- D. Provide solvent, cleaning agents and other accessory materials as recommended by the sealant manufacturer.

E. Perimeter Isolation Board

1. Perimeter isolation board shall be a 1/2" to 3/4" thick PVC closed-cell foam (7 lb/ft³ average density) or neoprene sponge rubber (conforming to ASTM-D01056, Grade SCE 41), inserted between the floating floor and the wall. No rigid material shall be allowed to pass across the isolation layer, thereby short circuiting the isolation. Height of board shall be full depth of finished floor plus 1 to 2 inches.
2. The following are acceptable, subject to the above:
 - a. Type P7 PVC Closed-Cell Foam by Mason Industries, Inc.
 - b. Type PIB by Kinetics Noise Control, Inc.
 - c. or approved equal.

- F. Materials shall be delivered to the job in sealed containers with manufacturer's original labels attached. Materials shall be used per manufacturer's printed instructions.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where joint sealers are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

- A. Comply, at minimum, with sealant and sealant primer manufacturer recommendations for space ventilation during and after installation. Where feasible, the following ventilation conditions shall be maintained during the sealant/sealant primer curing period or for 72 hours after installation: 1) supply 100% outside air 24 hours a day; 2) supply airflow at a rate of 6 air changes per hour, when outside temperatures are between 55 degrees F and 85 degrees F and humidity is between 30% and 60%; and 3) supply airflow at a rate of 1.5 air changes per hour, when outside air conditions are not within the range stipulated in item 2 above.
- B. To the extent practical, allow sealant and sealant primer installations to cure *prior to* the installation of materials that adsorb VOCs. Materials that adsorb VOCs include carpets, textiles, unprimed gwb, and acoustical ceiling panels.
- C. Sealant Installation Standard: Comply with instructions and recommendations of the manufacturer and in accordance with ASTM C 1193 for use of joint sealants as applicable to materials, applications and conditions required by this Project where more stringent installation requirements are specified herein, such requirements shall apply.
- D. Sample Section of Sealant
1. During sealant installation work in exterior wall, the manufacturer of sealant shall send his representative to the site, under whose supervision a section of the wall (used as "control section") shall be completed for purposes of determining performance characteristics of sealant in joints. Commissioner shall be informed of time and place of such installation of control section.

2. Control section shall be installed according to specification given herein and shall not be considered as acceptable until written acceptance is provided by the Commissioner.
 3. Accepted control section shall be standard to which all other sealant work must conform.
- E. Supervision: The Contractor shall submit to the Commissioner written certification from the sealant manufacturer that the applicators have been instructed in the proper application of their materials. The Contractor shall use only skilled and experienced workmen for installation of sealant.
- F. Apply sealant under pressure with a hand or power actuated gun or other appropriate means. Gun shall have nozzle of proper size and provide sufficient pressure to completely fill joints as detailed. Neatly point or tool joint to provide the contour as indicated on the drawings.
- G. Preparation and Application
1. Thoroughly clean all joints, removing all foreign matter such as dust, oil, grease, water, surface dirt and frost. Sealant must be applied to the base surface. Previously applied film must be entirely removed.
 2. Stone, masonry and concrete surfaces to receive sealant shall be cleaned where necessary by grinding, water blast cleaning, mechanical abrading, or combination of these methods as required to provide a clean, sound base surface for sealant adhesion.
 - a. Do not use any acid or other material which might stain surfaces.
 - b. Remove laitance by grinding or mechanical abrading.
 - c. Remove loose particles present or resulting from grinding, abrading, or blast cleaning by blowing out joints with compressed air, oil and water free, or vacuuming joints prior to application of primer or sealant.
 3. Clean non-porous surfaces such as metal and glass chemically. Remove protective coatings on metallic surfaces by solvent that leaves no residue and is compatible with sealant. Use solvent and wipe dry with clean, dry lint free paper towels. Do not allow solvent to air dry without wiping. Clean joint areas protected with masking tape or strippable films as above after removal of tape film.
 4. Do not seal joints until they are in compliance with drawings, or meet with the control section standard.
 5. Joint Size and Sealant Size: Joints to receive sealant shall be at least 1/4" wide. In joint 1/4" to 3/8" wide, sealant shall be 1/4" deep. In joints wider than 3/8" and up to 1" wide, sealant depth shall be one half the joint width. For joints wider than 1", sealant depth shall be as recommended by the sealant manufacturer. Depth of joint is defined as distance from outside face of joint to closest point of the filler.
 6. Primer: Thoroughly clean joints and apply primer to all surfaces that will receive sealant. Apply primer on clean, dry surfaces, and prior to installation of joint backing. Completely wet both inner faces of the joint with primer. Mask adjacent surfaces of joint with non-staining masking tape prior to priming. Apply primer with clean brush and only when temperature is above 45 deg. F.

7. **Joint Backing:** In joints where depth of joint exceeds required depth of sealant, install joint backing (after primer is dry) in joints to provide backing and proper joint shape for sealant. Proper shape for sealant is a very slight "hourglass" shape, with back and front face having slight concave curvature. Use special blunt T-shaped tool or roller to install joint backing to the proper and uniform depth required for the sealant. Joint backing shall be installed with approximately twenty-five (25) percent compressions. Do not stretch, twist, braid, puncture, or tear joint backing. Butt joint backing at intersections.
8. **Bond Breaker:** Install bond breaker smoothly over joint backing so that sealant adheres only to the sides of the joint and not backing.
9. **Sealant Application:** Apply sealant in accordance with the manufacturer's application manual and manufacturer's instructions, using hand guns or pressure equipment, on clean, dry, properly prepared substrates, completely filling joints to eliminate air pockets and voids. Mask adjacent surfaces of joint with non-staining masking tape. Force sealant into joint in front of the tip of the "caulking gun" (not pulled after it) and force sealant against sides to make uniform contact with sides of joint and to prevent entrapped air or pulling of sealant off of sides. Fill sealant space solid with sealant.
10. **Tooling:** Tool exposed joints to form smooth and uniform beds, with slightly concave surface conforming to joint configuration per Figure 4A in ASTM C 1193. Finished joints shall be straight, uniform, smooth and neatly finished. Remove masking tape immediately after tooling of sealant and before sealant face starts to "skin" over. Neatly remove any excess sealant from adjacent surfaces of joint, leaving the work in a neat, clean condition.
11. Replace sealant that is damaged during construction process.

END OF SECTION

SECTION 081113

STEEL DOORS AND FRAMES

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the steel doors and frames work as shown on the drawings and/or specified herein, including, but not limited to, the following:
 1. Interior hollow metal doors and frames for fire rated and unrated door openings.
 2. Trimmed openings.
 3. Interior hollow metal vision panels.
 4. Preparation of metal doors and frames to receive finish hardware, including reinforcements, drilling and tapping necessary.
 5. Furnishing anchors for building into masonry and drywall.
 6. Factory prime painting of work of this Section.

1.3 RELATED SECTIONS

- A. Installation of doors and frames - Section 062000.
- B. Wood Doors - Section 081416.
- C. Finish hardware - Section 087100.
- D. Glass and glazing - Section 088000.
- E. Gypsum drywall - Section 092900.
- F. Painting - Section 099000.

1.4 SUBMITTALS

- A. Product Data: Include construction details, material descriptions, core descriptions, label compliance, compliance with standards referenced herein, sound and fire resistance ratings, and finishes for each type of door and frame specified.
- B. Shop Drawings: Show fabrication and installation of doors and frames. Include details of each frame type, elevations of door design types, conditions at openings, details of construction, reinforcement for surface applied hardware, dimensions of profiles and hardware preparation, location and installation requirements of door and frame

hardware and reinforcements, and details of joints and connections. Show anchorage and accessories.

- C. Door Schedule: Submit schedule of doors and frames using same reference numbers for details and openings as those on Drawings.

1.5 QUALITY ASSURANCE

- A. Manufacturer Qualifications: A firm experienced in manufacturing custom steel doors and frames similar to those indicated for this Project and with a record of successful in service performance, as well as sufficient production capacity to produce required units.
- B. Testing Agency Qualifications: An independent agency qualified according to ASTM E329 for testing indicated, as documented according to ASTM E 548.
- C. Source Limitations: Obtain custom steel doors and frames through one source from a single manufacturer.
- D. Fire-Rated Door and Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated.
 - 1. Test Pressure: Test according to NFPA 252 or UL 10C. After 5 minutes into the test, the neutral pressure level in furnace shall be established at 40" or less above the sill.
 - 2. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a testing agency acceptable to authorities having jurisdiction that doors comply with standard construction requirements for tested and labeled fire-protection-rated door assemblies except for size.
 - 3. Temperature-Rise Rating: At exit enclosures, provide doors that have a temperature-rise rating of 250 deg. F. (or greater if required by Code) maximum in 30 minutes of fire exposure.
- E. Smoke-Control Door Assemblies: Comply with NFPA 105 or UL 1784.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver doors and frames palletted, wrapped, or crated to provide protection during transit and Project site storage. Do not use nonvented plastic.
- B. Inspect doors and frames, on delivery, for damage. Minor damage may be repaired provided refinished items match new work and are approved by Commissioner; otherwise, remove and replace damaged items as directed.
- C. Store doors and frames under cover at building site. Conform to the requirements of ANSI A 250-11-2001 for site storage unless more stringent requirements are noted herein. Place units on minimum 4-inch high wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber. If wrappers on doors become wet, remove cartons immediately. Provide minimum 1/4-inch spaces between stacked doors to permit air circulation.

PART 2 - PRODUCTS

2.1 FABRICATION – GENERAL

- A. Fabricate hollow metal units to be rigid, neat in appearance and free from defects, warp or buckle. Accurately form metal to required sizes and profiles. Weld exposed joints continuously, grind, dress, and make smooth, flush and invisible. Metallic filler to conceal manufacturing defects is not acceptable.
- B. Unless otherwise indicated, provide countersunk flat Phillips or Jackson heads for exposed screws and bolts.
- C. Prepare hollow metal units to receive finish hardware, including cutouts, reinforcing, drilling and tapping in accordance with Finish Hardware Schedule and templates provided by hardware suppliers. Comply with applicable requirements of ANSI A115 "Specifications for Door and Frame Preparation for Hardware." Hardware to be shop prepared for field installation. NO field preparation is acceptable.
- D. Locate finish hardware as shown on final shop drawings in accordance with locations noted herein.

2.2 MANUFACTURERS

- A. Provide products manufactured by Steelcraft, Curries, Ceco Door Products, or approved equal meeting these specifications.

2.3 FRAMES

- A. Materials
 - 1. Frames for interior openings shall be either commercial grade cold-rolled steel conforming to ASTM A 1008, Type B or commercial grade hot-rolled steel conforming to ASTM A 1011, Commercial Steel, Type B. Metal thickness shall be not less than sixteen (16) ga. for frames in openings 4'-0" or less in width; not less than fourteen (14) ga. for frames in openings over 4'-0" in width.
 - 2. Frames for Gasketed Doors: Frames for gasketed doors shall be continuously grout-filled when installed in masonry or concrete partition openings, or packed tightly with glass-fiber safing insulation and caulked with acoustical sealant around the perimeter of both sides of the frame when applied to drywall and stud partition openings.
- B. Design and Construction
 - 1. All frames shall be welded units with integral trim, of the sizes and shapes shown on approved shop drawings. Unless otherwise noted, knocked-down frames will not be permitted.
 - 2. Frames shall have 1-1/4" exposed sightlines.
 - 3. All finished work shall be strong and rigid, neat in appearance, square, true and free of defects, warp or buckle. Molded members shall be clean cut, straight and of uniform profile throughout their lengths.
 - 4. Jamb depths, trim, profile and backbends shall be as shown on drawings.
 - a. Frames at drywall partitions shall be formed with double return backbends to prevent cutting into drywall surface.

5. Welded frames shall have corners mitered and reinforced and faces of welded frames shall be continuously back welded full depth and width of frame conforming to NAAMM Standard HMMA-820; face joints shall be hairline.
6. Minimum depth of stops shall be 5/8".
7. Frames for multiple or special openings shall have mullion and/or rail members which are closed tubular shapes having no visible seams or joints. All joints between faces of abutting members shall be securely welded and finished smooth.
8. Mullions shall have 16 ga. internal steel stiffeners welded not less than 4" o.c.
9. Hardware Reinforcements
 - a. Frames shall be mortised, reinforced, drilled and tapped at the factory for fully-templated mortised hardware only, in accordance with approved hardware schedule and templates provided by the hardware supplier. Where surface-mounted hardware is to be applied, frames shall have reinforcing plates.
 - b. Minimum thickness of hardware reinforcing plates shall be as follows:
 - 1) Hinge and pivot reinforcements - seven (7) ga., 1-1/4" x 10" minimum size.
 - 2) Strike reinforcements - twelve (12) gauge
 - 3) Flush bolt reinforcements - twelve (12) gauge
 - 4) Closer reinforcements - twelve (12) gauge
 - 5) Reinforcements for surface mounted hardware - twelve (12) gauge.
 - 6) Floor Anchors
 - a) Provide adjustable floor anchors, providing not less than two (2) inch height adjustment.
 - b) Minimum thickness of floor anchors shall be fourteen (14) gauge.
10. Jamb Anchors
 - a. Frames for installation in stud partitions shall be provided with steel anchors of suitable design, not less than eighteen (18) gauge thickness, securely welded inside each jamb as follows:
 - 1) Frames up to 7'-6" height - four (4) anchors.
 - 2) Frames 7'-6" to 8'-0" height - five (5) anchors.
 - 3) Frames over 8'-0" height - five (5) anchors plus one additional for each 2'-0" or fraction thereof over 8'-0".
 - b. Frames to be anchored to previously placed concrete or masonry shall be provided with minimum 3/8" concealed bolts set into expansion shields or inserts at six (6) inches from top and bottom and twenty-four (24) inches o.c. Reinforce frames at anchor locations with sixteen (16) gauge sheet steel stiffeners welded to frame at each anchor.
11. Anchors in exterior frames and in masonry walls shall be hot dip galvanized per ASTM A 153.
12. Frames for installation in masonry wall openings more than 4'-0" in width shall have an angle or channel stiffener factory welded into the head. Such stiffeners shall be not less than twelve (12) gauge steel and not longer than the opening width, and shall not be used as lintels or load bearing members.
13. Dust cover boxes (or mortar guards) of not thinner than twenty-six (26) gauge steel shall be provided at all hardware mortises on frames to be set in masonry or plaster partitions.
14. Ceiling Struts: Minimum 3/8" thick x 2" wide steel.
15. All frames shall be provided with a steel spreader temporarily attached to the feet of both jambs to serve as a brace during shipping and handling.
16. Loose glazing stops shall be of cold rolled steel, not less than twenty (20) gauge thickness, butted at corner joints and secured to the frame with countersunk

cadmium-or zinc-plated screws. Interior frames may be provided with snap-on glazing stops.

17. Drill stops to receive three (3) silencers on strike jambs of single door frames and two (2) silencers on heads of double-door frames.

C. Finish: After fabrication, all tool marks and surface imperfections shall be removed, and exposed faces of all welded joints shall be dressed smooth. Frames shall then be chemically treated to insure maximum paint adhesion and shall be coated on all surfaces with one coat of rust-inhibitive baked-on alkyd primer standard with the manufacturer which is fully cured before shipment to a dry film thickness of 2.0 mils.

1. Frames set in masonry walls shall be grouted in as described in Section 042000 – Unit Masonry. These frames shall have surfaces in contact with grout shop coated with epoxy coating equal to Series 27 FC Typoxy made by Tnemec or approved equal spray applied at 4 to 6 mils, passing NFPA 101, Class A for smoke and flame spread, tested per ASTM E 84.

2.4 HOLLOW METAL DOORS

A. Materials: Doors shall be made of commercial quality, level, cold rolled steel conforming to ASTM A 1008, Commercial Steel, Type B and free of scale, pitting or other surface defects. Face sheets for interior doors shall be not less than eighteen (18) gauge.

B. Gasketed Doors: For hollow metal doors with acoustical gaskets, the door leaf shall be solid core steel, 1-3/4" thick flush construction with minimum face density of 5 lb/ft². Steel door leaf shall be constructed from welded 18 gauge seamless cold-rolled steel sheets with a solid core of fiber board or other material providing the required 5 lb/ft² density.

C. Design and Construction

1. All doors shall be of the types and sizes shown on the approved shop drawings, and shall be fully welded seamless construction with no visible seams or joints on their faces or vertical edges. Minimum door thickness shall be 1-3/4".
2. All doors shall be strong, rigid and neat in appearance, free from warpage or buckles. Corner bends shall be true and straight and of minimum radius for the gauge of metal used.
3. Face sheets shall be stiffened by continuous vertical formed steel sections spanning the full thickness of the interior space between door faces. These stiffeners shall be not less than twenty two (22) gauge spaced not more than six (6) inches apart and securely attached to face sheets by spot welds not more than five (5) inches o.c. Spaces between stiffeners shall be sound deadened and thermal insulated the full height of the door with an inorganic non-combustible batt type material.
4. Provide insulated door assemblies at all hollow metal doors noted for full perimeter gaskets.
5. Door faces shall be joined at their vertical edges by a continuous weld extending the full height of the door. All such welds shall be ground, filled and dressed smooth to make them invisible and provide a smooth flush surface.
6. Top and bottom edges of all doors shall be closed with a continuous recessed steel channel not less than fourteen (14) gauge, extending the full width of the door and spot welded to both faces. Openings shall be provided in the bottom closure of exterior doors to permit the escape of entrapped moisture.
7. Edge profiles shall be provided on both vertical edges of doors as follows:

- a. Single-acting swing doors - beveled 1/8" in two (2) inches.
 - b. Double acting swing doors - rounded on 2-1/8" radius.
 - c. No square edge doors permitted.
8. Hardware Reinforcements
- a. Doors shall be mortised, reinforced, drilled and tapped at the factory for fully templated hardware only in accord with the approved hardware schedule and templates provided by the hardware supplier. Where surface-mounted hardware (or hardware, the interrelation of which is to be adjusted upon installation - such as top and bottom pivots, floor closers, etc.) is to be applied, doors shall have reinforcing plates.
 - b. Minimum gauges for hardware reinforcing plates shall be as follows:
 - 1) Hinge and pivot reinforcement - seven (7) gauge.
 - 2) Reinforcement for lock face, flush bolts, concealed holders, concealed or surface mounted closers - twelve (12) gauge.
 - 3) Reinforcements for all other surface mounted hardware - sixteen (16) gauge.
9. Glass Moldings and Stops
- a. Where specified or scheduled, doors shall be provided with hollow metal moldings to secure glazing by others in accordance with glass opening sizes shown on drawings.
 - b. Fixed moldings shall be securely welded to the door on the security side.
 - c. Loose stops shall be not less than twenty (20) gauge steel, with mitered corner joints, secured to the framed opening by cadmium or zinc-coated countersunk screws spaced eight (8) inches o.c. Snap-on attachments will not be permitted. Stops shall be flush with face of door.
- D. Finish: After fabrication, all tool marks and surface imperfections shall be dressed, filled and sanded as required to make all faces and vertical edges smooth, level and free of all irregularities. Doors shall then be chemically treated to insure maximum paint adhesion and shall be coated, on all exposed surfaces, with manufacturer's standard rust-inhibitive alkyd primer as specified for frames which shall be fully cured before shipment.
- E. Flatness: Doors shall maintain a flatness tolerance of 1/16" maximum, in any direction, including in a diagonal direction.

2.5 LABELED DOORS AND FRAMES

- A. Labeled doors and frames shall be provided for those openings requiring fire protection ratings as scheduled on drawings. Such doors and frames shall be labeled by Underwriters' Laboratories or other nationally recognized agency having a factory inspection service.
- B. If any door or frame specified by the Commissioner to be fire-rated cannot qualify for appropriate labeling because of its design, size, hardware or any other reason, the Commissioner shall be so advised before fabricating work on that item is started.

2.6 HARDWARE LOCATIONS

- A. The location of hardware on doors and frames shall be as noted in "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames" of the Door Hardware Institute unless otherwise required by prevailing Handicap Codes.

2.7 CLEARANCES

- A. Fabricate doors and frames to meet edge clearances as follows:
 - 1. Jamb and Head: 1/8" plus or minus 1/16".
 - 2. Meeting Edges, Pairs of Doors: 1/8" Plus or minus 1/16".
 - 3. Bottom: 3/8", if no threshold.
 - 4. Bottom: 3/8", at threshold.
- B. Fire rated doors shall have clearances as required by NFPA 80.

2.8 MANUFACTURING TOLERANCES

- A. Manufacturing tolerance shall be maintained within the limits given in HMMA 841 of ANSI/NAAMM, current edition.

2.9 PREPARATION FOR FINISH HARDWARE

- A. Prepare door and frames to receive hardware:
 - 1. Hardware supplier shall furnish hollow metal manufacturer approved hardware schedule, hardware templates, and samples of physical hardware where necessary to insure correct fitting and installation.
 - 2. Preparation includes sinkages and cut-outs for mortise and concealed hardware.
- B. Provide reinforcements for both concealed and surface applied hardware:
 - 1. Drill and tap mortise reinforcements at factory, using templates.
 - 2. Install reinforcements with concealed connections designed to develop full strength of reinforcements.

2.10 REJECTION

- A. Hollow metal frames or doors which are defective, have hardware cutouts of improper size or location, or which prevent proper installation of doors, hardware or work of other trades, shall be removed and replaced with new at no cost.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where steel doors and frames are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

- A. Refer to Section 062000 for installation procedures for all work of this Section.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 081416

WOOD DOORS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the wood doors as shown on the drawings and/or specified herein, including but not limited to, the following:
 - 1. Solid core flush wood doors.
 - 2. Honeycomb core flush wood doors.
 - 3. Fire rated door, including jambs.

1.3 RELATED SECTIONS

- A. Waste Management Requirements -- Section 017419.
- B. Sustainable Design Requirements -- Section 018113.
- C. VOC Limits for Adhesives, Sealants and Architectural Coatings -- Section 018114.
- D. Indoor Air Quality Requirements -- Section 018119.
- E. Installation of wood doors - Section 062000.
- F. Hollow metal frames - Section 081113.
- G. Finish hardware - Section 087100.
- H. Glass and glazing -- Section 088000.

1.4 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS

- 1. The Contractor and their sub-contractors shall submit the LEED BUILDING Certification items listed herein. LEED BUILDING Submittals shall include the following:
 - a. For all installed products and materials of this Section, complete the ENVIRONMENTAL MATERIALS REPORTING FORM (blank copy attached at end of Section 018113 "Sustainable Design Requirements"). Information to be supplied for this Form shall include:

- 1). Cost breakdowns for the materials included in the Contractor or sub-contractor's work. Cost breakdowns shall include total installed cost and material-only cost.
 - 2). The percentages (by weight) of post-consumer and/or post-industrial recycled content in the supplied product(s).
 - 3). Indication (Y/N) of whether the raw materials have been extracted, harvested or recovered, as well as the final product has been manufactured (location of final assembly), within 500 miles of the project site.
 - 4). For all field-applied interior adhesives, sealants, and paints relating to work of this Section, provide the Volatile Organic Compound (VOC) content in grams/liter or lbs./gallon.
- b. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the product information supplied for the ENVIRONMENTAL MATERIALS CERTIFICATION FORM.
- B. Product Data: Submit door manufacturer's product data, specifications and installation instructions for each type of wood door.
1. Include details of core and edge construction and trim for openings.
 2. Include factory finish specifications.
 3. Include certifications to show compliance with specifications.
 4. Include certification to show compliance with AWI and WDMA requirements specified herein.
- C. Shop Drawings: Submit shop drawings indicating location and size of each door, elevation of each kind of door, details of construction, location and extent of hardware blocking, fire ratings, requirements for finishing and other pertinent data.
1. Include requirements for veneer matching.
- D. Samples: Submit factory finishes applied to actual door face materials, approximately 8 by 10 inches for each material and finish. For each wood species and transparent finish, provide set of three samples showing typical range of color and grain to be expected in the finished work.

1.5 QUALITY ASSURANCE

- A. LEED BUILDING PERFORMANCE CRITERIA: Products of this Section shall meet the following requirements and shall be documented in accordance with the LEED BUILDING SUBMITTAL REQUIREMENTS of this Section:
1. Products of this Section which have been extracted, harvested or recovered, as well as manufactured (location of final assembly), within 500 miles of the project site shall be identified and documented.

2. Field-applied interior adhesives, sealants, and paints relating to work of this Section shall meet the requirements of Section 018114 "VOC Limits for Adhesives, Sealants and Architectural Coatings," and shall be identified and documented.
 3. Certification of criteria shall be in accordance with the Submittal Requirements of this section.
 4. Wood shall meet FSC and LEED standards noted in Section 064023.
- B. Source Limitations: Obtain flush wood doors through one source from a single manufacturer.
- C. Quality Standard: Comply with AWI's "Architectural Woodwork Quality Standards Illustrated"; latest edition "Premium" grade and WDMA "Extra Heavy Duty" Performance Level.
1. Only manufacturers that are certified and listed by AWI to be QCP qualified are acceptable for this project.
 2. Provide letter of licensing for Project indicating that doors comply with requirements of grade specified.
- D. Fire Rated Wood Doors: Doors complying with Category A, Positive Pressure or Neutral Pressure testing standards per UBC 7-2-1997 and UL 10-C (UBC 7-2-1994 and UL 10B) that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated on Door Schedule, based on testing according to NFPA 252.
1. Conform to prevailing Code requirements to determine which pressure standard (Positive or Neutral) is required.
- 1.6 DELIVERY, STORAGE, AND HANDLING
- A. Comply with requirements of referenced standard and manufacturer's written instructions.
 - B. Package doors individually in plastic bags or cardboard cartons.
 - C. Mark each door on top and bottom rail with opening number used on Shop Drawings.
- 1.7 PROJECT CONDITIONS
- A. Environmental Limitations: Do not deliver or install doors until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.
- 1.8 WARRANTY
- A. Special Warranty: Manufacturer's standard form, signed by manufacturer in which manufacturer agrees to repair or replace doors that are defective in materials or workmanship, have warped (bow, cup, or twist) in excess of permitted standard noted in Article 2.5 herein, or show telegraphing of core construction in face veneers.
 1. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.

2. Warranty shall be in effect during the following period of time from date of Substantial Completion:

a. Solid Core Flush Wood Doors: Life of installation.

PART 2 PRODUCTS

2.1 SOLID CORE FLUSH WOOD DOORS

- A. Provide AWI PC-5 Premium Grade hot pressed 5-ply solid core particleboard doors, 1-3/4" and 2-1/4" thick, conforming to standards specified herein. Subject to meeting standards specified herein, the following manufacturers are acceptable: Marshfield Door Systems, Inc., Algoma Hardwoods Inc., or Eggers Hardwood Products Corp.
1. Core shall consist of a formed flat panel consisting of wood particles bonded together with synthetic resins or other added binder, with an average density of 30 to 32 lbs. per cubic foot. The material shall meet or exceed the requirements of ANSI A208.1, Grade 1-LD-2 covering mat formed particleboard with face screw holding of 124 lbs., modulus of rupture of minimum 700 psi and modulus of elasticity of not less than 148,000 psi.
 2. Core shall be capable of satisfying this WDMA TM-7 cycle slam test for 1 million slams for surface mounted hardware. Where the manufacturer's core does not meet this criteria, stiles and rails must measure a minimum of 5-1/2" and must be fabricated of hardwood.
 - a. Surface mounted hardware must be installed with minimum 1-1/4" screw penetrations using threaded to the head screws; coordinate with Section 087100.
- B. Cross Bands: Shall be 1/16" thick hardwood extending full width of door and laid with grain at right angles to face veneers. Cross bands and faces shall be laminated to the core with Type I MF or PVA glue.
- C. Stiles, Rails: Stile and rail shall be a minimum of 1-3/8" solid hardwood or structural composite lumber (after trimming) laminated to the core. Stiles and rails must be securely glued to the core with no voids allowed. Stiles and rails must be capable of screw holding of 550 lbs. per WDMA TM-10.
- D. Vertical door edge must be capable of screw holding of 550 lbs. per WDMA TM-10; horizontal door edge must be capable of screw holding of 400 lbs. per WDMA TM-10.
- E. Doors to be field painted shall have MDO or hardboard face.
- F. Doors shall have hinge loading capacity of 500 lbs. per WDMA TM-8.
- G. Gasketed Doors: For wood doors with acoustical gaskets, the door leaf shall be solid core wood throughout (honeycomb cores are not acceptable), with a minimum face density of 5 lb/ft². The surface weight of wood doors that require fire ratings shall be established by the door manufacturer.

- H. Where glass lites are noted, factory cut openings. Trim openings with solid hardwood moldings of same type of wood as face veneer. Lite openings in 20 minute rated doors shall have manufacturer's 20 minute approved hardwood system.
- I. Doors with transparent finish to have center balanced, slip matched, quarter sliced, Select Vertical Grain Douglas Fir veneer. Veneer to conform to AWI, "AA" grade veneer with 3" wide leaf. Minimum veneer thickness shall be not less than 1/50" after sanding.
 - 1. Veneers shall be continuous or end matched at transoms.

2.2 HONEYCOMB CORE FLUSH WOOD DOORS

- A. Provide honeycomb core flush wood door with fir CVG finish.

2.3 FIRE RATED WOOD DOORS ("B" LABEL) AND FRAMES

- A. Provide mineral core 1-3/4" thick solid core wood doors conforming to standards specified herein, manufactured by one of the manufacturers noted above. Stile construction on both stiles shall conform to the following:
 - 1. Stile edge screw withdrawals when tested in accordance with ASTM D 1037-78 shall exceed 650 lbs. This applies to both stiles.
 - 2. Stile edge split resistance when tested in accordance with ASTM D 143-52 (78) Modified must exceed 950 lbs. This applies to both stiles.
- B. Door to have face finish as specified above in Article 2.1.
 - 1. Where the core is free of urea formaldehyde, provide a layer of veneer over the substrate prior to application of finish veneer to prevent telegraphing of patterns from the adhesive.
- C. Blocking: For surface mounted hardware only, provide composite blocking designed to maintain fire resistance of door but with improved screw-holding capability of same thickness as core and with minimum dimensions as follows:
 - 1. 5-inch top rail blocking.
 - 2. 5-inch bottom rail blocking.
 - 3. 1 – 5" x 18" lock block at cylinder or mortise locksets.
 - 4. 2 – 5" x 18" lock blocks at exit devices.
- D. Pairs: Provide fire-rated pairs with fire-retardant stiles that are labeled and listed for kinds of applications indicated without formed-steel edges and astragals.
- E. Frames shall be provided by door manufacturer as a fully finished system.

2.4 SHOP FINISH

- A. Transparent Finish: Finish in the shop with clear satin catalyzed polyurethane finish conforming to AWI System "Catalyzed Polyurethane Transparent".

- B. **Opaque Finish:** For doors to be field painted, shop prime on all surfaces with one coat of alkyd wood primer applied to a dry film thickness of 1.5 mils.

2.5 FABRICATION

- A. Prefit and premachine wood doors at the factory.
- B. Comply with the tolerance requirements specified herein. Machine doors for hardware requiring cutting of doors. Comply with final hardware scheduled and door frame shop drawings, and with hardware templates and other essential information required to ensure proper fit of doors and hardware.
- C. Take accurate field measurements of hardware mortises in metal frames to verify dimensions and alignment before proceeding with machining in the factory.
- D. Doors shall be factory sized to door opening so that trimming and fitting are not required in the field.
- E. Factory fit doors to suit frame-opening sizes indicated, with the following uniform clearances unless otherwise indicated.
 - 1. Three degree bevel or bevel to suit frame sizes indicated, with 3/16" prefit in width, +0/-1/32" tolerances. Prefit top of door 1/8" + 1/16"/-0" and undercut as required by floor condition. Undercut shall not exceed 1/8" from bottom of door to top of finished floor; where threshold occurs undercut shall not exceed 1/8" from bottom of door to top of threshold.
 - 2. Comply with requirements in NFPA 80 for fire-rated doors.
- F. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3 unless otherwise noted. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.
 - 1. Coordinate measurements of hardware mortises in metal frames to verify dimensions and alignment before factory machining.
 - 2. Provide concealed intumescent seals at fire-rated pairs of doors meeting the requirements of U.L. 10 C.
- G. Openings: Cut and trim openings through doors to comply with applicable requirements of referenced standards for kinds of doors required.

2.6 SOURCE QUALITY CONTROL

- A. Once installed, maximum allowable warp, bow, cut or twist in doors shall be 1/16" as measured by the 1/16 inch feeler gauge and a straight-edge extending from corner to corner of the door face at stiles, top and bottom rails and along both diagonals.

PART 3 EXECUTION

3.1 INSTALLATION

- A. Refer to Section 062000 for installation of wood doors.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 083113

ACCESS DOORS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the access doors as indicated on the drawings and/or specified herein, including, but not limited to, the following:
 - 1. GFRG access panels at drywall.
 - 2. Steel access panels for non front of house spaces.
 - 3. Provide access doors and frames for access from occupied spaces to the following, where indicated or required, and as directed by the trades of Divisions 22, 23 and 26.
 - a. All shutoff or balancing valves.
 - b. Fire dampers, as required.
 - c. Points of duct access.
 - d. Pull boxes.
 - e. Controls of mechanical and electrical items.
 - f. Pipe spaces, if required.
 - g. Inlets of fans.
 - h. Fusible link and splitter damper at filter bank.
 - i. Automatic damper and motor.
 - j. Equipment not otherwise accessible.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Drywall - Section 092900.
- F. Valves and connections - Division 22.

1.4 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. LEED BUILDING Performance Criteria: The following criteria are REQUIRED for the products included in this section:
 - 1. Metal members shall contain a minimum of 35% (combined) post-industrial/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the Submittal Requirements of this Section.
 - 2. Metal members fabricated within, and containing raw materials extracted within, 500 miles (by air) of the project site shall be documented in accordance with the Submittal Requirements above.
 - 3. Adhesives or sealants used for work in this section shall meet the requirements of Section 018419: Volatile Organic Compound (VOC) Limits For Adhesives, Sealants, Paints and Coatings (LEED BUILDING), where applicable.
 - 4. Certification of these products shall be in accordance with the LEED BUILDING Submittal Requirements of this Section.
- C. For actual installation of the work of this Section, use only personnel who are thoroughly familiar with the manufacturer's recommended methods of installation and who are completely trained in the skills required.
- D. Fire-Resistance Ratings: Wherever a fire-resistance classification is shown, or for construction where access doors are installed, provide required access door assembly with panel door, frame, hinge and latch from manufacturers listed in Underwriters' Laboratories, Inc. "Classified Building Materials Index" for the rating shown.
 - 1. Provide UL label on each access panel.
 - 2. Provide flush, key operated cylinder lock.
- E. Size Variations: Obtain Commissioner's acceptance of manufacturer's standard size units that may vary slightly from sizes shown or scheduled.

1.5 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
 - 1. A completed ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, per these specifications. Information to be supplied includes:

- a. The amount of recycled content in the insulation product(s). Identify post-consumer and/or post-industrial recycled content.
 - b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the products.
 - c. Provide material costs for the materials included in the contractor's or subcontractor's work. Material cost does not include costs associated with labor and equipment.
2. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the amount of recycled content.
 3. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as per the QUALITY ASSURANCE requirements of this Section. Cut sheets shall be submitted with the Contractor or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.
 4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Before any materials of this Section are delivered to the job site, submit complete manufacturer's literature to the Commissioner. Submit plans and schedules showing size and location of each and every access door for Commissioner's acceptance prior to installation.

1.6 PRODUCT HANDLING

- A. Protection: Use all means necessary to protect the materials of this Section before, during and after installation and to protect the installed work and materials of all other trades.
- B. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

PART 2 PRODUCTS

2.1 GFRG ACCESS PANELS

- A. Provide access panels made from glass fiber reinforced gypsum (GFRG); Milcor DWR or approved equal.
 1. Provide access panels architecturally designed to blend seamlessly with drywall ceiling and wall construction. Coordinate work with Section 092900, "Gypsum Drywall."
 2. Panels shall be Class A rated, with a flame spread and smoke developed index of 0 in accordance with ASTM E 84.
 3. Size: 24 x 24 unless otherwise specified.

2.2 STEEL ACCESS PANELS

- A. Provide access door assembly manufactured by Milcor Inc, or equal made by Nystrom Inc., Karp Associates, Inc. or approved equal. Assembly shall be an integral unit complete with all parts and ready for installation.
- B. Fabricate units of continuous welded steel construction. Grind welds smooth and flush with adjacent surfaces. Provide attachment devices and fasteners of the type required to secure access panels to the types of supports shown.
- C. Frames for Masonry and Tile Wall Only (Flush Panel Units)
 - 1. Fabricate frame from sixteen (16) gauge steel. Provide frame with exposed flange not less than one (1) inch wide around perimeter of frame for the following construction:
 - a. Exposed masonry.
 - b. Tile finish.
 - 2. For installation in masonry construction, provide frames with adjustable metal masonry anchors.
- D. Frameless Units for Drywall Surfaces (Recessed Panel Units): Provide access doors without exposed frames for drywall adhered to recessed panel.
- E. Panels: Fabricate from fourteen (14) gauge steel, with concealed spring hinges set to open to 175 degrees. Provide removable pin type hinges of the quantity required to support the access panel sizes used in the work. Finish with manufacturer's factory applied baked enamel prime coat applied over phosphate protective coating on steel.
- F. Locking Devices
 - 1. For non-rated access doors, provide flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.
 - 2. For fire rated doors, provide locks as described in paragraph 1.4, D. herein.
- G. Inserts and Anchorage: Furnish inserts and anchoring devices which must be built into masonry for the installation of access panels. Provide setting drawings, templates, instructions, and directions for installation of anchorage devices. Coordinate delivery with other work to avoid delay.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where access doors are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 COORDINATION

- A. Coordinate all work with the mechanical trades to insure proper locations and in a timely manner to permit orderly progress of the total work.
- B. Set frames accurately in position and securely attach to supports with face panels plumb or level in relation to adjacent finish surfaces.
- C. Adjust hardware and panels after installation for proper operation.
- D. Remove and replace panels or frames that are warped, bowed, or otherwise damaged.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 083473

SOUND CONTROL DOOR ASSEMBLIES

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Acoustical metal door systems, including doors, frames, perimeter seals, cam-lift hinges, metal thresholds and accessories to maintain door operation and the required STC ratings indicated on the Drawings.
 - 1. Acoustical doors with minimum STC of 51.
 - 2. Perimeter seals and all other required hardware for acoustical doors are specified in Section 087100.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Joint Sealers - Section 079200.
- F. Finish Hardware - Section 087100.
- G. Glass and Glazing - Section 088000.

1.4 REFERENCES

- A. ASTM C 423: Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
- B. ASTM E 90: Standard Test Method for Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.
- C. ASTM E 336: Standard Test Method for Measurement of Airborne Sound Attenuation between Rooms in Buildings.
- D. ASTM E 413: Classification for Rating Sound Insulation.

1.5 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. LEED BUILDING Performance Criteria: The following criteria are REQUIRED for the products included in this section:
1. Metal members shall contain a minimum of 35% (combined) post-industrial/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the Submittal Requirements of this Section.
 2. Metal members fabricated within, and containing raw materials extracted within, 500 miles (by air) of the project site shall be documented in accordance with the Submittal Requirements above.
 3. Adhesives or sealants used for work in this section shall meet the requirements of Section 018419: Volatile Organic Compound (VOC) Limits For Adhesives, Sealants, Paints and Coatings (LEED BUILDING), where applicable.
 4. Certification of these products shall be in accordance with the LEED BUILDING Submittal Requirements of this Section.
- C. Single Responsibility: Assign undivided responsibility of the sound retardant door work to a single firm specializing in this type of work. The firm and their personnel engaged in the work shall be able to demonstrate successful experience with work of comparable extent, complexity and quality to that shown and specified. Do not engage a firm unacceptable to the manufacturers of the primary materials to be used. The firm shall engage other specialist firms to perform any part of the work which he is not equipped or qualified to perform properly with his own personnel. Include the following major items of work in the scope of work for undivided responsibility:
1. Doors and frames.
 2. Gasketing and sills.
 3. Door hardware.
 4. Glass and glazing.
- D. Qualifications:
1. Provide doors and frames manufactured by a firm specializing in the production of sound control doors.

2. Provide sound control doors for fire rated openings manufactured by a firm whose units are inspected, tested and listed by UL for single point hardware for sizes and profiles shown.
- E. Requirements of Regulatory Agencies: Comply with the label requirements of NFPA and applicable local codes. Fabricate doors and frames which comply with the requirements of NFPA Standard Number 80 for the class of door opening shown and scheduled and which have been tested and rated by a Testing Laboratory accepted by the local building authority.
1. Provide Testing Laboratory's label on each door scheduled or required to be labeled. Include all information required by the New York City Building Code.
 2. Provide anchors for labeled frames as required by the local building authority.
- F. Field Measurements: Take field measurements prior to preparation of shop drawings, and prior to fabrication, where possible, to ensure proper fitting of work. However, allow for trimming and fitting wherever taking of field measurements before fabrication might delay work.
- G. Inserts and Anchorages: Furnish inserts and anchoring devices which must be built into other work. Coordinate delivery with other work to avoid delay.

1.6 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
1. A completed ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, per these specifications. Information to be supplied includes:
 - a. The amount of recycled content in the insulation product(s). Identify post-consumer and/or post-industrial recycled content.
 - b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the products.
 - c. Provide material costs for the materials included in the contractor's or subcontractor's work. Material cost does not include costs associated with labor and equipment.
 2. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the amount of recycled content.
 3. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as per the QUALITY ASSURANCE requirements of this Section. Cut sheets shall be submitted with the Contractor or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.
 4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to, adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

- B. **Manufacturer's Data:** Submit two copies of the manufacturer's detailed technical data for materials, fabrication, and installation. Include catalog cuts of hardware, anchors, fastenings, and accessories.
- C. Provide illustrations and descriptions of all seals and hardware items which will be exposed on doors and frames.
- D. **Shop Drawings:** Submit shop drawings for the fabrication and erection of assemblies which are not fully described by manufacturer's data. Show all anchorage and accessory items and finishes.
 - 1. Submit setting drawings, templates, and instructions for installation of anchorage devices built into other work.
 - 2. Provide installation details applicable to the construction in which the sound control doors and frames will be installed.
 - 3. Indicate construction, sizes, thicknesses, reinforcing, anchoring, and finishes of all materials.
- E. **Samples:** Submit three (3) samples of each color and finish required. Samples will be reviewed for color, texture and surface reflectivity only. Compliance with all other requirements is the exclusive responsibility of the Contractor.
- F. Submit certified test reports indicating that the acoustical performance of the door meets the Sound Transmission Class (STC) performance as indicated in the door schedule. Test data shall be produced from an accredited independent acoustical laboratory which is a member of NVLAP (National Volunteer Laboratory Accreditation Program). Reports shall indicate that the test was performed on the doors and frames of the type to be supplied, in conformance with the requirements of test method ASTM E 90 and ASTM E 413. Earlier test reports will not be acceptable. The test results shall be representative of the performance of the proposed Sound Control Door assembly.
- G. Test reports by an independent Acoustical Engineer certifying a Field Sound Transmission Class (FSTC) or Noise Isolation Class (NIC) in conformance with the requirements of test method ASTM E 336, performance of no more than six points below the laboratory STC performance on similar installations.
- H. Written guarantee that door is constructed in accordance with the laboratory tested door and free of defects in material and workmanship for a period of 1 years after installation.
- I. Fire label as specified in the door schedule.

1.7 PERFORMANCE REQUIREMENTS

- A. Rated doors shall have a Sound Transmission Class (STC) rating of 43 for exterior door and 55 for interior door.
- B. Installed door assemblies shall meet Field Sound Transmission Class (FSTC) values no less than 5 dB points below the specified STC ratings.
- C. Test shall be for proposed door, frame, threshold, seals and hardware. Doors shall be fully operational at the time of the test.

1.8 PRODUCT HANDLING

- A. Upon award of contract, and before commencement of building construction, submit to the Commissioner any special requirements (scheduling, flatness of floor, etc.) which are necessary to assure successful installation.
- B. Protect door systems during transit, handling, and storage to prevent damage, soiling, and deterioration.
- C. Deliver frames to General Contractor with complete installation drawings and instructions for installation by the General Contractor.
- D. Deliver doors to project site only after the building has been closed in. Store doors in the building in a dry location and stack in accordance with the manufacturer's instructions.
- E. Protect door assemblies, especially sound gaskets, from damage before, during and after their installation.

PART 2 PRODUCTS

2.1 DOOR ASSEMBLIES

- A. Manufacturers: Provide door assemblies as scheduled, manufactured by Industrial Acoustics Company, Noise Barriers, LLC, Krieger Steel Products Co., Overly Manufacturing Co., or approved equal.
- B. General: The door assemblies shall be configured as indicated on the Contract Drawings as follows:
 - 1. Doors shall have a minimum STC rating of 51 unless otherwise indicated on Drawings.
 - 2. The door hardware shall be sized to support the weight of the door and provide easy movement by one person.
 - 3. The gasketing system shall provide an airtight seal around the entire perimeter of the door when closed. The force to compress the seal shall not exceed 29(ed.) pounds applied to the lockset.
- C. Provide all door assemblies with complete frame assemblies, including the extended frame(s), thresholds and joint covers required for split wall construction (if any).
- D. Doors shall be of thickness as indicated, or as required to achieve specified STC; flush design of cold-rolled steel construction, 14 gauge minimum thickness, with wood veneer finish. The core shall be acoustically non-coupling and shall be non-combustible. Vision panels, where indicated, shall be of glazing in accordance with the acoustically tested product, and be supplied by the door manufacturer.
 - 1. Wood Veneer: Quarter sawn white oak.
- E. Door and frames shall be factory mortised, reinforced, and fitted for heavy-duty locksets, strikes, and closers. All hardware shall be supplied by the door manufacturer as specified in the hardware schedule.

- F. Frames shall be formed to sizes and shapes indicated and shall have full welded unit-type construction at corners and other joints and packed with glass or mineral fiber. Frames shall be factory-welded and shall be shipped to the site as a single unit. Frames shall be of cold-rolled steel construction. All contact edges shall be closed tight. Welds on corners and exposed surfaces shall be pressed flush and smooth. Steel frame members shall be pre-straightened, free of wind or twist. Frames shall be factory-aligned to a diagonal tolerance of $\pm 1/16$ ".
- G. All doors all have cam-lift action hinges, closers, and aluminum thresholds. The cam-lift shall lower the door onto the sill as the door is closed, and provide a tight positive seal with the threshold. When opening, the door shall rise fast enough to minimize drag on the threshold.
 - 1. Surface strap or butt hinges are not acceptable.
- H. The cam-lift seal shall be a full mortised neoprene door bottom and shall close the entire gap between the door and the floor. The cam-lift seal shall ensure a continuous, positive seal at the floor with minimum friction, drag and roll of the assembly on the floor.
- I. All hardware shall be finished as scheduled on the drawings.
- J. Perimeter Treatment
 - 1. Clearance between frame and door shall not exceed 1/8". All sills shall be of aluminum construction to insure a proper bottom seal.
 - 2. All head and jamb seals shall be magnetic or compression stop in a fully adjustable retainer assembly.
 - 3. The door shall be supplied with a bottom closed cell neoprene seal covered in Teflon type material and felt/neoprene compression seal at jambs and head. The seal shall be adjustable with flush Phillips head screws, to conform to job site sill conditions. Automatic drop bottoms will not be permitted. All screws shall be flush with the door leaf; no surface exposed screw heads or bolts are acceptable.
 - 4. Astragal for double-leaf doors shall be rabbeted or beveled and contain neoprene compression and/or magnetic seals for the full height of the door. There shall be no gaps in the seals at the head and sill of the door. There shall be continuous pressure applied to the astragal to compress the seals and prevent the leaves from bowing out and disengaging the astragal seals. Double door acoustic test data shall be submitted. Single leaf test data will not be acceptable for double doors.
 - 5. Door shall have an Underwriters' Laboratory fire label if required (or certificate if the door exceeds the maximum opening size) as called out in the schedule of drawings.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions in which the work of this section is to be installed, including condition of substrate to which the item is to be attached. Do not proceed with work until unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

- A. General: Comply with the recommendations of the manufacturer for secure and proper installation in accordance with final shop drawings. Install the work in locations on the drawings, with proper clearances, elevation and anchorage. Provide accessories indicated and anchors, inserts, and other items required for installation of items and attachment to adjoining construction.
- B. Install seals so they are in intimate contact with the entire length of the jambs and head.

3.3 INSTALLATION OF FRAMES

- A. Comply with provisions of SDO-105 "Recommended Erection Instructions for Steel Frames," unless otherwise indicated.
- B. Place all frames for acoustical doors after all walls are set and in place. Set frames accurately in position, plumbed, aligned and braced securely until permanent anchors are set.
- C. In masonry construction, locate 3 wall anchors per jamb at hinge and strike levels.
- D. At in-place concrete, masonry or steel construction, set frames and secure to adjacent construction with machine screws and masonry anchorage devices in accordance with all approved shop drawings.
- E. Fill vertical cells of masonry units solid with grout where anchors are to be built-in to masonry construction.
- F. Grouting of frames complete with any rebar reinforcement and installation of insulation in the frame, shall be performed by the installing contractor as part of his work to insure the acoustical and structural integrity of the assembly.
- G. Install fire-rated frames in accordance with NFPA Std. No. 80.
- H. Remove spread bars only after frames have been properly set and secured.

3.4 DOOR INSTALLATION

- A. Fit acoustical doors accurately in frames, within clearances specified in SDI-100 and as herein specified.
- B. Doors must be installed plumb and aligned.
- C. Place fire-rated doors with clearances as specified in NFPA Std. No. 80.
- D. Adjust all automatic or adjustable acoustical perimeter and drop seals to insure a tight fit per manufacturer's recommendation.

3.5 ADJUST AND CLEAN

- A. Final Adjustments: Check and readjust operating finish hardware items and acoustical seals, leaving steel doors and frames undamaged and in complete and proper operation condition. Check for any air, light (and sound) gaps at door jambs, heads and sills, and adjust seals as necessary.
- B. Upon completion of the installation, put each operating component through at least 10 operating cycles. Adjust to achieve optimum operation.

3.6 FIELD SUPERVISION

- A. The door manufacturer shall provide factory trained supervision personnel during installation and final adjustment of sound seals. The manufacturer shall issue a letter of compliance certifying the completion of a successful installation.

3.7 FIELD TESTING

- A. If required, the City of New York will retain the services of an independent acoustical consultant to conduct an acoustical test at any designated door locations where noise transmission is suspected of being below the set criteria. The test shall consist of a Field Sound Transmission Class (FSTC) or Noise Isolation Class (NIC) test per ASTM E 336. If such results indicate non-conformance with the established FSTC or NIC requirements, it shall be the responsibility of the Contractor and manufacturer to correct, at their expense, such deficiencies by methods that shall be approved by the Commissioner and City of New York prior to incorporation. Acoustical tests shall be repeated and corrective measures devised and incorporated until the set criteria and performance standards are met. If the Commissioner determines that the materials are not as specified herein, all costs for the initial acoustical test as well as the cost of all retesting shall be borne by the Contractor and the Manufacturer.

END OF SECTION

SECTION 084313

ALUMINUM ENTRANCES AND STOREFRONTS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the aluminum entrances and storefronts as indicated on the drawings and/or specified herein including the following:
 - 1. Exterior entrance systems.
 - 2. Exterior storefront systems.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Sealants - Section 079200.
- F. Finish hardware - Section 087100.
- G. Glass and glazing - Section 088000.

1.4 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
 - 1. A completed ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, per these specifications. Information to be supplied includes:
 - a. The amount of recycled content in the insulation product(s). Identify post-consumer and/or post-industrial recycled content.
 - b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the products.
 - c. Provide material costs for the materials included in the contractor's or subcontractor's work. Material cost does not include costs associated with labor and equipment.

2. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the amount of recycled content.
 3. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as per the QUALITY ASSURANCE requirements of this Section. Cut sheets shall be submitted with the Contractor or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.
 4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. **Product Data:** Submit manufacturer's printed product data, specifications, standard details, installation instructions, use limitations and recommendations for each material used. Provide certifications that materials and systems comply with specified requirements.
- C. **Shop Drawings:** Provide large scale shop drawings for fabrication, installation and erection of all parts of work. Provide plans, elevations, and details of anchorages, connections and accessory items. Provide installation templates for work installed by others. Show interfaces and relationships to work of other trades.
- D. **Field Measurements:** Take necessary field measurements before preparation of shop drawings and fabrication. Do not delay progress of job. If field measurements are not possible prior to fabrication, allow for field cutting and fitting.
- E. **Initial Selection Samples:** Submit samples showing complete range of colors, textures, and finishes available for each material used.
- F. **Verification Samples:** Submit representative samples of each material that is to be exposed in completed work. Show full color ranges and finish variations expected. Provide samples having minimum size of 144 sq. in.
- G. **Calculations:** Provide professionally prepared calculations and certification of performance of this work. Indicate how design requirements for loading and other performance criteria have been satisfied; refer to Article 1.6, para. D for further description.
- H. **Test Reports:** Provide certified test reports for specified tests.

1.5 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions,

or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.

B. LEED BUILDING Performance Criteria: The following criteria are REQUIRED for the products included in this section:

1. Metal members shall contain a minimum of 35% (combined) post-industrial/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the Submittal Requirements of this Section.
2. Metal members fabricated within, and containing raw materials extracted within, 500 miles (by air) of the project site shall be documented in accordance with the Submittal Requirements above.
3. Adhesives or sealants used for work in this section shall meet the requirements of Section 018419: Volatile Organic Compound (VOC) Limits For Adhesives, Sealants, Paints and Coatings (LEED BUILDING), where applicable.
4. Certification of these products shall be in accordance with the LEED BUILDING Submittal Requirements of this Section.

C. Source: For each material type required for work of this Section, provide primary materials which are products of one manufacturer. Provide secondary or accessory materials which are acceptable to manufacturers of primary materials.

D. Installer: A firm with a minimum of three years experience in type of work required by this Section and which is properly trained by manufacturers of primary materials.

E. Engineering Criteria: Drawings indicate sizes, member spacings, profiles, and dimensional requirements of work of this Section. Minor deviations will be accepted in order to utilize manufacturer's standard products when, in the Commissioner's sole judgment, such deviations do not materially detract from the engineering concept or intended performances.

F. Engineering: Provide services of a Professional Engineer, registered in the jurisdiction in which the Project will be built, to design and certify that work of this Section meets or exceeds performance requirements specified.

1.6 TESTS AND PERFORMANCE REQUIREMENTS

A. Manufacturer's Standard Tests: Provide manufacturer's standard test data showing compliance with specified requirements.

B. Testing and performance data applies to exterior assemblies.

C. Test Sequence: Test sequence is optional, except that air infiltration tests shall precede water resistance tests.

D. Air Infiltration Test: Test unit in accordance with ASTM E 283, as follows:

1. Static Air Pressure Difference: 6.24 psf for fixed storefront units, and 1.567 psf for doors.
2. Performance: Maximum air leakage shall not exceed the following:

- a. Fixed Storefront Units: 0.06 cfm per sq. ft. of window area.
 - b. Door Units: 0.50 cfm per sq. ft. of single doors, 1.00 cfm per sq. ft. for doors hinged in pairs.

- E. Water Leakage Test: Test fixed framing system in accordance with ASTM E 331.
 - 1. Test Pressure: 6.24 psf.
 - 2. Performance: No leakage as defined in test method at specified test pressure.

- F. Uniform Load Deflection Test: Test units in accordance with ASTM E 330, at following static air pressure difference (Design Wind Pressure), or loads prescribed by code for this project site, whichever is greater. Apply pressure first to exterior side (positive) and then interior side (negative).
 - 1. Design Wind Pressure: 30 pounds per square foot minimum.
 - 2. Test Procedure: Procedure A as specified in ASTM E 330.
 - 3. Performance: Deflection in each member measured at locations of greatest deflection shall not exceed $L/175$ at specified Design Wind Pressure.

- G. Uniform Load Structural Test: Test units in accordance with ASTM E 330 at following static air pressure difference. Apply high pressure load first on one side and then on other side. At conclusion of test there shall be no glass breakage, permanent damage to fasteners, hardware parts, support arms or activating mechanisms.
 - 1. Static Air Pressure: Minimum 1.5 times the Design Wind Pressure.
 - 2. Permanent Deformation in Any Member: Not to exceed 0.2% of member span.

- H. Condensation Resistant Factor: Not less than 45 for fixed storefront units, and not less than 48 for doors; per AAMA 1502.7.

- I. Thermal Movement: Provide storefront systems that allow for expansion and contraction of members throughout an ambient temperature range of 120°F.

- J. Seismic Loads: Provide entrance and storefront systems, including anchorage, capable of withstanding the effects of earthquake motions calculated according to requirements of authorities having jurisdiction or ASCE 7, "Minimum Design Loads for Buildings and Other Structures", Section 9, "Earthquake Loads", whichever are more stringent.

- 1.7 DELIVERY, STORAGE, AND HANDLING
 - A. Deliver materials and products in unopened, factory labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations. Store under cover and protect from weather damage.
 - B. Sequence deliveries to avoid delays, but minimize on-site storage.

- 1.8 WARRANTIES
 - A. Provide written warranty, signed by manufacturer, agreeing to repair or replace work that exhibits defects in materials or workmanship. "Defects" is defined to include, but not limited to, leakage of water, abnormal aging or deterioration, abnormal deterioration

or fading of finishes, and failure to perform as required. Include requirement for removal and replacement of covering and connected adjacent work.

1. Warranty Period: Three (3) years from date of Substantial Completion; except finish shall be warranted for a period of fifteen (15) years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS/PRODUCTS

- A. Provide storefronts and entrance systems of one of the following manufacturers that meet or exceed requirements of these specifications:
 1. Leed Himmel Industries, Inc.
 2. Kawneer Company, Inc.
 3. Wausau Metals Corporation.
 4. EFCO.
 5. Vistawall.
- B. Basis of Design Product: Series 1500 Flush Glaze Framing and Door and Frame Systems by Leed Himmel Industries, Inc..

2.2 MATERIALS AND ACCESSORIES

- A. Aluminum Members: Provide 6063-T5 alloy and temper as recommended by manufacturer for strength, corrosion resistance, and application of required finish. Comply with ASTM B 221 for extrusions, and ASTM B 209 for sheet/plate. Provide 0.125 in. thick extrusions for door stiles and storefront framing. Provide 0.050 in. thick aluminum for glazing moldings.
 1. Structural aluminum shapes shall conform to ASTM B 308.
- B. Fasteners: Provide non-magnetic stainless steel fasteners, warranted by manufacturer to be non-corrosive and compatible with aluminum components.
- C. Concealed Flashing: Dead-soft stainless steel, 26 gage minimum, or extruded aluminum 0.062 in. minimum, of an alloy and type selected by manufacturer for compatibility with other components.
- D. Brackets and Reinforcements: Non-magnetic stainless steel or hot-dip galvanized steel complying with ASTM A 386.
- E. Concrete/Masonry Inserts: Cast-iron, malleable iron, or hot-dip galvanized steel complying with ASTM A 386.
- F. Bituminous Coatings: Cold-applied asphalt mastic compounded for 30-mil thickness per coat.

- G. Compression Weatherstripping: Manufacturer's standard replaceable stripping of molded neoprene or PVC gaskets complying with ASTM D 2287.
- H. Sliding Weatherstripping: Manufacturer's standard replaceable stripping of wool, polypropylene, or nylon woven pile, with nylon fabric or aluminum strip backing.
- I. Glazing: Storefront glazing will be provided to Contractor, as drawn, for contractor setting and installation. Contractor to provide anticipated schedule and confirmation of all final glazing sizes, including thickness, no less than 16 weeks prior to required receipt.

2.3 HARDWARE

- A. Provide hardware units as indicated, scheduled, or required for operation of each door. Refer to Section 087100, Finish Hardware for hardware description.

2.4 FABRICATION

- A. Sizes and Profiles: Required sizes for door and frame units, including profile requirements, are indicated on Drawings. Any variable dimensions are indicated, together with maximum and minimum dimensions required to achieve design requirements and coordination with other work.
- B. Prefabrication: To greatest extent possible, complete fabrication, assembly, finishing, hardware application, and other work before shipment to project site. Disassemble components only as necessary for shipment and installation.
 - 1. Preglaze door and frame units to greatest extent possible, in coordination with installation and hardware requirements.
 - 2. Do not drill and tap for surface-mounted hardware items until time of installation at project site.
 - 3. Perform fabrication operations, including cutting, fitting, forming, drilling and grinding of metal work in manner which prevents damage to exposed finish surfaces. For hardware, perform these operations prior to application of finishes.
- C. Welding: Comply with recommendations of American Welding Society to avoid discoloration; grind exposed welds smooth and restore mechanical finish.
- D. Reinforcing: Install reinforcing as necessary for performance requirements; separate dissimilar metals with bituminous paint or other separator to prevent corrosion.
- E. Continuity: Maintain accurate relation of planes and angles, with hairline fit of contacting members.
- F. Fasteners: Conceal fasteners.
- G. Provide EPDM/vinyl blade gasket weatherstripping in bottom exterior door rail, adjustable for contact with threshold.
- H. At interior doors and other locations without weatherstripping, provide neoprene silencers on stops to prevent metal-to-metal contact.

- I. Provisions shall be made in the framing for minimum edge clearance, nominal edge cover, and nominal pocket width for the thickness and type of glazing installed, and shall be in accordance with the FGMA Glazing Manual.
- J. Pocket glazed framing shall provide:

	<u>Single Glass</u>	<u>Insulating Glass</u>
1. Nominal edge cover (or bite) framing only	5/16"	1/2"
2. Min. nominal edge clearance	1/8"	1/4"
3. Min. face clearance	1/8"	5/32"

2.5 STOREFRONT FRAMING

- A. General: Provide inside-outside matched resilient flush glazed system with provisions for glass replacement. Shop fabricate and preassemble frame components where possible.
- B. Thermal-Break Construction: Fabricate exterior aluminum storefront framing system with integrally concealed, low conductance thermal barrier, located between exterior materials and exposed interior members, in manner which eliminates direct metal-to-metal contact. Provide manufacturer's standard construction which has been in use for similar projects for at least three years.
- C. For glass and glazing, refer to Section 088000.

2.6 ALUMINUM DOORS

- A. Aluminum entrance doors shall be narrow stile factory-glazed aluminum doors, manufactured by same manufacturer as storefront framing.
- B. Aluminum entrance doors shall be stile and rail type swing doors. Aluminum shall be extruded aluminum conforming to ASTM B 221, 0.125 in. thick for door stiles and 0.050 in. thick for glazing molding.
 - 1. Sections shall be of sizes and profiles indicated; shall present straight, sharply defined lines and arrises; and shall be free from defects impairing strength, durability, and appearance.
 - 2. Fasteners where exposed shall be aluminum stainless steel or plated steel conforming to ASTM A 164.
- C. Each door shall be factory glazed set in neoprene glazing gasket, refer to Section 088000 for glass.
- D. Doors shall meet the following resistance to corner racking when tested by the Dual Moment Load Test.
 - 1. Test section shall consist of a standard top door corner assembly. Side rail section shall be 24" long and top rail section shall be 12" long.
 - 2. Anchor "top rail" positively to test bench so that corner protrudes 3" beyond bench edge.

3. Anchor a lever arm positively to "side rail" at a point 19" from inside edge of "top rail". Attach weight support pad at a point 19" from inner edge of "side rail".
 4. Test section shall withstand a load of 235 lbs. On the lever arm before reaching the point of failure, which shall be considered a rotation of the lever arm in excess of 45 deg.
- E. Air Infiltration (applies only to single acting offset pivot or butt hung entrances): Air infiltration shall be tested in accordance with ASTM E 283, at a pressure differential of 1.567 psf. A single 3'-0" x 7'-0" entrance door and frame shall not exceed .50 cfm per linear foot of perimeter crack. A pair of 6'-0" x 7'-0" entrance doors and frame shall not exceed 1.0 cfm per linear foot of perimeter crack.
 - F. For door hardware, refer to Section 087100.
 - G. Door bottom rail of exterior doors shall have an EPDM blade gasket sweep strip applied with concealed fasteners.
 - H. Corner construction shall consist of mechanical clip fastening, SIGMA deep penetration and fillet welds. Glazing stops shall be hook-in type with EPDM glazing gaskets.
 - I. The door weatherstripping on a single acting offset pivot or butt hung exterior door and frame (single or pairs) shall be thermoplastic elastomer weathering on a tubular shape with a semi-rigid polymeric backing.
 - J. The door weatherstripping on a double acting, center pivoted door and frame (single or pairs) shall be pile cloth. The door bottom rail shall be weathered with an EPDM blade gasket sweep strip applied with concealed fasteners.
 - K. The meeting stiles on pairs of doors shall be equipped with an adjustable astragal.

2.7 FINISH

- A. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: as specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's written instructions.
 1. Fluoropolymer Three-Coat System: Manufacturer's standard three-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color coat and clear topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605-98.
 2. Color: Duranar XL Exotic Seafoam Green (#UC52059XL), where scheduled, or equivalent of Kynar, Tnemec, or approved equal.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where aluminum entrances and storefronts are to be installed and correct any conditions detrimental to the proper and timely completion of

the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

- A. Install aluminum entrance doors and storefront framing in openings prepared under other Sections plumb, square, level, in exact alignment with surrounding work, with proper clearances, and securely and positively anchored to building structure, to meet performance requirements specified herein, in accordance with manufacturer's published instructions and approved submittals.
- B. Use only skilled mechanics for erection, under supervision of manufacturer's representative.
- C. Provide protection against galvanic action. Isolate dissimilar materials with bituminous coating or non-absorptive dielectric tape.
- D. Install aluminum entrance doors, storefront frame, and finish hardware. Carefully fit and adjust doors and hardware to frames and weatherstripping. After erection check and adjust operating hardware for smooth and proper operation.
- E. Set continuous sill members and flashing in a full sealant bed to provide weathertight construction, unless otherwise indicated. Comply with requirements of Section 079200.
- F. Erection Tolerances: Install entrance and storefront systems to comply with the following maximum tolerances.
 - 1. Variation from Plane: Limit variation from plane or location shown to 1/8" in 12'; 1/4" over total length.
 - 2. Alignment: Where surfaces abut in line, limit offset from true alignment to 1/16". Where surfaces meet at corners, limit offset from true alignment to 1/32".
 - 3. Diagonal Measurements: Limit difference between diagonal measurements to 1/8".

3.3 PROTECTION AND CLEANING OF ALUMINUM

- A. Protect finished metal surfaces from damage during fabrication, shipping, storage, and erection until acceptance by City of New York.
- B. Clean metal surfaces promptly after installation, exercising care to avoid damage. Remove excess sealant, dirt, and other substances. Lubricate hardware and other moving parts.

3.4 PROTECTION AND CLEANING OF GLASS

- A. Replace glass that is broken, cracked or chipped prior to time of final acceptance of Project by City of New York.
- B. Clean glass surfaces promptly after installation, exercising care to avoid damage to same.

END OF SECTION

SECTION 087100
DOOR HARDWARE

PART 1 GENERAL:

1.01 GENERAL REQUIREMENTS:

- A. Work of this section, as shown or specified shall be in accordance with the contract documents.

1.02 WORK INCLUDES:

- A. Work of this Section includes all labor, materials, equipment and services necessary to furnish all the finish hardware as shown on the drawings and specified herein.

1.03 RELATED WORK:

- A. General Conditions.
- B. Supplementary Conditions.
- C. Division 1.
- D. Hollow Metal Doors and Frames – Section 08 11 13
- E. Wood doors – Section 08 14 16

1.04 REFERENCES:

- A. American National Standards Institute - ANSI 156.18 - Materials and Finishes.
- B. ANSI A117.1 - Specifications for making buildings and facilities usable by physically handicapped people.
- C. BHMA - Builders Hardware Manufacturers Association.
- D. NFPA - National Fire Protection Association
- E. NFPA 105 - Smoke and Draft Control Door Assemblies.
- F. New York City Building Code.
- G. SDI - Steel Door Institute.
- H. WDI - Wood Door Institute.
- I. AWI - Architectural Woodwork Institute.
- J. NAAM - National Association of Architectural Metal Manufacturers.

1.05 QUALITY ASSURANCE:

- A. Hardware: shall be suitable and adapted for its required use and shall fit its designated location. Should any hardware as shown, specified or required fail to meet the intended requirements or require modification to suit or fit the designated location, determine the

correction or modification necessary and notify the Architect in ample time to avoid delay in the manufacture and delivery of hardware.

- B. Fire rated openings: provide hardware complying with NFPA Standard No. 80 requirements of authorities having jurisdiction.
- C. Hardware Supplier Qualifications: The Hardware Supplier shall have been regularly engaged in the sale and distribution of Finish Hardware for projects of comparable scope and size for a minimum of three (3) years, or seek SER approval. The Hardware Supplier shall have an AHC of the Door and Hardware Institute on staff who will be responsible for overseeing the scheduling, detailing, ordering, and coordinating of Finish Hardware, and shall be available for consultation with the Architect, at no additional cost to the City of New York, during progress of construction. The Hardware Supplier shall be a direct factory authorized distributor for all Finish Hardware items being furnished in accordance with this Specification.

1.06 SUBMITTALS:

- A. Submittals: shall be in accordance with Conditions of the Contract, Division 1, and Specification sections.
- B. Hardware submission: Submit hardware schedule in vertical format as illustrated by the "Sequence and Format for Hardware Schedule" pamphlet published by the Door and Hardware Institute. Schedules which do not comply will be returned for correction before checking.
- C. Hardware schedule shall clearly indicate architect's hardware set and manufacturer of each item proposed.
- D. Hardware Supplier shall provide all product information, wiring diagrams, and electrical data to the Electrical Contractor.
- E. Samples: Submit samples as requested by Architect. Do not proceed with installation until samples have been approved. Approved samples may be installed in the work after substantial completion of work.

1.07 PRODUCT HANDLING:

- A. Pack finish hardware in manufacturer's containers, complete with trimmings, bolts, screws, washers, etc., as required for application. Each container shall bear a suitable label which shall state the quantity and kind of contents of said container, as well as identifying marks relating to the approved Hardware Schedule and its location in the project.
 - 1. Knobs, handles, pulls and other items of finish hardware with easily damaged finishes shall be individually wrapped before placing in containers and with sufficient sheet cloth or cotton-backed paper which shall be adequately secured all as necessary to protect the finishes.
 - 2. Finish hardware shall be delivered, as directed, to the building site or the factories of the various fabricators of metal or wood work to which such hardware is to be applied. Deliver hardware in the order required and in ample time to permit

application at the building, or fabricators' shops, within the time required for the completion of the building.

1.08 JOB CONDITIONS:

- A. Field Service: The hardware supplier shall assign a competent representative, acceptable to the Architect, to be at the job site each time a major shipment of finish hardware is received. Such representative shall assist in "checking in" these shipments and shall secure a receipt covering the contents of each shipment. In addition, such representative shall be available for immediate call to the job site when, in the opinion of the Architect, his presence is necessary.
- B. Templates: Promptly following approval of the Hardware Schedule by the Architect, furnish and deliver template information, to the fabricators, of items to which finish hardware is to be applied.
 - 1. Such deliveries shall be made in ample time to avoid delays in such work of said fabricators. Provide drawings, schedules and detailed information to other trades as necessary for them to accommodate and prepare their work to receive the finish hardware.
- C. Cooperation and Coordination: Prior to the installation of any finish hardware, all parties and trades having responsibility to any of all of the openings for the job, shall meet in a pre-construction meeting, for instruction on the proper installation of finish hardware with the manufacturers representative.
 - 1. Cooperate and coordinate work with that of other trades supplying materials or performing work in contact with, connecting to, underlying, or overlaying the work of this Section.
 - 2. Provide complete data of requirements for work of this Section to those other trades whose work is affected by or dependent upon the work of this Section.
 - 3. Furnish all items to be built into other work in ample time to avoid delaying the progress of such work.
 - 4. Examine all drawings covering the work of this Section and refer to all other drawings, including mechanical and electrical drawings, which may affect the work of this Section or require coordination by this trade.
- D. Existing Conditions: Verify all existing conditions in the field to ensure compatibility with hardware specified in the Hardware Sets herein. Any discrepancies between the existing field conditions and hardware specified shall be brought to the attention of the Architect immediately. Hardware Supplier shall not order any hardware until all discrepancies are rectified and the Architect grants written approval.

PART 2 PRODUCTS:

2.01 GENERAL:

- A. Requirements for design, grade, function, finish, size and other distinctive qualities of each type of finish hardware are indicated herein. Products are identified by using appropriate hardware designation numbers.

2.02 MANUFACTURERS:

- A. Provide hardware as indicated in hardware sets. Products other than those listed in the sets may be considered, provided that they are proven to be of equal quality and have equal performance to those products specified. See product description for each type of product for details on performance and quality requirements. The architect reserves the right to review and approve all proposed equivalents.

2.03 HANGING MEANS:

A. Hinges:

1. In general, where new hinges are to be provided at existing frames, existing condition must be verified before determining which hinge shall be provided so that new hinges will fit existing frame cut out size and locations.
2. Doors up to 60" in height shall be furnished with two hinges. Furnish one additional hinge for each 30" of door height or fraction thereafter.
3. Hinges shall be of types, sizes and materials as required to suit door weights thickness and fire ratings.
4. Unless otherwise specified, hinges shall be heavy weight. Doors over 3'-4" in width shall receive 5 x 4½ .190 gauge hinges.
5. Hinge sizes shall be detailed so that the least amount of projection shall be visible from the frame.
6. Unless otherwise specified, hinges shall have concealed ball bearings (combination anti-friction or oil impregnated) and five (5) knuckles.
7. All hinges shall have non-rising pins.
8. All keyed reverse bevel doors shall be furnished with non-removable pins.
9. Hinge Series: Ives BB1HW series, Stanley or Hager. See hardware sets for sizes.

2.04 MORTISE LOCKSETS AND LATCHSETS:

A. Mortise Locksets:

1. Lock cases to be constructed with a protected leading edge and screw configuration

that limits access to operating parts.

2. Lock cases are to be multi-functional that transform into different functions without opening the lock case.
 3. Lock components to be manufactured of zinc dichromate plated steel. Manufacturers utilizing plastic parts, spacers and/or bushings are not acceptable.
 4. Lock components to incorporate a spring loaded fusible link for Fire/Life Safety. Manufacturers utilizing gravity, fusible link are acceptable.
 5. Latchbolts to have a standard 2 3/4" backset with a full 3/4" throw.
 6. Latchbolts to be non-handed, field reversible without opening the lock case.
 7. Latchbolts to be 2-piece anti-friction, manufactured from stainless steel. Solid latchbolts and/or plastic anti-friction devices are not acceptable.
 8. Cylinders to be secured by a cast stainless steel, dual retainer. Manufacturers utilizing screws and/or stamped retainers are not acceptable.
 9. Manufacturers utilizing an exposed toggle on edge of door as "locked indicator" are not acceptable.
- B. Lever Trim:
1. Lever assembly (external) to be one-piece design attached by threaded bushing. Lever assembly (internal) shall be attached by screwless shank. Lever attachment by common tools (allen nuts and/or set screws) are not acceptable.
 2. Thru-bolt lever assemblies through the door for positive interlock. Manufacturers utilizing a through the door spindle for attachment are not acceptable.
 3. Levers to have independent rotation in both directions.
 4. Spring cages are to be incorporated into the lever assemblies.
 5. Hub blocking plate to be solid, cast stainless steel. Manufacturers utilizing open hub designs are not acceptable.
 6. Spindles to be independent, designed to "break-away" at a maximum of 75psi torque.
- C. Thumbturns:
1. Thumbturn and back-plate to be manufactured from castings and comply with ANSI 117 accessibility standard.
- D. Deadbolts:
1. Deadbolts to be 1 3/4" total length; have standard 1" throw with a minimum 3/4" internal engagement when fully extended.
 2. Deadbolts to be constructed of stainless steel, incorporating a security roller pin with a minimum Rc60 rating for surface hardness.

E. Strikes:

1. Strikes to be non-handed and bridged to ensure dead latching. Manufactures utilizing fillers of any kind for deadlatch engagement are not acceptable.
2. Mounting tabs are to be automatic self adjusting, vertically and horizontally for door bevel and strike alignment.

F. Lock Series & Design: Schlage L Series Heavy Duty Mortise Locks, lever trim as specified in hardware sets.

G. Approved Equals: Falcon MA Series , Sargent 8200 Series.

H. Certifications:

1. Provide mortise locksets that comply with ANSI A156.13, Series 1000, Operational Grade 1 and Security Grade 1 with all standard trims.
2. Provide mortise locksets that comply with UL10C and UBC 7-2 positive pressure requirements.
3. Provide mortise locksets that comply with ANSI/ASTM F476-76 Grade 40, UL Listed for locksets utilizing concealed cylinders.

2.05 EXIT DEVICES:

A. Exit Devices shall be touch bar type, as specified in hardware sets.

1. Furnish stainless steel touch bars on all exit devices
2. Touch bar and touch bar end caps shall overlap the mechanism case.
3. Touch bar sub assembly shall be minimum .160" thick, with minimum .060 supports.
4. Touch bar surface shall be minimum 2-1/4" high x 18" long for 36" doors, and minimum 2-1/4" high x 24" long for doors wider than 36".
5. Exit device touch bars shall be equipped with a fluid sound dampening feature.

B. Furnish exit devices, less bottom rod, on all cross corridor pairs of doors, where doors are for compartmentalization only

C. Rim and Mortise type devices shall have 3/4" throw latch bolt. Surface and Concealed Vertical Rod devices shall have 5/8" throw latch bolts.

1. Latch bolt security deadlocking shall be standard.

D. All fire doors shall receive devices U.L. listed Fire Exit Hardware

E. Furnish roller strikes, which interlock the door to the frame (499F) for all rim devices and surface vertical rod devices.

F. All internal springs shall be compression type.

G. Where lever trim is specified, levers shall match the balance of the project.

1. Escutcheons of all lever trim shall be forged brass or bronze, with (4) thru-bolts

- anchoring trim assembly to exit device chassis
 - 2. Levers shall be solid forged brass or bronze
 - 3. Lever return springs shall be compression type.
 - 4. Cylinders shall be recessed from face of escutcheon.
- H. Lever trim shall be breakaway type. When rotational force of 35 ft.lbs. is applied, lever trim appears to break. Lever trim can be reset to normal function, without disassembly
- 1. Lever shall be protected by a shear pin, which will withstand a rotational force of 55 ft.lbs. before shearing, to prevent further damage to lever. Lever shall not separate from the escutcheon.
- I. Where electrified latch retraction is specified, provide device with powerful continuous duty solenoid to retract the latch bolt(s) for momentary unlocking or for extended periods of time.
- 1. Provide appropriate power supply and power transfers, as required for the application.
 - 2. Use only on fire exit devices when under the control of an automatic fire alarm system.
 - 3. Coordinate with electrical specifications and drawings, and City of New York.
- J. Where electrified trim is specified, provide device with electrically locking (fail safe) or electrically unlocking (fail secure) trim.
- 1. Provide appropriate power supply & power transfer(s), as required for application.
 - 2. Use only on fire exit devices when under the control of an automatic fire alarm system.
 - 3. Coordinate with electrical specifications and drawings, and City of New York..
- K. Furnish all necessary Glass Bead Kits where exit device may interfere with raised glass beads on doors.
- L. Certifications:
- 1. Cycle Testing: Exit devices shall be certified by an independent testing lab for 1,000,000 cycles.
- M. Exit Device Series & Design: Von Duprin 98/99 series exit devices with outside trim as specified in hardware sets.
- N. Approved Equals: Falcon 25 Series, Precision Apex Series.
- 2.06 ORNAMENTAL PANIC HARDWARE:
- A. Ornamental Exit Devices and Exterior Pulls: UL listed devices that have been panic load tested for use on all-glass entrance doors and fabricated principally from 1-1/4 inch

diameter satin finished stainless steel tubing. Operation: The top latch bolt of the panic device shall be retracted by pushing the interior "L" shaped crash bar. In addition a built-in dogging device shall be provided which keeps the latch bolt in the retracted position and the crash bar becomes fixed. An exterior key cylinder for entry shall also be provided with each device.

1. Product Reference: Blumcraft; H-100F Panic Device x Full Height F-Handle, Dorma, or PRL on Exterior.

2.07 CLOSERS:

- A. All surface closers shall exceed ANSI A156.4 Grade 1 requirements in all aspects as called for below. All closers shall have certification by an independent testing laboratory of 10,000,000 cycles without failure.
- B. Closer cylinders shall be cast iron. Closer pinions shall be dual heat treated. Pinion and piston shall be steel alloy. Piston diameter shall be minimum 1-1/2".
- C. Closers shall be barrier free with spring tension adjustable from size 1 to size 5.
- D. Closers shall maintain control of the door in all conditions. Closers shall have 3 non critical adjusting valves: latch, main and backcheck. Backcheck shall take affect at 45 (AVB) degrees of opening for parallel arm closers and 70 degrees for regular arm closers. Closers with pressure relief valves are not acceptable.
- E. All closers shall have forged main arms. Forearms of parallel arm closers shall be forged. Parallel arm brackets shall be forged. All parallel arm joints shall have bronze bushings with minimum 5/8" diameter pins. Cylinders, arms, brackets and mounting plates shall be powder coated.
- F. Provide all plates, brackets and special templates when needed for interface with particular header, door and wall conditions and neighboring hardware. Consult factory for special template ("ST" suffix to closer number) pricing.
- G. All closers shall be installed so that closer bodies are positioned on room side of doors to and from corridors. Out-swing doors shall have an extra heavy duty parallel arm (EDA). Parallel arm shall be used on connecting doors between rooms.
- H. All exterior closers shall have all weather fluid that does not require seasonal adjustment to control speed of door, and shall exhibit the same viscosity from -30 ° F to +120° F.
- I. All closers shall have a powder coated aluminum finish on cylinder, arm and accessories. There shall be a full metal, powder coated cover.
- J. Furnish all brackets, drop plates and any other necessary hardware required to insure proper installation.
- K. All Closers shall comply with UL 10C requirements for positive pressure testing.
- L. All closers shall be of one manufacturer's products. All closers shall be inspected after installation by a factory representative to insure proper adjustment and operation.

- M. Closer Series: LCN 4011/4111 series.
- N. Approved Equals: Falcon SC71 Series , Sargent 281 Series

2.08 FLOOR CLOSERS:

- A. Shall be heavy duty model 27 (offset) or model 28 (center hung).
- B. All closers shall be handed.
- C. Choose appropriate functions and strengths to accommodate lead lining, extra high traffic, fire rating, oversized/heavy doors, special application doors.
- D. Closers shall have separate and independent checking valves, to control latch speed, closing speed and adjustable hydraulic backcheck.
- E. All single acting closers shall have a built in dead stop feature.
- F. All closers to have one piece spindle assembly.
- G. Extra heavy duty closers shall have a minimum of two thrust bearings and one needle bearing.
- H. Closers shall not have compression spring.
- I. Approved Equals: Dorma BTS 75 Series, Rixson or LCN.

2.09 DOOR STOPS:

- A. Unless otherwise noted, all door stops shall be wall mounted with concealed fasteners Ives WS407CCV/CVX series. Where wall stops will not function for the application, furnish floor mounted stops Ives FS436/438 series, Rockwood or Burns .

2.10 OVERHEAD STOPS:

- A. Overhead Stops: Stainless steel. Non-plastic mechanisms and finished metal end caps. Provide field-changeable hold-open, friction and stop-only functions. Coordinate templates for door and wall conditions and neighboring hardware. Furnish drop plates at locations where regular arm closer are used in conjunction with overhead stops. See hardware sets for specific model numbers.

2.11 PROTECTION PLATES:

- A. All kick plates and mop plates unless otherwise noted shall be 8" high x 2" less door width (LDW), beveled three sides x .050 thick

2.12 FLUSH BOLTS AND COORDINATORS:

- A. Manual Flush Bolts: Shall be Ives FB458/FB358 series, Rock wood, or Berns, furnished with DP2 dustproof strikes for all bottom bolts. Top bolts shall be furnished with proper extensions to allow for easy operation.
- B. Self Latching Flush Bolts: Shall be Ives FB51P/FB61P series, furnished with DP2 dustproof strikes for all bottom bolts. Furnish wear plates as required.
- C. Automatic Flush Bolts: Shall be Ives FB31P/FB41P series, furnished with DP2 dustproof strikes for all bottom bolts. Furnish wear plates as required.
- D. Coordinators: Shall be Ives COR series, Rock wood or Burns. Furnish all fillers, mounting brackets, carry bars and special cut outs for use with exit devices, as

required. Finish shall be black.

2.13 MAGNETIC HOLDERS:

- A. Magnetic holders to be field selectable for 12VDC 0.03 amps; 24VAC/24DC, 0.02 amps; 120VAC, 0.02 amps.
- B. Housing shall be cast metal. Armature bracket shall be cast metal.
- C. Provide armature extensions and ball coupler assemblies as necessary to suit application.
- D. Holding force shall be 35lbs.

2.14 POWER TRANSFERS:

- A. Provide electric power transfers where power must be transferred from the frame to the door for electrified door hardware.
- B. Units must be completely concealed when the door is in the closed position.
- C. Units must not prohibit door from opening to its maximum potential (up to 180 degrees)
- D. Units must be capable of housing up to 10 24 gauge wires with a rating of 24VDC, 1 ampere.
- E. Approved manufacturer: Von Duprin EPT-10, Falcon, or ABH

2.15 POWER SUPPLIES:

- A. Shall be provided, as necessary, where electrified hardware components are specified.
- B. Units must interface to all designated electrical security components with no additional hardware.
- C. Power supplies shall be Underwriter Laboratories (UL) listed for general purpose use tested to meet UL1012 specifications.
- D. Power supplies shall have 12/24VDC field selectable output voltage, with jumper.
- E. Output current shall be at least 2 AMP at 12VDC and 2 AMP at 24 VDC, or as required for electrified load.
- F. Power supply Optional Control Boards: 2 relay electric latch retraction panic device control board, 4 relay distribution board, 4 relay distribution board with logic, field configurable for time delay function, automatic operators and/or security interlock, 8 fused output distribution board, 8 PTC output distribution board.
- G. Power supply output shall be terminated by interface to an emergency alarm system where specified. Outputs shall be configurable as switched or unswitched when signal is provided.
- H. Power supply voltage shall be filtered and regulated.
- I. The power supply shall be housed in a standard NEMA 1 enclosure with additional space for up to (4) 4 Amp/hour batteries providing battery backup when required.
- J. Approved manufacturer: Schlage Electronics PS900 series, Falcon or Sargent, to suit electrified locking amperage requirements.

2.16 ELECTRIC STRIKES:

- A. Electric strikes shall be non-handed
- B. Provide voltage as required to suit project
- C. All electric strikes shall be provided as "Fail Secure", and shall remain locked upon loss of power.
- D. Electric strikes shall be furnished with two-piece wire plug connectors for easy installation and removal if servicing is required.
- E. Electric strikes shall be constructed of stainless steel and capable of accepting up to a ¾" throw latch bolt.
- F. Electric strikes shall be UL listed for Burglary-Resistant and Electric Strike for fire doors and frames.
- G. Electric strikes shall meet the requirements of ANSI A156.5, Grade 1, 1992.
- H. Approved manufacturer: Von Duprin 6000 series heavy duty electric strikes, Folger Adem, or HES, to suit locking device. See hardware sets for specific model numbers.

2.17 WEATHER SEALS AND THRESHOLDS:

- A. Weather Seals and Thresholds: Zero, Pemko or Reese as Scheduled.
- B. Perimeter seals: shall be of compressible black Neoprene material. Housing shall be solid alum stock. Furnish seals on three sides of the opening. Coordinate the amount of material is required in each specified opening.
- C. Seals shall be mechanically fastened to door frame.
- D. Door sweeps: shall be extruded aluminum and black neoprene sweep.
 - 1. Fasten door sweeps with wood screws for wood doors and sheet metal screws for hollow metal and fiberglass reinforced doors.
 - 2. Door sweep shall be 1 ¼" in overall height with a ½" high neoprene sweep.
 - 3. Mount door sweep on the exterior side of the door, with the neoprene engaged with the threshold or finish floor.
- E. Thresholds: shall be extruded aluminum meeting ADA requirements. They shall not exceed ¼" in height with a wall thickness of .125" unless specified otherwise. Coordinate templates for any and all hardware, which may require cutouts or slots within the threshold for the proper installation of that hardware.
 - 1. Furnish threshold with non-slip epoxy abrasive bonded within the grooves of the threshold.
 - 2. Thresholds shall extend a minimum of 1" past the exterior face of the door, and have returned closed ends.
 - 3. Set all thresholds in grout, and seal with silicone caulk.

4. Fasten thresholds with expansion shield mounting at masonry sub-straight locations, and wood screws at wood substrate locations.

2.18 KEY REQUIREMENTS:

- A. Final keying: requirements to be determined by the City of New York. A meeting must take place between the City of New York, the end user, the City of New York's representative, and the hardware distributor prior to cylinders being ordered, to establish the keying requirements and required keyway.
- B. Key System: Tie into the existing key system.
- C. Provide Concealed Key Control (CKC) keyset symbol stamping on the side of each master keyed core. Provide visual key control for all operating and master keys.
- D. Construction keying: provide construction master keying.
- E. Provide: Three (3) change keys for each differently keyed lock. Provide (3) control keys for construction cores, and (3) control keys for permanent cores. Provide 10 copies of each level Master Key, Grand Master Key, and/or Great Grand Master Key. Permanent keys and cores: secured shipment direct from point of origination to the City of New York. Provide bitting list, ship direct from point of origin to the City of New York upon project completion.
- F. Provide a key control system including envelopes. Labels, tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet, all as recommended by system manufacturer, with capacity for 150 percent of the number of locks required for the project.
 1. Provide four hinged panel type cabinet for wall mounting.

PART 3 EXECUTION:

3.01 PREPARATION:

- A. Ensure that walls and frames are square and plumb before hardware installation.
- B. The installer shall notify the architect, in writing, of all unacceptable condition that could affect the proper operation of the finish hardware.
- C. Locate hardware per SDI-100 and applicable building, fire, life-safety, accessibility, and security codes.
- D. Where new hardware is to be installed near existing doors/hardware scheduled to remain, match locations of existing hardware.
- E. Existing frames and doors scheduled to receive new hardware: carefully remove existing hardware and turn over to City of New York. Patch and fill wood frames and doors with solid wood stock or dowel material before cutting for new hardware. Do not reuse existing screw holes fill and re-pilot.

3.02 INSTALLATION:

- A. Install hardware per manufacturer's instructions and recommendations. Do not install surface-mounted items until finishes have been completed on substrate. Set units level, plumb and true to line and location. Adjust and reinforce attachment substrate for proper installation and operation.
 1. Unless otherwise specified, locate all hardware in accordance with the recommended

locations for builders hardware for standard doors and frames as published by the Door and Hardware Institute.

2. Gaskets: install jamb-applied gaskets before closers, overhead stops, rim strikes, etc. Install sweeps across bottoms of doors before astragals, cope sweeps around bottom pivots, trim astragals to tops of sweeps.
3. Unless otherwise specified or detailed, install thresholds with the bevel in vertical alignment with the outside door face. Notch and closely fit thresholds to frame profile. Set thresholds in full bed of sealant.
4. When hardware is to be attached to existing metal surface and insufficient reinforcement exists, use RivNuts, NutSerts or similar anchoring device for screws.
5. Locate floor stops not more than 4 inches from the wall.
6. Drill pilot holes for fasteners in wood doors and/or frames.
7. Shim doors as required to maintain proper operating clearance between door and frame.
8. Use only fasteners supplied by or approved by the manufacturer for each respective item of hardware.
9. Lubricate and adjust existing hardware scheduled to remain. Carefully remove and give to City of New York items not scheduled for reuse.
10. Where necessary, adjust doors and hardware as required to eliminate binding between strike and latchbolt. Doors should not rattle.
11. Install door closers on corridor side of lobby doors, room side of corridor doors, and stair side of stairways.
12. Adjust spring power of door closers to insure exterior and fire rated doors will consistently close and latch doors under existing conditions. Adjust all other door closers to insure opening force does not to exceed 5 lbs.
13. Adjust "sweep", "latch", & "back check" valves on all door closers to properly control door through out the opening and closing cycle. Adjust total closing speed as required to comply with all applicable state and local building codes.
14. Deliver to the City of New York 1 complete set of installation and adjustment instructions, and tools as furnished with the hardware.

3.03 QUALITY ASSURANCE:

- A. After installation has been completed, the hardware supplier and manufacturers representative for locksets, door closers, exit devices, and overhead stops shall check the project and verify compliance with installation instructions, adjustment of all hardware items, and proper application according to the approved hardware schedule. Hardware supplier shall submit a list of all hardware that has not been installed correctly.

- B. After installation has been completed, the hardware supplier and manufacturers representative shall meet with the City of New York to explain the functions, uses, adjustment, and maintenance of each item of hardware.

3.04 ADJUSTING AND CLEANING:

- A. Adjust and check for proper operation and function. Replace units which cannot be adjusted to operate freely and smoothly.
- B. At final completion, and when H.V.A.C. equipment is in operation, installer shall make final adjustments to and verify proper operation of all door closers and other items of hardware. Lubricate moving parts with type lubrication recommended by the manufacturer.
- C. All hardware shall be left clean and in good operation. Hardware found to be disfigured, defective, or inoperative shall be repaired or replaced.
- D. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy of space or area, return to work during week prior to acceptance or occupancy, and make final check and adjustment of hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors.

3.05 DEMONSTRATION:

- A. Demonstrate electrical, electronic and pneumatic hardware systems, including adjustment and maintenance procedures.

3.06 PROTECTION:

- A. Cover installed hardware, protect from paint, cleaning agents, weathering, carts/barrows, etc. Remove covering materials and clean hardware just prior to substantial completion.
- B. Clean adjacent wall, frame and door surfaces soiled from installation/reinstallation process.

3.07 SCHEDULE OF FINISH HARDWARE:

- A. See door schedule in drawings for hardware set assignments for basis of design only.
- B. Hardware Group No. 01 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
2	EA POWER TRANSFER	EPT-10	689	VON
2	EA CONTINUOUS HINGE	112HD EPT	628	IVE
2	EA PANIC HARDWARE	HD-EL-RX-LC-3549A-NL-OP	626	VON
2	EA RIM CYLINDER	20-021	626	SCH
2	EA LONG DOOR PULL	9265F X HEIGHT AS PER ARCHITECTS DETAIL	630	IVE
2	EA AUTO OPERATOR	SW200I SERIES (FURNISHED BY AUTO OPERATOR SUPPLIER	689	MIS
1	EA THRESHOLD	656A	AL	ZER
1	EA POWER SUPPLY	PS914-2RS	GRY	VON
2	EA ACTUATOR, WALL MOUNT	8310-853T		LCN
2	EA FLUSH MOUNT BOX	8310-867F		LCN

1	SET WEATHERSTRIPPING	BY DOOR MANUFACTURER	AL
1	EA CARD READER	BY SECURITY SUPPLIER	
1	EA CUSTOM	WIRING DIAGRAM (GC TO COORDINATE)	

OPERATIONAL DESCRIPTION:

1. DOORS NORMALLY CLOSED AND LOCKED AFTER HOURS. POWER TO EXTERIOR WALL ACTUATOR IS POWERED OFF.
2. DURING DAYTIME HOURS DOORS ARE MANUALLY DOGGED DOWN ALLOWING DOORS TO OPERATE AS PUSH/PULL. DOOR MAY ALSO BE OPENED AUTOMATICALLY WHEN OUTSIDE WALL ACTUATOR IS DEPRESSED
3. FREE EGRESS AT ALL TIMES VIA THE EXIT DEVICE.
4. WHEN DOORS ARE LOCKED ENTRY IS EITHER BY PROPER CREDENTIAL AT CARD READER WHICH SIGNALS LATCHES OF EXIT DEVICE TO OPEN AND ALLOW ENTRY. THE CARD READER WILL ALSO SIGNAL THE EXTERIOR WALL ACTUATOR TO POWER ON GIVING THE OPTION OF OPENING THE DOOR AUTOMATICALLY BY DEPRESSING THE ACTUATOR BUTTON. DPDT FURNISHED BY SECURITY.
5. AUTO OPERATOR IS TIED INTO THE BUILD SMOKE EVAC SYSTEM, UPON ACTIVATION DOORS WILL "BLOW-OPEN" AND REMAIN OPEN UNTIL SIGNAL IS RESET. COORDINATE WITH SMOKE EVAC SYSTEM AND ELECTRICAL

C. Hardware Group No. 01A Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
2	EA CONTINUOUS HINGE	112HD	628	IVE

1	SET SEALS	188FS	BLK	ZER
2	EA DOOR BOTTOM	369A	AL	ZER

DOOR BOTTOMS FOR USE WITH TAG 10BB

P. Hardware Group No. 12 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
1	SET PIVOT SET	7226	626	IVE
1	EA PIVOT	7226 INT	626	IVE
1	SET DOOR PULL	RM3300-66" O.A HEIGHT	630	ROC
1	EA SURFACE CLOSER	4041XP EDA	689	LCN
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	770SP	AL	ZER
1	EA DOOR BOTTOM	369A	AL	ZER

Q. Hardware Group No. 13 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
6	EA HINGE	5BB1HW 4.5 X 4.5 NRP	652	IVE
1	EA AUTO FLUSH BOLT	FB31B	630	IVE
1	EA CLASSROOM LOCK	L9070P 03A	626	SCH
1	EA COORDINATOR	COR X FL	628	IVE
2	EA MOUNTING BRACKET	MB SERIES	600	IVE
2	EA SURFACE CLOSER	4041XP EDA	689	LCN
4	EA KICK PLATE	8400 8" X 1" LDW	630	IVE
2	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	770SP	AL	ZER
2	SET MOUNTING PLATE	770SPB	AL	ZER
2	EA DOOR BOTTOM	365AA	AL	ZER
1	EA THRESHOLD	656A	AL	ZER

R. Hardware Group No. 14 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1 4.5 X 4.5	652	IVE
1	EA CLASSROOM LOCK	L9070P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP	689	LCN
1	EA MOP PLATE	8400 8" X 1" LDW	630	IVE
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	188S	BLK	ZER
1	SET SEALS	770SP	AL	ZER

1. MOP PLATE FOR TAG 111A ONLY (NO KICKPLATE).

2. 770SP FOR USE WITH TAG 111A ONLY.

S. Hardware Group No. 15 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
8	EA HINGE	5BB1 4.5 X 4.5	652	IVE
2	EA MANUAL FLUSH BOLT	FB458	626	IVE
1	EA DUST PROOF STRIKE	DP2	626	IVE
1	EA CLASSROOM LOCK	L9070P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP	689	LCN
2	EA KICK PLATE	8400 8" X 1" LDW	630	IVE
2	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	188S	BLK	ZER
2	EA DOOR BOTTOM	365AA	AL	ZER
1	EA SADDLE	AS PER ARCHITECTS DETAIL	AL	

PROVIDE TOP ROD LENGTH AS REQUIRED FOR DOOR HEIGHT

T. Hardware Group No. 16 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA CLASSROOM LOCK	L9070P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP EDA	689	LCN
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	188S	BLK	ZER

U. Hardware Group No. 17 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
6	EA HINGE	5BB1HW 4.5 X 4.5 NRP	652	IVE
2	EA FIRE EXIT HARDWARE	9947L-F-LBR 996L- 03 LEVER	626	VON
2	EA RIM CYLINDER	20-021	626	SCH
1	EA ASTRAGAL	555AA X 55AA	AL	ZER
2	EA SURFACE CLOSER	4041XP EDA	689	LCN
2	EA MOP PLATE	8400 8" X 1" LDW	630	IVE
2	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	770SP	AL	ZER
2	EA DOOR BOTTOM	369A	AL	ZER
1	EA THRESHOLD	657A X TYPE 3	AL	ZER

V. Hardware Group No. 18 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
6	EA HINGE	5BB1HW 4.5 X 4.5	652	IVE
2	EA TWO POINT LATCH	237L-BE-F X03 LEVER	626	VON
2	EA SURFACE CLOSER	4041XP SCUSH	689	LCN
2	EA KICK PLATE	8400 8" X 1" LDW	630	IVE
1	SET SEALS	188S	BLK	ZER

W. Hardware Group No. 19 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1 4.5 X 4.5	652	IVE
1	EA PRIVACY LOCK	L9496P 03A L583-363	626	SCH
1	EA MOP PLATE	8400 8" X 1" LDW	630	IVE
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
3	EA SILENCER	SR64	GRY	IVE

X. Hardware Group No. 20 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1 4.5 X 4.5	652	IVE
1	EA OFFICE LOCK	L9050P 03A L583-363	626	SCH
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
3	EA SILENCER	SR64	GRY	IVE

Y. Hardware Group No. 21 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1 4.5 X 4.5	652	IVE
3	EA HINGE	5BB1HW 5 X 4.5	652	IVE
1	EA STOREROOM LOCK	L9080P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP	689	LCN
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
3	EA SILENCER	SR64	GRY	IVE

HEAVYWEIGHT 5 X 4.5 HINGES FOR TAG 118A

Z. Hardware Group No. 22 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
8	EA HINGE	5BB1HW 4.5 X 4.5 NRP	652	IVE
2	EA POWER TRANSFER	EPT-10	689	VON
2	EA FIRE EXIT HARDWARE	EL-9947L-F-LBR 996L-03 LEVER	626	VON
1	EA MORTISE CYLINDER	20-001 1-1/4" X CAM AS REQUIRED	626	SCH
2	EA RIM CYLINDER	20-021	626	SCH
1	EA ASTRAGAL	555AA X 55AA	AL	ZER
2	EA AUTO OPERATOR	SW200I SERIES (FURNISHED BY AUTO OPERATOR SUPPLIER)	689	MIS
2	EA KICK PLATE	8400 8" X 1" LDW	630	IVE
2	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	770SP	AL	ZER
2	EA DOOR BOTTOM	369A	AL	ZER
1	EA THRESHOLD	657A X TYPE 3	AL	ZER
1	EA POWER SUPPLY	PS914-2RS	GRY	VON
1	EA KEYSWITCH	653-04-L2	630	SCE
2	EA ACTUATOR, WALL MOUNT	8310-853T		LCN

2	EA	FLUSH MOUNT BOX	8310-867F	LCN
1	EA	CUSTOM	WIRING DIAGRAM (GC TO COORDINATE)	

OPERATIONAL DESCRIPTION:

1. DOORS NORMALLY CLOSED AND LATCHED (THEY MAY ALSO BE LOCKED VIA THE OUTSIDE LEVER HANDLE WITH KEY).
2. FREE EGRESS AT ALL TIMES VIA THE EXIT DEVICE.
3. POWER TO THE OUTSIDE WALL ACTUATOR IS GRANTED BY USE OF KEYSWITCH IN WALL. WHEN ACTUATOR IS POWERED ON THE DOOR MAY ALSO BE OPENED AUTOMATICALLY.
4. AUTO OPERATOR IS TIED INTO THE BUILD SMOKE EVAC SYSTEM, UPON ACTIVATION DOORS WILL "BLOW-OPEN" AND REMAIN OPEN UNTIL SIGNAL IS RESET. COORDINATE WITH SMOKE EVAC SYSTEM AND ELECTRICAL

AA. Hardware Group No. 23 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1HW 4.5 X 4.5	652	IVE
1	EA CLASSROOM LOCK	L9070P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP	689	LCN
1	EA MOP PLATE	8400 8" X 1" LDW	630	IVE
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	188S	BLK	ZER

BB. Hardware Group No. 24 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA STOREROOM LOCK	L9080P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP	689	LCN
1	EA SURFACE CLOSER	4041XP EDA	689	LCN
1	EA MOP PLATE	8400 8" X 1" LDW	630	IVE
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	188S	BLK	ZER
1	EA SADDLE	AS PER ARCHITECTS DETAIL	AL	

1. PROVIDE 4041XP CLOSER AT TAG 127A
2. TAGS 127A & 128B WILL HAVE LESS INSIDE TRIM REFER TO ARCHITECTS DETAIL

CC. Hardware Group No. 25 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA CLASSROOM LOCK	L9070P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP EDA	689	LCN
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE

1	EA	WALL STOP	WS407CCV	630	IVE
1		SET SEALS	770SP	AL	ZER
1	EA	DOOR BOTTOM	369A	AL	ZER
1	EA	THRESHOLD	656A	AL	ZER

DD. Hardware Group No. 26 Provide each SGL door(s) with the following:

Qty		Description	Model Number	Finish	Mfr
1		SET PIVOT SET	7255	626	IVE
1	EA	CASTER	10600	626	RIX
1	EA	MORTISE DEADBOLT	L460P L583-363	626	SCH
2	EA	FLUSH CUP PULL	BF97	630	ROC
1	EA	OVERHEAD HOLDER	100H	630	GLY

PROVIDE CASTER FOR DOORS OVER 4/0 IN WIDTH

EE. Hardware Group No. 27 Provide each PR door(s) with the following:

Qty		Description	Model Number	Finish	Mfr
8	EA	HINGE	5BB1HW 4.5 X 4.5 NRP	652	IVE
2	EA	FIRE EXIT HARDWARE	9947L-F-LBR 996L- 03 LEVER	626	VON
2	EA	RIM CYLINDER	20-021	626	SCH
1	EA	ASTRAGAL	555AA X 55AA	AL	ZER
2	EA	SURFACE CLOSER	4041XP EDA	689	LCN
2	EA	KICK PLATE	8400 8" X 1" LDW	630	IVE
2	EA	WALL STOP	WS407CCV	630	IVE
2		SET SEALS	770SP	AL	ZER
2		SET MOUNTING PLATE	770SPB	AL	ZER
2	EA	DOOR BOTTOM	369A	AL	ZER
1	EA	THRESHOLD	657A X TYPE 3	AL	ZER

FF. Hardware Group No. 28: - NOT USED

Qty		Description	Model Number	Finish	Mfr
-----	--	-------------	--------------	--------	-----

GG. Hardware Group No. 29 Provide each SL door(s) with the following:

Qty		Description	Model Number	Finish	Mfr
1		SET SLIDING DOOR HARDWAR	5300	AL	GRA
1	EA	SLIDING DOOR LOCK	2002 CPDL-3	626	ACC
1	EA	MORTISE CYLINDER	20-001 1-1/4" X CAM AS REQUIRED	626	SCH
1	EA	FLUSH CUP PULL	S2002-C (OUTSIDE)	626	ACC
1	EA	FLUSH CUP PULL	S2002-T (INSIDE)	626	ACC

HH. Hardware Group No. 30 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
6	EA HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
2	EA MANUAL FLUSH BOLT	FB458	626	IVE
1	EA DUST PROOF STRIKE	DP2	626	IVE
1	EA STOREROOM LOCK	L9080P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP SCUSH	689	LCN
1	EA WALL STOP	WS407CCV	630	IVE
1	SET SEALS	770SP	AL	ZER
2	EA DOOR BOTTOM	365AA	AL	ZER
1	EA THRESHOLD	656A	AL	ZER

II. Hardware Group No. 31: - NOT USED

Qty	Description	Model Number	Finish	Mfr
-----	-------------	--------------	--------	-----

JJ. Hardware Group No. 32 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
6	EA CAM-LIFT HINGES	BY DOOR MANUFACTURER		
2	EA MANUAL FLUSH BOLT	FB358	626	IVE
1	EA DUST PROOF STRIKE	DP2	626	IVE
1	EA PASSAGE SET	L9010 03A	626	SCH
2	EA OVERHEAD STOP	100S	630	GLY
2	EA KICK PLATE	8400 8" X 1" LDW	630	IVE
2	EA WALL STOP	WS407CCV	630	IVE
1	EA THRESHOLD	656A	AL	ZER

STC 51 DOOR ASSEMBLY
ACOUSTIC SEALS BY ACOUSTICAL DOOR MANUFACTURER

KK. Hardware Group No. 33 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1HW 4.5 X 4.5	652	IVE
1	EA FIRE EXIT HARDWARE	99L-BE 996L-BE - 03 LEVER	626	VON
1	EA SURFACE CLOSER	4041XP EDA	689	LCN
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
3	EA SILENCER	SR64	GRY	IVE

LL. Hardware Group No. 34 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
2	SET PIVOTS	BY DOOR MANUFACTURER		
2	EA DBL DUMMY TRIM	L0172 03A	626	SCH
2	EA ROLLER LATCH	RL1152 (TOP MOUNT)	626	IVE
2	EA DOME STOP	FS436	626	IVE

MM. Hardware Group No. 35 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
1	SET PIVOTS	BY DOOR MANUFACTURER		
1	EA OFFICE LOCK	L9050P 03A L583-363	626	SCH
1	EA DOME STOP	FS436	626	IVE

NN. Hardware Group No.36 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
	SET ALL HARDWARE	BY DOOR MANUFACTURER		IVE

OO. Hardware Group No. 37 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
6	EA HINGE	5BB1 4.5 X 4.5	652	IVE
2	EA MANUAL FLUSH BOLT	FB458	626	IVE
1	EA DUST PROOF STRIKE	DP2	626	IVE
1	EA CLASSROOM LOCK	L9070P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP	689	LCN
2	EA KICK PLATE	8400 8" X 1" LDW	630	IVE
2	EA WALL STOP	WS407CCV	630	IVE
2	EA SILENCER	SR64	GRY	IVE

PP. Hardware Group No.38 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA STOREROOM LOCK	L9080P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP EDA	689	LCN
1	EA KICK PLATE	8400 8" X 2" LDW	630	IVE
1	EA WALL STOP	WS407CCV	630	IVE
3	EA SILENCER	SR64	GRY	IVE

QQ. Hardware Group No. 39 Provide each SGL door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
3	EA HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA STOREROOM LOCK	L9080P 03A	626	SCH
1	EA SURFACE CLOSER	4041XP EDA	689	LCN
1	EA WALL STOP	WS407CCV	630	IVE
3	EA SILENCER	SR64	GRY	IVE

RR. Hardware Group No. 40 Provide each PR door(s) with the following:

Qty	Description	Model Number	Finish	Mfr
6	EA HINGE	5BB1 4.5 X 4.5 NRP	652	IVE
2	EA MANUAL FLUSH BOLT	FB458	626	IVE

1	EA	DUST PROOF STRIKE	DP2	626	IVE
1	EA	STOREROOM LOCK	L9080P 03A	626	SCH
1	EA	SURFACE CLOSER	4041XP SCUSH	689	LCN
1	EA	OVERHEAD STOP	100S	630	GLY

This Page Intentionally Left Blank.

SECTION 088000

GLASS AND GLAZING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the glass and glazing as shown on the drawings and/or specified herein, including but not limited to glazing of the following:
 - 1. Doors.
 - 2. Entrances.
 - 3. Storefront framing.
 - 4. Interior borrowed lites.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Hollow metal doors and frames - Section 081113.
- F. Aluminum entrances and storefronts - Section 084313.
- G. Demountable partitions - Section 102219.

1.4 REFERENCES

- A. Comply with the recommendations of the following references unless more stringent requirements are indicated herein.
 - 1. FGMA Publications: FGMA Glazing Manual.
 - 2. LSGA Publications: LSGA Design Guide.
 - 3. SIGMA Publications: TM-3000 Vertical Glazing Guidelines.

4. Safety Glass: Products complying with ANSI Z97.1 and testing requirements of 16 CFR Part 1201.
5. Fire-Resistive Glazing Products for Door Assemblies: Products identical to those tested per ASTM E 152, labeled and listed by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
6. Fire-Resistive Glazing Products for Window Assemblies: Products identical to those tested per ASTM E 163, labeled and listed by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
7. 16 CFR 1201, Safety Standards for Architectural Glazing, Sealed Insulating Glass Manufacturing Association.
8. ASTM C 920, Elastomeric Joint Sealant.
9. Insulating Glass Criteria - IGCC International Glass Cert. Council.

1.5 PERFORMANCE REQUIREMENTS

- A. General: Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Glass Design: Glass thicknesses indicated on drawings and/or specified herein are minimums and are for detailing only. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites for various size openings in nominal thicknesses indicated, but not less than thicknesses and in strengths (annealed or heat treated) required to meet or exceed the following criteria:
 1. Glass Thicknesses: Select minimum glass thicknesses to comply with ASTM E 1300, according to the following requirements:
 - a. Specified Design Wind Loads: 30 psf or greater if required by Code.
 2. Probability of Breakage for Vertical Glazing:
 - a. 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.
 - b. 1 lite per 1000 for lites installed 15 degrees from the vertical and under wind action.
 - c. Load Duration: 60 seconds or less.
 3. Maximum Lateral Deflection: For glass supported on all four edges, provide thickness required that limits center deflection at design wind pressure to 1/100 times the short side length or 0.5", whichever is less.
 4. Thermal Movements: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

- a. Temperature Change (Range): 120 deg. F ambient; 180 deg F, material surfaces.
- 5. Thermal Solar Performance: See Article 2.2 herein.
- C. Glass units shall be annealed, heat strengthened, fully tempered or laminated where required to meet wind and/or snow loads and safety glazing requirements, as shown, specified or recommended by the glass fabricator and as required by the prevailing Building Code.

1.6 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
 - 1. A completed ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications. Information to be supplied includes:
 - a. The amount of recycled content in the insulation product(s). Identify post-consumer and/or post-industrial recycled content.
 - b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the products.
 - c. Provide material costs for the materials included in the contractor's or subcontractor's work. Material cost does not include costs associated with labor and equipment.
 - 2. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the amount of recycled content.
 - 3. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as per the QUALITY ASSURANCE requirements of this Section. Cut sheets shall be submitted with the Contractor or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.
 - 4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: Submit manufacturer's printed product data, specifications, standard details, glazing instructions, use limitations and recommendations for each material used. Provide certifications that materials and systems comply with specified requirements, including performance requirements.
- C. Submit compatibility and adhesion test reports from sealant manufacturer indicating materials were tested for compatibility and adhesion with glazing sealant, as well as other glazing materials including insulation units.
- D. Initial Selection Samples: Submit samples of each glass and glazing material showing complete range of colors, textures, and finishes available for each material used.

1. Submit complete range of samples of standard colors and patterns for ceramic frits at insulating glass.
 2. Submit complete range of samples of sandblasted glass showing variations of grits and opacity achieved.
- E. Verification Samples: Submit representative samples of each glass and glazing material that is to be exposed in completed work. Show full color ranges and finish variations expected. Provide glass samples having minimum size of 144 sq. in. and 6 in. long samples of sealants and glazing materials; all samples shall bear the name of the manufacturer, brand name, thickness, and quality.
- F. Calculations: Provide wind load charts, calculations, thermal stress analysis, and certification of performance of this work. Indicate how design requirements for loading and other performance criteria have been satisfied. Document shall be signed and sealed by a Professional Engineer licensed in the State of New York.
- G. Test Reports: Provide certified reports for specified tests.
- H. Warranties: Provide written warranties as specified herein.

1.7 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. LEED BUILDING Performance Criteria: The following criteria are REQUIRED for the products included in this section:
1. Metal members shall contain a minimum of 35% (combined) post-industrial/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the Submittal Requirements of this Section.
 2. Metal members fabricated within, and containing raw materials extracted within, 500 miles (by air) of the project site shall be documented in accordance with the Submittal Requirements above.
 3. Adhesives or sealants used for work in this section shall meet the requirements of Section 018419: Volatile Organic Compound (VOC) Limits For Adhesives, Sealants, Paints and Coatings (LEED BUILDING), where applicable.
 4. Certification of these products shall be in accordance with the LEED BUILDING Submittal Requirements of this Section.
- C. Source: For each glass and glazing type required for work of this Section, provide primary materials which are products of one manufacturer. Provide secondary or accessory materials which are acceptable to manufacturers of primary materials.

- D. Installer: A firm with a minimum of three years' experience in type of work required by this Section and which is acceptable to manufacturers of primary materials; and with a successful record of in-service installations similar in size and scope to this Project.
- E. Glass Thickness: Glass thicknesses shown on drawings and/or specified herein are minimum thicknesses. Determine and provide size and thickness of glass products that are certified to meet or exceed performance requirements specified in this Section.
- F. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated.
 - 1. GANA Publications: GANA'S "Glazing Manual" and "Laminated Glass Design Guide."
 - 2. IGMA Publications: IGMA TM-3000, "Vertical Glazing Guidelines for Sealed Insulating Glass Units."
- G. Glazing for Fire-Rated Door Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252.
- H. Glazing for Fire-Rated Window Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 257.
- I. Safety Glazing Products: Comply with testing requirements in 16 CFR 1201 and, for wired glass, ANSI Z97.1.
 - 1. Subject to compliance with requirements, obtain safety glazing products permanently marked with certification label of the Safety Glazing Certification Council.
 - 2. Where glazing units, including Kind FT glass and laminated glass, are specified in Part 2 articles for glazing lites more than 9 sq. ft. in exposed surface area of one side, provide glazing products that comply with Category II materials, for lites 9 sq. ft. or less in exposed surface area of one side, provide glazing products that comply with Category I or II materials, except for hazardous locations where Category II materials are required by 16 CFR 1201 and regulations of authorities having jurisdiction.
- J. Insulating Glass Certification Program: Permanently marked on spacers with appropriate certification label of the following testing and inspecting agency:
 - 1. Insulating Glass Certification Council.
 - 2. Associated Laboratories, Inc.
 - 3. Insulating Glass Manufacturers Alliance.
- K. Manufacturer shall be ISO 9001-2000 Certified.

1.8 TESTS

- A. Preconstruction Sealant Test: Submit samples of materials to be used to glazing sealant manufacturer to determine sealant compatibility. Include samples of glass, gaskets, glazing materials, framing members, and other components and accessories of glazing work. Test in accordance with ASTM C 794 to verify what type of primers (if any) are required to ensure sealant adhesion to substrates.
1. Submit minimum of nine pieces of each type and finish of framing member, and nine pieces of each type, class, kind, condition, and form of glass, including monolithic, laminated, and insulating glass for adhesion tests.
 2. Provide manufacturer's written report and recommendations regarding proper installation.

1.9 PROJECT CONDITIONS

- A. Weather: Perform work of this Section only when existing or forecasted weather conditions are within limits established by manufacturers of materials and products used.
- B. Temperature Limits: Install sealants only when temperatures are within limits recommended by sealant manufacturer, except, never install sealants when temperatures are below 40 deg. F.

1.10 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials and products in unopened, factory labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations and GANA Manual.
1. Protect materials from moisture, sunlight, excess heat, sparks and flame.
 2. Sequence deliveries to avoid delays, but minimize on-site storage.

1.11 WARRANTIES

- A. General: Warranties shall be in addition to, and not a limitation of, other rights the City of New York may have under the Contract Documents.
- B. Manufacturer's Special Project Warranty on Coated Glass Products: Provide written warranty signed by manufacturer of coated glass agreeing to furnish f.o.b. point of manufacture, within specified warranty period indicated below, replacements for those coated glass units which develop manufacturing defects. Manufacturing defects are defined as peeling, cracking or deterioration in metallic coating due to normal conditions and not due to handling or installation or cleaning practices contrary to glass manufacturer's published instructions.
1. Warranty Period: Manufacturer's standard but not less than five (5) years after date of substantial completion.
- C. Manufacturer's Special Project Warranty on Insulating Glass: Provide written warranty signed by manufacturer of insulating glass agreeing to furnish f.o.b. point of manufacture, freight allowed project site, within specified warranty period indicated

below, replacements for those insulating glass units developing manufacturing defects. Manufacturing defects are defined as failure of the hermetic seal of air space (beyond that due to glass breakage) as evidenced by intrusion of dirt or moisture, internal condensation or fogging, deterioration of protected internal glass coatings, if any, and other visual indications of seal failure or performance; provided the manufacturer's instructions for handling, installing, protecting and maintaining units have been complied with during the warranty period.

1. Warranty Period: Manufacturer's standard but not less than ten (10) years after date of substantial completion.

D. Manufacturer's Special Project Warranty on Laminated Glass: Manufacturer's standard form, made out to the City of New York and signed by laminated glass manufacturer agreeing to replace laminated glass units that deteriorated, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Warranty period five (5) years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS/FABRICATORS

A. All glass and glazing used at the exterior of the Project shall be manufactured by the same manufacturer. The same manufacturer and the same furnace shall be used for all tempered and heat strengthened glass used throughout the project. Acceptable manufacturers include the following:

1. PPG Industries.
2. Guardian Industries.
3. Pilkington.
4. AFG.
5. JE Berkowitz, LP.
6. Viracon.

2.2 GLASS MATERIALS AND PRODUCTS

A. Clear Float Glass: ASTM C 1036, Type I (Transparent, Flat), Class 1 (Clear), Quality q3, minimum 1/4" thick.

B. Clear Tempered Glass: ASTM C 1048, Condition A (Uncoated), Type I (Transparent, Flat), Class 1 (Clear), Quality q3, Kind FT, minimum 1/4" thick. Tempered glass must be certified by SGCC to meet applicable standards. Tempered glass shall also conform to the following:

1. Length and Width: For 2.9 mm to 6.0 mm; +/-1.6 mm.
2. Diagonal: +/- 3.0 mm.

3. Edgework: Belt seaming or diamond wheels. 1.5 mm seam of upper and lower glass edges. No sharp edges.
 4. Corners: No more than 3.0 mm from square.
 5. Float Glass Defects: Must meet the requirements of ASTM C 1036. The most common defects are scratches, stones gaseous bubbles and edge chips. Tables in the glass standards have limits for size/quantity of defects.
 6. Tempered glass shall have a minimum surface compression of 10,000 psi.
 7. Tempered glass to be heat-treated by horizontal (roller hearth) process with inherent roller-wave distortion parallel to the bottom edge of the glass when installed.
 8. Flatness Tolerances
 - a. Roller-Wave or Ripple: The deviation from flatness at any peak shall be targeted not exceed 0.003" as measured per peak to valley for 1/4" (6mm) thick glass.
 - b. Bow and Warp: The bow and warp tolerances shall not exceed 1/32" per linear foot.
 - c. Fully tempered glass shall be heat soaked to EN 14179-1:2005-European Heat Soaking Standard.
- C. Low 'E' Coated Glass: Provide high-performance, clear, metallic coating, equal to VE1-2M, as manufactured by Viracon.
- D. Laminated Safety Glass: Provide two glass panes of equal thickness, laminated together with a polyvinyl butyl interlayer, conform to ASTM C 1172, and as follows:
1. Interlayer Color: Clear.
 2. Interlayer Material: Provide Monsanto "Saflex" or DuPont "Butacite," 0.030" thick at vertical applications, and 0.060" thick at sloped or horizontal applications.
 3. Minimum thickness of 1/4".
- E. Insulating Glass: Insulated glass composition shall consist of 1/4" clear exterior lite of float (or tempered, where required) glass with Low E coating on No. 2 face, 1/2" air space and 1/4" clear interior lite of float (or tempered, where required) glass. Provide factory assembled units of organically sealed panes of glass enclosing a hermetically sealed dehydrated air space, complying with ASTM E 2190, and as follows:
1. Sealing System: Dual Seal.
 2. Primary Sealant: Polyisobutylene.
 3. Secondary Sealant: Silicone, General Electric IGS 3204 or IGS 3100, or Dow Corning 982.
 - a. For structurally glazed IG units, secondary seal shall conform to ASTM C 1249.

4. Primary and secondary seals shall not contain voids and must be continuously bonded to the glass structure.
5. Spacer: Clear finish aluminum with welded, soldered, or bent corners, hollow tube types, filled with low nitrogen absorption desiccant.
6. Desiccant: Molecular sieve, silica gel, or blend of both.
7. Air Space Thickness: 1/2".
8. Glass Thickness: 1/4" minimum.
9. Units shall be certified for compliance with seal classification "CBA" by the Insulating Glass Certification Council (IGCC) or by IGMA, and tested in accordance with the above ASTM Test Methods.
10. Insulating glass shall conform to the following tolerances:
 - a. Length and Width: + 3.0 mm/ -2.0 mm.
 - b. Diagonal: +/- 3.0 mm.
 - c. Thickness: As agreed +/- 1.0 mm.
 - d. Edge-Deletion of Coating: Minimum 8 mm wide. Width of deletion must be more than the width of the secondary seal. Silver layer(s) must be completely removed. Appearance must be uniform.
 - e. Primary PIB Seal: Must be complete with no breaks. Appearance must be uniform. PIB bead must overlap coating. No visible bright line when glass is viewed in transmission. The width of the PIB bead shall be 4.0 mm + 3.0/ - 1.5 mm.
 - f. Secondary Seal: Nominal 6 mm + 3.0/ - 1.5 mm. The minimum width of the secondary silicone seal for IG units that are glazed structurally must be determined according to ASTM C 1249. The secondary seal must be uniformly applied without bubbles, cavities or gaps. Avoid excess sealant that will need to be trimmed off later.
11. Additional requirements and properties for primary and secondary insulating glass seals and spacers:
 - a. Insulating glass unit hermetic seal to consist of butyl primary and silicone secondary seals with bent, welded, or soldered interpane spacer corners; keyed corners are not acceptable unless also soldered or welded. Spacers shall be aluminum or stainless steel. Locate spacer joint at the top or sides of the units, but in no instances at the sill. Design units to minimize the number of spacer joints. Provide solid keys, embedded in butyl sealant on all four sides, at spacer joints.
 - b. Hermetic seals must be continuous and intimately bonded to both lites of glass. Provide primary seal of uniform depth with a nominal width of 1/8 to 3/16 in. Hermetic seals shall not be contaminated with debris, fingerprints, or other foreign matter and shall not contain voids or air pockets that decrease the width of the seal below the minimum widths listed in these Specifications, or that breach the seal. The width of the primary seal shall not be less than 1/16 in., and the total cumulative length of the primary seal between 1/16 in. and 1/8 in. shall be less than 12 in. in any one insulating glass unit. The

primary seal shall not have a reduced thickness at the corners. An increased thickness of the primary seal at the corners is acceptable.

- c. Provide secondary seal of uniform depth with a nominal width of 1/4 in. Provide a total width of the primary and secondary seal of 1/2 in. Units shall carry CBA rating as established by ASTM E774 and shall meet SIGMA 65-7-2, latest edition. Units shall not contain breather or capillary tubes or similar penetrations.
- F. Acoustical Door Vision Panels: Vision panels for acoustically-rated doors shall comprise two panes of glazing of different thicknesses. Glazing shall be set into metal frames with integral seals that will not degrade the acoustical performance of the door assembly. Glazing shall at minimum consist of one 1/4" thick pane and one 3/8" thick pane with a minimum 1/2" air space between the panes.

2.3 GLAZING MATERIALS AND PRODUCTS

- A. General: Provide sealants and gaskets with performance characteristics suitable for applications indicated. Ensure compatibility of glazing sealants with insulating glass sealants, with laminated glass interlayers, and with any other surfaces in contact.
- B. General Glazing and Cap Bead Sealant: Provide sealant with maximum Shore A hardness of 50. Provide one of the following:
 - 1. Dow Corning 795.
 - 2. General Electric Silglaze N 2500 or Contractors SCS-1000.
 - 3. Tremco Spectrem 2.
- C. Weather Seal Sealant: Provide non-acid curing sealant with movement range $\pm 50\%$, ASTM C 719. Provide one of the following:
 - 1. Dow Corning 795.
 - 2. General Electric Silpruf.
 - 3. Tremco Spectrem 2.
- D. Backer Rod: Closed cell non-gassing polyethylene rod with rod diameter 25% wider than joint width.
- E. Dense Elastomeric Compression Seal Gaskets: Provide molded or extruded neoprene or EPDM gaskets, Shore A hardness of 75 ± 5 for hollow profile, and 60 ± 5 for solid profiles, ASTM C 864.
- F. Cellular, Elastomeric Preformed Gaskets: Provide extruded or molded closed cell, integral-skinned neoprene, Shore A 40 ± 5 , and 20% to 35% compression, ASTM C 509; Type II.
- G. Preformed Glazing Tape: Provide solvent-free butyl-polyisobutylene rubber with 100% solids content complying with ASTM C1281 AAMA A 800 with integral continuous EPDM shim. Provide preformed glazing tape in extruded tape form. Provide Tremco "Polyshim II" or approved equal.

- H. **Setting Blocks:** Provide 100% or silicone blocks with Shore A hardness of 80-90. Provide products certified by manufacturer to be compatible with silicone sealants. Length to be not less than 4". Width for setting blocks to be 1/16" more than glass thickness and high enough to provide the lite recommended by glass manufacturer. When thickness of setting block exceeds 3/4" the glass manufacturer must be consulted for sizes and configuration. In a vented system, setting block shall be designed so as to not restrict the flow of water within the glazing rabbet to the weep holes.
 - 1. **Shims:** For shims used with setting blocks, provide same materials, hardness, length and width as setting blocks.
 - 2. **Structural Silicone Glazing:** Provide silicone setting blocks where structural silicone occurs at sills and at insulating units with silicone edge seals.
- I. **Edge Blocks:** Provide neoprene or silicone as required for compatibility with glazing sealants. Provide blocks with Shore A hardness of 55±5.
- J. **Spacers:** Elastomeric blocks or continuous extrusions with a Shore A durometer hardness required by glass manufacturer to maintain glass lites in place.
- K. **Miscellaneous Glazing Materials:** Provide sealant backer rods, primers, cleaners, and sealers of type recommended by glass and sealant manufacturers.

2.4 FABRICATION OF GLASS AND OTHER GLAZING PRODUCTS

- A. Fabricate glass and other glazing products in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing standard, to comply with system performance requirements.
- B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites in a manner that produces square edges with slight kerfs at junctions with indoor and outdoor faces.
- C. Grind smooth and polish exposed glass edges.

2.5 GLASS AND GLAZING

- A. G-1: See Section 057010.
- B. G-2: Insulated Low E glass.
- C. G-3: 3/8" Clear laminated safety glass.
- D. G-4: 1/2" laminated acoustical glass 2 layers 1/4" clear float with 0.030 mm PVB interlayer.
- E. G-5: Not used.
- F. G-6: Laminated safety glass with translucent mylar interlayer (equal to Galaxy Glass double sided acid etched translucent).
- G. G-7: 5" IGU, 1/4" clear plate glass, 4-1/2" airspace, interior 1/4" clear laminated glass.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine framing glazing, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Presence and functioning of weep system.
 - 3. Minimum required face or edge clearances.
 - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 GENERAL GLAZING STANDARDS

- A. Install products using the recommendations from the manufacturer of glass, sealants, gaskets and other glazing materials, except where more stringent requirements are indicated, including those in the "GANA Glazing Manual".
- B. Verify that Insulating Glass (IG) Unit secondary seal is compatible with glazing sealants.
- C. Install glass in prepared glazing channels and other framing members.
- D. Install setting blocks in rabbets as recommended by referenced glazing standards in "GANA Glazing Manual" and "IGMA Glazing Guidelines".
- E. Provide bite on glass, minimum edge and face clearances and glazing material tolerances recommended by "GANA Glazing Manual".
- F. Provide weep system as recommended by "GANA Glazing Manual".
- G. Set glass lites in each series with uniform pattern, draw, bow and similar characteristics.
- H. Distribute the weight of glass unit along the edge rather than the corner.
- I. Comply with manufacturers and referenced industry standards on expansion joint and anchors; accommodating thermal movement; glass openings; use of setting blocks, edge, face, and bite clearances; use of glass spacers; edge blocks and installation of weep systems.
- J. Protect glass edge damage during handling and installation.
- K. Prevent glass from contact with contaminating substances that result from construction operations, such as weld spatter, fireproofing or plaster.
- L. Remove and replace glass that is broken, chipped cracked or damaged in any way.

3.4 GLAZING

- A. Glazing channel dimensions, as indicated on Shop Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.
- B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead. Install setting blocks at the one greater points of each lite along the horizontal mullion.
- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Provide spacers for glass lites where the length plus width is larger than 50 inches as follows:
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.
- G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- I. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
- J. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.
- K. Flush Glazing
 - 1. If the butt joint in the metal framing is in the vertical direction, the glazier shall run the tape initially on the head and sill members going directly over this joint. Should

the butt joint in the metal framing run horizontally, tapes must first be applied to the jambs so that it crosses over the joint.

2. Each tape section shall butt the adjoining tape and be united with a tool to eliminate any opening.
3. Do not overlap the adjoining length of tape or rubber shim as this will prevent full contact around the perimeter of glass.

L. Off-Set Glazing

1. Where the glazing legs are off-set, the difference in the rabbet width shall be compensated by employing different glazing tapes with different diameter shims. The difference in shim shall be equal to the size of the off-set. The thinner tape shall be positioned first on the glazing leg closest to the interior. The thicker tape shall be cut to the exact length of the dimension between the applied tapes, and installed on the outermost glazing leg.
2. Immediately prior to setting glass, paper backing shall be removed. Apply a toe bead of sealant 6" in each direction, from each corner.
3. Locate setting blocks in the sill member at quarter points, or if necessary to within 6" of each corner. Setting blocks must be set equal distance from center line of the glass and high enough to provide the recommended bite and edge clearances.
4. Set edge block according to glass manufacturer's recommendations.
5. Set Glass: The glass shall be pressed firmly against the tape to achieve full contact.
6. In a vented system, apply a heel bead (air seal) of sealant around the perimeter of glass, between the sole of the I.G. unit and the base of the rabbet of the metal framing developing a positive bond to the unit and to the metal framing. The bead of the sealant shall be deep enough so that it will partially fill the channel to a depth of 1/4" between the glass edge and the base of the metal framing rabbet.
7. Interior stops shall be set, and glazing tape spline for the appropriate face clearance shall be rolled into place, compressing the glass to the shim within the glazing tape.

3.5 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Where framing joints are vertical, cover these joints by applying tapes to heads and sills first and then to jambs. Where framing joints are horizontal, cover these joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

- E. Do not remove release paper from tape until just before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant as recommended by glass manufacturer or glass frame manufacturer.
- G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape where noted on approved shop drawings.

3.6 GASKET GLAZING (DRY)

- A. Fabricate compression gaskets in lengths recommended by gasket manufacturer to fit openings exactly, with stretch allowance during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Install gaskets so they protrude past face of glazing stops.

3.7 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.
 - 1. Exterior glazing gasket shall be set a minimum of 1/8" below exterior glazing stop to create a channel for sealant installation.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.8 PROTECTION AND CLEANING

- A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating

substances do come into contact with glass, remove them immediately as recommended by glass manufacturer.

- C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for build-up of dirt, scum, alkaline deposits, or stains; remove as recommended by glass manufacturer.
- D. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged in any way, including natural causes, accidents, and vandalism, during construction period.
- E. Clean excess sealant or compound from glass and framing members immediately after application, using solvents or cleaners recommended by manufacturers.
- F. Glass to be cleaned according to:
 - 1. GANA Glass Information Bulletin GANA 01-0300 – “Proper Procedure for Cleaning Architectural Glass Products”.
 - 2. GANA Glass Informational Bulletin GANA TD-02-0402 – “Heat Treated Glass Surfaces are Different”.
- G. Do not use razor blades, scrapers or metal tools to clean glass.

END OF SECTION

SECTION 092900

GYPSUM DRYWALL

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the gypsum drywall as shown on the drawings and/or specified herein, including, but not limited to, the following:
 1. Gypsum board work for partitions, ceilings, column enclosures, furring, and elsewhere where gypsum drywall work is shown on drawings.
 2. Metal supports for gypsum drywall construction.
 3. Acoustical insulation for gypsum drywall work.
 4. Acoustical accessories.
 5. Sealant for gypsum drywall work.
 6. Concealed metal reinforcing for attachment of railings, toilet partitions and other items supported on drywall partitions and walls.
 7. Taping and finishing of drywall joints.
 8. Installing rings and frames in drywall surfaces for grilles, registers and lighting fixtures.
 9. Gypsum wallboard cants at beams and other projections over 2" deep in elevator shafts where adjoining wall is of gypsum wallboard construction.
 10. Gypsum shaftwall construction.
 11. Bracing and connections.
 12. Isolated wall and ceiling assemblies.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.

- D. Construction IAQ requirements – Section 018119.
- E. Thermal insulation - Section 072100.
- F. Hollow metal door frames - Section 081113.
- G. Access doors - Section 083113.
- H. Painting - Section 099000.
- I. Elevators - Division 14.
- J. Rings for grilles, registers and light fixtures - Division 23 and 26.
- K. Acoustical sealant and perimeter isolation board - Section 079200.

1.4 ENVIRONMENTAL CRITERIA

- A. Recycled Content: Gypsum wallboard shall contain recycled content material as follows:
 - 1. Paper Facings: Where feasible, a minimum of 100% post-consumer recycled paper content.
 - 2. Gypsum Cores: Where feasible, a minimum of 75% post-industrial recycled gypsum content (also called "synthetic gypsum" – from coal-fired power plants).
- B. The percentage of recycled content is based on the weight of the component materials.

1.5 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. LEED BUILDING Performance Criteria: The following criteria are REQUIRED for the products included in this section:
 - 1. Steel studs, track, and miscellaneous framing shall contain a minimum of 35% (combined) post-industrial/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials).
 - 2. Gypsum wallboard shall contain "synthetic" gypsum produced with a minimum of 75% post-industrial recycled content, if readily available.
 - 3. Certification of recycled content shall be in accordance with the LEED BUILDING Submittal Requirements of this Section.

4. Steel framing and gypsum wallboard products harvested and manufactured within 500 miles (by air) of the project site shall be documented in accordance with the LEED BUILDING Submittal Requirements of this Section.
 5. Adhesives or sealants used for work in this section shall meet the requirements of Section 018419: Volatile Organic Compound (VOC) Limits For Adhesives, Sealants, Paints and Coatings (LEED BUILDING), where applicable
 6. Certification of these products shall be in accordance with the LEED BUILDING Submittal Requirements of this Section.
- C. The following standards, as well as other standards which may be referred to in this Section, shall apply to the work of this Section:
1. The Gypsum Construction Handbook, latest edition, USG.
 2. Construction Guide, latest edition, National Gypsum.
 3. ASTM A 568 "Standard Specification for Steel, Sheet, Carbon, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements For"
 4. ASTM C 475 "Standard Specification for Joint Treatment Materials For Gypsum Wallboard Construction"
 5. ASTM C 645 "Standard Specification for Non-Structural Steel Framing Members"
 6. ASTM C 754 "Standard Specification for Installation of Steel Framing Members to Receive Screw Attached Gypsum Panel Products"
 7. ASTM C 840 "Standard Specification for Application and Finishing of Gypsum Board"
 8. ASTM C 919 "Standard Specification for Use of Sealants in Acoustical Applications"
 9. ASTM C 954 "Standard Specification for Steel Drill Screws For the Application of Gypsum Board or Metal Plaster Bases to Steel Studs From 0.033 in. to 0.112 in. in Thickness"
 10. ASTM C 1002 "Standard Specification for Steel Self-Piercing Tapping Screws For the Application of Gypsum Board"
 11. ASTM C 1177 "Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing"
 12. ASTM C 1178 "Standard Specification for Glass Mat Water Resistant Gypsum Backing Board"
 13. ASTM C 1278 "Standard Specification for Fiber-Reinforced Gypsum Panel"
 14. ASTM C 1396 "Standard Specification for Gypsum Board"
 15. ASTM D 3273 "Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber"

- D. Allowable Tolerances: 1/32" offsets between planes of board faces, and 1/16" in 8'-0" for plumb, level, warp and bow.
- E. System Design Load
 - 1. Provide drywall shaft systems for elevators designed and tested by manufacturer to withstand a lateral loading (air pressure) of 10 lbs. per sq. ft. for the maximum wall height required, and with deflection limited to L/240 of partition height.
 - 2. Provide standard drywall wall assemblies designed and tested by manufacturer to withstand a lateral load of 5 lbs. per sq. ft. for the maximum wall height required, and with deflection limited to L/240 of partition height.
 - a. Drywall assemblies with tile finish shall have a deflection limit of L/360.
 - 3. Provide drywall ceiling assemblies designed, fabricated and installed to have a deflection not to exceed L/360.
- F. Fire-Resistance Rating: Where gypsum drywall with fire resistance ratings are indicated, provide materials and installations which are identical with those of applicable assemblies tested per ASTM E 119 by fire testing laboratories, or to design designations in UL "Fire Resistance Directory" or in listing of other testing agencies acceptable to authorities having jurisdiction, and compliant with UL Test #2079; criteria for cycle movement for all field height wall sections requiring allowance for vertical deflection within framing details.
- G. Installer: Firm with not less than 3 years of successful experience in the installation of specified materials.
- H. For projects located in New York City, comply with New York City Section 32-05 of Chapter 32 of Title 1 of the Official Compilation of the Rules of the City of New York regarding "Impact Resistant Stair and Elevator Enclosures" when such enclosures are of gypsum drywall construction.

1.6 SUBMITTALS

- A. LEED BUILDING Submittal Requirements The contractor or subcontractor shall submit the following LEED BUILDING certification items:
 - 1. A completed ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications. Information to be supplied includes:
 - a. The amount of recycled content in the product(s). Identify post-consumer and/or post-industrial recycled content.
 - b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the product(s).
 - c. Provide material costs for the materials included in the contractor's or subcontractor's work. Material cost does not include costs associated with labor and equipment.
 - 2. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the amount of recycled content.

3. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as per the QUALITY ASSURANCE requirements of this Section. Cut sheets shall be submitted with the Contractor or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.
 4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits.
- B. Submit shop drawing for each drywall partition, furring and ceiling system showing size and gauges of framing members, hanger and anchorage devices, wallboard types, insulation, sealant, methods of assembly and fastening, control joints indicating column lines, corner details, joint finishing and relationship of drywall work to adjacent work.
 - C. Samples: Each material specified herein, 12" x 12", or 12" long, or in manufacturer's container, as applicable for type of material submitted.
 - D. Manufacturer's Literature: Submit technical and installation instructions for each drywall partition, furring and ceiling system specified herein, and for each fire-rated and sound-rated gypsum board assembly. Submit other data as required to show compliance with these specifications, including data for mold resistant joint compound.
 - E. Test Reports: This Contractor shall submit test report, obtained by drywall manufacturer, indicating conformance of drywall assemblies to required fire ratings and sound ratings.
 - F. For isolated walls, submittal drawing shall also indicate locations and numbers of sway braces to be employed in the wall. Provide calculations showing that loading of sway braces is in accordance with manufacturer's guidelines.
 - G. For isolation ceilings, submit a ceiling shop drawing showing isolation hanger layout, calculations for isolation hanger load selection and isolation hanger static deflections.

1.7 PRODUCT HANDLING AND PROTECTION

- A. Deliver, store and handle drywall work materials to prevent damage. Deliver materials in their original, unopened containers or bundles, and store where protected from moisture, damage and from exposure to the elements. Store wallboard in flat stacks.
- B. Protect wallboard from becoming wet.

1.8 ENVIRONMENTAL CONDITIONS

- A. Provide and maintain minimum temperature of fifty-five (55) degrees F. and adequate ventilation to eliminate excessive moisture within the building in the area of the drywall work for at least twenty-four (24) hours, prior to, during and after installation of drywall work. Installation shall not start until windows are glazed and doors are installed, unless openings are temporarily closed. Space above suspended ceilings shall be vented sufficiently to prevent temperature and pressure build up.

1.9 JOB MOCK-UP

- A. At a suitable location, where directed by the Commissioner, lay up a portion of a finished wall and ceiling demonstrating the quality of work, including finishing, to be obtained under this Section. Omit drywall boards in locations as directed by the Commissioner to show stud spacing and attachments; after acceptance, complete assembly.
- B. Adjust the finishing techniques as required to achieve the finish required by the Commissioner as described in this Section of these specifications.
- C. Upon approval of the mock-up, the mock-up may be left in place as a portion of the finished work of this Section.
- D. All drywall work shall be equal in quality to approved mock-up.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Acceptable Manufacturers for Gypsum Drywall Panels and Accessories: Materials specified below, unless noted otherwise or specified herein, are those of U.S. Gypsum Co. Equivalent materials of Georgia Pacific, Lafarge North America, or National Gypsum Co. meeting specification requirements are acceptable.
- B. Acceptable Manufacturers for Metal Supports of Drywall Assemblies: Unless otherwise noted, provide products manufactured by Dietrich Metal Framing, Super Stud Building Products, Marino/Ware, Clark Western or approved equal.

2.2 METAL SUPPORTS

- A. Metal Floor and Ceiling Runners
 - 1. Channel Type: Formed from 20 U.S. Std. gauge (unless otherwise noted) galvanized steel, width to suit channel type metal studs. Use 20 ga. top runners with 1-1/4" minimum flanges.
 - 2. Ceiling runners and head of wall connections at rated partitions shall conform to UL #2079 for cycle movement. Provide positive mechanical connection of framing to structure, allowing for vertical movement within connections. Minimum of 20 ga. galvanized steel for clips, 25 ga. galvanized steel for ceiling runners. Providing a friction free – anti-seizure movement capacity.
 - a. As manufactured by the Steel Network, VertiClip or VertiTrack or equal made by Metal-Lite Inc.
 - b. FireTrak (including stud clips) by FireTrak Corp. or equal made by Metal-Lite Inc.
 - 3. "J" Type: Formed from 20 U.S. Std. gauge galvanized steel, 1" x 2-1/2" or 4" wide (to suit detail) x 2-1/4" (for shaft wall).

B. Metal Studs, Framing and Furring

1. Channel Type Studs: Channel type with holes for passage of conduit formed from minimum 20 U.S. Std. gauge (unless heavier gauge is required to meet deflection limits) galvanized steel, width as shown on drawings.
2. Furring Channels: Hat shaped, formed from galvanized steel, 25 U.S. Std. gauge.
3. "C-H," "CT," or "I" Type Stud: 1-1/2" x 2-1/2", 4" or 6" wide (to suit detail) galvanized steel. Use for shaft wall construction; gauge and size as required to meet deflection limits given herein.
4. Double "E" Type Stud or "J" Track with Holding Tabs: 2" x 2-1/2", 4" or 6" wide (to suit detail) galvanized steel. Use for shaft wall construction; gauge and size as required to meet deflection limits given herein.
5. Continuous 16 gauge x 8" wide steel wall plate screwed to studs as required for support of railings, toilet partitions and other items supported on drywall partitions and walls.

C. Suspended Ceiling and Fascia Supports

1. Main Runners: 1-1/2" steel channels, cold rolled at 0.475 lbs. per ft., rust-inhibitive paint finish.
2. Furring Members: Screw-type hat-shaped furring channels of 25 ga. zinc-coated steel; comply with ASTM C 645.
3. Hangers: Galvanized, 1" x 3/16" flat steel slats capable of supporting 5x calculated load supported.
4. Hanger Anchorages: Provide inserts, clips, bolts, screws and other devices applicable to the required method of structural anchorage for ceiling hangers. Size devices for 5x calculated load supported.
5. Furring Anchorages: 16 ga. galvanized wire ties, manufacturer's standard clips, bolts or screws as recommended by furring manufacturer.

D. All galvanized steel members shall have coating conforming to ASTM A 653, G60.

2.3 GYPSUM WALLBOARD TYPES

- A. Gypsum Wall Board: 1/2" thick and 5/8" thick as indicated on drawings, 48" wide, in maximum lengths available to minimize end-to-end butt joints.
- B. Fire Rated Gypsum Wall Board: 1/2" thick and 5/8" thick as indicated on drawings, 48" wide, in maximum lengths available to minimize end-to-end butt joints.
- C. Moisture/Mold Resistant Gypsum Wall Board (for areas in toilet rooms, not scheduled to receive ceramic tile and scheduled to received tile, or where fire rating is required): 1/2" thick and 5/8" thick as indicated on drawings; "Mold Tough," "Mold Tough FR," by U.S. Gypsum, "DensArmor Plus" by Georgia Pacific or Lafarge "Mold Defense" and/or Lafarge "Mold Defense Type X," 48" wide, in maximum lengths available to minimize end-to-end butt joints.

1. Board must have a rating of 10 per ASTM D 3273 with a core that meets ASTM C 1396, Section 6 or ASTM C 1658.
- D. Mold Resistant Shaft Wall Liner: Solid gypsum board liner for shaft wall construction, 1" thick, 24" wide, as required to suit condition, by standard lengths as required, beveled edges. Provide "Mold Tough Liner Panel," "DensGlass Ultra Shaft Guard" by Georgia Pacific, or Lafarge "Mold Defense Shaftliner Type X" and/or Lafarge "Weather Defense Shaftliner Type X."
1. Liner board must have a rating 10 per ASTM D 3273 with a core that meet ASTM C 1396 Section 6 and ASTM C 442.
- E. Water Resistant Backing Board for Tile Finish: 5/8" thick, 3' x 6', "Durock Tile Backer Board" by USG, "Dens-Shield Tile Backer Board" by Georgia Pacific, or "Perma Base Brand Cement Board" by National Gypsum. Cover joints with a pressure sensitive woven glass fiber tape equal to Imperial Type P Tape.
- F. Abuse Resistant Wallboard: 5/8" thick unless otherwise indicated on drawings, "Fiberock Brand Panel VHI Abuse Resistant" by USG, "Dens Armor Plus Abuse Resistant Panels" by Georgia Pacific, or Lafarge "Protects AR100," 48" wide, in maximum lengths available to minimize end-to-end butt joints.
1. Board must achieve a Level 3 rating per ASTM C 1629.

2.4 ACCESSORIES

- A. Acoustical Insulation: Paper-less, non-combustible, semi-rigid mineral fiber mat, 3 lb./cu. ft. maximum density; Thermafiber LLC "Thermafiber," or approved equal.
- B. Fasteners for Wall Board: Steel drill screws complying with ASTM C 1002; provide manufacturer's recommended type specifically for fastening wallboard to lighter gauge interior metal framing (up to 20 ga.); for fastening wallboard to heavier gauge interior metal framing (20 ga. to 12 ga.); for attaching metal studs to door frames and runners; and for fastening wallboard to wall board. Lengths specified below under "Part 3 - Execution" Articles and as recommended by drywall manufacturer.
- C. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.
- D. Metal Trim: Conforming to ASTM C 1047, 27 U.S. Std. ga. galvanized steel, 1-1/4" x 1-1/4", for 90 degree external corners.
1. Edge Beads: Paper-faced.
 2. Reveal Molding: "Z" Reveal Molding, 1/2", as manufactured by Fry Reglet Corporation, or equivalent of Gordon Inc., Pittcon Industries, or approved equal. Provide J bead for some locations.
- E. Joint Treatment Materials
1. Joint Tape
 - a. Interior Gypsum Board: Paper.
 - b. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.

- c. Tile Backing Panels: As recommended by panel manufacturer.
2. Joint Compound: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats. Use setting type or lightweight setting type joint compound for taping and topping, and a ready mix compound for finishing.
 3. Joint Compound for Tile Backing Panels
 - a. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
 - b. Cementitious Backer Units: As recommended by backer unit manufacturer.
 - c. Water-Resistant Gypsum Backing Board: Use setting-type taping compound and setting-type, sandable topping compound.
- F. Control Joints: #93 zinc control joint; USG, ClarkDietrich, Amico, or approved equal.
- G. Acoustical Sealant: USG "Acoustical Sealant," Tremco "Acoustical Caulking," Pecora "Acoustical Sealant," or approved equal.
- H. Neoprene Gaskets: Conform to ASTM D 1056.
- I. Acoustical Accessories:
1. Neoprene floor isolation.
 2. Floor pads.
 3. Low profile and regular isolation sway braces.
 - a. Neoprene Sway Brace shall prevent buckling or overturning of tall or extremely long walls without direct structural contact. Spacing shall be 4'-0" on center maximum. Neoprene shall be 60 Durometer, and meet the following physical requirements:
 - 1). Hardness (ASTM D 676): 60 ± 5 .
 - 2). Tensile Strength, minimum psi (ASTM D 412): 2,500.
 - 3). Elongation at Break, minimum percent: 350.
 - b. Isolator shall be selected upon ability to satisfy a maximum response frequency of 10 Hz for the composite wall/isolator construction. Manufacturer shall submit calculations of loads and isolator spacings and connection details for approval.
 - c. The following are acceptable: Type DNSB from Mason Industries, Type PSB from Kinetics Noise Control, or approved equal. For areas where clearance will not allow for installation of a standard sway brace, the following low-profile sway braces are acceptable: Type WIC from Mason Industries, Type KWBS from Kinetics Noise Control or approved equal.
 4. Low profile and full height ceiling suspension.
 - a. Combination neoprene element and spring hangers shall consist of a steel frame containing a neoprene isolation element at the top and a coil steel spring seated in a neoprene cup on the bottom. Both the element and the cup shall be molded with a neoprene bushing that passes through the steel frame. The neoprene element shall be capable of an average deflection of

0.35". The steel springs shall be capable of a minimum static deflection of 0.75" with a minimum additional travel to solid of 1/2". Spring diameters and hanger box lower hole size shall be large enough to permit the hanger rod to swing through a 30 degree arc before contacting the box and short circuiting the spring. Hangers shall be factory precompressed to 70% of the total deflection determined by the assigned load per hanger. Hangers shall be manufactured with provision for bolting or attaching to ceiling flat iron straps, rods or steel runners. Hangers shall be of a fail safe design.

- b. The following are acceptable, subject to the above: Type W30N from Mason Industries Inc., Type RSH-30A from Vibration Mountings and Controls, Type SNRC4 from Vibration Eliminator Company, Type SRH from Kinetics Noise Control, or approved equal. For areas where clearance will not allow for installation of a standard combination hanger, the following low-profile ceiling hangers are acceptable: Type 30CSCH from Mason Industries, Type KSCH from Kinetics Noise Control or approved equal.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where gypsum drywall is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 GENERAL INSTALLATION REQUIREMENTS

- A. Where feasible, one or both of the following procedures shall be used to minimize the exposure of gypsum wallboard to materials or finishes which have high short-term emissions of VOC's, formaldehyde, particulates, or other air-borne compounds:
 - 1. The gypsum wall board shall be taped, spackled and primed *before* the installation of the highly-emitting materials.
 - 2. The gypsum wallboard shall be installed *after* the installation of the highly-emitting materials.
- B. Materials with high short-term emissions include, but are not limited to: adhesives, sealants and glazing compounds (specifically those with petrochemical vehicles or carriers); paint, wood preservatives, and finishes; control and/or expansion joint fillers; hard finishes requiring adhesive installation; gypsum board (with associated finish processes and products); and composite or engineered wood products with formaldehyde binders.
- C. General
 - 1. Install drywall work in accordance with drywall manufacturer's printed instructions and as indicated on drawings and specified herein.
 - 2. All metal framing for drywall partitions shall extend from floor to underside of structural deck above. Provide for vertical deflection with positive mechanical connections of framing members to structure.

3. Provide concealed reinforcement, 16 ga. thick by eight (8) inches wide or as detailed or as recommended by manufacturer, for attachment of railings, toilet partitions, and other items to be supported on the partitions that cannot be attached to the metal framing members. Concealed reinforcement shall span between metal studs and be attached thereto using two (2) self-tapping pan head screws at each stud.
 - a. Back of drywall shall be scored or notched to prevent bulging out where reinforcement plate occurs.
- D. Fire-Rated Assemblies: Install fire-rated assemblies in accordance with requirements of authorities having jurisdiction, Underwriters' Laboratories and test results obtained and published by the drywall manufacturer, for the fire-rated drywall assembly types indicated on the drawings.
- E. Acoustic Assemblies: Install acoustic rated assemblies to achieve a minimum STC as noted on drawings, in accordance with test results obtained and published by the drywall manufacturer, for the drywall assembly type indicated on the drawings.
- F. Sealant
 1. Install continuous acoustical sealant bead at top and bottom edges of wallboard where indicated or required for sound rating as wallboard is installed, and between metal trim edge beads and abutting construction.
 2. Install acoustical sealant in 1/8" wide vertical control joints within the length of the wall or partitions, and in all other joints, specified below under "Control Joints." Install bead of acoustical sealant around electric switch and outlet boxes, piping, ducts, and around any other penetration in the wallboard; place sealant bead between penetrations and edge of wallboard.
 3. Where sealant is exposed to view, protect adjacent surfaces from damage and from sealant material, and tool sealant flush with and in same plane as wallboard surface. Sealant beads shall be 1/4" to 3/8" diameter.
- G. Wall Board Application
 1. Do not install wallboard panels until steel door frames are in place; coordinate work with Section 081113, "Steel Doors and Frames."
 2. See drawings for all board types. Use fire-rated wallboard for fire-rated assemblies. Use water-resistant wallboard where indicated on drawings and where wallboard would be subject to moisture. Install water-resistant wallboard in full, large sheets (no scraps) to limit number of butt joints.
 3. Apply wallboard with long dimension parallel to stud framing members, and with abutting edges occurring over stud flanges.
 4. Install wallboard for partitions from floor to underside of structure above and secure rigidly in place by screw attachment, unless otherwise indicated.
 5. Provide non combustible fire safing insulation meeting standards of Section 078413 at flutes of metal deck where partitions carry up to bottom of metal deck.

6. Neatly cut wallboard to fit around outlets, switch boxes, framed openings, piping, ducts, and other items that penetrate wallboard; fill gaps with acoustic sealant.
7. Where wallboard is to be applied to curved surfaces, dampen wallboard on back side as required to obtain required curve. Finish surface shall present smooth, even curve without fluting or other imperfections.
8. Screw fasten wallboard with power-driven electric screw driver, screw heads to slightly depress surface of wallboard without cutting paper, screws not closer than 3/8" from ends and edges of wallboard.
9. Where studs are doubled-up, screw fasten wallboard to both studs in a staggered pattern.

H. Cement Backer Board

1. General: Furnish cementitious backer board in maximum available lengths. Install horizontally, with end joints over framing members.
2. Fastening: Secure cementitious backer board to each framing member with screws spaced not more than 12 inches on center and not closer than 1/2" from the edge. Install screws with a conventional screw gun so that the screw heads are flush with the surface of the board.
3. Joint Treatment: Fill space between edge of backer and receptor with dry-set Portland cement or latex-Portland cement mortar. Fill all horizontal and vertical joints and corners with dry-set Portland cement or latex-Portland cement mortar. Apply fiberglass tape over joints and corners and embed with same mortar.

I. Metal Trim: Install and mechanically secure in accordance with manufacturer's instructions; and finish with three (3) coats of joint compound, feathered and finish sanded smooth with adjacent wallboard surface, in accordance with manufacturer's instructions.

1. Corner Beads: Install specified corner beads in single lengths at all external corners, unless corner lengths exceed standard stock lengths.
2. Edge Beads: Install specified edge beads in single lengths at all terminating edges of wallboard exposed to view, where edges abut dissimilar materials, where edges would be exposed to view, and elsewhere where shown on drawings. Where indicated on drawings, seal joint between metal edge bead and adjoining surface with specified gasket, 1/8" wide minimum and set back 1/8" from face of wallboard, unless other size and profile indicated on drawings.
3. Casing beads shall be set in long lengths, neatly butted at joints. Provide casing beads at juncture of board and vertical surfaces and at exposed perimeters.

J. Control Joint Locations: Gypsum board surfaces shall be isolated with control joints where:

1. Ceiling abuts a structural element, dissimilar wall or other vertical penetration.
2. Construction changes within the plane of the partition or ceiling.

3. Shown on approved shop drawings.
4. Ceiling dimensions exceed thirty (30) feet in either direction.
5. Wings of "L," "U," and "T" shaped ceiling areas are joined.
6. Expansion or control joints occur in the structural elements of the building.
7. Shaftwall runs exceed 30' without interruption.
8. Partition or furring abuts a structural element or dissimilar wall or ceiling.
9. Partition or furring runs exceed 30' without interruption.
10. Where control joints are required, ceiling height door frames may be used as control joints. Less than ceiling height frames shall have control joints extending to the ceiling from both corners.

K. Joint Treatment and Spackling

1. Joints between face wallboards in the same plane, joints at internal corners of intersecting partitions and joints at internal corners of intersections between ceilings and walls or partitions shall be filled with joint compound.
2. Screw heads and other depressions shall be filled with joint compound. Joint compound shall be applied in three (3) coats, feathered and finish surface sanded smooth with adjacent wallboard surface, in accordance with manufacturer's instructions. Treatment of joints and screw heads with joint compound is also required where wallboard will be covered by finish materials that require a smooth surface, such as vinyl wall coverings.

3.3 FURRED WALLS AND PARTITIONS

- A. Use specified metal furring channels. Run metal furring channel framing members vertically, space sixteen (16) inches o.c. maximum. Fasten furring channels to concrete or masonry surfaces with power-driven fasteners or concrete stub nails spaced sixteen (16) inches o.c. maximum through alternate wing flanges (staggered) of furring channel. Furring channels shall be shimmed as necessary to provide a plumb and level backing for wallboard. At inside of exterior walls, an asphalt felt protection strip shall be installed between each furring channel and the wall. Furring channel and splices shall be provided by nesting channels at least eight (8) inches and securely anchoring to concrete or masonry with two (2) fasteners in each wing.
- B. Wallboard Installation: Same as specified under Article 3.4 - "Metal Stud Partitions."

3.4 METAL STUD PARTITIONS

- A. Runner Installation: Use channel type. Align accurately at floor according to partition layout. Anchor runners securely sixteen (16) inches o.c. maximum with power-driven anchors to floor slab below and with power-driven anchors to structural slab above. See "Stud Installation" below for runners over heads of metal door frames. Where required, carefully remove sprayed-on fireproofing to allow partition to be properly installed.
- B. Stud Installation

1. Use channel type, positioned vertically in runners, spaced as noted on drawings, but not more than sixteen (16) inches o.c.
 2. Anchor studs to floor runners with screw fasteners. Provide snap-in or slotted hole slip joint bolt connections of studs to ceiling runners leaving space for movement. Anchor studs at partition intersections, partition corners and where partition abuts other construction to floor and ceiling runners with sheet metal screws through each stud flange and runner flange.
 3. Connection at ceiling runner for non-rated partitions shall be snap-in or slotted hole slip joint bolt connection that shall allow for movement. Seal studs abutting other construction with 1/8" thick neoprene gasket continuously between stud and abutting construction.
 4. Connections for fire rated partitions at ceiling runners shall conform to UL Design #2079.
 5. Install metal stud horizontal bracing wherever vertical studs are cut or wallboard is cut for passage of pipes, ducts or other penetrations, and anchor horizontal bracing to vertical studs with sheet metal screws.
 6. At jambs of door frames and borrowed light frames, install doubled-up studs (not back to back) from floor to underside of structural deck, and securely anchor studs to jamb anchors of frames and to runners with screws. Provide cross braces from hollow metal frames to underside of slab.
 7. Over heads of door frames, install cut-to-length section of runner with flanges slit and web bent to allow flanges to overlap adjacent vertical studs, and securely anchor runner to adjacent vertical studs with sheet metal screws. Install cut-to-length vertical studs from runner (over heads of door frame) to ceiling runner sixteen (16) inches maximum o.c. and at vertical joints of wallboard, and securely anchor studs to runners with sheet metal screws.
 8. At control joints, in field of partition, install double-up studs (back to back) from floor to ceiling runner, with 1/4" thick continuous compressible gasket between studs. When necessary, splice studs with eight (8) inches minimum nested laps and attach flanges together with two (2) sheet metal screws in each flange. All screws shall be self-tapping sheet metal screws.
- C. Runners and Studs at Chase Wall: As specified above for "Runners" and "Studs" and as specified herein. Chase walls shall have either a single or double row of floor and ceiling runners with metal studs sixteen (16) inches o.c. maximum and positioned vertically in the runners so that the studs are opposite each other in pairs with the flanges pointing in the same direction. Anchor all studs to runner flanges with sheet metal screws through each stud flange and runner flange following requirements of paragraph 3.4, B. Provide cross bracing between the rows of studs by attaching runner channels or studs set full width of chase attached to vertical studs with one self-tapping screw at each end. Space cross bracing not over thirty-six (36) inches o.c. vertically.
- D. Wallboard Installation - Single Layer Application (Screw Attached)
1. Install wallboard with long dimension parallel to framing member and with abutting edge joints over web of framing member. Install wallboard with long dimension perpendicular to framing members above and below openings in drywall extending

to second stud at each side of opening. Joints on opposite sides of wall shall be arranged so as to occur on different studs.

2. Boards shall be fastened securely to metal studs with screws as specified. Where a free end occurs between studs, back blocking shall be required. Center abutting ends over studs. Correct work as necessary so that faces of boards are flush, smooth, true.
3. Wallboard screws shall be applied with an electric screw gun. Screws shall be driven not less than 3/8" from ends or edges of board to provide uniform dimple not over 1/32" deep. Screws shall be spaced twelve (12) inches o.c. in the field of the board and 8" o.c. staggered along the abutting edges.
4. All ends and edges of wallboard shall occur over screwing members (studs or furring channels). Boards shall be brought into contact but shall not be forced into place. Where ends or edges abut, they shall be staggered. Joints on opposite sides of a partition shall be so arranged as to occur on different studs.
5. At locations where piping receptacles, conduit, switches, etc., penetrate drywall partitions, provide non-drying sealant and an approved sealant stop at cut board locations inside partition.

E. Wallboard Installation - Double-Layer Application

1. General: See drawings for wallboard partition types required.
2. First Layer (Screw Attached): Install as described above for single layer application.
3. Second Layer (Screw Attached): Screw attach second layer, unless laminating method of attachment indicated on drawings or necessary to obtain required sound rating or fire rating. Install wallboard vertically with vertical joints offset thirty-four (34) inches from first layer joints and staggered on opposite sides of wall. Attach wallboard with 1-5/8" screws sixteen (16) inches o.c. along vertical joints and sixteen (16) inches o.c. in the field of the wallboard. Screw through first layer into metal framing members.
4. Second Layer (Laminated): Install wallboard vertically. Stagger joints of second layer from first layer joints. Laminate second layer with specified laminating adhesive in beads or strips running continuously from floor to ceiling in accordance with manufacturer's instructions. After laminating, screw wallboard to framing members with 1-5/8" screws, spaced twelve (12) inches o.c. around perimeter of wallboard.

F. Wallboard Installation - Laminated Application: Where laminated wallboard is indicated, use specified laminating adhesive, install wallboard vertically and maintain tolerances as specified for screw attached wallboard.

G. Insulation Installation: Install where indicated on drawings. Place blanket tightly between studs.

H. Deflection of Structure Above: To allow for possible deflection of structure above partitions, provide top runners for non-rated partitions with 1-1/4" minimum flanges and do not screw studs or drywall to top runner. Where positive anchorage of studs to top

runner is required, anchorage device shall be by means of slotted hole (in clip connection with screw attachment to web of steel through bushings located in slots of clips), or other anchorage device approved by the Commissioner.

I. Control Joints

1. Leave a 1/2" continuous opening between gypsum boards for insertion of surface mounted joint.
2. Back by double framing members.
3. Attach control joint to face layer with 9/16" galvanized staples six (6) inches o.c. at both flanges along entire length of joint.
4. Provide two (2) inch wide gypsum panel strip or other adequate seal behind control joint in fire rated partitions and partitions with safing insulation.

3.5 DRYWALL FASCIAS AND CEILINGS

- A. Furnish and install inserts, hanger clips and similar devices in coordination with other work.
- B. Secure hangers to inserts and clips. Clamp or bolt hangers to main runners.
- C. Space main runners 4'-0" o.c. and space hangers 4'-0" o.c. along runners, except as otherwise shown.
- D. Level main runners to a tolerance of 1/4" in 12'-0", measured both lengthwise on each runner and transversely between parallel runners.
- E. Metal Furring Channels: Space sixteen (16) inches o.c. maximum. Attach to 1-1/2" main runner channels with furring channel clips (on alternate sides of main runner channels). Furring channels shall not be let into or come in contact with abutting masonry walls. End splices shall be provided by nesting furring channels no less than eight (8) inches and securely wire tying. At any openings that interrupt the furring channels, install additional cross reinforcing to restore lateral stability.
- F. Mechanical accessories, hangers, splices, runner channels and other members used in suspension system shall be of metal, zinc coated, or coated with rust inhibitive paint, of suitable design and of adequate strength to support units securely without sagging, and such as to bring unit faces to finished indicated lines and levels.
 1. Provide special furring where ducts are over two (2) feet wide.
- G. Apply board with its long dimension at right angles to channels. Locate board butt joints over center of furring channels. Attach board with one (1) inch self-drilling drywall screws twelve (12) inches o.c. in field of board at each furring channel; eight (8) inches o.c. at butt joints located not less than 3/8" from edges.

3.6 SHAFT WALLS

- A. Runner Installation: Use "J" metal runners at floor and ceiling, with the short leg toward finish side of wall. Securely attach runners to structural supports with power-driven fasteners at both ends and twenty-four (24) inches o.c.

- B. Shaft Wall Liner: Cut shaft wall liner panels one (1) inch less from floor to ceiling height and erect vertically between J-runners.
- C. C-H Studs: Cut metal studs 3/8" to not more than 1/2" less than floor to ceiling height and install between shaft wall liner panels so that panels are fitted snugly into the one (1) inch wide "H", "T" or "I" portion of the stud. Space studs twenty-four (24) inches o.c., unless otherwise indicated on drawings. Install full-length steel E-Studs or J-runners vertically at T-intersections, corners, door jambs, and columns. Install full length E-Studs or J-runners over shaft wall liner both sides of closure panels. Frame openings cut within a liner panel with J-Runner around perimeter. For openings, frame with vertical E-Stud or J-runner at edges, horizontal runner at head and sill, and reinforcing as shown on the drawings. Suitably frame all openings to maintain structural support for wall. Install floor-to-ceiling steel E-Studs or J-runners each side of elevator door frames to act as strut-studs. Attach strut-stud to floor and ceiling runners with two (2) 3/8" Type S screws, space twelve (12) inches o.c. Over metal doors, install a cut to length section of runner and attach to strut-studs with clip angles and 3/8" Type S Screws space twelve (12) inches o.c.
- D. Wallboard Installation - Double Layer Installation: Erect gypsum wallboard base layer horizontally one side of studs with end joints staggered. Fasten base layer panels to studs with one (1) inch Type S screws twenty-four (24) inches o.c. Caulk perimeter of base layer panels. Apply gypsum wallboard face layer vertically over base layer with joints staggered and attached with 1-5/8" Type S screws staggered from those in base, spaced eight (8) inches o.c. and driven into studs.
- E. Wallboard Installation (Where Both Sides of Shaft Wall are Finished): Apply gypsum wallboard face layers vertically both sides of studs. Stagger joints on opposite partition sides. Fasten panels with one (1) inch or two (2) inches Type S screws spaced eight (8) inches o.c. in field and along edges into studs.
- F. Cants: Provide one (1) inch thick shaft wall liner, cut to suit condition, at beams and other projections wider than two (2) inches in elevator shafts. Cants shall slope seventy-five (75) degrees from the horizontal. Screw attach shaft wall liner to the vertical metal studs.
- G. Support elevator hoistway door frames independently of drywall shaft framing system, or reinforce system in accordance with system manufacturer's instructions.
- H. Where handrails are indicated for direct attachment to drywall shaft system, provide not less than a sixteen (16) ga. x eight (8) inches wide galvanized steel reinforcement strip, accurately positioned and secured to studs and concealed behind not less than one 1/2" thick course of gypsum board in the system.
- I. Integrate stair hanger rods with drywall shaft system by locating cavity of system as required to enclose rods.

3.7 ERECTION AT COLUMN ENCLOSURES

- A. Metal furring supports shall be provided under work of this Section, and shall be cut to lengths as necessary for tight fit such that spacing is not more than sixteen (16) inches o.c.
- B. Board shall be fastened securely to supports with screws as specified. Place boards in position with minimum amount of joints. Where free ends occur between supports,

back-blocking or furring shall be required. Center abutting ends over supports. Correct work as necessary so that faces of boards are flush, smooth and true. Provide clips or cross furring for attachment as required.

- C. All layers shall be screw attached to furring.
- D. When column finish called for on drawings to be in the same plane as drywall finish layer, maintain even, level plane.

3.8 ISOLATED WALL CONSTRUCTION

- A. Where walls are indicated to be supported using sway braces, bottom track shall be supported on floating wood floor assembly (Floor Type F5). Top track shall not be attached to underside of slab above but shall float free of structure. Vertical height of wall framing shall be supported using sway braces per manufacturers guidelines.

3.9 ISOLATION CEILING CONSTRUCTION

- A. Locate and layout suspension hangers for elements that are to be suspended below the isolation ceiling such as ducts, sprinkler piping and the like. Ensure that these hanger extend at least 6-inches below the plane of the finished isolation ceiling (or more if required by the elevation of the item being supported below the ceiling). Note that suspension hangers that penetrate the isolation ceiling may only be round or square in section. Angle section or flat section hangers are not permitted. Ensure that all suspension are hanging plumb and true.
- B. Locate and layout isolation hangers in accordance with the approved isolation ceiling shop drawings. Ensure that hangers are vertical and that they do not rub against pipe, duct, ceiling beams or other adjacent constructions.
- C. Connect straps or wires between lower end of hangers and structural channels that are located as described on the drawings. At the perimeter of the space, structural channels shall be provided within 6" of perimeter walls. Position channels for proper ceiling height, level and secure. Provide 1" clearance between channels and abutting walls. If necessary apply perimeter isolation board at the perimeter walls to ensure that channels, furring and/or drywall do not contact adjacent walls. Verify that all hangers for ducts, fixtures or other elements to be hung beneath the isolation ceiling layer are already in place.
- D. Erect metal furring channels at right angles to the structural channels. Space furring 2'-0" on center or as otherwise described in the drawings and within 6" of walls. Provide 1" clearance between furring ends and abutting walls. Secure furring to carrying channels with clips or saddle tie to supports using double-strand 18-gauge tie wire. At splices, nest or overlap furring channels at least 8" and securely wire-tie each end with double-strand 18-gauge tie wire.
- E. Pre-cut or pre-drill (or pre-mark for drilling) the 5/8" thick gypsum boards to allow passage of penetrations through the ceiling. Apply gypsum board of maximum practical length with long dimension at right angles to furring channels. Position end joints over channel web and stagger in adjacent rows. Fit ends and edges closely, but not forced together. Fasten panels to channels with 1" screws spaced 12" on center in field of panels and along abutting ends and edges. Progressively locate 4-inch thick acoustical insulation across ceiling above base layer as base layer is installed.

- F. Apply face layer of 5/8" thick gypsum board to base layer with joints staggered in both directions by 24". Face layer shall be strip laminated to base layer with lamination strips offset from screws. Face layer shall be screwed 24" on center at perimeter and in field.
- G. Spacers, 1/4" thick, shall be used to keep the isolation ceiling away from walls, columns and any other rigid interface. After the ceiling has been hung, the spacers shall be removed. If at any time the ceiling then shifts and touches a rigid interface structure, that portion of the ceiling must be rehung and reassembled so as to be plumb and true.
- H. Penetrations of sound isolation ceilings should be minimized to the greatest extent possible. Where they are required, these penetrations shall be sealed as follows:
 - 1. If the object is attached to the framing of the floating ceiling, (such as light fixtures) then the penetration should be caulked in place. This way all objects move together and there are no sound leaks. Light fixtures should be surface or pendant mounted with only conduit penetration. If fixtures must be recessed, then the gypsum board must wrap around the fixture box on all sides on the top of the ceiling.
 - 2. If the object is attached to the building structure (not floating) or is capable of independent movement from the ceiling (pipes, duct) then an oversized hole by 1/2" all around should be left. After the gypsum board has been installed, pack the gap around the penetrating element with mineral wool insulation for the full depth of the gypsum board. Trim mineral wool flush with face of the underside of the gypsum board and caulk with acoustical sealant.

3.10 FINISHING

- A. Taping: A thin, uniform layer of compound shall be applied to all joints and angles to be reinforced. Reinforcing tape shall be applied immediately, centered over the joint, seated into the compound. A skim coat shall follow immediately, but shall not function as a fill or second coat. Tape shall be properly folded and embedded in all angles to provide a true angle.
- B. Filling: After initial coat of compound has hardened, additional compound shall be applied, filling the board taper flush with the surface. The fill coat shall cover the tape and feather out slightly beyond the tape. On joints with no taper, the fill coat shall cover the tape and feather out at least four (4) inches on either side of the tape. No fill coat is necessary on interior angles.
- C. After compound has hardened, a finishing coat of compound shall be spread evenly over and extending slightly beyond the fill coat on all joints and feathered to a smooth, uniform finish. Over tapered edges, the finished joint shall not protrude beyond the plane of the surface. All taped angles shall receive a finish coat to cover the tape and taping compound, and provide a true angle. Where necessary, sanding shall be done between coats and following the final application of compound to provide a smooth surface, ready for painting.
- D. Fastener Depressions: Compound shall be applied to all fastener depressions followed, when hardened by at least two (2) coats of compound, leaving all depressions level with the plane of the surface.

- E. Finishing Beads and Trim: Compound shall be applied to all bead and trim and shall be feathered out from the ground to the plane of the surface. When hardened, this shall be followed by two (2) coats of compound each extending slightly beyond the previous coat. The finish coat shall be feathered from the ground to the plane of the surface and sanded as necessary to provide a flat, smooth surface ready for decoration.
- F. Level of finish for surface exposed to view shall conform to Level 5 of ASTM C 840 and GA-214 of the Gypsum Association.
- G. Drywall construction with defects of such character which will mar appearance of finished work, or which is otherwise defective, will be rejected and shall be removed and replaced at no expense to the City of New York.

3.11 CLEANING AND ADJUSTMENT

- A. At the completion of installation of the work, all rubbish shall be removed from the building leaving floors broom clean. Excess material, scaffolding, tools and other equipment shall be removed from the building.
- B. Work shall be left in clean condition ready for painting or wall covering. All work shall be as approved by the Commissioner.
- C. Cutting and Repairing: Include all cutting, fitting and repairing of the work included herein in connection with all mechanical trades and all other trades which come in conjunction with any part of the work, and leave all work complete and perfect after all trades have completed their work.

3.12 PROTECTION OF WORK

- A. Installer shall advise Contractor of required procedures for protecting drywall work from damage and deterioration during remainder of construction period.

3.13 WASTE MANAGEMENT

- A. Identify manufacturer's policy for collection or return of construction scrap, unused material, demolition scrap, and/or packaging material. Where feasible, institute demolition and construction waste separation and recycling to take advantage of manufacturer's programs.

END OF SECTION

SECTION 093013

CERAMIC TILING

PART 1 . GENERAL :

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the ceramic tiling work as shown on the drawings and/or specified herein, including, but not limited to, the following:
 - 1. Ceramic mosaic floor tile.
 - 2. Ceramic glazed wall tile and matching base.
 - 3. Stone thresholds.
 - 4. Setting beds, grout, sealant and waterproofing membrane.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Gypsum drywall - Section 092900, for tile backing board.

1.4 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. Qualifications of Installers: For cutting, installing and grouting of ceramic tile, use only thoroughly trained and experienced journeyman tile setters who are completely familiar with the requirements of this work, and the recommendations contained in the referenced standards.

- C. Adhesives: "Green Seal Environmental Standard for Certification of Commercial Adhesives" (GS-36), Green Seal, Inc., Washington, DC, <http://www.greenseal.org>
- D. Codes and Standards: In addition to complying with all pertinent codes and regulations, comply with the following:
 - 1. Manufacture all ceramic tile in accordance with Standard Grade Requirements of ANSI A-137.1.
 - 2. Install all ceramic tile in accordance with the recommendations contained in Handbook for Ceramic Tile Installation of the Tile Council of America, Inc., latest edition.

1.5 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
 - 1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications.
 - 2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 - 3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 - 4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
 - 5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.
- B. Samples
 - 1. Before any ceramic tile is delivered to the job site, submit to the Commissioner sample panels, approx. 12" x 12", mounted on hardboard back-up with selected grout color for each color and pattern of ceramic tile and grout specified.
 - 2. Submit 6" length of stone thresholds.
 - 3. Submit 12" x 12" samples of waterproofing membrane.

- C. Master Grade Certificates: Prior to opening ceramic tile containers, submit to the Commissioner a Master Grade Certificate, signed by an officer of the firm manufacturing the ceramic tile used, and issued when the shipment is made, stating the grade, kind of tile, identification marks for tile containers, and the name and location of the project.
- D. Manufacturer's certification of recycled content per section 2.1 of this specification.
- E. Manufacturer's certification of lead-free glazings (for glazed tiles) per section 2.1 of this specification.
- F. Manufacturer's certification of product compliance with adhesive standards per section 2.1 of this specification (for mastic-set applications).
- G. Manufacturer's certification of product compliance with VOC limits for mortars and grouts per section 2.1 of this specification.
- H. Material Safety Data Sheets.
- I. Manufacturer's maintenance and cleaning instructions.
- J. Manufacturer's policy statement on ceramic tile recycling programs.
- K. Mock-Ups
 - 1. At an area on the site where approved by the Commissioner, provide a mock-up ceramic tile installation.
 - a. Make the mock-up approximately 36" x 36" in dimension.
 - b. Provide one mock-up for each type, class, and color of installation required under this Section.
 - c. The mock-ups may be used as part of the Work, and may be included in the finished Work when so approved by the Commissioner.
 - d. Revise as necessary to secure the Commissioner's approval.
 - 2. The mock-ups, when approved by the Commissioner, will be used as datum for comparison with the remainder of the work of this Section for the purposes of acceptance or rejection.
 - 3. If the mock-up panels are not permitted to be part of the finished Work, completely demolish and remove them from the job site upon completion and acceptance of the work of this Section.

1.6 PRODUCT HANDLING

- A. Delivery and Storage
 - 1. Deliver all materials of this Section to the job site in their original unopened containers with all labels intact and legible at time of use.
 - 2. Store all materials under cover in a manner to prevent damage and contamination; store only the specified materials at the job site.

- B. Protection: Use all means necessary to protect the materials of this Section before, during, and after installation, and to protect the installed work and materials of all other trades.
- C. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

1.7 PROJECT CONDITIONS

- A. Maintain environmental conditions and protect work during and after installation to comply with referenced standards and manufacturer's printed recommendations.
- B. Vent temporary heaters to exterior to prevent damage to tile work from carbon dioxide buildup.
- C. Maintain temperatures at not less than 50 deg. F. in tiled areas during installation and for 7 days after completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS OF TILE

- A. Provide tile manufactured by American Olean, or approved equal meeting these specifications. The Commissioner reserves the right to pick tile from any price group.
- B. Tile in the public restrooms (F-4)
 - 1. Company: Pinocchi
 - 2. Product: Pino 24" x 48"
 - 3. Source: Stone Source
- C. Wall tile (T-1):
 - 1. Company: Mosa Tile
 - 2. Product: 13210 (10 x 30 CM) Matte White
 - 3. Source: Town and Country Flooring.

2.2 WALL TILE AND BASE (T-2)

- A. Cushion edge units, matte glazed, and 6" x 6" x 1/4" thick, American Olean in colors as scheduled on the drawings.
- B. Provide sanitary cove base for floor/wall transition, and bullnose tile for top trim.

2.3 FLOOR TILE (F-4B)

- A. Provide 2" x 2" porcelain type ceramic mosaic floor tile with all-purpose edge in color and pattern as scheduled on the drawings. Tile to have water absorption not to exceed 0.5%.

2.4 TRIM AND SPECIAL SHAPES

- A. Provide external and internal corners, trim shapes at openings, and all other trim and special shapes to match the tile specified herein, as required by field conditions and drawing details.

2.5 STONE THRESHOLDS

- A. Marble: Provide sound Group "A" white marble complying with ASTM C 503, min. 3/4" thick.
- B. Stone thresholds shall have an abrasive hardness of not less than 10.0, when tested in accordance with ASTM C 241. Cut saddle to fit jamb profile, honed finish.

2.6 SETTING BEDS AND GROUT

- A. Portland Cement: ASTM C 150, Type 1.
- B. Hydrated Lime: ASTM C 207, Type S.
- C. Sand: ASTM C 144, clean and graded natural sand.
- D. Reinforcing for Mud Set Systems: 2" x 2" x 16/16 ga. welded wire mesh.
- E. Latex Additives: As manufactured by Laticrete or Mapei as follows:
 - 1. Laticrete 272 premium floor and wall thin set mortar, fortified with Laticrete 333 Mortar Admix.
 - 2. Mapei Kerabond thin set mortar, fortified with Ker 310 Keralastic System additive.
- F. Wall and Base Tile
 - 1. Over cement board use a Latex Portland cement mortar bond coat conforming to ANSI A118.4 and TCA Detail W-244; coat back of board with waterproof membrane as specified below.
 - 2. Over glass mat water resistant gypsum backer board use a Latex Portland cement mortar bond coat conforming to ANSI A118.4 and TCA Detail W-245.
- G. Floor Tile and Threshold - Thin Set with Waterproof Setting Bed: Set floor tile and threshold using thin set latex Portland cement bond coat conforming to ANSI A118.4 and waterproofing membrane conforming to TCA Detail F-122. Use this system where toilet room occurs over occupied space other than another toilet room and wherever else noted on drawings.
- H. Waterproofing Membrane: "Laticrete 9235 with Microban" made by Laticrete International or approved equal by Mapei.
- I. Water: Clean, fresh and suitable for drinking.
- J. Grout: For grouting ceramic tile, provide a commercial Portland cement grout made by Laticrete, Mapei, or approved equal; color as selected by the Commissioner. Add latex additive to grout made by same manufacturer as grout.

- K. **Physical Properties:** The setting beds and grouts must meet the following physical requirements:
1. Compressive Strength: 3000 psi min.
 2. Shear Bond Strength: 500 psi min.
 3. Water Absorption: 4.0% max.
 4. Service Rating (ASTM C 627): Extra Heavy Duty.
- L. **Sealer:** Seal all grout joints and all unglazed tile using No. 004 "Keraseal Penetrating Sealer for Unglazed Grout and Tile" as manufactured by Mapei Corp. or approved equal.
- M. **Temporary Protective Coating:** Either product indicated below that is formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.
1. Petroleum paraffin wax, fully refined and odorless, containing at least 0.5 percent oil, with a melting point of 120 to 140 deg. F. per ASTM D 87.
 2. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as temporary protective coating for tile.
- N. **Tile Cleaner:** A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.7 SEALANT

- A. **Joint Backing:** Preformed, compressible, resilient, non-extruding, non-staining strips of foam neoprene, foam polyethylene, or other material recommended by sealant manufacturer.
- B. **Bond Breaker:** Polyethylene tape, 3 mils thick, or other material recommended by sealant manufacturer.
- C. **Sealant Primer:** Colorless, non-staining, or type to suit substrate surface, as recommended by sealant manufacturer.
- D. **Sealant:** One-part silicone based sanitary sealant, conforming to ASTM C 920, Type S, Grade NS, Class 25. Sealant hardness upon full cure shall be between 20-30 Shore "A" Durometer. Color of sealant to blend with or match adjacent materials, and as selected by the Commissioner. Sealant shall be equivalent to 1700 Sanitary Sealant made by General Electric or approved equal.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where ceramic tile is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 CONDITION OF SURFACES

- A. Allowable Variations in Substrate Levels in Floors: + 1/8" in 10'-0" distance and 1/4" total max. variation from levels shown.
- B. Grind or fill concrete and masonry substrates as required to comply with allowable variations.

3.3 PREPARATION

- A. Steel trowel and fine broom finish concrete slabs that are to receive ceramic tile. Cure concrete slabs that are to receive tile before tile application. Do not use liquid curing compounds or other coatings that may prevent bonding of tile setting materials to slabs. Slab shall be dry at time of tile installation.
- B. Etch concrete substrate as may be required to remove curing compounds or other substances that would interfere with proper bond of setting bed. Rinse with water to remove all traces of treatment.
- C. Seal substrate with sealer as recommended by manufacturer of mortar or adhesive.

3.4 JOINTS IN TILE WORK

- A. Joint Widths: 1/16" wide in ceramic tile.
- B. Alignment: Wall, base and floor joints shall align through the field and trim. Direction and location of all joints as directed by Commissioner.
- C. Movement Joints: Conform to TCA Detail EJ171. Locate where movement joints are in back-up material. Provide movement joint at joints between mop receptors and ceramic tile. Provide movement joint at all vertical internal joints of wall tile. Movement joints 1/8" wide in ceramic tile. Fill all movement joints with specified backing and sealant. Use bond breaker where sufficient space for joint backing does not exist.
 - 1. Provide sealant between ceramic tile and plumbing fixtures, mirrors, pipes, countertops and other dissimilar materials penetrating or adjacent to ceramic tile.

3.5 INSTALLATION

- A. Comply with the following installation standards
 - 1. Wall tile over cement board or glass mat backer board using dry set mortar - ANSI A108.5 and A108.10.
 - 2. Floor tile over waterproofing membrane - ANSI A108.5 and A108.10.

B. Allowable Variations in Finished Work: Do not exceed the following deviations from level and plumb, and from elevations, locations, slopes and alignment shown.

1. Floors: 1/8" in 10'-0" run, any direction; +/- 1/8" at any location; 1/32" offset at any location.
2. Walls: 1/8" in 8'-0" run, any direction; 1/8" at any location; offset at any location, 1/32".
3. Joints: +/- 1/32" joint width variation of any location; 1/16" in 3'-0" run deviation from plumb and true.

C. Waterproofing Membrane

1. Install the membrane in strict accordance with manufacturer's written recommendations.
2. Upon completion of work, test horizontal membrane for leaks by plugging the drain or damming areas and filling with water. Inspect for leakage. Make necessary adjustments to stop all leakage and retest until watertight. If membrane is not covered by another surface immediately, provide protection until membrane is covered.

D. Handle, store, mix and apply setting and grouting materials in compliance with the manufacturer's instructions.

E. Extend tile work into recesses and under equipment and fixtures, to form a complete covering without interruptions. Terminate work neatly at obstructions, edges and corners without disruption of pattern or joint alignment.

F. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight, aligned joints. Fit tile closely to electrical outlets, piping and fixtures so that plates, collars, or covers overlap tile.

G. Lay tile in grid pattern. Align joints when adjoining tiles on floor, base, walls and trim are the same size. Lay out tile work and center tile fields both directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths.

3.6 INSTALLATION OF STONE THRESHOLDS

A. Install stone thresholds cut to profiles and sizes shown, accurately fitted to jambs, coped at stops, set in full bed of mortar herein specified, and with grouted edge joints as specified for floor tile.

3.7 CLEANING AND PROTECTION OF CERAMIC TILE

A. Upon completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter. Unglazed tile may be cleaned with acid solutions only when permitted by tile and grout manufacturer's printed instructions, but not sooner than 14 days after installation. Protect metal surfaces, cast iron and vitreous plumbing fixtures from effects of acid cleaning. Flush surface with clean water before and after cleaning.

- B. Apply to all clean completed tile walls and floors a protective coating of neutral cleaner solution, 1 part cleaner to 1 part water.
- C. Leave finished installation clean and free of cracked, chipped, broken, unbonded or otherwise defective tile work.
- D. Protect installed tile work with Kraft paper or other heavy covering during construction period to prevent damage and wear. Prohibit foot and wheel traffic from using tiled floors for at least 3 days after grouting is completed. Before final inspection, remove protective coverings and rinse neutral cleaner from tile surfaces.

3.8 WASTE MANAGEMENT

- A. Identify manufacturer's policy for collection or return of construction scrap, unused material, demolition scrap, and/or packaging material. Where feasible, institute demolition and construction waste separation and recycling to take advantage of manufacturer's programs.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 096400

WOOD FLOORING

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the wood strip flooring, as shown on the drawings and/or specified herein, including, but not limited to, the following:
 - 1. Wood strip flooring and base.
 - 2. Hardboard for use at floors of Theaters 1 and 2.
 - 3. Plywood subflooring.
 - 4. Accessories, including acoustical underlayment.
 - 5. Field finishing of wood flooring.

1.3 RELATED SECTIONS

- A. Waste Management Requirements – Section 017419.
- B. Sustainable Design Requirements – Section 018113.
- C. VOC Limits for Adhesives, Sealants and Architectural Coatings – Section 018114.
- D. Indoor Air Quality Requirements – Section 018119.
- E. Concrete slab - Section 033000.
- F. Carpentry - Section 062000.

1.4 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS

- 1. The Contractor and their sub-contractors shall submit the LEED BUILDING Certification items listed herein. LEED BUILDING Submittals shall include the following:
 - a. For all installed products and materials of this Section, complete the ENVIRONMENTAL MATERIALS REPORTING FORM (blank copy attached at end of Section 018113 "Sustainable Design Requirements"). Information to be supplied for this Form shall include:
 - 1) Cost breakdowns for the materials included in the Contractor or sub-contractor's work. Cost breakdowns shall include total installed cost and material-only cost.

- 2) The percentages (by weight) of post-consumer and/or post-industrial recycled content in the supplied product(s).
 - 3) Indication (Y/N) of whether the raw materials have been extracted, harvested or recovered, as well as the final product has been manufactured (location of final assembly), within 500 miles of the project site.
 - 4) For all field-applied interior adhesives, sealants, and paints relating to work of this Section, provide the Volatile Organic Compound (VOC) content in grams/liter or lbs./gallon.
- b. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the product information supplied for the ENVIRONMENTAL MATERIALS CERTIFICATION FORM.
 - c. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as stated below. Cut sheets shall be submitted with the Construction Manager or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.
 - d. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
2. The LEED BUILDING Submittal information outlined above shall be assembled into one (1) package per Specification section or sub-contractor. Incomplete or inaccurate LEED Submittals may be used as the basis for rejecting the submitted products or assemblies.
- B. Product Data: Submit manufacturer's product data and installation instructions for each material and product used.
 - C. Samples: Submit two representative samples of each material specified indicating visual characteristics and finish. Include range samples if variation of finish is anticipated.
 - D. Maintenance Data: Submit manufacturer's maintenance data, including maintenance schedule.
 - E. Extra Stock: Submit extra stock equal to 2% of total used.

1.5 QUALITY ASSURANCE

- A. LEED BUILDING PERFORMANCE CRITERIA: Products of this Section shall meet the following requirements and shall be documented in accordance with the LEED BUILDING SUBMITTAL REQUIREMENTS of this Section:
 1. Products of this Section which have been extracted, harvested or recovered, as well as manufactured (location of final assembly), within 500 miles of the project site shall be identified and documented.
 2. Field-applied interior adhesives, sealants, and paints relating to work of this Section shall meet the requirements of Section 018114 "VOC Limits for Adhesives, Sealants and Architectural Coatings," and shall be identified and documented.

3. Certification of criteria shall be in accordance with the Submittal Requirements of this section.
- B. Installer Qualifications: Specialized wood flooring firm with not less than three (3) years' successful experience in installation of types specified, and acceptable to manufacturer of wood flooring.
- C. General Standard: Comply with recommendations of National Wood Flooring Association (WFA) Installation Guidelines.
- D. Source Quality Control: Obtain flooring of each type from single manufacturer or source, to ensure match of quality, color, pattern and texture.
- E. Field-Constructed Mock-Up: Prior to installing wood flooring and trim, construct mockups for each form of construction and finish required to verify selections made under Sample submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mock-ups to comply with the following requirements, using materials indicated for completed work.
 1. Build mock-ups of wood flooring and each type of trim, in the form, dimensions, and location designated by the Commissioner.
 2. Notify Commissioner one week in advance of the dates and times when mock-ups will be erected.
 3. Demonstrate the proposed range of aesthetic effects and workmanship.
 4. Modify or reinstall mock-ups as required to obtain Commissioner's acceptance. Simulate finished lighting conditions for reviewing mock-ups.
 5. Obtain Commissioner's acceptance of mock-ups before start of final unit of work.
 6. Retain and maintain mock-ups during construction in undisturbed condition as a standard for judging completed unit of work. When directed, demolish and remove mock-ups from project site, except that accepted in place mock-ups in undisturbed condition at the time of Substantial Completion may become part of completed unit of work.
- F. The Contractor shall furnish a letter from the adhesive manufacturer stating that the concrete substrate has been tested for moisture vapor transmission and that the moisture vapor transmission levels do not exceed the manufacturers' recommendations.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Moisture Content: At time of delivery, limit average moisture content of wood flooring to 6%, with 8% maximum for any piece.
- B. Protect wood flooring from excessive moisture in shipment, storage and handling. Deliver in unopened cartons or bundles and store in a dry place, with adequate air circulation. Do not deliver material to building until "wet work" such as concrete and plaster have been completed and cured to a condition of equilibrium.

1.7 PROJECT CONDITIONS

- A. Conditioning: Do not proceed with installation of wood flooring until spaces have been enclosed. Building must be dry with all wet work (i.e. concrete, plaster, drywall, fireproofing) completed. Further, the building HVAC system must be operating and the space shall have been at the expected ambient temperature and relative humidity for

five days. Condition wood for five (5) days prior to start of installation by placing in spaces to receive flooring and maintaining ambient conditions in which it will be used before, during and after installation. Open packages of wood flooring which are sealed to permit natural adjustment of moisture content.

1.8 SPECIAL PROJECT WARRANTY

- A. Submit one (1) year warranty signed by Manufacturer agreeing to repair or replace wood flooring which shrinks, warps, cracks, or otherwise deteriorates excessively, or which breaks its anchorage or bond with substrate or otherwise fails to perform as required, due to failures of materials and/or workmanship and not due to unusual exposure to moisture or other abusive forces or elements not anticipated for application.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Wood strip flooring shall be Quarter Sawn, Select, White Oak (per NOFMA grading rules), 25/32" thick and 2-1/4" face width. No lengths less than 4' -0". Flooring strips shall be tongued-and-grooved and end-matched; back face of each strip shall be backchanneled. Strips shall be standard random lengths, complying with grading rules. Wood shall be kiln-dried and moisture content of wood at time of installation shall not exceed 8%.
- B. Hardboard: Signature S2S High Performance Panel by Decorative Panels International (DPI), or approved equal.
- C. Wood block flooring: See Section 096401, Wood Block Flooring.
- D. Plywood Subflooring: 3/4" thick C-D EXT APA Rating Sheathing, Exposure 1. Cover top of plywood with 30 lb. asphalt felt prior to application of wood flooring.
- E. Wood Trim: Where indicated to match wood flooring, provide wood base board molding, base shoe molding and stair risers of same species and grade as wood flooring. Provide wood stripping, nosings, saddles and thresholds, as indicated in or adjacent to wood flooring, of same species, grade and cut as wood flooring.

2.2 HARDWOOD FIELD FINISHING

- A. Polyacrylate Floor Finish: Provide (3) three coats of water-based urethane floor finish equal to "Naturale" as manufactured by Bona Kerni.
- B. For hardboard opaque finish, see Section 099000, Painting and Finishing.

2.3 ACCESSORIES

- A. Fasteners: Provide screw type flooring nails as recommended by NWFA in "Installation Guidelines Manual."
- B. Cork Expansion Strip: Composition cork expansion strip, where not specified or drawn otherwise.

- C. Red rosin building paper.
- D. Mastic: Cut black asphalt type.

2.4 ACOUSTIC MATERIALS

- A. The floating floor system shall be Model RIM by Kinetics Noise Control, Inc., Dublin, Ohio, or approved equal, Model RIM Floating Floor System shall consist of high density molded fiberglass pads individually coated with a flexible elastomeric membrane. Isolation pads shall be 2" thick and be spaced as recommended by the manufacturer but not greater than 16" centerline spacing. Pads shall be manufactured from annealed glass fibers stabilized by precompression during manufacture. Pads shall be designed to safely withstand a minimum imposed load of 75 PSF in all open areas and shall have a minimum overload capacity of 100% in all high load areas.
- B. Sound rated floor underlayment shall be Model SR Floorboard as manufactured by Kinetics Noise Control, Dublin, Ohio, (800) 959-1229; or approved equal. The material consists of a 5/8" thick composite consisting of a rigid phenolic-treated honeycomb core molded between two layers of high-density glass fiber. The isolation board shall be capable of withstanding up to 1,000 lbs./sq. ft. loading with a maximum of 0.060" of additional deflection.
- C. Pads shall have satisfactorily passed WMATA Section 3.49 dynamic test for isolator permanence.
- D. 1-1/2" thick low-density fiberglass absorption material shall be bonded to the isolation pads and shall cover a minimum of 95% of the area between the isolation pads.
- E. Perimeter Isolation Board: As specified in Section 079200, Joint Sealers.
- F. Self-Leveling Underlayment: "DSP-520" by H. B. Fuller, or approved equal.

PART 3 - EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where wood strip flooring is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 PREPARATION

- A. Wherever direct application of wood flooring to concrete substrate is indicated, test for dryness before proceeding with installation. If tests show dampness or moisture content in excess of 10%, do not proceed until slab is dry. Wood flooring manufacturer must approved substrate in writing, to the Commissioner prior to start of work of this Section.
- B. Grind high spots and fill low spots on concrete substrates to produce a maximum 1/8-inch deviation in any direction when checked with a 10-foot straight edge. Use

trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.

- C. Remove coatings, including curing compounds, and other substances on substrates that are incompatible with installation adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
- D. Broom or vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION (GENERAL)

- A. General: Comply with flooring manufacturer's instructions and recommendations, but not less than recommended by NWFA "Installation Guidelines."
- B. Pattern: Comply with pattern or direction of pattern for laying wood flooring, as directed by Commissioner.
- C. Expansion Space: Provide expansion space at walls and other obstructions and terminations of flooring, not less than 1/2". Fill expansion space with perimeter isolation board. Nail shoe molding or other trim to baseboard, rather than to flooring.
- D. Wood strip flooring shall be securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16" out of plane.

3.4 INSTALLATION OVER ACOUSTIC UNDERLAYMENT

- A. The installation of all sound isolation materials specified herein, including those installed under other sections of the specifications, shall be in accordance with procedures submitted by the isolation material manufacturer, and approved by the Commissioner.
- B. All sound isolation materials and building components supported by isolation materials shall be free from rigid contact with any part of the building structure.
- C. Plywood Sub-Floor: Provide floating installation of plywood over sound control mat. Cut plywood to 16" x 8'-0" planks scored on back 3/8" deep a minimum of every 12" across width. Place 16" planks perpendicular to direction of wood flooring. Stagger planks every 2'-0" and spaced 1/8" between ends. Do not attach planks to acoustic underlayment or sub-structure.
 - 1. Leave 3/4" space at all wall lines and 1/8" between panels. Cut plywood to fit within 1/8" near and around door jambs and other obstructions where finish trim will not be used.
- D. Apply rosin paper over plywood.
- E. Blind nail flooring to plywood spacing nails 8" o.c. in accordance with NWFA recommendations.
 - 1. Fasteners for blind nailing must be sized so that they cannot penetrate into the acoustic underlayment mat.

- F. Wood Trim: Nail baseboard to wall and nail shoe molding to other trim to baseboard; do not nail to flooring.

3.5 SANDING AND FINISHING

- A. Machine sand installed unfinished flooring to remove offsets and non-level conditions, ridges, cups, and sanding machine marks which would be visually noticeable after finishing. Use three (3) grades of sandpaper, ending with 00 grade. Vacuum clean and immediately apply finish. Do not permit traffic on floor after sanding and until finish is completed. Cover sanded floor with building paper to provide access for application of first finish coats.
- B. Immediately after proper sanding, tack rag with clean-up solvent. Apply a thin coat of polyurethane. Allow to dry thoroughly. Sand floors using NOFMA/MFMA procedures. Tack rag with clean-up solvent. Apply a second and third coat of polyurethane in same manner.

3.6 PROTECTION

- A. Protect completed wood flooring during remainder of construction period with heavy Kraft paper or other suitable covering, so that flooring and finish will be without damage or deterioration at time of acceptance.
- B. Install materials and systems in accordance with manufacturer's instructions and approved submittals. Install materials and systems in proper relation with adjacent construction and with uniform appearance. Coordinate with work of other sections.
- C. Restore damaged finishes. Clean and protect work from damage.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 096401

WOOD BLOCK FLOORING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the wood flooring, as shown on the drawings and/or specified herein, including, but not limited to, the following:
 - 1. Wood block flooring.
 - 2. Field finishing of wood flooring.

1.3 RELATED SECTIONS

- A. Waste Management Requirements – Section 017419.
- B. Sustainable Design Requirements – Section 018113.
- C. VOC Limits for Adhesives, Sealants and Architectural Coatings – Section 018114.
- D. Indoor Air Quality Requirements – Section 018119.
- E. Concrete sub-floor – Section 033000.
- F. Joint Sealers - Section 079200.

1.4 QUALITY ASSURANCE

- A. **LEED BUILDING PERFORMANCE CRITERIA:** Products of this Section shall meet the following requirements and shall be documented in accordance with the LEED BUILDING SUBMITTAL REQUIREMENTS of this Section:
 - 1. Products of this Section which have been extracted, harvested or recovered, as well as manufactured (location of final assembly), within 500 miles of the project site shall be identified and documented.
 - 2. Field-applied interior adhesives, sealants, and paints relating to work of this Section shall meet the requirements of Section 018114 "VOC Limits for Adhesives, Sealants and Architectural Coatings," and shall be identified and documented.
 - 3. Certification of criteria shall be in accordance with the Submittal Requirements of this section.
 - 4. Wood shall meet FSC and LEED standards noted in Section 064023.

- B. **Installer Qualifications:** Specialized wood flooring firm with not less than 3 years' successful experience in installation of types specified, and acceptable to manufacturer of wood flooring.
- C. All work of this Section shall meet the requirements of the manufacturer's specifications; copy available from the Commissioner.
- D. **Source Quality Control:** Obtain flooring of each type from single manufacturer or source, to ensure match of quality, color, pattern and texture.

1.5 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS

1. The Contractor and their sub-contractors shall submit the LEED BUILDING Certification items listed herein. LEED BUILDING Submittals shall include the following:
 - a. For all installed products and materials of this Section, complete the ENVIRONMENTAL MATERIALS REPORTING FORM (blank copy attached at end of Section 018113 "Sustainable Design Requirements"). Information to be supplied for this Form shall include:
 - 1). Cost breakdowns for the materials included in the Contractor or sub-contractor's work. Cost breakdowns shall include total installed cost and material-only cost.
 - 2). The percentages (by weight) of post-consumer and/or post-industrial recycled content in the supplied product(s).
 - 3). Indication (Y/N) of whether the raw materials have been extracted, harvested or recovered, as well as the final product has been manufactured (location of final assembly), within 500 miles of the project site.
 - 4). For all field-applied interior adhesives, sealants, and paints relating to work of this Section, provide the Volatile Organic Compound (VOC) content in grams/liter or lbs./gallon.
 - b. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the product information supplied for the ENVIRONMENTAL MATERIALS CERTIFICATION FORM.
 - c. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as stated below. Cut sheets shall be submitted with the Construction Manager or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.
 - d. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets,

manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

2. The LEED BUILDING Submittal information outlined above shall be assembled into one (1) package per Specification section or sub-contractor. Incomplete or inaccurate LEED Submittals may be used as the basis for rejecting the submitted products or assemblies.

B. Product Data: Submit manufacturer's detailed technical product data and installation instructions for each type of wood flooring. Include instructions for handling, storage, installation, finishing, protection, and maintenance.

C. Samples: Submit sets of range samples for wood flooring; include finish.

1. Include 6" samples of cork expansion strip and zinc divider strip.

2. Provide 24" x 24" finished floor sample for review.

1.6 DELIVERY, STORAGE AND HANDLING

A. Moisture Content: At time of delivery, limit average moisture content of wood flooring to 8%, with 10% maximum for any piece.

B. Protect wood flooring from excessive moisture in shipment, storage and handling. Deliver in unopened cartons or bundles and store in a dry place, with adequate air circulation. Do not deliver material to building until "wet work" such as concrete and plaster have been completed and cured to a condition of equilibrium.

1.7 PROJECT CONDITIONS

A. Conditioning: Do not proceed with installation of wood flooring until spaces have been enclosed and are at approximate humidity condition planned for occupancy. Condition wood for 5 days prior to start of installation by placing in spaces to receive flooring and maintaining ambient temperature between 65 and 70 degrees F. before, during and after installation. Open packages of wood flooring which are sealed to permit natural adjustment of moisture content.

1.8 SPECIAL PROJECT WARRANTY

A. Submit 1 year warranty signed by Manufacturer agreeing to repair or replace wood flooring which shrinks, warps, cracks, or otherwise deteriorates excessively, or which breaks its anchorage or bond with substrate or otherwise fails to perform as required, due to failures of materials and/or workmanship and not due to unusual exposure to moisture or other abusive forces or elements not anticipated for application.

1.9 EXTRA STOCK

A. Extra Stock: Deliver stock of maintenance material to the City of New York. Furnish maintenance material matching products installed, packaged with protective covering for storage and identified with appropriate labels.

1. Wood Block: Furnish quantity of full size units equal to 5.0% of amount installed.

PART 2 PRODUCTS

2.1 WOOD MATERIALS

- A. Wood Flooring: End Block, Douglas Fir, 1" thick, random widths, as produced by Kaswell Flooring Systems. (508) 879-1500, Oregon Lumber, or approved equal. Wood shall be kiln dried.
 - 1. Wood block flooring shall be end-grain solid block, kiln dried (8% - 10%) light colored wood turned on end and double edge wired with soft aluminum wire to form a flexible strip. Block faces shall be sanded 40 and 60 grit and edges chamfered to 1/64". Backs of blocks shall be double grooved with bottom edges beveled.

2.2 ACCESSORIES

- A. Mastic: As recommended by flooring and adhesive manufacturers for application indicated.
- B. Perimeter Isolation Board: As specified in Section 079200, Joint Sealers.
- C. Finish: Two coats of field applied water-based polyurethane and clear floor finish; matte finish as selected by the Commissioner.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where wood flooring is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 PREPARATION

- A. Broom or vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 CONDITIONING

- A. Open wrapping only after heating and air conditioning facilities are operating normally, and assuming a room temperature between 65 and 75 degrees F; then break the palletized units and restack vertically in the room where the flooring will be installed for 10 days or longer. To be sure air reaches all material, restack in a vertical column each strip individually on edge 1/2" apart (cross hatch) so that air can reach all surfaces. When handling keep all thin end blocks on the strip.
- B. Install flooring during the winter, spring or fall (neutral humidity) months. Material shall be as dry as possible and installed at very low humidified conditions.

3.4 INSTALLATION

- A. General: Comply with flooring manufacturer's instructions and recommendations, but not less than recommended by NOFMA in "Hardwood Flooring Installation Material".
 - 1. Pattern: Comply with pattern or direction of pattern for laying wood flooring, as directed by the Commissioner.
- B. Expansion Space: Provide expansion space at walls and other obstructions and terminations of flooring, not less than 3/8". Fill expansion space with perimeter isolation board. Nail shoe molding or other trim to baseboard, rather than to flooring.
- C. Apply adhesive to approved substrate in two applications as follows:
 - 1. First application shall be applied with a flat trowel, allowing the adhesive to be used as a primer and as a sealer. Allow to dry overnight.
 - 2. The second application shall be applied with a 3/16" notched trowel for block installation.
- D. Wood Flooring: Apply wood blocking strips using soap lines to start and maintain squareness. Place first strip in corner parallel and tight to temporary lumber filler. Place adjoining strips close as possible to next strip to avoid crowding mastic between strips. Stagger ends. Do not pound direct on edges of blocking. Instead place short section of 2 x 4 lumber on edge and pound only the 2 x 4 with mallet to avoid edge damage. Be sure strips are flat prior to placement by flat tapping out any curl. If after acclimation blocks are loose, carefully end tap blocks on the strip tight and snip excess wire. Continue snap lines to maintain squareness. All mastic must be kept off exposed surfaces.
 - 1. All half blocks at strip ends should be removed prior to installation.

3.5 SANDING AND FINISHING

- A. General: Wood block flooring shall be presanded with 60 grit from the factory. Any light brown (mottled) resin spots or discoloration on the surface must be removed by sanding. If slab irregularity causes over wood, drum sand with 40 grit necessary to flush all blocks to even height. Assuming slab sufficiently smooth so that after laying there is no over wood, then:
 - 1. Using drum belt sander sand first with 60 grit.
 - 2. Vacuum clean and fill any large cracks with patch compound. Under pressure gun, matching trowel or putty knife force deep and solid into the voids. Allow to dry thoroughly (usually 2 hours).
 - 3. With the drum make a second sanding pass with 80 grit (this will clean discoloration caused by patch compound).
 - 4. Using a rotary machine (either high speed or slow) lightly and quickly sand last with a 100 grit disc or screen.

- a. Eliminate all of the hard-to-see scratch marks no matter how faint and other blemishes. Be absolutely sure no liquids (paint, water, mud, etc.) touch this floor, and keep everyone out of the room until the surface is protected.
- B. Field finish following manufacturer's application requirements.
- C. Clean: Vacuum and sweep clean. Remove all sources of dust and other particles from ledges, radiators, etc.

3.6 PROTECTION

- A. Protect completed wood flooring during remainder of construction period with heavy Kraft paper or other suitable covering, so that flooring and finish will be without damage or deterioration at time of acceptance.

END OF SECTION

SECTION 096500

RESILIENT FLOORING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the resilient tile flooring, as shown on the drawings and/or specified herein, including, but not limited to, the following:
 - 1. Vinyl composite tile (VCT)
 - 2. Rubber base.
 - 3. Transition strips.
 - 4. Accessories.

1.3 RELATED SECTIONS

- A. Waste Management Requirements – Section 017419.
- B. Sustainable Design Requirements – Section 018113.
- C. VOC Limits for Adhesives, Sealants and Architectural Coatings – Section 018114.
- D. Indoor Air Quality Requirements – Section 018119.
- E. Gypsum board partitions - Section 092900.
- F. Carpeting - Section 096800.

1.4 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. Qualifications of Installers: Use only personnel who are thoroughly trained and experienced in the skills required and completely familiar with the requirements established for this work.

1.5 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications.
 2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
 5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.
- B. Manufacturer's Data: For information only, submit manufacturer's technical information and installation instructions for type of resilient tile.
- C. Samples
1. Submit full-size sample tiles for each type and color required, representative of the expected range of color and pattern variation. Sample submittals will be reviewed for color, texture and pattern only. Compliance with all other requirements is the exclusive responsibility of the Contractor.
 2. Submit six (6) inch long samples of base and strips.

1.6 DELIVERY AND STORAGE

- A. Deliver materials to the project site in the manufacturer's original unopened containers, clearly marked to indicate pattern, gauge, lot number and sequence of materials.
- B. Carefully handle all materials and store in original containers at not less than seventy (70) degrees F. for at least forty-eight (48) hours before start of installation.

1.7 JOB CONDITIONS

- A. Continuously heat spaces to receive tile to a temperature of seventy (70) degrees F. for at least forty-eight (48) hours prior to installation, whenever project conditions are such that heating is required. Maintain seventy (70) degrees F. temperature continuously during and after installation as recommended by the tile manufacturer, but

for not less than forty-eight (48) hours. Maintain a temperature of not less than fifty-five (55) degrees F. in areas where work is completed

PART 2 PRODUCTS

2.1 VCT TILE

- A. Provide 12" x 12" x 1/8" thick vinyl composition tile conforming to ASTM F 1066, Class 2, Dolphin IMP 0211, equal to "Impressions" made by LG Floors, or equivalent product of Armstrong, Johnsonite Tarkett, or approved equal. Provide tile units with uniformly distributed color and pattern throughout the thickness of tile. Variations in shades and off-pattern matches between containers are not acceptable.
 - 1. Color: Match VCT color and alignments in residential corridor. Other colors shall be as selected by the Commissioner.
- B. Provide 4" matching wall base.

2.2 ACCESSORIES

- A. Adhesives: Waterproof, stabilized type, as recommended by the tile manufacturer for the type of service indicated.
- B. Concrete Slab Primer: Non-staining type recommended by the tile manufacturer.
- C. Leveling Compound: Latex/Portland cement flash patching and leveling compound equal to No. DSP-520 made by H.B. Fuller or No. 226 with 3701 admixture made by Laticrete or equal made by Mapei, or approved equal.
- D. Edging Strips: 1/8" thick, homogeneous vinyl or rubber composition, tapered or bullnose edge, color as selected by the Commissioner from manufacturer's standards.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where resilient tile flooring is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.
- B. Installer must review prepared substrate for tolerances. Identify objections or concerns in writing.
- C. Installer shall confirm tile starts with Commissioner prior to layout and installation.
- D. Provide requirements for cement leveling.

3.2 CONDITION OF SURFACES

- A. Allowable Variations in Substrate Levels (Floors): $\pm 1/8"$ in 10'-0" distance and 1/4" total maximum variation from levels shown.
- B. Grind or fill concrete substrates as required to comply with allowable variation.

3.3 PREPARATION

- A. Prepare concrete slabs to receive resilient tile flooring in accordance with ASTM F-710 "Standard Practice For Preparing Concrete Floors to Receive Flooring".
- B. Concrete Primer: Apply concrete slab primer if recommended by tile manufacturer, prior to application of the adhesive. Apply in compliance with manufacturer's directions.

3.4 ALLOWABLE TOLERANCES

- A. Allowable Tolerances in Finished Work: Do not exceed the following deviations from level and plumb, and from elevations, locations, slopes and alignment shown.
 - 1. Floors: 1/8" in 10'- 0" run, any direction; 1/32" offset at any location.

3.5 INSTALLATION

- A. Install tile only after all finishing operations, including painting, have been completed and permanent heating system is operating. Moisture content of concrete slabs, building air temperature and relative humidity must be within limits recommended by tile manufacturer.
- B. Place tile units with adhesive cement in strict compliance with the manufacturer's recommendations. Butt tile units tightly to vertical surfaces, thresholds, nosings and edgings. Scribe around obstructions and to produce neat joints, laid tight, even and in straight, parallel lines. Extend tile units into toe spaces, door reveals, and into closet and similar openings.
- C. Maintain reference markers, holes, or openings that are in place or plainly marked for future cutting by repeating on the finish tile as marked in the subfloor. Use chalk or other non-permanent marking devices.
- D. Lay tile from center marks established with principal walls, discounting minor off-sets, so that tile at opposite edges of the room are of equal width. Adjust as necessary to avoid use of cut widths less than 1/2 tile at room perimeters. Lay tile square to room axis, unless otherwise shown.
- E. Match tiles for color and pattern by using tile from cartons in the same sequence as manufactured and packaged. Cut tile neatly to and around all fixtures. Broken, cracked, chipped or deformed tile is not acceptable.
- F. Tightly cement tile to sub-base without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks through tile, or other surface imperfections.
- G. Lay tile with grain in all tile running in the same direction.
- H. Place resilient edge strips tightly butted to tile and secure with adhesive. Provide edging strips at all unprotected edges of tile, unless otherwise shown.

- I. Bases: In all spaces where base is indicated, install bases tight to walls, partitions, columns, built-in cabinets, etc., without gaps at top or bulges at bottom, with tight joints and flush edges, with molded corner pieces at internal and external corners. Provide end stops adjacent to flush type door frames and where base does not terminate against an adjacent surface. Keep base in full contact with walls until adhesive sets.

3.6 CLEANING AND PROTECTION

- A. Remove any excess adhesive or other surface blemishes from tile, using neutral type cleaners as recommended by the tile manufacturer. Protect installed flooring from damage by use of heavy Kraft paper or other covering.
- B. Finishing: After completion of the project and just prior to the final inspection of the work, thoroughly clean tile floors and accessories. Apply two (2) coats of wax and buff using materials as specified herein.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 096800

CARPETING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the carpeting as shown on the drawings and/or specified herein, including, but not limited to, the following:
 - 1. Carpet, glue down installation, including adhesive.
 - 2. Carpet, tackless installation, including carpet pad.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Resilient flooring - Section 096500.

1.4 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. Installer Qualifications: Firm with not less than three (3) years of experience in installation of commercial carpeting of type, quantity and installation methods similar to work of this Section.
- C. Manufacturer Qualifications: Firm (carpet mill) with not less than three (3) years of production experience with carpet similar to types specified in this Section; and whose published product literature clearly indicates general compliance of products with requirements of this Section.

D. General Terminology/ Information Standard: Refer to current edition of "Carpet Specifier's Handbook" by The Carpet and Rug Institute (CRI); for definitions of terminology not otherwise defined herein, and for general recommendations and information.

1. Installation methods and procedures must meet standards of CRI Installation Manual.

E. Carpet used on Project must be from same dye lot for each carpet type.

1.5 SUBMITTALS

A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:

1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications.

2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.

3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.

4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.

B. Product Data: Submit manufacturer's complete technical product data for each type of carpet and accessory item required.

C. Shop Drawings: Submit carpet layout and seaming drawings, clearly indicating carpet directions, locations and methods of jointing seams and locations and types of edge strips. Indicate columns, doorways, enclosing wall/partitions, built-in cabinets and locations where cut-outs are required in carpet.

D. Samples: Submit 18" x 27" samples of each carpet required and six (6) inches long samples of each type exposed edge stripping.

E. Certification: Submit manufacturer's certification stating that carpet materials furnished comply with specified requirements.

1. Include listing of mill register numbers for carpet furnished.

2. Include supporting certified laboratory test data indicating that carpet meets or exceeds specified test requirements.

- F. Maintenance Data: Submit manufacturer's printed maintenance recommendations, including methods and frequency recommended for maintaining carpet in optimum conditions under anticipated traffic and use conditions.

1.6 EXTRA STOCK

- A. Overrun: Produce and deliver to project at least five (5) percent overrun on calculated yardage. Provide required overrun exclusive of carpet needed for proper installation, waste and usable scraps.

1.7 PRODUCT DELIVERY AND STORAGE

- A. Deliver carpeting materials in original mill protective wrapping with mill register numbers and tags attached. Store inside, in well ventilated area, protected from weather, moisture and soiling.

1.8 WARRANTY

- A. The Contractor shall promptly repair seams and edges in the carpet as required, for a period of one (1) year after Substantial Completion of the Project. The exact time for this work shall be left to the discretion of the City of New York. Fourteen (14) day notice for repairs shall be given by the City of New York, so that the Contractor can make the necessary arrangements.
- B. The manufacturer shall provide a warranty that the face yarn of the carpet will not wear more than ten (10) percent in five years. If the carpet wears more than ten (10) percent in five (5) years, the manufacturer will replace the carpet including parts, labor and materials, to the City of New York's satisfaction.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Manufacturers: Bentley Mills, Ruckstuhl, or approved equal.
- B. Carpet Material:
 1. Material: 80% Goat Hair, 15% nylon, 5% rayon.
 2. Installation Method: Direct glue down.
 3. Installation Method: Tackless mounting with carpet cushion.
 4. Colors:
 - a. Color 1 559 Burnt Orange (Theater 1).
 - b. Color 2 512 Dapple Grey (Sound and Light Locks).
 - c. 3 Administration area.
 5. Roll Width: 5'-7" or greater.

2.2 ACCESSORIES

- A. Provide vinyl edges, nosing strips, reducers and threshold plates where required. They shall be sized to be compatible with the thickness of the carpet, in a color as selected by the Commissioner, of a commercial quality as manufactured by Armstrong, Mercer Plastics Co., Inc., or approved equal. The type shall be as required by site conditions, as is the custom of the trade, and installation shall be made as recommended by the manufacturer.
- B. Underlayment: Provide polyurethane pad underlayment, 0.250" thick with releasable woven backing and breathable integral skin barrier equal to "Foundation XP" made by Healthier Choice Flooring or approved equal. Underlayment shall be antimicrobial treated, pas pill test FF 1-70, have an optical smoke density of <100 as per ASTM E662 and meet "Green Label" program of the Carpet and Rug Institute.
- C. Tackless Strips: Provide manufacturer's standard water resistant plywood stripping, with angular pins, designed to hold stretched carpet from below. Provide stripping with two rows of pins where carpet width is less than 20 ft., and with 3 rows of pins where width of carpet is 20 ft. or more. Provide pre-nailed stripping, ready for anchorage to substrate.
- D. Adhesive: Provide adhesive as recommended by the carpet manufacturer. Provide adhesive which complies with flame spread rating required for the carpet installation, if any.
- E. Leveling Compound: Latex/Portland cement flash patching and leveling compound equal to No. DSP-520 made by H.B. Fuller or No. 226 with 3701 admixture made by Laticrete or equal made by Mapei, or approved equal.
- F. Miscellaneous Materials: Provide the types of seaming, adhesives and tape, thread, and other accessory items recommended by the carpet manufacturer and Installer for the conditions of installation and use.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where carpet is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 PRE-INSTALLATION REQUIREMENTS

- A. Repair minor holes, cracks, depressions or rough areas in substrate using latex leveling compound.
- B. Clear away debris and scrape up cementitious deposits from surfaces to receive carpeting. Vacuum clean immediately before installation. Check concrete surfaces to ensure no "dusting" through installed carpet; apply sealer where required to prevent dusting.

- C. Sequence carpeting with other work so as to minimize possibility of damage and soiling of carpet during remainder of construction period.
- D. Installer must review prepared substrate for tolerances. Identify objections or concerns in writing.
- E. Provide requirements for cement leveling.

3.3 INSTALLATION

A. General

1. Comply with manufacturer's instructions and recommendations. Place seams in the directions as accepted on shop drawings. Maintain direction of pattern and texture, including lay of pile. So not seam weft to warp.
2. Extend carpet under open-bottomed and raised-bottom obstructions, and under removable flanges of obstructions. Extend carpet into closets and alcoves of rooms indicated to be carpeted, unless another floor finish is indicated for such spaces. Extend carpet under all movable furniture and equipment, unless otherwise indicated.
3. Provide cut-outs for removable access devices in the substrate. Bind edges as neatly as possible and secure both sides of cuts to the substrate. Use double-faced tape on carpet cut-outs which must be lifted from the substrate to gain access to the devices. Cut only three (3) sides wherever it is feasible to provide a carpet flat in lieu of a fully-removable cut-out.
4. Install vinyl carpet edge guard at every location where edge of carpet is exposed to traffic, except where another device is indicated.

B. Glue-Down Installation

1. Unroll carpet face up and cut the lengths required, making sure that pile-lay runs in the same direction. Check starting wall for squareness, allow for off-square wall. Strike chalk line the entire length of area where seam falls.
2. Place two (2) lengths in proper position for installing, trim selvage. Line up seam edge with chalk line. Make sure that carpet lays perfectly flat and tension free.
3. Fold or roll both widths back three (3) feet from seam area the entire length of the carpet.
4. Installers shall start spreading adhesive from approximate center towards each end using 1/16" V-notched trowel on concrete subfloors.
5. When sufficient floor area has been covered with adhesive, the first width can be dropped or rolled into place. Apply coating of edge sealer to seam edge of first width.
6. The remaining portion of the first width can now be folded or rolled from the wall. The adhesive is applied to the floor and the carpet dropped or rolled into place. Be sure to have enough men spreading the adhesive so that after the floor area is

covered with the adhesive, the carpet must be in place within the twenty (20) minute open time.

7. Roll or fold back dry portion of second width towards seam, spread the adhesive and place carpet to three (3) feet from where next seam will fall.
8. Brush or roll out looseness and air bubbles as carpet is put in place. Repeat above procedure on continuing widths. For trimming carpet at wall, use razor blade knife or suitable wall trimmer.
9. Contact adhesive (about six (6) inches wide) must be used along carpet edges where they butt to a wall and along all cross-seams to minimize the possibility of later shrinkage from over-wetting. Strike a chalk line along carpet width six (6) inches from edge and apply contact adhesive to both floor and carpet back according to instructions.

C. Tackless Installation

1. Install tackless carpet stripping in accordance with manufacturer's instructions. Turn cut-edge of carpet down to substrate in tight slot between wall base and edge of stripping.
2. Install underlayment over entire area to be carpeted. Butt cushion tight against edge stripping. Hold cushion back from terminal edge of the carpeting, approximately one (1) inch, but only where carpet edge is not secured by edge stripping or binder bar. Place cushion with slip resistant face down; comply with underlayment manufacturer's recommendations.
3. Install carpet with seams taped or sewn, or taped and sewn, using permanent type construction which is of sufficient strength for stretching and wear without failure during the life of the carpet. Apply seaming cement to edges without being in evidence on the face of the carpet. Maintain straight seams, running true with the lines of the building.
4. Stretch, adjust and trim carpet in accordance with recognized installation practices. Secure edges in the manner indicated, and as recommended by the carpet manufacturer. Use power stretchers of the type recommended by the carpet manufacturer, in areas exceeding 18'-0" in width.

3.4 CLEANING UP

- A. Upon completion of the carpeting installation in each area, visually inspect all carpet installed in that area and immediately remove all dirt, soil, and foreign substance from the exposed face; inspect all adjacent surfaces and remove all marks and stains caused by the carpet installation; remove all packaging materials, carpet scraps, and other debris from the carpet installation to the area of the job site set aside for its storage.

3.5 PROTECTION

- A. Provide temporary, protection against soiling or damage of carpet for the remainder of the construction period.

- B. Any carpet lengths soiled or damaged through final completion shall be replaced by the contractor at no cost to the City of New York.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 098413

ACOUSTIC WALL PANELS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the acoustic wall panels as shown on the drawings and/or specified herein, including, but not limited to, the following:
 - 1. ACW-1: Field spray painted Tectum Finale panels at dressing room ceilings, backstage ceilings, rehearsal room ceilings, lobby ceiling, and theater 1 sidewalls.
 - 2. ACW-2: 1-1/8" thick acoustical absorption panels wrapped in selected fabric.
 - 3. ACW-3: 1" industrial felt.
 - 4. ACW-4: 1/2" duct liner for theater 2.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Carpentry - Section 062000.
- F. Gypsum wallboard - Section 092900.

1.4 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.

- B. **Installer Qualification:** At least 3 years' experience installing comparable work, employing skilled mechanics under competent supervision for all phases of the Work.

1.5 SUBMITTALS

- A. **LEED BUILDING Submittal Requirements:** The contractor or subcontractor shall submit the following LEED BUILDING certification items:

1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, of these specifications.
2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.

- B. **Shop Drawings/Product Data**

1. Base drawings on field measurements.
2. Show dimensioned wall elevations with seam and joint locations, cutout sizes and locations, anchor locations, relation to adjacent work; large scale joint and mounting details; materials type, weight/thickness, design, color; and other data necessary to fabricate and install work and coordinate work with affected trades.

- C. **Samples:** Two 12" x 12" (minimum) panels in selected finish, showing seam, edge and cutout conditions.

- D. **Certification**

1. **Acoustical Performance:** Certified reports of acoustical performance tests conducted and/or witnessed by a recognized, independent, testing agency. Tests shall have been done by specified methods or recognized equivalent. Sound absorption tests shall be not more than three years old. Reports on earlier tests are acceptable if it can be established to the Commissioner's satisfaction, that they are valid indications of compliance with Project requirements.
2. **Fire Hazard:** Evidence of compliance with regulatory agency and specifications requirements.

- E. Cleaning and Maintenance Instructions: Recommendations for maintenance and cleaning per DDC Genral Conditions requirements. Identify cleaning/spotting products generically or by trade name.
- F. Manufacturer Qualifications: List comparable projects with 3-year (minimum) service histories. Describe projects and give owner/building manager names and addresses.

1.6 REFERENCES

- A. ASTM C 423 Test for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
- B. ASTM D 6207 Standard Test Method for Dimensional Stability of Fabrics to changes in Humidity and Temperature.
- C. ASTM E 84 Test for Surface Burning Characteristics of Building Materials.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Allow materials to become acclimated to Project conditions before installation, if necessary to prevent sag and distortion during service life.

1.8 PROJECT CONDITIONS

- A. Environmental Conditions
 - 1. Work areas shall be at or near ambient occupancy temperature and relative humidity.
 - 2. Painting, dust-raising activities, and work that introduces dampness shall be completed.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. ACW-1" Provide "Finale" acoustical wall panels as manufactured by Tectum or approved equal.
- B. ACW-2: Provide "Type HIR-1" acoustical wall panels as manufactured by Decoustics, or approved equal by Conwed, MDC Wall or approved equal.
- C. ACW-3: Provide 1" Felt Sutherland F-3 (grey) 1" thickness or approved equal.
- D. ACW-4: 1" Black duct liner Permacoat Linacoustic by Johns Manville or approved equal.

2.2 GENERAL

- A. Fabricate panels to sizes and configurations indicated; attach facing materials to cores to produce installed panels with visible surfaces fully covered and free from waves in fabric weave, wrinkles, sages, blisters, seams, adhesive or other foreign matter.

1. Fabricate back mounted panels in factory to exact sizes required to fit wall surfaces based on field measurements of completed substrates indicated to receive acoustical wall panels.
 2. Where radius corners are indicated, attach facing material so there are no seams or gathering of material.
- B. Dimensional Tolerances of Finished Units: Overall height and width of panels - plus or minus 1/16".
- C. Sound Absorption Performance: Provide acoustical wall panels with minimum noise reduction coefficients (NRC) indicated, as determined by testing per ASTM C 423 for mounting type specified under individual product requirements.
- D. Colors, Textures, and Patterns: Where manufacturer's standard material is indicated, provide acoustical wall panels faced with manufacturer's material complying with the following requirements:
1. Provide Commissioner's selections from manufacturer's full range of colors, textures, and patterns for products of type indicated.
 2. Selected fabric for ACW-2 shall be used at custom millwork speaker enclosures inside Theater 1.

2.3 BACK MOUNTED ACOUSTICAL WALL PANELS

- A. Back Mounted, Edge Reinforced Acoustical Wall Panels: Manufacturer's standard panel construction consisting of facing material laminated to front, edges, and back border of molded glass fiber board core; with edges chemically hardened to reinforce panel perimeter against warpage and damaged; and complying with the following requirements:
1. Core Density: 6 - 7 lb./cu. ft.
 2. Thickness and NRC: Nominal overall panel thickness of 1-1/8" and NRC of not less than 0.90 for Type A (ABPMA No. 4) mounting.
 3. Facing Material: Anchorage 2335 Guilford of Main in colors as follows:
 - a. Onyx 2016.
 - b. Aubergine 2036
 - c. Asteroid 2053
 - d. Graphite 2079.
 4. Panel Size: As indicated.
 5. Edge Detail: Square.

2.4 ACCESSORIES

- A. Back Mounting Accessories: Manufacturer's standard or recommended accessories for securely mounting panels of type and size indicated to substrates provided, and complying with the following requirements:

1. Mechanically Mounted Edge Reinforced Panels: Metal panel clip and base support bracket system consisting of 2 part panel clips, with one part of each clip mechanically attached to back of panel and the other part to wall substrate, designed to support panels laterally; and base support brackets designed to support full weight of panels; with both designed to allow panel removal.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where acoustic wall panels are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

A. General

1. Install acoustical wall panels in locations indicated with vertical surfaces and edges plumb, top edges level and in alignment with other panels, scribed to fit adjoining work accurately at borders and at penetrations. Comply with panel manufacturer's printed instructions for installation of panels using type of mounting accessories indicated or, if none indicated, as recommended by manufacturer.
2. Construction Tolerances
 - a. Variation from Plumb and Level: +/- 1/16".
 - b. Variation of Joints from Hairline: Not more than 1/16".
3. Actual location of sound absorptive panel to be determined through field evaluation with acoustic engineer. Provide temporary secure method for testing purposes. Provide installation cost for initial and two (2) follow up configurations as part of final installation.
4. Panels will require careful field scribing to accommodate ceiling mounted pipe supports, devices, outlet boxes, lighting canopies, lighting tracks, and so on.

- B. Anchoring to Drywall: Anchor clips to unreinforced gypsum board with toggle or Molly anchors. Anchor clips to metal drywall framing with tapping sheet metal screws.

- C. Panels shall be pressed against wall and slid down engaging "Z" clips into wall brackets.

- D. Remove and replace panels that are damaged and are unacceptable to the Commissioner.

3.3 ADJUSTING AND CLEANING

- A. Correct non-complying and damaged/defective Work. Replace work that cannot be satisfactorily repaired.
- B. Restretch and reinstall sagging and distorted fabric and correct other defects that occurred during normal service.

C. Carefully and thoroughly clean completed work by vacuuming and/or other means.
Remove soil, stains, loose threads.

D. Protect work from soiling and other damage.

END OF SECTION

SECTION 099000

PAINTING AND FINISHING

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the painting and finishing as shown on the drawings and/or specified herein, including, but not limited to, the following:
 1. Prime painting unprimed surfaces to be painted under this Section.
 2. Painting all items furnished with a prime coat of paint, including touching up of or repairing of abraded, damaged or rusted prime coats applied by others.
 3. Painting all ferrous metal (except stainless steel) exposed to view.
 4. Painting all galvanized ferrous metals exposed to view.
 5. Painting interior concrete block exposed to view.
 6. Painting gypsum drywall exposed to view.
 7. Epoxy floor paint.
 8. Painting of wood exposed to view, except items which are specified to be painted or finished under other Sections of these specifications. Back painting of all wood in contact with concrete, masonry or other moisture areas.
 9. Painting pipes, pipe coverings, conduit, ducts, insulation, hangers, supports and other mechanical and electrical items and equipment exposed to view.
 10. Painting surfaces above, behind or below grilles, gratings, diffusers, louvers, lighting fixtures, and the like, which are exposed to view through these items.
 11. Incidental painting and touching up as required to produce proper finish for painted surfaces, including touching up of factory finished items.
 12. Painting of any surface not specifically mentioned to be painted herein or on drawings, but for which painting is obviously necessary to complete the job, or work which comes within the intent of these specifications, shall be included as though specified.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Shop priming is required on some, but not all of the items scheduled to be field painted. Refer to other Sections of work for complete description.
- F. Shop coat on machinery and equipment: Refer to the Sections under which various items of manufactured equipment with factory applied shop prime coats are furnished, including, but not necessarily limited to, the following Sections. All items of equipment furnished with prime coat finish shall be finish painted under this Section.
 - 1. Plumbing - Division 22.
 - 2. Heating, ventilation and air conditioning -- Division 23.
- G. Color Coding of Plumbing Piping and Electrical Conduits – Divisions 22 and 26.
 - 1. This Color Coding consists of an adhesive tape system and is in addition to painting of piping and conduits under this Section, as specified above.

1.4 MATERIALS AND EQUIPMENT NOT TO BE PAINTED

- A. Items of equipment furnished with complete factory finish, except for items specified to be given a finish coat under this Section.
- B. Factory-finished toilet partitions.
- C. Non-ferrous metals, except for items specified and/or indicated to be painted.
- D. Finished hardware, excepting hardware that is factory primed.
- E. Surfaces not to be painted shall be left completely free of droppings and accidentally applied materials resulting from the work of this Section.

1.5 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.

B. LEED BUILDING Performance Criteria: The following criteria are REQUIRED for the products included in this section:

1. Paints and coatings manufactured within 500 miles (by air) of the project site shall be documented in accordance with the LEED BUILDING Submittal Requirements of this Section.
2. Paints used for interior applications shall meet the volatile organic compound (VOC) and chemical component limitations of the Green Seal Paint Standards GS-11 and GC-03, of Green Seal, Inc., Washington, DC. Other architectural coatings shall meet the VOC limits as established in the South Coast Air Product-specific environmental requirements are as follows:

a. Volatile Organic Compounds: the VOC concentrations (in grams per liter) of the product shall not exceed those listed below as determined by U. S. Environmental Protection Agency (EPA) Reference Test Method 24.

1). Interior Paints:

Non-flat:	150 grams/liter
Flat:	50 grams/liter

2). Interior Anti-Corrosive Paints (if used in interior applications):

Gloss:	250 grams/liter
Semi-gloss:	250 grams/liter
Flat:	250 grams/liter

3). Other Interior Coatings: Clear wood finishes, floor coatings, stains, sealers, and shellacs applied to the interior shall meet the VOC limitations defined in Rule 1113, "Architectural Coatings" of SCAQMD, of the State of California. The VOC limits defined by SCAQMD, based on 7/9/04 amendments, are as follows. VOC limits are defined in grams per liter, less water and less exempt compounds.

(1)	Clear Wood Finishes	
	(a) Varnish	350
	(b) Sanding Sealers	350
	(c) Lacquer	550
(2)	Shellac	
	(a) Clear	730
	(b) Pigmented	550
(3)	Stains	250
(4)	Floor Coatings	100
(5)	Waterproofing Sealers	250
(6)	Sanding Sealers	275
(7)	Other Sealers	200

The calculation of VOC shall exclude water and tinting color added at the point of sale.

- 4). Adhesives or sealants used for work in this section shall meet the requirements of DDC General Conditions, where applicable.

- 5). Certification of these products shall be in accordance with the LEED BUILDING Submittal Requirements of this Section.
- C. "Green Seal Environmental Standard for Paints" (GS-11), Green Seal, Washington, DC, www.greenseal.org
- D. "Green Seal Environmental Standard for Anti-Corrosive Paints (GC-03), Green Seal, Washington, DC, www.greenseal.org
- E. Job Mock-Up
1. In addition to the samples specified herein to be submitted for approval, apply in the field, at their final location, each type and color of approved paint materials, applied 10 feet wide, floor to ceiling of wall surfaces, before proceeding with the remainder of the work, for approval by the Commissioner. Paint mock-ups to include door and frame assembly.
 2. These applications when approved will establish the quality and workmanship for the work of this Section.
 3. Repaint individual areas which are not approved, as determined by the Commissioner, until approval is received. Assume at least two paint mock-ups of each color and gloss for approval.
- F. Qualification of Painters: Use only qualified journeyman painters for the mixing and application of paint on exposed surfaces.
- G. Paint Coordination: Provide finish coats which are compatible with the prime paints used. Review other Sections of these specifications in which prime paints are to be provided to ensure compatibility of the total coatings system for the various substrates. Upon request from other subcontractors, furnish information on the characteristics of the finish materials proposed to be used, to ensure that compatible prime coats are used. Provide barrier coats over incompatible primers or remove and re-prime as required. Notify the Commissioner in writing of any anticipated problems using the coating systems as specified with substrates primed by others.
- H. All paints must conform to the Volatile Organic Compounds (VOC) standards of prevailing codes and ordinances.
- 1.6 ENVIRONMENTALLY-PREFERABLE PRODUCT CRITERIA:
- A. VOC Content of Paints:
1. The volatile organic compound (VOC) content of interior paints, interior primers, and anti-corrosive paints used in interior applications shall not exceed the limits defined in the Green Seal Environmental Standards for Paints (GS-11, dated 5/20/93) and Anti-Corrosive Paints (GC-03, dated 1/7/97), of Green Seal, Washington, DC. The VOC limits defined in the referenced Green Seal standards are as follows. All VOC limits are defined in grams per liter, and exclude water and tinting color added at the point of sale (as determined by U.S. EPA Reference Test Method 24).

1.7 INTERIOR PAINTS AND ANTI-CORROSIVE PAINTS

A. Paints

Non-flat:	150	Gloss:	250
Flat:	50	Semi-gloss:	250
		Flat:	250

B. Additional Chemical Component Restrictions in Paints:

1. To the extent feasible, interior paints, interior primers, and anti-corrosive paints used in interior applications shall comply with the following chemical component restrictions of the Green Seal Environmental Standards for Paints (GS-11, dated 5/20/93) and Anti-Corrosive Paints (GC-03, dated 1/7/97), of Green Seal, Washington, DC.
 - a. Aromatic Compounds: the product must contain no more than 1.0% by weight of the sum total of aromatic compounds. Testing for the concentration of these compounds will be performed if they are determined to be present in the product during a materials audit.
 - b. Other Chemicals: The manufacturer shall demonstrate that the following chemical compounds are not used as ingredients in the manufacture of the product.
 - 1). Halomethanes: methylene chloride
 - 2). Chlorinated ethanes: 1,1,1-trichloroethane
 - 3). Aromatic solvents: benzene, toluene (methylbenzene), ethylbenzene
 - 4). Chlorinated ethylenes: vinyl chloride
 - 5). Polynuclear aromatics: naphthalene
 - 6). Chlorobenzenes: 1,2-dichlorobenzene
 - 7). Phthalate esters: di (2-ethylhexyl) phthalate, butyl benzyl phthalate, di-n-butyl phthalate, di-n-octyl phthalate, diethyl phthalate, dimethyl phthalate
 - 8). Miscellaneous semi-volatile organics: isophorone
 - 9). Metals and their compounds: antimony, cadmium, hexavalent chromium, lead, mercury
 - 10). Preservatives (antifouling agents): formaldehyde
 - 11). Ketones: methyl ethyl ketone, methyl isobutyl ketone
 - 12). Miscellaneous volatile organics: acrolein, acrylonitrile

1.8 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
 1. A completed ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications. Information to be supplied includes:
 - a. The amount of recycled content in the product(s). Identify post-consumer and/or post-industrial recycled content.

- b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the product(s).
 - c. Provide material costs for the materials included in the contractor's or subcontractor's work. Material cost does not include costs associated with labor and equipment.
2. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the amount of recycled content.
 3. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as per the QUALITY ASSURANCE requirements of this Section. Cut sheets shall be submitted with the Contractor or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.
 4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits

B. Materials List

1. Before any paint materials are delivered to the job site, submit to the Commissioner a complete list of all materials proposed to be furnished and installed under this portion of the work.
2. This shall in no way be construed as permitting substitution of materials for those specified or accepted for this work by the Commissioner.

C. Samples

1. Accompanying the materials list, submit to the Commissioner copies of the full range of colors available in each of the proposed products.
2. Upon direction of the Commissioner, prepare and deliver to the Commissioner two (2) identical sets of Samples of each of the selected colors and glosses painted onto 8-1/2" x 11" x 1/4" thick material; whenever possible, the material for Samples shall be the same material as that on which the coating will be applied in the work.

- D. Manufacturer's Recommendations:** In each case where material proposed is not the material specified or specifically described as an acceptable alternate in this Section of these specifications, submit for the Commissioner's review the current recommended method of application published by the manufacturer of the proposed material.

1.9 PRODUCT HANDLING

- A.** Deliver all paint materials to the job site in their original unopened containers with all labels intact and legible at time of use.

B. Protection

1. Store only the approved materials at the job site, and store only in a suitable and designated area restricted to the storage of paint materials and related equipment.
2. Use all means necessary to ensure the safe storage and use of paint materials and the prompt and safe disposal of waste.
3. Use all means necessary to protect paint materials before, during and after application and to protect the installed work and materials of all other trades.

C. Replacements: In the event of damage, immediately make all repairs and replacements necessary.

1.10 EXTRA STOCK

A. Upon completion of this portion of the Work, deliver to the City of New York an extra stock of paint equaling approximately ten (10) percent of each color and gloss used and each coating material used, with all such extra stock tightly sealed in clearly labeled containers.

1.11 JOB CONDITIONS

- A. Apply water-based paints only when the temperature of surfaces to be painted and the surrounding air temperatures are between 50 degrees F. and 90 degrees F., unless otherwise permitted by the paint manufacturer's printed instructions.
- B. Apply solvent-thinned paints only when the temperature of surfaces to be painted and the surrounding air temperatures are between 45 degrees F. and 95 degrees F. unless otherwise permitted by the paint manufacturer's printed instructions.
- C. Do not apply paint in snow, rain, fog or mist; or when the relative humidity exceeds eighty-five (85) percent; or to damp or wet surfaces; unless otherwise permitted by the paint manufacturer's printed instructions.
- D. Painting may be continued during inclement weather only if the areas and surfaces to be painted are enclosed and heated within the temperature limits specified by the paint manufacturer during application and drying periods.

PART 2 PRODUCTS

2.1 PAINT MANUFACTURERS

A. Except as otherwise noted, provide the painting products listed for all required painting made by one of the manufacturers listed in the paint schedule (Section 2.4). These companies are Benjamin Moore, Akzo Nobel Paint (Glidden Professional) and Sherwin Williams (S-W). Pratt and Lambert Paint. Comply with number of coats and required minimum mil thicknesses as specified herein.

2.2 MATERIALS

A. Provide undercoat paint produced by the same manufacturer as the finish coats. Use only thinners approved by the paint manufacturer, and use only to recommended limits.

B. Colors and Glosses: All colors and glosses shall be as selected by the Commissioner. Certain colors will require paint manufacturer to prepare special factory mixes to match colors selected by the Commissioner. Color schedule (with gloss) shall be furnished by the Commissioner.

1. NOTE: There will be at least 3 different colors for walls that are not scheduled to be painted white. Colors shall be noted on the drawing as "Color A," "Color B," and "Color C." Color A, Color B and Color C have color that requires more back paint job than white color. Bidders are hereby apprised of this, and shall include proper amount of cost for painting using these colors in their bids.

C. Coloring Pigment: Products of or furnished by the manufacturer of the paint or enamel approved for the work.

D. Linseed Oil: Raw or boiled, as required, of approved manufacture, per ASTM D 234 and D 260, respectively.

E. Turpentine: Pure distilled gum spirits of turpentine, per ASTM D 13.

F. Shellac: Pure gum shellac (white or orange) cut in pure denatured alcohol using not less than four (4) lbs. of gum per gallon of alcohol.

G. Driers, Putty, Spackling Compound, Patching Plaster, etc.: Best quality, of approved manufacture.

H. Heat Resistant Paint: Where required, use heat resistant paint when applying paint to heating lines and equipment.

2.3 GENERAL STANDARDS

A. The various surfaces shall be painted or finished as specified below in Article 2.4. However, the Commissioner reserves the right to change the finishes within the range of flat, semi-gloss or gloss, without additional cost to the City of New York.

B. All paints, varnishes, enamels, lacquers, stains and similar materials must be delivered in the original containers with the seals unbroken and label intact and with the manufacturer's instructions printed thereon.

C. All painting materials shall bear identifying labels on the containers with the manufacturer's instructions printed thereon.

D. Paint shall not be badly settled, caked or thickened in the container, shall be readily dispersed with a paddle to a smooth consistency and shall have excellent application properties.

E. Paint shall arrive on the job color-mixed except for tinting of under-coats and possible thinning.

F. All thinning and tinting materials shall be as recommended by the manufacturer for the particular material thinned or tinted.

G. It shall be the responsibility of the Contractor to see that all mixed colors match the color selection made by the Commissioner prior to application of the coating.

2.4 SCHEDULE OF FINISHES (BASIS OF DESIGN)

A. High Performance Coating On Exterior Galvanized Ferrous Metals (EPT-1)

- First Coat: "27 Typoxy" or "N69 Epoxoline II" by Tnemec; "Intergard 345" by International Protective Coatings; "Carboguard 893 SG" or "Carboguard 888" by Carboline; "Devran 203 WB Epoxy Primer" by Akzo; or "Recoatable Epoxy Primer 867-45" by Sherwin Williams.
- Second Coat: "V73 Endura Shield" or "1074/1075" by Tnemec; "Interthane 870UHS" or "990 UHS" by International Protective Coatings; "Carbothane 133 LH" by Carboline; "Devthane 379H Aliphatic Vizethne" by Akzo; or "Hi-Solids Urethane B65-300/350" by Sherwin Williams.

B. High Performance Coating On Exterior Non-Galvanized Ferrous Metals (EPT-2)

- Prime Coat: "Tneme-Zinc 90/97" by Tnemec; "Interzinc 52" or "315" by International Protective Coatings; "Carbozinc 859, Class B" by Carboline; "Cathacoat 302V Reinforced Inorganic Zinc Primer" by Akzo; or "Zinc Clad II Plus Inorganic Zinc Rich Coating B69V212" by Sherwin Williams.
- Second Coat: "27 Typoxy" or "N69 Epoxoline II" by Tnemec; "Intergard 345" by International Protective Coatings; "Carboguard 893 SG" or "Carboguard 888" by Carboline; "Bar-Rust 231V Multi Purpose Epoxy Mastic" by Akzo; or "Macropoxy G46 I.C. Epoxy B58-600" by Sherwin Williams.
- Third Coat: "V73 Endura Shield" or "1074/1075" by Tnemec; "Interthane 870UHS" or "990 UHS" by International Protective Coatings; "Carbothane 133 LH" by Carboline; "Devthane 379H Aliphatic Urethane" by Akzo; or "Hi-Solids Polyurethane B65-300/350" by Sherwin Williams.

C. Interior Ferrous Metal (IPT-1)

Satin Finish/Latex

- Primer: 1 coat Moore Alkyd Metal Primer (Z06)
1 coat Akzo Devflex 4020 PF DTM Prime/Flat Finish or touch-up shop primer
1 coat Sherwin-Williams Pro Industrial Pro-Cryl Universal Primer B66-310
1 coat Pratt and Lambert Steeltech Acrylic Prime or Finish Z190
- First Coat: 1 coat Water Borne Satin Impervo (314)
1 coat Akzo: Glidden Professional Diamond 350 Acrylic Eggshell 6P1403
1 coat S-W Pro-Classic Waterborne Acrylic Satin, B20
1 coat Pratt and Lambert Red Seal Latex Satin Enamel Z2300
- Second Coat: 1 coat Water Borne Satin Impervo (314)
1 coat Akzo: Glidden Professional Diamond 350 Acrylic Eggshell 6P1403
1 coat S-W Pro-Classic Waterborne Acrylic Satin, B20
1 coat Pratt and Lambert Red Seal Latex Satin Enamel Z2300 or Pro-Hide Gold Interior Latex Satin Z9490
- a. Total DFT not less than: 3.9 mils

Semi-Gloss Finish/Latex

- Primer: 1 coat Iron Clad Latex Low Lustre Metal & Wood Enamel (363)
1 coat Akzo Devflex 4020 PF DTM Primer/Flat Finish or touch-up shop primer.
1 coat Sherwin-Williams, Pro Industrial Pro-Cryl Universal Primer B66-310
- First Coat: 1 or 2 coats Pratt and Lambert; Steeltech Acrylic Prime or Finish Z190
1 coat Regal ICI Premium Interior 100% Acrylic Semi-gloss Finish (N333)
1 coat Akzo: Glidden Professional Diamond 350 Acrylic S/G 6P1407
1 coat S-W Pro-Classic Waterborne Acrylic Satin, B31
- Second Coat: 1 coat Pratt and Lambert; Pro Hide gold Interior Latex Semi-Gloss Z8300
1 coat Regal Premium Interior 100% Acrylic Semi-gloss finish (N333)
1 coat Akzo: Glidden Professional Diamond 350 Acrylic S/G 6P1407
1 coat S-W Pro-Classic Waterborne Acrylic Satin, B31
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Semi-Gloss Z8300
- a. Total DFT not less than: 4.0 mils

D. Interior Concrete Block (IPT-2)

Flat Finish/Vinyl Acrylic Latex over Filler

- Block Filler: 1 coat Moorcraft Super Craft Latex Block Filler (285)
1 coat Akzo Glidden Professional Concrete Coatings Block Filler GP 3010-1200
1 coat S-W Preprite Block Filler, B25W25
1 coat Pratt and Lambert; Pro Hide Silver Interior/Exterior Latex Block Filler Z8485
- First Coat: 1 coat Regal Wall Satin (215)
1 coat Akzo Glidden Professional Diamond 350 Flat GP 1201
1 coat S-W Pro Green 200 Interior Latex Flat, B30-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Flat Z8100
- Second Coat: 1 coat Regal Wall Satin (215)
1 coat Akzo Glidden Professional Diamond 350 Flat GP 1201
1 coat S-W Pro Green 200 Interior Latex Flat, B30-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Flat Z8100
- a. Total DFT not less than: 10.7 mils

Semi-Gloss Finish/Vinyl Acrylic Latex over Filler

- Block Filler: 1 coat Moorcraft Super Craft Latex Block Filler (285)
1 coat Akzo Glidden Professional Concrete Coatings Block Filler GP 3010-1200
1 coat S-W Preprite Block Filler, B25W25
1 coat Pratt and Lambert; Pro Hide Silver Interior/Exterior Latex Block Filler Z8485
- First Coat: 1 coat Regal AquaGlo (333)
1 coat Akzo Glidden Professional Diamond 350 Acrylic S/G GP 1407
1 coat S-W Pro Green 200 Interior Latex S. Gloss, B31-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Semi-Gloss Z8300

- Second Coat: 1 coat Regal AquaGlo (333)
1 coat Akzo Glidden Professional Diamond 350 Acrylic S/G GP 1407
1 coat S-W Pro Green 200 Interior Latex S. Gloss, B31-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Semi-Gloss
Z8300
a. Total DFT not less than: 10.7 mils

E. Interior Drywall (IPT-3)

Flat Finish/Vinyl Acrylic Latex

- Primer: 1 coat Regal FirstCoat (216)
1 coat Akzo Glidden Professional Gripper GP 3210
1 coat S-W Pro Green 200 Interior Latex Primer, B28-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Wall Primer
Z8160
First Coat: 1 coat Regal Wall Satin (215)
1 coat Akzo Glidden Professional Diamond 350 Flat GP 1201
1 coat S-W Pro Green 200 Interior Latex Flat, B30-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Flat Z8100
Second Coat: 1 coat Regal Wall Satin (215)
1 coat Akzo Glidden Professional Diamond 350 Flat GP 1201
1 coat S-W Pro Green 200 Interior Latex Flat, B30-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Flat Z8100
a. Total DFT not less than: 3.6 mils

F. Interior Painted Wood (IPT-4)

Satin Finish/Latex

- Primer: 1 coat Moore's Fresh Start 023
1 coat Akzo Glidden Professional Gripper GP 3210
1 coat S-W Premium Wall and Wood Primer B28W111
1 coat Pratt and Lambert Suprime Interior/Exterior 100% Acrylic
Multi Purpose Primer Z1001
First Coat: 1 coat Waterborne Satin Impervo 314
1 coat Akzo Glidden Professional Diamond 350 Acrylic Eggshell GP
1403
1 coat S-W Pro Green 200 Interior Latex Egg-Shell, B20-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Satin Z9490
Second Coat: 1 coat Waterborne Satin Impervo 314
1 coat Akzo Glidden Professional Diamond 350 Acrylic Eggshell GP
1403
1 coat S-W Pro Green 200 Interior Latex Egg-Shell, B20-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Satin Z9490
a. Total DFT not less than: 4.0 mils

Semi-Gloss Finish/Latex

- Primer: 1 coat Moore's Fresh Start 023
1 coat Akzo Glidden Professional Gripper GP 3210
1 coat S-W Premium Wall and Wood Primer B28W111
1 coat Pratt and Lambert Suprime Interior/Exterior 100% Acrylic
Multi Purpose Primer Z1001

- First Coat: 1 coat Moore's Regal AquaGlo 333
1 coat Akzo Glidden Professional Diamond 350 Acrylic S/G GP 1407
1 coat Pro Green 200 Interior Latex S. Gloss, B31-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Semi-Gloss Z8300
- Second Coat: 1 coat Moore's Regal AquaGlo 333
1 coat Akzo Glidden Professional Diamond 350 Acrylic S/G GP 1407
1 S-W Pro Green 200 Interior Latex S. Gloss, B31-600
1 coat Pratt and Lambert; Pro Hide Gold Interior Latex Semi-Gloss Z8300
 - a. Total DFT not less than: 3.8 mils

G. Concrete Floor Paint

- Primer: 1 coat I.M.C. Polyamide Epoxy Clear Sealer/Finish (CM36-00/M37)
- First Coat: 1 coat IM.C. Polyamide Epoxy Semi-Gloss (M36/M38)
- Second Coat: Same as second coat.
- Broadcast M67 anti slip aggregate in the first coat.

2.5 EXISTING SURFACES TO BE PAINTED

- A. Existing surfaces shall be painted in accordance with schedule given in Article 2.4 and on drawings herein except that first or prime coat may be eliminated where existing paint is sound. Where existing paint must be removed down to base material, provide first or prime coat as specified.

2.6 PIPING AND MECHANICAL EQUIPMENT EXPOSED TO VIEW

- A. Paint all exposed piping, conduits, ductwork and mechanical and electrical equipment. Use heat resisting paint when applied to heating lines and equipment. The Contractor is cautioned not to paint or otherwise disturb moving parts in the mechanical systems. Mask or otherwise protect all parts as required to prevent damage.
- B. Exposed Uncovered Ductwork, Piping, Hangers and Equipment: Latex Enamel Undercoater and one (1) coat Acrylic Latex Flat.
- C. Exposed Covered Piping, Duct Work and Equipment: Primer/Sealer and one (1) coat Acrylic Latex Flat.
- D. Panel Boards, Grilles and Exposed Surfaces of Electrical Equipment: Latex Enamel Undercoater and two (2) coats Latex Semi-Gloss.
- E. Equipment or Apparatus with Factory-Applied Paint: Refinish any damaged surfaces to match original finish. Do not paint over name plates and labels.
- F. All surfaces of insulation and all other work to be painted shall be wiped or washed clean before any painting is started.
- G. All conduit, boxes, distribution boxes, light and power panels, hangers, clamps, etc., are included where painting is required.
- H. All items of Mechanical and Electrical trades which are furnished painted under their respective Contracts shall be carefully coordinated with the work of this Section so as to leave no doubt as to what items are scheduled to be painted under this Section.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where painting and finishing are to be applied and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 GENERAL WORKMANSHIP REQUIREMENTS

- A. Comply, at minimum, with paint manufacturer recommendations for space ventilation during and after installation. Where feasible, the following ventilation conditions shall be maintained during the paint curing period, or for 72 hours after application: 1) supply 100% outside air 24 hours a day; 2) supply airflow at a rate of 6 air changes per hour, when outside temperatures are between 55 degrees F and 85 degrees F and humidity is between 30% and 60%; and 3) supply airflow at a rate of 1.5 air changes per hour, when outside air conditions are not within the range stipulated in item 2 above.
- B. To the extent practical, allow paint installations to cure *prior to* the installation of materials that adsorb VOCs. Materials that adsorb VOCs include carpets, textiles, and acoustical ceiling panels.
- C. Only skilled mechanics shall be employed. Application may be by brush or roller. Spray application only upon acceptance from the Commissioner in writing.
- D. The Contractor shall furnish the Commissioner a schedule showing when he expects to have completed the respective coats of paint for the various areas and surfaces. This schedule shall be kept current as the job progresses.
- E. The Contractor shall protect his work at all times, and shall protect all adjacent work and materials by suitable covering or other method during progress of his work. Upon completion of the work, he shall remove all paint and varnish spots from floors, glass and other surfaces. He shall remove from the premises all rubbish and accumulated materials of whatever nature not caused by others and shall leave his part of the work in clean, orderly and acceptable condition.
- F. Remove and protect hardware, accessories, device plates, lighting fixtures, and factory finished work, and similar items, or provide ample in place protection. Upon completion of each space, carefully replace all removed items by workmen skilled in the trades involved.
- G. Remove electrical panel box covers and doors before painting walls. Paint separately and re-install after all paint is dry.
- H. All materials shall be applied under adequate illumination, evenly spread and flowed on smoothly to avoid runs, sags, holidays, brush marks, air bubbles and excessive roller stipple.
- I. Coverage and hide shall be complete. When color, stain, dirt or undercoats show through final coat of paint, the surface shall be covered by additional coats until the paint film is of uniform finish, color, appearance and coverage, at no additional cost to the City of New York.

- J. All coats shall be dry to manufacturer's recommendations before applying succeeding coats.
- K. Do not apply paint behind frameless mirrors that use mastic for adhering to wall surface.

3.3 PREPARATION OF SURFACES

- A. Existing Surfaces: Clean existing surfaces requiring paint or finishing, remove all loose and flaking paint or finish and sand surface smooth as required to receive new paint or finish. No "telegraphing" of lines, ridges, flakes, etc., through new surfacing is permitted. Where this occurs, Contractor shall be required to sand smooth and re-finish until surface meets with Commissioner's approval.
- B. General
 - 1. The Contractor shall be held wholly responsible for the finished appearance and satisfactory completion of painting work. Properly prepare all surfaces to receive paint, which includes cleaning, sanding, and touching-up of all prime coats applied under other Sections of the work. Broom clean all spaces before painting is started. All surfaces to be painted or finished shall be perfectly dry, clean and smooth.
 - 2. Perform all preparation and cleaning procedures in strict accordance with the paint manufacturer's instructions and as herein specified, for each particular substrate condition.
 - 3. Clean surfaces to be painted before applying paint or surface treatments. Remove oil and grease with clean cloths and cleaning solvents prior to mechanical cleaning. Program the cleaning and painting so that dust and other contaminants from the cleaning process will not fall in wet, newly painted surfaces.
- C. Metal Surfaces
 - 1. Weld Fluxes: Remove weld fluxes, splatters, and alkali contaminants from metal surfaces in an approved manner and leave surface ready to receive painting.
 - 2. Bare Metal: Thoroughly clean off all foreign matter such as grease, rust, scale and dirt before priming coat is applied. Clean surfaces, where solder flux has been used, with benzene. Clean surfaces by flushing with mineral spirits. For aluminum surfaces, wipe down with an oil free solvent prior to application of any pre-treatment.
 - a. Bare metal to receive high performance coating specified herein must be blast cleaned SSPC SP-6 prior to application if field applied primer; coordinate with steel trades furnishing ferrous metals to receive this coating to insure that this cleaning method is followed.
 - 3. Shop Primed Metal: Clean off foreign matter as specified for "Bare Metal." Prime bare, rusted, abraded and marred surfaces with approved primer after proper cleaning of surfaces. Sandpaper all rough surfaces smooth.
 - 4. Galvanized Metal: Prepare surface as per the requirements of ASTM D 6386.

- 5. Metal Filler: Fill dents, cracks, hollow places, open joints and other irregularities in metal work to be painted with an approved metal filler suitable for the purpose and meeting the requirements of the related Section of work; after setting, sand to a smooth, hard finish, flush with adjoining surface.
- D. Gypsum Drywall Surfaces: Scrape off all projections and splatters, spackles all holes or depressions, including taped and spackled joints, sand smooth. Conform to standards established in Section 092900, "Gypsum Drywall."
- E. Wood Surfaces: Sand to remove all roughness, loose edges, splinters, or splinters and then brush to remove dust. Wash off grease or dirt with an approved cleaner. Fill all cracks, splits, nail holes, screw holes, and surface defects with putty after the priming coat has been applied. Putty shall be brought up flush with the surface and sanded smooth and touched-up with primer when dry.
- F. Block Masonry Surfaces: Thoroughly clean off all grit, grease, dirt mortar drippings or splatters, and other foreign matter. Remove nibs or projections from masonry surfaces. Fill cracks, holes or voids, not filled under the "Masonry" Section, with Portland cement grout, and bag surface so that it has approximately the same texture as the adjacent masonry surface.
- G. Testing for Moisture Content: Contractor shall test all plaster, masonry, and drywall surfaces for moisture content using a reliable electronic moisture meter. Contractor shall also test latex type fillers for moisture content before application of top coats of paint. Do not apply any paint or sealer to any surface or to latex type filler where the moisture content exceeds seven (7) percent as measured by the electronic moisture meter.
- H. Touch-Up: Prime paint all patched portions in addition to all other specified coats.

3.4 MATERIALS PREPARATION

- A. Mix and prepare painting materials in strict accordance with the manufacturer's directions.
- B. Store materials not in actual use in tightly covered containers. Maintain containers used in storage, mixing, and application of paint in a clean condition, free of foreign materials and residue.
- C. Stir all materials before application to produce a mixture of uniform density, and as required during the application of the materials. Do not stir any film which may form on the surface into the material. Remove the film and, if necessary, strain the material before using.
- D. Tint each undercoat a lighter shade to facilitate identification of each coat where multiple coats of the same material are to be applied. Tint undercoats to match the color of the finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

3.5 APPLICATION

A. General

1. Apply paint by brush or roller in accordance with the manufacturer's directions. Use brushes best suited for the type of material being applied. Use rollers of carpet, velvet back, or high pile sheep's wool as recommended by the paint manufacturer for material and texture required.
2. The number of coats and paint film thickness required is the same regardless of the application method. Do not apply succeeding coats until the previous coat has completely dried. Sand between each enamel or varnish coat application with fine sandpaper, or rub surfaces with pumice stone where required to produce an even, smooth surface in accordance with the coating manufacturer's directions.
3. Apply additional coats when undercoats, stains, or other conditions show through the final coat of paint, until the paint film is of uniform finish, color and appearance. Give special attention to insure that all surfaces, including edges, corners, crevices, welds, and exposed fasteners receive a film thickness equivalent to that of flat surfaces.
4. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 - a. "Exposed surfaces" is defined as those areas visible when permanent or built-in fixtures, convector covers, covers for finned tube radiation, grilles, etc., are in place in areas scheduled to be painted.
5. Paint interior surfaces of ducts, where visible through registers or grilles, with a flat, non-specular black paint, before final installation of equipment.
6. Paint the back sides of access panels, removable or hinged covers to match the exposed surfaces.
7. Finish doors on tops, bottoms, and side edges the same as the faces, unless otherwise indicated.
8. Enamel finish applied to wood or metal shall be sanded with fine sandpaper and then cleaned between coats to produce an even surface.
9. Paste wood filler applied on open grained wood after beginning to flatten, shall be wiped across the grain of the wood, then with a circular motion, to secure a smooth, filled, clean surface with filler remaining in open grain only. After overnight dry, sand surface with the grain until smooth before applying specified coat.

B. Scheduling Painting

1. Apply the first coat material to surfaces that have been cleaned, pre-treated or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.

2. Allow sufficient time between successive coatings to permit proper drying. Do not re-coat until paint has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and the application of another coat of paint does not cause lifting or loss of adhesion of the undercoat.
- C. Prime Coats: Re-coat primed and sealed walls and ceilings where there is evidence of suction spots or unsealed areas in first coat, to assure a finish coat with no burn-through or other defects due to insufficient sealing.
- D. Pigmented (Opaque) Finishes: Completely cover to provide an opaque, smooth surface of uniform finish, color, appearance and coverage.
- E. "Touching-Up" of Factory Finishes: Unless otherwise specified or shown, materials with a factory finish shall not be painted at the project site. To "touch-up," the Contractor shall use the factory finished material manufacturer's recommended paint materials to repair abraded, chipped, or otherwise defective surfaces.

3.6 PROTECTION

- A. Protect work of other trades, whether to be painted or not, against damage by the painting and finishing work. Leave all such work undamaged. Correct any damages by cleaning, repairing or replacing, and repainting, as acceptable to the Commissioner.
- B. Provide "Wet Paint" signs as required to protect newly painted finishes. Remove temporary protective wrappings provided by others for protection of their work after completion of painting operations.

3.7 CLEAN UP

- A. During the progress of the work, remove from the site all discarded paint materials, rubbish, cans and rags at the end of each work day.
- B. Upon completion of painting work, clean window glass and other paint spattered surfaces. Remove spattered paint by proper methods of washing and scraping, using care not to scratch or otherwise damage finished surfaces.
- C. At the completion of work of other trades, touch-up and restore all damaged or defaced painted surfaces.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 101400

IDENTIFYING DEVICES

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Provide all labor, materials, equipment and services, and perform all operations in connection with the furnishing and installing of identifying devices, complete in accordance with the Drawings and Specifications.

- 1. Panel signs.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Carpentry - Section 062000.
- F. Exit signs - Division 26.

1.4 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
 - 1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications.
 - 2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 - 3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 - 4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits,

then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.
 - B. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of unit.
 - C. Shop Drawings: Include plans, elevations and large-scale sections of typical members and other components. Show mounting methods, grounds, mounting heights, layout, spacing, reinforcement, accessories, and installation details.
 - D. Samples for Initial Selection: For each type of sign material indicated that involves color section.
 1. Dimensional Characters: Full-size samples of each type of dimensional character (letter and number) required. Show character style, material, finish, and method of attachment.
 2. Panel Signs: Submit samples of each sign showing finishes, colors, surface textures and qualities of manufacture and design of each sign component, including graphics.
 3. Approved samples will not be returned for installation into Project.

1.5 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. Installer Qualifications: An employer of workers trained by signage manufacturer.
- C. Source Limitations: Obtain each sign type through one source from a single manufacturer.
- D. Regulatory Requirements: Comply with the Americans with Disabilities Act (ADA) and with code provisions and Barrier Free Regulations as adopted by authorities having jurisdiction.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Where sizes of signs are determined by dimension of surfaces on which they are installed, verify dimensions by field measurement before fabrication and indicate measurements on Shop Drawings.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Comply with manufacturer's ordering instructions and Lead Time requirements to avoid construction delays.
- B. Deliver products in manufacturers original, unopened, undamaged containers.
- C. Store products protected from weather, temperature and other harmful conditions as recommended by manufacturer.
- D. Handle products in accordance with manufacturer's instructions.

PART 2 PRODUCTS

2.1 PANEL SIGNS

- A. Etched zinc with brished aluminum letters.
- B. Graphic Content and Style: Provide sign copy that complies with the requirements indicated for size, style, spacing, content, position, material, of letters, numbers, and other graphic devices.
- C. Tactile Characters: Characters and Grade 2 Braille raised 1/32 inch above surfaces, in contrasting color.
- D. Colors and Surface Textures: For exposed sign material that requires selection of materials with integral or applied colors, surface textures, or other characteristics related to appearance, provide colors and surface textures as selected by Commissioner.
- E. Acceptable Manufacturers for Panel Signs: Subject to compliance with requirements, provide interior panels signs manufactured by ASI Sign Systems, Inc., or equivalent of Best Sign Systems, Inc., Mohawk Sign Systems, or approved equal.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Locate signs and accessories where indicated, using mounting methods of types described and in compliance with manufacturer's written instructions.
 - 1. Install signs level, plumb, and at heights indicated, with sign surfaces free from distortion and other defects in appearance.
- B. Field-Applied, Vinyl-Character Signs: Clean and dry substrate. Align sign characters in final position before removing release liner. Remove release liner in stages, and apply

and firmly press characters into final position. Press from the middle outward to obtain good bond without blisters or fishmouths. Remove carrier film without disturbing applied vinyl film.

- C. Dimensional Letters and Numbers: Mount letters and numbers using standard fastening methods recommended by the manufacturer for letter form, type of mounting, wall construction, and condition of exposure indicated. Provide heavy paper template to establish letter spacing and to locate holes for fasteners.

- 1. Projected Mounting: Mount letters at the projection distance from the wall surface indicated.

3.3 CLEANING AND PROTECTION

- A. After installation, clean soiled sign surfaces according to manufacturers written instructions. Protect signs from damage until acceptance by the City of New York.

END OF SECTION

SECTION 102114

TOILET PARTITIONS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the toilet partitions as shown on the drawings and/or specified herein.
 - 1. Floor-mounted toilet partitions.
 - 2. Wall-hung urinal screens.

1.3 RELATED SECTIONS

- A. Waste Management Requirements – Section 017419.
- B. Sustainable Design Requirements – Section 018113.
- C. VOC Limits for Adhesives, Sealants and Architectural Coatings – Section 018114.
- D. Indoor Air Quality Requirements – Section 018119.
- E. Gypsum board partitions - Section 092900.
- F. Ceramic tile - Section 093000.
- G. Toilet accessories - Section 102813.

1.4 QUALITY ASSURANCE

- A. Field Measurements: Take field measurements prior to fabrication to ensure proper fitting of the work.
- B. Inserts and Anchorages: Furnish inserts and anchoring devices which must be built into other work for the installation of toilet partitions and related work. Coordinate delivery with other work to avoid delay.
- C. LEED BUILDING PERFORMANCE CRITERIA: Products of this Section shall meet the following requirements and shall be documented in accordance with the LEED BUILDING SUBMITTAL REQUIREMENTS of this Section:
 - 1. Products of this Section which have been extracted, harvested or recovered, as well as manufactured (location of final assembly), within 500 miles of the project site shall be identified and documented.

2. Field-applied interior adhesives, sealants, and paints relating to work of this Section shall meet the requirements of Section 018114 "VOC Limits for Adhesives, Sealants and Architectural Coatings," and shall be identified and documented.
 3. Certification of criteria shall be in accordance with the Submittal Requirements of this section.
 4. Wood shall meet FSC and LEED standards noted in Section 064023.
- D. **Installer Qualifications:** Specialized wood flooring firm with not less than 3 years' successful experience in installation of types specified, and acceptable to manufacturer of wood flooring.
- E. **Source Quality Control:** Obtain flooring of each type from single manufacturer or source, to ensure match of quality, color, pattern and texture.

1.5 SUBMITTALS

A. LEED BUILDING SUBMITTAL REQUIREMENTS

1. The Contractor and their sub-contractors shall submit the LEED BUILDING Certification items listed herein. LEED BUILDING Submittals shall include the following:
 - a. For all installed products and materials of this Section, complete the ENVIRONMENTAL MATERIALS REPORTING FORM (blank copy attached at end of Section 018113 "Sustainable Design Requirements"). Information to be supplied for this Form shall include:
 - 1). Cost breakdowns for the materials included in the Contractor or sub-contractor's work. Cost breakdowns shall include total installed cost and material-only cost.
 - 2). The percentages (by weight) of post-consumer and/or post-industrial recycled content in the supplied product(s).
 - 3). Indication (Y/N) of whether the raw materials have been extracted, harvested or recovered, as well as the final product has been manufactured (location of final assembly), within 500 miles of the project site.
 - 4). For all field-applied interior adhesives, sealants, and paints relating to work of this Section, provide the Volatile Organic Compound (VOC) content in grams/liter or lbs./gallon.
 - b. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the product information supplied for the ENVIRONMENTAL MATERIALS CERTIFICATION FORM.
 - c. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as stated below. Cut sheets shall be submitted with the Construction Manager or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.

- d. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
2. The LEED BUILDING Submittal information outlined above shall be assembled into one (1) package per Specification section or sub-contractor. Incomplete or inaccurate LEED Submittals may be used as the basis for rejecting the submitted products or assemblies.
- B. Shop Drawings: Before any of the materials of this Section are delivered to the job site, submit the following:
1. Room layouts and elevations for all areas, with dimensions based on actual dimensions taken at job site.
 2. Materials, finishes, details of construction, gauges of metal, hardware, fastening and anchoring conditions and relation to adjoining constructions.
- C. Samples: Submit the following:
1. One 12" x 12" sample of stainless steel.
 2. One sample of each type of hardware and fitting item including related fasteners. Include all items listed under 2.3 C. below.
- D. Templates: Submit templates to other trades as required for support of toilet partitions.

PART 2 PRODUCTS

2.1 TOILET PARTITIONS AND VISION SCREEN/TYPES AND MANUFACTURERS

- A. Provide toilet partitions and vision screens of the types indicated, as manufactured by one of the following, or approved equal:
1. "Flushart" of Flush-Metal Partition Corp.
 2. "Floor Anchored" of the Global Steel Products Corp.
 3. "Luxor Type FT-700" of the Metpar Co.
- B. Manufacturer's name or identifying markings are not permitted on exposed surfaces of metal toilet partition, vision screen, or related hardware.

2.2 URINAL SCREENS/TYPES AND MANUFACTURERS

- A. Provide wall mounted urinal screens of the types indicated, as manufactured by one of the following, or approved equal:
1. "WH Wall Hung" of Flush Metal Partition Corp.

2. "Wall Hung" of the Global Steel Products Corp.
 3. "Type T Wall Hung" of the Metpar Co.
- B. Manufacturer's name or identifying markings not permitted on exposed surfaces of urinal screens or related hardware.

2.3 MATERIALS FOR TOILET PARTITIONS AND SCREENS

- A. Stainless Steel Sheet: Prime quality stainless steel, cold rolled, stretcher leveled,) and bonderized.
- B. Core Insulation: Manufacturer's standard rot-proof and vermin-proof double faced honeycomb or corrugated type core material; required in all panels, screens, pilasters and doors.
- C. Hardware: Solid forged brass or stainless steel (Type 302 or 304), as indicated below. Stamped, cast alloy, or aluminum extrusions shall not be accepted.
1. Pilaster Shoes: Stainless steel, one piece (no visible joints or seams) flush or offset design, twenty (20) gauge.
 2. Hinges: Gravity hinge type, self-closing, concealed within door, fully adjustable, to bring door to rest in thirty (30) degree open position. Hinge brackets solid forged brass or stainless steel, with solid stainless steel pin and pintles.
 3. Latch: Solid forged stainless steel with solid stainless steel slide.
 4. Strike and Keeper: One piece, sixteen (16) gauge stainless steel, with rubber bumper mechanically applied and theft proof.
 5. Bumper Coat Hook: Solid forged stainless steel, with ferrule held rubber bumper on back of each toilet compartment door.
 6. Stirrup Brackets: Fourteen (14) gauge stainless steel or forged brass.
 7. Hardware Finishes
 - a. On Stainless Steel: No. 4, Satin Finish.
- D. Fasteners: Provide exposed fasteners of stainless steel or chromium plated brass, same finish as adjoining metal, theft proof. Provide concealed fasteners of non-corrosive metal.
- E. Furnish galvanized steel anchorage devices, complete with threaded rods, lock washers, and leveling adjustment nuts at pilasters, to permit structural connection at floor. Furnish shoe at each pilaster to conceal anchorage.

2.4 FABRICATION

- A. Minimum Acceptable Metal Gauges
1. Face Sheets for Panels and Screens: Twenty (20) gauge stainless steel sheet.
 2. Face Sheets for Doors: Twenty-two (22) gauge stainless steel sheet.

3. Face Sheets for Pilasters: Sixteen (16) gauge stainless steel sheet for baked enamel finish, unless otherwise indicated.
 - a. For pilasters less than four (4) inches wide - fourteen (14) gauge.
 4. Edge Moldings: Eighteen (18) gauge stainless steel.
 5. Concealed Reinforcement: Fourteen (14) gauge stainless steel for tapping and twelve (12) gauge stainless steel for anchoring devices.
- B. Thicknesses
1. Panels, Screens and Doors: One (1) inch overall thickness.
 2. Pilasters: 1-1/4" overall thickness.
- C. Sizes: As shown on drawings. Pilasters for compartments shall all be of the same width, except end pilasters which shall be approximately 1/2 the normal width.
- D. Construction
1. Panels, screens, doors and pilasters shall have face sheets, with formed edges, pressure cemented to each side of core insulation, providing flat, smooth surface, free of waves, warping, buckles or other defects.
 2. Lock edges of face sheets together by either concealed tack welding face sheets at contacting edges at eight (8) inches o.c. and installing interlocking edge molding, or by using a combination integral edge molding and internal reinforcing channel epoxy bonded to face sheets.
 3. Edge molding shall have corners mitered, welded or brazed, ground flush and finished to match adjacent surfaces. Corners, caps or exposed welds not permitted.
 4. Provide concealed reinforcement for hardware, grab bars, fastenings and accessories specified for in both work of this Section and in work of other Sections (such as Toilet Accessories), and for rigidity, strength and support of units in accordance with requirements of type and use of metal toilet partitions. Cut partitions in shop to receive toilet accessories, using templates furnished by Section 102813.
- E. Compartment Sizes: Unless otherwise indicated, minimum dimensions of components for toilet compartments shall be as follows:
1. Enclosure Height: 5'-10".
 2. Typical Door Width: 2'-0".
 3. Door Width for Barrier Free Compartments: 2'-10".
 4. Door Height: 4'-0".
 5. Floor Clearance: 1'-0".

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where toilet partitions are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

- A. Install work of this Section in a rigid and permanent manner, straight and plumb, with all horizontal lines level.
- B. Install panels and doors twelve (12) inches above finished floor, unless otherwise indicated. Toilet compartment doors shall be centered on water closets, unless otherwise indicated.
- C. Maintain uniform clearance of approximately 1/2" between pilasters and panels, and 1/2" between pilasters or panels and finished wall.
- D. Maintain uniform clearance of 1/4" or less between vertical edges of doors and pilasters.
- E. Set pilaster units with anchorages having not less than two (2) inches penetration into structural floor. Level, plumb, and tighten installation with devices furnished. Hang doors and adjust so that tops of doors are level with tops of pilasters when doors are in closed position.

END OF SECTION

SECTION 102219

DEMOUNTABLE PARTITIONS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the demountable partitions as shown on the drawings and/or specified herein, including but not limited to the following:
 - 1. Partition system.
 - 2. Doors and frames in partition system.
 - 3. Finish hardware for doors.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Hollow metal doors and frames - Section 081113.
- F. Finish hardware - Section 087100.
- G. Glass and Glazing - Section 088000.
- H. Drywall - Section 092900.
- I. Electrical - Division 26.

1.4 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions,

or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.

- B. LEED BUILDING Performance Criteria: The following criteria are REQUIRED for the products included in this section:
1. Metal members shall contain a minimum of 35% (combined) post-industrial/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the Submittal Requirements of this Section.
 2. Metal members fabricated within, and containing raw materials extracted within, 500 miles (by air) of the project site shall be documented in accordance with the Submittal Requirements above.
 3. Adhesives or sealants used for work in this section shall meet the requirements of Section 018419: Volatile Organic Compound (VOC) Limits For Adhesives, Sealants, Paints and Coatings (LEED BUILDING), where applicable.
 4. Certification of these products shall be in accordance with the LEED BUILDING Submittal Requirements of this Section.
- C. Manufacturer: Provide office partition system manufactured by a single firm specializing in production of this type of work.
- D. Shop Assembly: Preassemble items in shop to greatest extent possible. Disassemble units only to extent necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
- E. Installed partitions shall have a deflection limit of L/240 when subject to a 5 psf uniform lateral load and a concentrated load of 200 lbs.

1.5 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
1. A completed ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications. Information to be supplied includes:
 - a. The amount of recycled content in the insulation product(s). Identify post-consumer and/or post-industrial recycled content.
 - b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the products.
 - c. Provide material costs for the materials included in the contractor's or subcontractor's work. Material cost does not include costs associated with labor and equipment.
 2. Letters of Certification, provided from the product manufacturer on the manufacturer's letterhead, to verify the amount of recycled content.

3. Product Cut Sheets for all materials that meet the LEED BUILDING Performance criteria, as per the QUALITY ASSURANCE requirements of this Section. Cut sheets shall be submitted with the Contractor or Subcontractor's stamp, as confirmation that the submitted products are the products installed in the project.
 4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
- B. Product Data: Submit manufacturer's detailed materials and fabrication specifications and installation instructions. Include catalog cuts of hardware, fastenings and other data as required.
- C. Shop Drawings: Submit shop drawings for fabrication and erection of partition assemblies which are not fully described by manufacturer's data. Show anchorage and accessory items and finishes.
- D. Samples: Submit samples of each required finish and color. Prepare samples on same materials which will be used in partition assemblies.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver demountable panel partition components cartoned or crated to provide protection during transit and job storage.
- B. Inspect partition components upon delivery for damage. Minor damages may be repaired, provided finish items are equal to new work and acceptable to Commissioner. Remove and replace damaged items as directed.
- C. Store partition components on raised platforms in vertical positions with blocking between units to allow air circulation. Keep stored material covered and protected from damage.

PART 2 PRODUCTS

2.1 PARTITION SYSTEM

- A. Provide customized Acme Series 50 office partition system as manufactured by Inscape - Architectural Interiors, or equivalent of DIRTT, Transwall, or approved equal.
 1. Profiles: 16 ga cold rolled steel, 1-1/2" x 2-1/2"
 2. Finish: Powder coated metallic gray

2.2 MATERIALS

- A. Metal: Steel, cold-rolled, annealed, stretcher-leveled furniture stock free of pits, scale, and other surface defects, conforming to ASTM A 366, Type B, CS (commercial steel).
 1. Posts shall be formed of 18 gauge steel.

2. Bases shall be formed of 18 gauge steel, independently removable for access to wiring raceways.
 3. End fillers and closures shall be formed of 20 gauge steel and filled with 6 lb. density acoustic fiberglass insulation. Perimeter shall be sealed with acoustical sealant (USG, Tremco, Pecora, or approved equal).
 4. Panels shall be fabricated of 16 gauge steel.
 5. Ceiling channel shall be fabricated of 18 gauge steel.
- B. Glass and Glazing Accessories: Conform to the requirements of Section 088000.
 - C. Doors and Frames: Conform to the requirements of Section 081113.
 - D. Door Hardware: Conform to the requirements of Section 087100.
 - E. Insulation: Inorganic, incombustible mineral wool filler for sound deadening.
 - F. Light and Sound Seals: Dense, compressible neoprene or other acceptable flexible, non-hardening gasket material.

2.3 FABRICATION

- A. Panels: Flush hollow unit construction, minimum 16 gauge steel facing sheets, smooth and free of buckles, oil canning, and seams. Provide stiffening members welded to inside surfaces of panel faces or provide gypsum board backing solidly laminated to entire back surface of panel. Enclose perimeter edges of each panel with metal.
 1. Construct panels to interlock with adjoining panels or use internal vertical supports to ensure secure, rigid joints. Provide integral glazing recesses or other frame for glass at glazed openings. Insulate panels with inorganic mineral filler packed solidly for sound deadening.
- B. Base: Provide recessed, steel channel, 18 ga.
- C. Ceiling Trim: Minimum 20 gauge steel continuous profile, adjustable to variations in ceiling level, securely fastened to ceiling, with light and sound seal at ceiling contact.
- D. Field Joints: Provide concealed splice at field joints to ensure rigidity and alignment.
- E. Electrical Cutouts: Provide cutouts in panels or base for electrical outlets shown on Electrical drawings. Coordinate exact location and size with Electrical Work specified in Division 26.
- F. Door Frames: 18 gauge minimum steel, vertically adjustable to suit floor irregularities, with continuous sound-deadening closure seals at jamb and head stops. Mortise and reinforce frames to retain required hardware and to stiffen frame. Drill and tap for machine screws for mortise hardware per templates furnished with hardware. Conform to the requirements of Section 081113.
 1. Reinforce heads of frames to receive surface-mounted door closers whether or not such closures are indicated.

- G. Doors: Manufacturer's standard 2" x 2" thick flush or glazed hollow steel doors, formed of 20 gauge min. stainless steel face sheets. Pack interior of doors with inorganic mineral filler sound-deadening material.
 - 1. Door heights must be verified in the field by the Contractor and coordinated prior to fabrication.
 - 2. Factory prepare and reinforce doors to receive required hardware. Make cutouts and mortises and drill and tap for machine screws for mortise hardware per templates furnished with hardware.
 - 3. Conform to the requirements of Section 081113.
- H. Hardware: Install locks, door closers, door stops, thresholds, and other hardware furnished under the "Finish Hardware" Section 087100 for doors in demountable partitions. Install door bottoms and lock-reinforcing units at factory. Install other hardware at job site.
- I. Furnish and install the following hardware:
 - 1. Off set center hung pivot hardware.
 - 2. Fasteners: Provide Phillips-head screws and bolts, nuts, washers, grommets, and other fastening devices of appropriate type, metal, and finish. Countersink screws and bolts.
- J. Finishes: Steel to be shop finished with manufacturer's standard factory applied paint finish complying with ANSI A250.3; custom color and glass as selected by the Commissioner.
- K. Glazing: Set glass in glazing strips for firm retention and tight seal and to permit easy removal and reinstallation without damage. Loose glazing stops and exposed screws are not acceptable.
- L. Connectors and Accessories: Provide connectors, fasteners, and accessories required for rigid, secure, complete, and finished demountable metal partition system.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where demountable partitions are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected by the Contractor in a manner acceptable to the Commissioner.

3.2 INSTALLATION

- A. Install partitions before floor coverings and after suspended drywall ceilings have been installed. Coordinate partition work with work of other trades which are affected by partition installation. Avoid damage to installed work.

- B. Repair damaged or defaced work or replace with new work, as acceptable to Commissioner. Completely refinish defaced partition components with factory finished materials, or replace defaced components.
- C. Furnish, drill for and install anchoring devices required, and secure partitions to floor, ceiling and walls, using concealed fasteners.
- D. Install partitions rigid, level, plumb and in alignment, with components secure together, in accordance with manufacturer's instructions.
- E. Provide through posts to ceiling, or other concealed supports as required to assure lateral stability of partition runs.
- F. Install continuous and positive seal to prevent light and sound transmission at partition contacts with floor, ceiling, wall and other abutting surfaces.
- G. Adjust hardware and doors and leave in proper operating condition.

END OF SECTION

SECTION 102813

TOILET ACCESSORIES

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the toilet accessories as shown on the drawings and/or specified herein.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Gypsum board partitions - Section 092900.
- F. Ceramic tiling - Section 093013.
- G. Toilet partitions - Section 102113.
- H. Electrical - Division 26.

1.4 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. Inserts and Anchorages: Furnish inserts and anchoring devices which must be set in concrete or built into masonry; coordinate delivery with other work to avoid delay.
- C. Accessory Locations: Coordinate accessory locations with other work to avoid interference and to assure proper operation and servicing of accessory units. Accessories shall be installed at heights that comply with the prevailing Handicapped Code.

- D. Products: Unless otherwise noted, provide products of same manufacturer for each type of unit and for units exposed in same areas.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.5 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
 - 1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications.
 - 2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 - 3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 - 4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
 - 5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.
- B. Product Data: Submit manufacturer's technical data, catalogue cuts and installation instructions for each toilet accessory.
- C. Setting Drawings: Provide setting drawings, templates, instructions, and directions for installation of anchorage devices in other work.
- D. Submit schedule of accessories indicating quantity and location of each item.

1.6 PRODUCT HANDLING

- A. Deliver accessories to the site ready for use in the manufacturer's original and unopened containers and packaging, bearing labels as to type or material, manufacturer's name and brand name. Delivered materials shall be identical to approved samples.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Stainless Steel: AISI Type 302/304, with polished No. 4 finish, 22 gauge minimum, unless otherwise indicated.
- B. Brass: ASTM B 19 flat products; ASTM B 16, rods, shapes, forgings, and flat products with finished edges; or ASTM B 30, castings.
- C. Galvanized Steel Sheet: ASTM A 653, G60.
- D. Chromium Plating: Nickel and chromium electro-deposited on base metal, ASTM B 456, Type SC 2.
- E. Mirrors: ASTM C 1503, mirror glazing quality, clear glass mirrors, nominal 1/4" thick.

2.2 FASTENING DEVICES

- A. Exposed Fasteners: Theftproof type, chrome plated, or stainless steel; match finishes on which they are being used.
- B. Concealed Fasteners: Galvanized (ASTM A 123) or cadmium plated.
- C. No exposed fastening devices permitted on exposed frames.
- D. For metal stud drywall partitions, provide ten (10) gauge galvanized sheet concealed anchor plates for securing surface mounted accessories.

2.3 FABRICATION

- A. General: Stamped names or labels on exposed faces of toilet accessory units are not permitted. Unobtrusive labels on surfaces not exposed to view are acceptable. Where locks are required for a particular type of toilet accessory, provide same keying throughout project. Furnish two keys for each lock.
- B. Surface-Mounted Toilet Accessories, General: Fabricate units with tight seams and joints, exposed edges rolled. Hang doors or access panels with continuous stainless steel piano hinge. Provide concealed anchorage.
- C. Recessed Toilet Accessories, General: Fabricate units of all welded construction, without mitered corners. Hang doors of access panels with full-length stainless steel piano hinge. Provide anchorage which is fully concealed when unit is closed.

2.4 MANUFACTURERS

- A. Provide products manufactured by Bobrick Washroom Equipment Co., Kimberley Clark, Toto, American Specialties, Inc., Bradley Corp., or approved equal.

2.5 ACCESSORY SCHEDULE

- A. See Drawings.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where toilet accessories are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 PREPARATION

- A. Accessories which are to be partition mounted shall be closely coordinated with other trades, so that the necessary reinforcing is provided to receive the accessories.
- B. Furnish templates and setting drawings and anchor plates required for the proper installation of the accessories at gypsum drywall and masonry partitions. Coordinate the work to assure that base plates and anchoring frames are in the proper position to secure the accessories.
- C. Verify by measurements taken at the job site those dimensions affecting the work. Bring field dimensions which are at variance with those on the approved shop drawings to the attention of the Commissioner. Obtain decision regarding corrective measures before the start of fabrication of items affected.
- D. Cooperate in the coordination and scheduling of the work of this Section with the work of other Sections so as not to delay job progress.

3.3 INSTALLATION

- A. Install accessories at locations indicated on the drawings, using skilled mechanics, in a plumb, level and secure manner.
- B. Concealed anchor assemblies for gypsum drywall partitions shall be securely anchored to metal studs to accommodate accessories. Assemblies shall consist of plates and/or angles tack welded to studs.
- C. Secure accessories in place, at their designated locations by means of theftproof concealed set screws, so as to render removing of the accessory with a screwdriver impossible.
- D. Unless otherwise indicated, accessories shall conform to heights from the finished floor as shown on the drawings. Where locations are not indicated, such locations shall be as directed by the Commissioner.
- E. Installed accessories shall operate quietly and smoothly for use intended. Doors and operating hardware shall function without binding or unnecessary friction. Dispenser type accessories shall be keyed alike. Prior to final acceptance, master key and one duplicate key shall be given to City of New York's authorized agent.
- F. The Commissioner shall be the sole judge of workmanship. Workmanship shall be of the highest quality. Open joints, weld marks, poor connections, etc., will not be permitted. The Commissioner has the right to reject any accessory if he feels the workmanship is below the standards of this project.

- G. Grab bars shall be installed so that they can support a three hundred (300) lb. load for five minutes per ASTM F 446.

3.4 CLEANING AND PROTECTION

- A. Upon completion of the installation, clean accessories of dirt, paint and foreign matter.
- B. During the installation of accessories and until finally installed and accepted, protect accessories with gummed canvas or other means in order to maintain the accessories in acceptable condition.
- C. Replace and/or repair installed work which is damaged or defective to the City of New York's satisfaction, at no additional cost.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 104416

FIRE EXTINGUISHERS AND CABINETS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the fire extinguishers and cabinets as shown on the drawings and/or specified herein.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Gypsum drywall - Section 092116.
- F. Fire suppression systems - Division 22.
- G. Fire hose cabinets and valve cabinets - Division 22.

1.4 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. Provide portable fire extinguishers, cabinets and accessories by one manufacturer.
- C. UL-Listed Products: Provide new portable fire extinguishers which are UL-listed and bear UL "Listing Mark" for type, rating, and classification of extinguisher indicated.

1.5 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications.
 2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).
 5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.
- B. Product Data: Submit manufacturer's technical data and installation instructions for all portable fire extinguishers required. For fire extinguisher cabinets include roughing-in dimensions, and details showing mounting methods, relationships to surrounding construction, door hardware, cabinet type and materials, trim style and door construction, style and materials. Where color selections by Commissioner are required, include color charts showing full range of manufacturer's standard colors and designs available.
- C. Samples: Submit samples, 6" square, of each required finish. Prepare samples on metal of same gauge as metal to be used in the work. Where normal color variations are to be expected, include 2 or more units in each sample showing the limits of such variations.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide products of one of the following:
1. J. L. Industries.
 2. Larsen's Mfg. Co.
 3. Potter Roemer.

2.2 EXTINGUISHERS

- A. General: Provide fire extinguishers for each extinguisher cabinet and other locations indicated, in colors and finishes selected by Commissioner from manufacturer's standard which comply with requirements of governing authorities.
- B. Abbreviations indicated below to identify extinguisher type related to UL classification and rating system and not necessarily to type and amount of extinguishing material contained in extinguisher.
- C. Multi-Purpose Dry Chemical Type: UL rated 2A-10B:C, 5 lb. nominal capacity, in enameled steel container, for Class A, Class B and Class C fires.

2.3 MOUNTING BRACKETS

- A. Provide manufacturer's standard bracket designed to prevent accidental dislodgment of extinguisher, of proper size for type and capacity of extinguisher specified, in manufacturer's standard enamel finish; color to match extinguisher.

2.4 CABINETS

- A. Type and Style: Fire extinguisher cabinets shall be metal, recessed, with plexiglass panel, sized to fit within the partition or wall depth. Provide fire rated cabinets within fire rated partitions.
- B. Color: Stainless steel No. 4 finish.
- C. Design is based on "Model G-2409-R1" of Larsen's Mfg. Co. Other manufacturers noted herein may substitute their equivalent cabinet upon acceptance by the Commissioner.

PART 3 EXECUTION

3.1 INSPECTION

- A. Examine the areas and conditions where fire extinguishers and cabinets are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

- A. Install items included in this Section in locations indicated and at heights to comply with applicable regulations of governing authorities.
 - 1. Prepare recesses in walls for fire extinguisher cabinets as required by type and size of cabinet and style of trim and to comply with manufacturer's instructions.
 - 2. Securely fasten mounting brackets and fire extinguisher cabinets to structure, square and plumb, to comply with manufacturer's instructions.
- B. Where exact location of cabinets and bracket-mounted fire extinguishers is not indicated, locate as directed by the Commissioner.

3.3 IDENTIFICATION

- A. Identify fire extinguisher in cabinet with lettering spelling "FIRE EXTINGUISHER" painted on door by silk-screen process. Provide lettering on door as selected by Commissioner from manufacturer's standard letter sizes, styles, colors and layouts.
- B. Identify bracket-mounted extinguishers with red letter decals spelling 'FIRE EXTINGUISHER' applied to wall surface. Letter size, style and location as selected by the Commissioner.

3.4 SERVICE

- A. Determine the approximate completion date of the work and then inspect, charge, and tag the fire extinguishers at a date not more than 10 days before or not less than one day before actual completion date of the work.

END OF SECTION

SECTION 11 24 29

FALL PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and General Requirements

1.2 SUMMARY

A. Section Includes:

- 1) The work in this section includes furnishing and installing an OSHA approved fall restraint system including the following major elements and associated accessories for the MCC Theater:
 - a. Installed Personnel Safety Fall Restraint System
 - b. Personnel Safety Fall Restraint Loose Equipment
 - c. User Instruction and Operations Manual
 - d. Instruction and Demonstration for Operators
 - e. Miscellaneous Rigging
- 2) Complete site survey, design, engineering, fabrication and installation of fall protection system and devices for theatrical technical locations at the MCC Theater.
- 3) Furnish all materials, components and services required to provide the work as specified herein, elsewhere in the project documents and/or as shown on related drawings.
- 4) Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.

B. Products Supplied But Not Installed Under This Section

- 1) Loose equipment and accessories as detailed in this section.

C. Coordinate with all related sections of the specifications including, but not limited to:

- 1) Division 03 - Concrete.
- 2) Division 04 - Masonry.
- 3) Division 05 - Metals.
- 4) Division 09 - Finishes.

1.3 REFERENCES

- A. Reference the NYC DDC General Conditions for general project references and standards.

References to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.

- B. If an applicable code or standard permits work of lesser quality or extent than this specification, this specification and the related drawings will govern.
- C. Comply with prevailing local codes and applicable Underwriters Laboratory standards.
- D. Comply with national, state and local labor regulations and requirements.
- E. Equipment to have pertinent labels.
- F. Contractor shall know, understand, and comply with applicable OSHA and other regulatory requirements in New York, New York that govern the installation and testing of equipment in this section.

1.4 DEFINITIONS

- A. Reference the NYC DDC General Conditions for general project definitions.
- B. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
- C. "Contractor": Specialty Contractor/Manufacturer for the work contained in this section only. Contractors involved with other portions of the work shall be indicated with a specific trade preceding the word "Contractor" (i.e. General, Electrical, etc.).
- D. "Furnish": Purchase and/or fabricate and deliver to project site.
- E. "Install": Physically install the items in their proper location(s) on the project site.
- F. "Provide": Furnish and install complete, functioning and Complete With All Necessary Accessories (CWANA).

1.5 SYSTEM DESCRIPTION

- A. Personal Safety Fall Restraint System.
 - 1) The personal safety fall restraint system shall be a complete system dedicated exclusively to this purpose. All components of the system shall comply with OSHA standards 1910, 1926 and ANSI Z359, and any other state or local regulations under which this system is governed.
 - 2) The system shall consist of horizontal wire rope lifelines, fixed length lanyards for fall restraint and personnel harnesses, to provide employee fall restraint in catwalk areas of the facility.
 - 3) Anchorages shall be installed in locations as shown on the drawings. Steel embed plates with connection tabs required for the attachment of the horizontal lifelines will be installed under structural work.

- 4) Permanently installed wire rope lifelines will span between anchorage rings where indicated on the drawings. Fixed length lanyards, used in conjunction with full body harnesses, shall be used to prevent personnel center of gravity from extending beyond edge of catwalks to provide fall restraint.
- 5) System shall be designed so that the user may pass any intermediate supports without disconnecting from lifeline.
- 6) It shall be the responsibility of the contractor to verify site measurements and to provide lanyard devices of proper length for each application as described below.
- 7) The system shall be designed to accommodate two employees working between the same anchorage points as required by OSHA standards.
- 8) The system shall remain dormant until a Letter of Certification is issued and instruction of all users is complete.
- 9) System Coverage areas:
 - a. Theater 1
 1. 1 - 60' Horizontal Lifeline
 2. 2 - 20' Horizontal Lifelines
 - b. Theater 2
 1. 2 - 51' Horizontal Lifelines
 2. 6 - 44' Horizontal Lifelines

B. Operations and User Instruction Manual

- 1) Provide a detailed "Operations and User Instruction Manual". This manual shall be used as part of a complete user instruction program. This user instruction shall meet or exceed the OSHA requirement as detailed in 1910.66 Appendix C. The manual shall include at minimum, proper anchoring and tie-off techniques and inspection and storage of equipment.
- 2) An individual, known as an expert in the field of fall protection systems, shall conduct (1) four-hour seminar, for no more than 20 people. This instruction will include information as detailed in the Operations and User Instruction Manual. All aspects of the user instruction are to be performed by all members of the seminar.

1.6 SUBMITTALS

- A. All submittals shall be submitted in accordance with New York City DDC General Conditions. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing the project schedule.
- B. Submittals will be reviewed, accepted and field dimensions verified prior to proceeding with the fabrication of the work in this section. The Commissioner shall only mark one set of drawings per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked.
- C. All submittals shall leave space available for review stamps and comments.
- D. Product Data: Submit catalog or standard data sheets for component parts as part of the shop drawing submittal. The data shall include all information, which indicates compliance

with the specifications herein. Clearly indicate the manufacturer of each component and part.

- 1) If any work is required to be specially tested or approved, whether by the City of New York's instructions or by any laws, ordinance or any public authority, the Contractor shall give the General Contractor and owner timely notice of its readiness for inspections, and of dates of inspections to be made by appropriate authorities.
- 2) All fall protection equipment shall comply with OSHA 1926.500 and ANSI Z359.1.

E. Shop Drawings:

- 1) All elements shall be engineered, approved and drawings stamped by a licensed professional engineer licensed in the State of New York. The engineer shall verify that the equipment supplied under this section meets or exceed the design criteria of this specification.
- 2) Include a cover sheet with a drawing index including the sheet number and title for each sheet in the set.
- 3) Provide a 4" x 4" area near the title block for review stamps and comments. This area should be in relatively the same location on each sheet.
- 4) Provide 1/4" = 1'- 0" plans of all locations which contain equipment in this contract. Show all equipment properly located, dimensioned and labeled. Note all work by others in the vicinity, which may affect work in this contract.
- 5) Inventory of all equipment to be supplied, including quantities, manufacturer's part number, reference to applicable drawings, etc.
- 6) Complete, fully dimensioned, large scale detailed fabrication drawings of all major components.
- 7) Requisite schematics, plans and sections indicating assembly and installation of components.
- 8) Indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
- 9) Indicate all elements with appropriate safety factors and/or safety equipment.
- 10) Indicate recommended load limits for each element in the system with loading requirements.

F. Samples: Submit samples for approval within 14 days of written request. These items may include, but are not limited to:

- 1) Samples of fall protection components if requested by the Commissioner.
- 2) Samples of harness, lanyard, and lanyard connection devices.

G. Quality Control Submittal:

- 1) Design Data:
 - a. Confirm full structural compliance to these specifications.

- 2) Manufacturer's Instructions:
 - a. The Contractor shall provide critical instructions to the construction manager with regard to work by others.
- 3) Contractor's Field Reports:
 - a. The Contractor shall provide field reports immediately upon site inspection and field measurements to the construction manager in a timely manner so that any anomalies may be addressed.
 - b. Field reports shall be distributed to the City of New York and the Commissioner.

H. Project Schedule

- 1) The Contractor shall submit a project schedule (critical path) within 30 days of contract award, which shall indicate coordinated functions with other trades and project requirements.

I. Project Record Documents:

- 1) Submit documents in accordance with The NYC DDC General Conditions.
- 2) At the time of acceptance testing, submit six bound copies of parts lists and operations/maintenance instruction sheets.
- 3) Within 30 days of the acceptance testing, submit one set of reproducible "as built and approved" drawings showing all equipment as installed. These drawings shall include all adjustments made during the checkout process.
- 4) Submit operation and maintenance manuals with the "as built and approved" drawings. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for component parts, which may need periodic replacement.
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces.
 - e. Warranties as required.
- 5) Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
- 6) The record documents shall be reviewed by the Commissioner all modifications to the documents stemming from this review shall be made as required.
- 7) Above submissions are required as a condition for final approval of the work.

J. Closeout Submittals:

- 1) Verification that all punch list items have been corrected and as-built drawings so indicate.

1.7 QUALITY ASSURANCE

A. Special Experience Requirements

- 1) Manufacturer: The manufacturer providing the material or equipment specified in this Section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years. The systems described herein shall be provided by a Fall Protection Contractor who will be responsible for furnishing all services described herein including but not limited to coordination and supervision of the engineering, shop drawings, fabrication and provision for all systems specified herein and shown in the drawings. Special Experience Requirements
- 2) Installer: The contractor or subcontractor performing the work of this Section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.

B. The Contract Documents describe functional criterion of systems to be provided, including dimensions, profiles and visual appearances. Engineering of systems described herein, including modification of and addition to any details as required to provide a fully functional system, is the sole responsibility of the Manufacturer/Contractor.

- 1) Supplementary structural steel shall be coordinated with the project Structural Engineer and the Commissioner within 30 days of contract award.

C. Errors and omissions within the Contract Documents shall not relieve the Contractor and the General Contractor of the responsibility for providing a properly functioning installation of the fall protection system as described herein.

D. All equipment and installation to be the responsibility of the single Contractor, who shall own and operate their own shop for the fabrication the equipment, and be regularly engaged in the fabrication of such equipment.

E. The Contractor shall have a current contractor's license and shall know, understand, and have the required documentation to work in the State of New York. This license shall be maintained throughout the course of the work of this contract.

F. Contractor shall be responsible for proper installation, operation and safety of all components equipment.

G. Metalworking may be done by others. Responsibility in all respects shall be that of the Contractor.

H. The Contractor is responsible for providing fully engineered/stamped documents designed by a professional engineer licensed in the State of New York. All equipment shall be properly installed to meet the obligations of this section.

- 1) The Contractor shall provide all system design loads and structural accommodations not indicated on the drawings. The Contractor shall supply to the Commissioner all system engineering documents and information within 60 days of contract award.
- 2) The contractor must receive authorization to proceed by the Commissioner.

1.8 DELIVERY, STORAGE AND HANDLING

- A. All equipment shall be appropriately and substantially packed for shipment.
- B. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theater site allocation. Include packing and shipping lists for each container.
- C. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- D. Coordinate responsibility for acceptance of material and equipment at job site with the Contractor representative.
- E. Upon delivery, the materials shall be stored under cover in a dry and clean location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
- F. Replace, at no expense to the City of New York, all equipment and materials which are damaged during storage or handling.

1.9 VERIFY ALL PROJECT / SITE CONDITIONS

- A. Verify conditions at jobsite. Promptly report variations and obstructions to the Commissioner and City of New York. All additions and or corrections are to be requested prior to fabrications.
- B. Field measurements shall be taken prior to preparations of shop drawings to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.

1.10 SEQUENCING AND SCHEDULING

- A. The installation of the equipment in this section shall begin following the completion of work which may be in conflict with the installation.
- B. The Contractor shall submit a project schedule (critical path), which shall indicate coordinated functions with other trades and project requirements.

1.11 WARRANTY

- A. The warranty period shall not start until the date of substantial completion or until all punchlist items have been rectified, which ever is later.
- B. The Manufacturer shall warrant materials and workmanship of systems and equipment installed as free of defects. The Manufacturer shall guarantee in writing the repair or replacement within 2 days of any item found defective during a period of 2-years following date of final acceptance. Ordinary wear and defects due to improper usage are excepted.
- C. The Manufacturer shall provide a 24 hour / 7 day phone contact for owner to report warranty defects.
- D. During the warranty period, all emergency conditions where systems failures may be

hazardous or may cause severe hardship or cancellation of performances shall be responded to within 24 hours. Immediate action shall be undertaken to ensure the safety of the audience and the performers.

1.12 SYSTEM STARTUP, OWNER'S INSTRUCTIONS AND COMMISSIONING

- A. Provide Letter of Certification for the fall protection system.
- B. Provide two days of staff instruction on system operation, and maintenance of fall protection elements, one day for each of the two theaters. This shall include basic safety in the use of the system as well as the handling of mechanical elements. The staff shall be limited to twenty personnel.
- C. All instruction shall be by technical staff of the Contractor.

1.13 GUARANTEE SERVICE

- A. **Guarantee Service:** One year following date of final acceptance, a factory approved engineer shall be provided to examine, adjust and repair the equipment included in this sections as required. This service shall not cover adjustments, repairs or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the Contractor. All labor and materials which are required to perform this service shall meet or exceed these specifications and shall not compromise the performance of the equipment in any way.
- B. **Extra Materials:**
 - 1) Submit an inventory of recommended spare parts for all equipment provided. This shall include, but not be limited to, all expendable mechanical parts.
 - 2) This inventory shall be reviewed by the Commissioner and recommendations made to the City of New York concerning parts and equipment which should be purchased.

PART 2 - - PRODUCTS

2.1 MANUFACTURERS

- A. The basis of design shall be a system by one of the following manufacturers.

Capital Safety
3965 Pepin Avenue
Red Wing, MN 55066
(800) 328-6146

Latchways – PLC
Hopton Park
Devizes, Wiltshire SN10 2JP
44 (0) 1380 732700

Mine Safety Appliances
MSA Fall Protection Division
(800) 672-2222

2.2 INSTALLERS

- A. The system noted above may be installed by one of the following contractors or approved equal.

Sapsis Rigging, Inc.
233 N. Lansdowne Avenue
Lansdowne, PA 19050
(800) 727-7471

Evan Corporation
8 Reise Road
Jamestown RI 02835
(401) 423-2230

Hy-Safe Technologies
960 Commerce Drive
Union Grove, WI 53182
(800) 642-0775

Gravitec Systems, Inc.
21291 Urdahl Road NW
Poulsbo, WA 98370
(206) 780-2898

2.3 MATERIALS

- A. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable unless otherwise noted.
- B. All mounting hardware to be included.
- C. All equipment and components shall be factory tested prior to shipping.
- D. All bolts and fasteners must be Grade 8 or better.
- E. All bolted attachments to have lock washers or other approved self-locking fasteners.
- F. All elements to be designed with a safety factor per industry standard for fall protection systems.

2.4 PERSONNEL SAFETY FALL RESTRAINT SYSTEM

- A. Wire Rope.
- 1) The wire rope shall be sized in accordance with OSHA regulation 1929.502. The complete engineered system shall be designed to support a minimum of two employees working between the same anchorage points at any time.
- B. Intermediate Supports
- 1) System shall be designed to allow the user to move past intermediate supports without disconnecting from the lifeline.
- 2) Locations of intermediate supports and method of attachment shall be coordinated

with the Commissioner.

C. Terminations

- 1) The termination point for each horizontal lifeline shall be comprised of an engineered connection between the structural steel and the termination of the wire rope. Each specific condition must be engineered. Each of these termination connections shall be submitted to the Commissioner for confirmation of its compatibility with the existing conditions.

D. Cable Tensioner

- 1) Each horizontal lifeline shall incorporate an in-line tensioning device to allow the system to be set to the proper tension at installation and during periodic inspection.

E. Furnish the following fall protection safety devices in quantities specified here and above and as required to provide a complete working system as specified herein

- 1) Full Body Harness
 - a. OSHA compliant harness shall be constructed of 6,000 pound minimum breaking strength nylon or polyester webbing with zinc plated stamped alloy steel D-rings.
 - b. MSA 502733 or approved equal.
 - c. Provide six (6) standard size male harnesses with back rings
 - d. Provide six (6) standard size female harnesses with back rings
- 2) Restraint Lanyard
 - a. OSHA compliant restraint lanyard adjustable in length up to 25 feet and supplied with self-locking snaphooks.
 - b. MSA 415088 or approved equal.
 - c. Provide twelve (12).

2.5 OPERATIONS AND USER INSTRUCTION MANUAL:

A. Instructor

- 1) After award of contract, the contractor shall provide the name of the safety instructor and his/her qualifications for review by the Commissioner.

B. Seminar syllabus

- 1) Syllabus to be supplied to the Commissioner by instructor during submittal process. The Commissioner to approve and/or amend as required fulfilling the requirements of section above.

C. Operations manual

- 1) Supply all information as presented in the fall protection user instruction seminar. Provide information in a three ring binder format.
 - a. Furnish 6 binders.

2.6 FABRICATION

- A. The work on this section shall be installed by an experienced installer in the employ of the

successful contractor.

- B. Fabricate all work in this section in accordance with the Commissioner's direction, specifications, approved shop drawings, pertinent project drawings. Established trade practices and applicable code requirements.
- C. Machine-finish all operating parts to standard trade tolerance, fits and finishes.
- D. Carry out shop welding in full accordance with the appropriate sections of the "Specifications for the Design, Fabrication and Erection of Structural Steel Building" of the American Institute of Steel Construction (AISC).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: The Contractor shall examine areas and conditions under which the equipment is to be installed and shall notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Do not proceed with work until unsatisfactory conditions have been corrected in an acceptable manner.

3.2 ERECTION, INSTALLATION, APPLICATION

- A. Install all work in this section in accordance with the Commissioner's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Install all work securely; complete with all bolts, nuts, washers, clips, fittings, supports, and other items required for proper installation and operation.
- C. Position all items accurately as indicated on drawings.
- D. Coordinate work with all other trades to avoid causing delays in construction schedule.
- E. All field welding requires prior approval of the Commissioner.
- F. Do all cutting, drilling, tapping and approved welding required to properly install work. Obtain Commissioner's prior approval for cutting and drilling of existing structural work.

3.3 FIELD QUALITY CONTROL

- A. The installation of the equipment indicated in this section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- B. Arrange for all tests and inspections required by the NYC DDC General Conditions.

3.4 ADJUSTING AND CLEANING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent project drawings prior to demonstration.

- B. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the City of New York.

3.5 DEMONSTRATION

- A. Installed equipment to be operated for approval, and inspected for quality by the City of New York and the Commissioner
- B. Adjustments or modifications shall be made as directed by the Commissioner.
- C. Following the equipment demonstration, inspection and final adjustments, the City of New York's designated staff or representatives shall be instructed in the use, care and maintenance of all items.
- D. Tests and instruction to be scheduled in conformance with project construction schedules and the availability of the City of New York and the Commissioner.
- E. Cost of re-inspection and additional testing by the Commissioner, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor or the General Contractor respective to the area of work concerned. This work will be conducted on a time and materials basis, including standard hourly rates, and shall be scheduled and approved in writing prior to the re-inspection/testing session between the Commissioner, the City of New York, and the contractor(s). All travel expenses, if required, shall be provided.

3.6 PROTECTION

- A. Suitable precautions shall be taken to protect the equipment in this section from damage after installation and prior to acceptance by the City of New York.
- B. Remove all equipment protection and clean all components thoroughly prior to the demonstration session.
- C. Remove all packaging and installation debris from the site.

END OF SECTION

SECTION 113100

APPLIANCES

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to complete the appliances as shown on the drawings and/or specified herein.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Sinks and related plumbing fixtures – Division 22.
- F. Electrical service – Division 26.

1.4 SUBMITTALS

- A. LEED BUILDING Submittal Requirements: The contractor or subcontractor shall submit the following LEED BUILDING certification items:
 - 1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications.
 - 2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 - 3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
 - 4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.

B. Prior to purchase, submit catalog cuts, product information and technical data for each appliance.

1.5 QUALITY ASSURANCE

A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.

B. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

1.6 DELIVERY AND STORAGE

A. Deliver products to project site in manufacturer's undamaged protective containers.

B. Delay delivery until spaces to receive them have been fully enclosed and utility rough ins are complete.

PART 2 PRODUCTS

2.1 APPLIANCE SCHEDULE

A. As indicated on drawings. Provide scheduled products or equivalent products of General Electric, Frigidaire Co., KitchenAid Inc., or approved equal.

PART 3 EXECUTION

3.1 INSPECTION

A. Examine the areas and conditions where appliances are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

A. Coordinate as required with other trades to assure proper and adequate provision in the work of those trades for interface with the work of this Section.

- B. Install the work of this Section in strict accordance with the original design, pertinent requirements of governmental agencies having jurisdiction, and the manufacturer's recommended installation procedures as approved by the Commissioner, anchoring all components firmly into position for long life under hard use.
- C. Upon completion of installation and hookup to utilities, put each operating component of each appliance through at least five (5) complete operating cycles, adjusting as needed to secure optimum operation level.
- D. Touch up scratches and abrasions to be completely invisible to the unaided eye from a distance of five (5) feet.
- E. Promptly remove from the job site all cartons and packing material associated with the work of this Section.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 11 61 33

THEATRICAL RIGGING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and NYC DDC General Conditions, apply to this Section.

1.2 SUMMARY

- A. The work in this section includes but is not limited to furnishing and installing the following major elements and associated accessories:
 - 1) Dead-hung pipe grids
 - 2) Dead Hung Stage portal
 - 3) Line operated straight traveler tracks
 - 4) Motorized Rigging System
 - a. Motorized grid panel hoists
 - b. "Rigging Control System" (RCS)
 - 1. Motion Control Rack (MCR)
 - 2. Motor control cabinets (MCC)
 - 3. Control points and E-Stop
 - 4. Hand held control pendant
 - 5. Control pendant receptacles
 - 6. Data Logging
 - a) The automation system must keep a log all faults on the system. This data log must be accessible via the internet for review by the manufacturer in case of questions arising from the use of the system or for pre warranty diagnostics
 - c. Square Truss grid panel assemblies
 - d. Pantograph cable management
 - e. System load and safety signage in conformance with ANSI-Z535.
 - 5) Front of house rigging strong points
 - 6) Temporary mix position platform in Theater 1
 - a. Portable platform unit for temporary mix position in Theater 1
 - b. Step units
 - c. Fascia panels
 - d. Railings
 - e. Storage Carts
 - f. Spare parts

- 7) Owner/End User Instruction
 - a. After substantial completion of the work of this section, provide comprehensive user instruction for the owner/end user of this system.
 - b. Provide an interactive owner instruction DVD that can be repeated by the user, in the safe and effective use of the equipment of this section. See Closeout Activities/User Instruction in this section.

- 8) Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the Contract Documents and/or as shown on related Drawings.

- 9) Work Results:
 - a. The equipment installed as a result of this section shall result in a complete and working automated theatrical rigging system which can be monitored from a remote location.

- 10) Engineering:
 - a. Provide design of the means of fastening, suspension and support of the work of this section. Provide drawings and calculations meeting the review requirements of the authorities having jurisdiction, stamped and wet signed by a Professional Engineer licensed in the State of New York for work of the specific type performed.
 - b. Engineered drawings shall be provided to the Commissioner for review of coordination and compliance to this section.
 - c. Engineered drawings shall be provided to the Commissioner. The Commissioner will review the loads imposed on the structure by this equipment and compare those loads to allowable structural loading. In no case can the allowable loads be exceeded.

- 11) Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the Contract Documents and/or as shown on related Drawings.
 - a. Refer to the 'TR' series drawings.
 - b. Refer to all other drawings which detail the required coordination of this work

1.3 PRODUCTS SUPPLIED BUT NOT INSTALLED UNDER THIS SECTION

- A. The following equipment supplied under this section shall be installed and/or terminated under Division 26:
 - 1) Motion Control Racks (MCR)
 - 2) Motor Control Cabinets (MCC)
 - 3) Cable Management Pantograph and associated terminal boxes
 - 4) Rigging control system devices including but not limited to control panels, limit switches, detection and safety devices.

- B. Installation of the Cable Management Pantograph and associated terminal boxes shall be

made by Division 26 under the direct onsite supervision of the Contractor performing the work of this section in coordination with the Section 11 6163 Contractor.

- C. If not internal to the equipment, controls, safety and limit switch devices are installed under this section. Final terminations to the devices are made under Division 26.
- D. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.

1.4 RELATED SECTIONS

- A. All drawings including General Construction, Structural, Theatrical, Mechanical, and Electrical, and General Conditions of the contract, including Supplemental Provisions and NYC DDC General Conditions, apply to this section.
- B. Coordinate with all related sections of the specifications including, but not limited to:
 - 1) Division 03 – Concrete
 - a. Fastener requirements
 - 2) Division 04 - Masonry:
 - a. Fastener requirements
 - 3) Division 05- Metals:
 - a. Structural steel supporting the work of this section
 - 4) Division 09 – Finishes:
 - a. Flooring
 - 5) Division 11 – Equipment
 - a. Section 11 6163 – Theatrical Lighting Systems Dimming and Control
 - b. Section 11 6183 – Theatrical Audio Video Systems
 - 6) Division 23 – Mechanical:
 - a. Air supply/return devices
 - 7) Division 26 – Electrical:
 - a. Theatrical lighting wiring devices

1.5 REFERENCES

- A. References to code, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
- B. If an applicable code or standard permits work of lesser quality or extent that this specifications, this specification, this specification and the related Drawings will govern.

- C. Comply with prevailing local codes, standards, and applicable Underwriters Laboratory standards.
- D. Comply with national, state and local labor regulations and requirements.

1.6 DEFINITIONS

- A. "Contractor": Installer responsible for the construction and installation of the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word "Contractor" (i.e. General, Electrical, etc.).
- B. "Furnish": Purchase and/or fabricate and deliver to project site.
- C. "Install": Physically install the items in their proper location (s) on the project site.
- D. "Provide": Furnish and install.
- E. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.
- F. Definitions: Section Specific
 - 1) "Safe Working Load" – The load that can be applied to the system by the end user
 - 2) "System Load" – Sum of the Safe Working Load and the weight of the load carrying device. The maximum load which can be safely handled by the machinery installation under normal operating conditions, not taking dynamic forces into consideration.
 - 3) "Dynamic Force" – Forces exerted on the structure or machine that are the result of the movement patterns of the load and system component parts.
 - 4) "Design Load" – Sum of the System Load and the loads due to dynamic forces
 - 5) "Category 0 Stop" - An uncontrolled stop that immediately removes power from the machine actuators.
 - 6) "Category 1 Stop" - A controlled stop that allows power to the machine actuators to achieve the stop, and then removes power from the machine actuators when the stop is achieved.
 - 7) "Category 2 Stop" - A controlled stop that leaves power available to the machine actuators
 - 8) "Initial Limit" – The mechanical limit switch connected to the electrical system in such a manner as to prevent further movement in the over travel direction. It shall be a Category 2 stop and allow the user to operate the system in the opposite direction.
 - 9) "Ultimate Limit" – The mechanical limit switch is a positive break mechanical limit switch, which executes a Category 1 stop. NOTE: The Ultimate limit switch shall be located in such a manner that should the initial limit fail to operate, and the machinery

strikes the ultimate limit at maximum speed and taking the expected system delay time into consideration – the machinery installation can come to a complete stop before over travel results in mechanical damage.

- 10) "Fleet Angle" – The angle formed between the wire rope and the centerline of a sheave or drum as the wire rope traverses to another sheave or fixed point.

1.7 SYSTEM DESCRIPTION

- A. Provide dead-hung pipe grids as shown on the drawings in Theater 1
 - 1) Each pipe grid is a rectilinear system comprised of 1-1/2" nominal I.D. (1.9" OD) steel pipes for equipment mounting arranged as shown on the drawings.
 - 2) Theatre 1 pipe grid is arranged on 4'-0" centers and is approximately 200 square feet.
- B. Provide portal at the proscenium zone of Theater 1.
 - 1) Framed full width removable header dead hung from rigging beams.
 - 2) Two sets of framed, full height legs mounted on traveler tracks to provide variable stage width openings.
- C. Provide (1) line operated traveler track for the Proscenium Traveler in each Theater.
- D. Motorized Rigging System
 - 1) Provide the Theatrical Automation equipment as indicated on the drawings and as detailed herein
 - 2) Rigging Control System (RCS)
 - a. The Rigging Control System will be a system of components that shall allow the End User to perform operations of all motorized elements in the theatre while providing the maximum level of safety for performers and equipment.
 - b. Emergency stop stations shall be located throughout the stage area. The emergency stop system shall be a stand-alone system that shall function independently of the RCS computer network. Network failure shall not disrupt the emergency stop system.
 - 3) Individual winch
 - a. The individual winch shall receive command instructions from the RCS and it shall move accordingly. This includes, but is not limited to, direction, and position.
- E. Provide front of house strong points above the acoustical cloud in Theater 1.
 - 1) Strong points shall provide a method for connecting temporary rigging to the rigging steel over the seating.
 - 2) Coordinate locations with acoustical cloud.

F. Temporary Mix position system

- 1) System consists of a series of (1) single-sided platform top and leg set for use as temporary mix position located in the balcony of Theater 1.
- 2) Platform height is 22".
- 3) Provide Step Units as shown in the contract documents
 - a. 1 – 15" high
 - b. 1 – 22.5"high
- 4) Leg system shall have adjustable acme-thread feet allowing leveling adjustment of approximately 3".
- 5) Storage cart will allow system to be stored when not in use. Platform shall store vertically on edge when not in use.
- 6) Safety railings will be provided for use at edges as shown in the contract documents.
- 7) Hard fascia closure panels shall be provided between the platform and floor.
- 8) All components in the system shall be portable and shall be designed to minimize setup, take down and transition time.
- 9) Each platform shall have discrete leg understructure and shall not bridge between platforms.
- 10) The platform system is intended for interior use only.
- 11) All components shall meet all state and local applicable fire spread and building code requirements

1.8 SUBMITTALS

A. Product Data

- 1) Where standard manufactured parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions.
- 2) Clearly indicate specific component and applicable options.

B. Shop Drawings

- 1) Provide shop drawings on D size minimum (24 X 36) sheets.
- 2) Include a cover sheet with a drawing index including the sheet number and title for each sheet in the set.
- 3) Provide a 4" x 4" area near the title block for review stamps and comments. This area should be in relatively the same location on each sheet.
- 4) Provide ¼" = 1'- 0" plans of all locations which contain equipment in this contract

based upon AutoCAD backgrounds provided by the Commissioner. Show all equipment properly located dimensioned and labeled. Note all work by others in the vicinity, which may affect work in this contract.

- 5) Provide an inventory of all equipment to be supplied, including quantities, manufacturer's part number, reference to applicable drawings, etc.
- 6) Provide complete, fully dimensioned, large scale detailed fabrication drawings of all major components.
- 7) Provide requisite schematics, plans and sections indicating assembly and installation of components.
- 8) Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.
- 9) Indicate all elements with appropriate safety factors and/or safety equipment.
- 10) Indicate recommended load limits for each element in the system with loading requirements.
- 11) All elements shall be engineered, approved and drawings stamped by a professional engineer licensed in the State of New York. The engineer shall verify that the equipment supplied under this section meets or exceeds the design criteria of this specification.
- 12) Indicate Safe Working Load for each element in the system with loading requirements.
- 13) Power requirements, one-line riser diagrams and installation circuit diagrams for electrical equipment. Show all required wire sizes and counts between all components.

C. Samples

- 1) Submit samples for approval within 14 days of written request. These items may include, but are not limited to:
 - a. Samples of pipe grid hanging hardware and connections, pipe grid junction hardware, drapery tracks and associated hardware.

D. Quality Assurance/Control

- 1) Submittals - submit the following in accordance with Division 1.
 - a. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing the project schedule.
 - b. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section. The Commissioner shall only mark one set of reproducible drawings per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked.
 - c. All submittals shall leave space available for review stamps and comments.

d. Provide full insurance against loss or damage during shipment. Furnish certifications of such coverage to the Commissioner.

2) Motorized Rigging -Source Quality Control Submittals

a. The contractor of this section shall supply as part of the submittal process the following Source Quality Control documents which must contain, at minimum the information listed below

1. Serial number of hoist
2. Motor drive serial number
3. Batch number of major components
4. Name of person conducting the test
5. Date the test was conducted
6. List of mechanical tests conducted
7. List of electrical tests conducted

3) Special Procedure Submittals

a. User Instruction

1. To ensure proper instruction of the user group the contractor of this section shall supply as part of the submittal process the following Instruction documentation.
 - a) User Instruction syllabus
 - b) User Instruction guide (bound hard copy)
 - c) User Instruction guide (hands on system instruction)
 - d) Testing document for confirmation of understanding
 - e) DVD/Video instruction tape

E. Closeout Submittals

- 1) Submit documents in accordance with Division 1 – General Requirements.
- 2) At the time of acceptance testing, submit 4 bound copies of parts lists and operations/maintenance instruction sheets.
- 3) Within 60 days of the acceptance testing, submit 1 set of reproducible “as built and approved” drawings showing all equipment as installed. These drawings shall include all adjustments made during the checkout process. In addition, submit all relevant product data sheets, manuals and as-built drawings as Adobe PDF files on a CD.
- 4) Submit operation and maintenance manuals with the “as built and approved” drawings. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - a. Complete parts list for all equipment and telephone numbers for the authorized parts and service distributors.
 - b. Instructions as to the safe operation for all equipment.
 - c. Recommended maintenance schedule for component parts that may need periodic replacement or maintenance.
 - d. Recommendations for cleaning, maintaining and touch-up of all finished surfaces.
 - e. Warranties as required in Division 1 – General Requirements.

- 5) Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
- 6) The record documents shall be reviewed by the Commissioner and all modifications to the documents stemming from this review shall be made as required.
- 7) Above submissions are required as a condition for final approval of the work.

1.9 QUALITY ASSURANCE

A. Qualifications

- 1) All equipment and installation of the work in this section shall be the responsibility of a single Contractor, who shall own and operate their own shop for the fabrication of theatrical rigging equipment, and be regularly engaged in the fabrication of such equipment..
- 2) The Contractor shall have a current Contractors License. This license shall be maintained throughout the course of work of this Contract.
- 3) Contractor shall be responsible for proper installation, operation and safety of all components equipment. Equipment must be procured as specified. Non-specified items may be procured from any nationally recognized manufacturer.
- 4) Metalworking may be done by others. Responsibility in all respects shall be that of the Contractor.
- 5) The Contractor shall verify all system design loads.
- 6) Installers
 - a. The contractor or subcontractor performing the work of this Section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
 - b. Project Manager: The Project Manager shall be qualified and have experience in projects of similar size and scope. The Project Manager shall have binding authority to represent and act for the manufacturer of this equipment. The project manager shall be the primary conduit for all information between the supplier of this equipment and the general contractor. All information given to the Project Manager shall be considered as given to the manufacturer
- 7) Manufacturers
 - a. The manufacturer providing the material or equipment specified in this Section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years. The systems described herein shall be provided by a Theatrical Rigging Contractor who will be responsible for furnishing all services described herein including but not limited to coordination and supervision of the engineering, shop drawings, fabrication and provision for all systems specified herein and shown in the drawings.

- B. To establish comparative standards of quality, the equipment of the theatrical rigging systems shall be by one of the following contractors, or approved equal.

I. Weiss
815 Fairview Ave., Unit #10
Fairview, NJ 07022
(888) 325-7192

Pook, Diemont & Ohl
701 East 132nd Street
Bronx, New York 10454
(718) 402-2677

- C. Contractor may install hardware as manufactured by their own shop, or as manufactured by the following, or an approved equal:

- 1) H & H Specialties Inc.
- 2) J.R. Clancy
- 3) Stage Technologies

- D. Pre-installation Meetings

- 1) Reference NYC DDC General Conditions for pre-installation meeting requirements.

- E. State of the Art Development

- 1) The Contractor shall furnish only the latest developed appropriate product. In cases where product development from a specified manufacturer surpasses the criteria of this specification, the Contractor shall inform the Commissioner and make the newer product available to the project. In no case shall discontinued or obsolete equipment be acceptable. Should a newer product be suggested as a substitution for a discontinued product, or for a product that is in process of being phased out of production, that newer product shall be offered to the City of New York at no additional cost.
- 2) Should product recall by the Manufacturer require temporary or permanent replacement of a product specified under this section, the Contractor shall notify the City of New York at the earliest reasonable time and shall arrange to replace the product in question at the earliest possible time.
- 3) Equipment found defective or subject to recall prior to scheduled installation shall not be delivered to the jobsite.
- 4) Equipment defect or intended recall shall not relieve the Contractor from his contractual obligation with regard to delivery schedule of product. In this circumstance, notification shall be made to the Commissioner by express carrier. Arrangement for alternate product shall be made at this time.
- 5) Under no circumstances shall arrangement for alternate product necessarily require the City of New York to accept superseded equipment except on a temporary basis.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the General Contractor and shall meet all requirements described in Division 1.
- B. Packing, Shipping, Handling, and Unloading
 - 1) All equipment shall be appropriately and substantially packed for shipment.
 - 2) All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theater site allocation. Include packing and shipping lists for each container.
 - 3) All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- C. Acceptance at Site
 - 1) Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.
 - 2) The Contractor shall be responsible for acceptance of the Rigging System components at the job site, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.
- D. Storage and Protections
 - 1) Upon delivery, the materials shall be stored under cover in a clean and dry location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
 - 2) Replace, at no additional cost to the City of New York, all equipment and materials which are damaged during storage or handling.

1.11 PROJECT CONDITIONS

- A. Existing Conditions
 - 1) Verify all conditions at job site. Promptly report variations and obstructions to the Commissioner. All additions and or corrections are to be requested prior to fabrications.
- B. Field Measurements
- C. Field measurements shall be taken prior to preparation of shop drawings to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.
 - 1) Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.

1.12 SEQUENCING AND SCHEDULING

- A. The installation of the equipment in this section shall begin following the completion of work which may be in conflict with the installation including:
- 1) Structural upgrades
 - 2) Fire protection
 - 3) Mechanical systems
 - 4) Painting
 - 5) Application of acoustic materials
 - 6) Stage floors
 - 7) Completion of stage floor and balcony seating.
 - 8) Warranty
- B. The Contractor shall warrant materials and workmanship of systems and equipment installed as free of defects. The Contractor shall guarantee in writing the repair or replacement within 14 days of any item found defective during a period of 1-year following date of final acceptance. Ordinary wear and defects due to improper usage are not covered under this warranty.
- C. During the warranty period, all emergency conditions where systems failures may be hazardous or may cause severe hardship or cancellation of performances shall be responded to within 24 hours. Immediate action shall be undertaken to ensure the safety of the audience and the performers.
- D. Refer to Division 1 – General Requirements.

1.13 SYSTEM START UP, OWNER'S INSTRUCTION, AND COMMISSIONING

- A. Operation Instruction
- 1) Following the equipment demonstration, inspection and final adjustments, the City of New York's designated staff or representatives shall be instructed in the use, care and maintenance of all items.
 - 2) Deliver all copies of approved Operations Manual to the City of New York during instruction session, and review it as part of that session.
 - 3) Provide in-depth instruction of the user's staff in the operation and maintenance of all systems included herein.
 - 4) Provide 8 hours of staff instruction on equipment and systems specified herein. This shall include basic safety in the use of the systems, general trouble shooting of MCC, MCR and hoists.
 - 5) All instruction shall be by technical staff of Theatrical Rigging System Contractor.

1.14 GUARANTEE SERVICE

A. Extra Materials

- 1) Deliver stock of maintenance material to City of New York. Furnish the following to match those installed and taken from the same production run, packaged in drawers of a provided storage unit with protective covering for storage and identified with appropriate labels.
 - a. Furnish 12 compression sleeves of each type in the system.
 - b. Furnish 4 shackles of each type in the system.
 - c. Furnish 12 thimbles of each type in the system.
 - d. Furnish 12 bolts and nylock nuts of each type in the system.
 - e. Furnish 12 lockwashers of each type in the system.
 - f. Furnish 1 master track carrier of each type in the system.
 - g. Furnish 4 other track carriers of each type in the system.
 - h. Furnish 4 turnbuckles of each type in the system.
 - i. Furnish 2 single pin locator plates, if used in system.
 - j. Furnish 2 dual and 2 quad pin locator plates, or eight universal pin locator plates, as applicable.
 - k. Furnish 10 locator hole plugs.
 - l. Furnish 4 threaded foot assemblies.
 - m. Furnish 4 locking pins of each type in the system with cable tethers having un-crimped fittings.
 - n. Furnish 5% spares (minimum of 1) of loose hardware, ie: knobs, capture bolts, etc.
 - o. Furnish heavy duty storage box with hinged interlocking covers to contain all above spare parts

B. Guarantee Services

- 1) One year following date of final acceptance, a factory engineer shall be provided to examine, adjust and repair the equipment included in this sections as required. This service shall not cover adjustments, repairs or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the Contractor. All labor and materials which are required to perform this service shall meet or exceed these specifications and shall not compromise the performance of the equipment in any way.
- 2) Following this inspection and guarantee service, the Contractor shall provide the City of New York with a written report itemizing the results of the inspections and the guarantee work, which was conducted. The Contractor shall also include in this written report recommendations for any corrective actions, which the Contractor feels should be taken, with respect to the equipment included in this section, but are outside the scope of the warranty agreement.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General

- 1) In all cases where a device or a part of equipment is referred to in a singular manner within the Contract Documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the Contract

Documents.

- 2) All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable unless otherwise noted.
- 3) All mounting hardware to be included.
- 4) All equipment and components shall be factory tested prior to shipping.
- 5) All equipment to have pertinent labels.

B. Materials shall conform to the following minimum standard specifications:

- 1) AISI 1045 for steel shafts
- 2) ASTM A36 for structural steel shapes
- 3) ASTM A47 for malleable iron casting
- 4) ASTM A48 for gray iron casting
- 5) ASTM A1011 for side plates
- 6) ANSI B18.2.1&2 for square and hex bolts and nuts

C. Hardware

- 1) All mounting hardware to be included.
- 2) All bolts and fasteners must be Grade 5 or better.
- 3) All bolted attachments to have lock washers or other self-locking fasteners.

D. Design Factors

- 1) All overhead rigging elements including but not limited to mounting hardware, wire rope, wire rope fittings, and shackles to be designed with a mechanical safety factor of 10X of their rated breaking strength.

E. Staging Materials

- 1) Structural metal elements to be extruded aluminum or equal.
- 2) All corners, joints, etc. to be die-cast aluminum, or equal.
- 3) All elements to be fastened with removable fasteners, no weld, so that platforms may be easily repaired. Decks excepted.
- 4) All exposed surfaces to be finished flat black.

2.2 PIPE GRIDS

- A. Provide pipe grids as shown on the contract drawings. Pipe of 1½" nominal diameter

Schedule 40 black steel pipe as per standard industry practice.

- B. All hardware to be primed and finished with flat black matte epoxy paint.
- C. Pipe splices to be 18" close fitted internal sleeves secured by 2 bolts perpendicular to floor on each side of joint. 1/4" x 20 cap screws through-bolted with nylock nuts. Holes 4" on center, 3" from ends.
- D. Provide rigid supports to overhead structure as shown in drawings and as required to meet specified loading criteria as well as local seismic codes. Confirm final support design with the Commissioner.
- E. Provide lateral support to building structure as shown in drawings and as required to meet specified load criteria. Supports designed as sway bracing only are not acceptable. Confirm final support design with the Commissioner.
- F. Load criteria
 - 1) 30 lbs/lin. ft. uniform load.
 - 2) 90# maximum point loads at center of spans.
- G. Pipe grid hangers:
 - 1) Full batten clamp, ADC#2815 or approved equal
 - 2) Rated hot dip galvanized jaw/ open thread turnbuckle with 6" of take-up, locking hardware and safety wire mouse (after adjustment).
 - 3) Threaded rod sized as appropriate for load / safety factor.
 - 4) Rated beam clamp
- H. Pipe grid junction connections:
 - 1) Provide 4 1/2" x 4 1/2" x 1/8" steel full cross grid connectors with rated working load of 1500 lbs. minimum at each grid junction.
 - a. J.R. Clancy 015-100 full cross grid connector or approved equal
 - 2) Pipe grid junction connections shall be located at all pipe intersections.

2.3 STAGE PORTAL

- A. Provide Theater 1 removable portal and legs as indicated in the contract drawings.
- B. Portal panel construction
 - 1) Portal Header shall be designed to attach to 1-1/2" I.D. Schedule 40 pipe at the center of gravity for the header, adjustability is required.
 - 2) Header shall incorporate turnbuckles for fine level adjustment
 - 3) Frame is 1.5" aluminum tube welded with corner blocks at each corner on the back-

side. All welds ground smooth.

- 4) Offstage sides of header shall incorporate adjustable rubber gasket to act as a light seal.
- 5) Frame shall be faced with ¼" luan plywood faced with black IFR velour on the downstage side.
- 6) Flame retardant painted luan plywood facing to be affixed to tubular frame with flat-head self-tapping screws.
 - a. Screw heads shall be flush with surface or slightly recessed.
 - b. Application of black velour fabric cover shall be smooth, without wrinkles or other protrusions.
- 7) Fabric is inherently flame retardant.
 - a. Provide fabric sample.

C. Portal leg construction

- 1) Portal leg shall be designed to attach to traveler track specified herein at its center of gravity.
- 2) Portal leg shall incorporate turnbuckles for fine level adjustment
- 3) Frame is 1.5" aluminum tube welded with corner blocks at each corner on the back-side. All welds ground smooth.
- 4) Offstage sides and bottom of legs shall incorporate adjustable rubber gasket to act as a light seal.
- 5) Frame shall be faced with ¼" luan plywood faced with black IFR velour on the downstage side.
- 6) Flame retardant painted luan plywood facing to be affixed to tubular frame with flat-head self-tapping screws.
 - a. Screw heads shall be flush with surface or slightly recessed.
 - b. Application of black velour fabric cover shall be smooth, without wrinkles or other protrusions.
- 7) Fabric is inherently flame retardant.
 - a. Provide fabric sample.

D. Portal Leg Traveler track

- 1) Provide Portal Leg Traveler track as shown in Contract Documents.
 - a. Portal Leg traveler track shall be designed to attach to 1-1/2" ID schedule 40 pipe.
- 2) Portal Leg traveler track shall be:
 - a. Joker 95 by Gerriets

- b. Approved Equal
- 3) Provide Heavy Duty scenery carriers as required to support portal legs.
 - a. Joker 95 HD Carrier
 - b. Approved Equal

2.4 LINE OPERATED STRAIGHT TRAVELER TRACK ASSEMBLIES:

A. Track:

- 1) Track to be heavy-duty channel type, approximately 3" x 3", 14 gauge steel or extruded aluminum formed to provide parallel double tracks for carrier wheels and totally enclosed except for bottom carrier slot.
- 2) Traveler tracks to be in 2 sections, with 4'-0" combined center overlap, fitted for manual line operation.
- 3) Each half of double-section traveler track assemblies to be single piece, free of burrs, dents or irregularities. Halves clamped together by at least 3 lap clamps.
- 4) Hanger fittings and clamps for attachment spaced at 4'-0" on center maximum.

B. Carriers:

- 1) Two master carriers for each double-section traveler track. Each with 4 paired neoprene wheels with ball bearings.
- 2) Master carriers to have 2 clamps for attachment of operating line and 2 plated swivels with 6" of usable trim chains for curtain attachment.
- 3) Single carriers to have 2 neoprene wheels with ball bearing with "hollow center" design to bypass the operating line.
- 4) Each single carrier to have single plated swivels with 6" of usable trim chain.
- 5) One single carrier for each 1'-0" of track length.
- 6) Provide end stacking (rear fold, back pack) devices to stack drapery only at offstage track ends. Provide rubber washers to packing tabs.

C. Traveler Track Pulley Blocks:

- 1) End pulley blocks heavy-duty type with 8" sheaves turned and grooved for 1/2" operating line. Double vertical sheaves on the live end of the tracks; a single horizontal sheave on the dead end. Housings firmly bolted to the track.
- 2) Floor pulley blocks to have 8" sheaves with sealed ball bearings. Sheaves mounted to slide vertically and clamp in a steel frame with full side plates of sufficient height to permit 9" tension and adjustment of operating line. Base drilled for 2 improved stage screws for floor mounting. Supply 2 improved stage screws and plugs.
- 3) All blocks to provide for positive retention of operating cords in grooves of sheaves.

D. Traveler Operating Hand Lines:

- 1) Each handline to be a single length, first quality, ½" diameter fiberglass center, braided cotton cord.
- 2) Rig for curtain operation from the live end of the track.
- 3) Length of hand line to be adjusted for tension with traveler curtains mounted and trimmed.

E. Manufacturers:

- 1) ADC #283-R
- 2) H&H #400
- 3) TRU-ROLL #1000
- 4) Or equal

2.5 MOTORIZED RIGGING SYSTEM

A. Provide a system of motorized truss grid panels as shown in the contract documents. The panels shall be suspended from the structural steel as shown in the drawings. The truss panels shall operate individually or synchronously in groups of up to three. The truss units shall be controlled by the Rigging Control System (RCS) described herein.

B. Truss Winch Line Shaft Units

- 1) Live load hoisting capacity: 2400lbs
- 2) Speed 30 ft/min
- 3) ¼" - 7x19 galvanized aircraft cable
- 4) Travel Distance as shown on the drawings
- 5) Stromag Rotary Limits
 - a. Ultimate up hard struck Limit
 - b. Initial up encoder limit
 - c. Initial down encoder limit
 - d. Ultimate down hard struck limit
- 6) Telemetry shall be by absolute encoder
- 7) Brakes
 - a. Primary Motor Brake
 - b. Secondary Brake - Centrifugal Brake
- 8) Adjustable acceleration and deceleration rates

9) Drums shall incorporate cross-groove detection

10) Quantity: 5 complete units

C. Lift Lines

- 1) As required to properly support the loads, both dynamic and static, of the truss panel.
- 2) Connections to rigging truss shall be by shackle, thimble, compression sleeves and 5/8" x 12" Crosby jaw and eye forged turnbuckle installed as per manufacturer's recommendation. Dress cable ends with shrink tubing or self fusing tape.

D. Hoist Components

- 1) Hoist motor shall be properly sized to carry the weight of the truss module and rated live load. The motor shall have a minimum NEMA service factor of 1.25 for continuous operation. The motor shall be totally enclosed and fan cooled. Motor shall be C flange type mount. It shall operate on 3 phase, 208 VAC. Brakes shall be an integral part of the motor. Brakes shall be normally closed, direct acting, spring loaded, electrically released, and equipped with a manual release as well. Brakes must stop and hold 200% of the full load.
 - a. SEW or approved equal
- 2) Hoist gearboxes shall have combination helical-bevel reducers, directly mounted by a flange to the motor. Gear reducers shall be selected to safely transmit the required power, torque and impact. All gear reducers shall have a minimum service factor of 1.50 and an AGMA load classification of 1. The gear reducer case shall be high-tensile nickel cast iron. The helical gear shall be centrifugally cast bronze, mounted on a cast iron hub. The input and output shafts shall each be supported by two tapered roller bearings. The gears shall run in an oil bath. The shaft bearings shall be provided with double-lip oil seals to prevent leakage. There shall be a drip pan provided under the gearbox.
- 3) Cable Drums:
 - a. Cable drums shall be designed to properly support the required loads without crushing or deformation. Drums shall have integral hubs, which will accept properly sized drum shafts for the transmission of loads and torque from the drive mechanism to the cable drums. Outboard ends of shafts shall be supported by self-aligning pillow block bearings. Drum shafts shall be continuous passing through both hubs and both bearing mounts. The drum hub shall be keyed to the drum shaft with keys, which are properly sized for the shaft diameter, and set-screwed through the hub. The length of the hubs and keys shall be sized for the torsional load on the drum.
 - b. Drums shall be grooved for the wire rope to be spiral wound. The pitch diameter of the drum groove shall be in accordance with recommendations of the wire rope manufacturer. The groove shall be machined to accept a minimum of 3/8 the rope depth, with 15 degree sloping sides, and spaced for a minimum clearance of 1/32" between cables.
 - c. There shall be a minimum of three dead wraps. Drums shall carry only a single layer of cable. A series of three pressure clamps shall hold the rope to the drum at the termination of the wire rope. These pressure clamps should be easily visible for inspection.
 - d. All drums shall be machined to at least 63 RMS finish with concentricity to a

rotational angle + 1/16".

- e. All stepped-down shaft corners and shoulders shall have proper fleet radius.
- f. Cable drums shall be grooved as noted in the Contract documents.

- 1. Alternating drums are grooved opposite hand.

E. Aluminum Rigging Truss

- 1) Provide aluminum lighting truss to create grid panels as shown in the contract documents.
- 2) All truss shall be powder coated black.
- 3) All hardware shall be finished black
- 4) Provide all necessary hardware to assemble panels.
- 5) Provide integrated lifting points for attachment to hoists as shown in contract documents. Points must allow for adjustment to pick up the unit at the center of gravity.
- 6) 4'x50' Modules and 3'6"x50' Modules shall be comprised of:
 - a. 12"x12" plate style box type truss
 - b. 12"x12" corner blocks as shown on the contract documents
- 7) 3'x50' Modules shall be comprised of:
 - a. 12"x30" spigoted truss
 - 1. Tomcat Ballroom Truss
 - 2. Or Approved Equal

F. Cable Management Pantograph

- 1) Provide a folding pantograph cable management system to contain power and control cables running to the battens as shown on the drawings.
- 2) The pantograph body shall contain and protect the electrical cables and be constructed of an extruded shape with sturdy hinges capable of resisting the stresses and loads of regular operation of the trusses through their full travel.
- 3) The pantograph shall be powder coated flat black and shall match the trusses.
- 4) General Cable Requirements
 - a. Cables to have basket weave strain relief as indicated and/or required.
 - b. Cables to have neoprene bushing to terminal boxes as indicated and/or required.
 - c. Cables to have two 3" clear shrink wrap pieces installed unshrunk for user labeling.
- 5) Multiconductor cables:

- a) Shall be flat multiconductor cables
 - b) No common neutrals.
 - c) Unless otherwise noted multiconductor cable ends shall terminate at terminal block in terminal box enclosure.
 - d) Each cable provided must include additional length:
 - i) At batten end provide 20'-0" of additional length
 - ii) At grid end provide 50'-0" of additional length.
- 6) Ethernet Data Cables
- a) TMB "Proplex" CAT6-HD heavy duty Ethernet extension cables with Neutrik "Ethercon" connectors at either end.
 - b) Each cable provided must include additional length:
 - i) At truss end provide 20'-0" of additional length
 - ii) At grid end provide 20'-0" of additional length
- 7) Mark end of each switched power cable with 3" yellow heat shrink tubing to designate this cable for switched power use.
- 8) Terminal box per Theatrical Wiring Devices.
- 9) Provide track and trolley at grid end of the cable tray for free floating adjustment through the travel of the batten.
- a) Provide custom track stops for limit the travel of the trolley which can be adjusted in the field.
 - b) Track shall be captured
 - c) Track to be:
 - i) Rosco: UniTrack and Unibeam carrier
 - ii) Fisher Technical Services: Fastrack and Skates.
- 10) Provide (1) cable management Pantograph per truss winch unit – 5 total.
- a) Pantograph shall accommodate (36) theatrical lighting circuits and 1 Ethernet Tap.
 - b) Pantograph shall terminate in a terminal box at the grid level and a terminal box on the truss.
 - c) Rigging manufacturer to coordinate with Theatrical Lighting Contractor and Division 26 to facilitate mounting of Theatrical Lighting Devices.

2.6 FRONT OF HOUSE RIGGING STRONG POINTS

- A. Furnish and install rigging strong points as indicated on Drawings complete with all necessary accessories (CWANA).
- B. Provide all attachment hardware to mount strong points as indicated on Drawings.
- C. Each element of the strong point shall be rated for a capacity of 2000 pounds with a 10:1 safety factor, Each shall be labeled with the Safe Working Load.
- D. Each strong point shall consist of:
 - 1) (1) Wide flange beam clamp
 - 2) Forged screw pin shackles as required

- 3) (1) 3/8" wire rope sling with swaged thimble eyes

2.7 TEMPORARY MIX POSITION PLATFORM SYSTEM FOR THEATER 1

A. Furnish and install platform system as indicated on Drawings complete with all necessary accessories (CWANA).

B. Provide all attachment hardware to mount platform system as indicated on Drawings.

C. Platform System Basis of Design:

- 1) Staging Concepts, SC90 platform with SC100 support
- 2) Staging Dimensions, SD5000 Staging
- 3) StageRight, All Purpose Deck with Z-800 support
- 4) Wenger Corp., Versalite Staging

D. Manufacturers listed as the basis of design:

Staging Concepts
100 N. Sixth St.
Suite 730B
Minneapolis, MN 55403
(800) 337-5339

Staging Dimensions, Inc.
67 Industrial Blvd.
New Castle, DE 19720
(866) 591-3471

StageRight, Corp.
495 Pioneer Parkway
Clare, MI 48617
(800) 438-4499

Wenger Corp.
555 Park Drive
Owatonna, MN 55060
(800) 326-8373

E. System Criteria:

- 1) The system shall be statically calculated for uniform load-bearing capability of 125 lbs./sq. ft. live load at full height. The deck surface shall support a point load of 1250 lbs./sq. inch. Lateral load-bearing capability shall be 150 lbs./sq. ft. live load. Laboratory confirmation of live load capacity shall be provided by the manufacturer.
- 2) There shall be no lateral movement of the platforms. For height configurations that require cross-bracing for added stability, the manufacturer shall provide an adequate modular bracing device that will satisfy the demands of the live load requirements herein. The cross-bracing members shall not conflict with the legs of adjacent platforms and shall be in keeping with the construction methods described herein.

- 3) Platforms shall be interlocking side-to-side and front-to-back by means of a connection device that cannot be compromised by the rigors of audience loading. Positive interlock shall be assured between adjacent platforms whether they are at equal or dissimilar heights.
- 4) The support system shall be fabricated in such a manner that the platform may be disassembled for repairs. The manufacturer shall be obliged to make all parts available to the purchaser. Mechanically connected construction which cannot be repaired on site is not acceptable.

F. Platform Decks

- 1) Provide portable, single sided platforms with black laminate top finish and black aluminum perimeter.
 - a. Decking shall be laminated matte black: The color shall permeate the surface material. There shall be no irregularities or protrusions beyond the surface plane which shall be completely flat. Holes or permeations shall not exceed 1/8" in any dimension. Surface shall be non-reflective, non-skid and able to withstand mopping. Acceptable surface shall be black vinyl.
- 2) Aluminum perimeter shall have baked on matte black paint and shall accept accessories as specified herein.
- 3) There shall be no irregularities or protrusions beyond the surface plane, which shall be completely flat. Holes or permeation shall not exceed 1/4" in any dimension. Surface shall be non-reflective and able to withstand mopping.
- 4) The total weight of each platform deck shall not exceed 125 lbs.
- 5) Decks shall meet applicable flame spread criteria.
- 6) Provide quantities of platform decks, and all necessary hardware and attachments, as indicated on the drawings.

G. Platform Frames

- 1) Frame shall be constructed of extruded structural aluminum and finished as specified herein. The extrusion shall be a box design for maximum strength and rigidity, with grooves to protect the top surface edge, connect adjacent platforms, and to attach accessories. The overall thickness of the frame shall be not greater than 4".
- 2) Deck units shall be provided with sockets to accept detachable legs.
- 3) All exposed elements of the platform frames shall be finished black.

H. Variable Height Understructure

- 1) Provide independent fixed understructure to support independent platform decks as described above. This system shall be capable of providing tiered seating risers or single elevation stages on level floor.
- 2) Leg sockets shall be permanently attached to the platform frames. Legs shall positively lock in place in sockets on the underside of the platform decks.

- 3) The legs shall be fabricated from structural aluminum tubes in lengths to provide variable platform heights.
- 4) Legs shall be joined and stabilized when required, by cross bracing comprised aluminum tubing and formed steel brackets. Operation of the stabilizer shall not require the use of special tools.
- 5) Removable platform legs shall have leveling feet that provide height adjustment with an Acme threaded sleeve at the bottom of each leg.
- 6) Leveling feet shall evenly distribute loads over a 7 sq. inch (3" diameter if circular) non-abrasive pad of molded urethane or equivalent.
- 7) All components of the understructure shall be finished with baked-on matte black epoxy paint.
- 8) Set up shall be possible by means that do not require tools.
- 9) System shall require no more than 2 persons for setup and take down, and no component requiring manual lifting shall weigh more than 125#.
- 10) Provide quantities of understructure, and all necessary hardware and attachments, as indicated on the drawings.

I. Handrails

- 1) Custom handrails as shown on the construction documents.
- 2) Handrails attach to the step and platform units via socket in decking with bracket below to capture floor length handrail post.

J. Guardrails

- a. Custom guardrails for sound mix platforms attach to platform edge via hand operated clamps in at least two vertical locations per support post.
- b. Guardrail frame shall be completely infilled with plywood panel.
 1. Panel shall match material designation WD-4 as noted in Division 9, Finishes.
 2. Plywood shall be premium grade fir with face veneer.
 3. Face veneer shall be premium clear fir. When finished veneer will not show imperfections or other surface defects.
- c. All components shall be finished with baked-on matte black epoxy paint.
- d. Set up shall be possible by means that do not require tools.
- e. Provide quantities of guardrails, and all necessary hardware and attachments, as indicated on the drawings.

K. Platform Attachments

- 1) Connection between platforms may be by either heavy-duty cam-type locks mounted internally in the deck periphery or by hand-screw clamps applied to the understructure.
- 2) Connection between platform units or step units and adjacent structure shall employ picture sockets and mating picture hooks.

- a. Socket and hook devices shall be bent metal strap of at least $\frac{3}{4}$ " in width by 2-1/2" in length with a minimum of two countersunk screw holes each.

L. Fascia Panels

- 1) Provide fascia panels for each configuration shown on the drawings.
- 2) When used in seating configurations, fascia panels provide safety and visual closure between audience seating levels.
- 3) Fascia panels shall have positive attachment to extruded platform frame.
- 4) Fascia panels shall be flat black on all sides; finished to match the stage floor on the exposed face and all edges shall leave ply visible with flat black epoxy paint.

M. Custom Step Units

- 1) Provide custom step units as shown on the drawings.
 - a. Step units shall meet same average loading criteria as stage platform system.
 - b. Fabricate from wood top deck with laminate top layer to match adjoining deck.
 1. Box construction with finish fascia on all exposed sides.
 - a) Support fascia at perimeter and center of each step
 - c. Provide quantities of step units, and all necessary hardware and attachments, as indicated on the drawings.

N. Side Closure Panels

- 1) The open sides of the assembled risers shall be provided with removable panels similar in construction and attachment as the fascia panels defined above.

O. Storage Carts

- 1) Provide storage carts for all platforms and supports legs
 - a. Carts shall be provided with 8" diameter non-marking casters. At least 2 casters per cart shall be rigid, and at least 2 casters shall be locking swivel.
 - b. Cart shall be provided with a push handle located at a convenient height for use in a standing position.
 - c. Cart shall be provided with a tie down strap.
 1. Strap shall be firmly affixed to cart platform if one is provided.

2.8 FABRICATION

- A. Fabricate all work in this section in accordance with the specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Machine finish all operating parts to standard trade tolerance, fits and finishes.
- C. Carry out shop welding in full accordance with the appropriate sections of the "specifications for the Design, Fabrication and Erection of Structural Steel Building" of the American Institute

of Steel Construction (AISC).

2.9 SOURCE QUALITY CONTROL

- A. All equipment and components shall be factory tested prior to shipping.

PART 3 - EXECUTION

3.1 INSTALLERS

- A. The work on this section shall be installed by an experienced installer in the employ of the Contractor for the equipment in this section.

3.2 EXAMINATION

- A. Site Verification of Conditions

- 1) The Contractor shall examine areas and conditions under which the equipment is to be installed and shall notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Do not proceed with work until unsatisfactory conditions have been corrected in an acceptable manner.

3.3 ERECTION, INSTALLATION, APPLICATION

- A. Install all work in this section in accordance with the Commissioner's direction, specifications, approved shop drawings, pertinent Contract Drawings, established trade practices and applicable code requirements.
- B. Install all work securely, complete with all bolts, nuts, washers, clips, fittings, supports, and other items required for proper installation and operation.
- C. Position all items accurately as indicated on Drawings and true to plumb, line and level. Maintain maximum headroom and clearances at all points.
- D. Coordinate work with all other trades to avoid causing delays in construction schedule.
- E. All field welding requires prior approval of the Commissioner.
- F. Carry out approved field welding in full accordance with the appropriate sections of "Specifications for the Design, Fabrication and Erection of Structural Steel Buildings" of the American Institute of Steel Construction (AISC).
- G. Do all cutting, drilling, tapping and approved welding required to properly install work. Obtain Commissioner's prior approval for cutting and drilling of existing structural work.
- H. Clean structural steel and fabricated steelwork of rust, scale and foreign matter by grinding; prime with 1 coat of chromated primer; finish with 1 coat of first quality machinery enamel free of skips, runs and saps. Touch up all field connections, welds and abraded places with primer and enamel.

3.4 FIELD QUALITY CONTROL

A. Site Tests, Inspection

- 1) The installation of the equipment indicated in this section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- 2) Arrange for all tests and inspections required by the NYC DDC General Conditions.

3.5 ADJUSTING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent Contract Drawings prior to the demonstration indicated herein.

3.6 CLEANING

- A. Touch up minor abrasions and imperfections as required.
- B. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the City of New York.

3.7 DEMONSTRATION

- A. Installed equipment to be inspected for quality by the Commissioner and the City of New York.
- B. Adjustments or modifications shall be made as directed by the Commissioner.
- C. Following the equipment demonstration, inspection and final adjustments, the City of New York's designated staff or representatives shall be instructed in the use, care and maintenance of all items. Provide 6 hours of staff instruction.
- D. Tests and instruction to be scheduled in conformance with project construction schedules and the availability of the Commissioner and the City of New York.
- E. Cost of re-inspection and additional testing by the Commissioner, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor or the General Contractor respective to the area of work concerned.

3.8 DEMONSTRATION/COMMISSIONING

A. Compliance Testing Procedures (CTP)

- 1) Using the actual show control console and all other components that are installed as part of this Specification Section, the following tests must be conducted by the contractor under 100% of full load. These tests are designed to help ensure that the hoists function as specified. The following represents a sample of the types of testing that will be conducted. Note this list is not complete see Appendix for complete requirements.
 - a. Validation of E-Stop and limit switches
 - b. Validation of operational speeds
 - c. Validation of load capacity

- d. Validation of travel limits
 - e. Validation of target achievement & repeatability
 - f. Validation of load cell or drive over current detection
 - g. Validation of cross groove detector.
 - h. Primary brake, alone, holds 125%
 - i. Secondary brake, alone, holds 125%
 - j. Observe motion during E-Stop Activation
 - k. Observe motion during instantaneous loss of power (bang stop)
 - l. Verify hoists have been coordinated with other items to be installed
- 2) Provide a CTP testing report to the Commissioner indicating that the above tests have been conducted on each winch. The Commissioner will ask for these tests to be repeated on randomly selected hoist units. Failure to reproduce the tests on two of the units will require complete retesting of all units in the presence of the theatre consultant. See below for costs associated with this retesting.
 - 3) Coordinate the site so as to ensure testing can be done in a well light, clean, safe environment, include barricades to ensure unauthorized persons are not able to interfere with the testing. No temporary wiring or transformers will be allowed during the CTP.
 - 4) All costs associated with the CTP are the responsibility of the contractor/manufacturer of this section; this includes items such as equipment necessary to access the hoists to ensure limits and brakes can be tested.
- B. Adjustments or modifications shall be made as directed by the Commissioner.
 - C. Tests and instruction to be scheduled in conformance with project construction schedules and the availability of the Commissioner and the City of New York.
 - D. Cost of re-inspection and additional testing by the Commissioner, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor or the General Contractor respective to the area of work concerned.

3.9 USER INSTRUCTION

- A. Following the equipment demonstration, inspection and final adjustments, the end user's designated staff or representatives shall be instructed in the use, care and maintenance of all items. Instruction must match the information provided at the time of submittals and shall include, at minimum, those items listed in the submittals:
 - 1) Provide in-depth instruction to the end user's staff in the operation and maintenance of all systems included here-in
 - a. Provide 2 days of staff instruction on system and manipulation of hoists and associated devices and control elements
 - b. The user instruction must be conducted per the submittal information submitted as detailed in Part 1 above. Testing of the participants, at the conclusion of the user instruction, will be required in order to determine if the minimum level of proficiency has been attained

- B. All user instruction shall be by technical staff of the Contractor for the work in this Section
- C. At the conclusion of the user instruction the contractor shall conduct a written and hands on test of the participants that shall demonstrate to the contractor that the participants have reached a level of understanding that will result in safe use of the equipment
 - 1) Provide Certificates of Instruction for each participants. Log the names of those who successfully completed the instruction process. Submit as the first page of the Bound material.

3.10 PROTECTION

- A. Suitable precautions shall be taken to protect the equipment in this section from damage after installation and prior to acceptance by the City of New York.

3.11 APPENDIX

- A. See attached appendix for Compliance Testing Procedure.

TABLE OF CONTENTS

INTRODUCTION	32
ATTENDEES PRESENT AT TEST	34
TESTING PROCEDURES (test loads in parentheses)	
1.1 REVIEW OF FACTORY QUALITY CONTROL DOCUMENTS	36
1.2 VISUAL INSPECTION	37
1.3 VALIDATION OF E-STOP AND LIMIT SWITCH SIGNALS	38
1.4 VALIDATION OF OPERATIONAL SPEEDS & CYCLE TESTING (110% capacity)	40
1.5 VALIDATION OF OPERATIONAL TRAVEL DISTANCE	41
1.6 VALIDATION OF OPERATIONAL LIMITS (empty & 100% capacity)	42
1.7 VALIDATION OF TARGET ACHIEVEMENT & REPEATABILITY (100% capacity)	44
1.8 OBSERVE HOIST MOTION DURING E-STOP ACTIVATION (110% capacity)	45
1.9 BRAKE VALIDATION (125% capacity)	46
1.10 VALIDATION OF LOAD SENSING (various loads)	47
1.11 ADDITIONAL CTP DISCUSSION ITEMS (TBD)	48

Introduction

The following test procedures are provided to confirm that the hoists meet or exceed the operating parameters as detailed in specification 11 61 33 Theatrical Rigging. The results, generated from the procedures detailed in this document, are also intended to provide a basis for understanding how the hoists respond to specific commands generated by the Rigging Control System (RCS), understanding how the hoists respond to specific fault conditions and understanding how the hoists respond to E-Stop situations.

In all cases the safety of the performers and operating personnel is of prime importance. Safety is followed closely by consistent and reliable movement by the hoists. All deviations from the original specifications, which are due to specific design decisions made by the manufacturer, will be evaluated for overall safety, reliability and performance.

The Hoist

For the purposes of this document the hoist shall be defined as the machine with the properties listed below used to lift theatrical elements above the stage.

Purpose:	Truss Winch Unit
Mounted Location:	Mounted to rigging beams above stage
Mounted Orientation:	Underhung Horizontal, mounted on motor frame
Capacity:	2,400 lbs. live load
Lift Lines:	8
Travel Distance:	25'-0"
Speed:	Fixed Speed (30 fpm)
Manufacturer's Model #	Custom

During the CTP, the hoist shall be driven by the final installed drive cabinet and controller (i.e. no temporary drives or control systems). The drives shall be controlled by the same primary control system intended for the final installation. This shall include the handheld controller and the final version of the control software.

Provide input/out (I/O) monitoring software, laptop, and trained operator for tracing in real-time the inputs and outputs of the winches. These diagnostic features will be used to monitor and document position, velocity, accel/decel, overtravel distances, motor current, calculated torque, and load cell spikes due to E-stop.

Hoist Covers

Remove all hoist covers prior to the start of the CTP. Reinstall all hoist covers after completion of the CTP and any remedial work.

2-way Communication

The rigging contractor must provide 2-way wireless communication devices such as wireless headsets or 2-way radios for conducting CTPs. At minimum, provide three devices for control operator, stage level, and grid level.

Recording of Test Data

The format of the procedures contained in this document requires that a test be conducted and a specific reaction be observed by the complete review team. The reaction must match the intended reaction before the test can be checked "passed". Each member of the review team must concur that the test has passed and any comments by any member are added to the comments section at the end of the test. Each team member will be asked to initial that they have witnessed a successful test.

Variation to the intended reaction must be documented in the comments section and the "passed" box must be left unchecked. If, after careful consideration by the review team, it is determined that a reaction is acceptable a "Deviation Code Number" will be entered in the "passed" box and that deviation code number will reference the Acceptable Deviations document. This document will define the result of the test and the acceptable deviation.

Variation to the intended reactions which are deemed unacceptable by the review team must be retested. The mechanism or software must be adjusted until the reaction defined in the test is achieved. This may require adjustment or modification of the equipment prior to re-testing.

Test Weight

The rigging contractor must provide the test weight. The weight can be in any form the contractor chooses. To expedite the CTP, weight must be easily and quickly added and removed from the batten, such as spansets, carabineers, and sandbags. Provide a scale or calibrated dynamotor to randomly verify test weights during CTP. Provide test weight totaling 3,000 lbs (2,400 lbs capacity plus 25%).

Provide means to quickly bypass capacity-overload detection for tests conducted at 110% capacity.

Final Report

The final Compliance Testing Procedure (CTP) report shall contain the completed test results from this document and an Executive Summary letter. The Executive Summary letter shall indicate whether or not, as of date of the CTP, the results indicated that the machine has a high probability of working correctly.

Personnel Required/Review Team

The tests shall be observed by, at minimum, a representative of the Commissioner, a representative of the City of New York, installer's representative, and a manufacturer's representative for both controls and mechanical systems. These individuals must agree that the hoists have reacted as defined in this test document before the "passed" box can be checked.

At all times during these tests, the project manager for the rigging contractor must be present. The rigging contractor must provide technical assistance by a person or persons properly trained in the electrical/mechanical hardware of the hoists. Provide at least one person dedicated as control operator who is properly trained in the control system including the diagnostic features.

ATTENDEES PRESENT AT TEST

Record attendees present at each day of testing.

DATE: _____

The following persons were present, witnessed, and/or participated in the conduct of this test:

NAME	ORGANIZATION	PARTICIPATION	SIGNATURE

* Example: Commissioner, End-User, Manufacturer, Installer

COMMENTS:

ATTENDEES PRESENT AT TEST

Record attendees present at each day of testing.

DATE: _____

The following persons were present, witnessed, and/or participated in the conduct of this test:

NAME	ORGANIZATION	PARTICIPATION	SIGNATURE

* Example: Commissioner, End-User, Manufacturer, Installer

COMMENTS:

1.1 REVIEW OF FACTORY QUALITY CONTROL DOCUMENTS

PURPOSE:	The review of Factory Quality Control Documents is intended to verify that the manufacturer has an internal quality control procedure which helps ensure the quality of the equipment prior to its installation on site. The review will look for anomalies which could indicate any fundamental issues with specific components. It will also look for "chain of custody" information which helps track the machinery through manufacture and to its final installation.
SETUP:	<p>1) The manufacturer will provide individual tracking sheets which detail at minimum the following for each unit:</p> <ul style="list-style-type: none"> The machine serial number The date of manufacture The date of testing The tests conducted to confirm the physical components The tests conducted to confirm the electrical components. The <u>name and signature</u> of the person who conducted the tests. The date (or likely date) of shipping

STEP	ACTION	REACTION	PASS
1	There is an indication on the sheet of the machine serial number	Serial number is easily visible on the form and the machine	
2	There is an indication of the date when the machine was manufactured on the testing form	Machine manufacture date is clearly visible	
3	There is an indication of the date of testing on the form.	Testing date is clearly visible	
4	Review shipping date documents	Shipping date is clearly visible	
5	There is a series of tests conducted to confirm the physical components of the machine	Testing sheet has a series of tests which indicate how and what physical components have been tested	
6	There is a series of tests conducted to confirm the electrical components of the machine.	Testing sheet has a series of tests which indicate how and what electrical components have been tested	
7	There is a name and signature of the person who conducted the tests.	The name and signature of the person who tested the machines is clearly visible	
8	Review the manufacturer's installation checklist.	The manufacturer's installation checklist is filled out and is signed and dated by the installer.

1.2 VISUAL INSPECTION

HOIST: _____

PURPOSE:	The following inspection is conducted prior to movement of the hoist. This visual inspection has two purposes: 1) It is intended to help ensure a safe working environment. 2) It is intended to visually look for components, electrical devices and/or hardware which appear to be possible points of test failure or which could create an unsafe condition.
SETUP:	1) The manufacturer will establish a "Safe Zone". This zone will be corded off from the rest of the space by a barrier of some kind, at minimum there must be yellow "caution" tape around the test area. 2) All High Voltage areas must be marked with signage. 3) Bolts must be tight 4) Cables must be clear of machine travel 5) All loose equipment must be removed from moving parts 6) The host of the CTP must provide safety glasses, hearing protection, hard hats, and any other required personal protection equipment (PPE). 7) The host of the CTP must instruct the participants as to any other known safety considerations.
REF DOCS:	

STEP	ACTION	PASS
1	Is a proper Safe Zone provided for the tests?	
2	Do participants have PPE?	
3	Is proper rigging signage provided?	
4	Are all E-STOP locations clearly labeled and visible?	
5	Is the space clear of any loose cables?	
6	Is the space clear of any loose tools or parts?	
7	Are all welds complete and brushed clean?	
8	Are all bolts the correct length, with washers and tight?	
9	Is rope anchor method to drum visible and is wire rope properly terminated?	
10	Is the overall construction of high quality?	
11	Is the painting completed and of high quality?	
12	Are anchor points completed?	
13	All safety devices installed?	
14	Are power/control drive boxes properly installed?

1.3 VALIDATION OF E-STOP AND LIMIT SWITCH SIGNALS

HOIST: _____

PURPOSE:	The following tests are conducted to validate the safety functions prior to any motorized movement.
SETUP:	Provide all 5 functioning E-stops for the duration of the CTP. Provide means to quickly manually activate limit switches for the purpose of confirming their input/output at the motor drive.
REF DOCS:	

STEP	ACTION	REACTION	PASS
1	Verify E-Stop 01 (ES-01) indicates fault at control cabinet	Note fault condition at motor drive cabinet	
2	Verify E-Stop 02 (ES-02) indicates fault at control cabinet	Note fault condition at motor drive cabinet	
3	Verify E-Stop 03 (ES-03) indicates fault at control cabinet	Note fault condition at motor drive cabinet	
4	Verify E-Stop/Control Point 01 (CP-01) indicates fault at control cabinet	Note fault condition at motor drive cabinet	
5	Activate Hoist Initial high limit	Note fault condition at motor drive cabinet	
6	Activate Hoist Ultimate high limit	Note fault condition at motor drive cabinet	
7	Activate Hoist Initial low limit	Note fault condition at motor drive cabinet	
8	Activate Hoist Ultimate low limit	Note fault condition at motor drive cabinet	
10	Run hoist, activate E-Stop 01 (ES-01)	Verify machine has stopped all movement	
10a		Verify all motors have stopped running	
10b		Verify motor power is no longer present	
10c		Verify motor drive output power is no longer present Note Drive output display	
10d		Verify that motion does not resume when E-Stop is reset. i.e. the control system has put the Hoist in a safe state	
11	Run hoist, activate E-Stop 02 (ES-02)	Verify machine has stopped all movement	
11a		Verify all motors have stopped running	
11b		Verify motor power is no longer present	
11c		Verify motor drive output power is no longer present Note Drive output display	
11d		Verify that motion does not resume when E-Stop is reset. i.e. the control system has put the Hoist in a safe state	
12	Run hoist, activate E-Stop/Control Point 01 (CP-01)	Verify machine has stopped all movement	
12a		Verify all motors have stopped running	
12b		Verify motor power is no longer present	

12c		Verify motor drive output power is no longer present Note Drive output display	
12d		Verify that motion does not resume when E-Stop is reset. i.e. the control system has put the Hoist in a safe state

1.4 VALIDATION OF OPERATIONAL SPEEDS & CYCLE TESTING

HOIST: _____

PURPOSE:	The following tests are conducted to validate the lifting capacity and operational speeds of the hoist.
SETUP:	The hoist must be fully loaded with 110% of hoist capacity for cycle and load testing. All moves must be performed at maximum acceleration and deceleration.
Special Note:	

STEP	ACTION	REACTION	PASS
	Description of weight: Quantity: Weight of each:	Total Weight:	
1	Conduct a zero speed enable (i.e. the motor comes to full torque and both brakes are released). Observe the pipe as the brakes are released and applied.	No motion when brakes release/set	
2	Going up - Time the length of a total move at 100% of full speed. This time shall be taken from the time "GO" is depressed until the time the batten has come to a complete stop.	120 fpm Distance: Time:	
2a	Trace max acceleration on control system diagnostic software	Record accel:	N/A
2b	Trace max deceleration on control system diagnostic software	Record decel:	N/A
3	Going Down - Time the length of a total move at 100% of full speed. This time shall be from the time "GO" is depressed until the time the batten has come to a complete stop	120 fpm Distance: Time:	
3a	Trace max acceleration on control system diagnostic software	Record accel:	N/A
3b	Trace max deceleration on control system diagnostic software	Record decel:	N/A
4	Cycle hoist from low dead to high dead 5 times at full load/speed	All 5 cycles are smooth

1.5 VALIDATION OF OPERATIONAL TRAVEL DISTANCE

HOIST: _____

PURPOSE:	The following test shall confirm that the hoist meets the minimum travel distance while maintaining the required 3 wire rope safety wraps and 3 extra drum grooves.
SETUP:	Provide means to demonstrate full travel distance.
Special Note:	Minimum travel required: 26'-0"

STEP	ACTION	REACTION	PASS
1	Take measurement at lowest dead	Low dead measurement:	
2	Count the number of wire rope wraps left on the drum while at lowest dead	Number of wraps:	
3	Move batten to highest dead and take measurement.	High dead measurement: Total Travel achieved:	
	Count the number of empty wire rope grooves left on the drum while at the highest dead	Number of empty grooves:	

COMMENTS:

TEST CONDUCTED BY: _____ **DATE:** _____ **TIME:** _____

INITIALS OF REVIEW TEAM: _____

1.6 VALIDATION OF OPERATIONAL LIMITS

HOIST: _____

PURPOSE:	The following tests are conducted to validate the travel limit functions under dynamic operating conditions.
SETUP:	The test must first be conducted with the batten unloaded in the UP direction as this will likely represent the greatest upward overtravel scenario. The test must then be repeated at 100% capacity in the up and down directions. <u>Provide means to quickly temporarily disable the soft and initial limit switches and to back off of the ultimate limits.</u> If possible, use tracing features to derive overtravel distance.
Special Notes:	At the manufacturer's discretion, tests may be conducted at incremental speeds.

STEP	ACTION	REACTION	PASS
1	Unloaded: At 100% speed attempt to run the hoist UP to a position beyond its set high soft limit	Control system warns operator and prevents the move.	
	<u>Disable Soft Limit.</u> Unloaded: At 100% speed attempt to run the hoist UP to a position beyond its INITIAL hard high limit	Hoist stopped as a result of striking the initial high hard limit.	
		Hoist did not strike ultimate hard limit	
		If available, record actual overtravel distance:	N/A
	<u>Disable Soft and Initial limits.</u> Unloaded: At 100% speed attempt to run the hoist UP to a position beyond its ULTIMATE hard high limit	Hoist stopped as a result of striking the ultimate high hard limit.	
		Hoist elements did not reach physical end-of-travel confines	
		Record empty wire rope grooves left on drum:	
		If available, record actual overtravel distance:	N/A
	<u>Disable Soft Limit:</u> Loaded: At 100% speed attempt to run the hoist UP to a position beyond its INITIAL hard high limit	Hoist stopped as a result of striking the initial high hard limit.	
		Hoist did not strike ultimate hard limit	
		If available, record actual overtravel distance:	N/A
	<u>Disable Soft and Initial limits:</u> Loaded: At 100% speed attempt to run the hoist UP to a position beyond its ULTIMATE hard high limit	Hoist stopped as a result of striking the ultimate high hard limit.	
		Hoist elements did not reach physical end-of-travel confines	
		Record empty wire rope grooves left on drum:	
		If available, record actual overtravel distance:	N/A

	Loaded: At 100% speed attempt to run the hoist DOWN to a position beyond its set low soft limit	Control system warns operator and prevents the move.	
	Disable Soft Limit: Loaded: At 100% speed attempt to run the hoist DOWN to a position beyond its INITIAL hard low limit	Hoist stopped as a result of striking the initial low hard limit.	
		Hoist did not strike ultimate hard limit	
		If available, record actual overtravel distance:	N/A
	Disable Soft and Initial limits: Loaded: At 100% speed attempt to run the hoist DOWN to a position beyond its ULTIMATE hard low limit	Hoist stopped as a result of striking the ultimate low hard limit.	
		Hoist elements did not reach physical end-of-travel confines	
		Record wire rope wraps left on drum:	
		If available, record actual overtravel distance:	N/A

TEST CONDUCTED BY: _____ **DATE:** _____ **TIME:** _____

INITIALS OF REVIEW TEAM: _____

1.7 VALIDATION OF TARGET ACHIEVEMENT & REPEATABILITY

HOIST: _____

PURPOSE:	The following tests are conducted to validate the target achievement and repeatability of the hoist load within +/- .125" (1/8")
SETUP:	Conduct test with pipe loaded to 100% . Program a high and low Dead for test.
Special Note:	

STEP	ACTION	START POS	END POS	VARIANCE	PASS
1	From low dead, run the hoist UP to the high dead at 50% of full speed			N/A	
1a	From high dead, run the hoist DOWN to the low dead at 50% of full speed				
2	From low dead, run the hoist UP to the high dead at 50% of full speed				
2a	From high dead, run the hoist DOWN to the low dead at 50% of full speed				
3	From low dead, run the hoist UP to the high dead at 100% of full speed				
3a	From high dead, run the hoist DOWN to the low dead at 100% of full speed				
4	From low dead, run the hoist UP to the high dead at 100% of full speed				
4a	From high dead, run the hoist DOWN to the low dead at 100% of full speed				

OBSERVATION			
4b	During the above tests trace motor drive current draw and record maximum current	Current:	
4c	During the above tests trace motor torque and record maximum torque	Torque:	
4d	Both the Maximum torque and current are within the name plate capacity of the motor	Maximums are within manufacturers range	
4e	The maximum torque is within the name plate capacity of the gear box	Maximum is within manufactures given range

1.8 OBSERVE HOIST MOTION DURING E-STOP ACTIVATION

HOIST: _____

PURPOSE:	The following tests are conducted to evaluate how the hoist responds to dynamic E-stop situations.
SETUP:	The hoist must be fully loaded with 110% of capacity. Program a high and low Dead for test. Use diagnostic graphing feature to derive overtravel distance.
Special Note:	Rigging contractor may wish to conduct this test at incremental speeds.

STEP	ACTION	ACTIVATION POSITION	END POSITION	TRAVEL DISTANCE	PASS
1	From low dead, run the hoist at Full speed. Depress E-stop during move. Record the actual travel distance after the E-Stop was depressed.				
1a	Record dynamic load spike during E-stop from diagnostic system				N/A
2	From high dead, run the hoist DOWN at Full speed. Depress E-stop during move. Record the actual travel distance after the E-Stop was depressed.				
2a	Record dynamic load spike during E-stop from diagnostic system				N/A

1.9 BRAKE VALIDATION

HOIST: _____

PURPOSE:	The following tests are conducted to validate the primary and secondary brake integrity of the hoist.
SETUP:	The hoist must be fully loaded with 125% of capacity. Provide means to comfortably release and hold the primary and secondary brakes individually.
Special Note:	

STEP	ACTION	REACTION	PASS
1	Description of weight: Quantity: Weight of each:	Total Weight:	
2	Verify the test weight		
3	Static: Release the secondary brake and observe the primary brake holding the load for 10 minutes	Primary brake system holds the load.	
4	Static: Release the primary brake and observe the secondary brake holding the load for 10 minutes	Secondary brake system holds the load.	
5	Observe the motor/gearbox assembly	Motor/gearbox assembly appears to be functioning properly during the brake tests	

COMMENTS:

INITIALS OF REVIEW TEAM: _____

1.10 VALIDATION OF LOAD SENSING

HOIST: _____

PURPOSE:	Tests shall document load sensing resolution (smallest detectable weight) variance, shall verify under/overload function, and shall demonstrate how the system responds to specific load sensing fault conditions:
SETUP:	Conduct tests loaded and unloaded as described below. Provide means to force an overload condition by providing a means to pick up additional weight while moving up. Provide means to force an under load condition by providing a fixed object to obstruct batten while moving down.

STEP	ACTION	REACTION	PASS
1	Unloaded: Move batten to low dead. Record static weight readout from control desk.	Record low dead static weight readout from control desk: Does system display zero or does it display batten weight?	N/A
2	Unloaded: Move batten to high dead. Record static weight readout from control desk.	Record high dead static weight readout from control desk: Does system compensate for wire rope weight? YES or NO	N/A
3	Unloaded: With batten static at low dead. Record weight readout from control desk	Record weight readout:	N/A
4	Add weight in 5 lbs increments and record smallest amount detected	Average smallest amount detected:	
5	At an intermediate low dead, load pipe with approx. 400 lbs & set (teach) this as the current normal weight.	Weight loaded: Weight description:	
6	Conduct under/overload test at 10% of current load (.10*400 lbs = 40 lbs)	Record sensitivity settings:	N/A
7	Loaded with 400 lbs at Full speed/accel, run the hoist UP. After reaching full speed pickup an additional weight of 50 lbs	System detected overload and stopped. System prevented further UP movement, but allowed DOWN movement.	
8	Loaded with the weight from previous test (450) lbs at Full speed/accel, run the hoist Down. After reaching full speed land the additional weight of 50 lbs on the floor.	System detected underload and stopped. System prevented further DOWN movement, but allowed UP movement.

SECTION 11 61 63

THEATRICAL LIGHTING DIMMING & CONTROL

PART 1 - GENERAL

1.1 SUMMARY

- A. The work in this section includes, but is not limited to, furnishing and commissioning the following major elements and associated accessories:
- 1) Theatrical and Architectural dimmers and equipment racks
 - 2) Auxiliary equipment/electronics racks
 - 3) Theatrical lighting relay panels with integrated branch circuit breakers
 - 4) Architectural lighting emergency transfer panels
 - 5) Lighting systems computers
 - 6) Theatrical lighting Ethernet data networks
 - a. Network racks
 - b. Network components
 - c. Network devices
 - d. Network receptacles
 - 7) Theatrical lighting control consoles and peripherals
 - a. Wireless focus remote systems
 - b. Theatrical control panels and receptacles
 - c. Video display monitors
 - 8) Architectural lighting control systems
 - a. House lighting controls
 - b. House panic systems
 - c. Architectural control panels and receptacles
 - d. Portable house light control console and receptacles
 - 9) Theatrical lighting wiring devices
 - 10) Extension cables
 - 11) All materials, components and services required to provide the work as specified herein, elsewhere in the project documents and/or as shown on the related drawings.
 - 12) Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.
 - 13) Refer to 'TL' series drawings.

1.2 PRODUCTS INSTALLED BUT NOT SUPPLIED UNDER THIS SECTION

- A. The work of this section includes supervision of the termination of all control wiring in panels and racks. All control cabling related to this section shall be installed under Division 26.

1.3 PRODUCTS FURNISHED BUT NOT INSTALLED UNDER THIS SECTION

- A. All other equipment shall be installed and terminated under Division 26, except as noted above in paragraph 1.2A

1.4 RELATED SECTIONS

- A. All drawings including General Construction, Structural, Theatrical, Mechanical, Electrical, and the NYC DDC General Conditions of the contract, including Supplemental Provisions apply to this section.

- B. Coordinate with all related sections of the specifications including, but not limited to:

- 1) Division 03 – Concrete
 - a. Fastener requirements
- 2) Division 04 - Masonry:
 - a. Fastener requirements
- 3) Division 05- Metals:
 - a. Structural steel supporting the work of this section
- 4) Division 09 – Finishes
- 5) Division 11, Equipment
 - a. Section 11 6133 – Theatrical Rigging
 - b. Section 11 6183 – Theatrical Audio Video Systems
- 6) Division 23 – Mechanical
- 7) Division 26 – Electrical
 - a. Conduit, wire, pull boxes, junction boxes and miscellaneous hardware and components as required for a complete electrical installation.
 - b. Terminations and testing of system continuity
 - c. Section 26 5561, Theatrical Systems Electrical Installation

1.5 REFERENCES

- A. References to code, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
- B. If an applicable code or standard permits work of lesser quality or extent that this specification and the related drawings will govern.
- C. Comply with prevailing local codes and applicable Underwriters Laboratory standards.
- D. Comply with City of New York Fire Regulations for places of assembly.

E. Comply with applicable national, state and local labor regulations and requirements.

- 1) NEC: National Electric Code
- 2) UL: Underwriters Laboratories
- 3) IEEE: Institute of Electronic and Electrical Engineers
- 4) IESNA: Illuminating Engineering Society of North America
- 5) ANSI: American National Standards Institute
- 6) AISC: American Institute of Steel Construction

F. Equipment shall have pertinent labels.

1.6 DEFINITIONS

A. "Contractor": Installer/Integrator responsible for the construction and installation for the work contained in this section.

- 1) Contractors involved with other work shall be indicated with a specific trade preceding the word "Contractor" (i.e. General, Electrical, etc.).

B. "Furnish": Purchase and/or fabricate and deliver to project site.

C. "Install": Physically install the items in their proper location (s) on the project site.

D. "Provide": Furnish and install.

E. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.

1.7 STATE OF THE ART DEVELOPMENT

A. The successful Contractor shall supply only the latest developed appropriate product. In cases where product development from a specified manufacturer surpasses the criteria of this specification, the Contractor shall inform the Commissioner and make the newer product available to the project. In no case shall discontinued or obsolete equipment be acceptable. Should a newer product be suggested as a substitution for a discontinued product, or for a product that is in process of being phased out of production, that newer product shall be offered to the City of New York at no additional cost. The same requirement applies to control console programs developed/updated during the warranty period.

B. Should product recall by a specified manufacturer require temporary or permanent replacement of a product specified under this section, the Contractor shall notify the City of New York at the earliest reasonable time and shall arrange to replace the product in question at the earliest possible time.

- 1) Equipment found defective or subject to recall prior to scheduled installation shall not be delivered to the jobsite.
- 2) Equipment defect or intended recall shall not relieve the Contractor from his

contractual obligation with regard to delivery schedule of product. In this circumstance, notification shall be made to the Commissioner by fax and express carrier. Arrangement for alternate product shall be made at this time.

- 3) Under no circumstances shall arrangement for alternate product necessarily require the City of New York to accept superseded equipment except on a temporary basis.

1.8 SUBMITTALS

- A. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing the project schedule.
- B. All submittals shall leave space available for review stamps and comments.
- C. Submittals will be reviewed and accepted prior to proceeding with the fabrication of the work in this section. The Commissioner shall only mark one set of documents per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked,
- D. Review all pertinent project Contract Documents. Following this review, provide to the Commissioner and Construction Manager any additional information required to make a fully functioning system. In addition, the Contractor shall indicate the maximum accepted wire size as it relates to termination points on the specified equipment.
- E. Product Data: Submit catalog or standard data sheets for component parts as part of the shop drawing submittal. The data shall include all information, which indicates compliance with the specifications herein. Clearly indicate the manufacturer of each component and part.
- F. Bill of Materials: Submit a full Bill of Materials indicating quantity, products, manufacturer and manufacturer's part numbers.
- G. Verify wire type, count and routing for all required low voltage wire sizes between all components for conduit sizing and routing by Division 26. Verify and coordinate all line voltage power input required by systems components that shall be provided under Division 26.
- H. Shop Drawings
 - 1) Provide shop drawings on C size minimum (24 X 36) sheets.
 - 2) Include a cover sheet with a drawing index including the sheet number and title for each sheet in the set.
 - 3) Provide an inventory of all equipment to be supplied, including quantities, manufacturer's part number, reference to applicable drawings, etc.
 - 4) Provide complete, fully dimensioned, large-scale detailed drawings of all major components.
 - 5) Provide requisite schematics, plans and sections indicating assembly and installation of components.
 - 6) Provide indications by arrow and boxed caption of all variations from contract drawings and specifications, except where variation is indicated as acceptable.

- 7) Provide detailed one-line riser diagrams and installation circuit diagrams indicating all control and/or data electrical requirements and point to point connections. These shall be provided within 30 days of Contract Award.

I. Samples:

- 1) Submit samples for approval of the following.
 - a. Panel engraving or silk screen
 - b. Distribution device engraved lamacoid label showing attachment method.

J. Additional samples will be submitted within 14 days of Commissioner's written request.

K. Project Record Documents:

- 1) Submit documents in accordance with the NYC DDC General Conditions and as specified herein.

1.9 QUALITY ASSURANCE

A. Provision of all equipment and services under this section shall be the responsibility of a single Contractor as specified herein.

- 1) Contractor shall provide a complete organization chart listing engineering and project management staff including resumes of proposed staff.
- 2) Contractor shall provide a bill of materials listing products and manufacturer(s) of key systems components and major secondary components including but not limited to all Ethernet distribution components.

B. Qualifications:

- 1) Contractor: The contractor or subcontractor performing the work of this Section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
- 2) Manufacturer: The manufacturer furnishing the material or equipment specified in this Section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
- 3) The Contractor shall own and operate their own facility for the servicing and integration of theatrical lighting dimming and control equipment, and be regularly engaged in the servicing and integration of such equipment.
- 4) The Contractor shall maintain a full-time factory employed field engineering staff available in the New York, New York area on an emergency basis of at least two people trained in electronic lighting control systems and Ethernet systems services.

1.10 DELIVERY, STORAGE AND HANDLING

A. Delivery, storage and handling shall be coordinated with the Commissioner and shall meet all requirements described in the New York City DDC General Conditions.

B. Packing, Shipping, Handling & Unloading:

- 1) All equipment shall be appropriately and substantially packed for shipment.
- 2) All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", and the project name and theatre site allocation. Include packing and shipping list for each container.
- 3) All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.

C. Acceptance at Site

- 1) Delivery of all materials shall be coordinated with the General Contractor.
- 2) The Contractor shall be responsible for acceptance of the Lighting System components at the jobsite, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.

1.11 PROJECT / SITE CONDITIONS

A. Existing Conditions

- 1) Verify all conditions at jobsite. Promptly report variations and obstructions to the Commissioner. All additions and or corrections are to be requested prior to fabrication.

B. Field Measurements

- 1) Field measurements shall be taken by the Contractor prior to fabrication to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.
- 2) Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.

1.12 SEQUENCING AND SCHEDULING

- A. The installation of the lighting system wiring devices shall not occur until all painting in the area has been completed.
- B. The installation of computer grade network components, dimmer rack processors and modules, and any other equipment sensitive to construction debris and dust shall not be installed in any space until doors and any windows are installed, all dust producing construction and finishing is completed and all debris and dust has been removed. Typical "office" cleanliness shall be required in rooms in which computer grade equipment is to be installed.
- C. The unpacking and installation of theatrical lighting consoles and peripheral devices shall not occur until the control room is secure and climate controlled.

1.13 1 YEAR GUARANTEE

A. Manufacturer 1 Year Guarantee:

- 1) The Manufacturer shall warrant materials and workmanship of systems and equipment installed as free of defects. The Manufacturer shall guarantee in writing the repair or replacement within 14 days of any item found defective during a period of 1-year following date of final acceptance. Ordinary wear and defects due to improper usage are excepted and are not covered under Contractor's warranty.
- 2) During the warranty period, all emergency conditions where systems failures may be hazardous or may cause severe hardship or cancellation of performances shall be responded to within 24 hours. Immediate action shall be undertaken to ensure the safety of the audience and the performers.

B. Correction Period:

- 1) One year following the date of final acceptance, an engineer in the employ of the Manufacturer will examine, adjust, and repair the equipment included in this Section as required. This service will not cover adjustments, repairs, or replacement of parts due to negligence, misuse, abuse, or accidents caused by persons other than the Contractor. Labor and materials required to perform this service will meet or exceed these specifications and will not compromise the performance of the equipment.
- 2) Following this inspection and warranty service, provide the City of New York's Representative with a written report itemizing the results of the inspections and the warranty work conducted. Include in the written report recommendations for any corrective actions that the Manufacturer feels should be taken with respect to the equipment included in this Section, but are outside the scope of the warranty agreement.

1.14 SOFTWARE UPDATES

- A. Provide, at no cost to the City of New York, any software updates of the operating programs of any specified control consoles through end of the warranty period.
- B. Provide, at no cost to the City of New York, through the end of the 1 year guarantee, any software updates of the operating programs of any specified control consoles issued to correct "bugs" identified in the console operations.
- C. The City of New York shall be allowed a 60-day trial of each new software package with option to reject the new operating program for any reason.

1.15 SYSTEM STARTUP, END USER'S INSTRUCTIONS & COMMISSIONING

A. Operation Instruction:

- 1) Supply instruction to City of New York's operating personnel on operation and care of system for not less than eight hours total in 2 separate sessions. Instruction shall include, but not be limited to, proper general maintenance of the system, replacement procedures for user replaceable parts and operating procedure to obtain maximum usage of system.
- 2) Deliver all copies of approved Operations Manual to City of New York prior to first instruction session, and review it as part of that session.
- 3) The first session shall take place in the presence of the, and shall occur directly after

finish of Completion Checkout. If the Commissioner judge that any work inspected fails to conform to the specification, or is not substantially complete at time of Completion Checkout, postpone instruction session until Commissioner judge the entire Lighting System to conform with specification.

- 4) The second session shall occur at a time arranged by the City of New York no sooner than 1 day and no later than 1 month after first session.

B. Console Operator Instruction:

- 1) Provide instruction to City of New York's selected key Lighting Control Console Operators on the detailed operation of Console. This training shall take place in two separate sessions. Each session shall be no less than four hours and shall take place on site.

C. Timing for all sessions shall be scheduled by the City of New York at their convenience.

D. Instruction must be by qualified expert operators who have actual experience with systems in performance conditions. Submit instructor's qualifications to the Commissioner for approval at least 2 weeks prior to Completion Checkout. If the Commissioner rejects instruction personnel, schedule new instruction sessions with instructor(s) pre-approved by the Commissioner.

1.16 WARRANTY MATERIAL SUBMITTALS

A. Extra Materials: Deliver stock of warranty material to City of New York. Furnish the following to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels.

- 1) Provide four spare dimmer modules for each type of dimmer module in the system.
- 2) Provide one spare node or complete internal components of each type of node in the system.
- 3) Provide four circuit breakers of each size in the system.
- 4) Provide a package of spare parts for all user serviceable portions of the dimmer and control systems and distribution apparatus.
 - a. Provide 10% of total quantity of each type of small component or part in system as spare parts (minimum of one).
 - b. Label all spare parts with Manufacturer's part number, designation and description, and location(s) where used.
 - c. Provide durable, clearly labeled, storage containers for all spare parts, including special static free containers for electronically sensitive parts.
 - d. Quantity - Package shall include, but not be limited to:
 1. Five 4GB USB flash drives or other appropriate data storage medium.
 2. One spare of each type of pushbutton, pushbutton lamp, pushbutton caps of each color, key switches.
 3. Knobs, handles, nuts, bolts, screws, fuses, fuse holders, indicator lights and SSR assemblies.
 4. Caps, screws, crimp connectors and crimping tool, stage pin plugs, multipin connector spare parts, nuts and washers.
 5. Provide six pilot lights, two LED arrays of each type in the system.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. The systems described herein shall be provided by a Theatrical Lighting Manufacturer who will be responsible for furnishing all services described herein including but not limited to coordination and supervision of the engineering, shop drawings, fabrication and provision for all systems specified herein and shown in the drawings.
- B. Primary dimming and theatrical control shall be by a single manufacturer.
- C. The Manufacturer's services may be provided through a Contractor who shall be a dealer and servicer of all of the equipment specified herein.

- 1) The Contractor shall maintain a full-time Manufacturer trained field engineering staff of at least two people available via telephone and email on a 24/7 basis. Staff shall be employed by the dealer and be trained in electronic lighting control systems and Ethernet systems services.
- 2) To establish comparative standards of quality, the equipment of the theatrical lighting systems shall be by one of the following:

Barbizon Lighting Company
456 West 55th Street
New York, New York 10019
(212) 586-1620

4 Wall Entertainment
75 State Street
Moonachie, NJ 07074
(201) 329-9878

Production Resource Group
7777 West Side Avenue
North Bergen, New Jersey 07047
(210) 758-4000

Candela Controls
751 Business Park Boulevard
Suite 101
Winter Garden FL 34787
(407) 654-2420

- D. Manufacturer shall provide the Warranty specified herein.

2.2 GENERAL

- A. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable.
- B. All mounting hardware shall be included.
 - 1) All bolts and fasteners required to mount equipment to mounting hardware shall be Grade 5 or better.

- C. All equipment and components shall be factory tested prior to shipping.
- D. All bolted attachments shall have lock washers or other approved self-locking hardware.
- E. All internal wiring shall be factory completed and clearly marked. All field connections shall be by connector, terminal strip or other device specified herein. Any terminal strip connections shall be clearly labeled as to terminal designation.
- F. All wire sizes and insulation shall comply with NEC, NFPA and UL standards and all other applicable national and local codes.
- G. All wiring to be harnessed and bound. No loose or randomly routed wires shall be permitted.
- H. All control wire counts shall include 10% spares.
- I. All microprocessor controls shall utilize a non-volatile memory. System configuration, operating parameter, preset, etc. shall be protected against system power failure for a minimum of 48 hours.
- J. Systems components shall be modular in nature. Individual dimming modules shall slide in and be easily disconnected from power and removed from the rack without disturbing adjacent components and shall require no special tools for these tasks. Control circuitry shall be contained on plug-in printed circuit cards. Plug-in circuit cards shall be individually removable without disturbing adjacent components.
- K. All fixed components including dimmer modules, non-dim modules, circuit breakers, and cabinets shall be labeled sequentially for ease of maintenance.
- L. No manufacturer's logo shall appear on control station faceplates or any other device located in public areas.
- M. Any supplementary or auxiliary equipment necessary for the operation of the system shall be supplied with overload and short-circuit protection

2.3 DIMMER RACKS AND DIMMER MODULES

- A. Basis of design:
 - 1) The basis of design for the theatrical dimmer racks is the ETC Sensor + Racks and system with 500 microsecond rise AF dimmers.
- B. Product:
 - 1) Provide theatrical dimming equipment as indicated on the drawings, drawing schedules and specified herein
 - 1. ETC Sensor+ Racks and 500 microsecond rise AF dimmers.
 - 2. Approved equal.
- C. Dimmer Equipment Racks:
 - 1) The entire dimmer rack assembly shall be UL listed. Rack finishes shall be manufacturer's standard baked enamel color.
 - 2) Dimmer racks shall be floor mounted, dead front switch boards complete with all

dimmers, control electronics, timers, circuit breakers, and wiring terminations. No external components shall be required.

- 3) Dimmer slots shall be sequentially numbered and labeled on both sides of the dimmer slots.
- 4) Each dimmer rack shall be labeled as indicated on the drawings or as listed in dimmer schedules. Engrave and fill or silk-screen labels.
- 5) Dimmer racks shall be completely wired internally by the Manufacturer. The Electrical Contractor shall provide input feed wiring, load wiring, low voltage wire pulls and individual cabinet disconnects. All terminals shall be clearly and permanently marked and numbered.
- 6) Dimmer racks shall be constructed of #14 or #16 US gauge cold rolled sheet steel.
- 7) Access panels or knockouts shall be provided for bottom feed and top load/control wires.
- 8) All internal components shall be accessible from the front for testing and adjusting while system is operating. No rear access shall be needed for installation or future service.
- 9) Power distribution shall be by copper buss bars. Aluminum buss bars are not acceptable.
- 10) Theatrical and Architectural dimmer racks shall be 120/208 volt, 3 phase, 4 wire, size for minimum 600-amp feeds, as indicated on Division 26 contract documents.
- 11) Theatrical and architectural dimmer rack load, neutral and ground terminals shall accept up to #2 AWG wire.
- 12) Individual rack disconnects shall be provided under Division 26. Coordinate fault current requirements with the Commissioner.
- 13) All internal wiring shall terminate in pressure wire or clamp type terminals for installation of Electrical Contractor's wiring. No wire nuts or crimps shall be acceptable.
- 14) All wiring provided by the Electrical Contractor under Division 26 shall be individually labeled at both ends of wire and at all splice locations.
- 15) Each branch load circuit must have an individual neutral to the dimmer cabinet terminals. Common neutrals shall not be acceptable for any load wire from the load to the dimmer cabinet terminals. Clearly note this requirement on all documentation.
- 16) Standard advertised product dimensions are to be considered maximum and are not to be increased. Reduced sizes are acceptable with prior approval of Commissioner.
- 17) Location of dimmer racks shall be as shown on drawings. Provide quantities of cabinets dictated by dimmer quantity indicated herein.
- 18) Provide requisite ancillary, current modifying, regulating, and monitoring devices required for operation of a complete fully functioning system.

- 19) Dimming panels may be cooled by free convection without the use of cooling fans or by fans or blowers with screened air inlet and outlet grilles. Regardless of cooling method, dimming panels shall operate within a maintained ambient room temperature range of no less than 0°C/32°F and no more than 35°C/95°F degrees.
- 20) Provide cabinet overheat sensor and pilot light for each cabinet mounted in face of cabinet. Automatic shut off of the dimming system components shall occur should maximum safe operating temperatures of the cabinet be exceeded. Over heat sensor shall be duplicated to provide remote-warning messages located on the theatrical lighting control console.
- 21) The interior construction of the entire electrical assembly shall be designed for a minimum standard fault current of 50,000 AIC with the capability for increased protection to 100,000 AIC, if required.
- 22) Noise generated shall not exceed 55dbc per cabinet, as measured with a type two sound level meter at a distance of three feet from the cabinet in installed dimmer location.
- 23) The racks shall be mounted on Neoprene Isolation Mounts, Type "W" as manufactured by Mason Industries, "Sheer-Flex" by Vibration Mounting or approved equal.
- 24) Dimmer bank shall accept USITT standard DMX-512/1990 protocol digital control signal or Category 5, or greater Ethernet control signal in addition to any proprietary protocol control signal supported by the Manufacturer. Ethernet dimmer rack shall provide two data inputs functioning on a Highest Takes Precedence basis.
- 25) Selection of signal protocol shall be automatic and shall not require use of mechanical transfer relays.
- 26) Control signal input of each individual dimmer rack shall be fully opto-isolated from control signal input of any other rack, and fully opto-isolated from any control signal output.

D. Dimmer Modules:

- 1) Quantities and capacities of dimmers shall be as indicated on the drawings and specified herein. Dimmers shall meet all dimming performance criteria as listed in this section.
- 2) Dimmer Doubling:
 - a. Dimmer electronics shall support the independent control of the positive and negative half of the AC cycle.
 - b. In conjunction with back-to-back diode adapters the dual dimmer module shall be capable of providing (4) channels of 77V dimmed power from a single dimmer module.
- 3) Dimmer electronics shall be completely solid state. Silicon controlled rectifiers shall be used to control AC power supplied to the loads.
- 4) Dimmers shall operate properly on 60 Hz, 120 - 140 volts AC input. Dimmer output shall be AC, containing less than 1% DC component. At maximum input signal, the dimmer shall produce a full sine wave. With the input signal at zero, the dimmer

output shall be zero voltage at any load with regulation set OFF. Output shall be symmetrical to the zero voltage axis at any control setting prior to any electronic enhancement.

- 5) Dimmer efficiency shall be at least 97% at any voltage and with any load to maximum capacity.
- 6) AC voltage control components shall be rated at a minimum of 2 times the rated capacity of the dimmer and shall sustain a total short circuit for a sufficient length of time to open primary circuit protection.
- 7) Incandescent dimmers (line and low voltage) shall be capable of hot patching cold tungsten loads up to full rated capacity without malfunction or change in operating characteristics regardless of control setting.
- 8) Speed of response of system processor modules to control signal changes shall be no more than 25 milliseconds.
- 9) Dimmer output shall repeat with respect to the control signal input unit value without hysteresis.
- 10) Dimmers set to equivalent control signals with equal types and amperage of loads shall not vary from one to another by more than 1% at any place in the control signal range from full-off to full-on. Dimmer response shall not be phase sensitive with respect to control signal. There shall be exact tracking from one dimmer to the next with no variation.
- 11) There shall be no visible dimming resolution stepping or flickering regardless of length of fade time or control fader settings.
- 12) Protection shall be provided from overloads, short-circuiting, and transient voltage. Protection devices requiring reset or replacement must be accessible on the face of the dimming module or dimming cabinet.
- 13) Circuit Breakers:
 - a. Provide input fully magnetic circuit breaker(s) mounted on the face of each dimmer module or cabinet faceplate. One input breaker shall be provided for each individual dimmer within a module (e.g. one for single module, two for dual modules, etc.).
 - b. Input breakers must be rated for full load of the dimmer and must trip at 125% of rated capacity. Input breakers shall be rated for a minimum fault current of 10,000 AIC (120V) or 14,000 AIC (277V).
 - c. Acceptable manufacturers:
 1. Airpax or approved equal
- 14) Dimmers shall be provided with a ferrous core toroidal filter choke. This filter choke shall suppress lamp filament or transformer hum and vibration, prevent electromagnetic interference in professional quality audio, video, and computer equipment and limit objectionable harmonics. Laminated E.I. or C.I. type chokes are not acceptable.
 - a. Theatrical and House Lighting Dimmers:
- 15) Rise Time Full Load: Voltage rise time shall not be less than 500 microseconds measured and installed on site at 90 degree conduction angle from 10% to 90% of output wave form with dimmer operating at maximum load.

- 16) **Fluorescent dimmer modules compatible with the dimming system specified above may be substituted as necessary to control architectural lighting fixtures.**

E. Dimmer Control Electronics:

- 1) Dimmers shall utilize two silicon-controlled rectifiers in back-to-back electrical configuration and all required gating circuitry on high voltage side of an integral optocoupled control voltage isolator.
- 2) Rectifiers shall be mounted on ceramic substrate, and encapsulated along with other components in epoxy-filled high-impact plastic case.
- 3) All dimmer modules shall be able to operate as "non-dims" with selection of this function through dimmer rack and control console software.
 - a. When selected as a "non-dim", incoming control signal level is interpreted as either full on or full off signal.
 - b. Level of control signal required to initiate turn-on and turn-off shall be user selectable from 0% to 100%.
 - c. Non-dim function shall operate regardless of load type or wattage.
- 4) Control electronics shall use digital electronic circuitry, be microprocessor based, and designed specifically for the control of dimming systems. All user operated controls shall be low voltage; use Class II wiring and be electrically isolated from power wiring by means of a UL listed Class II transformer. Appropriate analog to digital conversion shall be acceptable provided circuitry is integral to the control system and not a stand-alone component.
- 5) System configuration, operating parameters, presets, levels and fade times shall be able to be field modified and shall not require components to be returned to the Manufacturer for such modifications.
- 6) System configuration, operating parameters, presets, levels and fade times shall be protected against system power failure for a minimum of 10 years. The state of the system status upon restoration of power shall be user selectable.
- 7) The dimmer control electronics may be capable of being addressed by the IEEE 802.3 Ethernet protocol.
 - a. The dimmer control electronics shall be capable of being addressed by the USITT DMX512/1990 protocol when any lighting control console utilizing the same protocol is plugged into a DMX In Node.
- 8) Dimmers shall regulate output voltage to remain constant output RMS voltage as long as input remains over 120V per phase.
- 9) Dimmer output RMS voltage versus control input signal shall have not more than 0.5% variation from the modified square law dimming curve as defined below. The dimmer curve shall be stable and shall not require individual curve adjustment devices. The dimming curve shall be predetermined and shall not vary unless modified through control device software.
 - a. Modified square law curve shall be as listed in the Acceptable Curve Settings Schedules included with this specification Section as a relationship of control signal output setting to dimmer output voltage:
 - b. Other optional curves shall be available for installation through rack and/or control console operations software.

c. Field adjustment of dimming curve shall not be required.

F. Theatrical and House Lighting Dimmer Quantities:

- 1) Provide theatrical dimmer modules in types and quantities as shown in the appendix.
- 2) Provide house lighting dimmers as specified herein. Coordinate exact quantities and type with architectural lighting / electrical drawings.
- 3) Provide the spare modules as called out in this specification section 1.16, B, Extra Materials.

2.4 AUXILIARY EQUIPMENT RACKS

A. Provide fully enclosed self-standing Auxiliary racks, as required for miscellaneous system components, located in control or dimmer rooms as indicated in the drawings. Construction and finish shall be generally as described for dimmer racks. In no case shall loose equipment be permanently mounted outside of a protective equipment rack or cabinet. Equipment racks shall be provided with knockouts as required on top, bottom and sides to allow conduit connection as required. The equipment mounted in auxiliary racks shall include but not be limited to:

- 1) Control switching devices, as required.
- 2) Network devices, including network nodes, network taps, as required.
- 3) DMX Combine Merger and Splitter Units, as required.
- 4) Architectural processors, as required.
- 5) Architectural branch circuit sub-breakers as required.

2.5 RELAY PANELS WITH INTEGRATED BRANCH CIRCUIT BREAKERS

A. Construction and finish shall be generally as described for dimmer racks. In no case shall loose equipment be permanently mounted outside of a protective equipment enclosure. Relay Panels shall be provided with knockouts as required on top, bottom and sides to allow conduit connection as required. The equipment mounted in Relay Panels shall include but not be limited to:

- 1) DMX512 Controlled Relays for switched power located in theatrical devices and backstage work lighting circuits.
 - a. Provide double pole 20 amp 208V and single pole 20 amp 120V relays as required by drawings and schedules. Coordinate with Division 26 for work lighting circuit quantities and designations.
- 2) Branch circuit breakers for DMX512 controlled relays
 - a. Provide double pole 20 amp 208V and single pole 20 amp 120V circuit breakers as required by drawings and schedules. Coordinate with Division 26 for work lighting circuit quantities and designations
- 3) Branch circuit breakers and DMX controlled relays shall be provided in a single enclosure. Separate Relay and Branch circuit panels are unacceptable.

- B. Relay panels shall be low voltage type signal relays controlled via a DMX512 interface. Branch load circuit breakers shall be provided with the relay panel as required for branch load terminations.
- 1) Relays shall be capable of simultaneous on/off within a given relay cabinet enclosure. Sequenced on/off are not acceptable.
 - 2) Multiple relays shall be capable of assignment to a single DMX channel to allow functional grouping of relays. Assignment shall be easily field modified.
 - 3) Cabinets shall monitor relay duty cycles and shall indicate through a monitoring device when duty cycle life is approaching rated cycle life.
 - 4) All relays shall be capable of continuous operation at full rated load.
- C. Provide relay panels that shall include Class II lighting control relays and micro-processor based programmable lighting controller(s) capable of interface with DMX/USITT protocol theatrical lighting console for the control of switched (non-dimmed) loads. Refer to the drawings for quantities and control schedules.
- 1) The Class II lighting relays and programmable control equipment shall be listed under either UL section 916 or 508.
- D. Provide lighting relays that control 120 and 208 VAC circuits loaded to a maximum of 20 amps. When required, the relays in addition to the Class II switching leads, will be equipped with a set of normally open auxiliary contacts which work in tandem with the high voltage contacts and be used as mechanisms for status feed back or pilot light indicators. Each Class II relay is a split coil-latching relay powered from a central transformer. Electrically held relays are NOT acceptable.
- E. Acceptable Manufacturers:
- 1) Strand – Contact Relay Panel.
 - 2) Cooper Controls – SC-RPB
 - 3) ETC – Echo Relay Panel
 - 4) Or approved equal.

2.6 EMERGENCY TRANSFER PANELS

- A. Provide Emergency Transfer Panel for the automatic transfer of branch circuits from normal to emergency power when normal power fails. The system shall consist of power transfer switches and a control circuitry interconnected to provide complete, automatic protection.
- B. The Emergency Transfer Panel shall have the following characteristics.
- 1) The Emergency Transfer Panel shall be mounted in a NEMA 1 type enclosure. It shall be equipped with a hinged locking door. Material shall be no less than 14 gauge steel.
 - 2) The Emergency Transfer Panel shall transfer designated lighting load branch circuits from dimmers control outputs to a second power source in the event of a loss of

power to the dimmer rack, a normal system failure, and a panic condition.

- 3) The system shall comply with ANSI/UL1008, NFPA 110 and ANSI/NFPA 70 (NEC), including Article 700 and 701, safety standards. The system shall be UL Listed 1008.
- 4) The Emergency Transfer Panel shall contain no more than 24 transfer poles and shall be 36" H. x 30" W. x 9" D.
- 5) The Emergency Transfer Panel shall provide power distribution and branch circuit protection for all emergency power circuits.
- 6) The transfer switch shall be electrically-operated and mechanically held. The electrical operator shall be a single-solenoid mechanism transfer switch unit.
- 7) The switch shall be positively locked and unaffected by voltage variations or momentary outages so constant contact pressure is maintained and temperature rise at the contacts is minimized.
- 8) The switch shall be mechanically interlocked to ensure only one of the two possible positions, either Normal or Emergency.
- 9) All switch main contacts shall be silver plated.
- 10) Overload and endurance testing of the transfer switch shall comply with UL1008 Tables 25.1, 25.2, 27.1, and 27.2 for mixed loads.
- 11) The transfer switch shall be rated to withstand the RMS symmetrical short circuit current without welding contacts.
- 12) Switch contacts shall withstand transfer without welding, with 180° phase displacement between Normal and Emergency power sources, both sources energized and 100% load.
- 13) Transfer switch contacts shall be rated for mixed loads, including high intensity discharge lamps and tungsten filament lamps.
- 14) The control circuitry shall direct the operation of the transfer switch.
- 15) Interfacing relays shall be a covered industrial control grade plug-in type.
- 16) The voltage of each phase of the normal source shall be monitored, with pickup adjustable from 85 to 100% and dropout adjustable from 75 to 98% of pickup setting. These settings shall be adjustable in increments of 1%. Repetitive accuracy of settings shall be 2% or better over a temperature range of -20°C to 70°C. Factory set to pickup at 90% and dropout at 85%.
- 17) Single-phase voltage sensing of the Emergency source shall be provided with a pickup adjustable from 85 to 100% and dropout fixed at 84 to 86% of pickup. Frequency sensing shall be provided with pickup adjustable from 90 to 100% and dropout fixed at 7 to 89% of pickup. Repetitive accuracy of settings shall be 2% or better over a temperature range of -20°C to 70°C. Factory set to pick up at 90% voltage and 95% frequency.
- 18) The control module shall include four time delays that are field adjustable in

increments of at least 13 steps over the entire range, as follows.

- a. Time delay to override momentary Normal source outages, to delay all transfer switch and engine starting signals, Adjustable from 0 to 6 sec. Factory set at 1 sec.
 - b. Transfer to Emergency time delay, from 0 to 5 min. Factory set at 0 min.
 - c. Retransfer to Normal time delay. Time delay is automatically bypassed if Emergency source fails and Normal source is acceptable. Adjustable from 0 to 30 min. Factory set at 1 min.
 - d. Emergency generator cool-down cycle. Adjustable from 0 to 60 min. Factory set at 5 min.
- 19) Control power for all logic and transfer functions shall always seek the acceptable power source. This shall prevent the system from locking up in one position if either of the power sources is available, regardless of the sequence of failure events.
- 20) A self-supervising isolated signal input shall be provided for connection to the facility fire alarm. It shall automatically transfer loads to the Emergency power source when the facility fire alarm is activated.
- 21) A key-operated double-throw, momentary test switch shall be provided to manually control the Emergency Transfer Panel. All automatic functions shall override this control. Two indicator lights shall be provided to show the position of the transfer switch.
- C. All automatic functions shall override remote control functions. Any combination of open or shorted wiring to remote stations shall not affect automatic functions, or disable the local switch.
- D. Provide an emergency transfer system for designated architectural circuits connecting to dimmer panels as called out on Electrical drawings.
- 1) ETC – ELTS
 - 2) Strand – Emergency Transfer Switch
 - 3) Union Connector – Emergency Transfer Panel

2.7 LIGHTING SYSTEMS COMPUTER

- A. The lighting systems computer serves as both the network and Architectural lighting programming device.
- B. Provide one laptop PC with 15" diagonal 16:9 format screen, minimum 2 GHz Intel i3 processor (Microsoft Windows 7 compatible) with 4GB of RAM and 500 GB hard drive, CD/DVD-RW drive, 3-USB ports, Wireless-N card. The Computer shall have the following:
- 1) Theatrical system
 - a. Network interface card for direct use over the lighting Ethernet data network.
 - b. Provide fifteen foot cable for plug-in to the network receptacle.
 - 2) Architectural system
 - a. Provide fifteen foot cable for plug-in to the network receptacle.

- 3) Acceptable Manufacturers:
 - a. Lenovo
 - b. Toshiba
 - c. Hewlett Packard
 - d. Dell

- 4) Operating System Software
 - a. Provide one boxed set of the most current Windows based operating system compatible with the proprietary application software and system configuration.
 - b. Provide networking software complete with manuals, technical support resources and CDROM as required allowing on line and off line End User configuration and operation of all system parameters and dimmer rack configuration setting.

- 5) Provide Architectural lighting system software:
 - a. ETC Unison Light Manager

C. Network Components:

- 1) Provide network switches as required for operation of the network system. Switches shall have the following characteristics and functions:
 - a. Switches shall contain (8) dual speed auto-sensing ports, supporting both 100BASE-T and 10BASE-T and PoE per IEEE 802.3af.
 - b. Switches shall support IEEE 802.3i Type 100BASE-T standard.
 - c. Switches shall be rack-mounted in standard 19" racks.
 - d. Switches shall be of fanless design.
 - e. Switches shall have front panel LED's that shall report switch traffic, collisions and expansion status. Per port LED's shall indicate link and partition status for individual connections.
 - f. Switches shall have UTP ports on its front face for connecting to nodes and taps via standard 19" patch panel.
 - g. Should Ethernet wire runs exceed 90 meters, provide switches with fiber ports equal to the number of fiber runs in the system.
 - h. Acceptable manufacturers:
 1. Cisco SF302-08MP
 2. Approved equal

- 2) UTP network patch panels
 - a. Provide Category 5E Patch Bay (or bays as required) for termination of Category 5E wire runs.
 - b. All terminations of Category 5E cable shall be under the responsibility of this Section.
 - c. Provide Category 5E patch cords as required for connection between the patch bay (or bays), switches and Ethernet Power Supply.
 - d. Patch bays shall be rack-mounted in standard 19" racks.
 - e. Provide rack mounted standard 19" cable management system for each patch panel.
 - f. Patch bays and cable management panels shall be finished in a black anodized finish and shall contain black Category 5E connectors as required.
 - g. Acceptable Manufacturers:
 1. Hubbell
 2. Or approved equal.

D. Network Cabling:

- 1) Fiber Optic Cable (as required for all runs greater than 90 meters)
 - a. Contractor to confirm all cable routing distance to determine appropriate use of fiber runs.
 - b. Contractor shall specify 62.5/125 μ m fiber optic cable as required to support network components.
 - c. The cable must exceed the IEEE802.3z Gigabit Ethernet Fiber specification for 62.5/125 μ m Fiber.
 1. For Gigabit Ethernet 1000sx over 62.5/125 μ m fiber, a modal bandwidth of 500MHz per km in the 850nm wavelength with 500m minimum distance is required.
 2. For Gigabit Ethernet 1000lx over 62.5/125 μ m fiber, a modal bandwidth of 500MHz per km in the 1300nm wavelength with 500m minimum distance is required.
 - d. The cable must exceed the TIA/EIA 568B Fiber specification.
 - e. Acceptable Manufactures:
 1. Berk-Tek GIGAlite 62.5 Fiber Optic Cable – 2 Fiber
 2. Belden 225362
 3. Or approved equal (for non-plenum rated applications).
- 2) UTP Cable
 - a. The copper cabling and connecting hardware must fully comply with the existing TIA/EIA 568B Standard and with the standard installation of Category 5E products.
 - b. The copper cabling should also comply with the TIA/EIA Category 5E standard.
 - c. Acceptable Manufacturers:
 1. For non-plenum rated applications:
 - a) CommScope 55N4 Ultra II Enhanced Category 5 UTP cable
 - b) Belden 1583A
 2. For plenum rated applications:
 - a) CommScope 5504M Ultra II Enhanced Category 5 UTP cable or approved equal (for plenum rated applications).
 - b) Belden 1585A

E. Network Devices

- 1) All DMX Nodes:
 - a. DMX nodes will be located as noted on drawings. Nodes shall be connected via the Ethernet data network on Category 5E wire.
 - b. XLR connectors at each node shall be able to be configured to output or allow input for any one frame of DMX 512 with normal assignment being sequential. All nodes indicated in the system shall be able to operate simultaneously without data collision or corruption while maintaining recommended minimum and maximum DMX-512/RS485 frame length, packet size and refresh rates.
 - c. DMX distribution over the data network shall be independent of all devices on the system. Regardless of dedicated theatrical lighting devices that may be connected to the various nodes, the DMX distribution system shall be configurable from a PC or other independent control device. The PC or other independent control device shall be provided under this section. Saving and loading of the system configuration to disk shall be supported.

- 2) Portable Network Full function Node
 - a. Provide Portable Network Node and Remote Video to provide for connection of Designer remote consoles, remote video monitors, focus remote and other DMX devices as required.
 - b. 120-volt power
 - c. All other network features as described above
 - d. Provide quantity per appendix
 1. ETC Net 3 Gateway and Remote Video Interface

- 3) Portable 2 Port DMX In/Out Nodes
 - a. DMX In/Out Nodes shall be capable of translating Ethernet based protocol into usable signal for output to plug in peripheral devices employing USITT standard DMX-512/1990 and shall have (2) female five pin XLR connectors within one node box. These nodes shall comply with all IEEE 802.3 standards.
 1. Label each receptacle with appropriate designations. All labels to be engraved with white core fill. Provide white acrylic write on surface as shown.
 - b. Each node shall be powered via its Ethernet connection using Power Over Ethernet (IEEE 802.3af).
 - c. DMX In/Out Nodes shall be portable.
 1. Connection of Category 5 at nodes shall be via a RJ-45 connector or what is accepted as industry standard at the time of the installation.
 2. Internal components shall be modular in nature and easily replaced as a unit in case of failure.
 3. Provide an enclosure and faceplate with appropriate labeling.
 4. Provide 5'-0" Category 5 cable extension for each node.
 5. Provide appropriate mounting hardware to mount node onto 1.5" Schedule 40 pipe.
 - d. Provide quantity per appendix
 1. Electronic Theatre Controls Net 3 2-Port Gateway

- 4) CC panels:
 - a. Provide device with four XLR-style RJ-45 receptacles, one dual strand XLR-style fiber receptacle, one double duplex "clean power" receptacle, and a portable house light control receptacle.
 - b. XLR-style RJ-45 receptacles shall be connected via Category 5E cable to the Ethernet network and shall allow full function nodes or other peripheral portable nodes to be connected to the network.
 - c. XLR-style fiber receptacles shall be connected via 6-strand multimode cable to the fiber patch panel located in the Network Control Rack.
 - d. Portable house light control receptacle shall allow full function of portable house lighting controller including panic and normal functions.
 - e. Label each receptacle with appropriate designations. All labels to be engraved with white core fill.
 - f. CC panels shall be mounted at fixed locations and wired as indicated on the drawings.
 1. Back box and faceplate shall be finished flat black.

- 5) Network Taps (ET):
 - a. Network taps will be mounted in specific locations as indicated on drawings. Taps shall contain two XLR-style RJ-45 receptacles, and a "clean" power duplex receptacle. Taps shall be connected via Category 5E cable to the

- Ethernet network and shall allow full function nodes or other peripheral portable nodes to be connected to the network.
- b. Network tap RJ-45 receptacles must comply with all Category 5E or greater standards.
 - 1. Network Tap Receptacles shall be surface mounted and wired to Category 5E cable.
 - c. Network tap receptacle should have the following information permanently attached to the faceplate (silk-screened or engraved lamacoid).
 - 1. Location of tap (name of Tap).
 - 2. Indication of which equipment rack to which it is connected.
 - 3. Maximum length of external Category 5E cable that can be connected without violating the Category 5E Standard.
 - d. ET panels shall be mounted at fixed locations and wired as indicated on the drawings.
 - 1. Receptacles shall have sheet metal back box and faceplate.
 - 2. Back box and faceplate shall be finished flat black.
- 6) Network Taps (ET2):
- a. Network taps will be mounted in specific locations as indicated on drawings. Taps shall contain two XLR-style RJ-45 receptacles, one dual strand XLR-style fiber receptacle, and a "clean" power duplex receptacle. Taps shall be connected via Category 5E cable to the Ethernet network and shall allow full function nodes or other peripheral portable nodes to be connected to the network as well as via multimode fiber to the Network Control Rack.
 - b. Network tap RJ-45 receptacles must comply with all Category 5E or greater standards.
 - 1. Network Tap RJ-45 Receptacles shall be surface mounted and wired to Category 5E cable.
 - c. Network tap receptacle should have the following information permanently attached to the faceplate (silk-screened or engraved lamacoid).
 - 1. Location of tap (name of Tap).
 - 2. Indication of which equipment rack to which it is connected.
 - 3. Maximum length of external Category 5E cable that can be connected without violating the Category 5E Standard.
 - d. ET2 panels shall be mounted at fixed locations and wired as indicated on the drawings.
 - 1. Receptacles shall have sheet metal back box and faceplate.
 - 2. Back box and faceplate shall be finished flat black.

2.8 THEATRICAL LIGHTING CONTROL CONSOLES

- A. Provide one desktop Theatrical Lighting Control Main Console for Theater 1 and one for Theater 2.
 - 1) Console shall be microprocessor-based system designed specifically for theatrical lighting control application. Consoles shall be engineered for ease and clarity of operation and shall incorporate visual display to assist operator in modes of operation.
 - 2) The console shall be capable of operation in blind (preview/non-live) and shall also be capable of operation in live (stage) mode.

- 3) Console shall be able to organize data for channels other than those associated with dimmer levels through the use of special grouping or numbering schemes. Simply flagging channels with a new color in the video display shall not be acceptable.
- 4) Console, particularly for automated luminaires, must be graphically organized to allow easy identification of the large groups of channel numbers involved with such fixtures. Assignment of pan and tilt functions of automated luminaires shall be supported by either rotary encoder, track pad or a mouse associated with the console. In addition, the pan and tilt axis of multiple luminaires shall be able to be assigned to a single device, such as a rotary encoder, track ball or mouse, to allow multiple automated fixtures to track together to a single point on stage.
- 5) Console shall be capable of pan and tilt operation through external devices with virtual focus software (such as WSYWIG) or automated tracking devices (such as BlackTrax).
- 6) The console shall allow cues to be modified while they are running. The console shall support color print outs to mimic colors displayed on video screens.
- 7) Console shall have MIDI In/Thru/Out, and USB ports.
- 8) The Console and central processors (if needed in the system) shall be connected through uninterrupted power supplies as needed to protect console and network operations for at least 30 minutes in the event of power failure.
- 9) The console shall be provided with all currently advertised features and components indicated in the most recently published product literature plus features described in Part 1, System Performance.
- 10) The console shall be capable of controlling the lighting network by being plugged directly into any network tap.
- 11) Furnish for Theater 1
 - a. ETC – Ion 1000 with 2 x 20 wing panel
- 12) Furnish for Theater 2
 - a. ETC – Element 60 with 500 Channels

2.9 WIRELESS REMOTE FOCUS UNIT

- A. Provide Wireless Remote Focus Unit system with all currently advertised features and components indicated in the most recently published product literature.
 - 1) System shall consist of a handheld personal digital assistant equipped with a wireless access card and a corresponding network access point that connects to the theatrical lighting Ethernet network.
 - 2) Remote shall "call up" dimmers and channels from remote locations for lamp or focus checks without an operator at the main console.
 - 3) Remote shall be capable of calling up and running through pre-recorded cues and triggering macros.
 - 4) Remote shall be capable of configuring 2-port DMX nodes attached to the network.

- 5) Remote shall operate on an 802.11b wireless Ethernet network.
- 6) Remote shall not lose data if its battery becomes depleted.
- 7) Remote shall operate with the main console.
- 8) Remote shall be provided with a charging cradle.
- 9) Network Access Point shall be IEEE 802.11af compliant and shall have the option of being powered by either Power-Over-Ethernet or 120v power supply.
- 10) Network Access Point shall be provided with pipe mounting hardware, power supply and 25' Ethernet cable.

B. Remote focus access unit shall connect to the network via cable to the network taps.

- 1) Quantity:
 - a. Handheld wireless hand-held unit
 1. Quantity per Appendix.
 - b. Network access point
 1. Quantity per Appendix.

2.10 VIDEO MONITORS

A. Portable monitors shall be high resolution; 17" or larger color flat-screen LCD monitors capable of displaying all console video display information. Monitors shall have connectors to mate directly with Net3 Remote Video Interface and shall have front mounted controls for contrast, brightness, vertical hold, and horizontal hold.

B. Provide: quantity per Appendix.

- 1) Furnish 1 - 10' and 1 - 25' video extension cable for each monitor.
- 2) Furnish 1 - 10' and 1 - 25' power extension cable for each monitor.
- 3) Protective Cover:
 - a. Provide one protective cover for each monitor.

2.11 ARCHITECTURAL CONTROL SYSTEMS

A. House lighting control system

- 1) Description: House lighting control system shall be a microprocessor-based control system that works in conjunction with the theatrical lighting control console to set and control auditorium house lighting levels. The system shall also control the remote switching of work lighting circuits throughout the auditorium and backstage spaces by interfacing with the DMX controlled worklight relay system. The system shall operate through master control panels located in the stage right technical area and a series of preset recall stations and key switch operated stations located through out the auditorium. The system shall also be controlled remotely with a portable master station (Auxiliary console specified herein) with plug-in locations through out the auditorium and backstage spaces.

- 2) The house lighting control system shall have the following characteristics and functions:
 - a. When in use, the theatrical console shall override preset levels on a highest takes precedence basis and shall directly control only those dimmed architectural circuits within the Auditorium.
 - b. The dimmed circuits in the Auditorium shall operate independently of the dimmed circuits in the Lobby.
 - c. Switching between panels shall not cause flicker or change in lighting levels when setting on panels or Auxiliary control console are identical.
 - d. The system shall be a microprocessor based lighting control system. System operating program shall be stored in electrically erasable programmable read only memory (EEPROM).
 - e. Data storage facilities shall retain memory for an indefinite period of time. In case of power failure, the control module shall retain preset memory for minimum of 72 hours.
 - f. The House lighting control system allows programming and selection for playback a minimum of 99 different preset lighting states and control of the fade time between presets.
 - g. The System shall be configured to allow multiple active presets to control work lights, concert lights, and theatrical lights simultaneously through the use of multiple room assignments.
 - h. Provide control system configuration software operating on a PC platform to allow configuration and preset level setting.
 - i. Provide the quantity of system processors to have the ability to "snapshot" DMX levels from Theatrical lighting console and record in to architectural preset for all DMX assigned values including dimmed circuits, relay circuits, moving lights and scrollers in the system.
 - j. Provide:
 1. ETC Paradigm Architectural System
 - a) Provide LightDesigner Software
 - b) Provide ControlDesigner Software

B. House Light Panic System

- 1) The House Panic Control System instantly brings the dimmed house lights to full with the push of one button. The system is always enabled at every location, regardless of the state of other control systems. The system must operate independently of emergency power transfer relays.
- 2) House Light Panic System shall include a separate power supply and DMX driver so that house lights can be brought on in the event of failure of primary supply and/or electronics.
- 3) House Light Panic control shall be included in the Main House Light Control Panels and in the Auxiliary Control Console.
- 4) Operations:
 - a. The NORMAL push button is illuminated at all locations whenever Panic System is not activated.
 - b. Depressing any PANIC push button illuminates the PANIC push button and turns off illumination of the NORMAL push button at all locations, and causes a control signal from a dedicated set of control electronics and a dedicated power supply to be applied to selected house light dimmers. This causes those house light dimmers to output full line voltage to loads. This state remains until any NORMAL push button is depressed. Depressing any

NORMAL push button illuminates the NORMAL push button and turns off illumination of the PANIC push- button at all locations, and returns the system to exact state it was in prior to depression of the PANIC push button.

2.12 ARCHITECTURAL LIGHTING CONTROL PANELS

A. General:

- 1) Control electronics shall use digital electronic circuitry, be microprocessor based and designed specifically for the control location, overall dimensions, and quantities of control devices shall be as shown on drawings.
- 2) Control device back boxes, where required, shall be standard deep masonry boxes by Square D or equal.
- 3) Controls shall be low voltage type and use N.E.C. Class II, low-voltage wiring.
 - a. Only Belden control cables or approved equal shall be acceptable.
 - b. Faceplates shall attach to the device with no visible mounting screws. No manufacturer's logo or other marking shall appear on faceplates unless otherwise noted.
 - c. Faceplate finishes shall be manufacturer's standard finish unless otherwise noted by the Commissioner or in the design documents. Selection of finish, custom or standard color shall be by the Commissioner.
 - d. Control devices shall be provided with appropriate zone and/or scene descriptions. These descriptions shall be furnished to the Manufacturer prior to fabrication by the Commissioner and shall be engraved and filled with color to be selected by Commissioner. Any silk screened borders, logos, potentiometer graduations, etc. shall use a chemically bonded graphic process which resists removal by scratching, cleaning, or other light abrasive scouring.
 - e. All slider potentiometers shall have a minimum travel of one (1) inch and shall have a graduated scale marked adjacent to the slider.

B. House lighting panel 'HL'

- 1) Architectural lighting control panels shall include the following:
 - a. Back lit user customizable 7" color liquid crystal display with user interface touch screen face-plate.
 - b. The panel shall have multiple pages as follows to allow control of:
 1. Master levels of each recorded preset.
 2. Individual dimmed channel and switched work light channel levels/status.
 3. Preset, level and fade time recording.
 4. Preset selection and playback.
 5. Recording of Theatrical lighting console output into architectural system presets.
 - c. Architectural lighting control panels shall be recessed, flush mounted panels, surface mounted panels in custom backboxes or rack mounted in standard 19" panels as indicated on drawings.
 - d. Provide black sheet metal back box for flush mounted panels. Do not exceed 4" in depth without prior approval.
 - e. Provide standard 19" black anodized panels for rack mounting.

- 2) Acceptable Manufacturers:
 - a. ETC "Paradigm 7" Touchscreen"

C. Architectural entry stations 'EP'

- 1) Provide single lighted pushbutton entry stations in flush or surface mounted box in locations as shown on the drawings. Station shall recall designated preset and may be disabled by the main system control.
 - a. Lighted pushbutton color to be selected by Commissioner from standard colors.
 - b. Provide black sheet metal back box. Do not exceed 4" in depth without prior approval.
 - c. Provide anodized sheet metal cover plate with chamfered edges, color as per Commissioner

D. Architectural entry stations 'EP2'

- 1) Provide dual pushbutton entry stations in flush mounted box in locations as shown on the drawings. Station shall recall designated preset and may be disabled by the main system control.
 - a. Lighted pushbutton color to be selected by Commissioner from standard colors.
 - b. Provide black sheet metal back box. Do not exceed 4" in depth without prior approval.
 - c. Provide anodized sheet metal cover plate with chamfered edges, color as per Commissioner.

2.13 AUXILIARY CONTROL CONSOLE

A. Provide portable Auxiliary Control Console capable of the following operations:

- 1) Random playback of House Light presets as described herein.
- 2) Control of relay controlled work lighting circuits as described herein.
- 3) House Light Panic system control as specified herein.
- 4) Provide Auxiliary Control Console consisting of a ruggedized hand-held touch screen device..
- 5) Front Panel: Provide front panel containing all controls as required to operate, House, House Panic, and Work, Lighting Systems as specified herein.
- 6) .Provide dedicated pushbutton switches as specified above for PANIC (Pushbutton shall have a latching cover), NORMAL controls.

B. Cables

- 1) Provide 1 – 10', and 1 – 25' male to female combined power and control cable to mate with associated connection panels.

C. Mating Connectors

- 1) Provide mating female multi-pin connector in the panels shown on the drawings.

D. Quantity:

- 1) Provide quantity per Appendix.

2.14 NETWORK CONTROL RACKS

A. Provide Network Control Racks with the following characteristics.

- 1) Production Control rack shall be 19" standard racks, freestanding, wall-anchored swing frame type. Enclosure shall provide adequate space for all network components as specified above.
- 2) Provide finished, blank panels, complete with rack-mounting holes and hardware as necessary.
- 3) Label all controls that are contained within this contract as indicated on related drawings or as appropriate. All labels to be engraved and white filled.

2.15 THEATRICAL WIRING DEVICES

A. Provide all theatrical wiring devices as indicated on the drawings and as specified herein, for installation by Division 26. All wire termination shall be by Division 26.

- 1) Coordinate size of device, orientation of circuits and mounting detail to suit site condition.
- 2) Devices constructed of sheet metal, finished flat black. Provide requisite mounting holes, conduit knockouts, etc.
- 3) All 20 amp and 60 amp stage pin receptacles shall be of the same manufacture.
- 4) Flush mounted female receptacles shall have a screw driven locking spring to ensure firm fit on face panel.
- 5) Provide for 20A stage pin connectors:
 - a. Union Connector 20-2P&G series.
 - b. Rosco 2000 series.
 - c. Bates Connectors.
- 6) Provide all requisite mounting hardware for installation of theatrical wiring devices. Coordinate all device mounting requirements with Division 26.
- 7) Provide all wiring devices with either internal terminal strips or exterior terminal boxes for interconnection to the dimming system. All wiring devices may be internally wired at the factory prior to shipping.
 - a. Size all terminals as required based on wire sizes indicated on the Electrical Documents. Terminal strips shall be grounded to the device enclosure.
 - b. Sheet metal construction, finish flat black. Reinforce base of terminal boxes as required to take load from multicable.
 - c. Back box to be clearly labeled with circuit numbers.

- 8) Terminal Boxes
 - a. Provide terminal boxes factory assembled with numbered terminal blocks for field connection by others, as indicated in the drawings and schedules. All terminal boxes regardless of quantity of circuits shall be the same size. Provide six spare terminals in each terminal box in addition to the spare circuits indicated in the schedules. Provide 4 ground lugs per box. Size all lugs and terminal box as required based on wire sizes indicated on the Electrical Documents.
- 9) Labeling:
 - a. Label each receptacle with appropriate circuit designation indicated on distribution schedule and drawings. All labels to be engraved on black (with white core) lamacoid tags with chamfered edges. Tags to be securely mechanically fastened to wiring device.
- 10) Mounting:
 - a. Devices shall be surface, flush or recess mounted at locations and mounting heights as called out on drawings.
 - b. All holes in mounting bracket to have 1" minimum slotted hole to enable adjustment for field conditions. Provide lock washers on bolts.
- 11) The Manufacturer is responsible for providing all wiring devices to meet all requirements as stated by the National Electrical Code and local code in reference to separation, isolation, and clearances for all different voltages specified, as well terminal sizes for all the different cable sizes, cable entry sizes and exit routes and standoff.

B. Multicable plug boxes - type "MBR".

- 1) Provide multicable plug boxes with female 6-circuit, heavy-duty, locking multipin receptacles. See drawings for locations of devices and distribution device schedule for device type and circuit quantity.
- 2) Provide labels on each box, with circuit numbers corresponding to the schedules, at the location of the multicable entry.
- 3) Provide ½" high wire number labels within six inches of the female multipin receptacle covered with clear heat shrink. Circuit numbers to correspond to the schedules.
- 4) Provide boxes with forged shouldered eye-bolts for multi-cable strain relief.
- 5) Provide brackets and hardware for mounting boxes. All holes in mounting bracket to have 1" minimum slotted hole to enable adjustment for field conditions. Provide lock washers on bolts.

C. Plugging Strip with Pigtail Receptacles – Type "PSP".

- 1) Provide plugging strips of standard plug batten construction. These shall have pigtail mounted, 20A and 60A grounded stage pin female receptacles as shown on the drawings. See drawings for locations of devices and distribution device schedule for device type and circuit quantity.

- 2) Pigtail length shall be as indicated on drawings.
- 3) Label each connector strip and pigtail connector on both sides, with appropriate circuit designation as indicated on drawings and distribution schedule.
- 4) Provide brackets and hardware for mounting boxes. All holes in mounting bracket to have 1" minimum slotted hole to enable adjustment for field conditions. Provide lock washers on bolts.

D. Plug Boxes with Pigtail Receptacles – Type "PBP".

- 1) Provide plug boxes with pigtail mounted, 20A and 60A grounded stage pin female receptacles as shown on the drawings. See drawings for locations of devices and distribution device schedule for device type and circuit quantity.
- 2) Pigtail length shall be as indicated on drawings.
- 3) Label each plug box and pigtail connector on both sides, with appropriate circuit designation as indicated on drawings and distribution schedule.
- 4) Provide brackets and hardware for mounting boxes. All holes in mounting bracket to have 1" minimum slotted hole to enable adjustment for field conditions. Provide lock washers on bolts.
- 5) Provide boxes with forged shouldered eye-bolts for multi-cable strain relief as indicated on the drawings.

E. Plug Boxes with Flush Receptacles - Type "PBR".

- 1) Provide plug boxes with flush mounted 20A stage-pin grounded female receptacles. See drawings for locations of devices and distribution device schedule for device type and circuit quantity.
- 2) Receptacles shall be provided with a screw driven mounting clamp mechanism to provide secure mounting regardless of metal thickness.
- 3) Back boxes and faceplates of sheet metal, finished flat black. Provide requisite mounting holes, conduit knockouts, etc.
- 4) Label each receptacle with appropriate circuit designation indicated on distribution schedule and drawings.
- 5) Provide brackets and hardware for mounting boxes. All holes in mounting bracket to have 1" minimum slotted hole to enable adjustment for field conditions. Provide lock washers on bolts.

2.16 FABRICATION

- A. Fabricate all work in this section in accordance with the Commissioner's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices and applicable code requirements.
- B. Machine finish all operating parts to standard trade tolerance, fits and finishes.

- C. Carry out shop welding in full accordance with the appropriate sections of "Specifications for the Design, Fabrication and Erection of Structural Steel Buildings" of the American Institute of Steel Construction (AISC).
- D. Fabrication, assembly and wiring shall be neat and workmanlike throughout.
- E. Control desks, racks and cabinets shall be welded assemblies of sheet steel or aluminum or of bar size angles, channels and tees or aluminum extrusions forming rigid enclosures to support internal components.
- F. All face panels shall be fully supported on all edges, either internally or by rolling interior edges of panels.
- G. Wood furniture/cabinet work for control desks acceptable with prior approval.
- H. Operating elements shall be mechanically safe and electrically "dead".
- I. All steel parts and panels shall be cleaned and primed with rust inhibiting primer. Exterior finishes shall be epoxy resin or baked enamel in matte black or in anodized black aluminum where approved.
- J. Control element working face panels shall be heavy aluminum or bakelite. Legends and control and protective device designations shall be engraved in panels, or in permanently attached plates, and located for ready identification.
- K. Operating instructions shall be similarly engraved and appropriately located on designated equipment.
- L. All panel engraving shall be in Helvetica Regular, height as indicated herein. Engraving shall be 1/4" or 3/16" as shown in drawings. In no case shall the engraving be less than 3/16" high without Commissioner's approval.
- M. All internal wiring shall be factory completed and clearly marked.
- N. Field connections shall be made by connector devices and cables as specified in preceding sections.
- O. Dimmer modules, dimmer controllers and other plug-in components may have spade lug and/or receptacle devices for connection.
- P. Control relays wherever possible shall be the glass or polycarbonate enclosed plug-in type. Relays shall be acoustically damped.
- Q. Uniform components shall be used throughout the system. All dimmer, fader and preset controllers shall be physically similar; they may vary in voltage according to the Theatrical Lighting Manufacturer circuit requirements.
- R. All wire sizes and insulation to comply with UL standards and local codes and meet or exceed electronics industry standards.
- S. All wiring to be harnessed and bound. No loose or randomly routed wires permitted.
- T. All printed circuit cards to be suitably racked with numbered and indexed guides. Legends to be provided on panel door.

- U. Key all components in this section with locks or key switches alike. Provide six keys minimum.
- V. Each receptacle within a wiring device must have a home run to the dimmer racks of its hot and neutral. Circuits with more than one receptacle must be paralleled at the dimmer rack. The method of termination must not void UL listing. Circuits with more than one receptacle within a single wiring device may be paralleled within the device and require only one home run of the hot and neutral to the dimmer racks.
- W. Minimize feeder inductance by twisting the hot and neutral conductors in long connector strips. Neutral conductor must be at least the same size or greater than the hot conductor.
- X. All wiring to be harnessed and bound. No loose or randomly routed wires permitted.

2.17 SOURCE QUALITY CONTROL

- A. Assemble in factory any and all system assemblies and subassemblies at Commissioner's request, for testing in presence of Commissioner, prior to shipment. Notify Commissioner at least 3 weeks prior to date when equipment is complete and ready for testing. Make equipment available to Commissioner in Manufacturer's factory for period of at least 2 weeks for testing prior to shipment.
- B. During the test provide test equipment for all testing required and any other testing requested by the Commissioner.
 - 1) Test Equipment shall consist of any item that is proprietary to the testing of manufacture's equipment. Meters and oscilloscope need not be supplied.
- C. Control Testing:
 - 1) Theatre Lighting Control Console and Network system shall be assembled in factory and tested for control console update time, video refresh rate, remote video picture quality, and any other function requested by the, typical where applicable, Commissioner.
 - 2) The Commissioner shall be sole judge of extent of testing necessary and sole judge of acceptability of any system tested.
- D. Verification of Performance:
 - 1) Provide Commissioner with all test results for verification of system performance.
 - 2) For equipment that requires in house testing, do not ship any piece of equipment without either written verification of factory testing or written waiver of factory testing from Commissioner for that particular piece of equipment.

PART 3 - EXECUTION

3.1 SITE RESPONSIBILITIES

- A. Provide site supervision during the installation of electrical work associated with the

Theatrical and Architectural Lighting system elements.

- B. Field verify all dimensions prior to fabrication.

3.2 EXAMINATION

- A. Verification of Conditions: The Manufacturer shall examine areas and conditions under which the equipment is to be installed and shall notify the Commissioner in writing of conditions detrimental to proper and timely completion of work. Do not proceed with work until unsatisfactory conditions have been corrected in an acceptable manner.

3.3 ADJUSTING AND CLEANING

- A. Adjust all equipment and components for operation in accordance with the specifications, approved shop drawings and pertinent project drawings prior to the demonstration indicated herein.
- B. Touch-up minor abrasions and imperfections as required.
- C. All unnecessary equipment and materials shall be removed from the area(s) of this work upon completion, removed from the job site and disposed of legally at no additional cost to the City of New York.

3.4 DEMONSTRATION

- A. Installed equipment to be operated for approval, and inspected for quality by the Commissioner and the City of New York.
- B. Adjustments or modifications shall be made as directed by the Commissioner.
- C. Following the equipment demonstration, inspection and final adjustments, the City of New York's representatives shall be instructed in the use, care and maintenance of all items.
- D. Tests and instruction to be scheduled in conformance with project construction schedules and the availability of the Commissioner and the City of New York.
- E. Cost of re-inspection and additional testing by the Commissioner, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor or the General Contractor respective to the area of work concerned.

3.5 PROTECTION

- A. Suitable precautions shall be taken to protect the equipment in this section from damage after installation and prior to acceptance by the Commissioner.
- B. Remove all equipment protection and clean components thoroughly prior to the demonstration session

3.6 SCHEDULES

- A. Refer to 'TL' drawings for distribution and control device schedules related to the work in this section.
- B. Refer to attached appendix for quantities.

Theatrical Lighting Dimming and Control Appendix

ITEM #	ITEM DESCRIPTION	THEATER 1	THEATER 2	TOTAL
--------	------------------	-----------	-----------	-------

Dimmers & Racks

1	Full Size Dimmer Rack	4	2	6
	6 Module Dimmer Rack		1	1
2	2.4 kw Dual Dimmer Modules (500ms) Std Rise	192	102	294
3	Blank Module	AR	AR	AR
4	Controlled Relay Panels with breakers (for 36 relays)	1	1	2
5	Relays	26	24	50
6	Circuit Breakers for Relay Panel	26	24	50
7	24 Circuit Emergency Transfer Panel	1		1
8	6 Circuit Emergency Transfer Panel		1	1

Theatrical Control

9	Ion 1000 w/Fader Wing and 2 Monitors	1		1
10	Element 60 with 500 Channels w/ 2 monitors		1	1
11	Extra LCD Monitor	2	2	4
12	Wireless Focus Remote Unit	1	1	2
13	Wireless Focus Remote Access Point	1	1	2

Theatrical Network

14	Network Rack	1	1	2
15	Network Equipment	AR	AR	AR
16	Rack Mount UPS/Power Conditioning	1	1	2
17	Portable Network Full-function Node with Remote Video	1		1
18	Portable 2-Port DMX Node	9	5	14
19	Lighting System Computer	1		1

House Lighting Control

20	House / Work Light - Processor	1	1	2
21	Work / House LCD Station	1	1	2
22	Single Button Preset Station	7	4	11
23	2 Button Preset Station	1		1
24	Auxiliary Control Console	1	1	2

Distribution & Faceplates

25	Performance Lighting Distribution Faceplates as shown on Drawings	AR	AR	AR
26	Performance Lighting Control Faceplates as shown on Drawings	AR	AR	AR

Note:

This equipment list specifies major systems components and equipment, and should not be interpreted as a "bill of materials". This list may not detail all equipment required for complete, working systems. It is the Lighting Systems Contractor's responsibility to provide complete, working systems regardless of the completeness of this list.

END OF SECTION

SECTION 11 61 83

THEATRICAL AUDIO VIDEO SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including DDC General Conditions and Supplementary Conditions and General Requirements

1.2 SUMMARY

- A. The work in this section includes Theatrical Audio Video (AV) systems and support infrastructure within the following spaces and associated support areas:

- 1) Theater 1
- 2) Theater 2
- 3) Rehearsal Room 1
- 4) Rehearsal Room 2
- 5) Support Spaces
- 6) Public Lobby Spaces

- B. Section Includes:

- 1) Sound reinforcement/playback system
- 2) ADA assistive listening system
- 3) Production intercom (headset communication) system
- 4) Program monitor / paging system
- 5) Production video system
- 6) Infrastructure to accommodate future video projection systems
- 7) Infrastructure to accommodate future digital signage systems
- 8) Base system portable equipment package

- C. Work Results:

- 1) The equipment installed as a result of this section shall result in complete and working audio video systems.

- 2) Provide fully coordinated and engineered equipment, installation, supervision and commissioning for the following major systems and associated accessories as required for each space.
- 3) Provide supervision of AV Systems low voltage signal cable pulling, termination and testing by the Division 26 Electrical Contractor.
- 4) Provide coordination of empty conduit, backboxes and AC power wiring provided by the Division 26 Electrical Contractor.

D. Engineering:

- 1) Provide the services of a Licensed Engineer to engineer all means of support and fastening of the work of this section to the building structure.

E. Provide all material, components, accessories and services required to provide the work as specified herein, elsewhere in the project documents and/or as shown on related drawings.

F. Consult and coordinate with other affected work and contractors throughout the course of the work contained herein.

1.3 PRODUCTS FURNISHED BUT NOT INSTALLED UNDER THIS SECTION

- A. Furnish all AV Systems low voltage signal cable for installation, termination and testing by the Division 26 Electrical Contractor.
- B. Furnish all AV Systems equipment for installation by the Division 26 Electrical Contractor. AV equipment installation shall be under the direct supervision of AV Contractor.
- C. Furnish all non-standard panel and device back boxes; including custom panel back boxes, floor boxes, recessed and surface mounted loudspeaker back boxes, etc. as specified for installation under Division 26.
- D. Furnish connector panel floor boxes as specified, for installation under Division 26.
- E. Furnish all AC power receptacles within system equipment racks for termination under Division 26.

1.4 RELATED SECTIONS

- A. All drawings including General Construction, Structural, Theatrical, Mechanical, Electrical, and NYC DDC General Conditions of the contract, including Supplemental Provisions and NYC DDC General Conditions Specifications Sections, apply to this section.
- B. Coordinate with all related sections of the specifications including, but not limited to:
 - 1) DDC General Conditions
 - 2) Division 03 – Concrete
 - 3) Division 05 - Metals
 - 4) Division 09 - Finishes

- 5) Section 11 6133 - Theatrical Rigging
- 6) Section 11 6163 - Theatrical Lighting Dimming and Control
- 7) Section 12 6100 – Seating
- 8) Division 21 – Fire Suppression
- 9) Division 23 – Heating, Ventilating and Air Conditioning
- 10) Division 26 – Electrical
 - a. General requirements for all Electrical work, including installation of system cable trays, terminal cabinets, empty conduit, junction/pull boxes and back boxes for system devices and panels (Division 26).
 - b. Electrical terminations (AC power and grounding only) to all equipment racks and isolated ground AC power receptacles (Division 26).
 - c. Provision and installation of all conduit and back boxes (Division 26).
 - d. Electrical services and main circuit protection (Division 26).
 - e. Distribution system equipment (Division 26).
 - f. Conduit, wire, pull boxes, junction boxes and miscellaneous hardware and components as required for a complete electrical installation.
 - g. Terminations and testing of system continuity
 - h. Section 26 5561, Theatrical Systems Electrical Requirement
- 11) Division 27 – Communications
 - a. Structured cabling systems
 - b. At common facility panels, coordinate receptacles for building standard communications systems.

1.5 REFERENCES

A. Abbreviations or Acronyms in addition to those defined in elsewhere in the specifications:

- 1) A/R – As Required
- 2) ATP – Acceptance Test Procedure
- 3) AV – Audio Video
- 4) Cat – Category
- 5) DSP – Digital Signal Processor. Unless noted it refers to the Main Audio System processor.
- 6) FAT – Factory Acceptance Test
- 7) FBO – Furnished by Owner
- 8) HD – High-Definition
- 9) HD-SDI – High-Definition Serial Digital Interface
- 10) MATV – Master Antenna Television

- 11) MPEG – Moving Picture Experts Group
- 12) OFCI – Owner Furnished Contractor Installed
- 13) QAM – Quadrature Amplitude Modulation
- 14) RF – Radio Frequency
- 15) RU – Rack Unit. One Rack Unit (1RU) equals 1.75 inches of vertical panel height.
- 16) SAD – See Architectural Drawings
- 17) SD – Standard Definition
- 18) TSE – Theatre and Stage Equipment

B. Definitions

- 1) "Contractor": Installer responsible for the construction and installation for the work contained in this section.
 - a. Contractors involved with other work shall be indicated with a specific trade preceding the word "Contractor" (i.e. General, Electrical, etc.).
- 2) "Furnish": Purchase and/or fabricate and deliver to project site.
- 3) "Install": Physically install the items in their proper location (s) on the project site.
- 4) "Provide": Furnish and install.
- 5) In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required to complete the installation in accordance with the project documents.

C. Reference Standards, in addition to those defined in Section– Site Standards

- 1) Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
- 2) If an applicable code or standard permits work of lesser quality or extent than this specification, this specification and the related drawings will govern.
- 3) Comply with National and New York codes, and applicable UL standards.
- 4) Comply with national, state and local labor regulations and requirements.
- 5) If an applicable code or standard permits work of lesser quality or extent than this specification, this specification and the related drawings will govern.

D. American National Standards Institute (ANSI):

- 1) ANSI S1.4-1983 (R2001) American National Standard Specification for Sound Level Meters.
- 2) ANSI S1.11-1986 (R2001) American National Standard Specification for Octave-Band and Fractional Octave-Band Analog and Digital Filters
- 3) ANSI S1.42-1986 (R2001) American National Standard Design Response of Weighting Networks for Acoustical Measurements

E. Audio Engineering Society Incorporated (AES):

- 1) AES2-1984 (r2003) AES Recommended Practice - Specification of Loudspeaker Components Used in Professional Audio and Sound Reinforcement
- 2) AES3-2003 AES standard for digital audio engineering – Serial transmission format for two-channel linearly represented digital audio data (Revision of AES-1992, including subsequent amendments)
- 3) AES3-4-2009 Annex D (Normative) - AES standard for digital audio coaxial transmission and AES- 2id Annex C - AES standard for digital audio coaxial cable adapters and equalizer characterization
- 4) AES5-2003 AES recommended practice for professional digital audio – Preferred sampling frequencies for applications employing pulse-code modulation (Revision of AES5-1997)
- 5) AES11-2003 AES recommended practice for digital audio engineering – Synchronization of digital audio equipment in studio operations (Revision of AES11-1997)
- 6) AES14-1992 (r2004) AES standard for professional audio equipment – Application of connectors, part 1, XLR-type polarity and gender
- 7) AES20-1996 (r2002) AES recommended practice for professional audio – Subjective evaluation of loudspeakers
- 8) AES26-2001 (r2006) AES recommended practice for professional audio interconnections – Conservation of the polarity of audio signals (Revision of AES26-1995)
- 9) AES48-2005: AES standard on interconnections – Grounding and EMC practices – Shields of connectors in audio equipment containing active circuitry
- 10) AES10-2003: AES recommended practice for digital audio engineering – Serial Multichannel Audio Digital Interface (MADI) (Revision of AES10-1991)
- 11) AES-2id-2006: AES information document for digital audio engineering – guidelines for use of the AES3 interface
- 12) AES-R2-2004: AES project report for articles on professional audio and for equipment specifications – Notations for expressing levels (Revision of AES-R2-1998)
- 13) AES TD1001.1.01-10 Multichannel surround sound systems and operations

- 10) UL 910 (1998) test for Flame-Propagation and Smoke-Density Values for Electrical and Optical-Fiber Cables Used in Spaces Transporting Environmental Air
- 11) UL 969 (1995; rev Thru Dec 2006) Marking and Labeling Systems
- 12) UL 6500 Audio/Video and Musical Instrument Apparatus for Household, Commercial and Similar General Use 1999

R. Comply with guidelines and practices outlined in the following texts:

- 1) Audio Systems – Design and Installation, Giddings, Focal Press, 1997.
- 2) Sound System Engineering (3rd Edition), Davis and Davis, Focal Press, 2006.
- 3) Dashboard for Control guidelines – InfoComm International.

1.6 SUBMITTALS

- A. All submittals shall be submitted in accordance with NYC DDC General Conditions.
- B. All submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittal without jeopardizing the project schedule.
- C. All submittals shall leave space available for review stamps and comments.
- D. Submittals will be reviewed and accepted, containing verified field dimensions, prior to proceeding with the fabrication of the work in this section.
- E. Review all pertinent project Electrical and Theatrical series drawings. Following this review, provide to the Commissioner and the City of New York any additional information required to make a fully functioning system. In addition, the Manufacturer shall confirm that all systems components are compatible with conduit sizes and wire gauge sizes as shown in the drawings and that the interconnectivity of components is as required to make a fully functioning system. This confirmation shall be in writing within 30 calendar days of contract award. All costs associated with additions to the scope of the electrical work because of insufficient wire count and/or sizes after this confirmation shall be borne by the Manufacturer/Contractor.

F. Product Data

- 1) Where standard manufactured parts are used, submit current product literature describing component, manufacturer's recommended applications, load ratings, safety factors and dimensions.
- 2) Clearly indicate specific component and applicable options.

G. Shop Drawings

- 1) Provide shop drawings on D size minimum (24" x 36") sheets.
- 2) Include a cover sheet with a drawing index including the sheet number and title for each sheet in the set.
- 3) Provide a 4" x 4" area near the title block for review stamps and comments. This area should be in relatively the same location on each sheet.
- 4) Provide 1/4" = 1'- 0" plans of all locations which contain equipment in this contract based upon AutoCAD backgrounds provided by the Commissioner. Show all equipment properly located dimensioned and labeled. Note all work by others in the vicinity, which may affect work in this contract.
- 5) Provide an inventory of all equipment to be supplied, including quantities, manufacturer's part number, reference to applicable drawings, etc.
- 6) Provide complete, fully dimensioned, large scale detailed fabrication drawings of all major components.
- 7) Provide complete conduit riser diagrams detailing all AV systems cable pulls, conduit runs and sizes.
- 8) Provide complete wiring block diagrams, based upon the Contract Documents but including cable types, identification and color codes, and detailed wiring of connections, both at equipment and between equipment racks and wiring in conduit.
- 9) Provide plans detailing schematic drawings of any custom circuitry or equipment modifications, including connector pinouts and component lists. Show all required wire sizes and counts between all components.
- 10) Provide plans detailing patch panels, custom connector panels and wall plates, with dimensions.
- 11) Provide plans detailing all consoles, equipment enclosures, supports, brackets, tables, etc.
- 12) Provide plans detailing location of all equipment in racks, consoles or on tables, with dimensions; wire routing and cabling within housings; AC power outlet and terminal strip locations.
- 13) Provide plans detailing loudspeaker location, orientation and support and aiming systems.
- 14) Provide indications by arrow and boxed caption of all variations from contract

drawings and specifications, except where variation is indicated as acceptable.

- 15) Indicate all elements with appropriate safety factors and/or safety equipment.
- 16) Indicate recommended load limits for each element in the system with loading requirements.
- 17) Indicate length of all Category 5/5e/6 cables in the system.
 - a. No data/network cable of this type shall exceed 90M / 295ft.
 - b. Contractor is responsible to structure data/network cabling to ensure this length restriction is not broken.
- 18) Power requirements, one-line riser diagrams and installation circuit diagrams for electrical equipment. Show all required wire sizes and counts between all components.
- 19) Engineer and draft all shop drawings to represent actual fabrication and installation drawings and details.
- 20) Copies or tracings of the Contract Drawings are NOT acceptable as shop drawings and shall be rejected.
 - a. The layouts of the various items of equipment, accessories, specialties and wiring on the Contract Drawings are diagrammatic, unless specifically dimensioned, and do not necessarily indicate every item required for a complete installation.

H. Control System screens

- 1) Provide preliminary control system screen layouts and menu structure.
- 2) Screen layouts and menu structure shall be approved prior to any programming.

I. Samples

- 1) Label samples to indicate product, characteristics and location. Samples will be reviewed for color and appearance only. Compliance with all other requirements is the exclusive responsibility of the Contractor. Provided samples may be used within the actual systems once its use has been accepted.
- 2) Submit samples of the following for approval within 14 days of written request:
 - a. Samples of a typical AV panel faceplate showing details of finishing, engraving and connector mounting. This plate shall contain one of each type of connector and switch used on the project.
 - b. A typical gang-box faceplate.
 - c. Additional samples will be submitted within 14 days of Commissioner's written request.

J. Engineering Submittals:

- 1) All mounting systems requiring the combining of multiple manufacturer mounting systems or where all hardware is not provided as a single rated system shall be engineered, approved, and drawings stamped by a professional engineer licensed in the State of New York. The engineer shall verify that the equipment supplied under this section meets or exceed the design criteria of this specification.

K. Test and Evaluation Reports

- 1) Supervise testing of Theatrical AV Systems low-voltage cabling as identified in Article 3.3.A.5 below. Submit hardcopies and electronic copies of all documentation and raw data as identified.

L. Site Quality Control Submittals:

- 1) Confirm all site dimensions prior to installation of the equipment for this section. Provide drawings of site conditions which are NOT the same as the contract documents.
- 2) Confirm that all, power feeds and receptacles, backboxes and raceways are installed per electrical and theatrical drawings, bulletins and RFI responses released during the construction phase of the project. CAREFUL COORDINATION WITH THE ELECTRICAL CONTRACTOR IS REQUIRED.
- 3) Confirm structural steel locations and configurations within 14 days of contract award. Steel locations are intended to support the systems specified but due to variations in product form factor some adjustment to steel locations may be necessary due to the mounting requirements of a particular product. CAREFUL COORDINATION WITH THE STRUCTURAL STEEL CONTRACTOR IS REQUIRED.
- 4) Commissioning documents will be provided at the conclusion of the commissioning process. These documents will repeat the tests as detailed in "source quality control submittals" and include additional testing as required to confirm the installation is compliant with this section.

M. Special Procedure Submittals:

- 1) To ensure proper instruction of the user group the contractor of this section shall supply as part of the submittal process the following user instruction documentation.
 - a. User instruction syllabus
 - b. User instruction guide (bound hard copy)
 - c. User instruction guide (hands on system instruction)
 - d. Testing document for confirmation of understanding
 - e. DVD / Video user instruction file

1.7 CLOSE OUT SUBMITTALS

- A. Submit documents in accordance with NYC DDC General Conditions.
- B. At the time of acceptance testing, submit electronic and two bound hardcopies of parts lists and operation/maintenance instruction sheets.
- C. Within 60 days of the acceptance testing, submit one set of reproducible "as built and approved" drawings showing all equipment as installed. These drawings shall include all adjustments made during the checkout process.
- D. Submit operation and maintenance manuals with the "as built and approved" drawings. Each manual shall be bound in an individual binder with the project name on the front cover and system identification on the spine. The manuals shall include:
 - 1) Complete parts list for all equipment and telephone numbers for the authorized parts

and service distributors.

- 2) Instructions as to the safe operation of all equipment.
 - 3) Recommended maintenance schedule for component parts which may need periodic replacement.
 - 4) Recommendations for cleaning, maintaining and touch-up of all finished surfaces.
 - 5) Hardcopies of AV Cable testing documentation and raw data.
 - 6) Warranties as required herein and in NYC DDC General Conditions.
- E. Where specific elements do not require manuals, instruction sheets as to care and handling shall be provided.
- F. The record documents shall be reviewed by the Commissioner and all modifications to the documents stemming from this review shall be made as required.
- G. Above submissions are required as a condition for final approval of the work.

1.8 QUALITY ASSURANCE

A. Regulatory Requirements:

- 1) Reference to codes, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
- 2) If an applicable code or standard permits work of lesser quality or extent than this specification, this specification and the related drawings will govern.
- 3) Comply with requirements of NYC DDC General Conditions and Codes and Standards referenced therein.
- 4) Comply with applicable national, state and local labor regulations and safety requirements.

B. Qualifications:

1) Manufacturers:

- a. The manufacturer providing the material or equipment specified in this Section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years. The systems described herein shall be provided by a Theatrical Rigging Contractor who will be responsible for furnishing all services described herein including but not limited to coordination and supervision of the engineering, shop drawings, fabrication and provision for all systems specified herein and shown in the drawings.
- b. The system shall be comprised of components that are of professional

quality. Manufacturers shall be as listed per item in Appendix or approved equals.

- c. Items which are not listed in Appendix but are required for completion of the work in this section may be procured from any industry recognized manufacturer or fabricated in the shop of the contractor supplying the work of this section. The contractor of this section is solely responsible for the equipment provided to complete the work of this section.

2) Integrator:

- a. The contractor or subcontractor performing the work of this Section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
- b. Work of this Section shall be the responsibility of the single contractor, who shall own and operate their own shop for the fabrication of audio, video and communication systems, and be regularly engaged in the construction of such systems.
- c. The contractor must have the ability to undertake the work within the time available, judged against other currently contracted work.
- d. The contractor must have the ability to meet specifications and project requirements.
- e. The contractor must have the technical expertise as demonstrated by past projects and manufacturing / engineering capability to meet the specifications as detailed herein and project requirements.
- f. Project Manager:

- 1. The Project Manager shall be qualified and have experience in projects of similar size and scope. The Project Manager shall have binding authority to represent and act for the contractor supplying the work of this section. The project manager shall be the primary conduit for all information between the supplier of this equipment and the general contractor. All information given to the Project Manager shall be considered as given to the contractor of this section.

C. State Of The Art Development:

- 1) Contractor shall provide only the manufacturer's latest developed product as of the date of procurement as reasonably required to comply with the Project Schedule. In no case shall discontinued or obsolete equipment be acceptable.
- 2) Should product recall by the manufacturer require temporary or permanent replacement of a product specified under this section, the Contractor shall notify the Commissioner at the earliest reasonable time and shall arrange to replace the product in question at the earliest possible time.
- 3) Equipment found defective or subject to recall prior to scheduled installation shall not be delivered to the jobsite.
- 4) Equipment defect or intended recall shall not relieve the manufacturer from his contractual obligation with regard to delivery schedule of product.
- 5) Under no circumstances shall arrangement for alternate product necessarily require the City of New York to accept superseded equipment except on a temporary basis.

- 6) Provide the manufacturer's most recent software version available as of the start of the equipment testing process.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Delivery, storage and handling shall be coordinated with the Commissioner and shall meet all requirements described in the NYC DDC General Conditions.
- B. Packing, Shipping, Handling, and Unloading
 - 1) All equipment shall be appropriately and substantially packed for shipment.
 - 2) All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theater site allocation. Include packing and shipping lists for each container.
 - 3) All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- C. Acceptance at Site
 - 1) Coordinate responsibility for acceptance of material and equipment at job site with the Contractor.
 - 2) The Contractor shall be responsible for acceptance of the equipment and components at the jobsite, confirming that all quantities and counts are correct and for keeping accurate logs and records of such information.
- D. Storage and Protections
 - 1) Upon delivery, the materials shall be stored under cover in a dry and clean location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.
- E. Replace, at no additional cost to the City of New York, all equipment and materials which are damaged during storage or handling.

1.10 SITE CONDITIONS

- A. Existing Conditions
 - 1) Field measurements shall be taken prior to preparation of shop drawings to ensure proper fitting of work. Allow for adjustments during installation whenever taking field measurements.
 - 2) Should field measurement of site conditions alter the design or installation of system elements from the approved shop drawings, revised shop drawings shall be reissued for review.
- B. Environmental Requirements
 - 1) Equipment is classified according to its susceptibility to construction conditions that

may affect its operation. Classes shall be defined by the following paragraphs:

a. Class 1:

1. Cable and distribution apparatus, structural elements, electrical back boxes, face plates, terminal boxes, and empty equipment rack frames may be stored in weather protected spaces under "normal" construction site conditions provided that no electronic components are contained within devices, that storage boxes are sturdy and well sealed, and that equipment is protected with imperforate inner plastic sheeting.
2. Contractor may install this class of equipment in weather-protected spaces under "normal" construction site conditions provided that equipment is protected from dust and moisture by sturdy imperforate plastic sheeting and completely covered with corrugated cardboard held securely in place by duct tape. Cardboard covers shall not be removed until area is broom cleaned. Under no circumstances shall equipment remain uncovered overnight during installation or while work which causes high dust or moisture levels in area of placement is taking place.

b. Class 2:

1. Control panels, spare parts, test and other equipment (except as listed under Class 3), not subject to damage by concrete dust or dirt shall be stored and protected per Class 1 devices.
2. Contractor shall not install equipment in this class until area of installation is broom cleaned, "blown" clean with pressurized air, mopped, air conditioned and secure. Contractor may install control panels with electronic components under Class 1 conditions, but electronic components must be removed and not installed until area of installation meets Class 2 conditions.

c. Class 3:

1. Mixing consoles, filled equipment racks and other electronic equipment shall not be shipped to site until the rack and control rooms are finished, air conditioned, dust free, broom and mop cleaned, secure, and in all respects complete and ready for occupation. This class of equipment shall not be unpacked until the system is complete in all other respects. Under no circumstances may any equipment in this class be removed from the rack and control rooms into or through spaces which are not cleaned, air conditioned, and complete.

1.11 SEQUENCING AND SCHEDULING

- A. The installation of the equipment in this section shall begin following the completion of work which may be in conflict with the installation including:
- 1) Installation of structural steel.
 - 2) Electrical and mechanical work in ceiling.
 - 3) Principal foundation work.
 - 4) Installation of associated electrical work.

- 5) Installation of floor and machine room structure.
 - 6) Construction sequencing for the delivery of large elements to the site must be coordinated with the Commissioner. It is the responsibility of the AV Contractor to coordinate with the Commissioner to arrange for a means to deliver large component of the systems described herein.
- B. The Contractor shall submit a project schedule (critical path) which shall indicate coordinated functions with other trades and project requirements.
 - C. The installation of the AV Systems equipment, panels and devices shall not occur until all painting in the area has been completed.

1.12 WARRANTY

- A. Comply with the warranty requirements of NYC DDC General Conditions and the following.
- B. The Contractor shall warrant materials and workmanship of all equipment supplied under the work of this specification as free of defects. The Contractor shall guarantee in writing the repair or replacement within 14 days of all items found defective during a period of 1 year following the date of final acceptance. Ordinary wear and defects due to improper usage are excepted.
- C. During the warranty period above, all emergency conditions where system failures may be hazardous or may cause severe hardship or cancellation of events shall be responded to within 24 hours. Immediate action shall be undertaken to ensure the safety of the audience and presenters.
- D. During the Warranty Period, for each product that uses software, furnish manufacturer's software updates to the City of New York for installation.
- E. Guarantee Services
 - 1) One year following date of final acceptance, a factory engineer shall be provided to examine, adjust and repair the equipment included in this sections as required. This service shall not cover adjustments, repairs or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the Contractor. All labor and materials which are required to perform this service shall meet or exceed these specifications and shall not compromise the performance of the equipment in any way.
 - 2) Following this inspection and guarantee service, the Manufacturer shall provide the City of New York and the Commissioner with a written report itemizing the results of the inspections and the warranty work, which was conducted. The Manufacturer shall also include in this written report recommendations for any corrective actions which the Manufacturer feels should be taken, with respect to the equipment included in this section, but are outside the scope of the warranty agreement.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Theatrical Audio Video Systems Equipment

- 1) REFER TO APPENDIX 116183 FOR MAJOR COMPONENT AND EQUIPMENT LIST.
 - a. Appendix 116183 equipment list specifies major systems components and equipment, and shall not be interpreted as a "bill of materials". Appendix 116183 may not detail all equipment required for complete, working AV Systems.
 - b. The AV Systems Contractor shall provide complete, working systems regardless of the completeness of the Appendix 116183 equipment list.
- 2) Refer to Article 2.5 - EQUIPMENT AND COMPONENTS below for additional audio video systems requirements.

2.2 INTEGRATION CONTRACTORS

- A. To establish comparative standards of quality, the provision of the systems, equipment and services of this Section shall be one of the following audio video systems integration contractors or approved equal:

Altel Systems, Inc.
601 North Main Street
Brewster, NY 10509
Tel. (845) 278-4400
Fax. (845) 278-2824

AVI-SPL, Inc.
10-40 45th Avenue
Long Island City, NY 11101
Tel: (718) 806-4040
Fax: (718) 806-4041

Diversified Systems, Inc.
363 Market Street
Kenilworth, NJ 07033
Tel: (908) 245-4833
Fax: (908) 245-0011

Masque Sound & Recording Corp.
21 East Union Avenue
East Rutherford, NJ 07073
Tel: (201) 939-8666
Fax: (201) 939-4704

Specialized Audio-Visual Inc (SAVI.)
14 Solar Drive
Clifton Park, NY 12065
Tel: (518) 383-6501
Fax: (518) 383-6506

- B. Standards of Acceptance:

- 1) Refer to Paragraph 1.8.B.2 - Quality Assurance/Qualifications above.

2.3 SYSTEMS DESCRIPTION

A. Theaters 1 and 2:

1) Sound reinforcement & playback system:

- a. The sound reinforcement system shall be used for the reinforcement and monitoring of live stage sound, archival recording, lecture/narration, amplification and for the distribution of prerecorded sound throughout the audience environment.
- b. Coverage of the seating area shall be provided by self-powered loudspeakers.
 1. Theater 1 shall be provided with a fixed center array. Additional wiring infrastructure and structural support shall accommodate future or rented left-right stereo arrays.
 2. Theater 2 shall utilize portable loudspeaker located by the end user as necessary for individual production needs.
- c. The primary sound control position shall be located in the Control Room. A secondary house sound mix position will be accommodated at the crossaisle.
- d. Additional monitor or "foldback", and surround effects loudspeakers may be placed as necessary, connecting to loudspeaker outlets around the stage, and backstage areas.
- e. A small-format digital mixing system shall provide minimal live source mixing, digital signal processing and sound playback control. Playback, recording and signal processing equipment shall also be provided.
- f. Additional self-powered loudspeakers shall be provided for surround sound playback capabilities. System will accommodate future or rented computer controlled multi-channel sound playback systems as required for specific production needs.
- g. An audio patching system shall be located in the control booth equipment racks to allow connection of audio signals from the stage area to the mixing console and signal processing equipment.
- h. The sound system shall also be configured to accommodate inputs from sources that are purchased in the future, rented, or brought in by outside performers.
- i. System control wiring accommodation shall consist of standard CAT-6 control tie lines.
- j. All sound system loudspeakers shall be configured to be automatically muted by the building life safety system in the event of an emergency (life safety system provided under Division 26). Muting shall be initiated upon receipt of a dry contact closure signal from the building life safety system. Coordinate requirements with Division 26.

2) ADA assistive listening system:

- a. This system shall assist patrons with a hearing impairment to better hear the performance by means of wireless receivers.
- b. Receivers totaling 4% of the total available seating shall be supplied to meet current Americans with Disabilities Act (ADA) requirements.
- c. Program signal shall be normally derived from the program monitor microphone. Additional signal sources shall be patched as required.
- d. Receivers shall be in the form of wireless headsets, which shall provide additional capability to interface to individual induction-loop and other devices to permit more direct coupling of the received signal to a patron's compatible hearing aid device.
- e. The system shall transmit the audio signal via a remote FM antenna located

in the Theater. Coordinate FM transmitter frequency selection to ensure that a clear channel is used.

B. Rehearsal Studio 1

- 1) Sound playback system Infrastructure:
 - a. Connection panels for wall-mounted loudspeakers with wiring infrastructure back to wall plates to support a **future** portable equipment rack housing playback sources, mixer and connection panel as located on the drawings.
- 2) Tie-line connections to the main AV rack room shall also be provided.

C. Rehearsal Studio 2

- 1) Empty conduit for future tie-line connections to the main AV rack room shall be provided.

D. Building-wide Audio Video systems:

- 1) Production intercom (headset communication) system:
 - a. The system shall provide up to 12-channels of wired, party-line headset intercommunication for stage technicians and related personnel in all performance spaces. This system shall also serve as the master control for paging functions, feeding signals and contact closures to the program monitor / paging system.
 - b. The system consists of a power supply and a network of wiring and receptacles to which portable "belt-pack" stations and headsets may be connected. These stations shall provide local amplification, call-light signaling circuitry and microphone on/off and headset loudspeaker volume control. All stations shall operate in full-duplex mode (simultaneous listen/talk).
 - c. A remote intercom station shall be provided within portable stage manager station for use within the Theaters. Connections for the portable stage manager control station shall be provided in various control areas. The stage manager station shall contain production intercom remote station, rack-light panel and custom control panel, as indicated on the Drawings
- 2) Program monitor / paging:
 - a. This system shall feed the program signal from a permanently-mounted microphone within each performance space, or shall be fed from other program sources as required, both to the back-of-house (BOH) areas including dressing rooms, lounges, and other backstage areas.
 - b. The program signal shall feed a digital signal processor which will provide multiple outputs to program/paging amplifiers, as well as other systems that require a program audio feed including the production intercom and assistive listening systems.
 - c. Back-of-house paging capability shall be provided at the portable stage manager stations. Paging shall be via the production intercom remote station's microphone and integral "announce" button. Paging shall automatically duck the program monitor signal (priority muting) and actuate the local volume control override relay for back-of-house paged areas.
 - d. The portable stage manager stations shall be provided with program audio "mute" switches for back-of-house (BOH) zones. These momentary switches shall connect to the digital signal processor to toggle between a preset

"mute" or "audio" condition. Whenever the system is in a "mute" condition, the appropriate switches on all portable stage manager control stations shall remain illuminated until the mute condition is released.

- e. Ceiling- or wall-mounted loudspeakers and local autotransformer-type volume controls shall be located in the various areas as indicated on the Drawings.
- f. All program monitor / paging system loudspeakers shall be configured to be automatically muted by the building life safety system in the event of an emergency (life safety system provided under Division 26).

3) Production video system:

- a. This system shall permit the distribution of composite video signals over coax cabling to the stage, technical backstage areas, control positions, and other locations as shown on the Drawings.
- b. Video patch panels and distribution amplifiers shall be located in the AV rack room & control booth video equipment rack.
- c. The main production video signal source shall be provided by one color camera located at the front-of-house lighting pipe. The camera shall be mounted by means of a C-clamp, and shall utilize an industry standard safety cable. Additional future video cameras, including infrared-light cameras, may connect at various places around the Theatre as required.
- d. Production video monitors shall be provided within portable stage manager station to allow connection at various locations.
- e. Wiring accommodation of front-of-house lobby latecomer video monitors shall be provided within the lobbies as shown on the Drawings.

4) Video Projection and Digital signage system wiring infrastructure:

- a. CAT-6 copper and fiber optic cabling shall be provided to support digital and high definition video distribution via the use of appropriate twisted-pair or fiber transmitters/receivers. This type of transmitter/receiver equipment shall be rented or future furnished by the City of New York.
- b. The front-of-house lobby latecomer video monitor plate locations shall be provided with additional infrastructure to support a future digital signage system. Future digital signage content may be distributed to video displays located throughout the lobby space, entry and other public areas as shown on the Drawings.

E. Low-voltage audio video device and wiring infrastructure:

- a. Contractor shall provide a series of low voltage connection plates and panels providing a flexible wiring plant for audio video equipment to support theatrical productions. The wiring system will comprise microphone and line level audio, wireless microphone antenna distribution, production video, video projection, program monitor/paging, production intercom and network cabling including fiber optic cabling.
- b. Network and control wiring:
 - 1. Category-6 and fiber optic distribution equipment shall be located as shown to provide an overall AV systems network & control infrastructure. This distribution system shall accommodate all Ethernet, RS-422, GPI/O system needs.
 - 2. Contractor shall coordinate with electrical contractor to ensure all Category-6 cabling runs are less than 90 meters as required. Contractor shall coordinate with electrical contractor to organize conduit routing to limit overall cable lengths. Unless otherwise noted Category-6 cabling is not required to be run under 90 meters.

3. Audio video distribution equipment and patch panels to support building-wide paging, intercom, and lobby digital signage equipment shall be located within the AV rack rooms. This rack will also provide tie-line interconnection points between the theaters, lobby and primary rehearsal room.

2.4 MATERIALS

- A. All equipment and components shall be new and complete. No used or reconditioned equipment shall be acceptable.
- B. All mounting hardware is to be included.
- C. All equipment and components shall be factory tested prior to shipping.
- D. All bolts and fasteners must be Grade 5 or better.
- E. All bolted attachments to have lock washers or other approved self-locking hardware.
- F. All microprocessor controls shall utilize a non-volatile memory. System configuration, operating parameters, presets, etc. shall be protected against system power failure for a minimum of 48 hours.
- G. All internal wiring shall be factory completed and clearly marked. All field connections shall be by connector, terminal strip or other device previously specified. Any terminal strip connections shall be clearly labeled as to terminal designation.
- H. All wire sizes and insulation to comply with UL standards and local codes.
- I. All wiring to be harnessed and bound. No loose or randomly routed wires shall be permitted.
- J. All analog control wire counts to include 10% spares.
- K. No manufacturer logo shall appear on control station face plates or any other device located in public areas.
- L. Any supplementary or auxiliary equipment necessary for the operation of the system shall be supplied with overload and short-circuit protection.
- M. Do not purchase or fabricate any materials, components or items to be used in the audio video systems prior to review of shop drawings, unless otherwise directed by Commissioner.
- N. Use only materials, components and items that conform with industry practice and applicable code standards. Use only components which are new and never previously used. Take care during installation to prevent scratches, dents, chips, etc.
- O. Install all rack-mounted equipment with 10-32 button head machine screws with Phillips head.
- P. Custom rack panels shall be 3/16" thick aluminum, standard EIA sizes, brushed black anodized finish unless otherwise noted. (Brush in direction of aluminum grain only.) Custom connector plates (loudspeaker, microphone, video, etc.) are typically stainless steel. It is the responsibility of the Contractor to verify plate finish with the Commissioner. Plastic plates will not be accepted.

- Q. All engraving shall be 1/8" block unless noted otherwise. Except where noted to the contrary, on dark panels or pushbuttons, letters shall be white; on stainless steel or brushed natural aluminum plates, or light-colored pushbuttons, letters shall be black.
- R. Connections shall be made with approved connectors and/or terminal blocks equal to Cinch 140 series or as indicated. Mount trim potentiometers, custom circuit cards, relays and transformers (except large 70V units) in shielded enclosures, and mark their function and connections with engraved lamacoid labels.
- S. Per IEC-268 standard, all XLR connectors, within equipment or out, shall be wired pin 2 hot (high), pin 3 low, and pin 1 shield (screen).
- T. Unless otherwise stated, all rack-mounted electronic and electrical equipment and components shall conform to EIA 19" standard. Any devices not specifically designed to be rack mountable shall be adapted, by professionally acceptable methods, to meet the EIA standard.
- U. The rack height of all equipment and components in this specification is in 1.75" (44mm) units denoted "U", i.e., a 5.25" device, which is three rack spaces high is denoted as "3U".
- V. All components shall be factory tested prior to shipping.
- W. All wire sizes and insulation shall comply with UL standards and local codes.
- X. All wire shall be harnessed, bound and routed neatly with no loose or randomly routed conductors.
- Y. All internal wiring shall be factory dressed and clearly marked. All field connections shall be by connector, terminal strip or other approved method specified herein. All terminal strips connection shall be clearly labeled.
- Z. All switches used in these systems (whether or not mentioned or shown in this specification) shall have sufficient voltage and amperage rating to cover the use for which they are required with a safety factor of at least 2. All switches handling audio circuits shall use gold contacts and shall meet JAN-S-23 or MIS-S-3950A specifications or equivalent.
- AA. Audio transformers shall be of appropriate impedance ratio and power-handling capacity for the function intended and, unless otherwise noted herein, shall have a frequency response within ± 1 dB from 20-20,000 Hz.
- BB. A -10dB to +4dB balancing transformer shall be provided for any unbalanced audio equipment used within the system.

2.5 EQUIPMENT AND SYSTEMS

A. General

- 1) Provide Theatrical Audio Video (AV) Systems described herein and on the Drawings.
- 2) Regardless of the length or completeness of the device descriptions herein, each device shall meet all of its published manufacturer's specifications. Verify performance as required. Where two or more acceptable products are listed, the Contractor may use either at his option. Equipment other than that listed shall not be substituted without specific written approval of the Commissioner.

- 3) Equipment quantities, if not specifically called out below, shall be as indicated on the Drawings, unless otherwise noted. The Contractor shall provide the higher quantity should a discrepancy between the Drawings and this Section exist.
- 4) Certain equipment is shared among multiple systems. Such equipment is listed here only once, in the system that constitutes the primary use of such equipment.

B. AV Equipment mounting - General Requirements

- 1) All mounting hardware to be included.
- 2) All bolts and fasteners must be Grade 5 or better.
- 3) All bolted attachments to have lock washers or other self-locking fasteners.
- 4) Provide all required mounting brackets and framing, hardware and components, safety systems and rigging systems using the following minimum design factors (given as ratio of working load limit (WWL) : rated breaking load):
 - a. 5:1 – Minimum design factor for all mounting components regardless of mounting condition.
 - b. 5:1-8:1 – Minimum design factor for manufacturer provided mounts & assemblies where engineered stamped documentation and destructive testing data is provided by manufacturer.
 - c. 10:1 – For all hardware and connecting assemblies between manufacturer rated assemblies when AV equipment is hung above the general public. This includes but is not limited to wire rope, bolts, shackles, turnbuckles, beam clamps, supplemental steel provided by AV contractor and other connecting hardware.
 - d. Design factor calculations to be provided with all equipment mounting details.
- 5) Provide all integral redundancy components, including safety cables, rated at 10:1 for all equipment mounted above head height. This includes but is not limited to loudspeaker arrays, ceiling loudspeakers, wall loudspeakers, video monitors, video projectors, video cameras etc.
- 6) Provide loudspeaker field adjustments and alignments after installation. All component orientations must be within + 5-degrees of the specified angles, with an allowable adjustment range of + 10-degrees.
- 7) AV Contractor shall coordinate required additional blocking, supplemental steel or unistrut supports with General Contractor & specific trade contractors.
- 8) All mounting systems requiring the combining of multiple manufacturer mounting systems or where all hardware is not provided as a single rated system shall be engineered, approved, and drawings stamped by a professional engineer licensed in the State of New York. The engineer shall verify that the equipment supplied under this section meets or exceed the design criteria of this specification.

C. Racks, patching panels and other permanent equipment

- 1) Microphone / Line Level Patch Panel
 - a. 2 x 24, 1/4" phone jack programmable audio patch panel.
 1. Provide programmable patchbay to allow field-selection of normals

and grounding. Normals shall have the option of full-normal, half-normal and non-normal. Grounding shall have the option of bussed, isolated, or looped.

2. Provide non-normalizing patch panel phone jack for use with isolation transformers, multiples, combining networks, tie lines; and microphone & line level circuits from AV panels and wall receptacle plates as shown on schematic drawings.
3. All patch jack contacts (tip, ring and sleeve) shall be wired to E3 style 3-pin molded connectors. Normalizing shall be internally selected via jumper connections on front of patchbay.
4. Provide patch panel jacks with tip & ring normalizing and an isolated switching "break" circuit which shall be used for sleeve normalizing. This jack will be used for all normalizing applications of microphone & line level circuits as shown on schematic drawings.
5. Provide paper designation strips above or below each patch row with both the appropriate signal level and circuit location description for each patch jack, and the consecutive circuit numbers; 1 through 24 for both the top and bottom rows.
6. Legends shall correspond with AV receptacle panel legends where applicable. Refer to detail drawings.
7. Provide plastic laminate designation labels at left and right of the patch panel to indicate reference letter (A, B, C, etc.) of the individual patch panel. Labels mount on the steel rack ears.
8. Color shall be black.
9. See drawings for additional information. All patch jack contacts (tip, tip normal, ring, ring normal, sleeve, and sleeve normal) shall be wired to a terminal strip mounted on the rear of the equipment rack. All connections to the patch panel (including normalizing) shall be made at this terminal strip, whether internal to the rack or from external devices. The Contractor shall propose a method of patch panel termination for approval by the Commissioner.

b. Manufacturers

1. Bittree
2. ADC
3. Switchcraft
4. Or approved equal

c. Basis of Design

1. Basis-of-design for is Bittree 489 Series (B48DC-FNPITE3M20U7L). Comparable products by one of the manufacturers listed above shall also be acceptable.

2) Video Level Patch Panel

a. Video jack patch panel.

1. Provide non-normalizing patch panel video jack for tie lines and video circuits from AV panels and wall receptacle plates as shown on schematic drawings.
2. Provide patch panel jacks with normalizing for all normalizing applications of video circuits as shown on schematic drawings.
3. Provide self-terminating patch jacks to facilitate termination of the unused side of a normalizing jack when a patchcord is in place.
4. Provide paper designation strips above or below each patch row, with both the appropriate signal level and circuit location description for each patch jack, and the consecutive circuit numbers; 1 through

- 26 for both the top and bottom rows.
 - 5. Legends shall correspond with AV receptacle panel legends where applicable. Refer to detail drawings.
 - 6. Provide plastic laminate designation labels at left and right of the patch panel to indicate reference letter (A, B, C, etc.) of the individual patch panel. Labels mount on the steel rack ears.
 - 7. Color shall be black.
 - 8. See drawings for additional information.
 - b. **Manufacturers**
 - 1. Canare
 - 2. ADC
 - 3. Switchcraft
 - 4. Or approved equal
 - c. **Basis of Design**
 - 1. Basis-of-design for is Canare 261U-DVJAW 2x26. Comparable products by one of the manufacturers listed above shall also be acceptable.
- 3) **Data/Network Copper Patch Panel (Cat 6 - RJ-45)**
- a. **Manufacturers**
 - 1. Leviton
 - 2. Blackbox
 - 3. Switchcraft
 - 4. Or approved equal
 - b. **Basis of Design**
 - 1. Basis-of-design for is Leviton Extreme 6+ QuickPort Patch Panel, 2RU (69270-U48). Comparable products by one of the manufacturers listed above shall also be acceptable
 - c. Patch panels shall be UL listed, meet or exceed TIA/EIA-568-B Category 6 requirements, and meet FCC Part 68. Panels shall be 19" wide to fit standard racks and wall mount brackets, and have a rolled edge design for rigidity.
 - d. Connections shall comply with TIA/EIA 568-B instructions for Category 6 termination practices.
 - e. Provide paper designation strips above or below each patch row with both the appropriate signal level and circuit location description for each patch jack, and the consecutive circuit numbers; 1 through 24 for both the top and bottom rows.
 - f. Legends shall correspond with AV receptacle panel legends where applicable. Refer to detail drawings.
 - g. Provide plastic laminate designation labels at left and right of the patch panel to indicate reference letter (A, B, C, etc.) of the individual patch panel. Labels mount on the steel rack ears.
 - h. Provide 1RU of horizontal cable management for every 24 patch points. Leviton 492RU-HFO 2RU front cable management or equal.
 - i. Color shall be black.
 - j. See drawings for additional information. All patch jack contacts (tip, tip normal, ring, ring normal, sleeve, and sleeve normal) shall be wired to a terminal strip mounted on the rear of the equipment rack. All connections to the patch panel (including normalling) shall be made at this terminal strip, whether internal to the rack or from external devices. The Contractor shall propose a method of patch panel termination for approval by the Consultant.

- 4) Data/Network Fiber Patch Panel (Multimode & Singlemode – Duplex LC)
 - a. Manufacturers
 1. Hubbell
 2. Blackbox
 3. Panduit
 4. Or approved equal
 - b. Basis of Design
 1. Basis-of-design for is Hubbell Fiber Interconnection Shelf, 1RU (FEUR24LCM). Comparable products by one of the manufacturers listed above shall also be acceptable
 - c. Patch panels shall be UL listed, 19" wide to fit standard racks and wall mount brackets and include internal cable management.
 - d. Patch panels shall be populated with (24) LC Duplex Multimode per row.
 - e. Provide paper designation strips mounted on 1RU blank panel above each patch row with both the appropriate signal level and circuit location description for each patch jack 1-24, and the consecutive circuit numbers.
 - f. Legends shall correspond with AV receptacle panel legends where applicable. Refer to detail drawings.
 - g. Provide plastic laminate designation labels at left and right of the patch panel to indicate reference letter (A, B, C, etc.) of the individual patch panel. Labels mount on the steel rack ears.
 - h. Provide 1RU of horizontal cable management for every 24 patch points. Leviton 481RU-HFO 1RU front cable management or equal.
 - i. Color shall be black.
 - j. See drawings for additional information.

- 5) XLR General Purpose Patch Panel
 - a. Manufacturers
 1. AVP
 2. Switchcraft
 3. Whirlwind
 4. Or approved equal
 - b. Basis of Design
 1. Basis-of-design for is AVP Universal Bulkhead. Comparable products by one of the manufacturers listed above shall also be acceptable
 - c. Patch panel shall be populated with connectors per system block diagrams. Unused Bulkhead spaces are to be provided with blank cover insert.
 - d. Provide designation strips above each patch row engraved with both the appropriate signal level and circuit location description for each patch jack, and the consecutive circuit numbers; 1 through X for both the top and bottom rows.
 - e. Provide plastic laminate designation labels at left and right of the patch panel to indicate reference letter (A, B, C, etc.) of the individual patch panel. Labels mount on the steel rack ears.
 - f. Legends shall correspond with AV receptacle panel legends where applicable. Refer to detail drawings.
 - g. Color shall be black.
 - h. See drawings for additional information.

- 6) Equipment Racks and panels
 - a. Manufacturers

1. Middle Atlantic
 2. Chief
 3. Atlas Sound
 4. Or approved equal
- b. Basis of Design
1. Basis-of-design for is Middle Atlantic MRK and SR series. Comparable products by one of the manufacturers listed above shall also be acceptable
- c. Floor Mount racks shall be Middle Atlantic Products MRK-4031 or MRK-4431 series or approved equal as identified in 11 61 83-A Appendix A equipment list.
1. EIA 19" standard rack providing 40 rack units of panel space (overall height: 76-1/8"), or 44 rack units of panel space (overall height: 83-1/8") 22" of width, and 31-1/2" of depth, minimum. This rack frame is supplied with rear door and adjustable front mounting rails.
 2. Provide optional Middle Atlantic Products MV-RR40 or approved equal rear rack rails for each 40U modular rack frame. Provide optional Middle Atlantic Products MV-RR44 or approved equal rear rack rails for each 44U modular rack frame.
 3. Provide optional Middle Atlantic Products MW-ST or approved equal solid top for each modular rack frame.
 4. Provide optional Middle Atlantic Products SPN-40-312 or approved equal side panels, one pair per 40U rack group. Provide optional Middle Atlantic Products SPN-44-312 or approved equal side panels, one pair per 44U rack group
- d. Swing-Out racks shall be Middle Atlantic Products SR-40-22 series or approved equal.
1. EIA 19" standard modular rack frames providing 40 rack units of panel space (overall height: 90-3/4"), 23.5" of width, and 22-3/4" of depth, minimum. This rack is supplied with adjustable front mounting rails.
 2. Provide optional Middle Atlantic Products DWR-RR40 or approved equal rear rack rails for each rack.
- e. Provide the following (as applicable):
1. Provide (1) switched incandescent light bulb per rack with magnetic base to provide work light in back of rack. Middle Atlantic WL-60 or approved equal.
 2. Provide matching blank panels in all spare rack spaces. See "blank panels" section. Maximum individual blank panel height shall be 3RU.
 3. Provide matching 1U ventilation panels above and below all DSP units.
 4. Amplifiers should be stacked on top of each other, without spacing between. *Do not* provide ventilation panels above and below amplifiers unless required by manufacturer.
 5. Provide two Middle Atlantic Products CLAW or approved equal patch cord holders for each rack group containing mic/line level or loudspeaker patch panels.
 6. Provide one (1) rack mount AC power receptacle strip for each rack group. Receptacle strip shall mount to the front of one rack and be connected to an unswitched AC power circuit. Hammond 1582T8A1BK or approved equal.

7. Approved pan or truss head type panel mounting screws with non-metallic flat washers shall be used to secure all rack-mounted equipment.
8. In racks containing amplifiers or digital signal processors and NOT located in public areas or control booths provide temperature controlled exhaust units. Middle Atlantic MW-#FT###CFM series or approved equal. Contractor to determine fan CFM after completing individual thermal management calculations.
9. Provide Middle Atlantic Products BB-40 or approved equal 2" wide heavy copper busbar in each rack for connection of isolated ground circuits. Bond busbars together with grounding conductor in a "star" configuration equal in AWG to conductor provided by Electrical Contractor to local AV panel board for interface with the sound system isolated ground network. Refer to AC power grounding detail on drawings for further information.
10. All racks shall have the same color finish (Textured Black).

7) AV Receptacle Panels and Wall Plates Custom Fabrication:

a. Methods and materials:

1. Single or multiple signal level and circuit receptacle panels for connection of AV Systems devices throughout the facility. Panels may include any combination of circuits and connectors for these signal levels: microphone, line level audio, video, intercom, control, and low volt/impedance loudspeaker. Connectors shall be identified as to signal level, circuit type, and circuit number by clearly engraved and coordinated legends on each panel. Exceptions as noted.
2. Refer to device plans for locations.
3. Refer to AV Systems Connector Panel Schedule for back box type, size, and depth, and mounting information.
4. Conduit and AV back boxes shall be supplied and installed by others.
5. AV panel faceplates shall be provided and installed by the AV Contractor, except as noted.
6. Wire shall be supplied, pulled, and terminated by the Contractor.
7. Circuit/connector quantity: As shown on detail drawings and as specifically indicated in the AV Panel Schedule. Exceptions as noted.
8. Connector: Panel or chassis types, as indicated below. Mount on AV Panel as shown on drawings and fasten with stainless steel machine screws, hex nuts, and lock washers (screw head style, color, and thread size to match connector body; slot or phillips drive to match wall plate screws). Refer to connector specification paragraph below. Exceptions as noted.
9. Microphone level ("M" series): Female XLR-3.
10. Line level ("L" series): Male & female XLR-3 pairs.
11. Production party-line intercom ("PL" series): Male XLR-3.
12. Network line ("N" series): Locking XLR-style Female RJ-45 CAT-6.
13. Production video coax ("V" series): Female BNC.
14. RF antenna coax ("RF" series): Female BNC.
15. Low volt/impedance loudspeaker ("LS" series): NL4 "speakon" series.
16. Fiber Optic ("F" series): Locking XLR-style female LC fiber.

- b. Laser etched/engraved legend: Details as indicated below. Locate legends on AV Panel as shown on drawings. Characters shall be laser etched/engraved and entire panel sealed. Exceptions as noted.

1. Legends shown on drawings are typical. Refer to AV Systems block diagrams and/or submit proposed layout to Commissioner for review.
 2. Similar groups of connectors on AV Panels are typically labeled with an appropriate signal level and circuit location title (e.g., microphone lines terminate in "M" series connectors on the "MICROPHONE" section of the panel).
 3. Individual connectors are labeled with the corresponding patch panel reference (e.g., "M-A11" indicates a microphone line terminating at patch panel row A, jack number 11), or other appropriate circuit reference (e.g., production intercom "CH A"). Refer to "Part 3 - Execution: Installation - Equipment - Labeling".
 4. Signal level title legend size shall be 0.1875" or 0.250" high characters of medium weight (as required).
 5. Patch panel reference legend size shall be 0.125" high characters of medium weight.
 6. Legend color typically references the specific signal level and follows guidelines found in "Part 3 - Execution: Installation - Equipment - Labeling".
- c. Termination: Refer to general termination guidelines in "Part 3 - Execution: Installation - Wiring - Termination" for further explanation of the following methods. Exceptions as noted.
1. XLR-type connectors: Solder wire directly to connector in the field.
 2. BNC-type connector: Attach double crimp-type (crimp-crimp) straight plug to end of coaxial cable for connection directly to the feed-through jack. Ensure integrity of coaxial cable shield isolation from back box by insulating connectors (and/or any adapters) with a shroud or hood of shrink tubing, or similar material. Plastic "electrical" tape is not acceptable.
 3. NL4 series connectors: Attach properly sized crimp-type female disconnect terminals to large gauge loudspeaker wire and mate with male disconnect terminals on the connectors. Securely strain relief loudspeaker wires to connector body or wall plate to ensure integrity of the electrical/mechanical disconnect termination.
 4. Ethercon RJ-45 connectors: 110 punchdown at patchbays; Male RJ-45 crimp to panel passthrough connector in field.
- d. Wall Connector plates (sizes as shown on drawings and schedules)
1. All details as in (a) above, with the following additional requirements:
 - a) Refer to AV Symbol & Device Schedule for back box type, size, and depth, and mounting information.
 - b) All plates shall be flush type for mounting to recessed back boxes or surface mount Wiremold-type boxes.
 - c) Wall plate: Standard, x-gang (size "x" to match detail drawings), type 302 stainless steel (heavy gauge), bright brushed or satin finish, flush-type electrical wall plate. Mount to back box with 6-32 stainless steel, slot or phillips drive, oval head machine screws. Exceptions as noted below.
 - d) Plates in public areas to have finish by Commissioner.
- e. AV panels (sizes as shown on drawings and schedules).
1. All details as in (a) above, with the following additional requirements.
 2. Panel: Fabricated of type 5052-H32 aluminum, 0.125" minimum thickness, lightly brushed (vertical direction), with black anodized and clear sealed finish. Panel dimensions to match back box size. Edges of panel shall be ground square and flat. Corners of panel to

- 3. have small radius. Exceptions as noted below.
 - 4. Panels in public areas to have finish by Commissioner.
 - 5. Panels that are flush mounted shall be oversized by 1/2" on all sides to cover the transition from backbox to wall treatment.
 - 6. Back Box: Provided by div 26, Hoffman type with a minimum depth of 6". Color: Black. Exceptions as noted below. Coordinate with Electrical Contractor.
 - 7. Panels 8" wide and larger shall have aluminum black anodized oval instrumentation handles or approved equal as shown on AV systems panel detail drawings. Handles shall be 1.75" deep.
- f. Floor Boxes
- 1. All details as in (a) above, with the following additional requirements.
 - 2. Panel (inside box): Fabricated of type 5052-H32 aluminum, 0.125" minimum thickness, lightly brushed (vertical direction), with black anodized and clear sealed finish. Panel dimensions to match opening size of floorpanel or as required by floor pocket manufacturer. Edges of panel shall be ground square and flat. Corners of panel to have small radius. Exceptions as noted below.
 - 3. All floor box lids to have finish by Commissioner.
 - 4. Floor Back Box: Furnished by AV contractor, available from floor pocket manufacturer. Exceptions as noted below. Coordinate with Electrical Contractor. Refer to Drawings for back box types.
 - 5. Installation of floor pocket and back box requirement of floor box shall be by Electrical Contractor.
 - 6. Floor boxes shall be as per the Appendix A equipment list.

D. Connectors

- 1) Connectors, as specified below, to properly install and terminate all AV Systems components.
 - a. Provide a minimum of five percent (5%) spare parts, for each connector series listed below, including all shells, pins, sockets, modules, strain reliefs, latches, etc. Exceptions as noted.
- 2) Audio Connectors
 - a. XLR Type
 - 1. XLR-3 (Microphone, Line, Communication, Loudspeaker): (male) and (female) panel mount connectors; (male) and (female) cable connectors. Silver contacts and nickel shells throughout.
 - 2. Note wiring:
 - a) Balanced mic/line: pin 1 = shield (screen), pin 2 = high (hot), pin 3 = low.
 - b) Unbalanced mic/line: pin 1 = shield/common, pin 2 = high, pin 3 = tie to pin 1.
 - c) Production intercom: pin 1 = shield/common, pin 2 = +30VDC, pin 3 = audio/signal.
 - d) In no case shall pin 1 be tied to case of connector.
 - 3. XLR-4 (Production Intercom Headset/Handset): (male) and (female) cable connectors. Silver contacts and nickel shells throughout.
 - b. 1/4" Phone Plugs and Jacks
 - 1. Plug: 2-pole and 3-pole cable plugs. Nickel contacts and nickel shells.
 - 2. Jack: latching 2- or 3-pole cable jack. Silver contacts and nickel

- shells.
 - 3. Note wiring:
 - a) 3-pole: Sleeve = ground/shield, ring = low, tip = high (hot).
 - b) 2-pole: Sleeve = common/ground/shield, tip = high.
 - c. 1/8" Mini Plug
 - 1. 1/8" T/R/S "Walkman-type" stereo mini plug. Metal shell required.
 - d. Phono (RCA) plugs and jacks
 - 1. Plug: RCA plug (available in pairs of black and red). Gold plated nickel contacts and brass shell.
 - 2. Jack: RCA jack. Nickel plated brass contacts and shell. Use isolation washer color as required (black/red/yellow/green/blue/white)
- 3) Video / RF connectors
- a. UHF Type (Wireless Microphone System Antenna)
 - 1. Phenolic insulated panel receptacle (female) for RG-8/U type coaxial cable. Beryllium copper center contact and TR-5 tarnish resistant alloy finish on body and fittings.
 - b. 75-ohm BNC Type (Video)
 - 1. Insulated double female (feedthru) recessed panel mount connector; double crimp-type straight plug (with long body sleeve for 75-ohm precision coaxial cable). Gold plated center contact and beryllium copper external contact.
- 4) Multipin Audio Connectors
- a. Whirlwind MASS-Series connectors as detailed below:
 - 1. Up to 16-channel:
 - a) Whirlwind W5CRP or approved equal crimp type pin/socket panel mount connector assembly.
 - b) Whirlwind W5IRP or approved equal crimp type pin/socket cable connector assembly.
 - 2. Up to 28 channel:
 - a) Whirlwind W6CRP or approved equal crimp type pin/socket panel mount connector assembly.
 - b) Whirlwind W6IRP or approved equal crimp type pin/socket cable connector assembly.
 - 3. Up to 40-channel:
 - a) Whirlwind W3CRP or approved equal crimp type pin/socket panel mount connector assembly.
 - b) Whirlwind W3IRP or approved equal crimp type pin/socket cable connector assembly.
 - 4. Up to 56-channel:
 - a) Whirlwind W4CRP or approved equal crimp type pin/socket panel mount connector assembly.
 - b) Whirlwind W4IRP or approved equal crimp type pin/socket cable connector assembly.
 - 5. Refer to manufacturer's pinout diagrams for wiring details.
 - 6. Wire and assemble connectors only according to the manufacturer's instructions.
 - 7. Use only those assembly tools supplied by the manufacturer for these contacts:
 - a) Crimp tool kit (or better: i.e., stripping/crimping machine) and all necessary crimping dies for specified contacts.

- b) Insertion/extraction tool for formed contacts.
 - 8. Provide 20% spare pins and sockets:
 - a) Crimp type male pin contact
 - b) Crimp type female socket contact
 - 5) Data/Networking Connectors
 - a. RJ-45 Type (Data Network)
 - 1. EtherCon type CAT6 D-shape panel mount jack.
 - 6) Fiber Optic
 - a. Duplex LC series panel connectors
 - 1. OpticalCon type LC-Duplex pass-through connector in D-shape panel mount jack.
 - b. Duplex LC series cable connectors
 - 1. Corning #95-051-98-SP-X Anaerobic Connectors or approved equal
 - 2. Corning # TRIGGER-BP-D Duplex Clip or approved equal

E. Switches

- 1) Pushbutton
 - a. Manufacturers
 - 1. EAO
 - 2. Switchcraft
 - 3. C&K Components
 - 4. Or approved equal
 - b. Basis of Design
 - 1. Basis-of-design for is EAO Series 31. Comparable products by one of the manufacturers listed above shall also be acceptable
 - c. Square panel mount general purpose pushbutton switches with internal incandescent lamp. Refer to Drawings for further details.
- 2) Keylock
 - a. Manufacturers
 - 1. EAO
 - 2. Switchcraft
 - 3. C&K Components
 - 4. Or approved equal
 - b. Basis of Design
 - 1. Basis-of-design for is EAO Series 15. Comparable products by one of the manufacturers listed above shall also be acceptable
 - c. Panel mount general purpose two position keylock switches with internal incandescent lamp. Refer to Drawings for further details.

F. Wire and cable

- 1) Conduit Installation
 - a. Refer to Wire and Cable Schedule located in the Appendix for specific wire type information.
- 2) Flexible Drop Multicable (where required)

- a. Provide Kellems-type metal mesh cord strain relief correctly sized to restrain permanently attached multi-conductor cables to junction boxes.

G. AC power equipment

1) AC Receptacle Strip

a. Wiremold 20GB Series Plugmold Strip or approved equal

- 1. A painted steel, 3-wire, 1-circuit, prewired outlet receptacle strip with insulated grounding conductor. Unit is available in three (3), five (5), or six (6) foot lengths containing 5 to 12 receptacles.
- 2. Receptacle strips shall be permanently mounted inside equipment racks.
- 3. Wiring to AC power switcher and intermediate junction boxes shall be in flexible conduit (greenfield).
- 4. Provide a sufficient quantity and configuration of AC receptacle strips to support the specified equipment in each equipment rack group, plus a minimum of 50% spare outlets.
- 5. Isolated ground conductors shall be wired directly to the copper busbar in each rack. Busbars are bonded together in a "star" configuration with 3/0 AWG welding cable and connected to the branch circuit panelboard via heavy-gauge cable (wiring and connection to panelboard by the Electrical Contractor). Refer to AC power grounding detail on drawings.

H. Computers and Associated Equipment

1) CPU

- a. Due to the ever-changing nature of the computer market, the CPU provided shall be the latest model and speed available at the time of installation. CPU make and model shall be fully compatible with all specified peripherals including audio cards, video cards, and proprietary control cards.
- b. The PC shall be fabricated and supplied by an Original Equipment Manufacturer to be approved by the Commissioner. Custom-built computers will not be accepted.
- c. Unless specifically noted otherwise, any CPU provided shall be rack mountable. This may be accomplished with a rack shelf or an actual rack enclosure.
- d. Standard peripherals, such as mouse and keyboard shall be supplied with the CPU.
- e. The operating system and platform shall be as specified in the equipment list, 11 61 83-A.
- f. On CPU specifically designated for performance playback use motherboards with integrated video or audio cards shall not be acceptable.
- g. All standard currently-available external interfaces shall be available.

2.6 ACCESSORIES

A. Spare Parts Package

- 1) Provide a package of spare parts for all user-serviceable portions of the AV Systems.
- 2) A minimum quantity of 10% of all connectors, bulbs, fuses, knobs, switches and other miscellaneous parts shall be supplied, in addition to any spare parts specifically listed

in individual product specifications.

- 3) Label all spare parts with manufacturer's part number, designation and description, and location(s) where used.
- 4) The spare parts shall be delivered to the City of New York after completion of the Commissioning procedure.

2.7 SOURCE QUALITY CONTROL

- A. Contractor shall demonstrate to the Commissioner the operation of all custom-designed equipment such as paging interfaces and communication control panels prior to shipping such equipment to the site. Other equipment such as mixing consoles, loudspeaker systems, equipment racks and other equipment shall also be inspected at this time. Testing shall be performed at a time to be determined by the Commissioner.

2.8 FABRICATION

- A. Fabrication, assembly and wiring shall be neat and workmanlike throughout.
- B. Control desks, racks and cabinets shall be welded assemblies of sheet steel or aluminum or of bar size angles, channels and tees or aluminum extrusions forming rigid enclosures to support internal components.
- C. All face panels shall be fully supported on all edges, either internally or by rolling interior edges of panels.
- D. Wood furniture/cabinet work for control desks acceptable with prior approval.
- E. Operating elements shall be mechanically safe and electrically "dead".
- F. All steel parts and panels shall be cleaned and primed with rust inhibiting primer. Exterior finishes shall be epoxy resin or baked enamel in matte black or in anodized black aluminum where approved.
- G. Control element working face panels shall be heavy aluminum or bakelite. Legends and control and protective device designations shall be engraved in panels, or in permanently attached plates, and located for ready identification.
- H. All panel engraving shall be in Helvetica Regular, height as indicated herein. In no case shall the engraving be less than 1/4" high without Commissioner approval.
- I. All internal wiring shall be factory completed and clearly marked.
- J. Control relays wherever possible shall be the glass or polycarbonate enclosed plug-in type. Relays shall be acoustically damped.
- K. All wire sizes and insulation to comply with UL standards and local codes and meet or exceed electronics industry standards.
- L. All wiring to be harnessed and bound. No loose or randomly routed wires permitted.
- M. Key all components in this section with locks or keyswitches alike. Provide six keys minimum.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions:

- 1) The AV Contractor shall examine areas and conditions under which the work of this section is to be installed and shall notify the General Contractor in writing of conditions detrimental to proper and timely completion of work. Do not proceed with work until unsatisfactory conditions have been corrected in an acceptable manner.
- 2) Confirm by site visit all field conditions that may affect manufacture and installation of AV Systems equipment prior to fabrication.
- 3) The AV Contractor shall ensure by drawing review and field survey that the conduit/raceway and power/grounding infrastructure is sufficient for the proper installation of the specified and required wire and cable, and/or any approved-substitute types of wire and cable. Submit any necessary changes to equipment and mounting details to Commissioner for review prior to fabrication.

3.2 INSTALLATION

A. General

- 1) Install all work in this section in accordance with the Contract Documents, Commissioner's direction, specifications, approved shop drawings with review action "No Exceptions" or "Make Corrections Noted", pertinent Contract Drawings, established trade practices and applicable code requirements.
- 2) Provide in accordance with final submittals and the manufacturer's written recommendations and as set forth herein. Verify measurements and dimensions at the project site and coordinate with the Work of other trades. Install at locations shown, in correct alignment and elevation, plum, level, straight and true. Use procedures that prevent damaging and soiling the Work during installation.
- 3) Coordinate work with all other trades to avoid causing delays in construction schedule.
- 4) Mount equipment and enclosures plumb and square. Permanently installed equipment to be firmly and safely held in place. This shall include loudspeakers, conduit, cables control equipment, rack equipment, etc. Fastenings and supports shall be adequate so support their loads with a safety factor of at least three. All switches, jacks, outlets, cables. All equipment shall be installed in such a fashion as to present no safety hazard to operating personnel.
- 5) All attached equipment shall comply with zone 3 seismic codes.
- 6) If any panel, distribution box, or other device requires relocation or change of mounting detail, and this fact is not known until after shipment due to sequence of work, modify equipment or provide new equipment to fit revised location or mounting detail. Notify Commissioner of any such changes, and submit all changes to Commissioner for review prior to fabrication.

B. Fabrication

- 1) Fabrication, assembly and wiring shall be neat and workmanlike throughout.
- 2) Control desks, racks and cabinets shall be welded assemblies of sheet steel or aluminum or of bar size angles, channels and tees or aluminum extrusions forming rigid enclosures to support internal components.
- 3) All face panels shall be fully supported on all edges, either internally or by rolling interior edges of panels.
- 4) Wood furniture/cabinet work for control desks acceptable with prior approval.
- 5) Operating elements shall be mechanically safe and electrically "dead".
- 6) All steel parts and panels shall be cleaned and primed with rust inhibiting primer. Exterior finishes shall be epoxy resin or baked enamel in matte black or in anodized black aluminum where approved.
- 7) Control element working face panels shall be heavy aluminum or bakelite. Legends and control and protective device designations shall be engraved in panels, or in permanently attached plates, and located for ready identification.
- 8) All panel engraving shall be in Helvetica Regular, height as indicated within Part 2 herein. In no case shall the engraving be less than indicated without Commissioner approval.
- 9) All internal wiring shall be factory completed and clearly marked.
- 10) Control relays wherever possible shall be the glass or polycarbonate enclosed plug-in type. Relays shall be acoustically damped.
- 11) All wire sizes and insulation to comply with UL standards and local codes and meet or exceed electronics industry standards.
- 12) All wiring to be harnessed and bound. No loose or randomly routed wires permitted.
- 13) Key all components in this section with locks or keyswitches alike. Provide six keys minimum.

C. Equipment Racks:

- 1) Mount equipment in racks and consoles and fully wire and test before delivery to job site.
- 2) Provide ventilation adequate to keep temperature within the rack below 100 degrees F (38 degrees C). Provide approved low-noise ventilation fan in each rack only if temperature in rack rises above 100 degrees F (38 degrees C) with power on for five continuous hours.
- 3) All metal cabinets connected to the sound system audio ground shall be effectively isolated from any conduit or other metallic component that is connected to the building electrical safety ground.

D. Wiring

- 1) The Contractor shall take such precautions as are necessary to prevent and guard against electromechanical/electrostatic/radio frequency interference. For line-level audio signals, flat cable shields at the output of source device. Refer to Drawings.
- 2) Exercise care in wiring; damage to cables or equipment will not be accepted. Isolate cables of different signals or different levels and separate, organize and rout to restrict channel crosstalk or feedback oscillation in any amplifier section. Between racks, cabinets, consoles or modules all cables shall be well-supported and shall be neatly laced and dressed.
- 3) Cover edges of cable pass-through holes in chassis, racks, boxes, etc, with rubber grommets or Brady GRNY nylon grommetting.
- 4) All joints and connections shall be made with rosin-core solder or with mechanical connectors approved by the Commissioner. Where spade lugs or other crimp-type terminals are used, crimp properly with ratchet type tool. Between racks, cabinets, consoles or modules, all cable shall terminate in approved terminal connectors, strips, blocks or boards.
- 5) Route unbroken microphone audio line and control wiring from receptacle plate/chassis to patch panel/rack. Remove spliced cables and replace without additional charge to the City of New York. No splices shall exist in any length of wire run except where noted on drawings.
- 6) Connect all loudspeakers electrically in phase, using the same wire color code for loudspeaker wiring throughout the project.
- 7) All wiring and connections shall be completely visible and labeled in rack. Termination resistors shall be 1/2 watt metal film 1% tolerance; fully visible and not concealed within equipment or connectors.
- 8) All terminations of shielded cables shall consist of a PVC or neoprene heat shrink sleeve covering the shield drain wire and an overall PVC or neoprene heat shrink sleeve covering the point at which the cable jacket and shield end.
- 9) Run vertical wiring inside rack in properly sized raceway with snap-on covers (Panduit type E series). Horizontal wiring in rack to be neatly tied in manageable bundles with cable lengths cut to minimize excess cable slack but still allow for service and testing. Provide horizontal support bars for cable bundle sag. Neatly bundle excess AC power cable from rack-mounted equipment with plastic cable ties. Rack wiring to be bundled with plastic cable ties or lacing twine. Electrical tape and adhesive-backed cable tie anchors are not acceptable.
- 10) Category 5/5e/6 lengths shall not exceed the maximum rated length of 90M/295ft. Contractor is responsible to ensure that no Ethernet data/network cable exceeds this length.
- 11) Refer also to additional guidelines noted under "References," and "Examination."

E. Labeling and Marking:

- 1) All portable cables and patch cords shall be color coded by length using a heat-shrink polyolefin sleeve near the male end of the cable. This sleeve shall be hot-stamped with the name of the facility. Color coding is to be as follows:

- a. Black = 5'
- b. Red = 10'
- c. Yellow = 25'
- d. Blue = 50'
- e. White = 100'

- 2) All AV Systems wire and cable shall be logically and permanently marked. All wire shall be identified at each termination point, and shall be marked to indicate the discrete destination (i.e., a wire shall show the reference number of the jack or connector to which it's other end is terminated). All cable markers shall bear the alphanumeric characters of the circuit shown on the approved shop drawings.
- 3) Wire and cable shall be marked with an approved system of durable identification markers, such as slip on type PVC or neoprene sleeves, or with directly heat stamped characters. Cloth or vinyl tape type markers are not acceptable.
- 4) The individual pairs of multipair cable and individual conductors of multiconductor cable shall be readily identified by permanent color coding of the wire insulation. Multipair or multiconductor cable that is identified only by means of the form or order of lay of individual wire is not acceptable.
- 5) All spare wire shall be marked "spare" at both ends and numbered consecutively. A "spare schedule" shall be provided indicating spare wire and cable numbers, locations and types.
- 6) Provide engraved lamacoid labels at the front and rear of all rack-mounted mixers, signal processing equipment, power amplifiers and other active equipment. Mount labels in a neat, plumb and permanent manner. Labels to include device name and schematic designation, and the devices the equipment controls. Embossed labels are not acceptable.
- 7) All wall receptacle plates shall be laser etched/engraved to indicate the reference number of the circuit to which each is attached. Such numbers will, when applicable, be referenced to the patch panel jack to which the circuit connects. Refer to the Drawings for reference numbers and designations.
- 8) Panels and receptacles must be readable in dim lighting. Quality of laser etching/engraving, letter sizes, etc. shall comply with the specification and as approved by the Commissioner through shop drawing and sample submittal.
- 9) All legends shall be laser etched/engraved in a color as indicated on the drawings, unless otherwise noted below.
- 10) Colored rings shall be used to color code connectors on panels with specific functions as described in the drawings. These color coding shall be consistent with color coding on the patchbays.
- 11) Portable rack connection cables shall be strain relieved at the rack end. The portable rack shall provide space for storing the cable when not in use. Cables will need to be color coded when they are intended to be used in color coded connectors as described above.

F. Audio Shielding / Grounding:

- 1) All shielded cables shall have their shields isolated from both the conduit system and any other shielded cables. Shields shall be continuous from source to input points. Shields shall be connected per AES 48, except as noted below.
- 2) Microphone wiring shall have continuous shields from the microphone receptacle to microphone patch jack, and if normalled to a console microphone input, continuous to that point.
- 3) Tie-line patch points shall have continuous shield connection from one patch jack to another with no permanent connection to the audio ground network.
- 4) Unbalanced wiring, such as used in certain communication systems, shall have audio shields connected at device inputs and floated at device outputs. Strap shield to "low" side of unbalanced input.
- 5) No "doubling up" of ground points on multi-pin connectors or terminal blocks shall be allowed.
- 6) Shielded audio cables that normal through patch panels shall utilize a normaling type jack which has an isolated switching "break" circuit. This shall be used for sleeve normaling.

G. Noise from Equipment:

- 1) The residual noise and hum output of the systems shall be such that PNC-15 or below can be measured at the center of main floor, and the character of the remaining noise must be random, with no audible discrete frequency components.
- 2) Where a control panel or rack is to be used or located in an operational area, such as on the fly chamber, gallery, or control room, there shall be no acoustic noise associated with the panel. No internal cooling fans or similar moving or magnetic equipment shall be permitted unless approved by the Commissioner in writing.
- 3) Operation of switches, pushbuttons, relays, solenoids, and similar shall not be audible to members of the audience.

H. Electrical Safety:

- 1) No voltage in excess of 25V RMS AC or 24V ripple free DC shall be exposed to touch in normal use or in any equipment by the withdrawal of modules or of any plug or connector or without the removal of suitably indelibly labeled covers.
- 2) Unless specifically excepted, all live electrical parts above 50V RMS AC or 60V ripple free DC, including terminals, shall remain completely shrouded by insulation or grounded metal when the main access panels are removed. The separate shrouds or covers shall require a tool to remove them to prevent inadvertent contact with live parts.
- 3) In addition, where enclosures or items of equipment containing predominantly control, computer, or similar low voltage signals also contain voltages in excess of 50V RMS AC or 60V ripple free DC, clear standard warning notices indicating the maximum voltage present shall be provided on all removable access panels. Similar warning notices shall be provided where voltages exceeding 120V are present in any enclosure or item of equipment and such a voltage would not reasonably be

expected to be present.

- 4) Within enclosures, racks and panels identify with prominent, standard, and indelible signage which circuit breakers or disconnects are to be switched off in order to isolate the equipment totally. Warning notices shall also be provided on all equipment which contains live terminals after operation of its circuit breaker or disconnect. These terminals must be completely shrouded to prevent inadvertent contact.
- 5) All equipment, control stations, equipment racks, enclosures, and all metal cases, raceways, and conduit shall be efficiently grounded. Special hand held or portable equipment which is not double insulated shall have duplicated grounding connections. All grounding shall be in accordance with the current edition of the National Electrical Code and as identified within this specification.

I. Interface with Other Work:

- 1) AC Power and Grounding:
 - a. Coordinate final connection of power and ground wiring to racks. Hard wire power wiring directly to power contactors or internal AC receptacles to ensure uninterrupted operation.
 - b. Install approved isolated-ground receptacles in wireway in each rack. Provide a minimum of two spare outlets in each rack. Label each outlet as to which AC circuit is feeding it and provide the same information in the circuit breaker panel.
 - c. Install a copper ground buss bar top to bottom in each rack, insulated from the rack. Ground equipment chassis not having a three-wire power cord to these busses. Connect green ground wire from each AC outlet in rack to this busbar.
 - d. AC power for the AV Systems is distributed at 120VAC, 60Hz.
 - e. Isolated-ground (audio ground) distribution:
 1. The audio system "isolated ground", including ground source, ground conductors, and ground distribution points shall be installed by the Electrical Contractor. The isolation and ground continuity of this network, although the responsibility of the Electrical Contractor, shall be reconfirmed by the Contractor prior to installation of equipment.
 2. Except at the ground source, the audio ground shall be totally isolated from all other electrical grounds. Therefore, if the connection between the audio ground network and the ground source is disconnected, no continuity between the audio ground and the building electrical ground shall exist.
 3. All equipment racks containing active electronics shall be connected to the audio ground, except as otherwise noted in this specification. Caution must be exercised so that these racks are not permanently, or in any way during operation, capable of being accidentally connected to the building safety ground.
 4. All conduits and back boxes containing AV Systems wiring shall be permanently connected to the building electrical safety ground.

3.3 FIELD QUALITY CONTROL

A. Field Tests and Inspection:

- 1) Prior to energizing of the AV systems, perform complete system check-out to verify that all items are correctly installed and shall safely operate as specified herein.
- 2) Perform required tests and adjustments upon completion of installation of AV System, including but not limited to those specified herein.
- 3) Contractor shall provide sufficient field service personnel (minimum of 2) to perform all tests specified below. Contractor shall furnish sufficient workmen to operate all equipment and to assist in all tests specified below. Contractor shall provide ladders and other devices, to allow access to all devices to be tested and communication between parties.
- 4) Contractor shall carry out the following inspections of the AV systems and submit to the Commissioner the written results at each inspection for inclusion on the permanent records of the sound system. Follow EIA standards RS-160 and RS-219 in performing test. Make corrections necessary to bring system(s) into compliance with the specifications.
- 5) AV Systems Low-Voltage Cable Testing:
 - a. General:
 1. Submit hardcopies and electronic copies of all documentation and raw data.
 - a) Test and report on each point-to-point cabling segment separately.
 - b) Test each end to end cable link.
 - c) Submit copy of final results organized by cable wire, consistent with circuit numbering scheme used in preparing submittal drawings and in labeling connectors and terminations.
 - d) Identify installed length of copper and fiber optic cabling.
 - b. Audio Cabling (Microphone/Line Level/70V Loudspeaker)
 1. Test cabling using at least one (1) of the following test measurement devices or equal:
 - a) Acoustic polarity tester. BSS Audio Ltd. Phasecheck System AR 130, GoldLine, or equal.
 - b) Integrated audio test set (Example: Audio Precision or Neutrik A1 or A2 System).
 2. Testing Procedures:
 - a) Verify all terminations.
 - b) Record cable length in feet.
 - c) Test all conductors for continuity.
 - d) Confirm that there are no shorts between conductors, and no shorts to ground.
 - e) Confirm all connectors are wired in correct polarity.
 - f) Perform a sweep test to 0.5MHz.
 - c. Coax Cabling:
 1. Test cabling using at least one (1) of the following test measurement devices or equal:
 - a) Combination Signal Level Meter and Frequency Domain Reflectometer (WaveTek CLI-1750/LST-1700).
 - b) Test Pattern Generator (Extron VTG 200 or equal).
 - c) RF Generator, 5-1,000 MHz. (GenRad, Hewlett Packard, or equal).

- d) Field Strength Meter, 5-1,000 MHz. (Tektronix, Hewlett Packard, or equal).
 - e) Spectrum Analyzer, 5-1,000 MHz. (Tektronix, Hewlett Packard, or equal).
 - f) Time-Domain Reflectometer (Tektronix, or equal, no known equal).
 - g) Precision Demodulator (Rhode & Schwartz, or equal).
 - h) True RMS Audio Digital Volt-Ohm-Millimeter.
2. Performance Requirements:
- a) At receptacles (subscriber outlets) provide output levels:
 - i) Not to exceed +15 dBmV
 - ii) For 54 to 400 MHz, +6 to +12 dBmV nominal, not to exceed +15 dBmV
 - iii) Above 400 MHz, not less than +3 dBmV
 - iv) Tap selection to provide +9dBmv (± 3 dBmv) at each modulated video receptacle. Taps shall be located as close as possible to the video receptacle.
3. Test Procedures:
- a) RF video distribution system points shall be tested for proper signal level as specified utilizing a spectrum analyzer or signal level meter.
 - b) Following the Signal Level Test, a standard television color receiver shall be connected to the interface point test tap output with suitable pad(s). All TV channels shall be viewed to verify that there are not visible signal distortions such as intermodulation (windshield wiper effect), ghosting, beats, etc. on any channel.
 - c) The RF distribution system shall be checked at the first and last outlet in each leg to verify that the RF distribution system meets all performance requirements utilizing the spectrum analyzer or signal level meter and TV receiver.
 - d) Provide a frequency sweep test over the entire forward bandwidth 5MHz to 1000MHz.
 - e) Measure and document signal level at each tapoff.
- d. Category Cable:
- 1. Test cabling using at least one (1) of the following test measurement devices or equal:
 - a) Category 6 Cable Pair Tester, Level III or later tester for full compliance with TIA/EIA 568-B.1 and B.2, (to include all current addendums) - Microtest Omniscanner, HP, Scope, Fluke, Siemon, or equal.
 - b) Outside Plant Voice Cabling Plant tester - capable of detecting shorts, opens, reversals, mis-wiring and crosstwists. (example: Siemon STM-8).
 - 2. Performance Requirements
 - a) To EIA/TIA standards referenced herein for Category 6 cabling. Performance requirement is for circuit end-to-end.
 - 3. Test Procedures:
 - a) Use the specified Category 6 cable test set, and test using the Permanent Link procedure.
 - b) Verify that all Category 6 cable runs meet TIA/EIA-568B compliance, using an appropriate Level III testing instrument. The instrument must verify the integrity of all conductors, as well as correctness of termination sequence. Tests shall be

performed between modular jacks at SVC panels and modular jacks at patch panel.

- c) Test station wire only after all pairs of station wire in an area have been terminated at both ends, and no work of this Section or other Sections may cause physical disturbance to the wiring.
 - d) Test and submit a test report for each individual cable segment.
 - e) Provide 250MHz sweep test, polarity checks, near-end cross talk, signal attenuation, noise, DC loop back resistance, pair-by-pair continuity and length.
 - f) Submit a test report indicating that the link meets Category 6 minimum requirements for at least the following parameters.
 - i) Wire map, pin to pin match.
 - ii) Length
 - iii) Report by frequency:
 - a. Insertion loss.
 - b. NEXT, worst pair to pair
 - c. Power sum NEXT
 - d. ELFEXT, worst pair to pair
 - e. Power sum ELFEXT
 - f. Return loss
 - iv) Report pass or fail
 - g) Correct any and all transpositions found.
 - h) Retest.
 - i) If any conductor in a station wire tests either open or short, then the entire station wire is to be removed, replaced, and re-tested.
- e. Fiber Optic Cable:
1. Test cabling using at least one (1) of the following test measurement devices or equal:
 - a) Optical power meter (HP, Siecor, 3M, Fotec).
 - b) Optical Time Domain Reflectometer (Tektronix TTP2 Fiber Master Optical Time Domain Reflectometer or equal).
 2. Performance Requirements
 - a) Optical Budget, any end to end link - not to exceed the sum of the following:
 - i) The specified cable performance, pro-rated for total link distance.
 - ii) Multimode:
 - a. 0.03 dB for each fusion splice
 - b. 0.3 dB for each mechanical splice
 - c. 0.4 dB for each LC connector
 3. Test Procedures:
 - a) Measure and record all fiber optic line End-to-End attenuations in accordance with TIA/EIA-526-14A using factory terminated test jumpers. Overall line attenuation, including all patch panel connections and mechanical or fusion splices shall be in accordance with TIA/EIA-568B. All fiber connectors shall be tested to assure insertion losses < 0.3 dB (typical) and 0.75 dB (maximum).
 - b) Test each fiber link for overall attenuation from end to end in both directions.
 - c) Perform the attenuation acceptance test for multi-mode cable at both the 850nm and 1300nm wavelengths.

- 6) Verify Basic System Operation:
- a. Inspect all device labels to ensure that devices are correctly and clearly labeled.
 - b. Test all circuits for proper labeling, wiring, polarity, and connection to proper device.
 - c. Test all equipment for proper operation.
 - d. Test all control panels for all functions.
 - e. Test all functions of all remote devices and all control plug in points.
 - f. Test all extension cables, adapters, etc.
 - g. Verify signal flow through the entire system.
- 7) Audio System:
- a. Test Equipment: Provide least one each of the following test measurement devices or approved functional equivalents:
 1. Calibrated measuring microphones.
 2. First-aRival measuring system, provide one any of:
 - a) SIA Smaart V7.0
 - b) Meyer Sim 3
 - c) SDA Systune V1.1.6
 3. Polarity tester
 4. Pink noise generator
 5. Sine wave generator
 6. True RMS audio voltmeter
 7. Recorded program material
 - b. Test Procedures:
 1. Test all mixing console operations.
 2. Measure and record the impedance of each loudspeaker and loudspeaker line circuit terminating at the equipment rack. Use 100 Hz for low frequency loudspeakers, 1kHz for mid-range horns, 4kHz for high frequency horns. For full-range devices, use 1kHz.
 3. Check polarity of loudspeakers with an electronic polarity checker and by applying music program or constant "pink noise" signal to system while walking through the transition areas of coverage from one loudspeaker to the next. Transition should be smooth with no apparent shift in source from one loudspeaker to the next.
 4. Apply sine wave sweep signal to each loudspeaker system, sweeping from 50 Hz to 5 kHz and at a level of 10dB below full amplifier output, and listen for rattles or noise. Correct if apparent.
 - c. Establish the normal settings for systems level controls.
 1. Adjust level controls on rack-mounted equipment for optimum signal-to-noise ratio and signal balance; cap controls which are not intended for end-user operation.
 2. Measure, adjust, align signal delay and equalize the response of all loudspeaker systems using calibrated measuring microphones and multi-channel testing equipment.
 - d. Optimizing S/N Ratio and Setting Gain Structure:
 1. After verifying the system is physically operating correctly, perform the following:
 - a) Turn down all power amplifier/level sensitivity controls.
 - b) Turn off power amplifiers.
 - c) Set all gain/level controls, system-wide, to their off or minimum settings.

- d) Defeat all dynamic controllers.
- e) Defeat all equalization
- f) Set all crossovers to maximum output level.
- g) Connect a 400Hz sine-wave tone generator to an input of the mixing console, and set that channel's input fader and the main output (stereo) fader at unity (0). Increase gain until the channel is just below clipping, as determined by an oscilloscope. It is also helpful to have a piezo tweeter available to aurally determine when the signal is clipping.
- h) This establishes the maximum level available throughout the system. All devices between the mixing console and the amplifiers now need to be calibrated to match. In effect, all devices (including mixing console) will clip at the same time if calibrated correctly.
With the 400Hz generator still connected to the mixing console, move to the next device in the signal path. If a device has input and output controls, do the input first, then the output. (You will need to open the output slightly in order to determine when the input is clipping). Continue doing this at each device in the signal path until you reach the power amplifier.
- i) With the amplifier sensitivity controls at "off," slowly open the sensitivity control until clipping just begins. This is the maximum output power possible.
- j) Repeat the process for each amplifier.
- k) References:

e. Setting Equalizers:

1. Using a calibrated measuring microphone located in the seating area at twice the critical distance (at which direct sound from the source and reverberant sound are in a ratio of 1:1), establish the unequalized acoustic amplitude response to a pink-noise source. Bring the observed acoustic amplitude to within ± 2 dB uniformity (flat) from 40 to 1,000 Hz (with subwoofers in use). Initially set the roll off at the low frequency end at 24dB / Octave below 20 Hz. Initially set the roll off at the high frequency end 3dB/Octave above 1kHz. Adjustments to these settings may be required following initial listening tests.
2. With an open microphone on stage adjust the sound system gain until it reaches feedback. Determine the most prominent frequencies of feedback and adjust the appropriate filters until the observed feedback ceases.
3. Equalization shall be further adjusted as necessary during acceptance testing to the satisfaction of the Commissioner and District.

f. Electro-Acoustic First Arrival Testing

1. Use Meyer SIM Testing, SMAART, or Systune.
2. Measure, adjust, align signal delay and equalize the response of all loudspeaker systems using calibrated measuring microphones and approved Meyer Sound SIM System 3 multi-channel testing equipment (v2.3m or greater) using a SIM-3022 analyzer with SIM-

- 3088 and 3081 mic and line switcher interfaces.
 - 3. For Meyer SIM process, testing and calibration shall be performed by a Certified SIM testing engineer. Testing and adjustment shall be in full accordance with SIM methodology and standards.
 - 4. For SMAART or Systune process, testing and calibration shall be performed by a person with factory training.
- 8) Projection and Production Video Systems:
- a. Test Equipment: Provide least one each of the following test measurement devices or approved functional equivalents:
 - 1. Combination Signal Level Meter and Frequency Domain Reflectometer (WaveTek CLI-1750/LST-1700).
 - 2. Wide Band Oscilloscope (Tektronix, Hewlett Packard, or equal).
 - 3. Test Pattern Generator (Extron VTG 200 or equal).
 - 4. RF Generator, 5-1,000 MHz. (GenRad, Hewlett Packard, or equal).
 - 5. Field Strength Meter, 5-1,000 MHz. (Tektronix, Hewlett Packard, or equal).
 - 6. Spectrum Analyzer, 5-1,000 MHz. (Tektronix, Hewlett Packard, or equal).
 - 7. Time-Domain Reflectometer (Tektronix, or equal, no known equal).
 - 8. Precision Demodulator (Rhode & Schwartz, or equal).
 - 9. True RMS Audio Digital Volt-Ohm-Millimeter.
 - 10. Any other items of equipment or materials required to demonstrate conformance with the Contract Documents.
 - b. Test Procedures:
 - 1. Test equipment according to equipment manufacturer procedures.
 - 2. Set up image display devices using Imaging Science Foundation procedures
- 9) Final Checkout:
- a. Repair or replace any equipment that fails to conform to specification, and schedule second set of tests and adjustments.
 - b. Repeat testing and repair or replacement as required to make entire AV Systems conform to specification.
 - c. Upon completion of testing, furnish the City of New York and the Commissioner a complete report on all field-testing and adjustment, certifying that system is complete, conforms to specification and is ready for Demonstration.

3.4 ADJUSTING

- A. Contractor shall correct all cosmetic damage to equipment. Ensure that all equipment is clean and in perfect condition at time of Demonstration.
- B. Repair or replace any equipment that has suffered non-cosmetic damage prior to time of Demonstration. Claims arising from repair or replacement of such damage shall be considered only after final acceptance of system by the City of New York.

3.5 CLEANING

- A. Contractor shall clean all racks, panels and boxes of dirt, dust, and debris, re assemble all equipment, and replace all panels, covers and screws prior to time of Demonstration.

- B. Contractor shall ensure that all control back boxes are free of dirt, dust and debris prior to installing control panels.
- C. Contractor shall correct all cosmetic damage to equipment. Ensure that all equipment is clean and in perfect condition at time of Demonstration.

3.6 CLOSEOUT ACTIVITIES

A. Demonstration:

- 1) Repair or replace any equipment that has suffered non-cosmetic damage prior to time of Demonstration. Claims arising from repair or replacement of such damage shall be considered only after final acceptance of system by the City of New York.
- 2) Schedule Demonstration no earlier than upon the City of New York's receipt of above specified report.
- 3) At request of Commissioner, repeat any and all tests specified in "Field Tests and Inspection" above in presence of the City of New York and the Commissioner.
- 4) Adjustments and modifications shall be made as directed by the City of New York and the Commissioner, and demonstration repeated until successful.
- 5) Following successful completion of demonstration, Contractor shall provide the City of New York's instruction as specified herein.
- 6) All costs for re-inspection and additional testing by the Commissioner, if required, due to incomplete work and/or errors and omissions shall be the responsibility of the Contractor.
 - a. All re-inspection or testing shall be scheduled and approved in writing by the Commissioner and the City of New York, in advance of the work.
 - b. All expenses, including travel, shall be the responsibility of the Contractor.

B. User Instruction:

- 1) Provide in-depth user instruction of the end-user staff in the operation and maintenance of all systems included herein.
- 2) Provide four days of user instruction of a maximum of six end user staff members on the use and operation of the AV Systems.
- 3) User instruction shall include information on the repair and maintenance of the AV systems and equipment including diagnostic testing, trouble shooting, component replacement and routine service.
- 4) All instruction shall be by approved instructors.

3.7 PROTECTION

- A. Do not use any control equipment intended for installation for the purpose of checking out wiring or circuitry prior to proper conditions existing on site, as specified above. Equipment may be used for such testing only in specific areas where such proper conditions exist.
- B. Provide appropriate protection from damage for all equipment in this section during the period

after installation and prior to demonstration.

- C. Remove all protection and clean all equipment immediately prior to demonstration.

3.8 GUARANTEE SERVICE

- A. One year following date of final acceptance, provide the services of a field engineer to examine, adjust and repair the equipment of the Work of this Section as required. This service shall not cover adjustments, repairs or replacement of parts due to negligence, misuse, abuse or accidents caused by persons other than the Contractor.
- B. All labor and materials which are required to perform this service shall meet or exceed these specifications and shall not compromise the performance of the equipment in any way.
- C. Additional Materials:
 - 1) Submit an inventory of recommended spare parts for all equipment provided. This shall include expendable mechanical parts, electronic elements such as processors, power supplies, miscellaneous boards, fuses and the like.
 - 2) This inventory shall be reviewed by the Commissioner and recommendations made to the City of New York concerning parts and equipment which should be purchased.
 - 3) Furnish the additional materials to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels.
 - 4) Deliver additional materials to the City of New York.

3.9 APPENDIX

- A. The following appendices detail equipment types and requirements. Refer to the Electrical drawings for conduit routing/sizing information. Refer to Theatrical Audio Video Systems Contract Drawings (TA-series) for wiring information and construction details.
- B. APPENDIX A 11 61 83:
 - 1) AV Systems Equipment List

MCC Theater Fit Out

Audio Video (AV) Systems

APPENDIX "A" - AV SYSTEMS EQUIPMENT LIST

NOTE:

This equipment list specifies major systems components and equipment, and should not be interpreted as a "bill of materials". This list may not detail all equipment required for complete, working systems. It is the AV Systems Contractor's responsibility to provide complete, working systems regardless of the completeness of this list.

THEATER 1						
Sound Reinforcement / Playback System:						
T1-SR-1	Digital Mixing Console, basic speech reinforcement / sound playback use	Soundcraft	SI Performer 2	1	1	Refer to drawings
T1-SR-2	Console & Playback system connection cables	Contractor Fabricated		1	1	Refer to drawings
T1-SR-3	Custom console I/O patch panel w/ jumper cable	BSS Soundweb	BLU-160	1	1	System provides analog I/O: 12 in X 12 out
T1-SR-4	Digital signal processing, with digital audio bus	BSS Soundweb	BLUCARD-IN	3	3	
T1-SR-5	Digital signal processing, analog input card	BSS Soundweb	BLUCARD-OUT	1	1	
T1-SR-6	Digital signal processing, analog output card	BSS Soundweb	BLU-BOB2	1	1	
T1-SR-7	Digital signal processing, output expander					
T1-SR-8	Portable Source/Control Rack	Tascam	SS-CDR200	1	1	
T1-SR-9	Solid State / CD recorder, player	Gator	G-PRO-12U-19	1	1	
T1-SR-10	Portable rack (playback equipment, UPS), 12U	Litrite	RL-10-D	1	1	
T1-SR-11	UPS/Power distribution for rack, small form factor, ultra-quiet	CyberPower	CP550SLG	1	1	
T1-SR-12	3U Rack Drawer	Middle Atlantic	UD3	1	1	
Control Room / AV Patch Racks & Audio Patching						
T1-SR-13	Mic / Line Level Patch Panel (1/4" TRS)	Bittree	B48DC-FNPITE3M20U7L	A/R	A/R	Refer to spec for additional patchbay requirements. Full-normalizing model number shown for reference; refer to block diagrams for final normalizing requirements. Contractor to confirm final model numbers with Commissioner prior to ordering.
T1-SR-14	3U Rack Drawer	Middle Atlantic	UD-3	1	1	
T1-SR-15	T1 Patching rack - swing frame (40U)	Middle Atlantic	SR-40-22	1	1	
T1-SR-16	T1 Control Room rack - standard rack (44U)	Middle Atlantic	MRK-4431	1	1	
T1-SR-17	Rack vent panels	Middle Atlantic	VT series	A/R	A/R	
T1-SR-18	Rack blank panels	Middle Atlantic	HBL series	A/R	A/R	
T1-SR-19	Rack accessories - refer to specifications	Ref Specs.	Ref Specs.	A/R	A/R	Rack light, power strip, etc. per specification.
T1-SR-20	UPS/Power distribution for rack, tower, ultra-quiet	CyberPower	CP1600PFCLCD	2	2	Locate (1) in Control Rm rack, (1) in AV patching rack.
T1-SR-21	Audio / data circuit drop box	Whirlwind	MD-6-2-C6-100	3	3	Mount to shelf in rear of rack
T1-SR-22	1/4" patch cords, 3'	Bittree	LPC3600-110	40	40	Provide with 100-ft cable for use in T1 stage house
T1-SR-23	1/4" patch cords, 4'	Bittree	LPC4800-110	10	10	
T1-SR-24	E3 Tool Kit	Bittree	SBCTLK01	1	1	
T1-SR-25	E3 Mult	Bittree	E3-Mult	4	4	
T1-SR-26	E3 to blunt - 15'-0"	Bittree	CCA0196	20	20	
T1-SR-27	Audio PatchBay Programmable Shunts	Bittree	plot	2	2	Provide (1) bag Red, (1) bag White
T1-SR-28	Video patch cables (3')	Canare	VPC-003F	10	10	
T1-SR-29	Video patch cables (4')	Canare	VPC-004F	6	6	
T1-SR-30	CAT6 patch cable, 3'	Per Contractor	Per Contractor	20	20

SECTION 12 05 00

UPHOLSTERY

PART 1 – GENERAL

1.01 DESCRIPTION

- A. General: Provide upholstered banquette covers in accordance with the Contract Documents.
- B. Scope of Work includes but is not limited to:
 - 1) Single piece upholstered seat and back
- C. Related Work specified in other Sections:
 - 1) Millwork

1.02 QUALITY ASSURANCE

- A. Codes: Comply with the 2008 New York City Building Code and standards listed.
- B. Standards: American Society of Testing and Materials (ASTM) ASTM E 84-01 - Test Method of Surface Burning Characteristics of Building Materials.

1.03 SUBMITTALS

- A. Samples: Submit 18" x 18" foam sample with bonded polyfiber cover for architect review and approval
- B. Provide a complete, fabric wrapped seat and back cushion mock-up for architect review and approval.

1.04 PRODUCT HANDLING

- A. Delivery: Deliver components in manufacturer's clearly identified containers indicating the areas of their use.
- B. Storage & Protection: Store and protect window treatment work from subsequent construction activities as recommended by the manufacturer.

PART 2 - PRODUCTS

2.01 UPHOLSTERED SEATS AND SEATBACKS

- A. Fabric – Custom printed fabric will be provided to Contractor. Fabricator to provide exact requirements including quantity 16 weeks prior to contractor required delivery.
 - 1) Provide full coverage all sides.
 - 2) All cushion units shall be provided with continuous or matching fabric layouts at all sides.
- B. Seaming – non-welted only as identified in the drawing documents. Provide concealed single side zippered access.
- C. Foam – Open cell high density polyurethane foam with Dacron type polyfiber wrap laminated to foam using acceptable foam adhesives
 - 1) Labeled High Resilient (HR) value of 2.8
 - 2) Foam shall be fire resistant rated and labeled (FR) to meet all applicable furniture flammability laws
 - 3) Labeled Indentation Load (ILD) value of 41 (Medium Firm)
- D. Bonded Substrate
 - 1) Provide min. ½" bonded plywood backing to meet curvatures and shaping shown in drawing documents. Work shall be coordinated with the architectural millwork as identified in 064023. Bonding shall be adhered using long lasting, non-staining adhesives, and free from all protusions or projections.

PART 3 - EXECUTION

3.01 PREPARATION

- A. Verify measurements and dimensions at the job site and cooperate in the coordination and scheduling of the work of this Section with the work of related trades and previously installed work so that job progress is not delayed.

3.02 INSTALLATION

- A. Workmanship: Install work in locations shown, plumb, level and in line with adjacent materials where required.

3.03 PROTECTION:

- A. Protect finished surfaces against damage during subsequent construction operations and remove such protection at time of substantial completion. Protect finished surfaces against damage during subsequent construction operations and remove such protection at time of substantial completion.

END OF SECTION

SECTION 12 61 00

FIXED THEATRE SEATING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the New York City DDC General Conditions.

1.2 SUMMARY

- A. The work in this section includes but is not limited to furnishing and installing the following major elements and associated accessories:
 - 1) Fabrication and installation of new, fixed, removable and demountable theater seating
 - 2) All materials, components, and services necessary to provide the work indicated or implied in this section, as specified herein, in the Contract Documents and shown on related Drawings
 - 3) Preparation and submission of complete shop drawings and samples for review by the Commissioner prior to fabrication
 - 4) Preparation and submission of sample chairs as indicated herein for review by the Commissioner prior to fabrication
 - 5) Installation in accordance with these specifications, pertinent drawings, established trade criteria and applicable code requirements
 - 6) Inspection, demonstration and necessary adjustment of completed installations
 - 7) Submission of required record drawings, service data and certificates
 - 8) Coordination with other affected work and contractors

1.3 PRODUCTS SUPPLIED BUT NOT INSTALLED UNDER THIS SECTION:

- A. Extra materials as listed in Paragraph 1.15A, Extra Materials.
- B. Provide fixed seats with chair mounted aisle lights with mechanically shielded wire whips. These shall be wired to junction boxes with wiring stub outs at floor slab locations by Division 26, Electrical. Provide transformers as required for quantity of aisle lights shown on the drawings, with a minimum of one transformer per level of seating. Transformers to be installed by Division 26, Electrical and located outside of the theater envelope.

1.4 RELATED SECTIONS:

- A. Coordinate with all related sections of the specifications including, but not limited to:
 - 1) Railings (reference Architectural documents)

- 2) DDC General Conditions
- 3) Division 03 – Concrete
 - a. Fastener requirements
- 4) Division 04 - Masonry:
 - a. Fastener requirements
- 5) Division 05- Metals:
 - a. Structural steel supporting the work of this section
- 6) Division 09 – Finishes:
 - a. Flooring of audience chamber
- 7) Division 23 – Mechanical:
 - a. Floor and riser mounted air supply/return devices

1.5 REFERENCES

- A. References to code, standards, specifications and recommendations of technical societies, trade organizations and governmental agencies will refer to the latest edition of such publications adopted and published prior to submittal of the bid. All such codes and standards will be considered a part of this specification as if they were fully included herein.
- B. If an applicable code or standard permits work of lesser quality or extent than this specification and the related drawings, this specification will govern.
- C. Comply with prevailing local codes and applicable Underwriters Laboratory standards.
- D. Comply with national, state and local labor regulations and requirements.
- E. Equipment to have pertinent labels.
- F. Refer to New York City DDC General Conditions.

1.6 DEFINITIONS

- A. "Contractor": Installer responsible for the construction and installation for the work contained in this section.
 - 1) Contractors involved with other work shall be indicated with a specific trade preceding the word "Contractor" (i.e. General, Electrical, etc.).
- B. "Furnish": Purchase and/or construct and deliver to project site.
- C. "Install": Physically install the items in their proper location (s) on the project site.
- D. "Provide": Furnish and install.
- E. In all cases where a device or a part of equipment is referred to in a singular manner within the contract documents, it is intended that such a reference shall include all devices required

to complete the installation in accordance with the project documents.

1.7 SYSTEM DESCRIPTION

- A. Refer to the 'TS' series contract drawings for seating layout plans, quantities of each type of seat, Refer to architectural and structural drawings for floor and riser plans.
- B. Theater 1 fixed de-mountable and removable seats:
 - 1) Seats are gravity assisted self-rising to a vertical safety position.
 - 2) Seat widths shall as indicated in the drawing except as required to meet requirements of actual site verified dimensions in which circumstance seats shall typically be 1'-10" (center to center). Alternate wider seats may be used where additional width may be required to bring row to proper width. Where absolutely necessary, 1'-8" seats may be used.
 - a. The 'TS' seating layout drawings in the bid package indicate proper widths and quantities of seats. Proposed contractor's alterations from this layout shall be explained in the shop drawing submittal.
- C. Layout Requirements:
 - 1) Seating layout shall conform to critical aisle dimensions as indicated on the Drawings. These dimensions are based on project code requirements.
 - 2) Actual makeup of rows and requisite seat widths shall be the responsibility of the Contractor and shall be based on the Contractor's own field measurements.
 - 3) The chairs must stagger from row to row on the centerline of the theatre to maximize vertical sightlines. End of rows shall align as indicated on the Drawings.
 - 4) In rows which contain varying width chairs, the following criteria shall be followed:
 - a. Narrower seats are to be mounted directly adjacent to aisles.
 - b. Wider seats are to be mounted adjacent to side-walls or railings.
 - c. The remaining varying width seats shall be distributed throughout the row so that the narrower seats are not mounted adjacent to one another.

1.8 CHAIR DESIGN CRITERIA

- A. Overall front to back envelope with seat in upright position shall not exceed 20.5" without notifying the architect in writing.
- B. The theatre seating shall be fabricated using molded foam cushions for maximum comfort, using materials, which are carefully selected to be free of defects, objectionable projections, or irregularities. Smoothly round corners, edges, and exposed fasteners, to present least possible snagging and pinching hazards.
- C. Seats:
 - 1) Seats shall be tested and professionally certified through an independent testing laboratory to support and withstand an evenly distributed minimum of 600 lbs. static load located 3" back from the front of the seat without deflection.

- 2) Seats shall be tested and professionally certified through an independent testing laboratory to withstand 300,000 operating cycles without added lubrication, spring fatigue or measurable bearing wear.
- 3) Seats shall be tested and professionally certified through an independent testing laboratory to withstand, without failure, not less than 100,000 impacts of a 40 lb. sandbag dropped equally from heights of 6", 8", 10" and 12".
- 4) All up-stops and down-stops shall be completely concealed.

D. Backs:

- 1) Backs shall withstand an evenly distributed front or rear load of 450 lbs.
- 2) Backs shall be tested and professionally certified through an independent testing laboratory to withstand, without failure, not less than 40,000 alternating swinging impact cycles by each of 2 opposing 40 lb. sandbags. Sandbags shall be moved horizontally and equally through various distances of 6", 8", 10" and 12" at 35 cpm.

E. Arm Rests:

- 1) Armrests shall be tested and professionally certified through an independent testing laboratory to accept a 250 lb. sandbag placed at the front of the armrest with no deflection.
- 2) The same test shall be performed on the rear of the armrest.

F. All components shall meet additional requirements as listed in Part Two below.

1.9 SUBMITTALS

A. Provide a statement with the following information:

- 1) Manufacturing company overview and history
- 2) Location of manufacturing plant
- 3) Name and work history of proposed installation team / company and name of foreman

B. Submittals shall be in accordance with New York City DDC General Conditions.

C. Submittals shall be submitted in a timely manner, allowing sufficient time for adequate review and possible resubmittals without jeopardizing the project schedule.

D. Submittals will be reviewed, accepted and field dimension verified prior to proceeding with the fabrication of the work in this section.

E. The Commissioner shall only mark one (1) set of drawings per submittal with comments. Any additional sets of drawings or product data shall be returned unmarked.

F. All submittals shall leave space available for review stamps and comments.

G. Shop Drawings:

- 1) Within 30 days of contract award, provide a provisional set of shop drawings with all required information included. A revised set of drawings shall be provided within 30 days after site verification measurements can be taken. The second set shall show any modifications due to unexpected site conditions.
- 2) All shop drawing submittals shall include but are not limited to:
 - a. Cover sheet with a drawing index including the sheet number and title for each sheet in the set
 - b. Each sheet shall have a 4" x 4" area near the title block for review stamps and comments. This area should be in relatively the same location on each sheet
 - c. Provide a minimum of one sheet for every seating level
 - d. ¼" scale layout plan(s) clearly indicating seat widths, dimensions for coordination for seat mounting, aisle widths, aisle lighting and row to row clearances
 - e. Complete, fully dimensioned, large scale detailed fabrication drawings of all major components
 - f. Include plan or schedules with quantities of each seat size, removable seats, demountable seats, transfer arm seating, aisle lights, and all other accessories
 - g. Electrical junction box location plan and details
 - h. Plan drawing with row letter and seat number layout
 - i. Product data comprised of catalog or standard data sheets for component parts. The data shall include all information to indicate compliance with the specifications herein.
- 3) Responsibility to prevent or remedy conflicts with any floor element shall rest solely on the Contractor.
- 4) Responsibility for providing a seating layout that meets prevailing code requirements, as demonstrated in the contract drawings, rests with the contractor.
- 5) All exceptions to or variations from the bid set drawings and this specification shall be noted and indicated by arrow and boxed caption
- 6) Requisite schematics, plans and sections indicating assembly and installation of components. This requirement includes any electrical schematics required to show installation procedures for seat lights.
- 7) Inventory of all equipment to be supplied, including quantities, reference to applicable drawings, etc.
- 8) Provide aisle light power requirements within 30 days of contract award.

H. Samples

- 1) Provide the following for each type of seat under this section.
- 2) Submit samples of each of the following elements in each color, finish, pattern and texture specified within 30 calendar days of contract award. If qualities of an element have not been specifically indicated herein, submit manufacturer's color charts or samples of actual materials indicating the full range of standard colors, finishes, patterns and textures available. The samples shall include, but are not limited to:
 - a. Provide two 30" square "quality" samples of seating fabric.

- b. Actual samples of electrostatically applied powder finishes to be used on exposed parts.
 - c. Wood and plywood materials with finish samples for color selection.
 - d. Seat and back cushion.
 - e. Seat pan assembly with padding and upholstery.
- 3) Any additional samples as may be requested in writing during the shop drawing process to be submitted within 14 days of written request.
 - 4) Following approval of shop drawings and samples indicated above, a mock-up shall be fabricated for verification and testing.

I. Mock-Ups:

- 1) Provide the following for each type of seat under this section.
 - a. All mock-ups shall be identical in quality, workmanship and craftsmanship to the seats to be provided for installation. Rejected mock-ups shall require further submittals to meet the standards set forth herein.
- 2) Following approval of shop drawings and samples indicated above, a mock-up shall be fabricated for review by the Commissioner.
- 3) Provide mock-up of each type of seat specified.
- 4) The mock-up of the installed seats shall be of two (2) chairs including selected fabric, finishes, aisle lights, etc. One of the chairs of the mock-up will include an ADA aisle standard as specified herein; the other shall have a fixed decorative end standard equipped with an integral aisle light as specified herein. The mock-up should include the extreme widths of chairs to be provided.
 - a. The Commissioner shall approve the mock-up prior to the fabrication of the remainder of the seating. The Commissioner shall retain the mock-up until the installation is complete.
 - b. The seating installed in the project shall be compared with the mock-up. They shall be identical in all respects.
 - c. It shall be the Contractor's obligation to provide shipping of the mock-up to the Commissioner's office and, following installation, to the job site. Following approval of the finished installation, the mock-up shall be turned over to the City of New York.

J. Quality Assurance Submittals:

- 1) The Contractor shall provide quality assurance submittals including the following:
 - a. Certificates: Submit manufacturer's certificate stating materials meet fire performance requirements specified herein.

K. Closeout Submittals:

- 1) The Contractor shall comply with all closeout procedures as described in New York City DDC General Conditions.
- 2) Verification that all punch list items have been rectified will be required for project closeout and initiation of the warranty period.

- 3) Operation and Maintenance Data:
 - a. Provide specific recommendations for cleaning upholstery including precautions against materials and methods which could damage upholstery fabric.
 - b. Provide recommendations for maintaining and touch-up of all finished surfaces of chairs.
 - c. Reference New York City DDC General Conditions for additional requirements.
- 4) Warranty:
 - a. The Contractor shall provide copies of all warranty information as specified herein. All warranty information and documentation shall be integrated into all materials provided at time of "as-built" submission.

1.10 QUALITY ASSURANCE

- A. Installer: The contractor or subcontractor performing the work of this Section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.
- B. Manufacturer: The manufacturer providing the material or equipment specified in this Section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years. The systems described herein shall be provided by a Theatrical Seating Contractor who will be responsible for furnishing all services described herein including but not limited to coordination and supervision of the engineering, shop drawings, fabrication and provision for all systems specified herein and shown in the drawings.
- C. Seat construction and installation of fixed and removable theatre seating to be the responsibility of a single theatre seating manufacturer, who shall own and operate their own shop for the manufacture of theatre and theatre seating and shall be regularly engaged in the fabrication and installation of such equipment.
- D. Manufacturer shall have under his control all parts composing the complete chair including castings, steel, plywood, fabric, and accessories, as well as mounting and installation components. Contractor shall do all construction and coordinate installation, shall maintain thorough test and inspection procedures to assure uniform high quality of all raw materials used as well as the finished product.

1.11 DELIVERY, STORAGE & HANDLING

- A. All equipment shall be appropriately and substantially packed for shipment.
- B. All equipment containers shall clearly indicate the equipment contained, "front", "top", "fragile", the project name, and theater site allocation. Include packing and shipping lists for each container.
- C. All shipping costs to the job site are the responsibility of the Contractor. The shipping method/company is at the total discretion of the Contractor in order to meet the published project schedules.
- D. Coordinate responsibility for acceptance of material and equipment at job site with the General Contractor.

E. Upon delivery, the materials shall be stored under cover in a dry and clean location, off the ground. Delivered materials which are damaged or otherwise not suitable for installation shall be removed from the job site and replaced with acceptable materials.

- 1) Replace all equipment and materials which are damaged during storage or handling at no additional cost to the City of New York.

1.12 SITE CONDITIONS

A. Environmental Requirements: Coordinate all environmental requirements for all materials provided and installed under this contract.

B. Existing Conditions: Verify all conditions at jobsite. Any additions or corrections are to be requested through the General Contractor prior to fabrication.

C. Field Measurements: Field measurements must be taken prior to preparation of final shop drawings to ensure proper fitting of work. Allow for adjustments as necessary whenever taking field measurements.

1.13 SEQUENCING AND SCHEDULING

A. The installation of the equipment in this section shall begin following the completion of work which may be in conflict with the installation including:

- 1) Concrete floor (Structural Drawings)
- 2) Division 11, Equipment
- 3) Mechanical air supply devices. (Division 23, Mechanical)
- 4) Electrical back boxes for aisle lights (Division 26, Electrical)

1.14 WARRANTY

A. Manufacturer shall warrant materials and workmanship of all seats and chairs, including fabric, supplied as free of defects, and shall guarantee in writing the repair or replacement within 14 days of any item found defective during a period of three (3) years following the date of final acceptance. Ordinary wear and defects due to improper usage are excepted.

1.15 WARRANTY SERVICE

A. Extra Materials: Deliver stock of maintenance material to the City of New York. Furnish the following to match those installed and taken from the same production run, packaged with protective covering for storage and identified with appropriate labels.

- 1) Seat and back fabric or fabric covers in a quantity equal to five percent (5%) of each type of chairs provided, with covers prorated to sizes of chairs used.
- 2) Provide spare light bulbs for aisle lights in a quantity equal to ten percent (10%) of the chairs installed with aisle lights.
- 3) Provide mounting hardware for all mounting conditions equal to five percent (5%) of chairs installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. To establish comparative standards of quality, the equipment and installation indicated herein shall be by one of the following manufacturers:
- 1) Poltrona Frau
 - 2) Ducharme Seating
 - 3) Series Seating.
 - 4) Or approved equal
- B. Qualifications
- 1) Equipment of the work in this Section shall be the responsibility of the single Manufacturer, who shall own and operate their own shop for the fabrication of theatrical seating equipment, and be regularly engaged in the fabrication of such equipment
 - 2) Manufacturer shall have under his control all parts composing the complete chair including castings, steel, plywood, fabric, and accessories, as well as mounting and installation components.

2.2 PRODUCTS – BASIS OF DESIGN

- A. Fixed, removable and demountable seating
- 1) Basis-of-design for audience seating is Poltrona Frau Thea with modifications described herein, with arm rests and low voltage LED aisle lights, ADA flip-up ends at transfer arm locations and finishes specified herein. Comparable products by one of the manufacturers listed above shall also be acceptable.

2.3 SCOPE

- A. Provide all seating and seating components in Theater 1 complete with all necessary accessories and as described herein.

2.4 MATERIALS

- A. The following criteria apply to all fixed, removable and de-mountable seating under this work.
- B. All variations from the specified materials and product must be approved by the Commissioner.
- C. Fire Performance Characteristics:
- 1) Flammability performance: Upholstery components and the assembly thereof shall be in conformance with flammability standards as set forth in California Technical Bulletin #117.

- 2) Padding: Provide new (prime manufacture) polyurethane foam with an average burn length not exceeding 8" and average flame time after removal of flame source not exceeding 15 seconds, with drippings from test specimen not continuing to flame for more than 5 seconds after falling, when tested vertically in compliance with Federal Test Method Standard 191, Method 5903.2.
 - 3) Fabric to comply with 16 CFR Part 1610 Class I.
 - 4) Certificates: Provide certificates by manufacturer attesting that the materials provided for theatre seating meet the above fire performance requirements.
- D. Gray Iron Castings: American Society of Testing Materials A48, Class 25.
- E. Steel Plates, Shapes, and Bars: American Society of Testing Materials A36.
- F. Steel Sheets for Baked Enamel Finish: American Society of Testing Materials A591, commercial and drawing quality; Class C, galvanized-bonderized; 20 gauge minimum unless otherwise indicated.
- G. Expansion Bolts: FS FF-B-588; Type, Class, and Style as recommended by the chair manufacturer.
- H. Concealed Plywood: PS 1/ANSI A199.
- I. Finish for all exposed metal parts shall match color to be selected by the Commissioner.
- J. Exposed Wood: Douglas Fir, free of visible defects. Color shall be stain per the Commissioner. Species shall be as specified herein. Stain and seal with Lacquer.
- K. Upholstery fabric:
- 1) Flame Retardant: Meets Class "A" flamespread rating in accordance with American Society of Testing Materials-E84, NFPA #255, UBC #42-1, and Underwriters Laboratory #723.
 - 2) Light Fast: Exceeds 48 hour NAFM requirement. Test method A.A.T.C.C.-16A.
- L. Cushions: Seat and back cushions made of open cell polyurethane foam.
- M. Fasteners: All fasteners shall be concealed. No exposed fasteners permitted.

2.5 THEATER 1 FIXED, REMOVABLE AND DEMOUNTABLE SEATS

- A. General:
- 1) The intent of the seat is to provide the comfort of individual seats with arms and to aesthetically create rows of monolithic, flat wood flat back seats.
 - 2) When not occupied, the rows of seats will appear as solid single rows from the rear with minimal gaps between individual backs.
 - 3) The backs will remain fixed and will not move up and down as the seat is deployed or returns upright.

- 4) The arms will be fixed and will be completely within the envelope of the seat of 20-1/2".
- 5) The top of the seat back shall be 34" above the floor of the row in which the seat is located.

B. Seat Bottom:

- 1) The seat bottom will have a 9/16" thick wood panel with a fully upholstered cushion applied to the top.
- 2) The wood bottom will be a single piece of birch/poplar plywood with a single bend at the 1/3 point to create two facets, veneered on both sides in Douglas Fir and stained in a standard color to be selected by the architect.
- 3) The top of the seat cushion, when deployed, shall be 17-3/4" above the floor.
- 4) The seat cushion shall be made of virgin HR polyurethane foam, flame retardant without additive, allergy proof, odorless, and moisture proof. The foam cushions shall be glued in place using inflammable glue and shall be perfectly fitted to the plywood structure.
- 5) The cushion will be 2-1/2" to 5" thick and will be molded for comfort.
- 6) When not occupied, seat bottoms will automatically return to a full upright position. Seat return mechanism shall use gravity to recline by means of a steel counterweight placed in the bottom back of the seat. Spring operated mechanisms will not be accepted.
- 7) All fasteners and attachments shall be concealed.

C. Seat Back:

- 1) The seat back will have a 3/4" thick flat wood rear panel with an upholstered cushion applied to the front side. The wood will not have a camber in any direction and the horizontal line at the top will be flat.
- 2) The wood back will be a single piece of birch/poplar plywood, veneered on both sides in Douglas Fir and stained in a standard color to be selected by the architect.
- 3) The cushion will be 2-1/2" to 5" thick and will be molded for comfort as the wood back will be flat.
- 4) The wood of the back will end approximately 13/16" from top of cushion, but the cushions will continue to the sides of the back.
- 5) All fasteners and attachments shall be concealed.

D. Intermediate Standard and Armrest:

- 1) The standards between seats shall be less than 2" wide and constructed of birch plywood upholstered in the same fabric as the seat.
- 2) The top and the rear of the standard shall be capped in a 1" thick single piece of

birch/poplar plywood, veneered on all sides in Douglas Fir and stained in a standard color to be selected by the architect to match seat bottom and back.

- 3) The front of the standard shall be perpendicular to the floor.
- 4) The rear of the standard shall be constructed be flush with the seat back wood panel, so as to form a monolithic seat back unit.
- 5) The standard shall be approximately 2'-9/16" high inclusive of wood cap.
- 6) The standard shall be supported on a 6" high steel hoop.
 - a. Hoop shall be 1"x1 15/16" bar steel
 - b. Hoop shall be finished in standard color powder coating selected by architect.
 - c. Hoop shall have a flat bottom to be used to secure seat standard to the floor.
- 7) Fabricate standards for attachment to sloped or flat floor, as required by the Drawings.
- 8) Provide bolt caps at each floor mounted standard foot, which cover mounting stud and nut. Color to match selected metal finish for aisle standard.
- 9) Aisle standards shall be floor mounted as per manufacture's specifications or as indicated on the Drawings. All mounting assemblies shall be approved by the Commissioner prior to installation.

E. Aisle End Panels:

- 1) The aisle end panels shall be of the same construction as Intermediate Standards.
- 2) Row letter identification tags will be incorporated into the end panels.

F. Fabric:

- 1) Manufacturers:
 - a. Kvadrat
 - b. Or approved equal
- 2) The basis of design for the seat fabric is "Hermod" as manufactured by Kvadrat. The color shall be "1544".

G. Handicapped Access Aisle Standards

- 1) The aisle end panels shall be visually identical to all other end panels.
- 2) The decorative aisle end panel shall be fully removable to allow side access to the seat.
- 3) Provide code complying graphics to indicate Handicapped aisle standards.

H. Number and Letter Plates

- 1) Provide brushed stainless steel finished plates with engraved and black filled or

black filled etched Helvetica Medium characters for seat location identification system corresponding to approved shop Drawings.

- 2) Black fill shall be deep in color and consistent. Characters shall be centered on the plate.
- 3) Row letter plates shall be round and located in a routed recess for flush mounting in the aisle end panel.
 - a. Mounting to use two (2) escutcheon pins or appropriate fastener without keying. Mounting pins to be of similar or identical metal to letter plate.
 - b. Engraving of aisle letter plate to be consistent with engraving of seat number plates.
- 4) Seat number plates to be recess mounted in the center of the seat bottom edge.
- 5) Mounting fasteners shall match finish of number/letter plates.

I. Donor Plates

- 1) All chairs shall accommodate donor plates. Location shall be determined with mock-up, either in a recess for flush mounting in all arm rests or at the top of the rear seat back panel.
- 2) Donor plate material shall visually match number and letter plates.
- 3) Donor plates shall be adhered with adhesive material; do not use pins, brads or screws.

J. Demountable seat bases

- 1) Provide seats, as designated in locations indicated on the drawings, with low-profile steel platforms fitted with specially designed locking devices to provide for easy demounting and re-attachment of the seat to accommodate conversion of the space occupied by the chair to wheelchair or equipment access
- 2) Provide release/transport tool to the owner with each chair/platform

K. Removable seats

- 1) Provide seats, as designated in locations indicated on the drawings, of the same construction as the fixed theater seat that is designed as a free-standing chair.
- 2) The chair shall be designed not to attach to the floor and be equipped with non-marking plastic glide feet

2.6 FABRICATION

A. Shop Assembly:

- 1) Fabricate all work in this section in accordance with the Commissioner's direction, specifications, approved shop drawings, pertinent project drawings, established trade practices, and applicable code requirements.
- 2) Do not commence shop assembly until written approval of all mock-ups has been

received from the Commissioner.

- 3) Carry out shop welding in full accordance with the appropriate sections of "Specifications for the Design, Fabrication and Erection of Structural Steel Buildings" of the American Institute of Steel Construction (AISC).
- B. Shop/Factory Finishing: All factory finishes shall comply with manufacturers' recommendations. Color selection shall be as indicated in the seating color scheme schedule at the end of this section.
 - C. Tolerances: Machine finish all operating parts to standard trade tolerances, fits and finishes.

PART 3 -- EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Contractor must examine areas and conditions under which theatre seating is to be installed, including condition of substrate to which seating standards are to be attached, and must notify Commissioner in writing of conditions detrimental to proper and timely completion of work. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to Contractor.

3.2 PREPARATION

- A. Surface Preparation: Prepare all surfaces as to manufacturers recommendations. Comply with all industry standards regarding surface materials.

3.3 ERECTION / INSTALLATION / APPLICATION / CONSTRUCTION

- A. Comply with best standard industry practice for secure and proper installation. Install seats in locations indicated on approved shop drawings, with required clearances, elevations, and sightlines.
- B. Install standards in locations necessitated by seating layout with each standard attached to the substrate by no less than two (2) anchoring devices of recommended size.
- C. Install seats by mounting components to standards or brackets mounted on standards using industry approved hardware and fasteners.

3.4 FIELD QUALITY CONTROL

- A. The installation of the equipment indicated in this section shall be supervised by qualified personnel who are regularly employed by the Contractor for supervision of equipment installation similar to that indicated herein.
- B. Arrange for all tests and inspections required by the NYC DDC General Conditions.

3.5 ADJUSTING AND CLEANING

- A. Adjust seat uplift mechanisms as required to assure that seats in each row are aligned when in upright position.
- B. Replace any upholstery that has been damaged during installation.

- C. Touch-up minor abrasions and imperfections in painted finishes with coating to match factory-applied finish.
- D. Remove all debris caused by this work from the premises.

3.6 DEMONSTRATION

- A. Installed seating to be operated for approval, and inspected for quality by the City of New York and the Commissioner.
- B. Make necessary adjustments or modifications as required.
- C. Instruct City of New York's designated staff or representatives in the care and maintenance of all items.
- D. Schedule tests and instruction in conformance with project construction schedules and the availability of City of New York and Commissioner.
- E. Cost of re-inspection and additional testing by the Commissioner, if required, due to lack of completion and/or errors and omissions shall be paid by the Contractor respective to the area of work concerned.

3.7 OWNER'S INSTRUCTIONS & COMMISSIONING

- A. Supply instruction to City of New York and City of New York's operating personnel on operation and care of system for not less than six (6) hours total. Instruction shall include, but not be limited to, proper maintenance of all systems, replacement procedures for user replaceable parts to obtain maximum usage of systems.
- B. Deliver all copies of approved Operations Manual to the City of New York prior to first instruction session, and review it as part of that session.
- C. Timing of all sessions shall be scheduled by City of New York at their convenience.
- D. All instruction shall be by technical staff of the Seating Contractor.

3.8 PROTECTION

- A. Take suitable precautions to protect the equipment in this section from damage after installation and prior to acceptance by the City of New York.
- B. Remove all equipment protection and clean all components thoroughly prior to the demonstration session.

END OF SECTION

This Page Intentionally Left Blank

SECTION 144200

WHEELCHAIR LIFTS

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Section, as shown or specified, shall be in accordance with the requirements of the Contract Documents.

1.2 SECTION INCLUDES

- A. Work of this Section includes all labor, materials, equipment and services necessary to install the wheelchair lifts, as shown on the drawings, specified herein, and/or as needed for a complete and proper installation.

1.3 RELATED SECTIONS

- A. Volatile organic compound (VOC) limits for adhesives, sealants, paints and coatings – Section 018419.
- B. Environmental Practices (LEED Building) – Section 018116.
- C. Construction waste requirements – Section 017419.
- D. Construction IAQ requirements – Section 018119.
- E. Elevators – Division 14.
- F. Electrical service - Division 26.

1.4 QUALITY ASSURANCE

- A. The City of New York requires the Contractor to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals which may impact this area of work are listed in the applicable paragraphs of this specification section. The Contractor shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor or their Subcontractors, shall not be allowed if such changes compromise the environmental goals.
- B. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.
- C. Use products produced by manufacturers regularly engaged in the business of manufacturing, installing, and servicing equipment of the type required by this Section of these Specifications, and with a 3 year history of successful production acceptable to the Commissioner.

D. Special Experience Requirements

1. **Installer:** The contractor or subcontractor performing the work of this Section must, within the last 5 consecutive years prior to the bid opening, have successfully completed in a timely fashion at least 3 projects similar in scope and type to the required work.

- E. Technical Services:** Manufacturer shall maintain a team of design personnel to work with Architects, Engineers, and Contractors to adapt the wheelchair lift product to the design and structural requirements of the building.

- F. Performance Requirements:** The unit shall be completely assembled and pre-wired (less optional equipment and necessary gates) and manufactured with adequate lifting and load capacity for the application described in this specification.

1.5 APPLICABLE STANDARDS

- A. Unit shall be designed and manufactured in accordance with the following standards:**

1. American National Standards Institute (ANSI A17.1) Parts 2000 and 2100 for vertical wheelchair lifts in private and public places.
2. Underwriter's Laboratories (UL)
3. International Building Code (IBC)
4. National Electric Code (NEC)
5. American Society for Testing Materials (ASTM)
6. American Welding Society (AWS)

1.6 SUBMITTALS

- A. LEED BUILDING Submittal Requirements:** The contractor or subcontractor shall submit the following LEED BUILDING certification items:

1. Material cost breakdowns, submitted in the format of the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM of these specifications.
2. Additional information to complete the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
3. Letters of Certification, Product Cut Sheets, Material Safety Data Sheets, or other items to support the information provided in the ENVIRONMENTAL BUILDING MATERIALS CERTIFICATION FORM, as requested by the Commissioner.
4. Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

5. The LEED BUILDING Submittal information shall be assembled into one package per specification section (or per subcontractor), and sent to the Commissioner for review.

B. Submit

1. Materials list of items proposed to be provided under this Section;
2. Manufacturer's specifications and other data needed to prove compliance with the specified requirements;
3. Shop Drawings in sufficient detail to show fabrication, installation, anchorage, and interface of the work of this Section with the work of adjacent trades;
4. Manufacturer's recommended installation procedures which, when approved by the Commissioner, will become the basis for accepting or rejecting actual installation procedures used on the Work.

- C. Upon completion of this portion of the Work, and as a condition of its acceptance, deliver to the Commissioner three copies of an operation and maintenance manuals.

1.7 PRODUCT HANDLING

- A. Protection: Use all means necessary to protect the materials of this Section before, during and after installation and to protect the installed work and materials of all other trades.
- B. Replacements: In the event of damage, immediately make all repairs and replacements necessary at no additional cost to the City of New York.

1.8 WARRANTY

- A. Unit shall have a one (1) year limited warranty on the basic unit and electrical system with a two (2) year warranty on drive train components as furnished by the manufacturer.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Basis of Design: Vertical Platform Lift, Model HBC-108, shaftway standard model by National Wheel-O-Vator, or equivalent product of Garaventa, ThyssenKrupp Access, or approved equal.
- B. Composition and Materials
1. Machine Tower: 16 gauge steel sheet.
 2. Base Frame: 2" square x 1/4" structural steel tubing.
 3. Lift Weldment: 3/8" hot rolled steel plate and 2" square x 1/4" wall structural steel tubing.
 4. Tower Cap: 7 gauge hot rolled, pickled and oiled steel plate.

5. Side Guard Panels: 22 gauge, steel sheet panel in 1" square x 14 gauge galvanized steel tubing frame.
6. Front Panel: 18 gauge steel sheet.
7. Platform: 11 gauge galvanized steel plate with slip resistant surface.
8. Access Ramp: 11 gauge galvanized steel plate with slip resistant surface.
9. All Welded Parts: Shall be made by welders certified in accordance with the requirements of AWS D1.1.

C. Characteristics of System

1. Capacity: 750 lbs.
2. Speed: 20 fpm.
3. Drive System: Hydraulic, 24 VDC 1-1/2 HP drive = 1:2 leaf chain hydraulic with type "A" instantaneous slack chain safety device.

D. Safety Devices: The unit shall have the following safety devices to safeguard the user.

1. Upper and lower limit switches.
2. Upper final limit switch.
3. Slack chain device.
4. 24 V low voltage controls.
5. Grounded electrical system.
6. Non-slip platform and access ramp surface.
7. Platform safety pan.
8. Emergency stop button.
9. Key-lock on controls shall meet the requirements of ANSI A17.1, Part 2000.
10. Locking top and bottom landing gates provided with combination mechanical lock and electrical contact meeting ANSI A17.1, Section 2000.
11. Grab rail.

E. Finish: Unit shall utilize the following finish process.

1. Alkaline detergent wash.
2. Clear water rinse.
3. Iron phosphate coating.
4. Clear water rinse.

5. Non-Chromate rinse.
6. Application of Polyester (TGIC) Thermostatic Powder Coating Material; black finish.

PART 3 EXECUTION

3.1 SURFACE CONDITIONS

- A. Examine the areas and conditions where wheelchair lifts are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.2 INSTALLATION

- A. Unit shall be installed and operated in accordance with ICC/ANSI A117.1, NEC and ASME A18.1 Guidelines.

3.3 COORDINATION

- A. Coordinate as required with other trades to assure proper and adequate provision in the work of these trades for interface with the work of this Section.
- B. Adjust all components to operate within accepted design tolerances, and lubricate equipment in accordance with the manufacturer's recommendations.
- C. Upon completion of the installation, make arrangements for and secure required inspections, tests, and approvals of the completed systems. Make all changes and adjustments required without additional cost to the City of New York.

CONTRACT # 2
PLUMBING WORK

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 00 00

GENERAL PROVISIONS FOR PLUMBING

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment and services necessary to furnish, deliver and install all work of this Section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of the Contract General Conditions, Section 230000 General Provisions, and with the provisions of all applicable Local, State, and Federal Codes and laws.

1.3 SCOPE OF WORK

- A. The work under this Section shall include all incidentals, labor, material, equipment, appliances, services, hoisting, scaffolding, supports, tools, consumable items, fees, licenses, and administrative tasks required to complete and make operable the plumbing work shown on the drawings and specified herein.

- B. Contract #2 Contractor shall furnish and install all equipment as necessary to provide a complete installation including system check out and start up on each item and system. The following equipment shall be provided:

1. Sanitary, waste, and vent systems.
2. Domestic hot and cold water systems.
3. Domestic water from existing service
4. Fire protection water from existing service.
5. Pipe materials, hangers and supports.
6. Insulation.
7. Valves.
8. Hose bibbs.
9. Pipe sleeves and seals.
10. Drains.
11. Cleanouts.
12. Plumbing fixtures.
13. Water heating equipment and specialties.
14. Trap primers.
15. Miscellaneous plumbing specialties.
16. Access panels.
17. Water detection systems.
18. Kitchen equipment plumbing support systems and connections.

1.4 WORK BY OTHERS

- A. Division 26 shall provide power wiring to electrical devices. Section 220000 shall provide and install all control wiring required for equipment operation. Section 220000 shall provide motor starters for installation by Division 26.

- B. Section 220523 shall provide and install all make-up water distribution to HVAC equipment from outlet valve of backflow preventer. Section 220000 shall provide and install backflow preventer.
- C. Section 220523 shall provide and install indirect condensate waste piping and trap to drain receptor from all HVAC equipment.
- D. Excavating, backfilling, and compacting shall be provided under other divisions of this specification. Coordinate requirements.
- E. Concrete housekeeping pads for floor-mounted equipment and concrete pits shall be provided under other divisions. Coordinate exact locations, dimensions, piping locations, and anchor bolt requirements.
- F. Plumbing devices, faucets, valves and fittings required for food service equipment shall be provided by other divisions. Section 220000 shall provide and install piping connections. Food service equipment shall be assembled by other divisions. Coordinate requirements.
- G. Plumbing fittings, faucets, drains, fixtures, and devices, required for laboratory and darkroom equipment shall be provided by other divisions. Section 220000 shall provide and install piping connections. Coordinate requirements.

1.5 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to all State, Local, and Federal Codes and Laws.
- B. The criteria of design and performance to produce the required operation is based on equipment of the named manufacturers. Equipment of other manufacturers shall be considered, subject to its acceptability in the Engineer's judgment and opinion. The equipment must conform to the operational characteristics and dimensions established by specified item and the drawings for mechanical spaces and other clearances.
- C. The following manufacturers, vendors or materials, when provided in accordance with requirements of this Division, are approved for use. Materials supplied shall comply with specification requirements and be of a product of approved manufacturers. No deviations from this list shall be permitted unless specifically approved, in writing, after submission of satisfactory evidence relative to compliance with specification requirements.

1.6 SUBMITTALS

- A. Procedure: Prepare and make the submissions listed below and in Section 230000.
- B. Shop Drawings: Submit shop drawings of all items proposed to be furnished and installed under this Section which shall include but not be limited to.
 1. Coordination drawings, coordinated with all other trades as outlined in section 220000.
 2. Piping materials, joints and fittings.
 3. Valves, tags and name plates with schedule and location.
 4. Pipe hangers and supports
 5. Insulation
 6. Valves
 7. Pressure regulating valves
 8. Cross connection protection devices.
 9. Pipe sleeves and seals.

10. Drains
11. Cleanouts
12. Plumbing fixtures
13. Water heating equipment
14. Pumps
15. Drip details.
16. Access panels.
17. Trap primers.
18. Miscellaneous plumbing specialties.
19. Welding certifications: submit reports as required for piping work,
20. Brazing certifications: submit reports as required for piping work.
21. Manufacturers' recommended installation procedures which, when approved, will become the basis for inspecting and accepting or rejecting actual installation procedures used on the work.

1.7 RELATED SECTIONS

- A. Section 017419 – Construction Waste Management

1.8 WORK INCLUDED

- A. Requirements of Construction Waste Management, Section 017419.
 1. The Commissioner has established that as many of the surplus and waste material as economically feasible shall be reused, salvaged, or recycled. To that end, the Contract #2 Contractor shall participate in the development of the Waste Management Plan, and collect, sort and deposit in designated containers, their waste, non-returned surplus materials and rubbish in accordance with the approved Plan.
 2. Project Diversion Goals are stated in Section 017419 – Construction Waste Management. Contract #2 Contractor shall meet or exceed the minimum percentage of waste stated there for diversion from landfill, unless Contract #1 Contractor designates a different amount. Specific items/categories shall be in accordance with the Documents and as established in the Plan.

PART 2 - PRODUCTS

2.1 PIPE MATERIALS

- A. Sanitary, waste, vent, and storm piping above ground (up to and including 10" size) within building: Hubless cast iron pipe with no hub fittings CISPI 301 and "Clamp-All 125" or 4 and 6 band "Huskey" clamps. All cast iron soil pipe and fittings shall be marked with the collective trademark of the Cast Iron Soil Pipe Institute (CISPI).
- B. Domestic hot water, cold water, hot water recirculating, condensate, and indirect waste piping above ground: hard drawn seamless Type L copper tubing ASTM B88 with wrought copper solder fittings A.N.S.I. B16.22 and "Bridgit" or other no lead content solder joints ASTM B32-83, alloy Grades SN96 or SB5. Solder flux lead content-zero percent.
- C. Domestic water service piping (up to 2" size): Type K soft copper tubing ASTM B88 with Flared fittings for copper ASA A40.2. No joints are permitted below concrete slabs.

2.2 PIPE HANGERS, SUPPORTS, SEISMIC RESTRAINT, AND VIBRATION ISOLATION

- A. Pipe hangers and supports: refer to section 220523.
 - 1. Roof piping support: Miro "pillow block" series, pre-fabricated, Polycarbonate resin pipestands with roller guides, spacer units and .040 aluminum pipe straps with #8 stainless steel screws to secure piping to stands. Model selection shall be based on carrier pipe size.
- B. Seismic restraint: refer to section 230000 and 220548.
- C. Vibration isolation: refer to section 220548.

2.3 INSULATION

- A. Insulation and sound attenuation: refer to section 220700.

2.4 VALVES

- A. General: refer to section 220523 for general information in addition to plumbing valves noted below.
- B. Ball Valves for domestic water systems up to 2" size: 600 WOG, bronze, two-piece, full port, brass ball with soldered or thread ends.

Manufacturer: Stockham S-206-BR-R-S or S-206-BR-R-T
Nibco S-585-70 or T-585-70
Watts B-6081 or B-6080

- C. Check valves for domestic water systems up to 2" size: Class 125, bronze, "Y"-pattern, swing check, threaded cover, bronze disc with soldered or threaded ends.

Manufacturer: Stockham B-309Y or B319Y
Nibco S-413 or T-413
Watts CVYS or CVY

- D. Water pressure regulating valve: the valve type shall be a fluid actuated pilot controlled pressure regulating valve equipped with a pressure sustaining feature that will cut out flow at a pre-set minimum pressure. The cut-off minimum pressure shall be set in the field, after a documented flow test and water supply curve is performed and plotted. The valve shall incorporate:

- 1. Bronze body.
- 2. Sealed FDA approved elastomer diaphragm.
- 3. Stainless steel spring and stem
- 4. Quad-ring flow throttling retainer.
- 5. Brass hydraulic control pilots.
- 6. Copper control tubing.
- 7. Full size FDA approved strainer and blow down valve.
- 8. Inlet and outlet pressure gauges with bleed shut off valves on the gauge stem.

Manufacturer: Watts 115-2 series.
Watts Regulator Co. ACV Div., Houston TX.
Cla-Val 92-01 series.

- E. Hose end drain valves: 600psi CWP, all bronze ball valve with 3/4" hose thread outlet, threaded hose cap, rubber gasket and safety chain with soldered or threaded ends.

Manufacturer: Nibco S-585-70-HC or T-585-70-HC
Watts B-6001-CC or B-6000-CC

2.5 PIPE SLEEVES AND SEALS

- A. Masonry walls and slabs: Schedule 40 galvanized steel pipe with integral water stop flange.
- B. Piping seal (interior walls in contact with earth): interlocking expandable synthetic rubber links, assembled with corrosion resistant bolts, nuts and pressure plates; equal to PSI "Link seal".
- C. Piping seal (interior walls and floors in contact with earth): interlocking expandable synthetic rubber links, assembled with corrosion resistant bolts, nuts and pressure plates; equal to PSI "Link seal".
- D. Piping seal (interior floor slabs in contact with earth): seal between pipe and sleeve with a flexible elastomeric caulk listed specifically as a pipe sealant.
- E. Sleeve adapters: coated cast iron, equipped with flashing clamp.
- F. Pack annular space between sleeve and pipe (insulation) and/or conduit in fire rated construction with fire retardant putty, sealant and/or caulk. Material shall be non asbestos based and installed in accordance with manufacturers instructions for fire rating required.
- G. Penetrations of multiple items and penetrations with annular space greater than 1/2" shall be provided with approved backing material in accordance with manufacturers instructions.
- H. Fire retardant sealer and system shall meet ASTM E-84, ASTM E-814, and UL-1479.

I.	<u>MANUFACTURER</u>	<u>MODEL</u>
	Dow Corning	Firestop 2001
	Nelson	CLK,FSP
	Standard Oil	Fyre Putty
	3M	CP-25

2.6 DRAINS

- A. General:
 - 1. Provide all poured in place drains with minimum 24" x 24" vinyl flashing.
 - 2. Subject to compliance with requirements, provide drain products by one of the following manufacturers... JR Smith, Zurn or Wade unless otherwise noted below.
- B. Floor drain, mechanical rooms, indirect waste receptor (D1): cast iron body, bottom outlet, 9" diameter open top, dome bottom strainer, combination seepage pan/membrane flashing clamp and trap primer adapter.

Manufacturer: JR Smith 3960 with 2695Y-2 tp adapter
Wade 3200-RS with 2400NH tp adapter
Zurn Z127 with Z1023 tp adapter

- C. Floor drain toilet rooms (D2): cast iron body, bottom outlet, 7" diameter nickel bronze top, trap primer connection, seepage pan and combination membrane flashing clamp.

Manufacturer: Smith 2010-A
Wade 1100STD
Zurn ZN-415- type B strainer

- D. Floor drain, (trash room) (D3): acid resistant coated (ARC) interior, 6" deep cast iron body, bottom outlet, 8" square nickel bronze top, aluminum sediment bucket and combination seepage pan/membrane flashing clamp. Provide drains receiving indirect waste with 1/2 grate.

Manufacturer: JR Smith 3101-C
Wade 9110-26-27
Zum ZN1910-KC-23

- E. Floor sink, kitchens (D4): acid resistant coated (ARC) interior, 8" deep cast iron body, bottom outlet, 12" square nickel bronze top, aluminum sediment bucket and combination seepage pan/membrane flashing clamp. Provide floor sinks receiving indirect waste with 1/2 grate.

Manufacturer: JR Smith 3151-C
Wade 9140-26-27
Zum ZN1901-KC-23

- F. Floor Drain, indirect waste funnel (D5): Duro-Coated cast iron, with necessary fasteners to secure funnel to strainer. 6" - 7" diameter funnel converting assembly.

Manufacturer: JR Smith 3812
Zum ZN328-
Wade EF Funnel

- G. Floor Drain, cast floor drain for floating floors (D6): Cast iron design. The upper funnel section cast into the floating floor. Lower bucket, built into the structure, shall retain water surrounding the upper section as a between floors sound seal. Weep holes are required to drain the structural floor. Floor drains shall have water proofing membrane clamps.

Manufacturer: Mason Industries, Inc. Type CFD
Zum Z625-
Watts FD-600

2.7 CLEANOUTS

- A. General: Provide all poured in place cleanouts with 24" x 24" vinyl flashing.

- B. Floor cleanout (DPCO): areas incorporating floor finishes, adjustable round scoriated heavy duty nickel bronze secured top, cast iron body, flashing flange and clamp, tapered bronze plug.

Manufacturer: Smith 4020 series
Wade 6000Z series
Zum ZN-1400 series

- C. Floor cleanout (DPCO): carpeted areas, adjustable round scoriated heavy duty nickel bronze secured top, carpet marker, cast iron body, flashing flange and clamp, tapered bronze plug.

Manufacturer: Smith 4020 series
Wade 6000 series
Zum ZN-1400 series

- D. Floor cleanout (DPCO): exterior areas, adjustable round scoriated heavy duty cast iron top, cast ductile iron body, flashing flange and clamp, tapered bronze plug. Install cleanouts with 18" square x 6" deep concrete apron in non-paved areas.

Manufacturer: Smith 4250 series
Wade 8300MF series

- E. Wall plate cleanout cover (WPCO): provided at cast iron cleanouts with tapered bronze plug a 6" x 6" chrome plated nickel bronze square frame and plate secured with vandal proof screws.

Manufacturer: Smith 4730 series
Wade 8480ST series
Zum ZANB-1460 series

2.8 PLUMBING FIXTURES

- A. General: Fixtures shall be new, complete with trimmings and fittings, including faucets, carriers, supplies, stops, traps, tailpieces, waste plugs, casings, hangers, plates, brackets, anchors, supports, hardware and fastening devices.

1. Stainless steel: type 302, 304, 316, or 317, as noted, sound deadened.
2. Trimmings and fittings: construct of forged, cast, rolled or extruded brass or bronze with Monel and other suitable non-corrosive parts: designed with easily renewable parts which are subject to wear or deterioration. No die castings and stampings other than brass or stainless steel. Plumbing trim shall consist of:

Exposed surfaces: chrome plated.
Pipe: copper type L.
Pipe fittings: threaded bronze.
Supplies: chrome plated brass tube.
Waste tailpiece: 17 gauge chrome plated cast brass.
P-traps: 17 gauge chrome plated cast brass with cleanout plug.
Escutcheons: one-piece chrome plated cast brass or stainless steel.
Air Chambers: Nibco #620-L. 12" long

3. Furnish and install ADA compliant utility insulation kit under handicap accessible lavatories and/or sinks.

Manufacturer: Truebro 102 E-Z "Lav Guard 2"
Plumberex X4333 "Pro-extreme"
McGuire "Pro-wrap" PW2000

- B. Water closets (W1, W2): Wall-mounted, flushometer, standard and handicapped vitreous china, wall hung, 1.28 gpf low flow, elongated, siphon jet, with 1-1/2" top spud. Seat: heavy duty solid plastic elongated open front. Flush valve (include trap primer on 1 flush valve in each toilet room equipped with floor drain), combined concealed carrier and support. Color: white.

Fixture: Toto CT708E(G)
Kohler Kingston K-4326
American Standard "AFWALL Millenium FloWise"

- Flushometer: Toto TET1LN32
Kohler K-7521
American Standard "Selectronic"
- C. Urinal (U1): wall hung, flush valve, standard and/or handicapped, vitreous china, 1.0 gpf, low flow, washout with 3/4" top spud, complete with flush valve and combination concealed carrier and support. Color: white.
- Fixture: Toto UT104EV
Kohler Bardon K-4904-ET-0
American Standard "Washbrook"
- Flush valve: Toto TET2LN33
Kohler K-7527
American Standard "Selectronic"
- D. Wall hung lavatories (L1): standard or handicapped, vitreous china, concealed arm carrier, drilled for 4" O.C. faucet, 1-1/2" chrome plated cast brass P-trap with cleanout plug, chrome plated brass angle stops with loose key operator, grid drain and tailpiece. Faucet: Chrome plated self closing metering faucet (0.5 gpm and 0.25 gallons per cycle). Insulate trap and hot water piping below lavatory with insulation kit. Color: white.
- Fixture: Duravit #041765
American Standard "Lucerne"
Kohler "Greenwich"
- Faucet: McGuire Pro Wrap
Delta 2517-HDF
Symmons S-60-G
- E. Undercounter mounted lavatory (L2): Vitreous china, oval, undercounter mount, 1-1/2" chrome plated cast brass P-trap with cleanout plug, chrome plated brass angle stops with loose key operator, and grid drain. Faucet: Chrome plated self closing metering faucet (0.5 gpm and 0.25 gallons per cycle). Insulate trap and hot water piping below lavatory with insulation kit. Color: white.
- Fixture: Kohler K-2214
American Standard "Aqualyn"
Eljer "Laura"
- F. Shower (SH1): pressure balancing shower valve with lever handle, integral check stops and volume control, chrome plated, vandal proof, 2.5 gpm shower head assembly. Type D shower drain.
- Shower valve: Florestone 39-62H
Symmons 4-500
Leonard PAM II-ST-TB
- G. Undermount Sink (S1): standard, single bowl, 18 gauge, type 304 stainless steel. Dual spray pull-out faucet.
- Fixture: Elkay ELUB12FB.
Just Mfg DFB18
Moen 1800 series.
- Drain: Elkay LK-35.
Just Mfg. J-35.
Moen sink drain.

- Faucet: Eurodisc 33-330.
Just Mfg. JPO series.
Moen "Extensa" 7560 series.
- H. Undermount Sink (S2): Gourmet single bowl sink with ribbed area. 18 gauge type 304 stainless steel. Self-rimming. Dual spray pull-out faucet.
- Fixture: Elkay ILGR4322L.
Just Mfg. SI-2243-A-GR-R
- Drain: Elkay LK-35.
Just Mfg. J-35
Moen sink drain.
- Faucet: Eurodisc 33-330.
Just Mfg. JPO series.
Moen "Extensa" 7560 series.
- I. Undermount Sink (S3): Drop-in sink-ette with drainboard. 18 gauge type 304 stainless steel. Self-rimming. Dual spray pull-out faucet.
- Fixture: Elkay ILR5422DD.
Just Mfg. SI-2243-A-GR
- Drain: Elkay LK-35.
Just Mfg. J-35.
Moen sink drain.
- Faucet: Eurodisc 33-330.
Just Mfg. JPO series.
Moen "Extensa" 7560 series.
- J. Utility Sink (S4): 18 gallon capacity utility tub set.
- Fixture: Mustee 19F
Swanstone "Veritek" MF-4W
- Faucet: Eagle #313304
T&S B-0892
Advance Tabco K-132
- K. Utility Sink (S5): 19 gallon capacity utility tub set.
- Fixture: Mustee 27F
Florestone20FM
Zurn MS2620
- Faucet: Eagle #313304
T&S B-0892
Advance Tabco K-132
- L. Drinking Fountain (DF):
- Wall-mounted drinking fountain constructed of #18 gauge, type 304, stainless steel. Contoured basin, safety bubbler, push-button operated. In-line flow regulator to provide stream from 20 to 105 psi.

Manufacturer: Elkay EDFP214C
Halsey Taylor HAC8FSQ
Haws HCBF7 series.

2.9 WATER HEATING EQUIPMENT

- A. General: Water heaters shall conform to all applicable A.S.M.E. Standards, approved by the National Sanitation Foundation, and in compliance with ASHRAE 90 (latest edition).
- B. Electric storage water heater. (WH1): Heater(s) shall have the UL seal of certification and be factory equipped with an CSA/ASME rated temperature and pressure relief valve. Tank(s) interior shall be coated with a high temperature porcelain enamel and furnished with an R-Tech resistored magnesium anode rod rigidly supported. Water heater(s) shall meet or exceed the energy factor requirements of ASHRAE. Tanks shall have a working pressure rating of 150 psi, and shall be completely assembled. Water heater(s) shall be equipped with copper, resistored, "screw-in" type elements. Tank shall be insulated with 2 1/2" of rigid polyurethane foam insulation. Water heater(s) shall be equipped with surface mounted thermostats each with an integral, manual reset, high limit control. Water heater(s) shall be covered by a three year limited warranty against tank leaks.

Manufacturer: Rheem ELD120
AO Smith PCT-120
Bradford White LD-120R3-3

- C. Electric storage water heater. (WH2, WH3): Steel tanks with anode rods and polyurethane foam insulation; high porcelain enamel finish maximizes corrosion resistance. Include thermostat and temperature limiting control. Factory-installed T&P valves are AGA/ASME rated. Max. thermostat setting: 160°F Moderate Hot Water Recovery, units feature 2 elements, 2-1/2" of rigid polyurethane foam insulation, and brass drain valve.

Manufacturer: Rheem EGSP30
AO Smith PCJ-30
Bradford White LD-30L3-3

- D. Water heating equipment specialties.
1. Thermostatic mixing valve, water heater (TMV1): Threaded inlets and outlet, thermostatic controller with swivel action check stops, removable cartridge with strainer (provide 1 extra cartridge), stainless steel piston and liquid fill thermal motor, volume control/shut-off valve, bi-metal dial thermometer, (3" face, 20 degrees F. to 240 degrees F.) brass pipe, fittings and unions. Rough chrome body finish.
 2. Thermometer (TH): adjustable angle type, mercury or liquid actuated, constructed with non-corrosive internal mechanism and recalibrator adjustment; assembled in minimum 3-1/2 inch diameter gasket sealed, glass faced stainless steel case; equipped with stainless steel bracket assembly, separable socket, 30 to 240 degrees F. water temperature range.

Manufacturer: Trerice L80030.
Palmer Wahl 35A
Weiss Instruments 3RBMS

3. Pressure and temperature relief valve (P&T): ASME rated, bronze body, non-corrosive trim, automatic reseating, extension thermostat, test lever, threaded inlet and outlet; 75 to 150 psi adjustable pressure range, set at 125 psi, 210 degrees F. water. Provide P&T if not included with water heating equipment.
4. Thermal expansion tanks (ET1): ASME rated, suspended-type, 6.4 gallon total volume, 0.50 maximum acceptance volume, 150 psig working pressure, welded steel shell, heavy duty butyl diaphragm, polypropylene lined water reservoir. 200°F operating temperature, provide 62 psi pre-charge

Manufacturer: Amtrol "Therm-X-Trol" ST-12-C
 Watts PLT-12
 Elbi DTS series

2.10 PUMPS

- A. General: refer to drawings for specific pump characteristics, (i.e. H.P., gpm, TDH, and Elec.).
- B. Domestic hot water circulating pumps (RP1): Bell & Gosset Series 100 or approved equal, UL listed, all bronze, in-line centrifugal pump, close coupled, 1/6 HP, 120V, 1PH, 1750 RPM.
 1. Circulator controllers: UL listed, automatic immersion aquastat, adjustable temperature range, and differential immersion well. Electrical rating 115 VAC.
 2. Motor starters: UL listed, manual starting switch in NEMA 1 enclosure with "Hands-Off-Auto" selector switch. Refer to section 220513.

2.11 MISCELLANEOUS PLUMBING SPECIALTIES

- A. Mechanical mixing valves: bronze body, chrome plated, 3/8" inlet and outlet connections.

Manufacturer: Symmons #4-10 series.
 Watts LFUSG-B
 Sloan Mix series.

- B. Water hammer arrestors: all 316 stainless steel, mechanical-pneumatic type, hermetically sealed bellows, threaded inlet; 150 psi WWP. Size and placement determination: PDI-WH 201.

Manufacturer: Precision Plumbing Products SS Series.
 Watts SS-series
 JR Smith Hydrotrols

- C. Water hammer air chambers: Copper ASTM B88, 12" long with spun closed end and sweat inlet connections. Install behind each fixture on each service.
- D. Air vent: bronze body, stainless steel trim and float, threaded inlet and outlet; 150 psi WWP.

Manufacturer: Sarco 13W series.
 Spirotherm Spirotop VTP
 Armstrong AV series

- E. Electronic trap primer (TP1) serving 1 to 4 floor drains in mechanical rooms: Precision plumbing products:

Manufacturer: PPP Mini-Prime model MP-500-115V

MIFAB MI-300
Zum Z1020

- F. Trap primer valve: self adjusting automatic trap primer and distribution unit complete with integral backflow preventer, distribution box, corrosion resistant brass fittings with a copper reservoir, clear plastic inspection cover on reservoir. Provide mounting brackets and install with access panel.

Manufacturer: Precision Plumbing Products Oregon #1 series.
MIFAB M-500
Watts LFTP300

- G. Pressure gauge (PG): direct mounting, liquid filled, constructed with non-corrosive internal mechanism, recalibrator adjustment, assembled on 4-1/2" black phenolic turret type case with blow out plug, gasket sealed glass faced with dial, 0 to 200 psig range. Gauge accurate to 1% of scale range.

Manufacturer: Trerice 450LFB series.
Palmer Wahl 45TS series
Weiss Instruments Series PG-1

- H. Gauge valve: all bronze needle valve, 150 psi WWP.

- I. Water filter: two-piece high impact strength plastic housing, 125 psi WWP, replaceable 5 micron filter cartridge. Equip on cold water supply to all electric water coolers.

Manufacturer: AMF CUNO 1M housing with G78B2 filter series.
Watts AIRPO
Omnipure CL series

- J. Water filter Scale Inhibitor: scale inhibitor water conditioner, constructed of high impact strength plastic for 125 psi WWP, equipped with integral by-pass and replaceable cartridge filter element, 1 to 6 gpm flow range. Equip on cold water make-up supply to all HVAC equip.

Manufacturer: Filterite SI-4 series.
Watts OneFlow series.
Omnipure Q series

- K. Hose bibb (HB): unfinished areas, bronze body, removable valve seat and stem assembly, threaded end and Watts NF8 vacuum breaker.

Manufacturer: Nibco #64 with Watts NF8 series.
Watts SC8 series with vacuum breaker.
Zum Z1341

- L. Hose bibb (HB): finished areas, chrome plated bronze sill cock with "lock shield key", removable hand wheel, and vacuum breaker.

Manufacturer: Nibco 763-LS series.
JR Smith 1/4 Wall Hydrant
Woodford Wall Hydrant

- M. Manual washing machine drain and shut-off valves – recessed, single lever ball type, brass body, copper ELL adaptors, in a plastic wall box complete with standpipe drain piping connection and plastic cover. Install per manufacturer's instructions at each washer.

Manufacturer: Watts 2M2-DWB
Sioux Chief OxBox
Zum WM2961

2.12 ACCESS DOORS IN WALLS AND CEILINGS

- A. At each valve, cleanout or plumbing device requiring access, furnish an access door for installation by other sections. Rigid construction with two hinges and a latch. In plenum ceilings, provide felt between the door and frame to make an air tight seal. Access doors shall be flush mounted, prime coated with rust inhibitive paint, concealed frame, flushscrew driver operated locks with metal cams and anchors as required. Refer to division 8 for additional requirements.

Access door sizes shall be:
12" x 12" at easily accessible items.
16" x 16" where partial body access is required.
24" x 24" where full body access is required.

Manufacturer: Milcor type M series.
Cesco series.

PART 3 - EXECUTION

3.1 GENERAL

- A. Drawings are diagrammatic and indicate a general arrangement of work. General design concepts indicated must be followed or bettered. Do not scale drawings. Consult Architectural and Structural drawings for space conditions. Develop and submit coordination drawings as outlined in section 230000.
- B. Manufacturer's qualifications: firms regularly engaged in the manufacturer of fixtures, appliances, pipes and pipe fittings of types and sizes required, whose products have been in satisfactory use in similar service for not less than 5 years.
- C. Material qualifications: shall conform to all local, state, and national/federal codes and regulations which may apply and nothing in these specifications shall be interpreted as an infringement of such codes or regulations.
- D. Welding: qualify welding procedures, welders, and operators in accordance with ASME B31.1, or ASME B31.9, as applicable. Certify welding of piping work using Standard Procedure Specifications by, and welders tested under supervision of, National Certified Pipe Welding Bureau (NCPWB).
- E. Brazing: certify brazing procedures, brazers, and operators in accordance with ASME Boiler and Pressure Vessel Code, Section IX, for shop and job-site brazing of piping work.

3.2 DELIVERY, STORAGE, AND HANDLING

- A. Except for concrete, corrugated metal, hub-and-spigot, clay, and similar units of pipe, provide factory-applied plastic end-caps on each length of pipe and tube. Maintain end-caps through shipping, storage and handling, as required to prevent pipe-end damage, and eliminate dirt and moisture from inside of pipe and tube.
- B. Where possible, store pipe and tube inside and protected from weather. Where necessary to store outside, elevate above grade and enclose with durable, waterproof wrapping.
- C. Protect flanges and fittings from moisture and dirt by inside storage and enclosure, or by packaging with durable, waterproof wrapping.

3.3 ELECTRICAL CONNECTIONS AND WIRING

- A. Power wiring to electrical devices shall be installed by Division 26. Contract #2 Contractor shall be responsible to furnish all motor starters for installation by Division 26 and provide and install miscellaneous control and power wiring required by the equipment for proper and safe operation not specifically outlined in Division 26.

3.4 EQUIPMENT IN OTHER DIVISIONS AND/OR BY THE OTHERS

- A. Section 220000 shall provide and/or install traps, stops, faucets, fittings, tailpieces, etc. including any miscellaneous trim and/or components not furnished by others but required for safe and proper operation, and connect the service
- B. Obtain certified and approved prints of roughing drawings of equipment before starting work.
- C. Coordinate and verify all equipment locations, connections, and equipment requirements with the appropriate contractors (i.e. Kitchen). Provide and install all piping and equipment necessary to operate all equipment properly and safely whether specifically shown or not.
- D. All exposed piping, stops, cocks, and wastes which are visible to occupants shall be chrome plated.

3.5 COORDINATION OF WORK

- A. Carefully coordinate space requirements with other trades to insure that all materials can be installed in spaces allotted thereto, including finished suspended ceilings.
- B. Prepare and submit coordination drawings as outlined in section 230000.
- C. Provide and install concrete housekeeping pads for all floor mounted plumbing equipment.

3.6 ALTERATION WORK

- A. All equipment, fixtures, piping, etc. to be removed, shall be disposed of, turned over to the City of New York, or salvaged as directed by the City of New York. Equipment, fixtures, piping, devices, etc. shall not be removed from the premises without the City of New York's approval.
- B. All piping to remain shall be properly plugged, valved, capped and/or by passed such that upon completion of work all abandon systems are properly concealed, and that existing systems to remain, remain operational.

- C. No dead ends shall be left on any piping systems upon completion of work.
- D. Existing exposed piping systems not to be reused, and not specifically noted for removal shall be completely removed.
- E. All systems shall be left in working order to the satisfaction of the City of New York upon completion of all new work.
- F. All existing exposed, unnecessary piping related to new work shall be completely removed.
- G. Re-route or remove all existing piping and systems where necessary to avoid new equipment, structural, or masonry work as required by the proposed alterations.

3.7 PIPING GENERAL

- A. The word "piping" in this Specification shall mean pipe, fitting, flanges, nipples, and valves. Install underground piping as soon as possible so that trenches may be closed as quickly as possible.
- B. No piping shall be covered until tested approved by the Commissioner.
- C. Install all piping in correct relation thereto and the finished grades indicated on the drawings, and as required for coordination.
- D. All piping shall be run perpendicular and/or parallel to floors, interior walls, etc. Piping and valves shall be grouped neatly and shall be run as to maximize headroom or passage clearance. All valves, controls and accessories concealed in furred spaces and requiring access for operation and maintenance shall be arranged to assure the use of a minimum number of access doors.
- E. All pipe lines made with screwed fittings must be provided with a sufficient number of flanges and/or unions to allow for easy and convenient dismantling of the system without breaking fittings.
- F. Check the drawings for space limitations permitted for the installation of piping such as shafts, chases, and furred ceilings.
- G. All piping shall run concealed in furred spaces of occupied areas or chases wherever construction permits. Contract #2 Contractor shall obtain permission from the Commissioner to run any exposed pipes.
- H. All pipes shall be reamed to full area before installation and blown clear of chips and dirt. With threaded pipes apply compound to the male thread only.
- I. Cap all pipe and equipment outlets during construction and keep lines and inside of equipment free of foreign materials. Provide for expansion without warping or dislocating lines or straining connected equipment. Install piping to clear building construction and to avoid interference with other work.
- J. Provide and erect in a workmanlike manner, according to the best practices of the trade, all piping shown on the drawings or required to complete the installation intended by these specifications.
- K. The drawings indicate schematically the size and location of piping. Piping shall be set up and down and offset as required to meet field conditions.

- L. Contract #2 Contractor shall inform himself from the general construction specifications and plans, of the exact dimension of finished work and of the height of finished ceilings in all rooms where equipment or pipes are to be placed and arrange his work in accordance with the schedule of interior finishes, as indicated on the architectural drawings.
- M. All piping below grade or building slab shall be coated with coal tar enamel.
- N. Provide and install identification of piping and valves. Refer to other Division 23 Sections for installation requirements.
- O. Provide and install additional pipe protection (i.e. concrete encasement, and /or laying condition, bedding type and methods.) for underground piping subject to excessive loading by depth of bury, traffic or other sources.
- P. Underground piping shall be coordinated with concrete piers, footings and grade beams. Piping shall not be located adjacent to the concrete structure's bed closer than a 45 degree angle from the bottom of the concrete structure. Piping running below a wall footing or grade beam shall have a minimum non-bearing clearance of 6" above the pipe to the bottom of the concrete structure.

3.8 PRESSURIZED PIPING

- A. Exterior water piping shall be installed at least 5'-0" below grade to top of pipe.
- B. Water piping shall be run free of traps and unnecessary bends. Any traps formed shall be provided with hose end drain valves with threaded cap and chain to completely drain the system.
- C. Install water hammer arrestors on water systems in accordance with manufacturer's recommendations.
- D. Provide section cut-off valves on all main branches or as shown. Pitch and valve all water piping for convenient drainage.
- E. Wherever dissimilar metals are joined together an approved dielectric fitting shall be used.
- F. Each sectional shut-off shall have a brass tag and copper wire with a number. A chart shall be made up for each system setting forth the number of valves and what fixture it controls. Chart to be placed in glass frame and hung in Mechanical Equipment Room. Refer to section 230000 for piping and valve identification requirements.
- G. Balance domestic hot water recirculation systems to maintain temperature throughout entire system.

3.9 DRAINAGE PIPE INSTALLATION

- A. Run all soil, waste and vent piping shown or required by local codes. Piping shown is minimum and in accordance with State and Federal codes. If local codes require additional venting or larger sizes, same shall take precedence.
- B. Make all connections through traps. Each trap to be vented, either by circuit, loop, or individual vent, as required, but not less than shown, or as required by local code.
- C. Vent pipes shall be graded to free themselves of any water or condensation. Pitch vents not less than 1/8" per foot up toward stack.
- D. Install exterior cleanouts with an 18" square x 6" thick concrete apron.

- E. Pitch horizontal storm water and drains within or buried under the building not less than 1/8" per foot unless otherwise indicated on drawings.
- F. Pitch horizontal sanitary and waste piping at 1/2" per ft. slope for piping 1-1/2" or less; 1/4" per ft. slope for piping 2" and 3" diameter; and 1/8" per ft. slope for piping 4" to 6" diameter.
- G. Piping shall be laid true to line and grade as shown on the drawings, and in such a manner that a true and even surface at the invert is made over joints and throughout the entire length of the line. Piping shall be graded by the tripod level and measuring rod method assuring a uniform slope of the pipe.
- H. All underground piping shall be laid on 6" sand and backfilled with clean fine earth compacted to 12" above pipe. Complete backfill with available earth free of large boulders and sharp rocks. Tamp backfill in 6" elevations and overfill to allow for settlement.

3.10 PIPING SUPPORT

A. General

- 1. Refer to Sections 230000, 220523, and 222000 for general requirements.
- 2. Protection shields shall be provided under all horizontally insulated piping at each hanger.
- 3. Provide necessary structural members, hangers and supports of approved design to keep piping in proper alignment and prevent transmission of injurious thrusts and vibrations.

B. Horizontal piping support

- 1. Cast iron soil pipe shall be supported at not more than 5-foot intervals. Supports shall be of ferrous material.
- 2. Copper tubing shall be supported at approximately 6-foot intervals for piping 1-1/2" and smaller and 10-foot intervals for piping 2" and larger. Supports shall be of copper material.

C. Vertical piping support

- 1. Cast-iron soil pipe. Cast iron soil pipe shall be supported at not less than every story height and at its base. Supports shall be of ferrous material.
- 2. Bases of cast iron soil stacks shall be supported on concrete, or metal brackets attached to the building structure, or any other methods designed to eliminate stress at the base of stacks and leaders approved by the local administrative authority.
- 3. Copper tubing shall be supported at each story for piping 1-1/2" and over and not more than 4-foot intervals for piping 1-1/4" and smaller. Supports shall be of copper material.

3.11 INSULATION

- A. Refer to section 220700 for installation requirements.

3.12 VALVES INSTALLATION

- A. Refer to section 220523 for general requirements.
- B. Do not install air gap backflow preventers in concealed spaces or in areas where splashing water will damage finishes. Provide and install an oversized copper funnel with air gap directly below RPZ pressure relief port. Pipe funnel to spill as an indirect waste to an approved drain location.
- C. Install all trap primer valves in an accessible location. Provide and install access panels and doors where required to gain access in concealed construction.

3.13 SLEEVE INSTALLATION

- A. Refer to Section 230000 and 220523 for general requirements.
- B. All piping through walls, floors or ceilings shall have sleeves and escutcheons.
- C. All piping penetrating a slab on grade or foundation wall below grade and in contact with earth shall be provided with a poured in place schedule 80 galvanized steel water tight sleeve with integral water stop and seal equal to "link seal".
- D. Furnish and set steel pipe sleeves of schedule 40 black steel for all locations of interior partitions, walls and floors providing at least 1/2" clearance between pipe insulation and sleeve or pipe and sleeve. Wall sleeves shall be smooth cut and set flush with finished walls. Floor sleeves shall extended 2" above the finished floor. Provide a two-piece chrome escutcheon where piping passes through walls or floors of finished spaces.
- E. Fill void spaces between piping and pipe sleeves penetrating fire/smoke walls and floors with an approved UL listed and fire tested sealing material.

3.14 DRAIN AND CLEANOUT INSTALLATION

- A. General: Provide and install all drains and cleanouts with 6# 24" x 24" vinyl flashing.
- B. Make all connections through traps. Each trap to be vented, either by circuit, loop, or individual vent, as required, but not less than shown, or as required by local code.
- C. Cleanouts shall be installed at the base of all stacks, at all changes of directions greater than 45 degrees and in runs to provide means of cleaning lines at maximum 50' intervals. Cleanouts shall be provided as noted and as required by code on all horizontal runs, except where floor drains connect to mains with less than 3'-0" of horizontal run from trap and the Commissioner approves of this exception.
- D. Coordinate floor drain locations with respect to equipment housekeeping pads. Place drains such that edge of the floor grate extends no further than 2 inches from the side of the pad.

3.15 PLUMBING FIXTURES

- A. The fixtures shall be furnished complete with chrome plating on exposed piping or trim. Provide anchor bolts, hangers, strainers, faucets and other incidental items furnished as standard. Provide loose key stops at every fixture. All supply fittings and exposed fixture trim shall be all brass, chrome plated.
- B. All fixtures are to be new, free of cracks, blemishes or other imperfections and to be "acid-resisting" quality.

- C. Set and properly connect all fixtures with hot and cold water, vent and drainage piping, as required and protect fixtures until acceptance and test. Clean all flush valves after two weeks of operation.
- D. All piping through walls, floors or ceilings shall have sleeves and escutcheons.
- E. Provide all fixture mounting supports and carriers as required to suit field conditions. Carriers and supports shall be floor mounted type except as noted.
- F. Examine roughing-in work of potable water and waste piping systems to verify actual locations of piping connections prior to installing fixtures. Correct any incorrect location of piping, and other unsatisfactory conditions for installation of plumbing fixtures. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to the engineer. All rough-in to plumbing fixtures shall conform to fixture manufacturer published rough-in dimensions, and requirements.
- G. Adjust all plumbing fixtures, faucets and flush valves to meet the maximum water consumption requirements listed herein.

Water closets:	1.28 gallons per flush
Urinals:	0.5 gallons per flush
Lavatory:	0.5 gpm flow restrictor
Showers:	2.0 gpm
- H. Upon completion of installation of plumbing fixtures and after units are water pressurized, test fixtures to demonstrate capability and compliance with requirements. Correct malfunctioning units at site, then retest to demonstrate compliance; otherwise, remove and replace with new units and proceed with retesting.
- I. Inspect each installed unit for damage to finish. If damaged, restore and match finish to original at site to the satisfaction of the Commissioner; otherwise, remove fixture and replace with new unit. Remove cracked or dented units and replace with new units.
- J. Clean plumbing fixtures, trim, and strainers of dirt and debris upon completion of installation.
- K. Adjust water pressure at drinking fountains, faucets, shower valves, and flush valves to provide proper flow stream and specified gpm.
- L. Exercise care in handling of fixtures, trim, pipe, and fittings. Use tools designed to prevent damage to surface finishes.
- M. Set fixtures level and uniformly, with connections at right angles to wall and properly centered. Lay out roughing accurately and in coordination with space and finish requirements. If field cut-outs and holes are required use proper cutting and drilling tools to maintain integrity of finished surface. Provide cut-out templates for countertop insert or undermount items.
- N. Locate waste outlets and water supplies at constant horizontal levels, with waste outlet centered on fixture drain connection and water supplies spaced equally to right and left.
- O. Support wall hung fixtures rigidly from building construction, not from piping, by means of concealed metal supporting members designed to carry weight of fixture under conditions of unusual loading, with no stress placed on waste connection or any other part of system.

- P. Secure floor mount supports to slab. Secure wall mount supports to 1/4 inch thick metal backup plate secured to wall construction. Do not use wire, nails, or other makeshift devices to secure supporting members. Secure recessed and inserted items to supporting surface.
- Q. Use vandal-proof devices to secure fixtures, trimmings and fittings to deter unauthorized removal. Provide chrome plated brass washers and cap nuts for exposed bolt ends.
- R. Provide escutcheons, threaded or held in place with threaded part or set screw, on piping and fixture supports protruding from wall or floor, and on visible connections to fixtures.
- S. Make connection between integral trapped fixtures and drainage piping with an approved prepared gasket that shall be a germicide, absolutely gas and fume-proof, watertight, stainproof, containing neither oil or asphaltum, and which will not rot, harden, or dry under any extreme of climatic change, and must adhere on wet surfaces.
- T. Use non-ferrous spacing devices to support and stabilize water piping.
- U. Paint non-coated ferrous metal surfaces of fixtures, including brackets, hangers, and plates with prime coat of paint.
- V. Upon completion of work, remove protective covers and thoroughly clean surfaces, traps and strainers. Check all items for proper operation. Tighten packings and retaining devices.
- W. Adjust flush valves to provide minimum flow consistent with cleaning requirements of fixtures. Adjust supplies to provide adequate flow without splashing, and with flow rate of hot and cold water equal in velocity, except as otherwise required.

3.16 INDIVIDUAL SIZES OF BRANCHES TO FIXTURES

	COLD	HOT	WASTE	VENT
Water closets(tank)	1/2"	—	4"	2"
Water closets(flush val)	1-1/4"	—	4"	2"
Urinals (flush valve)	3/4"	—	2"	2"
Lavatories	1/2"	1/2"	1-1/2"	1-1/2"
Electric water coolers and drinking fountains	1/2"	—	1-1/2"	1-1/2"
Hose bibbs	3/4"	—	—	—
Clothes washer	1/2"	1/2"	2"	2"
Service sink or mop receptor	1/2"	1/2"	2"	2"
Sinks	1/2"	1/2"	2"	2"
Showers	3/4"	3/4"	2"	2"

3.17 ROUGHING HEIGHTS

A. Above Finished Floor

Lavatories	31" to top of rim
Urinals	24" to top of rim
Water closets	15" to top of rim
Electric water coolers and drinking fountains	33" to top of rim
Hose bibbs	24" to bottom of spout

B. Handicap fixtures shall be set in accordance with ADA and local requirements.

3.18 EQUIPMENT IN OTHER DIVISIONS AND/OR BY CITY OF NEW YORK

- A. Kitchen equipment - Equipment will be provided and set by Kitchen Equipment Contractor (K.E.C.), except as noted below or on drawing.
- B. Faucets and tailpieces will be provided but not set by K.E.C.
- C. Plumber shall provide and install traps and stops and install faucets and tailpieces and connect the service as required.
- D. Plumber shall obtain certified prints of roughing drawings of equipment before starting work.

3.19 THRUST BLOCKS AND BRACING

- A. General: Conform to the requirements of NFPA 24.
- B. Thrust blocks for water piping shall be provided at all changes in direction both horizontally and vertically. Thrust blocks shall bear against undisturbed earth or earth installed in accordance with NFPA 24.
- C. Use rough forms along ends of concrete. Place concrete directly against fittings to be braced, and directly against undisturbed surface of trench wall. Do not encase fittings in concrete.

3.20 PENETRATIONS THROUGH FIRE SEPARATIONS

- A. Fire and smoke seal: UL listed, approved and tested fire and/or smoke sealing material installed in all fire and/or smoke rated floor and partitions in accordance with manufacturer's recommendations.

3.21 DISINFECTION OF POTABLE WATER SYSTEM

- A. Potable water systems shall be disinfected in accordance with State and Local codes but by not less than one of the following methods before it is placed in operation.
- B. The system, or part thereof, shall be filled with a solution containing 50 parts per million of available chlorine and allowed to stand 24 hours before flushing and returning to service.
- C. The system, or part thereof, shall be filled with a solution containing 200 parts per million of available chlorine and allowed to stand 3 hours before flushing and returning to service.

3.22 TESTS

- A. General: Test plumbing systems to satisfaction of Building Official. Do not close in, conceal, or cover up any plumbing work until it has been tested, inspected, and approved.
- B. Flush piping, prior to testing, to remove foreign materials which may have entered during course of installation. Clean filters and strainers after flushing.
- C. Test all piping except drainage and vent piping, including valves, fittings and joints hydrostatically at a pressure equal to at least 1-1/2 times the normal working pressure of the system under which it is to be used, but no less than 100 psig for a minimum of four hours. Blank off or remove all elements or equipment which may be damaged by the pressure. Open but do not back-seat valves. Inspect all joints and connections.

- D. Test rough plumbing drainage and vent system with water or air at least as follows:
 - 1. Water test: apply water test to drainage system either in its entirety or in sections. If applied to entire system, tightly close all openings in piping, except highest, and fill system with water to point of overflow. If system is tested in sections, tightly plug each opening except highest opening of section under test, and fill section with water. In testing successive sections at least upper 10 feet of next preceding section shall be tested, so that no joint or pipe in building (except uppermost 10 feet of system) shall have been submitted to a test of less than a 10 foot head of water. Keep water in system or in portion under test, for at least 15 minutes before inspection starts; system shall then be tight at all points.
- E. Final test for gas and water tightness to be as follows:
 - 1. Smoke test: fill all traps with water, and then introduce into the system a pungent thick smoke produced by one or more smoke machines. When the smoke appears at stack openings on the roof, they shall be closed, and a pressure equivalent to one inch water column shall be held for the test and inspection period.
- F. Repair all leaks, defects or damage revealed by the results of the testing and re-test the system.
- G. Do not insulate or conceal piping until the system has been tested and the results approved.
- H. Perform tests in the presence of the DOB Inspector. Notify Commissioner.

3.23 INSTRUCTION

- A. Provide field instruction course for City of New York's designated personnel.
- B. Instruction shall be provided for a total period of at least (8) hours of normal working time and shall start after the system is functionally complete but prior to final acceptance tests.
- C. Field instruction shall cover all of the items contained in the operation and maintenance manuals.

3.24 WASTE MANAGEMENT

- A. Contract #2 Contractor shall coordinate and comply with the Waste Management Plan requirements developed in conjunction with Contract #1 Contractor to separate and recycle, salvage or reuse cast-offs, surplus and waste material in accordance with the Waste Management Plan.
- B. Arrange for suppliers to take back shipping and packing materials for reuse or recycling to the maximum extent economically feasible, or include them in the Waste Management Plan.

END OF SECTION

SECTION 220013 – PLUMBING CONTRACTOR WORK
ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

1.01 SCOPE FOR ASBESTOS ABATEMENT WORK

- A. The "General Conditions" apply to the work of this Section.
- B. The Asbestos abatement contractor shall remove asbestos containing materials as needed to perform the other work of this Contract when discovered during the course of work. When required, the Asbestos abatement contractor shall replace the ACM with non-asbestos containing materials. An allowance of **\$5,000.00** for the **Plumbing Contractor** is herein established for this incidental work when so ordered and authorized by the Commissioner.
- C. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE APPLICABLE PROVISIONS OF THE RULES AND REGULATIONS OF THE ASBESTOS CONTROL PROGRAM AS PROMULGATED BY TITLE 15 CHAPTER I OF RCNY AND NEW YORK STATE DEPARTMENT OF LABOR INDUSTRIAL CODE RULE 56 CITED AS 12 NYCRR, PART 56 WHICHEVER IS MORE STRINGENT AS PER LATEST AMENDMENTS TO THESE LAWS AND AS MODIFIED HEREIN BY THESE SPECIFICATIONS.
- D. ALL DISPOSAL OF ASBESTOS CONTAMINATED MATERIAL SHALL BE PER LOCAL LAW 70/85.
- E. THE ASBESTOS ABATEMENT CONTRACTOR'S ATTENTION IS DIRECTED TO THE FACT THAT CERTAIN METHODS OF ASBESTOS ABATEMENT ARE PROTECTED BY PATENTS. TO DATE, PATENTS HAVE BEEN ISSUED WITH RESPECT TO "NEGATIVE PRESSURE ENCLOSURE" OR "NEGATIVE-AIR" OR "REDUCED PRESSURE" AND "GLOVE BAG".
- F. THE ASBESTOS ABATEMENT CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR AND SHALL HOLD THE DEPARTMENT OF DESIGN AND CONSTRUCTION AND THE CITY HARMLESS FROM ANY AND ALL DAMAGES, LOSSES AND EXPENSES RESULTING FROM ANY INFRINGEMENT BY THE ASBESTOS ABATEMENT CONTRACTOR OF ANY PATENT, INCLUDING BUT NOT LIMITED TO THE PATENTS DESCRIBED ABOVE, USED BY THE ASBESTOS ABATEMENT CONTRACTOR DURING PERFORMANCE OF THIS AGREEMENT.
- G. "Asbestos" shall mean any hydrated mineral silicate separable into commercially usable fibers, including but not limited to chrysotile (serpentine), amosite (cumingtonite-grunerite), crocidolite (riebeckite), tremolite, anthrophyllite and actinolite.

- H. Prior to starting, the Asbestos abatement contractor must notify the Commissioner of the Department of Design and Construction if he/she anticipates any difficulty in performing the Work as required by these Specifications. The Asbestos abatement contractor is responsible to prepare and submit all filings, notifications, etc. required by all City, State and Federal regulatory agencies having jurisdiction.

The Asbestos abatement contractor is responsible for submitting the Asbestos Project Notification Form (ACP-7 Form) to the Department of Environmental Protection, Asbestos Control Program, as per Title 15, Chapter I of RCNY and to the NYSDOL as per Industrial Code Rule 56.

The Asbestos abatement contractor is responsible for preparing, and submitting Asbestos Variance Application (ACP-9). If a Variance is required, the Asbestos abatement contractor is responsible to retain a NYSDOL Asbestos Project Designer, as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required variance.

The Plumbing contractor is responsible for preparing and submitting an Asbestos Abatement Permit and/or Work Place Safety Plans (WPSP) that may be required for the completion of the Contract or incidental work. If such plans are required, the Asbestos abatement contractor is responsible to retain a NYSDOL Licensed Design Professional as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required plans.

The Asbestos abatement contractor is responsible for the submission of all required documents to the NYCDEP to acquire the appropriate Asbestos Project Conditional Closeout (ACP-20) and/or Asbestos Project Completion Forms (ACP-21) on a timely basis for the completion of the incidental work encountered under this contract.

The Asbestos abatement contractor will be required to attend an on-site job meeting with the Construction Project Manager prior to the start of work to examine conditions and plan the sequence of operations, etc.

The Asbestos abatement contractor shall have a NYSDOL/NYCDEP Asbestos Supervisor onsite to oversee the work and conduct a final visual inspection as required by both Title 15, Chapter 1 of the RCNY and NYSDOL Industrial Code Rule 56.

- I. All work shall be done during regular working hours unless the Asbestos abatement contractor requests authorization to work in other than regular working hours and such authorization is granted by the Commissioner. (Regular work hours are those hours during which any given facility, in which work is to be done, is customarily open and functioning, normally between the hours of 8:00 A.M. and 4:00 P.M. Monday - Friday.) If such work schedule is authorized by the Commissioner, the work shall be done at no additional cost to the City.

- J. The Commissioner may order that work be done in other than regular working hours as herein by defined and this order may require the Asbestos abatement contractor to pay premium or overtime wages to complete the work. If the Commissioner orders work in other than regular working hours, the Asbestos abatement contractor shall multiply the unit price for that portion of the work requiring premium wages by 1.50 when computing payment in accordance with Paragraph 1.09. All requests for premium payment must be supported by certified payroll sheets and field sheets approved by the Construction Project Manager.

1.02 QUALIFICATIONS OF ASBESTOS ABATEMENT CONTRACTOR

- A. Requirements: The asbestos abatement contractor must demonstrate compliance with the special experience requirements set forth in subparagraphs (1) through (5) below. The asbestos abatement contractor must, submit documentation demonstrating compliance with all listed requirements. Such documentation shall include without limitation, all required licenses, certificates, and documentation.
1. The asbestos abatement contractor must, whether an individual, corporation, partnership, joint venture or other legal entity, must demonstrate for the three year period prior to the work, that it has been licensed by the New York State Department of Labor, as an "Asbestos abatement contractor".
 2. The asbestos abatement contractor must, for the three year period prior to the work, have been in the business of providing asbestos abatement services as a routine part of its daily operations.
 3. The asbestos abatement contractor proposing to do asbestos abatement work must be thoroughly experienced in such work and must provide evidence of having successfully performed and completed in a timely fashion at least five (5) asbestos abatement projects of similar size and complexity. The aggregate cost of these projects must be at least \$250,000.00 in each of the three years.
 4. For each project submitted to meet the experience requirements set forth above, the asbestos abatement contractor must submit the following information for the project; name and location of the project; name title and telephone number of the owner or the owner's representative who is familiar with the asbestos abatement contractor's work, brief description of the work completed as a prime or sub-asbestos abatement contractor; amount of contract or subcontract and the date of completion.
 5. The asbestos abatement contractor must demonstrate that it has the financial resources, supervisory personnel and equipment necessary to carry out the work and to comply with the required performance schedule, taking into consideration other business commitments. The asbestos

abatement contractor must submit such documentation as may be required by the Department of Design and Construction to demonstrate that it has the requisite capacity to perform the required services of this contract.

- B. Insurance Requirements: The asbestos abatement contractor must provide asbestos liability insurance in the following amount: 1 million dollars per occurrence, 2 million dollars aggregate (combined single limit). The City of New York shall be named as an additional insured on such insurance policy.
- C. Throughout the specifications, reference is made to codes and standards which establish qualities and types of workmanship and materials, and which establish methods for testing and reporting on the pertinent characteristics thereof.

1.03 ASBESTOS ABATEMENT CONTRACTOR RESPONSIBILITIES

The Asbestos abatement contractor will visit the subject location within one (1) working day of notification to ascertain actual work required. If the project is identified as being "urgent", then work shall commence no later than 48 hours from the time of notification. In this event, the asbestos abatement contractor shall immediately notify when applicable EPA NESHAPS Coordinator, NYSDOL Asbestos Control Bureau and NYCDEP Asbestos Control Program of start of the work and file the necessary Asbestos Notifications and any applicable Variance Applications with the regulatory agencies cited above..

In the event that the project is not classified as "urgent" the Asbestos abatement contractor shall notify the EPA NESHAPS Coordinator, NYSDOL and NYCDEP by submitting the requisite asbestos project notification forms, postmarked 10 days before activity begins if 260 linear feet or more and/or 160 square feet or more of asbestos containing material will be disturbed.

The following information must be included in the notification:

- A. Name and address of building City or operator;
- B. Project description:
 - 1. Size - square feet, number of linear feet, etc;
 - 2. Age - date of construction and renovations (if known);
 - 3. Use - i.e., office, school, industrial, etc.
 - 4. Scope - repair, demolition, cleaning, etc.
- C. Amount of asbestos involved in work and an explanation of techniques used to determine the amount;

- D. Building location/address, including Block and Lot numbers;
- E. Work schedule including the starting and completion dates;
- F. Abatement methods to be employed;
- G. Procedures for removal of asbestos-containing material;
- H. Name, title and authority of governmental representative sponsoring project.

1.04 WORK INCLUDED IN UNIT PRICE

The Asbestos abatement contractor will be paid a basic unit price of **\$25.00** per square feet for the removal and disposal of asbestos containing material and replacement of the same with non-asbestos containing materials.

Unit price shall include all costs necessary to do the work of this Contract, including but not limited to: labor, materials, equipment, utilities, disposal, insurance, overhead and profit.

1.05 AIR MONITORING - ASBESTOS ABATEMENT CONTRACTOR

- A. "Air Sampling" shall mean the process of measuring the fiber content of a known volume of air collected during a specific period of time. The procedure utilized for asbestos follows the NIOSH Standard Analytical Method 7400 or the provisional transmission electron microscopy methods developed by the USEPA and/or National Institute of Standard and Technology which are utilized for lower detectability and specific fiber identification.
- B. Air monitoring of Asbestos abatement contractor's personnel will be performed in conformance with OSHA requirements, (All costs associated with this work are deemed included in the unit price.).
- C. Qualifications of Testing Laboratory:

The industrial hygiene laboratory shall be a current proficient participant in the American Industrial Hygiene Association (AIHA) PAT Program. The laboratory identification number shall be submitted and approved by the City. The laboratory shall be accredited by the AIHA and New York State Department of Health Environmental Laboratory Approval Program (ELAP).

Note: Work area air testing and analysis before, during and upon completion of work (clearance testing) will be performed by a Third Party Air Monitor under separate Contract with the City.

1.06 THIRD PARTY MONITORING AND LABORATORY

- A. The NYCDDC, at its own expense, will employ the services of an independent Third Party Air Monitoring Firm and Laboratory. The Third Party Air Monitor will perform air sampling activities and project monitoring at the Work Site.
- B. The Laboratory will perform analysis of air samples utilizing Phase Contrast Microscopy (PCM) and/or Transmission Electron Microscopy (TEM).
- C. The Third Party Air Monitoring Firm and the designated Project Monitor shall have access to all areas of the asbestos removal project at all times and shall continuously inspect and monitor the performance of the Asbestos abatement contractor to verify that said performance complies with this Specification. The Third-Party Air Monitor shall be on site throughout the entire abatement operation.
- D. The NYCDDC will be responsible for costs incurred with the Third Party Air Monitoring Firm and laboratory work. Any subsequent additional testing required due to limits exceeded during initial testing shall be paid for by the Asbestos abatement contractor.

1.07 PAYMENT REQUEST DOCUMENTATION

- B. The following information shall be included for each payment request:
 - 1. Description of work performed.
 - 2. Linear footage and pipe sizes involved.
 - 3. Square footage for boiler & breaching insulation removed.
 - 4. Square footage of non pipe and boiler areas removed, patched, enclosed, sealed, or painted.
 - 5. Square footage of encapsulation, sealing, patching, and painting involved.
 - 6. Total cost associated with compliance with the assigned task.
 - 7. Architectural, Electrical, HVAC, Plumbing, etc. work incidental to the Asbestos Abatement Work.
 - 8. A certified copy (in form 4312-39) to the Comptroller or Financial Officer of the New York City to the effect that the financial statement is true.

PLUMBING CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

9. A signed copy (in form 6506q-6) of certificate of compliance with non-discriminatory provisions of the Contract.
 10. Attach a copy of valid workmen compensation insurance.
 11. Valid asbestos insurance per occurrence.
 12. General liability insurance when required.
- C. Each payment request shall include a grand total for all work completed that billing period, the landfill waste manifests and a copy of waste transporter permit. The Department of Design and Construction will inspect the work performed, review the cost and approve or disapprove requests for payment.
- D. EXPOSURE LOG: With this final payment, the Asbestos abatement contractor shall submit a listing of the names and social security numbers of all employees actively engaged in the abatement work of this Contract. This list shall include a summary showing each part of the abatement work in which the employee was engaged and the dates thereof.

1.08 QUANTITY CALCULATIONS

In order to determine the square footage involved for the various pipe sizes of pipe insulation that might be encountered, the following table is to be used.

<u>PIPE INSULATION SIZE O.D.</u>	<u>PIPE SIZE O.D.</u>	<u>SQUARE FOOTAGE PER LINEAR FOOT</u>
2-1/2"	1/2"	0.65
2-3/4"	3/4"	0.72
3"	1"	0.79
3-1/4"	1-1/4"	0.85
3-1/2"	1-1/2"	0.92
4"	2"	1.05
4-1/2"	2-1/2"	1.18
5"	3"	1.31
6"	3-1/4"	1.57
7"	3-1/2"	1.83
8"	4"	2.09
9"	5"	2.36
10"	6"	2.62
12"	8"	3.14
14"	10"	3.67
16"	12"	4.19
18"	14"	4.71

1.09 METHOD OF PAYMENT

Payment shall be made in accordance with Items A through R below. Payment shall be calculated based on the actual quantity of the item performed by the asbestos abatement contractor, times the unit price specified below. Credits may apply to certain times, as specified below.

- A. **REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING PIPE INSULATION:** Actual linear footage, multiplied by the square footage factor listed for the respective pipe size in Section 1.09, multiplied by the unit price in Section 1.05.

EXAMPLE: 100 lin.ft. of 1/2" pipe and 100 lin.ft. of 6" pipe, including elbows, tees. Flanges, etc.

$$100 \times 0.65 = 65 \text{ sq.ft.} \quad 65 \times \text{unit price} = \text{Payment}$$

$$100 \times 2.62 = 262 \text{ sq.ft.} \quad 262 \times \text{unit price} = \text{Payment}$$

- B. **REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER INSULATION:** (all types including Silicate Block and including the removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.

EXAMPLE: Item B. removal and replacement of 1000 S.F. of boiler insulation (incl. Silicate block)

$$1000 \text{ S.F.} \times (1.5) \times \text{the Unit Price} = \text{Payment}$$

- C. **REMOVAL, DISPOSAL AND REPLACEMENT OF TANK INSULATION:** (all types including removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.

- D. **REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER UPTAKE, & BREACHING INSULATION:** (all types including stiffening angles and wire lath) Payment shall be made at 2.0 times the unit price per square foot.

- E. **REMOVAL, DISPOSAL AND REPLACEMENT OF DUCT INSULATION:** Payment shall be made at 1.0 times the unit price per square foot.

- F. **REMOVAL, DISPOSAL AND REPLACEMENT OF SOFT ASBESTOS CONTAINING MATERIAL:** (Including sprayed-on fire proofing and sound proofing) Payment shall be made at 1.0 times the unit price per square foot of surface area. Area of irregular surfaces must be calculated and confirmed with DDC representative.

- G. **ACOUSTIC PLASTER REPAIR AND/OR ENCAPSULATION:** Payment shall be made at 0.5 times the unit price per square foot.

PLUMBING CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

- H. **PATCHING OR REPAIR** of items listed in A through F will be paid at 0.33 times the unit price per square foot.
- I. **REMOVAL, DISPOSAL AND REPLACEMENT OF WATERPROOFING ASBESTOS CONTAINING MATERIAL:** (including friable and non-friable waterproofing material from interior and exterior walls, floors, foundations, penetrations, louvers, vents and openings other than windows, doors and skylights) Payment shall be made at 0.5 times the unit price per square foot.
- J. **REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING ELECTRICAL WIRING INSULATION:** (including friable and non-friable wiring insulation) Payment shall be made at 0.33 times the unit price per square foot.
- K. **PAINTING:** Payment shall be made at 0.05 times the unit price per square foot.
- L. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING PLASTER:** from ceilings and walls, including any wire lath and disposal as asbestos containing waste. Payment shall be made at 0.80 times the unit price per square foot.
- M. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING FLOOR TILES, CEILING TILES, TRANSITE PANELS:** (including any adhesive, glue, mastic and/or underlayment) and disposal as asbestos containing waste. Payment shall be made at 0.40 times the unit price per square foot. If multiple layers are discovered, each additional layer shall be paid at 0.20 times the unit price per square foot.
- N. **ADDITIONAL CLEAN UP/HOUSEKEEPING OF WORK AREA:** (excluding pre-cleaning of work area required by regulations) HEPA vacuuming and wet cleaning of asbestos contaminated surface. Payment shall be made at 0.20 times the unit price per square foot. When GLOVE BAG is employed to remove ACM, cost of HEPA vacuuming and wet cleaning of floor area up to 3 feet on each side of glove-bag shall be included in unit price and no extra payment will be made.
- O. **REMOVAL, DISPOSAL OF ASBESTOS-CONTAINING ROOFING MATERIAL:** including mastic, flashing and sealant compound and provide temporary asbestos-free roof covering consisting of one layer of rolled roofing paper sealed with asphaltic roofing compound. Payment shall be made at 0.8 times the unit price per square foot. Credit at a rate of 0.33 times the unit price will be taken for each square foot of temporary roof covering which the Asbestos abatement contractor is directed not to install.
- P. **PICK-UP AND DISPOSAL OF GROSS DEBRIS:** (excluding any waste generated from abatement under Item A-R) at a rate of \$150 per cubic yard for asbestos contaminated waste and \$75 per cubic yard for non-asbestos

contaminated waste. This cost includes all labor and material cost associated with work.

- Q. **REMOVAL OF ASBESTOS-CONTAINING BRICK, BLOCK, MORTAR, CEMENT OR CONCRETE:** along with all surfacing materials including wire lath and/or other supporting structures and disposal as ACM waste. Payment shall be made at a rate of \$25.00 per cubic foot of material removed.
- R. **REMOVAL AND DISPOSAL OF ASBESTOS CONTAINING WINDOW/DOOR CAULKING:** including friable and non-friable caulking, weather-stripping, glazing, sealants or other waterproofing materials applied to windows, doors, skylights, etc. Payment shall be made at the rate of \$400.00 per opening regardless of size or configuration. This cost includes labor, consumable materials, set-up/breakdown, removal and disposal, as required.

Note 1: CREDIT: For items listed in A through F, a credit at a rate of 0.33 times the unit price, times the respective multiplier (for each item) will be taken for each square foot of insulation which the asbestos abatement contractor is not directed to reapply.

Note 2: MINIMUM PAYMENT: The minimum payment per call at any individual job sites or various job sites during the same day will be eight hundred dollars (\$800.00).

Note 3: All payments shall be made as described in paragraph 1.09 herein.

Note 4: WORKING HIGHER THAN 12 FEET ABOVE FLOOR LEVEL OR WORK REQUIRING COMPLEX SCAFFOLDING OR CONSTRUCTION WORK PLATFORMS: Provisions are made in this Contract to compensate the Asbestos abatement contractor for work performed in locations that are difficult to access due to work at elevations that are significantly higher than the normal work level. The unit price for these items will be paid at 1.20 times the unit price described in Paragraphs 1.09, A through R for those portions of the work that are more than twelve (12) feet above the grade for that would be judged as the normal working level.

1.10 GUARANTEE

- A. Work performed in compliance with each task shall be guaranteed for a period of one year from the date the completed work is accepted by the Department of Design and Construction.
- B. The Commissioner of The Department of Design and Construction will notify the Asbestos abatement contractor in writing regarding defects in work under the guarantee.

1.11 OCCUPANCY OF SITE NOT EXCLUSIVE

Attention is specifically drawn to the fact that contractors, performing the work of other Contracts, may be brought upon any of the work sites of this Contract. Therefore, the

Asbestos abatement contractor shall not have exclusive rights to any site of his work and shall fully cooperate and coordinate his work with the work of other contractors who may be brought upon any site of the work of this Contract. This paragraph applies to those areas outside the regulated Work Area as defined by Title 15, Chapter I of RCNY.

1.12 SUBMITTALS

A. Pre-Construction Submittals:

1. Attend a pre-construction meeting scheduled by the City of New York Department of Design and Construction. This meeting shall also be attended by a designated representative of the City of New York third party air monitoring firm, facility manager and the Construction Project Manager. At this meeting, the Asbestos abatement contractor shall present three copies of the following items:
 - a. Asbestos abatement contractor's scope of work, work plan and schedule.
 - b. Asbestos project notifications, approved variances and plans to Government Agencies.
 - c. Copies of Permits, clearance and licenses if required.
 - d. Schedules: the Asbestos abatement contractor shall provide to the Construction Project Manager a copy of the following schedules for approval. Once approved, schedules shall be maintained and updated as received. Asbestos abatement contractor shall post a copy of all schedules at the site:
 - (1) A construction schedule stating critical dates of the project including, but not limited to, mobilization, Work Area preparation, demolition, gross removal, fine cleaning, encapsulation, inspections, clearance monitoring, and phase of refinishing and final inspections. The schedule shall be updated biweekly, at a minimum.
 - (2) A schedule of staffing stating number of workers per shift per activity, name and number of supervisor(s) per shift, shifts per day, and total days to be worked.
 - (3) Submit all changes in schedule or staffing to the Construction Project Manager prior to implementation.

- e. Written description of emergency procedures to be followed in case of injury or fire. This section must include evacuation procedures, source of medical assistance (name and telephone number to nearest hospital) and procedures to be used for access by medical personnel (examples: first aid squad and physician). NOTE: Necessary Emergency Procedures Shall Take Priority Over All Other Requirements of These Specifications.
- f. Material Safety Data Sheets (MSDS) for encapsulants, sealants, firestopping foam, cleaners/disinfectants, spray adhesive and any and all potentially hazardous materials that may be employed on the project. No work involving the aforementioned will be allowed to proceed until MSDS are reviewed.
- g. Worker Training and Medical Surveillance: The Asbestos abatement contractor shall submit a list of the persons who will be employed by him /her to perform the removal work. Present evidence that workers have received proper training required by the regulations and the medical examinations required by OSHA 29 CFR 1926.1101.
- h. Logs: Specimen copies of daily progress log, visitor's log, and disposal log.
 - (1) The Asbestos abatement contractor shall provide a permanently bound log book of minimum 8-1/2" x 11" size at the entrance to the Worker and Waste Decontamination enclosure system as hereinafter specified. Log book shall contain on title page the project name, name, address and phone number of the Asbestos abatement contractor; name, address and phone number of Asbestos abatement contractor and City's third party air monitoring firm; emergency numbers including, but not limited to local Fire/Rescue Department. Log book shall contain a list of personnel approved for entry into the Work Area.
 - (2) All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted. Any significant events occurring during the abatement project shall be entered into the log. Upon completion of the job, the Asbestos abatement contractor shall submit the logbook containing a day-to-day record of personnel log entries countersigned by the Construction Project Manager every day.

PLUMBING CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

- i. Worker's Acknowledgments: Submit statements signed by each employee that the employee has received training in the proper handling of ACM, understands the health implications and risks involved; and understands the use and limitations of the respiratory equipment to be used.
- B. During Construction Submittals:
 1. Security and safety logs showing names of person entering workspace, date and time of entry and exit, record of any accident, emergency evacuation, and any other safety and/or health incident.
 2. Progress logs showing the number of workers, supervisors, hours of work and tasks completed shall be submitted daily to the Construction Project Manager.
 3. Floor plans indicating Asbestos abatement contractor's current work progress shall be submitted for review by the Construction Project Manager.
 4. All Asbestos abatement contractors' air monitoring and inspection results.
- C. Project Closeout Submittals:

Upon completion of the project and as a condition of acceptance, the Asbestos abatement contractor shall present two copies of the following items, bound and indexed:

 1. Lien Waivers from Asbestos abatement contractor, Sub-Asbestos abatement contractors and Suppliers,
 2. Daily OSHA air monitoring results,
 3. All Waste Manifests (Asbestos and Construction Debris), seals and disposal logs,
 4. Field Sign-In/Sign-Out Logs for every shift,
 5. Copies of all Building Department Forms and Permits,
 6. A Letter of Compliance stating that all the work on this project was performed in accordance with the Specifications and all applicable Federal, State and Local regulations,
 7. All Warranties as stated in the Specifications,
 - a. Fully executed disposal certificates and transportation manifest.

8. Project Record: The Asbestos abatement contractor shall maintain a project record for all small and large asbestos projects. During the project, the project record shall be kept on site at all times. Upon completion of the project, the project record shall be maintained by the building owner. The project record shall be submitted to DDC as part of the close out documents. The project record shall consist of:
 - a. Copies of licenses of all asbestos abatement contractors involved in the project;
 - b. Copies of NYCDEP and NYSDOL supervisor and handler certificates for all workers engaged in the project;
 - c. Copies of all project notifications and reports filed with NYCDEP, NYSDOL and USEPA for the project, with any amendments or variances;
 - d. Copies of all asbestos abatement permits, including associated approved plans and work place safety plan;
 - e. A copy of the air sampling log and all air sampling results;
 - f. A copy of the abatement asbestos abatement contractor's daily log book;
 - g. Copies of all asbestos waste manifests;
 - h. A copy of all Project Monitor's Reports (ACP-15).
 - i. A copy of each ATR-1 Form completed for the asbestos project (if required).
 - j. A copy of each Asbestos Project Conditional Closeout Report (ACP-20) if required.
 - k. A copy of the Asbestos Project Completion Form (ACP-21).

1.13 PROTECTION OF FURNITURE AND EQUIPMENT

Cover all furniture and equipment that cannot be removed from Work Areas. Movable furniture and equipment will be removed from Work Areas by the Asbestos abatement contractor prior to start of work. At the conclusion of the work (after final air testing), the Asbestos abatement contractor will remove all plastic covering on walls, floors, furniture, equipment and reinstall furniture and equipment. He shall remove and store all sheaths, curtains and drapes, and reinstall same following final clean up.

1.14 UTILITIES

A. General:

All temporary facilities shall be subject to the approval of the Commissioner. Prior to starting work at any site, locations and/or sketches (if required) of temporary facilities must be submitted to the Construction Project Manager for the required approval.

B. Water:

The Department of Design and Construction will furnish all water needed for construction, at no cost to the Asbestos abatement contractor in buildings under their jurisdiction. However, it is the responsibility of the Asbestos abatement contractor to ensure that hot water is provided for showering in the decontamination unit. The Asbestos abatement contractor shall furnish, install and maintain any needed equipment to meet these requirements at his own expense.

C. Electricity:

The Department of Design and Construction will furnish all electricity needed for construction, at no cost to the Asbestos abatement contractor in a building, under their jurisdiction. The Asbestos abatement contractor is responsible for routing the electric power to the abatement Work Area.

All temporary lighting and temporary electrical service for Work Area shall be in weatherproof enclosures and be ground fault protected.

- D. In leased spaces, arrangements for water supplies and electricity must be made with the landlord. However, all such arrangements must be made through and are subject to approval of the Department of Design and Construction. Utilities will be provided at no cost to the Asbestos abatement contractor. However, it is the Asbestos abatement contractor's (or the Plumbing contractor's) responsibility to furnish and install a suitable distribution system to the Work Area. This system will be provided at no cost to the City.

1.15 FEES

The Asbestos abatement contractor shall be responsible for any and all fees or charges imposed by Local, State or Federal Law, Rule and Regulation applicable to the work specified herein, including fees or charges which may be imposed subsequent to the date of the Bid opening.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 05 13

MOTORS AND STARTERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 220000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #2 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 220000, General Provisions, and with the provisions of all applicable codes and laws.
- B. The installation and equipment is to conform to applicable building code articles and applicable reference standards cited therein.

1.3 SUBMITTALS

- A. Procedure
- B. Prepare and make the submissions listed below and in Section 220000 in accordance with the procedure specified in Section 220000.
- C. Shop Drawings
 - 1. Submit motors with individual items of driven equipment.
 - 2. Starters - Technical specs and application data.
 - 3. Schedule of starters including starter model, equipment served, starter enclosure, and accessories.
 - 4. Submit starter and drive unit wiring diagrams with the automatic control shop drawing submission required under Section 220000.
 - 5. Variable speed drive units - Technical specs and application data.

1.4 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 220000

1.5 GENERAL REQUIREMENTS

- A. Provide all necessary contacts, relays and switches for motor operation in accordance with the control system sequences and safety device operation.
- B. All motors, starters, push buttons, signal devices and motor controller equipment shall be NEMA standard and UL listed.
- C. All motors shall be covered by the warranty provided by the original equipment manufacturer which shall extend the full extent of the project warrantee. No motor shall be installed which has been manufactured more than two years prior to delivery.

PART 2 - PRODUCTS

2.1 MOTORS

- A. All motors shall be general purpose squirrel-cage induction type, NEMA Design B, Class B insulation, continuous duty, 40°C ambient, single or multiple speed as scheduled.
- B. All three phase motors shall be NEMA Premium Efficiency design. Motor efficiency shall be indicated on the motor nameplate by the manufacturer per IEEE Standard 112 Method B in accordance with following tables:

Open Drip Proof (ODP)

Horsepower	1200 RPM	1800 RPM	3600 RPM
1	82.5%	85.5%	77.0%
1.5	86.5%	86.5%	84.0%
2	87.5%	86.5%	85.5%
3	88.5%	89.5%	85.5%
5	89.5%	89.5%	86.5%
7.5	90.2%	91.0%	88.5%
10	91.7%	91.7%	89.5%
15	91.7%	93.0%	90.2%
20	92.4%	93.0%	91.0%
25	93.0%	93.6%	91.7%
30	93.6%	94.1%	91.7%

Totally Enclosed Fan-Cooled (TEFC)

Horsepower	1200 RPM	1800 RPM	3600 RPM
1	82.5%	85.5%	77.0%
1.5	87.5%	86.5%	84.0%
2	88.5%	86.5%	85.5%
3	89.5%	89.5%	85.5%
5	89.5%	89.5%	86.5%
7.5	91.0%	91.7%	98.5%
10	91.0%	91.7%	90.2%
15	91.7%	92.4%	91.0%
20	91.7%	93.0%	91.0%
25	93.0%	93.6%	91.7%
30	93.0%	93.6%	91.7%

- C. Unless otherwise indicated, motors 1/2 horsepower and larger shall be three-phase; motors less than 1/2 horsepower shall be single phase. Motor voltage shall be as indicated; verify with Contract #4 Contractor.
- D. All motors shall have a 1.15 minimum service factor.
- E. Two speed motors shall be two winding type, RPM as noted on plans.
- F. Single speed motors shall operate at 1750 RPM unless otherwise indicated.
- G. Motors controlled by Variable Frequency Drive (VFD) units shall be rated for inverter duty (NEMA MG1, Part 31).
- H. All motors shall have a terminal box, appropriate mounting base, and a ground post for connection of a ground conductor.

- I. Motor enclosures shall be open drip-proof unless otherwise indicated or required.
- J. Motor manufacturers:
 - 1. General Electric Co.
 - 2. Baldor
 - 3. Westinghouse
 - 4. Marathon

2.2 MANUAL STARTERS

- A. Provide manual starters for single-phase motors that are not interlocked with other equipment.
- B. Starter shall include quick make-quick break toggle mechanism in a suitable enclosure. The overload relay shall be field adjustable to +/-10% of nominal rating.
- C.

<u>Manufacturer</u>	<u>Series</u>
Cutler Hammer	9101
General Electric	CR101
Siemens	SMF
Square D	Class 2510 Type F
Westinghouse	MS

2.3 MAGNETIC STARTERS

- A. Provide electrically-held magnetic starter for three-phase motors 1/2 horsepower and larger. Magnetic starters shall be combination type, with adjustable motor circuit protector, across-the-line contactor, and thermal overload relay in a common enclosure.
- B. The motor circuit protector shall trip instantaneously when the motor current level is in excess of the trip setting. Trip settings of all poles shall be adjusted simultaneously by a single trip point adjustment.
- C. The starter shall be suitable for connection to a power system having available fault current of 100,000RMS symmetrical amperes.
- D. Furnish contactors with one N.O. auxiliary interlock contact for the holding circuit, and a minimum of two additional auxiliary contacts. Coordinate auxiliary contacts with Section 230923.
- E.

<u>Manufacturer</u>	<u>Series</u>
General Electric	CR387
Square D	Class 8539
Westinghouse	Class A206

2.4 REDUCED VOLTAGE STARTER

- A. Provide autotransformer type starters of the closed transition type, in an enclosure, with integral motor circuit protector, for all starters of NEMA Size 4 and larger (i.e. > 25 hp at 208 volts or > 50 hp at 480 volts).
- B. Transformers shall have three starting taps, 50%, 65% and 80%. Unit shall be set at 65% at factory.

- C. Furnish contactors with one N.O. auxiliary interlock contact for the holding circuit, and a minimum of two additional auxiliary contacts. Coordinate auxiliary contacts with Section 230923.

<u>Manufacturer</u>	<u>Series</u>
General Electric	CR331
Square D	Class 8606
Westinghouse	A606

2.5 STARTER ACCESSORIES

- A. Enclosure shall be NEMA 1 for dry location, NEMA 4 for wet or outdoor locations.
- B. The disconnect handle shall be capable of being padlocked in the open position.
- C. Provide all starters unless otherwise specified with manual reset thermal type overload relays having inverse time delay characteristics and interchangeable heater elements.
- D. Provide each starter with a red running light, neon type, mounted through cover.
- E. Provide each starter with a three position, maintained contact, H-O-A selector switch, mounted through the cover.
- F. Provide two speed starters for all motors listed with multiple speeds in the equipment schedules. Multiple speed starters shall be provided with a time delay relay when switching to a lower speed.
- G. Furnish contactors with one N.O. auxiliary interlock contact for the holding circuit, and a minimum of two additional auxiliary contacts for each motor speed. Coordinate auxiliary contacts with Section 230923.
- H. Current-Sensing, Phase-Failure Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connection; arranged to operate on phase failure, phase reversal, current unbalance of from 30 to 40 percent, or loss of supply voltage. Provide adjustable response delay.

2.6 VARIABLE FREQUENCY DRIVES

- A. General
1. Where variable speed control is indicated in drawings, schedules, or specifications, provide complete factory-assembled and -tested adjustable frequency AC drives as herein specified.
 2. Variable frequency drives (VFD's) shall provide stepless speed control of standard NEMA Design B squirrel cage induction motors, without motor derating.
 3. VFD's shall be variable torque design, suitable for HVAC pump, fan, and blower applications.
 4. VFD's shall be tested and listed to the following standards:
 - a. UL Standard 508C
 - b. IEEE Standard 519-1992
 - c. NEMA – ICS 7.0, AC Adjustable Speed Drives
 - d. IEC 281000 Parts 1 and 2.

5. Each VFD shall be appropriately sized and rated to suit the driven load and input power characteristics.
6. VFD logic and control circuitry shall be microprocessor-based.

B. Design and Construction Features

1. Where located indoors in non-damp and non-wet environment, VFD enclosures shall be steel, ventilated NEMA 1, with hinged lockable door, suitable for wall mounting in sizes through 75 HP (at 460 VAC). Larger units shall have floor mounted, freestanding enclosures. Where located outdoors, or where VFD is mounted in damp or wet environment, provide NEMA 3R enclosures with strip heater.
2. The input section shall include a full-wave diode bridge rectifier, padlockable door-interlocked disconnect switch, input power fuses, input line reactor, and output reactor / filter for circuits longer than 75 feet.
3. The inverter section shall be sine-coded pulse-width-modulated (PWM), utilizing Insulated Gate Bipolar Transistors (IGBT's).

C. Performance Features

1. Produce rated output under the following service conditions:
 - a. Rated input voltage +/- 10%.
 - b. Ambient temperature 0°C. to 40°C.
 - c. Relative humidity 0-95% non-condensing.
 - d. Elevation up to 3300 feet above sea level.
 - e. Input frequency 60 hertz, +/- 2 hertz.
2. Input displacement power factor - minimum 0.95 at any speed.
3. Output - 6 to 60 hertz, 0 to input volts, with adjustable volts/hertz.
4. Adjustable output current limit - to 115%.
5. Adjustable acceleration and deceleration rates.
6. Adjustable minimum and maximum speed limits.
7. Automatic restart after an input power loss, with adjustable time delay, if RUN command is still activated.
8. Input current THD - 5% maximum.
9. Efficiency - minimum 96% at full load, full speed.
10. Capable of a smooth start into a rotating motor (either direction).
11. Minimum 2 second power loss ride-through for logic and control power.
12. Motor noise attributable to the VFD shall be less than 3 dB above that with across-the-line operation, measured at 3 feet from the motor centerline.

13. Capable of starting into a coasting load (forward or reverse) up to full speed and accelerate or decelerate to setpoint without safety tripping or component damage (flying start).
14. Ability to automatically restart after an over-current, over-voltage, under-voltage, or loss of input signal protective trip. The number of restart attempts, trial time, and time between attempts shall be programmable.
15. The overload rating of the drive shall be 110% of its normal duty current rating for 1 minute every 10 minutes, 130% overload for 2 seconds. The minimum FLA rating shall meet or exceed the values in NEC Table 430.250 for 3-phase alternating-current motors.
16. The VFD shall have an integral 5% impedance line reactors to reduce the harmonics to the power line and to add protection from AC line transients. The 5% impedance may be from dual (positive and negative DC bus) reactors, or 5% AC line reactors. VFD's with only one DC reactor shall add AC line reactors.
17. The input current rating of the VFD shall be no more than 3% greater than the output current rating. VFD's with higher input current ratings require the upstream wiring, protection devices and source transformers to be oversized per NEC 430.
18. Include a coordinated AC transient protection system consisting of 4-120 joule rated MOV's (phase to phase and phase to ground), a capacitor clamp, and 5% impedance reactors.
19. Capable of sensing a loss of load (broken belt / broken coupling) and signal the loss of load condition. The drive shall be programmable to signal this condition via a keypad warning, relay output and/or over the serial communications bus. Relay outputs shall include programmable time delays that will allow for drive acceleration from zero speed without signaling a false under-load condition.
20. If the input reference (4-20mA or 2-10V) is lost, the VFD shall give the user the option of either (1) stopping and displaying a fault, (2) running at a programmable preset speed, (3) hold the VFD speed based on the last good reference received, or (4) cause a warning to be issued, as selected by the user. The drive shall be programmable to signal this condition via a keypad warning, relay output and/or over the serial communication bus.
21. The VFD shall have programmable "Sleep" and "Wake up" functions to allow the drive to be started and stopped from the level of a process feedback signal.

D. Protective Features

1. Integral I^2t electronic motor overload protection, adjustable.
2. Integral trip circuits for input power undervoltage, overvoltage, phase loss, and overcurrent.
3. Integral trip circuits for internal overtemperature, DC bus overvoltage, and internal or output circuit ground fault.
4. The VFD's shall be suitable for connection to a power system having available fault current of 100,000RMS symmetrical amperes.
5. The VFD's shall be self-protecting against an open output circuit.

6. Provide input power line surge protection.
7. Provide user-selectable manual or automatic restart after a fault.

E. Controls and Indications

1. LED or LCD digital information display, including:
 - a. Output frequency, voltage, and current.
 - b. Input voltage, current, and KW.
 - c. % speed.
 - d. % load.
2. LED lamp or alphanumeric display indication of individual fault conditions.
3. Status indicators for POWER ON, READY, and RUN.
4. 3-position, maintained contact, Hand-Off-Auto selector switch.
5. Remote-Local speed reference selector.
6. Integral keypad for manual (local) speed control, adjustment, and programming functions.
7. Interfaces for remote safety contacts, start-stop contacts, and speed control (4-20 mA, 0-5 VDC, or 0-10 VDC, user selectable).
8. Form C (SPDT) dry contacts, wired to terminal blocks, for remote indication of RUN or FAULT.
9. Minimum of 3 programmable resonant frequency lockout bands.

F. Serial Communications

1. The VFD shall have an RS-485 port as standard. The standard protocols shall be Modbus, Johnson Controls N2 bus, and Siemens Building Technologies FLN or approved equal. Optional protocols for LonWorks, BACnet, Profibus, Ethernet, and DeviceNet shall be available. Each individual drive shall have the protocol in the base VFD. The use of third party gateways and multiplexers is not acceptable. All protocols shall be "certified" by the governing authority. Use of non-certified protocols is not allowed.
2. The BACnet connection shall be an RS485, MSTP interface operating at 9.6, 19.2, 38.4, or 76.8 Kbps. The connection shall be tested by the BACnet Testing Labs (BTL) and be BTL Listed. The BACnet interface shall conform to the BACnet standard device type of an Applications Specific Controller (B-ASC). The interface shall support all BIBBs defined by the BACnet standard profile for a B-ASC including, but not limited to:
 - a. Data Sharing – Read Property – B.
 - b. Data Sharing – Write Property – B.
 - c. Device Management – Dynamic Device Binding (Who-Is; I-AM).
 - d. Device Management – Dynamic Object Binding (Who-Has; I-Have).
 - e. Device Management – Communication Control – B.

If additional hardware is required to obtain the BACnet interface, the VFD manufacturer shall supply one BACnet gateway per drive. Multiple VFDs sharing one gateway shall not be acceptable.

3. Serial communication capabilities shall include, but not be limited to; run-stop control, speed set adjustment, proportional/integral/derivative PID control adjustments, current limit, accel/decel time adjustments, and lock and unlock the keypad. The drive shall have the capability of allowing the DDC to monitor feedback such as process variable feedback, output speed / frequency, current (in amps), % torque, power (kW), kilowatt hours (resettable), operating hours (resettable), and drive temperature. The DDC shall also be capable of monitoring the VFD relay output status, digital input status, and all analog input and analog output values. All diagnostic warning and fault information shall be transmitted over the serial communications bus. Remote VFD fault reset shall be possible. The following additional status indications and settings shall be transmitted over the serial communications bus – keypad "Hand" or "Auto" selected, bypass selected, the ability to change the PID setpoint, and the ability to force the unit to bypass (if bypass is specified). The DDC system shall also be able to monitor if the motor is running in the VFD mode or bypass mode (if bypass is specified) over serial communications. A minimum of 15 field parameters shall be capable of being monitored.
4. The VFD shall allow the DDC to control the drive's digital and analog outputs via the serial interface. This control shall be independent of any VFD function. For example, the analog outputs may be used for modulating chilled water valves or cooling tower bypass valves. The drive's digital (relay) outputs may be used to actuate a damper, open a valve or control any other device that requires a maintained contact for operation. In addition, all of the drive's digital and analog inputs shall be capable of being monitored by the DDC system.
5. The VFD shall include an independent PID loop for customer use. The independent PID loop may be used for cooling tower bypass valve control, chilled water valve control, etc. Both the VFD control PID loop and the independent PID loop shall continue functioning even if the serial communications connection is lost. The VFD shall keep the last good set-point command and last good DO & AO commands in memory in the event the serial communications connection is lost.

G. EMI / RFI Filtering

1. All VFD's shall include EMI/RFI filters. The onboard filters shall allow the VFD assemble to be CE Marked and the VFD shall meet product standard EN 61800-3 for the First Environment restricted level.

H. Special Features

1. A complete factory wired and tested bypass system consisting of an output contactor and bypass contactor. Overload protection and shall be provided in both drive and bypass modes.
2. Door interlocked, pad-lockable, circuit breaker that will disconnect all input power from the drive and all internally mounted options.
3. Fused VFD only disconnect (service switch). Fast acting fuses exclusive to the VFD – fast acting fuses allow the VFD to disconnect from the line prior to clearing upstream branch circuit protection, maintaining bypass capability. Bypass designs, which have no such fuses, or that incorporate fuses common to both the VFD and the bypass will not be accepted.
4. The drive / bypass shall provide single-phase motor protection in both the VFD and bypass modes.

5. The following operators shall be provided:
 - a. Bypass Hand-Off-Auto
 - b. Drive mode selector
 - c. Bypass mode selector
 - d. Bypass fault reset

6. The following indicating lights (LED type) shall be provided. A test mode or push to test feature shall be provided.
 - a. Power-on (Ready)
 - b. Run enable (safeties) open
 - c. Drive mode select damper opening
 - d. Bypass mode selected
 - e. Drive running
 - f. Bypass running
 - g. Drive fault
 - h. Bypass fault
 - i. Bypass H-O-A mode
 - j. Automatic transfer to bypass selected
 - k. Safety open
 - l. Damper opening
 - m. Damper end-switch made

7. The following relay (form C) outputs from the bypass shall be provided:
 - a. System started
 - b. System running
 - c. Bypass override enabled
 - d. Drive fault
 - e. Bypass fault (motor overload or underload (broken belt))
 - f. Bypass H-O-A position

8. The digital inputs for the system shall accept 24V or 115VAC (selectable). The bypass shall incorporate internally sourced power supply and not require an external control power source.

9. Customer Interlock Terminal Strip – provide a separate terminal strip for connection of freeze, fire, smoke contacts, and external start command. All external safety interlocks shall remain fully functional whether the system is in Hand, Auto, or Bypass modes (not functional in Fireman's Override 2). The remote start/stop contact shall operate in VFD and bypass modes.

10. Dedicated digital input that will transfer motor from VFD mode to bypass mode upon dry contact closure for fireman's override. Two modes of operation are required.
 - a. One mode forces the motor to bypass operation and overrides both the VFD and bypass H-O-A switches and forces the motor to operate across the line (test mode). The system will only respond to the digital inputs and motor protections.
 - b. The second fireman's override mode remains as above, but will also defeat the overload and single-phase protection for bypass and ignore all keypad and digital inputs to the system (run until destruction).

11. The VFD shall include a "run permissive circuit" that will provide a normally open contact whenever a run command is provided (local or remote start command in VFD or bypass mode). The VFD system (VFD or bypass) shall not operate the motor until it receives a dry contact closure from a damper or valve end-switch. When the VFD system safety interlock (fire detector, freeze stat, high static pressure switch, etc) opens, the motor shall coast to a stop and the run permissive contact shall open, closing the damper or valve.
 12. Class 20 or 30 (selectable) electronic motor overload protection shall be included.
 13. There shall be an internal switch to select manual or automatic bypass.
 14. There shall be an adjustable current sensing circuit for the bypass to provide loss of load indication (broken belt) when in the bypass mode.
 15. Output Reactor - A reactor (dv/dt filter) is to be installed between the drive and the motor if the total electric feeder distance between the two exceeds 75 feet.
- I. Factory Testing and Warranty
1. Each unit shall be fully tested prior to shipment, including operation at full load for 8 hours in a 40°C ambient.
 2. Each unit shall be fully warranted by the manufacturer for a period of 36 months from date of shipment, including the cost of all parts, labor, and travel expenses.
- J. Acceptable Manufacturers
1. Subject to compliance with requirements, provide variable frequency drives manufactured by one of the following:
 - a. Allen-Bradley
 - b. Yaskawa E7 Series
 - c. Asea Brown Boveri (ABB)
 - d. Graham / Danfoss
 - e. Square D

PART 3 - EXECUTION

3.1 GENERAL

- A. Motors shall be supplied as part of factory assembled equipment specified in other sections.
- B. All starters and variable speed drives shall be turned over to the Contract #4 Contractor for mounting, installation, and wiring in conformance with all applicable codes and ordinances. Starters and drives shall be located within line-of-site of the associated equipment being controlled.
- C. Install overload heaters, adjust overload relays, and set motor circuit protectors in accordance with motor nameplate ratings and NEC Article 430.
- D. Unless noted otherwise, starters for outdoor equipment shall be mounted attached to or adjacent to the equipment served and shall be provided with NEMA 3R enclosures with strip heaters.

3.2 MOTOR NOISE LEVEL

- A. Motor drives for pumps and refrigeration machines, or other mechanical equipment having a motor installed within a mechanical room, shall operate with noise levels not exceeding 85 dBA.
- B. Noise levels shall be determined in accordance with IEEE Standard #85 "Test Procedure for Air-Borne Noise Measurements on Rotating Electric Equipment".
- C. Motor drives for fans, regardless of where located, or other mechanical equipment located outside mechanical equipment spaces, shall not contribute to increase the manufacturer's sound power ratings by 2 dB in any octave band.

3.3 VARIABLE FREQUENCY DRIVE START-UP

- A. A factory authorized field service technician shall perform inspection of the drive installation and wiring, initial energizing and start-up, and the adjustments and programming necessary to achieve specified operation and performance.
- B. The factory-authorized field service technician shall program the 3 available resonant frequency lockout bands during motor/drive start-up based on actual motor/equipment performance for each drive. Provide the necessary frequency and vibration testing instruments.
- C. After successful start-up, a factory authorized representative shall provide a minimum of four (4) hours instruction and demonstration to City of New York's personnel.

SECTION 22 05 23

PIPING, VALVES AND FITTINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 220000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #2 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of section 220000, General Provisions, and with the provisions of all applicable codes and laws.

1.3 SUBMITTALS

- A. Procedure
 - 1. Prepare and make the submissions listed below and in Section 220000 in accordance with the procedure specified in Section 220000.
- B. Shop drawings
 - 1. Piping Materials, Joints and Fittings.
 - 2. Piping Specialties.
 - 3. Valve Tags and Name Plates with Schedule and Location.
 - 4. Valves.
 - 5. Strainers.
 - 6. Hot water accessories
 - 7. Anchors and guides
 - 8. Thermometers, gauges, complete listing with scale range and normal operating point.
 - 9. Water balance, contractors qualification, procedures, and report format
 - 10. Water Balance Report.

1.4 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 220000. Produce and maintain required effect under operating criteria determined in advance by agreement with the Commissioner.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. All pipe shall be new, free from scale or rust, and of the material and weight specified under the various services. Each length of pipe shall be properly marked at the mill for proper identification with name of symbol or manufacturer.

- B. All steel piping shall be standard or extra strong weight, in conformance with the ASTM designation A-53 as manufactured by National Tube Division, Republic Steel Corp., or approved equal. Piping shall be seamless except as specified herein.
- C. All brass piping shall be standard or extra heavy weight 85% red brass semi-annealed seamless-drawn, in conformance with the ASTM designation B-43, as manufactured by Anaconda, American Brass Co., Chase Brass and Copper Co., or Revere Copper and Brass, Inc.
- D. All copper tubing shall be of weight as required for service specified in conformance with ASTM designation B-88-47 for types "L" and "K" tubing, as manufactured by Chase, Anaconda, Revere, or approved equal. Copper tubing shall be used as specified in the schedule. Tubing and fittings shall be thoroughly cleaned with sand cloth and treated with an approved flux before solder is applied.
- E. All galvanized steel piping shall be standard or extra strong weight, as specified, in conformance with the ASTM designation A-53. Pipe shall be hot-dipped zinc-coated with prime western spelter and not wipes.
- F. Generally, unless otherwise specified, joints in steel and wrought-iron piping of sizes 2 inches and under shall be screwed, and all sizes 2-1/2" inches and over shall be welded or flanged. All drain piping shall be screwed. Brass pipe shall be screwed 2 inches and smaller and flanged 2-1/2 inches and over. Copper tubing shall be silver-soldered or 95-5 solder as herein specified.

2.2 FITTINGS

- A. Fittings shall be as specified under "Fittings" for each pipe service listed in the "Pipe Schedule".
- B. Welding fittings shall be of the same material and schedule as the pipe to which they are welded. Welding elbows shall be long radius pattern unless clearances necessitate the use of standard radius pattern. Welding fittings shall be Tubetum or Ladish.

Steel Welding Fittings	ASTM A-106
Wrought Iron Welding Fittings	ASTM A- 72
Malleable Iron Fittings	ASTM A-197
Cast-Iron Fittings	ASTM A-126
Brass Fittings	ASTM B- 62
Solder Fittings	ASTM B- 88

- C. All fittings used at expansion loops or bends shall be extra heavy.
- D. Cast-iron, malleable-iron and bronze fittings shall be of Crane Manufacture or approved equal.
- E. Flanges shall be of the same weight as the fittings in each service category. All flanges shall be drilled and spot faced in conformance with fittings. Screwed and loose flanges shall be of cast iron. Welding flanges shall be of steel welding neck type, flanges on brass to be Crane No. 2104 or approved equal.
- F. Flanges shall be faced and true and made up perfectly square and tight with gaskets. Bolts, nuts and gaskets shall be dipped in a mixture of graphite and oil just before installation.
- G. Unions - Unions 2 inches and smaller shall be screwed. Unions 2-1/2" and larger shall be flanged. Screwed unions on steel pipe, unless otherwise specified, shall be of malleable

iron with bronze ground seats suitable for 300 pounds, W.S.P. Screwed unions on brass pipe shall be brass, ground joint suitable for 300 pounds W.SP. Flanged unions shall be malleable iron, gasket type suitable for 150 pounds W.S.P. Unions shall be as manufactured by Crane, Dart or approved equal.

- H. Brass pipe threads shall be cut with special brass threading dies, and the joints shall be made with lubricant. Strap wrenches, or equivalent, shall be used in making up brass pipe. Wrenches that gouge or scar the pipe will not be used.
- I. Solder for each solder-type fitting shall be of 95% tin and 5% antimony or silver solder, as specified herein.
- J. Fittings shall be of the eccentric reducing type unless otherwise noted, where changes of size occur in horizontal piping to provide for proper drainage or venting. Steel pipe bends shall be made of the very best grade open hearth, low carbon steel, leaving a smooth uniform exterior and interior finish. Pipe bends shall be made with seamless steel pipe, leaving a minimum radius of not less than five (5) pipe diameters.

2.3 JOINTS

- A. Brass pipe threads shall be cut with special brass threading dies, and the joints shall be made up with lubricant. Strap wrenches or equivalent, shall be used in making up brass pipe. Wrenches which gouge or scar the pipe shall not be used.
- B. Flange joints shall be faced true, packed and made up perfectly square and tight. Each flange joint shall be provided with best grades steel bolts and with hexagon nuts. Flanges shall be raised face, suitable for pressure of system in which they are installed.

2.4 PIPE HANGERS AND SUPPORTS

- A. Provide necessary structural members, hangers and supports of approved design to keep piping in proper alignment and prevent transmission of injurious thrusts and vibrations. In all cases where hangers, brackets, etc., are supported from concrete construction, do not weaken concrete or penetrate waterproofing. All hangers and supports shall be capable of screw adjustment after piping is erected. Hangers supporting piping expanding into loops, bends and offsets shall be secured to the building structure in such a manner that horizontal adjustment perpendicular to the run of piping supported may be made to accommodate displacement due to expansion. All such hangers shall be finally adjusted both in the vertical and horizontal direction, as required. Hangers in contact with copper or brass pipe shall be copper plated steel or provided with felt sleeve.
- B. Pipe hangers shall be of the band type for piping 2" and smaller, clevis for pipe 2 1/2" and larger except where otherwise noted. Hangers for generator exhaust and steam pipe 2" and smaller shall be of the clevis roller type and two rod roller type for pipe 2 1/2" and larger except where otherwise noted.
- C. All vertical piping shall be supported by means of heavy wrought iron or steel clamps securely bolted or welded to the piping, and with end extension bearing on the building. Riser clamps shall be constructed of two flat wrought steel bar yokes formed to fit the pipe and bolted together.
- D. Beam clamps - hangers supported from steel shall be center loading beam clamps for hangers supporting piping 2 inches. For piping 2-1/2 inches and larger, I beam clamps shall be forged steel. "C" clamps are not to be used.
- E. Where piping is run near the floor and not hung from the ceiling construction, but is supported from the floor or in a trench, such supports shall be of pipe stanchion with base flange and adjustable top yoke with u-bolt retainer.

- F. Where piping is run above the floor, and is not hung from the ceiling construction or not supported from the floor, such piping shall be supported from the wall with bracket hangers, expansion bolted or fish plated to the wall. Provide details for review by Commissioner.
- G. For water piping (fluid less than 100F), provide insulated saddle with vapor barrier or pipe insulation plus protection shield with vapor barrier jacket. For steam, condensate, and hot-water heating piping 2 inches and smaller same as above. For hot-water heating piping 2-1/2 inches and larger, provide steel pipe covering protection saddles spot welded to pipe with insulation insert.
- H. Piping in trenches shall rest or hang from angle iron cross supports provided by Contract #2 Contractor.
- I. Hanger rods shall be of galvanized steel not exceeding six (6) feet in length of the following diameters. Trim excess rod to within 1" of the support. Supplementary steel shall be provided as necessary

PIPE SIZE	ROD DIAMETER
2 inches and below	3/8 in.
2-1/2 & 3 in.	1/2 in.
4 & 5 in.	5/8 in.
6 in.	3/4 in.
8 in. and above	7/8 in.

J. Support Schedule

All hanger components of hanger assembly shall be hot dip galvanized or cadmium plated.

2.5 VALVES - GENERAL

- A. All valves shall be of a design which the manufacturer lists for the service and shall be of materials allowed by the latest edition of the ASME Code for Pressure Piping for the pressure and temperature contemplated, unless a higher grade or quality is herein specified. All valves shall be of the same manufacturer, except for special applications.
- B. The system shall be supplied with gate or butterfly type isolation valves as specified herein, at all branches mains and risers.
- C. All valves shall be installed with the best workmanship and are to have neat appearance and be arranged so that they are easily accessible.
- D. Each valve shall have the maker's name or brand, the figure or list number and the guaranteed working pressure cast on the body and cast or stamped on the bonnet, or shall be provided with other means of easy identification.
- E. Check valves installed in the horizontal position shall be swing checks; valves installed in the vertical position shall be silent checks, except that all check valves in pump discharges shall be silent checks.
- F. Provide blow-off valves at all strainers, and where shown on the drawings.
- G. Provide valve operating chain on all gate and globe valves in Mechanical Equipment Rooms - 3" and larger, which are more than 6'-6" above the operating floor. Unit shall be complete with adjustable sprocket, chain and guide. Provide hook to keep chain out of the way.
- H. Generally, all valves are to be of the gate type, except that globe valves shall be used for throttling services and on traps, and pressure reducing and control valve by-passes. Globe valves used on by-passes shall have monel metal mountings.
- I. All valves 2 inches in diameter and smaller shall be all bronze with bronze bodies. Valves 2-1/2 inches in diameter and larger shall have iron bodies with bronze mountings unless otherwise specified.
- J. All flanged-end valves shall have renewable metal seat rings and discs. On gate valves these parts shall be of bronze, on all globe valves they shall be of bronze and suitable for throttling service.
- K. All screwed-end globe valves shall be of the union bonnet type, non-rising stem with renewable metal seats and discs.
- L. All valves shall have their bonnets back-seated to provide for packing under pressure.
- M. All gate valves shall be of the solid tapered wedge type, union bonnet, rising stem.

- N. All valves 5 inches in diameter and larger shall be furnished with an integral by-pass and a by-pass suitable for the operating pressure.
- O. Drain valves shall be provided on tanks, receivers, risers and where they may be required or necessary, or directed for draining the lines and equipment. Drain valves or plug cocks shall be provided at the low points for proper drainage, and where required or directed cocks and valves shall be provided with threaded ends for hose connections.
- P. All valves up to 2 inches in diameter shall have screw ends, 2-1/2" in diameter and over shall have flanged ends.
- Q. Isolation valves shall be provided at all pumps, tanks, reducing and automatic or mechanical flow control devices, radiation, coils and heat exchangers, and at all other apparatus requiring partial drainage of the system for periodic maintenance or inspection. The isolation valves shall be so located as to permit removal and/or service of the isolated equipment without draining complete or substantial portions of the system.
 - 1. Provide flanges or union(s) to permit removal of all equipment isolated as indicated above.
 - 2. The flow and control diagrams do not indicate the complete requirement for isolation valves in the system. Manual valves are depicted in flow diagrams to show relative positions of division 230923 control devices.

2.6 STRAINERS

- A. There shall be approved strainers in the inlet connections to each valve feeder and makeup connection, each water regulating valve, and each diaphragm valve, and where else indicated on the drawings. The intention is to protect by strainers, all apparatus of an automatic character, whose proper functioning would be interfered with by dirt on the seat, or by scoring of the seat.
- B. All strainers shall have cast iron, semi-steel or bronze bodies of ample strength for the pressure to which they shall be subjected, removable cylindrical or conical screens of monel or stainless steel and suitable flanges or tappings to connect with the piping they serve. They shall be of such a design as to allow blowing out of accumulated dirt, and to facilitate removal and replacement of a strainer screen, without disconnections of the main piping.
- C. All strainers shall be Y-type with removable screen.
 - 1. Two-inch and smaller or where installed in non-ferrous piping system, screwed or flanged, bronze material.
 - 2. 2-1/2" and larger in ferrous piping systems, flanged cast iron material. Brass screens for water 1/16" for 3" inclusive; 1/8" for 4" and above.

2.7 PRESSURE GAUGES

- A. Phosphorous bronze Bourdon tube type, cast aluminum 4-1/2" diameter case with blowout disc, stainless steel movement with bronze bushing brass socket and black numerals on a white face.
- B. Accuracy: 1/2 or 1% of scale range.
- C. Scale to be selected so that normal operating point is between 35% and 65% of full scale.

D. Each gauge to include brass petcock. Gauges on steam piping to include syphon.

E. Gauges to be installed:

1. Across water coils.
2. Across tube bundles (e.g. chiller evaporator, chiller condenser, convertors).
3. Suction and discharge of pumps.
(Compound gauge on fuel oil pump suction)
4. Inlet and outlet of pressure reducing valves.
5. Inlet and outlet of steam control valves.
6. Additional locations as shown on plans.

<u>Manufacturer</u>	<u>Series</u>
H.O. Trerice	500X
U.S. Gauge	Solfrunt
Albert A. Weiss	UG-1
Weksler Instruments	AA1

2.8 THERMOMETER

A. Mercury filled red reading column type, 9" long, with one piece aluminum case and sealed replaceable glass element. Brass stem with union connection and adjustable angle to permit reading from any angle. Black numerals on white background.

B. Accuracy: 1% of scale range.

C. Scale to be selected so that normal operating point is between 35% and 65% of full scale.

D. Each thermometer to be installed in an extension neck brass separable socket. Extension neck length to be coordinated with insulation thickness. Socket and thermometer insertion length to be minimum of 75% pipe diameter.

E. Thermometers to be installed:

1. Supply and return of water coils (single return on multiple coil bank)
2. Supply and return of tube bundles (e.g. chiller evaporator, chiller condenser, convertors)
3. Circulating pump discharge
4. Supply and return of water boilers.
5. Additional locations as shown on plans.

<u>Manufacturer</u>	<u>Series</u>
1. Taylor	E
2. H.O. Trerice	BX
3. Weksler Instrument	AA5

2.9 REMOTE READING THERMOMETER

A. Mercury actuated bronze Bourdon tube type, cast aluminum 4-1/2" diameter flanged case, stainless steel movement with bronze bushing, brass socket, and black numerals on a white face.

B. Braided capillary tube and sensing bulb shall be stainless steel and fully ambient compensated for its entire length. Sensing bulb to be installed in a extension neck brass separable socket. Extension neck length to be coordinated with insulation thickness.

C. Accuracy 1% of scale range.

- D. Scale to be selected so that normal operating point is between 35% and 65% of full scale.
- E. Thermometers to be installed as shown on plans.
- F.

Manufacturer	Series
1. H.O. Trerice	M80300
2. U.S. Gauge Supertherm	9100.
3. Weksler Instruments	415A.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION - GENERAL

- A. Provide and erect in a workmanlike manner, according to the best practices of the trade, all piping shown on the drawings or required to complete the installation intended by these specifications.
- B. The drawings indicate schematically the size and location of piping. Piping shall be set up and down and offset to meet field conditions.
- C. Contract #2 Contractor shall inform himself from the general construction specifications and plans, of the exact dimensions of finished work and of the height of finished ceilings in all rooms where radiation, units, equipment or pipes are to be placed and arrange his work in accordance with the schedule of interior finishes, as indicated on the architectural drawings.
- D. All piping shall be run perpendicular and/or parallel to floors, interior walls, etc. Piping and valves shall be grouped neatly and shall be run so as to avoid reducing headroom or passage clearance. All valves, controls and accessories concealed in furred spaces and requiring access for operation and maintenance shall be arranged to assure the use of a minimum number of access doors.
- E. All pipe lines made with screwed fittings must be provided with as sufficient number of flanges or unions to make possible any taking down of the pipes without breakage of fittings.
- F. All piping shall be erected so as to insure a perfect and noiseless circulation throughout the system. No bull head tees will be permitted.
- G. All valves and specialties shall be so placed as to permit easy operation and access and all valves shall be packed at the completion of the work before final inspection.
- H. Provide proper provisions for expansion and contraction in all portions of pipe work, and to prevent undue strains on piping or apparatus connected therewith. Provide double swings at riser transfers and other offsets wherever possible, to take up expansion. Arrange riser branches to take up motion of riser.
- I. Approved bolted, gasketed, welded flanges shall be installed at all apparatus and appurtenances, and wherever else required to permit easy connection and disconnection. Screwed unions shall be used on piping 2" or less.
- J. All piping connections to coils and equipment shall be made with offsets provided with screwed or welded bolted flanges so arranged that the equipment can be serviced or removed without dismantling the piping.

- K. If after plant is in operation, any coils or other apparatus are stratified or air bound (by vacuum or pressure) they shall be repiped with new approved and necessary fittings, air vents, or vacuum breakers at no extra cost. If connections are concealed in furring, floors, or ceilings, this trade shall bear all expenses of tearing up and refinishing construction and finish, leaving same in as good condition as before it was disturbed.
- L. Make all changes in size and direction of piping with fittings. Do not use miter fittings, face, or flush bushing, close nipples or street elbows. Provide clean outs at all changes in direction and at other locations shown in drainage piping.
- M. Make all branch connections with tees, except that on steel piping forged steel "Weldolets" as manufactured by Bonney Forge may be used where the branch pipe is not larger than one half the size of the main pipe.
- N. Tubing shall be erected neatly in a workmanlike manner. Bends in soft copper tubing shall be made with approved tubing benders to prevent deformation of the tubing in the bends. Approved seat-to-pipe threaded adapters shall be provided for junctions with valves and other equipment having threaded connections.
- O. Vertical sections of main risers shall be constructed of pipe lengths welded together. No couplings shall be used.
- P. The ends of all pipe and nipples shall be thoroughly reamed to the full inside diameter of the pipe and all burrs formed in the cutting of the pipes shall be removed.
- Q. Piping shall be installed in accordance with the latest edition of the ASME Code for pressure piping, and all other applicable codes.
- R. All piping shall be concealed above furred ceilings in rooms where such ceilings are provided (except where specifically indicated otherwise on the drawings), or walls or partitions, except as otherwise indicated.
- S. Dissimilar piping shall be connected with dielectric connector as made by Ebco Company.
- T. Piping at all equipment and control valves shall be supported to prevent strains or distortions in the connected equipment and control valves. Piping shall be supported to allow for removal of equipment, valves and accessories with a minimum of dismantling and without requiring additional supports after these items are removed.
- U. Pipe nipples - any piece of pipe 3" in length and less shall be considered a nipple. All nipples with unthreaded portion 1-1/2" and less shall be extra heavy. Only shoulder nipples shall be used. No close nipples will be provided.
- V. Screw threads shall be cut clean and true; screw joints made tight without caulking. No caulking will be permitted. A non-hardening lubricant will be permitted. No bushings shall be used. Reductions, otherwise causing objectionable water or air pockets, to be made with eccentric reducers or eccentric fittings. All pipe shall be reamed out after cutting to remove all burrs.
- W. Pitch water piping upward one inch per 100 feet in direction of flow to ensure adequate flow without air binding, and to prevent noise and water hammer.
- X. Pitch drain piping 1/8 inch per foot in the direction of flow.
- Y. Branch connections to mains are to be made in such a manner as to prevent air trapping and permit free passage of air. To meet job conditions mains shall be set up to maintain headroom, and clear other trades.

- Z. Provide air vents at all high points in water piping. Provide oversized float operated automatic air vent at high points of equipment connections and in mechanical rooms or as shown on piping details. Provide manual vents at all other locations. When installed above inaccessible ceilings, valves shall be installed remote and identified on valve tag chart.
- AA. Avoid 90 degrees lift set-ups in supply lines by using 45 degree ells. Where 90 degree lifts exceed 12" install automatic air vent in supply lines. All lifts in return lines shall be installed with automatic air vents.
- BB. Pipe outlet of all air vents to an open sight drain if the vent is concealed or to within two feet of the floor within Machine Rooms.
- CC. All water piping shall pitch back to low points for drainage. Low points shall be provided with 3/4 inch hose cocks.
- DD. Provide drain valves at the heel of all interior main water risers. Provide drain valves at the heel of all perimeter water risers if shown on drawings. Pipe all drain valves to an indirect waste.
- EE. Miscellaneous drains, vents, reliefs, and overflows from tanks, equipment, piping, relief valves, pumps, etc., shall be run to the nearest open sight drain or roof drain. Provide drain valves whenever required for complete drainage of piping including the system side of all pumps.
- FF. Where pipe penetrates walls, partitions or slabs provide Schedule 40 steel sleeves with an internal diameter at least 2" larger than the outside diameter of the pipe. Set sleeves before pouring concrete or securely fasten and grout with cement. Floor sleeves shall project 1" above the finished floor. Pack void between pipe and sleeve with an approved firestop material. See Section 230000.
- GG. Provide escutcheons fastened to pipe and covering sleeve on all penetrations visible within occupied spaces, corridors, and mechanical equipment rooms. Escutcheons are to be chrome plated brass, Ritter No. 36A for vertical lines, Ritter No. 3A for all other piping.
- HH. Cross connection of any devices, or construction which will permit backflow connections between a water distribution system and any part of the drainage system shall not be installed.
- II. Provide domestic water connections from valved outlets to any equipment requiring same.
- JJ. Keep piping 2'-0" outside the vertical line of unprotected electrical equipment, or provide painted, watertight gutters or pans with pipe drains.

3.2 PIPING SUPPORT

- A. Piping shall not be hung from other piping or from equipment of other trades.
- B. Piping installed in existing buildings (or in new buildings where additional supports are required), shall be hung from supplemental steel attached to and spanning the existing (or new, in new buildings) steel structure or with chemical adhesive anchors. Use of vertical expansion shields shall not be permitted. Where vertical support into masonry or concrete structure cannot be avoided, use supplemental steel as noted above, or use chemical adhesive anchors.
 - 1. When attaching to existing concrete structure (or newly placed structure where additional supports are required), provide two chemical adhesive anchors at each

support point. The chemical anchors shall be separated by a minimum of 8". A 2.5x2.5x3/8 angle iron shall span the two chemical anchors. Drilling for chemical adhesive anchors must not interrupt or displace any existing rebar. Concrete insert shall be either external or internal threaded element by the chemical adhesive manufacturer.

2. When attaching to concrete rib construction, the chemical anchors shall be attached to the upper third of the rib. Do not attach to the bottom of concrete ribs.
 3. Minimum chemical anchor embedment shall be 3". The two chemical adhesive anchors shall be the same diameter as the attachment rod.
 4. Chemical adhesive product for solid concrete applications shall be Hilti HIT RE 500 or approved equal with either internally threaded inserts or threaded rod supplied by the chemical adhesive manufacturer. Inserts to be similar to Hilti HIS or approved equal. Threaded rod to be similar to Hilti HAS product or approved equal.
- C. Hanger rods shall not pierce ducts.
- D. All piping connected to pumps and compressors within 50 feet of such equipment, and where required or directed to eliminate vibration or isolate pipe from building structure, Contract #2 Contractor shall supply and install spring type antivibration isolators as called for in Section 230548 of these specifications.
- E. Where additional steel is required for the support of hangers, the Contract #2 Contractor shall furnish and install same subject to the approval of the Commissioner.
- F. All piping running on walls shall be supported by means of hangers suspended from heavy galvanized steel angle wall brackets. No wall hooks will be permitted.
- G. Lateral bracing of horizontal pipe shall be provided where required to prevent side sway or vibration. The lateral bracing shall be of a type approved by the Commissioner and shall be installed where directed by the Commissioner.
- H. All horizontal copper tubing shall be supported by hangers not over 6' apart for piping 1-1/4" and smaller. Space hangers no more than 10' apart for piping 1-1/2" and larger. All branches shall have separate hangers. Hangers shall be Clevis type (with copper bottom support for uninsulated brass pipe or copper tubing). If channel or angle iron trapeze hangers are used, the space on the hangers for uninsulated brass pipe or copper tubing shall be wrapped with lead shields to isolate tubing.
- I. Hanger rods attached to concrete inserts or piping racks shall not be used to support piping in Mechanical Rooms or for the support of individual pipes weighing in excess of 20 lbs. per linear foot.

3.3 PIPING JOINTS

A. Welding

1. Joints between sections of pipe and between pipe and fittings shall be fusion welded in accordance with the recommendations of the American Welding Society. Mitering of pipe to form elbows, matching straight runs to form tees or any similar construction shall not be done.
2. All welding shall be done as outlined in the latest edition of the ASME Code for pressure piping.

3. Welding process - all welding shall be done by the oxyacetylene or electric arc welding process in accordance with the requirements set forth in welding of pipe joints of the codes for pressure piping.
 4. Beveling and welding - all pipe 2-1/2 inches and larger may be purchased mill beveled or shall be machine beveled on both ends before welding. On odd lengths of pipe, beveling may be accomplished by means of the oxyacetylene cutting torch provided all paint, rust, scale and oxide are carefully removed with hammer, chisel or file and bevel left smooth and clean. Joints shall be prepared and welded to assure thorough fusion of alignment and the production of a joint that shall develop the full strength of the pipe and that shall be leakproof in service.
 5. Welding tees - welding tees shall be used when specified hereinafter. Where necessary, branch connections shall be reinforced in an approved manner. For the smaller branches, where welding tees are unavailable, nozzles shall be welded to pipe. Where such nozzles are welded to the pipe, all cutting oxide which may drop inside the pipe shall be removed before welding the branch or section in place. Where branch size is one half the size of main or larger, use welding tees. Where branch size is two (2) sizes smaller than the size of main "Weldolets" or "Sockolets" may be used.
 6. Welding rods - the welding rod used for welding steel and wrought iron shall be approved welding rod in accordance with ASTM SPEC. A233.
 7. Welder shall be fully certified by New York City to certify welders for pressure piping.
- B. Flanged Joints
1. Use matched flange faces and 1/16" thick compressed gaskets.
 2. When connection to equipment with flat face flange, grind flange raised face flat and use full faced gaskets.
- C. Screwed Joints
1. Do not damage fitting surface, remove burrs, apply red lead and ground graphite in linseed oil to male threads only. Do not use wicking, cord or similar materials. Clean joint thoroughly of excess jointing material.
- D. Soldered Joints
1. 95-5 wire solder. Completely clean all surfaces and coat with a thin layer of flux.
- E. Brazed Joints
1. Conform to ASA-B31.1 and ASTM B-260-56T in accordance with the requirements of the manufacturers of the fittings and the brazing material.

3.4 CLEANING OF PIPING

- A. Plug all open ends of piping, valves and equipment except when work is being performed. Protect connections to equipment and control valves with temporary screens and flush piping with water. Remove dirt and debris collected.
- B. Thoroughly clean the piping to remove all organics, rust, and all foreign matters and to prepare the system for permanent treatment.

- C. Perform chemical cleaning after completing all pressure and leakage tests and thoroughly flushing the systems.
- D. Use cleansing agent which will not interact with any of the materials in the systems in any way to produce corrosions, form deposits, weaken, reduce the life or in any way have a detrimental effect on any system components.
- E. Fill the system with clean water and add sufficient cleaning preparation to provide a concentration adequate to perform complete cleaning. Add the cleaning preparation at a point which will assure good mixing.
- F. Provide temporary containers to accommodate the foam that may form and temporary pumps to circulate the chemical solution.
- G. Circulate the mixture of cleanser and water for a sufficient length of time to complete the cleaning.
- H. Drain the system, flush with clean water, clean all strainers and screens and refill the system.
- I. Cleaner for the new piping shall be Nalprep 330 as manufactured by the Nalco Chemical Co., or the approved equal.
- J. Entire cleaning operation shall be performed by a competent water treatment service in strict accordance with the manufacturer's recommendations. Provide written certifications after the cleaning operation is complete.

3.5 TESTS

- A. Tests all piping except drainage connections, including valves, fittings and joints hydrostatically at a pressure equal to at least 1-1/2 times the rated pressure, but no less than 200 psig for a minimum of four hours. Blank-off or remove all elements or equipment which may be damaged by the pressure. Open but do not back-seat valves. Inspect all joints and connections.
- B. Test drainage piping hydrostatically and with smoke in accordance with the local authorities.
- C. Repair all leaks, defects or damage revealed by resulting from the test and re-test the system.
- D. Do not insulate or conceal piping until the system has been tested and the results approved.
- E. Perform tests in the presence of the Commissioner.

3.6 AIR ELIMINATION

- A. The Contract #2 Contractor's attention is specifically directed to the problem of proper air elimination. In installing water piping systems and all equipment, the Contract #2 Contractor shall carefully plan the actual installation in such a manner that high points and air pockets be kept to a minimum and that they are properly vented where they are unavoidable. All air elimination devices called for on the drawings and in these specifications shall be provided and properly installed. In addition, Contract #2 Contractor shall furnish and install all other air elimination devices which may be required due to job conditions. The liability of the Contract #2 Contractor under the guarantee provisions of the contract is intended to cover his responsibility for a proper, continuous and automatic air elimination to assure even and balanced distribution of water to all equipment.

3.7 ANCHORS

- A. All anchors shall be separate and independent of all hangers and supports. Anchors shall be of heavy blacksmith construction suitable in every way for the work of this contract. Anchors shall be welded to the pipe and fastened to the structure with bolts.
- B. Anchors shall be fabricated and assembled in such a form as to secure the piping in a fixed position. They shall permit the line to take up its expansion and contraction freely in opposite directions away from the anchored points; and shall be so arranged to be structurally suitable for particular location, and line loading. Submit details for approval.

3.8 WATER BALANCE

- A. Balance all new water systems and those designated existing water system to the quantities shown with the following tolerances:
 - 1. Pumps: Design Flow plus 5%
 - 2. Coils: Design Flow plus 5%
- B. Balance in accordance with ASHRAE, AABC, or NEBB procedures and submit all readings.
- C. Water system balancing is to be performed by a professional organization, qualified by experience and practice to perform this service. Submit evidence of qualifications, balancing procedures, and report forms for approval prior to start of work.
- D. Submit three bound copies of the water balance report to the Commissioner. Balance Report to include the following data for each water system:

Pump Designation, location, system type.
Manufacturer, model number, size.
Suction and discharge pressure readings.
Balancing valve position.
Motor manufacturer, frame, horsepower, volts, phase, hertz, and RPM.
Motor amps - Design versus Actual.
Water coil GPM, entering water temperature, leaving water temperature and pressure drop (Design versus Actual) - Balancing valve position.
Tube bundle GPM, entering water temperature, Leaving water temperature, and pressure drop (Design versus Actual) - Balancing valve position.
Steam coil entering pressure, flow rate, air quantity, entering and leaving air temperature.

END OF SECTION

SECTION 22 05 48

EQUIPMENT BASES AND VIBRATION CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 220000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #2 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 220000, General Provisions, and with the provisions of all applicable codes and laws.

1.3 QUALITY ASSURANCE

A. Manufacturer shall:

- 1. Determine vibration isolation sizes and locations.
- 2. Provide piping and equipment isolation systems as scheduled or specified.
- 3. Guarantee specified isolation system deflection.
- 4. Provide installation instructions and drawings.
- 5. Substitution of "Internally Isolated" mechanical equipment in lieu of the specified isolation of this section must be approved for individual equipment units by the acoustical consultant. This type of substitution will only be considered with a letter of guarantee from the equipment manufacturer that states that the "Internal Isolated" mechanical equipment is equivalent to the specified isolation outlined in this section.

1.4 SUBMITTALS

A. Procedure

- 1. Prepare and make the submissions listed below and in Section 220000 in accordance with the procedure specified in Section 220000.

B. Shop Drawings

- 1. Vibration isolation equipment.
- 2. Submittal data shall include complete mounting details of each isolated piece of equipment, including static deflection, operating and free heights, and outside spring diameter.

3. Steel bases and concrete inertia bases shall be completely detailed.
4. Include clearly outlined procedures for installing and adjusting the isolators.
5. Performance report and calculations for vibration isolation equipment.
6. Manufacturers' certified reports on motorized equipment alignment and installation.

1.5 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 220000.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements specified herein, provide vibration isolation materials, bases and systems by one of the following or approved equal:

1. Kinetics Noise Control, Inc.
6300 Irelan Place
P.O. Box 655
Dublin, OH 43017
877.457.2695
www.kineticsnoise.com
2. Mason Industries, Incorporated
350 Rabro Drive
Hauppauge, New York 11788
631-348-0282
www.mason-ind.com
3. Vibration Mountings & Controls, Inc.
113 Main Street
Bloomingdale, NJ 07403
973-838-1780
www.vmc-kdc.com

- B. All products specified under this section shall be provided by one manufacturer.
- C. Where listed Mason Industries, Inc. (M.I.I) provided as a basis of design.
- D. Where exposed to corrosive elements: corrosion protected.

2.2 VIBRATION ISOLATIONS, GENERAL

- A. All mechanical equipment shall be mounted in accordance with the specifications below and with the specific requirements shown in the equipment schedules. The vibration isolation manufacturer shall provide supervision to ensure proper application, installation

and adjustment of the isolators. Upon completion of the installation and after the system is put into operation, the manufacturer shall make a final inspection and report. The Contract #2 Contractor shall submit this report to the Commissioner, in writing, certifying the proper performance of the installation.

- B. The isolation manufacturer shall supply all unit isolators, complete rails, fan and motor bases and structural steel forms for concrete inertia blocks, where called for, and shall be responsible for the selection of all vibration eliminators and shall guarantee to meet the requirements of this specification.
- C. Wherever rotational speed is mentioned as the disturbing frequency the lowest such speed in the system shall be used. All isolation devices shall be selected for uniform static deflections according to distribution of weight.
- D. Vibration isolators shall be designed or treated for resistance to corrosion. Steel components shall be PVC coated, or phosphated and painted with rust-resistant enamel. Nuts, bolts and washers shall be zinc-electroplated. Structural steel bases shall be thoroughly cleaned of welding slag and primed with metal etching primer and painted with rust-resistant enamel. Isolators exposed to the weather shall have all steel parts hot-dipped galvanized. Nuts, bolts and washers may be cadmium plated. Spring components shall be cadmium plated and neoprene coated.
- E. All fan units and air handling units (except fans mounted on slab on grade) shall be isolated as follows:

1.	Up to 450 RPM	75% efficiency (3-1/2" max. defl.)
2.	450 RPM to 850 RPM	90%
3.	850 RPM and Over	95%
- F. Submittals shall show disturbing frequency, required efficiency, designed deflection and outside diameter of springs, when pertinent.
- G. Horizontal pipe runs - all horizontal pipe runs within Mechanical Equipment Rooms and within 50 feet of final connections to all equipment having motors of 1/2 horsepower or larger, shall be isolated from building structure by means of spring hanger units designed for insertion in rods.
- H. All vibration isolators shall have either known undeflected heights or calibration markings so that, after adjustment, when carrying their load, the deflection under load can be verified, thus determining that the load is within the proper range of the device and that the correct degree of vibration isolation is being provided according to the design.
- I. All isolators shall operate in the linear portion of their load versus deflection curve. Load versus deflection curves shall be furnished by the manufacturer, and must be linear over a deflection range of not less than 50% above the design deflection.
- J. The ratio of lateral to vertical stiffness shall be not less than 1.0 nor greater than 1.5.
- K. The theoretical vertical natural frequency for each support point based upon load per isolator and isolator stiffness shall not differ from the design objectives for the equipment as a whole by more than + 10%.
- L. All neoprene mountings shall have a shore hardness of 40 to 65, after minimum aging of 20 days or corresponding oven-aging.

2.3 MOUNTINGS

- A. Spring Type:

1. Spring isolators shall incorporate the following:
 - a. Minimum diameter of 0.8 of the loaded operating height
 - b. Corrosion resistance where exposed to corrosive environment with:
 - i. Springs cadmium plated and neoprene coated.
 - ii. Hardware cadmium plated.
 - iii. All other metal parts hot dip galvanized.
 - c. Reserve deflection (from loaded to solid height) of 50% of rated deflection
 - d. Leveling device
 - e. 1/4" thick neoprene acoustical base pad.
 - f. Designed and installed so that ends of springs remain parallel.
 - g. Adequate operating clearance.
 - h. Non-resonant with equipment forcing frequencies or support structure natural frequencies.
 - i. Springs should not be welded to top and bottom plates.

2. Type "A": Spring isolators to be one of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	FDS
Mason Industries, Inc.	SLF
Vibration Mountings	Spring-Flex Series "A"

3. Type "A-S": Spring isolators shall incorporate seismic restraint and be one of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	SSLFH
Vibration Mountings	

4. Type "B": Spring isolators shall be the same as Type "A" except:

- a. Where operating weight differs from installed weight, provide built-in adjustable limit stops to prevent equipment rising when weight is removed. Stops not in contact during normal operation.
- b. Two layers of 1/4" neoprene base pad separated by 1/16" sheet steel.
- c. Tapped holes in top plate for bolting to equipment.
- d. Capable of supporting equipment at a fixed elevation during equipment erection.
- e. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	SLR
Vibration Mountings	AWR

5. Type "B-S": Spring isolators incorporating seismic restraint shall be one of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	SSL
Vibration Mountings	

6. Type "C": Spring hanger rod isolators shall incorporate the following:
- a. Spring element seated on a steel washer within a neoprene cup.
 - b. Steel retainer box encasing the spring and neoprene cup.
 - c. Neoprene bushing for lower rod hole to prevent steel-to-steel contact.
 - d. Spring diameters and hanger box lower hole size large enough to permit hanger rod to swing through a 30° arc before contacting the hole and short-circuiting the spring.
 - e. Requires Seismic Restraint.
 - f. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	Type 30
Vibration Mountings	

B. Elastomer Mounting Types

1. All elastomer isolators shall incorporate the following:
- a. Bolt holes for bolting to equipment base.
 - b. Bottom steel plates for bolting to sub-base as required.
 - c. Unit type design molded in black oil-resistant neoprene.
 - d. All metal surfaces shall be neoprene covered.
 - e. Neoprene to be compounded to meet the following:
 - i. Not greater than 50 durometer.
 - ii. Maximum tensile strength 2000 psi.
 - iii. Minimum elongation 300%.
 - iv. Maximum compression set at 25% of the original deflection.

2. Type "D": Double deflection neoprene mount.

- a. Rated deflection minimum 0.35 inches.
- b. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	ND
Vibration Mountings	RD

3. Type "D-S": Double deflection neoprene mount.

- a. Rated deflection minimum 0.35 inches.
- b. Shall incorporate seismic restraint.
- c. One of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	RBA
Vibration Mountings	

4. Type "D-SA": All directional captive neoprene mount.

- a. Rated deflection minimum 0.25 inches.
- b. Shall incorporate seismic restraint.
- c. One of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	BR
Vibration Mountings	

5. Type "E": Double deflection elastomer hanger rod isolators incorporating the following:

- a. Molded unit type neoprene element.
- b. Steel retainer box encasing neoprene mounting.
- c. Clearance between mounting hanger rod and steel retainer box.
- d. One of the following.

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	FLS
Mason Industries	HD
Vibration Mountings	RHD

6. Type "F": Pad type neoprene mountings.

- a. 3/4-inch minimum thickness.
- b. 50 psi maximum loading.
- c. Ribbed or waffled design.
- d. 15% Deflection
- e. 16 Gauge galvanized steel plate between multiple layers of pad thickness.
- f. Suitable bearing plate to distribute load.
- g. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	NPD
Mason Industries	Super W
Vibration Mountings	SHEAR-FLEX

C. Combination spring and elastomer types:

1. Type "G": Combination spring/elastomer hanger rod isolators.

- a. Spring and neoprene isolator elements in a steel box retainer.
- b. Characteristics of spring and neoprene as described in Type "C" and Type "E" isolators.
- c. Factory pre-loading to 75% of rated load (for pre-compressed springs).

- d. Requires Seismic Restraint.
- e. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries	30N
Vibration Mountings	

- 2. Type "G-S": Combination spring/elastomer hanger rod isolators incorporating seismic upstop.

- a. Spring and neoprene isolator elements in a steel box retainer.
- b. Characteristics of spring and neoprene as described in Type "C" and Type "E" isolators.
- c. Factory pre-loading to 75% of rated load (for pre-compressed springs).
- d. Requires Seismic Restraint.
- e. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries	RW30N
Vibration Mountings	

- 3. Type "H": Thrust Restraints

- a. Use on all fan heads and axial or centrifugal fans where the air thrust exceeds 10% of the equipment weight.
- b. The thrust restraint consists of a TYPE "G" isolator with the same deflection as specified in the schedule for the mountings or hangers.
- c. Spring element contained within a steel frame designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4" movement at start and stop.
- d. Assembly furnished with one rod and angle brackets for attachment to both equipment and ductwork or the equipment and the structure.
- e. Restraints attached at the centerline of thrust and symmetrically on either side of the unit.
- f. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries	Type WB
Vibration Mountings	

2.4 Materials – Rooftop spring curbs

- A. Type RSC-1: Curb mounted isolation base (low deflection).

- 1. Integral spring and weather seal curb arrangement that fits under the equipment to be isolated and over the curb.

2. Top and bottom members constructed of extruded aluminum and connected by a flexible, water-proof neoprene membrane. The aluminum members seal against the curb with continuous closed cell neoprene sponge.
3. Cadmium plated springs with a 1" deflection and 50% additional travel to solid. Spring diameters no less than 0.8 of the spring height at rated load.
4. Wind resistance and seismic restraint shall be provided by resilient snubbers in the corners with a minimum clearance of 1/4" so as not to interfere with the spring action except in high winds or seismic activity.
5. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries Vibration Mountings	Type CMAB

B. Type RSC-2: Curb mounted isolation base (high deflection).

1. Integral spring and weather seal curb arrangement that fits under the equipment to be isolated and directly on top of the roof, spanning the joists.
2. Bottom member constructed of rectangular, tubular structural steel. Top member, supporting the equipment, constructed of an inverted steel AU" channel with cross member bracing.
3. Water-proofing by a flexible formed aluminum weather seal on all four sides of the base. Corner joints constructed of molded rubber.
4. Springs cadmium plated with deflections as called out in the schedule and 50% additional travel to solid. Spring diameters of no less than 0.8 of the spring height at rated load.
5. Wind resistance and seismic restraint shall be provided by means of resilient snubbers in the corners with a minimum clearance of 1/4" so as not to interfere with the spring action except in high winds or seismic activity.
6. The system should incorporate (for improved air-borne acoustical isolation), two layers of staggered joint 5/8" drywall directly attached to the top of the roof structure within the curb surrounding the ducts. All interfaces should be caulked. In addition, 4" thick, 1.5 pound density glass or mineral fiber shall cover the drywall surface under the unit and all sides of the plenum.
7. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries	Type RSC

Vibration Mountings

2.5 Materials – Equipment Bases

A. Equipment Bases:

1. Type "B-1A": Integral structural steel bases.
 - a. Reinforced as required to prevent base flexure at startup and misalignment of drive and driven units.
 - b. Fan bases complete with motor slide rails.
 - c. Drilled for drive and driven unit mounting plate.
 - d. Depth equal to 1/10 of the longest dimension of the base, not exceeding 14 inches.
 - e. Height saving brackets shall be employed in all mounting locations. Isolators shall be Type "A". When seismic restraint is required, isolators shall be Type "A-S."
 - f. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries	Type WSFL
Vibration Mountings	

2. Type "B-2A": Concrete inertia base
 - a. Formed in structural steel frame.
 - b. Structural base reinforced as required to prevent flexure, misalignment of drive and driven unit or stress transferal into equipment
 - c. Minimum base depth must equal to 1/12th or 8% of the longest base dimension.
 - d. Fan bases complete with motor slide rails.
 - e. Pump bases to provide base elbow supports. Bases complete with height saving brackets, reinforcing, equipment bolting provisions and Type "A" isolators (Type "A-S" isolators for seismic requirements) provided by vibration control supplier.
 - f. Base ready for concrete pour; concrete weighing not less than 140 lbs per cubic foot by others.
 - g. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries	Type KSL
Vibration Mountings	

2.6 Materials – Flexible Connections

A. Flexible Connectors:

1. Type "FC-1": Neoprene connector for general piping.
 - a. Rubber expansion joints shall be peroxide cured EPDM throughout with Kevlar tire cord reinforcement.
 - b. The raised face rubber flanges must encase solid steel rings to prevent pull out. Flexible cable wire is not acceptable.
 - c. Sizes 1-1/2" through 14"(40mm through 350mm) shall have a ductile iron external ring between the two spheres. Sizes 16" through 24" (400mm to 600mm) may be single sphere. Sizes 3/4" through 2"(20mm through 50mm) may have one sphere, bolted threaded flange assemblies and cable retention.
 - d. Control rods passing through 1/2"(12mm) thick Neoprene washer bushings large enough to take the thrust at 1000psi (0.7 kg/mm²) of surface area may be used on unanchored piping where the manufacturer determines the condition exceeds the expansion joint rating without them.
 - e. Minimum ratings through 14"(350mm) shall be 250psi at 170°F and 215psi at 250°F. (1.72MPa at 77°C and 1.48MPa at 121°C), 16"(400mm) through 24"(600mm) 180psi at 170°F and 150psi at 250°F. (1.24MPa at 77°C and 1.03 MPa at 121°C). Higher published rated connectors may be used where required.
 - f. Safety factors shall be a minimum of 3/1. All expansion joints must be factory tested to 150% of maximum pressure for 12 minutes before shipment.
 - g. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer.
 - h. The piping gap shall be equal to the length of the expansion joint under pressure.
 - i. All expansion joints shall be installed on the equipment side of the shut off valves.
 - j. Connector to be one of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries	Type SAFEFLEX
Vibration Mountings	

2. Type "FC-2": Flexible stainless hose for use in inaccessible areas.
 - a. Flexible stainless steel hose shall have stainless steel braid and carbon steel fittings.
 - b. 3-inch and larger shall be flanged.
 - c. 3-inch pipe size and smaller with male nipple fittings.
 - d. At equipment, hoses shall be installed on the equipment side of the shut-off valves horizontal and parallel to the equipment shafts wherever possible.

- e. Suitable for operating pressure with 4:1 minimum safety factor.
- f. Length as shown on manufacturer's certified drawings and shall be as tabulated:

Flanged

3" x 12" (75 x 300mm)	6" x 18" (150 x 450mm)	12" x 24" (300 x 600mm)
4" x 12" (100 x 300mm)	8" x 18" (200 x 450mm)	14" x 30" (350 x 750mm)
5" x 18" (125 x 450mm)	10" x 18" (250 x 450mm)	16" x 32" (400 x 800mm)

Male Nipples

1/2" x 12" (12 x 300mm)	1-1/4" x 12" (32 x 300mm)	2" x 12" (50 x 300mm)
3/4" x 12" (19 x 300mm)	1-1/2" x 12" (38 x 300mm)	2-1/2" x 18" (64 x 450mm)
1" x 12" (25 x 300mm)		

- g. Connectors to be one of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries Vibration Mountings	Type BFFL

- 3. Type "FC-3": Flexible duct connections to fans.

- a. 30 ounce wovenglass fiber coated with neoprene, sewn together at the edges and joints.
- b. 6" long and held in place with 1" wide bands of 12 ga. galvanized steel bolted to duct and to outlets and inlets of the units and fans with 1/8" stove bolts, 5" o.c. Metal connections 3" wide on either side of the flexible material, as provided by the manufacturer, may also be used.
- c. One of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Ventfabrics DuroDyne	Ventglas Insulflex

2.7 ISOLATION SCHEDULE

<u>EQUIPMENT TYPE</u>	<u>SERVING</u>	<u>ISOLATOR TYPE</u>	<u>MINIMUM STATIC DEFLECTION (INCHES)</u>
FLOOR MOUNTED	AHU-1, 2, 3, 4	Units externally isolated	1.0

AIR HANDLING		A-S,FC-3	
UNIT HEATERS	ALL	F	Max. 50 Durometer
ROOF TOP FANS CURB MOUNT	SEF-1, 2 EF-4, EF-6	RSC-1, FC-3	1.0
EXHAUST FANS	RFL-1, EF-R1 EF-R2, EF-R3 EF-R4A, EF-R4B	G-S, FC-1	1.0
VAV BOXES	ALL	E, FC-3	1.0
FAN COIL UNITS	FCU-1, 2, 3, 4 FCU-5, 7, 8	G-S, FC-3	1.0
PIPING	FLOOR MOUNTED	B-S

	RISERS	B-S, P-2	
DUCTWORK	FLOOR MOUNTED	B-S	
	SUSPENDED	G, G-S	SEE SPEC

PART 3 - EXECUTION

3.1 Inspection

- A. Examine all work prepared by others to receive work of this Section and report problems or defects affecting installation to the General Contractor/Construction Manager for correction.
- B. Inspect all components of the Work to insure no damage has occurred during shipment or storage.
- C. Accompany Acoustical Consultant, General Contractor/Construction Manager on a joint inspection, ideally within 2 weeks of the point in time when equipment systems are certified operable and adjusted.

3.2 Installation

- A. Install vibration isolation devices and systems in accordance with the manufacturer's instructions and certified submittal data.
- B. Installation of vibration isolators must not cause any change of position of equipment, piping or duct resulting in stresses or misalignment.
- C. No rigid connections between equipment and the building structure shall be made that degrades the performance of the vibration isolation systems herein specified.
- D. The contractor shall not install any equipment, piping, duct or conduit, which makes rigid connections with the building unless isolation is not specified. "Building" includes, but is not limited to, slabs, beams, columns, studs and walls.
- E. Coordinate work with other trades to avoid rigid contact with the building.

- F. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the architects/engineers attention prior to installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractor's expense.
- G. Correct, at no additional cost, all installations which are deemed defective in workmanship and materials at the contractor's expense.
- H. Floor Mounted Equipment:
1. 4-inch thick concrete housekeeping pads:
 - a. Over entire floor area of supported equipment.
 - b. Supporting all vibration isolation devices and bases.
 - c. Keyed with hairpins as required to be integral with the structural slab.
 - d. Incorporating approved seismic restraint anchor plates flush with the top of the housekeeping pad.
 2. Concrete per specification describing requirements.
- I General Equipment Isolation:
1. Provide 2-inch operating clearance between concrete inertia bases and housekeeping pad and 1-inch clearance between equipment or structural bases and housekeeping pad.
 2. Isolation mounting deflection (minimum) as specified or scheduled on manufacturer's certified drawings.
 3. Position equipment, structural base and concrete bases on blocks or wedges at proper operating height.
 4. Provide operating load conditions prior to transferring base isolator loads to springs and removing wedges.
 5. Electrical conduit connections to isolated equipment shall be looped or installed with flexible conduit to allow free motion of isolated equipment.
 6. Install equipment directly on isolation system. Support rails between the equipment and isolators should not be used.
 7. Verify all installed isolators and mounting systems permit equipment motion in all directions.
 8. Adjust or provide additional resilient restraints to limit startup equipment lateral motion to 1/4-inch.
 9. Prior to startup, clean out all foreign matter between bases and equipment. Verify that there are no isolation short circuits in the base or isolators.

10. No rigid connections between rotating or vibrating equipment and building structure shall be made that degrades the vibration isolation system herein specified.
11. Coordinate work with other trades to avoid rigid contact with the "building". Inform other trades following, such as plastering, drywall, electrical or sheet metal, to avoid any contact which would reduce the vibration isolation.
12. Bring to the Architect's attention immediately, prior to installation, any conflicts with other trades which will result in unavoidable rigid contact with equipment or piping as described herein, due to inadequate space or other unforeseen conditions. Corrective work necessitated by conflicts after installation shall be at the contractor's expense.
13. Correct, at no additional cost, all installations which are deemed defective in workmanship or material as a result of project completion inspection or subsequent inspections due to owner complaints within a period of one year following acceptance.

J. Piping Isolation:

1. All piping shall be resiliently mounted, either floor supported or ceiling hung, such that piping will be isolated from the building structure (ie - no direct metal to metal contact of the piping with the building structure) in the following locations:
 - a. Inside Mechanical Equipment Rooms
 - b. Within 50-feet of vibrating equipment
 - c. Within 10-feet of noise critical (see Noise Control Section 230549 1.1.C.3) spaces (this includes piping under, over or adjacent to these spaces)
 - d. Inside noise critical (see Noise Control Section 230549 1.1.C.3) spaces itself (ie - piping run in ceiling of noise critical space)
 - e. All exposed piping in any occupied space
 - f. Pipe greater than 2-inches in diameter
 - g. First three hangers on both sides of an Acoustical Isolation Joint (AIJ) or when crossing into or out from box-in-box constructions
2. Horizontal pipe isolation: Use factory preloading for the first four isolators from the rotating equipment and for all piping greater than 6 inches in diameter. The first four isolators from the equipment shall have the same static deflection of the isolator used for the equipment itself. Subsequent isolators shall have a static deflection of 1/2 that of connected equipment with a minimum of 1". Use "G-S" isolators for subsequent hangers. Floor supported piping shall rest on type "B" isolators.

3. Riser isolation: Isolate the entire rise of all pipes in the locations described in 3.2.J.1. Risers shall be suspended from type "G-S" hangers or supported by type "A" mountings. Guide and anchor piping in shafts as required with approved resilient mounting designs as described below to prevent direct contact of piping with building structure. Steel springs shall be a minimum of 1" except in those expansion locations where additional deflection is required to limit load changes to $\pm 25\%$ of the initial load. Submittals must include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on the building structure, spring deflection changes and seismic loads. Submittal data shall include certification that the riser system has been examined for excessive stresses and that none will exist in the proposed design.
4. Provide flexible connections "FC-1" at all connections of pipe to rotating or vibrating equipment and as directed in the vibration isolation schedule.
5. Position isolators:
 - a. Close to building structure.
 - b. Between building structure and supplementary steel if required.
 - c. Not to contact acoustic rated walls.
6. Suspend isolators from rigid and massive support points.
7. Adjust as required all isolators to eliminate all contact of the isolated rod with the hanger rod box retainer or short circuiting of the spring.
8. Supplementary steel to be sized for a maximum deflection of 0.08 inches at the center span.
9. Resilient Piping Guides:
 - a. Weld steel guides to the pipe at a maximum spacing of 60°. The outside diameter of the opposing guide bars shall be smaller than the inside diameter of the pipe riser clamp in accordance with the standard field construction practice. Rigidly attach each end of the pipe anchor to an all-directional pipe anchor isolation mounting which, in turn, is rigidly fastened to the steel framing within the shaft.
 - b. The all-directional pipe anchor isolation mountings consists of a telescoping arrangement of two sizes of steel tubing separated by a minimum of 1/2" thick, heavy duty neoprene and canvas duck isolation pad. Provide vertical restraints by similar material arranged to prevent vertical travel in either direction. The allowable load on the isolation material shall not exceed 500 psi.

- c. Construct low temperature piping guides with a 360°, 10-gauge metal sleeve around the piping. Provide thermal insulation between the piping and the sleeve. Space the metal sleeve away from the piping with heavy duty neoprene and canvas duck isolation pad of thickness equal to thermal insulation. Provide urethane or other suitable thermal insulation in the voids between the pipe sleeve and isolation pad material. The metal sleeve outside diameter shall be smaller than the pipe riser clamp inside diameter in accordance with standard field construction practice. Rigidly attach the pipe riser clamp to the steel framing within the shaft.
- d. Mountings shall be Type VSG - M.I.I. or approved equal.

10. Resilient Piping Anchors:

- a. Weld the pipe riser clamp at anchor points to the pipe and to pairs of vertical resilient pipe anchor mountings, which, in turn, are rigidly fastened to the steel framing in the pipe shaft.
- b. The resilient pipe anchor mountings consist of a bolted assembly of steel plates with laminations of 1/2" thick, heavy duty neoprene and canvas duck isolation material. The mounting shall be capable of safely accepting loads developed by the installed piping. A heat shield shall be provided as required. The isolation material loading shall not exceed 500 psi.
- c. Resilient pipe anchor shall be Type ADA - M.I.I., or approved equal.

K. Ductwork Isolation:

- 1. Isolate all ductwork in mechanical rooms and outside of equipment rooms within 25 feet of vibrating equipment with Type "B-S" isolators (floor supported) or Type "G-S" hanger rod isolators with 1-inch static deflection (ceiling hung).
- 2. Provide flexible connections "FC-3" at all connections of ductwork to rotating or vibrating equipment and as directed in the vibration isolation schedule.
- 3. Position isolators:
 - a. Close to building structure.
 - b. Between building structure and supplementary steel if required.
 - c. Avoid contact to acoustic rated walls.
- 4. Suspend isolators from rigid and massive support points.
- 5. Adjust as required all isolators to eliminate all contact of the isolated rod with the hanger rod box retainer or short-circuiting of the spring.
- 6. Supplementary steel shall be sized for a maximum deflection of 0.08 inches at the center span.

3.3 Adjust and Clean

- A. Check and adjust all isolators to insure there is no short circuiting such as:
1. Hanger rods touching boxes
 2. Hold-down bolts not released
 3. Bolts touching springs
 4. Springs and/or neoprene overloaded
 5. Bottom neoprene pads short-circuited by welding bottom plate to structure
 6. Isolation device touching adjacent structures

3.4 Final Inspection

- A. On completion of installation of all vibration isolation devices herein specified, the local representative of the isolation materials manufacturer shall inspect the completed systems and report, in writing, any installation error, improperly selected isolation devices or other faults in the system that could affect the performance of the system. Contractor shall submit a report to the Architect, including the manufacturer's representative's final report, indicating all isolation reported as properly installed or requiring correction and include a report by the Contractor on steps taken to properly complete the isolation work.
- B. The Acoustical Consultant will subsequently inspect the systems for conformance to specifications and for proper installation methods. Contractor shall replace or repair, at his expense, any isolation devices that deviate from the specifications, approved shop drawings, and manufacturer's recommendations as a result of this inspection.

SECTION 22 07 00

INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 220700, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #2 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 220000, General Provisions, and with the provisions of all applicable codes and laws.
- B. Conform to applicable performance standards, listings or approvals of the following organizations.
 - 1. National Fire Protection Association (NFPA)
 - 2. Underwriters Laboratories (UL)
 - 3. New York City Office of Technical Certification and Research (OTCR)
- C. All insulating materials shall comply with the following ratings:
 - 1. Flamespread -25
 - 2. Smoke Developed -50
 - 3. Fuel Contributed -50

1.3 SUBMITTALS

- A. Procedure: Prepare and make the submissions listed below and in Section 220000 in accordance with the procedure specified in Section 220000.
- B. Shop Drawings
 - 1. Insulating materials and jackets.
 - 2. Insulating cements, mastics and adhesives.
 - 3. Methods of installation.
 - 4. Pump enclosure details.
 - 5. Pipe shields.
 - 6. Schedule of insulation (system, material, thickness, cover, method of installation).

1.4 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 220000.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Type A - Fiberglass Insulation

1. The insulation should be sectional pipe jacketed with an embossed barrier laminate. 3.5 pound density insulation with a maximum thermal conductivity(k) of 0.29 Btu-in/hr-ft²-°F and rated to 850°F, composed of glass fibers bonded with a thermosetting resin. Insulation to be faced with vapor barrier of white flame resistant UL rated Kraft paper bonded to reinforced aluminum foil. Vapor barrier to have a maximum permeance of 0.02 perms.

2. Indoor Piping	Pipe Size:		
	1-1/2" & smaller	Over 1-1/2"	Fitting Type
Service:	Thickness (in.):		
Domestic Water	1"	1"	G
Horiz. Roof Drains	1"	1"	G

3. Manufacturers:
Owens-Corning, SSL II
Johns Manville - Micro-Lok HP
Knauf 1000° Pipe Insulation

B. Type G - Fiberglass insulation for valves, fittings, flanges (vapor seal insulation).

1. Molded, factory-formed fibrous glass with 3.5 PCF minimum density, max. barrier adhesive and wrapped with glass mesh tape. Each fitting to be finished with two coats of Benjamin Foster 30-36 vapor seal.

2. Finish with white 0.020", 25/50 rated PVC jacket. All joints between PVC jacket and pipe covering shall be sealed with vapor barrier tape. Fitting covers and jacketing to be precured.

3. Service:	Thickness:
Domestic Water	Same as piping
Roof Drains	Same as piping

4. Manufacturers:
Fibrous Glass Products, Inc.
Insulcoustic Corp.
Hamfab

C. Type J - Fiberglass for tanks and accessories.

1. Three pounds density, 450°F max. operating temperature, K Max = .3 at 200°F, mean semi-rigid board fibrous glass insulation, unfaced.

2. Service:	Thickness:
Irregularly shaped pipe accessories	1"

3. Manufacturers:

Owens-Corning, Type 703
Certaineed, Type IB
Knauf, Type elevated temperature board.
Manville, Type 814 Spin Glass

PART 3 - EXECUTION

3.1 INSULATION - GENERAL

- A. All insulating materials shall be applied only by experienced workmen, in accordance with the best covering practice. All piping, duct or equipment shall be blown out, cleaned, tested and painted prior to the application of any covering.
- B. At all openings insulation, insulate edges neatly and protect with sheet metal frames.
- C. All items below described in general indicate the type of covering required, however, all piping, ductwork or equipment that transmits heat or will form condensation shall be insulated.
- D. Insulate all piping, valves, fittings, and accessories that are part of the piping systems specified to be insulated in specification section 230700. Insulate valves and strainers to permit removal of bonnets or baskets without damage to insulation on valve or strainer bodies.
- E. Where existing insulation is damaged by requirements of the work, replace all damaged insulation to match existing insulation's thermal value.
- F. All insulation at duct access doors shall be set in sheet metal double-pan construction.
- G. No piping, ductwork, or equipment shall be insulated until tested and approved for tightness. All piping and ducts shall be dry when covered.

3.2 APPLICATION - PIPE INSULATION (TYPE A)

- A. Vapor barrier jacket: Seal longitudinal joints with vapor barrier adhesive, transverse joints sealed with vapor barrier strips and adhesive. Ends of pipe insulation sealed off with vapor barrier adhesive at all flanges, valves and fittings, and at not more than 20 feet on continuous runs of pipe.
- B. Finish for concealed pipe insulation: Secure all concealed pipe insulation with staples and vapor seal adhesive at longitudinal; standard all service jacket pasted on lap.
- C. Finish for exposed pipe insulation: Multiple layers (minimum 2) of glass weave jacket lap sealed with Childers CP-30. Alternatively, finish with white 0.020", 25/50 rated PVC pre-curved and pre-cut jacket, as manufactured by Proto LoSMOKE or Zeston, covering over all service jacket. For exposed vapor seal insulation, same finish over vapor sealed all service jacket.

3.3 APPLICATION - INSULATION AT PIPE HANGERS

- A. Provide pipe hangers insulation protection saddles and shields.
- B. Fill each pipe covering protection saddle with same insulation as specified for respective pipe or with suitable insulating cement.

- C. Where shields are specified at hangers on piping with fibrous glass covering, provide for load bearing calcium silicate between shields and piping as follows:
 - 1. For pipe covering without vapor barrier jacket, furnish at each shield 18" long calcium silicate section with canvas jacket continuous between shield and insulation.
 - 2. For pipe covering with vapor barrier jacket, remove bottom half section of fibrous glass and replace with half section of calcium silicate. Make vapor barrier jacket continuous between shield and insulation.

3.4 APPLICATION - TANK INSULATION (TYPE J)

- A. Point joints with lagging cement prior to application of finish. Finish with two layers of 8 oz. glass mesh weave. Coat each layer of weave with vapor barrier adhesive.
- B. Insulation shall be fastened with welded pins or stick clips on flat surfaces and with stainless steel bands on irregular surfaces.

END OF SECTION

SECTION 22 08 00

COMMISSIONING OF PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 22, and other Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

- A. This section includes commissioning process requirements for Plumbing systems, assemblies, and equipment.
- B. Related Sections:
 - 1. Division 01 Section "General Commissioning Requirements" for general commissioning process requirements.

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the Owner with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of each system designer to provide a complete design or installing subcontractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the Owner.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
 - 1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
 - 2. Verify and document proper performance of equipment and systems.
 - 3. Verify that Operation & Maintenance documentation is complete and transferred to Owner.
 - 4. Verify that the Owner's operating personnel are adequately trained.
 - 5. Verify a contract is in place for a post occupancy review with O&M staff within 10 months after Substantial Completion.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.

- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner, Owner's representative, Trade Contractors, subcontractors, manufacturers and equipment suppliers.
- E. The Cx process shall not reduce the responsibility of the construction management group (CM/GC) to comply with the Contract Documents.

1.4 DEFINITIONS

- A. Refer to Division 01 Section "General Commissioning Requirements" for definitions.

1.5 SUBMITTALS

- A. Refer to Division 01 Section "General Commissioning Requirements" for CxA's role.
- B. Refer to Division 01 Section "Submittals" for specific requirements. In addition, provide the following:
 - C. Certificates of readiness
 - D. Certificates of completion of installation, prestart, and startup activities.
 - E. O&M manuals
 - F. Test reports

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: Contractors will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the contractor for the equipment being tested. For example, the plumbing contractor of Division 22 shall ultimately be responsible for all standard

testing equipment for the plumbing system in Division 22, except for equipment specific to and used by TAB in their commissioning responsibilities. A sufficient quantity of two-way radios shall be provided by each subcontractor.

- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the Owner and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the Owner upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment, if provided by the CxA, shall not become the property of the Owner.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the installing contractors, the CxA will prepare Pre-Functional Checklists for commissioned components, equipment, and systems.
- B. Red-lined Drawings:
 - 1. The contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
 - 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 - 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 - 4. The contracted party, as defined in the Contract Documents will create the as-built drawings.
- C. Operation and Maintenance Data:
 - 1. Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 - 2. The CxA will review the O&M literature once for conformance to project requirements.
 - 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the contractor.
- D. Demonstration and Instruction:

1. Contractor will provide demonstration and instruction as required by the specifications.
2. A complete training plan and schedule must be submitted by the contractor to the CxA four weeks (4) prior to any instruction.
3. An instruction agenda for each training session must be submitted to the CxA one (1) week prior the training session.
4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and Owner's representative. A copy of the test record shall be provided to the CxA, Owner, and Architect.
5. Engage a Factory-authorized service representative to instruct Owner's maintenance personnel to adjust, operate, and maintain specific equipment.
6. Instruct Owner's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Perform commissioning tests at the direction of the CxA.
- B. Attend construction phase controls coordination meetings.
- C. Attend domestic water balancing review and coordination meetings.
- D. Participate in Plumbing systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- E. Provide information requested by the CxA for final commissioning documentation.
- F. Prepare preliminary schedule for Plumbing system orientations and inspections, operation and maintenance manual submissions, training sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for owner. Distribute preliminary schedule to commissioning team members.
- G. Update schedule as required throughout the construction period.
- H. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
- I. Assist the CxA in all verification and functional performance tests.
- J. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- K. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA (45) days after submittal acceptance.
- L. Coordinate with the CxA to provide (48) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.

- M. Notify the CxA a minimum of (2) weeks in advance of the time for start of the balancing work. Attend the initial balancing meeting for review of the balancing procedures.
- N. Participate in, and schedule vendors and contractors to participate in the instruction sessions.
- O. Provide written notification to the CM/GCC and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
 - 1. Plumbing equipment including backflow preventers, domestic water heaters, pumps, plumbing fixtures, and all other equipment furnished under Division 22 and contract document.
 - 2. Gas piping, sanitary waste and vent piping, storm drainage piping, sump pumps and , sewage ejectors.
- P. The equipment supplier shall document the performance of his equipment.
- Q. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- R. Balance Contractor
 - 1. Attend initial commissioning coordination meeting scheduled by the CxA.
 - 2. Submit the site specific balancing plan to the CxA and Commissioner for review and acceptance.
 - 3. Attend the balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in balancing the Plumbing system.
 - 4. At the completion of the balancing work, and the submittal of the final balancing report, notify the Plumbing contractor and the CM/GC.
 - 5. At the completion of balancing work, and the submittal of the final balancing report, notify the Plumbing Contractor and the CM/GC.
 - 6. Participate in verification of the balancing report, which will consist of repeating measurements contained in the balancing reports. Assist in diagnostic purposes when directed.
- S. Provide instruction of the Owner's operating staff using expert qualified personnel, as specified.
- T. Equipment Suppliers
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the Owner, to keep warranties in force.
 - 2. Assist in equipment testing per agreements with contractors.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- U. Refer to Division 01 Section "General Commissioning Requirements" for additional contractor responsibilities.

3.3 OWNER'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for Owner's Responsibilities.

3.4 DESIGN PROFESSIONAL'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for Design Professional's Responsibilities.

3.5 CxA'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for CxA's Responsibilities.

3.6 TESTING PREPARATION

- A. Certify in writing to the CxA that Plumbing systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Plumbing instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.7 DOMESTIC WATER BALANCING VERIFICATION

- A. Prior to performance of Domestic Water Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- B. Notify the CxA at least ten (10) days in advance of testing and balancing Work, and provide access for the CxA to witness balancing Work.
- C. Provide technicians, instrumentation, and tools to verify testing and balancing of Plumbing systems at the direction of the CxA.
 - 1. The CxA will notify testing and balancing subcontractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
 - 2. The balancing subcontractor shall use the same instruments (by model and serial number) that were used when original data were collected.
 - 3. Failure of an item includes a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final balancing report.

4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.8 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of Plumbing testing shall include entire Plumbing installation. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The CxA along with the Plumbing contractor, balancing subcontractor shall prepare detailed testing plans, procedures, and checklists for Plumbing systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the Plumbing system, document the deficiency and report it to the Owner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.9 PLUMBING SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 22 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. Plumbing Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 22. Assist the CxA with preparation of testing plans.
- C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 22 piping Sections. Plumbing Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA.

- D. Plumbing Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, fuel gas, and sanitary waste and vent piping, storm drainage piping, sprinkler and domestic water distribution systems.
 - E. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.
 - F. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The systems shall be evaluated shall include, but not limited to:
 - 1. Electric Water Heaters
- 3.10 DEFICIENCIES/NON-CONFORMANCE, COST OF RETESTING, FAILURE DUE TO MANUFACTURER DEFECT
- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deficiencies/non-conformance, cost of retesting, or failure due to manufacturer defect.
- 3.11 APPROVAL
- A. Refer to Division 01 Section "General Commissioning Requirements" for approval procedures.
- 3.12 DEFERRED TESTING
- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deferred testing.
- 3.13 OPERATION AND MAINTENANCE MANUALS
- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in Division 01.
 - B. Refer to Division 01 Section "General Commissioning Requirements" for the AE and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.
- 3.14 INSTRUCTION OF OWNER PERSONNEL
- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to instruction.
 - B. Plumbing Contractor. The contractor shall have the following instruction responsibilities:
 - 1. Provide the CxA with an instruction plan two weeks before the planned training.
 - 2. Provide designated Owner personnel with comprehensive orientation and instruction in the understanding of the systems and the operation and maintenance of each piece of Plumbing equipment.

3. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
4. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing contractor or manufacturer's representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.
5. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
6. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance for all pieces of equipment.
7. The plumbing contractor shall fully explain and demonstrate the operation, function and overrides of any local packaged controls.
8. Instruction shall occur after functional testing is complete, unless approved otherwise by the Owner.

SECTION 22 20 00

PUMPING EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 220000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #2 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 220000, general provision, and with the provisions of all applicable codes and laws.

1.3 SUBMITTALS

- A. Procedure: Prepare and make the submissions listed below and in Section 220000 in accordance with the procedure specified in Section 220000.
- B. Shop Drawings
 - 1. Air conditioning condensate pump.
 - 2. Pump related accessories.
 - 3. Pump curves.

1.4 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 220000.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Construct all apparatus of materials and pressure ratings suitable for the conditions encountered during continuous operation.
- B. Provide casing connections for vent, drain, suction and discharge pressure gauges.
- C. Balance impellers and all other moving components statically and dynamically.
- D. Completely align and level pumps, motors and bases. Where pumps and motors are shipped as a unit, realign them in the field.
- E. Install and align mechanical seals in accordance with the manufacturer's recommendations.
- F. Provide water supply for cooling and lubricating of seals and/or packing.

- G. Match centrifugal pump impellers and casings so that at specified operating conditions, the impeller diameter is not more than 90% of the maximum diameter impeller which can satisfactorily operate in the casing.
- H. Pumps must operate stably without pulsation, vibration or internal recirculation. Pump operating characteristics at the design point must be such that a variation of 10% in head results in not more than 15% variation in GPM and does not affect the stability of operation of the pump.
- I. Motor sizes scheduled are minimum for the specific pumps indicated on pump schedules. When submitting pumps other than those specifically selected, size motors so that when operating at rated RPM, the pump motor brake horsepower does not exceed the nominal motor rating despite variations in pumping head or when operated singly or in parallel with other pumps serving the same system.
- J. Motors to be high efficiency type with guaranteed minimum efficiency rated in accordance with IEEE standard 112, method B - General Electric Company "Energy Saver" or equal.

Manufacturer: Bell & Gossett Series 100 or approved equal
 Taco Circulator Pump Series 110
 Grundfos UPS Series

PART 3 - EXECUTION

3.1 EQUIPMENT

- A. Install equipment in conformance with manufacturer's recommendations.

END OF SECTION

CONTRACT # 3
HVAC and FIRE PROTECTION WORK

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 21 00 00

GENERAL PROVISIONS FOR FIRE SUPPRESSION

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install all work of this Section as shown on the drawings, as specified herein, and/or as required by job conditions.
- B. Submit and secure approval for all shop drawings (including coordination drawings), calculations, system components, from the local AHJ and the City of New York's insurance company, prior to the start of installation.

1.2 REFERENCES

- A. The installation and equipment is to conform to:
 - 1. 2008 New York City Building Code (NYCBC) applicable bulletins and notices, and applicable reference standards cited therein, including:
 - a. NFPA 13-2002
 - b. NFPA 14-2003.
 - 2. 2008 New York City Fire Code (NYCFC)
 - 3. Applicable Local Laws
- B. All work shall comply with this division (i.e., 210000) and Section 230000, General Provisions.
- C. All wiring between the deluge control panel and the associated zone input and output devices shall be the responsibility of Contract #3 Contractor and shall comply with Part 1 and Part 3 of Section 283000, Addressable Fire Alarm System.

1.3 DESCRIPTION

- A. General Description.
 - 1. Fire protection for the new building shall consist of Complete sprinkler protection throughout renovated space
 - 2. Prior to the submittal of shop drawings and hydraulic calculations, Contract #3 Contractor shall submit necessary forms and documents to the New York City Department of Building (DOB) to assume applicant of record for sprinkler and standpipe scope of work. A copy of these forms and documents shall be included with the shop drawing and hydraulic calculation submittal. Before requesting acceptance of work, Contract #3 Contractor shall submit necessary forms and as-built shop drawings and hydraulic calculations to amend the application. A copy of these forms and as-built shop drawings and hydraulic calculations shall be included with the closeout documentation.
- B. Major Components.
 - 1. Two (2) 4" sprinkler zone control assemblies (one for the Ground Floor and Control Room Level and one for the Mezzanine Level)

2. One (1) 3" deluge valve assembly including associated zone input and output devices (i.e., heat detectors, pull station, alarm bell, solenoid valve, etc.)
- C. Work Starts at.
1. Connections to the existing sprinkler/standpipe system.
- D. Additional Components and Work.
1. Complete galvanized test and drain system piped to discharge to the building exterior (or other location as approved by the Commissioner).
 2. Complete hanger and earthquake bracing assemblies. All hanger and bracing components shall be galvanized.
 3. Required accessories, drains and test connections.
 4. Rough cutting and patching.
 5. Coordinate all fire protection wiring requirements with Sections 26 and 28.
- E. General Design:
1. All piping and sprinklers shall be of the concealed type in areas where ceilings exist. Exposed piping and sprinklers shall be installed in areas without ceilings.
 2. All fire protection work shall be coordinated with other trades, the building's architectural features and with the ceilings, soffits, and partitions. Special care should be taken in areas where sprinkler heads are centered in ceiling tiles or with other ceiling features.
 3. Do not run exposed piping in front of windows and skylights. Keep all exposed piping as high as possible and as tight to walls and ceilings/decking as possible. Exposed piping and sprinklers shall be installed in coordination with the buildings structural and architectural features. Concealed piping should be elevated +/- 6" above the ceiling. Coordinate all piping with lights, diffusers, and all other equipment above the ceilings. Provide any additional piping, offsets, and hanger assemblies required to meet the aesthetic considerations of this project. Do not locate piping in areas where it would interfere with door swings or required head clearances or egress paths.
 4. Provide all required drain and control valves. All valves shall be a maximum of 7'-0" above the finished floor unless noted otherwise.
 5. Do not attach any hanger assemblies directly to the underside of any roof assemblies. When supporting fire protection piping and equipment at the underside of roof construction, use "unistrut" type supplemental steel to span adjacent roof structure and attach equipment hangers to the "unistrut".
- F. Related work specified elsewhere.
1. Finished patching
 2. Electrical wiring
 3. Fire extinguishers
 4. Painting of exposed fire protection piping located in public spaces

1.4 SUBMITTALS

A. Procedure.

1. Prepare and make the submissions listed below and in Section 230000.

B. Materials.

1. Pipe and Fittings (including copper tubing and fittings)
2. Wall Plates
3. Sleeves
4. Control Valves
5. Check Valves
6. Drain and Auxiliary Valves
7. Sprinkler Zone Control Assemblies
8. Pressure Reducing Valve Assemblies
9. 2.5" Fire Department Valves
10. 1.5" Hose Rack assemblies
11. Deluge Valve Assembly including Control Panel and associated Input Zone and Output Devices
12. Hanger and Earthquake Bracing Assemblies
13. Valve tags, charts, pipe makers, and equipment signage including hydraulic summary placards for sprinklers systems
14. Fire Stopping Assemblies
15. Sprinklers, escutcheons, and head guards
16. Spare Sprinkler Cabinet
17. Hose Rack Cabinets

C. Shop Drawings.

1. Provide dimensional installation piping layout(s) coordinated with all trades. Include all sprinklers, piping, pipe sizes, fittings, drains and auxiliary drain, hangers and locations, valves with identification numbers, alarm equipment, and all other necessary information required for a complete shop drawing. Each drawing shall accurately list the size, type and schedule of all pipe and fittings used on the project.
2. Contract #3 Contractor shall verify location and pipe sizes of those portions of the existing sprinkler/standpipe system necessary to perform his hydraulic calculation including fire service piping, backflow preventer manufacturer and model, fire pump manufacturer and model, and fire pump room arrangement.
3. Determine any deviations from the contract documents (drawings and specifications) and clearly indicate them on in writing.
4. Submitted shop drawings shall be clear and legible. Minimum text size shall be 1/8". All sprinkler information must stand out on the shop drawings (i.e., bold piping, etc. or lighter background). Reverse reading drawings are not acceptable. Do not draw piping intersecting with other piping that does not actually connect. Poor quality printings, reverse reading drawings and drawings with excessive unnecessary information (i.e., field fabrication notes, etc.) will not be reviewed and will be returned for resubmission.
5. With initial drawing submittal, include a complete, schematic type, riser diagram indicating all system components, hydraulic reference points, and elevations at each floor. Diagram shall include all information from the municipal water main connection up to and including each sprinkler control assembly.
6. With initial drawing submittal, provide a full height building cross-section indicating floor elevations, types of construction, and locations of ceilings, walls/partitions, and sprinkler piping. Include a complete drawing index with each submittal and on the first drawing in the fire protection shop drawing set.
7. Provide a complete drawing index with each submittal and on the first drawing in the fire protection shop drawing set.
8. On projects where there are multiple drawings per floor, include a key plan for each drawing.

9. Include a site plan indicating the municipal water main, test hydrants (i.e., gauged and flowing hydrants), and fire department connection.
10. All shop drawings submitted shall be signed and sealed by a Professional Engineer licensed in New York State.

D. Hydraulic Calculations.

1. Each calculation shall contain a water summary sheet indicating pressure and flow required at the fire pump and the pressure available at the required flow. Each cover sheet shall also include the shop drawing number and floor/level associated with the remote area. This information shall be included on associated shop drawing(s).
2. Calculations are to be brought back to the municipal water main. Calculations must print out results in a consecutive format representing reverse direction of water flow. Calculations, which do not conform to this requirement will be sent back unreviewed.
3. Contract #3 Contractor shall verify location and pipe sizes of those portions of the existing sprinkler/standpipe system necessary to perform his hydraulic calculation including fire service piping, backflow preventer manufacturer and model, fire pump manufacturer and model, and fire pump room arrangement.
4. Calculations shall include a 10 psig design margin between the required pressure and the available water supply pressure at the required flow.
5. Hydraulic reference points shall be clearly indicated on drawings. Do not use "pipe numbers"; provide consecutively numbered reference points at all areas indicated on hydraulic calculations starting at the connection to the municipal water main.
6. All sprinklers in the remote area must be flowed in the calculations (i.e., do not exclude sprinklers in small rooms, closets, etc). Do not include any unsprinklered spaces in the determining the square footage of the remote area.
7. The remote area must be the minimum square footage indicated in the Contract Drawings. A reduction in the remote area square footage is not permitted with the use of quick response sprinklers.
8. Grid calculations shall include "Peaking" process (per NFPA requirements) to ensure calculation of most remote area.
9. **HYDRAULIC SUMMARY DATA MUST BE INCLUDED ON SHOP DRAWINGS.** Summary data shall include: location, file number, density, remote area square footage, number of sprinkler heads flowing, flow & pressure required at municipal water main.
10. Provide a calculation indicating the required pressure at the FDC required to supply the greatest sprinkler and hose stream demand.
11. All calculations submitted shall be signed and sealed by a Professional Engineer licensed in New York State.

E. Samples.

1. Submit three (3) samples on each of the following items:
 - a. Sprinklers including escutcheons and cover plates
 - b. Sprinkler head guards

F. Closeout Documentation.

1. At completion of installation work, provide complete "As-Built" documentation including revised shop drawings and hydraulic calculation that have been updated to reflect any minor changes to the design to accommodate field conditions, and the Operations and Maintenance Manual.

G. Operating and Maintenance Manual.

1. Before requesting acceptance of work, furnish five (5) printed and bound sets of the Operations and Maintenance Manual.
2. Each Manual shall include:
 - a. Title Page identifying the project name & location, and Contract #3 Contractor's emergency contact information
 - b. Table of Contents with tabbed sections
 - c. A section providing a brief description of systems and components, and basic operating features
 - d. A section providing the Manufacturer's name, (include address and telephone number) model number, service manual, spare parts lists, wiring diagrams and descriptive literature for all components.
 - e. A section providing maintenance instructions, listing of possible breakdowns and repairs of major components
 - f. A section providing instructions for start-up and operation of major components including a detailed and simplified one line color-coded flow and wiring diagrams, and copy of fire protection systems' valve tag chart
 - g. A section that includes all as-built shop drawing and hydraulic calculations
 - h. A section that includes the following witnessed certificates:
 - 1) Contractor's Material And Test Certificate for Above Ground Piping (NFPA 13-2002, Figure 16.1)
 - 2) Contractor's Material And Test Certificate for Underground Piping (NFPA 13-2002, Figure 10.10.1)
 - 3) Certificates shall include all required signatures along with printed names and titles of all individuals conducting the tests and witnesses.
 - i. A section that includes a copy of the first year's required inspections, testing and maintenance contract and copy of NFPA 25-2002.
 - j. A section that includes a CD of all approved fire protection as-built drawings, both .pdf and .dwg file types.

1.5 CLEARANCE FROM ELECTRICAL EQUIPMENT

A. Piping (except for piping directly supplying sprinklers for such room):

1. Prohibited, except as noted, in:
 - a. Electric Rooms and Closets.
 - b. Telephone Equipment Rooms and Closets.
 - c. Elevator Machine Rooms.

2. Prohibited, except as noted, over or within 5 feet of:
 - a. Transformers.
 - b. Substations.
 - c. Switchboards.
 - d. Motor control centers.
 - e. Standby power plant.
 - f. Bus ducts.
3. When over or within 5 feet unavoidable, provide drip pans under piping over electrical equipment.

1.6 QUALITY ASSURANCE

A. Quality of Materials.

1. All equipment and materials to be UL listed. All equipment and materials shall also be and Factory Mutual approved (unless noted otherwise).
2. New, best of their respective kinds and free of defects.
3. Electrical equipment: Listed by Underwriters Laboratories or bearing their label.
4. Secure approval from Commissioner, and all authorities having jurisdiction for materials, equipment, and installation prior to installation.
5. Obtain fire pump, pressure maintenance pump, controllers and automatic transfer switch through one source from a single manufacturer for each type of equipment.

B. Warranty.

1. All fire protection work shall be free from defects in workmanship and materials for a period of one (1) year from date of final acceptance shall meet all local and state codes. Contract #3 Contractor shall repair all defects, which develop or are discovered within this period, to the satisfaction of the City of New York, at no additional cost.
2. Provide (as part of the contract) all inspections, testing and maintenance required for the one (1) year period following final acceptance. Required inspections, testing and maintenance shall be those defined in NFPA 25-2002.

1.7 BASE BID MANUFACTURERS

A. Base bid on materials or equipment specified by:

1. Name of manufacturer.
2. Brand or trade name.
3. Catalogue reference.

B. Where two or more manufacturers are named, choice optional with bidder.

PART 2 PRODUCTS

2.1 PIPE

A. Above Ground.

1. Schedule 40, except where otherwise permitted, seamless or welded mild steel, ASTM A-135, A-795 or A-53 for size 1" and larger.
2. Schedule 10 steel pipe may be used for size 2.5" through 6".
 - a. No threaded or cut grooved connections on Schedule 10 pipe.
3. Minimum Wall 0.188" may be used for size 8"
4. Only Schedule 40 pipe is permitted on standpipe system.
5. Galvanized pipe shall be used for test and drain piping, above ground piping between fire department connection and check valve, piping for auto-ball drip, and for any above ground piping subject to alternate wetting and drying such a deluge water curtain piping.
6. Provide chrome-plated pipe for any exposed test and drain piping at the building exterior.
7. Copper tubing shall be used where wall cavity dimensions prevent use of black pipe. Copper tubing shall be drawn, seamless, Type K, manufactured in accordance with ASTM B-75, B-88 or B-251..

2.2 FITTINGS

A. Above Ground.

1. Cast iron threaded: Standard weight, ANSI B-16.4.
2. Cast iron flanged fittings and flanges: Standard weight, ANSI B-16.1.
3. Malleable iron: Threaded and banded, standard weights, ANSI B-16.3.
4. Steel welding: Standard seamless steel, ANSI B-16.9 and ASTM A-234.
5. Steel flanges: ANSI B-16.5, ASTM A-181 Grade 1 up to 300 PSI.
6. Grooved end malleable iron fittings, and bolted clamp type malleable iron couplings with rubber sealing gaskets for rolled grooved end pipe, 250-PSI WWP. Allowed for size 1¼" and larger. Similar to: VICTAULIC Co.
7. Plain end fittings and bushings are NOT PERMITTED.
8. All reducing fittings shall be tapered. Reducing couplings are allowed for one "nominal" pipe size reduction (i.e.: 6" x 4", 3" x 2 ½", etc).
9. Provide galvanized fittings shall be used in conjunction with galvanized pipe.
10. Provide chrome-plated fittings for any exposed test and drain fittings at the building exterior.
11. Copper fittings shall be wrought copper and copper alloy solder joint pressure fittings in accordance with ASME B16.22, or cast copper alloy solder joint pressure fittings in accordance with ASME B16.18.

2.3 WALL PLATES

- A. Chrome plated, heavy gauge steel, hinged split ring wall plate with spring steel inserts and positive locking tab. For exposed piping through interior floors, walls, and ceilings. Similar to: ARGCO series.
- B. Chrome plated, heavy duty, forged brass, one piece, wall plate with setscrew. For exposed piping through exterior walls. Similar to: ARGCO series.

2.4 SLEEVES

- A. Install galvanized steel, schedule 40, pipe sleeves for pipes passing through floors, walls, and partitions. Sleeves shall be sized per NFPA requirements. Floor sleeves shall project 1" above finished floor to prevent seepage.
- B. All sleeves passing through any rated construction shall be sealed with a UL listed fire and smoke resistive assembly
- C. Grout-in all sleeves through concrete walls and floors.
- D. All sleeves passing through exterior walls shall be schedule 40 galvanized steel pipe with integral water stop. Seal shall be interlocking expandable synthetic rubber links, assembled with corrosion resistant bolts, nuts, and pressure plates. Similar to: LINK-SEAL

2.5 VALVES

- A. General.
 - 1. Above ground valves shall be UL and FM approved. Similar to: VICTAULIC except as noted.
- B. Above ground Valves.
 - 1. 2" and smaller:
 - a. Butterfly type, slow close indicating valve with built-in tamper switch, threaded or grooved, 175 PSI. Similar to MILWAUKEE, Model No. BB-SCS02 OR BB-VSCS02 ("Butterball").
 - 2. 2 ½ " to 6":
 - a. Butterfly type, Tight closing, epoxy coated ductile iron, elastomer encapsulated disc, grooved, 300 PSI WWP, with stainless steel shaft, lifetime bearings, handwheel gear operator with position indicator, and built-in tamper switch. Similar to: VICTAULIC, Series 705W OR 705W RD ("FireLock").
- C. Check valves.
 - 1. 2" and smaller:
 - a. Swing type, bronze, threaded, rubber disc, 200 PSI WWP. Similar to: NIBCO, Model KT-403-W.
 - 2. 2 ½" and larger:
 - b. Grooved, 250 PSI. Similar to: VICTAULIC, Series 717 ("FireLock").
- D. Drain and Auxiliary Drain Valves.
 - 1. Threaded bronze angle or globe type with composition disc, 175 PSI. Similar to: NIBCO KT-65, KT-211, KT-67, and KT-301.
 - 2. Provide valves (not plugs) as required and at indicated locations for complete drainage of systems.

3. Pipe all drain and sprinkler test piping to the building exterior. Drains that drain to a floor drain, sump pit, or mop sink, will only be permitted with approval from the Commissioner. Provide any required pipe, fittings, and labor to terminate drains at approved coordinated locations.
4. At system low points where drain piping does not extend to a drain receptacle, provide a threaded hose and adapter at the valve outlet (where permitted by the Commissioner).

E. Automatic Ball Drip Valves.

1. 3/4" bronze, threaded, angled. Similar to: POTTER-ROEMER Model 5984.
2. Pipe to an approved drain location.

2.6 SPECIALTY VALVES

A. Sprinkler Control Assemblies.

1. Grooved manifold body, including a grooved control valve with tamper switch, waterflow switch, pressure gauge with maintenance valve, and a test & drain valve assembly.
2. Similar to: VICTAULIC Model 747M.

B. Pressure Reducing Valve Assemblies.

1. Pilot operated, globe style body with grooved ends including a pilot assembly and pressure gauges with maintenance valves.
2. UL Listed, 300 lb rating
3. Similar to: WILKINS, Model ZW209FP.

C. 2 1/2" Fire Department Valves

1. 2-1/2" cast brass valve with red hand wheel. Female NPT inlet x Male hose thread outlet, 300 psi rating. Hose thread type shall comply with local requirements.
2. Similar to: Potter Roemer, Model 4065-B.
3. Provide 2-1/2" x 1-1/2" reducer with rocker lugs, brass, hose thread. Similar to: Potter Roemer, Model 2810-B-RL.
4. Provide 1-1/2" cap with rocker lugs, brass, hose thread. Similar to: Potter Roemer, Model 4625-B-RL.
5. Provide written statement under company letterhead with product submittal that the submitted hose thread type has been confirmed with New York City Fire Department.

D. 1 1/2" Hose Rack Assemblies

1. 1 1/2" angle valve with red hand wheel, 300 lb., brass, double female NPT.
2. 1 1/2" hose rack nipple, brass, hose thread. Hose thread type shall comply with local requirements.
3. 1 1/2" hose rack, red glossy polyester finish with instruction decal.
4. 1 1/2" adjustable pressure restricting device, brass.
5. 75' interior standpipe hose, lined FM Approved.
6. 1 1/2" adjustable fog nozzle, brass.
7. Similar to: POTTER-ROEMER, Model 2507-10

E. Deluge Valve Assembly

1. Grooved unit with alarm switches to actuate building fire alarm system and local electric alarm bell, drains, gauges, test apparatus with required accessories. The deluge valve shall be a low differential, latch and actuator design that allows the valve to be reset without opening the valve. The low differential design shall not be subject to water columns. The valve shall include a release solenoid valve to actuate the valve.
2. The valve shall be made of high-strength, low-weight ductile iron, and have easy access to all internal parts. All internal parts shall be replaceable. Maintenance and service shall be possible without removing the valve from its installed position. The rubber clapper seal shall be easily replaceable without removing the clapper from the valve. The valve shall be painted inside and out to increase corrosion resistance. The valve body shall be tapped for main drain and all available trim configurations
3. Body: Ductile iron conforming to ASTM A-536, grade 65-45-12. Clapper: Aluminum bronze UNS-C95500, Latch: Aluminum bronze UNS-C95500, Shaft: Stainless 17-4, Clapper Seal: Peroxide cured EPDM - ASTM D2000, Bushings/Seat O-rings: Nitrile, Springs: Stainless Steel (300 Series), Diaphragm: Peroxide cured EPDM with fabric reinforcement. Dry valve shall be UL listed and Factory Mutual approved.
4. Similar to: VICTAULIC, Series 769 FireLock NXT Deluge Valve.
5. Deluge Valve Control Panel and Associated Input Zone and Output Devices
 - a. Control Panel: SYSTEM SENSOR, model PDRP-2001, OR Approved Equal
 - b. Heat Detectors:
 - i. Fixed Temperature/Rate of Rise: Conventional heat detector, single-circuit type, normally open. Detector shall be UL Listed, rated for activation at either 194°F, and shall activate by means of a combination fixed temperature/rate-of-rise thermal sensor where rate-of-rise element is activated by a rapid rise in temperature, approximately 15°F per minute. SYSTEM SENSOR, model 5602, OR Approved Equal
 - ii. Fixed Temperature: Conventional mechanical heat detector, single-circuit type, normally open. Detector shall be UL Listed, rated for activation at 194°F, and shall activate by means of a fixed temperature thermal sensor. SYSTEM SENSOR, model 5604, OR Approved Equal
 - c. Pull Station: Single action, break glass initiating station with normally open (NO) contacts. Pull station shall be provided with 6 inch wire leads and suitable for either flush or surface mounting. EDWARDS, model 270A-SPO, OR Approved Equal. Provide protective pull station enclosure. EDWARDS, model STI-3150, OR Approved Equal.
 - d. Waterflow Pressure Switch: Included with deluge valve assembly
 - e. Release Solenoid: included with deluge valve assembly
 - f. Alarm Bell: 6" with underdome strikers and operating mechanisms with an operating voltage of 24VDC. Alarm bell shall be UL Listed and suitable for either surface or semi-flush mounting. SYSTEM SENSOR, model SSM24-6, OR Approved Equal.
 - g. All wiring between the deluge control panel and associated devices (i.e., heat detectors, pull station, alarm bell, solenoid valve, etc.) shall be the responsibility of Contract #3 Contractor. Submittals and all work shall be in accordance with Part 1 and Part 3 of Design Specification 283100.
 - h. Power to the deluge control panel shall be responsibility of Division 28.
 - i. All wiring between the deluge control panel and the main fire alarm control panel shall be responsibility of Division 26.

2.7 ALARM ACTUATING DEVICES (Coordinate with Division 28)

- A. Closed circuit OS&Y type valve tamper switches to operate within two revolutions of valve wheel.
 - 1. Built-in models or Similar to: POTTER Electric Signal Co. model OSYSU-2.
- B. Closed circuit waterflow indicators with retarding device to prevent false alarms from line surges.¹
 - 1. $\frac{1}{2}$ " and smaller:
 - a. Similar to POTTER Electric Signal, Model VSR-S
 - 2. 2" and larger:
 - a. Similar to: POTTER Electric Signal, Model VSR-FE-2
- C. All wiring from devices to main fire alarm panel to be responsibility of Division 28.

2.8 VALVE TAGS, CHARTS, PIPE MARKERS AND EQUIPMENT SIGNAGE

- A. Tags.
 - 1. Brass 18 gauge with $\frac{1}{2}$ " stamped numbers and $\frac{1}{4}$ " letters filled with black paint. Not less than 1 $\frac{1}{2}$ " inches round with $\frac{3}{16}$ " top hole.
 - a. Similar to: SETON Style No. 65542.
 - 2. Provide on all valves and controls identifying numbered metal tags, with letter to indicate system (FP) fastened by heavy brass hook and chain.
 - a. Similar to: SETON Style Nos. 16197 and 16182.
- B. Charts.
 - 1. Provide (two) frame mounted and laminated: Valve tag charts along with a diagrammatic/schematic diagram showing essential features of system.
 - 2. All fire protection control, test and drain valves shall be tagged.
 - 3. Valve numbering and lettering shall correspond to designation on the metal valve tags.
 - 4. Valve tag chart shall indicate valve location, function, and area controlled. Minimum size is 11" x 17".
- C. Markers.
 - 1. Provide $\frac{1}{2}$ " wide self-adhesive pipe markers with flow arrows at reasonable locations (not to exceed 30' intervals) and in accordance with Section 230000, on all concealed and exposed piping.
 - a. Similar to: SETON brand style Nos. M4268 and M4167.
- D. Signage.
 - 1. Provide proper signage on all fire protection valves and devices, describing device and function in accordance with NFPA requirements.

2.9 PIPE HANGERS and EARTHQUAKE BRACING

A. Top Beam Clamps.

1. Carbon steel, galvanized, clamp body with hardened steel cup point setscrew and locknut. Body shall be tapped through to permit extended adjustment of threaded rod. Similar to: TOLCO Figures 65 and 66.
2. Provide retaining straps for all beam clamps.

B. Hanger Rods.

1. Carbon steel, galvanized, continuous thread sized in accordance with NFPA 13 requirements. Similar to: TOLCO Figure 99.
2. Do not band hanger rods. Use appropriate offsetting brackets/clamps.

C. Swivel Rings.

1. Carbon steel, galvanized. (For sizes 1" and larger). Similar to: TOLCO Figure 2.

D. Expansion Anchors.

1. Maximum loading, including pipe contents, covering and all required loads shall be 75 percent of rated load, SAE 110M, slotted type, plated with dull zinc finish. Similar to: HILTI Drop-In Anchor (HDI).
2. Use only at locations approved by the Commissioner.

E. Side Beam Brackets.

1. Carbon steel, galvanized, flush back plate with threaded eye socket, for pipe sizes 1" through 4".
2. Similar to: TOLCO Fig. 57.

F. Split Ring Hangers.

1. Carbon steel, galvanized, split ring hanger.
2. Similar to: ERICO, Model NI 429.

G. Steel Rod Couplings.

1. Carbon steel, galvanized
2. Similar to: TOLCO Fig. 70.

H. Earthquake Bracking.

1. Carbon steel, galvanized, UL/FM approved. Similar to: TOLCO Figures 906, 907, 908, 909, 910, 975, and 1000.

I. Other Hanger Materials.

1. All other hanger materials, assemblies and methods shall be UL/FM approved for their intended application.
2. All hanger and bracing material must be galvanized.

2.10 SPRINKLERS

A. General.

1. Cast brass, closed, quick response bulb type, standard spray with $\frac{1}{2}$ " discharge orifice.
2. Include complete sprinkler head descriptions on shop drawings. Provide make, model, temperature rating, and Sprinkler Identification Number (SIN) for all sprinklers.
3. Similar to: VIKING Corp. models unless noted otherwise.
4. Utilize ordinary temperature ratings, except as noted. Utilize high temperature ratings where subject to abnormal heating and conditions such as near heaters, heating lines, and in blast of heaters.
5. On exposed piping, use upright heads wherever possible and pendent type where necessary.
6. All sprinkler heads shall be quick response type (unless noted otherwise).

B. Sprinkler Types.

1. Exposed upright or pendent type, $\frac{1}{2}$ ", brass. Similar to: VIKING Corp., SIN VK300 and VK302. Commissioner shall select finish.
2. Horizontal sidewall type, $\frac{1}{2}$ ", brass. Similar to: VIKING Corp., SIN VK305. Commissioner shall select finish and style.
3. Extended coverage horizontal sidewall type, $\frac{3}{4}$ " brass, 8.0 K-Factor. Similar to VIKING Corp., SIN VK630. Commissioner shall select finish.
4. Concealed pendent type, $\frac{1}{2}$ ", brass, adjustable, with cover plate. Similar to: VIKING Corp., SIN 462. Commissioner shall select finish.
5. Dry horizontal sidewall type, $\frac{1}{2}$ ", brass, adjustable with escutcheon plate. Similar to: VIKING Corp., SIN VK156. Commissioner shall select finish.
6. Extended coverage horizontal sidewall type, $\frac{3}{4}$ ", brass, 8.0 K-Factor, recessed with thread-on recessed escutcheon. Similar to: VIKING Corp., SIN VK630. Commissioner shall select finish.
7. Exposed "open" pendent type, $\frac{1}{2}$ ", brass. Similar to: VIKING Corp., SIN VK302 with thermal element removed. Commissioner shall select finish.

C. Accessories.

1. Escutcheons shall be listed for the specific sprinklers they are used with. Similar to VIKING Corp., Model E-2.
2. Sprinkler head guards shall be listed for specific sprinkler heads they are protecting. Similar to VIKING Corp., Model D-1.

2.11 CABINETS

A. Spare Sprinkler Cabinet.

1. Enameled red steel. Similar to: POTTER-ROEMER, Model 6162.
2. Equipped with a minimum of two (2) sprinklers of each type and temperature rating used on the project, but not less than twelve (12) sprinklers. Concealed covers shall be provided when required by sprinkler type.
3. Equipped with a sprinkler wrench(s) that is needed to remove and install the types of sprinklers included in the cabinet.
4. Equipped with a list of each type and temperature rating of sprinklers used on the project.

B. Hose Rack Assembly Cabinets.

1. Cabinet shall be sized to accommodate a 1.5" Hose Rack Assembly and 2.5" Fire Department Valve. Approximate size will be 24" wide x 36" high x 8" deep. Refer to Architectural drawings for space limitations.
2. Cabinet construction shall be of minimum 20-gauge sheet metal box, with a minimum 20-gauge tubular steel door and minimum 18-gauge frame.
3. Cabinet shall be semi-recessed mounted with 2" trim.
4. Door style shall be full glass panel with lock OR as otherwise specified by the Commissioner.
5. Finish shall be powder-coated with an electrostatically applied, thermally fused, recoatable white polyester finish OR custom finish as otherwise specified by the Commissioner.
6. Labeling shall be: "STAGE FIRE HOSE VALVE"
7. Similar to POTTER-ROEMER, Series 1200.

2.12 FIRE STOPPING

A. All fire stopping shall be UL listed assemblies.

1. Similar to: HILTI Firestop Systems.

PART 3 EXECUTION

3.1 PIPING – GENERAL

- A. Approximately as indicated, modify to suit building conditions, avoid interferences with other trades and maintain pitch.
- B. Provide additional offsets, fittings, valves, drains, etc., where required by construction and work of other trades.
- C. Run in chases, recesses, shafts, hung ceilings and beam cuts where applicable. Do not cover before examination and testing.
1. Run parallel with or at right angles to walls, other piping, neatly spaced with plumb risers.
 2. Maintain 1" clearance between hubs, coverings and adjoining work.
- D. Provide reducing fittings for changes in pipe size.
1. No bushings or street elbows permitted.
 2. Grooved reducing couplings are acceptable for decreases of one nominal pipe size. (i.e.: 6" x 4", 3" x 2 1/2", etc.).
- E. Concealed piping in hung ceilings.
1. Obtain ceiling heights from Architectural Drawings.
- F. Use extra heavy pipe for nipples where unthreaded portion of pipe is less than 1 1/2 inches long. No close nipples permitted.

G. Joints.

1. In accordance with manufacturer's instructions.
2. Provide dielectric fittings wherever pipes of dissimilar materials are connected; location of such fittings shall be clearly noted on shop drawing.
3. Screwed piping: Clean-cut of exact length, ream pipe after cutting and threading, apply approved compound on male threads only, apply graphite on drain plugs.
4. Use extra heavy pipe for nipples where unthreaded portion of pipe is less than ½ inches long. Use close nipples only where necessary.
5. Ductile iron bell and spigot piping.
 - a. Push-on rubber gasket joints, ANSI A21.11.
 - b. Mechanical stuffing box type: Bolted assembly, ANSI A21.11.

H. Brazed Joints:

1. Copper tubing shall be connected using brazed joints.
2. Brazing filler metal shall be in accordance with AWS A5.8 (classification BCuP-3 or BCuP-4).

I. Mechanical outlet fittings.

1. Must be equal to VICTAULIC #920 for sizes available, and #920N, where a #920 is not available in the required size. No other types or styles will be permitted.

J. Flanged piping with full-faced rubber gaskets.

K. Welded piping: (Shop application only, NO FIELD WELDING)

1. Oxyacetylene or electric arc process in accordance with latest accepted practice and in accordance with Underwriters Laboratories.
2. Performed only by welders meeting qualifying tests for strength welds in pressure piping of ANSI.
3. Provide, have tested, and submit for review, standard sample welds for each welder before he commences work.
4. Remove foreign matter from ends of pipe before tacking and welding, align pipe ends concentric, then tack weld to prevent misalignment during welding.
5. Welding fittings.
 - a. Factory made, forged steel.
 - b. Fabricated: Not permitted.
6. Connections.
 - a. One-half size of main or smaller, Weld-o-lets or Thread-o-lets permitted.
 - b. Larger connections: Regular welding tees.
 - c. Hammer, clean and flush out piping after welding to remove scale, slag, welding beads, etc.

3.2 SLEEVES

- A. Provide required clearance between piping and sleeves as required by NFPA 13.
- B. Provide reduced clearances and flexible couplings wherever possible and increased clearances where necessary, unless noted otherwise.

3.3 PIPING SUPPORT

- A. Maximum loading, including pipe contents, covering and all required loads, 75% of rating.
 - 1. Support piping so as to secure in place, maintain required pitch and prevent vibration.
 - 2. Design and installation shall be in accordance with NFPA 13.
 - 3. Provide for expansion and contraction.
 - 4. No piping shall be hung from other piping, ductwork, conduit, ceiling structure, etc.
- B. Suspended Horizontal Piping:
 - 1. Chain, strap, perforated bar and wire hangers: NOT PERMITTED.
 - 2. Suspension from inserts, beam clamps, steel fishplates, cantilever brackets, or other approved methods with threaded rods with double nuts tightly made up.
 - 3. Where overhead construction does not permit fastening hanger rods in required locations, provide additional steel framing as required and reviewed.
 - 4. Maximum hanger spacing per NFPA 13 requirements.
- C. Vertical Piping.
 - 1. Riser clamps, bolted on each side of pipe and bearing equally on structure.
 - 2. Similar to: TOLCO Riser Clamp Fig. 6.
 - 3. Minimum clamp spacing: At every floor (or at a maximum of 15' on center).
 - 4. At offset from vertical: By hanger on horizontal branch close to riser or base fitting on foundation.
- D. If removal of existing fireproofing is required for installation purposes, such removal shall be kept to a minimum. Contract #3 Contractor shall replace all removed fireproofing with new, to the satisfaction of the Commissioner at no additional cost to the City of New York.
- E. Contract #3 Contractor shall provide all supplementary structural steel required or spanning between, or connecting to, building structural members, for the hanging or support of piping. Welding to or drilling into building structural members will not be permitted without the approval of the City of New York and the Commissioner.
- F. Supports: Hang or support sprinkler piping from overhead construction in accordance with NFPA 13, and maintain maximum headroom as practical.
- G. Underground Piping: All underground piping shall be laid on 6" sand and backfilled with clean fine earth compacted to 12" above pipe. Complete backfill with available earth free of large boulders and sharp rocks. Tamp and overfill to allow for settlement.

3.4 CLEANING AND ADJUSTING

- A. Brush and clean work, prior to concealing, painting, and acceptance. Perform in stages, if directed.
- B. Painted or exposed work that is soiled or damaged must be cleaned and repaired to match adjoining work before final acceptance.
- C. Remove debris from the inside and outside of all material and equipment.
- D. Flush piping at least twice after installation and before final connections are made in a manner as directed and/or approved by the Commissioner, and in accordance with NFPA 13 requirements. Make all temporary connections and furnish all appliances required for the purpose of proper flushing at no extra expense to the City of New York.

- E. Adjust alarm-indicating devices to meet the requirements of the New York City Fire Department.
- F. Remove and properly dispose of all unused or waste material.

3.5 TESTS

- A. Provide required labor, equipment and connections for the following tests of the Combined Standpipe and Sprinkler System.
 - 1. All acceptance testing as required by NFPA 13 including:
 - a. Pressure Test – The entire system shall be subjected to a hydrostatic test pressure of two hundred twenty five (225) psig for two (2) hours in accordance with NFPA 13.
 - b. Pressure reducing valve shall be functionally tested in accordance with NFPA 13, section 16.2.4
 - 2. Submit results of all testing for review within 1 week of completion of the test. Also include the results of all testing in O&M manuals.
 - 3. Pay for cleanup and restoration or replacement of damaged work of others due to testing (which section 210000 is responsible for)

3.6 VALVES

- A. Provide control valves where indicated in the contract drawings or required. All valves shall be accessible.
- B. Seal valves in proper position and provide approved tag and/or signage indicating purpose of valve. Indicate accurate field pressure settings of any pressure-activated valves.
 - 1. Provide control valves with 24 volt closed circuit supervisory tamper switches, (see Alarm Actuating Devices section of this specification), mounted in accordance with manufacturer's requirements.
 - 2. Install all valves at a maximum of 7'-0" above the finished floor unless otherwise indicated on contract drawings.

3.7 SPRINKLERS

- A. All sprinklers shall be used in accordance with all conditions, requirements, and limitations of their listing and in accordance with NFPA 13 and all other applicable codes.
- B. Install sprinklers, in hung ceiling areas, center of tile OR wood panels and align heads symmetrically with ceiling tile or panel. Install sprinklers in gypsum and plaster ceilings symmetrically and align with adjacent ceiling fixtures.
- C. Install all concealed sprinklers on return bends.
- D. Provide factory applied custom finishes and colors as selected by the Commissioner.
- E. Refer to Architectural ceiling plans for preferred locations of sprinklers. Refer to architectural sections and details for required pipe routing. Notify the Commissioner of any conflicts.

SECTION 210800

COMMISSIONING OF FIRE SUPPRESSION SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 21 and other Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

- A. This section includes commissioning process requirements for Fire Suppression systems, assemblies, and equipment.
- B. Related Sections:
 - 1. Division 21, Division 01 Section "General Commissioning Requirements" for general commissioning process description.

1.3 DESCRIPTION

- A. **Commissioning:** Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the Owner with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of each system designer to provide a complete design or installing subcontractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the Owner.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
 - 1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
 - 2. Verify and document proper performance of equipment and systems.
 - 3. Verify that Operation & Maintenance documentation is complete and transferred to Owner.
 - 4. Verify that the Owner's operating personnel are adequately trained.
 - 5. Verify a contract is in place for a post occupancy review with O&M staff within 10 months after Substantial Completion.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, and performance checkouts.

- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner, Owner's representative, Trade Contractors, subcontractors, manufacturers and equipment suppliers.
- E. The Cx process shall not reduce the responsibility of the CM to comply with the Contract Documents.

1.4 DEFINITIONS

- A. Refer to Division 01 Section "General Commissioning Requirements" for definitions.

1.5 SUBMITTALS

- A. Refer to Division 01 Section "General Commissioning Requirements" for CxA's role.
- B. Refer to Division 21 and Division 01 Section "Submittals" for specific requirements. In addition, provide the following:
 - C. Certificates of readiness
 - D. Certificates of completion of installation, and startup activities.
 - E. Test reports
 - F. O&M manuals

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: Contractors will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the contractor for the equipment being tested. For example, the fire protection contractor of Division 21 shall ultimately be responsible for all standard testing equipment for the plumbing system in Division 21. A sufficient quantity of two-way radios shall be provided by each subcontractor.

- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the Owner and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the Owner upon completion of the commissioning process.
- D. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the installing contractors, the CxA will prepare Pre-Functional Checklists for commissioned components, equipment, and systems.
- B. Red-lined Drawings:
 - 1. The contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
 - 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 - 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 - 4. The contracted party, as defined in the Contract Documents will create the as-built drawings.
- C. Operation and Maintenance Data:
 - 1. Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 - 2. The CxA will review the O&M literature once for conformance to project requirements.
 - 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the contractor.
- D. Demonstration and Instruction:
 - 1. Contractor will provide demonstration and instruction as required by the specifications for fire suppression systems.
 - 2. A complete instruction plan and schedule must be submitted by the contractor to the CxA four weeks (4) prior to any instruction.

3. A instruction agenda for each training session must be submitted to the CxA one (1) week prior the instruction session.
4. The CxA shall be notified at least 72 hours in advance of scheduled fire pump test so that testing may be observed by the CA and Owner's representative. A copy of the test record shall be provided to the CxA, Owner, and Architect.
5. Engage a Factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain specialty valves.
6. Engage a Factory-authorized service representative to instruct Owner's maintenance personnel to adjust, operate, and maintain Fire Pump.
7. Instruct Owner's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining units.
8. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Fire Protection Contractor. The commissioning responsibilities applicable to the Fire Protection Contractor of Division 21 are as follows (all references apply to commissioned equipment only):
 - B. Perform commissioning tests at the direction of the CxA.
 - C. Attend construction phase coordination meetings.
 - D. Participate in Fire Suppression systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
 - E. Provide information requested by the CxA for final commissioning documentation.
 - F. Prepare preliminary schedule for Fire Suppression system orientations and inspections, operation and maintenance manual submissions, training sessions, flushing and cleaning, pressure testing, equipment start-up, and task completion for owner. Distribute preliminary schedule to commissioning team members.
 - G. Update schedule as required throughout the construction period.
 - H. During the startup and initial checkout process, execute the Pressure testing of all piping system.
 - I. Assist the CxA in all verification and functional performance tests.
 - J. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
 - K. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
 - L. Coordinate with the CxA to provide (72) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
 - M. Participate in, and schedule vendors and contractors to participate in the instruction sessions.

- N. Provide written notification to the CM/GC and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
 - 1. Fire Suppression equipment including pumps, piping, and all other equipment furnished under this Division.
 - 2. Automatic sprinkler system.
 - 3. Fire stopping in fire rated construction, including caulking, gasketing and sealing of smoke barriers.
- O. The equipment supplier shall document the performance of his equipment.
- P. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- Q. Equipment Suppliers
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the Owner, to keep warranties in force.
 - 2. Assist in equipment testing per agreements with contractors.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- R. Provide instruction of the Owner's operating staff using expert qualified personnel, as specified.
- S. Refer to Division 01 Section "General Commissioning Requirements" for additional contractor responsibilities.

3.3 OWNER'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for Owner's Responsibilities.

3.4 DESIGN PROFESSIONAL'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for Commissioner Responsibilities.

3.5 CxA'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for CxA's Responsibilities.

3.6 TESTING PREPARATION

- A. Certify in writing to the CxA that Fire Suppression systems, subsystems, and equipment have been installed, tested, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Fire Suppression instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

- C. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- D. Inspect and verify the position of each device and interlock identified on checklists.
- E. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- F. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.7 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of Fire Protection testing shall include entire Fire Suppression installation. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions.
- D. The Fire Suppression contractor shall prepare detailed testing plans, procedures, and checklists for Fire Suppression systems, subsystems, and equipment and submit for CxA review.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the Fire Suppression system, document the deficiency and report it to the Owner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.8 FIRE SUPPRESSION SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 21 sections. Provide submittals, test data, inspector record, and certifications to the CxA.

- B. Fire Suppression Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of sprinkler distribution systems.
 - C. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems in the Division 21. The following equipment and systems shall be evaluated:
- 3.9 DEFICIENCIES/NON-CONFORMANCE, COST OF RETESTING, FAILURE DUE TO MANUFACTURER DEFECT
- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deficiencies/non-conformance, cost of retesting, or failure due to manufacturer defect.
- 3.10 APPROVAL
- A. Refer to Division 01 Section "General Commissioning Requirements" for approval procedures.
- 3.11 DEFERRED TESTING
- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deferred testing.
- 3.12 OPERATION AND MAINTENANCE MANUALS
- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in Division 01.
 - B. Refer to Division 01 Section "General Commissioning Requirements" for the AE and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.
- 3.13 TRAINING OF OWNER PERSONNEL
- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to instruction.

SECTION 23 00 00

GENERAL PROVISIONS FOR HVAC

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Division shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install all work of this Division as shown on the drawings, as specified herein, and/or as required by job conditions.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #3 Contractor.
- C. Perform the work in accordance with the above requirements and the provisions of all applicable codes and laws.
- D. Standard Specifications and Abbreviations
- E. The following abbreviations used in the Specifications refer to organizations publishing specifications and standards. These shall be construed to mean the latest standard adopted and published at the date of advertisement for bids and such specifications are made part of the Contract Documents to the same extent as if written out in full.

ADA	Americans with Disabilities Act
ADC	Air Diffusion Council
AHDGA	American Hot Dip Galvanizing Association
AISC	American Institute of Steel Construction
AMCA	Air Moving and Conditioning Association
ANSI	American National Standards Institute
ARI	American Refrigeration Institute
ASHRAE	American Society of Heating, Refrigerating and Air Conditioning Engineers
ASME	American Society of Mechanical Engineers
ASSE	American Society of Sanitary Engineers
ASTM	American Society for Testing Materials
AWS	American Welding Society
AWWA	American Water Works Association
BS & A	New York City Board of Standards and Appeals
FIA	Factory Insurance Association
FS	Federal Specifications
IGSPHA	International Ground Source Heat Pump Association
MCAA	Mechanical Contractors Association of America
MSS	Manufacturers Standardization Society of Valve and Fittings Industry
NBFU	National Board of Fire Underwriters
NBS	National Bureau of Standards
NEC	National Electrical Code
NEMA	National Electrical Manufacturers Association
NFPA	National Fire Protection Association
NSF	National Sanitation Foundation
OSHA	Occupational Safety Health Act
OTCR	New York City Office of Technical Certification and Research (formerly MEA)
PDI	Plumbing and Drainage Institute

PPI	Plastics Pipe Institute
SMACNA	Sheet Metal and Air Conditioning Contractors National Association, Inc.
SSPC	Steel Structures Painting Council
STI	Steel Tank Institute
UL	Underwriters Laboratories, Inc.
USDC	United States Department of Commerce
USPHS	United States Public Health Service

1. Conform to ANSI - 31.1.0 and addenda for basic materials and methods of installation for closed piping systems with pressures in excess of 30 PSI, and for pipe welding regardless of system pressures.
2. Conform to ASME Boiler and Pressure Vessel Code Section VIII and FM requirements for construction of unfired pressure vessels.

1.2 INTENT

- A. It is the intention of the specifications and drawings to provide for finished work, tested and ready for operation, subject to the requirements of the contract documents, including but not limited to Paragraphs B below.
- B. The drawings show, among other things, the intent of the system components and routing. Some fittings and accessories are shown, but it is not the intent to show all similar or other fittings and accessories that will be required in order to install the systems in a coordinated way, as finished work. The Contract #3 Contractor shall include all fittings and accessories as may be required in order to accomplish the coordination of the various building systems, to ensure the systems fit within the spaces provided, regardless of whether these fittings and/or accessories are shown on the drawings.

1.3 WORK INCLUDED

- A. The work under this Division shall include all labor, material, equipment plant, services and administrative tasks required to complete and make operable the mechanical work shown on the Drawings and specified herein, including but not limited to, the following:
 1. Preparation and submission of shop drawings, diagrams and illustrations.
 2. Procuring all necessary permits and approvals, and paying all required fees and charges in connection with the work of this Division.
 3. Protection, testing, cleaning, adjustment and guarantee of the work of this Division to safely, properly and continuously operate.
 4. As-built drawings, operating and maintenance instructions and manuals.
 5. Identification labels, tags, charts and diagrams.
- B. Requirements of Construction Waste Management, Section 017419.
 1. The Commissioner has established that as many of the surplus and waste material as economically feasible shall be reused, salvaged, or recycled. To that end, the Contract #3 Contractor shall participate in the development of the Waste Management Plan, and collect, sort and deposit in designated containers, their waste, non-returned surplus materials and rubbish in accordance with the approved Plan.
 2. Project Diversion Goals are stated in Section 017419 – Construction Waste Management. The Contract #3 Contractor shall meet or exceed the minimum percentage of waste stated there for diversion from landfill. Specific

items/categories shall be in accordance with the Documents and as established in the Plan.

1.4 RELATED WORK

- A. DDC General Conditions
- B. Division 1, Section 018113 – Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings
- C. Division 1, Section 018113 – Sustainable Design Requirements (LEED Building)
- D. Division 1, Section 017419 - Construction Waste Requirements
- E. Division 1, Section 018119 - Construction IAQ Requirements

1.5 WORK NOT INCLUDED

- A. Finish patching of all construction cut under this Division.
- B. Waterproofing of roof penetrations for the work of this Division.
- C. Concrete and masonry work except as specified.
- D. Painting, except as noted.
- E. Removal, patching, or otherwise handling of hazardous materials. See paragraph 230000 3.10.F

1.6 SITE INVESTIGATION

- A. Examine the drawings and specifications of all trades, and the site, and from these investigations be responsible for the nature and location of work, general and local conditions, particularly those bearing upon transportation, disposal, handling and storage of materials, availability of labor, water, electric power, roads, etc.

1.7 DRAWINGS

- A. Drawings are diagrammatic and indicate the general arrangement of systems and work required. Do not scale the Drawings. Consult the architectural drawings and details, and the drawings of other trades, for exact location of equipment.
- B. Drawings shall be used in layout of work. Check reference drawings to verify spaces in which the work will be installed. Maintain maximum headroom and space conditions. Where headroom or space conditions appear inadequate, Commissioner shall be notified before proceeding with installation.

- C. If directed by the Commissioner, make minor modifications in the layout as needed to prevent conflict with work of other trades or for proper execution of the work.
- D. The drawings are schematic and diagrammatic.
 - 1. Symbols and diagrams are used to indicate the various items of work and the complete systems, but not necessarily have dimensional significance; neither do they necessarily delineate all related and subsidiary parts and equipment.
 - 2. The work shall be installed complete and ready for operation in conformity with the intent expressed on the drawings and in the specifications.
 - 3. Coordinate the work with the requirements of the architectural and structural drawings for dimensions, locations and clearances.
 - 4. Locations of items exposed to view shall be taken from the architectural drawings or located as directed.

1.8 COORDINATION WITH OTHER TRADES

- A. Closely schedule the work so that work will be installed at the proper time without delaying the completion of the entire project.
- B. Where the work will be installed in close proximity to the work of other trades, or where there is evidence that the work will interfere with the work of other trades, arrange space conditions to make a satisfactory adjustment. If work is installed before coordinating with other trades, make necessary changes to the work to correct the condition without additional cost to the City of New York.
- C. Prepare complete set of drawings showing all necessary slab openings and structural supports that require structural framing. Drawings shall clearly indicate sizes and location relative to established column lines. Drawings shall be completed in sufficient time to allow for structural steel fabrication so as not to delay project schedule.
- D. Shop drawing submissions shall demonstrate a knowledge of the work of other trades, and shall show the locations of the work of other trades which affects the work of Contract #3.

1.9 EQUIPMENT DEVIATIONS

- A. Where an item of equipment is proposed, other than that detailed or specified on the drawings, which requires any redesign of the structure, partitions, foundations, piping, wiring or any other part of the mechanical or electrical layouts, such redesign, and new drawings required therefore, with approval of the Commissioner, shall be prepared without cost to the City of New York.
- B. Where such approved deviation requires a different quantity and arrangement of equipment from that specified or indicated on the drawings, provide required equipment, wiring, piping, connections, valves, and structural supports, and any other additional equipment required by the deviation, at no additional cost to the City of New York.
- C. It is the intent of these specifications that wherever a manufacturer of a product or a catalog number is specified, and terms "or equal" or "or approved equal" are used, the substituted item must conform in all essential respects to the specified item including operating efficiency, noise generated, and method of operation. Consideration will not be given claims that the substituted item meets performance requirements with lesser construction. Performance as delineated in schedules and in the specifications shall be interpreted as minimum performance.

1.10 EQUIPMENT AND SYSTEMS CRITERIA

- A. The criteria of design and performance to produce the required operation are based on equipment shown or scheduled.
- B. The equipment must conform to the structural design provisions for loads applied to the structure, to the dimensions established by drawings for machine spaces and other clearances, and for inlet and outlet locations and proper relationship to associated equipment, piping and ducts.
- C. The descriptions cover basic equipment and operation but not all the details of design and construction.
- D. The use of singular in descriptions does not limit the quantities of items to be furnished to provide the operation specified. Furnish all equipment required to produce specified performance under installed conditions.
- E. Factory wiring, interconnections, piping and connections shall conform to these specifications for the field work.
- F. Provide all trim, enclosures and accessories required to make a complete installation.
- G. Finish mechanical equipment, motors, controls and similar apparatus with machinery enamel, prime coat and finish coat. Provide prime coat suitable for field painting and other protective treatments and coatings as specified.
- H. Acoustical performance of equipment and systems.
 - 1. Noise levels from operation of motor driven equipment, whether air-borne or structure-borne, and noise levels created by or within air-handling equipment and air distribution and control media shall not exceed sound pressure levels determined by the noise criterion curves in the ASHRAE Guide as follows:

Space	Rating
Theater 1 and Theater 2	PNC-20
Rehearsal Studios	PNC-25
Lobbies and Public Circulation Areas	PNC-35 to 40
Offices, Dressing Rooms	PNC-30 to 40

- 2. Octave band sound pressure levels will be obtained for ambient room conditions with equipment not operating and also with the installed equipment operating per plans and specifications.
- 3. For testing purposes, sound pressure levels will be measured 3'-0" above the floor.

1.11 APPROVALS

- A. Obtain all approvals in accordance with Division 1 - General Requirements.
- B. Submit to the Commissioner for approval a list of manufacturers of equipment proposed for the work.

- C. Intent to use exact make specified does not relieve the Contract #3 Contractor of responsibility for submitting the required list.
- D. Where any specific materials, process or method of construction, or manufactured article is specified by name or by reference to catalog number of a manufacturer, or other standards, the intent is not to take precedence over the basic duty and performance specified, noted on drawings, or as required for intended results. In all cases, verify the duty specified with the specific characteristics of the equipment offered for approval.
- E. Equipment of one type shall be products of one manufacturer.

1.12 SUBMITTALS

- A. Procedure
 - 1. Prepare and make the submissions listed below in accordance with the procedure specified in this Section.
- B. Shop drawings
 - 1. Coordination Drawings.
 - 2. Guarantees and Warrantees.
 - 3. Operating and Maintenance Manual.
 - 4. Record As-Built Drawings.
 - 5. Identification Markings.
 - 6. Fire rated penetration safing.

1.13 SUBMITTALS PROCEDURE

- A. Refer to Division 1 - General Requirements for number of copies and routing procedure of submittals.
- B. Shop drawings shall be submitted for each item listed in each specification section of this division or specified on plans.
- C. Submittals shall include the following information on a cover sheet:
 - 1. Job Name
 - 2. Contract #3 Contractor's Name
 - 3. Manufacturer's Name
 - 4. Specification Section
 - 5. Paragraph Number
 - 6. Contract #3 Contractor Submission Number
 - 7. List drawings and/or sheets included
 - 8. List variations from specifications and drawings
 - 9. Space for Commissioner's Review Stamp
- D. Submittals shall consist of following applicable items:
 - 1. Manufacturer's Drawings.
 - a. Equipment listed in each section, include material specifications, operating characteristics and finishes.
 - 2. Installation Drawings.
 - a. Coordinated scale drawings of equipment including interconnecting piping and ductwork.
 - b. Coordinate space requirements for equipment and services.

- c. Include connections, anchorages and fastenings.
 - d. Make allowance for clearances for access to and maintenance equipment.
 3. Wiring and Control Diagrams.
 - a. Electric wiring diagrams and automatic control diagrams and sequences of operation. The wiring diagrams must be complete and coordinated with the equipment actually installed.
 4. Provide composite shop drawings showing work of all related construction, when required to ensure full coordination and proper fitting of the work, and when directed by the Commissioner.
 5. Provide drawings showing dimensions and locations of concrete work required for the mechanical work.
 6. Samples: Color samples for prefinished items.
 7. Reports:
 - a. Manufacturer's certified pressure tests on vessels.
 - b. Manufacturer's certified performance tests on operating equipment.
 - c. Field pipe testing reports and certificates of approval.
 - d. Welder's certificates and field test report.
 - e. Field operating test results for operating equipment.
 - f. Performance report on the balancing of air and water systems.
 - g. Performance report and calculations for vibration isolation equipment.
 - h. Manufacturer's certified reports on motorized equipment alignment and installation.
- E. If submissions of catalog cuts of standard manufactured items show different types, options, finishes, performance requirements, or other variations, those features proposed shall be clearly identified.
 1. If any variations from the catalog description are proposed or required, such variations must be clearly noted on the cut.
 2. Shop drawings shall clearly indicate all details, sectional views, arrangements, working and erection dimensions, kinds and quality of materials and their finishes, and other information necessary for proper checking and for fabrication and installation of the items, and shall include all information required for making connections to other work.
 3. Shop drawings shall be numbered consecutively, and drawings related to various units comprising a proposed assembly shall be submitted simultaneously so that units may be checked individually and as an assembly.

4. Keep on the site, in good order, a complete up-to-date set of approved shop drawings. All shop drawings shall be available for inspection by the Commissioner.
5. The approval of shop drawings will be general, and shall not be construed as permitting any departure from the contract requirements other than those specifically brought to the Commissioner's attention and so approved.
 - a. If the shop drawings show any variations from contract requirements because of standard shop practices or other reasons, such variations shall be clearly identified on the drawings in order that, if acceptable, suitable action may be taken for proper adjustment in other work affected thereby.
 - b. Failure to identify such variations will not relieve the Contract #3 Contractor of responsibility for executing the work in accordance with the Contract even though such shop drawings have been approved and the work installed.
 - c. Approval shall not relieve the Contract #3 Contractor of responsibility for any error in details, dimensions, etc., that may exist on shop drawings nor for the furnishing of materials or work required by the Contract and not indicated on the shop drawings.
 - d. Approval shall not be construed as approved departure from details or instructions previously furnished by the Commissioner.
 - e. Approval with a requirement for resubmission is an approval contingent upon satisfactory resubmission within 30 days. Failure to comply shall result in a revocation of the contingent approval.

F. Shop Drawing Schedule

1. The Contract #3 Contractor shall submit, within 30 days of the award of his contract, a schedule of all proposed shop drawing submissions.
2. The schedule shall include the following information.
 - a. Item to be submitted
 - b. Date of submission
 - c. Latest date for approval
 - d. Manufacturers of the specified item.
3. Items not specifically listed as "approved equal" should be listed for consideration at this time.

G. Submittals will be reviewed for conformance with the contract drawings and specifications. The Commissioner's review stamp will be affixed to submittals. One of the following actions will be taken.

1. **NO EXCEPTION** - Submittal appears to comply with the contract drawings and specifications. Contract #3 Contractor is not relieved of responsibility to meet the requirements of the contract drawings and specifications due to errors, omissions, or conflicts with other equipment or trades.

2. EXCEPTIONS AS NOTED - Submittal appears to comply with the contract drawings and specifications except for the items noted by the Commissioner. Contract #3 Contractor is not relieved of responsibility to meet the requirements of the contract drawings and specifications due to errors, omissions, or conflicts with other equipment or trades.
3. REVISE AND RESUBMIT - In the opinion of the Commissioner the nature and/or quantity of exceptions is sufficient to require resubmission to demonstrate compliance. Submittals must be returned within 30 days for contingent acceptance to remain valid. Submittals will become rejected if not returned within 30 days.
4. REJECTED - Submittal does not comply with contract drawings and specifications.

1.14 LEED BUILDING SUBMITTAL REQUIREMENTS:

- A. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

1.15 GUARANTEES AND SERVICES

- A. All workmanship, installation materials and equipment shall be maintained and serviced for the guarantee period at no additional cost to the City of New York.
- B. Leave entire system installed under Contract #3 in perfect working order, and, without additional charge, replace any work or material which develops defects within the guarantee period, including all other work damaged as a result of such defects.
- C. Non-durable, expendable items such as air filter media are not subject to replacement after the date of acceptance.
- D. The guarantee period shall be extended as follows:
 1. For heating systems, one year plus the time necessary to include one continuous heating season from November 1st to April 1st.
 2. For air-conditioning systems, one year plus the time necessary to include one continuous cooling season from May 1st to October 1st.
- E. Manufacturers' Warranties
 1. The manufacturer shall warrant that the equipment which he has furnished is free from defects in material and workmanship. Obligations under this warranty shall be as follows:
 - a. The equipment manufacturer or supplier shall provide and pay for all labor, parts, accessories, materials, freight and other services to repair or replace any equipment or part thereof which, in the course of installation, start-up and testing is found to be defective.

- b. For a period of one year from date of acceptance by the City of New York, the manufacturer shall replace any defective equipment or part thereof; freight costs for return of defective parts, labor for parts replacement, and replacement of lost refrigerant, are the responsibility of the Contract #3 Contractor.
 - c. The manufacturer shall provide an additional warranty on all refrigeration compressors under the same terms as Paragraph a, for a period of four years.
 - d. Tank linings - guarantee all internal metal surfaces against corrosion for ten years.
 - e. Performance - where equipment is specified by size, guarantee that it will have the capacity specified in the system in which it is installed.
2. The final acceptance of the equipment will be made after the manufacturer has adjusted his equipment, balanced the various systems, demonstrated that it fulfills the requirements of the drawings and specifications, and has furnished all the required certificates of inspection and approval.

1.16 SYSTEM SERVICE

- A. Contract #3 Contractor shall provide routine and preventive service during the warranty period.
- B. Contract #3 Contractor shall submit to Commissioner for approval a comprehensive plan covering items to be maintained and service to be performed. Plan shall include checklist for use by service personnel.
- C. Commissioner shall accompany Contract #3 Contractors' service personnel, and receive instructions on proper service of equipment.
- D. Service performed shall include a complete check out of each piece of equipment at least twice during 1 year warranty period. The first shall occur approximately half way through the warranty period (change of season) and the second shall occur at the conclusion of the warranty period and prior to commencement of the City of New York's service. Each system and/or piece of equipment shall be inspected, operated through its complete range of operation, and adjusted as required. This inspection shall be the same as performed at the initial start-up of the item or system. In addition, there shall be monthly service inspections of each piece of equipment. During the monthly inspections, equipment shall be checked for items such as dirty filters, belt wear, lubrication, unusual sounds or unusual operating conditions. Monthly inspections shall also include recording of system operating temperatures and pressures.
- E. Contract #3 Contractor shall include all labor and material to perform the service, including replaceable items such as filters and belts.
- F. Service on the following items shall be included:
 - 1. Fans, air handling units
 - 2. Filters
 - 3. Temperature controls
 - 4. Water Treatment
 - 5. Unit and Cabinet Heaters
 - 6. Domestic water heaters
 - 7. Fire Protection Systems (Sprinkler)

1.17 PERMITS AND CERTIFICATES

- A. Prior to proceeding with any installation, prepare and submit to the proper authorities, for their approval, all required working drawings. Provide all necessary notices, obtain all permits and pay all local, state and federal taxes, fees and other costs in connection with the work.
- B. The Contract #3 Contractor shall be responsible for performing all special inspections required by New York City Building Code.

1.18 COORDINATION DRAWINGS

- A. Sheet metal shop drawings that have been coordinated with architectural and structural drawings shall be submitted to Commissioner for approval. Drawings must be returned from Commissioner either "No Exception" or "Exceptions as Noted" prior to being used as basis for coordination drawings. Refer to Section 233000 for sheet metal shop drawing requirements.
- B. After sheet metal drawings have been revised per Commissioners comments, reproducible copies shall be sent to the others trades in the following sequence for the inclusion of their work:
 - 1. Contract #2 Contractor
 - 2. Contract #4 Contractor
 - 3. Contract #3 Contractor
- C. Prior to inclusion of sprinkler piping and equipment, Contract #3 Contractor shall have submitted sprinkler plans and calculations to Commissioner for approval and to the Fire Department for review.
- D. After all trades have included their work on the coordination drawing and noted conflicts, all trades shall meet to resolve conflicts and agree to acceptable solutions. Each trade shall sign coordination drawings. Items not shown on coordination drawing is responsibility of omitting contractor and that contractor is subject to additional costs incurred by other trades.
- E. The Commissioner are not part of the coordination drawing process. The Commissioner will provide assistance relative to acceptability of installations.
- F. Submit final signed coordination drawing to Commissioner. Only submit items that are different from previously approved shop drawings. Revisions shall be clearly indicated.
- G. Any work fabricated or installed prior to sign off by all trades shall be removed and re-installed in conformance with coordination drawings.

PART 2 - PRODUCTS

2.1 OPERATING AND MAINTENANCE INSTRUCTIONS

- A. Furnish manufacturers operating and maintenance instructions, parts lists and sources of supply for replacements in accordance with Division 1 - General Requirements.
- B. Provide the following:
 - 1. Complete sets of final and correct shop drawings, maintenance and replacement parts manuals, and operating instructions, for equipment supplied.

2. Bind each set within a common binder. Index and organize with a table of contents, to permit quick and convenient reference.
- C. Two days of instruction in operation and maintenance of equipment to City of New York's maintenance force. Design a 2-week period, convenient to City of New York, during which qualified personnel, including manufacturers' technicians and Professional Engineer licensed in the State of New Yorks will be available for City of New York's instruction. City of New York shall have the right to record the instruction sessions in video and/or audio format.
- D. Master Operating Manual (submit in quadruplicate)
1. Manufacturer's mechanical and electrical equipment parts lists of all components of the systems listed on the equipment schedules, control diagrams and wiring diagrams of controllers. List shall give system number, unit number, manufacturer's model number, and manufacturer's drawing numbers.
 2. Step by step operating instructions for each system including preparation for starting, summer operation, winter operation, shutdown and draining.
 3. Maintenance instructions for each type of equipment.
 4. Possible breakdowns and repairs for each type of equipment.
 5. List of nearest local suppliers for all equipment.
 6. Manufacturer's literature describing each piece of equipment listed on the equipment schedules, control diagrams and wiring diagrams of controllers and a copy of the air balance report.
 7. As-installed control diagrams by the control manufacturer.
 8. Description of sequence operation by the control manufacturer.
 9. Recommended trouble shooting procedures in the event of foreseeable mechanical system failure.
 10. Complete "As-Installed" color coded wiring diagrams of all systems and all electrical motor controller connections and interlock connections of all other mechanical equipment.
 11. Chart of the tag numbers, location and function of each valve.
 12. Copies of the following test reports:
 - a. Air Balance.
 - b. Water Balance.
 - c. System Performance.
 - d. Required Pressure Tests.

2.2 IDENTIFICATION MARKINGS

- A. General - apply after insulation and field painting are completed.

B. Valve Identification

1. Furnish and attach to each valve a 2" diameter tag of solid brass with number and service abbreviated as noted on contract drawings. Numbers to correspond to consecutive numbers on valve chart identifying each individual valve.
2. Securely attach tags to the stem of valves with brass "S" hooks.
3. Provide valve charts mounted on 1/4" masonite and covered with heat, bonded plastic laminate. They shall identify each valve by a number, service, its functions and list any remarks concerning special features of the valve; its location and the contract drawings which reference the valve.
4. Provide one such mounted valve chart in each Mechanical Equipment Room.
5. In addition, furnish one unmounted folded copy of the valve charts for each instruction manual.

C. Piping Identification

1. Provide identification for all bare or covered piping for all services, in spaces with or without ceilings, so as to be readable from the floor (even in the case of spaces with removable and/or hard ceilings – for identification if the ceilings are later removed). Piping shall be identified by prefabricated acrylic plastic markers. Markers shall be snap on or secured with bands (6" and over). Colors and lettering shall conform to ANSI Standard 13.1-1981. Seton Name Plate Company or the approved equal. Generally they shall be located at changes of direction, take-offs, valves, where pipes pass through walls and at intervals not greater than 30'-0" on straight runs, and shall indicate direction of flow at each marker.
2. Underground piping shall be provided with underground warning tapes, buried above piping run to identify by color and text, the utility below. Non-metallic piping shall be provided with warning tape having metallic core bonded between two polyethylene films. Seton Name Plate Company or the approved equal.

D. Ductwork Identification: Provide identification for all bare or insulated ductwork for all services, so as to be readable from the floor (even in the case of spaces with removable and/or hard ceilings – for identification if the ceilings are later removed). Ductwork shall be identified by service and associated unit tag number, and direction of airflow, using prefabricated acrylic plastic markers. Markers shall be self adhesive vinyl. Seton Name Plate Company 76470 or 76471, or the approved equal. Generally they shall be located at changes of direction, take-offs, where ducts pass through walls and at intervals not greater than 30'-0" on straight runs.

E. Underground piping shall be provided with underground warning tapes, buried above piping run to identify by color and text, the utility below. Non-metallic piping shall be provided with warning tape having metallic core bonded between two polyethylene films. Seton Name Plate Company or the approved equal.

F. Equipment Identification

1. Identify all equipment listed in equipment schedules that is located in mechanical rooms, on roof, outside adjacent to building, above ceilings, and other locations that are not exposed in finished areas. Identification shall be by unit tag (per

drawings), on a permanently attached minimum 1-1/2" x 3-1/2" nameplate of white core laminated bakelite with black surface and incised letters, located where it is legible and accessible. Where possible, mount plates in the same location on all similar pieces of equipment.

2. Each unit shall bear a manufacturer's nameplate with the following information:
 - a. Manufacturer's name and address.
 - b. Serial and model number.
 - c. Rated capacity.
 - d. Temperature pressure or other limitations.
3. Attach or mount adjacent to all controls and starters, a nameplate indicating which equipment it controls.

PART 3 - EXECUTION

3.1 COORDINATION AND LAYOUT

- A. Study Drawings and Specifications to insure completeness of work required. Include supplementary items normal to manufacturers' requirements or standard accepted trade practices as necessary to complete work, though not specifically indicated or specified.
- B. Verify measurements and conditions in field before starting work.
- C. Examine materials to which work is to be applied and notify the Commissioner, in writing, of any conditions existing which are detrimental to proper and expeditious installation of work. Starting of work shall be construed as acceptance of conditions.
- D. Confer with other trades, install work to avoid interference with other trades, and possible necessary adjustments to conform to structural conditions and work of other trades.
- E. Coordinate and set inserts and locate openings in floors and walls in new construction.
 1. Locate pipes and ducts to avoid interference with other work shown on the drawings and as directed by the Commissioner.
 2. Keep all concealed pipes and ducts within the enclosing construction provided.
 3. Arrange exposed work neatly in parallel runs and parallel with walls or structure, with uniformly spaced hangers and supports, and within the spaces assigned for each kind of work.
- F. Make coordinated layouts showing concrete work required for housekeeping pads, equipment bases and inertia masses which are cast in place, including the location of anchors and dowels.
 1. Coordinate the scheduling and placing of the concrete to suit the mechanical work schedules.
 2. Concrete housekeeping pads are to cover the full area of each piece of equipment.
 3. Concrete bases are to be of dimension and heights to suit the equipment.
 4. The forming and placing of concrete will be provided under this specification section.

3.2 SERVICE OF EQUIPMENT AND SYSTEM PRIOR TO FINAL ACCEPTANCE

- A. Maintain all equipment and systems installed until final acceptance by the Commissioner and the City of New York, and take such measures as necessary to insure adequate protection of all equipment and materials during delivery, storage, installation and shut-down conditions.
- B. This responsibility shall include all provisions required to meet the conditions incidental to the delays pending final test of systems and equipment.
- C. After installation of systems has been completed, operate the system to determine the capability of the equipment and controls to conform to the requirements of the drawings and specifications prior to performance testing.

3.3 EQUIPMENT INSTALLATION

- A. Locate and set equipment anchor bolts, dowels and aligning devices for all equipment requiring them. Refer to concrete work coordination. Level the equipment and grout solid between the equipment and the surface below. Grout to be premixed Embeco or Five Star Grout mixed in accordance with manufacturer's specifications.
- B. The field assembly, installation and alignment of equipment is to be done under field supervision provided by the manufacturer or with inspections, adjustments and approval by the manufacturer.
- C. Equipment startup: Each manufacturer of equipment shall provide qualified personnel to inspect and approve equipment and to supervise the operating tests of the equipment.
- D. Equipment and system test operation.
 - 1. Notify the Commissioner in advance of beginning the equipment and system test operation.
 - 2. Each piece of equipment shall be operated in its system as long as required to provide proper functioning.
 - 3. Perform an operating test of each complete system for twenty-four hours continuous operation as a minimum, or as long as required to provide coordination and proper functioning of all related systems and controls.
 - 4. The operating criteria for each test shall be determined in advance with the Commissioner's approval whenever seasonal conditions will not produce a full design load on any equipment or system.
 - 5. Certify to the City of New York that all equipment is functioning properly.
 - 6. Should the apparatus fail to meet the contract requirements, adjust, repair or replace all defective or inoperative parts and again conduct the complete performance tests.

3.4 CLEANING AND ADJUSTING

- A. Blow out, clean and flush each system of piping, and equipment as required to thoroughly clean the systems.
 - 1. Clean all materials and equipment, and leave in condition ready to operate and receive succeeding finishes where required.

2. Adjust and align all equipment interconnected with couplings or belts.
 - a. Adjust valves of all types and operating equipment of all types to provide proper operation.
 - b. Remove and clean elements in all steam trap bodies.
 - c. Clean all strainers.
- B. Lubricate equipment as recommended by the manufacturer, during temporary construction use, and provide complete lubrication just prior to acceptance.
- C. Permanent equipment operated during construction shall not be abused or be used in service different from its design application.
 1. Temporary disposable filters shall be used during temporary operation.
 2. All expendable media, including belts used for temporary operation and similar expendable materials shall be replaced just prior to acceptance.
 3. Packing boxes of equipment operated during construction must be replaced just prior to system acceptance, using materials and methods specified by the supplying manufacturer.
- D. Equipment furnished with factory finishes shall be retouched and repainted as required to present a new appearance.
- E. Provide and maintain protection for all of the work whether completed or in progress. Provide coverings and enclosures as required.
- F. New and existing operating equipment and systems shall be clean and dust free inside and out. Concealed and unoccupied areas such as plenums, pipe and duct spaces and Equipment Rooms shall be free of rubbish and swept clean at time of acceptance.

3.5 TESTING AND BALANCING

- A. Tests shall be performed in accordance with Division 1 - General Requirements, and the following.
- B. Provide the services of an independent air and water balancing and testing firm which specializes in balancing and testing of heating, ventilating and air conditioning systems, and which is acceptable to the City of New York. All instruments used shall be accurately calibrated and maintained in good working order. If requested, the balancing shall be conducted in the presence of the Commissioner/City of New York.
- C. Balancing shall not begin until the system has been completed and is in full working order. After completion of the balancing and testing submit copies of the results to the Commissioner.
- D. Perform tests and make necessary adjustments to obtain the flow and distribution of air and water required to produce the operating criteria called for by the contract documents, in accordance with the latest standards of the National Environmental Balancing Bureau and the Associated Air Balance Council.
 1. Occupied spaces shall be draft free upon completion.
 2. Provide any necessary baffles at registers and diffusers.
 3. Maintain the specified acoustical performance of the systems.

4. Mark final position of dampers and balancing valves.
- E. Upon completion of the installation, test and balance all equipment and systems under field operating conditions to demonstrate its compliance with specification requirements. Submit three copies of the test report to the Commissioner. Refer to specification sections 230523 and 233000 for details of report requirements.
- F. Should any part of the system fail to meet the contract requirements, adjust, repair or replace all defective or inoperative parts again conduct the complete performance tests.
- G. The Commissioner and City of New York shall be notified, in writing, at least 48 hours prior to scheduled test dates.

3.6 PAINTING

- A. Thoroughly clean all surfaces, requiring prime painting, of rust, loose scale, oil and grease.
 1. Dry surfaces before painting.
 2. Do not paint controls, nameplates, or labels.
- B. Paint all equipment not painted at the factory with one prime coat.
- C. Provide field painting as follows:
 1. All exposed iron work, including uninsulated ferrous piping and conduit system components, hangers, supports, equipment bases, and apparatus; prime coat, red lead.
 2. Uninsulated ductwork and casing exposed to view and exposed galvanized surfaces of conduit and piping and of equipment prime painted at the shop: Prime coat, zinc chromate for galvanized surfaces.
 3. Inside of all ductwork where visible through registers and grilles: One coat of flat black paint.

3.7 CONNECTIONS TO EQUIPMENT

- A. Provide mechanical connections to equipment and fixtures requiring such connections which are supplied by City of New York or under other divisions.
- B. Provide unions, nipples, adapters, valves, flexible connections, and other trim required for final connections for each such fixture or item of equipment, as required for complete and perfect operation.

3.8 WORKMANSHIP

- A. Perform all work in a practical, neat and workmanlike manner with mechanics skilled in work, and using the best practices of the trade involved.
- B. No work shall be concealed until it has been inspected and approved by the Commissioner.
- C. Workmanship or materials not meeting with requirements of the specifications and drawings and satisfaction of the Commissioner shall be rejected and immediately replaced in an acceptable manner, without additional cost to the City of New York.

3.9 LUBRICATION

- A. All equipment furnished, installed or connected under this division, shall be inspected for proper lubrication when connected and before operation of the equipment is begun.
- B. The Contract #3 Contractor for the work of this division will be held responsible for any damage to equipment that is operated without having been properly lubricated.

3.10 REMOVALS AND RELOCATIONS

- A. All components of abandoned systems and abandoned portions of systems shall be removed, and, unless specifically noted to be relocated and reused, become the City of New York's property. Contract #3 Contractor shall dispose of removed materials as directed by the City of New York.
- B. Where portions of systems noted for removal remain in use, permanently seal the point of disconnection so as not to interfere with the system operation.
- C. Where interferences between the existing system components and new work require relocation of the existing components to clear that interference, they may be reused, except where specifically noted to the contrary, providing that their condition is noted by the Commissioner and they are approved by him as equivalent to new.
- D. Where existing system components are required to be replaced, all new components shall be provided.
- E. System components include all accessories, cables, controls, conduits, hangers, bases and supports and outlets.
- F. The work specified under Contract #3 specifically excludes the removal or patching of "hazardous materials." This includes but is not limited to asbestos, PCBs or any other material having been designated by the Environmental Protection Agency as a hazardous material. If Contract #3 Contractor finds anything which is suspected of being a hazardous material, it should be immediately brought to the City of New York's attention.

3.11 USE OF PREMISES AND CLEANING

- A. Remove and dispose of all waste materials and rubbish due to all construction operations under the contract, except as otherwise noted, and keep the building free from rubbish and dirt caused by Contract #3 Contractor's subcontractors' employees. During the entire progress of the work, rubbish removal shall be made frequently so as to prevent any potential safety or health hazard.
- B. Upon completion of the work, remove all protection, paint, putty, and other stains from all fixtures and glass and leave the premises thoroughly broom cleaned.

3.12 CUTTING, ALTERING AND PATCHING

- A. Provide all cutting, chasing, drilling, altering and rough patching required for the work of this division.
 - 1. Including the restoring of existing work cut for or damaged by installation of new work, and where present work is removed.
 - 2. All materials and workmanship required in connection with cutting, altering and rough patching shall match the existing work in every respect.

- B. Do all shoring, bracing, cutting, patching, piecing out, filling in, repairing and refinishing of all present work as made necessary by the alteration and the installation of new work.
- C. All holes and openings occurring in the existing floors after equipment, partitions, floors, steel work, conduits and pipes are removed or installed shall be closed up with materials similar to the adjacent work.
- D. The size and location of items requiring an opening, chase or other provisions to receive it shall be given by the trade requiring same in ample time to avoid undue cutting of any new work to be installed. These provisions shall not relieve the Contract #3 Contractor from keeping informed as to the required opening, chases, etc., nor from responsibility for the correctness thereof, nor for cutting and repairing after the new work is in place.
- E. Include all cutting, repairing and patching in connection with the work that may be required to make the several parts come together properly and fit it to receive or be received by the work of other trades, as shown on the drawings and/or specified, or reasonably implied by the drawings and specifications.
- F. All repairing, patching, piecing-out, filling-in, restoring and refinishing shall be neatly done by mechanics skilled in their trade to leave same in condition satisfactory to the City of New York.
- G. Materials and their methods of application for patching shall comply with applicable requirements of the specifications. Materials and workmanship not covered by the specifications and items of work exposed to view adjoining existing work to remain shall conform to similar materials and workmanship existing in or adjacent to the spaces to be altered.
- H. Cutting, repairing and patching shall include all items shown on the drawings, specified in the specifications or required by the installation of new work or the removal of existing work.
- I. Remove partitions, walls, suspended ceilings, etc., as necessary to perform the required alterations or new construction work. Avoid damage to construction and finishes that are to remain.
- J. Protect and be responsible for the existing building, facilities and improvements. Any disturbance or damage to the work, the existing building, and improvements, or any impairments of facilities resulting from the construction operations, shall be promptly rectified, with the disturbed, damaged, or impaired work, restored, repaired or replaced at no extra cost.
- K. All alterations which are not indicated on the drawings nor specified herein but necessary to make good existing work disturbed by reason of the work shall be restored to a condition satisfactory to the City of New York.
- L. All holes in masonry floors and walls are to be core drilled.
- M. Disturbed concrete and/or cement floor areas shall be patched with approved type latex mortar. When cement mortar is used for patching, the surfaces shall be depressed a minimum depth of 1".
- N. Reinstall all weather protection work in waterproof manner.
- O. Openings in roofs. Openings in roofs shall be kept properly plugged and caulked at all times, except when being worked on, to preclude the possibility of flooding due to storms or other causes. After completion of work, openings shall be permanently sealed.

- P. Temporary openings. All temporary openings cut in walls, floors or ceilings for pipe or ductwork shall be closed off with non-combustible fiber cement boards containing no asbestos or other hazardous material, except when mechanics are actually working at the particular opening.

3.13 TEMPORARY HEAT

- A. Provide all labor, fuels, materials, tools, appliances and equipment and perform all operations necessary to maintain sufficient temporary heat to insure uninterrupted progress in the work and to protect all work and materials against injury from dampness and cold until issuance of the Commissioner's Final Certificate. In addition to the foregoing, the Contract #3 Contractor shall provide temporary heat to the extent itemized below, but not limited to the following:
1. During the placing, setting and curing of all concrete, an ambient temperature of 50 degrees F shall be maintained in the areas involved.
 2. During the placing, setting and/or curing of interior masonry, metal furring, plaster, tile; and taping and spackling of drywall an ambient temperature of 60 degrees F shall be maintained in the space involved.
 3. In spaces where resilient floor coverings are stored an ambient temperature of 70 degrees F shall be maintained, and such temperature shall be maintained 48 hours before, during and 48 hours after installation in each space where such covering is required.
 4. Except as noted above, all areas in which work is in progress, shall be maintained at 45 degrees F during working hours.
- B. The medium and procedure of providing temporary heat at all times shall be subject to the approval of the City of New York and Commissioner.
- C. Only heaters employing tanked gas will be permitted. The use of oil or coke as fuels will not be permitted. Provide thermal protection under heating units and pails of sand adjacent thereto.
- D. Prior to starting the metal lathing, or drywall spackling, the work shall be sufficiently advanced for temporary heat to be produced by the permanent heating system.
- E. After the permanent heating system or portion of the system is substantially complete and acceptable to the City of New York for temporary heating use, the Contract #3 Contractor may, at the City of New York's discretion, be permitted to use such heating facilities for temporary heat.
- F. The Contract #3 Contractor in using the permanent heating system for temporary heating agrees to the following:
1. After the Commissioner and the City of New York approve and accept the project heating system, or portion thereof, for temporary heating purposes, the heating system shall be turned over to the Contract #3 Contractor. When the Contract #3 Contractor has no further need for temporary heat, the heating system shall be returned to the City of New York.
 2. That portion of the project's heating system and other related mechanical equipment termed the temporary heating system shall be limited to equipment and the necessary piping, traps, valves, strainers, controls, pumps, starters, wiring and all other apparatus and equipment necessary to cause the temporary heating system to function correctly.

- G. Permanent duct work and air handling systems may not be utilized for temporary heat. The permanent boilers and piping systems may not be utilized for temporary heating without the operation of the permanent water treatment system.
- H. These provisions for temporary heating do not alter the requirements of the "General and Supplementary General Conditions" with respect to "Guarantees" and/or any "General Guaranty" contained herein.

3.14 TEMPORARY COOLING

- A. Provide all labor, materials, tools, appliances and equipment and perform all operations necessary to maintain sufficient temporary cooling to insure uninterrupted progress in the work and to protect all work and materials against injury from dampness and heat until issuance of the Commissioner's Final Certificate. In addition to the foregoing, the Contract #3 Contractor shall provide temporary cooling to the extent itemized below, but not limited to the following:
 - 1. In spaces where millwork and/or cabinetry will be stored and/or installed, a maximum ambient temperature of 78 degrees F and maximum relative humidity of 60% shall be maintained, and such conditions shall be maintained 48 hours before installation, and continuously after installation in each space where such installation has occurred or where millwork and/or cabinetry items are stored.
 - 2. In spaces where electronic equipment will be installed, maximum ambient temperature of 78 degrees F and maximum relative humidity of 60% shall be maintained, and such conditions shall be during installation, and continuously after installation in each space where such installation has occurred.
- B. The medium and procedure of providing temporary cooling at all times shall be subject to the approval of the City of New York and Commissioner.
- C. After the permanent cooling system or portion of the system is substantially complete and acceptable to the City of New York for temporary cooling use, the Contract #3 Contractor may, at the City of New York's discretion, be permitted to use such cooling facilities for temporary cooling. Prior to such permanent cooling system components being used, all permanent overcurrent protection, conduit, wiring and controls shall be in place to protect the equipment and personnel. All piping pressure tests shall be performed prior to use of piping systems for temporary cooling purposes. Temporary cooling equipment shall be provided with overcurrent protection as required, coordinated with Contract #4 Contractor.
- D. The Contract #3 Contractor in using the permanent cooling system for temporary cooling agrees to the following:
 - 1. After the Commissioner and the City of New York approve and accept the project cooling system, or portion thereof, for temporary cooling purposes, the cooling system shall be turned over to the Contract #3 Contractor. When the Contract #3 Contractor has no further need for temporary cooling, the cooling system shall be returned to the City of New York, after having been serviced and any normal maintenance having been performed.
 - 2. That portion of the project's cooling system and other related mechanical equipment termed the temporary cooling system shall be limited to equipment and the necessary chiller(s), cooling tower(s), heat exchanger(s), piping, valves, insulation, water treatment systems(s), strainers, controls, pumps, starters, permanent wiring, permanent overcurrent protection, permanent controls and all other apparatus and equipment necessary to cause the temporary cooling system to function correctly.

- E. Permanent duct work and air handling systems may not be utilized for temporary cooling. The permanent chiller(s), cooling tower(s) and piping systems may not be utilized for temporary cooling without the operation of the permanent water treatment system.
- F. These provisions for temporary cooling do not alter the requirements of the "General and Supplementary General Conditions" with respect to "Guarantees" and/or any "General Guaranty" contained herein.

3.15 PENETRATIONS THROUGH FIRE SEPARATIONS

- A. Pack annular space between sleeve and pipe (insulation) and/or conduit in fire rated construction with fire retardant putty, sealant and/or caulk. Material shall be non asbestos based and installed in accordance with manufacturers instructions for fire rating required.
- B. Penetrations of multiple items and penetrations with annular space greater than 1/2" shall be provided with approved backing material in accordance with manufacturers instructions.
- C. Fire retardant sealer and system shall meet ASTM E-84, ASTM E-814, and UL-1479.
- D.

<u>MANUFACTURER</u>	<u>MODEL</u>
Dow Corning	Firestop 2001
Nelson	CLK,FSP
Standard Oil	Fyre Putty
3M	CP-25

3.16 WASTE MANAGEMENT

- A. Comply with the requirements established by the Contract #1 Contractor to separate and recycle, salvage or reuse cast-offs, surplus and waste material in accordance with the Waste Management Plan.
- B. Arrange for suppliers to take back shipping and packing materials for reuse or recycling to the maximum extent economically feasible, or include them in the Waste Management Plan.

3.17 SEISMIC ANALYSIS

- A. The following steps were used to determine the Seismic Design Category for this project.
 1. Based on 2008 New York City Building Code table 1604.5, the project is considered Occupancy Category III.
 2. Site Class D was selected as the default for unknown soil site conditions.
 3. The USGS web application determined the following based on the geographical location of the project building:
 - a. $S_S = 0.363g$
 - b. $S_1 = 0.070g$.
 4. 2008 New York City Building Code Tables 1615.1.2 (1) and 1615.1.2 (2) were used to determine the following:
 - a. $F_A = 1.51$
 - b. $F_V = 2.4$
 5. 2008 New York City Building Code Equations 16-38 and 16-39 were used to determine the following:

- a. $S_{MS} = F_A S_S = 1.51 \times 0.147 = 0.548g$
 - b. $S_{M1} = F_V S_1 = 2.4 \times 0.049 = 0.168g$
6. 2008 New York City Building Code Equations 16-40 and 16-41 were used to determine the following:
- a. $S_{DS} = 2/3 \times S_{MS} = 2/3 \times 0.548g = 0.365g$
 - b. $S_{D1} = 2/3 \times S_{M1} = 2/3 \times 0.168g = 0.112g$
7. 2008 New York City Building Code Tables 1616.3 (1) and 1616.3 (2) were used to determine the following:
- a. Seismic Design Category D based on Short-Period Response Accelerations table
 - b. Seismic Design Category C based on 1-Second Response Accelerations table
8. Based on the more severe of the seismic design categories listed above, the Seismic Design Category for this project has been determined as Seismic Design Category D.

3.18 SEISMIC RESTRAINT

- A. Provide seismic restraint of all mechanical, electrical, plumbing and fire protection systems as required per 2008 New York City Building Code Sections 1614, ASCE 7-05, and referenced sections and publications.
- B. Importance Factor (I_p) for this project shall be as follows:
 - 1. Mechanical, electrical, plumbing and fire protection systems installed by Contract #3 Contractor required to function as part of life-safety systems shall have Importance factor (I_p) equal to 1.5. Life-safety systems shall include: Theater 1 Smoke Exhaust, Emergency Lighting, Exit Signage, Fire Alarm and Fire Protection (sprinkler) systems.
 - 2. All mechanical, electrical, plumbing and fire protection systems installed by Contract #3 Contractor not required to function as part of life-safety systems shall have Importance Factor (I_p) equal to 1.0.
- C. Provide seismic analysis and calculations for all mechanical, electrical, plumbing and fire protection system components installed by Contract #3 Contractor except the following:
 - 1. Mechanical and electrical components where the component importance factor (I_p) is equal to 1.0 and either:
 - a. Flexible connections between the components and associated ductwork, piping and conduit are provided.
 - b. Components are mounted 4 ft or less above a floor level and weigh 400 lb or less.
 - 2. Mechanical and electrical components where the component importance factor (I_p) is equal to 1.0 and:
 - a. Flexible connections between the components and associated ductwork, piping and conduit are provided.
 - b. The components weigh 20 lb or less or, for distribution systems, weighing 5 lb/ft or less.

- D. Seismic restraint calculations shall be provided for all connections of components to the structure. Calculations must be stamped by a Professional Engineer licensed in the State of New York with at least three years' experience in seismic design experience.
- E. Analysis must indicate calculated dead loads, seismic static loads, capacity of materials utilized for connection to equipment and structure. Analysis shall detail anchoring methods, bolt diameter, embedment and/ or welded length. All seismic restraint devices shall be designed to accept without failure, the lateral forces acting through the center of gravity.

END OF SECTION

SECTION 230013 – HVAC CONTRACTOR WORK
ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

1.01 SCOPE FOR ASBESTOS ABATEMENT WORK

- A. The "General Conditions" apply to the work of this Section.
- B. The Asbestos abatement contractor shall remove asbestos containing materials as needed to perform the other work of this Contract when discovered during the course of work. When required, the Asbestos abatement contractor shall replace the ACM with non-asbestos containing materials. An allowance of **\$5,000.00** for the **HVAC Contractor** is herein established for this incidental work when so ordered and authorized by the Commissioner.
- C. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE APPLICABLE PROVISIONS OF THE RULES AND REGULATIONS OF THE ASBESTOS CONTROL PROGRAM AS PROMULGATED BY TITLE 15 CHAPTER I OF RCNY AND NEW YORK STATE DEPARTMENT OF LABOR INDUSTRIAL CODE RULE 56 CITED AS 12 NYCRR, PART 56 WHICHEVER IS MORE STRINGENT AS PER LATEST AMENDMENTS TO THESE LAWS AND AS MODIFIED HEREIN BY THESE SPECIFICATIONS.
- D. ALL DISPOSAL OF ASBESTOS CONTAMINATED MATERIAL SHALL BE PER LOCAL LAW 70/85.
- E. THE ASBESTOS ABATEMENT CONTRACTOR'S ATTENTION IS DIRECTED TO THE FACT THAT CERTAIN METHODS OF ASBESTOS ABATEMENT ARE PROTECTED BY PATENTS. TO DATE, PATENTS HAVE BEEN ISSUED WITH RESPECT TO "NEGATIVE PRESSURE ENCLOSURE" OR "NEGATIVE-AIR" OR "REDUCED PRESSURE" AND "GLOVE BAG".
- F. THE ASBESTOS ABATEMENT CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR AND SHALL HOLD THE DEPARTMENT OF DESIGN AND CONSTRUCTION AND THE CITY HARMLESS FROM ANY AND ALL DAMAGES, LOSSES AND EXPENSES RESULTING FROM ANY INFRINGEMENT BY THE ASBESTOS ABATEMENT CONTRACTOR OF ANY PATENT, INCLUDING BUT NOT LIMITED TO THE PATENTS DESCRIBED ABOVE, USED BY THE ASBESTOS ABATEMENT CONTRACTOR DURING PERFORMANCE OF THIS AGREEMENT.
- G. "Asbestos" shall mean any hydrated mineral silicate separable into commercially usable fibers, including but not limited to chrysotile (serpentine), amosite (cumingtonite-grunerite), crocidolite (riebeckite), tremolite, anthrophyllite and actinolite.

- H. Prior to starting, the Asbestos abatement contractor must notify the Commissioner of the Department of Design and Construction if he/she anticipates any difficulty in performing the Work as required by these Specifications. The Asbestos abatement contractor is responsible to prepare and submit all filings, notifications, etc. required by all City, State and Federal regulatory agencies having jurisdiction.

The Asbestos abatement contractor is responsible for submitting the Asbestos Project Notification Form (ACP-7 Form) to the Department of Environmental Protection, Asbestos Control Program, as per Title 15, Chapter 1 of RCNY and to the NYSDOL as per Industrial Code Rule 56.

The Asbestos abatement contractor is responsible for preparing and submitting Asbestos Variance Application (ACP-9). If a Variance is required, the Asbestos abatement contractor is responsible to retain a NYSDOL Asbestos Project Designer, as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required variance.

The HVAC contractor is responsible for preparing and submitting an Asbestos Abatement Permit and/or Work Place Safety Plans (WPSP) that may be required for the completion of the Contract or incidental work. If such plans are required, the Asbestos abatement contractor is responsible to retain a NYSDOL Licensed Design Professional as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required plans.

The Asbestos abatement contractor is responsible for the submission of all required documents to the NYCDEP to acquire the appropriate Asbestos Project Conditional Closeout (ACP-20) and/or Asbestos Project Completion Forms (ACP-21) on a timely basis for the completion of the incidental work encountered under this contract.

The Asbestos abatement contractor will be required to attend an on-site job meeting with the Construction Project Manager prior to the start of work to examine conditions and plan the sequence of operations, etc.

The Asbestos abatement contractor shall have a NYSDOL/NYCDEP Asbestos Supervisor onsite to oversee the work and conduct a final visual inspection as required by both Title 15, Chapter 1 of the RCNY and NYSDOL Industrial Code Rule 56.

- I. All work shall be done during regular working hours unless the Asbestos abatement contractor requests authorization to work in other than regular working hours and such authorization is granted by the Commissioner. (Regular work hours are those hours during which any given facility, in which work is to be done, is customarily open and functioning, normally between the hours of 8:00 A.M. and 4:00 P.M. Monday - Friday.) If such work schedule is authorized by the Commissioner, the work shall be done at no additional cost to the City.

- J. The Commissioner may order that work be done in other than regular working hours as herein by defined and this order may require the Asbestos abatement contractor to pay premium or overtime wages to complete the work. If the Commissioner orders work in other than regular working hours, the Asbestos abatement contractor shall multiply the unit price for that portion of the work requiring premium wages by 1.50 when computing payment in accordance with Paragraph 1.09. All requests for premium payment must be supported by certified payroll sheets and field sheets approved by the Construction Project Manager.

1.02 QUALIFICATIONS OF ASBESTOS ABATEMENT CONTRACTOR

- A. Requirements: The asbestos abatement contractor must demonstrate compliance with the special experience requirements set forth in subparagraphs (1) through (5) below. The asbestos abatement contractor must, submit documentation demonstrating compliance with all listed requirements. Such documentation shall include without limitation, all required licenses, certificates, and documentation.
1. The asbestos abatement contractor must, whether an individual, corporation, partnership, joint venture or other legal entity, must demonstrate for the three year period prior to the work, that it has been licensed by the New York State Department of Labor, as an "Asbestos abatement contractor".
 2. The asbestos abatement contractor must, for the three year period prior to the work, have been in the business of providing asbestos abatement services as a routine part of its daily operations.
 3. The asbestos abatement contractor proposing to do asbestos abatement work must be thoroughly experienced in such work and must provide evidence of having successfully performed and completed in a timely fashion at least five (5) asbestos abatement projects of similar size and complexity. The aggregate cost of these projects must be at least \$250,000.00 in each of the three years.
 4. For each project submitted to meet the experience requirements set forth above, the asbestos abatement contractor must submit the following information for the project; name and location of the project; name title and telephone number of the owner or the owner's representative who is familiar with the asbestos abatement contractor's work, brief description of the work completed as a prime or sub-asbestos abatement contractor; amount of contract or subcontract and the date of completion.
 5. The asbestos abatement contractor must demonstrate that it has the financial resources, supervisory personnel and equipment necessary to carry out the work and to comply with the required performance schedule, taking into consideration other business commitments. The asbestos

abatement contractor must submit such documentation as may be required by the Department of Design and Construction to demonstrate that it has the requisite capacity to perform the required services of this contract.

- B. Insurance Requirements: The asbestos abatement contractor must provide asbestos liability insurance in the following amount: 1 million dollars per occurrence, 2 million dollars aggregate (combined single limit). The City of New York shall be named as an additional insured on such insurance policy.
- C. Throughout the specifications, reference is made to codes and standards which establish qualities and types of workmanship and materials, and which establish methods for testing and reporting on the pertinent characteristics thereof.

1.03 ASBESTOS ABATEMENT CONTRACTOR RESPONSIBILITIES

The Asbestos abatement contractor will visit the subject location within one (1) working day of notification to ascertain actual work required. If the project is identified as being "urgent", then work shall commence no later than 48 hours from the time of notification. In this event, the asbestos abatement contractor shall immediately notify when applicable EPA NESHAPS Coordinator, NYSDOL Asbestos Control Bureau and NYCDEP Asbestos Control Program of start of the work and file the necessary Asbestos Notifications and any applicable Variance Applications with the regulatory agencies cited above..

In the event that the project is not classified as "urgent" the Asbestos abatement contractor shall notify the EPA NESHAPS Coordinator, NYSDOL and NYCDEP by submitting the requisite asbestos project notification forms, postmarked 10 days before activity begins if 260 linear feet or more and/or 160 square feet or more of asbestos containing material will be disturbed.

The following information must be included in the notification:

- A. Name and address of building City or operator;
- B. Project description:
 - 1. Size - square feet, number of linear feet, etc;
 - 2. Age - date of construction and renovations (if known);
 - 3. Use - i.e., office, school, industrial, etc.
 - 4. Scope - repair, demolition, cleaning, etc.
- C. Amount of asbestos involved in work and an explanation of techniques used to determine the amount;

- D. Building location/address, including Block and Lot numbers;
- E. Work schedule including the starting and completion dates;
- F. Abatement methods to be employed;
- G. Procedures for removal of asbestos-containing material;
- H. Name, title and authority of governmental representative sponsoring project.

1.04 WORK INCLUDED IN UNIT PRICE

The Asbestos abatement contractor will be paid a basic unit price of **\$25.00** per square feet for the removal and disposal of asbestos containing material and replacement of the same with non-asbestos containing materials.

Unit price shall include all costs necessary to do the work of this Contract, including but not limited to: labor, materials, equipment, utilities, disposal, insurance, overhead and profit.

1.05 AIR MONITORING – ASBESTOS ABATEMENT CONTRACTOR

- A. "Air Sampling" shall mean the process of measuring the fiber content of a known volume of air collected during a specific period of time. The procedure utilized for asbestos follows the NIOSH Standard Analytical Method 7400 or the provisional transmission electron microscopy methods developed by the USEPA and/or National Institute of Standard and Technology which are utilized for lower detectability and specific fiber identification.
- B. Air monitoring of Asbestos abatement contractor's personnel will be performed in conformance with OSHA requirements, (All costs associated with this work are deemed included in the unit price.).
- C. Qualifications of Testing Laboratory:

The industrial hygiene laboratory shall be a current proficient participant in the American Industrial Hygiene Association (AIHA) PAT Program. The laboratory identification number shall be submitted and approved by the City. The laboratory shall be accredited by the AIHA and New York State Department of Health Environmental Laboratory Approval Program (ELAP).

Note: Work area air testing and analysis before, during and upon completion of work (clearance testing) will be performed by a Third Party Air Monitor under separate Contract with the City.

1.06 THIRD PARTY MONITORING AND LABORATORY

- A. The NYCDDC, at its own expense, will employ the services of an independent Third Party Air Monitoring Firm and Laboratory. The Third Party Air Monitor will perform air sampling activities and project monitoring at the Work Site.
- B. The Laboratory will perform analysis of air samples utilizing Phase Contrast Microscopy (PCM) and/or Transmission Electron Microscopy (TEM).
- C. The Third Party Air Monitoring Firm and the designated Project Monitor shall have access to all areas of the asbestos removal project at all times and shall continuously inspect and monitor the performance of the Asbestos abatement contractor to verify that said performance complies with this Specification. The Third-Party Air Monitor shall be on site throughout the entire abatement operation.
- D. The NYCDDC will be responsible for costs incurred with the Third Party Air Monitoring Firm and laboratory work. Any subsequent additional testing required due to limits exceeded during initial testing shall be paid for by the Asbestos abatement contractor.

1.07 PAYMENT REQUEST DOCUMENTATION

- B. The following information shall be included for each payment request:
 - 1. Description of work performed.
 - 2. Linear footage and pipe sizes involved.
 - 3. Square footage for boiler & breaching insulation removed.
 - 4. Square footage of non pipe and boiler areas removed, patched, enclosed, sealed, or painted.
 - 5. Square footage of encapsulation, sealing, patching, and painting involved.
 - 6. Total cost associated with compliance with the assigned task.
 - 7. Architectural, Electrical, HVAC, Plumbing, etc. work incidental to the Asbestos Abatement Work.
 - 8. A certified copy (in form 4312-39) to the Comptroller or Financial Officer of the New York City to the effect that the financial statement is true.

9. A signed copy (in form 6506q-6) of certificate of compliance with non-discriminatory provisions of the Contract.
 10. Attach a copy of valid workmen compensation insurance.
 11. Valid asbestos insurance per occurrence.
 12. General liability insurance when required.
- C. Each payment request shall include a grand total for all work completed that billing period, the landfill waste manifests and a copy of waste transporter permit. The Department of Design and Construction will inspect the work performed, review the cost and approve or disapprove requests for payment.
- D. EXPOSURE LOG: With this final payment, the Asbestos abatement contractor shall submit a listing of the names and social security numbers of all employees actively engaged in the abatement work of this Contract. This list shall include a summary showing each part of the abatement work in which the employee was engaged and the dates thereof.

1.08 QUANTITY CALCULATIONS

In order to determine the square footage involved for the various pipe sizes of pipe insulation that might be encountered, the following table is to be used.

PIPE INSULATION SIZE O.D.	PIPE SIZE O.D.	SQUARE FOOTAGE PER LINEAR FOOT
2-1/2"	1/2"	0.65
2-3/4"	3/4"	0.72
3"	1"	0.79
3-1/4"	1-1/4"	0.85
3-1/2"	1-1/2"	0.92
4"	2"	1.05
4-1/2"	2-1/2"	1.18
5"	3"	1.31
6"	3-1/4"	1.57
7"	3-1/2"	1.83
8"	4"	2.09
9"	5"	2.36
10"	6"	2.62
12"	8"	3.14
14"	10"	3.67
16"	12"	4.19
18"	14"	4.71

1.09 METHOD OF PAYMENT

Payment shall be made in accordance with Items A through R below. Payment shall be calculated based on the actual quantity of the item performed by the asbestos abatement contractor, times the unit price specified below. Credits may apply to certain times, as specified below.

- A. REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING PIPE INSULATION:** Actual linear footage, multiplied by the square footage factor listed for the respective pipe size in Section 1.09, multiplied by the unit price in Section 1.05.

EXAMPLE: 100 lin.ft. of 1/2" pipe and 100 lin.ft. of 6" pipe, including elbows, tees. Flanges, etc.

$100 \times 0.65 = 65 \text{ sq.ft.}$ $65 \times \text{unit price} = \text{Payment}$

$100 \times 2.62 = 262 \text{ sq.ft.}$ $262 \times \text{unit price} = \text{Payment}$

- B. REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER INSULATION:** (all types including Silicate Block and including the removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.

EXAMPLE: Item B. removal and replacement of 1000 S.F. of boiler insulation (incl. Silicate block)

$1000 \text{ S.F.} \times (1.5) \times \text{the Unit Price} = \text{Payment}$

- C. REMOVAL, DISPOSAL AND REPLACEMENT OF TANK INSULATION:** (all types including removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.

- D. REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER UPTAKE, & BREACHING INSULATION:** (all types including stiffening angles and wire lath) Payment shall be made at 2.0 times the unit price per square foot.

- E. REMOVAL, DISPOSAL AND REPLACEMENT OF DUCT INSULATION:** Payment shall be made at 1.0 times the unit price per square foot.

- F. REMOVAL, DISPOSAL AND REPLACEMENT OF SOFT ASBESTOS CONTAINING MATERIAL:** (Including sprayed-on fire proofing and sound proofing) Payment shall be made at 1.0 times the unit price per square foot of surface area. Area of irregular surfaces must be calculated and confirmed with DDC representative.

- G. ACOUSTIC PLASTER REPAIR AND/OR ENCAPSULATION:** Payment shall be made at 0.5 times the unit price per square foot.

HVAC CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

- H. **PATCHING OR REPAIR** of items listed in A through F will be paid at 0.33 times the unit price per square foot.
- I. **REMOVAL, DISPOSAL AND REPLACEMENT OF WATERPROOFING ASBESTOS CONTAINING MATERIAL:** (including friable and non-friable waterproofing material from interior and exterior walls, floors, foundations, penetrations, louvers, vents and openings other than windows, doors and skylights) Payment shall be made at 0.5 times the unit price per square foot.
- J. **REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING ELECTRICAL WIRING INSULATION:** (including friable and non-friable wiring insulation) Payment shall be made at 0.33 times the unit price per square foot.
- K. **PAINTING:** Payment shall be made at 0.05 times the unit price per square foot.
- L. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING PLASTER:** from ceilings and walls, including any wire lath and disposal as asbestos containing waste. Payment shall be made at 0.80 times the unit price per square foot.
- M. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING FLOOR TILES, CEILING TILES, TRANSITE PANELS:** (including any adhesive, glue, mastic and/or underlayment) and disposal as asbestos containing waste. Payment shall be made at 0.40 times the unit price per square foot. If multiple layers are discovered, each additional layer shall be paid at 0.20 times the unit price per square foot.
- N. **ADDITIONAL CLEAN UP/HOUSEKEEPING OF WORK AREA:** (excluding pre-cleaning of work area required by regulations) HEPA vacuuming and wet cleaning of asbestos contaminated surface. Payment shall be made at 0.20 times the unit price per square foot. When GLOVE BAG is employed to remove ACM, cost of HEPA vacuuming and wet cleaning of floor area up to 3 feet on each side of glove-bag shall be included in unit price and no extra payment will be made.
- O. **REMOVAL, DISPOSAL OF ASBESTOS-CONTAINING ROOFING MATERIAL:** including mastic, flashing and sealant compound and provide temporary asbestos-free roof covering consisting of one layer of rolled roofing paper sealed with asphaltic roofing compound. Payment shall be made at 0.8 times the unit price per square foot. Credit at a rate of 0.33 times the unit price will be taken for each square foot of temporary roof covering which the Asbestos abatement contractor is directed not to install.
- P. **PICK-UP AND DISPOSAL OF GROSS DEBRIS:** (excluding any waste generated from abatement under Item A-R) at a rate of \$150 per cubic yard for asbestos contaminated waste and \$75 per cubic yard for non-asbestos

contaminated waste. This cost includes all labor and material cost associated with work.

- Q. **REMOVAL OF ASBESTOS-CONTAINING BRICK, BLOCK, MORTAR, CEMENT OR CONCRETE:** along with all surfacing materials including wire lath and/or other supporting structures and disposal as ACM waste. Payment shall be made at a rate of \$25.00 per cubic foot of material removed.
- R. **REMOVAL AND DISPOSAL OF ASBESTOS CONTAINING WINDOW/DOOR CAULKING:** including friable and non-friable caulking, weather-stripping, glazing, sealants or other waterproofing materials applied to windows, doors, skylights, etc. Payment shall be made at the rate of \$400.00 per opening regardless of size or configuration. This cost includes labor, consumable materials, set-up/breakdown, removal and disposal, as required.

Note 1: CREDIT: For items listed in A through F, a credit at a rate of 0.33 times the unit price, times the respective multiplier (for each item) will be taken for each square foot of insulation which the asbestos abatement contractor is not directed to reapply.

Note 2: MINIMUM PAYMENT: The minimum payment per call at any individual job sites or various job sites during the same day will be eight hundred dollars (\$800.00).

Note 3: All payments shall be made as described in paragraph 1.09 herein.

Note 4: WORKING HIGHER THAN 12 FEET ABOVE FLOOR LEVEL OR WORK REQUIRING COMPLEX SCAFFOLDING OR CONSTRUCTION WORK PLATFORMS: Provisions are made in this Contract to compensate the Asbestos abatement contractor for work performed in locations that are difficult to access due to work at elevations that are significantly higher than the normal work level. The unit price for these items will be paid at 1.20 times the unit price described in Paragraphs 1.09, A through R for those portions of the work that are more than twelve (12) feet above the grade for that would be judged as the normal working level.

1.10 GUARANTEE

- A. Work performed in compliance with each task shall be guaranteed for a period of one year from the date the completed work is accepted by the Department of Design and Construction.
- B. The Commissioner of The Department of Design and Construction will notify the Asbestos abatement contractor in writing regarding defects in work under the guarantee.

1.11 OCCUPANCY OF SITE NOT EXCLUSIVE

Attention is specifically drawn to the fact that contractors, performing the work of other Contracts, may be brought upon any of the work sites of this Contract. Therefore, the

Asbestos abatement contractor shall not have exclusive rights to any site of his work and shall fully cooperate and coordinate his work with the work of other contractors who may be brought upon any site of the work of this Contract. This paragraph applies to those areas outside the regulated Work Area as defined by Title 15, Chapter I of RCNY.

1.12 SUBMITTALS

A. Pre-Construction Submittals:

1. Attend a pre-construction meeting scheduled by the City of New York Department of Design and Construction. This meeting shall also be attended by a designated representative of the City of New York third party air monitoring firm, facility manager and the Construction Project Manager. At this meeting, the Asbestos abatement contractor shall present three copies of the following items:
 - a. Asbestos abatement contractor's scope of work, work plan and schedule.
 - b. Asbestos project notifications, approved variances and plans to Government Agencies.
 - c. Copies of Permits, clearance and licenses if required.
 - d. Schedules: the Asbestos abatement contractor shall provide to the Construction Project Manager a copy of the following schedules for approval. Once approved, schedules shall be maintained and updated as received. Asbestos abatement contractor shall post a copy of all schedules at the site:
 - (1) A construction schedule stating critical dates of the project including, but not limited to, mobilization, Work Area preparation, demolition, gross removal, fine cleaning, encapsulation, inspections, clearance monitoring, and phase of refinishing and final inspections. The schedule shall be updated biweekly, at a minimum.
 - (2) A schedule of staffing stating number of workers per shift per activity, name and number of supervisor(s) per shift, shifts per day, and total days to be worked.
 - (3) Submit all changes in schedule or staffing to the Construction Project Manager prior to implementation.

- e. Written description of emergency procedures to be followed in case of injury or fire. This section must include evacuation procedures, source of medical assistance (name and telephone number to nearest hospital) and procedures to be used for access by medical personnel (examples: first aid squad and physician). NOTE: Necessary Emergency Procedures Shall Take Priority Over All Other Requirements of These Specifications.
- f. Material Safety Data Sheets (MSDS) for encapsulants, sealants, firestopping foam, cleaners/disinfectants, spray adhesive and any and all potentially hazardous materials that may be employed on the project. No work involving the aforementioned will be allowed to proceed until MSDS are reviewed.
- g. Worker Training and Medical Surveillance: The Asbestos abatement contractor shall submit a list of the persons who will be employed by him /her to perform the removal work. Present evidence that workers have received proper training required by the regulations and the medical examinations required by OSHA 29 CFR 1926.1101.
- h. Logs: Specimen copies of daily progress log, visitor's log, and disposal log.
 - (1) The Asbestos abatement contractor shall provide a permanently bound log book of minimum 8-1/2" x 11" size at the entrance to the Worker and Waste Decontamination enclosure system as hereinafter specified. Log book shall contain on title page the project name, name, address and phone number of the Asbestos abatement contractor; name, address and phone number of Asbestos abatement contractor and City's third party air monitoring firm; emergency numbers including, but not limited to local Fire/Rescue Department. Log book shall contain a list of personnel approved for entry into the Work Area.
 - (2) All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted. Any significant events occurring during the abatement project shall be entered into the log. Upon completion of the job, the Asbestos abatement contractor shall submit the logbook containing a day-to-day record of personnel log entries countersigned by the Construction Project Manager every day.

HVAC CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

- i. Worker's Acknowledgments: Submit statements signed by each employee that the employee has received training in the proper handling of ACM, understands the health implications and risks involved; and understands the use and limitations of the respiratory equipment to be used.
- B. During Construction Submittals:
 1. Security and safety logs showing names of person entering workspace, date and time of entry and exit, record of any accident, emergency evacuation, and any other safety and/or health incident.
 2. Progress logs showing the number of workers, supervisors, hours of work and tasks completed shall be submitted daily to the Construction Project Manager.
 3. Floor plans indicating Asbestos abatement contractor's current work progress shall be submitted for review by the Construction Project Manager.
 4. All Asbestos abatement contractors' air monitoring and inspection results.

C. Project Closeout Submittals:

Upon completion of the project and as a condition of acceptance, the Asbestos abatement contractor shall present two copies of the following items, bound and indexed:

1. Lien Waivers from Asbestos abatement contractor, Sub-Asbestos abatement contractors and Suppliers,
2. Daily OSHA air monitoring results,
3. All Waste Manifests (Asbestos and Construction Debris), seals and disposal logs,
4. Field Sign-In/Sign-Out Logs for every shift,
5. Copies of all Building Department Forms and Permits,
6. A Letter of Compliance stating that all the work on this project was performed in accordance with the Specifications and all applicable Federal, State and Local regulations,
7. All Warranties as stated in the Specifications,
 - a. Fully executed disposal certificates and transportation manifest.

8. Project Record: The Asbestos abatement contractor shall maintain a project record for all small and large asbestos projects. During the project, the project record shall be kept on site at all times. Upon completion of the project, the project record shall be maintained by the building owner. The project record shall be submitted to DDC as part of the close out documents. The project record shall consist of:
 - a. Copies of licenses of all asbestos abatement contractors involved in the project;
 - b. Copies of NYCDEP and NYSDOL supervisor and handler certificates for all workers engaged in the project;
 - c. Copies of all project notifications and reports filed with NYCDEP, NYSDOL and USEPA for the project, with any amendments or variances;
 - d. Copies of all asbestos abatement permits, including associated approved plans and work place safety plan;
 - e. A copy of the air sampling log and all air sampling results;
 - f. A copy of the abatement asbestos abatement contractor's daily log book;
 - g. Copies of all asbestos waste manifests;
 - h. A copy of all Project Monitor's Reports (ACP-15).
 - i. A copy of each ATR-1 Form completed for the asbestos project (if required).
 - j. A copy of each Asbestos Project Conditional Closeout Report (ACP-20) if required.
 - k. A copy of the Asbestos Project Completion Form (ACP-21).

1.13 PROTECTION OF FURNITURE AND EQUIPMENT

Cover all furniture and equipment that cannot be removed from Work Areas. Movable furniture and equipment will be removed from Work Areas by the Asbestos abatement contractor prior to start of work. At the conclusion of the work (after final air testing), the Asbestos abatement contractor will remove all plastic covering on walls, floors, furniture, equipment and reinstall furniture and equipment. He shall remove and store all sheaths, curtains and drapes, and reinstall same following final clean up.

1.14 **UTILITIES**

A. General:

All temporary facilities shall be subject to the approval of the Commissioner. Prior to starting work at any site, locations and/or sketches (if required) of temporary facilities must be submitted to the Construction Project Manager for the required approval.

B. Water:

The Department of Design and Construction will furnish all water needed for construction, at no cost to the Asbestos abatement contractor in buildings under their jurisdiction. However, it is the responsibility of the Asbestos abatement contractor to ensure that hot water is provided for showering in the decontamination unit. The Asbestos abatement contractor shall furnish, install and maintain any needed equipment to meet these requirements at his own expense.

C. Electricity:

The Department of Design and Construction will furnish all electricity needed for construction, at no cost to the Asbestos abatement contractor in a building, under their jurisdiction. The Asbestos abatement contractor is responsible for routing the electric power to the abatement Work Area.

All temporary lighting and temporary electrical service for Work Area shall be in weatherproof enclosures and be ground fault protected.

- D. In leased spaces, arrangements for water supplies and electricity must be made with the landlord. However, all such arrangements must be made through and are subject to approval of the Department of Design and Construction. Utilities will be provided at no cost to the Asbestos abatement contractor. However, it is the Asbestos abatement contractor's (or the HVAC contractor's) responsibility to furnish and install a suitable distribution system to the Work Area. This system will be provided at no cost to the City.

1.15 **FEES**

The Asbestos abatement contractor shall be responsible for any and all fees or charges imposed by Local, State or Federal Law, Rule and Regulation applicable to the work specified herein, including fees or charges which may be imposed subsequent to the date of the Bid opening.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 00 50

DEMOLITION AND REMOVALS FOR HVAC

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall comply with the General Requirements of Division 1.

1.2 WORK INCLUDED

- A. The Work of this Section includes all labor, materials, equipment and services necessary to complete the demolition as shown on the drawings and specified herein, including, but not limited to, the following:
1. Removal and capping of existing mechanical and electrical systems as appropriate to condition.
 2. Disposal of material, equipment, and items removed during demolition work.
 3. Protection of persons, trees, property, adjacent structures, utilities and other materials to remain.
 4. Obtain all necessary permits from authorities.

1.3 CONDUCT OF WORK

- A. The existing facility will be in operation during the performance of the Work.
1. When necessary to temporarily disconnect any existing feeder or branch circuit, domestic water, and chilled/hot water and steam service supplying occupied facilities, confer with the City of New York and schedule a mutually agreeable period of interruption.
 2. Where replacement, relocation or modification of existing equipment is indicated, provide and maintain all temporary feeders, connections, and any other materials and appurtenances required to maintain services to occupied areas.
- B. No work shall be left incomplete, nor any hazardous situation created, which will affect the life or safety of the public and/or building occupants. At no time shall the work interfere with or cut off any of the existing services without the City of New York's prior written permission.
- C. The City of New York reserves the right to operate all existing electrical and mechanical equipment not included in this work, and to perform all required servicing and repairs to same, at all times.
- D. It is required that the work indicated and/or specified shall be carried out with a minimum of interference to the established operations of the Building.

1.4 PROJECT SITE CONDITIONS

- A. Site Visit: Examine the site and existing buildings in order to determine the existing conditions, character of equipment and facilities needed for the performance of demolition work.
 - 1. Investigate adjoining construction and underlying conditions including field verification of electrical and mechanical system locations.
 - 2. Investigate the conditions of public thoroughfares and roads as to availability, clearances, load limits, and other restrictions or limitations affecting transportation to and from site.
- B. Building Conditions: Accept the condition of the site and building structures as found. The Commissioner and City of New York assume no responsibility for condition of site nor structures nor the continuation of the condition existing at time of bidding.

1.5 GENERAL

- A. Products and materials furnished for the work of this section shall comply with other Sections of Contract #3.

1.6 PREPARATION

- A. Contract #3 Contractor's Verifications
 - 1. Check existing conditions of Project, including adjacent elements subject to damage or to movement during demolition, cutting, and removal operations.
- B. Utility Disconnections: Disconnect and cap existing utility, electrical, and other service lines.
 - 1. Do not interrupt existing utility service or adjacent occupied or used facilities except when authorized. Provide temporary services during accidental or unavoidable interruptions to existing utilities.
 - 2. Remove, seal, cap, disconnect and make safe utilities serving the structure to be demolished. Remove wires and cap conduits of electrical systems and any steam or water services. Disconnects or capping shall be to the point of service origin or otherwise clear of new work for the Project. Verify terminations prior to start of demolition work.

1.7 DEMOLITION

- A. Codes: All demolition work shall be completed in compliance with all governing codes, standards and regulations. The use of explosives in demolition operations is prohibited.
- B. Dust, Dirt and Noise Control:
 - 1. Use water sprinkling, temporary enclosures, and other suitable methods as necessary to limit the amount of dust and dirt rising and scattering in the air to the lowest level of air pollution and to prevent dust from being a nuisance to the public or causing damage.

2. Maintain noise abatement program to keep noise level at lowest possible level. Work shall be carried out during daylight hours on weekdays only in accordance with regulations.

1.8 CUTTING

- A. Execute cutting and demolition by methods which will prevent damage to other work and will provide proper surface to receive installation of work by others and patching of finish surfaces.

1.9 REMOVAL, CLEAN-UP AND DISPOSAL

- A. General: Remove from the site all debris, rubbish and other materials resulting from demolition operations as work progresses. Storage or sale of demolished materials will not be permitted on the Project site.
- B. Removal:
 1. Transport all materials removed from demolished building structure and dispose of all from the Project site. Do not accumulate debris on site during progress of work.
 2. Remove debris and litter of man-made materials, equipment or machinery which is not otherwise scheduled to be salvaged for City of New York.
- C. Disposal and Transport:
 1. Disposal shall be at legal off-site disposal areas.
 2. Transport materials over legal haul routes and obtain necessary permits for transporting and disposal as required by local regulations.

1.10 EXISTING MECHANICAL WORK AND REMOVALS

- A. Remove, reroute or relocate any piping, ductwork, controls and other mechanical items which are rendered inactive in the course of, or interfere with, the alterations. Remove all newly and previously exposed and or inactive piping, ductwork, etc. which interfere with the alterations.
- B. It is the intention of these specifications to provide for the continuance of all mechanical services presently installed in areas not being altered under this scope of work. Provide all interconnecting piping, ducts, controls and equipment necessary to maintain services to these areas.
- C. Compare the plans with the existing conditions to determine the amount of work affected. Remove all unused mechanical equipment, piping, ductwork, controls and the like not required by the alterations.
- D. All equipment, piping, and materials required to be removed and not reinstalled under this Contract #3, unless otherwise indicated, shall become the property of the Contract #3 Contractor and shall be removed from the site and properly disposed of.

- E. Where piping and branch lines are indicated to be removed, they shall be completely removed back to their source. Accessible piping shall be removed completely; piping embedded in concrete or masonry shall be cut off flush and the surface patched with concrete smooth and level.
- F. Where ductwork and branch lines are indicated to be removed, they shall be completely removed back to their source. Exposed or accessible ductwork shall be removed completely; ductwork passing through concrete or masonry shall be removed in its entirety and the surface patched with concrete smooth and level.
- G. No removed existing piping or materials shall be reused.

1.11 EXISTING PLUMBING WORK AND REMOVALS

- A. Remove, abandon, reroute or relocate any piping and other plumbing items which are rendered inactive in the course of, or interfere with, the alterations. Remove all newly and previously exposed piping and plumbing equipment which interfere with the alterations.
- B. It is the intention of these specifications to provide for the continuance of all plumbing services presently installed in areas not being altered under this scope of work. Provide all interconnecting piping and devices necessary to maintain services to these areas.
- C. Compare the plans with the existing conditions to determine the amount of work affected. Remove all unused plumbing equipment, fixtures, piping and the like not required by the alterations.
- D. All equipment, fixtures, piping, and materials required to be removed and not reinstalled under this Contract #3, unless otherwise indicated, shall become the property of the Contract #3 Contractor and shall be removed from the site and properly disposed of.
- E. All connections to piping to be removed shall be properly plugged or capped.
- F. Where piping and branch lines are indicated to be removed, they shall be completely removed back to their source. Accessible piping shall be removed completely; piping embedded in concrete or masonry shall be cut off flush and the surface patched with concrete smooth and level.
- G. No dead ends shall be left on any piping upon completion of work.
- H. All lengths of piping no longer required due to system modification shall be removed completely. No piping shall be abandoned in place, unless embedded in concrete or otherwise specifically noted.
- I. All systems shall be left in perfect working order upon completion of all new work.
- J. No removed existing piping or materials shall be reused.

1.12 EXISTING FIRE PROTECTION WORK AND REMOVALS

- A. Remove, reroute or relocate any existing piping, valves, and other items which are rendered inactive in the course of, or interfere with, the alterations.
- B. Compare the plans with the existing conditions to determine the amount of work affected. Remove all unused mechanical equipment, piping, ductwork, controls and the like not required by the alterations.

- C. All equipment, piping, and materials required to be removed and not reinstalled under this Contract #3, unless otherwise indicated, shall become the property of the Contract #3 Contractor and shall be removed from the site and properly disposed of.
- D. Where piping and branch lines are indicated to be removed, they shall be completely removed back to their source. Accessible piping shall be removed completely; piping embedded in concrete or masonry shall be cut off flush and the surface patched with concrete smooth and level.
- E. No removed existing piping or materials shall be reused.

1.13 HAZARDOUS MATERIAL REMEDIATION

- A. Refer to description of work under separate cover and Sections 024119 and 028013.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 05 13

MOTORS AND STARTERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 230000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #3 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 230000, General Provisions, and with the provisions of all applicable codes and laws.
- B. The installation and equipment is to conform to applicable building code articles and applicable reference standards cited therein.

1.3 SUBMITTALS

- A. Procedure
- B. Prepare and make the submissions listed below and in Section 230000 in accordance with the procedure specified in Section 230000.
- C. Shop Drawings
 - 1. Submit motors with individual items of driven equipment.
 - 2. Starters - Technical specs and application data.
 - 3. Schedule of starters including starter model, equipment served, starter enclosure, and accessories.
 - 4. Submit starter and drive unit wiring diagrams with the automatic control shop drawing submission required under Section 230000.
 - 5. Variable speed drive units - Technical specs and application data.

1.4 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 230000

1.5 GENERAL REQUIREMENTS

- A. Provide all necessary contacts, relays and switches for motor operation in accordance with the control system sequences and safety device operation.
- B. All motors, starters, push buttons, signal devices and motor controller equipment shall be NEMA standard and UL listed.
- C. All motors shall be covered by the warranty provided by the original equipment manufacturer which shall extend the full extent of the project warrantee. No motor shall be installed which has been manufactured more than two years prior to delivery.

- D. Each unit shall be fully warranted by the manufacturer for a period of 36 months from date of shipment, including the cost of all parts, labor, and travel expenses.

PART 2 - PRODUCTS

2.1 MOTORS

- A. All motors shall be general purpose squirrel-cage induction type, NEMA Design B, Class B insulation, continuous duty, 40°C ambient, single or multiple speed as scheduled.
- B. All three phase motors shall be NEMA Premium Efficiency design. Motor efficiency shall be indicated on the motor nameplate by the manufacturer per IEEE Standard 112 Method B in accordance with following tables:

Open Drip Proof (ODP)

Horsepower	1200 RPM	1800 RPM	3600 RPM
1	82.5%	85.5%	77.0%
1.5	86.5%	86.5%	84.0%
2	87.5%	86.5%	85.5%
3	88.5%	89.5%	85.5%
5	89.5%	89.5%	86.5%
7.5	90.2%	91.0%	88.5%
10	91.7%	91.7%	89.5%
15	91.7%	93.0%	90.2%
20	92.4%	93.0%	91.0%
25	93.0%	93.6%	91.7%
30	93.6%	94.1%	91.7%

Totally Enclosed Fan-Cooled (TEFC)

Horsepower	1200 RPM	1800 RPM	3600 RPM
1	82.5%	85.5%	77.0%
1.5	87.5%	86.5%	84.0%
2	88.5%	86.5%	85.5%
3	89.5%	89.5%	85.5%
5	89.5%	89.5%	86.5%
7.5	91.0%	91.7%	98.5%
10	91.0%	91.7%	90.2%
15	91.7%	92.4%	91.0%
20	91.7%	93.0%	91.0%
25	93.0%	93.6%	91.7%
30	93.0%	93.6%	91.7%

- C. Unless otherwise indicated, motors 1/2 horsepower and larger shall be three-phase; motors less than 1/2 horsepower shall be single phase. Motor voltage shall be as indicated; verify with Contract #4 Contractor.
- D. All motors shall have a 1.15 minimum service factor.
- E. Two speed motors shall be two winding type, RPM as noted on plans.
- F. Single speed motors shall operate at 1750 RPM unless otherwise indicated.
- G. Motors controlled by Variable Frequency Drive (VFD) units shall be rated for inverter duty (NEMA MG1, Part 31).

- H. All motors shall have a terminal box, appropriate mounting base, and a ground post for connection of a ground conductor.
- I. Motor enclosures shall be open drip-proof unless otherwise indicated or required.
- J. Motor manufacturers:
 - 1. General Electric Co.
 - 2. Baldor
 - 3. Westinghouse
 - 4. Marathon

2.2 MANUAL STARTERS

- A. Provide manual starters for single-phase motors that are not interlocked with other equipment.
- B. Starter shall include quick make-quick break toggle mechanism in a suitable enclosure. The overload relay shall be field adjustable to +/-10% of nominal rating.
- C.

<u>Manufacturer</u>	<u>Series</u>
Cutler Hammer	9101
General Electric	CR101
Siemens	SMF
Square D	Class 2510 Type F
Westinghouse	MS

2.3 MAGNETIC STARTERS

- A. Provide electrically-held magnetic starter for three-phase motors 1/2 horsepower and larger. Magnetic starters shall be combination type, with adjustable motor circuit protector, across-the-line contactor, and thermal overload relay in a common enclosure.
- B. The motor circuit protector shall trip instantaneously when the motor current level is in excess of the trip setting. Trip settings of all poles shall be adjusted simultaneously by a single trip point adjustment.
- C. The starter shall be suitable for connection to a power system having available fault current of 100,000RMS symmetrical amperes.
- D. Furnish contactors with one N.O. auxiliary interlock contact for the holding circuit, and a minimum of two additional auxiliary contacts. Coordinate auxiliary contacts with Section 230923.
- E.

<u>Manufacturer</u>	<u>Series</u>
General Electric	CR387
Square D	Class 8539
Westinghouse	Class A206

2.4 REDUCED VOLTAGE STARTER

- A. Provide autotransformer type starters of the closed transition type, in an enclosure, with integral motor circuit protector, for all starters of NEMA Size 4 and larger (i.e. > 25 hp at 208 volts or > 50 hp at 480 volts).
- B. Transformers shall have three starting taps, 50%, 65% and 80%. Unit shall be set at 65% at factory.

- C. Furnish contactors with one N.O. auxiliary interlock contact for the holding circuit, and a minimum of two additional auxiliary contacts. Coordinate auxiliary contacts with Section 230923.

<u>Manufacturer</u>	<u>Series</u>
General Electric	CR331
Square D	Class 8606
Westinghouse	A606

2.5 STARTER ACCESSORIES

- A. Enclosure shall be NEMA 1 for dry location, NEMA 4 for wet or outdoor locations.
- B. The disconnect handle shall be capable of being padlocked in the open position.
- C. Provide all starters unless otherwise specified with manual reset thermal type overload relays having inverse time delay characteristics and interchangeable heater elements.
- D. Provide each starter with a red running light, neon type, mounted through cover.
- E. Provide each starter with a three position, maintained contact, H-O-A selector switch, mounted through the cover.
- F. Provide two speed starters for all motors listed with multiple speeds in the equipment schedules. Multiple speed starters shall be provided with a time delay relay when switching to a lower speed.
- G. Furnish contactors with one N.O. auxiliary interlock contact for the holding circuit, and a minimum of two additional auxiliary contacts for each motor speed. Coordinate auxiliary contacts with Section 230923.
- H. Current-Sensing, Phase-Failure Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connection; arranged to operate on phase failure, phase reversal, current unbalance of from 30 to 40 percent, or loss of supply voltage. Provide adjustable response delay.

2.6 VARIABLE FREQUENCY DRIVES

- A. General
- Where variable speed control is indicated in drawings, schedules, or specifications, provide complete factory-assembled and -tested adjustable frequency AC drives as herein specified.
 - Variable frequency drives (VFD's) shall provide stepless speed control of standard NEMA Design B squirrel cage induction motors, without motor derating.
 - VFD's shall be variable torque design, suitable for HVAC pump, fan, and blower applications.
 - VFD's shall be tested and listed to the following standards:
 - UL Standard 508C
 - IEEE Standard 519-1992
 - NEMA - ICS 7.0, AC Adjustable Speed Drives
 - IEC 281000 Parts 1 and 2.

5. Each VFD shall be appropriately sized and rated to suit the driven load and input power characteristics.
6. VFD logic and control circuitry shall be microprocessor-based.

B. Design and Construction Features

1. Where located indoors in non-damp and non-wet environment, VFD enclosures shall be steel, ventilated NEMA 1, with hinged lockable door, suitable for wall mounting in sizes through 75 HP (at 460 VAC). Larger units shall have floor mounted, freestanding enclosures. Where located outdoors, or where VFD is mounted in damp or wet environment, provide NEMA 3R enclosures with strip heater.
2. The input section shall include a full-wave diode bridge rectifier, padlockable door-interlocked disconnect switch, input power fuses, input line reactor, and output reactor / filter for circuits longer than 75 feet.
3. The inverter section shall be sine-coded pulse-width-modulated (PWM), utilizing Insulated Gate Bipolar Transistors (IGBT's).

C. Performance Features

1. Produce rated output under the following service conditions:
 - a. Rated input voltage +/- 10%.
 - b. Ambient temperature 0°C. to 40°C.
 - c. Relative humidity 0-95% non-condensing.
 - d. Elevation up to 3300 feet above sea level.
 - e. Input frequency 60 hertz, +/- 2 hertz.
2. Input displacement power factor - minimum 0.95 at any speed.
3. Output - 6 to 60 hertz, 0 to input volts, with adjustable volts/hertz.
4. Adjustable output current limit - to 115%.
5. Adjustable acceleration and deceleration rates.
6. Adjustable minimum and maximum speed limits.
7. Automatic restart after an input power loss, with adjustable time delay, if RUN command is still activated.
8. Input current THD - 5% maximum.
9. Efficiency - minimum 96% at full load, full speed.
10. Capable of a smooth start into a rotating motor (either direction).
11. Minimum 2 second power loss ride-through for logic and control power.
12. Motor noise attributable to the VFD shall be less than 3 dB above that with across-the-line operation, measured at 3 feet from the motor centerline.

13. Capable of starting into a coasting load (forward or reverse) up to full speed and accelerate or decelerate to setpoint without safety tripping or component damage (flying start).
14. Ability to automatically restart after an over-current, over-voltage, under-voltage, or loss of input signal protective trip. The number of restart attempts, trial time, and time between attempts shall be programmable.
15. The overload rating of the drive shall be 110% of its normal duty current rating for 1 minute every 10 minutes, 130% overload for 2 seconds. The minimum FLA rating shall meet or exceed the values in NEC Table 430.250 for 3-phase alternating-current motors.
16. The VFD shall have an integral 5% impedance line reactors to reduce the harmonics to the power line and to add protection from AC line transients. The 5% impedance may be from dual (positive and negative DC bus) reactors, or 5% AC line reactors. VFD's with only one DC reactor shall add AC line reactors.
17. The input current rating of the VFD shall be no more than 3% greater than the output current rating. VFD's with higher input current ratings require the upstream wiring, protection devices and source transformers to be oversized per NEC 430.
18. Include a coordinated AC transient protection system consisting of 4-120 joule rated MOV's (phase to phase and phase to ground), a capacitor clamp, and 5% impedance reactors.
19. Capable of sensing a loss of load (broken belt / broken coupling) and signal the loss of load condition. The drive shall be programmable to signal this condition via a keypad warning, relay output and/or over the serial communications bus. Relay outputs shall include programmable time delays that will allow for drive acceleration from zero speed without signaling a false under-load condition.
20. If the input reference (4-20mA or 2-10V) is lost, the VFD shall give the user the option of either (1) stopping and displaying a fault, (2) running at a programmable preset speed, (3) hold the VFD speed based on the last good reference received, or (4) cause a warning to be issued, as selected by the user. The drive shall be programmable to signal this condition via a keypad warning, relay output and/or over the serial communication bus.
21. The VFD shall have programmable "Sleep" and "Wake up" functions to allow the drive to be started and stopped from the level of a process feedback signal.

D. Protective Features

1. Integral I^2t electronic motor overload protection, adjustable.
2. Integral trip circuits for input power undervoltage, overvoltage, phase loss, and overcurrent.
3. Integral trip circuits for internal overtemperature, DC bus overvoltage, and internal or output circuit ground fault.
4. The VFD's shall be suitable for connection to a power system having available fault current of 100,000RMS symmetrical amperes.
5. The VFD's shall be self-protecting against an open output circuit.

6. Provide input power line surge protection.
7. Provide user-selectable manual or automatic restart after a fault.

E. Controls and Indications

1. LED or LCD digital information display, including:
 - a. Output frequency, voltage, and current.
 - b. Input voltage, current, and KW.
 - c. % speed.
 - d. % load.
2. LED lamp or alphanumeric display indication of individual fault conditions.
3. Status indicators for POWER ON, READY, and RUN.
4. 3-position, maintained contact, Hand-Off-Auto selector switch.
5. Remote-Local speed reference selector.
6. Integral keypad for manual (local) speed control, adjustment, and programming functions.
7. Interfaces for remote safety contacts, start-stop contacts, and speed control (4-20 mA, 0-5 VDC, or 0-10 VDC, user selectable).
8. Form C (SPDT) dry contacts, wired to terminal blocks, for remote indication of RUN or FAULT.
9. Minimum of 3 programmable resonant frequency lockout bands.

F. Serial Communications

1. The VFD shall have an RS-485 port as standard. The standard protocols shall be Modbus, Johnson Controls N2 bus, and Siemens Building Technologies FLN or approved equal. Optional protocols for LonWorks, BACnet, Profibus, Ethernet, and DeviceNet shall be available. Each individual drive shall have the protocol in the base VFD. The use of third party gateways and multiplexers is not acceptable. All protocols shall be "certified" by the governing authority. Use of non-certified protocols is not allowed.
2. The BACnet connection shall be an RS485, MSTP interface operating at 9.6, 19.2, 38.4, or 76.8 Kbps. The connection shall be tested by the BACnet Testing Labs (BTL) and be BTL Listed. The BACnet interface shall conform to the BACnet standard device type of an Applications Specific Controller (B-ASC). The interface shall support all BIBBs defined by the BACnet standard profile for a B-ASC including, but not limited to:
 - a. Data Sharing – Read Property – B.
 - b. Data Sharing – Write Property – B.
 - c. Device Management – Dynamic Device Binding (Who-Is; I-AM).
 - d. Device Management – Dynamic Object Binding (Who-Has; I-Have).
 - e. Device Management – Communication Control – B.

If additional hardware is required to obtain the BACnet interface, the VFD manufacturer shall supply one BACnet gateway per drive. Multiple VFDs sharing one gateway shall not be acceptable.

3. Serial communication capabilities shall include, but not be limited to; run-stop control, speed set adjustment, proportional/integral/derivative PID control adjustments, current limit, accel/decel time adjustments, and lock and unlock the keypad. The drive shall have the capability of allowing the DDC to monitor feedback such as process variable feedback, output speed / frequency, current (in amps), % torque, power (kW), kilowatt hours (resettable), operating hours (resettable), and drive temperature. The DDC shall also be capable of monitoring the VFD relay output status, digital input status, and all analog input and analog output values. All diagnostic warning and fault information shall be transmitted over the serial communications bus. Remote VFD fault reset shall be possible. The following additional status indications and settings shall be transmitted over the serial communications bus – keypad "Hand" or "Auto" selected, bypass selected, the ability to change the PID setpoint, and the ability to force the unit to bypass (if bypass is specified). The DDC system shall also be able to monitor if the motor is running in the VFD mode or bypass mode (if bypass is specified) over serial communications. A minimum of 15 field parameters shall be capable of being monitored.
4. The VFD shall allow the DDC to control the drive's digital and analog outputs via the serial interface. This control shall be independent of any VFD function. For example, the analog outputs may be used for modulating chilled water valves or cooling tower bypass valves. The drive's digital (relay) outputs may be used to actuate a damper, open a valve or control any other device that requires a maintained contact for operation. In addition, all of the drive's digital and analog inputs shall be capable of being monitored by the DDC system.
5. The VFD shall include an independent PID loop for customer use. The independent PID loop may be used for cooling tower bypass valve control, chilled water valve control, etc. Both the VFD control PID loop and the independent PID loop shall continue functioning even if the serial communications connection is lost. The VFD shall keep the last good set-point command and last good DO & AO commands in memory in the event the serial communications connection is lost.

G. EMI / RFI Filtering

1. All VFD's shall include EMI/RFI filters. The onboard filters shall allow the VFD assemble to be CE Marked and the VFD shall meet product standard EN 61800-3 for the First Environment restricted level.

H. Special Features

1. A complete factory wired and tested bypass system consisting of an output contactor and bypass contactor. Overload protection and shall be provided in both drive and bypass modes.
2. Door interlocked, pad-lockable, circuit breaker that will disconnect all input power from the drive and all internally mounted options.
3. Fused VFD only disconnect (service switch). Fast acting fuses exclusive to the VFD – fast acting fuses allow the VFD to disconnect from the line prior to clearing upstream branch circuit protection, maintaining bypass capability. Bypass designs, which have no such fuses, or that incorporate fuses common to both the VFD and the bypass will not be accepted.
4. The drive / bypass shall provide single-phase motor protection in both the VFD and bypass modes.

5. The following operators shall be provided:
 - a. Bypass Hand-Off-Auto
 - b. Drive mode selector
 - c. Bypass mode selector
 - d. Bypass fault reset

6. The following indicating lights (LED type) shall be provided. A test mode or push to test feature shall be provided.
 - a. Power-on (Ready)
 - b. Run enable (safeties) open
 - c. Drive mode select damper opening
 - d. Bypass mode selected
 - e. Drive running
 - f. Bypass running
 - g. Drive fault
 - h. Bypass fault
 - i. Bypass H-O-A mode
 - j. Automatic transfer to bypass selected
 - k. Safety open
 - l. Damper opening
 - m. Damper end-switch made

7. The following relay (form C) outputs from the bypass shall be provided:
 - a. System started
 - b. System running
 - c. Bypass override enabled
 - d. Drive fault
 - e. Bypass fault (motor overload or underload (broken belt))
 - f. Bypass H-O-A position

8. The digital inputs for the system shall accept 24V or 115VAC (selectable). The bypass shall incorporate internally sourced power supply and not require an external control power source.

9. Customer Interlock Terminal Strip – provide a separate terminal strip for connection of freeze, fire, smoke contacts, and external start command. All external safety interlocks shall remain fully functional whether the system is in Hand, Auto, or Bypass modes (not functional in Fireman's Override 2). The remote start/stop contact shall operate in VFD and bypass modes.

10. Dedicated digital input that will transfer motor from VFD mode to bypass mode upon dry contact closure for fireman's override. Two modes of operation are required.
 - a. One mode forces the motor to bypass operation and overrides both the VFD and bypass H-O-A switches and forces the motor to operate across the line (test mode). The system will only respond to the digital inputs and motor protections.
 - b. The second fireman's override mode remains as above, but will also defeat the overload and single-phase protection for bypass and ignore all keypad and digital inputs to the system (run until destruction).

11. The VFD shall include a "run permissive circuit" that will provide a normally open contact whenever a run command is provided (local or remote start command in VFD or bypass mode). The VFD system (VFD or bypass) shall not operate the motor until it receives a dry contact closure from a damper or valve end-switch. When the VFD system safety interlock (fire detector, freezestat, high static pressure switch, etc) opens, the motor shall coast to a stop and the run permissive contact shall open, closing the damper or valve.
 12. Class 20 or 30 (selectable) electronic motor overload protection shall be included.
 13. There shall be an internal switch to select manual or automatic bypass.
 14. There shall be an adjustable current sensing circuit for the bypass to provide loss of load indication (broken belt) when in the bypass mode.
 15. Output Reactor - A reactor (dv/dt filter) is to be installed between the drive and the motor if the total electric feeder distance between the two exceeds 75 feet.
- I. Factory Testing
1. Each unit shall be fully tested prior to shipment, including operation at full load for 8 hours in a 40°C ambient.
- J. Acceptable Manufacturers
1. Subject to compliance with requirements, provide variable frequency drives manufactured by one of the following:
 - a. Allen-Bradley
 - b. Yaskawa E7 Series
 - c. Asea Brown Boveri (ABB)
 - d. Graham / Danfoss
 - e. Square D

PART 3 - EXECUTION

3.1 GENERAL

- A. Motors shall be supplied as part of factory assembled equipment specified in other sections.
- B. All starters and variable speed drives shall be turned over to the Contract #4 Contractor for mounting, installation, and wiring in conformance with all applicable codes and ordinances. Starters and drives shall be located within line-of-site of the associated equipment being controlled.
- C. Install overload heaters, adjust overload relays, and set motor circuit protectors in accordance with motor nameplate ratings and NEC Article 430.
- D. Unless noted otherwise, starters for outdoor equipment shall be mounted attached to or adjacent to the equipment served and shall be provided with NEMA 3R enclosures with strip heaters.

3.2 MOTOR NOISE LEVEL

- A. Motor drives for pumps and refrigeration machines, or other mechanical equipment

having a motor installed within a mechanical room, shall operate with noise levels not exceeding 85 dBA.

- B. Noise levels shall be determined in accordance with IEEE Standard #85 "Test Procedure for Air-Borne Noise Measurements on Rotating Electric Equipment".
- C. Motor drives for fans, regardless of where located, or other mechanical equipment located outside mechanical equipment spaces, shall not contribute to increase the manufacturer's sound power ratings by 2 dB in any octave band.

3.3 VARIABLE FREQUENCY DRIVE START-UP

- A. A factory authorized field service technician shall perform inspection of the drive installation and wiring, initial energizing and start-up, and the adjustments and programming necessary to achieve specified operation and performance.
- B. The factory-authorized field service technician shall program the 3 available resonant frequency lockout bands during motor/drive start-up based on actual motor/equipment performance for each drive. Provide the necessary frequency and vibration testing instruments.
- C. After successful start-up, a factory authorized representative shall provide a minimum of four (4) hours training and demonstration to City of New York's personnel.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 05 23

PIPING, VALVES AND FITTINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 230000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #3 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of section 230000, General Provisions, and with the provisions of all applicable codes and laws.

1.3 SUBMITTALS

A. Procedure

- 1. Prepare and make the submissions listed below and in Section 230000 in accordance with the procedure specified in Section 230000.

B. Shop drawings

- 1. Piping Materials, Joints and Fittings.
- 2. Piping Specialties.
- 3. Valve Tags and Name Plates with Schedule and Location.
- 4. Valves.
- 5. Strainers.
- 6. Hot water accessories
- 7. Anchors and guides
- 8. Thermometers, gauges, complete listing with scale range and normal operating point.
- 9. Water balance, contractors qualification, procedures, and report format
- 10. Water Balance Report.

1.4 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 230000. Produce and maintain required effect under operating criteria determined in advance by agreement with the Commissioner.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. All pipe shall be new, free from scale or rust, and of the material and weight specified under the various services. Each length of pipe shall be properly marked at the mill for proper identification with name of symbol or manufacturer.

- B. All steel piping shall be standard or extra strong weight, in conformance with the ASTM designation A-53 as manufactured by National Tube Division, Republic Steel Corp., or approved equal. Piping shall be seamless except as specified herein.
- C. All brass piping shall be standard or extra heavy weight 85% red brass semi-annealed seamless-drawn, in conformance with the ASTM designation B-43, as manufactured by Anaconda, American Brass Co., Chase Brass and Copper Co., or Revere Copper and Brass, Inc.
- D. All copper tubing shall be of weight as required for service specified in conformance with ASTM designation B-88-47 for types "L" and "K" tubing, as manufactured by Chase, Anaconda, Revere, or approved equal. Copper tubing shall be used as specified in the schedule. Tubing and fittings shall be thoroughly cleaned with sand cloth and treated with an approved flux before solder is applied.
- E. All galvanized steel piping shall be standard or extra strong weight, as specified, in conformance with the ASTM designation A-53. Pipe shall be hot-dipped zinc-coated with prime western spelter and not wipes.
- F. Generally, unless otherwise specified, joints in steel and wrought-iron piping of sizes 2 inches and under shall be screwed, and all sizes 2-1/2" inches and over shall be welded or flanged. All drain piping shall be screwed. Brass pipe shall be screwed 2 inches and smaller and flanged 2-1/2 inches and over. Copper tubing shall be silver-soldered or 95-5 solder as herein specified.

2.2 FITTINGS

- A. Fittings shall be as specified under "Fittings" for each pipe service listed in the "Pipe Schedule".
- B. Welding fittings shall be of the same material and schedule as the pipe to which they are welded. Welding elbows shall be long radius pattern unless clearances necessitate the use of standard radius pattern. Welding fittings shall be Tubetum or Ladish.

Steel Welding Fittings	ASTM A-106
Wrought Iron Welding Fittings	ASTM A- 72
Malleable Iron Fittings	ASTM A-197
Cast-Iron Fittings	ASTM A-126
Brass Fittings	ASTM B- 62
Solder Fittings	ASTM B- 88

- C. All fittings used at expansion loops or bends shall be extra heavy.
- D. Cast-iron, malleable-iron and bronze fittings shall be of Crane Manufacture or approved equal.
- E. Flanges shall be of the same weight as the fittings in each service category. All flanges shall be drilled and spot faced in conformance with fittings. Screwed and loose flanges shall be of cast iron. Welding flanges shall be of steel welding neck type, flanges on brass to be Crane No. 2104 or approved equal.
- F. Flanges shall be faced and true and made up perfectly square and tight with gaskets. Bolts, nuts and gaskets shall be dipped in a mixture of graphite and oil just before installation.
- G. Unions - Unions 2 inches and smaller shall be screwed. Unions 2-1/2" and larger shall be flanged. Screwed unions on steel pipe, unless otherwise specified, shall be of malleable

iron with bronze ground seats suitable for 300 pounds, W.S.P. Screwed unions on brass pipe shall be brass, ground joint suitable for 300 pounds W.SP. Flanged unions shall be malleable iron, gasket type suitable for 150 pounds W.S.P. Unions shall be as manufactured by Crane, Dart or approved equal.

- H. Brass pipe threads shall be cut with special brass threading dies, and the joints shall be made with lubricant. Strap wrenches, or equivalent, shall be used in making up brass pipe. Wrenches that gouge or scar the pipe will not be used.
- I. Solder for each solder-type fitting shall be of 95% tin and 5% antimony or silver solder, as specified herein.
- J. Fittings shall be of the eccentric reducing type unless otherwise noted, where changes of size occur in horizontal piping to provide for proper drainage or venting. Steel pipe bends shall be made of the very best grade open hearth, low carbon steel, leaving a smooth uniform exterior and interior finish. Pipe bends shall be made with seamless steel pipe, leaving a minimum radius of not less than five (5) pipe diameters.

2.3 PIPE SCHEDULE

- A. All piping materials installed under this Section shall be new and shall consist of the following materials and construction:

Service	2" and Smaller	2-1/2" and Larger
Chilled Water Hot Water Vents and Drains	<p>Construction: Solder joint construction with threaded adapters as required. 95-5 Tin/Antimony solder.</p> <p>Piping: Copper, Type L, hard drawn, ANSI H23.1, ASTM B88.</p> <p>Unions: Bronze solder ends, ground joints, ANSI B16.19 or ANSI B16.22.</p> <p>Flanges: Cast bronze, Class 150, solder type, ANSI B16.24</p>	<p>Welded construction with flanged connections to valves and equipment</p> <p>Black steel, schedule 40, seamless, ASTM A53, Grade A or B.</p> <p>Steel, Class 150, weld type, ANSI B16.5, ASTM A181, Grade 1.</p> <p>Steel, Class 150, weld type, ANSI B16.5, ASTM A234, Grade WPA</p>
Service	2" and Smaller	2-1/2" and Larger
Cooling Coil Drains Cold Water Make-Up	<p>Construction: Solder joint construction with threaded adapters as required. 95-5 Tin/Antimony solder.</p> <p>Piping: Copper, Type L, hard drawn, ANSI H23.1, ASTM B88.</p> <p>Fittings: Cast bronze or wrought copper, solder ends, ANSI B16.189 or ANSI B16.22</p>	<p>Solder joint construction with threaded adapters as required. 95-5 Tin/Antimony solder.</p> <p>Copper, Type L, hard drawn, ANSI H23.1, ASTM B88.</p> <p>Cast bronze or wrought copper with solder ends, ANSI B16.19 or ANSI B16.22.</p>

	Construction:	Threaded construction with threaded or flanged connections to equipment as required.	Welded construction with flanged connections to valves and equipment as required.
Emergency Generator Exhaust			
	Construction:	Threaded construction with threaded or flanged connections to equipment as required.	Welded construction with flanged connections to valves and equipment
	Piping:	Black steel, schedule 40, seamless, ASTM A106, Grade A.	Black steel, schedule 40, seamless, ASTM A53, Grade A or B.
	Fittings:	Cast iron ASTM A126B, Class 125, threaded ends.	Steel, Class 150, weld type, ANSI B16.5, ASTM A234, Grade WPA.
	Flanges:	Steel, Class 150, threaded type, ANSI B16.5, ASTM A181, Grade 1.	Steel, Class 150, threaded type, ANSI B16.5, ASTM A234, Grade WPA.
Fuel Oil Supply and Return			
		2" and Smaller	2-1/2" and Larger
	Construction:	Threaded construction with threaded or flanged connections to equipment as required.	Welded construction with flanged connections to valves and equipment as required.
	Piping:	Black steel, Schedule 40, seamless, ASTM 106, Grade A or B., inside same secondary containment pipe.	Black steel, Schedule 40, seamless, ASTM A106, Grade A or B., inside same secondary containment pipe.
	Fittings:	Cast iron ASTM A126B, Class 125, threaded ends.	Steel, Class 150, butt weld ends, ANSI B16.9, ASTM A234
	Unions:	Malleable iron, Class 150, threaded ends, ground joints, ANSI B16.49, ASTM A181, Grade 1.	Use flanges.
	Flanges:	Steel, Class 150, threaded type, ANSI B16.5, ASTM A181, Grade 1.	Steel, Class 150, weld type, ANSI B16.5, ASTM A234, Grade WPA.
Fuel Oil Vents and Steam Vents			
	Construction:	Threaded construction with threaded or flanged connections to equipment as required.	Welded construction with flanged connections to valves and equipment as required.
	Service	2" and Smaller	2-1/2" and Larger

Piping:	Galvanized steel, Schedule 40, seamless, ASTM A106, Grade A or B., inside same secondary containment pipe.	Galvanized steel, Schedule 40, seamless, ASTM A106, Grade A or B., inside same secondary containment pipe.
Fittings:	Cast iron ASTM A126B, Class 125, threaded ends.	Cast iron ASTM A126B, Class 125, threaded ends.
Unions:	Malleable iron, Class 150, threaded ends, ground joints, ANSI B16.49, ASTM A181, Grade 1.	Use flanges.
Flanges:	Galvanized Steel, Class 150, threaded type, ANSI B16.5, ASTM A181, Grade 1.	Galvanized Steel, Class 150, threaded type, ANSI B16.5, ASTM A181, Grade 1.

B. Flange Bolts and Nuts:

Bolts: ANSI B181, ASTM A307, Grade B, square head, course-thread series, Class 2B fit.

Nuts: ANSI B18.2.2, ASTM A307, Grade B, hexagonal, heavy series, semi-finished, course-thread series, Class 2B fit.

C. Gaskets: Flat ring 1/16-inch thick, compressed synthetic fiber with SBR binder. Garlock Style 3200, or an approved equal.

D. Welded Joints: Branch lines and changes in direction shall be made with factory weld fittings such as tees, 90 ells, 45 ells, weld-o-lets, thread-o-lets, and welding saddles. Job fabrication of fittings and stab-ins is not permitted.

2.4 JOINTS

A. Brass pipe threads shall be cut with special brass threading dies, and the joints shall be made up with lubricant. Strap wrenches or equivalent, shall be used in making up brass pipe. Wrenches which gouge or scar the pipe shall not be used.

B. Flange joints shall be faced true, packed and made up perfectly square and tight. Each flange joint shall be provided with best grades steel bolts and with hexagon nuts. Flanges shall be raised face, suitable for pressure of system in which they are installed.

2.5 PIPE HANGERS AND SUPPORTS

A. Provide necessary structural members, hangers and supports of approved design to keep piping in proper alignment and prevent transmission of injurious thrusts and vibrations. In all cases where hangers, brackets, etc., are supported from concrete construction, do not weaken concrete or penetrate waterproofing. All hangers and supports shall be capable of screw adjustment after piping is erected. Hangers supporting piping expanding into loops, bends and offsets shall be secured to the building structure in such a manner that horizontal adjustment perpendicular to the run of piping supported may be made to accommodate displacement due to expansion. All such hangers shall be finally adjusted both in the vertical and horizontal direction, as required. Hangers in contact with copper or brass pipe shall be copper plated steel or provided with felt sleeve.

- B. Pipe hangers shall be of the band type for piping 2" and smaller, clevis for pipe 2 1/2" and larger except where otherwise noted. Hangers for generator exhaust and steam pipe 2" and smaller shall be of the clevis roller type and two rod roller type for pipe 2 1/2" and larger except where otherwise noted.
- C. All vertical piping shall be supported by means of heavy wrought iron or steel clamps securely bolted or welded to the piping, and with end extension bearing on the building. Riser clamps shall be constructed of two flat wrought steel bar yokes formed to fit the pipe and bolted together.
- D. Beam clamps - hangers supported from steel shall be center loading beam clamps for hangers supporting piping 2 inches. For piping 2-1/2 inches and larger, I beam clamps shall be forged steel. "C" clamps are not to be used.
- E. Where piping is run near the floor and not hung from the ceiling construction, but is supported from the floor or in a trench, such supports shall be of pipe stanchion with base flange and adjustable top yoke with u-bolt retainer.
- F. Where piping is run above the floor, and is not hung from the ceiling construction or not supported from the floor, such piping shall be supported from the wall with bracket hangers, expansion bolted or fish plated to the wall. Provide details for review by Commissioner.
- G. For water piping (fluid less than 100F), provide insulated saddle with vapor barrier or pipe insulation plus protection shield with vapor barrier jacket. For steam, condensate, and hot-water heating piping 2 inches and smaller same as above. For hot-water heating piping 2-1/2 inches and larger, provide steel pipe covering protection saddles spot welded to pipe with insulation insert.
- H. Piping in trenches shall rest or hang from angle iron cross supports provided by Contract #3 Contractor.
- I. Hanger rods shall be of galvanized steel not exceeding six (6) feet in length of the following diameters. Trim excess rod to within 1" of the support. Supplementary steel shall be provided as necessary

PIPE SIZE	ROD DIAMETER
2 inches and below	3/8 in.
2-1/2 & 3 in.	1/2 in.
4 & 5 in.	5/8 in.
6 in.	3/4 in.
8 in. and above	7/8 in.

- J. Support Schedule

All hanger components of hanger assembly shall be hot dip galvanized or cadmium plated.

TYPE	GRINNELL	NATIONAL	SUPER TOLCO	CARPENTER & PATTERSON	M-CO
Band	70	110/115	2	1A	105

2.6 VALVES - GENERAL

- A. All valves shall be of a design which the manufacturer lists for the service and shall be of materials allowed by the latest edition of the ASME Code for Pressure Piping for the pressure and temperature contemplated, unless a higher grade or quality is herein specified. All valves shall be of the same manufacturer, except for special applications.
- B. The system shall be supplied with gate or butterfly type isolation valves as specified herein, at all branches mains and risers.
- C. All valves shall be installed with the best workmanship and are to have neat appearance and be arranged so that they are easily accessible.
- D. Each valve shall have the maker's name or brand, the figure or list number and the guaranteed working pressure cast on the body and cast or stamped on the bonnet, or shall be provided with other means of easy identification.
- E. Check valves installed in the horizontal position shall be swing checks; valves installed in the vertical position shall be silent checks, except that all check valves in pump discharges shall be silent checks.

- F. Provide blow-off valves at all strainers, and where shown on the drawings.
- G. Provide valve operating chain on all gate and globe valves in Mechanical Equipment Rooms - 3" and larger, which are more than 6'-6" above the operating floor. Unit shall be complete with adjustable sprocket, chain and guide (Crane "Babbit" type or approved equal). Provide hook to keep chain out of the way.
- H. Generally, all valves are to be of the gate type, except that globe valves shall be used for throttling services and on traps, and pressure reducing and control valve by-passes. Globe valves used on by-passes shall have monel metal mountings.
- I. All valves 2 inches in diameter and smaller shall be all bronze with bronze bodies. Valves 2-1/2 inches in diameter and larger shall have iron bodies with bronze mountings unless otherwise specified.
- J. All flanged-end valves shall have renewable metal seat rings and discs. On gate valves these parts shall be of bronze, on all globe valves they shall be of bronze and suitable for throttling service.
- K. All screwed-end globe valves shall be of the union bonnet type, non-rising stem with renewable metal seats and discs.
- L. All valves shall have their bonnets back-seated to provide for packing under pressure.
- M. All gate valves shall be of the solid tapered wedge type, union bonnet, rising stem.
- N. All valves 5 inches in diameter and larger shall be furnished with an integral by-pass and a by-pass suitable for the operating pressure.
- O. Drain valves shall be provided on tanks, receivers, risers and where they may be required or necessary, or directed for draining the lines and equipment. Drain valves or plug cocks shall be provided at the low points for proper drainage, and where required or directed cocks and valves shall be provided with threaded ends for hose connections.
- P. All valves up to 2 inches in diameter shall have screw ends, 2-1/2" in diameter and over shall have flanged ends.
- Q. Isolation valves shall be provided at all pumps, tanks, reducing and automatic or mechanical flow control devices, radiation, coils and heat exchangers, and at all other apparatus requiring partial drainage of the system for periodic maintenance or inspection. The isolation valves shall be so located as to permit removal and/or service of the isolated equipment without draining complete or substantial portions of the system.
 - 1. Provide flanges or union(s) to permit removal of all equipment isolated as indicated above.
 - 2. The flow and control diagrams do not indicate the complete requirement for isolation valves in the system. Manual valves are depicted in flow diagrams to show relative positions of division 230923 control devices.

2.7 VALVE SCHEDULE

- A. All valves shall conform to the requirements of this Section for the services indicated and shall be provided as indicated on the Drawings.
- B. Valves for hot water, chilled water, condenser water, cold water (make-up), and pumped condensate piping systems shall comply with the following:

<u>Valve Type</u>	<u>Manufacturer</u>	<u>Construction</u>
Gate Valves 2" & smaller Class 150	Stockham B-124 Milwaukee 1169 NIBCO S-134	Bronze body, solid wedge disc, rising stem, union bonnet, threaded ends, 150 psi SWP, 300 psi WOG.
Gate Valves 2-1/2" & larger Class 125	Crane 465-1/2 Stockham G-623 Milwaukee F-2885 NIBCO F-617-0	Iron body, solid wedge disc, OS&Y, bolted bonnet, flanged ends, 125 psi SWP, 200 psi WOG.
Globe Valves 2" & smaller Class 150	Crane 7TF Stockham B-22T Milwaukee 590T NIBCO T-235-Y	Bronze body, composition steam disc, union bonnet, threaded ends, 150 psi SWP, 300 psi WOG.
Plug Valves 2-1/2" & larger Class 125	DeZurik 118F	Cast iron body, eccentric acting, resilient plug facing, stainless steel bearings, nickel seat flanged ends, ANSI 125, 150 psi CWP
Swing Check Valves 2" & smaller Class 150	Crane T/S-433 Stockham B-309/319 Milwaukee 07 NIBCO 563Y	Bronze body, horizontal swing, bronze re-grinding disc, Y-pattern, threaded ends, 150 psi SWP, 300 psi WOG.
Swing Check Valves 2-1/2" & larger Class 125	Crane 373 Stockham F-931 Milwaukee F-2974 NIBCO F-918	Iron body, horizontal swing, bolted cap, flanged ends, 125 psi SWP, 200 psi WOG.
Spring Check Valves 2" & smaller Class 150	Mueller 109M-BP	Bronze body, globe type, stainless steel spring, bronze seat and disc, flanged ends.
Spring Check Valves 2-1/2" & larger Class 125	Mueller 105M-AP	Iron body, globe type, stainless steel spring, bronze seat and disc, flanged ends.
Ball Valves 2" & smaller Class 150	Watts B-6001 Apollo 70-200 Crane 9322 Stockham S-216 BRRS Milwaukee ML-123E NIBCO LD2000	Bronze body, two-piece, full port, reinforced Teflon seats, lever operated. 150 psi SWP 600 psi WOG. Stem extensions with sleeves shall be provided to suit insulation thickness, so handle is located clear of insulation.
Butterfly Valves 2-1/2" & larger Class 125	Crane 44-FXZ Stockham LD-712 Milwaukee ML-123E NIBCO LD2000	Ductile iron body, lug type, stainless steel stem aluminum-bronze disc, bronze or Nylatrin GS bushings, EPDM liner, with lever lock handle for 6 inches and smaller and weatherproof gear operators for 8 inches and larger, and memory stop on return piping valves.
Triple Duty Valves Class 125	Bell & Gossett 3DS Mueller 721	Combination balancing, shut off and check valve. Cast iron body, bronze seat and disc, rising stem, 175 psi WOG, ANSI Class 125

C. Combination Balancing/Flow Measuring Valve

1. Valves 1/2-inch to 3-inch size shall be of bronze/brass ball construction with glass and carbon filled TFE seat rings. Valves shall have differential pressure

read-out ports across valve seat area. Read-out ports shall be fitted with internal EPT inserts and check valves. Valve bodies to have 1/4" NPT tapped drain/purge port. Valves shall have memory stop feature allowing valve to be closed for service and then opened to setpoint without disturbing balance position. All valves to have calibrated nameplates to assure specific valve settings. Valves shall be designed for positive shut-off.

2. Valves shall be manufactured by Bell & Gossett, Armstrong or Griswold.

2.8 AUTOMATIC AIR VENTS

- A. Furnish where shown on drawings and wherever else required, for water systems, of float type to expel air from system and prevent air binding. Provide each valve with 1/2" shut-off valve and overflow of soft copper tubing extended to spill over nearest open drain. Similar to Sarco type 13W or approved equal.

2.9 STRAINERS

- A. There shall be approved strainers in the inlet connections to each valve feeder and makeup connection, each water regulating valve, and each diaphragm valve, and where else indicated on the drawings. The intention is to protect by strainers, all apparatus of an automatic character, whose proper functioning would be interfered with by dirt on the seat, or by scoring of the seat.
- B. All strainers shall have cast iron, semi-steel or bronze bodies of ample strength for the pressure to which they shall be subjected, removable cylindrical or conical screens of monel or stainless steel and suitable flanges or tappings to connect with the piping they serve. They shall be of such a design as to allow blowing out of accumulated dirt, and to facilitate removal and replacement of a strainer screen, without disconnections of the main piping.
- C. All strainers shall be Y-type with removable screen. Two-inch and smaller or where installed in non-ferrous piping system, screwed or flanged, bronze Sarco type BT or approved equal.
 1. 2-1/2" and larger in ferrous piping systems, flanged cast iron Sarco type AF-125 or approved equal. Brass screens for water 1/16" for 3" inclusive; 1/8" for 4" and above.

2.10 FINTUBE RADIATION:

- A. Type L, seamless copper tubing with aluminum fins permanently bonded to the tube and guaranteed for a pressure of 200 PSIG with temperatures up to 250°F.
- B. 16 gauge steel enclosure with spring clip fastening.
- C. Prime coat and factory finished with baked enamel. Color to be selected by the Commissioner from manufacturer's samples.
- D. Accessories: Full 20 gauge backplate with urethane gasket, combination hanger/bracket with cradle and damper.
- E. Refer to plans for capacity and cover style.
- F. Manufacturer:
Standard
Sterling
Trane
Vulcan

2.11 PRESSURE GAUGES

- A. Phosphorous bronze Bourdon tube type, cast aluminum 4-1/2" diameter case with blowout disc, stainless steel movement with bronze bushing brass socket and black numerals on a white face.
- B. Accuracy: 1/2 or 1% of scale range.
- C. Scale to be selected so that normal operating point is between 35% and 65% of full scale.
- D. Each gauge to include brass petcock. Gauges on steam piping to include syphon.
- E. Gauges to be installed:
1. Across water coils.
 2. Across tube bundles (e.g. chiller evaporator, chiller condenser, convertors).
 3. Suction and discharge of pumps.
(Compound gauge on fuel oil pump suction)
 4. Inlet and outlet of pressure reducing valves.
 5. Inlet and outlet of steam control valves.
 6. Additional locations as shown on plans.
- F.

<u>Manufacturer</u>	<u>Series</u>
H.O. Trerice	500X
Albert A. Weiss	UG-1
Weksler Instruments	AA1
Or Approved Equal	

2.12 THERMOMETER

- A. Mercury filled red reading column type, 9" long, with one piece aluminum case and sealed replaceable glass element. Brass stem with union connection and adjustable angle to permit reading from any angle. Black numerals on white background.
- B. Accuracy: 1% of scale range.
- C. Scale to be selected so that normal operating point is between 35% and 65% of full scale.
- D. Each thermometer to be installed in an extension neck brass separable socket. Extension neck length to be coordinated with insulation thickness. Socket and thermometer insertion length to be minimum of 75% pipe diameter.
- E. Thermometers to be installed:
1. Supply and return of water coils (single return on multiple coil bank)
 2. Supply and return of tube bundles (e.g. chiller evaporator, chiller condenser, convertors)
 3. Circulating pump discharge
 4. Supply and return of water boilers.
 5. Additional locations as shown on plans.
- F.

<u>Manufacturer</u>	<u>Series</u>
1. Taylor	E
2. H.O. Trerice	BX
3. Weksler Instrument	AA5

2.13 REMOTE READING THERMOMETER

- A. Mercury actuated bronze Bourdon tube type, cast aluminum 4-1/2" diameter flanged ease, stainless steel movement with bronze bushing, brass socket, and black numerals on a white face.
- B. Braided capillary tube and sensing bulb shall be stainless steel and fully ambient compensated for its entire length. Sensing bulb to be installed in a extension neck brass separable socket. Extension neck length to be coordinated with insulation thickness.
- C. Accuracy 1% of scale range.
- D. Scale to be selected so that normal operating point is between 35% and 65% of full scale.
- E. Thermometers to be installed as shown on plans.
- F.

<u>Manufacturer</u>	<u>Series</u>
1. H.O. Trerice	M80300
2. U.S. Gauge Supertherm	9100.
3. Weksler Instruments	415A.

PART 3 - EXECUTION

3.1 PIPING INSTALLATION - GENERAL

- A. Provide and erect in a workmanlike manner, according to the best practices of the trade, all piping shown on the drawings or required to complete the installation intended by these specifications.
- B. The drawings indicate schematically the size and location of piping. Piping shall be set up and down and offset to meet field conditions.
- C. Contract #3 Contractor shall inform himself from the general construction specifications and plans, of the exact dimensions of finished work and of the height of finished ceilings in all rooms where radiation, units, equipment or pipes are to be placed and arrange his work in accordance with the schedule of interior finishes, as indicated on the architectural drawings.
- D. All piping shall be run perpendicular and/or parallel to floors, interior walls, etc. Piping and valves shall be grouped neatly and shall be run so as to avoid reducing headroom or passage clearance. All valves, controls and accessories concealed in furred spaces and requiring access for operation and maintenance shall be arranged to assure the use of a minimum number of access doors.
- E. All pipe lines made with screwed fittings must be provided with as sufficient number of flanges or unions to make possible any taking down of the pipes without breakage of fittings.
- F. All piping shall be erected so as to insure a perfect and noiseless circulation throughout the system. No bull head tees will be permitted.
- G. All valves and specialties shall be so placed as to permit easy operation and access and all valves shall be packed at the completion of the work before final inspection.

- H. Provide proper provisions for expansion and contraction in all portions of pipe work, and to prevent undue strains on piping or apparatus connected therewith. Provide double swings at riser transfers and other offsets wherever possible, to take up expansion. Arrange riser branches to take up motion of riser.
- I. Approved bolted, gasketed, welded flanges shall be installed at all apparatus and appurtenances, and wherever else required to permit easy connection and disconnection. Screwed unions shall be used on piping 2" or less.
- J. All piping connections to coils and equipment shall be made with offsets provided with screwed or welded bolted flanges so arranged that the equipment can be serviced or removed without dismantling the piping.
- K. If after plant is in operation, any coils or other apparatus are stratified or air bound (by vacuum or pressure) they shall be repiped with new approved and necessary fittings, air vents, or vacuum breakers at no extra cost. If connections are concealed in furring, floors, or ceilings, this trade shall bear all expenses of tearing up and refinishing construction and finish, leaving same in as good condition as before it was disturbed.
- L. Make all changes in size and direction of piping with fittings. Do not use miter fittings, face, or flush bushing, close nipples or street elbows. Provide clean outs at all changes in direction and at other locations shown in drainage piping.
- M. Make all branch connections with tees, except that on steel piping forged steel "Weldolets" as manufactured by Bonney Forge may be used where the branch pipe is not larger than one half the size of the main pipe.
- N. Tubing shall be erected neatly in a workmanlike manner. Bends in soft copper tubing shall be made with approved tubing benders to prevent deformation of the tubing in the bends. Approved seat-to-pipe threaded adapters shall be provided for junctions with valves and other equipment having threaded connections.
- O. Vertical sections of main risers shall be constructed of pipe lengths welded together. No couplings shall be used.
- P. The ends of all pipe and nipples shall be thoroughly reamed to the full inside diameter of the pipe and all burrs formed in the cutting of the pipes shall be removed.
- Q. Piping shall be installed in accordance with the latest edition of the ASME Code for pressure piping, and all other applicable codes.
- R. All piping shall be concealed above furred ceilings in rooms where such ceilings are provided (except where specifically indicated otherwise on the drawings), or walls or partitions, except as otherwise indicated.
- S. Dissimilar piping shall be connected with dielectric connector as made by Eboo Company.
- T. Piping at all equipment and control valves shall be supported to prevent strains or distortions in the connected equipment and control valves. Piping shall be supported to allow for removal of equipment, valves and accessories with a minimum of dismantling and without requiring additional supports after these items are removed.
- U. Pipe nipples - any piece of pipe 3" in length and less shall be considered a nipple. All nipples with unthreaded portion 1-1/2" and less shall be extra heavy. Only shoulder nipples shall be used. No close nipples will be provided.

- V. Screw threads shall be cut clean and true; screw joints made tight without caulking. No caulking will be permitted. A non-hardening lubricant will be permitted. No bushings shall be used. Reductions, otherwise causing objectionable water or air pockets, to be made with eccentric reducers or eccentric fittings. All pipe shall be reamed out after cutting to remove all burrs.
- W. Pitch water piping upward one inch per 100 feet in direction of flow to ensure adequate flow without air binding, and to prevent noise and water hammer.
- X. Pitch drain piping 1/8 inch per foot in the direction of flow.
- Y. Branch connections to mains are to be made in such a manner as to prevent air trapping and permit free passage of air. To meet job conditions mains shall be set up to maintain headroom, and clear other trades.
- Z. Provide air vents at all high points in water piping. Provide oversized float operated automatic air vent at high points of equipment connections and in mechanical rooms or as shown on piping details. Provide manual vents at all other locations. When installed above inaccessible ceilings, valves shall be installed remote and identified on valve tag chart.
- AA. Avoid 90 degrees lift set-ups in supply lines by using 45 degree ells. Where 90 degree lifts exceed 12" install automatic air vent in supply lines. All lifts in return lines shall be installed with automatic air vents.
- BB. Pipe outlet of all air vents to an open sight drain if the vent is concealed or to within two feet of the floor within Machine Rooms.
- CC. All water piping shall pitch back to low points for drainage. Low points shall be provided with 3/4 inch hose cocks.
- DD. Provide drain valves at the heel of all interior main water risers. Provide drain valves at the heel of all perimeter water risers if shown on drawings. Pipe all drain valves to an indirect waste.
- EE. Miscellaneous drains, vents, reliefs, and overflows from tanks, equipment, piping, relief valves, pumps, etc., shall be run to the nearest open sight drain or roof drain. Provide drain valves whenever required for complete drainage of piping including the system side of all pumps.
- FF. Where pipe penetrates walls, partitions or slabs provide Schedule 40 steel sleeves with an internal diameter at least 2" larger than the outside diameter of the pipe. Set sleeves before pouring concrete or securely fasten and grout with cement. Floor sleeves shall project 1" above the finished floor. Pack void between pipe and sleeve with an approved firestop material. See Section 230000.
- GG. Provide escutcheons fastened to pipe and covering sleeve on all penetrations visible within occupied spaces, corridors, and mechanical equipment rooms. Escutcheons are to be chrome plated brass, Ritter No. 36A for vertical lines, Ritter No. 3A for all other piping.
- HH. Cross connection of any devices, or construction which will permit backflow connections between a water distribution system and any part of the drainage system shall not be installed.
- II. Provide domestic water connections from valved outlets to any equipment requiring same.

- JJ. Keep piping 2'-0" outside the vertical line of unprotected electrical equipment, or provide painted, watertight gutters or pans with pipe drains.

3.2 PIPING SUPPORT

- A. Piping shall not be hung from other piping or from equipment of other trades.
- B. Piping installed shall be hung from supplemental steel attached to and spanning the steel structure or with chemical adhesive anchors. Use of vertical expansion shields shall not be permitted. Where vertical support into masonry or concrete structure cannot be avoided, use supplemental steel as noted above, or use chemical adhesive anchors.
1. When attaching to concrete structure, provide two chemical adhesive anchors at each support point. The chemical anchors shall be separated by a minimum of 8". A 2.5x2.5x3/8 angle iron shall span the two chemical anchors. Drilling for chemical adhesive anchors must not interrupt or displace any existing rebar. Concrete insert shall be either external or internal threaded element by the chemical adhesive manufacturer.
 2. When attaching to concrete rib construction, the chemical anchors shall be attached to the upper third of the rib. Do not attach to the bottom of concrete ribs.
 3. Minimum chemical anchor embedment shall be 3". The two chemical adhesive anchors shall be the same diameter as the attachment rod.
 4. Chemical adhesive product for solid concrete applications shall be Hilti HIT RE 500 or approved equal with either internally threaded inserts or threaded rod supplied by the chemical adhesive manufacturer. Inserts to be similar to Hilti HIS or approved equal. Threaded rod to be similar to Hilti HAS product or approved equal.
- C. Hanger rods shall not pierce ducts.
- D. All piping connected to pumps and compressors within 50 feet of such equipment, and where required or directed to eliminate vibration or isolate pipe from building structure, Contract #3 Contractor shall supply and install spring type antivibration isolators as called for in Section 230548 of these specifications.
- E. Where additional steel is required for the support of hangers, the Contract #3 Contractor shall furnish and install same subject to the approval of the Commissioner.
- F. All piping running on walls shall be supported by means of hangers suspended from heavy galvanized steel angle wall brackets. No wall hooks will be permitted.
- G. Lateral bracing of horizontal pipe shall be provided where required to prevent side sway or vibration. The lateral bracing shall be of a type approved by the Commissioner and shall be installed where directed by the Commissioner.
- H. All horizontal copper tubing shall be supported by hangers not over 6' apart for piping 1-1/4" and smaller. Space hangers no more than 10' apart for piping 1-1/2" and larger. All branches shall have separate hangers. Hangers shall be Clevis type (with copper bottom support for uninsulated brass pipe or copper tubing). If channel or angle iron trapeze hangers are used, the space on the hangers for uninsulated brass pipe or copper tubing shall be wrapped with lead shields to isolate tubing.

- I. Hanger rods attached to concrete inserts or piping racks shall not be used to support piping in Mechanical Rooms or for the support of individual pipes weighing in excess of 20 lbs. per linear foot.

3.3 PIPING JOINTS

A. Welding

1. Joints between sections of pipe and between pipe and fittings shall be fusion welded in accordance with the recommendations of the American Welding Society. Mitering of pipe to form elbows, matching straight runs to form tees or any similar construction shall not be done.
2. All welding shall be done as outlined in the latest edition of the ASME Code for pressure piping.
3. Welding process - all welding shall be done by the oxyacetylene or electric arc welding process in accordance with the requirements set forth in welding of pipe joints of the codes for pressure piping.
4. Beveling and welding - all pipe 2-1/2 inches and larger may be purchased mill beveled or shall be machine beveled on both ends before welding. On odd lengths of pipe, beveling may be accomplished by means of the oxyacetylene cutting torch provided all paint, rust, scale and oxide are carefully removed with hammer, chisel or file and bevel left smooth and clean. Joints shall be prepared and welded to assure thorough fusion of alignment and the production of a joint that shall develop the full strength of the pipe and that shall be leakproof in service.
5. Welding tees - welding tees shall be used when specified hereinafter. Where necessary, branch connections shall be reinforced in an approved manner. For the smaller branches, where welding tees are unavailable, nozzles shall be welded to pipe. Where such nozzles are welded to the pipe, all cutting oxide which may drop inside the pipe shall be removed before welding the branch or section in place. Where branch size is one half the size of main or larger, use welding tees. Where branch size is two (2) sizes smaller than the size of main "Weldolets" or "Sockolets" may be used.
6. Welding rods - the welding rod used for welding steel and wrought iron shall be approved welding rod in accordance with ASTM SPEC. A233.
7. Welder shall be fully certified by New York City to certify welders for pressure piping.

B. Flanged Joints

1. Use matched flange faces and 1/16" thick compressed gaskets.
2. When connection to equipment with flat face flange, grind flange raised face flat and use full faced gaskets.

C. Screwed Joints

1. Do not damage fitting surface, remove burrs, apply red lead and ground graphite in linseed oil to male threads only. Do not use wicking, cord or similar materials. Clean joint thoroughly of excess jointing material.

D. Soldered Joints

1. 95-5 wire solder. Completely clean all surfaces and coat with a thin layer of flux.

E. Brazed Joints

1. Conform to ASA-B31.1 and ASTM B-260-56T in accordance with the requirements of the manufacturers of the fittings and the brazing material.

3.4 CLEANING OF PIPING

- A. Plug all open ends of piping, valves and equipment except when work is being performed. Protect connections to equipment and control valves with temporary screens and flush piping with water. Remove dirt and debris collected.
- B. Thoroughly clean the piping to remove all organics, rust, and all foreign matters and to prepare the system for permanent treatment.
- C. Perform chemical cleaning after completing all pressure and leakage tests and thoroughly flushing the systems.
- D. Use cleansing agent which will not interact with any of the materials in the systems in any way to produce corrossions, form deposits, weaken, reduce the life or in any way have a detrimental effect on any system components.
- E. Fill the system with clean water and add sufficient cleaning preparation to provide a concentration adequate to perform complete cleaning. Add the cleaning preparation at a point which will assure good mixing.
- F. Provide temporary containers to accommodate the foam that may form and temporary pumps to circulate the chemical solution.
- G. Circulate the mixture of cleanser and water for a sufficient length of time to complete the cleaning.
- H. Drain the system, flush with clean water, clean all strainers and screens and refill the system.
- I. Cleaner for the new piping shall be Nalprep 330 as manufactured by the Nalco Chemical Co., or the approved equal.
- J. Entire cleaning operation shall be performed by a competent water treatment service in strict accordance with the manufacturer's recommendations. Provide written certifications after the cleaning operation is complete.

3.5 TESTS

- A. Tests all piping except drainage connections, including valves, fittings and joints hydrostatically at a pressure equal to at least 1-1/2 times the rated pressure, but no less than 200 psig for a minimum of four hours. Blank-off or remove all elements or equipment which may be damaged by the pressure. Open but do not back-seat valves. Inspect all joints and connections.
- B. Test drainage piping hydrostatically and with smoke in accordance with the local authorities.
- C. Repair all leaks, defects or damage revealed by resulting from the test and re-test the system.

- D. Do not insulate or conceal piping until the system has been tested and the results approved.
- E. Perform tests in the presence of the Commissioner.

3.6 AIR ELIMINATION

- A. The Contract #3 Contractor's attention is specifically directed to the problem of proper air elimination. In installing water piping systems and all equipment, the Contract #3 Contractor shall carefully plan the actual installation in such a manner that high points and air pockets be kept to a minimum and that they are properly vented where they are unavoidable. All air elimination devices called for on the drawings and in these specifications shall be provided and properly installed. In addition, Contract #3 Contractor shall furnish and install all other air elimination devices which may be required due to job conditions. The liability of the Contract #3 Contractor under the guarantee provisions of the contract is intended to cover his responsibility for a proper, continuous and automatic air elimination to assure even and balanced distribution of water to all equipment.

3.7 ANCHORS

- A. All anchors shall be separate and independent of all hangers and supports. Anchors shall be of heavy blacksmith construction suitable in every way for the work of this contract. Anchors shall be welded to the pipe and fastened to the structure with bolts.
- B. Anchors shall be fabricated and assembled in such a form as to secure the piping in a fixed position. They shall permit the line to take up its expansion and contraction freely in opposite directions away from the anchored points; and shall be so arranged to be structurally suitable for particular location, and line loading. Submit details for approval.

3.8 WATER BALANCE

- A. Balance all new water systems and those designated existing water system to the quantities shown with the following tolerances:
 - 1. Pumps: Design Flow plus 5%
 - 2. Coils: Design Flow plus 5%
- B. Balance in accordance with ASHRAE, AABC, or NEBB procedures and submit all readings.
- C. Water system balancing is to be performed by a professional organization, qualified by experience and practice to perform this service. Submit evidence of qualifications, balancing procedures, and report forms for approval prior to start of work.
- D. Submit three bound copies of the water balance report to the Commissioner. Balance Report to include the following data for each water system:

Pump Designation, location, system type.
Manufacturer, model number, size.
Suction and discharge pressure readings.
Balancing valve position.
Motor manufacturer, frame, horsepower, volts, phase, hertz, and RPM.
Motor amps - Design versus Actual.
Water coil GPM, entering water temperature, leaving water temperature and pressure drop (Design versus Actual) - Balancing valve position.
Tube bundle GPM, entering water temperature, Leaving water temperature, and pressure drop (Design versus Actual) - Balancing valve position.
Steam coil entering pressure, flow rate, air quantity, entering and leaving air temperature.

SECTION 23 05 48

EQUIPMENT BASES AND VIBRATION CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 230000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #3 Contractor.
- C. Refer to ASHRAE Guidelines on Vibration Isolation in the 2007 ASHRAE Handbook – HVAC Applications, Chapter 49, for additional information not covered in this section.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 230000, General Provisions, and with the provisions of all applicable codes and laws.

1.3 QUALITY ASSURANCE

- A. Manufacturer shall:
 - 1. Determine vibration isolation sizes for all locations.
 - 2. Provide piping and equipment isolation systems as scheduled or specified.
 - 3. Guarantee specified isolation system deflection.
 - 4. Provide installation instructions and drawings.
 - 5. Substitution of "Internally Isolated" mechanical equipment in lieu of the specified isolation of this section must be approved for individual equipment units by the Commissioner. This type of substitution will only be considered with a letter of guarantee from the equipment manufacturer that states that the "Internal Isolated" mechanical equipment is equivalent to the specified isolation outlined in this section.

1.4 SUBMITTALS

- A. Submit the following data in a comprehensive vibration isolation submittal for approval, clearly identifying each item of equipment supported and the isolation to be installed at each point of support.
 - 1. Summary sheet of equipment supported and the isolation to be installed at each point of support. The following items shall be provided on the summary sheet.
 - a. Location
 - b. Estimated load
 - c. Type by model number

- d. Rated capacity (lbs.)
- e. Rated deflection (in.)
- f. Estimated deflection under estimated load (in.)

2. Dimension detail for each isolation device.
3. Piping and duct layout drawings showing each point of support and isolator type selected by model number and spring color reference to summary sheet.
4. Horsepower of each motor, and rpm of both driven and driver, in each supported unit.
5. Deflection as indicated in the Vibration Isolation Schedule herein, in inches.
6. Scheduled deflection of each isolator. Identification of each isolator selected by model number and spring color.
7. Deflection of each isolator under the calculated load, actual loaded and unloaded measurable spring height.
8. The loading at which each isolator would be fully compressed to solid.
9. The load at which each isolator would operate at the deflection recommended in the Vibration Isolation Schedule herein.

B. Shop Drawings

1. Vibration isolation equipment.
2. Submittal data shall include complete mounting details of each isolated piece of equipment, including static deflection, operating and free heights, and outside spring diameter, and isolation efficiencies.
3. Steel bases and concrete inertia bases shall be completely detailed.
4. Include clearly outlined procedures for installing and adjusting the isolators.
5. Performance report and calculations for vibration isolation equipment.
6. Manufacturers' certified reports on motorized equipment alignment and installation.
7. Piping and duct layout drawings showing each point of support and the isolator type selected by model number and spring color reference to the summary sheet.
8. The loading at which each isolator would be fully compressed to solid.
9. Anchor bolt locations.
10. Reinforcing and template steels.
11. Quality Assurance Provisions

C. Samples

1. Provide one sample of each type of vibration isolator in use on the project.

D. Final Inspection Report

1.5 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 230000.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements specified herein, provide vibration isolation materials, bases and systems by one of the following or approved equal:

1. Kinetics Noise Control, Inc.
6300 Irelan Place
P.O. Box 655
Dublin, OH 43017
877.457.2695
www.kineticsnoise.com
2. Mason Industries, Incorporated
350 Rabro Drive
Hauppauge, New York 11788
631-348-0282
www.mason-ind.com
3. Vibration Mountings & Controls, Inc.
113 Main Street
Bloomingdale, NJ 07403
973-838-1780
www.vmc-kdc.com

- B. All products specified under this section shall be provided by one manufacturer.

- C. Where listed Mason Industries, Inc. (M.I.I) provided as a basis of design.

- D. Where exposed to corrosive elements: corrosion protected.

2.2 VIBRATION ISOLATIONS, GENERAL

- A. All mechanical equipment shall be mounted in accordance with the specifications below and with the specific requirements shown in the equipment schedules. The vibration isolation manufacturer shall provide supervision to ensure proper application, installation and adjustment of the isolators. Upon completion of the installation and after the system is put into operation, the manufacturer shall make a final inspection and report. The Contract #3 Contractor shall submit this report to the Commissioner, in writing, certifying

the proper performance of the installation.

- B. The isolation manufacturer shall supply all unit isolators, complete rails, fan and motor bases and structural steel forms for concrete inertia blocks, where called for, and shall be responsible for the selection of all vibration eliminators and shall guarantee to meet the requirements of this specification.
- C. Wherever rotational speed is mentioned as the disturbing frequency the lowest such speed in the system shall be used. All isolation devices shall be selected for uniform static deflections according to distribution of weight.
- D. Vibration isolators shall be designed or treated for resistance to corrosion. Steel components shall be PVC coated, or phosphated and painted with rust-resistant enamel. Nuts, bolts and washers shall be zinc-electroplated. Structural steel bases shall be thoroughly cleaned of welding slag and primed with metal etching primer and painted with rust-resistant enamel. Isolators exposed to the weather shall have all steel parts hot-dipped galvanized. Nuts, bolts and washers may be cadmium plated. Spring components shall be cadmium plated and neoprene coated.
- E. All fan units and air handling units (except fans mounted on slab on grade) shall be isolated as follows:

1.	Up to 450 RPM	75% efficiency (3-1/2" max. defl.)
2.	450 RPM to 850 RPM	90%
3.	850 RPM and Over	95%
- F. Submittals shall show disturbing frequency, required efficiency, designed deflection and outside diameter of springs, when pertinent.
- G. Horizontal pipe runs - all horizontal pipe runs within Mechanical Equipment Rooms and within 50 feet of final connections to all equipment having motors of 1/2 horsepower or larger, shall be isolated from building structure by means of spring hanger units designed for insertion in rods.
- H. All vibration isolators shall have either known undeflected heights or calibration markings so that, after adjustment, when carrying their load, the deflection under load can be verified, thus determining that the load is within the proper range of the device and that the correct degree of vibration isolation is being provided according to the design.
- I. All isolators shall operate in the linear portion of their load versus deflection curve. Load versus deflection curves shall be furnished by the manufacturer, and must be linear over a deflection range of not less than 50% above the design deflection.
- J. The ratio of lateral to vertical stiffness shall be not less than 1.0 nor greater than 1.5.
- K. The theoretical vertical natural frequency for each support point based upon load per isolator and isolator stiffness shall not differ from the design objectives for the equipment as a whole by more than + 10%.
- L. All neoprene mountings shall have a shore hardness of 40 to 65, after minimum aging of 20 days or corresponding oven-aging.

2.3 MOUNTINGS

- A. Spring Type:
 - 1. Spring isolators shall incorporate the following:
 - a. Minimum diameter of 0.8 of the loaded operating height

- b. Corrosion resistance where exposed to corrosive environment with:
 - i. Springs cadmium plated and neoprene coated.
 - ii. Hardware cadmium plated.
 - iii. All other metal parts hot dip galvanized.
- c. Reserve deflection (from loaded to solid height) of 50% of rated deflection
- d. Leveling device
- e. 1/4" thick neoprene acoustical base pad.
- f. Designed and installed so that ends of springs remain parallel.
- g. Adequate operating clearance.
- h. Non-resonant with equipment forcing frequencies or support structure natural frequencies.
- i. Springs should not be welded to top and bottom plates.

2. Type "A": Spring isolators to be one of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	FDS
Mason Industries, Inc.	SLF
Vibration Mountings	Spring-Flex Series "A"

3. Type "A-S": Spring isolators shall incorporate seismic restraint and be one of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	SSLFH
Vibration Mountings	

4. Type "B": Spring isolators shall be the same as Type "A" except:

- a. Where operating weight differs from installed weight, provide built-in adjustable limit stops to prevent equipment rising when weight is removed. Stops not in contact during normal operation.
- b. Two layers of 1/4" neoprene base pad separated by 1/16" sheet steel.
- c. Tapped holes in top plate for bolting to equipment.
- d. Capable of supporting equipment at a fixed elevation during equipment erection.
- e. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	SLR
Vibration Mountings	AWR

5. Type "B-S": Spring isolators incorporating seismic restraint shall be one of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	SSL
Vibration Mountings	

6. Type "C": Spring hanger rod isolators shall incorporate the following:

- a. Spring element seated on a steel washer within a neoprene cup.
- b. Steel retainer box encasing the spring and neoprene cup.
- c. Neoprene bushing for lower rod hole to prevent steel-to-steel contact.
- d. Spring diameters and hanger box lower hole size large enough to permit hanger rod to swing through a 30° arc before contacting the hole and short-circuiting the spring.
- e. Requires Seismic Restraint.
- f. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries, Inc. Vibration Mountings	Type 30

B. Elastomer Mounting Types

1. All elastomer isolators shall incorporate the following:

- a. Bolt holes for bolting to equipment base.
- b. Bottom steel plates for bolting to sub-base as required.
- c. Unit type design molded in black oil-resistant neoprene.
- d. All metal surfaces shall be neoprene covered.
- e. Neoprene to be compounded to meet the following:
 - i. Not greater than 50 durometer.
 - ii. Maximum tensile strength 2000 psi.
 - iii. Minimum elongation 300%.
 - iv. Maximum compression set at 25% of the original deflection.

2. Type "D": Double deflection neoprene mount.

- a. Rated deflection minimum 0.35 inches.
- b. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries, Inc. Vibration Mountings	ND RD

3. Type "D-S": Double deflection neoprene mount.

- a. Rated deflection minimum 0.35 inches.
- b. Shall incorporate seismic restraint.
- c. One of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries, Inc. Vibration Mountings	RBA

4. Type "D-SA": All directional captive neoprene mount.

- a. Rated deflection minimum 0.25 inches.
- b. Shall incorporate seismic restraint.
- c. One of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries, Inc.	BR
Vibration Mountings	

- 5. Type "E": Double deflection elastomer hanger rod isolators incorporating the following:

- a. Molded unit type neoprene element.
- b. Steel retainer box encasing neoprene mounting.
- c. Clearance between mounting hanger rod and steel retainer box.
- d. One of the following.

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	FLS
Mason Industries	HD
Vibration Mountings	RHD

- 6. Type "F": Pad type neoprene mountings.

- a. 3/4-inch minimum thickness.
- b. 50 psi maximum loading.
- c. Ribbed or waffled design.
- d. 15% Deflection
- e. 16 Gauge galvanized steel plate between multiple layers of pad thickness.
- f. Suitable bearing plate to distribute load.
- g. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	NPD
Mason Industries	Super W
Vibration Mountings	SHEAR-FLEX

- C. Combination spring and elastomer types:

- 1. Type "G": Combination spring/elastomer hanger rod isolators.

- a. Spring and neoprene isolator elements in a steel box retainer.
- b. Characteristics of spring and neoprene as described in Type "C" and Type "E" isolators.
- c. Factory pre-loading to 75% of rated load (for pre-compressed springs).
- d. Requires Seismic Restraint.
- e. One of the following:

MANUFACTURER TYPE

Kinetics
Mason Industries 30N
Vibration Mountings

2. Type "G-S": Combination spring/elastomer hanger rod isolators incorporating seismic upstop.

- a. Spring and neoprene isolator elements in a steel box retainer.
- b. Characteristics of spring and neoprene as described in Type "C" and Type "E" isolators.
- c. Factory pre-loading to 75% of rated load (for pre-compressed springs).
- d. Requires Seismic Restraint.
- e. One of the following:

MANUFACTURER TYPE

Kinetics
Mason Industries RW30N
Vibration Mountings

3. Type "H": Thrust Restraints

- a. Use on all fan heads and axial or centrifugal fans where the air thrust exceeds 10% of the equipment weight.
- b. The thrust restraint consists of a TYPE "G" isolator with the same deflection as specified in the schedule for the mountings or hangers.
- c. Spring element contained within a steel frame designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4" movement at start and stop.
- d. Assembly furnished with one rod and angle brackets for attachment to both equipment and ductwork or the equipment and the structure.
- e. Restraints attached at the centerline of thrust and symmetrically on either side of the unit.
- f. One of the following:

MANUFACTURER TYPE

Kinetics
Mason Industries Type WB
Vibration Mountings

2.4 Materials – Rooftop spring curbs

A. Type RSC-1: Curb mounted isolation base (low deflection).

- 1. Integral spring and weather seal curb arrangement that fits under the equipment to be isolated and over the curb.

2. Top and bottom members constructed of extruded aluminum and connected by a flexible, water-proof neoprene membrane. The aluminum members seal against the curb with continuous closed cell neoprene sponge.
3. Cadmium plated springs with a 1" deflection and 50% additional travel to solid. Spring diameters no less than 0.8 of the spring height at rated load.
4. Wind resistance and seismic restraint shall be provided by resilient snubbers in the corners with a minimum clearance of 1/4" so as not to interfere with the spring action except in high winds or seismic activity.
5. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries Vibration Mountings	Type CMAB

B. Type RSC-2: Curb mounted isolation base (high deflection).

1. Integral spring and weather seal curb arrangement that fits under the equipment to be isolated and directly on top of the roof, spanning the joists.
2. Bottom member constructed of rectangular, tubular structural steel. Top member, supporting the equipment, constructed of an inverted steel AU" channel with cross member bracing.
3. Water-proofing by a flexible formed aluminum weather seal on all four sides of the base. Corner joints constructed of molded rubber.
4. Springs cadmium plated with deflections as called out in the schedule and 50% additional travel to solid. Spring diameters of no less than 0.8 of the spring height at rated load.
5. Wind resistance and seismic restraint shall be provided by means of resilient snubbers in the corners with a minimum clearance of 1/4" so as not to interfere with the spring action except in high winds or seismic activity.
6. The system should incorporate (for improved air-borne acoustical isolation), two layers of staggered joint 5/8" drywall directly attached to the top of the roof structure within the curb surrounding the ducts. All interfaces should be caulked. In addition, 4" thick, 1.5 pound density glass or mineral fiber shall cover the drywall surface under the unit and all sides of the plenum.
7. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries Vibration Mountings	Type RSC

2.5 Materials – Equipment Bases

A. Equipment Bases:

1. Type "B-1A": Integral structural steel bases.
 - a. Reinforced as required to prevent base flexure at startup and misalignment of drive and driven units.
 - b. Fan bases complete with motor slide rails.
 - c. Drilled for drive and driven unit mounting plate.
 - d. Depth equal to 1/10 of the longest dimension of the base, not exceeding 14 inches.
 - e. Height saving brackets shall be employed in all mounting locations. Isolators shall be Type "A". When seismic restraint is required, isolators shall be Type "A-S."
 - f. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries	Type WSFL
Vibration Mountings	

2. Type "B-2A": Concrete inertia base
 - a. Formed in structural steel frame.
 - b. Structural base reinforced as required to prevent flexure, misalignment of drive and driven unit or stress transferal into equipment
 - c. Minimum base depth must equal to 1/12th or 8% of the longest base dimension.
 - d. Fan bases complete with motor slide rails.
 - e. Pump bases to provide base elbow supports. Bases complete with height saving brackets, reinforcing, equipment bolting provisions and Type "A" isolators (Type "A-S" isolators for seismic requirements) provided by vibration control supplier.
 - f. Base ready for concrete pour; concrete weighing not less than 140 lbs per cubic foot by others.
 - g. One of the following:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics	
Mason Industries	Type KSL
Vibration Mountings	

2.6 Materials – Flexible Connections

A. Flexible Connectors:

1. Type "FC-1": Neoprene connector for general piping.

- a. Rubber expansion joints shall be peroxide cured EPDM throughout with Kevlar tire cord reinforcement.
- b. The raised face rubber flanges must encase solid steel rings to prevent pull out. Flexible cable wire is not acceptable.
- c. Sizes 1-1/2" through 14"(40mm through 350mm) shall have a ductile iron external ring between the two spheres. Sizes 16" through 24" (400mm to 600mm) may be single sphere. Sizes 3/4" through 2"(20mm through 50mm) may have one sphere, bolted threaded flange assemblies and cable retention.
- d. Control rods passing through 1/2"(12mm) thick Neoprene washer bushings large enough to take the thrust at 1000psi (0.7 kg/mm²) of surface area may be used on unanchored piping where the manufacturer determines the condition exceeds the expansion joint rating without them.
- e. Minimum ratings through 14"(350mm) shall be 250psi at 170°F and 215psi at 250°F. (1.72MPa at 77°C and 1.48MPa at 121°C), 16"(400mm) through 24"(600mm) 180psi at 170°F and 150psi at 250°F. (1.24MPa at 77°C and 1.03 MPa at 121°C). Higher published rated connectors may be used where required.
- f. Safety factors shall be a minimum of 3/1. All expansion joints must be factory tested to 150% of maximum pressure for 12 minutes before shipment.
- g. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer.
- h. The piping gap shall be equal to the length of the expansion joint under pressure.
- i. All expansion joints shall be installed on the equipment side of the shut off valves.
- j. Connector to be one of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries Vibration Mountings	Type SAFEFLEX

- 2. Type "FC-2": Flexible stainless hose for use in inaccessible areas.
 - a. Flexible stainless steel hose shall have stainless steel braid and carbon steel fittings.
 - b. 3-inch and larger shall be flanged.
 - c. 3-inch pipe size and smaller with male nipple fittings.
 - d. At equipment, hoses shall be installed on the equipment side of the shut-off valves horizontal and parallel to the equipment shafts wherever possible.
 - e. Suitable for operating pressure with 4:1 minimum safety factor.

- f. Length as shown on manufacturer's certified drawings and shall be as tabulated:

Flanged

3" x 12" (75 x 300mm)	6" x 18" (150 x 450mm)	12" x 24" (300 x 600mm)
4" x 12" (100 x 300mm)	8" x 18" (200 x 450mm)	14" x 30" (350 x 750mm)
5" x 18" (125 x 450mm)	10" x 18" (250 x 450mm)	16" x 32" (400 x 800mm)

Male Nipples

1/2" x 12" (12 x 300mm)	1-1/4" x 12" (32 x 300mm)	2" x 12" (50 x 300mm)
3/4" x 12" (19 x 300mm)	1-1/2" x 12" (38 x 300mm)	2-1/2" x 18" (64 x 450mm)
1" x 12" (25 x 300mm)		

- g. Connectors to be one of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Kinetics Mason Industries Vibration Mountings	Type BFFL

3. Type "FC-3": Flexible duct connections to fans.

- a. 30 ounce wovenglass fiber coated with neoprene, sewn together at the edges and joints.
- b. 6" long and held in place with 1" wide bands of 12 ga. galvanized steel bolted to duct and to outlets and inlets of the units and fans with 1/8" stove bolts, 5" o.c. Metal connections 3" wide on either side of the flexible material, as provided by the manufacturer, may also be used.
- c. One of the following or equal:

<u>MANUFACTURER</u>	<u>TYPE</u>
Ventfabrics DuroDyne	Ventglas Insulflex

2.7 ISOLATION SCHEDULE

<u>EQUIPMENT TYPE</u>	<u>SERVING</u>	<u>ISOLATOR TYPE</u>	<u>MINIMUM STATIC DEFLECTION (INCHES)</u>
FLOOR MOUNTED AIR HANDLING	AHU-1, 2, 3, 4	Units externally isolated A-S,FC-3	1.0
UNIT HEATERS	ALL	F	Max. 50 Durometer

ROOF TOP FANS	SEF-1, 2	RSC-1, FC-3	1.0

	SUSPENDED	G, G-S	SEE SPEC

PART 3 - EXECUTION

3.1 Inspection

- A. Examine all work prepared by others to receive work of this Section and report problems or defects affecting installation to the General Contractor for correction.
- B. Inspect all components of the Work to insure no damage has occurred during shipment or storage.
- C. Accompany Commissioner and Contractor on a joint inspection, ideally within 2 weeks of the point in time when equipment systems are certified operable and adjusted.

3.2 Installation

- A. Install vibration isolation devices and systems in accordance with the manufacturer's instructions and certified submittal data.
- B. Installation of vibration isolators must not cause any change of position of equipment, piping or duct resulting in stresses or misalignment.
- C. No rigid connections between equipment and the building structure shall be made that degrades the performance of the vibration isolation systems herein specified.
- D. The contractor shall not install any equipment, piping, duct or conduit, which makes rigid connections with the building unless isolation is not specified. "Building" includes, but is not limited to, slabs, beams, columns, studs and walls.
- E. Coordinate work with other trades to avoid rigid contact with the building.
- F. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the architects/engineers attention prior to installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractor's expense.
- G. Correct, at no additional cost, all installations which are deemed defective in workmanship and materials at the contractor's expense.
- H. Floor Mounted Equipment:
 - 1. 4-inch thick concrete housekeeping pads:
 - a. Over entire floor area of supported equipment.
 - b. Supporting all vibration isolation devices and bases.
 - c. Keyed with hairpins as required to be integral with the structural slab.
 - d. Incorporating approved seismic restraint anchor plates flush with the top of the housekeeping pad.

2. Concrete per specification describing requirements.

I General Equipment Isolation:

1. Provide 2-inch operating clearance between concrete inertia bases and housekeeping pad and 1-inch clearance between equipment or structural bases and housekeeping pad.
2. Isolation mounting deflection (minimum) as specified or scheduled on manufacturer's certified drawings.
3. Position equipment, structural base and concrete bases on blocks or wedges at proper operating height.
4. Provide operating load conditions prior to transferring base isolator loads to springs and removing wedges.
5. Electrical conduit connections to isolated equipment shall be looped or installed with flexible conduit to allow free motion of isolated equipment.
6. Install equipment directly on isolation system. Support rails between the equipment and isolators should not be used.
7. Verify all installed isolators and mounting systems permit equipment motion in all directions.
8. Adjust or provide additional resilient restraints to limit startup equipment lateral motion to 1/4-inch.
9. Prior to startup, clean out all foreign matter between bases and equipment. Verify that there are no isolation short circuits in the base or isolators.
10. No rigid connections between rotating or vibrating equipment and building structure shall be made that degrades the vibration isolation system herein specified.
11. Coordinate work with other trades to avoid rigid contact with the "building". Inform other trades following, such as plastering, drywall, electrical or sheet metal, to avoid any contact which would reduce the vibration isolation.
12. Bring to the Architect's attention immediately, prior to installation, any conflicts with other trades which will result in unavoidable rigid contact with equipment or piping as described herein, due to inadequate space or other unforeseen conditions. Corrective work necessitated by conflicts after installation shall be at the contractor's expense.
13. Correct, at no additional cost, all installations which are deemed defective in workmanship or material as a result of project completion inspection or subsequent inspections due to owner complaints within a period of one year following acceptance.

J. Piping Isolation:

1. All piping shall be resiliently mounted, either floor supported or ceiling hung, such that piping will be isolated from the building structure (ie - no direct metal to metal contact of the piping with the building structure) in the following locations:
 - a. Inside Mechanical Equipment Rooms
 - b. Within 50-feet of vibrating equipment
 - c. Within 10-feet of noise critical (see Noise Control Section 230549 1.1.C.3) spaces (this includes piping under, over or adjacent to these spaces)
 - d. Inside noise critical (see Noise Control Section 230549 1.1.C.3) spaces itself (ie - piping run in ceiling of noise critical space)
 - e. All exposed piping in any occupied space
 - f. Pipe greater than 2-inches in diameter
 - g. First three hangers on both sides of an Acoustical Isolation Joint (AIJ) or when crossing into or out from box-in-box constructions
2. Horizontal pipe isolation: Use factory preloading for the first four isolators from the rotating equipment and for all piping greater than 6 inches in diameter. The first four isolators from the equipment shall have the same static deflection of the isolator used for the equipment itself. Subsequent isolators shall have a static deflection of 1/2 that of connected equipment with a minimum of 1". Use "G-S" isolators for subsequent hangers. Floor supported piping shall rest on type "B" isolators.
3. Riser isolation: Isolate the entire rise of all pipes in the locations described in 3.2.J.1. Risers shall be suspended from type "G-S" hangers or supported by type "A" mountings. Guide and anchor piping in shafts as required with approved resilient mounting designs as described below to prevent direct contact of piping with building structure. Steel springs shall be a minimum of 1" except in those expansion locations where additional deflection is required to limit load changes to $\pm 25\%$ of the initial load. Submittals must include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on the building structure, spring deflection changes and seismic loads. Submittal data shall include certification that the riser system has been examined for excessive stresses and that none will exist in the proposed design.
4. Provide flexible connections "FC-1" at all connections of pipe to rotating or vibrating equipment and as directed in the vibration isolation schedule.
5. Position isolators:
 - a. Close to building structure.
 - b. Between building structure and supplementary steel if required.
 - c. Not to contact acoustic rated walls.
6. Suspend isolators from rigid and massive support points.

7. Adjust as required all isolators to eliminate all contact of the isolated rod with the hanger rod box retainer or short circuiting of the spring.
8. Supplementary steel to be sized for a maximum deflection of 0.08 inches at the center span.
9. Resilient Piping Guides:
 - a. Weld steel guides to the pipe at a maximum spacing of 60°. The outside diameter of the opposing guide bars shall be smaller than the inside diameter of the pipe riser clamp in accordance with the standard field construction practice. Rigidly attach each end of the pipe anchor to an all-directional pipe anchor isolation mounting which, in turn, is rigidly fastened to the steel framing within the shaft.
 - b. The all-directional pipe anchor isolation mountings consists of a telescoping arrangement of two sizes of steel tubing separated by a minimum of 1/2" thick, heavy duty neoprene and canvas duck isolation pad. Provide vertical restraints by similar material arranged to prevent vertical travel in either direction. The allowable load on the isolation material shall not exceed 500 psi.
 - c. Construct low temperature piping guides with a 360°, 10-gauge metal sleeve around the piping. Provide thermal insulation between the piping and the sleeve. Space the metal sleeve away from the piping with heavy duty neoprene and canvas duck isolation pad of thickness equal to thermal insulation. Provide urethane or other suitable thermal insulation in the voids between the pipe sleeve and isolation pad material. The metal sleeve outside diameter shall be smaller than the pipe riser clamp inside diameter in accordance with standard field construction practice. Rigidly attach the pipe riser clamp to the steel framing within the shaft.
 - d. Mountings shall be Type VSG - M.I.I. or approved equal.
10. Resilient Piping Anchors:
 - a. Weld the pipe riser clamp at anchor points to the pipe and to pairs of vertical resilient pipe anchor mountings, which, in turn, are rigidly fastened to the steel framing in the pipe shaft.
 - b. The resilient pipe anchor mountings consist of a bolted assembly of steel plates with laminations of 1/2" thick, heavy duty neoprene and canvas duck isolation material. The mounting shall be capable of safely accepting loads developed by the installed piping. A heat shield shall be provided as required. The isolation material loading shall not exceed 500 psi.
 - c. Resilient pipe anchor shall be Type ADA - M.I.I., or approved equal.

K. Ductwork Isolation:

1. Isolate all ductwork in mechanical rooms and outside of equipment rooms within 25 feet of vibrating equipment with Type "B-S" isolators (floor supported) or Type "G-S" hanger rod isolators with 1-inch static deflection (ceiling hung).

2. Provide flexible connections "FC-3" at all connections of ductwork to rotating or vibrating equipment and as directed in the vibration isolation schedule.
3. Position isolators:
 - a. Close to building structure.
 - b. Between building structure and supplementary steel if required.
 - c. Avoid contact to acoustic rated walls.
4. Suspend isolators from rigid and massive support points.
5. Adjust as required all isolators to eliminate all contact of the isolated rod with the hanger rod box retainer or short-circuiting of the spring.
6. Supplementary steel shall be sized for a maximum deflection of 0.08 inches at the center span.

3.3 Adjust and Clean

- A. Check and adjust all isolators to insure there is no short circuiting such as:
 1. Hanger rods touching boxes
 2. Hold-down bolts not released
 3. Bolts touching springs
 4. Springs and/or neoprene overloaded
 5. Bottom neoprene pads short-circuited by welding bottom plate to structure
 6. Isolation device touching adjacent structures

3.4 Final Inspection

- A. On completion of installation of all vibration isolation devices herein specified, the local representative of the isolation materials manufacturer shall inspect the completed systems and report, in writing, any installation error, improperly selected isolation devices or other faults in the system that could affect the performance of the system. Contractor shall submit a report to the Architect, including the manufacturer's representative's final report, indicating all isolation reported as properly installed or requiring correction and include a report by the Contractor on steps taken to properly complete the isolation work.
- B. The Commissioner will subsequently inspect the systems for conformance to specifications and for proper installation methods. Contractor shall replace or repair, at his expense, any isolation devices that deviate from the specifications, approved shop drawings, and manufacturer's recommendations as a result of this inspection.

END OF SECTION

SECTION 23 05 49

NOISE CONTROL

PART 1 - GENERAL

1.1 DESCRIPTION

- A. Complete noise control systems for equipment, piping and ductwork including:
 - 1. Acoustical Performance of equipment systems and air distribution devices.
 - 2. Sound attenuating units.
 - 3. Duct lining.
 - 4. Noise Control Enclosures and Plenum.
 - 5. Noise Control Louvers.
 - 6. Duct and Pipe Lagging.
 - 7. Soundproofing of construction.
 - 8. Ductwork Enclosure for soundproofing.
- B. Noise evaluation of equipment specified elsewhere.
- C. Acoustical Performance
 - 1. It is the intent of this specification that noise levels from HVAC equipment (air-conditioning and/or ventilating equipment, ducts, grills, diffusers, mixing boxes, fan coil units, pumps, cooling towers, etc.) will not exceed the Preferred Noise Criteria Curves (PNC) described in Paragraph 3 of this Section. Noise Criteria Curves establish a one number rating for evaluating the acceptability of a sound pressure spectrum according to the average person's hearing. Noise Criteria Curves and their related sound pressure equivalents for each frequency are described in the 1987 ASHRAE Handbook Systems Volume.
 - 2. These NC levels should be used as a guide in the event of product substitutions and shop drawing modifications. The NC levels shall also serve as a gauge by which the results of workmanship and care of installation will be judged from an acoustical standpoint, since a poor installation can lead to the generation of noise.

3. Noise Criteria for occupied spaces for this project shall be set as follows:

Table 2 – Background Noise Criteria

Space	Rating
Theater 1 and Theater 2	PNC-20
Rehearsal Studios	PNC-25
Lobbies and Public Circulation Areas	PNC-35 to 40
Offices, Dressing Rooms	PNC-30 to 40

- D. This section is supplementary to other sections of Division 23, except where conflict exists between Section 230549 and other sections of Division 23, this Section 230549 shall govern.

1.2 QUALITY ASSURANCE

- A. Manufacturers to have been in the production and installation of noise control products for a period of no less than three years.
- B. Manufacturer to supervise installation of noise control systems where specified later in this section.
- C. In addition to complying with all pertinent codes and regulations, all work of this Section shall conform to the following Standard Specification requirements:
1. ADC 1062GRD-84 Test Code for Grilles, Registers and Diffusers.
 2. ADC 1062R4 Equipment Test Code for Air Terminal Boxes (VAV).
 3. AMCA Standard 300-1996 Reverberant Room Method for Sound Testing of Fans.
 4. AMCA Standard 301-1990 Methods for Calculating Fan Sound Ratings from Laboratory Test Data.
 5. ANSI S12.2-1995 Criteria for Evaluating Room Noise.
 6. ANSI S12.34-1988 Engineering Method for the Determination of Sound Power Levels of Noise Sources for Essentially Free-Field Conditions over a Reflecting Plane.
 7. ANSI/ARI 880-89P Air Terminals.
 8. ARI Standard 260P Sound Rating of Ducted Air Moving and Conditioning Equipment.
 9. ARI Standard 270 Sound Rating of Outdoor Unitary Equipment.

10. ARI Standard 370-86 Sound Rating of Large Outdoor Refrigeration and Air Conditioning Equipment
11. ARI 890/ASHRAE 70-91 Rating of Air Diffusers and Air Diffuser Assemblies
12. ARI Standard 885-90 Method for Estimating Occupied Space Sound Levels in the Application of Air Terminals and Air Outlets
13. ARI Standard 575-94 Method of Measuring Machinery Sound Levels within Equipment Rooms.
14. ARI Standard 350-86 Sound Rating of Non-Ducted Indoor Air-Conditioning Equipment.

1.3 SUBMITTALS

A. Shop drawings, supplemental to Division 1 requirements:

1. Noise Control Enclosures and Plenum
2. Ductwall External Sound Proofing
3. Noise Control Louvers

B. Product data and schedules:

1. Sound Attenuators
2. Duct Lining
3. Noise Control Enclosures and Plenum
4. Pipe or Duct Lagging
5. Air Distribution Devices (Grilles, Registers and Diffusers)
6. VAV Units, Fan Terminal Units
7. Fans, Blowers, Chillers, Cooling Towers, Air-Conditioning Equipment, Pumps

C. Test Reports

Submit certified, independent acoustical test reports, not prior to 1975, from an accredited laboratory, member of NVLAP (National Volunteer Laboratory Accreditation Program) for the following:

1. Sound Attenuators
 - a. Acoustical performance shall be established by ASTM E-477-96 procedures. Dynamic insertion loss, air generated noise and aerodynamic performance test results, both in positive and negative flow, with pressure drop ratings shall be supplied that meets or exceeds requirements established later in this Specification.
2. Duct Lining
 - a. Acoustical performance shall be established by ASTM C423-90 procedures. Sound Absorption Coefficients with Type "A" mounting per ASTM E795 shall be supplied that meets or exceeds requirements established later in this Specification.
3. Noise Control Enclosures, Plenum and Louvers
 - a. Acoustical performance shall be established by ASTM E90, E413, E795 and C423 procedures. Sound Transmission Loss data, STC value, Sound Absorption Coefficients and NRC value shall be supplied that meets or exceeds requirements established later in this Specification.
4. Duct Lagging
 - a. Acoustical performance shall be established by ASTM E413 and E90 procedures. Insertion loss, Transmission loss and STC data shall be supplied that meets or exceeds requirements established later in this Specification.
5. Grilles, Registers and Diffusers
 - a. Acoustical performance shall be established by ADC 1062GRD and ADC/ARI standard 885 procedures. Sound power data and NC value with correction factors used shall be supplied that meets or exceeds requirements established later in this Specification. (NC data only is not acceptable).
6. VAV and Fan Terminal Boxes
 - a. Acoustical performance shall be established by ANSI/ARI 880-89 procedures. Sound power data and NC value with correction factors used shall be supplied that meets or exceeds requirements established later in this Specification. (Sone data only is not acceptable).
7. Fan Coil Units
 - a. Acoustical performance shall be established by AMCA Standard 350 procedures. Sound data shall be supplied that meets or exceeds requirements established later in this Specification. (Data in Sones or Bels is not acceptable).
8. AHUs and Air Conditioning Equipment

- a. Acoustical performance shall be established by AMCA Standard 330/ASHRAE Standard 68, or ARI 260P procedures. Sound data shall be supplied that meets or exceeds requirements established later in this Specification. (Data presented in Sones or Bels is not acceptable).
9. Fans (Exhaust Fans, Return Fans, Transfer Fans, Ventilation Sets)
- a. Acoustical performance shall be established by AMCA Standard 300 or 301 procedures. Sound data shall be supplied that meets or exceeds requirements of this Specification. (Data presented in Sones or Bels is unacceptable).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Sound Attenuators
 - Vibro-Acoustics, Scarborough, ON (800) 565-8401
 - Industrial Acoustics Company, Inc., Bronx, NY (718) 931-8000
 - The AeroSonics Corporation, California, MO (573) 796-4151
 - United McGill Corporation, Griffin, GA (614) 882-5455
 - Commercial Acoustics, Division of Metal Form Manufacturing, Phoenix, AZ (602) 233-1211
- B. Duct Lining
 - Duct Liner Board, Owens-Corning Fiberglass, Toledo, OH (419) 248-8000
 - Mat Faced Linacoustic Standard Fiberglass Liner Board, Johns Manville, Denver, CO (303) 978-4900
 - Model PA Fiber Glass Absorber, Kinetics Noise Control Inc., Dublin, OH (614) 889-0480
- C. Duct and Pipe Lagging
 - KNM-100ALQ-2, Kinetics Noise Control, Inc., Dublin, Ohio (614) 889-0480
 - Noisemaster, The Proudfoot Company, Inc., Monroe, CT (800) 445-0034
 - Sound Seal Lag Series, Sound Seal, division of United Process, Inc., Agawam, MA (413) 789-1770
 - Soundfab, The Soundcoat Company, Inc., Deer Park, NY (631) 242-2200
- D. Noise Control Louvers
 - Industrial Acoustics Company, Inc., Bronx, NY (718) 931-8000
 - Titus Products, Division of Phillips Industries Inc., Richardson, TX 75081 (214) 699-1030
- E. Noise Control Plenums and Enclosures
 - Industrial Acoustics Company, Inc., Bronx, NY (718) 931-8000
 - Commercial Acoustics, Division of Metal Form Manufacturing, Phoenix, AZ (602) 233-1211

2.2 SOUND ATTENUATORS

- A. Duct silencers/sound traps/attenuators shall be installed according to the plans, specifications and enclosed schedule.
- B. Outer shells of the silencer shall be of 22 gauge minimum galvanized steel, with inner faces of 24 gauge minimum perforated galvanized steel. All internal components shall be spot-welded in place with welds on centers not exceeding 4". Seams shall be lock formed, mastic filled and be airtight when subjected to a differential air pressure of 8" H₂O. Leading and trailing edges of modules, when in multiple configuration shall be filled with a bead of caulking and shall be provided with continuously taped nosing or continuous metallic nosing that is crimped or button punched. Filler material shall be of inorganic mineral or glass fiber under a minimum 5% compression, inert, vermin and moisture proof.
- C. Combustion rating for the filler material shall equal or exceed the following when tested in conformance with ASTM E84, NFPA Standard 255 or UL No. 723:
- | | |
|-----------------------------|---------|
| Flame Spread Classification | 10 - 25 |
| Fuel Contributed | 0 - 15 |
| Smoke Development | 0 - 20 |
- D. Acoustical performance shall be established by ASTM E-477 tests in an accredited laboratory. Dynamic insertion loss, air generated noise and aerodynamic performance test results, both in positive and negative flow, shall be supplied by the manufacturer with submittal drawings. All tests are to have been conducted in the same facility. The silencers provided and installed shall have interior configurations, namely splitter and air passage widths, that are identical to the approved test units.
- E. Dynamic insertion loss and air generated noise performance under design air flow velocities shall be as scheduled herein.
- F. DUCT SILENCER SCHEDULE

Tag Number	Type*	System/ Area Served	W"	H"	L"	Airflow (cfm)	Static Pressure Drop (in.)
SA-3S	5LFM	AHU-3 Supply	30	26	60	4300	0.13
SA-3R	3LFM	AHU-3 Return	36	22	36	4300	0.12
SA-F8S	3LFM	FCU-8 Supply	24	12	36	696	0.05
SA-F8R	3LFM	FCU-8 Return	24	12	36	696	0.05

SA-F4S	3LFM	FCU-4 Supply	24	18	36	1250	0.05
SA-F4R	3LFM	FCU-4 Return	24	18	36	1250	0.05

* Type numbers are based, for identification purposes, on the Industrial Acoustics Company models.

G. DUCT SILENCER PERFORMANCE SCHEDULE

- The following minimum Dynamic Insertion Loss performance in decibels (+ 4 dB) shall be provided by each silencer when measured at a face velocity (forward (+) and reverse (-) flow) of 2000 ft/min, (values for type S and LFM are for 1000 ft/min.)

Silencer Type	Airflow Direction	Octave Band Center Frequency (Hz)						
		63	125	250	500	1000	2000	4000
3LFM	+	5	7	16	19	17	12	10
3LFM	-	7	8	17	20	18	13	11
5LFM	+	10	13	24	29	28	17	13
5LFM	-	12	15	27	31	30	17	14

- The **Self or Regenerated Noise** sound power levels in decibels re 10^{-12} watt shall not exceed the following values (+ 4 dB) when measured at a face velocity (forward (+) and reverse (-) flow) of 1000 ft/min on a unit with a face area of 4 ft² for rectangular and conical cross sections.

Silencer Type	Airflow Direction	Octave Band Center Frequency (Hz)						
		63	125	250	500	1000	2000	4000
LFM	+	47	34	36	35	40	37	27
LFM	-	45	40	43	45	47	46	37

- Silencer dimensions are listed as catalog standard sizes. For ducts not falling into a standard silencer cross-section, units were chosen based on the most economical treatment with a combination of standard sizes and the required transitions versus custom fabrication to exact duct size.
- When silencers are installed downstream of elbows, splitters shall be parallel to the plane of the elbow turn.
- Silencers installed within 2 duct diameters of elbows or branch takeoffs shall be avoided, as this will increase the static pressure drop of the silencer by 1.2 to 3 times the catalog performance (as shown in the last column of the schedule) and could increase the silencer's regenerated noise and affect the final background room NC level.

2.3 SOUND-LININGS:

- A. Duct lining shall be roll form, 1" or 2" as called out in the drawings or specifications. It shall be installed on all interior surfaces of sheet metal ductwork where shown on the drawings or specifications.
- B. Duct lining shall be adhered by 100% covering of a fire retardant adhesive. The black acrylic face shall face the air stream. When width of duct exceeds 12" and also on sides when height exceeds 24", use non-ferrous mechanical fasteners in addition to 100% adhesive coverage. All transverse and longitudinal abutting edges of duct lining shall be sealed and lapped 3" with a heavy coat of adhesive, in accordance with the manufacturer's recommendations.
- C. Duct lining shall be fiberglass insulation with a surface acrylic EPA registered anti-microbial coating that will not support biological growth, and meets ASTM G21 and G22 specifications. This coating shall also guard against incursion of dust and dirt into the insulation. This coating shall be damage resistant which does not tear or abrade easily. Duct lining shall be capable of being cleaned per NAIMA Duct Cleaning Standards. Duct lining shall be black, 1.5 lb/ ft³ density meeting the requirements of NFPA 90A and 90B, FHC 25/50, and limited combustibility. Duct lining shall be suitable up to 5000 fpm. Duct lining and adhesives shall comply with ASTM E-84 and shall have a maximum flame spread rating of 25 and smoke rating of 50. Duct lining adhesive shall conform to ASTM C916 "Specifications for Adhesives for Duct Thermal Insulation". Fasteners shall comply with SMACNA HVAC Duct Construction Standards Article S2.11
- D. Metal Nosings shall be securely installed over transversely-oriented liner edges facing the air stream at forward discharge and at any point where lined duct is preceded by unlined duct. When velocities exceed 4000 FPM, use metal nosings on every leading edge. Nosing may be formed on duct or be channel or zee attached by screws, rivets or welds.
- E. Duct lining shall conform to ASTM C1071 standard "Thermal and Acoustical Insulation" and have the following minimum sound absorption coefficients when tested in accordance with ASTM C423 and E795 procedures mounting type "A":

	Octave Band Center Frequency, Hz.						
	125	250	500	1000	2000	4000	NRC
1" thick	0.04	0.19	0.35	0.55	0.69	0.72	0.45
2" thick	0.12	0.42	0.76	0.85	0.85	0.83	0.72

1. Mechanical Fasteners:

Comply with SMACNA HVAC Duct Construction Standards, Article S2.11.

2. Adhesives:

15-141 from King Co., St. Louis, MO (314) 772-9953

Tuffbond from Goodloe E. Moore, Inc., Danville, IL (800) 331-1164

INC C-700 from Industrial Noise Control Inc., Addison, IL (312) 620-1998

2.4 NOISE CONTROL ENCLOSURES AND PLENUM

- A. Plenum shall be furnished and installed as shown on the drawings and/or as hereinafter specified.
- B. 4" thick (nominal) noise control panels shall comprise 16-18 gauge solid sheet metal outer faces with 20-22 gauge perforated (providing 23% minimum open area) inner faces. The space between faces shall be filled with a mineral or glass fiber blanket, 3" to 4" thick of minimum density 3 lb/ ft³, packed under compression and two layers of 1/2" thick drywall, adhered to the solid steel side with mastic, for high STC panel. Panel framing and stiffeners shall be 16-18 gauge sheet metal. Perforated face of panel shall provide minimum Noise Reduction Coefficient (NRC) of 0.95 and entire panel shall provide a minimum Sound Transmission Class (STC) of 40, and minimum sound transmission loss values in the 1/1 octave bands as follows when tested in accordance with ASTM E90-75 or later:

Transmission Loss in dB	Octave Band Frequency, Hz.								STC
	63	125	250	500	1000	2000	4000	8000	
Regular	20	21	27	38	48	58	67	66	40
High STC	27	30	32	41	50	59	67	71	45

- C. Plenum shall be mounted on Mason Type ND mounts with a 0.35" deflection, or approved equal.
- D. Door panels shall be constructed of solid #18 gauge galvanized metal sides. Doors shall be supplied 24" wide x 60" high or 36" wide x 72" high as shown on the drawings. The doors shall be 4" thick of the overlapping seal type. Each door shall be supplied with single continuous acoustic seals around the sill, jamb and head. Doors shall have 2 hinges and 2 latches with an inside release handle. Each door shall be assembled with hinge hardware attached and adjusted and latches to be installed in the field. Door latches are to be the wedge lever type with inside handle. Hinges shall be heavy duty and designed for door size and weight. Door shall be designed to open against the air pressure.
- E. Windows shall be furnished for doors where shown on the drawings and shall consist of two layers of 1/4" safety glass separated by an air space and sealed acoustically and air tight with rubber seals. Air space shall contain a desiccant material to prevent misting.

- F. Roof channels, aprons and corner joiners shall be made of #16 gauge galvanized steel formed to prevent a direct path for sound and/or air leakage. Floor channels shall be made of #18 gauge galvanized steel. Panel joiners shall be made of #20 gauge galvanized steel and shall be roll formed to be greater in strength than standard #16 gauge joiners. Where roll joiners are not utilized, #16 gauge shall be provided. All panel accessories shall be furnished in standard lengths to be field cut to required dimensions. When Ramset can not be used, floor channels shall be pre-punched with 9/32" holes spaced 24" on center for attachment by 1/4" round head screws with expansion type inserts. All panel joiners and connectors requiring neoprene seals shall have the neoprene field applied.
- G. Openings for acoustical louvers, fan and duct connections where required, shall be provided by the plenum manufacturer. Pipe and conduit penetrations shall be located and cut in the field and sealed in accordance with the Manufacturer's instructions.
- H. The plenum shall be normally self-supporting. Where roof spans and wall loadings require additional strength, it shall be furnished either by heavier roof and wall joiners or additional structural steel members and/or pipe columns.
- I. Metal surfaces shall be galvanized except for 5" wide flange beams when used which shall be HR steel prime painted. Plenum shall be designed for outdoor use where required with normal weather-proofing and wind and snow loads accounted for.
- J. Panels shall have a maximum Heat Transfer Factor of 0.07 BTU/hour/sq. ft./degree Fahrenheit temperature difference of standard air.
- K. Plenum installation shall be capable of withstanding a positive internal static air pressure of 5.5 inches.
- L. Plenum installation shall be capable of withstanding a negative internal static air pressure of 4.5 inches.
- M. Plenum manufacturer shall warrant that when the plenum is installed in a workman like manner in strict accordance with these specifications and manufacturer's instructions, plenum shall meet the acoustical, thermal and air pressure performance specified.
- N. Plenum components shall be furnished clean, well made and free of any defects which may adversely affect the appearance, serviceability or performance. Manufacturer shall furnish proof of having manufactured similar plenums for at least three years prior to this installation.

2.5 DUCT AND PIPE LAGGING

- A. Where indicated on the drawings, duct/pipe shall be wrapped with a minimum 2" thick glass or mineral fiber blanket with a minimum 3.0 lb/ ft³ density, and a mass loaded vinyl sheet covered with an aluminum foil jacket. Vinyl sheet shall have a nominal density of 1.0 lb/ ft³ and shall be 0.10" thick. Jacket edges shall overlap by minimum of 6" and be supplied with velcro or peel off tape to secure jacket around duct/pipe. Complete system shall provide a minimum STC-23 as measured in an independent accredited acoustical laboratory in accordance with ASTM E90 and E413. Insertion Loss data indicating an IL (Insertion Loss) value of 25 at 500 Hz shall also be submitted.

2.6 GRILLES, REGISTERS AND DIFFUSERS

- A. Grilles, registers and diffusers shall be as specified elsewhere. Sound power and NC data shall be submitted as described in Section 1.4 of this Specification. Submittal may be rejected if sound power data is more than 5 dB higher in the 63 Hz octave band or 3 dB higher in any other octave band and NC is more than 1 NC higher when compared against the sound data of the specified product as indicated on the schedule.

2.7 AIR HANDLING UNITS AND AIR-CONDITIONING EQUIPMENT

- A. Air handling units and air-conditioning equipment shall be as specified elsewhere. Sound power data shall be submitted as described in Section 2.1 of this Specification.
- B. Provide units with the maximum sound power levels in dB, re 10⁻¹² as described in the following table. Units shall meet the specified power levels for radiated, discharge and ducted inlet noise.

Unit	Element	Octave Band Center Frequency (Hz)						
		63	125	250	500	1000	2000	4000
AHU-1	D	67	65	69	54	49	46	44
	I	64	66	77	65	49	55	53
	R	68	64	64	65	61	48	37
AHU-2	D	70	68	75	60	52	52	49
	I	68	66	82	69	57	63	58
	R	71	67	70	71	63	55	43
AHU-3	D	68	67	70	56	50	47	45
	I	64	67	79	68	50	56	52
	R	70	66	66	68	50	56	52
AHU-4	D	74	64	78	69	61	55	53
	I	67	56	76	63	59	63	57
	R	74	63	68	75	67	51	40
AHU-5A	D	84	85	79	79	78	73	73
	I	86	86	77	80	70	66	67

	R	72	68	56	56	57	60	49
AHU-5B	D	84	85	79	78	78	73	72
	I	86	85	77	81	72	67	68
	R	71	68	55	55	57	60	48

D: Discharge
I: Ducted Inlet
R: Casing Radiated

- C. Submittal may be rejected if sound power level data is more than 5 dB higher in the 63 Hz octave band or 3 dB higher in any other octave band when compared against the specified unit.
- D. Air-conditioning equipment shall be as specified elsewhere. Sound power data shall be submitted as described in Section 2.1 of this Specification for all units listed in the mechanical schedules on the drawings.
- E. Prior to air handling unit shipment to the site, ducted discharge and inlet sound power levels shall be measured for units AHU-1. Testing shall be witnessed by Commissioner at the manufacturer's expense. Notice shall be given by the air handling unit manufacturer of the proposed test date a minimum of four weeks in advance. Prior to testing, the manufacturer shall submit a detailed test plan as well as laboratory accreditation, personnel, and test equipment qualifications for approval by the Commissioner.

All measurements shall be taken in 1/3 and 1/1-octave bands. All tests shall be performed in conjunction with an AMCA 210 air flow test to ensure that sound measurements are taken when the unit is at the design operating point.

- F. In the event that the specified sound levels are not achieved by the tested unit(s), it is the manufacturer's responsibility to do whatever is necessary to achieve the specified sound levels at no additional cost to the owner.
- G. A detailed report, including all certifications, sound power level data, and test methods, shall be presented to Commissioner for approval prior to equipment shipment.

2.8 FANS (Exhaust Fans, Return Fans, Transfer Fans, Vent Sets)

- A. Fans shall be as specified elsewhere. Sound power data shall be submitted as described in Section 2.1 of this Specification.
- B. Provide units with the maximum sound power levels in dB, re 10^{-12} as described in table below. Units shall meet the specified power levels for radiated, discharge and ducted inlet noise if and as specified below.

Unit	Element	Octave Band Center Frequency (Hz)						
		63	125	250	500	1000	2000	4000

RFL-1	I	81	83	81	73	69	66	60
	R	84	84	77	67	61	51	42
EF-R1	I	79	77	64	61	53	51	45
	R	80	79	58	55	48	45	39
EF-R2	I	70	67	71	60	52	51	53

EF-R4B	I	73	76	69	65	58	55	48
	R	76	77	65	59	50	40	30

D: Discharge

I: Ducted Inlet

R: Casing Radiated

- C. Submittal may be rejected if sound power level data is more than **5 dB** higher in the 63 Hz octave band or **3 dB** higher in any other octave band when compared against the specified unit.

2.9 FAN COIL UNITS

- A. Fan Coil Units shall be as specified elsewhere. Sound power data shall be submitted as described in Section 2.1 of this Specification.
- B. Provide units with the maximum sound power levels in dB, re 10^{-12} as described in table below. Units shall meet the specified power levels for radiated, discharge and ducted inlet noise if and as specified below.

Unit	Speed	Element	Octave Band Center Frequency (Hz)

D: Discharge

I: Ducted Inlet

R: Casing Radiated

PART 3 - EXECUTION

3.1 SOUNDPROOFING OF CONSTRUCTION

- A. Required for penetrations of ductwork, pipes, and conduits through walls, floors and ceilings of mechanical rooms and Sound-Critical Spaces as called out in Acoustical Performance Section 1.01 of this Specification, as well as those walls, floors, and ceilings indicated on the drawings.
- B. The Contractor shall ensure that the sound control performance of structures be maintained in accordance with the drawings and specifications. All penetrations shall be installed in a manner that results in complete air tightness through structure. If a condition occurs where penetration of the structure by a duct, pipe, conduit, etc., is not shown clearly on the drawings (or described in the specifications), the Contractor shall ask immediately for clarification of the method necessary to install the particular item.
- C. Penetrations of Single-Wythe Masonry and Concrete Constructions
 - 1. Ductwork:
 - a. Install a metal sleeve at the penetration. Size the sleeve to allow for 1" thick sheet insulation and normal duct clearances. Line the sleeve with 1" thick elastomeric closed cell neoprene sheet insulation (AP Armaflex Sheet and Roll Insulation from Armstrong, or approved equal).
 - b. Install duct through lined sleeve and seal airtight with acoustical sealant or fire-rated acoustical sealant (3M Corporation CP 25 or equal) if partition is fire-rated.
 - c. Do not rigidly secure duct to wall with angles.
 - 2. Pipe/Conduit diameter = 1" or larger:
 - a. Install a metal sleeve at the penetration. Size the sleeve to allow for 1/2" thick pipe insulation and normal pipe clearances. Line the sleeve with 1/2" thick elastomeric closed cell neoprene pipe insulation (AP Armaflex SS Self-Seal pipe insulation from Armstrong, or approved equal).
 - b. Install pipe/conduit through lined sleeve and seal airtight with acoustical sealant or fire-rated acoustical sealant (3M Corporation CP 25 or equal) if partition is fire-rated.
 - c. Do not rigidly secure pipe/conduit to wall with angles.

3. Pipe/Conduit diameter < 1":

- a. Wrap pipe/conduit with 1/2" thick elastomeric closed cell neoprene pipe insulation (AP Armaflex SS Self-Seal Pipe Insulation from Armstrong, or approved equal). Extend wrapping a minimum of 2" beyond the width of the partition on either side.
- b. Grout tightly to the neoprene pipe insulation on the pipe/conduit.
- c. Trim neoprene pipe insulation to the width of the partition, and seal airtight with acoustical sealant or fire-rated acoustical sealant (3M Corporation CP 25 or equal) if partition is fire-rated.

D. Penetrations of Single Stud Drywall Constructions

1. Ductwork:

- a. Wrap duct with 1" thick elastomeric closed cell neoprene sheet insulation (AP Armaflex Sheet Insulation by Armstrong, or approved equal). Extend sheet insulation a minimum of 2" beyond the width of the partition on either side.
- b. Install drywall tight to the sheet insulation.
- c. Trim sheet insulation to the width of the partition, and seal airtight with acoustical sealant or fire-rated acoustical sealant (3M Corporation CP 25 or equal) if partition is fire-rated.

2. Pipe/Conduit diameter = 1" or larger:

- a. Wrap with 1/2" thick elastomeric closed cell neoprene pipe insulation (AP Armaflex SS Self-Seal Pipe Insulation by Armstrong, or approved equal). Extend wrapping a minimum of 2" beyond the width of the partition on either side.
- b. Install a metal pipe sleeve around the neoprene insulation.
- c. Install the drywall around the sleeve and spackle tightly to full thickness of partition.
- d. Trim pipe insulation and sleeve to the width of the partition, and seal airtight with acoustical sealant or fire-rated acoustical sealant (3M Corporation CP 25 or equal) if partition is fire-rated.

3. Pipe/Conduit diameter < 1":

- a. Wrap with 1/2" thick closed cell neoprene pipe insulation (AP Armaflex SS Self-Seal Pipe Insulation by Armstrong, or approved equal). Extend wrapping a minimum of 2" beyond the width of the partition on either side.
- b. Install the drywall tight to the neoprene pipe wrap.
- c. Trim neoprene insulation to the width of the partition, and seal airtight with acoustical sealant or fire-rated acoustical sealant (3M Corporation CP 25 or equal) if partition is fire-rated.

E. Multiple Duct/Pipe/Conduit Penetrations

- 1. Where a series of duct, conduits or pipes are penetrating the wall/floor/ceiling, each duct/conduit/pipe shall be separated by minimum 4" in all directions.
- 2. Multiple duct/pipe/conduit penetrations at one location (i.e., one large opening for a series of pipe runs) is not recommended.

F. Penetrations of Double-Wythe Masonry/Concrete and/or Double Stud Drywall and/or Combination Constructions

- 1. Use same techniques described above EXCEPT do not bridge the two studs or wythes with solid members such as sleeves or stud frames. Each sleeve or frame must be completely separate for each individual wythe or stud.

3.2 DUCTWORK ENCLOSURE FOR SOUNDPROOFING

- A. Where indicated on drawings, duct shall be enclosed on all four sides (or air-tight to the slab above) with a separate 2-1/2" steel stud filled with 2" thick, 3 pound density fiberglass and covered with 2 thicknesses of 5/8" thick gypsum wallboard. Wherever possible, joints between the base and face layers shall be staggered by a minimum of 6 inches. All gypsum board joints on both the base and face layers shall be taped. Use acoustical caulking to seal all interfaces with structure. Treatment shall be applied to elbows, transitions, branch-takeoffs, etc. that are included in the applicable duct section.
- B. Where access is required, approved gypsum board covered metal access panels shall be installed with perimeter gaskets.
- C. Where enclosure intersects a metal deck, insure that the gypsum wallboard is cut to the shape of the flutes and caulked air-tight.

3.3 NOISE CONTROL ENCLOSURE AND PLENUM

- A. Noise control enclosures and plenums shall be installed by factory trained personnel or manufacturer and/or his representative. Installer shall conform to all local trade agreements. Installation shall be performed according to approved shop drawings and manufacturer's instructions.
- B. Manufacturer shall inspect site and/or coordinate with machinery manufacturer in preparing shop drawings. Shop drawings shall be approved by machinery manufacturer as well as Commissioner and other parties in accordance with Section 1.3.
- C. Installer shall inspect finished installed product after machine is operational and adjust any sound seals and caulk any leaks and/or adjust seals to maintain noise control properties of enclosure.

3.4 PERFORMANCE VERIFICATION

- A. Subsequent to equipment installation, the installation will be surveyed visually for conformance to specified installation, materials and workmanship by the Commissioner. This review will take place following receipt of an air-balancing report, and prior to final acceptance of the installation. All parts of the installation will be reviewed for conformance to this specification including vibration isolation devices, duct connections (and leaks thereof), and sealing of all partition penetrations. Background sound levels due to equipment noise may be measured by the Commissioner where noise is considered objectionable.
- B. If the results of the visual survey indicate non-conformance with the specifications or if the results of any acoustical measurements indicate non-conformance with the specified PNC levels, as described in Section 1.01.C of this specification, due to improper installation, poor workmanship or unapproved substitutions or shop drawings, it shall be the responsibility of the contractor to correct, at his own expense, such deficiencies by methods that shall be approved by the Commissioner prior to incorporation.
- C. After corrections have been made, further acoustical tests shall be performed at contractor's expense for verification of conformance to specified PNC levels.

END OF SECTION

SECTION 23 07 00

INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 230700, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #3 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 230000, General Provisions, and with the provisions of all applicable codes and laws.
- B. Conform to applicable performance standards, listings or approvals of the following organizations.

- 1. National Fire Protection Association (NFPA)
- 2. Underwriters Laboratories (UL)
- 3. New York City Office of Technical Certification and Research (OTCR)

- C. All insulating materials shall comply with the following ratings:

- 1. Flamespread -25
- 2. Smoke Developed -50
- 3. Fuel Contributed -50

1.3 SUBMITTALS

- A. Procedure: Prepare and make the submissions listed below and in Section 230000 in accordance with the procedure specified in Section 230000.

- B. Shop Drawings

- 1. Insulating materials and jackets.
- 2. Insulating cements, mastics and adhesives.
- 3. Methods of installation.
- 4. Pump enclosure details.
- 5. Pipe shields.
- 6. Schedule of insulation (system, material, thickness, cover, method of installation).

1.4 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 230000.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Type A - Fiberglass Insulation

1. The insulation should be sectional pipe jacketed with an embossed barrier laminate. 3.5 pound density insulation with a maximum thermal conductivity(k) of 0.29 Btu-in/hr-ft²-°F and rated to 850°F, composed of glass fibers bonded with a thermosetting resin. Insulation to be faced with vapor barrier of white flame resistant UL rated Kraft paper bonded to reinforced aluminum foil. Vapor barrier to have a maximum permeance of 0.02 perms.

Indoor Piping	Pipe Size:		
	1-1/2" & smaller	Over 1-1/2"	Fitting Type
Service:	Thickness (in.):		
Hot Water (<200°F)	1"	2"	F
Chilled Water	1"	1-1/2"	G
Condensate Drains	1/2"	1/2"	G

3. Manufacturers:
Owens-Corning, SSL II
Johns Manville - Micro-Lok HP
Knauf 1000° Pipe Insulation

B. Type B – NOT USED

C. Type C – NOT USED

D. Type D – Calcium silicate

1. Asbestos free, rigid hydrous calcium silicate, rated to 1200°F operating temperature.

Minimum density = 12 PCF.

Maximum conductivity = .4 at 200°F mean.6 at 600°F, mean

Service:	Thickness:
Generator Exhaust	2"
Generator Muffler	2"

3. Manufacturers:
Owens-Corning, Kaylo 10
Industrial Insulation Group, Thermo-12 Gold

- G. No piping, ductwork, or equipment shall be insulated until tested and approved for tightness. All piping and ducts shall be dry when covered.

3.2 APPLICATION - PIPE INSULATION (TYPE A)

- A. Vapor barrier jacket: Seal longitudinal joints with vapor barrier adhesive, transverse joints sealed with vapor barrier strips and adhesive. Ends of pipe insulation sealed off with vapor barrier adhesive at all flanges, valves and fittings, and at not more than 20 feet on continuous runs of pipe.
- B. Finish for concealed pipe insulation: Secure all concealed pipe insulation with staples and vapor seal adhesive at longitudinal; standard all service jacket pasted on lap.
- C. Finish for exposed pipe insulation: Multiple layers (minimum 2) of glass weave jacket lap sealed with Childers CP-30. Alternatively, finish with white 0.020", 25/50 rated PVC pre-curved and pre-cut jacket, as manufactured by Proto LoSMOKE or Zeston, covering over all service jacket. For exposed vapor seal insulation, same finish over vapor sealed all service jacket.

3.3 APPLICATION - INSULATION AT PIPE HANGERS

- A. Provide pipe hangers insulation protection saddles and shields.
- B. Fill each pipe covering protection saddle with same insulation as specified for respective pipe or with suitable insulating cement.
- C. Where shields are specified at hangers on piping with fibrous glass covering, provide for load bearing calcium silicate between shields and piping as follows:
 - 1. For pipe covering without vapor barrier jacket, furnish at each shield 18" long calcium silicate section with canvas jacket continuous between shield and insulation.
 - 2. For pipe covering with vapor barrier jacket, remove bottom half section of fibrous glass and replace with half section of calcium silicate. Make vapor barrier jacket continuous between shield and insulation.

3.4 APPLICATION - DUCT INSULATION (TYPE H)

- A. Install duct wrap over clean, dry sheet metal ducts. All duct joints and seams must be sealed to prevent air leakage from the duct.
- B. Duct wrap shall be cut to stretch-out dimensions. 2" piece of insulation is removed from the facing at the longitudinal and circumferential ends of the piece to form an overlap. Wrap the insulation around the perimeter of the duct with the facing out. Duct wrap shall be compressed a maximum of 25% in order to maintain thermal efficiency. Adjacent sections of insulation shall be tightly butted with the 2" overlapping. Staple seams on 6" centers.
- C. Minimize compression of the insulation to assure maximum thermal performance. Longitudinal seam of the vapor barrier must be overlapped a minimum of 2".
- D. All seams should be finished with appropriate pressure sensitive tape or glass fabric and mastic.
- E. Pressure sensitive tapes should be a minimum 3" wide and be applied with moving pressure using an appropriate sealing tool.

- F. Closure systems should have a 25/50 F.H.C. per UL 723.
- G. For rectangular ducts over 18" wide, the duct wrap should be secured to the duct with mechanical fasteners spaced on 18" centers to reduce sag. Care should be taken to avoid overcompressing the insulation with the retaining washer.
- H. Unfaced duct wrap should be overlapped a minimum of 2" and fastened with 4" to 6" nails or skewers spaced 4" apart, or secured with a wire or banding system.
- I. Where vapor barrier performance is necessary, all seams, joints, penetrations, washers and damage to the facing should be repaired with a minimum 2" overlap of tape prior to system startup.

3.5 APPLICATION - DUCT INSULATION (TYPE I)

- A. Fasten insulation in place with wed pins and washers or equivalent mechanical fastening method, as approved.
- B. Seal all joints with vapor barrier adhesive to provide continuous vapor barrier.
- C. All edges, corners, penetrations, and joints shall be reinforced and sealed with with vapor barrier adhesive tape to provide continuous vapor barrier. Tape shall be 4" wide, of type, and applied in strict conformance with manufacturer's recommendations. Tape shall be applied over insulation support washers.

3.6 APPLICATION - TANK INSULATION (TYPE J)

- A. Point joints with lagging cement prior to application of finish. Finish with two layers of 8 oz. glass mesh weave. Coat each layer of weave with vapor barrier adhesive.
- B. Insulation shall be fastened with welded pins or stick clips on flat surfaces and with stainless steel bands on irregular surfaces.

3.7 APPLICATION - FIRE RESISTIVE DUCT WRAP (TYPE L)

- A. Install in accordance with manufacturer's recommendations and approved OTCR installation procedures.
- B. Encircle the duct with continuous layers of insulation material. The material shall overlap by a minimum of three inches in the perpendicular direction. Subsequent layers of material shall be applied with a minimum three inch overlap in the longitudinal direction. Apply multiple layers as necessary to achieve a two hour zero clearance fire resistance rating.
- C. Secure insulation with 304 carbon steel banding (two hour rating) not less than 1/2 inches wide and 0.015 inches thick.
- D. Seal edges of insulation with high performance aluminum tape, 3 inches wide.
- E. Access doors shall be covered by three layers of insulation secured by 10 gauge pins, 4" to 5" long or copper coated steel, secured by 1-1/2" x 1-1/2" galvanized clips. Insulation shall be applied in three layers, each successive layer shall be 2" larger than the previously applied layer. Seal edges of exposed insulation with three inch wide aluminum tape. Access door shall be secured by 1/4" diameter threaded rods with 1/4" wing nuts, 12 inches on center around the perimeter of the access door.
- F. Seal floor penetrations with 3M FB-2000+ silicone sealant or approved equal over packing material of 3M FireMaster duct wrap or 3 pcf mineral wool or approved equal.

- G. Insulate all hanger rods directly in contact with the duct, with 8" of ductwrap closest to the point of contact.

3.8 APPLICATION - GENERATOR EXHAUST/MUFFLER (TYPE D)

- A. Apply insulation in two layers with staggered joints between layers. Each layer shall be secured with No. 14 gauge stainless steel wire. Apply a high rib lath and two coats of vermiculite plaster over the insulation.
- B. Finish the surfaces with .016" thick aluminum jacketing with lock on joints. Provide 12" long, 16 gauge aluminized steel shields at support points.

3.9 APPLICATION - PIPE INSULATION (TYPE E)

- A. Install aluminum jacketing with a minimum 2" overlap lapped downward to shed water. Seal all joints with joint sealer mastic. Finish circumferential joints with 3/8" aluminum strapping and seals. Secure with aluminum bands on 8" centers.

END OF SECTION

SECTION 23 08 00
COMMISSIONING OF HVAC SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, General Commissioning Requirement and other Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

- A. This section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment.
- B. Related Sections:
 - 1. Division 01 Section "General Commissioning Requirements" for general commissioning process requirements.
 - 2. Division 23 Heating Ventilation & Air Conditioning

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the Owner with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of each system designer to provide a complete design or installing subcontractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the Owner.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
 - 1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
 - 2. Verify and document proper performance of equipment and systems as per the written procedures.
 - 3. Verify that Operation & Maintenance documentation is complete and transferred to Owner.
 - 4. Verify that the Owner's operating personnel are adequately trained.
 - 5. Verify a contract is in place for a post occupancy review with O&M staff within 10 months after Substantial Completion.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.

- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner, Owner's representative, Trade Contractors, subcontractors, manufacturers and equipment suppliers.

The Cx process shall not reduce the responsibility of the CM to comply with the Contract Documents.

1.4 DEFINITIONS

- A. Refer to Division 01 Section "General Commissioning Requirements" for definitions.

1.5 SUBMITTALS

- A. Refer to Division 01 Section "General Commissioning Requirements" for CxA's role.
- B. Refer to Division 01 Section "Submittals" for specific requirements.
- C. In addition, provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, pre-start, and startup activities.
 - 3. O&M manuals
 - 4. Test reports
- D. Control Drawings Submittal
 - 1. The control drawings shall have a key to all abbreviations.
 - 2. The control drawings shall contain graphic schematic depictions of the systems and each component.
 - 3. The schematics will include the system and component layout of any equipment that the control system monitors, enables or controls, even if the equipment is primarily controlled by packaged or integral controls.
 - 4. Provide a full points list with at least the following included for each point:
 - a. Controlled system
 - b. Point abbreviation
 - c. Point description
 - d. Display unit
 - e. Control point or set point (Yes / No)
 - f. Monitoring point (Yes / No)
 - g. Intermediate point (Yes / No)
 - h. Calculated point (Yes / No)

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: Contractors will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the mechanical contractor of Division 23 shall ultimately be responsible for all standard testing equipment for the HVAC&R system and controls system in Division 23, except for equipment specific to and used by TAB in their commissioning responsibilities. A sufficient quantity of two-way radios shall be provided by each subcontractor.
- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the Owner and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the Owner upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment will be provided by the CxA, but shall not become the property of the Owner.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to an accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the installing contractors, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems
- B. Red-lined Drawings:
 - 1. The contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
 - 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 - 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 - 4. The contracted party, as defined in the Contract Documents will create the as-built drawings.

C. Operation and Maintenance Data:

1. Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
2. The CxA will review the O&M literature once for conformance to project requirements.
3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.

D. Demonstration and Instruction:

1. Contractor will provide demonstration and instruction as required by the contract document.
2. A complete instruction plan and schedule must be submitted by the contractor to the CxA four weeks (4) prior to any instruction.
3. A instruction agenda for each training session shall be submitted to the CxA at least one (1) week prior the training session.
4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and Owner's representative. A copy of the test record shall be provided to the CxA, Owner, and Architect.
5. Engage a Factory-authorized service representative to instruct Owner's maintenance personnel to adjust, operate, and maintain specific equipment.
6. Instruct Owner's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Mechanical, Controls and TAB Contractors. The commissioning responsibilities applicable to each of the mechanical, controls and TAB contractors of Division 23 are as follows (all references apply to commissioned equipment only):
 - B. Perform commissioning tests at the direction of the CxA.
 - C. Attend construction phase controls coordination meetings.
 - D. Attend testing, adjusting, and balancing review and coordination meetings.
 - E. Participate in HVAC&R systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
 - F. Provide information requested by the CxA for final commissioning documentation.
 - G. Prepare preliminary schedule for Mechanical system orientations and inspections, operation and maintenance manual submissions, training sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for owner. Distribute preliminary schedule to commissioning team members.
 - H. Update schedule as required throughout the construction period.
 - I. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
 - J. Assist the CxA in all verification and functional performance tests.
 - K. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.

- L. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA (45) days after submittal acceptance.
- M. Coordinate with the CxA to provide (72) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
- N. Notify the CxA a minimum of (2) weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.
- O. Participate in, and schedule vendors and contractors to participate in the instruction sessions.
- P. Provide written notification to the CM/GC and CxA Authority that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
 - 1. HVAC&R equipment including all fans, air handling units, piping, ductwork, dampers, terminals, and all other equipment furnished under this Division.
 - 2. Controls system used for equipment monitoring and manipulation
 - 3. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
 - 4. Fire detection and smoke detection devices furnished under other divisions of the specification.
- Q. The equipment supplier shall document the performance of his equipment.
- R. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- S. Test, Adjust and Balance Contractor
 - 1. Attend initial commissioning coordination meeting scheduled by the Commissioning Authority.
 - 2. Submit the site specific testing and balancing plan to the CxA and AE for review and acceptance.
 - 3. Attend the testing and balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in testing, adjusting, and balancing the HVAC&R system.
 - 4. At the completion of the testing and balancing work, and the submittal of the final testing and balancing report, notify the HVAC&R contractor and the CM/GC.
 - 5. Participate in verification of the testing and balancing report, which will consist of repeating measurements contained in the testing and balancing reports. Assist in diagnostic purposes when directed.
- T. Provide instruction of the Owner's operating staff using expert qualified personnel, as specified.
- U. Equipment Suppliers
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the Owner, to keep warranties in force.
 - 2. Assist in equipment testing per agreements with contractors.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- V. Refer to Division 01 Section "General Commissioning Requirements" for additional contractor responsibilities.

3.3 OWNER'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for Owner's Responsibilities.

3.4 CxA RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for CxA's Responsibilities.

3.5 TESTING PREPARATION

- A. Certify in writing to the CxA that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.6 TESTING, ADJUSTING AND BALANCING VERIFICATION

- A. Air and water testing, balancing and equipment performance verification shall be accomplished by an independent test and balance firm. The CxA shall spot check this work to verify accuracy of results
- B. Prior to performance of Testing, Adjusting and Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- C. Notify the CxA at least ten (10) days in advance of testing and balancing Work, and provide access for the CxA to witness testing and balancing Work.
- D. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.
 - 1. The CxA will notify testing and balancing subcontractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
 - 2. The testing and balancing subcontractor shall use the same instruments (by model and serial number) that were used when original data were collected.
 - 3. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.7 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of HVAC&R testing shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.

- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The CxA along with the HVAC&R contractor, testing and balancing Subcontractor, and HVAC&R Instrumentation and Control Subcontractor shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct to alter set points when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system, document the deficiency and report it to the Owner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.8 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 23 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. HVAC&R Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections. Assist the CxA with preparation of testing plans.
- C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 23 piping Sections. HVAC&R Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include but not limited to the following:
 1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
 2. Description of equipment for flushing operations.
 3. Minimum flushing water velocity.
 4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.
- D. Refrigeration System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of chillers, cooling towers, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- E. HVAC&R Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, steam, and hydronic distribution systems; special exhaust; and other distribution systems, including HVAC&R terminal equipment and unitary equipment.

- F. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.
- G. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The following equipment and systems shall be evaluated:
 1. HVAC systems
 2. Building Automation System
 3. Ductwork and accessories
 4. Heating Hot Water System
 5. Testing, Adjusting and Balancing

3.9 APPROVAL

- A. Refer to other specification and "General Commissioning Requirements" for approval procedures.

3.10 DEFERRED TESTING

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deferred testing.

3.11 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in Division 01.
- B. Refer to Division 01 Section "General Commissioning Requirements" for the CxA roles in the Operation and Maintenance Manual contribution, review and approval process.
- C. An updated as-built version of the control drawings and sequences of operation shall be included in the final controls O&M manual submittal.

3.12 INSTRUCTION OF OWNER PERSONNEL

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to instruction.
- B. Mechanical Contractor. The mechanical contractor shall have the following instruction responsibilities:
 1. Provide the CxA with an instruction plan two weeks before the planned training.
 2. Provide designated Owner's personnel with comprehensive orientation and instruction in the understanding of the systems and the operation and maintenance of each piece of HVAC equipment including, but not limited to, all HVAC equipment (ex. pumps, heat exchangers, chillers, heat rejection equipment, air conditioning units, air handling units, fans, terminal units, controls and water treatment systems, etc.)
 3. Instruction shall normally start with classroom sessions followed by hands-on instruction on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
 4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
 5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing contractor or manufacturer's representative. Practical building

operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the training.

6. The controls contractor shall attend sessions other than the controls instruction, as requested, to discuss the interaction of the controls system as it relates to the equipment being discussed.
 7. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
 8. Instruction shall include:
 - a. Use of the printed installation, operation and maintenance instruction material included in the O&M manuals.
 - b. Discussion of relevant health and safety issues and concerns.
 - c. Discussion of warranties and guarantees.
 - d. Common troubleshooting problems and solutions.
 - e. Explanatory information included in the O&M manuals and the location of all plans and manuals in the facility.
 - f. Discussion of any peculiarities of equipment installation or operation.
 - g. The format and training agenda in The HVAC Commissioning Process, ASHRAE Guideline 1-2007, is recommended.
 9. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance for all pieces of equipment.
 10. The mechanical contractor shall fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.
 11. Instruction shall occur after functional testing is complete, unless approved otherwise by the Owner.
- C. Controls Contractor. The controls contractor shall have the following training responsibilities:
1. Provide the CxA and AE with a training plan four weeks before the planned training.
 2. The controls contractor shall provide designated Owner personnel training on the control system in this facility. The intent is to clearly and completely instruct the Owner on all the capabilities of the control system.
 3. Training manuals. The standard operating manual for the system and any special training manuals will be provided for each trainee, with three extra copies left for the O&M manuals. In addition, copies of the system technical manual will be demonstrated during training and three copies submitted with the O&M manuals. Manuals shall include detailed description of the subject matter for each session. The manuals will cover all control sequences and have a definitions section that fully describes all relevant words used in the manuals and in all software displays. Manuals will be approved by the CxA and A/E. Copies of audiovisuals shall be delivered to the Owner.
 4. The trainings will be tailored to the needs and skill-level of the trainees.
 5. The trainers will be knowledgeable on the system and its use in buildings. For the on-site sessions, the most qualified trainer(s) will be used. The Owner shall approve the instructor prior to scheduling the training.

6. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
7. The controls contractor shall attend sessions other than the controls training, as requested, to discuss the interaction of the controls system as it relates to the equipment being discussed.
8. Three (3) training sessions are suggested: (to be confirmed by the owner and should be included in general specification for training, as applicable)
 - a. Training I. Control System. The first training shall consist of 8 hours of actual training. This training may be held on-site or in the supplier's facility. If held off-site, the training may occur prior to final completion of the system installation. Upon completion, each student, using appropriate documentation, should be able to perform elementary operations and describe general hardware architecture and functionality of the system.
 - b. Training II. Building Systems. The second session shall be held on-site for a period of 8 hours of actual hands-on training after the completion of system commissioning. The session shall include instruction on:
 - 1) Specific hardware configuration of installed systems in this building and specific instruction for operating the installed system, including HVAC systems, lighting controls and any interface with security and communication systems.
 - 2) Security levels, alarms, system start-up, shut-down, power outage and restart routines, changing set points and alarms and other typical changed parameters, overrides, freeze protection, manual operation of equipment, optional control strategies that can be considered, energy savings strategies and set points that if changed will adversely affect energy consumption, energy accounting, procedures for obtaining vendor assistance, etc.
 - 3) All trending and monitoring features (values, change of state, totalization, etc.), including setting up, executing, downloading, viewing both tabular and graphically and printing trends. Trainees will actually set-up trends in the presence of the trainer.
 - 4) Every screen shall be completely discussed, allowing time for questions.
 - 5) Use of keypad or plug-in laptop computer at the zone level.
 - 6) Use of remote access to the system via phone lines or networks.
 - 7) Setting up and changing an air terminal unit controller.
 - 8) Graphics generation
 - 9) Point database entry and modifications
 - 10) Understanding DDC field panel operating programming (when applicable)
 - c. Training III. The third training will be conducted on-site six months after occupancy and consist of 8 hours of training. The session will be structured to address specific topics that trainees need to discuss and to answer questions concerning operation of the system.

D. TAB: The TAB contractor shall have the following training responsibilities:

1. TAB shall meet with facility staff after completion of TAB and instruct them on the following:
 - a. Go over the final TAB report, explaining the layout and meanings of each data type.
 - b. Discuss any outstanding deficient items in control, ducting or design that may affect the proper delivery of air or water.

- c. Identify and discuss any terminal units, duct runs, diffusers, coils, fans and pumps that are close to or are not meeting their design capacity.
- d. Discuss any temporary settings and steps to finalize them for any areas that are not finished.
- e. Other salient information that may be useful for facility operations, relative to TAB.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 09 23

CONTROLS AND INSTRUMENTATION

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 230000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #3 Contractor.
- C. Provide all labor, materials, tools, equipment, and services for a complete direct digital control (DDC) system as indicated, in accordance with provisions of contract documents.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 230000, General Provisions, and with the provisions of all applicable codes and laws.
- B. The installation and equipment is to conform to applicable building code articles and applicable reference standards cited therein.
- C. It is the responsibility of the Contract #3 Contractor to be familiar with all codes, rules, ordinances, and regulations of the New York City Building Code and their interpretations which are in effect at the site of the work.
- D. The latest issue of applicable standards and recommended practices of the following agencies in effect shall form a part of the specification to the extent each agency's relative standards or recommended practices apply to the Systems and its components as specified herein.
 - 1. Federal Communications Commission (FCC)
 - 2. American National Standards Institute (ANSI)
 - 3. American Society of Mechanical Engineers (ASME)
 - 4. Electronic Industries Association (EIA)
 - 5. Institute of Electrical and Electronics Engineers (IEEE)
 - 6. National Electrical Manufacturers Association (NEMA)
 - 7. National Fire Protection Association (NFPA)
 - 8. Underwriters Laboratories (UL)
 - 9. Occupational Safety and Health Administration (OSHA)
 - 10. American Society of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE)
- E. The Contract #3 Contractor shall be solely responsible for compliance with all health and safety regulations, performing the work in a safe and competent manner, and use industry accepted installation procedures required for the work as outlined in these documents.

- F. All systems equipment, components, accessories, and installation hardware shall be new and free from defects and shall be UL listed where applicable. All components shall be in current production and shall be a standard product of the system or device manufacturer. Refurbished or reconditioned components are unacceptable. Each component shall bear the make, model number, device tag number (if any), and the UL label as applicable. All Systems components of a given type shall be the product of the same manufacturer.

1.3 SUBMITTALS

- A. Procedure: Prepare and make the submissions listed below and in Section 230000 in accordance with the procedure specified in Section 230000.
- B. Shop Drawings
 - Automatic control components
 - Sequences of operation
 - Starter wiring of all automatically controlled motors
 - Control diagrams
 - Color coded wiring diagrams
 - Control valves
 - Variable speed drive unit
 - Sample of panel graphics
 - Direct digital control panels
 - Computer program
 - Accessories and auxiliaries
 - Library of custom computer graphics to be installed under this contract.
 - Outline of system test and commissioning procedure and anticipated schedule for testing and commissioning using project milestones.

1.4 SYSTEM TESTING AND COMMISSIONING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 230000.
- B. Control system shall be set up and checked out by factory trained competent technicians skilled in the setting and adjustment of BMS equipment used in this project. This technician shall be experienced in the type of systems associated with this BMS.
- C. At the time of final observation, demonstrate the sequence of operation for each system to the Commissioner.

1.5 IDENTIFICATION TAGS AND DRAWINGS

- A. Provide two copies of the as-installed control system, mounted on masonite and covered with heat bonded clear plastic laminate.
- B. Provide identifying tags on all controls to conform to the designation of the control diagrams.
- C. Provide nameplate on each starter equal to equipment identification (Section 230000) indicating equipment controlled, source of control voltage, and equipment interlocked through starter. Size of identification nameplate to be a function of information contained (minimum 1-1/2" x 3-1/2").

1.6 MANUFACTURER'S WARRANTY

- A. In addition the warranty specified in 230000, the BMS vendor shall warrant all system components for a period of two years from the date of final acceptance by the City of New York and Commissioner. The warranty shall include parts, labor, and debugging of system software.

1.7 INSTRUCTION OF CITY OF NEW YORK'S OPERATING PERSONNEL

- A. In addition to the on site training specified elsewhere, the Contract #3 Contractor shall instruct two facilities personnel at the manufacturer's regional training facility.
- B. The course shall be the same course used in the instruction of the manufacturer's own service personnel. The course shall have a minimum of 40 classroom hours, and shall cover the following curriculum.
 - 1. Programming
 - 2. Maintenance of hardware
 - 3. Trouble shooting
 - 4. Repairing and rebuilding system components

PART 2 - PRODUCTS

2.1 ELECTRIC CONTROLS

- A. General
 - 1. Electrical controls of the low voltage type, shall be minimum #18AWG THHN/THWN, plenum-rated, with copper conductors. 120 volt control wiring shall be minimum #12AWG, THHN/THWN, terminated in appropriate lugs.
 - 2. Safety controls shall be 120 volts or less, with one leg grounded.

2.2 INDIVIDUAL INDICATING PANELS

- A. Provide separate indicating panels in each mechanical room, to house all miscellaneous pneumatic and electric control devices, relays, etc. serving systems located in the room. Mount controls, control setting indicator, all control pressure gauges and all remote mounted system temperature and pressure gauges on the panel.
- B. Locate the panels near the central equipment for each system. The panel mounted controls for air systems may be mounted in a common panel.
- C. Construct the panels of a minimum of 16 gauge steel or formica properly braced and stiffened and supported on an angle iron frame.
- D. Provide a diagram of each device and its position in the panel, with nomenclature matching the final control diagrams.

2.3 MOTORIZED DAMPERS

- A. Constructed multiple opposed blades of extruded aluminum 16 gauge steel crimped at the ends or of doubled 22 gauge steel, formed and spot welded for stiffness or of airfoil shaped aluminum. Limit blade width to 10". Provide steel linkage and shaft and nylon or oil impregnated bronze bearings. Set damper blades in a welded steel channel frame.
- B. Galvanize or zinc plate all steel parts. Finish with aluminum paint.
- C. Damper blades and frame shall have butyl or neoprene mechanically fastened to insure airtight seal when closed. Provide seals on all four sides. Seals shall be rated for operation between -40°F and 200°F. Maximum leakage shall not exceed 4 SCFM/FT² at 3.0 inch pressure differential.
- D. Damper linkage arrangement shall be equal percentage and shall match the damper operator.

Application: Fresh Air
 Relief
 Return
 Smoke Damper

2.4 DIRECT DIGITAL CONTROL SYSTEM

- A. Approved manufacturers for the automatic control systems are as follows:

<u>Manufacturers</u>	<u>SERIES</u>
Automated Logic	
Honeywell	EXCEL 5000 w/ Symmetre software
Johnson Controls	Metasys
Siemens	Apogee

- B. System Architecture
 - 1. The system shall employ distributed processing architecture. Interruption of the main network bus or any of the local LAN buses shall not interrupt the operation of the system in any way. DDCP shall be so organized such that all necessary inputs and output points necessary to accomplish specified sequences of operation shall be connected to the same DDC panel.
 - 2. It shall be possible to access data from any point on the system from any other point on the system including space sensors, DDCP's, LAN controller's, etc.
 - 3. Workstation/DDC Panel Support: Operator workstations and DDC panels shall directly reside on a single shared high speed local area network such that communications may be executed directly between controllers, directly between workstations, and between controllers and workstations on a peer-to-peer basis.
 - 4. Dynamic Data Access: All operator devices, either network resident or connected via dial-up modems, shall have the ability to access all point status and application report data, or execute control functions for any and all other devices via the local area network. Access to data shall be based upon logical identification of building equipment.

- a. Access to system data shall not be restricted by the hardware configuration of the facility management system. The hardware configuration of the DDC system network shall be transparent to the user when accessing data or developing control programs.
5. General Network Design: Network design shall include the following provisions:
- a. High speed data transfer rates for alarm reporting, quick report generation from multiple controllers, and upload/download efficiency between network devices. The minimum baud rate shall be 1 Megabaud.
 - b. Support of any combination of controllers and Operator Workstations directly connected to the local area network.
 - c. Detection and accommodation of single or multiple failures of either workstations, DDC panels or the network media. The network shall include provisions for automatically re-configuring itself to allow all operational equipment to perform their designated functions as effectively as possible in the event of single or multiple failures.
 - d. Message and alarm buffering to prevent information from being lost.
 - e. Error detection, correction, and re-transmission to guarantee data integrity.
 - f. Default device definition to prevent loss of alarms or data, and ensure alarms are reported as quickly as possible in the event an operator device does not respond.
 - g. Commonly available, multiple sourced, networking components shall be used to allow the DDC system to coexist with other networking applications. The following are acceptable technologies: ARCNET and/or ETHERNET and/or SERVICE TELEPHONE PAIRS and/or BROADBAND.
 - h. Communications must be of a deterministic nature to assure calculable performance under worst-case network loading. When a collision-based network is proposed, the Contract #3 Contractor shall provide detailed calculations showing worst-case network response times.
 - i. Automatic synchronization of the real-time clocks in all DDC panels shall be provided.
- C. Direct Digital Control Panels (DDCP)
1. Stand-alone Controllers shall be micro-processor based with a minimum word size of 16 bits. They shall also be multi-tasking, multi-user, real-time digital control processors consisting of modular hardware with plug-in enclosed processors, communication controllers, power supplies and input/output point modules. Controller size shall be sufficient to fully meet the requirements of this specification and the attached point list.

2. Each DDC Controller shall have sufficient memory, a minimum of 1 megabyte, to support its own operating system and databases, including:
 - a. Control processes
 - b. Energy management applications
 - c. Alarm management applications including custom alarm messages for each level alarm for each point in the system.
 - d. Historical/trend data for points specified
 - e. Maintenance support applications
 - f. Custom processes
 - g. Operator I/O
 - h. Dial-up communications
 - i. Manual override monitoring

3. Each DDC Controller shall support:

Monitoring of the following types of inputs, without the addition of equipment outside the DDC Controller cabinet:

- a. Analog inputs
 - 4-20 mA
 - 0-10 Vdc
 - Thermistors
 - 1000 ohm RTDs

- b. Digital inputs
 - Dry contact closure
 - Pulse Accumulator
 - Voltage Sensing

Direct control of pneumatic and electronic actuators and control devices. Each DDC Controller shall be capable of providing the following control outputs without the addition of equipment outside the DDC Controller cabinet:

- c. Digital outputs (contact closure)
- d. Contact closure (motor starters, sizes 1-4).
- e. Analog outputs
 - 0-20 psi
 - 4-20 mA
 - 0-10 Vdc

4. Each DDC Controller shall have a minimum of 10 per cent spare capacity for future point connection. The type of spares shall be in the same proportion as the implemented I/O functions of the panel, but in no case shall there be less than two spares of each implemented I/O type. Provide all processors, power supplies and communication controllers complete so that the implementation of a point only requires the addition of the appropriate point input/output termination module and wiring.
 - a. Provide sufficient internal memory for the specified control sequences and have at least 25% of the memory available for future use.

5. DDC Controllers shall provide at least two RS-232C serial data communication ports for operation of operator I/O devices such as industry standard printers, operator terminals, modems and portable laptop operator's terminals. DDC Controllers shall allow temporary use of portable devices without interrupting the normal operation of permanently connected modems, printers or terminals.
6. The operator shall have the ability to manually override automatic or centrally executed commands at the DDC Controller via local, point discrete, on-board hand/off/auto operator override switches for digital control type points and gradual switches for analog control type points. These override switches shall be operable whether the panel processor is operational or not.
 - a. Switches shall be mounted either within the DDC Controllers key-accessed enclosure, or externally mounted with each switch keyed to prevent unauthorized overrides.
 - b. DDC Controllers shall monitor the status of all overrides and inform the operator that automatic control has been inhibited. DDC Controllers shall also collect override activity information for reports.
7. DDC Controllers shall provide local LED status indication for each digital input and output for constant, up-to-date verification of all point conditions without the need for an operator I/O device. Graduated intensity LEDs or analog indication of value shall also be provided for each analog output. Status indication shall be visible without opening the panel door.
8. Each DDC Controller shall continuously perform self-diagnostics, communication diagnosis and diagnosis of all panel components. The DDC Controller shall provide both local and remote annunciation of any detected component failures, low battery conditions or repeated failure to establish communication.
9. Isolation shall be provided at all peer-to-peer network terminations, as well as all field point terminations to suppress induced voltage transients consistent with IEEE Standards 587-1980.
10. In the event of the loss of normal power, there shall be an orderly shutdown of all DDC Controllers to prevent the loss of database or operating system software. Non-volatile memory shall be incorporated for all critical controller configuration data and battery backup shall be provided to support the real-time clock and all volatile memory for a minimum of 72 hours.
 - a. Upon restoration of normal power, the DDC Controller shall automatically resume full operation without manual intervention.
 - b. Should DDC Controller memory be lost for any reason, the user shall have the capability of reloading the DDC Controller via the local RS-232C port, via telephone line dial-in or from a network workstation PC.
11. Provide a separate DDC Controller for each HVAC system as indicated by separate articles in the Part III - Execution section of this specification section. It is intended that each unique system be provided with its own point resident DDC Controller.

12. Telecommunication Capability:

- a. Auto-dial/auto-answer communications shall be provided to allow DDC Controllers to communicate with remote operator stations and/or remote terminals on an intermittent basis via telephone lines, as indicated in the sequence of operations.
- b. Auto-dial DDC Controllers shall automatically place calls to workstations to report alarms or other significant events using recorded voice messages for each alarm category and system prepared by the DDC vendor in coordination with the City of New York.
 - i. DDC Controllers shall be able to store a minimum of 10 phone numbers of at least 20 digits. Retry a single primary number at a fixed interval until successful.
 - ii. The auto-dial program shall include provisions for handling busy signals, "no answers" and incomplete data transfers. Provide as a minimum 3 secondary numbers when communications cannot be established with the primary device.
- c. Operators at dial-up workstations shall be able to perform all control functions, all report functions and all database generation and modification functions as described for workstations connected via the network. Routines shall be provided to automatically answer calls from remote DDC Controllers. The fact that communications are taking place with remote DDC Controllers over telephone lines shall be completely transparent to an operator.
 - i. An operator shall be able to access remote buildings by selection of any facility by its logical name. The workstation dial-up program shall store the phone numbers of each remote site, so the user shall not be required to remember or manually dial telephone numbers.
 - ii. A PC workstation may serve as an operator device on a network, as well as a dial-up workstation for multiple auto-dial DDC Controllers or networks. Alarm and data file transfers handled via dial-up transactions shall not interfere with network activity, nor shall network activity keep the workstation from handling incoming calls.
- d. Dial-up communications shall make use of Hayes compatible modems and voice-grade telephone lines. Provide modems rated at 9600 baud unless otherwise directed.

D. Transmission Network.

1. The control system shall include a multi-drop digital transmission network that provides the communication link between the microprocessor controllers and the console. The system shall utilize a cyclic redundancy check or dual transmission with parity check to insure signal reliability.

2. The transmission network shall be minimum 22AWG, 1 pair, non-shield Level 4 Plenum Cable compatible with LonWorks technology with the following features: LonWorks specified jacket colors and print legends for quick identification and troubleshooting, sequential foot markings, UL listed, manufactured in ISO 9002 certified plants and certified for use in LonWorks systems.

E. Control Devices and Sensors

1. Duct Temperature Sensor

- a. Device shall include a RTD temperature sensor capable of $\pm 0.5^{\circ}\text{F}$ accuracy or less. The sensor operating range without loss of accuracy shall be 30°F to 130°F .
- b. All duct sensors shall have an accessible NEMA 1 electrical box for connections and terminations.
- c. Manufacturer/ Model: ACI model ACI Duct or approved equal

2. Duct Averaging Temperature Sensor

- a. Device shall include a platinum curve averaging temperature sensor with copper probe capable of $\pm 0.3^{\circ}\text{F}$ accuracy or less. The sensor operating range without loss of accuracy shall be 30°F to 130°F .
- b. All duct sensors shall have an accessible NEMA 1 electrical box for connections and terminations.
- c. Provide capillary mounting clips for support of the probe.
- d. Manufacturer/Model: Minco model ST-AV8 or approved equal

3. Immersion Temperature Sensor

- a. Device shall include a RTD temperature sensor capable of $\pm 0.5^{\circ}\text{F}$ accuracy or less. The sensor operating range without loss of accuracy shall be 30°F to 130°F .
- b. All duct sensors shall have an accessible NEMA 1 electrical box for connections and terminations.
- c. Manufacturer/ Model : ACI model ACI Immersion, Precon model ST-TS or approved equal

4. Space Temperature Sensor

- a. Provide a minimum of one space temperature sensor per control zone or quantity as shown on plans, whichever is greater.
- b. Sensors shall be thermistor type with accuracy equal to $\pm 0.36^{\circ}\text{F}$ through minimum range of 30°F to 80°F without display.

- c. Manufacturer/Model: Siemens model QAA-20 or approved equal
5. Combination Temperature, Relative Humidity and Carbon Dioxide Space Sensor
- a. A single wall-mounted sensor capable of measuring CO₂ concentration (ppm), temperature (°F) and relative humidity (%RH). Sensors with displays are not acceptable.
 - b. Accuracy:
 - (1) CO₂: ±50ppm
 - (2) Temperature between 59°F & 95°F: ±0.8K
 - (3) Relative Humidity at 73°F and between 30 & 70%RH: ±3%RH
 - c. Stability: CO₂ recalibration free for 5 year
 - d. Output: multiple 0-10 Vdc
 - e. Dimensions: maximum 4" tall x 3-1/2" wide x 1-1/2" deep
 - f. Manufacturer: Siemens QPA-20
6. Duct-Mounted Carbon Dioxide Sensors
- a. Provide a minimum of one duct-mounted carbon dioxide sensor at the common return air duct of each air system or quantity as shown on plans, whichever is greater.
 - b. Sensors shall measure carbon dioxide concentration with accuracy equal to ±40ppm through minimum carbon dioxide range of 0 to 2000ppm, minimum temperature range of 32°F to 120°F.
 - c. Provide the following options: duct-mount accessory enclosure, calibration software kit and hand-held meter for field verification.
 - d. Manufacturer/Model: Vaisala model GMD20, Siemens model QPA63.1, GE model T8300 or approved equal
7. Duct-Mounted Relative Humidity Sensors
- a. Device shall include a relative humidity sensor capable of ±1%RH accuracy or less. The sensor operating range without loss of accuracy shall be 20% to 90%RH.
 - b. All duct sensors shall have an accessible NEMA 1 electrical box for connections and terminations.
 - c. Manufacturer/Model: ACI model ACI/RH1 Duct or approved equal
8. Flow sensors

- a. Ultra sonic, clamp on type. The unit shall be capable of measuring flow over a range of 0.1 to 40.0 feet per second pipe velocity, with flow in either direction.
- b. The transducers shall be NEMA 4, standard temperature metal body. The flow computer shall be a two channel type in a "blind" configuration capable of monitoring two flow stations simultaneously.
- c. The unit shall be capable of measuring the flow within pipes over a size range of 1/2" to 24" diameter. Mounting track shall be dielectrically compatible with the pipe to which the unit is mounted.
- d. Performance:

Liquid temperature:	-40°F to 250 °F
Accuracy:	+ 2%
Repeatability	1/2%
Sensitivity:	0.001 fps
- e. The unit shall provide a 4-20 ma input signal to the DDC system.

Manufacturer: Controltron Inc.
 155 Plant Avenue
 Hauppauge, NY
 (516) 231-3600

Model: System 990 Uniflow or approved equal

9. Current Sensing Relay (CSR)

- a. Provide a current sensing relay where indicated on the drawings for monitoring electrical current to operating electrical motors. Each relay shall be selected for the brake horsepower of the motor and shall provide a signal to the DDC system when the current exceeds specified parameters (locked rotor current).
- b. The SCR shall be selected with extended frequency feature for the low frequency applications.
- c. Features shall include variable trip point and time delay, current monitoring from 10 mA to 60 AC Amps, electrical isolation between circuits, LED trip status indicator, calibrated dial and external current transformers where applicable.
- d. Provide Power-On delay: 100 ms max. Frequency 12 to 400 Hz. Mechanical life 10,000,000 operations @ rated load.
- e. Manufacturer: CR Magnetics Inc., Model: CR 4395 or approved equal.

10. Current indicator: (CI)

- a. Provide a current indicator at each fan motor. The current indicator shall sense voltage drop due to broken fan belt or detached fan wheel and send a signal to the DDC system.

- b. The indicators shall be factory calibrated for the turn on point. The value of the turn on point shall be determined by the temperature Contract #3 Contractor and submitted for Commissioner's approval.
- c. Indicators shall be fully isolated, self powered units and supplied with the LED attached to the current sensing transformer.
- d. Manufacturer: CR Magnetics, Inc. Model: CR2530 or approved equal

F. Central Operators' Terminal.

- 1. A central operators' terminal shall provided for monitoring of all DDC system functions. The central operators terminal shall be installed in a location which shall be determined in consultation with the City of New York's facilities manager.

Provide a second Operators' Terminal, identical to the Central Operators Terminal, in the location defined on the drawings or as directed in field.

Provide the software necessary to permit an City of New York purchased notebook computer to operate as a fully capable operators terminal.

- 2. Output shall be 30 character alpha numeric display in English Language which can be scrolled up to 80 characters wide per line to indicate all dynamic temperature, pressure, humidity and flow values, equipment status and alarms and alarm limit set points. This shall also display set points of all DDC loops, control pressure to controlled actuators and complete DDC control loop strategies.
- 3. Input and control shall be via an alpha numeric keyboard with the following commands and control initiated at the keyboards; start/stop equipment, set or change alarm limits, add, modify, enable or disable control strategies, tune-up control strategies by adjusting parameters, define and set alarm status and limits, add or delete points to system and initiate hard copy record of any data and select points to be trended over a period of time.
- 4. Command Entry/Menu Selection Process: Operator Workstation interface software shall minimize operator training through the use of English language prompting, English language point identification, and industry standard PC application software.

The operator interface shall minimize the use of a typewriter style keyboard through the use of a mouse or similar pointing device, and "point and click" approach to menu selection. For example, users shall be able to start and stop equipment or change setpoints from graphical displays through the use of a mouse or similar pointing device.

- 5. Graphical and Text-Based Displays: At the option of the user, Operator Workstations shall provide consistent graphical or text-based displays of all system point and application data described in this specification. Point identification, engineering units, status indication, and application naming conventions shall be the same at all operator devices.
- 6. Multiple, Concurrent Displays: The Operator Interface shall provide the ability to simultaneously view several different types of system displays in a windowing environment to speed facility operation and analysis. For example, the interface shall provide the ability to simultaneously display a graphic depicting an air

handling unit, while displaying the trend graph of several associated space temperatures to allow the user to analyze system performance. If the interface is unable to display several different types of displays at the same time, the Contract #3 Contractor shall provide at least two operator stations.

7. Password Protection: Multiple-level password access protection shall be provided to allow the user/manager to limit workstation control, display and data base manipulation capabilities as he deems appropriate for each user, based upon an assigned password.
 - a. Passwords shall be exactly the same for all operator devices, including DDC panel portable or panel-mounted network terminals. Any additions or changes made to password definition shall automatically cause passwords at all DDC panels on a network to be updated and downloaded to minimize the task of maintaining system security. Users shall not be required to update passwords for DDC panels individually.
 - b. A minimum of five levels of access shall be supported:
 - c. A minimum of 50 passwords shall be supported at each DDC panel.
 - d. Operators will be able to perform only those commands available for their respective passwords. Menu selections displayed at any operator device, including portable or panel mounted devices, shall be limited to only those items defined for the access level of the password used to log-on.
 - e. User-definable, automatic log-off timers of from 1 to 60 minutes shall be provided to prevent operators from inadvertently leaving devices on-line.
8. Operator Commands: The operator interface shall allow the operator to perform commands including, but not limited to, the following:
 - a. Start-up or shutdown selected equipment
 - b. Adjust setpoints
 - c. Add/Modify/Delete time programming
 - d. Enable/Disable process execution
 - e. Lock/Unlock alarm reporting for each point
 - f. Enable/Disable Totalization for each point
 - g. Enable/Disable Trending for each point
 - h. Override PID Loop setpoints
 - i. Enter temporary override schedules
 - j. Define Holiday Schedules
 - k. Change time/date
 - l. Enter/Modify analog alarm limits
 - m. Enter/Modify analog warning limits
 - n. View limits
 - o. Enable/Disable Demand Limiting for each meter
 - p. Enable/Disable Duty Cycle for each load
9. Logs and Summaries: Reports shall be generated automatically or manually, and directed to either CRT displays, printers, or disk files. As a minimum, the system shall allow the user to easily obtain the following types of reports:
 - a. A general listing of all points in the network
 - b. List all points currently in alarm
 - c. List of all off-line points

- d. List all points currently in override status
- e. List of all disabled points
- f. List all points currently locked out
- g. List of all items defined in a "Follow-Up" file
- h. List all Weekly Schedules
- i. List all Holiday Programming
- j. List of Limits and Deadbands

Summaries shall be provided for specific points, for a logical point group, for a user-selected group of groups, or for the entire facility without restriction due to the hardware configuration of the facility management system. Under no conditions shall the operator need to specify the address of hardware controller to obtain system information.

10. Features:

Minimum 2.0 GHz Intel "Pentium IV" processor.
 3.5" 1.44MB floppy drive
 Iomega Zip Drive
 Minimum 52X CD ROM
 Minimum 24x10x40 Read-Write CD ROM
 Adjustable display contrast.
 Typewriter keyboard with quick entry numeric pad.
 ASCII character set.
 (2) USB, (1) Serial, (1) parallel, and mouse ports.
 17" SVGA (1024X768) Monitor
 512 KB Static RAM
 Integral surge suppressor AC power supply
 Latest Windows operating system
 Latest Version of Microsoft Office Professional

11. Ratings:

Temperature 50°F - 150°F
 Humidity to 98% R.H.

12. Accessories:

- a. Minimum 60 gigabyte hard disk including an allowance of at least 40 gigabytes for storage of archived trend logged data and other City of New York provide software."
- b. Operators "mouse" with pad
- c. Modem
- d. UPS (Uninterruptible Power Supply)
- e. Library of interactive computer graphics, prepared by the DDC vendor, of HVAC system arrangements similar to those depicted on mechanical flow and control diagrams; Insight package for PC's.
- f. Archiving software package capable of downloading data to the hard drive in ASCII format and/or downloading data to Microsoft Excel.
- g. System 600 management applications library
- h. System 600 Dail-Up software
- i. System 600 Maintenance Management for Insight
- j. Remote monochrome video terminal for additional monitoring locations.

G. Terminal Control Unit

- 1. Control of terminal units shall be accomplished by a microprocessor based stand

alone controller utilizing Direct Digital Control. The Terminal Control Unit shall interface to the building control system in a multi-drop communications network originating at the control system field panel. An individual controller shall be provided for each terminal unit.

- a. Each Terminal Control Unit shall contain resident programs which are field selectable for a specific application. All resident programs shall be contained in non-volatile memory using EEPROM, EPROM, and PROM. Systems that employ volatile (RAM) memory shall provide 72 hour battery back-up for each Terminal Control Unit.
2. Each Terminal Control Unit shall be accessible for purposes of control and monitoring from central or remote operator's terminals as specified herein.
3. The Terminal Control Unit shall continue its primary control function independent of other network communication. Reversion to a failed (normally open or normally closed contact position) mode on separation from the communication bus is not acceptable.
4. An operator's terminal connected to any field panel on the network, directly or via modem, will have access to all Terminal Control Units connected to all communication bus. Under no circumstances will it be necessary to identify the specific bus, field panel, or Terminal Control Unit prior to obtaining values or status for any point in the building system.

H. Printer

1. A wide carriage high-speed keyboard/printer shall be provided for hard copy data and alarm printouts. The minimum print speed shall be 160 characters per second. The printer shall have a line length of at least 132 characters and the character set shall be the standard 96 character ASCII upper class and lower case character set.
 - a. The printer shall be equipped with a compressed mode option for 220 characters per line. The printer shall have both 9 x 9 DOT matrix character structure and 9 x 18 DOT matrix for letter quality output.
 - b. Accessories:
 - i. Adjustable line spacing of 6 or 8 lines per inch.
 - ii. Adjustable tractor for 5 to 15 inch paper widths.
 - iii. Software selectable emphasized, double strike, and double width character capability.

I. Man-Machine Interfacing.

1. The following functions shall be capable through the operators' terminal or printer/keyboard.
 - a. Add, delete, or change points without vendor assistance.
 - b. Write custom control sequences without vendor assistance.
 - c. Time of day scheduling.
 - d. Start/stop time optimization.
 - e. Night setback.
 - f. Economizer cycle.
 - g. Holiday schedule.
 - h. Run time totalization.

- i. Trending.
 - j. Duct cycle program.
2. Operator shall be able to interface with the system in English Language as follows:
 - a. Display.
 - b. Command.
 - c. Edit.
 - d. Add.
 - e. Modify.
 - f. Copy.
 - g. Delete.
3. Output information shall be displayed or printed for hard copy record and shall include:
 - a. 6 alpha/numeric character for point names.
 - b. 12 alpha/numeric characters for point descriptors.
 - c. Appropriate alpha/numeric characters for values such as temperature, pressure and humidity.
 - d. Appropriate alpha/numeric characters for status and alarms.
Example: "EC-1 Ret Air Temp 78.5°F Hi Alarm"
 - e. All points may be displayed or printed including:
 - i. All values, may be shown to nearest 1/10.
 - ii. All motors, may be commanded and shown on/off or automatic.
 - iii. All alarms shall have condition to be displayed or printed.
 - iv. All control point adjustments to be shown to the nearest 1/10 of a pound.
4. User Programmability.
 - a. All temperature control strategies and energy management routings shall be definable by the operator through the operators' terminal. It shall be possible for the operator to modify system functions independently after receiving the training from the Contract #3 Contractor. The system shall be provided complete with all equipment and documentation necessary to allow a trained operator to independently perform the functions listed below:
 - i. Read the value of a measured variable (i.e. temperature).
 - ii. Start or stop equipment.
 - iii. Monitor the status of equipment being controlled.
 - iv. Read the setpoint of a control loop.
 - v. Determine the control strategies that have been defined for a specific piece of equipment.
 - vi. Generate displays of control strategies.
 - vii. Add/delete control loops to the system.
 - viii. Add/delete points to the system.
 - ix. Create, modify or delete control strategies.
 - x. Assign sensors and/or actuators to a control strategy.
 - xi. Tune control loops through the adjustment of control loop parameters.
 - xii. Enable or disable control strategies.
 - xiii. Generate hardcopy records of control strategies on a printer.

xiv. Select points to be alarmable and define the alarm state(s).

J. Programming

1. Include all programming necessary to perform the sequences of operation as specified.
2. Submit the logic programming to Commissioner for review and comment. Include time to personally the program logic with the Commissioner.
3. Submit to the City of New York a complete list of the alarms to be annunciated by the system including typical families of analog limit alarms with their proposed values. The City of New York will provide a custom text relative to each alarm point including instructions as to what action to be taken.
4. The system shall be capable of supporting proportional, proportional-integral, and proportional-integral-derivative control algorithms.
5. Custom graphics are to be prepared by the DDC system vendor for each mechanical system indicated on the contract flow and control diagram, or for which there is a unique sequence of operation indicated in PART 3 of this specification section.

K. Training/City of New York's instruction: The Contract #3 Contractor shall provide four copies of an operator's manual describing all operating and routine maintenance service procedures to be used with the system. The Contract #3 Contractor shall instruct the City of New York personnel in these procedures during the start up and period. The duration of the instruction period shall be no less than 40 hours. These instructions are to be conducted during normal working hours. The instructions shall consist of both hands-on and classroom training at the job site. The City of New York reserves the right to video tape these instruction periods.

L. VALVES

1. Control valves shall be selected with a maximum pressure drop of 5.0 psi for valves 2" and larger and 2.0 psi for valves smaller than 2".
2. Valves shall be single seated for tight shut off against system pressures encountered during the full range of operation.
3. "Motorized" butterfly valves shall be Dezurik HP with double acting high pressure rotary cylinder actuators for two position service. Type T actuators for valves 6" and smaller; type G gear actuator for sizes 8" and larger.
 - a. For modulating service provide rotary diaphragm actuators, complete with pilot positioners, suitable for operation with 55 psi compressed air. See Section 230523 for details of valve construction.

PART 3 - EXECUTION

3.1 AUTOMATIC CONTROLS - GENERAL

A. Provide all relays, switches, sources of electricity and all other auxiliaries, accessories and connections necessary to make a complete operable system in accordance with the sequences specified. Junction boxes and/or circuit breakers for the automatic control system are provided by the Contract #4 Contractor. All low-voltage field wiring, to all control panels and electric control components of the automatic control system shall be

provided and installed by the Contract #3 Contractor:

- B. Install controls so that adjustments and calibrations can be readily made. Controls are to be installed by, or under the supervision of the control equipment manufacturer.
- C. Mount surface-mounted control devices on brackets to clear the final finished surface on insulation.
- D. Conceal control conduit and piping and capillaries in all spaces except in the Mechanical Equipment Rooms and in unfinished spaces. Install in parallel banks with all changes in directions made at 90 degree angles.
- E. Install control valves horizontally with the power unit up.
- F. Unless otherwise noted, install wall mounted thermostats and humidistats 4'-6" above the floor measured to the center line of the instrument. Room devices are to be of the concealed adjustment type without indicator.
- G. Install outdoor thermostats in perforated tube and sunshield.
- H. Static pressure sensors shall be located as far from the fan as possible.
- I. Electronic and pneumatic space mounted devices are to be identical in appearance. All devices shall be mounted under the same style cover.
- J. Install control wiring in EMT conduit. Flexible metal conduit, up to 36 inches in length, shall be permitted for final connections to devices. MC cable may be used for 120 volt control wiring where run within concealed spaces, such as walls and above hung or furred ceilings.
- K. Low voltage, plenum-rated control wiring may be installed without conduit where run in accessible concealed ceiling spaces. Wiring shall be run in EMT in all cases where stubbed down into walls and run below 8 feet.
- L. Control wiring for engineered smoke control systems and components shall be completely enclosed within continuous EMT raceways. Exposed raceways run within 8' of finished floor in garages, mechanical rooms, elevator machine rooms, loading docks and elsewhere where subject to mechanical damage shall be rigid galvanized steel conduit.
- M. "Bridle ring" type supports may be used for support of control system cables where permitted above to be run without conduit. "Bridle rings" shall be supported by bolt-on C-clamps or trapeze hangers. Do not use "tie-wraps" for cable attachment to other support systems.

3.2 ADJUSTMENTS AND TESTS

- A. Adjust and calibrate controls and test all safety devices when systems are operative for the required performance prior to the performance tests.
- B. At final performance test, demonstrate performance of controls and safety devices.
- C. Adjustment and tests are to be performed by the control manufacturer.
- D. Excluding the work called for in Paragraphs A through C above, the Contract #3 Contractor shall, as part of his proposal, allow for an additional 120 hours of qualified mechanics' time for system readjustment and/or instruction of City of New York's

personnel.

3.3 PERFORMANCE

- A. Unless stated otherwise, control temperatures within plus or minus 2°F and humidity within plus or minus 5% of the set point.
- B. Provide fully compensated capillaries with remote bulb instruments.

3.4 EVENT INITIATED TRENDING

- A. In the event that the temperature or humidity of any zone shall enter alarm condition, the DDC system shall begin a trend of the parameters which affect the ability of the system to maintain conditions.
- B. The points trended shall be similar but not limited to:
 - 1. Air handling unit discharge temperature.
 - 2. Air handling unit discharge humidity.
 - 3. Zone supply air temperature.
 - 4. Base building chilled water supply and return temperature.
 - 5. Pre-treatment system supply temperature
 - 6. Pre treatment system supply humidity.
 - 7. Hot water supply and return temperature.
 - 8. Steam supply pressure.
 - 9. Outside air temperature
 - 10. Outside air humidity.
- C. The DDC system shall plot the variables on a single real time graphic display.
- D. The DDC system shall monitor these points at 2 minute intervals and periodically download the values into Microsoft Excel.

3.5 INITIAL SET POINTS

- A. The figures listed below are to be considered the initial settings within the BMS system. All set points are to be adjustable by the BMS Operator through the BMS Workstation.
 - 1. Zone Cooling Temperature 75°F
 - 2. Zone Setback Cooling Temperature 80°F
 - 3. Zone Heating Temperature 70°F
 - 4. Zone Setback Heating Temperature 65°F
 - 5. Zone Minimum Relative Humidity 30%RH
 - 6. Zone Maximum Relative Humidity 55%RH

3.6 SEQUENCE OF OPERATION – AIR HANDLING UNITS

- A. General
 - 1. The unit shall be enabled and disabled through the BMS system. All control functions shall be accomplished through the BMS system.
 - 2. The Operator shall have the ability to choose normal mode heating, normal mode cooling, setback heating mode or set back cooling mode as well as organize the occupied and unoccupied schedules.

B. Disabled Mode

1. When the units are disabled; the fan shall be off, the humidifier steam generator shall be disabled, the chilled water control valve shall be closed and all heat coil control valves shall be closed.

C. Normal Operating Mode

1. When the unit is enabled in normal operating mode by the BMS the supply fan shall start. The supply fan VFD shall modulate to maintain the normal airflow set point (adjustable) and the relief air fan shall initially be disabled.
2. When the system is in Occupied Mode, the BMS shall enable and modulate the local relief air fan VFDs to maintain the set point air flow schedule below.

Ventilation Airflow	Conditions
30% design vent. air	CO2 <999 ppm
75% design vent. air	1000 ppm < CO2 <1199 ppm
100% design vent. air	CO2 >1200 ppm

3. The BMS shall modulate the cooling coil control valve to maintain the cooling set point.
4. The BMS shall modulate the heating coil control valve to maintain the heating set point.
5. The minimum and maximum set point dew points shall be calculated by the BMS system based on the temperature and relative humidity set points for each air handling unit. The return air dew point shall be calculated by the BMS system for each air handling unit based on return air temperature and return air relative humidity readings.
 - a. When the return air dew point is above the maximum set point dew point, the BMS shall modulate open the cooling coil control valve to maintain the return air maximum set point dew point in the return air. The BMS shall modulate the zone reheat coil to maintain zone space temperature set point.
 - b. When the return air dew point is below the minimum set point dew point, the BMS shall command the humidifier steam generator to turn on and modulate the humidifier steam generator to maintain the minimum set point dew point in the return air.
 - c. A discharge high limit sensor shall overcall the humidifier steam generator command to limit the humidity in the supply duct to 80%RH.
6. When each air handling unit system is in Unoccupied Mode, the heating, cooling and humidification sequences described above shall use the setback supply fan air flow set point (adjustable, initially 60% of design supply airflow), setback cooling temperature set point (adjustable), setback heating temperature set point (adjustable), and setback minimum relative humidity set point (adjustable). The supply fan shall be cycled off at times when the setback space set points are maintained. When the air handling unit is operating with setback supply air flow and either the cooling coil, heating coil or steam generator are operating at 100% and the space set points are not satisfied, the air handling unit supply air shall be modulated up to the design air flow to maintain the space set points.

D. Safeties and Alarms

1. A freeze-stat located upstream of the chilled water coil shall send a signal to the Operator's Workstation when the air temperature sensed on any segment of the serpentine sensing element has dropped below 20°F (adjustable). Upon activation of the freeze-stat the supply fan shall be disabled and alarms shall be initiated at the Operator's Workstation and at the local control panel. The freeze-stat shall be reset locally with its own manual reset button.
2. Upon activation of any duct smoke detector, the supply fan shall shut down. The fire alarm system shall be wired directly to the fan start circuit.
3. Upon activation of any smoke detector, an alarm shall be initiated at the Operator's Workstation and at the local control panel. Smoke detectors shall be furnished, installed and wired to the fire alarm system by Contract #4 Contractor. Smoke detectors shall be located per Contract #3 Contractor shop drawings.
4. A water sensor located in the drain pan below each AHU shall send a signal to the Operator's Workstation when water is sensed in the drain pan. Upon activation of the water sensor, the local supply fan shall be disabled and alarms shall be initiated at the Operator's Workstation and at the local control panel.

3.7 SEQUENCE OF OPERATION – VENTILATION AIR (EXISTING MUA-1)

- A. Existing MUA-1 system shall serve to provide ventilation air to all three theater tenants in the Archstone complex including MCC Theater, ArtNY and 52nd Street Theater.
- B. Existing MUA-1 shall be enabled and disabled through the BMS system. All control functions shall be accomplished through the BMS system. The ventilation air VAV boxes for MCC Theater and 52nd Street Theater shall be installed by Contract #3 Contractor. The ventilation air VAV boxes for Art/NY shall be provided by others and Contract #3 Contractor BMS shall provide all control functions.
- C. The maximum ventilation air for each theater is per the below schedule:
 1. 52nd Street Theater 3,980cfm
 2. MCC Theater 2,920cfm
 3. ArtNY 5,100cfm
 - a. When all three tenants are simultaneously calling for peak ventilation air, the above values will be the maximum aggregate ventilation air provided to each of the three tenants. The BMS shall only exceed the scheduled rates above when one (or two) of the theater tenants are calling for less than peak ventilation air. The unused airflow capacity of MUA-1 shall be available to the other tenants.
- D. The fan will be off when no tenants are calling for ventilation air. When any of the Air Handling Units are in Occupied Mode, the supply fan will operate continuously and its speed will be modulated to maintain the duct static pressure set point. If the supply fan fails to prove status for 30 seconds (adjustable), the fan will be commanded off, the outside air damper will close and all operating sequences will be disabled and an alarm will be annunciated. A manual reset is required to restart the fan. A hardwired, high static pressure cut-off switch is electrically interlocked with the variable speed drive. If the high static pressure cut-off switch is tripped the fan will stop, the outside air damper will close, all sequences will be disabled, and an alarm will be annunciated. A manual reset of the high static pressure cut-off switch will be required to restart the fan.

- E. The duct static pressure set point is sent by the BMS and is reset by the following Discharge Duct Static Pressure Set Point Optimization Sequence:
1. When any VAV damper is more than 75% (adjustable) open, the supply fan discharge duct static pressure set point shall be reset upward by 0.1 in W.C. (adjustable), at a frequency of 15 minutes (adjustable), until no damper is more than 75% open or the static pressure set point has reset upward to the system maximum duct static pressure set point or the AHU variable-frequency drive is at the maximum speed setting.
 2. When all VAV dampers are less than 65% (adjustable) open, the supply fan discharge duct static pressure set point shall be reset downward by 0.1 in W.C. (adjustable), at a frequency of 15 minutes (adjustable), until at least one damper is more than 65% open or the static pressure set point has reset downward to the system minimum duct static pressure set point or the AHU variable-frequency drive is at the minimum speed setting.
 3. The control bands, set point increment values, set point decrement values and adjustment frequencies shall be adjusted to maintain maximum static pressure optimization with stable system control and maximum comfort control.
 4. The BMS shall have the capability to allow the operator to exclude "problem" zones that should not be considered when determining the optimized set point.
 5. The BMS shall also read the status of the supply air static pressure sensor and display the active duct static pressure reading on the status screen.
 6. The BMS shall have the ability to identify, and display to the user, the VAV box that serves the Critical Zone (that is, the zone with the most wide-open VAV damper). This information shall update dynamically as the location of the Critical Zone changes based on building load, and duct static pressure set point optimization control.
 7. During the commissioning process, the controls contractor shall demonstrate the performance of fan pressure optimization.
- F. The BMS shall modulate the cooling coil control valve to maintain the cooling set point.
- G. The BMS shall modulate the heating coil control valve to maintain the heating set point.
- H. Safeties and Alarms
1. A freeze-stat shall send a signal to the Operator's Workstation when the air temperature sensed on any segment of the serpentine sensing element has dropped below 34°F (adjustable). Upon activation of the freeze-stat the supply fan shall be disabled and alarms shall be initiated at the Operator's Workstation and at the local control panel. The freeze-stat shall be reset locally with its own manual reset button.
 2. Upon activation of any duct smoke detector, the supply fan shall shut down. The fire alarm system shall be wired directly to the fan start circuit.
 3. Upon activation of any smoke detector, an alarm shall be initiated at the Operator's Workstation and at the local control panel. Smoke detectors shall be furnished, installed and wired to the fire alarm system by Contract #4 Contractor. Smoke detectors shall be located per Contract #3 Contractor shop drawings.

3.8 SEQUENCE OF OPERATION – RELIEF AIR (RLF-1)

- A. Relief Air Fan (RLF-1) shall be enabled and disabled through the BMS system. All control functions shall be accomplished through the BMS system.
- B. When any of the air handling units are in Occupied Mode, RLF-1 shall be enabled. The relief air flow rate of RLF-1 shall be equal to the sum of all local relief air fans serving local air handling units. The BMS shall modulate the Relief Air Fan VFD to maintain the total relief air flow rate.

3.9 SEQUENCE OF OPERATION – TOILET EXHAUST

- A. Existing base-building toilet exhaust fan controls shall remain.

3.10 SEQUENCE OF OPERATION – DRYER EXHAUST

- A. Dryer exhaust booster fan shall be controlled by the dryer booster manufacturer's controller and sequences of operation.
- B. The BMS shall monitor the dryer booster fan controller for alarm (alarm/clear) and status (on/off).

3.11 SEQUENCE OF OPERATION – THEATRICAL STAGE EXHAUST

- A. Theatrical Stage Exhaust Fan (EF-6) shall be enabled and disabled through the BMS system. All control functions shall be accomplished through the BMS system.
- B. The BMS shall monitor a wall switch located at the side stage. When the wall switch is indexed to ON, the BMS shall command the motorized damper to open. Once the position of dampers is confirmed open with end switches, the BMS shall enable the exhaust fan.

3.12 SEQUENCE OF OPERATION – TRASH ROOM EXHAUST

- A. Theatrical Stage Exhaust Fan (EF-4) shall be enabled and disabled through the BMS system. All control functions shall be accomplished through the BMS system.
- B. The operator shall schedule the operation of EF-4 on a seven day schedule through the Operator's Workstation. The BMS shall monitor a wall switch located in the trash room.
- C. If either the schedule or wall switch is indexed to ON, the BMS shall command the motorized damper to open. Once the position of dampers is confirmed open with end switches, the BMS shall enable the exhaust fan.

3.13 SEQUENCE OF OPERATION – FAN COIL UNIT

- A. All fan coil units and unit heaters shall be enabled and disabled through the BMS system. All control functions shall be accomplished through the BMS system.
- B. The BMS shall modulate the heating coil and cooling coil to maintain the space temperature set point (adjustable). In units with multiple coils, only one of the coil control valves may be open at one time.

3.14 SEQUENCE OF OPERATION – DOMESTIC HOT WATER RECIRCULATION PUMPS

- A. When the building is in occupied mode, the BMS shall enable or disable the domestic water

recirculation pumps to maintain the recirculation water temperature set point (adjustable).

3.15 SEQUENCE OF OPERATION – FIRE/SMOKE AND SMOKE DAMPERS

- A. All fire/smoke dampers and smoke dampers shall be controlled by the Fire Alarm system provided by the Contract #4 Contractor.
- B. Some fire/smoke and smoke dampers shall be controlled through the BMS system as described in Sequence of Operation outlined in this section. The fire alarm system control shall always have priority to BMS.

3.16 SEQUENCE OF OPERATION – MONITORING POINTS

- A. The BMS shall monitor general conditions, which are typically not used in any of the other above sequences and report alarms for each point based on BMS Operator values.
- B. The points include, but are not limited to: base-building chilled water supply temperature, base-building chilled water flow, base-building chilled water pressure, base-building hot water supply temperature, base-building hot water flow, base-building hot water pressure, base-building ventilation air pressure, base-building ventilation air temperature and base-building ventilation air flow.

END OF SECTION

SECTION 23 20 00
PUMPING EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 230000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #3 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 230000, general provision, and with the provisions of all applicable codes and laws.

1.3 SUBMITTALS

- A. Procedure: Prepare and make the submissions listed below and in Section 230000 in accordance with the procedure specified in Section 230000.
- B. Shop Drawings
 - 1. Air conditioning condensate pump.
 - 2. Pump related accessories.
 - 3. Pump curves.

1.4 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 230000.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Construct all apparatus of materials and pressure ratings suitable for the conditions encountered during continuous operation.
- B. Provide casing connections for vent, drain, suction and discharge pressure gauges.
- C. Balance impellers and all other moving components statically and dynamically.
- D. Completely align and level pumps, motors and bases. Where pumps and motors are shipped as a unit, realign them in the field.
- E. Install and align mechanical seals in accordance with the manufacturer's recommendations.
- F. Provide water supply for cooling and lubricating of seals and/or packing.

- G. Match centrifugal pump impellers and casings so that at specified operating conditions, the impeller diameter is not more than 90% of the maximum diameter impeller which can satisfactorily operate in the casing.
- H. Pumps must operate stably without pulsation, vibration or internal recirculation. Pump operating characteristics at the design point must be such that a variation of 10% in head results in not more than 15% variation in GPM and does not affect the stability of operation of the pump.
- I. Motor sizes scheduled are minimum for the specific pumps indicated on pump schedules. When submitting pumps other than those specifically selected, size motors so that when operating at rated RPM, the pump motor brake horsepower does not exceed the nominal motor rating despite variations in pumping head or when operated singly or in parallel with other pumps serving the same system.
- J. Motors to be high efficiency type with guaranteed minimum efficiency rated in accordance with IEEE standard 112, method B - General Electric Company "Energy Saver" or equal.

2.2 AIR CONDITIONING CONDENSATE PUMP

- A. Complete assembly of receiver, pump, and motor float switch.
- B. Receiver shall be ABS plastic with 1 gallon capacity. Insulate exterior of receiver sump per 230700.
- C. Vertical type pump shall be constructed with stainless steel shaft bronze bearing and Polypropylene impeller. Pump shall be capable of 150 GPH at 17 ft. head.
- D. Motor shall be 1/18HP, 1750 RPM, 120 volts, single phase, 60 Hz, with built-in overload protection.
- E. Pump features a safety switch that can be connected to shut down the air conditioner condenser or wired to an alarm to warn of possible tank overflow.
- F. Discharge shall be a 3/8" O.D. barbed tubing adapter. Pump shall be rated for high-efficiency gas furnace applications that produce an acidic condensate.
- G. Thermally protected motor shall be UL and CSA listed.
- H.

Manufacturer:	Model/Series:
Little Giant	VCL-24
Domestic	
Federal	

PART 3 - EXECUTION

3.1 EQUIPMENT

- A. Install equipment in conformance with manufacturer's recommendations.

END OF SECTION

SECTION 23 30 00

DUCTWORK AND AIR OUTLETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 230000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #3 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 230000, General Provisions, and with the provisions of all applicable codes and laws.

1.3 SUBMITTALS

- A. Procedure: Prepare and make the submissions listed below and in Section 230000 in accordance with the procedure specified in Section 230000.
- B. Shop Drawings
 - 1. Typical duct construction details (elbows, taps, splits, transitions, plenums, supports).
 - 2. Ductwork layouts at 3/8" scale, with match lines as necessary to maintain maximum sheet size of 48x36.
 - 3. Fire dampers and sheet metal hardware.
 - 4. Volume & motorized dampers, accessories and access doors.
 - 5. Combination fire/smoke and smoke dampers and accessories.
 - 6. Duct mounted smoke detector locations.
 - 7. Grilles, registers, diffusers and terminal outlets.
 - 8. Casing construction details.
 - 9. Acoustical lining and application methods.
 - 10. Air duct leakage test procedures.
 - 11. Air duct leakage test report.
 - 12. Air balance contractors qualifications, procedures and report format.
 - 13. Air balance report.
 - 14. Sound Attenuators.
 - 15. Dust collector and accessories.
- C. Samples: Typical finished grilles and terminal air distributing devices. Color samples for pre-finished items. Samples will not be returned, nor used in the project.
- D. Sheetmetal shop drawings shall be coordinated, showing the work of other trades, including but not limited to, sprinklers, light fixtures, conduits, structural steel, plumbing and HVAC piping. Refer to Specification Section 230000, Coordination drawings, for submission requirements. Drawings shall show the following, as a minimum:
 - 1. Ductwork including sizes, bottom of duct elevations, material and pressure class.
 - 2. Duct fittings, transitions, takeoffs, and flexible connections.

3. Equipment including, but not limited to, diffusers, grilles, fans, air handling units, air flow stations, humidifiers, coils, and sound attenuators.
 4. Volume, fire, smoke, combination fire/smoke and automatic control dampers.
 5. Duct smoke detectors.
 6. Duct access doors.
 7. Section views shall be provided for mechanical rooms and other sheet metal intensive spaces to clearly represent all sheet metal work.
- E. Sheetmetal shop drawings shall be submitted on drawings no larger than 48" long by 36" high, at minimum 3/8"=1'-0" scale. Provide match lines and key plans as required.

1.4 SYSTEM TESTING

- A. Perform operating tests and instruct City of New York's personnel as specified in Section 230000. Produce and maintain ventilation and air conditioning under operating criteria.

PART 2 - PRODUCTS

2.1 RECTANGULAR DUCTWORK

- A. Construct all ducts and casings of lock forming quality sheet, light commercial galvanized coating class - ASTM - A525, 526, 527; stainless steel sheet ASTM - A480; aluminum sheet Alloy 3003-H-14. Metal thicknesses are U.S. Standard gauge. Duct joints, seams and reinforcing shall meet or exceed requirements as per SMACNA HVAC Duct Construction Standards 1995 edition.
- B. Duct construction shall follow standards set forth in Tables 1-5 through 1-13M of SMACNA HVAC Duct Construction Standards 1995 edition. Ductwork shall be fabricated for the pressure and minimum gauge listed below. Minimum pressure construction shall be +/- 4" WG. Pressure classification for ducts serving or connected to SEF-1 or SEF-2 shall be +/- 10" WG.
- C. Minimum gauges for rectangular ducts and fittings - 4" WG. where either dimension is:

STEEL	DUCT DIMENSION
No. 24 ga.	Up to 12"
No. 22 ga.	13" to 30"
No. 20 ga.	31" to 54"
No. 18 ga.	55" to 72"
No. 16 ga.	73" and larger

- D. Minimum gauges for rectangular ducts and fittings - 10" WG. where either dimension is:

STEEL	DUCT DIMENSION
No. 24 ga.	Up to 12"
No. 22 ga.	13" to 30"
No. 20 ga.	31" to 54"
No. 18 ga.	55" to 72"
No. 16 ga.	73" and larger

2.2 ROUND AND FLAT OVAL DUCTWORK

- A. Construct all ducts and fittings of lock forming quality sheet, light commercial galvanized coating class - ASTM - A525, 526, 527; stainless steel sheet ASTM - A480; aluminum sheet Alloy 3003-H-14. Metal thicknesses are U.S. Standard gauge.

- B. Gauges for round and flat-oval ducts - low and medium pressure - unless noted otherwise on plans -

	SPIRAL LOCK SEAM	LONGI. SEAM
No. 26 gauge	Up to 8" dia.	---
No. 24 gauge	9" to 22"	Up to 8" dia.
No. 22 gauge	23" to 36"	9" to 22"
No. 20 gauge	37" to 50"	23" to 50"
No. 18 gauge	---	51" to 60"
No. 16 gauge	---	61" and larger

- C. Gauges for round fittings.

No. 20 gauge	up to 36" dia.
No. 18 gauge	37" to 50"
No. 16 gauge	51" and larger.

2.3 DUCT CLASSIFICATION

- A. All ductwork shall be constructed to commercial SMACNA standards for internal pressures of +/- 4 inches of static pressure (water gauge).

2.4 DUCT SEALING

- A. All ductwork shall be sealed to SMACNA Seal Class A.

2.5 VOLUME DAMPERS

- A. General - provide in ALL branch duct connections at mains to control and adjust the total volume of the system. Outlet dampers shall not be used for system adjustment.

- B. Single Blade Dampers. Maximum width of single blade shall be 14", use opposed blade damper for height exceeding 14". Pre-manufactured dampers shall be part of an assembly complete with damper, frame, axle and bearings. The damper frame shall be installed internal to the duct and fastened with the appropriate hardware. The installation shall not interfere with the operation of the damper blade(s). Approved products for pre-manufactured devices are as follows:

Device	Manufacturer	Model
Rectangular	Air Balance	AC-111
	Greenheck	MBD-15
	Ruskin	MD25
Round	Air Balance	AC-112
	Greenheck	MBDR50
	Ruskin	MDRS25

- C. Multiple Blade Dampers. Opposed blade damper shall be used where duct height exceeds 14". Approved products for pre-manufactured devices are as follows:

Opposed Blade	Air Balance	AC-2
	Greenheck	MBD-15
	Ruskin	MD35OB

- D. On uninsulated round ducts, equip dampers with heavy duty locking quadrant. The locking quadrant shall be mounted on a 2" x 3" x 1/8" stand off plate held to duct in a manner so as not to interfere with the operation of the damper blade.
- E. On uninsulated rectangular ducts, equip dampers with heavy duty locking quadrant and one close end gasketed damper bearing. The end bearing be mounted on a 4" x 4" x 1/8" plate held to duct in a manner so as not to interfere with damper blade operation. The locking quadrant shall be mounted on a 2" x 3" x 1/8" standoff plate held to duct in a manner so as not to interfere with the operation of the damper blade.
- F. On insulated round ducts, equip dampers with heavy duty locking quadrant. The locking quadrant shall be mounted on a 8" x 8" x 1/8" stand off plate. The standoff shall be the insulation thickness plus 1/2". The plate shall be held to duct in a manner so as not to interfere with the operation of the damper blade.
- G. On insulated rectangular ducts, equip dampers with heavy duty locking quadrant and one close end gasketed damper bearing. The locking quadrant shall be mounted on an 8" x 8" x 1/8" stand off plate. The standoff shall be the insulation thickness plus 1/2". The end bearing be mounted on a 4" x 4" x 1/8" plate. Both plates shall be held to duct in a manner so as not to interfere with damper blade operation.
- H. Cable operated dampers (COD) shall be provided where indicated on plans, and/or where required due to damper location above/behind finished construction, where access to damper would require access door in finished construction. Rectangular dampers shall have opposed blade action. Dampers shall be equipped with internally controlled operators and cable. Cable shall terminate at face of outlet.
- I. Volume extractors shall be used where radius tap or split is not possible or where square elbows inlet and outlet throat radii vary by more than 15%.

2.6 FIRE DAMPERS - DYNAMIC

- A. Provide dynamic fire dampers with fusible links in all fire rated partitions, with ratings to conform to fire rating of construction where installed. Blades are to be of interlocking design mounted in a frame having two folder guides that serve as stops. Both frame and blades are to be of galvanized steel construction. Dampers shall be vertical or horizontal with blades out of the air stream. Damper shall be designed to close against a velocity and pressure per UL 555. Damper shall be constructed, tested, and labeled in accordance with the current edition of UL-555 Standard for Fire Dampers. Units with blades in the air stream shall be utilized only when space limitations preclude used standard damper and the Commissioner approves each specific instance.
- B.

Manufacturer:	Model:
Air Balance Inc.	Series D19, D19
Greenheck	Series DFD
Imperial	
Prefco Products	Series 5500
Ruskin	Series DIBD2, DIBD23

2.7 SMOKE DAMPER - AIRFOIL BLADE

- A. Damper to be UL listed Class I smoke damper. Unit including operator shall be rated for 350°F.
- B. Blades to be double skin airfoil shape 16 gauge galvanized steel construction mounted in 16 gauge galvanized channel. Unit to incorporate flexible blade and jamb seals, bronze or stainless steel bearings, 1/2" axle, blade interconnecting linkage out of air stream, 16 gauge galvanized steel sleeve.

- C. Unit shall incorporate blade end switches (open and closed), and outside the duct mounted UL listed operator. Operator to be compatible with sequence of operation as stated in Section 230923. Provide manufacturer's standard U. L. listed open - close - reset switch and position pilot lights in unit mounted enclosure. Enclosure to be capable of being removed for remote mounting to ensure visibility after system installation.
- D. The damper shall include factory mounted no-flow duct smoke detectors designed for use with the damper. The smoke detector shall be capable of interfacing with the building fire alarm system. All damper wiring shall be 24 volt or 12 volt.
- E. Unit shall meet UL 555S, and NFPA90A requirements for smoke dampers. Unit shall bear UL label.
- F.

Manufacturer:	Model:
Air Balance Inc.	SA1
Greenheck	SMD311
Ruskin	SD60
Imperial	

2.8 SMOKE/FIRE DAMPER

- A. Damper to be combination UL classified 1-1/2 hour fire damper and UL listed Class I smoke damper. Unit shall be approved for use in New York City.
- B. Blades to be double skin airfoil shape 16 gauge galvanized steel construction mounted in 16 gauge galvanized channel. Unit to incorporate flexible blade and jamb seals, bronze or stainless steel bearings, 1/2" axle, blade interconnecting linkage out of air stream, 16 gauge galvanized steel sleeve.
- C. Unit shall incorporate re-operable electric temperature sensor, blade end switches (open and closed), and outside the duct mounted UL listed operator. Operator to be compatible with sequence of operation as stated in Section 230923. Provide manufacturer's standard U. L. listed open - close - reset switch and position pilot lights in unit mounted enclosure. Enclosure to be capable of being removed for remote mounting to ensure visibility after system installation.
- D. The damper shall include factory mounted no-flow duct smoke detectors designed for use with the damper. The smoke detector shall be capable of interfacing with the building fire alarm system. All damper wiring shall be 24 volt or 12 volt.
- E. Unit shall meet UL 555, UL 555S, and NFPA90A requirements for fire and smoke dampers. Unit shall bear UL label.
- F.

Manufacturer:	Model:
Greenheck	FSD311
Prefco	Series 5000
Ruskin	FSD60

2.9 ACOUSTICAL LINING

- A. Sound insulation - where indicated on drawings, and within 10 lineal feet of fans, ductwork shall be lined with fiberglass duct liner of minimum 2 lbs. per cubic foot density and covered with a fire resistant black coating that includes an EPA-registered antimicrobial agent bonded to fiberglass. Thickness of liner 1-1/2" in ducts, 2" in fan and outside air plena. Duct called to have thermal insulation, but also indicated on drawings for sound insulation shall receive sound insulation on inside only consisting of 1-1/2" thick fiberglass minimum 2 lbs. density rigid duct liner with fire resistant coating that includes an EPA-registered antimicrobial agent bonded to fiberglass.

seams shall be SMACNA tables.

- D. Make transitions and reducing sections of sufficient length to maintain the angle of deflection of any side less than 20 degrees.
- E. Cut sheet metal screws extending inside accessible casing to be smooth and flush with inside of duct.
- F. Make airtight, caulked connections between metal ducts and grilles or masonry.
- G. Insulate joints between non-ferrous and galvanized iron materials with non-ferrous and galvanized iron angles separated with tar paper strips and fastened with non-ferrous stove bolts.

3.2 DUCT ACCESSORIES, AND HARDWARE

- A. Provide access doors to all equipment. Make doors not less than 16" x 16" where not otherwise sized on the drawings. Provide rigid pan construction with two hinges and latch. Provide access on entering and leaving sides of coil and heater sections, and at leaving side of volume boxes. Reinforce duct openings with angle iron frame. Where ducts are insulated, frame is to be raised to surface acting as an insulation stop. Provide felt between door and duct to make airtight seal when locked. Door shall be the double wall insulated type.
- B. Latches similar to Ventfabrics, Inc. No. 100 (or approved equal) for small doors and No. 310 (or approved equal) where physical access is possible. Window latch type hardware is specifically prohibited except where the door swing for a hinged door is restricted by the hung ceiling or some other obstruction.
- C. Provide 8" x 8" frame around damper quadrants in insulated ducts for insulation stop, of same height as insulation thickness.
- D. Fan and unit connections - 30 oz. neoprene coated cloth connection with 2" clear distance, double wrapped, securely strapped to fan and cut and sewn airtight. Provide in each connection, including mixing box discharge.

3.3 DUCT SUPPORT

- A. Rectangular ducts below 30 inches in width shall be hung with 1" x 1/8" galvanized strap iron bent 1" under bottom side of the duct and fastened to the duct with sheet metal screws using one on underside and not less than 2 screws per side and as many more needed so that they are no greater than 6" centers.
- B. Rectangular ducts above 30 inches in width shall be hung with galvanized rods fastened to galvanized 1" angles running under the ducts as per detail.
- C. Structural attachment of hanging rods and straps to be per detail. Friction type beam attachments for rod or strap hangers is not acceptable. Attachment to metal deck tabs is also not acceptable (refer to detail on plans).
- D. Provide hangers on not greater than 8 feet centers.
- E. Provide 18 gauge galvanized sheet metal escutcheon plates attached to ducts and on both sides around all exposed ducts passing through partitions, where visible, except within equipment rooms.
- F. Provide 2" galvanized ground angles secured to floor on all ducts passing through floors.

3.4 BRACING OF RECTANGULAR DUCTS

- A. Ducts shall be reinforced per SMACNA HVAC Duct Construction Standards 1995 edition Tables 1-5 through 1-13M.
- B. Tie rods reinforcement shall be per SMACNA HVAC Duct Construction Standards 1995 edition Tables 1-5 through 1-13M.

3.5 ROUND AND FLAT-OVAL DUCTS

- A. Round ducts with fittings and accessories are to be machine made, spiral type welded, factory manufactured by United Sheet Metal Co., or another acceptable to the Commissioner.
- B. Make duct sections not longer than 20'-0".
- C. Make elbows with welded sections using 5 pieces for 90 degree and 3 pieces for 45 degree turns and having a center line radius of one times the diameter of the duct.
- D. Make joints in ducts with inside couplings not less than 6" long and seal joint with Minnesota Mining No. EC 800 adhesive or equal as recommended by the Supplier. Butt ends of duct tight to coupling bead.
- E. Hang and encircle all round ducts with 1" x 1/8" galvanized strap iron. On ducts below 10 ft. circumference, clamp strap iron at top and hang with single rod. Above 10 ft. circumference, clamp strap iron on both sides and hang with 2 rods. Provide hangers on not greater than 8 ft. centers unless noted otherwise on drawings.
- F. Make all reducers and reducing fittings concentric and of sufficient length to maintain the angle of deflection of the perimeter below 15 degrees.
- G. Make all other fittings including, rectangular to round transitions, access doors with sleeves, volume dampers, and fire damper to conform to manufacturer's standards.
- H. Where ducts pass through floors use short length of duct for sleeve. Provide couplings and temporary caps at both ends.
- I. Where ducts pass through walls provide sleeves using a coupling one size larger than duct and of length to conform to the thickness of the finished wall. Pack angular spaces with fiberglass insulation.
- J. Factory, cut, reinforce, and provide flanges on main ducts for grille and branch connections.

3.6 ROUND AND FLAT-OVAL DOUBLE WALL DUCTS

- A. Double wall round ducts and flat oval ducts with fittings and accessories are to be machine made, spiral type welded, factory manufactured by United Sheet Metal Co., or another acceptable to the Commissioner.
- B. Make duct sections not longer than 20'-0".
- C. Make elbows with welded sections using 5 pieces for 90 degree and 3 pieces for 45 degree turns and having a center line radius of one times the diameter of the duct. Elbows shall be standard product of manufacturer of double wall duct system.
- D. Duct system shall be furnished with inner liner couplings and outer pressure shell couplings. Outer shell connections may be either slip joint or flanged joint, except flanged joints shall be used at ducts with outer shell diameters in excess of 36". Slip couplings shall join inner liner sections at duct to duct joints. Fitting liners shall be

extended 2" beyond the outer shell cutoff to provide an inner liner coupling at duct to fitting joints. Flanged joints shall provide Van Stone connections to fittings, and shall be welded to duct.

- E. Hang and encircle all round ducts with 1" x 1/8" galvanized strap iron. On ducts below 10 ft. circumference, clamp strap iron at top and hang with single rod. Above 10 ft. circumference, clamp strap iron on both sides and hang with 2 rods. Provide hangers on not greater than 8 ft. centers unless noted otherwise on drawings.
- F. Provide all reducers and reducing fittings from manufacturer's standard offerings. Reducers shall be concentric and of sufficient length to maintain the angle of deflection of the perimeter below 15 degrees.
- G. Make all other fittings including, rectangular to round transitions, access doors with sleeves, volume dampers, and fire damper to conform to manufacturer's standards.
- H. Where ducts pass through walls provide sleeves using a coupling one size larger than duct and of length to conform to the thickness of the finished wall. Pack angular spaces with fiberglass insulation.

3.7 TURNING VANES

- A. Turning vanes shall be double wall construction of minimum 24 gauge galvanized metal. Each vane shall be securely riveted or welded to minimum 22 gauge runner or directly to duct.
- B. Turning vanes shall have 2" inside radius spaced 2-1/8" apart through 36" wide duct. Vanes in elbows larger than 36" shall have a 4 1/2" radius and be spaced 3 1/4" apart.
- C. Vanes shall be installed in sections to reduce unsupported length for duct depths exceeding 60".

3.8 TEST CONNECTIONS

- A. On the discharge duct from each air handling unit downstream at least 5'-0" from unit if duct is accessible, or closer to unit if necessary, install a #699 Ventlock instrument test hold device for balancing and testing of system.

3.9 ACOUSTICAL LINING

- A. Install sound insulation over adhesive, on welding pins not more than 12" O.C. with a minimum of two rows per side. Secure lining to pins with speed washers or clips. Apply 4" continuous strip of adhesive along edges at all joints and apply 50% coverage of adhesive between joints. Seal and caulk all joints between boards with adhesive at corners of ducts.
- B. Interrupt lining at fire dampers. Insulate exterior of duct at liner interruption if duct requires insulation. Refer to Section 230700.
- C. Duct mounted items such as dampers, turning vanes, and coils shall be installed on a continuous circumferential hat section of height equal to liner thickness and width to accommodate item. Provide liner section behind hat section or provide external duct insulation.
- D. Provide continuous circumferential sheet metal protection nosing at leading edges of lining on all lined duct sections.

3.10 COORDINATION AND COMPLETION

- A. Conform to all applicable provisions of Section 230000 and coordinate with the requirements of the other mechanical work specification sections to provide complete operating systems.

3.11 AIR BALANCE

- A. Balance all new air systems and those designated existing air systems to the quantities shown with the following tolerances:

Fans:	Design volume plus 5%
Outlets:	Design volume plus 5%
Leakage:	3% maximum.

- B. Balance in accordance with ASHRAE, AABC or NEBB procedures and submit all readings.
- C. Air system balancing is to be performed by a professional organization, qualified by experience and practice to perform this service. Submit evidence of qualifications, balancing procedures, and report forms for approval prior to start of work.
- D. Provide one extra set of drive sheaves per fan as part of the system balancing. Sheaves shall be installed as directed by the Contract #3 Contractor to achieve design CFM at the minimum RPM with an allowance for filter loading.
- E. Submit three bound copies of the air balance report to the Commissioner. Balance Report to include the following data for each fan system (supply, return, relief and exhaust).
 1. System designation and location.
 2. System description including areas served.
 3. Manufacturer, model number, size designation, class and arrangement.
 4. Supply/return/outside air CFM - Design vs. Actual (unit air quantities to be determined by duct traverse not sum of outlets - Submit data of traverse/minimum traverse points = 16 - max. distance between traverse points = 6")
 5. Unit suction and discharge static pressure - design vs. actual.
 6. Individual unit component static pressure drops (coils, filters, dampers)
 7. Motor manufacturer, frame, horsepower, volts, phase, hertz and RPM.
 8. Motor AMPS - design vs. actual.
 9. Fan RPM
 10. Sheave and belt data.
 11. Air outlet number, type, size, Ak, design CFM and velocity, intermediate velocity readings, final CFM and velocity.
 12. Reduced plans with air outlets cross-referenced to number.
 13. CFM, static pressure drop, (CFM and static pressure at minimum setting for VAV boxes) for all duct mounted items such as coils, VAV boxes, filters, induction units.

3.12 AIR DUCT LEAKAGE TEST

- A. Supply ductwork from the supply air fan to the terminal boxes shall be subject to inspection and leakage testing by the testing, adjusting, and balancing (tab) agency.
- B. The duct system testing shall be performed before the installation of duct insulation and ceilings. Testing shall be conducted at the design pressure of the ductwork being tested. Duct leakage test shall be coordinated by the Contract #3 Contractor. The Contract #3 Contractor shall prepare a schedule for testing indicating specific dates and procedures. The City of New York and Commissioner shall be notified a minimum of two (2) weeks

before testing is performed.

- C. Procedures for conducting the leakage test shall be in accordance with SMACNA air duct leakage test manual. Procedures shall be submitted to the Commissioner for approval prior to actual testing.
- D. Maximum leakage shall not exceed the requirements for leakage class 6.
- E. Leakage for non-duct components such as fire, smoke, and volume dampers, and terminal boxes is an integral part of the overall system leakage, and these components shall be included in the duct leakage tests.
- F. Ductwork failing to meet the maximum leakage criteria shall be resealed and or reconstructed as required.
- G. The Contract #3 Contractor shall submit a report on the leakage test. The report shall include an accurate description of the test procedure and results, including recommendations for any remedial action required to meet the specified leakage criteria. Copies of certified calibration data for the leakage test apparatus shall be provided as part of the test report.

3.13 DUCT MOUNTED SMOKE DETECTORS

- A. Coordinate with Contract #4 Contractor for quantities of duct mounted smoke detectors.
- B. Exact locations of duct mounted smoke detectors shall be determined by the Contract #3 Contractor and indicated on sheet metal shop drawings.
- C. Duct mounted smoke detectors shall be furnished and wired by the Contract #4 Contractor. Installation of the duct mounted smoke detectors in the ductwork shall be by the Contract #3 Contractor.

3.14 NOISE CONTROL ENCLOSURES & PLENUMS

- A. Plenum shall be furnished and installed as shown on the drawings and/or as hereinafter specified.
- B. 4" thick (nominal) noise control panels shall comprise 16-18 gauge solid sheet metal outer faces with 20-22 gauge perforated (providing 23% minimum open area) inner faces. The space between faces shall be filled with a mineral or glass fiber blanket, 3" to 4" thick of minimum density 3 lb/ ft³, packed under compression and two layers of 1/2" thick drywall, adhered to the solid steel side with mastic, for high STC panel. Panel framing and stiffeners shall be 16-18 gauge sheet metal. Perforated face of panel shall provide minimum Noise Reduction Coefficient (NRC) of 0.95 and entire panel shall provide a minimum Sound Transmission Class (STC) of 40, and minimum sound transmission loss values in the 1/1 octave bands as follows when tested in accordance with ASTM E90-75 or later:

Transmission Loss in dB	Octave Band Frequency, Hz.								
	63	125	250	500	1000	2000	4000	8000	STC
Regular	20	21	27	38	48	58	67	66	40
High STC	27	30	32	41	50	59	67	71	45

- C. Plenum shall be mounted on Mason Type ND mounts with a 0.35" deflection, or approved equal.
- D. Door panels shall be constructed of solid #18 gauge galvanized metal sides. Doors shall be supplied 24" wide x 60" high or 36" wide x 72" high as shown on the drawings. The doors shall be 4" thick of the overlapping seal type. Each door shall be supplied with single continuous acoustic seals around the sill, jamb and head. Doors shall have 2 hinges and 2 latches with an inside release handle. Each door shall be assembled with hinge hardware attached and adjusted and latches to be installed in the field. Door latches are to be the wedge lever type with inside handle. Hinges shall be heavy duty and designed for door size and weight. Door shall be designed to open against the air pressure.
- E. Windows shall be furnished for doors where shown on the drawings and shall consist of two layers of 1/4" safety glass separated by an air space and sealed acoustically and air tight with rubber seals. Air space shall contain a desiccant material to prevent misting.
- F. Roof channels, aprons and corner joiners shall be made of #16 gauge galvanized steel formed to prevent a direct path for sound and/or air leakage. Floor channels shall be made of #18 gauge galvanized steel. Panel joiners shall be made of #20 gauge galvanized steel and shall be roll formed to be greater in strength than standard #16 gauge joiners. Where roll joiners are not utilized, #16 gauge shall be provided. All panel accessories shall be furnished in standard lengths to be field cut to required dimensions. When Ramset can not be used, floor channels shall be pre-punched with 9/32" holes spaced 24" on center for attachment by 1/4" round head screws with expansion type inserts. All panel joiners and connectors requiring neoprene seals shall have the neoprene field applied.
- G. Openings for acoustical louvers, fan and duct connections where required, shall be provided by the plenum manufacturer. Pipe and conduit penetrations shall be located and cut in the field and sealed in accordance with the Manufacturer's instructions.
- H. The plenum shall be normally self-supporting. Where roof spans and wall loadings require additional strength, it shall be furnished either by heavier roof and wall joiners or additional structural steel members and/or pipe columns.
- I. Metal surfaces shall be galvanized except for 5" wide flange beams when used which shall be HR steel prime painted. Plenum shall be designed for outdoor use where required with normal weather-proofing and wind and snow loads accounted for.
- J. Panels shall have a maximum Heat Transfer Factor of 0.07 BTU/hour/sq. ft./degree Fahrenheit temperature difference of standard air.
- K. Plenum installation shall be capable of withstanding a positive internal static air pressure of 5.5 inches.
- L. Plenum installation shall be capable of withstanding a negative internal static air pressure of 4.5 inches.

- M. Plenum manufacturer shall warrant that when the plenum is installed in a workman like manner in strict accordance with these specifications and manufacturer's instructions, plenum shall meet the acoustical, thermal and air pressure performance specified.
- N. Plenum components shall be furnished clean, well made and free of any defects which may adversely affect the appearance, serviceability or performance. Manufacturer shall furnish proof of having manufactured similar plenums for at least three years prior to this installation.

SECTION 23 70 00

AIR HANDLING AND TREATMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and applicable provisions of the Contract, including General and Supplementary Conditions, Division 1 - General Requirements, and the General Provisions, Section 230000, govern the work of this Division.
- B. Requirements given herein may be affected by other related requirements of the project specification. Correlation of the contract requirements is the responsibility of the Contract #3 Contractor.

1.2 REFERENCES

- A. Perform the work in accordance with the requirements of Section 230000, General Provisions, and with the provisions of all applicable codes and laws.
- B. The installation and equipment is to conform to ANSI B9.1 Safety Code for Mechanical Refrigeration.
- C. Air Moving and Conditioning Association (AMCA) Standards - Air performance of all air moving devices, shall be rated in accordance with AMCA Standard Test Code 210 and shall be licensed to bear the AMCA certified rating. Sound ratings specified in Section 230000 shall be obtained in accordance with the AMCA Standard 300. They shall be published in accordance with AMCA Standard 301, and the products should bear the AMCA sound certified ratings seal.
- D. The quantity and performance criteria for each type of equipment is listed in the equipment schedules.

1.3 SUBMITTALS

- A. Procedure
 - 1. Prepare and make the submissions listed below and in Section 230000 in accordance with the procedure specified in Section 230000.
- B. Shop Drawings
 - 1. Air Handling Equipment and all Related Equipment
 - 2. Fans
 - 3. Fan Performance Curves
 - 4. Heating and cooling coils
 - 5. Filters
 - 6. Variable volume, constant volume, fan terminal units
 - 7. Fan coil units
 - 8. Humidifier / dehumidifier
 - 9. Cabinet and Unit Heaters
 - 10. Sound Absorbers

C. System Testing

1. Perform operating tests and instruct City of New York's personnel as specified in Section 230000. Produce and maintain ventilation and air conditioning under operating criteria determined in advance by agreement with the Commissioner.

PART 2 - EQUIPMENT

2.1 GENERAL REQUIREMENTS

- A. Construct all apparatus of materials suitable for the conditions encountered during operation.
- B. All factory applied acoustical and thermal insulation, including facing and adhesives, sealants and paint, to be fire-resistant or non-combustible, and shall conform to the requirements of NFPA and local codes.
- C. Construct all equipment in accordance with requirements of the local and state codes. Construct all pressure vessels that fall within the scope of ASME Code for unfired pressure vessels to conform to the code and bear the code stamp. Furnish three copies of National Board Inspection and Test Report.
- D. Match and balance all system components to achieve compatibility of equipment for satisfactory operation and performance throughout the entire operating temperature and control range.
- E. Provide all controls, wiring, piping, valves, tubing, accessories and other components necessary to make a complete operating assembly.
- F. Test and rate all fans in accordance with the standards of AMCA. All fans must bear the AMCA rating seal.
- G. Mount grease fittings directly on bearings unless the bearings are not visible or inaccessible. Then provide easily accessible extensions to bearing lubrication fittings.
- H. Balance all fan wheels and other moving components statically and dynamically. Drill all fan shafts on the center line to receive a tachometer point.
- I. Submit to the Commissioner for approval complete curves of fan performance at the operating speed.
- J. Provide coil covers on all coil headers which are installed outside of the air stream.
- K. All filters shall be U.L. Class I.
- L. Certify unit performance in accordance with ARI standard 410-72.
- M. Submit to the Commissioner for approval complete sound power data at the operating speed.
- N. Motors to be premium high efficiency type with guaranteed minimum efficiency rated in accordance with IEEE standard 112, method B. Refer to Specification Section 230513 for required motor efficiencies and acceptable manufacturers.

- O. Fans scheduled for variable speed duty shall be equipped with motors compatible with and specifically designed for variable speed operation. Coordinate with the manufacturer of the variable speed drive as specified in Section 230513.

2.2 AIR HANDLING UNITS

- A. Factory assembled unit of matched components including fans, cooling and heating coil, filter and access section and all accessories and hardware.
- B. Casing Construction
 1. Unit air leakage shall not exceed 1.0% of design cfm at +10.0" w.g. in all positive-pressure sections and -10.0" w.g. in all negative-pressure sections. Leakage shall be calculated by totaling all leakage either in to or out of the unit.
 2. Casing deflection shall not exceed $L/200$ at +10.0" w.g. in all positive-pressure sections and -10.0" w.g. in all negative-pressure sections, where L is defined as the panel span.
 3. Insulation that meets a minimum R-value of 12.5 shall be provided at all casing surfaces including the entire unit floor. Insulation shall be closed-cell foam.
 4. Wall assemblies shall be double-wall construction with galvanized steel solid exterior and galvanized steel interior. The entire unit shall have a solid wall liner on the interior. All spaces and joints of wall assemblies shall be completely sealed. Wall shall meet the casing deflection limits contained herein.
 5. Panel-to-panel joint and corner details and panel-to-roof details, all showing Class "B" thermal breaks. A Class "B" thermal break shall be defined as a thermal break that ensures no member on the exterior of the unit, excluding fasteners, has through metal contact with any member on the interior of the unit, excluding fasteners.
 6. External surfaces of all outdoor unit casings shall be prepared and painted. Paint shall be able to withstand a salt spray test in accordance with ASTM B117 for a minimum of 700 consecutive hours.
 7. Primary condensate drain pans shall be provided in cooling coil sections as detailed in the drawings. Drain pans in cooling coil sections shall be stainless steel. Primary drain pans shall extend under each entire coil bank, including headers and return bends. Primary drain pans shall extend downstream of the coil bank. Primary drain pans shall be sloped a minimum of 1/8" per foot, shall be a minimum of 2" deep, and shall be double-sloped (sloped in 2 planes) to positively drain.
 8. Stainless steel drains pans shall be provided in the humidifier sections. Drain pans shall be sloped a minimum of 1/8" per foot. Drain connections shall be of the same material as the drain pan and shall extend a minimum of 1-1/2" beyond the base to ensure adequate room for field piping.

9. The overall unit acoustics shall comply with the table below, which lists the allowable maximum dB levels per octave band.

	63 Hz	125 Hz	250 Hz	500 Hz	1000H z	2000H z	4000H z	8000 Hz
Discharge	73	72	80	72	65	68	62	56
Casing	77	75	71	75	68	50	37	36
Ducted Inlet	88	83	80	77	69	66	59	52

C. Access Door Construction

1. Access doors shall be provided throughout units as indicated on the schedules and drawings. Access doors shall be double wall construction. Interior and exterior door panels shall be of the same construction as the interior and exterior wall panels, respectively.
2. A Class "A" thermal break shall be provided on all door assemblies throughout the unit. A Class "A" thermal break shall be defined as a thermal break that ensures no member on the exterior of the unit, including fasteners, has through metal contact with any member on the interior of the unit, including fasteners.
3. Door hinges shall be stainless steel type. Door handles shall be Allegis design for minimized leakage and to provide a Class "A" thermal break. Handles shall fasten against the door frame with a roller cam to eliminate wear of the door frame. All door handles shall be operable from both the unit exterior and interior.

D. Louver and Damper Constructions

1. Louver frames and blade material shall be constructed of aluminum. Louvers shall have a minimum of 50% free area. Louvers shall be flush mounted to the exterior wall of the unit casing.
2. Intake louver frames shall be 6" deep. Intake louvers shall be drainable with stationary blades, front flanges, and bird screens. Intake louvers shall be sized to prevent water penetration greater than 0.01 oz/sq. ft in a 15 minute test period per AMCA Standard 500-L and shall bear the AMCA seal. Intake louvers shall be sized for air velocity through the free area of no more than 800 feet per minute.
3. Exhaust louver frames shall be 4" deep. Exhaust louvers shall be sized for no more than 0.2" w.g. pressure drop.
4. Ultra low-leak modulating dampers with opposed blade arrangement shall be provided. Damper blades shall be aluminum double-skin airfoil design for minimal pressure drop. Leakage rate shall not exceed 4 scfm/ft² at 3.0" w.g. All leakage testing and pressure ratings shall be based on AMCA Standard 500-D. All dampers shall be mounted on the AHU interior.
5. In each case where a louver is provided in front of a damper, the louver shall be flush-mounted to the exterior wall of the unit casing and the damper shall be mounted in a housing frame on the unit interior. The damper shall be spaced adequately from the louver to prevent any damper blade from contacting the louver when the damper is open. The width and height of the damper shall be equal to or greater than each corresponding width and height of the louver to ensure the maximum rated velocity of the louver is not exceeded.

E. Filters

1. Pleated media filters 2" deep shall be provided as indicated on the schedule and drawings. The MERV rating shall be 8 when tested in accordance with ANSI/ASHRAE 52.2. Filter media shall be of non-woven fibers with metal grid support. Filters shall be UL Class 2 when tested in accordance with UL Standard 900.
2. Rigid cartridge filters 4" deep shall be provided as indicated on the schedule and drawings. The MERV rating shall be 14 when tested in accordance with ANSI/ASHRAE 52.2. Filters shall consist of high density glass fiber media enclosed in galvanized steel frames with diagonal supports on both the entering and leaving sides. Filters shall be UL Class 1 when tested in accordance with UL Standard 900.

F. Heating Coils

1. Hot water coils shall have 0.0075" thick aluminum fins. Fins shall be mechanically bonded to 5/8" OD seamless copper tubes with 0.035" thick walls. Fins shall have collars drawn, belled and firmly bonded to the tubes by means of mechanical expansion. Coils shall be circuited for counter-flow heat transfer. Coil casings shall be constructed of galvanized steel.
2. Hot water coils shall be proof and leak tested under water. Proof test shall be at 300 psig and leak test shall be at 200 psig.
3. Coil capacities, pressure drops and selection procedures shall be certified to AHRI Standard 410.

G. Cooling Coils

1. Chilled water coils shall have 0.0075" thick aluminum fins. Fins shall be mechanically bonded to 5/8" OD seamless copper tubes with 0.035" thick walls. Fins shall have collars drawn, belled and firmly bonded to the tubes by means of mechanical expansion. Coils shall be circuited for counter-flow heat transfer. Coil casings shall be constructed of stainless steel.
2. Chilled water coils shall be proof and leak tested under water. Proof test shall be at 300 psig and leak test shall be at 200 psig.
3. Coil capacities, pressure drops and selection procedures shall be certified to AHRI Standard 410.

H. Fans

1. All fans shall be tested, rated and certified in accordance with ANSI/AMCA Standard 210 for air delivery and in accordance with AMCA Standard 300 for sound power levels and shall bear the AMCA seal. The fan balancing process, including vibration limits and documentation, shall be performed in accordance with ANSI/AMCA Standard 204. Fan and motor performance requirements shall be as shown on the schedule and drawings. Maximum rated speed of the fans shall not exceed 75% of the first critical speed.

2. **Housed Centrifugal Fans (Relief Fans)**
 - a. Fan shall be DWDI or SWSI with BC or high-efficient AF blades as indicated on the schedule and drawings. The Hp characteristic of all fans shall be non-overloading.
 - b. Fan bearings shall be heavy duty, grease lubricated, self-aligning, antifriction pillow block type. Fan bearings shall be rated for a minimum average life (L-50) per ANSI/ABMA of 200,000 hours at design operating conditions. For easy accessibility, lubrication lines for fan bearings shall extend to the drive side of the fan, on the unit interior.
3. **Unhoused Plenum Fans (Supply Fans)**
 - a. Fans shall be unhoused, SWSI plenum type with high efficient AF blades as indicated on the schedule and drawings. Fans shall be direct driven. Fan wheels shall be aluminum. The Hp characteristic of the fans shall be non-overloading. Fans shall be furnished with protective enclosures around the fan wheels. Fans shall be furnished with inlet collars.
4. All fan motors shall conform to ANSI/NEMA MG 1 as well as all applicable requirements of NEC and shall be UL Listed. Motors shall be inverter ready, ODP and of the voltage, phase, frequency, and Hp indicated in the mechanical schedule. Motors shall be premium efficiency, exceeding the EPA efficiency requirements. The motor shall be provided with a heavy duty, adjustable, steel base.
5. Nameplate motor horsepower for all fans, including dual fans, shall be at least 10% greater than design brake horsepower of each fan.
6. Sheaves for motors and fans shall be fixed pitch and shall be selected at a minimum service factor of 1.2. Sheaves shall have multiple grooves, requiring a minimum of two belts for operation.

1. **Accessories**

1. Marine lights shall be provided at each AHU section with an access door. Lights shall be fluorescent type to minimize amperage draw and shall produce lumens equivalent to a minimum 64 W, instant-start bulb. Lights shall be constructed of safety glass. Lights shall be suitable for wet locations.
2. All lights on a unit shall be wired in the factory to a single on-off switch. On outdoor units, the light switch shall be mounted on the casing exterior in a NEMA 4 enclosure next to the fan access door. Lighting circuit(s) shall be wired by the AHU Manufacturer to a common junction box separate from the VFD or starter so the lights can remain on when the main disconnect to the unit is on or off. A connector plug shall be provided at each shipping split to eliminate field wiring of lights between splits.
3. A 15 amp, 115V GFCI convenience outlet shall be provided by the AHU Manufacturer. On outdoor units, the outlet shall be mounted on the casing exterior in a NEMA 4 enclosure next to the fan access door. The outlet shall be wired by the AHU Manufacturer to the same circuit as the lights.

J.	Manufacturer:	Model/Series
	McQuay	Custom
	Trane	Custom
	York	Custom

2.3 FANS: ROOF MOUNTED UTILITY SET

- A. Roof exhaust fans shall be of the centrifugal belt-driven or direct-drive type as indicated on Drawings. Fans shall be of capacities and characteristics as scheduled on Drawings and specified herein.
- B. Construction of the fan housing shall be of heavy-gauge aluminum.
- C. All spun parts shall have a rolled bead for added rigidity and shall be specially spun so as to seal the pores of the aluminum providing greater resistance against oxidation and deterioration.
- D. The fan wheel shall be all-aluminum of the centrifugal blower type featuring backward-inclined blades and a tapered inlet shroud. Wheels shall be statically and dynamically balanced. Inlet cone shall be aluminum and of the centrifugal blower type. Motor and drives shall be enclosed in a weathertight compartment, separate from the exhaust air stream. Air for cooling the motor shall be supplied to the motor compartment by way of an air passage from an area free of contaminated exhaust fumes. Motors shall be of the duty, permanently lubricated, sealed ball-bearing type. Drives shall be sized for 165 percent of motor horsepower capabilities and of the cast-iron type, keyed to the fan and motor shafts. Variable pitch drives shall be standard. Fan shaft shall be of steel construction, turned, ground, and polished to precise tolerances in relationship to the hub and bearings. Drive belts shall be of the oil-resistant, non-static, non-sparking type with life expectancy of over 24,000 hours.
- E. Bearings shall be flanged and of the permanently lubricated, permanently sealed, ball-bearing type capable of over 200,000 hours bearing life. The entire drive assembly and wheel shall be removable, as a complete unit, from the support structure without disassembling the external fan housing. The complete drive assembly shall be mounted on rubber vibration isolation.
- F. Fans shall be licensed to bear the AMCA ratings seal for air and sound performance.
- G. Fans shall be mounted on an isolation base per spec section 230548.
- H. Fans shall have chemical-resistant heresite finish and spark-proof construction.
- I.

Manufacturers:	Model/Series:
Greenheck	SWB
Loren Cook	CPS
Barry Blower	Dynamo

2.4 FAN: CENTRIFUGAL INLINE - SQUARE CONSTRUCTION

- A. Factory assembled with all components mounted on a reinforced steel stand.

2.6 VAV UNIT: LOW PRESSURE

- A. Cabinet shall be constructed of zinc coated steel with 1" internal insulation. Insulation shall meet standards of specification section 233000.
- B. Air volume damper shall be constructed of extruded aluminum components with nylon fitted bearings. Air leakage shall not exceed 2% at 1" W.G. inlet pressure.
- C. Damper operator shall be factory mounted and compatible with space thermostats specified in specification Section 230923. Units shall be of the pressure independent type capable of operating with inlet pressures between 1.0 and 3.0 inches of water.
- D. Unit shall be factory tested prior to shipment.
- E.

Manufacturer:	Model/Series:
Titus	DESV
Trane	VCC
Anemostat	EZT

2.7 VAV UNIT: LOW PRESSURE - HOT WATER REHEAT

- A. Cabinet shall be constructed of zinc coated steel with 1" internal insulation. Insulation shall meet standards of specification Section 233000.
- B. Air volume damper shall be constructed of extruded aluminum components with nylon fitted bearings. Air leakage shall not exceed 2% at 1" W.G. inlet pressure.
- C. Damper operator shall be factory mounted and compatible with space thermostats specified in specification Section 230923. Units shall be of the pressure independent type capable of operating with inlet pressures between 1.0 and 3.0 inches of water.
- D. Unit shall be factory tested prior to shipment.
- E. Heating Coil
- F. Seamless copper tubes with brazed copper return bends and without internal turbulence inducers. Aluminum plate or helical fins. Red brass headers each with drains and vents.
- G. Flanged minimum 16 gauge galvanized steel casings with mounting holes.
- H. Mount and arrange components to permit expansion without strain on tubes, headers or casing and with all guides and supports necessary to assure proper alignment and drainage.
- I. Support - All units shall be independently suspended from the building structure. Provide auxiliary steel for hanging where required. Resting the units on ceiling structure will not be permitted.
- J.

Manufacturer:	Model/Series:
Titus	DESV
Trane	VCW
Anemostat	EZT

2.8 FAN COIL UNIT: CABINET - 2/4 PIPES

- A. Vertical cabinet centrifugal type.

- B. Cabinet: 18 gauge, nominal with 16 gauge front panels; channel formed edges around entire perimeter.
- C. Chassis: Minimum 18 gauge galvanized steel, reinforced with flanged edges lined with 1/2" thick, 1 lb. density neoprene faced fiberglass. Galvanized steel drain pan with insulating liner.
- D. Fan: Double inlet, double width, forward curved, galvanized steel wheel and scroll. Fan, motor and drain pan assembly shall be removable as a unit.
- E. Coils:
 - 1. Cooling/heating coil: 5/8" O.D. seamless copper tubes, with aluminum fins, mechanically bonded.
 - 2. Test coils at the factory for maximum working pressures of up to 300 PSI.
- F. Motors: Multispeed permanent split capacitor type directly connected to an extension of fan shaft. Maximum fan motor speed 1100 RPM. Provide integral thermal overload protection. Unit mounted fan speed switch. Provide special motors for all units scheduled with external static pressures of 0.10 inches or greater. Motors shall be capable of delivering scheduled CFM at static pressures indicated.
- G. Filter: 1" disposable woven glass.
- H. Accessories:
 - 1. Two-pipe valve package with automatic summer/winter changeover (Trane H-37).
 - 2. Four pipe valve package, including two way control valves for hot and chilled water, two stop valves for each service and an air vent on each service. Provide three way chilled water control valves where indicated on plans or in equipment schedules. Control valves shall be provided in conformance with Specification Section 230923.
 - 3. Tamper proof panel
 - 4. Unit sub-base.
 - 5. Extended motor oiler lines.
- I. Manufacturer: Trane International Environmental Company York
 Model/Series: Unitrane

2.9 HUMIDIFIER: STEAM GRID

- A. Steam grid type, with multiple steel headers, pneumatic operator, trap, temperature switch and strainer. Operator to be compatible with sequence of operation as defined in Section 230923.
- B. Provide support brackets and all interconnection piping.
- C. Manifolds shall be insulated with fiberglass and be provided with stainless steel

PART 3 - EXECUTION

3.1 GENERAL

- A. Install equipment in conformance with manufacturer's recommendations.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

**MCC Theater
PV467-CRG**

**CONTRACT # 4
ELECTRICAL WORK**

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 00 00

GENERAL PROVISIONS FOR ELECTRIC

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Division shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this Division as shown on the drawings, as specified herein, and/or as required by job conditions.
- B. This Section 260000 governs general procedures, materials and workmanship as applicable to the electrical work specified in the other Division 01 sections. Refer to Division 01 sections for additional general requirements.
- C. Perform the work in accordance with the requirements and provisions of applicable codes and laws.
- D. Equipment, materials, and installation shall conform to applicable standards and requirements of the following organizations and documents:

ANSI	-	American National Standards Institute
ASTM	-	American Society for Testing and Materials
AWS	-	American Welding Society
CBM	-	Certified Ballast Manufacturers Association
CSA	-	Canadian Standards Association
ETL	-	ETL Testing Laboratories
FCC	-	Federal Communications Commission
FM	-	Factory Mutual
FS	-	Federal Specifications
ICEA	-	Insulated Cable Engineers Association
IEEE	-	Institute of Electrical and Electronic Engineers
IESNA	-	Illuminating Engineering Society of North America
NEC	-	National Electrical Code
NECA	-	National Electrical Contractors Association
NEMA	-	National Electrical Manufacturers Association
NESC	-	National Electric Safety Code
NETA	-	International Electrical Testing Association
NFPA	-	National Fire Protection Association
NYCA	-	New York City Amendments to the 2008 NEC
OSHA	-	Occupational Safety and Health Administration
UL	-	Underwriters Laboratories, Inc.

1.2 INTENT

- A. It is the intention of the specifications and drawings to obtain finished work, clean, tested, and ready for operation.

1.3 WORK INCLUDED

- A. The work under this Division shall include labor, material, equipment, services and administrative tasks required to complete and make operable the electrical work shown on the drawings and specified herein, and including, but not limited to, the following:
 - 1. Preparation and submission of shop drawings, diagrams and illustrations.

2. Procuring necessary permits and approvals, and paying required fees and charges in connection with the work of this Division.
3. Coordinating with, and complying with requirements of, the local electric utility, telecommunications service provider, and other franchised utility and service companies as applicable to the scope of this work.
4. Record drawings.
5. Operating and maintenance instructions and manuals.
6. Identification labels, tags, charts and diagrams.
7. Final connections to electrical equipment and devices.
8. Cutting, drilling, and patching required for the work of this Division.
9. Concrete housekeeping pads for floor-mounted electrical equipment.
10. Temporary light and power for construction purposes.
11. Maintain existing life safety systems in operation during construction.
12. Testing and adjustment of systems and equipment furnished, installed, and/or connected under this Division.
13. Requirements of Construction Waste Management, Section 017419.
 - a. The Commissioner has established that as many of the surplus and waste material as economically feasible shall be reused, salvaged, or recycled. To that end, the Contractor #4 for Electrical Work shall participate in the development of the Waste Management Plan, and collect, sort and deposit in designated containers, their waste, non-returned surplus materials and rubbish in accordance with the approved Plan.
 - b. Project Diversion Goals are stated in Section 017419 – Construction Waste Management. The Contractor #4 for Electrical Work shall meet or exceed the minimum percentage of waste stated there for diversion from landfill, unless the Contractor #1 for General Construction Work designates a different amount. Specific items/categories shall be in accordance with the Documents and as established in the Plan.

1.4 REFERENCES

- A. DDC General Conditions
- B. Division 1, Section 018113.13 – Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings
- C. Division 1, Section 018113 – Sustainable Design Requirements (LEED Building)
- D. Division 1, Section 017419 - Construction Waste Requirements
- E. Division 1, Section 018119 - Construction IAQ Requirements

1.5 APPROVALS

- A. See General Conditions, in addition to the following requirements.
- B. Submit for approval a list of manufacturers of equipment proposed for the work. Contractor #4's intent to use exact make specified does not relieve him of responsibility for submitting such a list.
- C. Where any specific material, process or method of construction, or manufactured article is specified by name or by reference to catalog number of a manufacturer, or other standards, the intent is not to take precedence over the basic duty and performance specified, noted on drawings, or as required for intended results. The Contractor #4 shall verify the duty specified with the specific characteristics of the equipment offered for approval.
- D. If material or equipment is installed before it is approved, the Contractor #4 shall be liable for its removal and replacement with no additional cost.

1.6 COORDINATION WITH OTHER TRADES

- A. Prepare complete set of drawings showing necessary slab openings, cuts or holes in structural members and structural supports that require structural framing. Drawings shall clearly indicate sizes and location relative to established column lines. Drawings shall be made using the latest backgrounds available from the Commissioner. Drawings shall be completed in sufficient time to allow for structural steel fabrication so as not to delay project schedule.
- B. Shop drawing submissions shall demonstrate knowledge of the work of other trades, and shall show the locations of the work of other trades that affect the work of this contract.

1.7 COORDINATION DRAWINGS

- A. Coordination drawings shall be completed as required in Division 01. Refer to Section 230000 for requirements and sequence of drawing development.
- B. The electrical Contractor #4 shall add electrical work on the coordination drawings. Electrical work to be shown on the coordination drawings shall include, but not be limited to, panelboards, switchgear, transformers, motor control centers, variable frequency drives, and cable tray and conduit 2" and larger. Additional electrical work shall be shown on coordination drawings where close coordination is required. Access requirements shall be shown for equipment.

- C. After other trades have included their work on the coordination drawings and noted conflicts, the trades shall meet to resolve conflicts and agree to acceptable solutions. Each trade shall sign coordination drawings. Items not shown on the coordination drawings are the responsibility of the omitting Contractor #4 and the Contractor #4 is subject to additional costs incurred by other trades.
- D. The Commissioner and Engineer are not part of the coordination drawing process. The Commissioner will provide assistance relative to acceptability of proposed installations to resolve conflicts.
- E. Submit final signed coordination drawing to engineer. Only submit items that are different from previously approved shop drawings. Revisions shall be clearly indicated.
- F. Any work fabricated or installed prior to sign off by the applicable trades shall be removed and re-installed in conformance with coordination drawings.
- G. The overall coordination of the coordination process is the responsibility of the general Contractor #1.

1.8 SUBMITTALS

- A. Shop Drawing Schedule
 - 1. The Contractor #4 shall submit, within 30 days of the award of his contract, a schedule of proposed shop drawing submissions.
 - 2. The schedule shall include the following information.
 - a. Item to be submitted
 - b. Date of submission
 - c. Latest date for approval
 - d. Manufacturers of the specified item.
 - 3. Items not specifically listed as "approved equal" should be listed for consideration at this time.
- B. See Division 260000 equipment sections for specific submittals required. Unless otherwise indicated, submittals are required for electrical devices, equipment, and systems including basic construction materials such as conduit, 600 volt building wire, and standard fittings and boxes.
- C. Manufacturers' Data
 - 1. If catalog cuts of standard manufactured items show different types, options, finishes, performance requirements, or other variations, those features that the Contractor #4 proposes to furnish shall be clearly identified. If any variations from the catalog description are proposed or required, such variations must be clearly noted on the cut.
- D. Shop Drawings
 - 1. Shop drawings shall clearly indicate details, sectional views, arrangements, working and erection dimensions, kinds and quality of materials and their finishes, and other information necessary for proper checking and for fabrication and installation of the items, and shall include information required for making connections to other work.

2. Shop drawings shall be numbered consecutively, and drawings related to various units comprising a proposed assembly shall be submitted simultaneously so that such units may be checked both individually and as an assembly.
 3. Shop drawings shall include a listing and labeling statement indicating products are listed and labeled by a certified testing laboratory or agency for all electrical materials, devices, appliances and equipment.
 4. Contractor #4 shall keep on the site, in good order, a complete up-to-date set of approved shop drawings. Shop drawings shall be made available for inspection by the Commissioner.
 5. The approval of shop drawings will be for general conformance to drawings and specifications, and shall not be construed as permitting any departure from the contract requirements. If the shop drawings show any variations from contract requirements because of standard shop practices or other reasons, such variations shall be clearly identified on the drawings or specifically noted in the letter of transmittal, in order that, if acceptable, suitable action may be taken for proper adjustment in other work affected thereby. If the Contractor #4 fails to so identify such variations, he will not be relieved of responsibility for executing the work in accordance with the contract, even though such shop drawings have been approved and the work installed. Approval shall not relieve the Contractor #4 of responsibility for any error in details, dimensions, etc. that may exist on shop drawings, nor for the furnishing of materials or work required by the contract and not indicated on the shop drawings. Approval shall not be construed as approved departure from details or instructions previously furnished by the Commissioner.
 6. No work for which shop drawings are required shall be executed until the Commissioner's approval is obtained.
- E. Submittals will be reviewed for conformance with the contract drawings and specifications. The Professional Engineer licensed in New York State's review stamp will be affixed to submittals. One of the following actions will be taken.
1. **NO EXCEPTION** - Submittal appears to comply with the contract drawings and specifications. Contractor #4 is not relieved of responsibility to meet the requirements of the contract drawings and specifications due to errors, omissions, or conflicts with other equipment or trades.
 2. **EXCEPTIONS AS NOTED** - Submittal appears to comply with the contract drawings and specifications except for the items noted by the engineer. Contractor #4 is not relieved of responsibility to meet the requirements of the contract drawings and specifications due to errors, omissions, or conflicts with other equipment or trades.
 3. **REVISE AND RESUBMIT** - In the opinion of the engineer the nature and/or quantity of exceptions is sufficient to require resubmission to demonstrate compliance. Submittals must be returned within 30 days for contingent acceptance to remain valid. Submittals will become rejected if not returned within 30 days.
 4. **REJECTED** - Submittal does not comply with contract drawings and specifications.

1.9 OPERATING AND MAINTENANCE INSTRUCTIONS

- A. Furnish manufacturers operating and maintenance instructions, parts lists and sources of supply for replacements in accordance with Division 01 - General Requirements.
- B. Provide the following:
 - 1. Complete sets of final and correct shop drawings, maintenance and replacement parts manuals, and operating instructions, for equipment supplied.
 - 2. Bind each set within a common binder. Index and organize with a table of contents, to permit quick and convenient reference.
 - 3. Two days of instruction in operation and maintenance of equipment to City of New York's maintenance force. Schedule a 2-week period, convenient to City of New York, during which qualified personnel, including manufacturers' technicians and engineers will be available for City of New York's instruction.
 - 4. Master Operating Manual (submit in quadruplicate).
 - 5. Manufacturer's mechanical and electrical equipment parts list of components of the systems listed on the equipment schedules, control diagrams and wiring diagrams of controllers.
 - 6. List shall give system number, unit number, manufacturer's model number, and manufacturer's drawing numbers.
 - 7. Step by step operating instructions for each system including preparation for starting, re-starting after power failure, or re-setting after overcurrent or short-circuit operation.
 - 8. Maintenance instructions for each type of equipment.
 - 9. Possible breakdowns and repairs for each type of equipment.
 - 10. List of nearest local suppliers for equipment.
 - 11. Manufacturer's literature describing each piece of equipment listed on the fixture, panel and equipment schedules and in the specifications including wiring diagrams and a copy of any applicable test reports.
 - 12. As-installed control diagrams by the control manufacturer.

13. Recommended trouble shooting procedures in the event of foreseeable electrical system failure.
14. Complete "As-Installed" color coded wiring diagrams of systems and electrical motor controller connections.
15. Copies of the following test reports or study reports:
 - a. Branch circuit transfer system.
 - b. Dry type transformer.
 - c. Computer grade isolation transformer.
 - d. Lighting control system.
 - e. Architectural dimming control system.
 - f. Fire alarm system.
 - g. Short circuit, arc flash and coordination study with final settings.
 - h. Thermographic survey.

1.10 GUARANTEES AND SERVICES

- A. Workmanship, installation materials, and equipment shall be guaranteed as specified in the General Conditions.
- B. Contractor #4 shall leave entire system installed under this Contract in proper working order, and shall replace any work or material which develops defects within the 1 year guarantee period, including other work damaged as a result of such defects, without additional cost.

1.11 PERMITS AND CERTIFICATES

- A. Prior to proceeding with any installation, the Contractor #4 shall prepare and submit to the proper authorities for their approval working drawings required by them, and shall give necessary notices, obtain permits, and pay local, state and federal taxes, fees and other costs in connection with this work.

1.12 SHORT CIRCUIT, ARC FLASH AND OVERCURRENT PROTECTION COORDINATION STUDY

- A. The equipment manufacturer shall perform and submit for review and approval (1) a short circuit study and (2) an overcurrent protection coordination study in accordance with IEEE "Red Book" Standard 141 for service and distribution equipment supplied, including (3) arc flash hazard calculations per IEEE 1584 and complying with NFPA 70E. The study shall include existing equipment and equipment specified in: Sections 260962 Branch Circuit Transfer System, 262416 Panelboards, 263623 Automatic Transfer Switches, and 260943 Architectural Dimming Control Systems and Theatrical Lighting Controls. Include all portions of the existing and proposed electrical distribution system from the normal power incoming primary source down to and including all panels and distribution equipment shown on the drawings. Provide a computer generated format similar to SKM Systems Power Tools, EDSA Easy Power or approved equivalent. Study reports shall be reviewed and sealed by a Professional Engineer licensed in New York State with the appropriate seal annotated on the title page.
- B. Reports shall include as minimum:
 1. Single-line diagram(s) of service & distribution to include:
 - a. Complete component identification to match project labels
 - b. Transformer KVA and temperature rise
 - c. Circuit breaker & fuse type, frame & trip
 - d. Conductor quantity, type, size and length

- e. UL listed component AIC rating, including rating with upstream fuse, if applicable
 - f. Calculated fault current at each node and labeled on the single-line diagram.
2. Short circuit summary & analysis shall include complete fault calculations as specified herein for each proposed and ultimate source combination including: utility, generator and parallel or closed-transition with motor contribution, as applicable. Include fault contribution of all motors in the study. Motors with variable frequency drive controllers are equipped with bypass and shall be included.
 3. Selective coordination summary & analysis as required by Code including:
 - a. Coordination required for 0.1 second and longer.
 - b. Coordination where the service overcurrent protective device (OCPD) rating or setting is above 601 amps, such device shall be selectively coordinated with the next downstream OCPD.
 - c. Fire pump, elevator, emergency and legally required standby distribution.
 4. Arc flash hazard analysis shall calculate:
 - a. Listing of assumptions.
 - b. Incident energies at each equipment, protective device, bus, and feeder including transformers less than 125 kVA and where work could be performed on energized parts.
 - c. Incident energies at defined working distances.
 - d. Arc-flash protection boundary.
 - e. Required protective flame resistant clothing class for arc flash areas.
 - f. Recommendations for arc flash mitigation and reduction of personal protective equipment categories.
 5. Short circuit computer program results.
 6. Analysis of short circuit results including discussion of any problem areas.
 7. Recommended solutions for any identified problem areas.
 8. Branch & feeder composite computer generated time current curves (TCC) for equipment and protective devices in system.
 9. Time current curves including analysis of selective coordination results including discussion of any problem areas. TCC's shall include:
 - a. Individual devices in color with information labels to match single line diagram descriptions.
 - b. Inset containing single line diagram of components described in TCC.
 - c. Component damage curves & inrush points for conductors, motors & transformers.
 - d. Truncate curves at maximum available fault current.
 - e. Trip settings.
 10. When emergency generator is provided, include phase and ground coordination of the generator protective devices. Show the generator decrement curve and damage curve along with the operating characteristic of the protective devices. Obtain the information from the generator manufacturer and include the generator actual impedance value, time constants and current boost data in the study. Do not use typical values for the generator.
 11. Table of recommended settings of protective devices.
 12. Appendices with time current curves in color, UL listings, manufacturer's data, and supporting information used in study.
- C. Manufacturer shall document that overcurrent protection devices will perform in accordance with their U.L. listings and ANSI/IEEE Standard 242.
 - D. The short circuit, arc flash and coordination study shall be included with the submittals for equipment included in the study and as listed above. Failure to include the study with the equipment submittals will cause the equipment submittals to be rejected.
 - E. The Contractor #4 shall modify distribution equipment based on the results of the study.

- F. The Contractor #4 shall be responsible for final field adjustment of ground fault, overload and short circuit settings of adjustable circuit breakers and replacement of fused devices in compliance with the short circuit and coordination study recommendations.
- G. Provide labeling of equipment likely to require examination, adjustment, servicing or maintenance while energized to warn qualified persons of potential electric arc flash hazards in accordance with the results of the study and NFPA 70E.

1.13 LOSS CONTROL SERVICES THERMOGRAPHIC SURVEY REPORTS

- A. Perform thermographic survey and inspection of new and existing electrical equipment within one (1) year of installation to include: utility service end boxes, pad mount transformers and medium voltage switches, medium voltage cable terminations and splices, switchboards, sub-distribution switchboards and panelboards, branch circuit panelboards, disconnect switches, transfer switches, fuses and circuit breakers, busway, transformers, cable splices, and equipment terminals as shown on the drawings. Perform thermographic survey of other equipment as indicated on the drawings. Thermographic surveys shall be performed during periods of maximum loading using imaging equipment capable of detecting a minimum temperature difference of 0.1°C at 30°C. Loose connections shall be tightened and re-surveyed to confirm adequate repair. Upon completion of survey, submit a report to include the following:
 - 1. Complete description of equipment testing.
 - 2. Any discrepancies found.
 - 3. Temperature difference between the area of concern and the reference area.
 - 4. Probable cause of temperature difference.
 - 5. Areas inspected to include inaccessible and unused areas and equipment.
 - 6. Load conditions at time of inspection.
 - 7. Thermographs and photographs of the deficient area.
 - 8. Corrective action recommendations.
 - 9. Results submitted in formal bound report.

1.14 LEED BUILDING REQUIREMENTS

- A. General: The City of New York requires the Contractor #4 to implement practices and procedures to meet the project's environmental goals, which include achieving a LEED™ Green Building rating. Specific project goals, which may impact this area of work, are listed in the applicable paragraphs of this specification section. The Contractor #4 shall ensure that the requirements related to these goals, as defined in the sections below and in related sections of the contract documents, are implemented to the fullest extent. Substitutions, or other changes to the work proposed by the Contractor #4 or their Sub-Contractors, shall not be allowed if such changes compromise the stated LEED BUILDING criteria.
- B. Performance Criteria: All field applied adhesives, sealants (used as fillers), prime painting, and finished painting shall comply with the low VOC requirements called out in Division 1, Section 018115 - Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, & Architectural Paint and Coatings.

1.15 LEED BUILDING SUBMITTAL REQUIREMENTS

- A. Provide for all field-applied adhesives, sealants (used as fillers), and paints: Material Safety Data Sheets, for all applicable products. Applicable products include, but are not limited to adhesives, sealants, paints and coatings applied on the interior of the building. Material Safety Data Sheets shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product's VOC limits, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC limits).

1.16 EQUIPMENT AND SYSTEMS CRITERIA

- A. The criteria of design and performance to produce the required operation are based on equipment shown or scheduled.
- B. The equipment must conform to the structural design provisions for loads applied to the structure, to the dimensions established by drawings for equipment spaces and other clearances.
- C. The descriptions cover basic equipment and operation but not all the details of design and construction.
- D. The use of singular in descriptions does not limit the quantities of items to be furnished to provide the operation specified. Furnish equipment required to produce specified performance under installed conditions.
- E. Factory wiring, interconnections, raceways and connections shall conform to these specifications for the field work.
- F. Provide trim, enclosures and accessories required to make a complete installation.
- G. Finish equipment, motors, controls and similar apparatus with machinery enamel, prime coat and finish coat. Provide prime coat suitable for field painting and other protective treatments and coatings as specified.
- H. Acoustical performance of equipment and systems.

- 1. Noise levels from operation of equipment, transformers, ballasts, inverters, uninterruptible power supplies (ups's) and power conditioners, whether air-borne or structure-borne, and noise levels created by or within equipment and raceway shall not exceed sound pressure levels determined by the noise criterion curves in the ASHRAE Guide as follows:

<u>Location</u>	<u>Noise Criterion</u>
Theater 1	NC 20
Theater 2	NC 20
Control Booths	NC 20
Sound & Light Locks	NC 25
Stage	NC 20
Rehearsal Studios	NC 30
Patron Lounge	NC 30
Dressing Rooms	NC 30
Green Room	NC 30
Lobbies	NC 35
Public Circulation Areas	NC 35
Offices	NC 30
Conference Room	NC 25

- 2. Octave band sound pressure levels will be obtained for ambient room conditions with equipment not operating and also with the installed equipment operating per plans and specifications.
- 3. For testing purposes, sound pressure levels will be measured 3'-0" above the floor.

PART 2 - PRODUCTS

2.1 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Materials and equipment and systems shall be new, bear manufacturer's name and trademark, and comply with applicable standards specified.
- B. The UL label shall be borne on each piece of applicable material or equipment.
- C. Equipment shall be provided with required hardware for proper installation, assembly, and operation.
- D. The descriptions cover basic equipment and operation but not complete details of design and construction. The use of singular in descriptions does not limit the quantities of items to be furnished to provide the operation specified. Furnish equipment required to produce specified performance under installed conditions. Provide trim, enclosures and accessories required to make a complete installation.
- E. Follow manufacturers' directions in delivery, storage, protection and installation of equipment and materials. Notify Commissioner promptly, in writing, of any conflict between requirements of the contract documents and manufacturers' directions, and obtain Commissioner's written instructions before proceeding with work. Bear any costs to correct deficiencies arising from failure to comply with the manufacturers' directions and instructions.
- F. Deliver equipment and materials to the site and store in original containers, suitably sheltered from the elements. Store items subject to moisture damage in dry, heated spaces. Tightly cover and protect equipment against dirt, water, chemical, and mechanical injury, and against theft.
- G. Equipment and materials of the same general type shall be of the same manufacturer, make and model throughout the work to provide uniform appearance, operation and maintenance.
- H. Where new products or components are indicated to be installed or connected to existing systems or equipment, verify compatibility and performance with the manufacturer of the existing systems or equipment prior to purchase and installation.

2.2 EQUIPMENT DEVIATIONS

- A. Where the Contractor #4 proposes to use an item of equipment other than that specified or detailed on the drawings, and which requires any additional utilities or redesign of the structure, partitions, foundations, piping, wiring or any other part of the mechanical or electrical layouts, such redesign and new drawings required thereby, with approval of the

Commissioner, shall be prepared by the Contractor #4 without additional cost. Any changes in the project required to support alternates or substitutions shall be fully identified and submitted on the shop drawings for the substitute or alternate product. Such changes shall be reflected in the coordination drawings and shall be approved by the affected trades.

- B. Where such approved deviation requires a different quantity or arrangement of equipment from that specified or indicated on the drawings, the Contractor #4 shall provide any structural supports, controllers, motors, starters, wiring, conduit, and any other additional equipment required by the deviation, at no additional cost.
- C. It is the intent of these specifications that wherever a manufacturer of a product or a catalog number is specified, and terms "or equal" or "or approved equal" are used, a substituted item must conform to the specified item. Consideration will not be given to claims that a substituted item meets performance requirements with lesser construction. Performance as indicated in schedules and in specifications shall be interpreted as minimum acceptable performance.

2.3 ACCESS DOORS IN WALLS AND CEILINGS

- A. At each electrical component requiring access when located above ceiling or inside the wall not accessible by removal of grille, ceiling tile or from the air shafts, furnish access panels for installation by trades responsible for wall and ceiling construction as specified under Division 08 – Access Doors and Panels. Size panels sufficiently to access products requiring inspection, maintenance and adjustment, including but not limited to electrically operated valves, in-line controls, fire dampers, instruments and smoke or heat detectors.
 - 1. Minimum size for panels: 16 by 16 inches.
 - 2. Size panels located in masonry walls to match masonry coursing.
- B. Locations: Locate panels in walls and non-accessible ceilings of closets, storage rooms and other non-public spaces to the greatest extent possible. When access panels are required in corridors and public spaces, locate panels as directed by Commissioner.
- C. Panel type and materials: As specified under Division 08.

PART 3 - EXECUTION

3.1 SITE INVESTIGATION

- A. Examine drawings, specifications, and site, and be responsible for the nature and location of work and the general and local conditions, particularly those bearing upon transportation, disposal, handling and storage of materials, availability of labor, electric power, roads, etc.

3.2 DRAWINGS

- A. Drawings are diagrammatic and indicate the general arrangement of systems and work required. Do not scale the drawings. Consult the Mechanical and Architectural drawings and details for exact locations of equipment.
- B. Drawings shall be used in layout of work. Check reference drawings to verify spaces in which work will be installed, and maintain maximum headroom and space conditions. Where headroom, working clearance or space conditions appear inadequate, Commissioner shall be notified before proceeding with installation.

- C. If directed by the Commissioner, make minor modifications in the layout as needed to prevent conflict with work of other trades or for proper execution of the work.

3.3 COORDINATION WITH OTHER TRADES

- A. Closely schedule the work so that the work will be installed at the proper time and without delaying the project's completion.
- B. Where the work of this Division is to be installed in close proximity to the work of other trades, or where there is evidence that the work will interfere with the work of other trades, assist in working out space conditions to make a satisfactory arrangement. If the work is installed before such coordination with other trades, make necessary changes in the work as directed by the Commissioner to correct any conflicts or interferences, without additional cost to the City of New York.

3.4 COORDINATION AND LAYOUT

- A. Study drawings and specifications to ensure completeness of work required. Include supplementary items normal to manufacturers' requirements or standard accepted trade practices as necessary to complete the work, even if not explicitly shown or specified.
- B. Verify measurements and conditions in field before starting work.
- C. Examine materials, surfaces, and structures to which work is to be applied and notify the Commissioner, in writing, of any conditions that are detrimental to proper and expeditious installation of work. Starting of work shall be construed as acceptance of conditions.
- D. Confer with other trades to install work to avoid interference with other trades. The necessary adjustments to conform to structural conditions and work of other trades, particularly ductwork and piping layouts, are included under this section. Assist other trades in the preparation of coordinated layout drawings.

3.5 CONNECTIONS TO EQUIPMENT FURNISHED UNDER OTHER DIVISIONS OR BY CITY OF NEW YORK

- A. Provide electrical connections to equipment and fixtures requiring such connections which are supplied by City of New York or under other Divisions.
- B. Provide conduit, wire, lugs, fittings, accessories, and trim for final connection of each item of equipment as required for complete assembly and specified operation.

3.6 WORKMANSHIP

- A. Perform work in practical, neat, and workmanlike manner, with electricians skilled in the work they are performing, and using the best generally recognized trade practices.
- B. No work shall be covered or hidden from view until it has been inspected and approved by the required Building Department personnel and the Commissioner.
- C. Workmanship or materials not meeting with requirements of the specifications or drawings, or the satisfaction of the Commissioner, shall be rejected and shall be immediately replaced in an acceptable manner without additional cost.

3.7 TESTS

- A. Testing on incoming services shall be in accordance with Local Power Company requirements. Tests shall be performed by an approved independent testing Company in the presence of the Commissioner, City of New York, and the local Utility.
- B. Notify Commissioner, in writing, at least one week prior to tests, of the proposed testing timetables. Perform tests with the approval of and in the presence of the Commissioner or his representative.
- C. Provide temporary connections, necessary testing equipment, labor and materials, required for the testing of the systems and equipment. Systems shall be prepared for testing and protected from damage. Measuring instruments shall be properly calibrated. The cost of tests shall be included in the contract price.
- D. Verify and correct as necessary the following: voltages, tap settings, trip settings, and phasing on equipment and devices furnished or installed. Secondary voltages shall be tested at the bus in the main switchboard, at panelboards, and at such other locations on the distribution systems as necessary. Secondary voltages shall be tested under no-load and full-load conditions.
- E. Electronic solid state trip units shall be set by a manufacturer's trained technician as follows:
 - 1. Circuit breakers with solid state trip units shall be initially pre-set to the equivalent LT, LTD, ST, STD setting of the thermal magnetic version of the same ampere rated circuit breaker.
 - 2. Instantaneous setting shall be not less than 4X.
- F. Provide a written report on testing and device settings. Include a copy in the Operation and Maintenance Manual.
- G. Adjust occupancy sensors for proper operation including time delay, field of view (masking), typed sensing and parallel operation.
- H. Test wiring, outlets, lighting fixtures, switches, controllers, starters, motors, etc., wired under this Division. Leave free from grounds, crosses, shorts, opens, etc., and leave materials and apparatus in proper and satisfactory working condition. Perform additional tests as listed in the other Division 260000 specification sections.
- I. Lighting fixtures shall be tested with specified lamps in place for not less than ten hours; the fixtures may be checked in sections.
- J. Test for proper operation of emergency lighting equipment under simulated emergency conditions.
- K. Test distribution equipment, motors, and three phase receptacles for proper phase connections and phase rotation.
- L. Test service entrance, switchboards, panelboards, feeders, branch circuits and receptacles for proper neutral and grounding connections.

- M. Prior to energizing, test insulation resistance of conductors and distribution equipment with a 500VDC megger, both phase-to-phase and phase-to-ground. Do not energize any circuits with a reading of less than one megohm (1 million ohms) for #6 AWG wire and smaller or 250,000 ohms for #4 AWG wire or larger, between conductors and between conductor and the grounding conductor. Circuits under megger insulation test shall be connected to respective final terminals but with switches and breakers in the "OFF" position.
- N. After fixtures, devices, and equipment are installed and connections completed to each panel, the Contractor #4 shall disconnect the neutral feeder conductor from the neutral bar and the grounded enclosure and test insulation resistance. If this reading is less than 250,000 ohms, the Contractor #4 shall disconnect the branch circuit neutral wires from the neutral bar. He shall then test each branch circuit separately to the panel until the low readings are found. The Contractor #4 shall correct troubles, reconnect and retest until at least 250,000 ohms from the neutral bar to the grounded panel can be achieved with only the neutral feeder disconnected.
- O. Prior to energizing, test for continuity and identification of each conductor. Identify both ends of each conductor.
- P. Perform additional tests required by City of New York, Commissioner or any other authorities having jurisdiction.
- Q. Correct or replace any circuit, material or equipment that is found to be defective by these tests. Correct defects, whether due to faulty workmanship or material furnished, in a manner acceptable to Commissioner without additional cost.

3.8 IDENTIFICATION

A. Equipment

1. Identify each item and the system or area it serves. Provide an engraved lamicaid nameplate in a visible location on each switchboard, panelboard, disconnect, switch, inverter, annunciator and similar equipment. Provide stencils on major equipment.
2. Switchboard devices, panels, cabinets, junction boxes, switches, controllers, motors, etc., shall be identified as to systems, voltage, phases, horsepower, fuse size, circuit breaker size, heater size, magnetic size, and feed location on their exteriors.
3. Provide printed labels for all equipment in the system from the project short circuit, coordination & arc flash study file. Assume three (3) labels per equipment/bus in your estimate using 4" x 6" labels or one (1) 6" x 8" label per equipment bus. The labels shall be UV resistant vinyl labels (white with orange warning strip and black letters) conforming to ANSI-Z535. The labels shall be printable directly from the power system software utilized for the study with a Duralabel, Brady PowerMark or GlobalMark printer.
4. Emergency systems and equipment: Identify all boxes and enclosures, including automatic transfer switches, emergency generators, and panelboards, for emergency circuits with permanent yellow color so that they are readily identified as components of an emergency circuit or system as required. Yellow paint and/or a permanently-affixed nameplate, yellow in color with black lettering, shall be acceptable.

B. Wiring

1. Provide vinyl cloth self-adhering labels for feeders and branch circuits in pull boxes, junction boxes, cabinets, and outlets to identify each feeder and circuit. Manufacturer: Panduit Pan-Code, Brady or approved equal.
 2. Cables and branch wiring shall be identified showing phasing, system designations, and items served. Identity is required in switchboards, panels, junction boxes, switches, controllers, cabinets, etc.
- C. Provide complete, accurate, typewritten panelboard and switchboard directories mounted securely to panelboard doors and switchboard faces. Directories to include for each circuit: room number or area served and load description.
- D. Label receptacle cover plates to indicate source panelboard and branch circuit breaker number at bottom of cover plate. Provide typewritten self-adhering labels with black text and clear background, Brady or approved equal.
- E. Label covers of pullboxes and junction boxes with readily visible lettering at least 1/4-inch high system, source panel, circuit number and voltage. Provide typewritten self-adhering labels with black text and clear background, Brady or approved equal.
- F. Install a permanently affixed sign at the service entrance equipment indicating the type and location of the on-site emergency power source. Install a sign on the main grounding box identifying all emergency and normal sources connected at that location.
- G. Provide a reduced size "as-built" single line diagrams, framed under glass, and mounted in a conspicuous place adjacent to the main switchboard.

3.9 CUTTING, ALTERING AND PATCHING

- A. Provide cutting, chasing, drilling, altering and rough patching required for the work of this division.
1. Including the restoring of existing work cut for or damaged by installation of new work, and where present work is removed.
 2. Materials and workmanship required in connection with cutting, altering and rough patching shall match the existing work in every respect.
- B. Do shoring, bracing, cutting, patching, piecing out, filling in, repairing and refinishing of present work as made necessary by the alteration and the installation of new work.
- C. Holes and openings occurring in the existing floors after equipment, partitions, floors, steel work, conduits are removed or installed shall be closed up with materials similar to the adjacent work.
- D. The size and location of items requiring an opening, chase or other provisions to receive it shall be given by the trade requiring same in ample time to avoid undue cutting of any new work to be installed. These provisions shall not relieve the Contractor #4 from keeping informed as to the required opening, chases, etc., nor from responsibility for the correctness thereof, nor for cutting and repairing after the new work is in place.
- E. Include cutting, repairing and patching in connection with the work that may be required to make the several parts come together properly and fit it to receive or be received by the work of other trades, as shown on the drawings and/or specified, or reasonably implied by the drawings and specifications.

- F. Repairing, patching, piecing-out, filling-in, restoring and refinishing shall be neatly done by mechanics skilled in their trade to leave same in condition satisfactory to the City of New York.
- G. Materials and their methods of application for patching shall comply with applicable requirements of the specifications.
 - 1. Materials and workmanship not covered by the specifications and items of work exposed to view adjoining existing work to remain shall conform to similar materials and workmanship existing in or adjacent to the spaces to be altered.
- H. Cutting, repairing and patching shall include items shown on the drawings, specified in the specifications or required by the installation of new work or the removal of existing work.
- I. Remove partitions, walls, suspended ceilings, etc., as necessary to perform the required alterations or new construction work. Avoid damage to construction and finishes that are to remain.
- J. Protect and be responsible for the existing building, facilities and improvements. Any disturbance or damage to the work, the existing building, and improvements, or any impairments of facilities resulting from the construction operations, shall be promptly rectified, with the disturbed, damaged, or impaired work, restored, repaired or replaced at no extra cost.
- K. Alterations which are not indicated on the drawings nor specified herein but necessary to make good existing work disturbed by reason of the work shall be restored to a condition satisfactory to the City of New York.
- L. Holes in masonry floors and walls are to be core drilled. Scan existing slabs and walls for concealed locations of equipment to include: conduits, piping, rebar and structural elements prior to being core drilled. Prior to core drilling, notify the building occupants of the potential for an unscheduled power outage. The Commissioner shall inspect core holes before installing conduits, sleeves, or poke-through devices. Conduits damaged during core drilling shall be restored immediately at the Contractor #4's expense.
- M. Disturbed concrete and /or cement floor areas shall be patched with approved type latex mortar. When cement mortar is used for patching, the surfaces shall be depressed a minimum depth of 1".
- N. Reinstall weather protection work in waterproof manner.
- O. Openings in roofs shall be kept properly plugged and caulked, except when being worked on, to preclude the possibility of flooding due to storms or other causes. After completion of work, openings shall be permanently sealed.
- P. Temporary openings cut in walls, floors or ceilings for conduit shall be closed off with non-combustible material except when mechanics are actually working at the particular opening.

3.10 SLEEVES AND SEALING

- A. Install sleeves of Schedule 40 galvanized steel pipe for conduits and cables penetrating above-grade floor slabs, and any concrete or masonry walls. Sleeves through walls shall terminate flush with wall surface on each side. Sleeves through floors shall terminate 2 inches above finished floor. Neatly and completely grout sleeves in place.

- B. Sleeves shall be adequately sized for the conduits and cables to be installed, with sufficient free space to install sealing caulk or putty.
- C. Sleeved conduits through slab-on-grade floors, below-grade foundation walls, shafts, and the like shall be provided with sealing bushings to seal against fluid and gas pressure and installed in accordance with UL and manufacturer's instructions.
- D. Where penetrating floor slabs and fire-rated partitions, pack the annular space between the sleeves and the conduits and cables with reusable fire-retardant modules, putty, sealant, or caulk. The sealant material shall be intumescent, asbestos free, and installed in accordance with UL and manufacturer's instructions. Sealant materials shall be easily removed and replaced for addition or deletion of cables.
 - 1. Penetrations with annular space greater than 1/2" shall be provided with approved backing material.
 - 2. Fire-retardant sealer and system shall be UL listed for the application and meet ASTM E-84, ASTM E-814, and UL-1479 requirements. Use Hilti Firestop Systems, CSD Sealing Systems, Nelson "FSP", Carborundum Co. "Fyre Putty", 3M "CP-25", IPC "Flamesafe", ROX System or approved equal.
- E. Where cable tray penetrates floor slabs, ceilings and rated partitions, the cable tray shall stop at the floor, ceiling or wall. Provide a fire-rated pathway through floor, wall or ceiling of equivalent size to the cable tray dimensions. The cable tray shall then be continued on the opposite side of the floor, ceiling or wall. The cable tray shall be grounded and bonded for electrical continuity. The Contractor #4 shall maintain the floor, ceiling and wall rating.
 - 1. Fire-rated pathway products: STI EZ-Path Series 22, 33 and 44 or approved equal by Wiremold or Hilti.
- F. Contractor #4 shall photographically document that proper sealing bushings, fire stopping, sleeving and pathway products have been provided before locations are hidden from view. Refer to Section 260500 for additional information.

3.11 SEISMIC ANALYSIS

- A. The following steps were used to determine the Seismic Design Category for this project.
 - 1. Based on 2008 New York City Building Code table 1604.5, the project is considered Occupancy Category III.
 - 2. Site Class D was selected as the default for unknown soil site conditions.
 - 3. The USGS web application determined the following based on the geographical location of the project building:
 - a. $S_s = 0.363g$
 - b. $S_1 = 0.070g$.
 - 4. 2008 New York City Building Code Tables 1615.1.2 (1) and 1615.1.2 (2) were used to determine the following:
 - a. $F_A = 1.51$
 - b. $F_V = 2.4$

5. 2008 New York City Building Code Equations 16-38 and 16-39 were used to determine the following:
 - a. $S_{MS} = F_A S_S = 1.51 \times 0.147 = 0.548g$
 - b. $S_{M1} = F_V S_1 = 2.4 \times 0.049 = 0.168g$
6. 2008 New York City Building Code Equations 16-40 and 16-41 were used to determine the following:
 - a. $S_{DS} = 2/3 \times S_{MS} = 2/3 \times 0.548g = 0.365g$
 - b. $S_{D1} = 2/3 \times S_{M1} = 2/3 \times 0.168g = 0.112g$
7. 2008 New York City Building Code Tables 1616.3 (1) and 1616.3 (2) were used to determine the following:
 - a. Seismic Design Category D based on Short-Period Response Accelerations table
 - b. Seismic Design Category C based on 1-Second Response Accelerations table
8. Based on the more severe of the seismic design categories listed above, the Seismic Design Category for this project has been determined as Seismic Design Category D.

3.12 SEISMIC RESTRAINT

- A. Provide seismic restraint of all mechanical, electrical, plumbing and fire protection systems as required per 2008 New York City Building Code Sections 1614, ASCE 7-05, and referenced sections and publications.
- B. Provide seismic analysis and calculations for all mechanical, electrical, plumbing and fire protection system components installed by this Contractor #4 except the following:
 1. Mechanical and electrical components where the component importance factor (I_p) is equal to 1.0 and either:
 - a. Flexible connections between the components and associated ductwork, piping and conduit are provided.
 - b. The components are mounted 4 ft or less above a floor level and weigh 400 lb or less.
 2. Mechanical and electrical components where the component importance factor (I_p) is equal to 1.0 and:
 - a. Flexible connections between the components and associated ductwork, piping and conduit are provided.
 - b. The components weigh 20 lb or less or, for distribution systems, weighing 5 lb/ft or less.
- C. Importance Factor (I_p) for this project shall be as follows:
 1. Mechanical, electrical, plumbing and fire protection systems installed by this Contractor #4 required to function as part of life-safety systems shall have Importance factor (I_p) equal to 1.5. Life-safety systems shall include: Theater 1 Smoke Exhaust, Emergency Lighting, Exit Signage, Fire Alarm and Fire Protection (sprinkler) systems.
 2. All mechanical, electrical, plumbing and fire protection systems installed by this Contractor #4 not required to function as part of life-safety systems shall have Importance Factor (I_p) equal to 1.0.

- D. Seismic restraint calculations shall be provided for all connections of components to the structure. Calculations must be stamped by a Professional Engineer licensed in New York State with at least three years' experience in seismic design experience.
- E. Analysis must indicate calculated dead loads, seismic static loads, capacity of materials utilized for connection to equipment and structure. Analysis shall detail anchoring methods, bolt diameter, embedment and/ or welded length. All seismic restraint devices shall be designed to accept without failure, the lateral forces acting through the center of gravity.

3.13 PLENUM APPLICATION

- A. Space above the hung ceilings shall not be used as a return air plenum (air transfer), except where specifically indicated on the mechanical drawings and/or other drawings. Material in spaces so noted shall be suitable for use in plenum application. In spaces so noted, no combustible materials shall be used. Wiring shall be in conduit, or shall be listed for the use, and shall comply with the requirements of NFPA 70, Section 300-22, as well as other applicable codes. Materials used in plenum spaces shall have flame spread/smoke developed ratings as required by code and/or authorities having jurisdiction.

3.14 TEMPORARY LIGHT AND POWER

- A. Contractor #4 shall furnish, install and maintain a temporary light and power system to provide the buildings, field offices, and project site with temporary light to provide safe working conditions throughout, interior and exterior, and to supply construction power as required on the job.
- B. The system shall be furnished, installed, and operating at the earliest possible date.
- C. Work for the system shall be in accordance with NEC Article 590 with NYC Amendments, the requirements of the Utility Company, and as approved by the City of New York and authorities having jurisdiction.
- D. The work shall include generally, but not be limited to, the following:
 - 1. Make arrangements with the utility company or the City of New York to furnish and install the temporary light and power service.
 - 2. Review and coordinate the electrical needs of other trades on a continuing basis, until permanent power and light is available and the temporary system is removed and no longer needed.
 - 3. Furnish, install, and maintain required temporary system equipment, devices, and wiring. Remove when no longer needed, or at the direction of the City of New York. Modify, add, or relocate equipment, devices, and wiring as required to suit job conditions.

3.15 WASTE MANAGEMENT

- A. Comply with the requirements established by the Contractor #4 for General Construction Work to separate and recycle, salvage or reuse cast-offs, surplus and waste material in accordance with the Waste Management Plan.
- B. Arrange for suppliers to take back shipping and packing materials for reuse or recycling to the maximum extent economically feasible, or include them in the Waste Management Plan.

END OF SECTION

SECTION 260013 - ELECTRICAL CONTRACTOR WORK
ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

1.01 SCOPE FOR ASBESTOS ABATEMENT WORK

- A. The "General Conditions" apply to the work of this Section.
- B. The Asbestos abatement contractor shall remove asbestos containing materials as needed to perform the other work of this Contract when discovered during the course of work. When required, the Asbestos abatement contractor shall replace the ACM with non-asbestos containing materials. An allowance of **\$5,000.00** for the **Electrical Contractor** is herein established for this incidental work when so ordered and authorized by the Commissioner.
- C. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE APPLICABLE PROVISIONS OF THE RULES AND REGULATIONS OF THE ASBESTOS CONTROL PROGRAM AS PROMULGATED BY TITLE 15 CHAPTER 1 OF RCNY AND NEW YORK STATE DEPARTMENT OF LABOR INDUSTRIAL CODE RULE 56 CITED AS 12 NYCRR, PART 56 WHICHEVER IS MORE STRINGENT AS PER LATEST AMENDMENTS TO THESE LAWS AND AS MODIFIED HEREIN BY THESE SPECIFICATIONS.
- D. ALL DISPOSAL OF ASBESTOS CONTAMINATED MATERIAL SHALL BE PER LOCAL LAW 70/85.
- E. THE ASBESTOS ABATEMENT CONTRACTOR'S ATTENTION IS DIRECTED TO THE FACT THAT CERTAIN METHODS OF ASBESTOS ABATEMENT ARE PROTECTED BY PATENTS. TO DATE, PATENTS HAVE BEEN ISSUED WITH RESPECT TO "NEGATIVE PRESSURE ENCLOSURE" OR "NEGATIVE-AIR" OR "REDUCED PRESSURE" AND "GLOVE BAG".
- F. THE ASBESTOS ABATEMENT CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR AND SHALL HOLD THE DEPARTMENT OF DESIGN AND CONSTRUCTION AND THE CITY HARMLESS FROM ANY AND ALL DAMAGES, LOSSES AND EXPENSES RESULTING FROM ANY INFRINGEMENT BY THE ASBESTOS ABATEMENT CONTRACTOR OF ANY PATENT, INCLUDING BUT NOT LIMITED TO THE PATENTS DESCRIBED ABOVE, USED BY THE ASBESTOS ABATEMENT CONTRACTOR DURING PERFORMANCE OF THIS AGREEMENT.
- G. "Asbestos" shall mean any hydrated mineral silicate separable into commercially usable fibers, including but not limited to chrysotile (serpentine), amosite (cumingtonite-grunerite), crocidolite (riebeckite), tremolite, anthrophyllite and actinolite.

- H. Prior to starting, the Asbestos abatement contractor must notify the Commissioner of the Department of Design and Construction if he/she anticipates any difficulty in performing the Work as required by these Specifications. The Asbestos abatement contractor is responsible to prepare and submit all filings, notifications, etc. required by all City, State and Federal regulatory agencies having jurisdiction.

The Asbestos abatement contractor is responsible for submitting the Asbestos Project Notification Form (ACP-7 Form) to the Department of Environmental Protection, Asbestos Control Program, as per Title 15, Chapter 1 of RCNY and to the NYSDOL as per Industrial Code Rule 56.

The Asbestos abatement contractor is responsible for preparing, and submitting Asbestos Variance Application (ACP-9). If a Variance is required, the Asbestos abatement contractor is responsible to retain a NYSDOL Asbestos Project Designer, as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required variance.

The Electrical contractor is responsible for preparing and submitting an Asbestos Abatement Permit and/or Work Place Safety Plans (WPSP) that may be required for the completion of the Contract or incidental work. If such plans are required, the Asbestos abatement contractor is responsible to retain a NYSDOL Licensed Design Professional as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required plans.

The Asbestos abatement contractor is responsible for the submission of all required documents to the NYCDEP to acquire the appropriate Asbestos Project Conditional Closeout (ACP-20) and/or Asbestos Project Completion Forms (ACP-21) on a timely basis for the completion of the incidental work encountered under this contract.

The Asbestos abatement contractor will be required to attend an on-site job meeting with the Construction Project Manager prior to the start of work to examine conditions and plan the sequence of operations, etc.

The Asbestos abatement contractor shall have a NYSDOL/NYCDEP Asbestos Supervisor onsite to oversee the work and conduct a final visual inspection as required by both Title 15, Chapter 1 of the RCNY and NYSDOL Industrial Code Rule 56.

- I. All work shall be done during regular working hours unless the Asbestos abatement contractor requests authorization to work in other than regular working hours and such authorization is granted by the Commissioner. (Regular work hours are those hours during which any given facility, in which work is to be done, is customarily open and functioning, normally between the hours of 8:00 A.M. and 4:00 P.M. Monday - Friday.) If such work schedule is authorized by the Commissioner, the work shall be done at no additional cost to the City.

- J. The Commissioner may order that work be done in other than regular working hours as herein by defined and this order may require the Asbestos abatement contractor to pay premium or overtime wages to complete the work. If the Commissioner orders work in other than regular working hours, the Asbestos abatement contractor shall multiply the unit price for that portion of the work requiring premium wages by 1.50 when computing payment in accordance with Paragraph 1.09. All requests for premium payment must be supported by certified payroll sheets and field sheets approved by the Construction Project Manager.

1.02 QUALIFICATIONS OF ASBESTOS ABATEMENT CONTRACTOR

- A. Requirements: The asbestos abatement contractor must demonstrate compliance with the special experience requirements set forth in subparagraphs (1) through (5) below. The asbestos abatement contractor must, submit documentation demonstrating compliance with all listed requirements. Such documentation shall include without limitation, all required licenses, certificates, and documentation.
1. The asbestos abatement contractor must, whether an individual, corporation, partnership, joint venture or other legal entity, must demonstrate for the three year period prior to the work, that it has been licensed by the New York State Department of Labor, as an "Asbestos abatement contractor".
 2. The asbestos abatement contractor must, for the three year period prior to the work, have been in the business of providing asbestos abatement services as a routine part of its daily operations.
 3. The asbestos abatement contractor proposing to do asbestos abatement work must be thoroughly experienced in such work and must provide evidence of having successfully performed and completed in a timely fashion at least five (5) asbestos abatement projects of similar size and complexity. The aggregate cost of these projects must be at least \$250,000.00 in each of the three years.
 4. For each project submitted to meet the experience requirements set forth above, the asbestos abatement contractor must submit the following information for the project; name and location of the project; name title and telephone number of the owner or the owner's representative who is familiar with the asbestos abatement contractor's work, brief description of the work completed as a prime or sub-asbestos abatement contractor; amount of contract or subcontract and the date of completion.
 5. The asbestos abatement contractor must demonstrate that it has the financial resources, supervisory personnel and equipment necessary to carry out the work and to comply with the required performance schedule, taking into consideration other business commitments. The asbestos

abatement contractor must submit such documentation as may be required by the Department of Design and Construction to demonstrate that it has the requisite capacity to perform the required services of this contract.

- B. Insurance Requirements: The asbestos abatement contractor must provide asbestos liability insurance in the following amount: 1 million dollars per occurrence, 2 million dollars aggregate (combined single limit). The City of New York shall be named as an additional insured on such insurance policy.
- C. Throughout the specifications, reference is made to codes and standards which establish qualities and types of workmanship and materials, and which establish methods for testing and reporting on the pertinent characteristics thereof.

1.03 ASBESTOS ABATEMENT CONTRACTOR RESPONSIBILITIES

The Asbestos abatement contractor will visit the subject location within one (1) working day of notification to ascertain actual work required. If the project is identified as being "urgent", then work shall commence no later than 48 hours from the time of notification. In this event, the asbestos abatement contractor shall immediately notify when applicable EPA NESHAPS Coordinator, NYSDOL Asbestos Control Bureau and NYCDEP Asbestos Control Program of start of the work and file the necessary Asbestos Notifications and any applicable Variance Applications with the regulatory agencies cited above..

In the event that the project is not classified as "urgent" the Asbestos abatement contractor shall notify the EPA NESHAPS Coordinator, NYSDOL and NYCDEP by submitting the requisite asbestos project notification forms, postmarked 10 days before activity begins if 260 linear feet or more and/or 160 square feet or more of asbestos containing material will be disturbed.

The following information must be included in the notification:

- A. Name and address of building City or operator;
- B. Project description:
 - 1. Size - square feet, number of linear feet, etc;
 - 2. Age - date of construction and renovations (if known);
 - 3. Use - i.e., office, school, industrial, etc.
 - 4. Scope - repair, demolition, cleaning, etc.
- C. Amount of asbestos involved in work and an explanation of techniques used to determine the amount;

ELECTRICAL CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

- D. Building location/address, including Block and Lot numbers;
- E. Work schedule including the starting and completion dates;
- F. Abatement methods to be employed;
- G. Procedures for removal of asbestos-containing material;
- H. Name, title and authority of governmental representative sponsoring project.

1.04 WORK INCLUDED IN UNIT PRICE

The Asbestos abatement contractor will be paid a basic unit price of **\$25.00** per square feet for the removal and disposal of asbestos containing material and replacement of the same with non-asbestos containing materials.

Unit price shall include all costs necessary to do the work of this Contract, including but not limited to: labor, materials, equipment, utilities, disposal, insurance, overhead and profit.

1.05 AIR MONITORING – ASBESTOS ABATEMENT CONTRACTOR

- A. "Air Sampling" shall mean the process of measuring the fiber content of a known volume of air collected during a specific period of time. The procedure utilized for asbestos follows the NIOSH Standard Analytical Method 7400 or the provisional transmission electron microscopy methods developed by the USEPA and/or National Institute of Standard and Technology which are utilized for lower detectability and specific fiber identification.
- B. Air monitoring of Asbestos abatement contractor's personnel will be performed in conformance with OSHA requirements, (All costs associated with this work are deemed included in the unit price.).
- C. Qualifications of Testing Laboratory:

The industrial hygiene laboratory shall be a current proficient participant in the American Industrial Hygiene Association (AIHA) PAT Program. The laboratory identification number shall be submitted and approved by the City. The laboratory shall be accredited by the AIHA and New York State Department of Health Environmental Laboratory Approval Program (ELAP).

Note: Work area air testing and analysis before, during and upon completion of work (clearance testing) will be performed by a Third Party Air Monitor under separate Contract with the City.

1.06 THIRD PARTY MONITORING AND LABORATORY

- A. The NYCDDC, at its own expense, will employ the services of an independent Third Party Air Monitoring Firm and Laboratory. The Third Party Air Monitor will perform air sampling activities and project monitoring at the Work Site.
- B. The Laboratory will perform analysis of air samples utilizing Phase Contrast Microscopy (PCM) and/or Transmission Electron Microscopy (TEM).
- C. The Third Party Air Monitoring Firm and the designated Project Monitor shall have access to all areas of the asbestos removal project at all times and shall continuously inspect and monitor the performance of the Asbestos abatement contractor to verify that said performance complies with this Specification. The Third-Party Air Monitor shall be on site throughout the entire abatement operation.
- D. The NYCDDC will be responsible for costs incurred with the Third Party Air Monitoring Firm and laboratory work. Any subsequent additional testing required due to limits exceeded during initial testing shall be paid for by the Asbestos abatement contractor.

1.07 PAYMENT REQUEST DOCUMENTATION

- B. The following information shall be included for each payment request:
 - 1. Description of work performed.
 - 2. Linear footage and pipe sizes involved.
 - 3. Square footage for boiler & breaching insulation removed.
 - 4. Square footage of non pipe and boiler areas removed, patched, enclosed, sealed, or painted.
 - 5. Square footage of encapsulation, sealing, patching, and painting involved.
 - 6. Total cost associated with compliance with the assigned task.
 - 7. Architectural, Electrical, HVAC, Plumbing, etc. work incidental to the Asbestos Abatement Work.
 - 8. A certified copy (in form 4312-39) to the Comptroller or Financial Officer of the New York City to the effect that the financial statement is true.

ELECTRICAL CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

9. A signed copy (in form 6506q-6) of certificate of compliance with non-discriminatory provisions of the Contract.
 10. Attach a copy of valid workmen compensation insurance.
 11. Valid asbestos insurance per occurrence.
 12. General liability insurance when required.
- C. Each payment request shall include a grand total for all work completed that billing period, the landfill waste manifests and a copy of waste transporter permit. The Department of Design and Construction will inspect the work performed, review the cost and approve or disapprove requests for payment.
- D. EXPOSURE LOG: With this final payment, the Asbestos abatement contractor shall submit a listing of the names and social security numbers of all employees actively engaged in the abatement work of this Contract. This list shall include a summary showing each part of the abatement work in which the employee was engaged and the dates thereof.

1.08 QUANTITY CALCULATIONS

In order to determine the square footage involved for the various pipe sizes of pipe insulation that might be encountered, the following table is to be used.

<u>PIPE INSULATION SIZE O.D.</u>	<u>PIPE SIZE O.D.</u>	<u>SQUARE FOOTAGE PER LINEAR FOOT</u>
2-1/2"	1/2"	0.65
2-3/4"	3/4"	0.72
3"	1"	0.79
3-1/4"	1-1/4"	0.85
3-1/2"	1-1/2"	0.92
4"	2"	1.05
4-1/2"	2-1/2"	1.18
5"	3"	1.31
6"	3-1/4"	1.57
7"	3-1/2"	1.83
8"	4"	2.09
9"	5"	2.36
10"	6"	2.62
12"	8"	3.14
14"	10"	3.67
16"	12"	4.19
18"	14"	4.71

1.09 METHOD OF PAYMENT

Payment shall be made in accordance with Items A through R below. Payment shall be calculated based on the actual quantity of the item performed by the asbestos abatement contractor, times the unit price specified below. Credits may apply to certain times, as specified below.

- A. **REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING PIPE INSULATION:** Actual linear footage, multiplied by the square footage factor listed for the respective pipe size in Section 1.09, multiplied by the unit price in Section 1.05.

EXAMPLE: 100 lin.ft. of 1/2" pipe and 100 lin.ft. of 6" pipe, including elbows, tees. Flanges, etc.

$$100 \times 0.65 = 65 \text{ sq.ft.} \quad 65 \times \text{unit price} = \text{Payment}$$

$$100 \times 2.62 = 262 \text{ sq.ft.} \quad 262 \times \text{unit price} = \text{Payment}$$

- B. **REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER INSULATION:** (all types including Silicate Block and including the removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.

EXAMPLE: Item B. removal and replacement of 1000 S.F. of boiler insulation (incl. Silicate block)

$$1000 \text{ S.F.} \times (1.5) \times \text{the Unit Price} = \text{Payment}$$

- C. **REMOVAL, DISPOSAL AND REPLACEMENT OF TANK INSULATION:** (all types including removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.
- D. **REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER UPTAKE, & BREACHING INSULATION:** (all types including stiffening angles and wire lath) Payment shall be made at 2.0 times the unit price per square foot.
- E. **REMOVAL, DISPOSAL AND REPLACEMENT OF DUCT INSULATION:** Payment shall be made at 1.0 times the unit price per square foot.
- F. **REMOVAL, DISPOSAL AND REPLACEMENT OF SOFT ASBESTOS CONTAINING MATERIAL:** (Including sprayed-on fire proofing and sound proofing) Payment shall be made at 1.0 times the unit price per square foot of surface area. Area of irregular surfaces must be calculated and confirmed with DDC representative.
- G. **ACOUSTIC PLASTER REPAIR AND/OR ENCAPSULATION:** Payment shall be made at 0.5 times the unit price per square foot.

ELECTRICAL CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

- H. **PATCHING OR REPAIR** of items listed in A through F will be paid at 0.33 times the unit price per square foot.
- I. **REMOVAL, DISPOSAL AND REPLACEMENT OF WATERPROOFING ASBESTOS CONTAINING MATERIAL:** (including friable and non-friable waterproofing material from interior and exterior walls, floors, foundations, penetrations, louvers, vents and openings other than windows, doors and skylights) Payment shall be made at 0.5 times the unit price per square foot.
- J. **REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING ELECTRICAL WIRING INSULATION:** (including friable and non-friable wiring insulation) Payment shall be made at 0.33 times the unit price per square foot.
- K. **PAINTING:** Payment shall be made at 0.05 times the unit price per square foot.
- L. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING PLASTER:** from ceilings and walls, including any wire lath and disposal as asbestos containing waste. Payment shall be made at 0.80 times the unit price per square foot.
- M. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING FLOOR TILES, CEILING TILES, TRANSITE PANELS:** (including any adhesive, glue, mastic and/or underlayment) and disposal as asbestos containing waste. Payment shall be made at 0.40 times the unit price per square foot. If multiple layers are discovered, each additional layer shall be paid at 0.20 times the unit price per square foot.
- N. **ADDITIONAL CLEAN UP/HOUSEKEEPING OF WORK AREA:** (excluding pre-cleaning of work area required by regulations) HEPA vacuuming and wet cleaning of asbestos contaminated surface. Payment shall be made at 0.20 times the unit price per square foot. When GLOVE BAG is employed to remove ACM, cost of HEPA vacuuming and wet cleaning of floor area up to 3 feet on each side of glove-bag shall be included in unit price and no extra payment will be made.
- O. **REMOVAL, DISPOSAL OF ASBESTOS-CONTAINING ROOFING MATERIAL:** including mastic, flashing and sealant compound and provide temporary asbestos-free roof covering consisting of one layer of rolled roofing paper sealed with asphaltic roofing compound. Payment shall be made at 0.8 times the unit price per square foot. Credit at a rate of 0.33 times the unit price will be taken for each square foot of temporary roof covering which the Asbestos abatement contractor is directed not to install.
- P. **PICK-UP AND DISPOSAL OF GROSS DEBRIS:** (excluding any waste generated from abatement under Item A-R) at a rate of \$150 per cubic yard for asbestos contaminated waste and \$75 per cubic yard for non-asbestos

contaminated waste. This cost includes all labor and material cost associated with work.

- Q. **REMOVAL OF ASBESTOS-CONTAINING BRICK, BLOCK, MORTAR, CEMENT OR CONCRETE:** along with all surfacing materials including wire lath and/or other supporting structures and disposal as ACM waste. Payment shall be made at a rate of \$25.00 per cubic foot of material removed.
- R. **REMOVAL AND DISPOSAL OF ASBESTOS CONTAINING WINDOW/DOOR CAULKING:** including friable and non-friable caulking, weather-stripping, glazing, sealants or other waterproofing materials applied to windows, doors, skylights, etc. Payment shall be made at the rate of \$400.00 per opening regardless of size or configuration. This cost includes labor, consumable materials, set-up/breakdown, removal and disposal, as required.

Note 1: CREDIT: For items listed in A through F, a credit at a rate of 0.33 times the unit price, times the respective multiplier (for each item) will be taken for each square foot of insulation which the asbestos abatement contractor is not directed to reapply.

Note 2: MINIMUM PAYMENT: The minimum payment per call at any individual job sites or various job sites during the same day will be eight hundred dollars (\$800.00).

Note 3: All payments shall be made as described in paragraph 1.09 herein.

Note 4: WORKING HIGHER THAN 12 FEET ABOVE FLOOR LEVEL OR WORK REQUIRING COMPLEX SCAFFOLDING OR CONSTRUCTION WORK PLATFORMS: Provisions are made in this Contract to compensate the Asbestos abatement contractor for work performed in locations that are difficult to access due to work at elevations that are significantly higher than the normal work level. The unit price for these items will be paid at 1.20 times the unit price described in Paragraphs 1.09, A through R for those portions of the work that are more than twelve (12) feet above the grade for that would be judged as the normal working level.

1.10 GUARANTEE

- A. Work performed in compliance with each task shall be guaranteed for a period of one year from the date the completed work is accepted by the Department of Design and Construction.
- B. The Commissioner of The Department of Design and Construction will notify the Asbestos abatement contractor in writing regarding defects in work under the guarantee.

1.11 OCCUPANCY OF SITE NOT EXCLUSIVE

Attention is specifically drawn to the fact that contractors, performing the work of other Contracts, may be brought upon any of the work sites of this Contract. Therefore, the

Asbestos abatement contractor shall not have exclusive rights to any site of his work and shall fully cooperate and coordinate his work with the work of other contractors who may be brought upon any site of the work of this Contract. This paragraph applies to those areas outside the regulated Work Area as defined by Title 15, Chapter I of RCNY.

1.12 SUBMITTALS

A. Pre-Construction Submittals:

1. Attend a pre-construction meeting scheduled by the City of New York Department of Design and Construction. This meeting shall also be attended by a designated representative of the City of New York third party air monitoring firm, facility manager and the Construction Project Manager. At this meeting, the Asbestos abatement contractor shall present three copies of the following items:
 - a. Asbestos abatement contractor's scope of work, work plan and schedule.
 - b. Asbestos project notifications, approved variances and plans to Government Agencies.
 - c. Copies of Permits, clearance and licenses if required.
 - d. Schedules: the Asbestos abatement contractor shall provide to the Construction Project Manager a copy of the following schedules for approval. Once approved, schedules shall be maintained and updated as received. Asbestos abatement contractor shall post a copy of all schedules at the site:
 - (1) A construction schedule stating critical dates of the project including, but not limited to, mobilization, Work Area preparation, demolition, gross removal, fine cleaning, encapsulation, inspections, clearance monitoring, and phase of refinishing and final inspections. The schedule shall be updated biweekly, at a minimum.
 - (2) A schedule of staffing stating number of workers per shift per activity, name and number of supervisor(s) per shift, shifts per day, and total days to be worked.
 - (3) Submit all changes in schedule or staffing to the Construction Project Manager prior to implementation.

ELECTRICAL CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

- e. Written description of emergency procedures to be followed in case of injury or fire. This section must include evacuation procedures, source of medical assistance (name and telephone number to nearest hospital) and procedures to be used for access by medical personnel (examples: first aid squad and physician). NOTE: Necessary Emergency Procedures Shall Take Priority Over All Other Requirements of These Specifications.
- f. Material Safety Data Sheets (MSDS) for encapsulants, sealants, firestopping foam, cleaners/disinfectants, spray adhesive and any and all potentially hazardous materials that may be employed on the project. No work involving the aforementioned will be allowed to proceed until MSDS are reviewed.
- g. Worker Training and Medical Surveillance: The Asbestos abatement contractor shall submit a list of the persons who will be employed by him /her to perform the removal work. Present evidence that workers have received proper training required by the regulations and the medical examinations required by OSHA 29 CFR 1926.1101.
- h. Logs: Specimen copies of daily progress log, visitor's log, and disposal log.
 - (1) The Asbestos abatement contractor shall provide a permanently bound log book of minimum 8-1/2" x 11" size at the entrance to the Worker and Waste Decontamination enclosure system as hereinafter specified. Log book shall contain on title page the project name, name, address and phone number of the Asbestos abatement contractor; name, address and phone number of Asbestos abatement contractor and City's third party air monitoring firm; emergency numbers including, but not limited to local Fire/Rescue Department. Log book shall contain a list of personnel approved for entry into the Work Area.
 - (2) All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted. Any significant events occurring during the abatement project shall be entered into the log. Upon completion of the job, the Asbestos abatement contractor shall submit the logbook containing a day-to-day record of personnel log entries countersigned by the Construction Project Manager every day.

ELECTRICAL CONTRACTOR WORK ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

- i. Worker's Acknowledgments: Submit statements signed by each employee that the employee has received training in the proper handling of ACM, understands the health implications and risks involved; and understands the use and limitations of the respiratory equipment to be used.
- B. During Construction Submittals:
1. Security and safety logs showing names of person entering workspace, date and time of entry and exit, record of any accident, emergency evacuation, and any other safety and/or health incident.
 2. Progress logs showing the number of workers, supervisors, hours of work and tasks completed shall be submitted daily to the Construction Project Manager.
 3. Floor plans indicating Asbestos abatement contractor's current work progress shall be submitted for review by the Construction Project Manager.
 4. All Asbestos abatement contractors' air monitoring and inspection results.

C. Project Closeout Submittals:

Upon completion of the project and as a condition of acceptance, the Asbestos abatement contractor shall present two copies of the following items, bound and indexed:

1. Lien Waivers from Asbestos abatement contractor, Sub-Asbestos abatement contractors and Suppliers,
2. Daily OSHA air monitoring results,
3. All Waste Manifests (Asbestos and Construction Debris), seals and disposal logs,
4. Field Sign-In/Sign-Out Logs for every shift,
5. Copies of all Building Department Forms and Permits,
6. A Letter of Compliance stating that all the work on this project was performed in accordance with the Specifications and all applicable Federal, State and Local regulations,
7. All Warranties as stated in the Specifications,
 - a. Fully executed disposal certificates and transportation manifest.

8. Project Record: The Asbestos abatement contractor shall maintain a project record for all small and large asbestos projects. During the project, the project record shall be kept on site at all times. Upon completion of the project, the project record shall be maintained by the building owner. The project record shall be submitted to DDC as part of the close out documents. The project record shall consist of:
 - a. Copies of licenses of all asbestos abatement contractors involved in the project;
 - b. Copies of NYCDEP and NYSDOL supervisor and handler certificates for all workers engaged in the project;
 - c. Copies of all project notifications and reports filed with NYCDEP, NYSDOL and USEPA for the project, with any amendments or variances;
 - d. Copies of all asbestos abatement permits, including associated approved plans and work place safety plan;
 - e. A copy of the air sampling log and all air sampling results;
 - f. A copy of the abatement asbestos abatement contractor's daily log book;
 - g. Copies of all asbestos waste manifests;
 - h. A copy of all Project Monitor's Reports (ACP-15).
 - i. A copy of each ATR-1 Form completed for the asbestos project (if required).
 - j. A copy of each Asbestos Project Conditional Closeout Report (ACP-20) if required.
 - k. A copy of the Asbestos Project Completion Form (ACP-21).

1.13 PROTECTION OF FURNITURE AND EQUIPMENT

Cover all furniture and equipment that cannot be removed from Work Areas. Movable furniture and equipment will be removed from Work Areas by the Asbestos abatement contractor prior to start of work. At the conclusion of the work (after final air testing), the Asbestos abatement contractor will remove all plastic covering on walls, floors, furniture, equipment and reinstall furniture and equipment. He shall remove and store all sheaths, curtains and drapes, and reinstall same following final clean up.

1.14 UTILITIES

A. General:

All temporary facilities shall be subject to the approval of the Commissioner. Prior to starting work at any site, locations and/or sketches (if required) of temporary facilities must be submitted to the Construction Project Manager for the required approval.

B. Water:

The Department of Design and Construction will furnish all water needed for construction, at no cost to the Asbestos abatement contractor in buildings under their jurisdiction. However, it is the responsibility of the Asbestos abatement contractor to ensure that hot water is provided for showering in the decontamination unit. The Asbestos abatement contractor shall furnish, install and maintain any needed equipment to meet these requirements at his own expense.

C. Electricity:

The Department of Design and Construction will furnish all electricity needed for construction, at no cost to the Asbestos abatement contractor in a building, under their jurisdiction. The Asbestos abatement contractor is responsible for routing the electric power to the abatement Work Area.

All temporary lighting and temporary electrical service for Work Area shall be in weatherproof enclosures and be ground fault protected.

D. In leased spaces, arrangements for water supplies and electricity must be made with the landlord. However, all such arrangements must be made through and are subject to approval of the Department of Design and Construction. Utilities will be provided at no cost to the Asbestos abatement contractor. However, it is the Asbestos abatement contractor's (or the Electrical contractor's) responsibility to furnish and install a suitable distribution system to the Work Area. This system will be provided at no cost to the City.

1.15 FEES

The Asbestos abatement contractor shall be responsible for any and all fees or charges imposed by Local, State or Federal Law, Rule and Regulation applicable to the work specified herein, including fees or charges which may be imposed subsequent to the date of the Bid opening.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 00 50

DEMOLITION AND REMOVALS FOR ELECTRIC

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this Section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.2 REFERENCES

- A. Perform the work of this section in accordance with the requirements of Section 260000 General Provisions and Section 260500 Basic Materials.

1.3 SYSTEM INTERRUPTIONS

- A. The existing base building facility will be occupied and in operation during the performance of the Work.
 - 1. When necessary to temporarily disconnect any existing feeder or branch circuit supplying occupied facilities, confer with the Commissioner and schedule a mutually agreeable period of interruption.
 - 2. Where replacement, relocation or modification of existing equipment is indicated, provide and maintain temporary feeders, connections, circuit protection, and any other materials and appurtenances required to maintain services to occupied areas.
- B. No work shall be left incomplete, nor any hazardous situation created, which will affect the life or safety of the public and/or building occupants. At no time shall the work interfere with or cut off any of the existing services without the Commissioner's prior written permission. Do not tamper with fire protection devices including covering smoke detectors or turning off sprinkler valves. Work that may cause a trouble or alarm condition on the fire alarm system or sprinkler system (dust, sprinkler flow, heat, electrical work, etc.) shall be performed only after temporarily shutting down the respective life safety system. Shut downs shall be arranged and scheduled at least 24 hours in advance and coordinated with the Commissioner and the Office of the Fire Marshal.
- C. The City of New York reserves the right to operate existing electrical and mechanical equipment not included in this work, and to perform required servicing and repairs to same, at all times.
- D. The work indicated and/or specified shall be carried out with a minimum of interference to the established operations of the Building.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Products and materials furnished for the work of this section shall comply with Section 260500 BASIC MATERIALS.

PART 3 - EXECUTION

3.1 EXISTING ELECTRIC WORK AND REMOVALS

- A. It is the intent of these specifications to remove or modify existing wiring in the existing tenant space and grounds and replace with new. Existing conduit shall be reused in place only where indicated on the drawings or with specific approval of the Engineer.
- B. Remove, reroute or relocate any conduit, wiring, lighting fixtures, outlets, and other electrical items that are laid bare in the course of, or interfere with, the alterations. Remove exposed outlets, conduit and branch circuit work which interfere with the alterations.
- C. It is the intention of these specifications to provide for the continuance of electrical services including: power, lighting, telephone, data, fire alarm, and security as presently installed in renovated areas until the replacement services are complete. Provide conduit, wiring, and devices necessary to maintain services to these areas.
- D. Compare the plans with the existing conditions to determine the amount of work affected. Remove unused exposed circuit work, outlets, fixtures and the like not required by the alterations.
- E. Materials to be removed and not reinstalled under this Division of the Work, unless otherwise indicated, shall become the property of the Contractor #4 and shall be removed from the site.
- F. Feeders and branch circuits to be removed: conductors and cables shall be completely removed back to their source. Exposed or accessible conduits shall be removed completely; conduits embedded in concrete or masonry shall be cut off flush and the surface patched smooth and level.
- G. All existing low voltage wiring, telecommunications and/or data systems wiring, fire alarm wiring, and security system wiring not scheduled to be reused shall be removed in its entirety as required by NEC Articles 640, 645, 725, 760, 770, 800, 820, and 830. Wiring shall not be abandoned and left in place.

3.2 DISPOSAL OF REMOVED MATERIALS

- A. Removed materials shall be disposed of using licensed carting service.
- B. Hazardous materials including polychlorinated biphenyl (PCB) substances as found in transformers, switchgear, lighting ballasts, mercury contaminated materials as found in fluorescent lamps, and the like shall be disposed of by an EPA approved, licensed disposal service. Contractor #4 shall obtain and have on file, waste disposal manifest and receipts stating how and where the waste was disposed of or converted as follows:
 - 1. Fluorescent light ballasts shall be collected and disposed of as hazardous waste containing PCB's unless expressly labeled "No PCB's".
 - 2. Fluorescent lamps shall be collected and disposed of as hazardous waste containing mercury
 - 3. Room temperature controlling thermostats that contain mercury switches shall be collected and disposed of as hazardous waste containing mercury.
- C. The work specified under this contract specifically excludes the removal, sealing and/or patching of "hazardous materials." This includes but is not limited to asbestos, PCBs and/or any other material having been designated by the Environmental Protection Agency as a hazardous material. If Contractor #4 finds anything which is suspected of being a hazardous material, it should be immediately brought to the Commissioner's attention.

END OF SECTION

SECTION 26 05 00

BASIC MATERIALS FOR ELECTRIC

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and as required by job conditions.

1.2 REFERENCES

- A. Perform the work of this section in accordance with the requirements of Section 260000 General Provisions.
- B. See other Division 26 sections for requirements of specific electrical equipment and systems not included herein.

1.3 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to state and local codes and laws.
- B. The criteria of design and performance to produce the required operation are based on equipment of the named manufacturers. Equipment of other manufacturers will be considered, subject to acceptability in the Engineer's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products provided shall be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.4 SUBMITTALS

- A. Submit manufacturers' catalog data for the following basic materials:

1. Surface raceways and fittings.
2. Wireway, trough, and fittings.
3. Flexible cable tray and fittings.
4. Cable hangers.
5. Wire and Cables (MC).
6. Wiring devices and wallplates.
7. Floor boxes and fittings.
8. Disconnect switches and fuses.
9. Circuit breakers.
10. Surge Protection Devices (SPD).
11. Submetering.
12. Company switches.
13. Switch bypass devices.
14. Low voltage lighting power supply.

- B. Submit scaled and dimensioned shop drawings for the following:

1. Custom-fabricated pull, junction boxes, and terminal boxes.
2. Exposed raceway installations in architecturally finished spaces.

C. Submit samples of the following:

1. Wiring device wall plates.
2. Wiring devices.

PART 2 - PRODUCTS

2.1 WIRING & RACEWAY SCHEDULE

A. Except where specialty wiring methods are called for, use wiring methods selected in accordance with the following list. Use threaded rigid steel conduit with wire installed as the wiring method for purposes and in locations not covered by the following list and where the listed wiring methods are excluded.

RACEWAY & WIRE

Threaded Rigid Steel Conduit
(RSC)

APPLICATION

1. All exposed work.
2. Underground conduits in contact with earth.
3. Smoke exhaust fan feeders, and associated control circuits.
4. Penetrations through concrete slabs or equipment pads.
5. Refer to Fire Alarm (Section 283100) for additional requirements.

Electrical Metallic Conduit (EMT)

1. Limited to hung ceilings and dry wall partitions.
2. Fire alarm (Section 283100).
3. Telecommunications (Section 270528).
4. Theatrical Sound & Video (Section 265561).
5. Security (Security specifications).

Flexible Metal Conduit (FMC)

1. Final connections minimum 18 inches and less than six (6) feet only for lighting and appliance branch circuitry in accessible voids of suspended ceilings
2. Final connections minimum 18 inches and less than three (3) feet to motors in mechanical rooms
3. Other interior dry locations, or where located in plenums or other spaces used for environmental air.
4. Provide grounding conductor.

Liquidtight Flexible Metal
Conduit(LFMC)

1. Final connections minimum 18 inches and less than three (3) feet only for lighting and appliance and motor branch circuitry in exposed wet or damp locations.
2. Do not use in plenums or other spaces used for environmental air.
3. Provide grounding conductor.

Metal Clad Cable (MC)

1. Limited to six (6) foot fixture whips.

Optical Fiber/Communications
Cable Raceway

1. Inner duct for communications applications in conduit or ductbank.

Surface Metal Raceway

1. Exposed work in finished areas only where specifically indicated on drawings or approved by the Commissioner.
2. Exclude in concealed locations.

Flexible Cable Tray

1. Low voltage, voice, data and video systems in exposed locations and above accessible ceilings.

B. Minimum raceway size: 3/4-inch.

C. Provide equipment ground conductor per 3.04.

2.2 RACEWAYS

A. Provide raceways of the types and sizes indicated and specified, or as required to comply with codes and job conditions where not so indicated or specified.

B. Metallic Conduit, Tubing, and Fittings

1. Rigid steel conduit shall be hot-dip galvanized, conforming to ANSI C80.1, UL 6, and NEC Article 344. Fittings and couplings shall be threaded. For outdoor locations provide raintight conduit hubs with insulated throat and bonding screw equal to O.Z. Gedney Type CHM-T. Die-cast fittings are not acceptable.

2. Electrical metallic tubing (EMT) shall be galvanized steel, conforming to ANSI C80.3, UL 797, and NEC Article 358. Provide with galvanized steel compression type fittings, couplings, and connectors. Set screw type fittings, couplings, and connectors are not acceptable. Die-cast fittings are not acceptable.

3. Liquidtight flexible metal conduit shall have an interlocked flexible galvanized steel core with a permanently bonded polyvinylchloride (PVC) jacket, conforming to UL 360 and NEC Article 352. Die-cast fittings are not acceptable.

C. Flexible metal conduit shall be interlocked flexible galvanized steel conforming to UL 1 and NEC Article 348. Provide malleable iron fittings, UL 514B. Die-cast fittings are not acceptable.

D. Connectors for metal conduit shall be insulated throat type. Provide galvanized steel grounding bushings or locknuts at metallic raceway connections to sheet steel boxes and enclosures. Die-cast fittings are not acceptable.

E. Connectors for metal conduits which contain BOTH normal ground AND isolated-ground conductors, where the conduit is NOT being used as the equipment grounding conductor, shall be phenolic insulating types. O-Z Gedney Type ICC or approved equal. (For conduits containing only a normal ground conductor or only an isolated ground conductor, where the conduit is also used as the equipment grounding conductor, provide galvanized couplings and connectors as specified above.) Die-cast fittings are not acceptable.

F. Expansion fittings for metal conduit shall be as follows:

1. Rigid metal conduit in air: Provide 4-inches conduit expansion and contraction allowance; O.Z. Gedney Type AX or approved equal.

2. Rigid metal conduit in concrete or wet locations: O.Z. Gedney Type DX or approved equal.

3. EMT conduit in air: Provide 4-inches conduit expansion and contraction allowance; O.Z. Gedney Type TX or approved equal.
- G. Optical Fiber/Communications Cable raceway and fittings in reel lengths manufactured of high density polyethylene (HDPE). Comply with UL 2024; flexible type, listed for plenum, riser or general purpose. Include factory installed polyester tape. Fittings, cement and accessories shall be from one manufacturer; Lamson & Sessions Carlton Corrugated HDPE or approved equal.
- H. Surface Metal Raceway
1. Provide two-piece surface metal raceway of the types, sizes, and configurations indicated, complete with fittings, boxes, devices, covers, plates, mounting straps, etc. as required for a finished installation, in conformance to UL 5 and NEC Article 386. Use for exposed work in finished areas only where specifically indicated on drawings and approved by the Commissioner. Not permitted in concealed locations.
 2. Provide fittings for flush feed-in unless otherwise indicated or required.
 3. For multi-service power/telecommunications surface raceways, provide continuous metal divider between compartments.
 4. For fiber optic cable: provide minimum 2-inch bend radius fittings.
 5. Surface metal raceway and components shall be Wiremold/Legrand or approved equal by Mono-Systems, Inc, sizes as indicated on drawings and customgray or ivory color selected by Commissioner:
 - a. V500, 17/32"D x 3/4"H, galvanized steel with powder coat finish.
 - b. V700, 21/32"D x 3/4"H, galvanized steel with powder coat finish.
 - c. G3000, 1-15/32"D x 2-3/4"H, galvanized steel with powder coat finish.
 - d. G2000, 3/4"D x 1-9/32"H, galvanized steel with powder coat finish.
 - e. G4000, 1-3/4"D x 4-3/4"H, galvanized steel with powder coat finish.
 - f. G6000, 3-9/16"D x 4-3/4"H, galvanized steel with powder coat finish.
 - g. S3000, 1-15/32"D x 2-3/4"H, stainless steel.
 - h. S4000, 1-3/4"D x 4-3/4"H, stainless steel.
 - i. S6000, 3-9/16"D x 4-3/4"H, stainless steel.
 - j. AL3300, 1-7/8"D x 2-7/8"H, anodizedpainted aluminum.
 - k. AL4000, 2"D x 5-1/2"H, anodizedpainted aluminum.
 - l. DS4000 Designer Series, 2"D x 5-1/2"H, anodizedpainted aluminum.
 6. Provide metal raceways with factory installed conductors and attachment plug receptacles per NEC Article 380. Receptacles shall be specification grade, 15 ampere, 125 volt mounted 18 inches on center. Do not attempt field installation of additional conductors except where product is so marked.
- I. Wireways and Troughs
1. Provide factory-fabricated sheet metal wireways and troughs of the types, sizes, and configurations indicated, or as required to suit job conditions, complete with fittings, connectors, end plates, hangers, etc. as required for a finished installation. Products shall be galvanized steel with ANSI 61 gray acrylic electrocoat finish. Fittings and components shall conform to UL 870 and NEC Article 376.

2. Wireways, troughs, and components shall be as manufactured by Square D, Hoffman Engineering Co., Wiegmann & Co., or approved equal.

J. Flexible Cable Tray

1. Provide flexible cable trays for low voltage, voice, data, and video wiring, of the sizes and configurations indicated, complete with fittings, connectors, hangers, etc. as required for a finished installation to Category 6A UTP standards.
2. Unless otherwise indicated, flexible cable trays shall be welded wire mesh permitting continuous ventilation of cables. Provide straight sections in 118-inch lengths suitable for field bending and fitting to cable pathway contours. Minimum tray width shall be 12-inch by 6-inch depth unless otherwise indicated.
3. Finish: Wire to be welded, bend and surface treated after manufacture. Surface finish to be hot dip galvanizing in molten zinc bath providing an average coating thickness of 2.4 mils to 3.2 mils, where used outdoors; electro-plated zinc galvanizing where used indoors.
4. Fittings: Cable management fittings to be field manufactured from straight sections through the use of hardware and instructions supplied by the manufacturer. Fasteners and hardware shall be stainless steel.
5. Installation: Cable management system to be installed using splice connectors and support components as supplied by the manufacturer.
6. Where cable tray penetrates floor slabs, ceilings and rated partitions, the cable tray shall stop at the floor, ceiling or wall. Provide a fire-rated pathway through floor, wall or ceiling of equivalent size to the cable tray dimensions. The cable tray shall then be continued on the opposite side of the floor, ceiling or wall. The cable tray shall be grounded and bonded for electrical continuity. The Contractor #4 shall maintain the floor, ceiling and wall rating.
 - a. Fire-rated pathway products: STI EZ-Path Series 22, 33 and 44 or approved equal by Wiremold or Hilti.
7. Loading: Flexible cable trays shall be designed to support a load of 100lbs./ft. across a 12" span with a maximum deflection of 1.5 inches. In addition, the tray shall be capable of supporting a 200lb. concentrated load at mid-span without damage or permanent deformation.
8. Flexible cable tray shall be sized for 30% fill based on the installed cable load.
9. Flexible cable trays shall be as manufactured by B-Line, G.S. Metals Flextray, Cablofil Inc. EZ Tray, Cope Cat-Tray or approved equal.

K. Cable Hangers

1. Provide non-compressing, non-continuous cable supports for low voltage, voice, data, and video wiring and fiber optic cable, of the sizes and configurations indicated, complete with fasteners, anchors, cable pulling protection and as required for a finished installation to Category 6A UTP standards.
2. Finish: A653 G60-Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-coated (Galvannealed) by the Hot-Dip process.
3. Manufacturers: Caddy CableCat, Panduit J-Pro or approved equal.

4. Installation: Installation and configuration shall conform to the requirements of the current revision levels of ANSI/ EIA/TIA Standards 568 & 569, NFPA 70 (National Electrical Code), applicable local codes, and to the manufacturer's installation instructions.
 - a. Install cables using techniques, practices, and methods that are consistent with Category 6A UTP or higher requirements and that supports Category 6A UTP or higher performance of completed and linked signal paths, end to end.
 - b. Install cables without damaging conductors, shield, or jacket.
 - c. Do not bend cables, in handling or in installing, to smaller radii than minimums recommended by manufacturer.
 - d. Pull cables without exceeding cable manufacturer's recommended pulling tensions. Use pulling means that will not damage media.
 - e. Do not exceed load ratings specified by manufacturer.
 - f. Adjustable non-continuous support sling shall have a static load capacity of 100 lbs.
 - g. Cable hangers shall be sized for 30% fill based on the installed cable load.

2.3 600 VOLT WIRE AND CABLE

- A. Wire and cable for secondary power and lighting circuits and for NEC Class 1 control circuits shall be fabricated of annealed 98% conductivity copper conductors with 600 volt, 90°C-rated, thermoplastic or cross-linked polymer insulation, manufactured in strict accordance with applicable requirements of UL, NEMA, ICEA and ASTM.
- B. Copper conductors No. 10, 12, and 14 AWG shall be solid or concentric stranded Type THHN/THWN-2; No. 8 AWG through No. 1 AWG shall be concentric stranded Type THHN/THWN-2; No. 1/0 AWG and larger shall be concentric stranded Type XHHW-2.
- C. Type MC metal-clad cable minimum requirements:
 1. Conform to UL 1569 and NEC Article 330.
 2. Acceptable sizes limited to: No. 12 AWG through No.8 AWG copper conductors with THHN insulation.
 3. Green-colored insulated ground conductor.
 4. Galvanized steel interlocked armor sheath. Aluminum armor sheath is not acceptable on this project due to electrical noise mitigation considerations.
 5. Listed and labeled Type MC steel fittings per UL 514B. Type AC fittings are not acceptable. Die-cast fittings are not acceptable.
 6. Multi-wire homeruns shall contain a single, oversized neutral conductor, sized to accommodate non-linear loads. Provide AFC "Super Neutral Cable", or approved equal.
 7. Color coded conductors per Section 3.03.
 8. Manufacturers: AFC Cable Systems or approved equals Southwire, United Copper Industries.
- D. Bare grounding conductors: See paragraph 2.7 Grounding Materials.

2.4 TERMINATIONS

- A. Terminations, splices and taps under 600 volts:
1. Copper conductors No. 10 and smaller: Provide with copper compression type or twist-on spring-loaded connectors and nylon insulating covering. Connectors for outdoor conductors shall be suitable for direct burial installation.
 2. Copper conductors No. 8 and larger: Provide hydraulic copper compression type using manufacturer's recommended tooling, Burndy or approved equal; or mechanical bolted pressure type, IlSCO ClearTap or Cytolok spring compression terminator or approved equal. Exception: Wiring terminations rated 100,000 amperes short circuit current and greater shall be provided with compression type lugs.
 3. Cable lugs and connectors: Provide compression type of tin-plated copper. Provide to match cable, pre-filled with antioxidant compound, UL486B listed, with marking indicating size and type. Where oversized feeders are installed to reduce voltage drop and the equipment terminations are not sufficient to accept the larger feeders, provide the proper equipment terminations or provide Burndy Type YE-series or approved equivalent compression adapters.
 4. Lug connections to bus bars: Provide with tin plated lugs and Belleville compression washers. Use anti-seize compound on threads. Provide 2-hole type for ground lugs.

2.5 ELECTRICAL BOXES

- A. Provide outlet, junction, pull, and floor boxes, complete with associated fittings and accessories, as indicated and specified, as required by codes, to suit job conditions, and compatible with the associated wiring methods and devices.
- B. Interior Outlet Boxes
1. Provide galvanized pressed steel boxes of appropriate size and type. Provide each with appropriate plaster ring to suite wall construction.
 2. Unless otherwise indicated, or required by job conditions, provide boxes as follows:
 - a. Flush wall power outlets in hollow partitions - 4" square, 1-1/2" deep, with 1- or 2-gang device cover; provide gang boxes for 3 or more adjacent outlets.
 - b. Flush wall power outlets in masonry walls - 3-1/2" deep masonry boxes, with number of gangs as required.
 - c. Recessed switches - 3" x 2" x 3-1/2" deep, gangable.
 - d. Surface mounted power devices - 4" square, 1-1/2" deep, with rounded corners and appropriate raised cover.
 - e. Flush or surface telecom outlets - 4" square, 2-1/8" deep, where 1" knockouts are required; 4-11/16" square, 2-1/8" deep, where 1-1/4" knockouts are required.

- f. Refer to "Floor Box" product descriptions for specific floor box dimensions.

C. Pull and Junction Boxes

1. Provide galvanized and baked enamel painted code-gauge sheet steel boxes with welded seams, hinged covers with stainless steel padlockable spring latch as manufactured by Hoffman Engineering Co. or approved equal. Provide sizes and configurations as indicated, or to suit job conditions and codes.

D. Telecommunications Terminal, Outlet and Pullboxes

1. Outlet boxes shall be galvanized sheet steel as described elsewhere in this Section with exceptions as noted hereafter. Desk type telephone and computer data outlet boxes shall be minimum size 4 11/16" square, 2-1/8" deep box with double gang faceplate and plaster ring. Outdoors: Cast boxes, NEMA FB1, Type FD, aluminum. Provide gasketed cover by box manufacturer and threaded hubs.

E. Floor Boxes

1. Provide floor boxes as indicated, suitable for the application, complete with compatible accessories including, but not limited to: trim rings, device plates, service fittings, tile or carpet flanges and protective rings for mechanical and wet mop protection.
2. Floor box fittings shall be equipped with gasketing and shall be constructed to meet or exceed UL scrub water exclusion requirements and be so listed.
3. Poke-through fittings shall be UL listed to maintain fire rating of floor construction. Do not use in new slabs unless specifically noted.
4. Floor boxes shall be cast iron for installation in slab-on-grade floors or wet floors, formed sheet steel for above-grade installations. Coordinate box depth with slab thickness and other job conditions. Boxes shall be adjustable before and after pour.
5. All floor boxes, regardless of whether poured-in-place or poke-thru types, shall be ADA-approved with regard to height above finished floor and surface slope ratio.
6. Where new floor boxes are indicated in existing floors, provide required saw-cutting and patching of existing floors as required for flush installation.
7. Coordinate specific non-power connectivity requirements with the City of New York.
8. Poured-in-place and wood floor boxes shall be provided in types as follows:

<u>Label</u>	<u>Shape</u>	<u>Trim/Cover</u>	<u>Outlets</u>	<u>Description</u>
Type 1	Square w/Square Cover	Provide FloorPort Series cutout or blank cover, flanged or flangeless, for: carpet, tile, or furniture feed with finish per Commission er as follows: Nickel Brass Black Bronze Gray	Two duplex receptacles, data & A-V.	Multi-service four compartment box for installation in new concrete floors above grade. Accepts 3/4" to 1-1/4" conduit. 12-3/4"L x 10"W x 3-7/16" deep. Legrand Wiremold Resource RFB4 for above grade. RFB4-CI-1 for on grade or wet locations. Accepts 1" to 1-1/4" conduit. 14-1/2"L x 11-7/8"W x 3-7/16" deep. RFB4-SS series for shallow floors (2-7/16" deep) above grade. Accepts 3/4" to 1" conduit. 13-5/8"L x 10"W x 2-7/16" deep. Include barrier kits, extensions, tile shims & accessories.
Type 2	Square w/6" Round Cover	Provide Evolution Series cutout or blank cover, flanged or flangeless, for: carpet, tile, or furniture feed with finish per Commission er as follows: Nickel Brass Black Bronze Gray	Four duplex outlets, data & A-V.	Multi-service four compartment box for installation in new concrete floors. Accepts 3/4" to 1-1/4" conduit. 14-5/8"L x 14"W x 4" deep. Legrand Wiremold Resource RFB6E for above grade. RFB6E-OG for on grade or wet locations. Dimensions & knock-outs similar to RFB6E. Include barrier kits, extensions, tile shims & accessories.
Type 3	Round	Brass Aluminum Plastic	Duplex receptacle with #895 flip lid or #895SP screw-out cover plate	Single-gang box for wood floors. Aluminum body for installation in 4" hole. Wiremold/Walker Series 861. (4-1/4" round x 3-1/4"D) max.

Type 4	Round	Brass For tile & carpet.	Single power outlet or data with screw plug cover.	Small single-gang box for concrete floors. Accepts 3/4" conduit. Legrand Wiremold Series 800. 800LCK stamped steel, for above grade, 4-3/16" x 3"H. 800CILCK cast iron, for on grade or wet locations, 4-3/16" x 3-3/8"H.
--------	-------	--------------------------------	--	---

9. Floor boxes for combination audio/visual and power work shall be provided in types as specified by the Commissioner.

F. Where different voltage systems are indicated to occupy a common box, provide internal metal barriers or dividers between systems.

2.6 WIRING DEVICES

A. Provide switches, receptacles, connectors, and other wiring devices complete with associated hardware and wall plates, as indicated and specified. Devices of one type (such as switches and receptacles) shall be made by one manufacturer. Basis of Design manufacturer: Hubbell or approved equal by Legrand or Leviton.

B. Verify device colors and plate materials and finishes with the Commissioner. Unless otherwise noted, receptacles connected to emergency or standby power shall be "red"; isolated ground receptacles shall be factory embossed with an "orange" triangle.

C. Wiring devices shall comply with applicable UL and NEMA requirements and shall be UL labeled for the appropriate NEMA-classified document.

D. Local Wall Switches (line voltage type).

1. Provide premium specification grade, Decorator-style, quiet operating AC switches, rated 20 amperes at 120 volts. Switches shall be verified by UL to meet Federal Specification W-S-896E.

2. Provide single pole, double pole, 3-way, or 4-way operation as indicated or required.

3. Switches shall be Hubbell Specification Grade Commercial Series (CS) or approved equal.

4. Colors (except as required by Commissioner): Provide gray with metallic cover plate at wood and concrete walls; white with white nylon plate at sheetrock walls; black with black nylon plate in T1 and T2 except at concrete walls.

E. Pilot Light Switches, 20 A, Single pole, with neon-lighted handle, illuminated when switch is "ON": Hubbell; HPL1221PL for 120 V and 277 V or approved equal.

F. Key-Operated Switches, 120/277 V, 20 A, Single pole, with factory-supplied key in lieu of switch handle: Hubbell; HBL1221L or approved equal.

G. Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A; for use with mechanically held lighting contactors: Hubbell; HBL1557 or approved equal.

H. Key-Operated, Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A; for use with mechanically held lighting contactors, with factory-supplied key in lieu of switch handle: Hubbell; HBL1557L or approved equal.

- I. Key-Operated Switches, 120/277 V, 20 A, Single pole, 3-position, maintained contact with factory-supplied key in lieu of switch handle: Leviton 1285-L or approved equal.
- J. Duplex Convenience Receptacles
 1. Receptacles shall be standard NEMA 5-20R, Decorator-style configuration.
 2. Receptacles shall be two-pole, three-wire grounding type, with molded nylon body and face, premium specification grade, rated 20 amps at 125 volts. Receptacles shall meet Federal Specification W-C-596F.
 3. Receptacles shall be Hubbell Inc. Commercial Specification Grade (DR) series or approved equal.
 4. Colors (except as required by Commissioner): Provide gray with metallic cover plate at wood and concrete walls; white with white nylon plate at sheetrock walls; black with black nylon plate in T1 and T2 except at concrete walls.
 5. Provide weather-resistant (WR) receptacles for damp and wet locations.
 6. Weatherproof lockable and flush covers for public outdoor, wet or damp location outlets shall be specification grade enclosures with neoprene gasket seals and mortar tabs for positive holding means and retains weatherproof feature with or without plug inserted. Provide Pass & Seymour heavy duty cast aluminum cover No. 4600 series or approved equal.
 7. Weatherproof non-locking and flush covers for non-public outdoor, wet or damp location outlets shall be specification grade enclosures with neoprene gasket seals and retains weatherproof feature with or without plug inserted. Provide Arlington Products In Box Series or Taymac MX-3200 Series.
 8. Install receptacles with ground up or to the left when looking at receptacle.
- K. Special Purpose Receptacles and Switches
 1. Ground fault circuit interrupter (GFCI) receptacles shall comply with UL 2006 and shall be rated 20 amps with 20 amp feed-through rating, 125 volt duplex, NEMA 5-20R, Hubbell #GF20LA series, or approved equal.
 2. Transient voltage surge suppression receptacles shall have integral metal oxide varistors rated: 150 volt rms, 80 joules energy absorption and 6,500 amperes current handling capacity minimum to suppress transients equally in all modes; 20 amp, 125 volt, NEMA 5-20R, LED indicator, Leviton #5380, Hubbell Circuit Guard #HBL 5360-SA series or Pass & Seymour SpecGuard #6362-SP series or approved equal. Receptacles shall be factory embossed with an "orange" triangle and LED indicator to assure protection is in place.
 3. Isolated ground receptacles with integral surge suppression shall have an insulating barrier between the grounding screw and the mounting strap, and a triangle marking on the face to indicate isolated grounding type. The surge suppression unit shall have a light to indicate that the protection is active, and an audible alarm to indicate damage. The receptacles shall be NEMA 5-20R duplex, Leviton #5380-IG, Hubbell #IG-5362-SA series, P&S #IG6362-SP series or approved equal. Receptacles shall be factory embossed with an "orange" triangle.

4. Isolated ground receptacles without integral surge suppression shall have an insulating barrier between the grounding screw and the mounting strap and an orange triangle marking on the face to indicate isolated grounding type. The receptacles shall be NEMA 5-20R duplex, Hubbell #IG-5362 series, P&S IG6300 series or approved equal.
5. Clock hanger receptacles shall have a stainless steel plate and heavy duty 15 amp, 125 volt, grounding type receptacle, NEMA 5-15R, and shall be Hubbell Inc. HBL5235, P&S S3733-SS or approved equal.
6. Weatherproof switches shall be 20 amp, 120 or 277 volts, tap action with waterproof neoprene plate, specification grade, self-grounding, Cooper #2991 with #2881 plate or approved equal.
7. Push button emergency power off (EPO) switches shall be 2.375 inch mushroom head, non-illuminated, momentary push contact, labeled "Emergency Stop" in red, GE #CR104P Series or approved equal.
8. Door switches shall be push button type, 6 amps at 125 volts, flush mounted in hinged side of door where indicated on plans, switch closed when door open, Arrow Hart #4029, P&S #1200 or approved equal.
9. Lighted handle switches shall be illuminated when load is off, clear toggle, single or double poles or three-way, as indicated on plans, Hubbell Inc. HBL1221IL and HBL1223IL, P&S 20AC1-CPL and 20AC3-CPL series or approved equal.
10. Dressing room switched-receptacle remote pilot lights shall be wired to interior room switch for light "on" when load is "on". Lights shall be red round Lexan, 125 volts, to fit in a single receptacle plate, and shall be engraved "dressing room counter receptacles". Gang lights together for rooms with multiple switches/lights. Arrow Hart #87-Red or approved equal.
11. Wallbox dimmers
 - a. Provide wallbox dimmers rated for loads and voltages to be controlled. Do not gang-mount (mount side-by-side) dimmers in same box or remove side sections so that dimmers may be used up to full rating. Provide separate wall boxes unless otherwise specifically noted on plans.
 - b. Dimmers shall be "3-way" capable, using "smart remotes" which allow dimming control from each switch location.
 - c. Provide 1000-watt-rated Lutron Ariadni series dimmers with screwless cover plates where used in the vicinity of Decora-style wiring devices and switches. Provide 1000-watt-rated Leviton Toggle Touch series dimmers or Cooper Trace series with screwed cover plates where used in the vicinity of "standard" wiring devices and switches or approved equal.
 - d. Provide Lutron remote Power Boosters and Hi-Power 2•4•6 Dimming Modules as required to increase wattage capacity of specified wallbox dimmers and to provide compatibility between specified dimmer style and loads to be controlled. Power boosters and Hi-Power 2•4•6 Dimming Modules shall be suitable for incandescent, fluorescent, magnetic low voltage, electronic low voltage or neon/cold cathode lamp sources. Provide sizes as indicated on the drawings, or as required to control loads indicated or approved equal.
 - e. Provide dimming ballasts as required per Section 265000.

12. Occupancy/Vacancy Sensors – Refer to Section 260943 for Digital Lighting Control Sensors.

13. Standalone Occupancy/Vacancy Sensors

- a. Sensors shall be automatic on (occupancy) or manual on (vacancy) as indicated on the drawings. Sensor operation shall incorporate dual technology digital passive infrared (PIR) detection to detect occupant motion and microphonic to detect occupant sound. Provide integral photocell to prevent lights from turning on if adequate daylight is available. Include a minimum on timer set at 15 minutes to preserve lamp life by eliminating short lamp cycles and a timer adjustable between 30 seconds and 20 minutes, and set at 10 minutes, to turn off if no occupancy is detected.
- b. Ceiling mounted occupancy or vacancy sensor switches for single or multiple sensor operation with separately mounted auxiliary power and control unit. Sensor receives control power from the auxiliary power and control unit, and operates power switching contacts in that unit. Provide Sensor Switch CM-PDT 10 ceiling sensor with PP-20 series auxiliary power and control unit for each switched circuit and sPOD/sPOD-2P series low voltage wall switch for Manual On operation, or Wattstopper DT-300 with BZ-Series power pack and DCC2 low voltage momentary wall switch with green LED for Manual On operation, or Cooper Greengate OMC-DT with switch pack and Model AML wall switch for Manual On operation. Provide additional relay/power packs as required for larger or multiple loads controlled by single sensor switches. Provide auxiliary power packs for HVAC control where indicated on the drawings.
- c. Wall mounted occupancy or vacancy sensor switches for control of single circuit lighting loads shall be intelligent self-adjusting multi-technology types with integral manual "on" and "off" switch. Unit receives power directly from switch leg of the 120- or 277-V ac circuit it controls and operates integral power switching contacts rated 800 W at 120-V ac, and 1000 W at 277-V ac, minimum. Provide relay/power packs as required for larger or multiple loads controlled by single sensor switches. Provide Sensor Switch WSD-PDT VA rated 120/277 volts, 800/1200 watts, Wattstopper DW-100, or Cooper Greengate ONW-D-1001-DMV NeoSwitch, or Hubbell AD1277x1N (for NYC where manual override button is not allowed by Local Law No. 48).
- d. Wall mounted occupancy or vacancy sensor switches for control of two circuit lighting loads (inboard/outboard lamp switching) or light and small fan loads shall be two pole intelligent self-adjusting types with integral manual override OFF switch. Provide relay/power packs as required for larger or multiple loads controlled by single sensor switches. Provide Sensor Switch WSD-2P (first pole auto on/second pole manual on) rated 120/277 volts, 800/1200 watts, Wattstopper DW-200, or Hubbell AD1277x2N (for NYC where manual override button is not allowed by Local Law No. 48).

L. Telecommunications Faceplates & Port Devices--Refer to Section 270528.

- M. Cable Television Outlets – Refer to Section 270528.
- N. Cover Plates
 - 1. Provide screwless/snap-on style compatible wall plate for each outlet and switch installed, except as otherwise noted. Plates shall be .040" Type 302/304 stainless steel with brushed finish specification-grade and high-impact smooth nylon as noted in device descriptions. Color and finish to be as noted in device descriptions and as selected by Commissioner. Refer to architectural/lighting plans for engraving requirements. Submit sample to Commissioner and obtain acceptance prior to installation.
 - 2. Replace existing wall plates in renovated areas to match new device wall plates.
 - 3. Where two or more switches or devices are indicated at one location, mount under common plate.
 - 4. Screws shall be metallic, with countersunk heads, finish same as plate, tamperproof where indicated.
 - 5. Telecommunication outlets shall have cover plates to match area wiring device type and accommodate port configuration in each wall or floor box. Refer to other Sections for exact types.
- O. See other Division 26 sections for wallbox dimmers, low voltage switches, and other special-purpose devices.

2.7 GROUNDING MATERIALS

- A. Provide a complete continuous grounding system to effectively ground the non-current carrying metal parts of every piece of installed equipment, and to provide a low impedance fault return to source.
- B. Grounding materials shall be copper, bronze and/or brass construction with stainless steel or bronze threaded materials, listed and approved for the use. Cadmium or zinc-plated threaded materials are not acceptable.
- C. Insulated grounding conductors shall be copper with green colored insulation, or black insulation totally covered with green vinyl tape at all taps and terminations, as permitted by NEC.
- D. Connectors, clamps, straps, terminals, etc. shall be as manufactured by Burndy, Dossert, IlSCO or approved equal. Provide two-hole compression grounding lugs; one-hole lugs are not acceptable.
- E. Use exothermic welding, Harger UltraShot or approved equivalent, for underground system connections and connections to structural steel.
- F. Ground bus or grounding bars shall be bare annealed copper of rectangular cross-section, 2" wide x 1/4" thick unless otherwise indicated, complete with appropriate mounting hardware, clamps, and connectors. Hardware used with copper bar shall be silicon bronze.

G. Ground bars for the main telecommunications closet and satellite telecommunications closet grounding shall be tinned copper, with 304 stainless steel mounting brackets and hardware with 2-inch insulators and pre-drilled holes, as specified in ANSI J-STD-607-A. Manufacturer: Erico Eritech series or approved equal by Harger or Panduit.

1. Telecommunications main grounding busbar (TMGB) shall be 4" high x 1/4" deep x minimum 24" long. One TMGB shall be installed in the main telecommunications closet, or room.
2. Telecommunications grounding busbars (TGB's) shall be 2" high x 1/4" deep x minimum 18" long. TGB's shall be installed in each satellite telecommunications closet.

2.8 DISCONNECT SWITCHES

A. Provide safety switches where shown and required to comply with requirements of codes and enforcing agencies. Refer to Divisions 14 and 23 for additional information and requirements. See other Division 26 sections for panelboard applications.

B. Disconnect switches indicated by symbol of box with slash on drawings, for two and three-pole loads greater than 1/2 horsepower, shall be heavy duty NEMA Type HD with quick-make/quick-break blades, rejection fuse holders, and equipment grounding kit; enclosures shall be NEMA Type 1 (interior dry locations), Type 4 (exterior or wet locations) and as shown on drawings. Disconnect switches shall have a listed interrupting capacity of no less than the interrupting capacity of the installed fuses, where applicable, and minimum of 100,000 amperes, unless otherwise noted.

1. Enclosures shall have hinged door with interlock to prevent unauthorized door opening when switch is in "on" position, or closing of switch with door open.
2. Ampere ratings, voltage ratings, fusing and poles shall be as indicated or required. Provide non-fused type unless otherwise noted.
3. Provision shall be made for padlocking in "off" position.
4. Wheelchair Lift disconnect switches shall include auxiliary contact kit with normally open/closed contacts for safety interlock to lift controller. Provide fusible disconnect switches as follows or required by the lift manufacturer:
 - a. Square D Model H221N w/contact kit #ELK031
 - b. Siemens Model HF221N w/contact kit #HA161234
 - c. General Electric Model TH3221 w/contact kit #THAUX21D
 - d. Cutler-Hammer Model DH221NGK w/contact kit #THAUX21D
5. Where fusing is indicated, and unless otherwise specified, provide as follows:
 - a. Main service and feeder switches 0 - 600 amperes: Class RK1; specification grade, Bussmann Low-Peak, dual element, time-delay, 200 kA, Type LPN-RK (250 volt) or LPS-RK (600 volt) or approved equal by Ferraz Shawmut.
 - b. Main service and feeder switches 601 - 6000 amperes: Class L; Bussmann Low-Peak, Type KRP-CSP, 600 volt, time-delay, 300 kA, or approved equal by Gould - Shawmut.

- c. Motor and transformer branch circuits 0 - 600 amperes: Class RK5; Bussmann Fusetrone, Type FRN-R (250 volt) or FRS-R (600 volt), time delay, 200 kA, or approved equal by Ferraz Shawmut.
 - d. Non-motor branch circuits 0 - 600 amperes: Class J; Bussmann Low-Peak Type LPJ, 600 volt, dual element, time-delay, 200 kA, or approved equal by Ferraz Shawmut.
- 6. Fuses shall be of the same manufacturer.
- 7. Provide three (3) spare fuses of each type and size installed, in manufacturer's original packaging.
- C. Disconnect switches indicated by symbol SM on drawings, for single-phase, one or two-pole loads, 1/2 horsepower and less, shall be toggle-type, AC manual motor starting switches with thermal overload protection to match the motor served. Switches shall be U.L. 508 Listed.
 - 1. Single-pole switches shall be rated 30 amperes at 120-240 VAC, 2 HP at 120 volts, 3 HP at 240 volts, with standard toggle with brown handle. Provide key-type or pilot light types where specifically indicated. Mount with appropriate backbox and coverplate per Section 2.02; NEMA 1 where indoors; NEMA 4 where outdoors. Square D Type FO1 or approved equal.
 - 2. Two-pole switches shall be rated 30 amperes at 240 VAC (3 HP at 120 volts, 7.5 HP at 240 volts). Provide manufacturer's standard NEMA 1 enclosure where indoors; NEMA 4 enclosure where outdoors enclosure for each unless otherwise noted. Square D Type FO2 or approved equal.
- D. Provide accessory dry contacts in disconnect switches:
 - 1. For motors controlled by an electronic variable frequency drive unit. Provide interlock wiring from auxiliary contacts to drive "Run-Permit" circuit to prevent drive from attempting to start motor with remote disconnect open.
- E. Mount disconnect switches 4'-6" above finished floor to center of operating handle.
- F. Fire alarm control panel disconnect switches shall be lockable in the on and off positions with red identification.
- G. Company switches: NEMA 1 enclosure, finished blue, adjustable cable strain relief bar; outlets color coded and protected with snap back covers; UL listed; 65 kAIC minimum. Provide ratings as indicated below for locations shown on drawings:
 - 1. CO-TL-1: 200A – Union Connector PBS-M2020W-C/SP or Lex Products CS-200F-C6DS1, both with double neutral option.
 - 2. CO-TL-2, CO-TL-4, CO-TL-5, CO-TL-6: 60A – Hubbell HBL560MI9W receptacle and HBL560P9W plug or equivalents by Leviton.
 - 3. CO-TL-3: 100A – Hubbell HBL5100MI9W receptacle and HBL560P9W plug or equivalents by Leviton.

4. CO-AV-1: 120/208V, 60A, 3-Phase: Hubbell HBL560MI9W receptacle and HBL560P9W plug or equivalents by Leviton. Note: Audio switches shall be labeled "Audio Only – Technical Power" and provided with oversized lugs (to accept #4/0 cable) and an isolated ground bus with oversized lugs.

2.9 CIRCUIT BREAKERS

- A. Circuit breakers shall be molded case type, operable in any position, with quick-make and quick-break toggle. Mechanism shall be trip free on overload or short circuit. The handle shall automatically assume a tripped position between the manual off and on positions.
- B. Provide circuit breakers with the required number of trip elements, with frame, trip, voltage, and interrupting capacity ratings as indicated, or to suit the application.
- C. Breakers shall be designed to carry 80% of trip rating continuously at 40 degrees C ambient temperature, to have inverse time delay tripping above 100% of trip rating, and to trip instantaneously at approximately 10 times trip rating.
- D. Provide enclosures, shunt trip (ST) devices, ground-fault circuit-interrupting (GFCI or GFI) devices, arc-fault circuit-interrupting (AFCI) devices, and other circuit breaker accessories as indicated, or to suit the application. See other Division 26 sections for panelboard applications.
- E. Where circuit breakers are used to protect multi-wire branch circuits, they must be multi-pole breakers – not single-pole types.
- F. Circuit breakers shall be of the same manufacturer.

2.10 SPD – SURGE PROTECTION DEVICES

- A. Provide surge suppression devices where indicated on the drawings. Equipment shall be manufactured by a single manufacturer and listed to the following standards:
 1. UL 1449, 3rd Edition updates effective September 29, 2009 "Surge Protective Devices".
 2. UL 1283 "Electromagnetic Interference Filters".
 3. IEEE C62.41.1, IEEE Guide on the Surge Environment in Low-Voltage (1000 V and Less) AC Power Circuits.
 4. IEEE C62.41.2, IEEE Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits.
 5. IEEE C62.45, IEEE Recommended Practice on Surge Testing for Equipment Connected to Low-Voltage (1000 V and Less) AC Power Circuits.
 6. National Electrical Code: Article 285.
 7. SPD shall be UL labeled with 20kA nominal rating (I-n) (verifiable at UL.com) for compliance to UL 96A Lightning Protection Master Label and NFPA 780.
- B. SPD manufacturer shall have at least three (3) years experience in manufacturing surge protection devices and shall be ISO 9001 or 9002 certified.
- C. Surge protection devices shall be connected on the load side of utility metering compartment and shall comply with local utility requirements.
- D. SPD shall provide Standard 7 Mode Protection paths for modes of protection as follows:
 1. Wye systems: Normal mode suppression line-to-line, line-to-neutral, common mode suppression line-to-ground and neutral-to-ground.

2. Delta and impedance grounded wye systems: Line-to-line and line-to-ground.
- E. Submittals shall include information describing each unit and as a minimum establish compliance with the following criteria:

1. UL listed and labeled as Type 1 intended for Type 1 or Type 2 applications as follows:
 - a. Service entrance: 300 kA per phase and 200 kA short circuit current rating (SCCR).
 - b. Distribution: 100 kA per phase and 200 kA short circuit current rating (SCCR).
 - c. Branch: 100 kA per phase and 65 kA short circuit current rating (SCCR).
2. Voltage Protection Ratings shall not exceed the following:

<u>VOLTAGE</u>	<u>L-N</u>	<u>L-G</u>	<u>N-G</u>	<u>L-L</u>	<u>MCOV</u>
208Y/120	800V	800V	800V	1200V	150V
480Y/277	1200V	1200V	1200V	2000V	320V

3. Maximum Continuous Operating Voltage (MCOV):

<u>System Voltage</u>	<u>Allowable System Voltage Fluctuation (%)</u>	<u>MCOV</u>
208Y/120	25%	150V
480Y/277	15%	320V

4. Suppression components shall be heavy duty metal oxide varistors and shall be field replaceable module(s) (service entrance only).
5. Audible noise: 35db or less @ 3 feet from unit.
6. Response time less than or equal to 1/2 nanosecond.
7. UL 1283 listed EMI/RFI filter with noise attenuation: -50dB or greater at 100 kHz.
8. Fusing: 200 kA symmetrical fault current interrupting capacity @ 600V.
9. Phase and operational status indicator LED indicator lights for power and protection status.
10. Surge counter (service entrance only).
11. NEMA 1 enclosure with safety interlocked entry door.
12. Integral circuit breaker or fused disconnect switch (service entrance only).
13. Dual set of Form C dry contacts for remote monitoring.
14. Audible alarm & alarm disable.

- F. Approved manufacturers: Current Technology, Liebert, Siemens Industry, Inc. or Advanced Protection Technologies.

2.11 CABLE SUPPORTS & CONDUIT VENTILATORS

- A. Provide cable supports for supporting electrical cables in vertical conduit risers per NEC Article 300-19.
- B. Cable supports shall be clamping device type with ventilating capability suitable for non-armored cables, 600 volts or less, O.Z. Gedney Type S or approved equal.
- C. Provide conduit ventilators to allow movement of air through the vertical conduit riser where shown on the drawings; O.Z. Gedney Type KVM or KVF or approved equal.

2.12 CONDUIT AND CABLE SEALING BUSHINGS

- A. Conduit sealing bushings for sealing conduit penetrations against fluid and air pressure shall be as follows as manufactured by O.Z. Gedney, Thunderline Corporation, Burndy or Thomas & Betts.
 - 1. For walls which have or will have membrane waterproofing:
 - a. Cast-In-Place Installations: OZ/Gedney Co.'s Type FSK thru wall seal and Type FSKA membrane clamp adapter.
 - b. Core drilled or Sleeved Installations: OZ/Gedney Co.'s type CSM and type CSMC with membrane clamp adapter.
 - 2. For walls which will not have membrane waterproofing:
 - a. Cast-In-Place Installations: OZ/Gedney Co.'s Type FSK.
 - b. Core Drilled or Sleeved Installations: OZ/Gedney Co.'s Type CSM or Thunderline Corporation Link-Seal CS-316.
 - 3. Provide abandonment plates for unused openings.
- B. Cable sealing bushings for sealing power cables in conduit shall be Type CSB, by O.Z. Gedney, Burndy or Thomas & Betts.
- C. Cable seals for low voltage and signal cables shall be reusable simplex, duplex or triplex split design as required by Tyco Electronics or approved equal. Empty/spare conduit closed end caps shall be low temperature shrink Type LTCP by Tyco Electronics Raychem or approved equal.

2.13 SUBMETERING

- A. Provide UL listed Amps/Volts/kW/kW peak/power factor/kWh/KVARh/Demand submetering equipment where indicated on the drawings. Data for two channels shall be stored in 15-minute intervals for 36 days or 5-minute intervals for 12 days. Metering shall be 1% accurate, fully electronic with LCD display for kilowatt hour and demand readings with low and high user selectable set points and mounted in a lockable NEMA 1 enclosure. Provide voltage and split core type current sensors that shall be capable of remote mounting up to 500 feet from meter and suitable for installation in panelboards, switchboards or remotely mounted in separate enclosures as indicated without interrupting circuit continuity. Each meter shall be capable of reading up to (3) sets of current sensors for cumulative (totalizing) readings of 120/208V or 277/480V, and three phase, 3-wire and 4-wire systems. Provide the following communications accessories including software for Ethernet personal computer monitoring: Ethernet, ModBus or load control alarm relay with high and low threshold adjustment] via 4-conductor 24 AWG cable up to 4000 feet. Submetering equipment shall be E-MON Corporation Class 3200 Advanced Series with E-MON Energy software or approved equal.

2.14 AUDIO-VIDEO SYSTEM – Refer to Theater documents.

2.15 TELECOMMUNICATION SYSTEM– Refer to Section 270528

2.16 CABLE TELEVISION (CATV) SYSTEM – Refer to Section 270528.

2.17 POINT OF SALE (POS) SYSTEM

- A. Electrical Contractor #4 shall furnish and install dedicated empty raceway and cable pathway system for the Point of Sale (POS) System. Equipment and cable installation are provided by the City of New York's POS System vendor.

2.18 LOW VOLTAGE LIGHTING POWER SUPPLIES

- A. Provide toroidal transformer low voltage power supplies designed with manual taps to achieve 12, 13, 14, and 15 volts for 12 volt operation and 24, 26, 28, and 30 volts for 24 volt operation as indicated on drawings. Proper transformer wattage shall equal or exceed total lamping wattage without derating as indicated on drawings. 250 volt primary and 12 volt or 24 volt secondary voltage compartments shall be separate. Power supply shall be inherently protected and include primary and secondary overcurrent circuit protection. Size power supply overcurrent protection according to manufacturer's recommendations.
- B. Indoor housing shall be suitable for recessed or surface mounting for both walls and ceilings with zero clearance to combustible materials with damp locations label. Outdoor housing shall be UL listed for wet label direct burial. Provide 304 stainless steel diamond plate or bead blasted bronze covers with stainless steel hardware as required for application.
- C. Products shall be QT (indoor) and QSET & QVAULT (exterior) Series by Q-Tran, Inc., or approved equals by Semper Fi, Inc.

2.19 SWITCH BYPASS DEVICES

- A. Provide switch bypass devices (SBD) to power egress lighting regardless of fixture switch position where indicated on the drawings. The device shall be capable of bypassing the local control including switch, dimmer, occupancy sensor or relay when normal utility power has been lost. An un-switched source of power on the same branch circuit as the AC ballast is required. The device shall not affect normal fixture operation when wired to a direct, un-switched connection to a generator-supplied or central inverter-supplied lighting circuit. Warranty: Five years from date of purchase.
- B. Individual Fixtures: Provide one SBD per fluorescent lighting fixture. The devices shall consist of relay switching circuitry and fusing contained in one 8"x1.18"x1.18" (204mm x 30mm x 30mm) enclosure. Rating: 120 or 277 VAC, 50/60 Hz, 3 amps of fluorescent lighting load, sensing load - 280 mA/1.6 watts. The device shall be UL Listed for indoor, damp location field installation inside, on top of or remote from fixtures. Manufacturer: Bodine GTD or approved equal.
- C. Multiple Fixtures: Provide one SBD per lighting circuit. The devices shall consist of relay switching circuitry, a test switch, a normal power indicator and an emergency power indicator light contained in one 9"x6"x3.5" (229mm x152mm x89mm) enclosure. Rating: 120 or 277 VAC, 50/60 Hz, 20 amps of fluorescent, incandescent or HID lighting load, sensing load - 45 mA and 3.5 watts. The device shall be UL Listed for indoor, damp location field installation adjacent to panelboards, above suspended ceilings and as indicated on the drawings. Manufacturer: Bodine GTD20A or approved equal.
- D. Refer to details on drawings for bypass device types and control configurations.

PART 3 - EXECUTION

3.1 WIRING & RACEWAY - GENERAL

- A. The drawings show the general layout and typical details. Provide complete systems. Drawings are based on the specified equipment. Raceway layouts, boxes, and wiring of the systems are subject to approved shop drawings.
- B. Ensure that items to be furnished fit the space available. Make necessary field measurements to ascertain space requirements, including those for connections, and provide such sizes and shapes of equipment that final installation shall satisfy the intent of the drawings and specifications.
- C. Locations of outlets, switches, appliances, etc. as shown on Electrical plans are approximate; coordinate with Architectural and Mechanical plans and details, and with job conditions. Install switches with "OFF" position down and on the strike side of doors, unless otherwise noted. Install receptacles with grounding pole in the up position for vertical mounting and at left for horizontal mounting.
- D. Locate and install electrical equipment, junction and pull boxes, panelboards, switches, controls, and other apparatus requiring maintenance, inspection, and operation so as to be readily accessible. For finished locations, provide a suitable marked, hinged access panel only where approved by the Commissioner.
- E. All feeder conduit must be routed away from low voltage AV conduits per the spacing identified in specification section 265561.

3.2 RACEWAY INSTALLATION

- A. Install conduit in accordance with the NECA "Standard of Installation".
 - 1. In architecturally finished spaces, conduits and cables shall be run concealed in hung or furred ceilings, slabs, masonry, and partitions unless otherwise indicated. In unfinished spaces, raceways may be run exposed.
 - 2. Raceway installation at existing slabs, existing masonry walls and existing furred partitions in finished areas shall be as indicated in the raceway schedule listed in paragraph 2.1, saw-cut or chopped into existing floor or partition and patched, unless otherwise specifically noted. Surface raceways shall only be used where specifically indicated or permitted by the Commissioner.
 - 3. Submit shop drawings for exposed conduits or raceways indicated on drawings in architecturally finished spaces.
 - 4. Shop drawings shall demonstrate coordination with related trades and the ability to provide a neat and workmanlike installation.
- B. Unless otherwise indicated, exact routing of raceways shall be determined by the Contractor #4 to suit project requirements and field conditions.
- C. Where raceways cross expansion or seismic joints, provide approved expansion fittings, or combinations of fittings, which allow deflection in all directions equal to twice the movement allowed in the structural design. For conduits 1-1/4" trade size or smaller, a 24" length of flexible metal conduit, with bonding jumper, slack mounted, may be used.

- D. Provide sealing bushings on the ends of underground conduits that terminate at indoor equipment, or interior conduits where subject to different temperatures or where condensation is known to be a problem as in cold storage areas. Install appropriate sealant after installation and testing of cables.
- E. Raceways and cables shall be neatly arranged on hangers and supports, with fittings designed for the purpose, and shall be installed parallel and perpendicular to walls, floors, structure and ceilings in a neat and workmanlike manner. Group related raceways; provide space for 25 percent additional raceways.
- F. Raceways installed in close proximity to pipes of other trades shall be arranged to allow proper clearance for servicing, headroom and the like. Maintain minimum 6 inch clearance from steam, hot water, and flue piping.
- G. Conduit ends shall be reamed smooth and interiors shall be wiped clean and dry.
- H. Use of running threads is not permitted; use conduit unions or split couplings in areas where threaded conduit cannot be turned.
- I. Conduits passing through roof construction shall be flashed watertight.
- J. Raceways shall be supported at intervals less than or equal to code with seismic bracing as described in this section.
- K. Locate pull boxes, junction boxes, pull fittings, etc. to comply with code and to prevent recommended values of wire and cable tensions and side wall pressures from being exceeded.
- L. Conduit in concrete or masonry shall be securely held in place during pouring and construction operations. Change from non-metallic conduit to rigid steel conduit before rising above the floor or emerging from concrete.
- M. Where conduits are embedded in concrete above metal decking or suspended below metal decking, provide spacers for 1-1/2 inch minimum gap between conduit and deck to avoid penetration of conduit by fasteners.
- N. Direct buried conduit and conduit below concrete slabs: Unless otherwise shown on the plans, a layer of fine earth material, at least 4 inches thick (loose measurement) shall be placed in the bottom of the trench as bedding for the conduit. The bedding material shall consist of soft dirt, sand or other fine fill, and it shall contain no particles that would be retained on a 1/4-inch sieve. The bedding material shall be tamped until firm. Flowable backfill may alternatively used. Backfill using fine material no less than 6 inches above the top of the conduit placed in 6-inch lifts and thoroughly tamped.
- O. Provide a suitable pullstring in each empty conduit except sleeves and nipples less than 24 inches.
- P. Use suitable caps to protect empty conduit against entry of dirt and moisture.
- Q. Conduits and/or sleeves shall not be placed in concrete slabs or walls without prior approval of the Commissioner. Prepare a submittal detailing the number, size, spacing and layout of the proposed conduit and/or sleeves including material specifications. Adhere to the following limits in planning the conduit embedments:
 - 1. Maximum outside diameter of embedded conduit or sleeve: $\frac{1}{4}$ the thickness of the slab or wall.

2. Minimum center-to-center conduit spacing: Six (6) times the outside diameter of the conduit.
 3. Conduits shall be firmly supported at the mid-thickness of the slab or wall and shall be wired into place.
 4. Conduits shall not be placed in contact with the concrete reinforcement.
 5. Use of aluminum conduit or sleeves for embedment in concrete is not permitted.
 6. Conduit or sleeves shall not be placed in columns or beams.
- R. Close ends of conduits immediately after being placed to keep out foreign matter. The entire conduit system shall be tested for obstructions, omissions and smooth joints by fishwire, and thoroughly swabbed out and made dry before pulling any wire.
- S. Install covers on boxes and raceway fittings. Plug unused open knockouts and hubs.
- T. Do not install outlet boxes back-to-back in walls. The use of thru-wall boxes is strictly prohibited.
- U. Provide phenolic insulating connectors for metal conduits containing BOTH normal ground AND isolated-ground conductors, where the conduit is NOT being used as the equipment grounding conductor. (For conduits containing only a normal ground conductor or only an isolated ground conductor, where the conduit is also used as the equipment grounding conductor, provide galvanized couplings and connectors.)
- V. Provide separate raceways, junction boxes, pull boxes and wireways for emergency system wiring.
- W. Optical Fiber/Communications Cable Raceway and fittings shall not be run exposed, in concrete slabs or direct buried in earth except as shown on drawings. Color code: ORANGE for communications.

3.3 WIRING INSTALLATION

- A. Do not use wire smaller than No. 12 AWG for any power or lighting circuit. Use larger sizes where indicated, as required by codes, and as follows:
1. 30 ampere circuit: No. 10
 40 ampere circuit: No. 8
 50 ampere circuit: No. 6
 60 ampere circuit: No. 6

2. Minimum homerun and branch circuit wiring sizes and maximum homerun conduit fill for 120 Volt, 20 ampere circuits shall be as follows:

Length	Circuit Wire Size	Home Run Wire Size	Conduit Size (9 current-carrying conds.+ G)
0' to 50'	#12	#12	3/4"
51' to 100'	#12	#10	3/4"
101' to 200'	#10	#8	1" (1-1/4" for 9 #8 AWG +G)

Greater than 200' - Request Direction from Commissioner.

Note: Provide derating per Code when installing more than 3 current-carrying conductors in conduit.

- B. Do not use wire smaller than No. 14 AWG for control circuits unless otherwise recommended by the equipment or system manufacturer on wiring shop drawings, and so approved by the Commissioner.

- C. Where greater than three (3) current-carrying conductors are installed in any one conduit or cable, conductors must be derated and sizes increased, if needed, to accommodate conductor derating as required by NEC Article 310.15(B)(2)(a) Allowable Ampacities of Insulated Conductors Rated 0-2000 volts. Do not install more than nine (9) current-carrying conductors in conduit or raceway without approval from the Engineer.
- D. Where conductors in conduits supported above roofs are exposed to sunlight, apply ambient temperature ampacity adjustment factors per Table 310.15(B)(2)(c) according to distance above roof from bottom of conduit.
- E. Make splices only at outlets or accessible junction boxes. Make splices No. 10 AWG and smaller with Buchanan B-Cap wire-nuts or equivalent insulated solderless twist-on connectors. Make joints, taps, and splices in wires No. 8 AWG and larger with solderless mechanical connectors enclosed in molded covers. Splices shall be UL listed for the environment.
- F. When pulling conductors through conduits, care shall be taken not to exceed manufacturer's maximum tension and side wall pressures.
- G. Wire shall not be installed until work which may cause injury to wiring has been completed, and conduits are cleaned and dry.
- H. Conductors shall be completely installed and connected. Provide terminals, lugs, and connectors to suit the application, and in compliance with equipment manufacturers' recommendations.
- I. Branch circuit wiring for lighting and other single phase applications shall be multi-wire, utilizing common neutrals, except dimmer circuits shall have separate neutrals, and as otherwise indicated.
 - 1. Under no circumstances shall any switch or circuit breaker break a neutral conductor.
 - 2. The circuit numbers indicated on the drawings are intended as a guide for proper connection of circuits at panels. However, it shall be the responsibility of the Contractor #4 to ensure that the final circuiting work fulfills the following conditions:
 - a. Loads on panel busses shall be phase-balanced as evenly as possible.
 - b. No neutral conductor shall be common to more than one circuit conductor of the same phase leg.
 - 3. Receptacle, fluorescent lighting, and electronic low voltage lighting (track or fixed) branch circuits shall be considered non-linear loads and shall be provided with individual dedicated 100% neutral wires.
 - 4. Provide multi-pole circuit breakers for multi-wire circuits and circuits that supply devices or equipment on the same yoke or strap.
- J. Wire lubricant shall be used to ease the pulling of cables and conductors in conduits. The lubricant used shall be fully compatible with the wire insulation or cable jacket material.

K. Secondary Service, Feeder, and Branch-Circuit Conductors: Color-code throughout the secondary electrical system.

1. Color-code 208Y/120-V system as follows:
 - a. Phase A: Black.
 - b. Phase B: Red.
 - c. Phase C: Blue.
 - d. Neutral: White.
 - e. Ground: Green.

3.4 GROUNDING & BONDING INSTALLATION

A. Install a complete building, equipment, and system grounding and bonding network as indicated and specified, and to meet or exceed the requirements of NEC Article 250 and the local utility.

B. Grounding Electrode System

1. Bond structural steel and interior metal piping at accessible points to the grounding electrode system. Size bonding conductors per NEC. Interior metal piping to bond includes: water, fire protection, gas, waste, drain, vent, pneumatic, oxygen, air and vacuum systems.
2. After completion of installation, test earth ground resistance by fall-of-potential or other approved method. If test result is greater than 3 ohms, drive two (2) additional ground rods and bond to system. Provide a certified report of the test methods and results, including any corrective actions taken. Do not use salt or other chemical means to reduce earth resistance, unless so directed by the Commissioner.

C. Equipment Grounding

1. Install an insulated ground conductor, run in the raceway with the phase conductors, for each feeder serving: panelboards, lighting dimmer boards, motors, equipment and appliances unless otherwise noted.
2. Include an insulated ground conductor in conduit runs containing sections of flexible conduit unless otherwise noted.
3. Include an insulated ground conductor in branch circuit raceways or cables unless otherwise noted.
4. Note: Addition of equipment grounding conductor to AC circuits run in metallic enclosures does not lessen the requirement for conductor enclosure continuity, since part of total ground fault current will flow through the raceway and enclosure system. Therefore, the continuity of this system shall be maintained.
5. Provide bonding bushings and bonding conductors for boxes with concentric, eccentric or over-sized knockouts. The bonding conductor shall be sized per NEC Table 250-122 and lugged to the box.
6. Grounded service conductor (neutral) of distribution system shall be grounded at only one point: service neutral connection to the ground bus. Under no circumstances shall system neutral be grounded at any other point. As part of final inspection procedures, demonstrate purity of system neutral.

7. Bond each separately derived system transformer. Bond grounded conductor (X0) to the transformer case, to the nearest available interior metal water piping, to nearest grounded building steel, and to other metal piping in accordance with requirements of NEC Article 250. If building steel does not exist (i.e., concrete structures), the transformer shall be grounded to main service ground bus. Size conductors per NEC, but use no smaller than No. 4 AWG copper unless otherwise shown on the drawings. The transformer primary feeder ground is supplemental and shall be sized for primary feeder protection. Refer to contract drawings for additional bonding requirements.
8. Install a common grounding electrode conductor serving each separately derived system. The common ground electrode conductor size shall be #3/0 ASW bare tinned copper. Taps to each separately derived system shall be sized per NEC Table 250.66 and minimum #6 AWG bare copper.

D. Low Voltage Telecommunications Grounding & Bonding

1. Provide a proper grounding and bonding infrastructure serving low voltage telecommunications systems including voice, data, video, audio, fire alarm, security and environmental control per ANSI-J-STD-607-A as indicated on the drawings and as follows:
 - a. Provide a Telecommunications Bonding Backbone (TBB), minimum size #3/0 AWG in 1-inch conduit from the main service grounding electrode system to the Telecommunications Main Grounding Busbar (TMGB) and to each Telecommunications Closet Busbar (TGB). The intent of the TBB is to reduce or equalize potential differences between telecommunications systems.
 - b. Where two or more vertical Telecommunications Bonding Backbones (TBB) are used in a multi-story building, provide a #3/0 AWG horizontal grounding equalizer (GE) to each TBB at the top floor, bottom floor and every third floor.
 - c. Metallic raceways for low voltage telecommunications systems copper or fiber optic cabling shall be made electrically continuous for grounding purposes and bonded to the TGB or TMGB. Provide connections from each item to the ground bus or if bonded in series provide a connection at each end for continuity.
 - d. Bonds shall be hollow braided copper jumpers minimum 60A ampacity. Each bond terminal shall be irreversible compression type with NEMA two-hole bolted connections to ground bus or exothermic weld connection.
 - e. Provide additional #4 AWG ground cable connections from each TMGB and TGB to the closest building steel and to the ground bus in the electric panel serving the outlets and equipment in the associated telecommunications room/closet.
 - f. Ground each low voltage system to the TMGB or TGB with a #4 AWG conductor.
 - g. Grounding and bonding conductors shall be installed without splices. Exception: Irreversible compression-type connectors or exothermic welds.
 - h. Conductors may be insulated; if insulated the insulation shall meet the fire ratings of its pathway.

2. Grounding or bonding conductors installed for Telecommunications Systems shall be labeled near their termination points. Labels shall be non-metallic and include the following:
 - a. "WARNING if this connector or cable is loose or must be removed, please call the Building Telecommunications Manager."
 - b. Labels and installation shall meet the requirements of ANSI/TIA/EIA 606 and 607.

E. Specialty Grounding

1. Provide ground connections for anti-static floor covering materials according to manufacturer's installation instructions.
2. Audio Isolated Ground Test - Verify the integrity of the audio isolated ground system, as specified by the Commissioner and as follows:
 - a. Confirm that continuity is measured between each isolated ground receptacle/outlet neutral conductor and the grounding electrode connection at the audio isolation transformer.
 - b. Disconnect the neutral bonding link at each audio isolation transformer and confirm that the neutral buss is isolated from the building ground. Locate and remove connections between the neutral buss and the building ground other than the main bonding jumper. Reconnect the neutral bonding link.
 - c. Confirm that continuity is measured between each isolated ground receptacle/outlet ground conductor and the grounding electrode at the audio isolation transformer.
 - d. Disconnect the isolated ground bonding link at each audio isolation transformer and confirm that the isolated ground buss is isolated from the building ground. Locate and remove connections between the isolated ground buss and the building ground other than the main bonding jumper. Reconnect the isolated ground bonding link.
 - e. Confirm that each isolated ground receptacle/outlet is wired with correct polarity.

3.5 RACEWAYS & CABLE PATHWAYS FOR TELECOMMUNICATION SYSTEM

- A. Provide empty conduit raceway and cable pathway systems as described here and shown on the drawings for telecommunication work, complete with flexible cable tray and non-compressing cable hangers, conduit, pull boxes, and outlet boxes, as indicated on the drawings and to Category 6A UTP standards.
- B. Accessible ceilings: Provide cable pathways via 1-1/4 inch EMT conduit in finished walls and from outlet boxes to accessible ceiling space. Provide cable pathways above accessible ceilings via flexible cable tray and non-compressing cable hangers to each local telecommunications room backboard. Cable hangers shall be 4-inch capacity minimum, galvanized steel, suitable for Category 6A UTP, optical fiber/communications cable raceway, and low voltage cabling with UL listing for structured cabling systems; B-Line or approved equivalent. Flexible cable tray shall be as specified previously in this Section.

- C. In-accessible ceilings: Provide cable pathways via 1-1/4 inch EMT conduit in finished walls and from outlet boxes to each local telecommunication room backboard.
- D. Vertical: Provide cable pathways via empty EMT conduit between telecommunication room backboards at each level. Outside telecommunication rooms: Use conduit for exposed runs through floors to height of 8' above floor and in shaftways. Conduit sizes as shown on the drawings.
- E. Refer to other paragraphs in this Section for raceway installation with the following supplemental information or exceptions:
 - 1. Conduit fill shall not exceed 40 percent fill based on the installed cable load.
 - 2. Flexible cable tray and cable hangers shall be sized for 30% fill based on the installed cable load.
 - 3. Provide non-compressing cable hangers (j-hooks & rings) only for pathways to single work area outlets.
 - 4. Mount outlet boxes vertically at 16" centered above finished floor.
 - 5. Wall mounted telephone outlets shall be 54" centered above finished floor.
 - 6. Provide metal pullbox in conduit runs as follows:
 - a. Length over 100 feet.
 - b. More than two (2) 90-degree bends.
 - c. After every reverse bend.
 - 7. A third bend is acceptable in a pull section without derating the conduit capacity if one of the following is true:
 - a. The total run is not longer than 33 feet.
 - b. The conduit is increased to the next trade size.
 - c. One of the bends is located with 12 inches of the cable feed end such that the cable can be pushed around the first bend.
 - 8. Condulet fittings are not acceptable.
 - 9. Provide minimum inside bending radius for telecommunications conduit as follows:
 - a. 2-inch or less: Six (6) times the internal conduit diameter.
 - b. Larger than 2-inch: Ten (10) times the internal conduit diameter.
 - 10. Provide cable hangers at minimum intervals of three (3) feet and seismically braced. Provide additional hangers if cable sag exceeds 12 inches.
 - 11. Provide a drag line in each run and terminate in a bushed elbow.
- F. When completed the conduit systems shall be ready for the installation of wiring and equipment.
- G. Cable installation shall comply with the following minimum criteria:
- H. Maintain minimum 6 inches separation from power distribution cables unless in conduit.

- I. Power and communications cables shall cross perpendicularly where crossings are needed.
- J. Maintain minimum 12 inches separation between communications cables and fluorescent light ballasts.
- K. Cable bend radii shall be a minimum of eight (8) times the outside cable diameter.
- L. Fiber optic cable bend radii shall be a minimum of ten (10) times the outside cable diameter.

3.6 RACEWAYS FOR AUDIO-VIDEO/THEATER SYSTEMS – Refer to Theater documents Section 265561.

3.7 RACEWAYS & CABLE PATHWAYS FOR POINT OF SALE (POS) SYSTEM

- A. Provide empty conduit raceway and cable pathway systems as described here and shown on the drawings for POS work, complete with flexible cable tray and non-compressing cable hangers, conduit, pull boxes, and outlet boxes, as indicated on the drawings and to Category 6A UTP standards. Refer to raceways and cable pathways for Telecommunication System for additional requirements.

3.8 MECHANICAL EQUIPMENT WIRING

- A. Unless otherwise indicated or specified herein, motors, motor starters, motor controllers, variable speed/frequency drives, and associated control devices are furnished by other Divisions and installed by this Division. Coordinate installation and locations with other Division contractors.
- B. Power wiring from the indicated source to the starter/controller/drive unit, and from the starter/controller/drive unit to the motor, including any local disconnect switches provided and installed by this Division, and associated lugs, terminals, and connections, is the work of this Division.
- C. Verify correct voltage, phase rotation and protection for equipment prior to start-up. Correct deficiencies before energizing equipment.
- D. Control circuit wiring is generally furnished and installed under other Divisions, except that any such wiring shown on Electrical drawings is work of this Division.
- E. Provide 120 volt power to temperature control panels (TCP's) supplied and installed by Division 23. Use emergency power sources when available. Coordinate power requirements and panel locations with Division 23 Temperature Controls Contractor #3.
- F. Cooperate and coordinate with the other trades in the installation, connection, and testing of mechanical equipment. Perform work of this section in accordance with equipment manufacturers' instructions.

3.9 SUPPORTS AND HANGERS

- A. Provide metal framing, supports and braces for equipment installed. Provide floor mounted or free standing supports for equipment not mounted to concrete or block walls. Support panelboards, pull boxes and outlet boxes independently of the conduit.
- B. Support single conduit runs by individual hangers.

- C. Support multiple conduit runs on trapeze hangers. Do not support conduit on hangers provided for mechanical runs.
- D. Provide listed raceway roof support blocks. Wooden support blocks are not acceptable.
- E. Securely fasten electrical items including lighting fixtures and their supports to the building structure, unless otherwise indicated. Do not use the ceiling-support wires or ceiling grid to support raceways and cables. Provide independent support wires, secured at both ends.
- F. Do not support electrical items including disconnect switches, motor controllers, variable frequency drives, or conduit from the equipment or supports of other divisions.
- G. Securely fasten electrical items and their supports to the building structure, unless otherwise indicated. Do not support electrical items from the equipment or supports of other divisions.
- H. Hanger rods shall be threaded galvanized steel, 3/8" minimum with galvanized double nuts, securely attached to the building structure. Provide sizes, quantities, and connections to safely support imposed loads.
- I. Support horizontal and vertical conduits per code and to prevent visible deflections. Conduit shall be firmly fastened within 3 feet of each outlet box, junction box, cabinet or fitting.
- J. Provide galvanized steel channel or angle as required for conduit and equipment supports. Provide independent support for items weighing 100 pounds, or more, mounted on gypsum board partitions.
- K. Connect rod hangers to the building structure as follows:
 - 1. In formed concrete slabs provide anchors by means of cast-in-place inserts.
 - 2. To structural steel provide anchors secured to the structure with beam clamps. Clip type (Caddy) conduit supports shall be used only for armored cable.
 - 3. To existing work provide expansion bolts if structural steel is not available.
 - 4. Powder propelled inserts are not acceptable for this project.
- L. Support MC cable independent of supports for other mechanical or ceiling support systems.
 - 1. Supports shall consist of "Caddy clips" attached to 1/4" threaded rods, steel studs, and beams, and shall be installed in accordance with their listing and loading capacity.
 - 2. To existing work provide expansion bolts if structural steel is not available.
 - 3. Beam clamps shall be bolt-on C-clamp types, NOT push-on friction-hold Caddy types.
 - 4. Do not use "drop wire" or "pencil rod" for supports. Do not use tie-wraps for attachment.

5. "Bridle ring" type supports may be used for support of up to six cables, as listed by the manufacturer, where supported by bolt-on C-clamps. Adjust ampacity for more than three current carrying conductors in a cable or for more than twenty bundled cables and ensure compliance with NEC Article 310.15(B)(2)(a) Exception No. 5.
6. MC cable shall be routed in a neat and workmanlike manner, parallel, and perpendicular to walls, floors, ceilings, and structure.

3.10 HOUSEKEEPING PADS AND RUBBER MATS

- A. Corrdinate concrete housekeeping pads under floor mounted electrical equipment with general contractor.
- B. Pads shall be 4 inches high, and 4 inches wider than the equipment in both directions.

3.11 SEISMIC REQUIREMENTS - Refer to Sections 260000 and 260548.

3.12 LOW VOLTAGE LIGHTING POWER SUPPLIES

- A. Install according to manufacturer's instructions.
- B. Mount where indicated on plans and install in a manner that prevents transmission of vibration into the structure. Refer to Section 260548 for further information.

3.13 OCCUPANCY/VACANCY SENSORS

- A. Upon completion of the installation, the system shall be adjusted by the manufacturer's factory authorized technician or the electrician who will verify all adjustments and sensor placement to ensure a trouble-free occupancy-based lighting control system.
- B. Upon completion of the system adjustment the factory authorized technician shall provide the proper instruction to the City of New York's personnel in the adjustment and maintenance of the sensors.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 48

ELECTRICAL VIBRATION & NOISE CONTROL

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Install electrical equipment in a manner that prevents transmission of objectionable vibration into the structure. This isolation includes, but is not limited to, resilient mounting of transformers, dimmer racks, conduit, UPS's, motor starters, remote fluorescent fixture ballast cabinets, automatic transfer switches and variable frequency motor controllers. The vibration isolation manufacturer shall provide supervision to ensure proper application, installation and adjustment of the isolators. Upon completion of the installation and after the system is put into operation, the manufacturer shall make a final inspection and report. Contractor #4 shall submit this report to the Commissioner, in writing, certifying the proper performance of the installation. Refer to Section 260000 for additional information.

1.2 SUBMITTALS

- A. Submit NEMA sound power ratings for transformers, dimmer racks, UPS's, motor starters, remote fluorescent fixture ballasts, and variable frequency motor controllers.
- B. Submit shop drawings for conduit passing through isolated block-outs in structure.
- C. Submit shop drawings for resilient penetration sleeve/seals field fabricated or prefabricated.
- D. Submittals shall show required efficiency, designed deflection and outside diameter of springs, when pertinent, and installation guidelines.
- E. Submit shop drawings for neoprene mounts clearly marked to show equipment tag and weight, mount type and size, actual isolator deflection and maximum rated load for every mount. Submittals based on static load are not acceptable.
- F. Indicate materials and show designs and calculations signed and sealed by a Professional Engineer licensed in New York State.

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATIONS - GENERAL

- A. Electrical equipment shall be mounted in accordance with the specifications below and with the specific requirements shown in the equipment schedules. The vibration isolation manufacturer shall provide supervision to ensure proper application, installation and adjustment of the isolators. Upon completion of the installation and after the system is put into operation, the manufacturer shall make a final inspection and report. The Contractor #4 shall submit this report to the Commissioner, in writing, certifying the proper performance of the installation.
- B. The isolation manufacturer shall supply unit isolators, complete rails, where required, and shall be responsible for the selection of vibration eliminators and shall guarantee to meet the requirements of this specification.

- C. Vibration isolators shall be designed or treated for resistance to corrosion. Steel components shall be PVC coated, or phosphate primed and finish painted with rust-resistant enamel. Nuts, bolts and washers shall be zinc-electroplated. Structural steel bases shall be thoroughly cleaned of welding slag and primed with metal etching primer and painted with rust-resistant enamel. Isolators exposed to the weather shall have steel parts hot-dipped galvanized. Nuts, bolts and washers shall be cadmium plated. Spring components shall be cadmium plated and neoprene coated.
- D. Vibration isolators shall have either known undeflected heights or calibration markings so that, after adjustment, when carrying their load, the deflection under load can be verified, thus determining that the load is within the proper range of the device and that the correct degree of vibration isolation is being provided according to the design.
- E. Isolators shall operate in the linear portion of their load versus deflection curve. Load versus deflection curves shall be furnished by the manufacturer, and must be linear over a deflection range of not less than 50% above the design deflection.
- F. The ratio of lateral to vertical stiffness shall be not less than 0.9 nor greater than 1.5.
- G. The theoretical vertical natural frequency for each support point based upon load per isolator and isolator stiffness shall not differ from the design objectives for the equipment as a whole by more than + 10%.
- H. Neoprene mountings shall have a shore hardness of 40 to 65, after minimum aging of 20 days or corresponding oven-aging.

2.2 MOUNTINGS

- A. Type A, Seismic, Floor Mount - horizontal and vertical rated in tension, compression and shear, consisting of bridge-bearing neoprene, ductile iron housing, top 'N' cap screw with washer, and minimum four bottom anchor holes. Mountings shall have a minimum static deflection of 0.5 inch. Include structural steel channel rails with leveling bolts for rigid connection to the equipment. Basis of design: Mason Industries Type BR and Type DNR rails or approved equal by Kinetics Noise Control, Amber Booth or Korfund.
- B. Type B, Seismic, Spring Mount - not used.
- C. Type C, Seismic, Suspension Mount - horizontal and vertical rated in tension, compression and shear, consisting of bridge-bearing neoprene, steel housing, top 'CS' cap screw with washer, and minimum six bottom anchor holes. Mountings shall have a minimum static deflection of 0.5 inch. Include structural steel channel rails with leveling bolts for rigid connection to the equipment. Basis of design: Mason Industries Type RBA or approved equal by Kinetics Noise Control, or Vibration Mountings.
- D. Type D, Seismic, Wall Mount - bridge neoprene and electro-galvanized steel sleeve and washer type isolator with seismic anchor stud. Basis of design: Mason Industries Type PB or approved equal by Kinetics Noise Control, Amber Booth or Korfund.
- E. Flexible Connectors
 - 1. Penetrations of sound-rated walls, floors, and ceilings in sound-critical spaces shall be specially sealed in accordance with the requirements as outlined on the drawings.

2. Provide isolation couplings with molded neoprene sleeve, bonding jumper and hot-dip galvanized finish ductile iron end fittings for rigid metal conduit and intermediate metal conduit; Appleton Type CF-1, OZ Gedney Type DX or approved equal.

2.3 ISOLATION SCHEDULE

EQUIPMENT TYPE	ISOLATION TYPE
----------------	----------------

Floor Mounted Transformers	C
Floor Mounted Dimming Panels	C
Floor Mounted Unit Power Conditioners	A
Floor Mounted UPS's	A
Suspended Transformers	C
Wall Mounted Equipment *	D

* wall mounted equipment shall include dimmer panels, transformers, and all controls/control panels with transformers, contactors, relays, fans, and/or moving parts

2.4 RESILIENT PENETRATION SLEEVE/SEAL

- A. Resilient penetration sleeve/seals shall be field fabricated from a pipe or sheet metal section that is 1/2-inch to 3/4-inch larger than the penetrating element in all directions around the element and shall form a sleeve through the construction penetrated. Refer to drawing detail. Prefabricated sleeves shall be submitted for review prior to installation.

2.5 OUTLET BOX PAD

- A. Outlet box pads shall be field installed to acoustically isolate spaces. Refer to drawing details and manufacturer's instructions. Box pad manufacturer shall be Harry A. Lowry & Associates, Inc., Sun Valley, CA 818-768-4661 or approved equal.

PART 3 - EXECUTION

3.1 GENERAL

- A. See Section 260500 Basic Materials and Methods.

3.2 INSTALLATION

- A. Install vibration isolation devices and systems in accordance with the manufacturer's instructions.
- B. Floor Mounted Equipment to include:
 1. 4-inch thick concrete housekeeping pads over entire floor area of supported equipment.
 2. Supporting vibration isolation devices and bases.
 3. Keying with hairpins as required to be integral with the structural slab.
 4. Incorporating approved seismic restraint anchor plates flush with the top of the housekeeping pad.
- C. Concrete per specification Division 3 describing requirements.
- D. Verify installed isolators and mounting systems permit equipment motion in all directions.

- E. Adjust or provide additional resilient restraints to limit startup equipment lateral motion to 1/4-inch.
- F. Prior to startup, clean out foreign matter between bases and equipment. Verify that there are no isolation short circuits in the base or isolators.
- G. No rigid connections between equipment and building structure shall be made that degrades the vibration isolation system herein specified.
- H. Do not install any equipment, piping or conduit that makes rigid contact with the "building" unless permitted in this specification. "Building" includes, but is not limited to slabs, beams, columns, studs and walls. Use flexible conduit for connections to equipment vibration isolated with springs or neoprene (transformers, dimmers, pumps, fans, chillers, boilers, etc.). Flexible conduit shall be minimum of 25% greater length than the separation between the isolated equipment and the termination of rigid conduit. Install flexible conduit to be slack and not to exceed the manufacturer's minimum recommended bending radius. For conduit sizes greater than 2" diameter, use pre-manufactured flexible conduit connectors instead of flexible conduit.
- I. Use flexible conduit or a flexible conduit connector at every location where conduit crosses a building expansion or isolation joint.
- J. Resiliently mount to structure conduit connected to vibration isolated electrical equipment for a distance equal to 200 conduit diameters and for any additional extent indicated on the Drawings. Wrap conduit with 1" Armaflex, or approved equal, prior to restraining with wall-mounted clamp.
- K. Provide steel sleeve, grouted rigidly in place for conduit penetrations through walls, floors, and ceilings of mechanical equipment rooms, machine rooms, electrical equipment rooms and elevator equipment rooms. Make inside dimension of sleeve 1/2-inch to 3/4-inch greater than outside dimension of penetrating item on all sides. The sleeve shall extend 1-inch beyond the penetrated construction on each side. The penetrating element shall pass through the sleeve without contacting the sleeve. Pack annular space to full depth of penetration with intumescent fire-rated sealant to form an airtight seal. Refer to Section 260000 and drawing details.
- L. Coordinate work with other trades to avoid rigid contact with the "building". Inform other trades following, such as plastering, drywall, electrical or sheet metal, to avoid any contact that would reduce the vibration isolation.
- M. Bring to the Commissioner's attention, prior to installation, any conflicts with other trades which will result in unavoidable rigid contact with equipment or piping as described herein, due to inadequate space or other unforeseen conditions. Corrective work necessitated by conflicts after installation shall be at the Contractor #4's expense.
- N. Correct, at no additional cost, installations that are deemed defective in workmanship or material as a result of project completion inspection or subsequent inspections due to Commissioner complaints within a period of one year following acceptance.
- O. Position isolators:
 - 1. Close to building structure.
 - 2. Between building structure and supplementary steel if required.
 - 3. Not to contact acoustic rated walls.
- P. Suspend isolators from rigid and massive support points.

- Q. Adjust isolators to eliminate contact of the isolated rod with the hanger rod box retainer or short circuiting of the spring.
- R. Provide outlet box pads for electrical, telecommunications, fire alarm, security boxes and the like where indicated on the drawings.
1. There shall be a separation of 24" between centerlines of outlet boxes or receptacles set into opposite sides of the wall. Conduit connecting such boxes shall be flexible and shall provide 6" slack per 24" of run.
 2. In a double wall, boxes in opposite sides of the wall shall be located 24" on center, minimum. Effectively, this means that boxes on the same side of the wall will be 48" apart if there is a box between them on the other side of the wall.
 3. The boxes shall be treated to reduce sound transmission. Unused knock-out holes shall be plugged with knock-out caps or spot welded closed. The openings or cutouts in the walls to receive the boxes/receptacles shall be made no more than 1/4" oversize to allow a 1/8" gap all around. The flanges shall be perimeter sealed with acoustical caulking, prior to the boxes/receptacles being inserted.
 4. Outlets installed in gypsum board only partitions (no CMU in construction) in noise critical spaces will require that the outlet be wrapped on five sides with an acoustical pad. The pad is a polybutadiene-butyl material with a self-adhesive backing. Adhere pads to boxes before mounting box or attaching conduit according to manufacturer's instructions. Install plaster rings and tightly secure before completely wrapping pad around gypsum board face of box. Fill any remaining voids between gypsum board and box with non-hardening acoustical sealant.
- S. General Equipment Isolation and Seismic Restraint:
1. Provide 2-inch operating clearance between concrete inertia bases and housekeeping pad and 1-inch clearance between equipment or structural bases and housekeeping pad.
 2. Isolation mounting deflection (minimum) as specified or scheduled on manufacturer's certified drawings.
 3. Position equipment, structural base and concrete bases on blocks or wedges at proper operating height.
 4. Electrical conduit connections to isolated equipment shall be looped or installed with flexible conduit to allow free motion of isolated equipment.
 5. Install equipment directly on isolation system. Support rails between the equipment and isolators should not be used.
 6. Position corner or side seismic restraints with equipment operation for operating clearance and weld or bolt seismic restraint to seismic anchor plates in housekeeping pad.

3.3 SEISMIC REQUIREMENTS

- A. Adequately anchor floor mounted equipment to floor slab or housekeeping pad to resist 0.5g (minimum) horizontal accelerations. Where necessary, also provide U-channel bracing to structural steel or slab above.

- B. Wall mounted enclosures and equipment on stud partitions or non-reinforced block walls shall be mounted via two (2) slab-to-slab steel U-channels anchored to the wall every 24 inches O.C., and anchored to the floor and ceiling slabs.
- C. Where possible, conduit, cable tray & raceway hangers shall be less than 12 inches long. Where hangers are 12 inches or more in length, and conduit size is 2-1/2 inches or more and for cable tray, provide longitudinal and transverse sway bracing. Seismic restraints spacing shall be in accordance with hanger spacing.
- D. Provide sway bracing for those conduit runs containing emergency and critical power and lighting, fire alarm circuits, other life safety systems regardless of conduit size.
- E. Recessed lighting fixtures shall be independently supported from the structure above unless the suspended ceiling is seismic-rated and the fixtures are provided with earthquake clips.

END OF SECTION

SECTION 26 08 00

COMMISSIONING OF ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

- A. This section includes commissioning process requirements for Electrical systems, assemblies, and equipment.
- B. Related Sections:
 - 1. Division 01 Section "General Commissioning Requirements" for general commissioning process requirements.

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the Owner with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of each system designer to provide a complete design or installing subcontractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the Owner.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
 - 1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
 - 2. Verify and document proper performance of equipment and systems.
 - 3. Verify that Operation & Maintenance documentation is complete and transferred to Owner.
 - 4. Verify that the Owner's operating personnel are adequately trained.
 - 5. Verify a contract is in place for a post occupancy review with O&M staff within 10 months after Substantial Completion.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.

- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner, Owner's representative, Trade Contractors, subcontractors, manufacturers and equipment suppliers.
- E. The Cx process shall not reduce the responsibility of the CM to comply with the Contract Documents.

1.4 DEFINITIONS

- A. Refer to Division 01 Section and "General Commissioning Requirements" for definitions.

1.5 SUBMITTALS

- A. Refer to Division 01 Section and "General Commissioning Requirements" for CxA's role.
- B. Refer to Division 01 Section "Submittals" for specific requirements. In addition, provide the following:
- C. In addition, provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, prestart, and startup activities.
 - 3. O&M manuals
 - 4. Test reports

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: Contractors will comply with test equipment manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the electrical contractor of Division 26 shall ultimately be responsible for all standard testing equipment for the electrical systems and controls systems in Division 26. A sufficient quantity of two-way radios shall be provided by each contractor.

- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the Owner and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the Owner upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment will be provided by the CxA, but shall not become the property of the Owner.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the installing contractors, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems
- B. Red-lined Drawings:
 1. The contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 4. The contracted party, as defined in the Contract Documents will create the as-built drawings.
- C. Operation and Maintenance Data:
 1. Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 2. The CxA will review the O&M literature once for conformance to project requirements.
 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Instruction:
 1. Contractor will provide demonstration and instruction as required by the specifications.
 2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any instruction.

3. An instruction agenda for each training session must be submitted to the CxA one (1) week prior the training session.
4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and Owner's representative. A copy of the test record shall be provided to the CxA, Owner, and Architect.
5. Engage a Factory-authorized service representative to instruct Owner's maintenance personnel to adjust, operate, and maintain specific equipment.
6. Instruct Owner's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Perform commissioning tests as per the written procedure and at the direction of the CxA.
- B. Attend construction phase controls coordination meetings.
- C. Participate in Electrical systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- D. Provide information requested by the CxA for final commissioning documentation.
- E. Prepare preliminary schedule for Electrical system orientations and inspections, operation and maintenance manual submissions, training sessions, equipment start-up and task completion for owner. Distribute preliminary schedule to commissioning team members.
- F. Update schedule as required throughout the construction period.
- G. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
- H. Perform all verification and functional performance tests in the presence of the CxA as required.
- I. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- J. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
- K. Coordinate with the CxA to provide 72-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
- L. Notify the CxA a minimum of two weeks in advance for start of the testing work.
- M. Participate in, and schedule vendors and contractors to participate in the instruction sessions.
- N. Provide written notification to the CM/GCC and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.

1. Electrical equipment including switchgear, panel boards, motor control centers, lighting, receptacles, and all other equipment furnished under this Division.
 2. Fire alarm system
 3. Lighting System
- O. The equipment supplier shall document the performance of his equipment.
- P. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- Q. Provide instruction of the Owner's operating staff using expert qualified personnel, as specified.
- R. Equipment Suppliers
1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the Owner, to keep warranties in force.
 2. Assist in equipment testing per agreements with contractors.
 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- S. Refer to Division 01 Section "General Commissioning Requirements" for additional Contractor responsibilities.

3.3 OWNER'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for Owner's Responsibilities.

3.4 DESIGN PROFESSIONAL'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for Commissioner's Responsibilities.

3.5 CxA'S RESPONSIBILITIES

- A. Refer to Division 01 Section "General Commissioning Requirements" for CxA's Responsibilities.

3.6 TESTING PREPARATION

- A. Certify in writing to the CxA that Electrical systems, subsystems, and equipment have been installed, meggered, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.

- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.7 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of Electrical testing shall include the entire Electrical installation, from the incoming power equipment throughout the distribution system. Testing shall include measuring, but not limited to resistance, voltage, and amperage of system(s) and devices.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The Electrical contractor and other contracted subcontractors, including the fire alarm Subcontractor shall prepare detailed testing plans, procedures, and checklists for Electrical systems, subsystems, and equipment with guidance from CxA.
- E. Tests will be performed using design conditions whenever possible.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. If tests cannot be completed because of a deficiency outside the scope of the Electrical system, document the deficiency and report it to the Owner. After deficiencies are resolved, reschedule tests.
- I. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.8 ELECTRICAL SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 26 sections. Provide submittals, test data, inspector record, infrared camera and certifications to the CxA.

- B. Electrical Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 26. Assist the CxA with preparation of testing plans.
- C. Fire Detection and Alarm System Testing: Provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- D. Electrical Distribution System Testing: Provide technicians, load banks, infrared cameras, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested
- E. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The scope of commissioning work shall include but not limited to the following equipment and systems :
 - 1. Lighting Controls
 - 2. Dry Type Transformers
 - 3. Power Distribution System

3.9 DEFICIENCIES/NON-CONFORMANCE, COST OF RETESTING, FAILURE DUE TO MANUFACTURER DEFECT

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deficiencies/non-conformance, cost of retesting, or failure due to manufacturer defect.

3.10 APPROVAL

- A. Refer to Division 01 Section "General Commissioning Requirements" for approval procedures.

3.11 DEFERRED TESTING

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to deferred testing.

3.12 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in Division 01.
- B. Refer to Division 01 Section "General Commissioning Requirements" for the AE and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

3.13 TRAINING OF OWNER PERSONNEL

- A. Refer to Division 01 Section "General Commissioning Requirements" for requirements pertaining to instruction.

B. Electrical Contractor. The electrical contractor shall have the following instruction responsibilities:

1. Provide the CxA with a instruction plan four weeks before the planned training.
2. Provide designated Owner's personnel with comprehensive instruction in the understanding of the systems and the operation and maintenance of each major piece of commissioned electrical equipment or system.
3. Instruction shall be recorded by the CxA and start with classroom sessions, if necessary, followed by hands on training on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing contractor or manufacturer's representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.
6. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
7. Instruction shall include:
 - a. Use the printed installation, operation and maintenance instruction material included in the O&M manuals.
 - b. Include a review of the written O&M instructions emphasizing safe and proper operating requirements, preventative maintenance, special tools needed and spare parts inventory suggestions. The instruction shall include start-up, operation in all modes possible, shut-down, seasonal changeover and any emergency procedures.
 - c. Discuss relevant health and safety issues and concerns.
 - d. Discuss warranties and guarantees.
 - e. Cover common troubleshooting problems and solutions.
 - f. Explain information included in the O&M manuals and the location of all plans and manuals in the facility.
 - g. Discuss any peculiarities of equipment installation or operation.
8. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance of all pieces of equipment.
9. The electrical contractor shall fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.
10. Instruction shall occur after functional testing is complete, unless approved otherwise by the Owner's.

END OF SECTION

SECTION 26 09 43

ARCHITECTURAL DIMMING SYSTEMS

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this Division shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this Division as shown on the drawings, as specified herein, and/or as required by job conditions.

1.2 REFERENCES

- A. Perform the work of this contract in accordance with the requirements of Section 26000 General Provisions and Section 260500 Basic Materials.
- B. Refer to 265510 for requirements not included herein.

1.3 WORK INCLUDED

- A. The work under this Section shall include labor, material, equipment, plant, services and administrative tasks required to complete and make operable the electrical work related to architectural dimming systems for the areas as shown on the drawings and specified herein.
- B. The Contractor #4 shall furnish and install architectural dimming control systems and components as necessary to provide a complete operational installation, including but not limited to:
 - 1. Pre-wired dimming cabinets.
 - 2. Multi-zone, multi-scene preset controllers.
 - 3. A/V, BMS and timeclock interface circuitry.
 - 4. Remote control stations.
 - 5. Emergency "Full-On" components and circuitry.
- C. Submit project-specific riser and wiring diagrams indicating and specifying field wiring and connections required for the project.

1.4 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to state and local codes and laws.
- B. The criteria of design and performance to produce the required operation is based on equipment of the named manufacturers. Equipment of other manufacturers shall be considered, subject to its acceptability in the Professional Engineer licensed in New York State's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Design and performance criteria are based on products manufactured by Lutron Electronics Company, "Grafik 4000" Series GP or LP dimmer panelboards as indicated on the drawings.

1.5 SHOP DRAWINGS

- A. Submit manufacturer's standard catalog data including application, wiring, and installation information on components and sub-systems.

- B. Provide test data and/or samples as required to demonstrate conformance with PART 2 of this specification.
- C. Submit the following shop drawings:
 - 1. Control equipment physical and performance data.
 - 2. Zone and module schedules.
 - 3. Dimmer panels.
 - 4. Remote control stations, engraving, and finishes.
 - 5. Wiring and installation diagrams and instructions.
- D. Submit the following samples:
 - 1. Preset System Control coverplate.
 - 2. Wallbox coverplate.

1.6 QUALITY ASSURANCE

- A. Manufacturer shall have a minimum of 3 years continuous experience in manufacturing architectural lighting control products.
- B. Devices shall be U.L. and CSA Listed specifically for the required loads (i.e., Incandescent, fluorescent, magnetic low voltage transformer). Manufacturer shall provide file card upon request. Universal-type dimmers shall not be acceptable.

1.7 ACCEPTABLE MANUFACTURERS

- A. Electronic Theater Controls (ETC) or equal.
- B. The listing of a manufacturer as "acceptable" does not imply automatic approval. It is the sole responsibility of the electrical Contractor #4 to ensure that any submittals made are for devices that meet or exceed the specifications included herein.
- C. Equipment described here are products of Lutron Electronics Company, to set a standard of quality and performance. Products of the other manufacturer will be considered, subject to the standards of quality and system design intent described herein and on the drawings.

PART 2 - PRODUCTS

2.1 INTEGRAL DIMMING

- A. Preset dimming control shall be capable of operating at rated capacity without adversely affecting design lifetime and shall mount individually in standard 2,3, or 4 gang U.S. switchboxes.
- B. Preset dimming control shall operate in an ambient temperature range of 0°C (32°F) to 40°C (104°F).
- C. Preset dimming control shall meet IEC 801-2, tested to withstand 15 kV electrostatic discharge without damage or loss of memory, ANSI/IEEE Std. C62.41-1980, tested to withstand voltage surges of up to 6000V and current surges of up to 200A without damage, and U.L. 20 limited short circuit test requirement for snap switches.
- D. Preset dimming control shall be voltage regulated so that a ±10% variation in line voltage shall cause no more than a ±5% variation in load voltage when dimmer is operating at 40V (5% light output).

- E. Preset dimming control shall utilize an LC filtering network to minimize interference with properly installed radio, audio, and video equipment.
- F. Preset dimming control shall operate (dim or non-dim) the following sources/load type with a smooth and continuous Square Law dimming curve. Universal type dimmers shall not be acceptable.
- G. Incandescent, Tungsten and Magnetic Low Voltage Transformer Dimming
 - 1. Dimmer shall contain circuitry specifically designed to control and provide a symmetrical AC waveform to the input of magnetic low voltage transformers.
 - 2. Dimmer shall not cause a magnetic low voltage transformer to operate above the transformer's rated operating current and temperature.
 - 3. Dimmer shall contain circuitry to control dioded lamps.
- H. Fluorescent Electronic Dimming Ballasts
 - 1. Dimmer shall be rated to control T-12, T-12 high output, T-8, T-5 and T-5 high output lamps at 120 VAC with the use of an interface. Lamps on the same circuit must have the same current rating (i.e., T-8), but may be different lengths (i.e., 3', 4').
 - 2. Ballasts for fluorescent fixtures shall be Lutron Hi-lume "FDB" series for 1% dimming, Lutron "Compact SE" series for 5% dimming, and Lutron "ECO-10" series for 10% dimming or approved equal. See lighting designer's fixture schedule, sections 265100 and/or dimming schedule for specific ballast model numbers.
- I. The dimming performance shall be as follows:
 - 1. Dimming range down to 1% light output (5% for compact T-5 twin tube lamps).
 - 2. One- and two-lamp ballasts track evenly, with no perceptible difference in light levels for the same type lamps.
 - 3. Different lamp lengths on the same circuit shall track evenly, with no perceptible difference in light levels for the same type lamps.
 - 4. Ballasts shall be inaudible with no apparent humming or buzzing at any point in the dimming range.
 - 5. Ballasts shall have: a power factor greater than .95, ballast factor equal to .93, total harmonic distortion less than 10%, and lamp current crest factor less than or equal to 1.6.
 - 6. Ballasts shall be inaudible in a 27dB ambient throughout the dimming range.
 - 7. Ballasts shall be capable of striking lamps at any light level without first flashing to full light.
 - 8. Ballasts must comply with FCC Part 18 regulations and shall not interfere with other properly installed electrical equipment.
 - 9. Ballasts shall have a minimum starting temperature of 10°C and shall be free of polychlorinated biphenyls (PCB's).

2.2 DIMMING PANELS

- A. Panels shall be wall mounted NEMA grade, constructed of sheet steel plates not less than #16 U.S. gauge. Contractor #4 shall reinforce wall as required for wall-mounted panels and provide vibration isolation as recommended by the manufacturer.
- B. Panels shall be completely pre-wired by the manufacturer. The Contractor #4 shall be required to provide input feed wiring, load wiring, and control wiring. No other wiring or assembly by the Contractor #4 shall be permitted.
- C. Unless otherwise indicated, panels shall contain branch circuit protection for each dimming module. Branch circuit breakers shall have the following performance characteristics:
 - 1. U.L. listed under U.L. 489 as a molded case circuit breaker for use on lighting circuits.
 - 2. Contain a visual trip indicator and shall be rated at 22,000 AIC (120/208/240V) or 25,000 AIC (277/480V), unless otherwise approved based on results of the short circuit study (Section 260000). Note: Dimming panel short circuit rating shall be as indicated on the drawings.
 - 3. Circuit breakers shall be rated 20 amperes.
 - 4. Thermal-magnetic in construction for both overload and dead short protection. The use of fully magnetic breakers shall not be acceptable, even when used in conjunction with individual dimmer thermal cut-outs.
 - 5. Switching duty (SWD) rated so that the loads can be switched off via the breakers.
- D. Panels shall be shipped with each dimmer in a BYPASS position via a jumper bar inserted between the input and load terminals. These jumpers shall carry the complete load current and shall be reusable at any time.
- E. Panels shall be cooled via free-convection, unaided by fans, and capable of continuous operation in an ambient temperature range of 0°C (32°F) to 40°C (104°F). To provide the utmost in reliability, panels that normally use cooling fans must have the panel capacity derated by 50%. A lesser derating will be allowed providing that the manufacturer can substantiate via an independent test laboratory that with no fans operating, and at full-rated dimmer capacity, the temperatures of the main semiconductors are at least 20°C below maximum temperature rating and the temperatures of the filter chokes are within the maximum allowable temperatures of these components at an ambient temperature of 40°C.
- F. Dimming panels shall have the following additional performance characteristics:
 - 1. Designed to prevent any foreign objects from coming in contact with any part of the panel that would be at an elevated temperature, such as the dimmer extrusions or heat fins.
 - 2. Designed to provide airflow across the heat sink areas and through the dimmer chassis. Panel sections that provide airflow only across heat sinks shall not be mounted one above another in order to allow for adequate heat dissipation.
 - 3. Panel shall provide capability to electronically assign each circuit to any zone in the dimming system. Panels using mechanical switches, rewiring, or EPROMS shall not be acceptable.
 - 4. Multiple panels shall be capable of operating in one system, up to a maximum of 32 panels and 768 dimmers.

2.3 EMERGENCY "FULL-ON" SYSTEM ELECTRONICS

- A. Circuits listed as emergency shall be connected to their respective circuit breakers in the emergency dimming panels (EDP's) as shown on the drawings. They shall be controlled simultaneously with other lighting circuits within that control zone during the presence of normal utility power.
- B. Upon loss of normal power and the subsequent presence of emergency power, the circuits listed as emergency shall immediately go to a full-on condition. Local control stations shall be inoperable during this period.
- C. Once normal power is restored, lighting zones shall revert back to their status prior to the emergency condition (restoration to some other "default" level is not acceptable).
- D. Upon fire alarm condition or signal from the BMS circuits shall immediately go to a full-on condition. Once the fire alarm or BMS signal is removed, lighting zones shall revert back to their status prior to the signal condition (restoration to some other "default" level is not acceptable). See 2.05(d) "Accessory Control Options".

2.4 DIMMING MODULES

- A. Quantities of dimmer modules shall be provided to control each type of load shown on the load schedule and/or the drawings.
- B. Dimmers shall be voltage regulated so that a nominal change in line voltage shall not cause a perceptible change in output voltage.
- C. Under full-load conditions in a 40°C environment, silicon thyristors shall operate at a minimum 20°C safety margin below the component temperature rating. The maximum allowable asymmetry in the load waveform shall be ± 1 VDC.
- D. Each dimmer shall incorporate an electronic "soft-start" default at initial turn-on that smoothly ramps the lights up to the appropriate levels within 0.5 seconds.
- E. Once installed as part of a complete system, the silicon thyristors used to control the power furnished to the loads shall be both designed and tested to withstand surges, without impairment to performance, of 6000V, 3000A (equivalent to a near lightning strike) as specified by ANSI/IEEE std. C62.41. Upon request the manufacturer shall provide a means to demonstrate conformance to this specification using the appropriate surge-generation equipment.
- F. Filtering shall be provided in each dimmer so that current rise time shall be at least 350 μ sec at 50% rated dimmer capacity as measured from 10-90% of the load current waveform at a 90° conduction angle, and at no point rise faster than 30mA/ μ sec. Manufacturers should note that additional filters may be required to meet this specification. These filters need not be integral to the dimming module, but shall be integral to the dimming cabinet.
- G. Dimmer output voltage shall be a minimum 95% of input voltage at maximum intensity setting.

- H. Dimmers shall operate the following sources/load types with a smooth continuous Square Law dimming curve. Dimmers shall also be capable of operating these sources on a non-dim basis. Universal-type dimmers that do not adjust the dimming curve shall not be acceptable.
- I. Incandescent, Tungsten and Magnetic Low Voltage Transformer Dimming
 - 1. Dimmers shall not cause a magnetic low voltage transformer to operate above the transformer's rated operating current and temperature under any load condition on the transformer secondary.
 - 2. Dimmers shall contain circuitry to control dioded lamps.
- J. Electronic Low Voltage Transformer Dimming
 - 1. No flicker or interaction shall occur at any point in the dimming range.
- K. Fluorescent Electronic Dimming Ballasts
 - 1. Dimmer shall be rated to control T-12, T-12 high output, T-8, and T-5 lamps. Lamps on the same circuit must have the same current rating (i.e., T-8), but may be different lengths (i.e., 3' and 4'). Ballasts for fluorescent fixtures shall be Lutron Hi-lume "FDB" series (1% min. dimming level) or Lutron "Compact SE" series (5% minimum dimming level) for Lutron "ECO-10" series (10% minimum dimming level) or approved equal. See fixture schedules for specific ballast model numbers.
- L. Neon & Cold Cathode
 - 1. Dimmer shall provide the ability to dim lamps down to 1% of full light output when used with normal (low) power factor transformers without flicker or striations.
- M. Non-Dim Controls
 - 1. Non-dim controls shall be rated to switch 16A of resistive, tungsten, inductive, or capacitive loads. Non-dim controls shall incorporate an air gap relay to open circuit when load is off.
- N. Minimum light levels shall be user adjustable for each dimmer in order to compensate for different loading of each dimmer.
- O. Maximum light levels shall be user adjustable for each dimmer to predetermine energy and potential lamp life savings.

2.5 CONTROL

A. General

- 1. Definitions: A "scene" or "preset" is a specific look or mood created by different lighting zones set at different intensities. A "zone" is one or more lighting circuits which are controlled together as a group.
- 2. Preset dimming control shall provide power failure memory. Should power be interrupted and subsequently returned, the lights will come back on to the same levels set prior to the power interruption. Restoration to some other default level is not acceptable, unless specifically noted elsewhere.
- 3. Faceplate shall attach using no visible means of attachment. Faceplates shall have

brushed metallic finish as selected by Commissioner. Plastic faceplates shall not be acceptable.

4. Wiring from dimming panel to preset dimming control and accessory controls shall be low voltage type Class 2 wiring, daisy-chain style, wire type and connections as recommended by panel manufacturer.
5. Panel processor shall:
 - a. Electronically assign each circuit to any zone in the system.
 - b. Determine Normal/Emergency function of panel and set emergency lighting states.
 - c. Operate each circuit in the system.
 - d. Maintain switched outputs at current state (ON or OFF) in the event of control failure. Systems that fail to a set state (OFF or ON) during a control failure are not acceptable.
 - e. React to changes from the control in no more than 20 milliseconds.

B. Four Scene Preset Control

1. Where indicated on the drawings, control shall provide 4 preset lighting scenes and off for up to 8 control zones. Control shall be capable of storing an additional 12 preset lighting scenes. Up to 8 controls may be tied together for more than 8 zones. Controls shall incorporate built-in wide angle infrared receiver, providing control via a separate wireless remote control transmitter from up to 50 feet away. Preset shall be set via easy-to-use raise/lower switches, one raise and lower switch per zone. The intensity for each zone shall be indicated via an illuminated barograph, one barograph per zone. More than one zone may be proportionately raised or lowered at the same time.
2. Additionally, one or more zones may be temporarily overridden without altering the scene values which are stored in memory. Lighting levels shall fade smoothly between scenes at time intervals of 0-59 seconds or 1 to 60 minutes. The fade time shall be separately selectable for each scene and shall be indicated by a digital display for the current scene.
3. Pressing a scene select button will also light the corresponding scene LED and simultaneously begin changing the barograph levels to reflect the currently selected scene. In the event that a preset scene with a fade time greater than 5 seconds is initially selected from an OFF condition, the programmed fade time shall be temporarily overridden, unless otherwise noted, and the lights shall fade up to that scene over a five-second time span.

C. LCD Wallstation

1. The LCD wallstation shall access and display every area, scene and zone within the lighting control processor. The LCD wallstation shall allow the user to:
 - a. View and modify the scene status of an area.
 - b. Temporarily modify zone intensities in an area.
 - c. View timeclock status for each area.
 - d. Enable or disable timeclock for an area.
 - e. Permanently modify zone intensities, delay times and fade times.

D. Accessory Control Options

1. Provide the following controls for use with the preset control(s) as shown on the drawings:
 - a. Two Scene Entrance Control(s) shall be capable of recalling Scene One plus Off.
 - b. Four Scene Control(s) shall be capable of recalling any one of four scenes, master raise/lower and Off. Control shall provide access up to 16 scenes.
 - c. Fine Tuning Control(s) shall allow the temporary override of a particular zone or zones from the preset light level.
 - d. Special Function Control(s) shall provide the following functions:
2. Sequencing shall allow the user to set up and operate a sequence of 4 or 12 steps. A sequence shall be defined as a series of steps, while a step shall be defined as the recall of a scene. Each step interval is adjustable from 1 second to 60 minutes.
3. Zone lockout shall allow temporary changes without altering the light levels preset for each scene.
4. Scene lockout shall lockout the control, maintaining current scene and disabling buttons on the preset dimming control.
5. Fade override shall set fade times to zero.
6. Infrared control: Provide wireless remote control capable of recalling preset light levels that shall operate up to 50 feet within line of sight of receiver. Ceiling mounted receiver shall provide 360° reception range.
7. Daylighting: Provide astronomic timedlock interface to determine the times during which direct sunlight is incident on the façade being controlled using a single interior photocell to control shade positions and intensity of lighting. Include manual override controls for both lights and shades.
8. Equipment Interface(s), fire alarm, BMS, etc., shall allow access to preset dimming control(s) via isolated momentary/maintained dry contact closures. Where indicated on the drawings, each interface shall provide isolated maintained contact closures rated at 200mA at 30VDC for pilot light status feedback.

E. Control Interfaces

1. Provide ability for the centralized lighting system controls to interface and communicate with the following:
 - a. Contact closure: Interface with dry contact closures devices such as timedlock inputs, BMS, fire alarm system, security system, and occupancy sensors.
 - b. RS232: Communicate via RS232 serial communication to a user supplied PC or digital audio visual equipment.
 - c. BACnet: Communicate via BACnet IP or BACnet Ethernet from a user supplied 10BaseT Ethernet network.
 - d. LonWorks: Communicate via LonWorks FTT-10.
 - e. DMX512: Convert 32 control intensities to 32 continuous DMX512 outputs.

- f. Daylighting: Automatically select light levels in response to ambient daylight via four thresholds for selection of light levels. Include photocell calibration, averaging for up to three photosensors.
- g. Room assignor control panel(s): Accept up to 32 contact closure inputs including the following functions: scene selection, panic mode, occupancy response, sequencing, zone and scene lockouts, and partitioning. Include visual status.

2.6 DIMMING SYSTEM DESCRIPTIONS

A. General

- 1. Dimming for the areas of work shall be accomplished by a series of systems which are controlled locally within the area(s) served and remotely from the area(s) shown - Refer to Lighting Design Documents.

B. Preset Scene Dimming Systems - Refer to Lighting Design Documents

2.7 QUALITY CONTROL

- A. Components shall be inspected following U.S. military standard 105D or equivalent. Equipment shall be fully tested for proper operation prior to shipment from the factory.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Equipment shall be installed utilizing manufacturer's shop drawings and in accordance with these specifications.
- B. Surface-mounted dimmer panels shall be mounted on 3/4-inch plywood backboard or 3/4-inch galvanized steel channel secured to wall. Do not use plywood backboard in wet or damp locations. Where required provide galvanized steel channel to stand panels six inches off wall to allow routing conduit or cable behind panels.
- C. The Electrical Contractor #4 shall run separate neutrals for branch load circuits.
- D. Where a dimming panel is indicated and upon completion of the installation and prior to removal of the bypass jumpers, the electrical Contractor #4 shall completely test line voltage power and low voltage control wiring for continuity and accuracy of connections. The jumpers shall remain in place until loads have been fully tested and found to be free of miswires, short circuits, or other wiring defects.
- E. Manufacturer shall provide access to qualified personnel able to address problems with the dimming system 24 hours per day, 365 days per year through the warranty period.

3.2 SYSTEM COMMISSIONING

- A. Upon completion of the installation, the system shall be completely commissioned by a factory-trained engineer. The commissioning will be performed upon notification by the electrical Contractor #4 that the system installation is complete and that loads have been tested live for continuity and freedom from defects and that control wiring has been connected and checked for proper continuity. The electrical Contractor #4 shall provide both the manufacturer and the Commissioner with ten working days notice of the scheduled commissioning date.

- B. New fluorescent lamps shall be seasoned for dimming applications by operating at full intensity for their first 100 hours. Leave lamps at full intensity for 100 continuous hours to achieve good dimming performance and normal lamp life.
- C. Upon completion of the system check-out, Contractor #4 shall demonstrate the operation of the system to the Commissioner.

3.3 WARRANTY AND WARRANTY SERVICE

- A. Unless otherwise noted, Manufacturer shall provide a two year warranty on the complete system for systems with factory commissioning. Warranty shall cover 100% of the cost of the manufacturer's services and any replacement parts required over the first two years which are directly attributable to the manufacturer.
- B. Warranty coverage shall begin from date of final system commissioning or three months from date of delivery, whichever is the earlier. Commissioning and warranty service shall be performed by a factory-trained engineer.

END OF SECTION

SECTION 26 09 62

BRANCH CIRCUIT TRANSFER SYSTEMS

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.2 REFERENCES

- A. Perform the work of this Section in accordance with the requirements of Section 260000 General Provisions and Section 260500 Basic Materials and Methods.
- B. See other Division 26 Sections for requirements of emergency system panelboards and other electrical distribution equipment not included herein.

1.3 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to state and local codes and laws.
- B. The criteria of design and performance to produce the required operation is based on equipment of the named manufacturers. Equipment of other manufacturers will be considered, subject to acceptability in the Engineer's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products provided shall be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.4 SUBMITTALS

- A. Submit manufacturers' technical data for automatic transfer equipment and components, including construction details, performance specifications, and furnished options and features.
- B. Submit project-specific shop drawings, including complete wiring diagrams for system components.
- C. Submit certified field test report upon completion of work.
- D. Submit complete operating and maintenance manual.
- E. Submit short circuit, arc flash and overcurrent protection coordination study as described in Section 260500. Study shall accompany equipment submittals. Failure to include the study with the equipment submittals will cause the equipment submittals to be rejected.

PART 2 - PRODUCTS

2.1 BRANCH CIRCUIT TRANSFER SYSTEMS (BTS)

A. General

1. Provide branch circuit automatic transfer systems with the number of poles, voltage, and current ratings as indicated on the drawings. The system shall consist of power transfer switches and a control module interconnected so as to provide complete automatic protection.
2. The system shall comply with the following safety standards:
 - a. ANSI/UL1008
 - b. ANSI/NFPA 70
 - c. ANSI/NFPA 110, Level 1 Emergency Systems
3. The function of the BTS's shall be to transfer critical lighting load branch circuits from dimmer panels to an emergency power source (inverter) in the event of a power failure, fire alarm condition, or panic condition.
4. Transfer poles shall be provided for the phase and neutral legs of each branch circuit load.
5. Remote control stations for the system shall be provided as shown on the drawings.

B. Enclosure

1. The branch circuit transfer devices (BTS's) shall be mounted in a hinged door, NEMA 1 type enclosure. Material shall be no less than 14 gauge steel.
2. The enclosures shall be separate and independent of other equipment. In no instance shall the BTS be enclosed in an enclosure containing other equipment.
3. The systems shall be provided with an approved nameplate mounted on the front of the enclosure, stating; "FOR USE ON EMERGENCY AND STANDBY SYSTEMS". The enclosure shall also be provided with an approved nameplate indicating that the system is UL1008 Listed.
4. The BTS's shall contain a recessed local control station in the enclosure door. This station shall include a key switch and two transfer position indicator LEDs.

C. Remote Stations

1. Each remote control station shall contain a three-position key switch. The left and right positions of the switch shall be momentary and the switch shall always return to the center position.
2. The station faceplate shall be engraved; "NORMAL", "EMERGENCY", and "AUTO" adjacent to the corresponding switch positions, and shall contain two LED's for transfer switch position confirmation.
3. Each station shall mount in a standard 2-gang wall box (4" x 4" x 2 1/8").
4. Wiring to remote stations shall be by 5-conductor Class 2 wiring (24VDC). A terminal strip shall be provided for wiring.

D. Transfer Switch

1. The transfer switch unit shall be electrically-operated and mechanically-held. The electrical operator shall be a single-solenoid mechanism, momentarily energized to minimize power consumption, noise, and heat generation.
2. The switch shall be positively locked and unaffected by voltage variations or momentary outages, so that contact pressure is maintained at a constant value and temperature rise at the contacts is minimized.
3. The switch shall be mechanically interlocked to ensure only one of two possible positions - Normal or Emergency.
4. Switch main contacts shall be silver plated.
5. Inspection of contacts shall be possible from the front of the switch without disassembly of operating linkages or power conductors.
6. Provide a manual operating handle for backup operation and maintenance purposes. The handle shall permit the operator to stop the contact at any point through the entire travel of the contact.
7. Overload and endurance testing of the transfer switch shall comply with UL1008 Tables 25.1, 25.2, 27.1, and 27.2 for mixed loads.
8. The transfer switch shall be rated to withstand the RMS symmetrical short circuit current with the type of overcurrent protection shown, without welding of the contacts.
9. Switch contacts shall withstand transfer without welding, with 180° phase displacement between Normal and Emergency power sources, both sources energized and 100% load.
10. Transfer switch contacts shall be rated for mixed loads, including: motors, electric discharge lamps, and tungsten filament lamps.

E. Logic Control Module

1. The control module shall direct the operation of the transfer switch.
2. The module's sensing and logic shall be controlled by a build-in microprocessor for maximum reliability and minimum maintenance.
3. The control module shall be connected to the transfer switch by an interconnecting wire harness. The harness shall include a keyed disconnect plug to enable the control module to be disconnected from the transfer switch for routine maintenance.
4. The module shall be completely enclosed with a protective cover and be mounted separately from the transfer switch unit for safety and ease of maintenance.
5. Sensing and control logic shall be provided on plug-in printed circuit boards, for maximum reliability.
6. Interfacing relays shall be industrial control grade plug-in type, with dust covers.

7. The control panel shall meet the voltage surge withstand capability in accordance with IEEE Standard 472-1978 (ANSI C37.90A-1978).
8. The control panel shall meet the impulse withstand voltage test in accordance with the proposed NEMA Standard ICS 1-109.

F. Operation

1. The voltage of each phase of the normal source(s) shall be monitored, with pickup adjustable from 85 to 100% and dropout adjustable from 75 to 98% of pickup setting. These settings shall be adjustable in increments of 1%. Repetitive accuracy of settings shall be 2% or better over a temperature range of -20°C to 70°C. Factory set to pickup a 90% and dropout at 85%.
2. Single phase voltage sensing of the Emergency source shall be provided with a pickup adjustable from 85 to 100% and dropout fixed at 84 to 86% of pickup. Frequency sensing shall be provided with pickup adjustable from 90 to 100% and dropout fixed at 87 to 89% of pickup. Repetitive accuracy of settings shall be 2% or better over a temperature range of -20°C to 70°C. Factory set to pick up a 90% voltage and 95% frequency.
3. The control module shall include four time delays that are field adjustable in increments of at least 13 steps over the entire range, as follows:
 - a. Time delay to override momentary Normal source outages, to delay transfer switch and engine starting signals, Adjustable from 0 to 60 sec. Factory set a 1 sec.
 - b. Transfer to Emergency time delay. Adjustable from 1 to 5 min. Factory set at 0 min.
 - c. Retransfer to Normal time delay. Time delay is automatically bypassed of Emergency source fails and Normal source if acceptable. Adjustable from 0 to 30 min. Factory set at 5 min.
4. Control power for logic and transfer functions shall always seek the acceptable power source. This shall prevent the system from locking up in one position if either of the power sources is available, regardless of the sequence of failure events.
5. A key-operated double-throw, momentary test switch shall be provided to manually control the BTS. Automatic functions shall override this control. Two indicator lights shall be provided to show the position of the transfer switch.
6. Automatic functions shall override remote control functions. Any combination of open or shorted wiring to remote stations shall not affect automatic functions, or disable the local switch.
7. Provide a self-supervising isolated signal input for connection to the facility fire alarm. The BTS shall automatically transfer loads to the Emergency power source when the tenant fire alarm is activated.

G. Approved Manufacturers

1. Union Connection Model UC700
2. Electronic Theater Control (ETC) Model ELTS
3. Lex Products Corporation PowerGate Model ELTS

H. Accessories

1. Provide #UC700-RCS-1A Manual Remote Control Stations or approved equivalent, quantity and locations as indicated on the drawings.

PART 3 - EXECUTION

3.1 GENERAL

- A. See Section 260500 BASIC MATERIALS AND METHODS.

3.2 INSTALLATION

- A. Install and connect branch circuit transfer system switches and accessories where indicated, in strict compliance with manufacturer's instructions.
- B. Provide power, control, and signal wiring and connections as required for specified operation. Assure proper phasing of transfer switch normal and emergency source power connections.
- C. Provide CT/PT's as required for monitoring of normal and emergency power sources by BTS control logic.

3.3 FIELD ACCEPTANCE TESTING

- A. After completion of the transfer switch installation, perform a complete on site performance test of the emergency power system per NFPA 110, Paragraph 7.13.
- B. Testing shall be conducted by authorized representatives of the equipment manufacturer(s), and witnessed by the Commissioner and any interested local authorities.
- C. Provide necessary calibrated test equipment, temporary cabling and connections, etc. as required to perform the testing in an approved manner.
- D. A certified report of test procedures, results, and any corrective measures taken shall be provided to the Commissioner.
- E. Demonstrate operating procedures to Commissioner's personnel and provide written operating and maintenance instructions.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 22 12

COMPUTER-GRADE ISOLATION TRANSFORMERS

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.2 REFERENCES

- A. Perform the work of this section in accordance with the requirements of Section 260000 General Provisions and Section 260500 Basic Materials.
- B. See other Division 26 sections for requirements of general-purpose transformers, panelboards, and other electrical distribution equipment not included herein.

1.3 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to state and local codes and laws.
- B. The criteria of design and performance to produce the required operation is based on equipment of the named manufacturers. Equipment of other manufacturers may be considered, subject to acceptability in the Engineer's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products provided shall be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.4 SUBMITTALS

- A. Submit manufacturer's technical product data and performance specifications for computer-grade isolation transformers and components, including the following information:
 - 1. Ratings, including % impedance.
 - 2. Enclosure type and dimensions.
 - 3. Tap ratings and quantities.
 - 4. UL, ANSI, and NEMA compliances.
 - 5. Noise attenuation.
 - 6. Transient voltage suppression system ratings.
- B. Submit short circuit, arc flash and overcurrent protection coordination study as described in Section 260000. Study shall accompany equipment submittals. Failure to include the study with the equipment submittals will cause the equipment submittals to be rejected.

PART 2 - PRODUCTS

2.1 TRANSFORMER CONSTRUCTION

- A. Provide ventilated dry-type computer-grade isolation transformers, 3 phase, delta primary, grounded wye secondary, U.L. listed and labeled, of the indicated ratings and voltages.
- B. Transformers shall comply with NEMA standard TP1 for optimum energy efficiency at 35% load. Transformers shall be labeled for EPA Energy Star program. Provide 80°C rise transformers for all transformers indicated on the drawings, unless specifically otherwise noted. Efficiencies shall be tested in accord with NEMA TP2, in minimums as follows:

Single Phase		Three Phase	
kVA	Efficiency	kVA	Efficiency
15	97.7%	15	97.0%
25	98.0%	30	97.5%
37.5	98.2%	45	97.7%
50	98.3%	75	98.0%
75	98.5%	112.5	98.2%
100	98.6%	150	98.3%
167	98.7%	225	98.5%
250	98.8%	300	98.6%
333	98.9%	500	98.7%
		750	98.8%

- C. Transformers specifically designated on the drawings shall be Class 155 insulation minimum per UL 1561 and shall be designed for a maximum winding temperature rise of 80°C at rated load in a 40°C ambient. 80°C transformers shall comply with NEMA standard TP-1 and shall be designed for low energy losses at loads greater than 50% of nameplate rating. 80°C rise transformers shall have a continuous emergency overload capability of 30%. Provide 80°C rise transformers unless otherwise noted on the drawings.
- D. Isolation transformers shall be constructed with copper windings and minimum dual electrostatic (Faraday) shielding.
- E. The transformers shall be constructed, listed, and labeled to supply non-linear loads with a K-factor of K-13 minimum, including a 200% secondary neutral.
- F. Provide transformers with six 2-1/2 percent primary winding taps, two above and four below nominal voltage.
- G. Enclosures shall be suitable for indoor locations, either floor or platform mounting.
- H. Transformers shall be convection-cooled.

2.2 RATINGS

- A. Common mode noise attenuation – 140 dB.
- B. Transverse mode noise attenuation – 90 dB.
- C. Output voltage harmonic distortion: 0.5% with linear load; 5.0% maximum for 2/3 switched mode power supply load.
- D. Impedance - 3% minimum, 5.5% maximum.

- E. Efficiency - 96%, minimum.
- F. Audible sound, maximum at 5 feet:
 - 1. 15-50 kVA – 45 dBA
 - 2. 51-150 kVA – 50 dBA
 - 3. 151-225 kVA – 55 dBA
- G. Magnetic field strength – less than 0.1 gauss at 1.5 feet.
- H. Operating ambient conditions - 0°C. to 40°C, 0-95% RH (non-condensing).

2.3 TRANSIENT SUPPRESSION

- A. Units shall be constructed in accordance with NEMA Standard LS 1, UL 1449 Second Edition and tested using the transient waveforms specified in ANSI/IEEE C62.41 in accordance with the procedures set forth in ANSI/IEEE C62.45.
- B. Provide factory-installed input surge arresters of appropriate voltage rating, and having the following performance characteristics:
 - 1. FOW sparkover - 3200 volts maximum.
 - 2. Discharge voltage (8x20 microsecond waveform) - 2.2 KV maximum @ 1500 amperes.
- C. Provide a factory-installed output transient suppression network of appropriate voltage rating, fused, with status indicating lights, and having the following performance characteristics:
 - 1. Peak current handling - 40,000 amperes, minimum.
 - 2. Energy absorption - 200 joules per phase, minimum.

2.4 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with requirements, provide computer-grade isolation transformers manufactured by one of the following:
 - 1. TransMax – Harmonics Limited
 - 2. Controlled Power – Ultra K/Series 600K
 - 3. On-Line Power – Iso-Care Series

PART 3 - EXECUTION

3.1 GENERAL

- A. See Section 260500 BASIC MATERIALS.

3.2 INSTALLATION - TRANSFORMERS

- A. Provide primary and secondary connections with 24" of flexible steel conduit to minimize vibration transmission to the building structure.

- B. Bond grounded conductor to the transformer case, to the nearest available interior metal water piping, to nearest grounded building steel, and to other metal piping in accordance with requirements of NEC Article 250. Size conductors per NEC, but use no smaller than No. 4 AWG copper. Provide single-point ground per Section 260500 and as indicated on drawings.
- C. Connect with secondary neutral conductors rated 200% of rated secondary amperes.
- D. Adjust tap connections as necessary to achieve a no-load secondary voltage of 100-105% of nominal.
- E. Provide vibration & noise control and seismic restraints. Refer to Section 260548.

END OF SECTION

SECTION 26 24 16

PANELBOARDS

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.2 REFERENCES

- A. Perform the work of this section in accordance with the requirements of Section 260000 General Provisions and Section 260500 Basic Materials.
- B. See other Division 26 sections for requirements of switchboards and other electrical distribution equipment not included herein.

1.3 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to state and local codes and laws.
- B. The design is based on equipment of the named manufacturers. Equipment of other manufacturers will be considered, subject to acceptability in the Engineer's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products provided shall be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.4 SUBMITTALS

- A. Submit manufacturers' catalog data for panelboards, including enclosure details and device specifications.
- B. Submittals: Include dimensioned plans, sections, and elevations. Show tabulations of installed devices, major features, and voltage rating. Include the following:
 - 1. Enclosure type and dimensions with details.
 - 2. Bus configuration, lug sizes, materials and current ratings.
 - 3. Short-circuit current rating of panelboard.
 - 4. Features, characteristics, ratings, and factory settings of individual protective devices and auxiliary components.
 - 5. Accessories and options furnished.
 - 6. Wiring Diagrams: Details of schematic diagram including control wiring and differentiating between manufacturer-installed and field-installed wiring.
- C. Submit short circuit, arc flash and overcurrent protection coordination study as described in Section 260000. Study shall accompany equipment submittals. Failure to include the study with the equipment submittals will cause the equipment submittals to be rejected.

PART 2 - PRODUCTS

2.1 CIRCUIT BREAKER PANELBOARDS

A. General

1. Furnish and install approved panelboards of types and configurations indicated and specified herein.
2. Panelboards shall comply with the following industry standards:
 - a. UL Standards
Panelboards - UL67
Cabinet & Boxes - UL50
Circuit Breakers - UL489
 - b. National Electric Code Article 408
 - c. NEMA Standard - PB 1
3. Panels identified for use as service entrance equipment shall be so labeled and equipped.

B. Interiors

1. Interiors shall be completely factory assembled. They shall be so designed that switching and protective devices can be replaced without disturbing adjacent units and without removing the main bus connectors, so that circuits may be changed without machining, drilling or tapping.
2. Branch circuits shall be arranged using double row construction except when narrow column panels are indicated.
3. A manufacturer's nameplate shall be provided listing panel type and ratings.
4. Bus bar taps for panels with single pole branches shall be arranged for sequenced phasing of the branch circuit devices.
5. A copper ground bus shall be included in panels. An isolated ground bus shall be provided in panels as indicated on Contract drawings.
6. Where "SPACE" is indicated on the schedules, it shall be fully equipped for future installation of the indicated device, with a blank cover over live parts.

C. Boxes

1. Boxes shall be at least 20 inches wide made from galvanized steel. Provide minimum gutter space in accordance with standards. Where feeder cables supplying the mains of a panel are carried through its box to supply other electrical equipment, the box shall be sized to include the additional required wiring space. Provide gutter barriers for panels requiring through-feed gutters.
2. At least four interior mounting studs with adjustable nuts shall be provided.

D. Trim

1. Switching device handles shall be accessible without exposure to any live parts. Doors shall have flush type cylinder lock and catch, except doors over 48 inches in height shall have auxiliary fasteners top and bottom of door in addition to the flush type cylinder lock and catch.

2. Door hinges shall be concealed. Locks shall be keyed alike for #47 key; directory frame and card having a transparent cover shall be furnished with each door.
3. Exterior and interior steel surfaces of the trim shall be properly cleaned, primed with a rust inhibiting phosphatized coating, and finished with a gray ANSI 61 paint. Trims for flush panels shall overlap the box for at least 3/4 inch all around. Surface trims shall have the same width and height as the box.
4. Front trim shall be hinged "door within a door" construction consisting of an inner door, outer door and an outer frame. Inner door shall allow access to circuit breakers and the outer door shall allow access to circuit breaker terminations, wiring and gutter space without having to remove trim. Provide key operated latch(s) on each door with multiple latches as required by size of doors. The outer frame shall be secured to the enclosure box with coarse thread slotted machine screws. Toggles, clamps and cam-operated fasteners are not acceptable. Provide a centered, top mounted stud secured to the enclosure box to facilitate outer frame removal and installation.

E. Bus Bars and Connectors

1. Main bus bars and branch connectors shall be tin-plated copper, sized in accordance with UL standards to limit the temperature rise on any current carrying part.
2. Panelboards shall utilize bolt-on breaker connections.
3. Provide full capacity insulated neutral bus in each panelboard. Neutral bussing shall have a suitable lug for each outgoing circuit requiring a neutral connection.
4. Provide sub-feed, feed-through and through-feed lugs as shown on drawings.

F. Circuit breakers shall be thermal-magnetic molded case type. See Section 260500.

G. One and two pole circuit breakers for lighting circuits shall be labeled for switching duty (SWD) and (HID), if used for switching high intensity discharge lighting.

H. Circuit breakers shall be full-size type: Half-size, twin or tandem breakers are not acceptable.

I. Circuit breakers feeding exit lights and emergency lighting shall be provided with handle locking devices. Where so indicated, provide circuit breakers with padlocking devices.

J. Fusible Switches

1. Where protective devices are indicated to be fusible switches, provide 3-pole, quick-make, quick-break types mounted in metal enclosures, and which have external operating handles that are padlockable in the "Off" position. Switches rated 1200 amperes and larger shall be bolted-pressure type, 100% rated, per UL 977. Main fuse switches shall be equipped with blown-fuse protection and electric trip mechanism.
2. Where fusing is indicated, and unless otherwise specified, provide as follows:
 - a. Main service and feeder switches 0 - 600 amperes: Class RK1; specification grade, Bussmann Low-Peak, dual element, time-delay, 200 kA, Type LPN-RK (250 volt) or LPS-RK (600 volt) or approved equal by Ferraz Shawmut.

- b. Main service and feeder switches 601 - 6000 amperes: Class L; Bussmann Low-Peak, Type KRP-CSP, 600 volt, time-delay, 300 kA, or approved equal by Gould - Shawmut.
 - c. Motor and transformer branch circuits 0 - 600 amperes: Class RK5; Bussmann Fusetron, Type FRN-R (250 volt) or FRS-R (600 volt), time delay, 200 kA, or approved equal by Ferraz Shawmut.
 - d. Motor and transformer branch circuits 601 - 6000 amperes: Class L; Bussmann Low-Peak, Type KRP-C, 600 volt, time delay, 200 kA, or approved equal by Ferraz Shawmut.
 - e. Non-motor branch circuits 0 - 600 amperes: Class J; Bussmann Low-Peak Type LPJ, 600 volt, dual element, time-delay, 200 kA, or approved equal by Ferraz Shawmut.
 - f. Fuses shall be of the same manufacturer.
- 3. Provide three (3) spare fuses of each type and size installed, in manufacturer's original packaging.
 - 4. Where so indicated, provide switches with blown fuse protection, electric trip mechanisms and integral zero-sequence solid-state ground-fault protection, complete with current transformers, adjustable trip level and time settings, trip indication lights, trip test switches, and fused control power source.
 - 5. Provide switches with handle locking devices and padlocking hasps.
- K. Fusible Coordination Panelboards
- 1. Where panelboards are indicated to be selectively coordinated fused type, provide fused or non-fused main and one, two or three-pole as indicated, and fused branch disconnects. Include: dead-front construction, rejection fuse holders, blown fuse indication, and operating handles padlockable in the "Off" position.
 - 2. Fuses shall be of the same manufacturer.
 - 3. Provide three (3) spare fuses of each type and size installed, in manufacturer's original packaging.
- L. Short-Circuit Ratings
- 1. Panelboards and devices shall be fully rated for the short-circuit currents indicated, and shall be so labeled. Series rating of main and branch devices will not be accepted.
- M. Panelboard circuit configurations and voltage, ampere, and short-circuit ratings shall be in accordance with the schedules on the drawings.
- N. Panelboards shall be commercial or industrial grade. Residential grade load centers will not be accepted.
- O. Lighting and appliance panelboards and power distribution panelboards up to and including 400 amperes shall be NYC approved equivalent of Square D NQOD or NF series, Eaton Cutler-Hammer Pow-R-Line 2 series or GE A series.

- P. Power distribution panelboards rated above 400 amperes shall be NYC approved equivalent of Square D I-line type HCN, HCM, HCW, HCNM or HCWM-U, Eaton Cutler-Hammer Pow-R-Line 4 series or GE Spectra series.

2.2 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with requirements, provide panelboards manufactured by one of the following:
1. All City Switchboard Co.
 2. Atlas Switchboard Co.
 3. Electrotech Service Equipment Co.
 4. Lincoln Electric Co.
- B. Fusible coordination panelboards shall be equivalent of Cooper Bussmann Quik-Spec Coordination Panelboard Model QSCP, Eaton Cutler-Hammer Pow-R-Line 3FQS Fusible Panelboard, or approved equivalent by Siemens, Square D or GE or Littlefuse LCP (28" w x 6"d).

PART 3 - EXECUTION

3.1 GENERAL

- A. See Section 260500 BASIC MATERIALS.

3.2 INSTALLATION - PANELBOARDS

- A. Drawings show schematic locations for panelboards with Contractor #4 responsible for final field installation to Code standards and working clearances.
- B. Unless otherwise indicated, mount panelboards with top of enclosure 6'-6" above finished floor. Mount securely, per manufacturer's instructions, with top and sides level and plumb.
- C. Surface-mounted panelboards shall be mounted on 3/4-inch plywood backboard or 3/4-inch galvanized steel channel secured to wall. Do not use plywood backboard in wet or damp locations. Where required provide galvanized steel channel to stand panelboards six inches off wall to allow routing conduit or cable behind panelboards.
- D. Provide typewritten as-built circuit directory information for each panelboard, including load description and location. Circuit description shall conform to NEC Paragraph 408.4, which states "identification shall include sufficient detail to allow each circuit to be distinguished from all others."
- E. Clearly label the exterior of each panelboard with I.D. number from drawings, system voltage, and ampere rating of panel bussing and main protective device/MLO, and rating/Class of fuses on engraved nameplates.
- F. For flush-mounted panelboards, provide 3-1" EMT sleeves to ceiling cavity above and below (3 conduits up, 3 conduits down), capped, for future additional branch circuit wiring.
- G. Install required interconnecting conduit and wiring for multi-section panelboards.
- H. Provide insulated gutter tap assemblies with insulating cover; Bumdy Type KPU-AC Polytap or Type UCU-AC Riser Tap or equal by O.Z. Gedney. Split-bolt and taped tap connections are not acceptable.

- I. Document and label the flash protection boundary and the incident energy in accordance with IEEE 1584, NEC and the approved short circuit, arc flash and overcurrent protection coordination study.
- J. Surge protection remote alarm: Provide for remote alarm monitoring connections. Provide raceway and 3#14 AWG conductors from surge protection device dry contacts to a junction box located adjacent to the switchboard including empty conduit from junction box to BMS. Final connection of SPD alarm contacts is provided under Division 23 and shall not require access to panelboard or de-energizing of panelboard.
- K. Where existing panelboards are replaced with new panelboards intercept the existing branch circuits and extend to the new panelboards and connect to the new circuit breakers. Extended circuits shall use the same size and number of conductors as the existing circuits unless otherwise indicated on the drawings.

END OF SECTION

SECTION 26 32 00

EMERGENCY POWER SYSTEM

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.2 REFERENCES

- A. Perform the work of this Section in accordance with the requirements of Section 260000 General Provisions and Section 260500 Basic Materials.
- B. See other Division 26 Sections for requirements of emergency system panelboards and other electrical distribution equipment not included herein.

1.3 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to state and local codes and laws.
- B. Materials and products provided shall be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.4 SUBMITTALS

- A. Submit manufacturers' project-specific technical data for emergency power system equipment and components, including construction details, engine and alternator performance specifications, and mounting and installation instructions.
- B. Submit project-specific shop drawings including the following:
 - 1. Factory dimensioned layout and arrangement drawings. Typical catalog cuts are not acceptable.
 - 2. Complete wiring diagrams for system components.
 - 3. Complete rigging diagrams and assembly procedures for the generator and generator enclosure
- C. Submit a listing and report of factory tests performed.
- D. Submit certified field test report upon completion of work.
- E. Submit complete operating and maintenance manual.
- F. Submittals shall be tabbed and indexed for easy reference and location of submitted components (i.e. generator, radiator, silencer, fuel system, enclosure, load bank, etc.).
- G. Submit short circuit, arc flash and overcurrent protection coordination study as described in Section 260000. Study shall accompany equipment submittals. Failure to include the study with the equipment submittals will cause the equipment submittals to be rejected.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Provide a complete integrated emergency power system including, but not limited to, engine-generator set, automatic transfer switches, fuel system, exhaust system, sound-attenuated weather protected enclosure, remote annunciation, and power distribution, as indicated and herein specified. The system shall provide specified voltage, power and frequency to the designated circuits and loads within 10 seconds of loss of utility power.
- B. The emergency power system shall be in compliance with the following codes and standards:
 - 1. NEC Compliance: Comply with applicable requirements of NEC Articles 700 (Emergency Systems), 701 (Legally Required Standby Systems), and 702 (Optional Standby Systems) pertaining to emergency and standby systems.
 - 2. NFPA Compliance: Comply with applicable requirements of NFPA 37, "Stationary Combustion Engines and Gas Turbines", and NFPA 110 "Emergency and Standby Power Systems" (Level 1).
 - 3. UL Compliance: Provide standby power generator system and enclosure components that are listed and labeled to UL 2200 standard.
 - 4. ANSI/NEMA Compliance: Comply with applicable requirements of ANSI/NEMA MG 1 "Motors and Generators", and MG 2 "Safety Standard for Construction and Guide for Selection, Installation and Use of Electric Motors and Generators".
- C. The system manufacturer shall have a factory-authorized parts and service facility within a reasonable distance of the jobsite.

2.2 ENGINE-GENERATOR SET

- A. The engine-generator set shall be nominally rated as indicated on the drawings. The kW rating shall be at 0.8 power factor, 122°F/50°C ambient air temperature, for standby operation for the duration of any utility power outage. Motor-starting capability shall be minimum 261 kVA with a maximum 30% voltage dip. The manufacturer shall provide oversized components as may be necessary to meet this requirement.
- B. Engine
 - 1. The engine shall be an 1800 rpm water-cooled compression ignition diesel. Engine shall meet specifications when operating on No. 2 (Grade DF-2) domestic burner oil. Diesel engines requiring premium fuels will not be considered. The engine shall be equipped with fuel, lube oil, and intake air filters, lube oil coolers, fuel transfer pump, fuel priming pump, and gear driven water pump. The engine shall be Generac Model SD100. The engine shall be configured for low exhaust emissions and comply with Tier 3 (less than 500 kW) per EPA guidelines.
 - 2. The engine governor shall be isochronous electronic type and shall maintain frequency regulation not to exceed 0.25% (0.15 Hertz) from no load to full rated load.

3. The unit shall be mounted on a structural steel sub-base and shall be provided with adjustable spring-type vibration isolators. Provide anchor bolts of hot dipped galvanized steel, of the types and sizes recommended by the manufacturer.
4. Provide safety shut-offs for high water temperature, low water level, low oil pressure, overspeed and engine overcrank.
5. Provide a thermostat-controlled thermal circulation type jacket water heater to maintain engine jacket water at 90°F in an ambient temperature of 0°F, minimum 1500 watt, 120 volt .
6. Provide a crankcase emission control system that shall remove a minimum of 99% of crankcase emissions including NOX, hydrocarbon and oil.
7. An engine-mounted radiator with blower type fan shall be sized to maintain rated operation at 122°F/ 50°C maximum outside air temperature. The radiator shall be stacked core design. The aftercooler circuit shall be rated at 140°F. The engine cooling system shall be filled with an anti-freeze solution of 50/50 ethylene glycol/ water mixture. Rotating parts shall be guarded against accidental contact per OSHA requirements.

C. Starting System

1. Provide engine-generator unit with a 12 or 24 volt (manufacturer's standard) DC electric starting motor with positive engagement drive capable of three complete cranking cycles without overheating.
2. Provide a non-gassing lead calcium recombination type engine starting battery set of the heavy-duty diesel type to avoid requirements for ventilation. The battery set shall be of sufficient capacity to provide for one and one half minutes total cranking time without recharging. Include a corrosion-resistant battery rack, and necessary cables and clamps.
3. Engine mounted battery charging alternator shall be 45 ampere minimum with solid-state voltage regulator.
4. Provide a current limiting battery charger located at the generator to automatically recharge batteries and to maintain at full charge. Charger shall float at 2.20 volts per cell and equalize at 2.40 volts per cell. It shall include overload protection, silicon diode full wave rectifiers, voltage surge suppressors, DC voltmeter, DC ammeter, and fused AC input. AC input voltage shall be 120 volts. Amperage output shall be no less than 10 amperes. Provide Stored Energy Systems Model NRG.

D. Exhaust System

1. Provide a internally mounted critical grade exhaust silencer including rain cap along with appropriately sized piping to the engine exhaust manifold. Final connection to the manifold shall be flexible stainless steel for vibration isolation. The silencer and piping shall be of high temperature and corrosion-resistant (aluminized shell & heads) construction. Manufacturer: GT Exhaust Systems, Inc.; Model 201-7100 Extreme Application series.
2. For interior installations, exhaust pipe extensions beyond the silencer will be furnished and installed under Division 23. Where no such extensions are required, provide a suitably configured exhaust outlet and, where required, a rain cap.

E. Generator (Alternator)

1. The generator shall be a three-phase, wye-connected, grounded neutral, 60 Hertz, single bearing, four pole, synchronous type, 105°C temperature rise at 130 kW / 162.5 kVA standby output, volts with brushless exciter and shall be built to NEMA Standards. 125°C or 150°C temperature rise is not acceptable. Shunt excitation is not acceptable. Class H insulation shall be used on the stator and rotor, and both shall be further protected with 100% epoxy dipped and baked impregnation. Stator shall be skewed with 2/3 pitch windings to minimize field heating and voltage harmonic effects. Generator shall be Generac 130kW alternator.
2. A generator mounted solid-state voltage regulator shall be provided to match the characteristics of the generator and engine. Voltage regulation shall be +/- 2% from no load to full rated load. Readily accessible voltage droop, voltage level and voltage gain controls shall be provided. Voltage level adjustment shall be a minimum of +/- 5%. One-step application of 100% rated load shall result in a voltage drop of no greater than 15% of rated, and recovery to steady-state shall be within 5 seconds. Generator output voltage distortion shall be less than 5% total harmonic distortion (THD) line-to-line and line-to-neutral when supplying full rated linear load with no greater than 3% individual harmonic content. To limit voltage distortion for non-linear load current harmonics, the generator per unit sub-transient reactance shall not exceed 0.11 at generator temperature rise rating under full load.
 - a. The manufacturer shall review the generator application, and the indicated loads served, to determine what level of filtering or derating, if any, is recommended or required for satisfactory regulator and generator performance. Provide equipment accordingly.
 - b. Provide alternator anti-condensation heater, thermostatically controlled, 100 watt, 120 volt.
3. Connection to the engine flywheel shall be via a semi-flexible disc coupling.
4. A permanent magnet generator (PMG) shall be included to provide a reliable source of excitation power for optimum motor starting and short circuit performance. The PMG and controls shall be capable of sustaining and regulating current supplied to a single phase or three phase fault at approximately 300% of rated current for more than 10 seconds.
5. Provide separate unit mounted, three-pole, molded-case circuit breaker for legally required loads at the generator output terminals in NEMA 1 enclosure(s) to protect the generator and the generator supply conductors against overload as indicated on the drawings. Circuit breakers shall have field-adjustable electronic trip units (LSI), with field-interchangeable rating plugs within frame size to enable emergency system coordination with downstream devices. Refer to Section 260500 for additional circuit breaker requirements. Each circuit breaker shall have a trip rating as indicated on the drawings
6. Provide (2) sets of ear protection to reduce noise levels to 20 db for the person wearing the headsets. Provide rack to hang heads sets by entry door.

F. Engine-Generator Set Control:

1. The generator set shall be provided with a microprocessor-based control system, which is designed to provide automatic starting, monitoring, and control functions

for the generator set. The control system shall also be designed to allow local monitoring and control of the generator set, and remote monitoring and control as described in this specification. Provide a digital generator set control for Windows software.

2. The control shall be mounted on the generator set. The control shall be vibration isolated and prototype tested to verify the durability of components in the system under the vibration conditions encountered.
3. The control shall be UL508 labeled, CSA282-M1989 certified, and meet IEC8528 part 4. Switches, lamps and meters shall be oil-tight and dust-tight, and the enclosure door shall be gasketed. There shall be no exposed points in the control (with the door open) that operate in excess of 50 volts. The controls shall meet or exceed the requirements of Mil-Std 461C part 9, and IEC Std 801.2, 801.3, and 801.5 for susceptibility, conducted, and radiated electromagnetic emissions. The entire control shall be tested and meet the requirements of IEEE587 for voltage surge resistance.
4. The generator set mounted control shall include the following features and functions:
 - a. Three position control switch labeled RUN/OFF/AUTO: In the RUN position the generator set shall automatically start, and accelerate to rated speed and voltage. In the OFF position the generator set shall immediately stop, bypassing time delays. In the AUTO position the generator set shall be ready to accept a signal from a remote device to start and accelerate to rated speed and voltage.
 - b. Red "mushroom-head" push-button EMERGENCY STOP switch: Depressing the emergency stop switch shall cause the generator set to immediately shut down, and be locked out from automatic restarting.
 - c. Push-button RESET switch: The RESET switch shall be used to clear a fault and allow restarting the generator set after it has shut down for any fault condition.
 - d. Push-button PANEL LAMP switch: Depressing the panel lamp switch shall cause the entire panel to be lighted with DC control power. The panel lamps shall automatically be switched off 10 minutes after the switch is depressed, or after the switch is depressed a second time.
 - e. Generator Set AC Output Metering: The generator set shall be provided with digital and analog metering set including the following features and functions:
 1. 2.5-inch, 90 degree scale analog voltmeter, ammeter, frequency meter, and kilowatt (kW) meter. These meters shall be provided with a phase select switch and an indicating lamp for upper and lower scale on the meters. Ammeter and kW meter scales shall be color coded in the following fashion: readings from 0-90% of generator set standby rating: green; readings from 90-100% of standby rating: amber; readings in excess of 100%: red.
 2. Digital metering set, 0.5% accuracy, to indicate generator RMS voltage and current, frequency, output current, output kW, kW-hours, and power factor. Generator output voltage shall be available in line-to-line and line-to-neutral voltages, and shall display three phase voltages (line to neutral or line to line) simultaneously.

f. **Generator Set Alarm and Status Message Display:** The generator set shall be provided with alarm and status indicating lamps to indicate non-automatic generator status, and existing alarm and shutdown conditions. The lamps shall be high-intensity LED type. The lamp condition shall be clearly apparent under bright room lighting conditions. The generator set control shall indicate the existence of the following alarm and shutdown conditions on a digital display panel (in addition, provide items designated (*) to signal at remote annunciator):

1. pre-low oil pressure (alarm)*
2. low oil pressure (shutdown) *
3. oil pressure sender failure (alarm)
4. low coolant temperature (alarm)*
5. pre-high coolant temperature (alarm)*
6. high coolant temperature (shutdown)*
7. engine temperature sender failure (alarm)
8. low coolant level (alarm or shutdown--selectable)*
9. fail to crank (shutdown)
10. overcrank (shutdown) *
11. overspeed (shutdown) *
12. low DC (battery) voltage (alarm)*
13. high DC (battery) voltage (alarm)*
14. normal DC (battery) voltage*
15. weak battery (alarm)*
16. battery charger malfunction*
17. low fuel-daytank (alarm or shutdown--selectable)*
18. high AC voltage (shutdown)
19. low AC voltage (shutdown)
20. under frequency (shutdown)
21. over current (warning)
22. over current (shutdown)
23. short circuit (shutdown)
24. over load (alarm)
25. emergency stop (shutdown)
26. generator running*
27. normal utility power*
28. EPS supplying load*
29. Not in auto*
30. Fault* (owner selected condition)

g. In addition, provisions shall be made for indication of two customer-specified alarm or shutdown conditions. Labeling of the customer-specified alarm or shutdown conditions shall be of the same type and quality as the above specified conditions. The non-automatic indicating lamp shall be red, and shall flash to indicate that the generator set is not able to automatically respond to a command to start from a remote location.

h. **Engine Status Monitoring:** The following information shall be available from a digital status panel on the generator set control:

1. engine oil pressure (psi or kPA)
2. engine coolant temperature (degrees F or C; Both left and right bank temperature shall be indicated on V-block engines.)
3. engine oil temperature (degrees F or C)
4. engine speed (rpm)
5. number of hours of operation (hours)
6. number of start attempts
7. battery voltage (DC volts)

- i. The control system shall also incorporate a data logging and display provision to allow logging of the last 10 warning or shutdown indications on the generator set, as well as total time of operation at various loads, as a percent of the standby rating of the generator set.
- j. Control Functions: The control system provided shall include a cycle cranking system, which allows for user selected crank time, rest time, and # of cycles. Initial settings shall be for 3 cranking periods of 15 seconds each, with 15 second rest period between cranking periods.
- k. The control system shall include an idle mode control, which allows the engine to run in idle mode in the RUN position only. In this mode, the alternator excitation system shall be disabled.
- l. The control system shall include an engine governor control, which functions to provide steady state frequency regulation as noted elsewhere in this specification. The governor control shall include adjustments for gain, damping, and a ramping function to control engine speed and limit exhaust smoke while the unit is starting. The governor control shall be suitable for use in paralleling applications without component changes.
- m. The control system shall include time delay start (adjustable 0-300 seconds) and time delay stop (adjustable 0-600 seconds) functions.
- n. The control system shall include sender failure monitoring logic for speed sensing, oil pressure, and engine temperature which is capable of discriminating between failed sender or wiring components, and an actual failure conditions.
- o. Alternator Control Functions: The generator set shall include an automatic voltage regulation system that is matched and prototype tested with the governing system provided. It shall be immune from mis-operation due to load-induced voltage waveform distortion and provide a pulse width modulated output to the alternator exciter. The voltage regulation system shall be equipped with three-phase RMS sensing and shall control buildup of AC generator voltage to provide a linear rise and limit overshoot. The system shall include a torque-matching characteristic, which shall reduce output voltage in proportion to frequency below a threshold of 58-59 HZ. The voltage regulator shall include adjustments for gain, damping, and frequency roll-off. Adjustments shall be broad range, and made via digital raise-lower switches, with an alpha-numeric LED readout to indicate setting level. The voltage regulation system shall include provisions for reactive load sharing and electronic voltage matching for paralleling applications. Motorized voltage adjust pot is not acceptable for voltage matching.
- p. Controls shall be provided to monitor the output current of the generator set and initiate an alarm when load current exceeds 110% of the rated current of the generator set on any phase for more than 60 seconds. The controls shall shut down and lock out the generator set when output current level approaches the thermal damage point of the alternator.
- q. Controls shall be provided to monitor the kW load on the generator set, and initiate an alarm condition when total load on the generator set exceeds the generator set rating for in excess of 5 seconds.

- r. Controls shall include a load shed control, to operate a set of dry contacts (for use in shedding customer load devices) when the generator set is overloaded.
- s. An AC over/under voltage monitoring system that responds only to true RMS voltage conditions shall be provided. The system shall initiate shutdown of the generator set when alternator output voltage exceeds 110% of the operator-set voltage level for more than 10 seconds, or with no intentional delay when voltage exceeds 130%. Under voltage shutdown shall occur when the output voltage of the alternator is less than 85% for more than 10 seconds.
- t. Provide a battery monitoring system to load test the batteries each time the engine is started. Test failure shall alarm when the DC control and starting voltage is less than 25VDC or more than 32 VDC. During engine starting, the low voltage limit shall be disabled, and if DC voltage drops to less than 14.4 volts for more than two seconds a "weak battery" alarm shall be initiated.
- u. Control Interfaces for Remote Monitoring - Control and interconnection points from the generator set to remote components shall be brought to a separate connection box. No field connections shall be made in the control enclosure or in the AC power output enclosure. Provide the following features in the control system:
 - 1. Form "C" dry common alarm contact set rated 2A @ 30VDC to indicate existence of any alarm or shutdown condition on the generator set.
 - 2. One set of contacts rated 2A @ 30VDC to indicate generator set is ready to load. The contacts shall operate when voltage and frequency are greater than 90% of rated condition.
 - 3. A fused 10 amp switched 24VDC power supply circuit shall be provided for customer use. DC power shall be available from this circuit whenever the generator set is running.
 - 4. A fused 20 amp 24VDC power supply circuit shall be provided for customer use. DC power shall be available from this circuit continuously from the engine starting/control batteries.
 - 5. The control shall be provided with a direct serial communication link using LonWorks communication network interface as described elsewhere in this specification and shown on the drawings.
 - 6. Serial interface communication port to allow the control to communicate with a personal computer running InPower software.
 - 7. Echelon LonWorks interface.
 - 8. Input/output expansion module – provides up to 16 configurable Form-C relays, 12 configurable discrete inputs and 8 analog inputs.

9. Digital output relay module – provides (3) relays, each with 2 normally open and 2 normally closed contacts rated 10A at 600 VAC, 5A at 24 VDC. Relay functions are configurable.

G. Remote Annunciator

1. Provide a remote alarm annunciator, (18) light minimum (refer to 2.02-F-4-f), in a surface-mounted NEMA 1 enclosure containing indicating lights/LED's for low oil pressure, high water temperature, overspeed, overcrank, low battery, low fuel level, fuel tank leak, other indications for NFPA 110, Table 3-5.5.2 (d) Level 1 (refer to generator control panel requirements), and an alarm horn with silencing pushbutton and light.
2. Remote annunciator shall be powered by the genset storage battery.
3. The remote annunciator shall have provisions to signal a common emergency power system alarm to the building security system. (See other Division 26 section for security system requirements).
4. The remote annunciator, located per drawings, shall have provisions for the manual start, transfer and transfer override features required by Code. Provide required wire and conduit between genset and remote annunciator.

H. Shutdown Switch

1. Provide a breakglass-type remote manual shutdown switch per NFPA 110, 5.6.5.6. Switch shall be located externally mounted to the outdoor generator enclosure; weatherproof type.

I. Sound Attenuated Weather Protected Enclosure

1. Provide corrosion-resistant sound attenuated weather protected enclosure for engine-generator set made of heavy gauge reinforced steel. Enclosure shall be sized for the engine-generator set and local auxiliaries (batteries, charger, and as specified and indicated). The enclosure shall be provided with necessary louvers, louver operators, maintenance access doors and heaters. Enclosures shall be Level II with measured sound pressure level performance as follows: average 75.5 dBA, maximum 76.7 dBA measured at 7 meters.

J. Acceptable Generator Manufacturers

1. The generator shall be manufactured by Generac, diesel engine-generator set, Model SD100.

2.3 FREE STANDING PRIMARY FUEL TANK

- A. Provide UL 142 listed day tank, free-standing from generator, size as hereinafter specified, complete with required connections and hardware.
- B. The day tank and all associated components shall be suitable for the application. Tanks with limitations on lengths of fill and/or vent piping shall not be permitted. Tanks shall have pressure ratings to comply with Code and local laws.
- C. The tank shall be constructed of heavy gauge steel, have a removable gasketed inspection plate 6" square, fuel level gauge, and fuel inlet strainer. Tank construction shall be double-wall, 200% rupture basin, rated 25PSI with automatic leak detection and alarm.

- D. The interior of the tank shall be epoxy coated and the exterior shall be rust-proofed and painted to match the color of the generator set.
- E. Plumbing and wiring between the tank and the generator set shall be field-installed. Tank fill and vent piping shall be provided and installed by Division 23.
- F. Tank shall be sized for 6 hours full load capacity, 55 gallon and be provided with appropriately sized and completely piped fill, drain, overflow and vent assemblies. Fuel system shall include: auxiliary hand pump, automatic level controls, solenoid valve(s) and alarms for trouble, leak, low and high fuel. Each alarm shall indicate at the remote annunciator and signal a fault to the security system and Building Management/Automation System (BMS). Provide "Reset" switch to extinguish and clear alarms until next event.

PART 3 - EXECUTION

3.1 GENERAL

- A. See Section 260500 BASIC MATERIALS.

3.2 SEQUENCE OF OPERATION

- A. Provide the following generator and automatic transfer switch (ATS) control and transfer sequence:
 - 1. Normal utility power supply source fails.
 - 2. The ATS sends a start signal to the generator control system.
 - 3. Generator(s) start. Normal operating voltage and frequency are achieved.
 - 4. ATS's sense the availability of an alternate power source or receives a permissive transfer signal from the emergency generator control system to transfer to the alternate source side. Emergency loads are picked up sequentially by the emergency generator's bus in accordance with load priority setting.
 - 5. The load priority settings are as follow:
 - a. At 3 seconds, Engine Start.
 - b. At 5 seconds, transfer Emergency ATS-E
 - c. At 8 seconds, transfer Legally Required Standby ATS-L1.
 - 6. The generator control system shall have the capability to control load shed operation, sending signals to load breakers and/or ATS devices removing loads from the emergency system in accordance with load priority setting to prevent generator overloading. This requires fast control processing as well as direct control of load serving breakers.
 - 7. Normal utility power supply source returns.
 - 8. ATS's transfer back to normal power supply source. The transfer can be either an open transition (momentary power interruption) or a momentary closed transition (no power interruption), depending on the emergency load requirements and the function and feature of the ATS installed.
 - 9. Generator(s) cool down and shut down.

3.3 INSTALLATION

- A. Install and connect generator sets and accessories where indicated, in strict compliance with manufacturer's instructions.
- B. Coordinate fuel system, exhaust system, and combustion/cooling air requirements with Division 23.
- C. Provide power, control, and signal wiring and connections as required for specified operation. Assure proper phasing of transfer switch normal and emergency source power connections.
- D. Coordinate wiring of ATS auxiliary contacts and Selective Load (BMS) Disconnect Contacts with Section 230923. Provide wiring and conduit from these contacts to mutually-agreed termination locations at the Division 23 interface equipment. Refer to Section 230923.
- E. Install a sign at the service entrance equipment indicating the type and location of the on-site emergency power source. Install a sign on the main grounding box identifying all emergency and normal sources connected at that location.
- F. The enclosure manufacturer shall provide supervisory labor during the rigging and re-assembly of the generator set enclosure at the jobsite.

3.4 FIELD ACCEPTANCE TESTING

- A. After completion of the emergency power system installation, perform a complete on site performance test per NFPA 110, Paragraph 7.13.
- B. Testing shall be conducted by authorized representatives of the equipment manufacturer(s), and witnessed by the Commissioner and any interested local authorities.
- C. Provide necessary calibrated test equipment, load banks, temporary cabling and connections, etc. as required to perform the testing in an approved manner.
- D. A certified report of test procedures, results, and any corrective measures taken shall be provided to the Owner.
- E. Demonstrate operating procedures to Owner's personnel and provide written operating and maintenance instructions.
- F. Tests and Approval:
 - 1. Factory Test: The engine-generator shall be tested fully assembled at the factory with a 0.8 PF inductive load bank. The generator set shall conform to the performance criteria of this section.
 - 2. The tests shall be conducted as follows:
 - a. Operation at full rated load for a minimum of two hours.
 - b. Records shall be maintained, throughout the test period on water temperature, oil pressure, ambient air temperature, voltage, current, frequency, noise readings, connected load and power factor.

3. On-Site Tests: The complete installation shall be tested for compliance with the Specification following completion of site work with a 1.0 PF resistive load bank for a minimum of 2 hours, or longer if required by NFPA 110 for specific occupancies and site conditions. Testing shall be conducted by representatives of the manufacturer, with required test equipment, witnessed by the Owner. Certified copies of test procedures and results shall be provided to the Owner.
4. On-Site load test shall repeat factory load test as described above and include the following:
 - a. Check fuel, lubricating oil, and antifreeze in liquid cooled models for conformity to the manufacturer's recommendations under environmental conditions present.
 - b. Test (prior to cranking engine) for proper operation of accessories that normally function while the set is in a standby mode. Accessories include: engine heaters, battery chargers, generator and control enclosure strip heaters and remote annunciators.
 - c. Check (during start-up test mode) for exhaust leaks, path of exhaust gases outside the building, cooling air flow, movement during starting and stopping, vibration during running, normal and emergency line-to-line voltage and phase rotation.
 - d. Test, by means of simulated power outage, automatic start-up by remote-automatic starting, transfer of load, and automatic shutdown. Prior to this test, adjust transfer switch timers for proper system coordination. Monitor throughout the test engine temperature, oil pressure, battery charge level, generator voltage, amperes, and frequency.
 - e. Perform manual transfer of loads to generator simulating loss of automatic transfer switch operation.
 - f. Test for proper interfacing and sequences of operation of ATS auxiliary and selective load shedding (BMS) contacts with equipment and sequences described herein, on the drawings, and in Section 230923.
 - g. Upon completion of installation, demonstrate capability and compliance of system with requirements. Where possible, correct malfunctioning units at site, then retest to demonstrate compliance; otherwise, remove and replace with new units, and proceed with retesting. Initial testing and retesting to be at no cost to Owner.
5. Provide complete instructions, consisting of three (3) operating and maintenance manuals, parts books, dimensional drawings. Separate unit wiring diagrams, and schematics and interconnection wiring diagrams shall be provided.
6. Owner Orientation: A representative of the supplier shall meet the Owner at the time of start up, and shall review the operation and parts books, starting and control methods, and recommended preventative maintenance procedures.
 - a. Furnish instruction as follows for a minimum of four employees of the system user:
 1. Instruction in the receipt, handling and acknowledgement of alarms.

2. Instruction in the system operation including manual control of output functions from the system control panel.
 3. Instruction in the testing of the system including logging of detector sensitivity, field test of devices and response to common troubles.
 4. The total Instruction requirement shall be a minimum of 8 hours or as required by the Owner, conducted on three successive days, but shall be sufficient to cover the items specified.
- G. Refill fuel oil tank so that Owner is provided with full tank upon successful completion of testing. This shall be at no cost to the Owner.

3.5 WARRANTY

- A. Provide five (5) year comprehensive extended coverage for standby power applications. The complete electrical power system (generator set, controls, and associated switches, switchgear and accessories) as provided by the single source manufacturer shall be warranted by the manufacturer against defects in materials and workmanship for a period of five (5) years or 1500 hours, whichever occurs first from the date of system start-up. Coverage shall include parts, labor, travel expenses, and labor to remove/reinstall said equipment per the manufacturer's standard published limited warranty. There shall be no deductibles applied to warranty.

END OF SECTION

SECTION 26 36 23

AUTOMATIC TRANSFER SWITCH

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.2 REFERENCES

- A. Perform the work of this Section in accordance with the requirements of Section 260000 General Provisions and Section 260500 Basic Materials.
- B. See other Division 26 Sections for requirements of emergency system panelboards and other electrical distribution equipment not included herein.

1.3 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to state and local codes and laws.
- B. The criteria of design and performance to produce the required operation is based on equipment of the named manufacturers. Equipment of other manufacturers will be considered, subject to acceptability in the Engineer's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products provided shall be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.4 SUBMITTALS

- A. Submit manufacturers' technical data for automatic transfer equipment and components, including construction details, performance specifications, and furnished options and features.
- B. Submit project-specific shop drawings, including complete wiring diagrams for system components.
- C. Submit certified field test report upon completion of work.
- D. Submit complete operating and maintenance manual.
- E. Submit short circuit, arc flash and overcurrent protection coordination study as described in Section 260000. Study shall accompany equipment submittals. Failure to include the study with the equipment submittals will cause the equipment submittals to be rejected.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Provide automatic transfer equipment compatible with the existing emergency power system. The system shall provide specified voltage, power and frequency to the designated circuits and loads within 10 seconds of loss of utility power. Interconnect new transfer switch(es) to the existing emergency generator according to manufacturer's recommendations.
- B. The emergency power system shall be in compliance with the following codes and standards:
 - 1. NEC Compliance: Comply with applicable requirements of NEC Articles 700, 701, and 702 pertaining to emergency and standby systems.
 - 2. NFPA Compliance: Comply with applicable requirements of NFPA 110 "Emergency and Standby Power Systems" (Level 1).
 - 3. UL Compliance: Provide automatic transfer switches and components which are listed and labeled by UL or ETL.
- C. The switch manufacturer shall have a factory-authorized parts and service facility within a reasonable distance of the jobsite.

2.2 AUTOMATIC TRANSFER SWITCH

- A. Provide open-transition electrically-operated, mechanically-held, double-throw automatic transfer switch, quantity and locations as indicated on the drawings, complying with the requirements of UL 1008 and NFPA 110, Level 1.
- B. Voltage, ampere rating, and number of poles shall be as indicated. Fault withstand rating shall be suitable for the application, with the indicated upstream circuit protective device. ATS shall be SE (service entrance) rated where installed on the supply side of the service disconnect or as indicated on the drawings.
- C. Three-pole switches shall be provided with a fully rated, solid, unswitched neutral terminal. Four-pole switches shall be provided with full-capacity neutral switching.
- D. Provide transfer switch mechanisms and control components factory assembled and wired in a wall mounting NEMA 1 enclosure with hinged, lockable door.
- E. Electrical operation shall be accomplished by a non-fused momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions. Transfer switches using components of molded case circuit breakers, or contactors not designed for continuous duty repetitive switching between active power sources, are not acceptable.
- F. Switch action for double-throw-type switches shall be mechanically held in both directions.
- G. Overcurrent devices shall not be part of transfer switch products.

- H. Provide switch with a manual operator, capable of transferring the switch to either source position for maintenance purposes. Control circuit shall be disconnected from electrical operator during such manual operation.
- I. Provide the following ATS accessories and controls:
1. Close differential voltage sensing on each phase of normal source. Pick-up voltage shall be adjustable from 85 percent to 100 percent of nominal, and dropout shall be adjustable from 75 percent to 98 percent of the pick-up value. Factory set for pick-up at 95 percent and dropout at 85 percent.
 2. Time-delay override of normal source voltage sensing shall delay transfer and engine start signals. Adjustable 0 to 6 seconds, and factory set at 2 seconds.
 3. Voltage/frequency lockout relay and sensing of the emergency source shall be provided to prevent premature transfer. Voltage pick-up shall be adjustable from 85 to 100 percent of nominal. Factory set to pick-up at 90 percent of nominal. Pick-up frequency shall be adjustable from 90 percent to 100 percent of nominal. Factory set to pick-up at 95 percent. Provide adjustable time delay for transfer to emergency, 0 to 60 seconds, set at 0 seconds, to permit staggered transfer of multiple switches.
 4. System test switch, momentary type, to simulate normal source failure with load, no load and disabled options.
 5. Retransfer time delay to normal source, adjustable from 0 to 30 minutes and factory set at 15 minutes. Provide automatic defeat of the delay upon loss of voltage or sustained undervoltage of the emergency source, provided the normal supply has been restored.
 6. Pilot lights to indicate source to which the load is connected.
 7. Engine starting contacts, one isolated normally closed and one isolated normally open. Contacts shall be gold flashed or plated and rated 10 amperes at 32 VDC.
 8. Engine cool-down time delay to run engine unloaded after retransfer to normal source, adjustable 0 to 30 minutes, set at 5 minutes.
 9. Engine-generator exercising timer, adjustable in 15 minute maximum increments, from 0 to 2 hours, for operation once a week, with load/no load transfer.
 10. Unassigned Auxiliary Contacts: Two normally open contacts for each switch position, rated 10 amperes at 480 VAC.
 11. Source Available/Connected Indicating Lights: Provide a indicating light and engraved nameplate for each of the following:
 - a. "NORMAL SOURCE AVAILABLE"
 - b. "NORMAL SOURCE CONNECTED"
 - c. "EMERGENCY SOURCE AVAILABLE"
 - d. "EMERGENCY SOURCE CONNECTED"

- e. Supervision of sources shall be via the transfer switch normal and emergency source sensing circuits, respectively.
- 12. Transfer Override Switch: To override automatic retransfer control so the ATS will remain connected to the emergency power source regardless of the condition of the normal source. Provide a pilot light to indicate the override status. Retransfer shall occur if the emergency source fails and the normal source is available.
- 13. Provide each ATS with a factory-installed and wired internal in-phase monitor relay. The relay shall control transfer so it occurs when the two sources are synchronized in phase. The relay shall compare phase relationship and frequency difference between the normal and emergency sources and initiate transfer when both sources are within 15 electrical degrees and only if the transfer can be completed within 60 electrical degrees. In-phase transfer shall be initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage. The transfer switch shall be configurable to control the operation time from source to source (program transition operation). The control system shall be capable of enabling or disabling this feature, and adjusting the time period to a specific value.
- 14. Provide surge protection for normal, source and load sides, minimum 70 kA.
- 15. Provide load power and load current monitoring to measure load phase and neutral, current, power factor, real power (kW) and apparent power (kVA). Include trouble signal to warn of excessive neutral current resulting from unbalanced or nonlinear loads.

2.3 ACCEPTABLE MANUFACTURERS

- A. Subject to compliance with requirements, provide Generac Power Systems automatic transfer switches or equal as manufactured by one of the following:
 - 1. Automatic Switch Company (ASCO) 7000 Series.
 - 2. Russ Electric Company

PART 3 - EXECUTION

3.1 GENERAL

- A. See Section 260500 BASIC MATERIALS.

3.2 INSTALLATION

- A. Install and connect transfer switches and accessories where indicated, in strict compliance with manufacturer's instructions.
- B. Provide power, control, and signal wiring and connections as required for specified operation. Assure proper phasing of transfer switch normal and emergency source power connections.

- C. Coordinate wiring of ATS auxiliary contacts with Division 23. Provide wiring and conduit from these contacts to mutually-agreed termination locations at the Division 23 interface equipment. Refer to Division 23.

3.3 FIELD ACCEPTANCE TESTING

- A. After completion of the transfer switch installation, perform a complete on site performance test of the emergency power system per NFPA 110, Paragraph 7.13.
- B. Testing shall be conducted by authorized representatives of the equipment manufacturer(s), and witnessed by the Commissioner's representatives and any interested local authorities.
- C. Provide necessary calibrated test equipment, load banks, temporary cabling and connections, etc. as required to perform the testing in an approved manner.
- D. A certified report of test procedures, results, and any corrective measures taken shall be provided to the Commissioner.
- E. Demonstrate operating procedures to Commissioner's personnel and provide written operating and maintenance instructions.
- F. Test for proper interfacing and sequences of operation of ATS auxiliary and selective load shedding (BMS) contacts with equipment and sequences described herein, on the drawings, and in Division 23 Section 230933.

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 50 00

SERVICE LIGHTING

PART 1 - GENERAL

1.1 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.2 REFERENCES

- A. Perform the work of this section in accordance with the requirements of Section 260000 General Provisions and Section 260500 Basic Materials.
- B. See other Division 26 sections and architectural reflected ceiling plans including lighting consultant's sections for requirements of architectural luminaires, and of lighting control and dimming equipment and systems, not included herein.

1.3 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to state and local codes and laws.
- B. The design is based on equipment of the named manufacturers. Equipment of other manufacturers will be considered, subject to acceptability in the Engineer's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products provided shall be suitable for, and where applicable UL or CSA listed and labeled for, the intended use or application.

1.4 SUBMITTALS

- A. Submit manufacturers' technical product data for luminaires and components, including the following:
 - 1. Dimensions.
 - 2. Materials and construction.
 - 3. Finishes.
 - 4. Photometric data.
 - 5. Ballasts (including normal, emergency and dimming).
 - 6. Lamps.
 - 7. Mounting accessories and details.
- B. Submit scaled and dimensioned shop drawings for custom-fabricated luminaires, and for custom field assemblies.

PART 2 - PRODUCTS

2.1 LUMINAIRES

- A. Provide luminaires of sizes, types and ratings indicated, complete with, but not limited to, housing, lenses, louvers, baffles, lamps, lamp holders, reflectors, ballasts, starters, wiring and mounting accessories.

- B. Luminaire types are indicated on schedules and drawings. Luminaires must comply with minimum requirements as stated therein or in the listed manufacturers' published data. Review architectural drawings and specifications to verify ceiling types, modules, and suspension systems appropriate to installation.
- C. Coordinate with the ceiling system supplier to ensure that the luminaires and components supplied will be fully compatible with the ceiling system construction.
- D. Recessed incandescent luminaires shall have built-in, automatic reset thermal protection, or be of low-temperature construction, as required by NEC 410-65 (c), and shall be provided with feed-through wiring boxes.
- E. Provide electrical wiring within luminaire suitable for the ampacity and operating temperature.
- F. Sockets for medium bi-pin fluorescent lamps shall be knife-edge type.
- G. Lenses for fluorescent luminaires shall be prismatic acrylic, pattern 12, minimum 0.156 inch thick. Provide gasketing between enclosure and frame and between frame and luminaire housing.
- H. Provide iridescent free reflectors and baffles for fluorescent luminaires.
- I. Provide internal fixture disconnecting means for fluorescent luminaires equipped with double ended lamps or ballasts supplied from multi-wire circuits per NEC 410.73(G).

2.2 BALLASTS

- A. Ballasts shall be Class P, thermally protected, ANSI C82.11-listed, U.L., CSA or ETL-listed, and compatible with the luminaires, lamps, and voltage systems specified. Include end-of-life protection for detecting excessive voltages across the lamp that can occur when the lamp nears end of life and shuts the ballast down safely before these high voltages can do harm or damage. Provide universal voltage ballasts rated for 120 – 277 VAC input unless otherwise indicated. Where applicable, ballasts shall comply with Public Law 100-357 and local utility energy conservation criteria for energy efficiency, and with the requirements of FCC Part 18. Ballasts shall meet FCC EMI/RFI emission requirements for consumer equipment. Ballasts shall contain no PCB's.
- B. Fluorescent ballasts for rapid-start lamps shall be high power factor, high frequency electronic type, sound rated A or better. Input Total Harmonic Distortion (THD) shall be less than 10% and ballast factor shall exceed 90%. Ballasts shall withstand line transients as defined in ANSI/IEEE C62.41, Category A. Ballasts shall be manufactured by Advance, Magnetek, Robertson or Sylvania, and shall come with a manufacturer's 5 year replacement warranty, including labor costs.
- C. Fluorescent ballasts for pre-heat lamps shall be high power factor, trigger-start type. Pre-heat ballasts with starters are not acceptable.
- D. Three-lamp fluorescent luminaires shall be provided with one 1-lamp and one 2-lamp ballasts, unless otherwise indicated. The center lamp of each shall be connected to the 1-lamp ballast.

- E. Ballasts for compact fluorescent and T-5 twin-tube lamps shall be electronic type. Total harmonic distortion shall be less than 10%. Ballast shall maintain constant output for a line voltage variation of +/- 10%, have transient voltage protection per ANSI C62.41 Category A, be sound rated A, have power factor and ballast factor >90% throughout dimming range, start lamp at minimum temperature of 50°F, and have lamp end of life detection and shutdown circuit.
- F. Emergency ballasts for fluorescent lamp emergency power supply shall be suitable for installation in ballast compartment of fluorescent luminaire. For luminaires not large enough to enclose the emergency ballast, provide a separate NEMA 1 enclosure accessible by removing the luminaire or ceiling tiles. Ballast output shall power each lamp for a minimum of 1100 lumens for 90 minutes. Battery shall be sealed lead calcium type, 5 year warranty, not pro-rated, with 7 to 10 year life expectancy. Include TEST switch and AC ON indicator light, installed to be operable and visible without disassembling luminaire. Emergency ballasts shall be Bodine B-50 ST (self-test) for T8 lamps, B35ST for T5 lamps, and B-84C ST for compact lamps and LP600 ST (self-test) for low profile and space-limited fixtures or approved equals. Include Bodine Model KTS remote keyed test switch or approved equal.
- G. Where installed outdoors, in unheated areas, cold storage areas or areas below 50°F fluorescent ballasts shall be low-temperature type, suitable for 0°F operation. Emergency ballasts installed in unheated areas shall be Bodine B50 Cold-Pak for linear fluorescent lamps, B4CF for compact fluorescent lamps or approved equals to withstand temperatures ranging from -4 °F to 131 °F and providing minimum 1200 lumens.
- H. Provide HID lamp ballasts capable of operating lamp types with ratings indicated; constant wattage autotransformer magnetic type (CWA), high power factor (>0.90), multi-tap (120/208/240/277 volt), core and coil assembly encapsulated in non-melt resin; install capacitor outside ballast encapsulation for easy field replacement. Remote ballasts shall be provided by the fixture manufacturer with the proper lamp ignitor for remote applications. Provide wiring in accordance with manufacturer's recommendations to withstand lamp starting voltage and operating temperature. Coordinate installation requirements with manufacturer to assure code compliant installation.
- I. Emergency ballasts for 175, 250 and 400 watt HID lamps with constant wattage autotransformer (CWA) ballasts shall maintain lamp arc for a minimum of two minutes until normal power is restored or emergency power takes over. Emergency ballasts shall be remote mounted up to 15 feet from HID fixture in a separate NEMA 1 enclosure. Battery shall be field replaceable, nickel cadmium type, 5 year warranty, not pro-rated, with 7 to 10 year life expectancy. Include charging indicator light. Emergency ballasts shall be Bodine Arc Keeper series or approved equal.
- J. Emergency ballasts for LED fixtures shall be Bodine BSL series emergency LED drivers, or approved equal, with rated current selected to provide fixture lumen output for minimum 90 minutes.
- K. Fluorescent Electronic Dimming Ballasts – Refer to Section 260943.

2.3 LAMPS

- A. Provide lamps as indicated on drawings or schedules, or to suit the specified luminaires.
- B. Fluorescent lamps shall be by the same manufacturer and shall be of the same color (3500K) with a Color Rendering Index (CRI) of 82 or higher for compact lamps and 85 or higher for other fluorescent lamps, unless otherwise indicated or required. Lamps of the same wattage, size and shape shall be identical. Fluorescent lamps shall be low-mercury types, and shall be EPA TLCP-compliant. Provide GE "Ecolux" series, Philips "ALTO" series, or Sylvania "Ecologic" series.

- C. Lamps shall be rated for dimming duty by the manufacturer where dimming control is shown on the drawings.
- D. Incandescent lamps shall be 120 volt, inside-frosted (except PAR types), sizes and bases as indicated or required for luminaire compatibility.
- E. High-intensity-discharge (HID) lamps shall be of the type and wattage specified, and compatible with the specified luminaires. High pressure sodium lamps for interior luminaires shall be diffuse-coated. Metal halide lamps for interior luminaires shall be phosphor-coated. Metal halide lamps for open luminaire operation shall be ANSI "O-rated" and include a quartz shroud around the arc tube to restrict end-of-life rupture. HID lamps for exterior luminaires shall be clear.

2.4 ACCEPTABLE MANUFACTURERS

- A. Cooper
- B. Lithonia
- C. Thomas
- D. Hubbell
- E. General Electric
- F. Lightolier
- G. Colombia/Prescolite/Moldcast

PART 3 - EXECUTION

3.1 GENERAL

- A. See Section 260500 BASIC MATERIALS.

3.2 INSTALLATION OF LUMINAIRES

- A. Install luminaires at locations and heights as indicated, in accordance with luminaire manufacturers' written instructions, applicable requirements of NEC and NEMA standards, and with recognized industry practices, to ensure that luminaires fulfill requirements.
- B. Electrical drawings show luminaire types, quantities, circuiting and approximate locations. Exact locations shall be as per the architectural drawings. Where exact dimensions are not given luminaires shall generally be centered in the room or area, equally spaced, sides parallel to walls, level, and in a straight line (for rows). Where conflicts occur or where exact locations cannot be determined, request clarification from the Commissioner.
- C. Provide necessary boxes, canopies, stems, chain, and mounting hardware for a complete installation.
- D. Luminaire suspension and mounting methods shall be capable of supporting the weight of the luminaire, plus the forces applied during re-lamping and maintenance.
- E. Pendant fluorescent luminaires shall be stem or chain suspended as indicated. Individual luminaires shall have two supports, equally spaced from each end. Continuous rows with rigid couplers shall have supports near the center of each luminaire, equally spaced. Stem-supported luminaires shall be wired via one of the stems. In finished or semi-finished areas, outlet boxes and stem mountings shall be provided with decorative canopies. Chain-supported luminaires shall be wired with 3-conductor Type MC cable, strapped to the chain to provide a neat appearance, with appropriate cable connectors at each end. Pendant luminaires shall be hung plumb and level, parallel and perpendicular

to walls.

- F. In unfinished areas and areas without finished ceilings including but not limited to Mechanical Equipment Rooms, storage rooms and utility corridors, install luminaires after completion of ductwork and piping, in approximately the locations shown. Luminaires shall not be mounted above ducts or pipes where rendered inaccessible or where the light will be substantially blocked. Luminaires shall not be supported from ductwork or piping. In Mechanical Equipment Rooms mounting heights and exact locations shall be field-determined, but in no case shall mounting height be less than 7'-0". Provide necessary support as described in Section 260500.
- G. Continuous rows of luminaires shall be rigidly aligned to provide a true straight-line appearance.
- H. 2' x 2' fluorescent luminaires in any one area or corridor shall be mounted with the lamps oriented in the same direction.
- I. Ceiling mounted lighting track sections, recessed downlights, outlet boxes, exit signs, etc. shall be securely mounted to the ceiling grid system and not supported by the acoustical ceiling tile only. Track shall be installed parallel and perpendicular to the grid system, unless otherwise indicated.
- J. Lay-in troffers for exposed grid ceilings shall be provided with hold-down clips to prevent T-bar spread and subsequent falling of luminaire.
- K. Recessed luminaires weighing more than fifty pounds shall not be installed directly on the concealed or exposed ceiling spline of a lightweight, mechanical acoustical ceiling system. Such fixtures shall be supported from the channel iron or the building structure.
- L. Surface or pendant type luminaires, regardless of their weight, shall not be mounted directly on the concealed or exposed ceiling spline of lightweight, mechanical acoustical ceiling system. Such luminaires shall be supported from the channel iron or the building structure.
- M. Install flush mounted luminaires to eliminate light leakage between luminaire frame and finished surface.
- N. Provide plaster frames for recessed luminaires installed in other than suspended grid types acoustical ceiling systems. Brace frames temporarily to prevent distortion during handling.
- O. Support surface mounted luminaires greater than 2' in length at a point in addition to the outlet box luminaire stud.
- P. Extra care shall be taken in the handling of parabolic baffle and louver assemblies. Factory-installed plastic protection should be left intact until just before final job completion.
- Q. Fluorescent lamps shall be stored lying flat. Do not stand on end.
- R. Install exit signs to be readily visible per Code and adjust locations up to five feet from locations shown on drawings at no additional cost.
- S. Install and operate UV filtering sleeves luminaires to insure proper fit. If any condition of incompatibility with the proposed luminaires is found, Contractor #4 shall submit for approval a luminaire of equal appearance and quality that has been found to be compatible with the lamp/sleeve combination.

3.3 ADJUSTING AND CLEANING

- A. Clean luminaires of dirt and debris upon completion of installation.
- B. Protect installed luminaires from damage during remainder of construction period.
- C. Adjust the aiming of adjustable floodlights, track-mounted luminaires, wall-wash luminaires, etc. as directed, or as required to direct the illumination to the intended locations. Where applicable, such adjustments shall be performed at night.
- D. Level and grout pole and bollard bases.

3.4 EXTRA STOCK

- A. At date of substantial completion, turn over to City of New York, in original factory packaging, spare lamps equaling 10% of the installed quantity of each type, and spare ballasts equaling 5% of the installed quantity of each type, minimum two (2) of each type.

3.5 LUMINAIRE SCHEDULE

- A. Refer to lighting /architectural drawings for luminaire descriptions and schedules. Refer to lighting specification Section 265100 for luminaire descriptions and schedules in addition to those shown in the following schedule:

TYPE	LAMP	DESCRIPTION
B1	(2)F32T8/SPX35	4 FOOT, LINEAR, LOW PROFILE T8 FLUORESCENT FIXTURE. PROVIDE INTEGRAL EMERGENCY BALLST WHERE INDICATED AND TUBE GUARD. BARTCO #BFL257-32 -120V- EB- TG Or approved equal.
B2, B2A, B2B	-	SINGLE CIRCUIT, SURFACE MOUNTED LIGHT TRACK IN MATTE BLACK FINISH. PROVIDE ALL COMPONENTS AND HARDWARE FOR A COMPLETE SYSTEM. PHILIPS LIGHTOLIER BASIC LYTESPAN 6000 SERIES - 120V <ul style="list-style-type: none"> • B2 - 45 1/16" • B2A - 96" • B2B - 93 1/16" Or approved equal.
B3	60W PAR16 NFL (HALOGEN)	BASIC CYLINDER TRACK LIGHT FIXTURE IN MATTE BLACK FINISH. LIGHTOLIER #6355 - 120V Or approved equal.
B4, B4A	6W WARM WHITE LED 3000K	LOW PROFILE STEP LIGHT WITH GLASS FACEPLATE. COLE LIGHTING #L 2158G-J -120V <ul style="list-style-type: none"> • B4 - BOTTOM MOUNTED JUNCTION BOX • B4A - BACK MOUNTED JUNCTION BOX Or approved equal.

B5	(8) 57W COMPACT FLUORESCENT	ARCITECTURAL GRADE HIGH BAY LIGHT FIXTURE WITH ALUMINUM DOME AND 21" DROP CLEAR POLY LENS. PHILIPS SPORTLITE TDX T5711S BK & 21DLCPV Or approved equal.
B6	150W A21	WALL MOUNTED LIGHT FIXTURE WITH TEMPERED 100 SERIES "BLUE" COLORED GLOBE AND GUARD. HUBBELL KILLARK #NV2IG15BHG Or approved equal.
X	L.E.D.	RECESSED EDGE-LIT EXIT SIGN WITH LED LIGHT SOURCE, 8" RED LETTERS ON CLEAR BACKGROUND WITH TRIM PLATE. SELF-CONTAINED EMERGENCY POWER BATTERY PACK WITH SELF-DIAGNOSTICS. FINISH PER COMMISSIONER. MOUNTING AND ARROWS AS REQUIRED. <ul style="list-style-type: none"> • SIGNTEX INC. CRYSTAL RECESSED CRR SERIES. • COOPER ATLITE MARATHON RECESSED SERIES. • HUBBELL DUAL-LITE NYE SERIES. Or approved equal.
X1	L.E.D.	PENDANT EDGE-LIT EXIT SIGN WITH LED LIGHT SOURCE, 8" RED LETTERS ON CLEAR BACKGROUND WITH TRIM PLATE. SELF-CONTAINED EMERGENCY POWER BATTERY PACK WITH SELF-DIAGNOSTICS. FINISH: MATTE BLACK. PENDANT: 25.25 INCHES. <ul style="list-style-type: none"> • SIGNTEX INC. CRYSTAL #CRS8BB-1RCX (MATTE BLACK)-NA-TW-PENX (25.25")-DG • COOPER ATLITE MARATHON SERIES. • HUBBELL DUAL-LITE NYE SERIES. Or approved equal.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 51 00

ARCHITECTURAL LIGHTING

PART 1 – GENERAL

1.01 DESCRIPTION

- A. General: Provide Architectural lighting in accordance with the Contract Documents.

1.02 RELATED WORK SPECIFIED ELSEWHERE

- A. Lighting Control Equipment
B. Emergency Lighting

1.03 DEFINITIONS

- A. Fixture: The elements of a luminaire that are designed to distribute the light, and to position and protect the lamps.
B. Luminaire: A complete lighting unit consisting of a lamp or lamps and ballasting (when applicable) together with the parts designed to distribute the light, to position and protect the lamps and to connect the lamps to the power supply.
C. Lighting Unit: A fixture or an assembly of fixtures with a common support, including a pole or bracket plus mounting and support accessories.
D. Average Life: The time after which 50 percent of the lamps fail and 50 percent of the lamps survive under normal conditions.

1.04 QUALITY ASSURANCE

- A. Fixture Materials: Provide fixture parts and components that are constructed of materials most appropriate to their use or function, and that are resistant to corrosion in a marine environment and mechanical stresses encountered in the normal application and function of the fixtures.
B. Manufacturers: Provide fixtures from manufacturers making like products for not less than three years.
C. Electrical Component Standard: Provide components that comply with NFPA 70 and that are listed and labeled by UL.
D. Listing and Labeling: Provide fixtures and accessory components specified in this Section that are listed and labeled for their indicated use and installation conditions on Project.
1. Special Listing and Labeling: Provide fixtures for use in damp or wet locations, underwater, and recessed in combustible construction that are specifically listed and labeled for such use. Provide fixtures for use in hazardous (classified) locations that are listed and labeled for the specific hazard.
2. The Terms "Listed" and "Labeled": As defined in the National Electrical Code, Article 100.

3. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.
- E. Applicable Codes: Fixtures shall be made and installed in accordance with the current version of the National Electric Code, the Uniform Building Code, the Federal Occupational Safety & Health Act, local codes and any other applicable regulations.
- F. Measuring and Testing Equipment: Instruments for the measurement of voltage, luminaire temperature, lighting level and fixture brightness level shall be available at all times on the site.

1.05 SUBMITTALS

- A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections, unless noted otherwise. Contractor shall be allowed one initial submission and one resubmission to meet all specification requirements. If the fixture submittals are not acceptable for approval after one resubmission, Contractor shall be required to provide fixtures exactly as specified, except where otherwise noted by the Commissioner.
- B. Substitutions:
 1. Contractor-offered substitutions beyond those named within the Luminaire Schedule in this Section must meet or exceed the aesthetic, dimensional and performance characteristics of the specified products. The Commissioner reserves the right to reject substitution submittals that do not meet the requirements of the application. In that event one of the specified products would have to be resubmitted.
 2. Some luminaires included in this specification are unique designs, available only from the specified manufacturer. No attempt shall be made to solicit bids from other manufacturers to copy or "knock-off" these luminaires.
 3. Some luminaires included in this specification are listed as having no alternate manufacturers. Where this is the case, it is because the Commissioner was unable to find a product for specification that met the requirements of the application. In these cases, the Contractor shall refer to Note 2.
- C. Product Data: Fixtures, lamps, ballasts and poles or other mounting components. Arrange Product Data for fixtures in order of fixture designation. Include data on features and accessories and the following:
 1. Outline drawings indicating dimensions and principal features of fixtures.
 2. Electrical Ratings and Photometric Data: Certified results of independent laboratory tests for fixtures and lamps. Provide data for the specified lamp or lamp/ballast combination.
- D. Provide data as required to demonstrate that the submitted product meets or exceeds the performance of the specified fixture.
 1. Include photometric data charts: C.U., candlepower distribution and/or luminance information as necessary.

2. Where technical charts alone cannot substantiate compliance, the submitting manufacturer may be required to provide a full photometric study of a specific project application for verification.
3. Lamp Data: Manufacturer, ordering code and technical information.
4. Ballast Data: Manufacturer, ordering code and technical data showing compliance with requirements.
 - a. Where a fixture manufacturer will utilize ballasts from multiple manufacturers depending on availability, technical data must indicate the minimum characteristics that will be met in all cases.
- E. Scaled shop drawings detailing nonstandard fixtures and indicating dimensions, weights, method of field assembly, components, features, and accessories. Details shall be scaled at not less than half full size.
 1. Scaled shop drawings of continuous run fixtures shall indicate overall length of each run, lamp combinations used to achieve the length, and any accessory components required.
- F. Wiring diagrams detailing wiring for control system showing both factory-installed and field-installed wiring for specific system of this Project, and differentiating between factory-installed and field-installed wiring.
- G. Coordination Drawings showing fixtures mounted on, in, or above ceiling. Indicate coordination with ceiling grids and other equipment installed in vicinity.
- H. Product certificates signed by manufacturers of lighting fixtures certifying that their products comply with specified requirements.
- I. Field test reports indicating and interpreting test results specified in Part 3 of this Section.
- J. Maintenance data for fixtures to include in the operation and maintenance manual specified in Division 1.

1.06 WARRANTY

- A. General Warranty: The special warranty specified in this Article shall be in addition to, and run concurrent with, other warranties made under requirements of the Contract Documents.
- B. Special Warranty: Submit a written warranty signed by manufacturer agreeing to replace external parts of lighting fixtures exhibiting a failure of finish as specified below. This warranty is in addition to, and not a limitation of, other rights and remedies specified elsewhere within the Contract Documents.
 1. Protection of Metal from Corrosion: Warranty against perforation or erosion of finish due to weathering.
 2. Color Retention: Warranty against fading, staining, and chalking due to effects of weather and solar radiation.
 3. Special Warranty Period: 3 years from date of Substantial Completion.

- C. Special Warranty for LED Luminaires and drivers: Submit a written warranty signed by manufacturer agreeing to replace LED luminaires and drivers that fail within 5 years from date of Substantial Completion.

1.07 DELIVERY, STORAGE, AND HANDLING

- A. Delivery: Luminaires and lighting equipment shall be delivered to the project complete, including mounting devices, lamps, and components necessary for the proper operation of the equipment.
- B. Marking: All equipment must be clearly and boldly identified as to the fixture type and, where practicable, the fixture location.
 - 1. Voltage Identification: Fixtures designed for voltages other than 110-125 volt circuits shall be clearly marked.
 - 2. Lamp Ballast Coordination: Fixtures equipped with ballasts for operation of rapid start lamps shall be plainly marked "Use Rapid Start Lamps Only." Similarly, fixtures equipped with ballasts or other components requiring use of specific types of lamps shall be plainly marked. Markings must be clear and shall be located to be readily visible to service personnel *but invisible from normal viewing angles* when lamps are in place.
- C. Timely Purchase: Luminaires, associated lamps and other allied equipment shall be ordered in a timely fashion and securely stored to be available to meet the project schedule.

1.08 EXTRA MATERIALS

- A. Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents.
 - 1. Lamps: 10 lamps for every 100 of each type and rating installed. Furnish at least one of each type.
 - 2. Plastic Diffusers and Lenses: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 3. Ballasts: 1 for every 100 of each type and rating installed. Furnish at least one of each type.
 - 4. Globes and Guards: 1 for every 20 of each type and rating installed. Furnish at least one of each type.
 - 5. Parabolic Louvers and Reflector Cones: 1 for every 100 of each type. Furnish at least one of each type.
 - 6. Custom Luminaires: When 10 identical custom fixtures are furnished, furnish one complete spare custom fixture as attic stock. Attic stock for custom color housings and reflector trims shall be furnished at the ratio of 1 for every 20, but no less than one.
 - 7. LED Modules: 1 for every 50 of the same type, from the same production run as the installed products.

8. Tools: Furnish manufacturer's recommended number of each tool required to service and maintain the fixtures.

PART 2 – PRODUCTS

2.01 MANUFACTURERS

- A. Available Products: Subject to compliance with the submittal requirements of this specification, fixtures that may be incorporated into the Work include, but are not limited to, the products specified in the Lighting Fixture Schedule at end of this Section. The photometric performance of all submitted products must meet or exceed the performance of the specified fixtures where proposed.

2.02 FIXTURES AND FIXTURE COMPONENTS, GENERAL

- A. Sheet Metal Components: Provide the required dimensional thickness of metal, plastic and composite materials so that all fixtures are rigid, stable and will resist deflection, twisting, warping under normal installation, and relamping procedures.
 1. All luminaire housings shall be minimum 0.84 mm cold rolled steel, unless a heavier gauge is specified or required by code.
 2. All aluminum extrusion housings shall be minimum 5 mm thick.
 3. All spun, hydro-formed or sheet aluminum reflectors shall be fabricated from # 12 aluminum sheets minimum, 1.45 mm or heavier. Material shall be 3002 alloy, 99.5 percent pure aluminum with uniform grain structure.
 4. All spun aluminum housings shall be of an alloy of the 5000 series (ANSI/ASTM-B209-1977) or of an alloy that is found to have equal corrosion resistance.
- B. Joints: Provide positive, durable, means of connection at all joints as required. No hollow rivets, unless specifically approved.
- C. Gaskets: Provide neoprene, silicone, rubber, or other appropriate gaskets, stops, and barriers where required to prevent light leak, control sound and vibration, prevent water leaks and, if pertinent, water vapor penetration.
- D. Edges: Provide finished product with the following minimum qualities:
 1. Ground and/or burr free metal edges.
 2. Tight fitting connections, hinges, and closures.
 3. Clean neat corners, edges, trims, and frames.
- E. Castings: All cast parts, including die-cast members, shall be of uniform quality; free from blow holes, pores, hard spots, shrinkage defects, cracks, and/or other imperfections that affect strength and appearance, or are indicative of inferior metals or alloys.
- F. Reflecting Surfaces: Minimum reflectance as follows, except as otherwise indicated:
 1. White Surfaces: 85 percent.

2. Specular Surfaces: 83 percent.
 3. Diffusing Specular Surfaces: 75 percent.
 4. Laminated Silver Metallic Film: 90 percent.
- G. Lenses, Diffusers, Covers, and Globes: 100 percent virgin acrylic plastic or water white, annealed crystal glass, except as otherwise indicated. Greenish-tinted lenses are not acceptable. Heat resistant where required: borosilicate or Pyrex glass.
1. Plastic: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.
 2. Lens Thickness: 0.125 inch (3 mm) minimum; except where greater thickness is indicated.
- H. Doors, Frames, and Other Internal Access: Smooth operating, free from light leakage under operating conditions, and arranged to permit relamping without use of tools. Arrange doors, frames, lenses, diffusers, and other pieces to prevent accidental falling during relamping and when secured in operating position.
- I. Fixture Support Components: Comply with Division 26 Section "Basic Electrical Materials and Methods."
1. Single-Stem Hangers: ½ inch (12 mm) steel tubing with swivel ball fitting and ceiling canopy. Finish same as fixture
 2. Twin-Stem Hangers: Two, ½ inch (12 mm) steel tubes with single canopy arranged to mount a single fixture. Finish same as fixture.
 3. Rod Hangers: 3/16 inch (5 mm) minimum diameter, cadmium-plated, threaded steel rod.
 4. Hook Hanger: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.
- J. Track-Lighting Systems: Provide components, including track, fittings, and fixtures from same manufacturer and as recommended by manufacturer for intended use.
1. Maintain a continuity of conductors through feeds, splices, and boxes. The relative positions of live and neutral conductors must always be maintained along a continuous run so that track fittings connect into the track in a consistent manner.
 2. Install surface mounted track straight and true regardless of the ceiling contour.
- K. Cast-in Fixture: Housings installed directly in concrete shall be fabricated of hot dip galvanized steel or cast aluminum. Where cast aluminum housings are used, give two coats of asphaltum paint prior to installation. To prevent direct contact of housings to concrete, 3 mm thick x 51 mm diameter solid neoprene grommets shall be furnished at every point light fixture surfaces are mounted to concrete structure.

2.03 FINISHES

- A. Manufacturer's standard, except as otherwise indicated, applied over corrosion-resistant treatment or primer, free of streaks, runs, holidays, stains, blisters, and similar defects.
1. Prior to finishing, all surfaces must be free from foreign materials such as dirt, rust, oil, polishing compounds, and mold release agents.
 2. Where necessary, surface cleaned by accepted chemical means shall receive corrosion inhibiting phosphating treatment assuring positive paint adhesion.
 3. All castings and extrusions shall be machined, sanded or similarly treated, and given minimum one coat of baked-on clear methacrylate lacquer, unless a painted finish is specified.
 4. Aluminum surfaces exposed to weather (other than anodized reflectors covered elsewhere) receive a duronodic or polyester powder paint finish as specified for corrosion resistance.
 5. Sheet steel fixture housings, iron and steel parts, which have not received phosphating treatment ("Bonderizing" or similar process) or are to be utilized in exterior applications, are to be made corrosion resistant by zinc or cadmium plating or hot-dip galvanizing.
 6. Anodized aluminum reflectors required for exterior use shall have a minimum of 0.02 mm anodizing thickness.

2.04 LAMPS

- A. Available Products: Lamps of the same type (such as fluorescent or HID) shall be supplied from the same manufacturer. Where a specific lamp manufacturer has been indicated in the Luminaire Schedule within this Section, lamps shall be supplied from the named manufacturer. Provide fluorescent lamps from Osram Sylvania or Philips Lighting.
- B. Fluorescent Color Temperature and Minimum Color-Rendering Index (CRI): 3000 K and 85 CRI, except as otherwise indicated.
- C. Linear Fluorescent Lamp Life: Rated average is 25,000 hours at 3 hours per start when used on rapid start circuits.
- D. Environmentally Responsible Lamp Technology: Use only fluorescent and metal halide sources that are low mercury and TCLP-compliant, except where not available in a specified lamp type.
- E. Lamp Burn-in Period: Fluorescent and metal halide lamps that are specified for dimming shall be burned-in, or run continuously in a non-dim state, for a period of 100 hours prior to dimming the lamps.
- F. Solid State Lighting / Light Emitting Diode (LEDs):
1. All individual LEDs used within a luminaire must be manufactured by a reputable LED manufacturer, such as Cree, Osram Sylvania, Nichia, Philips (Lumileds) or approved equal. LED modules shall be manufactured by Bridgelux, Philips (Fortimo) or Xicato.
 2. Testing: All products shall be tested by a Nationally Recognized Testing Laboratory (NRTL) in accordance with IES LM-79 testing methods and shall carry a UL, ETL or CSA label. Fixture manufacturer shall confirm in writing that

the LEDs within the fixture will not exceed the maximum temperature to which the LED die was tested using IES LM-80 testing methods.

3. **Drive Current, Thermal Management and LED rated Life:** Drivers must not over-drive the LEDs beyond LED manufacturer's recommendations and shall adhere to device manufacturer guidelines, certification programs, and test procedures for thermal management of LEDs within their fixtures. Drive current and luminaire thermal design must ensure minimum 50,000 hour rated life for the LEDs.
4. **Color Consistency:** All LEDs from the same manufacturer, both within each luminaire and from luminaire to luminaire, must be batch-sorted for visual color and brightness consistency. All luminaires of the same type shall be supplied at the same time and shall come from the same batch. Spare luminaires shall be provided from the same batch.
5. **Dimming:** Luminaire manufacturer must provide specific data on the means of dimming for coordination of the proper control device (specified elsewhere). Acceptable methods include electronic low voltage dimming and 0-10V 4-wire dimming protocol. Dimming must provide uniform, smooth, full-range dimming. LEDs must maintain consistent brightness and color throughout the dimming range.
6. **Technology Upgrades:** Supply the newest LED technologies that are available for the specified products when the orders are released, as long as there are no increases in input watts or cost.
7. **Warranty:** See Part 1.6 C. above for the warranty requirement for LED luminaire systems and LED drivers.

2.05 LAMPHOLDERS

- A. **Screw Base:** Screw base sockets for incandescent and metallic vapor lamps shall be of heavy duty heat resistant porcelain with spring center contacts and plated screw shells. For ceramic metal halide lamps with electronic ballasts, provide minimum 4 KV pulse rated lampholders.
- B. **Fluorescent Sockets:** Fluorescent lamp sockets operating with an open circuit voltage in excess of 300 volts shall be of the safety type that open the supply circuit when the lamp is removed from the sockets.

2.06 BALLASTS

- A. **Fluorescent Ballasts:** Electronic integrated circuit, solid-state, full-light-output, energy-efficient rapid start type, unless otherwise indicated; must be compatible with lamps and lamp combinations to which connected.
 1. Underwriters Laboratories (UL) listed, Class P, Type 1.
 2. Certification by Certified Ballast Manufacturers Association (CBM).
 3. Ballast shall be rapid start, unless otherwise indicated. Ballast starting parameters shall be consistent with lamp manufacturer's recommendations and shall provide full rated lamp life under normal operating conditions.

4. Ballast shall have audible noise rating of Class "A" except as otherwise indicated.
5. Voltage: Match connected circuits.
6. Lamp Flicker: Less than 5 percent.
7. Minimum Power Factor: 95 percent.
8. Total Harmonic Distortion (THD) of Ballast Current: 20 percent or less.
9. Minimum Ballast Factor (relative light output): 88 percent for T8 lamps, 87 percent for T5 compact fluorescent, 97 percent for all T4 compact fluorescent, and 100 percent for linear T5.
10. Multi-Lamp Ballasts: Use 2 lamp ballasts for multi-lamp fixtures where possible. Supply 3 or 4 lamp ballasts only if the ballasts comply with the other requirements of this specification.
11. Lamp-ballast connection method shall not reduce normal rated life of lamps.
12. Ballast shall comply with all applicable local, state, and federal efficiency standards.
13. For lamps smaller than one inch in diameter (all T2, T4 and T5 lamps) ballasts shall be equipped with a cut-off circuit that senses an over-voltage condition to the lamp for end-of-life protection.
14. Low-Temperature Fluorescent Ballasts: Comply with above requirements, except ballast may be Class P electromagnetic type. Starting temperature shall be minus 20 deg. F or colder, or the minimum available depending on lamp type.
15. Dimming Ballasts: Electronic rapid start type providing smooth dimming over a minimum range from 100 to 1 percent light output (unless otherwise specified). Listed for use with specific fluorescent dimming system provided.
16. Remote Ballasts: Where ballasts must be mounted remotely from fixtures, provide locations that fall within the manufacturer's recommended distance limitations.

2.07 TRANSFORMERS

- A. Suitability: Transformers shall be of the best quality and sized to compensate for voltage drop over indicated distances and meet with the following requirements:
 1. Where possible transformers have an integral line voltage switch.
 2. All transformers shall be locally fused.
 3. Provide adequate ventilation to meet code and manufacturers' requirements concerning temperature rise.

2.08 LED DRIVERS

- A. Provide line voltage LED product, where available, to eliminate the need for drivers. If the LED product is not available as line voltage, then the LED drivers shall meet the following requirements:
1. Drivers shall have a minimum efficiency of 85%
 2. Starting Temperature: -40° C
 3. Input Voltage: capable of 120 to 480 (±10%) volt, single phase or as required by the site
 4. Power supplies can be UL Class I or II output
 5. Surge Protection: The system must survive 250 repetitive strikes of "C Low" (C Low – 6kV/1.2 x 50 µs, 10kA/8 x 20 µs) waveforms at 1 minute intervals with less than 10% degradation in clamping voltage. "C Low" waveforms are as defined in IEEE/ASNI C62.41.2-2002, Scenario 1 Location Category C
 6. Drivers shall have a Power Factor (PF) of: ≥ 0.90
 7. Drivers shall have a Total Harmonic Distortion (THD) of: ≤ 20%
 8. Drivers shall comply with FCC 47 cfr part 18 non-consumer RFI/EMI standards
 9. Drivers shall be Reduction of Hazardous Substances (RoHS) compliant (see <http://www.rohs.eu/english/index.html>)

PART 3 – EXECUTION

3.01 INSTALLATION

- A. Set units plumb, square, and level with ceiling and walls, and secure according to manufacturer's written instructions and approved Shop Drawings. Support fixtures according to requirements of Division 26 Section "Basic Electrical Materials and Methods".
- B. Support for Recessed and Semi-recessed Grid-Type Fluorescent Fixtures: Units may be supported from suspended ceiling support system, unless prohibited by local codes. No movement permitted after installation. Install ceiling support system rods or wires at a minimum of 4 rods or wired for each fixture, located not more than 6 inches (150 mm) from fixture corners.
1. Install support clips for recessed fixtures, securely fastened to ceiling grid members, at or near each fixture corner.
 2. Fixtures Smaller than Ceiling Grid: For fixtures that normally mount at the ceiling grid on at least one side, install a minimum of 4 rods or wires for each fixture and locate at corner of ceiling grid where fixture is located. Provide additional ceiling grid to frame out fixture. Do not support fixtures by ceiling acoustical panels.
 3. Fixtures of Sizes Less than Ceiling Grid: Center in acoustical panel. Support fixtures independently with at least two ¾ inch (20 mm) metal channels spanning and secured to ceiling tees.

- C. Support for Suspended Fixtures: Brace pendants and rods over 48 inches (1200 mm) long to limit swinging. Support stem-mounted, single-unit, suspended fluorescent fixtures with twin-stem hangers. For continuous rows, use tubing or stem for wiring at one point and tubing or rod or cable for suspension for each unit length of chassis, including one at each end.
 - 1. Provide all mounting components required for installation, including hickeys, stud-extensions, ball-aligners, canopies and stems.
 - 2. Provide stems on pendant fixtures of the correct length to uniformly maintain the fixture heights shown on the drawings or established in the field.
- D. Cast-in Fixtures: Housings installed directly in concrete shall be fabricated of hot dip galvanized steel or cast aluminum. Where cast aluminum housings are used, give two coats of asphaltum paint prior to installation. To prevent direct contact of housings to concrete, 3 mm thick x 51 mm diameter solid neoprene grommets shall be furnished at every point light fixture surfaces are mounted to concrete structure.
- E. Fixture Attachment: Fasten to indicated structural supports.
- F. Fixture Attachment with Adjustable Features or Aiming: Attach fixtures and supports to allow aiming for indicated light distribution.
- G. Lamping: Where specific lamp designations are not indicated, lamp units according to manufacturer's instructions.
- H. Installation Sequence: Install fixture mounting frames, plaster rings, etc. prior to the trim assembly, which shall not be installed until the project is "broom-clean." Where the fixture location or construction does not permit sequential installation, all reflectors, lenses, flanges, and other visible surfaces shall be carefully protected.

3.02 WIRING

- A. Minimum Standards: All wiring shall comply with the following standards:
 - 1. Wiring between fluorescent lamp holders and associated operating and starting equipment shall be of similar or heavier gauge than the leads furnished with the approved ballasts.
 - 2. Wire leads to the receptacle or connector of any side prong incandescent lamp or any "cool-beam" lamp, or any lamp 200 watts or over shall be SF-2 (silicone rubber insulated) stranded wire.
 - 3. Wiring within fixture construction is to be concealed, except where the fixture design or mounting dictates otherwise.
 - 4. Wiring channels and wireways shall be free from projections and rough or sharp edges throughout, and at all points or edges over which conductors must pass and may be subject to injury or wear.
 - 5. Insulated bushings shall be installed at points of entrance and exit of flexible wiring.

3.03 GROUNDING

- A. Ground fixtures according to the grounding provisions found under Section 26 0000 General Provisions for Electric, and 26 0500 Basic Materials for Electric. Tighten electrical connectors and terminals, including grounding connections, according to manufacturer's published torque-tightening values.

3.04 FIELD QUALITY CONTROL

- A. Inspect each installed fixture for damage. Replace damaged fixtures and components.
- B. Give advance notice of dates and times for field tests.
- C. Provide instruments to make and record test results.
- D. Tests: Verify normal operation of each fixture after fixtures have been installed and circuits have been energized with normal power source.
- E. Replace or repair malfunctioning fixtures and components, then retest. Repeat procedure until all units operate properly.
- F. Report results of tests.
- G. Replace fixtures that show evidence of corrosion during Project warranty period.

3.05 CLEANING AND ADJUSTING

- A. Clean Fixtures After Installation: Remove all protective strippable coatings, dust, finger marks, paint spots, and any materials deleterious to the appearance or functioning of the fixtures. Use methods and materials recommended by manufacturer. Abrasive cleaners are not permitted.
- B. Focusing and Adjustment: After installation of all lighting fixtures, finishes and furnishings has been completed, provide personnel, ladders or lifts, spare lamps, and any other equipment necessary to expeditiously focus all lighting. All work shall be performed in accordance with applicable codes.
 - 1. Aim all adjustable lighting fixtures according to instructions.
 - 2. Program preset dimming system "scene" lighting levels, where applicable.

3.06 FINAL INSPECTION

- A. Upon completion of the installation, lighting equipment must be in first class operating order and free from defects in condition or finish.
 - 1. At time of final inspection, all fixtures and equipment must be installed and lamped with new lamps and be complete with all lenses, diffusers, reflectors, side panels, louvers, or other necessary components. Lamps that have been operating longer than the following time limits or that have already burned out must be replaced with new lamps prior to final completion.
 - a. Halogen Incandescent lamps: 200 hours (approximately 25 eight-hour days).

- b. Non-halogen Incandescent lamps: 75 hours (approximately 9 eight-hour days).
 - c. Fluorescent lamps: 1000 hours (approximately 125 eight-hour days).
 - d. HID lamps: 1000 hours (approximately 125 eight-hour days).
2. Fixtures shall be completely clean and free from finger marks, dust, plaster, or paint spots.
3. Any reflectors, lenses, diffusers, side panels, or other parts damaged prior to the final inspection shall be replaced.
4. Housings shall be rigidly installed and adjusted to a neat flush fit with the ceiling.
5. *No light leaks* shall be permitted at the ceiling line or from any visible part or joint.

LUMINAIRE SCHEDULE

TYPE	DESCRIPTION	LAMP CODE	MANUFACTURER/CATALOG/ BASIS OF DESIGN
L1	NOT USED		
L1A	Indirect/direct linear fluorescent T5 pendant suspended from sheetrock ceiling with 1-lamp cross section – nominally 8'-0" length Location: Admin Office 203	(3) FP21/830/ECO Input Watts: 74W	AXIS LIGHTING BDI-S-C-8-T5-1S-W-277V-ERS-1- CA With satin lens on bottom and clear lens on top; with minimum 4" overlap staggered lamps; bottom of fixture at 8'-0" A.F.F. in 9'-3" ceiling height; with white finish; provide with matching 4-1/4" diameter canopies, for feed and non-feed points, mounted in sheetrock ceiling; manufacturer's shop drawings showing length, lamping, and mounting are required for approval <i>Or approved equal by Gammalux or Focal Point</i>

NOTES:

- 1) Contractor shall verify all catalog codes with drawn and written descriptions.
- 2) Commissioner to verify all fixture finishes.
- 3) Commissioner to verify ceiling type and grid system for light fixture installation. Contractor to coordinate all ceiling materials and thicknesses with fixture trim requirements. Thick ceilings (greater than 3/4") may require modifications to fixtures.
- 4) Commissioner to coordinate ballast wiring with specified dimming controls.
- 5) Commissioner to verify all supply voltages and specify emergency lighting.

LUMINAIRE SCHEDULE

TYPE	DESCRIPTION	LAMP CODE	MANUFACTURER/CATALOG/ BASIS OF DESIGN
L8 ALT	<p>Recessed dimmable LED 5" aperture downlight with poured-in-place concrete housing</p> <p>Location: Theater 1</p>	<p>3000K LEDs</p> <p>652 Total Lumens</p> <p>Input Watts: 14.7W</p>	<p>EDISON PRICE LED-OS-DL/5-800-3000-277V- COL-CONC-DM/Lutron "Hi-Lume A Series1%" Provide with Lutron "Hi-Lume A Series 1%" LED driver to be used with dimming controls (specified by others); drivers to be remote outside theater- Commissioner to coordinate accessible and ventilated remote driver location; Commissioner to coordinate driver wiring with specified dimming controls; provide with poured-in- place concrete housing; Commissioner to coordinate fixture mounting with concrete mezzanine floor construction; Commissioner to provide custom color RAL flange finish to manufacturer; with semi- specular clear reflector finish</p>
L8A	<p>Recessed BT15 halogen 5" aperture downlight mounted in gyp. board ceiling</p> <p>Location: Theater 2 S.L.L.</p>	<p>BC75BT15/HAL/CL Philips</p> <p>Input Watts: 75W</p>	<p>EDISON PRICE HAL 15/4-COL-CCF Commissioner to coordinate fixture mounting with gyp. board ceiling; Commissioner to provide custom color RAL flange finish to manufacturer; with semi-specular clear reflector finish</p>

NOTES:

- 1) Contractor shall verify all catalog codes with drawn and written descriptions.
- 2) Commissioner to verify all fixture finishes.
- 3) Commissioner to verify ceiling type and grid system for light fixture installation. Contractor to coordinate all ceiling materials and thicknesses with fixture trim requirements. Thick ceilings (greater than ¾") may require modifications to fixtures.
- 4) Commissioner to coordinate ballast wiring with specified dimming controls.
- 5) Commissioner to verify all supply voltages and specify emergency lighting.

LUMINAIRE SCHEDULE

TYPE	DESCRIPTION	LAMP CODE	MANUFACTURER/CATALOG/ BASIS OF DESIGN
L8A ALT	Recessed dimmable LED 5" aperture downlight mounted in gyp. board ceiling Location: Theater 2 S.L.L.	3000K LEDs 652 Total Lumens Input Watts: 14.7W	EDISON PRICE LED-OS-DL/5-800-3000-277V- COL-DM/Lutron "Hi-Lume A Series 1%" Provide with Lutron "Hi-Lume A Series 1%" LED driver to be used with dimming controls (specified by others); drivers to be remote outside theater- Commissioner to coordinate accessible and ventilated remote driver location; Commissioner to coordinate driver wiring with specified dimming controls; Commissioner to coordinate fixture mounting with gyp. board ceiling; Commissioner to provide custom color RAL flange finish to manufacturer; with semi- specular clear reflector finish

NOTES:

- 1) Contractor shall verify all catalog codes with drawn and written descriptions.
- 2) Commissioner to verify all fixture finishes.
- 3) Commissioner to verify ceiling type and grid system for light fixture installation. Contractor to coordinate all ceiling materials and thicknesses with fixture trim requirements. Thick ceilings (greater than 3/4") may require modifications to fixtures.
- 4) Commissioner to coordinate ballast wiring with specified dimming controls.
- 5) Commissioner to verify all supply voltages and specify emergency lighting.

LUMINAIRE SCHEDULE

TYPE	DESCRIPTION	LAMP CODE	MANUFACTURER/CATALOG/ BASIS OF DESIGN
L9	Surface mounted dimmable linear LED wall grazer in cavity with remote power supplies – multiple lengths Location: Theater 1 (behind wood slats)	3000K LEDs 30deg. Beam 124 lumens/ft Input Watts: 4.5W/LF	WINONA LIGHTING WSL-102-(lengths)-30-30K-DM24V-A-NAA-STD Provide with 30° beam spread and 3000K color temperature LEDs; with remote mounted 24VAC magnetic transformer for use with low voltage magnetic dimming equipment (specified by others); remote power supplies to be located in nearby accessible ceilings outside of theater; cavity detail to be coordinated; two rows of fixtures per location – one row on top and one row on bottom inside cavity detail <i>Or approved equal by iO Lighting</i>
L9A	NOT USED		
L10	Surface mounted BT15 halogen 5" aperture downlight Location: Theater 1 (underneath Control Room)	BC75BT15/HAL/CL Philips Input Watts: 75W	EDISON PRICE BOM# 804883-MOD/-CC-COL-(black)-MG Fixture modified to take BT15 medium base lamp; Commissioner to coordinate fixture mounting with concrete control room floor construction; with black housing finish; with semi-specular clear reflector finish

NOTES:

- 1) Contractor shall verify all catalog codes with drawn and written descriptions.
- 2) Commissioner to verify all fixture finishes.
- 3) Commissioner to verify ceiling type and grid system for light fixture installation. Contractor to coordinate all ceiling materials and thicknesses with fixture trim requirements. Thick ceilings (greater than ¾") may require modifications to fixtures.
- 4) Commissioner to coordinate ballast wiring with specified dimming controls.
- 5) Commissioner to verify all supply voltages and specify emergency lighting.

L22	LED step light with 30° internal angle bracket and with remote drivers – nominally 4-1/8" Dia. x 1-3/4"D Location: Theater 1	3000K warm white LEDs 75-82 CRI 66 lumens 50,000 hours to L70 Input Watts: 1W	MP LIGHTING L02-1-W30S-30-C-30-(finish) With 3000K color temperature, 30° beam, clear lens, and 30° internal angle bracket; mounted 20" A.F.F. to center of fixture; Commissioner to specify finish
L23	Pipe mounted adjustable PAR38 halogen accent light Location: Theatre 2	70PAR38/IRC/HAL/WFL40 Philips Lumens: 1550 CBCP: 2320 Input Watts: 70W	LIGHTING SERVICES INC. 290-3G-WL-B-C998- Cross Baffle C With black housing finish; with wrench locking, beam softener lens, and cross baffle; provide c-clamp mounting with cord – hardwired to junction box for house lighting
L23A	Pipe mounted adjustable PAR38 halogen accent light with barn doors Location: Theatre 1 & 2	50PAR38/IRC/HAL/WFL25 Philips Lumens: 970 CBCP: 4000 Input Watts: 50W	LIGHTING SERVICES INC. 290-3G-WL-B-C998-Barndoor C- Cross Baffle C With black housing finish; with wrench locking, beam softener lens, barndoor, cross baffle; provide c-clamp mounting with cord – hardwired to junction box for house lighting

NOTES:

- 1) Contractor shall verify all catalog codes with drawn and written descriptions.
- 2) Commissioner to verify all fixture finishes.
- 3) Commissioner to verify ceiling type and grid system for light fixture installation. Contractor to coordinate all ceiling materials and thicknesses with fixture trim requirements. Thick ceilings (greater than 3/4") may require modifications to fixtures.
- 4) Commissioner to coordinate ballast wiring with specified dimming controls.
- 5) Commissioner to verify all supply voltages and specify emergency lighting.

TYPE	DESCRIPTION	LAMP CODE	MANUFACTURER/CATALOG/ BASIS OF DESIGN
L24	<p>Dimmable LED step light with 45° cut-off louvers and with remote drivers – nominally 3”H x 13-1/4”W x 3”D</p> <p>Location: Theater 1 & 2, S.L.L.</p>	<p>3000K LEDs</p> <p>Input Watts: 6W</p>	<p>COLE LIGHTING</p> <p>L2158N-J-TP-277V-(custom RAL finish)-MOD/3” Depth</p> <p>Faceplate modified 3” or less recessing depth – Commissioner to verify if required; provide with 3000K color temperature; with remote supply(s) 24V/DC and Osram Sylvania “Optotronic Dim” dimming module to be used with 0-10V dimming controls (specified by others); Commissioner to coordinate remote power supplies outside theater; 50’ maximum remote distance; fixture mounted 18” A.F.F. to center of fixture - Commissioner to coordinate mounting; Commissioner to verify if different finishes are need per fixture locations - Commissioner to provide custom RAL finish to manufacturer</p>
L25	<p>Vertically recessed in wall linear fluorescent slot fixture with frosted lens– length to be determined</p> <p>Location: Wardrobe 160 (mirror)</p>	<p>FP28/830/ECO</p> <p>FP21/830/ECO</p> <p>Input Watts: 8.5W/LF</p>	<p>AXIS LIGHTING</p> <p>BMRV-F-FL-(length)-T5-1S-W-UNV-ERS-1-DS</p> <p>Fixture length to be determined; Commissioner to coordinate vertical mounting in wall with drywall spackle flange; Commissioner to verify white trim finish; manufacturer shop drawings showing mounting, lamping and length required for approval</p> <p><i>Or approved equal by Gammalux or Selux</i></p>

NOTES:

- 1) Contractor shall verify all catalog codes with drawn and written descriptions.
- 2) Commissioner to verify all fixture finishes.
- 3) Commissioner to verify ceiling type and grid system for light fixture installation. Contractor to coordinate all ceiling materials and thicknesses with fixture trim requirements. Thick ceilings (greater than 3/4”) may require modifications to fixtures.
- 4) Commissioner to coordinate ballast wiring with specified dimming controls.
- 5) Commissioner to verify all supply voltages and specify emergency lighting.

LUMINAIRE SCHEDULE

TYPE	DESCRIPTION	LAMP CODE	MANUFACTURER/CATALOG/ BASIS OF DESIGN
L26	Dimmable compact fluorescent pendant with acrylic diffuser - nominally 7" H x 48"Dia. X 10-3/4" Canopy Dia. Location: Ground Floor Lobby	(2) FT24DL/830/ECO (2) FT36/DL/830/ECO Input Watts: 132W	VIBIA 0535-01-DM/Advance "Mark 10"-MOD/Black finish Provide one circuit with Advance Ballasts "Mark 10 Powerline" 5% electronic dimming ballast; provide compatible dimming controls; bottom of pendant to be 10'-0" A.F.F. of Upper Lobby in 16'-9-1/4" ceiling height - Commissioner to coordinate; provide with black finish for trim ring, housing, and canopy; with grey cable suspension
L26A	Dimmable compact fluorescent pendant with acrylic diffuser - nominally 7" H x 48"Dia. X 10-3/4" Canopy Dia. Location: Mezzanine Lobby	(2) FT24DL/830/ECO (2) FT36/DL/830/ECO Input Watts: 132W	VIBIA 0535-01-DM/Advance "Mark 10"-MOD/Black finish Provide one circuit with Advance Ballasts "Mark 10 Powerline" 5% electronic dimming ballast; provide compatible dimming controls; bottom of pendant to be 9'-3" A.F.F. in 13'-6" ceiling height to align with bottom of adjacent dropped ceiling - Commissioner to coordinate; provide with black finish for trim ring, housing, and canopy; with grey cable suspension

NOTES:

- 1) Contractor shall verify all catalog codes with drawn and written descriptions.
- 2) Commissioner to verify all fixture finishes.
- 3) Commissioner to verify ceiling type and grid system for light fixture installation. Contractor to coordinate all ceiling materials and thicknesses with fixture trim requirements. Thick ceilings (greater than 3/4") may require modifications to fixtures.
- 4) Commissioner to coordinate ballast wiring with specified dimming controls.
- 5) Commissioner to verify all supply voltages and specify emergency lighting.

LUMINAIRE SCHEDULE

TYPE	DESCRIPTION	LAMP CODE	MANUFACTURER/CATALOG/ BASIS OF DESIGN
L27	Dimmable recessed 4.5" diameter aperture LED adjustable downlight Location: Lobby	3000K LEDs Xicato 50,000hrs 2150 2000 Lumens Input Watts: 32W	LUCIFER LIGHTING DL2YP-NC-W-(ceiling thickness)-8021-30-1 DH-NC-YF-(ceiling thickness)-8021-12L2 With Lutron 1% dimmable driver, 3000K color temperature; provide dimming controls (specified by others) to interface with dimmable driver; fixture accommodates maximum 1-3/4" ceiling thickness; Commissioner to choose ceiling thickness option from ordering code; Commissioner to note 9" recessing depth; with white flange finish
L28	Recessed 6" aperture PAR38 adjustable halogen accent light mounted in acoustical cloud Location: Theater 1	100PAR38/IRC/HAL/ FL25 Philips Lumens:2200 CBCP: 8500 Input Watts: 100W	EDISON PRICE DL38/40/6AA-COL-SC30-+2"CLG-(black finish)-MOD/No Light Leaks Commissioner to coordinate fixture mounting with acoustical cloud construction; with 0-40° tilt and 358° rotation; housing to have black paint finish and no light leaks; fixture can accommodate a 2" thick ceiling – Commissioner to confirm that acoustical cloud is no thicker than 2"; with semi-specular clear reflector finish; with black overlap finish to match acoustical cloud finish

NOTES:

- 1) Contractor shall verify all catalog codes with drawn and written descriptions.
- 2) Commissioner to verify all fixture finishes.
- 3) Commissioner to verify ceiling type and grid system for light fixture installation. Contractor to coordinate all ceiling materials and thicknesses with fixture trim requirements. Thick ceilings (greater than 3/4") may require modifications to fixtures.
- 4) Commissioner to coordinate ballast wiring with specified dimming controls.
- 5) Commissioner to verify all supply voltages and specify emergency lighting.

LUMINAIRE SCHEDULE

TYPE	DESCRIPTION	LAMP CODE	MANUFACTURER/CATALOG/ BASIS OF DESIGN
L29	Surface mounted dimmable Class II rated LED strip light mounted in front of bar hidden by millwork "lip" with remote driver(s) Location: Lobby - Bar	3000K LEDs Input Watts: 1.25W/LF	BRUCK LIGHTING 135401-1/2700K - Orion Belt 70447 - 96W Dimmable Driver 135910 - Power Feed 135915 - Connector 135912-1 - Mounting Channel 135914 - Belt Clip Provide 0-10V dimming controls (specified by others) to interface with dimmable driver; fixture accepts (100V-240V) input voltage; provide dimmable drivers, wires, connectors, mounting channels, clips, and accessories per manufacturer's recommendation for a complete system; mounting detail to be coordinated; remote driver to be located at base of bar with access panel available for maintenance; driver can be located up to 25' away from fixture with 18 gauge wire - Commissioner to size wire gauge to match remote distance so that no more than a 2% voltage drop occurs; longer remote distance available if required with appropriate gauge wire - Commissioner to coordinate

SECTION 26 55 61

THEATRICAL SYSTEMS ELECTRICAL REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Includes but not limited to:

- 1) Section includes general requirements for provision of electrical services and materials, and raceway and outlet box system suitable to accommodate installation of the Division 11 Theatrical Systems, including Theatrical Audio Video (AV) Systems, Theatrical Lighting Dimming and Control, Theatrical Rigging, and Fixed Theater Seating.
- 2) Coordinate Theatrical Systems-related electrical materials installation with Division 11 Theatrical Systems drawings.
- 3) Provide Theatrical Systems-related electrical materials and methods in accordance with all requirements and related sections of Division 26 and as detailed herein.
- 4) Provide all Theatrical Systems junction boxes, pull boxes, terminal cabinets, cable trays, conduit, enclosures, standard outlet and device back boxes, and other electrical materials and hardware for a complete Theatrical Systems electrical infrastructure as specified herein and in quantities and location as shown on Electrical drawings.
- 5) Provide all disconnects, panelboards and company switches for Theatrical Systems Equipment as specified herein and in quantities as shown on Electrical drawings.
- 6) Provide test reports and verification that wiring installations comply with applicable standards and the requirements set forth in the Division 11 Theatrical Systems documents and by the equipment manufacturers.

B. Theatrical Audio Video systems

- 1) Provide all conduit, pull strings, standard backboxes, cable trays, pull boxes and terminal cabinets required for the AV Systems infrastructure.
- 2) Install, terminate and test all AV Systems low-voltage cable as furnished under Section 11 61 83. Wire shall be terminated under the direct supervision of the AV Systems contractor.
- 3) Provide and terminate all AC power wiring and receptacles required for the AV Systems isolated technical ground system and general power system.
- 4) Install all AV Systems equipment as furnished by the Section 11 61 83 AV Systems Contractor. All Theatrical AV systems and equipment shall be installed under the direct supervision of the AV Systems Contractor.
 - a. The Electrical Contractor shall provide a separate trained crew of electricians dedicated to the installation of the Theatrical AV Systems equipment and

- cabling.
 - b. The Electrical Contractor shall not begin pulling Theatrical AV systems wiring through the empty conduit until all conduit, pull boxes, etc. for each given run (point-to-point) are completely installed by others and ready for such wire and cable installation.
 - c. The Electrical Contractor's foreman shall undertake a field inspection of the conduit system and pull boxes, reporting any missing conduit, sharp edges, missing bushings or drag lines, blocked runs and so forth, prior to attempting installation of wire and cable.
- C. Theatrical lighting dimming and control
 - 1) Provide all conduit, wire, and wire pulling for theatrical lighting systems.
 - 2) Provide terminations for theatrical lighting systems racks and devices, low voltage termination will be terminated under the direct supervision of the Theatrical lighting contractor.
 - 3) Provide and terminate wiring and double gang receptacle outlets required for the Theatrical Lighting System "TL" power system as called out on drawings.
 - 4) Provide interface devices required to dim architectural LED lighting fixtures within the auditorium with input control signal (DMX control protocol or 0-10V) from Theatrical Lighting Dimming and Control system as provided under section 116163.
- D. Theatrical Rigging
 - 1) Provide all conduit, wire, wire pulling and termination for motorized theatrical rigging equipment.
 - 2) Provide terminations for theatrical rigging systems racks and devices, low voltage termination will be terminated under the direct supervision of the Theatrical rigging contractor.
 - 3) Provide all local motor disconnects as required to complete system in a code compliant manner.
 - 4) Provide terminations for all system electrical safety devices.
- E. Fixed theater seating
 - 1) Provide all conduit, wire, wire pulling, junction boxes for fixed theater seating aisle light fixtures. Fixture provided as an integrated arm end panel. Coordinate requirements with seating manufacturer.
- F. Future Telescopic bleacher system
 - 1) Provide all conduit for future telescopic seating unit.
 - 2) Provide all conduit for 120V switched power circuit for relay control of future aisle lights fed from relay panel furnished under Section 11 61 63.

1.2 PRODUCTS INSTALLED BUT NOT FURNISHED UNDER THIS SECTION

A. Theatrical Audio Video systems

- 1) Install all AV Systems equipment as furnished under Section 11 61 83.
- 2) Terminate all AV Systems AC power receptacles and devices within equipment racks (including receptacles, isolated ground bus bars, etc.), as furnished under Section 11 61 83.
- 3) Install all AV Systems specialty panel and device back boxes including floor boxes, recessed ceiling loudspeaker back boxes, etc. furnished by Division 11 where noted. Provide all required conduit, electrical hardware, and mounting brackets.

B. Theatrical lighting system

- 1) Receive, store and install dimmed and switched power distribution equipment and associated control equipment furnished under Section 11 61 63.
- 2) Receive, store and install all power and control distribution and connection devices furnished under Section 11 61 63.
- 3) Install terminal boxes and flexible multi-cable drops to pipe grids, etc.
- 4) Install all head-end control equipment furnished under Section 11 61 63 under the direct supervision of the equipment manufacturer.

C. Theatrical rigging system

- 1) Install all Theatrical Rigging Systems line voltage and low voltage control equipment as furnished under Section 11 61 33.
- 2) Install, in coordination with the Theatrical Lighting Contractor, cable management pantograph as furnished under Section 11 61 33.
- 3) Terminate all Theatrical Rigging System power disconnects and devices within equipment racks (including receptacles, etc.), as furnished under Section 11 61 33.
- 4) Install all Theatrical Rigging Systems specialty panel and device back boxes furnished by Division 11 where noted. Provide all required conduit, electrical hardware, and mounting brackets.

D. Fixed Theater Seats

- 1) Install all Fixed Theater seat aisle lights and transformers as furnished under Section 12 61 00.
- 2) Provide all required conduit, electrical hardware, and mounting brackets.

E. Future Telescopic Bleacher System

- 1) Terminate 120V relay circuit fed from relay panel supplied under Section 11 61 63 Theatrical Lighting Dimming and Control.
- 2) Provide all required conduit, electrical hardware, and mounting brackets.

1.3 SEQUENCE AND SCHEDULING

- A. The installation of the theatrical system wiring devices shall not occur until all painting in the area has been completed.
- B. Computer grade network components, rack processors and modules, and any other equipment sensitive to construction debris and dust shall not be installed until all debris and dust has been removed. Typical "office" cleanliness shall be required in rooms in which computer grade equipment is to be installed.
- C. Computer grade network components, rack processors and modules, and any other valuable equipment shall not be installed until equipment rooms are secure.
- D. The unpacking and installation of computer control consoles and peripheral devices shall not occur until the control room is secure and climate controlled.

1.4 SYSTEM START UP AND COMMISSIONING

- A. Test and "ring out" all 120V system socket-outlet devices to ensure that all systems components are wired properly and functional at the time of commissioning.
- B. Provide personnel at the time of commissioning to supervise the inspection / testing of theatre systems related electrical equipment. This includes distribution boards, circuit breaker panels, relay panels, and all mains voltage devices installed under this section.
- C. Provide the appropriate test equipment for the commissioning of theatre systems related electrical equipment.
- D. Provide access (ladders, lifts, scaffolding, etc) to all theatre systems related electrical equipment for inspection at the time of commissioning.
- E. Provide testing of Theatrical AV Systems low-voltage cabling as identified in specification section 116183, article 3.3.A.5. All cable testing shall be performed under the supervision of the AV Systems contractor.

PART 2 - PRODUCTS

2.1 RACEWAYS

- A. Conduit and Fittings
 - 1) Provide electrical metallic tubing (EMT) conduit for all Theatrical Systems wiring with the following exceptions:
 - a. Provide rigid steel conduit (GRS) for AV Systems wiring installed in poured concrete and masonry, and where specifically required.
 - b. PVC conduit is NOT acceptable, except within concrete slab.
 - c. Compression-type conduit connectors and couplings, rated for maximum continuity (conduit-to-box and conduit-to-conduit), shall be used for all AV Systems metallic conduit.
- B. Cable Trays

- 1) General
 - a. Provide cable trays, tray supports, and splicing hardware to accommodate cable runs as shown on theatre equipment drawings. Refer to sections 11 61 63 and 11 61 83.
 - b. Trays to be adequately mounted so that there is no visible deflection between supported sections.

- 2) Theatrical AV Systems
 - a. Provide 16-gauge steel cable tray, 18"w x 6"d, with three barriers for four wiring compartments. Cable tray interiors to be smooth and free of nicks, burrs, or any protrusions.
 - b. Length as required to carry AV Systems cabling from the terminal cabinets to the top or bottom of the equipment racks, or as indicated. Refer to Section 11 61 83 AV drawings.
 - c. Cable trays shall be electrically and mechanically connected (bonded) to the building electrical safety ground and isolated from the AV Systems equipment racks in order to maintain the integrity of the AV Systems technical isolated technical ground system.
 - d. Cable tray shall be by B-Line, Chalfant Series-6, or equal.

- 3) Theatrical lighting system
 - a. Provide high strength steel basket style cable tray, 300mm W x 50mm D (12" x 2" UL WB212) Cable tray interiors to be smooth and free of nicks, burrs, or any protrusions.
 - b. Provide length and quantity to accommodate cable runs as shown on drawings.
 - c. Cable trays shall be electrically and mechanically connected (bonded) to the building electrical safety earth.
 - d. Cable trays shall be finished flat black
 - e. Cable tray shall be by Cooper B-Line, or equal.

2.2 BOXES

A. Pull and Junction Boxes

- 1) Pull and junction boxes shall be as specified under Section 260500, 2.5 (C) ELECTRICAL BOXES: Pull and Junction Boxes.

B. Outlet Boxes

- 1) Outlet boxes shall be as specified under Section 260500, ELECTRICAL BOXES: with the following additional requirements:
 - a. Recessed outlet boxes:
 1. Provide outlet boxes as standard steel gang boxes for devices of 2-1/2" minimum depth.
 - a) Provide plaster rings of appropriate size (per Section 11 61 83 Appendix), and depth (per site conditions).
 - b) 3" x 2" gangable steel switch boxes ("GEM" boxes) shall not be acceptable as single or multiple-gang recessed back boxes.
 - b. Surface-mounted outlet boxes:
 1. Provide surface-mounted outlet boxes as Wiremold-type boxes or

weatherproof cast metal boxes ("bell boxes"), of 2-5/8" depth. Single-gang "bell boxes" of 2-5/8" depth shall be acceptable.

2. Any surface mount back box which allows the receptacle cover plate to overhang the edge of the box presents a safety hazard and shall not be acceptable.

2) AV Panel Back Boxes

- a. Provide standard NEMA Type 1 screw cover back boxes for "C" Series AV panels, unless noted otherwise.
- b. Back Box sizes and mounting conditions are as indicated on the Section 11 61 83 AV Systems drawings and specification.
- c. All surface mount AV panel and device back boxes to be finished flat black, unless noted otherwise.

3) AV Terminal Cabinets

- a. Provide standard NEMA Type 1 telephone cabinet style terminal cabinets with plywood backboard, hinged door & locking handle for routing of all AV Systems wiring in and out of AV Systems rack rooms as indicated on AV Systems shop drawings.
- b. Terminal Cabinet sizing & final quantities to be coordinated with AV Systems contractor. Sizing & quantities will be determined by overall system routing and distribution.

2.3 THEATRICAL SYSTEMS CONTROL CABLE

A. General

- 1) Provide only wire types specified in Electrical Documents and verified by Theatrical Systems Manufacturer's shop drawings. No substitutions allowed without written approval of the Commissioner and Theatrical Systems Manufacturers.
- 2) Wire types provided in Electrical documents represent the information available at the time of bid and are provided for development of conduit size requirement and bidding purposes. Determination of the final wire type is dependent on the specific systems of the successful Division 11 manufacturer. Do not purchase or install any Theatrical Systems control cable until shop drawings for these systems are approved.
- 3) All wire to be installed in conduit unless otherwise noted or by specific written agreement by the Commissioner. Should an exception be made allowing cable to be run outside of conduit, contractor shall provide appropriate plenum rated cable for approval by the Commissioner and Theatrical Systems Manufacturers.
- 4) Network cable runs shall be continuous. Cable splicing will not be acceptable.
 - a. All network cable runs must be confirmed. Lengths exceeding 75M shall be identified and run with fiber optic cable.

2.4 WIRING DEVICES

- ### A.
- Provide Theatrical systems receptacles and other required wiring devices, complete with associated hardware and wall plates, as specified below. Verify cover plate finish color with Commissioner.

- 1) AV System isolated ground receptacle
 - a. AV System isolated ground receptacles fed from Non-UPS power shall be colored orange.
 - b. AV System isolated ground UPS & Non-UPS circuits may not be housed within the same backbox.
 - c. Provide cover plate labeled "SOUND SYSTEM ISOLATED GROUND" with labeling identifying panelboard and breaker number feeding receptacle.
 - d. Edison/Straight Blade Receptacle Types
 1. Simplex 15 Amp 120V isolated ground Edison receptacles shall be standard NEMA 5-20R configuration, 2-pole, 3-wire
 - a) Receptacles shall be Hubbell IG5251, or approved equal.
 2. Duplex 20 Amp 120V isolated ground Edison receptacles shall be standard NEMA 5-20R configuration, 2-pole, 3-wire
 - a) Receptacles shall be Hubbell IG5362, or approved equal.
 3. Duplex 30 Amp 120V isolated ground Edison receptacles shall be standard NEMA 5-30R configuration, 2-pole, 3-wire.
 - a) Receptacles shall be Hubbell IG9308, or approved equal.
 - e. Twist-Lock/Locking Receptacle Types
 1. Simplex 20 Amp 120V isolated ground Twist-Lock receptacles shall be standard NEMA L5-20R configuration, 2-pole, 3-wire.
 - a) Receptacles shall be Hubbell IG2310, or approved equal.
 2. Duplex 20 Amp 120V isolated ground Twist-Lock receptacles shall be standard NEMA L5-20R configuration, 2-pole, 3-wire.
 - a) Receptacles shall be (2) Hubbell IG2310 in two-gang backbox, or approved equal.
 3. Simplex 30 Amp 120V isolated ground Twist-Lock receptacles shall be standard NEMA L5-30R configuration, 2-pole, 3-wire.
 - a) Receptacles shall be Hubbell IG2610, or approved equal
 4. 3-phase 30 Amp 120/208V isolated ground Twist-Lock receptacles shall be standard NEMA L21-30R configuration, 4-pole, 5-wire.
 - a) Receptacles shall be Hubbell IG2810, or approved equal
- 2) Provide Theatrical Lighting system receptacles and other required wiring devices, complete with associated hardware and wall plates, as specified below and shown on Electrical drawings.
 - a. Theatrical lighting system power receptacles
 1. Quad receptacles shall be standard NEMA 5-20R configuration, 20A/120V 2-pole, 3-wire.
 2. Receptacle shall be colored gray.
 3. Receptacle shall be fed from Lighting Systems power panel board as shown on drawings.
 4. Receptacles shall be Hubbell or equal.

2.5 COMPANY SWITCHES AND RECEPTACLES

- A. Provide Theatrical Systems company switch disconnects and receptacles as described herein and as shown on Electrical drawings.
- B. 60 Amp AV Systems company switch receptacles
 - 1) Company switch receptacle configuration shall be 120/208-volt 3-phase 4-wire & equipment ground 60-amp mechanically interlocked pin and sleeve receptacle provided with mating plug connector.

- a. Connect technical isolated ground conductor to ground lug.
 - b. Provide 60-amp receptacle and plug
- 2) Manufacturers
 - a. Hubbell
 - b. Cooper Devices
 - c. Leviton
 - 3) Basis of Design
 - 1. Basis-of-design is 60-amp Hubbell HBL560MI9W Receptacle and HBL560P9W Plug. Comparable products by one of the manufacturers listed above shall also be acceptable.
- C. 60 Amp Theatrical Lighting company switch receptacles
- 1) Company switch receptacle configuration shall be 120/208-volt 3-phase 4-wire & equipment ground 60-amp mechanically interlocked pin and sleeve receptacle provided with mating plug connector.
 - a. Provide 60-amp receptacle and plug
 - 2) Manufacturers
 - a. Hubbell
 - b. Cooper Devices
 - c. Leviton
 - 3) Basis of Design
 - 1. Basis-of-design is 60-amp Hubbell HBL560MI9W Receptacle and HBL560P9W Plug. Comparable products by one of the manufacturers listed above shall also be acceptable.
- D. 100 Amp Theatrical lighting company switch receptacles
- 1) Company switch receptacle configuration shall be 120/208-volt 3-phase 4-wire & equipment ground 100-amp mechanically interlocked pin and sleeve receptacle provided with mating plug connector.
 - a. Provide 100-amp Receptacle and Plug.
 - 2) Manufacturers
 - a. Hubbell
 - b. Cooper Devices
 - c. Leviton
 - 3) Basis of Design
 - 1. Basis-of-design is 100-amp Hubbell HBL5100MI9W Receptacle and HBL5100P9W Plug. Comparable products by one of the manufacturers listed above shall also be acceptable.
- E. 200 Amp Theatrical lighting company switch
- 1) Company switch shall be 120/208-volt 3-phase 5-wire & equipment ground 200-amp device with means of connection for both single pole E1016 compatible connectors

and direct wire lugs in a connection chamber.

- a. Provide Lex Products CS-200F-C6DS1-BLK or Union Connector PBS-M2010W-C/SP Both with double neutral option.

PART 3 - EXECUTION

3.1 THEATRICAL SYSTEMS CONTROL CABLES

- A. Theatrical Systems Ethernet network shall be Category 5E UTP /100Base TX cabling installed in accordance with all applicable standards including but not limited to IEEE 802.3u standard.
 - 1) Cable runs between hubs shall not exceed 75 meters. Contractor shall verify run lengths prior to installation.
 - 2) No splices. No exceptions.
 - 3) Contractor shall provide field installation reports verifying that cable installations comply with specifications.
- B. Theatrical Systems Fiber Optic (single-mode fiber back bone) /100Base-FX cabling shall be installed in accordance with all applicable standards including but not limited to IEEE 802.3u standard (if required).
- C. Termination of all control cabling shall be undertaken only under the direct supervision of Theatrical Lighting Manufacturer's authorized field service personnel.

3.2 AV SYSTEM RACEWAY INSTALLATION

- A. General: proceed as directed under all related sections of Division 26, and as directed below. Should any requirements conflict, the most stringent condition shall apply.
- B. Rigid Conduit, Steel Electrical Metallic Tubing.
 - 1) All AV Systems empty conduit has been sized for wire and cable based on full use of the maximum "40% fill" area of each conduit, per the NEC.
 - 2) Provide ¾" minimum conduit size.
 - 3) Provide a complete, continuous and clean conduit system, as indicated on the drawings, including all conduits, conduit supporting means, all electrical boxes and enclosures, etc., and all connections to terminal cabinets, pull boxes, and AV panels and receptacles.
 - 4) Provide separate and independent conduit systems for AV Systems wire and cable of the following different wiring/conduit groups, as shown on the drawings, without exception:
 - a. Group A - Microphone & Line Level Audio
 - b. Group B - Video & RF Level
 - c. Group C - Communication & Control Level
 - d. Group D - Loudspeaker Level
 - e. Group E - Spare (empty conduit only)

- 5) Maintain minimum separation required between AV Systems conduit groups, and between all AV Systems, production lighting system control, and AC power conduit as indicated in the separation schedules below.
- 6) All conduit must be clean and free of burrs, nicks, etc. Ream all conduit ends to prevent damage to cables.
- 7) Provide a pull box for any conduit run which is greater than 100' or which requires more than two 90-degree bends.
- 8) Provide nylon pull cord in all conduit runs, point to point.
- 9) All conduit and boxes shall be bonded to the building safety ground as required.
- 10) All conduit shall be electrically isolated from AV Systems equipment racks to maintain the integrity of the sound system technical isolated ground system. Mechanical conduit connections to equipment racks shall be made with non-conductive fittings.
- 11) The following conduit installation precautions shall be taken to prevent and guard against electro-magnetic interference (EMI), radio frequency interference (RFI), and electro-static interference:
 - a. AV conduit shall not be run through any electrical distribution or transformer rooms, lighting dimmer rooms, mechanical equipment rooms, backstage or engineering "shops," telephone or communication rooms, and computer rooms. No exceptions.
 - b. Do not install AV conduit near devices and conduit for incandescent light dimmers, high-density architectural or theatrical dimming systems, and fluorescent or vapor lamp fixtures (including separate lamps and remoted ballasts).
 - c. Do not install AV conduit directly parallel and adjacent to any AC power conduit. No exceptions.
 - d. AV Systems conduits may only cross AC power conduit at 90-degrees. No exceptions.
 - e. Minimum AV Systems conduit separation distances shall be considered most important for all conduit runs over fifty (50) feet. In some instances AV Systems conduit and other conduit may, by necessity, need to be installed closer than the distances indicated on the AV Systems Conduit Separation Schedule. In these cases, the length of closely spaced conduit shall be kept to an absolute minimum, and the frequency of these close spacings in a single run of conduit shall be kept to an absolute minimum. In particular, AV Systems conduit shall not run parallel to any AC power conduit.
 - f. Note: For example, if "Group A – Microphone & Line Level Audio" conduit is installed in close proximity to AC power feeder conduit in five locations of 10' each over a total run of 200', the resulting 50' of potential interference in the microphone conduit shall be considered unacceptable.
- 12) When it is physically impossible to maintain the minimum conduit separation distances for AV Systems conduit, the following special measures shall be taken to ensure adequate shielding from electro-magnetic and radio frequency interference:
 - a. For below grade slab conduit runs where the distance between any AV Systems conduit (only) is less than the specified minimum, rigid steel (GRS) conduit shall be substituted for the full run of each affected AV Systems conduit.

- b. For below grade slab conduit runs where the distance between any AV Systems conduit and any AC Power conduit is less than the specified minimum, rigid steel (GRS) conduit shall be substituted for the full run of each affected AV Systems conduit and AC power conduit which is less than the minimum.

3.3 AV SYSTEM LOUDSPEAKER ENCLOSURES

- A. Flush recessed ceiling loudspeaker back box enclosures (supplied by Division 11) shall be installed as shown on the Division 11 AV drawings and as detailed below:
 - 1) Loudspeaker enclosures mounted in suspended tile type ceilings: Connect enclosure to intermediate 4" square box in the loudspeaker trunk conduit by a section of flexible conduit (Greenfield). Extend flexible conduit a minimum of 36" beyond loudspeaker location. Pull box shall be used for wiring to adjacent loudspeakers in the same zone.
 - 2) Loudspeaker enclosures mounted in plaster and sheet rock ceilings: Connect loudspeaker enclosure directly to loudspeaker branch conduit by a section of flexible conduit (Greenfield). Extend flexible conduit a minimum of 36" beyond the loudspeaker location. Do not provide intermediate 4" square junction box at these locations.
 - 3) Provide mounting brackets as required for all flush recessed ceiling loudspeaker enclosures. Mounting brackets must support the entire weight of the loudspeaker assembly on the ceiling framing or structure.
 - 4) Loudspeaker enclosures shall not be directly supported from acoustic tile, sheet rock, or plaster ceiling construction. No exceptions.
 - 5) Surface wall mount loudspeaker back box enclosures (supplied by Division 11) shall be installed as shown on the Division 11 AV drawings and as detailed below:
 - a. Wall loudspeaker enclosures shall mount directly to a standard 4" square box. Conduit shall be run down to wall mount volume control directly below loudspeaker enclosure.

3.4 AV PULL BOXES

- A. Provide NEMA Type 1 AV Systems pull boxes as necessary in accordance with the NEC and as indicated on the drawings. Pull boxes shall be provided in accessible areas with removable screw cover.
- B. AV Systems pull boxes may be provided as follows:
 - 1) Provide separate, individual pull boxes for each AV Systems wiring/conduit group.
 - 2) Provide one pull box with full size, removable barriers for each AV Systems wiring/conduit group.
 - 3) Pull boxes shall be sized to accommodate the quantity of conduits indicated, per NEC requirements.
 - 4) Pull boxes shall be installed so as to allow complete pulls of AV Systems wire and

cable without break or splice.

3.5 AV ELECTRICAL IDENTIFICATION

- A. General: Proceed as directed under all related sections of Division 26, and as directed below.
 - 1) Provide a coordinated system of labeling and identification for the AV system empty conduit and outlet box system.
 - 2) Individual pull cords in conduits shall be clearly and securely tagged at each end with an indelible legend indicating the conduit group and destination of the specific run.

3.6 AV SYSTEMS ISOLATED TECHNICAL GROUND

- A. All components of the AV Systems shall be connected to an independent isolated technical ground. The AV Systems isolated technical ground shall originate separately at the building main service ground and connect through the isolation transformer directly to an insulated ground bus in the main AC power distribution panel.
- B. The AV Systems isolated technical ground and the building safety ground must only be connected at this one point.
- C. The isolated technical ground must not be connected to conduit, neutral, water pipes or other ground sources. Establishing the AV Systems isolated technical ground by connection to steel frame structural members will not be acceptable.
- D. The AV Systems isolated technical ground shall be established in a star configuration which radiates out from the distribution panel to insulated ground busses located at each technical power panelboard and then to uninsulated busses bonded to each equipment rack and to individual isolated ground power receptacles.
- E. All AV Systems isolated technical ground conductors must be insulated, stranded copper cable sized to provide an impedance of 0.1 ohms or less between any point in the system and the main service entrance ground. Provide 3/0 AWG stranded copper welding cable for all isolated ground busbar conductors.
- F. All cable splices must be fully insulated.
- G. All conductors must be contained within metallic conduit.
- H. Each AV Systems equipment rack will be bonded to an internal uninsulated copper busbar provided by Division 11. Where more than one rack forms a group, the busbar from each rack shall be bonded together at one central rack and then connected to the isolated ground conductor to maintain the star configuration. Physically ganging equipment racks together shall not be an acceptable method of bonding to the AV Systems isolated technical ground.
- I. All conduits and raceways entering equipment racks must be insulated from the racks with insulated couplings. All equipment racks must be insulated from the floor and situated so as to not come in contact with any ground items during normal operations.
- J. When the AV Systems isolated technical ground is complete, the Division 26 contractor must prove that it is not grounded at any other point than the main service entry panel. With the power to the system switched off, the contractor shall disconnect the isolated technical ground from the technical ground busbar at the main distribution panel. At this point, an open

circuit (greater than 1-megaohm) must be measurable between the AV Systems isolated technical ground and the building safety ground.

K. Isolated Ground Receptacles

- 1) All power receptacles for AV Systems use shall be isolated ground type with an insulated ground wire. Color of receptacle shall be orange. Type as specified herein or as determined by the Commissioner.
- 2) Power receptacles within racks shall have insulated ground conductors connected to the AV Systems isolated technical ground bus in each rack.
- 3) Individual isolated ground power receptacles shall have insulated ground conductors connected to the AV Systems isolated technical ground bus in the branch circuit panelboard from which they are fed.

3.7 AV SYSTEMS EMERGENCY MUTING FROM LIFE SAFETY SYSTEM

- A. Provide relay contact closure from the life safety system to the AV Systems equipment rack. Relay closure shall cause all loudspeaker circuits and other selected audio circuits to be on during "normal" conditions, and muted during "emergency" conditions.
- B. Provide all wiring from the main life safety control center to the equipment racks located in AV Equipment Rack Rooms 2M30 and 252, Theatre 1 Control Room, Theatre 2 Control Room and Theatre 3 Control Room. Provide relay and switching devices and all incidental materials in order to provide the Division 11 AV Contractor with a normally open dry contact closure for connection to the loudspeaker mute circuits. Refer to the Division 11 AV Systems Drawings.

3.8 AV SYSTEMS CONDUIT ADJACENT SCHEDULES

- A. Conduits serving AV Systems wiring groups, as defined herein and on the AV drawings, shall be separated from conduits serving other uses according to the following schedule:

Wiring Group in Conduit	Group A	Group B	Group C	Group D	Group E
Electronic Dimmer-Controlled Lighting or Other Electronically Switched Power Services	36"	12"	12"	6"	36"
Convenience Outlet Power Service	12"	6"	6"	Adjacent	12"
All Other Power Services	18"	6"	6"	Adjacent	18"

SECTION 27 05 28

TELECOMMUNICATION AND DATA WIRING SYSTEM

PART 1 – GENERAL

1.1 WORK INCLUDED

A. The work under this Section includes providing of all material, labor, equipment and supplies and the performance of all operations to provide a complete working system as required by the Drawings and details and as specified herein. Where the Drawings, Specifications, Codes, Regulations, Laws, or requirements of the local Authority conflict, provide the higher quality and higher quantity indicated or required and follow the strictest requirement. In general, the work includes, but is not limited to, the following:

1. Equipment Racks and Cabinets.
2. Relay Brackets.
3. Administration Document Cabinets.
4. Terminations.
5. Data Cabling Systems including:
 - a. Horizontal Cabling.
 - b. Backbone Cabling.
 - c. Cable Management.
 - d. Work Area Outlets.
 - e. Modular Jacks.
 - f. Patch Panels.
 - g. Patch and Line Cords.
 - h. Cross Connect Blocks.
 - i. Cross Connect Cabling.
 - j. Connectors and Couplings.
 - k. Inner Duct.
6. Pathways and Supports – (Coordination with Section 260500).
7. Pathways and Supports – (Provide Specific Pathways and Supports that are not being provided under Section 260500, i.e., J-hooks, etc.).
8. Telecommunications Cable Runway (Within Telecommunications Spaces and Integral to Telecommunications Equipment Racks and Cabinets Layouts/Support)
9. Power Requirements - (Coordination with Section 260000).
10. UL 497 primary and UL 497A secondary line lightning and surge protection at entrance to the building from the exterior.
11. Protection of new and existing work.
12. Record Drawings and Documentation.
13. Staging.
14. Telecommunications Equipment Grounding/Bonding to Telecommunications Grounding Backbone System.
15. Telephone System Cabling System.
16. Seismic Supports, Supplementary Steel and Channels.
17. Operation and Maintenance Instructions and Manuals for this Section's work.
18. Nameplates, Labels and Tags.
19. Testing and certification.
20. Sealing of Penetrations and Openings.
21. Access panels and doors.
22. Phasing of work and maintenance of service to existing and temporarily relocated items, City of New York equipment or workstations, etc. as required to meet the project schedule, including premium time.

23. Coordination with manufacturers, other trades, Contractor #4 and City of New York. Include costs associated with adjustments and changes resulting from coordination.
- B. The work required by this Section is indicated on Drawings Numbered E-107 through E-108 inclusive.
 - C. Adhere and comply with all requirements of cabling manufacturers certification and warranty program. Provide Commissioner and designer with test results and documentation including testing documentation and as-built drawings
 - D. Coordinate that Contractor #4 indicates on the project schedule:
 1. Installer, Commissioner and City of New York coordination meetings: 3 months (90 days) prior to scheduled Substantial Completion date or as soon as Submittals are submitted and reviewed for projects with schedules shorter than 5 months (150 days).
 2. Systems Testing: 30-45 days prior to project completion and prior to Substantial Completion, Acceptance Demonstrations and Training.
 3. Acceptance Demonstrations: 15 days prior to project Substantial Completion and prior to City of New York acceptance of project.
 4. Systems Instruction: 15 days prior to final Substantial Completion and prior to the City of New York's acceptance of project.
 - E. Communications System Scope:
 1. Provide all labor, supervision, materials, tools, equipment, and ancillary devices necessary to provide a complete telecommunications cabling system as described herein these Specifications and shown on the Drawings, which shall provide state of the art internal and external communications systems. The telecommunications cabling system includes, but is not limited to voice, and data cabling systems. The intent is to establish a standard of quality, function and features.
 2. All interface cabling terminations and installation shall be per manufacturer's recommendations.
 3. Coordinate with the City of New York, Contractor #1, Contractor #4, Commissioner, and all systems Installers for Telephone Equipment and Data Network Equipment for a complete and fully operational cabling system.

1.2 DEFINITIONS

- A. Entrance Facility (EF) also known as Main Distribution Frame (MDF).
- B. Telecommunications Room (TR) also known as Intermediate Distribution Frame (IDF).
- C. Telecommunication Grounding Main Busbar (TGMB)
- D. Telecommunications Grounding Busbar (TGB)

1.4 INTERPRETATION OF DRAWINGS

- A. Schematic diagrams shown on the Drawings indicate the required functions. Standard diagrams of the manufacturer may be used for the functions indicated without exact adherence to the Schematic Drawings shown. Work required for such deviations shall be provided.
- B. The right is reserved to make reasonable changes in locations of work prior to rough-in at no additional cost.
- C. Drawings and Specifications may not indicate every item required to produce a complete and properly operating installation. Materials, equipment or labor not indicated, but which can be reasonably inferred to be necessary for a fully complete, secure and properly operating installation suitable for the intended use shall be provided.
- D. Where Drawings or Specifications do not coincide with manufacturer's recommendations, or with applicable Codes and Standards, alert the Commissioner in writing before installation. Otherwise, make changes in installed work as the Commissioner requires without additional cost.
- E. It is the intent of these Contract Documents to have systems and components that are fully complete and operational and fully suitable for the intended use. There may be situations in the documents where insufficient information exists to precisely describe a certain component or subsystem, or the routing of a component. In cases such as this, where the Installer has failed to notify the Commissioner, in writing, of the situation, the installer shall provide the specific component or subsystem with all parts necessary for the intended use, fully complete and operational, and installed in workmanlike manner either concealed or exposed per the design intent.
- F. In situations or where potential conflicts exist or where the Installer believes guidance is required, submit a sketch identifying proposed solution and the Commissioner shall review, note if necessary, and return this sketch appropriately marked for use by the Installer.

1.5 OBTAINING INFORMATION

- A. Obtain from the manufacturer the proper method of installation and connection of the equipment that is to be furnished or installed. Obtain all information that is necessary to facilitate the work and to complete the project. Include all such information in Operation and Maintenance Manual.

1.6 APPROVED CONTRACTOR

- A. The Telecommunications Contractor #4 must be a properly trained cable installer by the cable manufacturers warranty program. The Telecommunications Contractor #4 is responsible for workmanship and installation practices in accordance with the cable manufacturers warranty program. The manufacturers warranty will be applied once the Telecommunications Contractor #4 fulfills all requirements under the cable manufacturers warranty program.

1.7 PROTECTION OF WORK AND PROPERTY

- A. Be responsible for the care and protection of all work included under this Section until it has been tested and accepted.
 - 1. Protect all equipment and materials from damage from all causes including theft. All materials and equipment damaged or stolen shall be replaced with equal material or equipment at the option of the Commissioner and City of New York.
 - 2. Materials and equipment stored for this project shall be protected and maintained according to the manufacturer's recommendations and requirements and according to the applicable requirements of NFPA 70B.
 - 3. Protect all equipment, outlets and openings with temporary plugs, caps and covers. Protect work and materials of other trades from damage that might be caused by work or workmen and make good any damage caused.
 - 4. Use caution to avoid damage to existing work, and to prevent harm to personnel working in all areas.
 - 5. Observe all safety precautions and requirements for the construction.
 - 6. Contractor #1 and Contractor #4 are responsible for initiating, maintaining, and supervising all safety precautions and requirements during construction.
 - 7. Coordinate installations with all other trades in order to not damage equipment or cables during construction. Any work that is damaged during construction shall not be repaired. Replace damaged work completely, with no splices in cabling, at no additional cost to the Project.

1.8 SUBMITTAL REQUIREMENTS

- A. Product Data: Submit catalog data sheets or other published materials showing appearances, electrical ratings characteristics and connection requirements, seismic ratings, performance characteristics, dimensions, weights, installation methods, and space requirements of equipment and their accessories, as listed below and as required elsewhere in the Specifications and as requested by the Engineer:
 - 1. Identification Methods
 - 2. Cable Runways
 - 3. Wire and Cable
 - 4. Wiring Devices
 - 5. Grounding and Bonding
 - 6. Seismic Supports and Supplementary Steel
 - 7. Seals and Fittings
 - 8. All equipment and devices as noted under "Work Included"
 - 9. Test Report Formats

10. Test Equipment
 11. Test Procedures
 12. Year 2000 equipment and software compatibility certification for each equipment and software.
 13. Submit 5'-0" sample of all cables to be installed on this project including associated published cabling specification and Note Nominal Velocity of Propagation (NOMINAL VELOCITY OF PROPAGATION (NVP)).
- B. Shop Drawings: Submit shop drawings indicating physical size and arrangement, (plans and elevations) construction details, provisions for conduits, access requirements for installation and maintenance, Seismic, finishes, and materials used in fabrication. Supplement shop drawings with wiring diagrams and information as described under Product Data. Provide Shop Drawings for the following and as required elsewhere in the Specifications and as requested by the Engineer:
1. Submit complete shop drawings showing inventory of equipment to be installed, parts, and quantity for each telecommunications equipment room and closet. Include configuration of complete installed system.
 2. Design Data: Submit completed cable schedules for each cable including horizontal and backbone cables, based on construction room numbering. Use the cable schedule form included at the end of Part 3 of this specification.
 3. Submit one line drawings for each system and sub-system. Show each and every component, sub-system and system as well as connections within systems and connections between systems.
- C. Samples: Submit three samples of each connector and termination.
- D. Submit certified test report on each piece of telecommunications field testing equipment to be used on this project. Certified test report shall include at least the factory calibration date and test results. Factory calibration and testing shall take place immediately before actual systems testing is to take place. Factory calibration and testing date deemed too far in advance of actual testing, may be rejected.
- E. Provide a detailed submittal for all of the cabling, equipment and systems as follows:
1. Submit a letter indicating that the system is as specified and indicated on the Drawings and that any and all exceptions are as listed in this letter.
 2. As a minimum the submittal shall include the following:
 - a. Description of the configuration and operation of the proposed system.
 - b. Outline drawings of all proposed equipment in plan and elevation views including overall dimensions, weights and clearances required.
 - c. A complete copy of the specifications with each sub-paragraph on each page noted in the right hand margin with the comment, "compliance", "deviation", or "alternate". In the case of non-primary, vendor-supplied items, the name of the sub-vendor supplying said item, including model number shall be indicated.
 1. By noting the term "compliance", it shall be understood that the Manufacturer is in full compliance with the item specified and will provide exactly the same with no deviations.
 2. By noting the term "deviation", it shall be understood that the Manufacturer prefers to provide a different component in lieu of that specified. Manufacturer shall indicate all deviations and indicate what is being proposed.
 3. By noting the term "alternate", it shall be understood that the Manufacturer proposes to provide the same operating function but prefers to do it in a different manner. An alternate shall be fully described as to what the manufacturer proposes to provide.

3. The Submittal shall include catalog cut sheets or other descriptive material of major components.
 4. Items specifically identified in this specification are to provide for specific performance and quality of components desired and shall not restrict any Manufacturer from furnishing an equivalent product for the performance and operation intended as described above.
 5. Provide a synopsis of like systems of similar nature and complexity previously delivered and installed with names and telephone numbers of design engineers or customer personnel for each system.
 - a. If there are two or more documented cases of operational problems and failures of a similar system, the proposed manufacturer may be rejected.
- F. Schedule of Shutdowns: After the project construction schedule is developed, submit the following information to the City of New York for all required shutdowns of existing systems.
1. Date of proposed shutdown.
 2. List of systems to be affected.
 3. List of areas affected by the shutdown.
 4. Description of work to be performed.
 5. Estimated length of the shutdown.

1.9 EXTENDED WARRANTY/GUARANTY – UTP AND FIBER OPTIC CABLING SYSTEM

- A. Channel model configuration may be applied to the horizontal and/or backbone sub-systems of the structured cabling system. Applications assurance is only applied to a channel model configuration. All copper channels are to be qualified for linear transmission performance up to 250 MHz to ensure that high-frequency voltage phase and magnitude contributions do not prove cumulative or adversely affect channel performance.
- B. Copper Cabling System Warranty
 1. A twenty (20) minimum year manufacturer warranty available for the category 6 structured cabling system shall be provided for an end-to-end channel model installation which covers applications assurance, cable, connecting hardware and the labor cost for the repair or replacement thereof.
 2. Additional features of the warranty shall include:
 - a. Margin over category 6 channel specifications on all parameters across the entire frequency range of 1-250MHz as noted below:

Insertion Loss	0.1 dB
NEXT Loss	0.9 dB
PS NEXT Loss	1.9 dB
ACR	1.1 dB
PS ACR	2.1 dB
ELFEXT	0.6 dB
PS ELFEXT	0.6 dB
Return Loss	0.5 dB

Propagation Delay	20 ns
Delay Skew	10 ns

Performance claims based on worst case testing and channel configurations

C. Fiber Optic Cabling System

1. A twenty (20) year minimum manufacturer warranty available for the fiber optic structured cabling system shall be provided for an end-to-end channel model installation which covers applications assurance, cable, connecting hardware and the labor cost for the repair or replacement thereof.

D. Additional features of the warranty shall include:

1. Fiber guaranteed to meet IEEE 802.3ae 10 Gigabit Ethernet requirements as well as IEC-60793-2-10 and TIA-492AAAC specifications for laser bandwidth Differential Mode Delay (DMD) specifications. In addition, it exceeds all ANSI/TIA/EIA and ISO/IEC insertion loss and return loss requirements.

Fiber	Guaranteed Gigabit Transmission Distance (m)		Guaranteed 10 Gigabit Transmission Distance (m)		Minimum Bandwidth (MHz*km)		Maximum Attenuation (dB/km)		Group Index of Refraction	
	850 nm	1300 nm	850 nm	1300 nm	850 nm	1300 nm	850 nm	1300 nm	850 nm	1300 nm
50/125L	1040	600	550	300	Laser		Tight	Tight	1.483	1.478
					4700		Buffer	Buffer		
					O.F.L.	O.F.L.	Loose	Loose		
					3500	500	Tube	Tube		
							3.0	1.0		

E. Performance claims based on worst case testing and channel configurations

1. Attenuation
Qualified cables shall perform in accordance with the attenuation limits as noted above when tested per ANSI/EIA/TIA-455-46, -53, -61 or -78 (as applicable).
2. Bandwidth
Qualified cables shall perform in accordance with the bandwidth limits as noted above when tested per ANSI/EIA/TIA-455-51 or IEC/ISO 793-1-C2A.
3. Transmission Distance
The protocol pertinent to the transmission distances noted above for Qualified Cables is Gigabit Ethernet per IEEE 802.3:2002 and 10 Gigabit Ethernet per IEEE 802.3ae.
4. Differential Mode Delay
Qualified multimode cable shall perform in accordance with Differential Mode Delay specifications per TIA-492AAAC at 850nm and 0.88ps/m at 1300nm.

F. Product Warranty

1. The manufacturer of passive telecommunications equipment used in a manner not associated with the Systems Warranty must have a minimum five (5) year Component Warranty on all ITS product. The Products Warranty covers the components against defects in material or workmanship under normal and proper use.

G. Applications Supported

1. Existing and future applications supported for a channel model warranty include those approved by the Institute of Electronic and Electrical Engineers (IEEE), the Asynchronous Transfer Mode (ATM) Forum, the American National Standards Institute (ANSI) or the International Organization of Standards (ISO) that specify compatibility with the cable referenced herein.

1.10 CERTIFICATES OF APPROVAL

- A. Upon completion of all work, and as a condition to receiving payment at Substantial Completion, furnish to the Commissioner the following original signed certificates and include copies of these certificates as part of the Operation and Maintenance manuals:

1. Certification from the manufacturers authorized representative stating that authorized factory engineers have inspected and tested the operation of their respective equipment and found same to be installed in accordance with the manufacturer's requirements, all requirements for manufacturer's warranties are complied with, and equipment is in satisfactory operating condition. This certification shall be provided for each piece of major equipment and cabling and for all complete systems. Provide certificate for additional items requested by the Commissioner.
2. Certificates of inspection, letters or notices from the appropriate governmental authorized inspectional authorities stating that all portions of the work (indicate trade and responsibility) have been inspected and are installed in conformance with the applicable codes, laws, ordinances and referenced standards. If non-conformance notices are received, include the re-inspection certificate, letter of explanation, etc. as required to indicate complete conformance. Provide written evidence of all exceptions or variances given by any Inspector.
3. Certificate from the installing firm responsible for the work (indicate trade and responsibility) signed by an authorized Officer of the firm and the Foreman or Project Manager in charge, indicating trade license numbers and stating that to the best of the signer's knowledge and belief that the project (indicate project name and address) has been installed in compliance with the Contract Drawings, Specifications and Addenda, and all applicable codes, laws, ordinances and referenced standards. Where sub-contractors perform a portion of the work of this section include certificates from them.

- B. Final affidavit for the occupancy permit will not be signed until the above certificates have been submitted and accepted.

1.11 SUBSTANTIAL COMPLETION

- A. When Work under this Section, or a designated portion of Work, is substantially complete, submit written notice through Contractor #4 with a list of items remaining to be completed or corrected.
- B. Should Engineer observe and find Work is not substantially complete, promptly notify Contractor #1, in writing, listing observed deficiencies.

- C. Remedy all deficiencies and submit a second written notice of Substantial Completion.
- D. Substantial Completion shall not be considered unless work remaining is less than one percent of the Contract Value of this Section and all systems are operational and tested to verify compliance with Contract Documents. Only minor items shall remain to be completed.
- E. When Commissioner finds Work is substantially complete a Certificate of Substantial Completion in accordance with provisions of the Contract Documents will be prepared.

1.12 FINAL COMPLETION

- A. When Work under this Section is complete, submit through Contractor #1 written certification that:
 - 1. Contract Documents (which include addenda, clarifications, requests for information (RFI's), change orders and instructions from the Commissioner) have been reviewed.
 - 2. Work has been inspected for compliance with Contract Documents.
 - 3. Work has been completed in accordance with Contract Documents and deficiencies listed with Certificate of Substantial Completion have been corrected.
 - 4. Equipment and systems have been tested, adjusted and balanced and are fully operational.
 - 5. Work is complete and ready for Commissioner's final review.
- B. Should Commissioner observe and find Work incomplete, the review will be promptly suspended and Contractor #1 notified in writing.
- C. Complete work, remedy deficiencies and send a second certification of Final Completion.
- D. Commissioner shall, upon receipt of a second certification of completion, make a second review and shall notify Contractor #1 listing observed deficiencies.
- E. When Commissioner finds Work is complete, he will consider close out submittals.

1.13 OPERATING INSTRUCTIONS AND OPERATION AND MAINTENANCE (O&M) MANUALS

- A. Include copies of manufacturer's and installer's warranties, properly executed and signed by an authorized representative.
- B. Include copies of all test reports and certifications.

1.14 SEISMIC REQUIREMENTS

- A. Equipment and work shall meet the seismic restraint requirements based on the parameters described in the structural documents for installation and connections of material and equipment to the building structure.

PART 2 – PRODUCTS

2.1 EQUIPMENT RACKS

- A. Provide products meeting the requirements of the Drawings and Specifications from one of the following manufacturers:
 - 1. Chatsworth, Panduit, Hoffman, Great Lakes, Hubbell, Siemon or Ortronics.
- B. All products shall be provided by the equipment rack Manufacturer.
- C. Free Standing Equipment Racks
 - 1. Free standing equipment racks shall be seven feet high, EIA nineteen inches wide, ten and a half inch minimum depth, seismic rated, open bay free standing as indicated on the Drawings. Rack features shall include the following:
 - a. Universal hole pattern on the front and rear flanges, and threaded mounting holes on both sides of rack assembly for management brackets and with an eight inch mounting floor plate on the front and rear.
 - b. Racks shall be clear anodized aluminum with 12-24 threaded equipment mounting holes. Mounting holes that require supplemental threaded clips are specifically prohibited. Provide 12-24 screws for all equipment mounting holes plus 32 spare screws per rack.
 - c. Shelves for electronic equipment with load carrying capacity to support at least 125 percent of each piece of electronic equipment weight. Shelves shall have adequate openings within them to dissipate heat and allow for adequate electronic equipment ventilation.
 - d. Mounting brackets specifically designed to support the equipment installed within the rack.
 - e. Side mounted, 6-inch vertical cable management channels on each rack. Provide front accessible and rear accessible channels in order to properly dress horizontal/back bone cables (rear) and patch cables (front).
 - f. Horizontal cable support bar on rear of each patch panel/cross connect block panel to support hook and loop (Velcro) strain relief. Cables shall not rely on terminations for cable support.
 - g. Hook and loop (Velcro) cable strain relief system on rear of rack to support horizontal and backbone cables. Tie-wraps are specifically prohibited.
 - h. Hook and loop (Velcro) horizontal and vertical cable management on front of rack for dressing patch cable and cross connect wiring. Tie-wraps are specifically prohibited.

- i. Hook and loop (Velcro) cable management system independent of telecommunications cable management to properly dress the electronic equipment power cords through the rack maintaining as much clearances between the two as possible. Tie-wraps are specifically prohibited.
- j. Bonding and grounding cables for all equipment not directly bolted to equipment rack (i.e., shelf mounted electronic equipment, etc.).
- k. Bonding and grounding bus bar with individual set screw terminals for at least a minimum of six #6 Cu. bonding cables. Bonding and grounding bus bars shall be EIA 19-inch (518 mm) wide supported by mounting holes in pre-drilled 12-24 both the left and right rack flanges.
- l. Surge protected power strip as described in this specification.
- m. Patch panels and cross connect block panels as described in this specification.
- n. All hardware, supplementary steel, channel and supports as required to properly assemble the rack and support it to the building structure.
- o. All equipment racks and their hardware shall match in appearance and shall be provided by a single manufacturer.
- p. Equipment rack shall support all electronic and passive devices and have the ability to open when fully loaded for rear accessibility of rack mounted equipment.

2.2 WALL MOUNTED RELAY BRACKETS

- A. Provide products meeting the requirements of the Drawings and Specifications from one of the following manufacturers:
 - 1. Wall mounted relay brackets shall be provided by the patch panel and cross-connect block panel manufacturer.
- B. All components shall be provided by the Relay Bracket Manufacturer.
- C. Wall Mounted Relay Brackets
 - 1. Wall mounted relay brackets shall be black color 3.5 inch high, minimum EIA nineteen inch (518mm) wide, wall mounted relay brackets for IDC Type cross-connect block panels as indicated on the Drawings. Bracket features shall include the following:
 - a. Integral hinged mounting flanges with universal mounting hole pattern and mounting holes on both sides of bracket assembly for cable management brackets.
 - b. Brackets shall have 12-24 threaded equipment mounting holes. Mounting holes that require supplemental threaded clips are specifically prohibited.
 - c. Provide horizontal cable support bar on rear of each patch panel/cross connect block panel to support hook and loop (Velcro) strain relief. Cables shall not rely on terminations for cable support. Hook and loop (Velcro) cable strain relief system within bracket to support horizontal and back bone cables. Tie-wraps are specifically prohibited.

- d. Hook and loop (Velcro) horizontal and vertical cable management on front and sides for dressing patch cables and cross connect wiring. Tie-wraps are specifically prohibited.
 - e. Provide bonding and grounding terminals for at least two #6 Cu. bonding cables.
 - f. Patch panel and cross connect block panels as described in this specification.
- D. All hardware, supplementary steel, channel and supports as required to properly assemble the bracket and support it to the building structure.
 - E. All relay brackets and their hardware shall match in appearance and shall be provided by a single manufacturer.

2.3 SURGE PROTECTED POWER STRIP

- A. Provide products meeting the requirements of the Drawings and Specifications from one of the following Manufacturers: APC, Wiremold Sentrex, TrippLite, S.L. Waber or Hubbell
- B. Surge protected power strip shall be rack mount type.
- C. Surge protected power strip with six NEMA 5-15R outlets 15 amp capacity, 120 volts, UL 1449 listed, maximum surge current of 33,000 amps, clamping voltage of 260 volts, maximum 5 picosecond response time, resettable overload circuit breaker, surge suppression warning light, surge protection for line to neutral, line to ground, neutral to ground, EMI/RFI filters. One required for each load up to 1200 watts (total of individual connected equipment loads).

2.4 ADMINISTRATION DOCUMENTS CABINETS

- A. Provide products meeting the requirements of the Drawings and Specifications from one of the following manufacturer: Rittal, B-line, Hoffman or custom manufactured.
- B. The cabinet shall be constructed of primed and painted, code gauge steel with a piano hinged door with locking handle. Locks for all document cabinets shall be keyed alike. Document cabinets shall be adequately sized to contain all of the documents required to be located within them. Cabinet shall be able to hold a complete set of rolled "As-Built" drawings and TIA/EIA 606 required reports. The preferred mounting location is on the room side of the passage door in the MDF (ER) unless otherwise noted on the drawings.

2.5 CABLE SUPPORTS

- A. Provide products meeting the requirements of the Drawings and Specifications from one of the following manufacturers:
 - 1. D-Rings: Hubbell or approved equal
 - 2. J-Hooks: Caddy, Snaketray, Minerallac, AT&T, Diamond, Chatsworth, Harrison/Dracon, B-Line, Nelson, Mono-System.
 - 3. Hook and Loop Fasteners: Hubbell or B-Line
 - 4. Beam Clamps: Burndy, Minerallac, Kindorff, Steel City, OZ/Gedney
 - 5. Split Mesh Strain or approved equal
 - 6. Reliefs (Kellums): Hubbell or approved equal

- B. D-Rings and J-Hooks shall be sized to correctly support the number of cables which pass through them. Under no circumstances shall cable quantity exceed 30 in any given support. Fill capacity shall be as required by code for conduit. That is to say that every D-Ring or J-Hook shall have a maximum of 40 percent fill capacity. Install additional supports as required.
- C. Hook and loop fasteners shall be designed for their specific application. For example, if a hook and loop fastener is used to support cables to a rack, it shall have a grommeted opening for use with a 12-24 rack mounting screw.
- D. Cable-ties are specifically prohibited.
- E. Beam clamps shall be steel with threaded bolt type closure. Spring steel or "quick-clip" type clamps are specifically prohibited.
- F. Split mesh strain relief shall be properly sized for each cable that they support. Only one cable shall be installed in each split mesh strain relief.

2.6 BONDING AND GROUNDING JUMPER CABLE

- A. Provide products meeting the requirements of the Drawings and Specifications from one of the following manufacturers: Belden (No. 8669) or equivalent.
- B. Jumper cable shall be hollow braided, 60 amp capacity, copper.
- C. Provide equal conductor as described in "B" above for aluminum equipment.
- D. Jumpers shall have compression or exothermic type terminals on both ends of cables. Terminals shall be compatible with jumper cable material and equipment material in order to not have any degenerative reaction.

2.7 UNSHIELDED TWISTED PAIR (UTP) STATION CABLING SYSTEMS

- A. Provide products meeting the requirements of the Drawings and Specifications from the following Manufacturers while following warranty requirements:
 - 1. BERK-TEK
 - 2. MOHAWK
 - 3. SIEMON
 - 4. GENERAL CABLE
 - 5. COMMSCOPE
- B. Each work area outlet shall consist of the following:
 - 1. Single gang faceplate stainless steel with number of voice, and data, jacks as indicated in the Specifications and Drawings, unless otherwise noted.
 - 2. Oversized face plates are specifically prohibited.
 - 3. Furniture mounted work area outlet shall be single gang with number of voice and data jacks indicated on Drawings or in Specifications, semi-flush mounted on furniture utilizing manufacturer provided box or opening in raceway. Adhesive mounting is not allowed. Furniture work area outlets shall be coordinated with furniture manufacturer and shall be specifically designed for powered furniture. Surface mounted outlets that are designed for general use applications are specifically prohibited.

4. Each faceplate shall be able to support the jack modules, as required. All openings remaining after required number of jack modules have been installed in faceplates shall be blanked off with manufacturer provided blank modules.
5. Manufacturer and Installer Company logo, signage or any advertisement shall not be permitted on face of work area outlets.
6. Wall mounted telephone outlets shall have modular jack integral to the faceplate and shall have hardware to support the telephone device. Cover plate shall be stainless steel. Provide wall mounted telephone outlets approved by the manufacturer of the work area outlets being provided on this project.
7. Work area outlets shall have integral identification label holders with clear plastic cover panel. Adhesive label holders are specifically prohibited.
8. Work area outlets shall have cable strain relief for each cable terminated. Cables shall not rely on the conductor termination for support.
9. Work area outlets shall have rear accessible modules and use Philips head cover plate screws.
10. Refer to Work Area Outlet Details for placement of jack
11. Provide products meeting the requirements of the Drawings and Specifications from one of the following manufacturers.

Wire and Cable:	Berk-Tek LanMark 1000 P/N: 10032094 General Cable Genspeed 6500 P/N: 7131282 or 7131431 Mohawk Advance Net 6E P/N: M57193 Commscope Ultra Media P/N:7504
Cat 6 Modular Jacks (Gray):	Ortronics P/N: OR-TJ600-78 Siemon P/N: MX6-F04 Hubbell P/N: HXJ6GY
Patch Panels:	Ortronics P/N: OR-PHD66U24 or OR-PHD66U48 Siemon P/N: HD6-24 or HD6-48 Hubbell P/N: P624U or P648U
Cable Management:	Ortronics / Siemon / Hubbell
Cross Connect Blocks:	Ortronics / Siemon / Hubbell
Cross Connect Block Panels:	Ortronics / Siemon / Hubbell

Patch Cables:

Ortronics P/N: OR-MC607-06
Siemon P/N: MC6-8-T-07-06
Hubbell P/N: PCX6BK08

12. Cross Connect Cabling: Shall be provided by Wire and Cable Manufacturer.
 - a. NOTE: Each of the products listed herein shall be provided to ensure manufactures warranty.

C. UTP Cabling system Pin/Pair Termination Assignment

1. The UTP cabling systems shall have TIA/EIA T568B pin/pair termination assignment. All eight conductors provided shall be properly and consistently terminated at both ends throughout the entire systems. Splitting pairs of conductors between multiple jacks or other devices is specifically prohibited.

D. Horizontal Cable

1. TIA/EIA Category 6 Unshielded Twisted Pair (UTP) - Data Cabling
 - a. Cable shall meet or exceed 1000 Mbps at 250 MHZ, 24 AWG, four unshielded twisted pairs (UTP), NRTL certified to TIA/EIA 568B.1 for Category 6 (UL Category 6).
 - b. Maximum cable diameter shall be 0.235 inches
 - c. Plenum rated cable - CMP rated jacket.
 - d. Cable sheath shall be the following colors: Data – Blue
2. TIA/EIA Category 6 Unshielded Twisted Pair (UTP) – Voice Cabling
 - a. Cable shall meet or exceed 1000 Mbps at 250 MHZ, 24 AWG, four unshielded twisted pairs (UTP), NRTL certified to TIA/EIA 568B.1 for Category 6 (UL Category 6).
 - b. Maximum cable diameter shall be 0.235 inches
 - c. Plenum rated cable - CMP rated jacket.
 - d. Cables sheath shall be the following color: Voice – White
3. TIA/EIA Category 6 Unshielded Twisted Pair (UTP) – “Emergency Telephone” Cabling
 - a. Cable shall meet or exceed 1000 Mbps at 250 MHZ, 24 AWG, four unshielded twisted pairs (UTP), NRTL certified to TIA/EIA 568B.1 for Category 6 (UL Category 6).
 - b. Outside plant cable - Gel-filled (Six pair) outside non-plenum rated cable - CMX rated jacket.
 - c. Plenum rated cable - CMP rated jacket.
 - d. Riser rated cable - CMR rated jacket.
 - e. Cables sheath shall be the following colors: Voice – Red
4. Modular Jacks (Work Area Outlets)
5. Data jacks shall be TIA/EIA Category 6 (UL Category 6) with printed circuit board or lead frame technology and integral board mounted, color-coded, high density, IDC type terminations. Provide 8 position modular jacks. Keyed jacks are not allowed. Jacks shall be able to withstand at least a minimum of 2000 mating cycles without any transmission degradation.
6. Voice jacks shall be TIA/EIA Category 6 (UL Category 6) with printed circuit board or lead frame technology and integral board mounted, color-coded, high density, IDC type terminations. Provide 8 position modular jacks. Keyed jacks are not allowed. Jacks shall be able to withstand at least a minimum of 2000 mating cycles without any transmission degradation.

7. Modular jacks color shall be:
 - a. Voice – Gray (Category 6)
 - b. Data – Gray (Category 6)
 - c. Data – Gray (Multimode Fiberoptic)
 - d. Data – Gray (Single Mode Fiberoptic)
8. Each work area outlet and modular jack shall have jack opening dust cover. Modular jacks that do not have integral dust covers shall have dust covers installed on each modular jack.
9. Each 8-position modular jack shall be gray and have color-coded icons.
10. Horizontal cables shall have single point IDC Type connection integral to the jacks only.
11. Jack modules shall be flame retardant thermoplastic with integral cable strain relief.

E. Patch Panels – Data Cabling Systems

1. Patch panels shall be EIA nineteen inch (518mm), rack mounted, TIA/EIA Category 6, UL Category 6 type patch panels with integral printed circuit board or lead frame technology, color-coded, high density, IDC type terminations and 8 position modular jacks. Keyed jacks are not allowed. Jacks shall be able to withstand at least a minimum of 2000 mating cycles without any transmission degradation.
2. Provide 24/48 port, high density, 1.75/3.5 inch (44/88mm) high, rack mounted patch panels and verify size with drawings.
3. Horizontal cables shall have single point IDC type connection integral to the jacks only.
4. Each port shall have color-coded identification label. Continuous label strips for multiple in-line ports are acceptable. Silk screened identifiers "1" through "48" are acceptable.
5. Provide patch panels for Horizontal Cabling Systems.

F. Cable Management

1. Each equipment rack and equipment cabinet shall have cable management panels with horizontal and vertical brackets.
2. Cable management shall be EIA nineteen inch (518mm) rack mounted 1.75 inch (44mm) high panel with horizontal and vertical patch cable distribution rings, or approved equivalent and shall be provided above and below each patch panel in the equipment rack.
3. Equipment rack cable management shall be furnished by patch panel manufacturer.
4. Cable management for high density, IDC Type cross-connect block panels shall be distribution rings integral to the panel or approved equivalent. Cable management shall be provided above and below each cross connect block in the equipment rack.

G. Patch Cables and Line Cords

1. Data patch cables shall be factory provided pre-connectorized, Category 6 (TIA/EIA Category 6) (UL Category 6), 4 UTP, 8-position modular jack, stranded conductors. Patch cables and line cords shall be able to withstand at least a minimum of 2000 jack mating cycles without any transmission degradation. One data patch cable per station location. Provide two (2) duplex patch cords for each port configuration on the patch panels, according to the following percentages and lengths:
 - a. 50% as 7 foot cables
 - b. 25% as 5 foot cables
 - c. 25% as 15 foot cables
2. Voice line cords shall be factory pre-connectorized, TIA/EIA Category 6 (UL Category 6), 4 UTP, 8-position modular jack, stranded conductors. Patch cables and line cords shall be able to withstand at least a minimum of 2000 jack mating cycles without any transmission degradation. One seven foot voice line cord per station location.
3. Meet the following performance specifications:

Frequency (MHz)	Attenuation (dB/100m)	PS ELFEXT (dB)	PS NEXT (dB)
1	2.4	67.8	72.3
4	4.5	55.8	63.3
10	7.1	47.8	57.3
16	9.1	43.7	54.2
20	10.2	41.8	52.8
31.25	12.8	37.9	49.9
62.5	18.5	31.9	45.4
100	23.8	27.8	42.3
200	34.8	21.8	37.8
250	39.4	19.8	36.3

H. Cross Connect Blocks – Voice Cabling Systems

1. Category 6:
 - a. Cross-connect blocks shall be TIA/EIA Category 6 (UL Category 6) color-coded, high density, IDC type terminations, 50, 100, 200, or 300 pair, cross connect blocks. Type 66 IDC cross connect blocks or similar are not allowed. Cross-connect blocks shall have integral stand-off support.
 - b. Modular connectors that allow cables fitted with connectors to be connected to the cross connect blocks are specifically prohibited. Cables shall have single point IDC type connection to the cross-connect blocks only.
 - c. Each (4 pair) connection shall have color-coded identification label. Continuous label strips for multiple in-line terminations are acceptable.
 - d. Provide with horizontal and vertical cable management.
 - e. Provide separate, dedicated cross-connect blocks for voice cabling systems.
 - f. Cross-connect cabling shall be NRTL certified that it meets or exceeds the TIA/EIA UL category rating of the system installed.
 - g. Cross Connect Blocks – Facilities Systems Cabling

2. Cross-connect cabling shall be NRTL certified that it meets or exceeds the TIA/EIA UL category rating of the system installed.

Meet the following performance specifications: Margin over category 6 @ 250MHz		
Parameters	Worst Case	Typical
Insertion Loss (dB)	0.12	0.15
NEXT* (dB)	12.7	13.9
FEXT* (dB)	22.1	22.6
Return Loss (dB)	5.3	5.9

2.8 FIBEROPTIC CABLING SYSTEMS

A. Manufacturers

1. Provide products meeting the requirements of the Drawings and Specifications from one of the following Manufacturers (where xxx denotes fiber quantities):
 - a. Cable Multimode: Berk-Tek PDPK12Bxxx-FB3015/X5, CommScope P-xxx-DZ-5K-FxUAQ, Superior Essex L4xxxF401.
 - b. Cable Singlemode: Berk-Tek PDPK12Bxxx-AB0707, General Cable APxxx1PNU-ILP, Mohawk M9SMxxx, CommScope P-xxx-DZ-8W-FxUYL, Superior Essex L4xxx3401.
 - c. Connectors and Couplers: Ortronics, Siemon, Hubbell.
 - d. Patch Panels: Ortronics, Siemon, Hubbell.
 - e. Patch Cables: Shall be provided by fiberoptic patch panel manufacturer.
 - f. Cable Management: Shall be provided by fiberoptic patch panel manufacturer.
2. Multimode Fiberoptic Backbone Cable – Inside Plant – Data Cabling Systems:
 - a. Cable shall be NRTL certified to TIA/EIA 492CAAA, 492AAAA, 568A, TSB72 and ANSI X3T9.5 fiberoptic specifications,
 - b. See drawings for quantities
 - c. 50/125 micron 850 nm and 1300 nm, graded index, optical fiber waveguide
 - d. Tight Buffer Multimode Plenum Distribution Cable.
 - e. Riser-Rated Multi-Mode Cable - OFNR Jacket, Distribution Cable.
 - f. Plenum Rated, Multi-Mode Cable - OFNP Jacket, Distribution Cable.
 - g. The maximum attenuation measured at 23 degrees C. shall be 3.0 dB/km @ 850 nm and 1.0 dB/km @ 1300 nm. The minimum bandwidth shall be 4700 MHZ @ 850 nm for effective modal bandwidth and 500 MHZ @ 1300 nm for over filled launch.

B. Modular Connectors and Couplers

1. Fiberoptic modular connectors/couplings shall be NRTL listed and TIA/EIA compliant, type "568LC" terminations with zirconia ferrules. Connectors and couplings shall be able to withstand at least a minimum of 2000 mating cycles without any transmission degradation. Maximum optical loss budget shall not exceed 1.5 dB per mated pair of terminations (0.75 dB per termination).
2. The connectors and couplings shall be compatible with the installed fiber optics: multi mode 50/125 micron optics.
3. Fiberoptic connectors shall be terminated by the following methods:
 - a. Hot Melt
 - b. Heat Cured Epoxy

- c. Ultra Violet Cured Epoxy
 - d. Mechanical (Compression with Index Matching Gel)
4. Fiberoptic connectors and couplers shall be provided by a single Manufacturer.
 5. Multimode connectors shall be beige in color.
 6. Maximum Insertion Loss (dB) 0.65.

C. Fiberoptic Patch Panels

1. Patch panels shall be capable of terminating a minimum of 12 pair (24 strands) of a fiberoptic cable. See drawings for exact quantities.
2. Patch panels shall be rack mounted or cabinet mounted.
3. Patch panels shall be EIA nineteen (19) inch, rack mounted drawer type with integral cable management, locking door and preloaded with duplex 568-LC couplings. "LC" coupling shall allow for "LC" male connectors to be connected to the front and back of the patch panel. Provide silk screening on panel to distinctly identify TX and RX at each port. Provide large bold label indicating information similar to "caution - severe eye damage. Do not look into fiber optic connector while energized," and mounted signature to the fiber optic patch panel.
4. Provide separate patch panels for each of the following:
 - a. Horizontal Cabling – Data Cabling Systems
 - b. Backbone Cabling – Data Cabling Systems

D. Fiberoptic Patch Cables

1. Provide NRTL certified EIA/TIA 492AAAA, 568A, TSB67, performance tested patch cables as required for a complete operational system. Patch cables shall be factory fitted with connectors, two strand, "568LC" type connectors with zirconia ferrules, tight buffer. Patch cables connectors shall be provided by the same manufacturers as the fiberoptic connectors and couplings. One 3m duplex patch cord per pair of backbone fiber.
2. Patch cables shall match the fiberoptic system installed multimode 50/125 micron multimode.
3. One strand of the patch cable shall have a distinguishing mark throughout its entire length to simplify the distinction between Transmitting (Tx) and Receiving (Rx) at the patching area. Color coded factory marked (Tx-Rx) connectors are preferred.
4. Be 100% optically tested to meet the following performance specifications:

Parameter	50/125µm		62.5/125µm	
	850nm	1300nm	850nm	1300nm
Min. Cable Bandwidth (MHz•km)	4700*	500&	200&	500&
Max. Insertion Loss (dB)	0.65 (0.40 Typical)			
Min. Return Loss (dB)	20 (25 Typical)			
* =	Effective Modal Bandwidth 850nm Differential Mode Delay (DMD) measurement per TIA-455-220			
& =	Over filled launch per TIA-455-204			

E. Fiber optic Cable Management

1. Each equipment rack shall have horizontal and vertical cable management panels and brackets.
 - a. Horizontal cable management shall be EIA nineteen inch (482mm) rack mounted 1.75 inch (44mm) high drawer panel with integral cable management and shall be provided for each fiber optic patch panel. This cable management drawer panel is to manage the fiber optic patch cables and is separate from the fiber optic patch panel.
2. Fiber optic patch panels shall have an integral means for managing the fiber optic backbone strands in order to safely and neatly maintain 15 feet (4.5m) of cable slack.

2.9 TELECOMMUNICATIONS CABLE RUNWAY

- A. Cable trays are provided by Division 26 section 260500.

2.10 INNERDUCT

- A. Refer to Part 1 - GENERAL for additional Manufacturer's requirements.
- B. Provide products meeting the requirements of the Drawings and Specifications from one of the following manufacturers:
1. Max-Cell
 2. Carlon
 3. Kwikpath
 4. George Ingraham
 5. Pyramid Industries
- C. PE constructed innerduct shall be used when placed in underground conduits.

PART 3 - EXECUTION

3.1 GENERAL

- A. Inspect the site, existing conditions, fully understand the Work required, and provide the Work according to Contract Documents and all existing site conditions. Confer with the Manufacturer's of existing systems to be retained, modified or extended. Include all required costs and components for a fully functional system performing as indicated herein and on the Drawings. No additional compensation will be granted because of existing conditions.
- B. Verify the exact location of all items that may be indicated and determine exact location of all items that are not indicated on the Drawings.
- C. Any work installed contrary to the Contract Documents or written directions from the Commissioner shall be subject to change as directed by the Commissioner and no extra compensation will be allowed for making these changes or any work of any other trade due to these changes.

- D. Do not install equipment and materials which have not been reviewed by the Commissioner. Equipment and materials which are installed without the Commissioner's review or without complying to comments issued with the review shall be removed from the project when so instructed by the Commissioner. No payment will be made for unapproved or removal if it is ordered removed. The Installer shall be responsible for any ancillary costs incurred because of its removal and the installation of the correct equipment and materials.
- E. Manufacturers:
1. Manufacturers shall refer to all parts of the Project Specifications and Drawings to familiarize themselves with all project requirements and include, in cooperation with the Installer, all associated costs.
 2. During construction, each Manufacturer or an authorized Representative shall visit the site periodically to observe the installation of projects furnished. Immediately notify the Installer in writing if products are not being installed as recommended by the Manufacturer of the product. Provide copy of notice to Contractor #1 and the Commissioner.
 3. Upon completion of the work, each Manufacturer shall certify the installation as indicated under "CERTIFICATES OF APPROVAL".
 4. When a Manufacturer, or authorized Representative accepts an order for material and equipment, they agree to adjust Submittals and production schedules as required to accommodate the project schedule. Schedules shall be included with Submittals indicating review times as specified herein and manufacturing and delivery times such that material and equipment will be manufactured and delivered to the site sufficiently ahead of schedule so as not to delay the completion of the work.
- F. At the start of construction, consult with Contractor #4 and all Trades and determine and verify the telecommunications requirements and characteristics of all equipment which is supplied under the Contract.
- G. Request, in writing, that Contractor #4 and each Trade prepare and submit to this Section a complete list of all equipment which they are supplying under their respective Sections which require or effect work under this Section.
- H. Obtain detailed information on installation requirements from the manufacturers of all equipment to be furnished, installed or provided. At the start of construction, check all Contract Documents including all Drawings and all Sections of the specifications for equipment requiring connections and service and verify characteristics of equipment prior to roughing.
- I. Request Contractor #4 to provide, as soon as possible after approval, two copies of approved submittals of equipment which require or effect the work of this section. Review these submittals for characteristics and return the submittals to Contractor #4 noting any disagreement within two weeks of receipt.
- J. Equipment and systems shall not be installed without first coordinating the location and installation of equipment and systems with Contractor #4 and all other Trades.
- K. Any and all material installed or work performed in violation of above requirements shall be re-adjusted and corrected by the Installer without charge.

- L. Refer to all Drawings associated with the project, prior to the installation or roughing-in of the work and to determine the exact location of all outlets.
- M. Assure that all equipment is accessible, such as junction boxes, pull boxes, and such other apparatus as may require maintenance and operation from time to time. Provide necessary construction access panels sized to provide adequate and required access for installation by Contractor #4. Provide rated panel or door appropriate for the construction being installed into (fire, smoke and/or acoustical).
- N. After installation, equipment shall be protected to prevent damage during the construction period. Openings in conduits and boxes shall be closed to prevent the entrance of foreign materials. All cables are to be supported properly during construction.
- O. Home runs indicated are not to be combined or reduced without written consent from the Commissioner.
- P. Cables and raceway sizes indicated shall be continuous throughout circuit unless otherwise indicated.
- Q. Connections to equipment shall be made as required, and in accordance with the approved submittal and setting drawings.

3.2 EQUIPMENT RACKS, CABINETS AND BRACKETS

- A. Securely mount equipment racks, cabinets and wall mounted relay brackets to the building structure. Provide Seismic bracing. Proper supports such as 3/8" lag screws and expansion anchors shall be used. Proper quantity of supports shall be utilized. Dry wall screws and other types of supports not specifically approved to support equipment are specifically prohibited. Submit mounting supports for approval before installation.
- B. Position racks, cabinets and wall mounted relay brackets in order to have minimum 3 foot clearance for easy access. Equipment racks, cabinets, and relay brackets mounted on or against walls shall have 3 foot clearance in front of deepest component. Free standing equipment racks and cabinets shall have 3 foot clearance in front and rear of deepest components. Provide 3 foot clearance between free standing equipment racks or cabinets and any other obstruction to allow access from front to rear of rack or cabinet for maintenance.
- C. Provide cable runway over each rack and cabinet as required to facilitate a neat and orderly installation of cables and to secure the top of the racks to the structure. Cables shall drop straight down (through "waterfall" fittings) to equipment racks and cabinets. Cable runways shall be secured at both ends to the structure and connected together as required for a complete contiguous installation. Utilize proper supports to support the cable runway to the building structure as well as the equipment rack and cabinet. Submit mounting supports for approval before installation.
- D. Install terminating components such as patch panels cable management, etc., into the racks, cabinets and wall mounted relay brackets.
- E. Patch Panels: Mount patch panels onto the rack(s) in top-to-bottom fashion with the first patch panels cable management, etc., into the racks, cabinets and wall mounted relay brackets. Provide separate patch panels for backbone and horizontal data cabling systems, video distribution system, facility cabling systems, etc.
- F. Cross Connect Blocks: Mount cross connect blocks on to the backboards in top-to-bottom fashion with the first block mounted at the top of the backboard. Uniquely label each cross connect block according to the numbering convention outlined in the Section on labeling. Each four pair termination shall be uniquely labeled. The lowest cross connect block shall be a minimum 18" above finished floor. Refer to details on the Drawings.

- G. Cable Management: All cable shall enter the telecommunication's room/closet to within the equipment racks and/or brackets. Secure the bundle(s) to the rack strain relief and wire management behind the patch panels and cross connect blocks. Install horizontal and side-mounted vertical cable management panels and brackets for routing and management of patch cables and cross connect cabling. Maintain EIA/TIA and BICSI standards on bundling, support and bend radii.
- H. Once the cabling system has been installed and terminated, coordinate installation of all active components such as Hubs, UPS and surge protected power strips into the racks, cabinets and wall mounted relay brackets.
- I. Coordinate power requirements with Contractor #4. It is this section's responsibility to provide additional power requirements for their equipment that has not been provided in the Drawings and Specifications of Division 260000.

3.3 WORK AREA OUTLETS

- A. All work area outlets locations shall be as indicated on the Drawings. Uniquely label each work area outlet and jack within the outlet according to the numbering convention outlined in the section on labeling.
- B. Work area outlets installed in powered furniture partitions shall have their cables installed within the integral furniture raceway.
- C. Utilize philips head screws to secure the work area outlet cover plates to the outlet box.
- D. Install jack and connector modules as indicated in the details on the Drawings.
- E. Work area outlets shall be seated properly and shall be installed level on walls and parallel to building elements as required.

3.4 TERMINATIONS

- A. All copper and fiber conductors of every cable shall be completely terminated at both ends.
- B. Terminations shall be as indicated under the type of cabling specified in Part Two of the Specifications.

3.5 CABLE PATHWAYS

- A. Install cables in pathways provided under Section 260500 or required under the execution part of this section.
- B. Provide all equipment and cabling for a complete installed operating system. In general, pathways, outlet boxes and grounding are provided under Section 260500. However, it is the Installers responsibility under this Section to coordinate with the Drawings and Specifications for Section 260500 and to provide all pathways and outlet boxes required that are not provided under Section 260500.
- C. All pathways provided under this Section shall comply with fill capacities as per the Electrical Code, EIA/TIA and BICSI.
- D. Cable bending radius shall not be less than minimum required by EIA/TIA and BICSI.
- E. Cabling installed concealed shall be supported from the building structure (e.g. cable trays, "J" hooks, etc.).

- F. At a minimum, exposed cabling installed in return air plenums shall be plenum rated cables.
- G. Cables shall be installed no closer than 12 inches (305mm) to electrical equipment and wiring. When cables are required to cross power wiring, they shall only do so perpendicular to the power wiring. Telecommunications cabling and power wiring shall only cross each other the minimal number of times as required due to building design limitations.
- H. Clearances: Clearances between cabling and other building systems as required by EIA/TIA 569 and BICSI shall be maintained throughout the building.
- I. All cables shall be installed in a neat and workman-like manner. Cables shall be installed parallel and perpendicular to building elements.
- J. Cables installed in telecommunications rooms and closets shall be installed in approved path way systems (cable tray, etc.). Under no circumstance shall cables be allowed to "hang" across any spaces. Lace or wrap cables frequently in order to dress them properly.
- K. All cables shall have a minimum of 10 foot service loops in the intermediate distribution frame and rooms and shall have a minimum of 18 inch service loop at the work area outlet.
- L. Provide expansion fittings and adequate cable slack at all building expansion joints.

3.6 TELECOMMUNICATIONS GROUNDING/BONDING

- A. Provide Bonding to Grounding Buses.
- B. Grounding/Bonding conductors shall be of electrical grade copper except where otherwise indicated.
- C. Grounding/Bonding connector shall be un-insulated unless otherwise indicated.
- D. Grounding connections shall be made by means of approved and listed bronze clamps equal to Burndy type GBM, compression connections or exothermic welding.
- E. Raceways including wireways, conduits, cable runways, etc., are installed for low voltage or fiber optic cabling shall be made electrically continuous for grounding purposes. Provide hollow braided copper jumpers between sections equal to Belden No. 8669 (60A ampacity). Provide equal conductor for aluminum raceway.
- F. Bond raceways to the ground bus located in the MDF/IDF rooms. Bond raceways in each room they terminate in.
- G. Grounding or bonding conductors installed for Telecommunication Systems shall be labeled near their termination points. Labels shall be non-metallic and include the following:
 1. A WARNING if this connector or cable is loose or must be removed, please call City of NY.
 2. Labels and installation shall meet the requirements of ANSI/TIA/EIA 606 and 607.
 3. Connections shall be made readily accessibly for inspection. No connection shall be made concealed in floors or walls.

4. In general, all connections shall be exothermic welded where safe to apply except that substantial mechanical connections shall be used where disconnection is required for test and where called for on the Drawings.

3.7 INSTALLATION

- A. All cabling shall be installed in conduit or in cable tray where indicated on plans or shall be installed open using "J" hooks.
- B. Use industry standard EIA/TIA and BICSI color codes and maintain consistent color coding throughout the building.
- C. At telephone board locations designated on the Drawings, furnish 3/4 inch thick sheet of MDO plywood backboard with smooth finish for the mounting of equipment and cable terminators. The backboards shall be painted matte white with two coats of non conductive, fire retardant paint. Exact dimensions of the backboards shall be as indicated on the Drawings.
- D. All equipment, materials and devices listed and inferred shall be furnished and installed under this section unless noted otherwise.
 1. Refer to the Drawings for locations and quantities.
 2. Refer to Part 2 Products of this specification for additional information.
- E. Typical Layouts and Requirements:
 1. Equipment racks and cabinets
 2. Backbone cabling
 3. Typical layout of telecommunications equipment racks and cabinets
 - a. Each equipment rack and cabinet shall contain the following equipment:
 - Fiber optic patch panel
 - Fiber optic cable management
 - Space for Hubs / Switches
 - Space for UPS
 - Patch panels - Horizontal distribution
 - Horizontal distribution cable management
 - Patch panels - Telephone distribution
 - Telephone distribution cable management
 - Vertical cable management
 - Patch cords
 - b. Provide space for the installation of Hubs, Switches, UPS and Hub distribution patch panels in the equipment racks. Coordinate with the City of New York's installer to determine the exact amount of space required in each rack.
 - c. Provide horizontal cable management between each patch panel (fiber optics, Horizontal distribution and telephone distribution).
 - d. Provide, at a minimum, horizontal distribution patch panels with sufficient ports to terminate all modular jacks indicated on the Drawings plus twenty percent spare.
 - e. Provide all equipment racks and cabinets required to support the aforementioned equipment.
 - f. The main distribution frame (MDF) room shall contain fiber optic patch panel quantities which correspond to the total number of fiber optic patch panels located at the intermediate distribution frame (IDF). See drawings for quantities.

- g. Provide the required grounding to ensure that all of the equipment is grounded and bonded.
- 4. Typical backbone cabling
 - a. Provide backbone cabling consisting of the following:
Fiber optic cables installed in innerduct sized appropriately.
Unshielded twisted pair cabling (UTP)
 - b. Provide backbone between fiber optic patch panels in each IDF and the MDF.
Provide fiber optic cable from each fiber optic patch panel in each intermediate distribution frame (IDF) to its corresponding fiber optic patch panel in the main distribution frame (MDF) room.
Terminate both ends of all fiber optic strands installed.
 - c. Provide all IDC cross connect block panels and hardware for terminating voice and facilities backbone cabling systems. Terminations of these systems onto the IDC cross connect block at the head-end shall be provided under this section.
 - d. Final terminations from IDC cross connect blocks to telephone equipment and PBX by Telephone Company and Equipment Installer. Coordinate with Telephone Company and Equipment Installer for final terminations. Final terminations from IDC cross connect blocks to voice and facilities cabling horizontal cabling systems shall be by City of New York.

3.8 CABLE SUPPORTS

- A. Provide strain relief system for backbone cables at each floor level as they pass from one floor to the next. Include all racking anchors, mounts, cable supports, etc. necessary to a complete and functioning system. Maximum distance between supports shall be five feet (1500 mm).
- B. Provide hook and loop (Velcro) cable wraps at all panels, equipment racks and cabinets. Cable ties are specifically prohibited.
- C. Hook and loop (Velcro) cable wraps for horizontal cables shall be secured with minimum required compression in order to secure the cables properly without impeding the signal transmission rating (geometry) of the cable. Cable-ties are specifically prohibited.
- D. When pathways are not provided or specified, provide raceways or "J" hook or "D" ring supports from the building structure as required for cable runs to the cable drop location. Maximum distance between supports shall be four feet (1200mm) depending on the structural elements of the building. Maximum number of cables per support shall be thirty. Provide additional supports as required when cable quantities exceeds thirty and to maintain required bending radius of cables. Cables installed exposed or in areas subject to abuse (below 10 feet (3m) above finished floor) or in accessible areas shall be installed in conduit.
- E. All cables shall be supported directly from building structure. Under no circumstance shall cable be installed using cross bracing, plumbing/sprinkler pipes, ceiling systems or any other system that is not a specifically approved method to independently support telecommunications systems cables. Cables shall not be allowed to rest on ceiling tiles, ductwork, piping, etc. Supports shall be provided as required in order for cables to avoid contact with any other building system. Bundle cables in groups by common destination.
- F. Cable supports shall be installed in order to have minimal disruption to fireproofing. Fireproofing that is removed in order to install supports shall be replaced by the installer under this section under the supervision of Contractor #4. Coordinate with Contractor #1.

3.9 SEISMIC SUPPORTS, SUPPLEMENTARY STEEL AND CHANNELS

- A. Provide all supports, supplementary steel and channels required for the proper Seismic installation, mounting and support of all work installed under this Section.
- B. All supports, supplementary steel and channels shall be furnished, installed and secured with all fittings, support rods and appurtenances required for a complete support or mounting system.
- C. Supplementary steel and channels shall be firmly connected to the building construction in a manner approved by the Commissioner prior to the installation of same. Submit to the Commissioner, via Contractor #1, the locations proposed for using supplementary steel and channels for the support of equipment, fixtures and raceways. The submittal shall indicate the mounting methods, size and details of the supports, channels and steel; it shall indicate also that weight which the supports, channels and supplementary steel is to carry.
- D. The type and size of the supporting channels and supplementary steel shall be of sufficient strength and size for seismic restraint and to allow only a minimum deflection in conformance with the channel and supplementary steel manufacturer's requirements for loading.
- E. All supplementary steel and channels shall be installed in a neat and workmanlike manner parallel to the walls, floor and ceiling construction. All turns shall be made with 90 degrees and 45 degrees fittings, as required to suit the construction and installation conditions.
- F. All supplementary steel, channels, supports, and fittings, shall be Underwriters' Laboratories, Incorporated, approved, be galvanized steel and be manufactured by Steel City, Unistrut, Power-Strut, T. J. Cope, Chalfant or approved equal.
- G. Provide supports to meet the required Seismic rating as indicated under "Part One" of this Specification.
- H. Provide beam clamps with set screws (C-clamp type).
- I. Work under this Section shall be held in place by Seismic rated methods.
- J. Supporting from the roof decking will not be acceptable.
- K. Provide expansion anchors on masonry units or brick work. Power actuated supports will not be accepted.
- L. Provide stainless steel or corrosion resistant supports in corrosive areas on wet or damp areas.
- M. Support work from the building structure, independent of suspended ceilings, roof deck or other trades work. Where ductwork, pipes, pipe racks, type of building construction materials or structural framing members provide obstruction or difficult support means, hanger rods shall be used in association with horizontal sections of steel support channels, in an approved manner.
- N. All work shall be installed in a rigid and satisfactory manner and shall be supported by bar hangers in frame construction or shall be fastened directly with wood screws on

wood, bolts with expansion shields on concrete or brick toggle bolts on hollow masonry units, and machine screws or welded threaded studs on metal. Threaded studs of the proper type and holding capacity driven in by a power charge and provided with lock washers and nuts are acceptable for mounting of equipment on solid concrete walls or slabs.

- O. Obtain written permission from Contractor #1 allowing use of power activated charges. Use only properly trained and licensed operators.
- P. Do not use power charge driven supports for any work that is to be hung from a horizontal surface without written permission from the Commissioner.
- Q. Preset inserts of the proper type and holding capacity shall be used in overhead slab construction wherever possible.
- R. Provide lateral supports for work to prevent excessive movement during a seismic event using rods, braces or galvanized or stainless steel cables.
- S. Pendants, supports or hanging rods longer than 12 inches (300mm) shall be laterally braced.
- T. Where installed in damp, wet and areas requiring wash down, all surface mounted panels, boxes, junction boxes, conduit, etc., shall be supported by spacers to provide a clearance between wall and equipment.

3.10 CABLE PROTECTION

- A. Cables to be installed in existing enclosed open bays or furred spaces where conduit stubs are not provided, shall be protected from chafing or any damage. The Installer shall verify that the warranty shall not be violated before installing any cabling in these locations.
- B. Provide bushings in all metal studs and other openings where cables will pass through. Bushings shall be of two (2) piece construction with one piece inserted through the openings and the second piece locking it into place. Single piece bushings with locking tabs or friction fit are specifically prohibited.
- C. Provide cutting, coring, sleeves and bushings and seal as required at all penetrations.
- D. Fiberoptic backbone cables shall be installed in innerduct. Innerduct shall be plenum rated where installed in HVAC air plenum spaces. PE rated innerduct when installed in underground conduit.
- E. Cables damaged during installation shall not be repaired. They shall be completely replaced with new cable.

3.11 COPPER CABLING SYSTEMS

- A. The general topology shall be a "hierarchical star" configuration. All segments shall originate in NRTL listed patch panels or IDC blocks located in the MDF(ER) or IDF(TR) and end at the work area outlet.
- B. All horizontal cables shall be terminated at their respective equipment racks in the MDF/IDF rooms. Allow ten feet (3m) of cable slack coiled up for future cable movement within the MDF/IDF rooms and ten feet (3m) of cable slack coiled up in the ceiling at the work area outlet.
- C. All cables shall have both ends completely terminated at their respective patch panel, cross-connect block, work area outlet, splitters, tap, etc. Individual conductors shall be

trimmed flush with IDC block. Cables indicated to be "spare" shall have one end terminated at their respective patch panel or cross-connect block and the other end shall be hermetically sealed with a polyolefin heat-shrinkable cap. Provide Raychem Co. or approved equivalent after testing. Tape shall not be approved.

- D. The total length of permanently installed cable for any complete segment shall not exceed 295 feet (90m) for UTP. Do not splice or otherwise re-terminate any cable used, terminate only at the patch panels, cross connect blocks and work area outlets. Route cables (minimum of 12 inches (305mm) away) to avoid light ballasts, transformers, power wiring and other electrical devices so that there is no EMI or RFI interference with data transmission. Permanently label all cables six inches from the connector at each end, according to the numbering convention outlined in the section on labeling. All cables shall be terminated at outlets, patch panels or cross connect blocks only.
- E. Maximum pulling tension shall not exceed 25 lbs/ft. when installing cables.
- F. Modular Jacks
 - 1. Each Category 6 jack shall have a Category 6 home cable run back to its associated patch panel.
 - 2. Each Category 6 jack shall have a Category 6 home cable run back to its associated cross connect block.
- G. Maximum pulling tension shall not exceed 25 lbs/ft. when installing cables.
- H. Once the cabling system has been installed and terminated, install all active components such as Network Electronics, UPS and surge protected power strips into the racks, cabinets and wall mounted relay brackets.

3.12 FIBER OPTIC CABLING SYSTEMS

- A. Cabling
 - 1. The general topology shall be star configuration. All segments shall originate from NRTL listed fiber optic patch panels located in equipment racks/cabinets in the main distribution frame (MDF) and be distributed to fiber optic patch panels in intermediate distribution frame (TR). Each TR shall connect directly back to the MDF with fiber optic cables.
 - 2. All strands within the fiber optic backbone cable shall have both ends terminated in their respective patch panels. "Dark" fibers are not allowed.
 - 3. All fibers supplied in cable shall be usable fibers and meet required specifications.
 - 4. Multimode fiber optic cable:
 - a. Multimode fiber optic cable shall be furnished and installed from the main distribution frame (MDF) to each intermediate distribution frame (TR). See drawings for quantities and locations.
 - 5. Single Mode Fiber Optic Cable System:
 - a. Provide single mode fiber optic cable between main distribution frame (MDF) and each intermediate distribution frame (TR). See drawings for quantities and locations.
 - 6. Pulling tension shall not exceed 25 lbs/ft when installing cables.
 - 7. Fiber Optic Cable Management

- a. Hook and loop (Velcro) type cable wraps shall be secured with minimum required compression in order to secure cables properly without impeding the signal transmission rating (geometry) of the cable. Cable ties are specifically prohibited.
- b. Split mesh metal strain relief (Kellums) shall be provided to secure cables installed vertically.

8. **Fiberoptic Patch Panels**

- a. Provide a minimum of 1 fiberoptic patch panel in each main distribution frame (MDF) and each intermediate distribution frame (TR).
- b. "SC" couplers shall allow for "SC" male connectors to be connected to the front and back of the patch panel. Provide silk screening on panel to distinctly identify transmit (Tx) and receive (Rx) at each port. Provide large bold label indicating information similar to "CAUTION - SEVERE EYE DAMAGE! DO NOT LOOK INTO FIBEROPTIC CONNECTOR WHILE ENERGIZED!", and mount signage to the fiber optic patch panel.

9. **Fiberoptic Patch Cables**

- a. Verify the connectors provided by the electronics provider. If the electronic equipment has ST connectors, provide hybrid cables with SC connectors on one end and ST connectors on the other end.

10. **Innerduct**

- a. All fiber optic cabling shall be installed in innerduct.
- b. Provide two (2) 1 1/2 inch innerducts and one (1) 1 1/4 inch innerduct each with 200-pound-test pull line, in each four inch (102mm) conduit provided for fiberoptic cabling.
- c. Fiberoptic cabling installed exposed through air plenum spaces (cable tray, etc.) shall be installed in plenum rated innerduct. Provide J-hooks or similar and innerduct. Bound innerducts together neatly utilizing hook and loop fasteners.

- B. Fiberoptic backbone shall be installed in innerduct.

3.13 **IDENTIFICATION**

- A. All equipment and cabling shall be properly identified by means of clear and concise labels. All identification shall meet or exceed the minimum requirements of EIA/TIA-606 and BICSI standards. Handwritten and embossed type labels are specifically prohibited.

- B. Permanently label, using pre-printed labels, all cables and terminations exactly as defined:

1. Label patch panels and cross connect blocks numerically, top-to-bottom.
2. Label patch panel and cross connect blocks ports numerically.
3. Label the cable segments as indicated on Drawing Schedules. Each outlet will be designated by the incoming cable, and will be labeled accordingly.
4. Label each equipment rack, panel and cross connect block uniquely.
5. Refer to Administration section for specific labeling requirements.

C. **Labels**

1. Provide color-coded labels with CODED identifiers as follows:
 - a. Conduits and other pathways shall be labeled at all end points including equipment rooms, MDF/IDF rooms, pull boxes and the like. Provide

- adhesive labels on the conduit with at least one label within each space that the conduit passes through. Labels shall be attached by means of the label adhesive and color-coded pressure-sensitive tape wrapped around conduit at least one and one half times.
- b. Cable trays and wireways shall be labeled at all end points and at ten foot (3m) intervals along the length of the entire cable tray. Provide adhesive labels on the cable tray with at least one label within each space that the system passes through. Labels shall be attached by means of the label adhesive. Should the label not adhere properly, provide a permanent means of mounting.
 - c. Telecommunications Rooms and Closets shall have engraved labels provided on the interior side of the door entering the space located above the Administrative Documents holder indicating the room identification. Administrative documentation shall be modified to reflect the Telecommunications label identifier in relation to the Architectural room designation.
 - d. Cables shall have double lapped adhesive labels at all end points including work area outlets, telecommunication closets and equipment rooms. Cables shall have factory imprinted sequential cable length markings at a minimum of two foot (610mm) intervals the entire length of the cable (each cable's markings do not have to start at two feet.) Cables shall also have factory imprinted manufacturer's name, part number and the NRTL certified UL EIA/TIA category rating designation at a minimum of two foot (610mm) intervals along the entire length of the cable.
 - e. Termination hardware shall have adhesive labels on both the front and rear (if accessible) of the hardware.
 - f. Engraved Nameplates - shall be provided at each equipment cabinet (1/3 the distance down from the top), equipment rack (top), patch panel (left side), pullbox (1/3 the distance down from top), cross connect block [panel] (left side) and the like. Nameplates shall be fastened by means of tamper proof screws or rivets. Nameplates located 10 feet (3m) or higher above the finished floor or above accessible ceilings shall have nameplates with 1 inch (25mm) high characters.
 - g. Insert Labels - shall be provided in each work area outlet patch panel termination hardware (top of jack) cross connect blocks (edge of block) and the like.
 - h. Outlet boxes and junction boxes shall have adhesive labels attached on the inside where visible from the outlet opening.
 - i. Grounding and bonding system shall have engraved labels at each ground bar and backbone grounding cable as it passes through each room. Each bonding jumper shall have heat shrink labels at all end points.
2. Labels shall be constructed of approved material in order to meet the legibility, defacement, adhesion (adhesive labels only), and exposure requirements of UL 969. All labels shall be mounted horizontally in order to be read from left to right.
- a. Adhesive Labels - shall be constructed of color-coded paper with a clear polyester over laminate, Brady USA, Inc. PermaShield J, Raychem TMS or approved equal. Adhesive material used shall be approved for material being attached to, typeface shall be medium density, Helvetica, 1/8 inch (3mm) high black characters unless indicated otherwise.
 - b. Engraved Nameplates - shall be constructed of color-coded three-ply bake-lite. Typeface shall be engraved, Helvetica 1/4 inch (6mm) high black characters unless indicated otherwise.
 - c. Heat-Shrink Labels - shall be constructed of color-coded flame retardant, heat-shrinkable polyolefin, Brady USA, Inc, Raychem TMS or approved equal. Typeface shall be medium density, Helvetica 1/8 inch (3mm) high black characters unless indicated otherwise.

- d. Insert Labels - shall be constructed of color-coded paper inserted behind clear plastic label holder. Work area outlets shall have white color labels inserted behind a flush mounted (recessed) plastic window. Patch panels and cross connect block may have continuous clear plastic insertion strips label holders with label strips. Label strips shall have distinct markings to indicate where one jack or cross connect ends and the adjacent one starts. Typeface shall be medium density, Helvetica 1/8 inch (3mm) high black characters unless indicated otherwise.
- e. Each work area outlet shall have each of its eight-position modular jacks provided with a color-coded, embossed modular ICON. The telephone jack icon shall be red and shall have either the word "VOICE" or a telephone logo. The data jack icon shall be blue and shall have either the word "DATA" or a computer logo. The work area outlet jack provided shall also be able to have additional ICON types such as but not limited to "LAN1" or "LAN2" and the like available for use. Coordinate with the City of New York through the Commissioner, the specific Icon's required for this project.
- f. Handwritten or embossed labels are not allowed.

3. Color Coding

- a. Provide hierarchical color-coded labels as follows:
 - (1) Horizontal Cables Color Code: All horizontal and backbone connection hardware shall have color-coded labels.
- b. Cables shall be standard manufacturers colors.
- c. Category 5e cables shall be different color than Category 6 cables.
- d. Voice cables shall be different color than data cables.
- e. Shall be standard manufacturers colors. Category 5e backbone cables overall color shall be a different color than Category 6 backbone cables overall color. UTP backbone cables shall have different colors than fiber optic backbone cables.
- f. Category 5e - 100 pair backbone cables shall contain four 25-pair binders. Each 25 pair binder group shall maintain 25 pair backbone conductor pair color code similar to 25 pair backbone cable. All 25-pair binder groups shall be cut down in order of the following binder color:
 - (1) Blue
 - (2) Orange
 - (3) Green
 - (4) Brown
- g. White conductors shall have a co-extruded color stripe to match its companion conductor for efficient pair identification.

4. Coded Identifiers

- a. Provide coded identifiers as follows:

BCD-xxx	backbone conduit
CB-xxx	backbone cable
ER-xxx	equipment room
SE-xxx	service entrance

- b. The work area outlet shall be labeled in the format of AB-CDNN where: A = Floor Number, B = Building Section, C = Rack Number, D = Patch Panel and NN = Jack Number. For 1st Floor Part A from Rack #3 Patch Panel D Jack 36, the identifier would be as follows: 1A-3D36. Each jack within the outlet faceplate shall have unique identifier: V = voice, D1 = Data1, D2 = Data2, D3 = Data3, D4 = Data4, MT = Multi-mode transmit, MR = Multi-mode receive, ST = Single-mode transmit and SR = Single-mode receive. Voice is always located in the upper left corner of the faceplate. Data1 and Data3 are located in the top row in positions 1 and 2. Data2 and Data4 are located in the second row in positions 1 and 2.

3.14 TESTING

- A. Horizontal cabling indicated to be spare shall be fitted with connectors and tested as described below. The connector shall be cut off and the cable hermetically sealed for future.
- B. Test all cabling and passive components. Provide certification that entire installation of cabling, equipment and jacks are NRTL certified meeting or exceeding a minimum of TIA/EIA TSB67 Standards. Tests shall indicate each cable segment performance as well as each cable overall link performance.
- C. All cable segments and links shall be tested from both ends of the cable. (Verify that cable labeling matches at both ends).
- D. Test Reports: Upon completion and testing of the installed system, test reports shall be submitted in booklet form showing all factory and field tests performed. Organize test reports by each MDF and TR. Test reports shall be typewritten. Provide documentation and a copy of the standards being tested to. Indicate where test is in compliance, and acceptable limits for the test, measured value of the test and application involved. Submit test report formats to Commissioner for approval. Provide test results on CD with appropriate software.
- E. Produce bound hard copies of all test reports for every segment and link.
- F. The system shall not be considered certified until the tester has acknowledged, in writing, that the performance of the physical layer of the system has been fully tested and is operational at the completion of the installation phase.
- G. At completion Installer shall contact City of New York's representative in writing to witness testing of random cable tests. Random locations shall be indicated by City of New York's representative. Random testing shall not exceed 10% the total number of installed jacks.
- H. Equipment Manufacturers Factory Test
 - 1. Each cable and equipment manufacturer shall factory test their respective products being installed on this project and provide test reports at time of delivery to the Telecommunications Cabling Installer. Provide separate respective test reports indicating that they meet or exceed the latest EIA/TIA Standards for the following:
 - a. UTP Cable - Factory-test each master reel. Cable shall be tested off of the reel. Provide test report for same with each sub-reel, and box indicating all latest EIA/TIA Standards required testing information as well as NEXT, Structural Return Loss, Attenuation, Power-Sum, opens, shorts and Characteristic Impedance.
 - b. All other products relative to this Specification shall be tested to its respective industry's strictest standards.
 - c. Each manufacturer shall factory test their respective cable or equipment provided to this project at several lower frequency levels, including the minimum and maximum frequency level indicated herein. The test reports shall indicate test results for at least 5 equal incremental frequency levels including the maximum required.
 - d. High density IDC Type cross connect blocks - provide test report indicating the latest EIA/TIA Standards (SP-4195-B and SP-4195-B-1) required testing information as well as Structural Return Loss, NEXT, opens, shorts, crossed pairs, binder groups, and Characteristic Impedance.

- e. Patch panels -provide test report indicating the latest EIA/TIA Standards (SP-4195-B and SP-4195 B-1) required testing information as well as Structural Return Loss, NEXT, opens, shorts crossed pairs and Characteristics Impedance.
- f. Jacks - provide test report indicating the latest EIA/TIA Standards (SP-4195-B and SP-4195 B-1) required testing information as well as Structural Return Loss, NEXT, opens, shorts and Characteristics Impedance.

I. Field Testing Equipment

- 1. Submit shop drawings on the testing equipment to be utilized on this project. Test all fiber optic, copper and coax cables installed on the project. Shop drawings shall be submitted during the normal submitting process. Provide a hard copy of all field testing for fiber optic, copper and coax cables.
- 2. Fiber optic Testing:
 - a. Test all fiber optic cable segments end-to-end from the fiber optic backbone patch panel in the main distribution frame (MDF) to each fiber optic backbone patch panel in each intermediate distribution frame (TR) with an Optical Power Meter and high resolution Optical Time Domain Reflectometer (OTDR) for compliance to latest EIA/TIA Standards performance requirements, at 850 and 1,300 nm.
- 3. Twisted pair Testing Equipment:
 - a. The cable tester shall be a level III tester with latest software version and calibration including a wide variety of preprogrammed cable types as an integral part of its testing system and have the ability to test cables less than 6 meters from the test point.
 - b. Test all cables to their specified performance category. Category 6 cables shall meet TIA/EIA-SP 4195-B and SP 4195-B-1 performance.
 - c. Test results shall include:
 - Wire Map
 - Length
 - Attenuation
 - Power Sum Near-end Crosstalk (PS NEXT)
 - Remote
 - Local
 - NEXT Loss (pair to pair)
 - ELFEXT loss (pair to pair)
 - Power Sum ELFEXT loss
 - Return Loss
 - Insertion Loss
 - Propagation Delay
 - Delay Skew
- 4. Wire map shall determine the following:
 - a. Continuity to the remote end
 - b. Shorts between any two or more conductors
 - c. Crossed pairs
 - d. Reversed pairs
 - e. Split pairs
 - f. Any other mis-wiring
- 5. Length:
 - a. Length is determined by the propagation of delay of signals and depends on the twist helix and dielectric materials. Note: Calibration of Nominal Velocity of Propagation (NOMINAL VELOCITY OF PROPAGATION

- (NVP)) is critical to the accuracy of the length measurements when estimating from either frequency or time domain methods.
- b. The maximum physical lengths for
 - c. Basic link = 90 meters including test equipment cords.
 - d. Channel = 100 meters including equipment cords and patch cords.
 - e. Test results shall be reported in feet.
6. Attenuation:
- a. Link attenuation shall include all connection hardware
7. Near end Cross Talk (NEXT) Loss:
- a. All copper cables (including 4 UTP, 25 UTP and 100 UTP) shall be power sum tested.
 - b. Next shall be measured from both ends of the cable or link under test. For accurate measurements, at least 360 linearly spaced sample points in a 350 MHZ sweep are required.
 - c. When a test result is closer to the test limit than the accuracy of the field tester, the result shall be marked with an asterisk (*). Contractor #4 shall provide documentation to interpret results marked by an asterisk.
 - d. The specified accuracy of the tester shall be indicated on the testing results. Acceptable limits of accuracy for the proposed tester is as follows:
 - e. Any reconfiguration of link components after testing may change the performance of the link and thus invalidate the previous test result. These links shall be retested.
 - f. Test all installed horizontal cable segments end to end, from each work area outlet to:
 - Each TR horizontal patch panel/cross connect block.
 - Each MDF horizontal patch panel/cross-connect block.
 - g. Test all installed backbone cable segments end to end from each outlet on TR backbone patch panel/cross-connect block to each respective MDF backbone patch panel/cross-connect block.
 - h. Utilize a signal Injector, Graphical Link Testing Meter and Time Domain Reflectometer (TDR) for compliance to latest EIA/TIA Standards performance requirements, as well as NEXT, structural return loss, alternating power sum, opens, shorts, continuity, cable length, and Characteristics Impedance.
 - i. In general, provide certification that all cabling and equipment installed has been tested for wire mapping, cable length, NEXT, attenuation, shorts, opens, polarity, split pairs and that the pin configuration is consistent throughout the entire systems.
8. City of New York's Observation of Tests
- a. The City of New York reserves the right to observe (witness) 10% of the testing provided on each cabling system.
 - b. Should any of the cabling system's cables fail to pass the test or is improperly labeled (identified) the City of New York reserves the right to have the entire system retested and documented by the installer under this Section at no additional cost to the City of New York.
9. Engineer's Observation of the Test
- a. The Engineer may request that a 10% random field re-test be conducted on the cable system, at no additional cost, to verify documented findings. Tests shall be a repeat of those defined above. If findings contradict the documentation submitted by the telecommunications Contractor #4, additional testing can be requested to the extent determined necessary by the Engineer, including a 100% re-test. This re-test shall be at no additional cost to the City of New York.

10. Test Results

- a. Test documentation shall be provided on disk within three weeks after the completion of the project. The disk shall be clearly marked on the outside front cover with the words "Wiring Test Documentation", the project name, and the date of completion (month and year). The results shall include a record of a test frequencies, cable type, conductor pair and cable (or outlet) I.D., measurement direction, reference setup, and crew member name(s). The test equipment name, manufacturer, model number, serial number, software version and last calibration date will also be provided at the end of the document. Unless the manufacturer specifies a more frequent calibration cycle, annual calibration cycle is anticipated on all test equipment used for this installation. The test document shall detail the test method used and the specific settings of the equipment during the test as well as the software version being used in the field test equipment.

3.15 DOCUMENTATION

- A. Label all equipment as specified above
- B. Provide the City of New York with:
 1. Hard copy documentation of "As-Built" Telecommunications Cabling Systems Administration Reports.
 2. Hard copy and electronic documentation of test results for every cable segment and link in 3-ring binder. Documents shall include measured values as well as whether or not the test passed.
 3. "As-Built" drawings indicating location of all equipment including but not limited to work area outlets, patch panels, cross connect blocks, on each segment and cable routing. Indicate labeling for each piece of equipment.
 4. Refer to Part One for additional documentation.

3.16 SYSTEM ACCEPTANCE

- A. Obtain written acceptance from the City of New York or their authorized representative for each cabling system installed on this project. Failure to obtain written acceptance shall result in delay of start of warranty period. No claim for additional costs will be allowed due to not receiving written acceptance. Warranty period will start upon receipt of written acceptance.

3.17 ACCEPTANCE DEMONSTRATIONS

- A. Systems installed under this section shall be demonstrated to the City of New York and Commissioner. Demonstrations are in addition to necessary testing and instruction sessions. Notify all parties at least 7 days prior to the scheduled demonstration. Schedule demonstrations in cooperation with and at times convenient to all parties and so as to not disturb ongoing activities.
- B. Systems shall be tested prior to the demonstrations and each system shall be fully operational and tested prior to arranging the Acceptance Demonstration.
- C. If the demonstration is not totally complete, performing all functions, features and connections or interfaces with other systems, or if there is a failure during the demonstration, additional demonstrations shall be arranged. Provide and pay for all costs, labor and expenses incurred for all attendees for each additional demonstration required for acceptance and demonstration of complete system operation.
- D. Demonstrations shall be scheduled in ample time to complete all activities prior to final acceptance and City of New York occupancy. Demonstrations shall take place at least

30 days prior to the scheduled project completion date and 30 days prior to City of New York's use and occupancy.

- E. As a minimum, provide demonstrations for systems indicated under "Work Included" under Part One of the Specifications. Provide demonstrations of additional systems as requested by the City of New York or Commissioner.

3.18 PROJECT COORDINATION

- A. Prior to Substantial Completion of the project and in ample time to address and resolve any coordination issues, request and arrange meetings between the City of New York, Commissioner, and Contractor #4 to discuss the Scope of Work for each system being provided and the interface required for a fully functional and operational system upon project completion. Initial meetings shall be scheduled three months prior to the scheduled Substantial Completion date or as soon as Submittals are submitted and reviewed for projects with shorter schedules.
- B. At these meetings the required interface with the City of New York shall be reviewed, requests for information required to complete programming or for coordination shall be presented and system operation and philosophy shall be discussed.
- C. Additional meetings shall be held as requested by any party so that all issues are resolved and with the goal and intent being that all systems are fully operational and functional upon project Substantial Completion and that the responsibility for all components required is clearly established.

3.19 CLEANING UP

- A. Upon completion of all work and testing, thoroughly inspect all exposed portions of installation and completely remove all exposed labels, markings, and foreign material.
- B. The interior of all equipment and cabinets shall be left clean; exposed surfaces shall be cleaned and plated surfaces polished.
- C. Repair damage to finish surfaces resulting from work under this section.
- D. Remove material and equipment from areas of work and storage areas.
- E. All equipment shall be clean from dirt, dust, and fingerprints prior to final acceptance.
- F. Touch up all damaged pre-finished equipment using materials and methods recommended by the Manufacturer.

3.20 PROJECT CLOSEOUT

- A. Provide close out submittals as required herein and in Division One including the following close out submittals.
 - 1. Operation and Maintenance Manuals
 - 2. Record Drawings.
 - 3. Video Tapes / DVDs of Instruction.
 - 4. Test Reports.
 - 5. Cabling Systems Administration Reports.
 - 6. Extra Materials.
 - 7. Obtain written receipts of acceptance close out submittals submitted. Receipts shall specifically detail what is being delivered (description, quantity and specification section) and shall be dated and signed by firm delivering materials and by the Commissioner.

B. Telecommunications:

1. Provide ten percent spare dust covers provided to the City of New York at the completion of the project.

C. Provide 15% spare patch cables and line cords for each cable type and length of each type provided.

1. Provide record drawings indicating actual cable routings and cable terminations and all required identifiers. Provide copy mounted in each intermediate distribution frame and the main distribution frame.

END OF SECTION

SECTION 280500

COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. Work of this Division shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this Division as shown on the drawings, as specified herein, and/or as required by job conditions.
- B. This Section governs general procedures, materials and workmanship as applicable to the electrical work specified in the other Division 28 sections. Perform the work of this section in accordance with the requirements of Section 260000 General Provisions, Section 260500 Basic Materials, Section 283100 Addressable Fire Alarm, and architectural Sections for Door Hardware.
- C. Perform the work in accordance with the requirements and provisions of applicable codes and laws.
- D. Equipment, materials, and installation shall conform to applicable standards and requirements of the following organizations and documents:

ANSI	-	American National Standards Institute
ASTM	-	American Society for Testing and Materials
AWS	-	American Welding Society
CSA	-	Canadian Standards Association
ETL	-	ETL Testing Laboratories
FCC	-	Federal Communications Commission
FM	-	Factory Mutual
FS	-	Federal Specifications
ICEA	-	Insulated Cable Engineers Association
IEEE	-	Institute of Electrical and Electronic Engineers
NEC	-	National Electrical Code
NECA	-	National Electrical Contractors Association
NEMA	-	National Electrical Manufacturers Association
NESC	-	National Electric Safety Code
NETA	-	International Electrical Testing Association
NFPA	-	National Fire Protection Association
NYCA	-	New York City Amendments to the 2005 NEC
OSHA	-	Occupational Safety and Health Administration
UL	-	Underwriters Laboratories, Inc.

1.02 INTENT

- A. It is the intention of the specifications and drawings to obtain finished work, clean, tested, and ready for operation.
- B. The drawings show, among other things, the intent of the system components and routing. Some fittings and accessories are shown, but it is not the intent to show all the fittings and accessories that will be required in order to install the systems in a coordinated way, as finished work. The contractor shall include all fittings and accessories as may be required in order to accomplish the coordination of the various building systems, to ensure the systems fit within the spaces provided.

1.03 WORK INCLUDED

- A. The work under this Division shall include labor, material, equipment, services and administrative tasks required to complete and make operable the electrical work shown on the drawings and specified herein, and including, but not limited to, the following:

1. Preparation and submission of shop drawings, diagrams and illustrations.
2. Procuring necessary permits and approvals, and paying required fees and charges in connection with the work of this Division.
3. Coordinating with, and complying with requirements of, the local electric utility, telecommunications service provider, and other franchised utility and service companies as applicable to the scope of this work.
4. Record drawings.
5. Operating and maintenance instructions and manuals.
6. Identification labels, tags, charts and diagrams.
7. Final connections to electrical equipment and devices.
8. Cutting, drilling, and patching required for the work of this Division.
9. Excavation and backfill for underground electrical work.
10. Maintain existing life safety systems in operation during construction.
11. Testing and adjustment of systems and equipment furnished, installed, and/or connected under this Division.

1.04 APPROVALS

- A. See General Conditions and Division 1 sections, in addition to the following requirements.
- B. Submit for approval a list of manufacturers of equipment proposed for the work. Contractor's intent to use exact make specified does not relieve him of responsibility for submitting such a list.
- C. Where any specific material, process or method of construction, or manufactured article is specified by name or by reference to catalog number of a manufacturer, or other standards, the intent is not to take precedence over the basic duty and performance specified, noted on drawings, or as required for intended results. The Contractor shall verify the duty specified with the specific characteristics of the equipment offered for approval.
- D. If material or equipment is installed before it is approved, the Contractor shall be liable for its removal and replacement with no additional cost.

1.05 SUBMITTALS

- A. Shop Drawing Schedule
 1. The Contractor shall submit, within 30 days of the award of his contract, a schedule of proposed shop drawing submissions.
 2. The schedule shall include the following information.
 - a. Item to be submitted
 - b. Date of submission
 - c. Latest date for approval
 - d. Manufacturers of the specified item.
 3. Items not specifically listed as "approved equal" should be listed for consideration at this time.

- B. See Division 28 equipment sections for specific submittals required. Unless otherwise indicated, submittals are required for electrical devices, equipment, and systems including basic construction materials such as conduit, 600 volt building wire, and standard fittings and boxes.
- C. **Manufacturers' Data**
1. If catalog cuts of standard manufactured items show different types, options, finishes, performance requirements, or other variations, those features that the Contractor proposes to furnish shall be clearly identified. If any variations from the catalog description are proposed or required, such variations must be clearly noted on the cut.
- D. **Shop Drawings**
1. Shop drawings shall clearly indicate details, sectional views, arrangements, working and erection dimensions, kinds and quality of materials and their finishes, and other information necessary for proper checking and for fabrication and installation of the items, and shall include information required for making connections to other work.
 2. Shop drawings shall be numbered consecutively, and drawings related to various units comprising a proposed assembly shall be submitted simultaneously so that such units may be checked both individually and as an assembly.
 3. Contractor shall keep on the site, in good order, a complete up-to-date set of approved shop drawings. Shop drawings shall be made available for inspection by the Architect.
 4. The approval of shop drawings will be for general conformance to drawings and specifications, and shall not be construed as permitting any departure from the contract requirements. If the shop drawings show any variations from contract requirements because of standard shop practices or other reasons, such variations shall be clearly identified on the drawings or specifically noted in the letter of transmittal, in order that, if acceptable, suitable action may be taken for proper adjustment in other work affected thereby. If the Contractor fails to so identify such variations, he will not be relieved of responsibility for executing the work in accordance with the contract, even though such shop drawings have been approved and the work installed. Approval shall not relieve the Contractor of responsibility for any error in details, dimensions, etc. that may exist on shop drawings, nor for the furnishing of materials or work required by the contract and not indicated on the shop drawings. Approval shall not be construed as approved departure from details or instructions previously furnished by the Architect.
 5. No work for which shop drawings are required shall be executed until the Architect's approval is obtained.
- E. Submittals will be reviewed for conformance with the contract drawings and specifications. The engineer's review stamp will be affixed to submittals. One of the following actions will be taken.
1. **NO EXCEPTION** - Submittal appears to comply with the contract drawings and specifications. Contractor is not relieved of responsibility to meet the requirements of the contract drawings and specifications due to errors, omissions, or conflicts with other equipment or trades.
 2. **EXCEPTIONS AS NOTED** - Submittal appears to comply with the contract drawings and specifications except for the items noted by the engineer. Contractor is not relieved of responsibility to meet the requirements of the contract drawings and specifications due to errors, omissions, or conflicts with other equipment or trades.
 3. **REVISE AND RESUBMIT** - In the opinion of the engineer the nature and/or

quantity of exceptions is sufficient to require resubmission to demonstrate compliance. Submittals must be returned within 30 days for contingent acceptance to remain valid. Submittals will become rejected if not returned within 30 days.

4. REJECTED - Submittal does not comply with contract drawings and specifications.

1.06 OPERATING AND MAINTENANCE INSTRUCTIONS

- A. Furnish manufacturers operating and maintenance instructions, parts lists and sources of supply for replacements in accordance with Division 1 - General Requirements.
- B. Provide the following:
 1. Complete sets of final and correct shop drawings, maintenance and replacement parts manuals, and operating instructions, for equipment supplied.
 2. Bind each set within a common binder. Index and organize with a table of contents, to permit quick and convenient reference.
 3. One day of instruction in operation and maintenance of equipment to Owner's maintenance force. Schedule a 2-week period, convenient to Owner, during which qualified personnel, including manufacturers' technicians and engineers will be available for Owner's instruction.
 4. Master Operating Manual (submit in quadruplicate).
 5. Manufacturer's mechanical and electrical equipment parts list of components of the systems listed on the equipment schedules, control diagrams and wiring diagrams of controllers.
 6. List shall give system number, unit number, manufacturer's model number, and manufacturer's drawing numbers.
 7. Step by step operating instructions for each system including preparation for starting, re-starting after power failure, or re-setting after overcurrent or short-circuit operation.
 8. Maintenance instructions for each type of equipment.
 9. Possible breakdowns and repairs for each type of equipment.
 10. List of nearest local suppliers for equipment.
 11. Manufacturer's literature describing each piece of equipment listed on the fixture, panel and equipment schedules and in the specifications including wiring diagrams and a copy of any applicable test reports.
 12. As-installed control diagrams by the control manufacturer.
 13. Recommended trouble shooting procedures in the event of foreseeable electrical system failure.
 14. Complete "As-Installed" color coded wiring diagrams of systems.
 15. Copies of the security system test reports.

1.07 GUARANTEES AND SERVICES

- A. Workmanship, installation materials, and equipment shall be guaranteed as specified in

the General Conditions and Division 1.

- B. Contractor shall leave entire system installed under this Contract in proper working order, and shall replace any work or material which develops defects within the 1 year guarantee period, including other work damaged as a result of such defects, without additional cost.

1.08 PERMITS AND CERTIFICATES

- A. Prior to proceeding with any installation, the Contractor shall prepare and submit to the proper authorities for their approval working drawings required by them, and shall give necessary notices, obtain permits, and pay local, state and federal taxes, fees and other costs in connection with this work.

PART 2 - PRODUCTS

2.01 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Materials and equipment and systems shall be new, bear manufacturer's name and trademark, and comply with applicable standards specified.
- B. The UL label shall be borne on each piece of applicable material or equipment.
- C. Equipment shall be provided with required hardware for proper installation, assembly, and operation.
- D. The descriptions cover basic equipment and operation but not complete details of design and construction. The use of singular in descriptions does not limit the quantities of items to be furnished to provide the operation specified. Furnish equipment required to produce specified performance under installed conditions. Provide trim, enclosures and accessories required to make a complete installation.
- E. Follow manufacturers' directions in delivery, storage, protection and installation of equipment and materials. Notify Architect promptly, in writing, of any conflict between requirements of the contract documents and manufacturers' directions, and obtain Architect's written instructions before proceeding with work. Bear any costs to correct deficiencies arising from failure to comply with the manufacturers' directions and instructions.
- F. Deliver equipment and materials to the site and store in original containers, suitably sheltered from the elements. Store items subject to moisture damage in dry, heated spaces. Tightly cover and protect equipment against dirt, water, chemical, and mechanical injury, and against theft.
- G. Equipment and materials of the same general type shall be of the same manufacturer, make and model throughout the work to provide uniform appearance, operation and maintenance.
- H. Where new products or components are indicated to be installed or connected to existing systems or equipment, verify compatibility and performance with the manufacturer of the existing systems or equipment prior to purchase and installation.

2.02 EQUIPMENT DEVIATIONS

- A. Where the Contractor proposes to use an item of equipment other than that specified or detailed on the drawings, and which requires any additional utilities or redesign of the structure, partitions, foundations, piping, wiring or any other part of the mechanical or electrical layouts, such redesign and new drawings required thereby, with approval of the Architect, shall be prepared by the Contractor without additional cost. Any changes in the project required to support alternates or substitutions shall be fully identified and submitted on the shop drawings for the substitute or alternate product. Such changes shall be reflected in the coordination drawings and shall be approved by the affected trades.

- B. Where such approved deviation requires a different quantity or arrangement of equipment from that specified or indicated on the drawings, the Contractor shall provide any structural supports, controllers, motors, starters, wiring, conduit, and any other additional equipment required by the deviation, at no additional cost.
- C. It is the intent of these specifications that wherever a manufacturer of a product or a catalog number is specified, and terms "or equal" or "or approved equal" are used, a substituted item must conform to the specified item. Consideration will not be given to claims that a substituted item meets performance requirements with lesser construction. Performance as indicated in schedules and in specifications shall be interpreted as minimum acceptable performance.

PART 3 - EXECUTION

3.01 SITE INVESTIGATION

- A. Examine drawings, specifications, and site, and be responsible for the nature and location of work and the general and local conditions, particularly those bearing upon transportation, disposal, handling and storage of materials, availability of labor, electric power, roads, etc.

3.02 DRAWINGS

- A. Drawings are diagrammatic and indicate the general arrangement of systems and work required. Do not scale the drawings. Consult the Mechanical and Architectural drawings and details for exact locations of equipment.
- B. Drawings shall be used in layout of work. Check reference drawings to verify spaces in which work will be installed, and maintain maximum headroom and space conditions. Where headroom, working clearance or space conditions appear inadequate, Architect shall be notified before proceeding with installation.
- C. If directed by the Architect, make minor modifications in the layout as needed to prevent conflict with work of other trades or for proper execution of the work.

3.03 COORDINATION WITH OTHER TRADES

- A. Closely schedule the work so that the work will be installed at the proper time and without delaying the project's completion.
- B. Where the work of this Division is to be installed in close proximity to the work of other trades, or where there is evidence that the work will interfere with the work of other trades, assist in working out space conditions to make a satisfactory arrangement. If the work is installed before such coordination with other trades, make necessary changes in the work as directed by the Architect to correct any conflicts or interferences, without additional cost to the Owner.

3.04 COORDINATION AND LAYOUT

- A. Study drawings and specifications to ensure completeness of work required. Include supplementary items normal to manufacturers' requirements or standard accepted trade practices as necessary to complete the work, even if not explicitly shown or specified.
- B. Verify measurements and conditions in field before starting work.
- C. Examine materials, surfaces, and structures to which work is to be applied and notify the Architect, in writing, of any conditions that are detrimental to proper and expeditious installation of work. Starting of work shall be construed as acceptance of conditions.
- D. Confer with other trades to install work to avoid interference with other trades. The necessary adjustments to conform to structural conditions and work of other trades, particularly ductwork and piping layouts, is included under this section. Assist other trades in the preparation of coordinated layout drawings.

3.05 CONNECTIONS TO EQUIPMENT FURNISHED UNDER OTHER DIVISIONS OR BY OWNER

- A. Provide electrical connections to equipment and fixtures requiring such connections which are supplied by Owner or under other Divisions.
- B. Provide conduit, wire, lugs, fittings, accessories, and trim for final connection of each item of equipment as required for complete assembly and specified operation.

3.06 WORKMANSHIP

- A. Perform work in practical, neat, and workmanlike manner, with electricians skilled in the work they are performing, and using the best generally recognized trade practices.
- B. No work shall be covered or hidden from view until it has been inspected and approved by the required Building Department personnel and the Architect.
- C. Workmanship or materials not meeting with requirements of the specifications or drawings, or the satisfaction of the Architect, shall be rejected and shall be immediately replaced in an acceptable manner without additional cost.

3.07 TESTS

- A. Notify Architect, in writing, at least one week prior to tests, of the proposed testing timetables. Perform tests with the approval of and in the presence of the Architect or his representative.
- B. Provide temporary connections, necessary testing equipment, labor and materials, required for the testing of the systems and equipment. Systems shall be prepared for testing and protected from damage. Measuring instruments shall be properly calibrated. The cost of tests shall be included in the contract price.
- C. Prior to energizing, test for continuity and identification of each conductor. Identify both ends of each conductor.
- D. Perform additional tests required by Owner, Architect or any other authorities having jurisdiction.
- E. Correct or replace any circuit, material or equipment that is found to be defective by these tests. Correct defects, whether due to faulty workmanship or material furnished, in a manner acceptable to Architect without additional cost.

3.08 SLEEVES AND SEALING

- A. Install sleeves of Schedule 40 galvanized steel pipe for conduits and cables penetrating above-grade floor slabs, and any concrete or masonry walls. Sleeves through walls shall terminate flush with wall surface on each side. Sleeves through floors shall terminate 2 inches above finished floor. Neatly and completely grout sleeves in place.
- B. Sleeves shall be adequately sized for the conduits and cables to be installed, with sufficient free space to install sealing caulk or putty.
- C. Sleeved conduits through slab-on-grade floors, below-grade foundation walls, shafts, and the like shall be provided with sealing bushings to seal against fluid and gas pressure and installed in accordance with UL and manufacturer's instructions.
- D. Where penetrating floor slabs and fire-rated partitions, pack the annular space between the sleeves and the conduits and cables with reusable fire-retardant modules, putty, sealant, or caulk. The sealant material shall be intumescent, asbestos free, and installed in accordance with UL and manufacturer's instructions. Sealant materials shall be easily removed and replaced for addition or deletion of cables.

1. Penetrations with annular space greater than 1/2" shall be provided with approved backing material.
 2. Fire-retardant sealer and system shall be UL listed for the application and meet ASTM E-84, ASTM E-814, and UL-1479 requirements. Use Hilti Firestop Systems, CSD Sealing Systems, Nelson "FSP", Carborundum Co. "Fyre Putty", 3M "CP-25", IPC "Flamesafe", ROX System or approved equal.
 3. Retrofit cable installation products: STI EZ-Path Series 22, 33 and 44 or approved equal by Wiremold or Hilti.
- E. Contractor shall photographically document that proper sealing bushings, fire stopping and sleeving have been performed before locations are hidden from view.

END OF SECTION

SECTION 281100

SECURITY SYSTEM

PART 1 - GENERAL

1.01 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.02 REFERENCES

- A. Perform the work of this section in accordance with the requirements of Section 260000 General Provisions, Section 260500 Basic Materials, Section 283100 Addressable Fire Alarm, and architectural Sections for Door Hardware.

1.03 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components shall conform to state and local codes and laws.
- B. The criteria of design and performance to produce the required operation is based on equipment of the named manufacturers. Equipment of other manufacturers may be considered, subject to acceptability in the Commissioner's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products shall be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.04 SUBMITTALS

- A. Submit manufacturers' technical product data for security system equipment and devices, and including description of operation, specifications, dimensions and finishes. Clearly mark options and features furnished, and strike out items, options, and features not being furnished.
- B. Submit complete drawings covering the following for the proposed system:
 - 1. Floor plans showing initiating devices, surveillance and indicating appliances, and control panels.
 - 2. Wiring diagrams showing points of connection and terminals used for electrical connections to the existing system devices and panels.
 - 3. Submit project-specific riser, wiring diagrams and floor plans indicating and specifying field wiring and connections required for the project.
- C. Submit a schedule of initiating devices, listing device type, location, zone (if applicable), and software address.

PART 2 - PRODUCTS

2.01 GENERAL

- A. Provide necessary products, equipment, devices, wiring, software, and programming for a complete operating security system, as indicated and specified.
- B. The electronic security system shall generally consist of two separate, but related, subsystems - door and room intrusion monitoring; and closed-circuit television (CCTV) monitoring.
- C. Security system devices are indicated generically on the drawings. Specific product and component selections, locations, and quantities shall be determined by a qualified vendor of commercial security systems of equivalent size and type. Product selections shall be coordinated with the architecture, door hardware, and other field conditions affecting such selections.
- D. The system shall be microprocessor-controlled, intelligent reporting with individual device addresses, electrically supervised, low-voltage, power-limited.
- E. Subject to compliance with requirements, provide a complete security system as manufactured by one of the following:
 - 1. GE Security
 - 2. Honeywell
 - 3. Bosch

2.02 BASIC OPERATION

- A. Intrusion Monitoring
 - 1. Provide acoustic glassbreak sensors as indicated.
 - 2. Activation of door sensors and glassbreak sensors shall initiate a specifically identified alarm at the security panel. Provide door status switches on exterior doors as indicated.
 - 3. Provide dual-technology passive infrared motion detectors as indicated.
 - 4. Provide electric door strike as indicated on plans.
 - 5. The monitoring and alarm system shall include 24 hour, 365 day, time-of-day programming to permit automatic scheduling of activation and deactivation times for each device or room.
- B. CCTV
 - 1. Provide compact, visually unobtrusive, charged coupled device (CCD), color cameras, complete with appropriate lenses, housings, mounts, power supplies, controllers, and other necessary accessories at locations as indicated on drawings. Each camera shall connect to display and recording equipment. Provide cameras with the following principal features:

- a. Suitable for indoor or outdoor applications.
 - b. Camera housing to be constructed of heavy-duty aluminum with a polycarbonate dome.
 - c. Image capturing device to be 1/3" interline transfer Super HAD CCD image sensor.
 - d. Overall resolution shall be 540 television lines.
 - e. Sensitivity shall be 0.5 lux at f1.2, 30IRE.
 - f. Signal system shall be NTSC or PAL standard.
 - g. Universal input voltage of 12VDC or 24 VAC.
2. Provided with one 16-channel time-lapse professional digital video recorder, with the following principal features:
- a. 320GB hard drive.
 - b. Triplex – MPEG4.
 - c. View, record, and playback simultaneously.
 - d. Remote software allows live viewing or playback of video over LAN, WAN or Internet.
 - e. Motion detection; Digital activity detector;
3. Provide 19" LCD Monitor, with the following principal features:
- a. 2/6 ms of fast response time.
 - b. 500:1 high contrast ratio
 - c. Multiple inputs including 1 X BNC In/Out, 1 x S-video In/Out, HDMI, VGA input
4. Include a custom rack assembly for Security Control Center equipment. Equipment will be located in the administrative area.

2.03 SECURITY SYSTEM CONTROL PANEL

- A. Provide security system control panel including enclosures for housing modules, boards, devices, and circuits necessary to perform required functions, and to service as test points and trouble-signal points.
- B. Modules, boards, and devices shall be modular, plug-in design and construction.
- C. Provide control panel for operation on 120-volts AC supply, and for 24-volts DC system operation with battery stand-by power source.
- D. Equip control panel for number of active points indicated, plus minimum 50% future. Equip any remaining blank spaces in the enclosures for future installation of modules.
- E. Control panel enclosures shall be surface mounted, with hinged lockable door, suitable for the location.
- F. Provide UPS as secondary power supply, minimum 90 minutes full load capability.
- G. Provide remote signal receiver, electrically supervised, capable of receiving signals from remote station transmitter over telephone lines and visually annunciating alarm signals and common trouble signal.
- H. Provide remote signal transmitter, electrically supervised, capable of transmitting alarm

and trouble signals over telephone lines to remote station receiver.

2.04 PROGRAMMING AND CONTROL

- A. The system shall be programmable, configurable, and expandable in the field without the need for special tools or electronic equipment, and shall not require replacement of electronic circuits.
- B. Programming shall be accomplished through the main control panel operator interface.
- C. At least two levels of user-defined password protection shall be provided to prevent unauthorized changes in status levels or in program information.
- D. Any device in the system may be enabled or disabled, and any output may be turned on or off, from the control panel or video display terminal.

PART 3 - EXECUTION

3.01 INSTALLATION

- A. Install, connect, and program security system in accordance with equipment manufacturer's written instructions and The Commissioner's requirements.

3.02 RACEWAY

- A. Furnish and install dedicated conduit system for the Security System. All cabling and conduit to be run concealed including within new concrete slab construction where required. All cabling to be run in conduit. Raceways and cables shall be neatly arranged on hangers and supports, with fittings designed for the purpose, and shall be installed parallel and perpendicular to walls, floors, structure and ceilings in a neat and workmanlike manner.
- B. Provide dedicated security cable pathways as follows:
 - 1. Accessible ceilings: Provide empty electrical conduit and outlet boxes with pullstring from outlets to accessible ceiling spaces. Provide cable /pathways above accessible ceilings via non-compressing cable hangers to the local designated security panel/sub-panel. Cable hangers shall be 4-inch capacity minimum, galvanized steel, suitable for Category 6, fiber optic, innerduct, and low voltage cabling with UL listing for structured cabling systems; B-Line or approved equivalent.
 - 2. In-accessible ceilings: Provide empty electrical conduit and outlet boxes with pullstring from outlets to designated security panel/sub-panel.
 - 3. Vertical: Provide cable pathways via empty EMT conduit between security panels/sub-panels at each level. Use conduit for exposed runs through floors to height of 7' above floor and in shaftways. Conduit sizes as shown on the drawings.
 - 4. Provide metal pullboxes in conduit runs as follows:
 - a. Length over 100 feet.
 - b. More than two (2) 90-degree bends.
 - c. After every reverse bend.

- C. Refer to other paragraphs in this Section for raceway installation with the following supplemental information or exceptions:
1. Conduit, flexible cable tray and cable hanger fill shall not exceed 40 percent.
 2. Provide minimum inside bending radius of ten (10) times the inside diameter of the conduit for security raceways.
 3. Provide cable hangers at minimum intervals of three (3) feet and seismically braced. Provide additional hangers if cable sag exceeds 12 inches.
 4. Provide a drag line in each conduit run and terminate in a bushed elbow.
 5. When completed the conduit systems shall be ready for the installation of wiring and equipment.
- D. Security cable installation shall comply with the following minimum criteria:
1. Maintain minimum 6 inches separation from power distribution cables unless in conduit.
 2. Power and security cables shall cross perpendicularly where crossings are needed.
 3. Maintain minimum 12 inches separation between security cables and fluorescent light ballasts.
 4. Cable bend radii shall be a minimum of eight (8) times the outside cable diameter.
- E. Provide shop drawings of security system conduit routing for the Commissioner, security system vendor and review.

3.03 WIRING

- A. Provide wire and cable sizes, quantities, and construction characteristics in accordance with requirements of manufacturer. Conductors shall be copper. Cable jackets shall be UL listed for use in plenum spaces.
- B. Wiring of security system is work of this section, but is not specifically detailed on drawings. Complete wiring in accordance with manufacturer's requirements. Color code or label wiring and install per manufacturer's point-to-point wiring diagram. Connect each device with sufficient wiring to complete its intended operation.
1. Do not exceed manufacturer's maximum circuit lengths.
- C. Install wiring of power-limited circuits in accordance with NEC Article 800. Use conduit for runs through floors, or in shaftways, to height of 7' above floor.
- D. Install wires and cables without splices. Make connections at terminal strips in cabinets or at equipment terminals.
- E. Install wiring in strict accordance with manufacturer's written instructions and approved shop drawings.

- F. Unless otherwise indicated, backboxes shall be recessed, and conduits and cable shall be concealed.
- G. Make connections to panel under supervision of the manufacturer's authorized representative.

3.04 GROUNDING

- A. Provide a #4 AWG ground conductor riser in 1" EMT conduit bonded at each end the security closet grounding busbar from the security main grounding busbar and to main service grounding electrode system.
- B. Connect the ground riser per ANSI J-STD-607-A Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications.
- C. Provide additional #4 AWG ground cable connections from the security closet grounding busbar to the closest building steel and to the ground bus in the electric panel feeding the outlets and equipment in the associated security closet.
- D. Ground the security control panel to the associated security closet grounding busbar with a #4 AWG conductor per ANSI J-STD-607-A Commercial Building Grounding (Earthing) and Bonding Requirements for Telecommunications.
- E. Control equipment must have transient protection devices to comply with UL864 requirements. Provide an isolated loop protector device on any circuit including power, telephone, signal, initiating device, or notification appliance device circuit that extends beyond the main building by either aerial, underground, or other method.

3.05 TESTING AND DEMONSTRATION

- A. Upon completion of the installation, test wiring for continuity and for the absence of shorts and grounds; then energize the system and demonstrate compliance with requirements in the presence of the manufacturer's representative and Commissioner's representatives.
- B. Correct, repair, or replace any malfunctioning software, programming, wiring, or devices, and re-demonstrate until proper functioning is achieved.
- C. In addition to the testing and demonstration specified above, the manufacturer's authorized representative shall provide one (1) full day of orientation and training for The City of New York's personnel, at a time to be scheduled by the The City of New York.

END OF SECTION

SECTION 28 31 00

ADDRESSABLE FIRE ALARM SYSTEM

PART 1 - GENERAL

1.1 SCOPE & RELATED DOCUMENTS

- A. The work covered by this section of the specifications includes the furnishing of labor, equipment, materials, and performance of each operation in connection with the installation of the Fire Alarm System as shown on the drawings and as herein specified.
- B. The work covered by this section of the specifications includes the furnishing of labor, equipment, materials, and performance of operations in connection with the additions and modifications to the existing Fire Alarm System as shown on the drawings and as herein specified.
- C. The requirements of the conditions of the Contract, Supplementary Conditions and General Requirements, apply to the work specified in this section.
- D. The complete installation is to conform to the applicable sections of NFPA-72, Local Code Requirements and National Electrical Code with particular attention to Article 760.
- E. The work covered by this section of the specifications is to be coordinated with the related work as specified elsewhere under the project specifications.
- F. Additionally, the entire installed system and integrated system operations shall be within the guidelines of the New York City Building Code, including Chapter 9 and Appendix Q.
- G. Products, components and assemblies furnished by the manufacturer shall be approved by the New York City Board of Standards and Appeals (BSA) and/or the New York City Building Department Materials and Equipment Acceptance (MEA) and the New York City Fire Department (FDNY). Submittal documents for these products, components and assemblies shall have their respective BSA and/or COA Approval Calendar Numbers clearly indicated or the submittals shall be rejected by the Commissioner.
- H. Additionally, the entire installed system and integrated system operations shall be within the guidelines of the New York City Building Code, including Chapter 9 and Appendix Q.
- I. The existing building will be in operation throughout construction. The existing fire alarm system shall remain in operation until the new system has been installed and tested. The existing building has an emergency voice alarm communications system. The digitized voice message shall notify occupants of this project that a fire condition has been reported. The new fire alarm control panel for the Theaters shall report to the existing base building fire alarm panel. Refer to Section 260050 and coordinate with Building Property Manager, Commissioner and Construction Manager.

1.2 QUALITY ASSURANCE

- A. Each item of the Fire Alarm System shall be listed as a product of a SINGLE fire alarm system manufacturer under the appropriate category by Underwriters' Laboratories, Inc. (UL), and shall bear the "U.L." label. Equipment provided shall be listed under UL 864 9th Edition to insure the latest revision of control equipment. Equipment that does not have UL 864 9th

Edition or has 9th Edition pending will not be approved. Manufacturer shall provide copy of UL 9th Authorization letter if requested. Control equipment is to be listed under UL category UOJZ as a single control unit. Partial listing shall not be acceptable.

- B. The equipment and installation supervision furnished under this specification is to be provided by a manufacturer who has been engaged in production and/or installation of this type (software driven) of equipment for at least three (3) years, and has a fully-equipped service organization within proximity too the installation.
- C. Before commencing work, submit data showing that Contractor #4 has successfully installed fire alarm system of the same type and design as specified or that they have a firm contractual agreement with a subcontractor having the required manufacture's instruction and experience. Contractor #4 will include the names and location of installations of similar size and complexity where Contractor #4, or his subcontractor have installed such systems.
- D. Control equipment must have transient protection devices to comply with UL864 requirements. Provide an isolated loop protector device on any circuit including power, telephone, signal, initiating device, or notification appliance device circuit that extends beyond the main building by either aerial, underground, or other method.

1.3 SHOP DRAWINGS

- A. Prior to submittal of drawings:
 - 1. First: Obtain Commissioner's approval for revisions to layouts shown on Contract Documents.
 - 2. Second: Submit shop drawings to the FDNY for review and approval prior to commencing construction.
- B. Submit shop drawings for the following:
 - 1. Intelligent addressable fire alarm control panel, manual pull stations, heat detectors, analog smoke detectors, alarm monitoring modules, supervised control modules and accessories.
 - 2. Conventional non-addressable devices as required for performance to this specification.
 - 3. Audible and visual evacuation signals and devices.
 - 4. Wiring and conduit to include circuit load and spare capacity.
 - 5. Detailed sequence of operation.
- C. Data describing more than one type of item shall be clearly marked to indicate the type Contractor #4 intends to provide for a given application. The reviewing authority will assume that options not crossed out in submittal material will be furnished for the project. Submittal

material shall be complete. Partial submittals will not be accepted. Submit copies of UL listing or FM approval data showing compatibility of the proposed device or appliance and the panel being provided.

- D. Complete drawings covering the following shall be submitted for the proposed system:
1. Floor plans showing initiating, end of line, supervisory, notification appliances, and output control devices.
 2. Wiring diagrams showing points of connection and terminals used for electrical connections to the existing system devices and panels.
 3. Submit project-specific, complete riser diagram showing interconnections of panels, modules, and point-to-point wiring between devices including wire types and major junction boxes required for the project.
 4. A complete proposed system database including a description of logic strings, control by event programming and point identification labels on a compact disk (CD) and in a formatted printed form, required for off site editing, uploading and downloading shall be submitted for evaluation by the Commissioner. A programming manual shall accompany the submitted program and shall be adequate to allow understanding, operation and editing by the system Commissioner.
- E. Submit a schedule of initiating devices, listing device type, location, zone (if applicable), and software address.
- F. Submit a matrix or table listing each output control function (e.g. fan shutdown, door release) and its corresponding initiating addresses.
- G. Submit calculations for the sizing of power supplies, batteries, and audio amplifiers (where applicable).
- H. Submit a copy of the field installer's NICET certificate in Fire Protection Engineering Technology, Fire Alarm Systems.
- I. For use in system test, a complete operation and maintenance manual with two sets of proposed installation drawings shall be submitted.
1. The following information shall be inscribed on the cover:
 - a. "OPERATION AND MAINTENANCE MANUAL"
 - b. Building location.
 - c. The name of the Contractor #4, system manufacturer and system subcontractor.
 - d. The name and phone number of the fire department required to respond to alarms at the project location.
 2. The manual shall be legible and easily read with large drawings folded and contained in pockets. Included in the manual shall be circuit drawings, wiring and control diagrams with data to explain detailed operation and control of each item of equipment and a control sequence describing start up instructions. Included shall be installation instructions, maintenance instructions, safety precautions, test procedures, performance data, and software documentation.
- J. Upon completion of the installation, "as-built" record drawings shall be submitted on each system before final acceptance of the work. Furnish to the Commissioner a set of "as-built" record drawings including updated system riser diagrams for each system. The record

drawings masters shall be on reproducible vellum uniformly sized as required for legibility and reproduction and on a compact disk (CD) in a DXF format suitable for use in a CAD drafting program. Record drawings shall additionally be annotated with the following:

1. Voltage drop calculations on a dedicated sheet.
2. Battery calculations on a dedicated sheet.
3. Amplifier power calculations on a dedicated sheet.

1.4 SUBMITTALS

- A. Submit manufacturers' technical product data for fire alarm system equipment and devices, and including description of operation, specifications, dimensions and finishes. Clearly mark options and features furnished, and strike out items, options, and features not being furnished.
- B. Submit a minimum of (2) additional Factory Authorized Independent Distributors within proximity too the project that can maintain, service, and add to the proposed system.

1.5 GENERAL

- A. Furnish and install a complete Fire Alarm System as described herein and as shown on the plans. The system shall be microprocessor-controlled, intelligent reporting, electrically supervised, low-voltage, power-limited, non-coded, utilizing one-way voice communication with individually addressable manual and automatic initiating devices and circuits, and individually addressable output control functions. The system shall use closed loop initiating device circuits with individual zone supervision, individual notification appliance circuit supervision, incoming and standby power supervision.
 1. Include a control panel, manual pull stations, automatic fire detectors, audible devices, flashing lights, remote annunciator, remote control devices, conduit and wiring, connections to devices, outlet boxes, junction boxes, and other necessary material for a complete operating system.
 2. The Theaters shall have an emergency voice alarm communications system. The digitized voice message shall notify occupants that a fire condition has been reported. Provide emergency manual voice override. The base building FACP digitized voice message shall notify occupants that a fire condition has been reported to either the Theater or existing base building FACP.
 3. The fire alarm control panel shall allow for loading or editing special instructions and operating sequences as required. The system is to be capable of on site programming to accommodate and facilitate expansion, building parameter changes or changes as required by local codes. Software operations are to be stored in a non-volatile programmable memory within the fire alarm control panel. Loss of primary and secondary power shall not erase the instructions stored in memory.
- B. To accommodate and facilitate job site changes, initiation circuits shall be individually configurable on site to provide either alarm/trouble operation, alarm only, trouble only, current limited alarm, no alarm, normally closed device monitoring, a non-latching circuit or a alarm verification circuit.

- C. Panels and peripheral devices shall be the standard product of a single manufacturer (unless otherwise specifically noted) and shall display the manufacturer's name on each component. The materials specified under this section are those of Siemens Fire Safety, UTC Fire & Security/Edwards, Tyco/Simplex Grinnell and Honeywell/Notifier FireCom, Inc. and constitute the type, product quality, material, and desired operating features.
- D. If equipment of another manufacturer is submitted for approval, Contractor #4 shall state what, if any, specific points of system operation differ from the specified points of the system operation. This differentiation report is to reference every paragraph of this specification. The following manufacturers are pre-approved for bidding purposes on this project:
 - 1. UTC Fire & Security/Edwards
 - 2. Siemens Fire Safety
 - 3. Honeywell/Notifier
 - 4. Tyco/Simplex Grinnell

1.6 OPERATION

- A. Provide system with the following operation and control features:
 - 1. Alarm reporting to remote supervising station (coordinate exact requirements with the Commissioner or local Fire Department).
 - 2. Alarm verification for automatic smoke detectors.
 - 3. Subsequent alarm (second zone in alarm re-sounds the audible signals after silencing of the first alarm).
 - 4. Control of auxiliary services:
 - a. Fan shut down relays, with key-operated or key-accessible H-O-A switches for complete override control of all fan systems 2000 cfm and larger. Provide "Status" indication for all smoke control system equipment, obtained by monitoring differential pressure switches provided and installed by Division 23.
 - b. Start-up and status indication of smoke exhaust fans.
 - c. Magnetic door holder release.
 - d. Release of magnetic door locks.
 - e. Close smoke dampers.
 - f. Operation of automatic smoke vents.
 - g. Stage water deluge system.
 - h. Close fire shutter doors and motorized fire-rated doors.
 - i. Close proscenium curtains.
 - j. Operation of motorized doors for make-up air.
 - 5. Detector sensitivity, status, adjustment, and testing from the control panel and day/night sensitivity control.
 - 6. Alarm initiation and bell activation from sprinkler flow switches.
 - 7. Alarm initiation from smoke detector operated doors and smoke hatches.
 - 8. Supervisory indication from sprinkler valve tamper switches, with ring back upon correction.

9. Electrical supervision of output control circuits. System status reports consisting of hard copy, English-language printout, with time and date stamp, of system input and output activity. Digital alarm communication to remote station via telephone line.
- B. Under normal condition the front panel shall display a "SYSTEM NORMAL" message and the current time and date.
 - C. Should an abnormal condition be detected the appropriate LED (Alarm, Supervisory, or Trouble) shall flash. The panel audible signal shall sound steadily for alarm conditions and pulse for trouble and supervisory conditions.
 - D. The panel shall display the following information relative to the abnormal condition of a point in the system:
 1. Custom location label (40 characters minimum)
 2. Type of device (i.e. smoke, pull station, waterflow)
 3. Point status (i.e. alarm, trouble)
 4. These three characteristics relative to an abnormal condition of a point shall be displayed simultaneously.
 - E. Pressing the appropriate acknowledge button shall acknowledge the alarm or trouble condition. The acknowledge functions may be passcode protected. Systems not capable of password protected manual command operations shall provide key operated switches for these functions. Function key switches shall be keyed differently from any other keyed switches or locks used within the system.
 - F. After all points have been acknowledged, the LED's shall glow steady and the panel audible signal will be silenced. The total number of alarms, supervisory, and trouble conditions shall be displayed along with a prompt to review each list chronologically. The end of the list shall be indicated. This feature shall be duplicated by the remote annunciator panel(s) with both the main fire alarm control panel and remote annunciator panel(s) responding the same way.
 - G. Alarm Silencing
 1. Alarm silencing shall be duplicated by the remote annunciator panel(s) with both the main fire alarm control panel and remote annunciator panel(s) responding in like manner.
 2. Should the "Alarm Silence" button be pressed alarm signals shall cease operation.
 3. Signals shall not be silenced during alarm silence inhibit mode.
 - H. System Reset
 1. The "System Reset" button shall be used to return the system to its normal state after an alarm condition has been acknowledged and cleared by authorized personnel. The display shall step the user through the reset process with simple English language messages. Messages shall provide operator assurance of the sequential steps (i.e.: "IN PROGRESS", "RESET COMPLETED", and "SYSTEM NORMAL") as they occur, should alarm conditions be cleared.

I. Fan Reset

1. The "Fan Reset" button shall be used to return the previously shutdown mechanical systems to their normal state after an alarm condition has been acknowledged and cleared by authorized personnel. The display shall step the user through the reset process with simple English language messages. Messages shall provide operator assurance of the sequential steps (i.e.: "FAN RESET IN PROGRESS", "FAN RESET COMPLETED", and "FAN SYSTEMS NORMAL") as they occur, should alarm conditions be cleared.

J. Function Keys

1. Additional function keys shall be provided to access status data for system points. As a minimum the status data shall include Disable/Enable Status, Verification Tallies of Initiating Devices, Acknowledge Status, etc.

K. History Logging

1. In addition to any required printer output, the control panel shall have the ability to store a minimum of three hundred (300) events in an alarm log plus a minimum of three hundred (300) events in a separate trouble log. These events shall be stored in a battery protected random access memory (RAM). Systems not having discrete alarm and trouble logging memory shall include an alternative supervised (eg: floppy drive, tape cassette, zip drive) historic recording method with battery backup. Real time and date shall accompany history event recording.

L. Walk Test with History Logging

1. The system shall be capable of being tested by one person. While in testing mode, the alarm activation of an initiating device shall be silently logged as an alarm condition in the historical data file. The panel shall automatically reset itself after logging of the alarm.

M. Access Levels

1. There shall be a minimum of four (4) access levels. Passcodes shall consist of up to ten (10) digits. Changes to passcodes shall only be made by authorized personnel. Systems not capable of password protected manual command operations shall provide key operated switches for these functions. Function key switches shall be keyed differently from any other keyed switches or locks used within the system.
2. The following keys/switches shall have access levels associated with them:
3. Alarm Silence
4. System Reset
5. Set Time/Date
6. Manual Control
7. On/Off/Auto Control
8. Disable/Enable
9. Clear Historical Alarm Log

10. Clear Historical Trouble Log
11. Walk Test
12. Change Alarm Verification

N. Detection Operation

1. Smoke sensors shall be smoke density measuring devices having no self contained alarm set point (fixed threshold). The alarm decision for each sensor shall be determined by the control panel. The control panel shall determine the condition of each sensor by comparing the sensor value to the stored values.
2. The control panel shall maintain a moving average of the sensors' smoke chamber value to automatically compensate (move the threshold) for dust and dirty conditions that could affect detection operations. The system shall automatically maintain a constant smoke obscuration sensitivity for each sensor (via the floating threshold) by compensating for environmental factors. The smoke obscuration sensitivity shall be adjustable to within 0.3% of either limit of the UL window (0.5% to 4.0%) to compensate for any environment.
3. The system shall automatically indicate when an individual sensor needs cleaning. When a sensor's average value reaches a predetermined value, a "DIRTY SENSOR" trouble condition shall be audibly and visually indicated at the control panel for the individual sensor. Additionally, the LED on the sensor base shall glow steady giving a visible indication at the sensor location. If a "DIRTY SENSOR" is left unattended, and its average value increases to a second predetermined value, an "EXCESSIVELY DIRTY SENSOR" trouble condition shall be indicated at the control panel for the individual sensor. To prevent false alarms, these "DIRTY" conditions shall in no way decrease the amount of smoke obscuration necessary for system activation. The control panel shall be listed to automatically perform the calibrated test requirements of NFPA 72.
4. The control panel shall continuously perform an automatic self-test routine on each sensor that will functionally check sensor electronics and ensure the accuracy of the values being transmitted to the control panel. Any sensor that fails this test shall indicate a "SELF TEST ABNORMAL" trouble condition with the sensor location at the control panel.
5. An operator at the control panel, having a proper access level, shall have the capability to manually access the following information for each sensor:
 - a. primary status
 - b. device type
 - c. present average value
 - d. present sensitivity selected *
 - e. peak detection values *
 - f. sensor range (normal, dirty, etc.)

*Values shall be in "percent of smoke obscuration" format so that no interpretation is required by the operator.

6. An operator at the control panel, having a proper access level, shall have the capability to manually control the following for each sensor:
 - a. clear peak detection values
 - b. enable or disable the point
 - c. clear verification tally
 - d. control a sensor's relay driver output
 7. It shall be possible to program the control panel to automatically change the sensitivity settings of each sensor based on time-of-day and day-of-week (for example, to be more sensitive during unoccupied times and less sensitive during occupied periods). There shall be a minimum of five (5) sensitivity settings available for each sensor.
 8. The control panel shall have the capability of being programmed for a pre-alarm or two-stage function. This function allows an indication to occur when, for example, a 3% sensor reaches a threshold of 1.5% smoke obscuration.
 9. For increased smoke detection assurance, individually addressed smoke sensors shall be provided with alarm verification. Only a verified alarm shall initiate the alarm sequence operation.
- O. RS-232-C Output
1. The Fire Alarm Control Panel shall be capable of operating remote printers. The output shall be paralleled ASCII from an EIA RS-232-C connection.
- P. Building Management System (BMS)/Temperature Control System Interface
1. The FACP shall be capable of transmitting trouble and alarm signals to the BMS. Coordinate with Section 230923 and provide any interfaces, modules, or contacts to communicate with the BMS.

1.7 ALARM SEQUENCE

- A. The system alarm operation subsequent to the alarm activation of any manual station, automatic detection device, or sprinkler flow switch is to be as follows:
1. Audible alarm notification appliances shall sound a non-coded digitized tone and voice message until silenced by the alarm silence switch at the control panel or remote annunciator panel(s).
 2. High Rise: Audible alarm notification appliances on floors other than the alarm floor, floor below and the floor above, shall sound an alert tone and voice message until silenced by the alarm silence switch at the control panel.
 3. Visual alarm notification appliances (xenon strobes) on the floor of alarm, floor below and floor above shall display a continuous synchronized pattern until extinguished by the Alarm Silence Switch.
 4. Visual alarm notification appliances (xenon strobes) shall display a continuous pattern until extinguished by the Alarm Silence Switch.
 5. Doors normally held open by door control devices shall release.

6. A supervised signal to notify an approved central station shall be activated. To accommodate and facilitate job site changes the type of "city connection circuit" is to be on site configurable to provide either a "reverse polarity", "local energy", "shunt" or dry contact connection.
 7. Air handling systems (supply and return) larger than 2000 cfm, shall be automatically shutdown. Other systems and equipment shall also be shut down as indicated on the plans.
 8. The control panel shall provide on/off/auto switch(es). In the automatic mode, the Division 23 mechanical controls shall operate the air handling systems as required. The control panel shall indicate "on" or "off" status of the air handling system via separate and distinct "on" and "off" LED indicators. Manual control is to be provided to override the automatic functions. Manual control shall initiate a system trouble alarm when any air handling system is shut down. A "supervised feedback" input shall be provided to indicate true "on" or "off" status from a contact closure of the air handling system. This positive feedback indication is to take precedence in determining true "on" or "off" status. For smoke control systems, status shall be determined by monitoring the differential pressure switches for each system, provided and installed by Division 23.
 9. Alarms shall be displayed on the panel display. The alarm LED shall flash on the control panel until the alarm has been acknowledged at the control panel. Once acknowledged, this same LED shall latch on. A subsequent alarm received from another zone after acknowledged shall flash the alarm LED on the control panel and the panel display shall show the new alarm information. A pulsing alarm tone shall occur within the control panel and the remote annunciator until acknowledged.
 10. Dry contact outputs from the fire alarm control panel (FACP) shall disable theater sound, projection and house lighting systems upon any alarm condition. Theater sound and projection systems shall be silenced and disabled to allow audiences to understand the alarm message. Theater lighting levels shall return to egress brightness for safe evacuation.
- B. The control panel is to have a dedicated supervisory service LED and a dedicated supervisory service acknowledge switch.
1. The activation of any standpipe or sprinkler valve tamper switch shall activate the system supervisory service audible signal, illuminate the LED at the control panel and activate the electric sprinkler fire bell outside the building. Provide differentiation between valve tamper activation and opens and/or grounds on fire alarm initiation circuit wiring. Fire bells shall be furnished and installed by Section 210000 and wired by this Contractor #4.
 2. Activating the Supervisory Service Acknowledge Switch will silence the supervisory audible signal while maintaining the Supervisory Service LED on indicating the tamper contact is still in the off-normal state.
 3. Restoring the valve to the normal position shall cause the Supervisory Service LED to extinguish thus indicating restoration to normal position.
- C. Alarm and trouble conditions shall be immediately displayed on the control panel front alphanumeric display. If more alarms or troubles are in the system the operator may scroll to display new alarms.

- D. The system shall have an alarm list key that will allow the operator to display alarms, troubles, and supervisory service conditions with the time of occurrence. This shall allow for the determination of not only the most recent alarm but also may indicate the path that the fire is taking.
- E. The control panel shall be capable of supplying sufficient 24VDC power output to suit job conditions and expansion capability for system growth. Include a minimum of 20 percent spare capacity for 24 VDC notification appliance circuits.

1.8 SUPERVISION

- A. The system shall contain a minimum of 250 Class 'A' independently supervised initiation circuits so that a fault in any one zone shall not affect any other zone. The alarm activation of any initiation circuit shall not prevent the subsequent alarm operation of any other initiation circuit.
- B. There shall be sprinkler supervisory initiation device circuits for connection of sprinkler valve tamper switches to perform the Supervisory Service Operation. Wiring methods which affect any fire alarm initiation circuits to perform this function shall be deemed unacceptable; i.e.: sprinkler and standpipe tamper switches (N/C contacts) shall NOT be connected to circuits with fire alarm initiation devices (N/O contacts). This independent initiation circuit shall be labeled Supervisory Service and shall differentiate between tamper switch activation and wiring faults.
- C. Provide independently supervised and independently fused notification appliance circuits for audible alarms and flashing alarm lamps. Disarrangement conditions of any circuit shall not affect the operation of other circuits.
- D. Auxiliary manual controls shall be supervised so that switches must be returned to the normal automatic position to clear system trouble.
- E. Each independently supervised circuit shall include a discrete panel readout to indicate disarrangement conditions per circuit.
- F. The incoming power to the system shall be supervised so that any power failure must be audibly and visually indicated at the control panel. A green "power on" LED shall be displayed continuously while incoming power is present.
- G. The system batteries shall be supervised so that a low battery condition or disconnection of the battery shall be audibly and visually indicated at the control panel.
- H. The System Expansion Modules shall be electrically supervised for module placement. Should a module become disconnected from the controls, the system trouble indicator must illuminate and audible trouble signal must sound.
- I. The system shall have provisions for disabling and enabling circuits individually for maintenance or testing purposes.

1.9 POWER REQUIREMENTS

- A. The control panel shall receive 120 VAC power (as noted on the plans) via dedicated fused cutout switch(es).

- B. Speaker/Strobe Systems: Shall be connected to the existing base building Edwards FACP. During normal power failures, provide sufficient battery capacity to operate the entire system in a supervisory mode for a period of 24 hours with 45 minutes of entire system alarm operation at the end of this period. Systems shall meet these requirements, including those with an emergency generator. The system shall automatically transfer to the standby batteries upon power failure. Battery charging and recharging operations shall be automatic.
- C. Circuits requiring system operating power shall be 24VDC and shall be individually fused at the control panel.

1.10 TRANSIENT & SURGE PROTECTION

- A. Provide protection against voltage transients and surges as follows:
 1. On AC Input: A feed-through (not a shunt-type) branch circuit transient arrestor such as the EFI HWM-120, Leviton OEM-120EFI, Northern Technologies TCS-HW, Transtector ACP100BWN3, or any approved equivalent UL Listed device. Install suppressor in a listed enclosure near the electrical panelboard, and trim excess lead lengths. Wind small coil in the branch circuit conductor just downstream of the suppressor connection. Coil to be 5 to 10 turns, about 1" diameter, and securely tie-wrapped. This series impedance will improve the effectiveness of the arrestor in suppressing voltage transients.
 2. On DC Circuits Extending Outside Building: Adjacent to the FACP, and also near point of entry to outlying building, provide "pi"-type filter on each leg, consisting of a primary arrestor, series impedance, and a fast acting secondary arrestor that clamps at 30v-40v. Acceptable models: Innovative Technology D2S33-2ML, Simplex 2081-9027 and 2081-9028, Transtector TSP8601, Ditek DTKxLVL series, Citel America B280-24V, and Northern Technologies DLP-42 or approved equivalent. UL 497B listing is a prerequisite for consideration of alternative products. Devices using only MOV active elements are not acceptable.

1.11 ADDRESSABLE NETWORK

- A. Communication with addressable devices: The system must provide communication with initiating and control devices individually. These devices are to be individually annunciated at the control panel. Annunciation shall include the following conditions for each point:

1. Alarm	4. Short
2. Trouble	5. Ground
3. Open	6. Device Fail/or Incorrect Device
- B. Addressable devices are to have the capability of being disabled or enabled individually.
- C. Up to 60 addressable devices may be connected to a single pair of wires. Systems that require factory reprogramming to add or delete devices are unacceptable.
- D. Format: The communication format must be a poll/response protocol to allow t-tapping of the wire to addressable devices and be completely digital. A high degree of communication reliability must be obtained by using parity data bit error checking routines for address codes and check sum routines for the data transmission protocol. Systems that do not utilize full digital transmission protocol (i.e. that may use time pulse width methods to transmit data etc.) will not be acceptable since they are considered unreliable and prone to errors.

- E. Identification of Addressable Devices: Each addressable device must be uniquely identified by an address code digitally entered on each device at time of installation. The use of jumpers to set address will not be acceptable due to the potential of vibration and poor contact.
- F. Wiring Type, Distances, Survivability and Configurations: Wiring types will be approved by the equipment manufacturer. The system must allow up to 2,500 feet wire length to the furthest addressable device. Provide Class A (Style 6) signaling line circuits as defined by NFPA-72 for initiation with no "T" taps and Class A (Style Y) for notification appliance circuits with no "T" taps. The load connected to each notification appliance circuit shall not exceed 80% of rated module output. The voltage drop during alarm must not exceed 14% of the voltage measured across the batteries at that time. To achieve this, the installation shall consider wire size, length of circuit, device load, inherent voltage loss within the FACP's power supply, etc. The Contractor #4 shall use power outage testing to verify that the NAC circuit was designed and installed properly.

1.12 ONE-WAY VOICE COMMUNICATION

- A. The system shall incorporate one-way voice communication and tone generating capabilities. Audio amplifiers and tone generating equipment shall be electrically supervised for normal and abnormal conditions. Provide two (2) amplifiers minimum and connect speakers to alternate circuits and arrange control equipment such that a loss of a portion of the wiring on a floor will not render more than 60% of the devices of each type inoperative, and the devices shall remain so connected to circuitry (i.e. by means of alternate circuits) as to maintain at least partial audibility/visibility throughout the entire floor.
- B. A central audio control module shall be provided for the necessary alarm message/tone generation, main and remote microphone connections, music inputs, and mixer/pre-amplifier circuits. Continuous supervision shall be provided along with specific information as to the type of failure should a problem occur (i.e. main microphone trouble, tone trouble, etc.). Audio outputs shall have individual gain control.
- C. A hand-held, push-to-talk microphone shall be provided, recessed within a protective panel-mounted enclosure. The microphone shall be a noise-canceling communication type with a frequency range of 200 Hz to 4000 Hz and shall be equipped with a self-winding five foot coiled cable. An LED indicator shall be provided to indicate the microphone push-to-talk button has been pressed and speaker circuits are ready for transmission. The microphone shall be supervised for disconnection.
- D. An audio control switch module shall be furnished to provide manual access to audio operations for authorized personnel. The module shall include an "ALL Circuits" switch, "Aux Tone 1" switch, "Aux Tone 2" switch, tone generator stop switch, and "Audio Trouble Reset" switch. These switches and associated LED indicators shall be supervised for disarrangement or failure.
- E. Audio power amplifiers shall be furnished with a self-contained filtered 24VDC power supply, transformer, and amplifier monitor circuits. The amplifiers shall provide a 25 Volt or 70 Volt RMS output with a frequency response of 120 Hz to 12,000 Hz. Provide sufficient amplification to operate system speakers simultaneously plus fifty (50) percent spare capacity. Size amplifiers based on 2 watts minimum per speaker with 100% of speakers adjusted to the 2 watt tap setting.

- F. High Rise: Alarm speaker amplifiers shall be paired to provide 100% redundancy. One back-up alarm speaker amplifier shall be provided for each primary alarm speaker amplifier. If any primary alarm speaker amplifier fails, its function shall be taken over by its backup amplifier. Alarm tone and alert tone oscillators and pre-amplifiers shall be paired to provide 100% redundancy. No more than half the speakers serving any floor or zone shall be connected to the same riser circuit. Speakers shall be alternately wired to ensure that the loss of one circuit will not impair audibility throughout a large area of a single floor.
- G. Provide remote microphone/annunciator command sub-systems as shown on the plans shall to duplicate the manual voice transmission capability of the main fire alarm control panel. The sub-system microphone shall communicate only to the respective area speakers. The main FACP microphone shall override sub-system voice evacuation microphones and transmit the message throughout the main system and sub systems.
- H. Automatic Voice Evacuation Sequence
 - 1. The audio alarm signal shall consist of an alarm tone for a maximum of 15 seconds followed by automatic pre-selected voice evacuation messages. At the end of each voice evacuation message, the alarm tone shall resume. The alarm tones shall sound alternately until the alarm silence switch at the fire alarm control panel has been operated.
 - 2. Audio alarm operations (speaker circuit selection and alarm tone/voice message timing variations) shall be activated by the system software so that any required future changes to the evacuation sequence can be facilitated by authorized personnel without any component rewiring.
- I. Voice Evacuation Zones
 - 1. Provide a minimum of two (2) independent audio circuits from independent amplifiers to each voice evacuation zone as scheduled on the drawings.
 - 2. Each floor, stairway, elevator bank, and assembly space (>300 persons) shall be a separate communication zone.
 - 3. Strobe lights shall not be installed in elevator cars, stairways, or photo darkrooms.

PART 2 - PRODUCTS

2.1 FIRE ALARM CONTROL PANEL (FACP)

- A. Modify the existing FACU: Edwards Model EST2 Audio as required to accept the new devices. Subject to compliance with requirements, provide Fire Alarm Control Units manufactured by one of the following:
 - 1. Siemens Fire Safety Model XLSV FireFinder
 - 2. Tyco Simplex-Grinnell Model 4100ES Voice
 - 3. UTC Fire & Security/Edwards Model EST 3/EXT 3X Audio
 - 4. Honeywell Notifier Model NFS2-3030
 - 5. Honeywell Gamewell-FCI E3 Series Broadband

- B. Construction shall be modular with solid state, microprocessor based electronics. The FAC shall display only those primary controls and displays essential to operation during a fire alarm condition. Although the keypad/keyboard can be used for control (firefighter/emergency) of the entire system, it shall only be used for maintenance purposes.
- C. Keyboards or keypads shall not be visible or required to operate the system during fire alarm conditions.
- D. A local audible device shall sound during Alarm, Trouble, or Supervisory conditions. This audible device shall sound differently during each condition to distinguish one condition from another without having to view the panel. This audible device shall also sound differently during each keypress to provide an audible feedback (chirp) to ensure that the key has been pressed properly
- E. Primary Keys & Panel Display
 - 1. The Control Panel's display shall be backlit for enhanced readability. So as to conserve battery standby power, it shall not be lit during an AC power failure unless an alarm condition occurs or there should be keypad activity. The display shall support both upper and lower case letters. Lowercase letters shall be used for softkey titles and prompting the user. Uppercase letters shall be used for System Status Information. A cursor shall be visible when entering information. The display shall include a back-lit alphanumeric Liquid Crystal Display (LCD). It shall include LED indications for Pwr, Test, CPU Fail, Gmd. Fault, Disable, Reset, Alarm Silence, Panel Silence, Drill, as well as individual Ques for alarm, trouble, supervisory, and monitor events.
- F. Equipment Enclosures
 - 1. For system expansion, if required, provide cabinet(s) of sufficient size to accommodate the aforementioned equipment. The cabinet(s) shall be equipped with locks and transparent door panel(s) providing freedom from tampering yet allowing full view of the various lights and controls. Provide a separate enclosure for batteries larger than 15 ah. Enclosures shall be flush or semi-flush mounting unless otherwise indicated on the drawings.

2.2 PERIPHERAL DEVICES

- A. Evacuation Signals, Voice Reproducing
 - 1. Voice reproducing and visual alarm signals shall meet Americans with Disabilities Act (ADA) and UL Standard 1971 requirements shall have the following characteristics and capacities with provisions for speaker only and strobe only installations as required:
 - 2. Field selectable taps at 3db increments between 1/8 watt and 8 watts, driven at 25 volts rms or 70 volts rms, as shown on the drawings.
 - 3. Sound output rating of 96 db at full power tap.
 - 4. Visual intensity: Field-selectable 15/30/75/110 or 135/185 candela for wall-mounted units; field-selectable 15/30/75/95 or 115/177 candela for ceiling-mounted units; xenon strobe, synchronized repetition of 1-3 Hz, 0.2 second pulse duration, clear white light (FIRE), white color housing, and back box. The LEXAN lens shall be pyramidal in shape to allow better visibility, labeled "FIRE" complying with ADA guidelines.

5. Signals to be suitable for installation in audible only, audible/visual, and visual only in combinations described above and below:
- B. Wheelock ET-Series, Siemens S-HP series; Notifier SpectrAlert SP2 series; System Sensor SpectrAlert series; Simplex TrueAlert 4906 series; Edwards Genesis series or approved equal. Provide mounting (wall and/or ceiling) as required by plans. Flush mount with 4-inch square outlet boxes; surface mount with manufacturer's factory finished backbox. Set candela ratings as indicated on plans. All appliances and associated wall plates shall be white except in Theater 1 and Theater 2 which will be red.
1. Unless otherwise indicated on the drawings, alarm speaker taps shall be set, as a minimum, to provide the following wattage levels for each location type of alarm speaker:
 - a. Each floor alarm speaker: Provide 1 watt of input power.
 - b. Each toilet alarm speaker: Provide 1/2 watt of input power.
 - c. Each mechanical room alarm speaker: Provide 2 watts of input power.
 - d. Each stairwell alarm speaker: Provide 1/2 watt of input power.
- C. Waterflow Alarm Bells – Furnished under Section 21000; power supply and installation and connection by this Contractor #4.
- D. Door Holders: Magnetic door holders shall have a minimum holding force of 25 lbs. The door portion shall have an adjustable stainless steel pivotal mounted armature and contact plate with shock absorbing nylon bearing. Unit shall be capable of being either surface, flush, semi-flush or floor mounted as required. Door holders shall be UL-listed for their intended purpose. Operation: 24 volts unless indicated as 120 volts on drawings. Edwards 1500 series or approved equivalent. Coordinate final locations and hardware with Commissioner.

2.3 ADDRESSABLE DEVICE TYPES

- A. General: The system control panel, over its two wire multi-drop channel, must be capable of communicating with the types of addressable devices specified below. Each device shall be electronically addressed, tested and programmed prior to installation using a UL-listed programmer/tester. Detectors shall be operational with relay bases, audible bases, and remote indicating LED's and programmable by the control panel. Devices shall be located as shown on the drawings. Devices shall be electronically addressed and not require mechanical means of setting individual address's for ease of service and replacement.
- B. Smoke Detector, Photoelectric: Pulsed infrared light source, photodiode, self-compensating for ambient temperature and humidity, in-place sensitivity readout from the control panel, two wire operation, dual LED alarm indication for 360° viewing angle, UL (UROX) Listed for open area coverage. Notifier FSP series, Siemens Fire Safety FP-11 FirePrint series, Edwards Signature series, Simplex 4098-9714, Gamewell Velociti series or approved equal.
- C. Smoke Detector, Photoelectric, Duct Mounted: Analog HVAC duct smoke detectors listed for installation in air duct sampling housings for the detection of smoke in HVAC system ducts, with RF suppression and insect screen. Auxiliary SPDT relays or remote LED alarm indicators shall be installed where indicated. Provide remote LED alarm indicators and test stations in accessible locations for duct detectors. Notifier FSD series, Siemens Fire Safety AD-11XPR housing and Series 11 intelligent detector, Edwards Signature series, Gamewell Velociti series, System Sensor Model DNRHS series with RTS151 remote key test station or approved equal.

- D. Heat Detector, Rate Compensated: Combination fixed temperature (135°F) and rate of rise, LED alarm indication, automatically restorable, 900 square foot coverage. Provide higher fixed-temperature-only, 200°F rated detectors where indicated on plans. Edwards Signature series, Siemens Fire Safety FPT-11 (for 135°F) or DT-200F (for 200°F), each with addressable CZM interface, Notifier FST series, Simplex 4098-9733 (for 135°F) or Fire Detection Devices Model CR 200 (for 200°F), Gamewell Velociti series or approved equal.
- E. Heat Detector, Fixed Temperature, Non-addressable, Non-conditioned Spaces: Mechanical fixed temperature (135°F) 625 square foot coverage. Provide higher fixed-temperature-only, 200°F rated detectors where indicated on plans. System Sensor 5600 series, Edwards 104 series or approved equivalent. Connect to system interface module in conditioned space as indicated on plans.
- F. Fire Detector Bases, Universal: Low profile twist lock type with screw clamp terminals and self-wiping contacts, with EMI and RFI immunization. Bases shall be installed on 4" square or octagonal electrical outlet box. Where selective localized control of electrical devices is required for system operation, provide software programmed addressable relay integral to the base. The relay shall switch electrical loads, as indicated on the drawings for controlled release of smoke hatches and shaft vents, and for shunt-trip of elevator power disconnect. Detector bases shall be compatible with, and allow the installation of, detectors operating on the flame, ionization, photoelectric, or rate compensated heat principles of detection. Siemens Fire Safety DB-11 and DB-X11RS, Simplex 4098-9792, Edwards SIGA-SB, Notifier B224RB or approved equal. Heat Detector, Rate Compensated: Combination fixed temperature (135°F) and rate of rise, LED alarm indication, automatically restorable, 900 square foot coverage. Provide higher fixed-temperature-only, 200°F rated detectors where indicated on plans. Edwards Signature series, Siemens Fire Safety FPT-11 (for 135°F) or DT-200F (for 200°F), each with addressable CZM interface or approved equal.
- G. Manual Station: Double action and identifiable by the master fire alarm control panel. Manufactured from high impact red Lexan with white raised lettering, mechanical latch upon operation, FACP-key operated manual reset. Flush or surface mounted as required, include manufacturer's back box, red baked enamel finish. Reliable Security Group (RSG) RMS series, Edwards SIGA series or approved equal. Section 27-973: Provide manual stations marked with a 1-inch diagonal white stripe to indicate Central Station reporting. Manual stations shall be furnished with a tamper proof, clear Lexan polycarbonate shield and frame where indicated. An integral battery powered warning horn shall sound when shield is lifted. STI #STI-1000 series or approved equal.
- H. Remote Zone Module: Zone modules shall be used to interface normally open direct contact (non-addressable) devices to an addressable signaling line circuit. The module shall be identifiable by the master fire alarm control panel and contain an on board LED alarm indicator. Mounting: standard 4-inch outlet box, flush, surface and weatherproof as shown for the area indicated.
- I. System Interface Module: Interface modules shall be used to interface normally open direct contact non-addressable devices to an addressable signaling line circuit to monitor alarm, trouble, supervisory or security devices. The module shall have Form C programmable control contacts for the management of specified electrical loads as shown on the drawings. The module shall be identifiable by the master fire alarm control panel and contain an on board LED alarm indicator. Mounting: standard 4-inch outlet box, flush, surface and weatherproof as shown for the area indicated. Siemens Fire Safety TRI-B6 series, Simplex 4090-9001 or 4090-9101, Notifier FMM-1, Edwards Signature series, Gamewell Velociti series or approved equal.

- J. Supervised Control Module: Control modules shall be used to supervise relays, contactors, audible signal circuits, visual signal circuits, distributed speaker circuits and two way fire fighters communication circuits. Controlled circuits shall be power limited at 1.5 amperes. The module shall be identifiable by the master fire alarm control panel and contain an on board LED alarm indicator. Mounting: standard 4-inch x 2-inch deep or double gang x 3-inch deep outlet box, semi-flush or surface.
- K. Controllable Relay Module: Controllable relay modules shall be used to provide auxiliary control of building functions such as door holder release, elevator capture, smoke control, lock release, shunt trip, etc. Each relay shall be supervised and include one set of SPDT contacts rated at 2 amperes, 30 VDC/120 VAC resistive minimum. Siemens Fire Safety CRM-4, Edwards Signature series, Simplex 4090-9002, Notifier FCM-1 series, Gamewell Velociti series or approved equal.
- L. Control Relay: Provide remote relays where required for relay contact requirements above the approved rating of addressable relay modules for remote control of fans, dampers, door releases, motor controls, or status feedback. Relay shall be SPDT contacts rated at 10 amperes, 24 VDC/115VAC. A red LED shall indicate the relay is energized. PAM series or approved equal.

2.4 REMOTE ALPHANUMERIC ANNUNCIATORS

- A. Where shown on the plans, provide supervised, remote alphanumeric annunciators with features and characteristics as follows:
 1. Any activity supported at the main control panel shall be enabled at the remote annunciator.
 2. Active poll response communications with the master fire alarm control panel using the local system communications network.
 3. Minimum 80 character alphanumeric display for fire alarms, supervisory reports, and system troubles. The number of characters shall mimic the number of characters on the main panel display.
 4. Individual fire alarm, supervisory, security and trouble acknowledge momentary switches and power "ON", each with LED indicators showing acknowledgement status by flashing and steady states.
 5. Remote paging capability consisting of dynamic push to talk microphone with enclosure.
 6. Scroll switch for the alarm display. Switch shall enable scrolling backward or forward through the alarm queue.
 7. Integral audible signal with audible signaling silence switch with LED indicating the state of the evacuation signals.
 8. Key menu driven keypad for the entry of passcodes, request for reports, setting time, and bypassing points.
 9. Twelve software programmable function key commands. These commands shall be capable of utilizing any and system logic functions resident within the system programming or of being an input into any of the logic functions.

10. Locked cabinet, factory finished enamel with viewing window. Cabinet shall not exceed 14 inches in width and height, or 3.5 inches in depth.
11. The annunciator shall be capable of supporting a supervised system printer, system CRT control terminal with keyboard or system color graphics alarm display terminal.
12. Remote annunciator shall be Siemens Fire Safety remote command center #RCC series or Edwards LSRA-C or 3-LCDANN series, Notifier FDU 80 series, or Simplex 4603-9101 or approved equal.

2.5 WIRING

- A. Fire alarm cable shall be "Teflon" jacketed, or the equivalent, conforming with the requirements for type FPLP "Power-Limited Fire Protective-Signaling Circuits," having a temperature rating of 150°C or higher, solid conductor insulation with a minimum average thickness of 15 mils, protected with a sheath and an outer jacket of 25 mils minimum, colored either red, or clear with red cable tape visible underneath. Cable shall be labeled for its entire length per UL 1424 and UL Tunnel Test 910, labeled "Also Classified NYC Cert." with the BS&A/MEA/OTC approval number and the temperature rating.
- B. Provide and install two #14 AWG minimum twisted pair, shielded for initiating device analog loop circuits.
- C. Provide and install two #14 AWG minimum twisted pair, shielded for strobes, and non-shielded for speakers and analog audible device loop circuits.
- D. Provide and install two #14 AWG minimum twisted pair, non-shielded for each waterflow alarm bell.
- E. Provide and install two #16 AWG minimum twisted pair, shielded for each remote annunciator.
- F. Verify conductor sizes and quantities with system manufacturer, prior to installation.
- G. Increase wire size to accommodate voltage drop per manufacturer's recommendations. Design circuits to a maximum of 75% rated capacity to accommodate future device additions and sound level changes. Do not exceed manufacturer's maximum circuit lengths.
- H. Provide permanent wire markers to identify connections at the FACP and other control equipment, at power supplies, and in terminal cabinets.
- I. In multi-story buildings, circuits leaving the riser on each floor shall feed through a labeled terminal block in a hinged enclosure accessible from the floor. Terminal block screws shall have pressure wire connectors of the self-lifting or box lug type.
- J. Notification appliance circuit booster ("ADA") power supplies shall be individually monitored by the FACP and protected by a smoke detector per NFPA 72. Do not locate above ceilings or in non-conditioned space. Note: A 24VDC power circuit service addressable control relays shall also be monitored for integrity.

2.6 ISOLATOR MODULE

- A. Provide isolator modules to automatically isolate wire-to-wire short circuits on a signaling line circuit (SLC) loop. The isolator module shall limit the number of modules or detectors that may be rendered inoperative by a short circuit fault on the SLC loop after each 25 initiating devices and control points or a lesser number where recommended by the manufacturer. Modules must be readily accessible (not above ceiling) and clearly labeled.
- B. Operation: Isolator modules shall operate such that if a wire-to-wire short occurs, the isolator module shall automatically open-circuit (disconnect) the SLC loop. When the short circuit condition is corrected, the isolator module shall automatically reconnect the isolated section. The isolator module shall not require any address-setting, and its operations shall be totally automatic. It shall not be necessary to replace or reset an isolator module after its normal operation.
- C. Mounting: The isolator module shall mount in standard 4-inch square, 2-1/8" deep electrical boxes. It shall provide a single LED that shall flash to indicate that the isolator is operational and shall illuminate steadily to indicate that a short circuit condition has been detected and isolated.
- D. Labeling: Each isolation module must be clearly labeled, readily accessible for convenient inspection (not above a lay-in ceiling), and shown on as-built system drawings.

PART 3 - EXECUTION

3.1 INSTALLATION DRAWINGS

- A. Show a general layout of the complete system including equipment arrangement. Verify dimensions and assure compatibility with other systems interfacing with the fire alarm system.
 - 1. Identify on the drawings, conduit and conductor sizes and types with number of conductors in each conduit. Provide each conduit and device with a unique identification.
 - 2. For addressable alarm initiation devices, the system identifier shall be, as minimum, the system address for that device. Signals shall be sequentially numbered as the address of the controlling module. Provide additional identification labels, room name, number and area, etc., as required by the Commissioner and coordinated with the Commissioner prior to final programming of the FACP.
 - 3. Indicate on the point to point wiring diagrams, interconnecting wiring within the panel between modules, and connecting wiring to the field device terminals.

3.2 INSTALLATION

- A. Field installer shall be NICET Level 3 certified in Fire Protection Engineering Technology, Fire Alarm Systems. Perform work in accordance with the requirements of NYCEC, NFPA 70, NFPA 72, and other requirements of local authority having jurisdiction.
- B. Fasten equipment to structural members of building or metal supports attached to structure, or to concrete surfaces.
 - 1. Use clamping devices for attaching to structural steel, or when clamping is impractical, obtain written authority to weld or to drill.

2. Fasten equipment to concrete or masonry with expansion anchors.
 3. Fasten equipment to drywall by screws into studs, and to metal wall panels by weld studs, bolts or self-tapping metal screws.
 4. Do not install conduit raceways and boxes in positions that interfere with the work of other trades.
 5. Attach nameplates on panels or other components as specified.
- C. Install equipment and devices where indicated; refer to architectural drawings for exact locations and mounting heights.
- D. Refer to HVAC drawings and specifications (Division 23) for exact locations of duct-mounted smoke detectors. Coordinate with appropriate trade for the cutting of ducts and mounting of housings and sampling tubes.
- E. Provide remote indicators for concealed smoke detectors and install in a readily visible location as close as possible to the location of the associated detector, either flush wall mounted 5'-0" AFF, or flush ceiling mounted. Provide remote indicators for duct smoke detectors located outside of mechanical equipment rooms. Coordinate exact mounting locations of remote indicators with Commissioner in field.
- F. Smoke detectors shall not be located in a direct air flow nor be closer than three (3) feet from an air supply diffuser or return air opening. Increase separation as required per NFPA 72.
- G. Conduit requirements for running of multi-conductor fire alarm and voice communications system wiring shall be as follows:
1. Multi-conductor cables may be installed without raceway protection where cable is protected by building construction, or located 8 feet or greater above the finished floor and not subject to physical tampering or hazard in accordance with the NYCEC. Support multi-conductor cables as required by the NYCEC.
 2. Wiring shall be run in EMT in all cases where stubbed down into walls and run below 8 feet.
 3. All wiring within mechanical and elevator equipment rooms shall be run in raceway.
 4. Exposed raceways run within 8' of finished floor in garages, mechanical rooms, elevator machine rooms, loading docks and elsewhere where subject to mechanical damage shall be rigid galvanized steel conduit.
 5. Flexible metal conduit, up to 36 inches in length, shall be permitted where approved by the Commissioner for final connections to initiating and notification devices.
 6. In any suppression and extinguishing system activated by automatic fire detection, including, but not limited to, pre-action sprinkler, deluge sprinkler, clean air agent, range hood, CO₂, and/or dry chemical, multi-conductor cables shall be installed in rigid galvanized conduit or EMT, in accordance with the requirements of locations in item c above.
 7. Power shall not be installed in raceways with low voltage wiring.
 8. Raceway shall have a maximum 40% fill. Refer to Section 260500 for raceway and installation requirements.
 9. Telephone wiring between digital alarm communicator and telephone system shall be run in rigid galvanized steel conduit.

- H. Provide a separate raceway system for fire alarm wiring. Power shall not be installed in raceways with low voltage wiring. Raceway shall be electrical metallic tubing (EMT), minimum 3/4-inch size, maximum 40% fill and as indicated on drawings. Refer to Section 260500 for raceway and installation requirements.
- I. Unless otherwise indicated, backboxes shall be recessed, and conduits and cable shall be concealed.
- J. "Fire alarm system" decal shall be applied to junction box covers. Junction box covers shall be painted "fire department red".
- K. Each conductor shall be identified with wire markers at every splice and terminal point. Attach permanent wire markers within 2 inches of the wire termination. Marker legends shall be visible.
- L. Splices shall not be made other than at terminal blocks or on terminal blocks at cabinets. Wire nuts and crimp splices shall not be permitted. Connectors shall be installed in conformance with the manufacturer's recommendations.
- M. Crimp-on type spade lugs shall be used for terminations of stranded conductors to binder screw or stud type terminals. Spade lugs shall have upset legs and insulation sleeves sized for the conductors.
- N. Permanently label or mark each conductor at both ends with permanent alpha-numeric wire markers.
- O. Use a consistent color code for fire alarm system conductors throughout the installation.
- P. Smoke detectors shall not be installed until final construction clean-up has been completed. Replace detectors contaminated during construction. Caution: Covers supplied with smoke detector head do not provide protection against heavy construction dust, spray painting, etc., and shall not be used for that purpose. Covers are suitable only during final, minor clean-up or touch-up operations.
- Q. The Contractor #4 shall clean dirt and debris from the inside and the outside of the fire alarm equipment after completion of the installation.
- R. The manufacturer's authorized representative shall provide on-site supervision of installation. Power shall not be applied to the system until a manufacturer's factory trained representative is present.
- S. Identify individual devices. Assign each a unique number as follows, in sequence starting at the FACP: (Addressable Loop # – Device # – Room/Space #). Show on the record drawings, and also permanently mount on each device's base so that the identification is readable standing on the floor below without having to remove the device. Exception: For detectors with housings (air duct, projected beam, air sampling) apply the identification to a suitable location on the exterior of the device housing. Addressable device descriptors shall utilize room/space designations and numbers that will be used by the facility after occupancy. Descriptors shall be approved by the Commissioner.
- T. For each duct/plenum detector provide remote alarm indicator lamp/test switch installed in the nearest corridor or as shown on plans. Identify each location by an engraved label affixed to the wall or ceiling.
- U. The Contractor #4 shall provide up to three fire alarm system reprogramming revisions as directed by the Commissioner.

- V. Provide supervisory alarm wiring from the fire pump controller to the fire alarm system. Supervisory alarms to be wired are: power failure alarm, phase reversal alarm, and pump running alarm. Coordinate all alarm contact voltages, ratings, and types (NO/NC) with the equipment being supplied.
- W. The fire alarm voice evacuation system messages shall be as approved by the Commissioner and custom messages shall be provided as directed.
- X. Label locations of duct smoke detectors to indicate "Duct Smoke Detector Access".

3.3 WIRING OF COMBINATION FIRE/SMOKE AND SMOKE DAMPERS

- A. The Division 26 electrical Contractor #4 shall be responsible for all 120 volt wiring of combination fire/smoke, smoke dampers and damper power via step down transformers. The Division 23 contractor shall be responsible for all damper control wiring from secondary of step down transformers.
- B. Obtain sources of electrical power as directed on the electrical plans, in the electrical specifications, and herein. Provide such power wiring from the source of power to the dampers and associated controls as required for a complete system installation.
- C. Confer with the Division 23 temperature control Contractor to ensure damper control sequences are in accordance with the sequences of operation outlined in Section 230923.
- D. The Division 23 mechanical and temperature control contractors shall be responsible for ALL damper control – this includes life safety shut-down and control, smoke purge / exhaust sequence control, as well as standard operation for specified temperature control sequences.
- E. Refer to Section 230923 for additional requirements.

3.4 FIELD QUALITY CONTROL

A. General Testing

1. Intelligent analog devices shall be tested for correct address and sensitivity using test equipment specifically designed for that purpose. These devices and their bases shall be tagged with adhesive tags located in an area not visible when installed, showing the system address, initials of the installing technician and date.
2. Wiring runs shall be tested for continuity, short circuits and grounds before system is energized. Resistance, current and voltage readings shall be made as work progresses.
 - a. A systematic record shall be maintained of readings using schedules or charts of tests and measurements. Areas shall be provided on the logging form for readings, dates and witnesses.
 - b. The acceptance inspector shall be notified before the start of the required tests. Items found at variance with the drawings or this specification during testing or inspection by the acceptance inspector shall be corrected.
 - c. Test reports shall be delivered to the acceptance inspector as completed.

Test equipment, instruments, tools and labor required to conduct the system tests shall be made available by the Contractor #4. The following equipment shall be a minimum for conducting the tests:

- a. Ladders and scaffolds as required to access installed equipment.
 - b. Multi-meter for reading voltage (current and resistance).
 - c. Intelligent device programmer/tester (if required to set device addresses).
 - d. Laptop computer with programming software for any required program revisions.
 - e. Two way radios, flashlights, smoke generation devices and supplies.
 - f. A manufacturer recommended device for measuring air flow through air duct smoke detector sampling assemblies.
 - g. Decibel meter.
 - h. Provide a testing kit for testing CO detectors in accordance with manufacturer's requirements.
4. In addition to the testing specified to be performed by the Contractor #4, the installation shall be subject to test by the acceptance inspector.
5. System wiring: Fire alarm circuits shall be tested for continuity, grounds, and short circuits.

B. Acceptance Testing

1. A written acceptance test procedure (ATP) for testing the fire alarm system components and installation will be prepared by the manufacturer in accordance with NFPA 72, and this specification. Contractor #4 shall be responsible for the performance of the ATP, demonstrating the function of the system and verifying the correct operation of system components, circuits, and programming.
2. Contractor #4 shall prepare a program matrix referencing each alarm input to every output function affected as a result of an alarm condition on that input. In the case of outputs programmed using more complex logic functions involving "any", "or", "not", "count", "time", and "timer" statements; the complete output equation shall be referenced in the matrix.
3. A complete listing of device labels for alpha-numeric annunciator displays shall be prepared by Contractor #4 prior to the ATP.
4. The acceptance inspector shall use the system record drawings in combination with the documents specified under paragraph 3.01 during the testing procedure to verify operation as programmed. In conducting the ATP, the acceptance inspector shall request demonstration of any or input and output functions. The items tested shall include but not be limited to the following:
 - a. System wiring shall be tested to demonstrate correct system response and correct subsequent system operation in the event of:
 - 1) Open, shorted and grounded intelligent analog signaling circuit.

- 2) Open, shorted and grounded network signaling circuit.
 - 3) Open and grounded conventional zone circuits.
 - 4) Open and grounded signal and telephone circuits.
 - 5) Intelligent device removal.
 - 6) Primary power or battery disconnected.
 - 7) Incorrect device at address.
- b. System evacuation alarm notification appliances shall be demonstrated as follows:
- 1) Alarm notification appliances actuate as programmed.
 - 2) Audibility and visibility at required levels.
- c. System indications shall be demonstrated as follows:
- 1) Correct message display for each alarm input at the base building control panel and each remote alpha-numeric display.
 - 2) Correct annunciator light for each alarm input at each annunciator as shown on the drawings.
5. After Contractor #4 has completed his own acceptance test following the ATP procedure, and after the authorized fire alarm equipment representative has performed a 100% complete test of the system, an acceptance test of the fire alarm system will be conducted by Contractor #4 as directed by the Commissioner or his authorized representative.
6. In the event of system failure to perform as specified and programmed during the ATP procedure, at the discretion of the acceptance inspector, the test shall be terminated.
- a. Contractor #4 shall retest the system, correcting deficiencies and providing test documentation to the acceptance inspector.
 - b. The acceptance inspector may elect to require the complete ATP to be performed again if, in his opinion, modifications to the system hardware or software warrant complete re-testing.
7. Before completion, the System Supplier shall turn over, to the City of New York, a disc copy and hard copy of the approved system custom program. Information shall be complete to allow for an alternate Factory Authorized Distributor to service, maintain, add, or delete devices as required.

3.5 SERVICES

- A. Contractor #4 shall warrant the entire system against mechanical and electrical defects for a period described in the contract general conditions. This period shall begin upon completed certification and test of the system or upon first beneficial use of the system, whichever is earlier.
- B. Furnish instruction as follows for a minimum of four employees of the system user:
 1. Instruction in the receipt, handling and acknowledgement of alarms.
 2. Instruction in the system operation including manual control of output functions from the system control panel.
 3. Instruction in the testing of the system including logging of detector sensitivity, field

test of devices and response to common troubles.

4. The total instruction requirement shall be a minimum of 24 hours or as required by the City of New York, conducted on three successive days, but shall be sufficient to cover the items specified.
- C. Prepare and start systems as directed by the Commissioner.
1. Include services of a certified technician to supervise adjustments and final connections, if required by the local authority having jurisdiction, to include: speaker tap setting, strobe intensity, detector sensitivity and door release adjustment.

3.6 WARRANTY

- A. Contractor #4 shall warrant the completed fire alarm system wiring and equipment to be free from inherent mechanical and electrical defects for a period of one (1) year from the date of the completed and certified test or from the date of first beneficial use.

3.7 EXISTING CONDITIONS

- A. Where work consists of additions or extensions to an existing system, prior to starting work, establish that system is in proper working order. If condition exists which prevents normal operation of specified additions and extensions, bring this fact to Commissioner's attention prior to doing work affecting existing system.
- B. Where work is done without such notification, it shall be assumed that connections have been made to a working system, and performance requirements and guarantee will apply to entire system.
- C. The existing building will be in operation continuously. Refer to notes on drawings, Section 260050, and elsewhere in this specification regarding system shutdowns.
