a. Open Heating Elements: Resistance wire of 80 percent nickel and 20 percent chromium supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in galvanized-steel frame.
b. Overtemperature Protection: Disk-type, automatically resetting, thermal-cutout, safety device; serviceable through terminal box without removing heater from coil section.
c. Secondary Protection: Load-carrying, manually resetting or manually replaceable, thermal cutouts; factory wired in series with each heater stage.

5. Condenser Refrigerant Coils:

a. Tube Material: Copper.
b. Fin and Tube Joint: Mechanical bond.

F. Refrigeration Circuit Components:

1. Compressors: Hermetic, scroll compressors, mounted on integral vibration isolators; with internal overcurrent and high-temperature protection, internal pressure relief.
2. Refrigerant: R32.
3. Refrigeration Specialties:

a. Expansion valve with replaceable thermostatic element.
b. Refrigerant filter/dryer.
c. Manual-reset high-pressure safety switch.
d. Automatic-reset low-pressure safety switch.
e. Minimum off-time relay.
f. Automatic-reset compressor motor thermal overload.
g. Thermostat for coil freeze-up protection during low-ambient-temperature operation or loss of air.
h. Brass service valves installed in discharge and liquid lines.
i. Low-ambient kit high-pressure sensor.
j. Single compressor with evaporator and condenser coil within the refrigerant section to provide initial pre-cooling and to reheat for humidity control.
k. Modulating hot-gas reheat solenoid valve with a replaceable magnetic coil.
l. Heat-pipe heat exchanger, wrapped around the evaporator coil to pre-cool the air entering the evaporator coil and reheat the air leaving the evaporator coil to control humidity.
m. Hot-gas bypass refrigerant control for capacity control with continuous dehumidification for single-speed compressor.

G. Air Filtration:

1. Panel Filters:

a. Description: factory-fabricated, self-supported disposable air filters with holding frames.
b. Filter Unit Class: UL 900.

c. Media: Interlaced glass, synthetic, or cotton fibers coated with nonflammable adhesive and antimicrobial coating.
d. Filter-Media Frame: High wet-strength beverage board with perforated metal retainer, or metal grid, on outlet side.

H. Adhesive: As recommended by air-filter manufacturer and with a VOC content of 80 g/L or less.

I. Controls:

1. Damper Controls: Space-pressure sensor modulates outdoor- and relief-air dampers to maintain a positive pressure in space at a minimum of 0.05 inch wg with respect to outdoor reference.

J. Roof Curbs:

1. Materials: Galvanized steel with corrosion-resistant coating, watertight gaskets, and factory-installed wood nailer; complying with National Roofing Contractors Association manuals for the specific type of roofing applicable to the Project.

2.3 MATERIALS

A. Steel:

1. ASTM A36/A36M for carbon structural steel.
2. ASTM A568/A568M for steel sheet.

B. Stainless Steel:

1. Manufacturer's standard grade for casing.
2. Manufacturer's standard type, ASTM A240/A240M for bare steel exposed to airstream or moisture.

C. Galvanized Steel: ASTM A653/A653M.

D. Aluminum: ASTM B209.

E. Corrosion-Resistant Coating: Coat casing with a corrosion-resistant coating capable of withstanding a 3,000 -hour salt-spray test in accordance with ASTM B117.

1. Standards:

a. ASTM B117 for salt spray.
b. ASTM D2794 for minimum impact resistance of 100 in-lb.
c. ASTM D3359 for cross-hatch adhesion of 5B.

2. Application: Immersion.
3. Thickness: 1 mil.
4. Gloss: Minimum gloss of 50 gloss units on a single angle 60-degree meter.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for piping, ducts, and electrical systems to verify actual locations of connections before equipment installation.

C. Examine roof curbs and equipment supports for suitable conditions where units will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION OF DEDICATED OUTDOOR-AIR UNITS

A. Roof Curb: Install on roof structure or concrete base, level and secure, in accordance with NRCA's "The NRCA Roofing Manual: Membrane Roof Systems". Install units on curbs and coordinate roof penetrations and flashing with roof construction specified in Section 077200 "Roof Accessories." Secure units to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts. Coordinate sizes and locations of roof curbs with actual equipment provided.

B. Do not operate fan system until filters (temporary or permanent) are in place. Replace temporary filters used during construction and testing with new, clean filters.

C. Install filter-gauge, static-pressure taps upstream and downstream of filters. Mount filter gauges on outside of filter housing or filter plenum in accessible position. Provide filter gauges on filter banks, installed with separate static-pressure taps upstream and downstream of filters.

D. Connect duct to air-handling units with flexible connections. Comply with requirements in Section 233300 "Air Duct Accessories."

E. Install wall- and duct-mounted sensors furnished by manufacturer for field installation. Install control wiring and make final connections to control devices and unit control panel.

F. Install separate devices furnished by manufacturer and not factory installed.

G. Install new filters at completion of equipment installation and before testing, adjusting, and balancing.

3.4 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to units, allow space for service and maintenance.

C. Connect piping to units mounted on vibration isolators with flexible connectors.

D. Refrigerant Piping: Comply with applicable requirements in Section 232300 "Refrigerant Piping." Install shutoff valve and union or flange at each supply and return connection.

E. Hydronic Piping Connections:

1. Comply with requirements in Section 232113 "Hydronic Piping."
2. Install shutoff valve and union or flange on each supply connection, and install balancing valve and union or flange on each return connection.

F. Duct Connections:

1. Comply with requirements in Section 233113 "Metal Ducts."
2. Drawings indicate the general arrangement of ducts.
3. Connect ducts to units with flexible duct connectors. Comply with requirements for flexible duct connectors in Section 233300 "Air Duct Accessories."

3.5 ELECTRICAL CONNECTIONS

A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.

3.6 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."

3.7 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's written instructions.
2. Inspect units for visible damage to refrigerant compressor, condenser and evaporator coils, and fans.
3. Start refrigeration system when outdoor-air temperature is within normal operating limits. and measure and record the following:

    a. Cooling coil leaving-air, dry- and wet-bulb temperatures.
    b. Cooling coil entering-air, dry- and wet-bulb temperatures.
    c. Condenser coil entering-air dry-bulb temperature.
    d. Condenser coil leaving-air dry-bulb temperature.

4. Simulate maximum cooling demand and inspect the following:

    a. Compressor refrigerant suction and hot-gas pressures.
    b. Short-circuiting of air through outside coil or from outside coil to outdoor-air intake.

5. Inspect casing insulation for integrity, moisture content, and adhesion.
6. Verify that clearances have been provided for servicing.
7. Verify that controls are connected and operable.
8. Verify that filters are installed.
9. Clean coils and inspect for construction debris.
10. Inspect and adjust vibration isolators and seismic restraints.
11. Verify bearing lubrication.
12. Clean fans and inspect fan-wheel rotation for movement in correct direction without vibration and binding.
13. Adjust fan belts to proper alignment and tension.
14. Start unit.
15. Inspect and record performance of interlocks and protective devices, including response to smoke detectors by fan controls and fire alarm.
16. Operate unit for run-in period.
17. Calibrate controls.
18. Adjust and inspect high-temperature limits.
19. Verify operational sequence of controls.
20. Measure and record the following airflows. Plot fan volumes on fan curve.

    a. Supply-air volume.
    b. Relief-air flow.
    c. Outdoor-air flow.

B. After startup, change filters, verify bearing lubrication, and adjust belt tension.

C. Remove and replace components that do not properly operate, and repeat startup procedures as specified above.

D. Prepare written report of the results of startup services.

3.8 ADJUSTING

A. Adjust initial temperature and humidity set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

C. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.9 CLEANING

A. After completing system installation; testing, adjusting, and balancing dedicated outdoor-air unit and air-distribution systems; and completing startup service, clean air-handling units internally to remove foreign material and construction dirt and dust. Clean fan wheels, casings, dampers, coils, and filter housings, and install new, clean filters.

3.10 DEMONSTRATION

A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate units.

END OF SECTION 237433

SECTION 238129 - VARIABLE-REFRIGERANT-FLOW HVAC SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes: VRF HVAC systems.

1. Indoor, concealed, ceiling-mounted units for ducting.
2. Indoor, exposed, wall-mounted units.
3. Outdoor, air-source heat recovery units.
4. Heat recovery control units (HRCUs).
5. System controls.
6. System refrigerant and oil.
7. System condensate drain piping.

1.3 DEFINITIONS

A. Air-Conditioning System Operation: System capable of operation with all zones in cooling only.

B. Heat-Pump System Operation: System capable of operation with all zones in either heating or cooling, but not with simultaneous heating and cooling zones that transfer heat between zones.

C. Heat Recovery System Operation: System capable of operation with simultaneous heating and cooling zones that transfer heat between zones.

D. HRCU: Heat Recovery Control Unit. HRCUs are used in heat recovery VRF HVAC systems to manage and control refrigerant between indoor units to provide simultaneous heating and cooling zones. "Heat Recovery Control Unit" is the term used by ASHRAE for what different manufacturers term as branch circuit controller, branch selector box, changeover box, flow selector unit, mode change unit, and other such terms.

E. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

F. Plenum: A space forming part of the air distribution system to which one or more air ducts are connected. An air duct is a passageway, other than a plenum, for transporting air to or from heating, ventilating, or air-conditioning equipment.

G. Three-Pipe System Design: One high pressure refrigerant vapor line, one low pressure refrigerant vapor line, and one refrigerant liquid line connect a single outdoor unit or multiple manifold outdoor units in a single system to associated system HRCUs. One liquid line and refrigerant vapor line connect HRCUs to associated indoor units.

H. Two-Pipe System Design: One refrigerant vapor line and one refrigerant liquid line connect a single outdoor unit or multiple manifold outdoor units in a single system to associated system HRCUs. One refrigerant liquid line and refrigerant vapor line connect HRCUs to associated indoor units. HRCUs used in two pipe systems act as an intermediate heat exchanger and include diverting valves and gas/liquid separators to move high and low pressure refrigerant between indoor units.

I. VRF: Variable refrigerant flow.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Product Data: For VRF HVAC system components.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for indoor and outdoor units and for HRCUs.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Include operating performance at design conditions and at extreme maximum and minimum outdoor ambient conditions.
4. Include description of system controllers, dimensions, features, control interfaces and connections, power requirements, and connections.
5. Include system operating sequence of operation in narrative form for each unique indoor- and outdoor-unit and HRCU control.
6. Include description of control software features.
7. Include total refrigerant required and a comprehensive breakdown of refrigerant required by each system installed.
8. Include refrigerant type and data sheets showing compliance with requirements indicated.
9. For system design software.
10. Indicate location and type of service access.

B. Sustainable Design Submittals:

1. Product Data for Credit IEQ 7.1, "Thermal Comfort - Design": Documentation indicating that systems, equipment, and controls comply.

C. Shop Drawings: For VRF HVAC systems.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Include diagrams and details of refrigerant piping and tubing showing installation requirements for manufacturer-furnished divided flow fittings.
5. Include diagrams for power, signal, and control wiring.

D. Samples for Initial Selection: For fully and partially exposed indoor units with factory finishes viewable by occupants.

1. Include a Sample for each unique finish with unit identification, detailed description of application, and cross-referenced floor plans showing locations.

E. Engineering Services Submittals:

1. Include calculations for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
2. Include calculations with corresponding diagram of refrigerant piping and tubing sizing for each system installed.
3. Include calculations with corresponding floor plans indicating that refrigerant concentration limits are within allowable limits of ASHRAE 15 and Chapter 11 of the NYC Mechanical Code.
4. Include calculations showing that system travel distance for refrigerant piping and controls cabling are within horizontal and vertical travel distances set by manufacturer. Provide a comparison table for each system installed.

F. Coordination Drawings: Plans, elevations, sections, and details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Suspended ceiling components.
2. Structural floors, roofs and associated members to which equipment, piping, ductwork, cables, and conduit will be attached.
3. Size and location of initial access modules for acoustical tile.
4. Wall-mounted controllers located in finished space showing relationship to light switches, fire-alarm devices, and other installed devices.
5. Size and location of access doors and panels installed behind walls and inaccessible ceilings for products installed behind walls and requiring access.
6. Items penetrating finished ceiling including the following:

    a. Luminaires.
    b. Air outlets and inlets.
    c. Speakers.
    d. Sprinklers.
    e. Service access panels.

1.7 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Data: Certificates, for equipment, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Product Certificates: For VRF HVAC system components.

C. Product Test Reports: Where tests are required, for each product, for tests performed by manufacturer and witnessed by a qualified testing agency.

D. Source quality-control reports.

E. Field quality-control reports.

F. Sample Warranties: For manufacturer's warranties.

1.8 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For VRF HVAC systems to include in emergency, operation, and maintenance manuals.

B. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On CD or DVD, USB media, or approved cloud storage platform, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store products in a clean and dry place.

B. Comply with manufacturer's written rigging and installation instructions for unloading and moving to final installed location.

C. Handle products carefully to prevent damage, breaking, denting, and scoring. Do not install damaged products.

D. Protect products from weather, dirt, dust, water, construction debris, and physical damage.

1. Retain factory-applied coverings on equipment to protect finishes during construction and remove just prior to operating unit.
2. Cover unit openings before installation to prevent dirt and dust from entering inside of units. If required to remover coverings during unit installation, reapply coverings over openings after unit installation and remove just prior to operating unit.

E. Replace installed products damaged during construction.

1.11 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace equipment and components that fail(s) in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures.
b. Faulty operation.
c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.

2. Warranty Period:

a. For Compressor: 10 year(s) from date of Substantial Completion.
b. For Parts, Including Controls: 10 year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 VRF HVAC SYSTEMS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Daikin, VRV EMERION HR, or comparable product by one of the following:

1. LG Electronics.
2. Mitsubishi Electric & Electronics USA, Inc.
3. Or approved equal.

B. Source Limitations: Obtain products from single source from single manufacturer including, but not limited to, the following:

1. Indoor and outdoor units, including accessories.
2. Controls and software.
3. HRCUs.
4. Refrigerant isolation valves.
5. Specialty refrigerant pipe fittings.

2.2 SYSTEM DESCRIPTION

A. Direct-expansion (DX) VRF HVAC system(s) with variable capacity in response to varying cooling and heating loads. System shall consist of multiple indoor units, HRCUs, outdoor unit(s), piping, controls, and electrical power to make complete operating system(s) complying with requirements indicated.

1. Two-pipe or three-pipe system design.
2. System(s) operation, air-conditioning heat pump or heat recovery as indicated on Drawings.
3. Each system with one refrigerant circuit shared by all indoor units connected to system.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. AHRI Compliance: System and equipment performance certified according to AHRI 1230 and products listed in AHRI directory.

D. ASHRAE Compliance:

1. ASHRAE 15: For safety code for mechanical refrigeration.
2. ASHRAE 62.1: For indoor air quality.
3. ASHRAE 135: For control network protocol with remote communication.
4. ASHRAE/IES 90.1 Compliance: For system and component energy efficiency.

E. UL Compliance: Comply with UL 1995.

2.3 PERFORMANCE REQUIREMENTS

A. Engineering Services: Engage a qualified professional engineer licensed in the State of New York, as defined in DDC General Conditions, to design complete and operational VRF HVAC system(s) complying with requirements indicated.

1. Provide system refrigerant calculations.

    a. Refrigerant concentration limits shall be within allowable limits of ASHRAE 15 and Chapter 11 of the NYC Mechanical Code.
    b. Indicate compliance with manufacturer's maximum vertical and horizontal travel distances. Prepare a comparison table for each system showing calculated distances compared to manufacturer's maximum allowed distances.

2. Include a mechanical ventilation system and gas detection system as required to comply with ASHRAE 15 and Chapter 11 of the NYC Mechanical Code.
3. System Refrigerant Piping and Tubing:

    a. Arrangement: Arrange piping to interconnect indoor units, HRCUs, and outdoor unit(s) in compliance with manufacturer requirements and requirements indicated.
    b. Routing: Conceal piping above ceilings and behind walls to maximum extent possible.
    c. Sizing: Size piping system, using a software program acceptable to manufacturer, to provide performance requirements indicated. Consider requirements to accommodate future change requirements.

4. System Controls:

    a. Network arrangement.
    b. Network interface with other building systems.
    c. Product selection.
    d. Sizing.

B. Service Access:

1. Provide and document service access requirements.
2. Locate equipment, system isolation valves, and other system components that require service and inspection in easily accessible locations. Avoid locations that are difficult to access if possible.
3. Where serviceable components are installed behind walls and above inaccessible ceilings, provide finished assembly with access doors or panels to gain access. Properly size the openings to allow for service, removal, and replacement.
4. If less than full and unrestricted access is provided, locate components within an 18-inch reach of the finished assembly.
5. Where ladder access is required to service elevated components, provide an installation that provides for sufficient access within ladder manufacturer's written instructions for use.
6. Comply with OSHA regulations.

C. System Design and Installation Requirements:

1. Design and install systems indicated according to manufacturer's recommendations and written instructions.
2. Where manufacturer's requirements differ from requirements indicated, contact Commissioner for direction. The most stringent requirements should apply unless otherwise directed in writing by Commissioner.

D. Isolation of Equipment: Provide isolation valves to isolate each HRCU, indoor unit and outdoor unit for service, removal, and replacement without interrupting system operation.

E. System Capacity Ratio: The sum of connected capacity of all indoor units shall be within the following range of outdoor-unit rated capacity:

1. Not less than 50 percent.
2. Not more than 130 percent.
3. Range acceptable to manufacturer.

F. System Turndown: Stable operation down to 20 percent of outdoor-unit capacity.

G. System Auto Refrigerant Charge: Each system shall have an automatic refrigerant charge function to ensure the proper amount of refrigerant is installed in system.

H. Outdoor Conditions:

1. Suitable for outdoor ambient conditions encountered.

    a. Design equipment and supports to withstand wind loads of governing code and ASCE/SEI 7.

b. Design equipment and supports to withstand snow and ice loads of governing code and ASCE/SEI 7.
c. Provide corrosion-resistant coating for components and supports where located in coastal or industrial climates that are known to be harmful to materials and finishes.

2. Maximum System Operating Outdoor Temperature: See Drawings.
3. Minimum System Operating Outdoor Temperature: See Drawings.

I. Seismic Performance: VRF HVAC system(s) shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the system will remain in place without separation of any parts when subjected to the seismic forces specified."
2. Component Importance Factor: 1.5.

J. Sound Performance: Sound levels generated by operating HVAC equipment shall be within requirements indicated.

1. Indoor: Within design guidelines of "2015 ASHRAE HANDBOOK- HVAC Applications."
2. Outdoor: Within the limitations set by the New York City Noise Code.

K. Thermal Movements: Allow for controlled thermal movements from ambient, surface, and system temperature changes.

L. Capacities and Characteristics: As indicated on Drawings.

2.4 INDOOR, CONCEALED, CEILING-MOUNTED UNITS FOR DUCTING

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to ductwork, piping, power, and controls field connections.

B. Cabinet:

1. Material: Galvanized steel.
2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
3. Duct Connections: Extended collar or flange, or designated exterior cabinet surface, designed for attaching field-installed ductwork.
4. Mounting: Manufacturer-designed provisions for field installation.
5. Internal Access: Removable panels or hinged doors of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:

1. Coil Casing: Aluminum, galvanized, or stainless steel.
2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
3. Coil Tubes: Copper, of diameter and thickness required by performance.
4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
5. Unit Internal Tubing: Copper tubing with brazed joints.

6. Unit Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
7. Field Piping Connections: Manufacturer's standard.
8. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:

1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.
2. Condensate Removal: Unit-mounted pump or other integral lifting mechanism, capable of lifting drain water to an elevation above top of cabinet.
3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:

1. Fan(s):

   a. Direct-drive arrangement.
   b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
   c. Fabricated from non-ferrous components or ferrous components with corrosion-resistant finish.
   d. Wheels statically and dynamically balanced.

2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
3. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.
4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:

1. Access: Bottom, side, or rear to accommodate field installation without removing ductwork and to accommodate filter replacement without need for tools.

G. Unit Accessories:

1. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.

H. Unit Controls:

1. Enclosure: Metal, suitable for indoor locations.
2. Factory-Installed Controller: Configurable digital control.

3. Features and Functions:

   a. Self-diagnostics.
   b. Time delay.
   c. Auto-restart.
   d. External static pressure control.
   e. Auto operation mode.
   f. Manual operation mode.
   g. Filter service notification.

h. Power consumption display.
i. Drain assembly high water level safety shutdown and notification.
j. Run test switch.

4. Communication: Network communication with other indoor and outdoor units.
5. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

I. Unit Electrical:

1. Enclosure: Metal, suitable for indoor locations.
2. Field Connection: Single point connection to power unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways.

2.5 INDOOR, EXPOSED, WALL-MOUNTED UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

B. Cabinet:

1. Material: Painted steel, or coated steel frame covered by a plastic cabinet, with an architectural acceptable finish suitable for tenant occupancy on exposed surfaces.
2. Insulation: Manufacturer's standard internal insulation, complying with ASHRAE 62.1, to provide thermal resistance and prevent condensation.
3. Mounting: Manufacturer-designed provisions for field installation.
4. Internal Access: Removable panels of adequate size for field access to internal components for inspection, cleaning, service, and replacement.

C. DX Coil Assembly:

1. Coil Casing: Aluminum, galvanized, or stainless steel.
2. Coil Fins: Aluminum, mechanically bonded to tubes, with arrangement required by performance.
3. Coil Tubes: Copper, of diameter and thickness required by performance.
4. Expansion Valve: Electronic modulating type with linear or proportional characteristics.
5. Unit Internal Tubing: Copper tubing with brazed joints.
6. Unit Internal Tubing Insulation: Manufacturer's standard insulation, of thickness to prevent condensation.
7. Field Piping Connections: Manufacturer's standard.
8. Testing: Factory pressure tested and verified to be without leaks.

D. Drain Assembly:

1. Pan: Non-ferrous material, with bottom sloped to low point drain connection.

2. Condensate Removal: Gravity.

    a. If a floor drain is not available at unit, provide unit with field-installed condensate pump accessory.

3. Field Piping Connection: Non-ferrous material with threaded NPT.

E. Fan and Motor Assembly:

1. Fan(s):

    a. Direct-drive arrangement.
    b. Single or multiple fans connected to a common motor shaft and driven by a single motor.
    c. Fabricated from non-ferrous components or ferrous components with corrosion protection finish.
    d. Wheels statically and dynamically balanced.

2. Motor: Brushless dc or electronically commutated with permanently lubricated bearings.
3. Motor Protection: Integral protection against thermal, overload, and voltage fluctuations.
4. Speed Settings and Control: Two (low, high), three (low, medium, high), or more than three speed settings or variable speed with a speed range of least 50 percent.
5. Vibration Control: Integral isolation to dampen vibration transmission.

F. Filter Assembly:

1. Access: Front, to accommodate filter replacement without the need for tools.
2. Washable Media: Manufacturer's standard filter with antimicrobial treatment.

G. Grille Assembly: Manufacturer's standard discharge grille with field-adjustable air pattern mounted in top or front face of unit cabinet.

H. Unit Accessories:

1. Remote Room Temperature Sensor Kit: Wall-mounted, hardwired room temperature sensor kit for use in rooms that do not have room temperature measurement.
2. Condensate Pump: Integral reservoir and control with electrical power connection through unit power.

I. Unit Controls:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Factory-Installed Controller: Configurable digital control.

3. Features and Functions: Self-diagnostics, time delay, auto-restart, auto operation mode , manual operation mode , filter service notification , power consumption display , run test switch.
4. Communication: Network communication with other indoor units and outdoor unit(s).
5. Cable and Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Field Connection: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.

J. Unit Electrical:

1. Enclosure: Manufacturer's standard, and suitable for indoor locations.
2. Field Connection: Single point connection to power entire unit and integral controls.
3. Disconnecting Means: Factory-mounted circuit breaker or switch, complying with NFPA 70.
4. Control Transformer: Manufacturer's standard. Coordinate requirements with field power supply.
5. Wiring: Manufacturer's standard with each connection labeled and corresponding to a unit-mounted wiring diagram.
6. Raceways: Enclose line voltage wiring in metal raceways to comply with NFPA 70.

2.6 OUTDOOR, AIR-SOURCE HEAT RECOVERY UNITS

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

1. Specially designed for use in systems with simultaneous heating and cooling.
2. Systems shall consist of one unit, or multiple unit modules that are designed by variable refrigerant system manufacturer for field interconnection to make a single refrigeration circuit that connects multiple indoor units.
3. All units installed shall be from the same product development generation.

2.7 HEAT RECOVERY CONTROL UNITS (HRCUs)

A. Description: Factory-assembled and -tested complete unit with components, piping, wiring, and controls required for mating to piping, power, and controls field connections.

1. Specially designed for use in systems with simultaneous heating and cooling.
2. Systems shall consist of one unit, or multiple unit that are designed by variable refrigerant system manufacturer for field interconnection to make a single refrigeration circuit that connects multiple indoor units.

2.8 SYSTEM CONTROLS

A. General Requirements:

1. Network: Indoor unitsand outdoor units shall include integral controls and connect through a TIA-485A or manufacturer-selected control network.
2. Network Communication Protocol: control communication between interconnected units.
3. Integration with Building Automation System: ASHRAE 135, BACnet IP and certified by BACnet Testing Lab (BTL), including the following:

    a. Ethernet connection via RJ-45 connectors and port with transmission at Mbps or higher.

4. Operator Interface:

    a. Operators shall interface with system and unit controls through the following:

        1) Operator interfaces integral to controllers.

2) City of New York-furnished PC connected to central controller(s).
3) Web interface through web browser software.
4) Integration with Building Automation System.

b. Users shall be capable of interface with controllers for indoor units control to extent privileges are enabled. Control features available to users shall include the following:

1) On/off control.
2) Temperature set-point adjustment.

B. VRF HVAC System Operator Software for PC:

1. Software offered by VRF HVAC system manufacturer shall provide system operators with ability to monitor and control VRF HVAC system(s) from a single dedicated City of New York-furnished PC.
2. Software shall provide operator with a graphic user interface to allow monitoring and control of multiple central controllers from a single device location through point-and-click mouse exchange.
3. Plan views shall show building plans with location of indoor units and identification superimposed on plans.
4. Controls operation mode of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units. Operation modes available through central controller shall match those operation modes of controllers for indoor units.
5. Schedules operation of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units. Schedules daily, weekly, and annual events.
6. Changes operating set points of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units.
7. Optimized start feature to start indoor units before scheduled time to reach temperature set-point at scheduled time based on operating history.
8. Night setback feature to operate indoor units at energy-conserving heating and cooling temperature set-points during unoccupied periods.
9. Supports Multiple Languages: English or Spanish.
10. Supports Imperial and Metric Temperature Units: Fahrenheit or Celsius.
11. Displays service notifications and error codes.
12. Monitors and displays cumulative operating time of indoor units.
13. Able to disable and enable operation of individual controllers for indoor units.
14. Information displayed on individual controllers shall also be available for display.

C. Central Controllers:

1. Centralized control for all indoor and outdoor units from a single central controller location.

a. Include multiple interconnected controllers as required.

2. Controls operation mode of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units. Operation modes available through central controller shall match those operation modes of controllers for indoor units.
3. Schedule operation of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units.

a. Sets schedule for daily, weekly, and annual events.
b. Schedule options available through central controller shall at least include the schedule options of controllers for indoor units.

4. Changes operating set points of indoor units as individual units, by selected groups of indoor units, or as collection of all indoor units.
5. Optimized start feature to start indoor units before scheduled time to reach temperature set-point at scheduled time based on operating history.
6. Night setback feature to operate indoor units at energy-conserving heating and cooling temperature set-points during unoccupied periods.
7. Service diagnostics tool.
8. Able to disable and enable operation of individual controllers for indoor units.
9. Information displayed on individual controllers shall also be available for display through central controller.
10. Information displayed for outdoor units, including refrigerant high and low pressures percent capacity.
11. Multiple RJ-45 ports for direct connection to a local PC and an Ethernet network switch.
12. Operator interface through a backlit, high-resolution color display touch panel and web accessible through standard web browser software.

2.9 SYSTEM REFRIGERANT AND OIL

A. Refrigerant:

1. As required by VRF HVAC system manufacturer for system to comply with performance requirements indicated.
2. ASHRAE 34, Class A1 or Class A2L refrigerant classification.
3. R-410a or R-32.

B. Oil:

1. As required by VRF HVAC system manufacturer and to comply with performance requirements indicated.

2.10 SYSTEM CONDENSATE DRAIN PIPING

A. If more than one material is listed, material selection is Contractor's option.

2.11 MATERIALS

A. Steel:

1. ASTM A36/A36M for carbon structural steel.
2. ASTM A568/A568M for steel sheet.

B. Stainless Steel:

1. Manufacturer's standard grade for casing.
2. Manufacturer's standard type, ASTM A240/A240M for bare steel exposed to airstream or moisture.

C. Galvanized Steel: ASTM A653/A653M.

D. Aluminum: ASTM B209.

E. Corrosion-Resistant Coating: Coat with a corrosion-resistant coating capable of withstanding a 3000 -hour salt-spray test according to ASTM B117.

1. Standards:

a. ASTM B117 for salt spray.
b. ASTM D2794 for minimum impact resistance of 100 in-lb.
c. ASTM B3359 for cross-hatch adhesion of 5B.

2. Application: Immersion.
3. Thickness: 1 mil.
4. Gloss: Minimum gloss of 60 on a 60-degree meter.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine products before installation. Reject products that are wet, moisture damaged, or mold damaged.

C. Examine roughing-in for piping and tubing to verify actual locations of connections before equipment installation.

D. Examine roughing-in for ductwork to verify actual locations of connections before equipment installation.

E. Examine roughing-in for wiring and conduit to verify actual locations of connections before equipment installation.

F. Examine walls, floors, roofs, and outdoor pads for suitable conditions where equipment will be installed.

G. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

H. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 EQUIPMENT INSTALLATION, GENERAL

A. Clearance:

1. Maintain manufacturer's recommended clearances for service and maintenance.

2. Maintain clearances required by governing code.

B. Loose Components: Install components, devices, and accessories furnished by manufacturer, with equipment, that are not factory mounted.

1. Loose components shall be installed by manufacturer's service representative or system Installer under supervision of manufacturer's service representative.

3.4 INSTALLATION OF INDOOR UNITS

A. Install units to be level and plumb while providing a neat and finished appearance.

B. Unless otherwise required by VRF HVAC system manufacturer, support ceiling-mounted units from structure above using threaded rods; minimum rod size of 3/8 inch.

C. Adjust supports of exposed and recessed units to draw units tight to adjoining surfaces.

D. Protect finished surfaces of ceilings, floors, and walls that come in direct contact with units. Refinish or replaced damaged areas after units are installed.

E. In rooms with ceilings, conceal piping and tubing, controls, and electrical power serving units above ceilings.

F. In rooms without ceiling, arrange piping and tubing, controls, and electrical power serving units to provide a neat and finished appearance.

G. Provide lateral bracing if needed to limit movement of suspended units to not more than 0.25 inch.

H. For floor- and wall-mounted units that are exposed, conceal piping and tubing, controls, and electrical power serving units within walls.

I. Floor-mounted units located in mechanical rooms.

J. Install floor-mounted units on support structure indicated on Drawings.

K. Install floor-mounted units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."

L. Attachment: Install hardware for proper attachment to supported equipment.

M. Grouting: Place grout under equipment supports and make bearing surface smooth.

3.5 INSTALLATION OF OUTDOOR UNITS

A. Install units to be level and plumb while providing a neat and finished appearance.

B. Install outdoor units on support structures indicated on Drawings.

C. Pad-Mounted Installations: Install outdoor units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."

1. Attachment: Install anchor bolts to elevations required for proper attachment to supported equipment.
2. Grouting: Place grout under equipment supports and make bearing surface smooth.

D. Roof-Mounted Installations: Install outdoor units on equipment supports specified in Section 077200 "Roof Accessories." Anchor units to supports with removable, stainless-steel fasteners.

3.6 GENERAL REQUIREMENTS FOR PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping and tubing systems. Install piping and tubing as indicated unless deviations to layout are approved on coordination drawings.

B. Install piping and tubing in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping and tubing at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping and tubing above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping and tubing to permit valve servicing.

F. Install piping and tubing at indicated slopes.

G. Install piping and tubing free of sags.

H. Install fittings for changes in direction and branch connections.

I. Install piping and tubing to allow application of insulation.

J. Install groups of pipes and tubing parallel to each other, spaced to permit applying insulation with service access between insulated piping and tubing.

K. Install sleeves for piping and tubing penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 230500 "Common Work Results for HVAC."

L. Install escutcheons for piping and tubing penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 230500 "Common Work Results for HVAC."

3.7 INSTALLATION OF SYSTEM CONDENSATE DRAIN PIPING

A. General Requirements for Drain Piping and Tubing:

1. Install a union in piping at each threaded unit connection.
2. Install an adjustable stainless-steel hose clamp with adjustable gear operator on unit hose connections. Tighten clamp to provide a leak-free installation.
3. If required for unit installation, provide a trap assembly in drain piping to prevent air circulated through unit from passing through drain piping. Comply with more stringent of the following:

a. Details indicated on Drawings.
b. Manufacturer's requirements.
c. The NYC Mechanical Code.
d. In the absence of requirements, comply with ASHRAE requirements.

4. Extend drain piping from units with drain connections to drain receptors as indicated on Drawings. If not indicated on Drawings, terminate drain connection at nearest accessible location that is not exposed to view by occupants.
5. Provide each 90-degree change in direction with a Y- or T-fitting. Install a threaded plug connection in the dormant side of fitting or future use as a service cleanout.

B. Gravity Drains:

1. Slope piping from unit connection toward drain termination at a constant slope of not less than one percent.

C. Pumped Drains:

1. If unit condensate pump or lift mechanism is not included with an integral check valve, install a full-size check valve in each branch pipe near unit connection to prevent backflow into unit.

3.8 INSTALLATION OF PIPING AND TUBING INSULATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated. Installation to maintain a continuous vapor barrier.

B. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are unavailable, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

E. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.9 INSTALLATION OF DUCT, ACCESSORIES, AND AIR OUTLETS

A. Where installing ductwork adjacent to equipment, allow space for service and maintenance.

B. Comply with requirements for metal ducts specified in Section 233113 "Metal Ducts."

C. Comply with requirements for air duct accessories specified in Section 233300 "Air Duct Accessories."

D. Comply with requirements for air diffusers specified in Section 233713.13 "Air Diffusers."

E. Comply with requirements for registers and grilles specified in Section 233713.23 "Registers and Grilles."

3.10 ELECTRICAL CONNECTIONS

A. Comply with requirements indicated on Drawings and in applicable Division 26 Sections.

B. To extent electrical power is required for system equipment, components, and controls, and is not indicated on Drawings and addressed in the Specifications, the design for such electrical power shall be performed by VRF HVAC system provider.

1. Engineering calculations of electrical power to equipment, components and controls, and associated installation shall be included at no additional cost to City of New York.

C. Connect field electrical power source to each separate electrical device requiring field electrical power. Coordinate termination point and connection type with Installer.

D. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wiring connections.

E. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding connections.

F. Install nameplate or acrylic label with self-adhesive back for each electrical connection indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated phenolic layers of black with engraved white letters. Letters at least 1/2 inch high.
2. Locate nameplate or label where easily visible.

G. Comply with requirements in Section 260533.13 "Conduits for Electrical Systems" for raceway selection and installation requirements for conduits as supplemented or revised in this Section.

H. Comply with requirements in Section 260533.16 "Boxes and Covers for Electrical Systems" for box selection and installation requirements for boxes as supplemented or revised in this Section.

I. Comply with requirements in Section 260533.23 "Surface Raceways for Electrical Systems" for wireways selection and installation requirements for wireways as supplemented or revised in this Section.

1. Outlet boxes shall be no smaller than 2 inches wide, 3 inches high, and 2-1/2 inches deep.
2. Outlet boxes for cables shall be no smaller than 4 inches square by 1-1/2 inches deep with extension ring sized to bring edge of ring to within 1/8 inch of the finished wall surface.
3. Flexible metal conduit shall not be used.

J. Comply with TIA-569-D for pull-box sizing and length of conduit and number of bends between pull points.

K. Install manufactured conduit sweeps and long-radius elbows if possible.

L. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

3.11 SOFTWARE

A. Cybersecurity:

1. Software:

a. Coordinate security requirements with the Commissioner.
b. Ensure that latest stable software release is installed and properly operating.
c. Disable or change default passwords to password using a combination of uppercase and lower letters, numbers, and symbols at least eight characters in length. Record passwords and turn over to party responsible for system operation and administration.

2. Hardware:

a. Coordinate location and access requirements with the Commissioner.
b. Enable highest level of wireless encryption that is compatible with the City of New York's ICT network.
c. Disable dual network connections.

3.12 INSTALLATION OF SYSTEM CONTROL CABLE

A. Comply with NECA 1.

B. Installation Method:

1. Install cables in raceways except as follows:

a. Within equipment and associated control enclosures.
b. In accessible ceiling spaces where open cable installation method may be used.
c. In gypsum board partitions where cable may be enclosed within wall cavity.

2. Conceal raceway and cables except in unfinished spaces.

C. General Requirements for Cabling:

1. Comply with TIA-568-C Series of standards.
2. Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems."
3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
4. Cables may not be spliced and shall be continuous from terminal to terminal. Do not splice cable.
5. Cables serving a common system may be grouped in a common raceway. Install control cable in separate raceway from power wiring. Do not group conductors from different systems or different voltages.
6. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
7. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Install lacing bars and distribution spools.
8. Do not install bruised, kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable.
9. Cold-Weather Installation: Bring cable to room temperature before dereeling. Do not use heat lamps for heating.
10. Pulling Cable: Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Monitor cable pull tensions.
11. Support: Do not allow cables to lie on removable ceiling tiles or access panels.
12. Secure: Fasten securely in place with hardware specifically designed and installed so as to not damage cables.
13. Provide strain relief.
14. Keep runs short. Allow extra length for connecting to terminals.
15. Do not bend cables in a radius less than 10 times the cable OD.
16. Use sleeves or grommets to protect cables from vibration at points where they pass around sharp corners and through penetrations.
17. Ground wire shall be copper, and grounding methods shall comply with IEEE C2. Demonstrate ground resistance.

D. Balanced Twisted-Pair Cable Installation:

1. Comply with TIA-568-C.2.
2. Do not untwist balanced twisted-pair cables more than 1/2 inch at the point of termination to maintain cable geometry.

E. Open-Cable Installation:

1. Suspend copper cable not in a wireway or pathway a minimum of 8 inches above ceilings by cable supports not more than 30 inches apart.
2. Cable shall not be run through or on structural members or in contact with pipes, ducts, or other potentially damaging items. Do not run cables between structural members and corrugated panels.

F. Separation from EMI Sources: Comply with BICSI TDMM and TIA-569-D recommendations for separating unshielded cable from potential EMI sources including electrical power wiring and equipment.

3.13 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI TDMM, "Firestopping" Chapter.

3.14 GROUNDING INSTALLATION

A. For data communication wiring, comply with TIA-607-B and with BICSI TDMM, "Bonding and Grounding (Earthing)" Chapter.

B. For low-voltage control cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.15 IDENTIFICATION

A. Identify system equipment, piping, tubing, and valves. Comply with requirements for identification specified in Section 230553 "Identification for HVAC Piping and Equipment."

B. Identify system electrical and controls components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

1. Identify each control cable on each end and at each terminal with a number-coded identification tag. Each cable shall have a unique tag.

3.16 STARTUP SERVICE

A. Engage a VRF HVAC system manufacturer's service representative to perform system(s) startup service.

1. Service representative shall be a factory-trained and -authorized service representative of VRF HVAC system manufacturer.
2. Complete startup service of each separate system.
3. Complete system startup service according to manufacturer's written instructions.

B. Startup checks shall include, but not be limited to, the following:

1. Check control communications of equipment and each operating component in system(s).
2. Check each indoor unit's response to demand for cooling and heating.
3. Check each indoor unit's response to changes in airflow settings.
4. Check each indoor unit, HRCU, and outdoor unit for proper condensate removal.

C. System Operation Report:

1. After completion of startup service, manufacturer shall issue a report for each separate system.
2. Report shall include complete documentation describing each startup check, the result, and any corrective action required.

D. Witness:

1. Invite Commissioner to witness startup service procedures.

2. Provide written notice not less than 20 business days before start of startup service.

3.17 ADJUSTING

A. Adjust equipment and components to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust initial temperature and humidity set points. Adjust initial airflow settings and discharge airflow patterns.

C. Set field-adjustable switches and circuit-breaker trip ranges according to VRF HVAC system manufacturer's written instructions, and as indicated.

D. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.18 PROTECTION

A. Protect products from moisture and water damage. Remove and replace products that are wet, moisture damaged, or mold damaged.

B. Protect equipment from physical damage. Replace equipment with physical damage that cannot be repaired to new condition. Observable surface imperfections shall be grounds for removal and replacement.

C. Protect equipment from electrical damage. Replace equipment suffering electrical damage.

D. Cover and seal openings of equipment to keep inside of equipment clean. Do not remove covers until finish work is complete.

END OF SECTION 238129

SECTION 238236 - FINNED-TUBE RADIATION HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Baseboard radiation heaters - electric.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions, Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

B. Shop Drawings:

1. Include plans, elevations, sections, and details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include details and dimensions of custom-fabricated enclosures.
4. Indicate location and size of each field connection.
5. Indicate location and arrangement of integral controls.
6. Include enclosure joints, corner pieces, access doors, and other accessories.
7. Include diagrams for power, signal, and control wiring.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Structural members, including wall construction, to which baseboard and finned-tube radiation heaters will be attached.
2. Method of attaching baseboard and finned-tube radiation heaters to building structure.
3. Penetrations of fire-rated wall and floor assemblies.

B. Field quality control reports.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 BASEBOARD RADIATION HEATERS

A. Baseboard Radiation Heaters - Electric: EBB-1

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Stelpro; model AALUX1 or comparable product by one of the following:

    a. INDEECO.
    b. Markel Products Company; a subsidiary of TPI Corporation.
    c. Or approved equal.

2. Source Limitations: Obtain electric baseboard radiation heaters from single manufacturer.
3. Description: Factory-packaged units constructed in accordance with UL 499, UL 1030, and UL 2021.
4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
5. Heating Elements: Nickel-chromium-wire heating element enclosed in metallic sheath mechanically bonded to fins, with high-temperature cutout and sensor running the full length of the element. Element supports are to eliminate thermal expansion noise.

6. Enclosures:

    a. Minimum 20 gauge with removable front cover.
    b. Full-height back.
    c. Full-length damper.
    d. End panel.
    e. Inside and outside corners.
    f. Joiner pieces to snap together.
    g. Enclosure Height: 4.5 Inches.
    h. Enclosure Depth: 2.0 Inches.
    i. Element Brackets: Primed and painted steel to support front panel and element.

7. Unit Controls: Integral line-voltage thermostat.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF BASEBOARD RADIATION HEATERS - ELECTRIC

A. Examine areas to receive electric baseboard radiation heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for electrical connections to verify actual locations before installation of electric baseboard radiation heaters.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

D. Install units level and plumb.

E. Install enclosure continuously around corners, using outside and inside corner fittings.

F. Join sections with splice plates and blank filler pieces to provide continuous enclosure.

G. Install enclosure continuously from wall to wall.

H. Terminate enclosures with manufacturer's end caps except where enclosures are indicated to extend to adjoining walls.

I. Install air-seal gasket between wall and recessed flanges or front cover of fully recessed unit.

3.3 ELECTRICAL CONNECTIONS

A. Ground electric finned-tube radiation heaters in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Units will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 238236

SECTION 238239.13 - CABINET UNIT HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes: Cabinet unit heaters with centrifugal fans and hot-water, steam, or electric-resistance heating coils.

1.3 DEFINITIONS

A. CWP: Cold working pressure.

B. PTFE: Polytetrafluoroethylene plastic.

C. TFE: Tetrafluoroethylene plastic.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include rated capacities, operating characteristics, furnished specialties, and accessories.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 CABINET UNIT HEATERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Stelpro, model AWFA or comparable product by one of the following:

1. Airtherm; a Mestek company.
2. Berko; Marley Engineered Products.
3. INDEECO.
4. Or approved equal.

B. Heaters: Factory-assembled and -tested unit complying with AHRI 440.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with UL 2021.

2.2 PERFORMANCE REQUIREMENTS

A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

B. ASHRAE/IESNA 90.1 Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

C. Seismic Performance: Cabinet unit heaters are to withstand the effects of earthquake motions determined in accordance with .

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified."

2.3 CABINETS

A. Material: Steel with baked-enamel finish with manufacturer's standard paint, in color selected by Commissioner.

1. Vertical Unit, Exposed Front Panels: Minimum 0.0528-inch- thick sheet steel, removable panels with channel-formed edges secured with tamperproof cam fasteners.
2. Recessed Flanges: Steel, finished to match cabinet.
3. Control Access Door: Key operated.

2.4 COILS

A. Electric-Resistance Heating Coil: Nickel-chromium heating wire, free from expansion noise and hum, mounted in ceramic inserts in galvanized-steel housing; with fuses in terminal box for overcurrent protection and limit controls for high-temperature protection. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.

2.5 CAPACITIES AND CHARACTERISTICS

A. Cabinet:

1. Vertical, Surface Mounted: Upflow.

    a. Air Inlet: Front, extruded-aluminum bar grille.
    b. Air Outlet: extruded-aluminum bar grille.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine areas to receive cabinet unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for electrical connections to verify actual locations before unit-heater installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION OF CABINET UNIT HEATERS

A. Install wall boxes in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Section 079200 "Joint Sealants."

B. Install cabinet unit heaters to comply with NFPA 90A.

C. Suspend cabinet unit heaters from structure with elastomeric hangers. Vibration isolators are specified in

D. Install wall-mounted thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

E. Install new filters in each fan-coil unit within two weeks of Substantial Completion.

3.4 CONNECTIONS

A. Comply with safety requirements in UL 1995.

B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 ADJUSTING

A. Adjust initial temperature set points.

B. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 238239.13

SECTION 238413.29 - SELF-CONTAINED STEAM HUMIDIFIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Self-contained electric-resistance humidifiers.

1.3 DEFINITIONS

A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product. Include rated capacities, operating characteristics, furnished specialties, and accessories.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.7 COORDINATION

A. Coordinate location and installation of humidifiers with distributer tubes/manifolds in ducts and plenums or occupied space. Revise locations and elevations to suit field conditions and to ensure proper humidifier operation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with AHRI 640.

C. Comply with UL 998.

D. Listed and labeled by ETL.

E. Seismic Performance: Self-contained steam humidifiers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts when subjected to the seismic forces specified."
2. Component Importance Factor: 1.5.

F. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or less.

2.2 SELF-CONTAINED ELECTRIC-RESISTANCE HUMIDIFIERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Neptronic Model SKE; or comparable product by one of the following:

1. Nortec Industries Inc.
2. Pure Humidifier Company.
3. Or approved equal.

B. Immersion Heating:

1. Evaporation Chamber: Cleanable, stainless steel, Type 304 or stainless steel, Type 316.

C. Cabinet:

1. Stainless-steel enclosure for housing heater cylinder, electrical wiring, components, controls, and control panel.
2. Hinged or removable cover, keyed to restrict unauthorized access.
3. Plumbing and electrical components housed in separate parts of the cabinet.
4. Threaded outlet in bottom of cabinet for drain piping.

D. Control Panel:

1. Microprocessor-based control system for modulating control.
2. Factory-wired disconnect switch.
3. Liquid-crystal display.
4. Programmable keypad.
5. Low-voltage control circuit, with fused transformer.
6. Diagnostic, maintenance, alarm, and status features.
7. Safety switch interlocked to shut off heaters when cabinet is open.
8. Internal electrical controls prewired to appropriately marked terminals for field connection.
9. Electrical terminals for connection to each controlling device and alarm.
10. NEMA 250, Type 12, to comply with environmental conditions at installed locations.
11. Material: Galvanized steel .
12. Building Automation System Interface:

    a. Full Communication Interface: BACnet.

E. Controls:

1. Solenoid Fill Valve Maintains Water Level: Bronze, including fill tee with built-in air gap to prevent back siphoning. Include stainless-steel inlet strainer.
2. Field-adjustable timer to control drain cycle for flush duration and interval. Automatic flush is not required for reverse osmosis or deionized water applications.
3. Controls shall drain tanks if no demand for humidification for more than 72 hours.
4. Set-point adjustment.
5. Tri-conductivity sensor probes for water-level control.
6. Low-water switch shuts down heater to protect elements.
7. Over-temperature switch shuts down heater.
8. Aquastat maintains minimum water temperature in tank during short periods of no demand.
9. Foaming detection and correction.

F. Accessories:

1. Humidity Sensor: Return-duct mounted.
2. Duct-mounted, high-limit humidity sensor.
3. Airflow switch prevents humidifier operation without airflow.
4. Steam and Condensate Hoses: For interconnection of humidifier to distributer tube(s)/manifold.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine ducts, air-handling units, and conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before humidifier installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Install humidifiers with required clearance for service and maintenance. Maintain path, downstream from humidifiers, clear of obstructions as required by ASHRAE 62.1.

B. Seal all duct and plenum penetrations with flange.

C. Install humidifier assemblies in metal ducts and casings constructed according to SMACNA's "HVAC Duct Construction Standards, Metal and Flexible."

D. Install stainless-steel drain pan under each manifold mounted in duct.

1. Construct drain pans with connection for drain; insulated and complying with ASHRAE 62.1.
2. Connect to condensate trap and drainage piping.
3. Extend drain pan upstream and downstream from tube(s)/manifold a minimum distance recommended by manufacturer but not less than required by ASHRAE 62.1.

E. Install tube(s)/manifold supply piping pitched to drain condensate back to humidifier or as recommended by manufacturer.

F. Equipment Mounting:

1. Install floor-mounted humidifiers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Comply with requirements for vibration isolation devices specified in Section 230548.13 "Vibration Controls for HVAC."

G. Install all manufacturer-furnished accessories in accordance with manufacturer's written installation instructions.

3.4 PIPING CONNECTIONS

A. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Install piping adjacent to humidifiers to allow service and maintenance.
2. Install shutoff valve, strainer, backflow preventer, and union in humidifier makeup line.

B. Install piping specialties furnished by manufacturer but not factory mounted.

C. Install piping from safety relief valves to nearest floor drain.

3.5 ELECTRICAL CONNECTIONS

A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch high.
3. Locate nameplate where easily visible.

3.6 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring between control devices.

C. Connect control wiring according to Section 260523 "Control Voltage Electrical Power Cables."

END OF SECTION 238413.29

SECTION 260010 - SUPPLEMENTAL REQUIREMENTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Requirements generally applicable to all electrical Work on the Project, including but not limited to Work specified in Divisions 26, 27, and 28.

1.3 REFERENCES

A. Abbreviations and Acronyms for Electrical Terms and Units of Measure:

1. 8P8C: An 8-position 8-contact modular jack.
2. A: Ampere, unit of electrical current.
3. AC or ac: Alternating current.
4. AFCI: Arc-fault circuit interrupter.
5. AIC: Ampere interrupting capacity.
6. AL, Al, or ALUM: Aluminum.
7. ASD: Adjustable-speed drive.
8. ATS: Automatic transfer switch.
9. AWG: American wire gauge; see ASTM B258.
10. BAS: Building automation system.
11. BIL: Basic impulse insulation level.
12. BIM: Building information modeling.
13. BMS: Building management system.
14. CAD: Computer-aided design or drafting.
15. CATV: Community antenna television.
16. CB: Circuit breaker.
17. cd: Candela, the SI fundamental unit of luminous intensity.
18. CO/ALR: Copper-aluminum, revised.
19. COPS: Critical operations power system.
20. CU or Cu: Copper.
21. CU-AL or AL-CU: Copper-aluminum.
22. dB: Decibel, a unitless logarithmic ratio of two electrical, acoustical, or optical power values.
23. dB(A-weighted) or dB(A): Decibel acoustical sound pressure level with A-weighting applied in accordance with IEC 61672-1.
24. dB(adjusted) or dBa: Decibel weighted absolute noise power with respect to 3.16 pW (minus 85 dBm).

25. dBm: Decibel absolute power with respect to 1 mW.
26. DC or dc: Direct current.
27. DCOA: Designated critical operations area.
28. EGC: Equipment grounding conductor.
29. ELV: Extra-low voltage.
30. EMF: Electromotive force.
31. EMI: Electromagnetic interference.
32. EMP: Electrical maintenance program (operation and maintenance); electromagnetic pulse (transient analysis).
33. EPS: Emergency power supply.
34. EPSS: Emergency power supply system.
35. ESS: Energy storage system.
36. EV: Electric vehicle.
37. EVPE: Electric vehicle power export equipment.
38. EVSE: Electric vehicle supply equipment.
39. FACU: Fire-alarm control unit.
40. fc: Footcandle, an internationally recognized unit of illuminance equal to one lumen per square foot or 10.76 lx. The simplified conversion 1 fc = 10 lx in the Specifications is common practice and considered adequate precision for building construction activities. When there are conflicts, lux is the primary unit; footcandle is specified for convenience.
41. FLC: Full-load current.
42. ft: Foot.
43. ft-cd: Foot-candle, the antiquated U.S. standard unit of illuminance, equal to one international candle measured at a distance of one foot, that was superseded in 1948 by the unit "footcandle" when the SI unit candela (cd) replaced the international candle; see "fc."
44. FTP: File transfer protocol.
45. GEC: Grounding electrode conductor.
46. GFCI: Ground-fault circuit interrupter.
47. GFPE: Ground-fault protection of equipment.
48. GND: Ground.
49. HACR: Heating, air conditioning, and refrigeration.
50. HDPE: High-density polyethylene.
51. HP or hp: Horsepower.
52. HVAC: Heating, ventilating, and air conditioning.
53. Hz: Hertz.
54. ICT: Information and communications technology.
55. inch: Inch. To avoid confusion, the abbreviation "in." is not used.
56. I/O: Input/output.
57. IP: Ingress protection rating (enclosures); Internet protocol (communications).
58. IR: Infrared.
59. IT&R: Inspecting, testing, and repair.
60. ITE: Information technology equipment.
61. kAIC: Kiloampere interrupting capacity.
62. kcmil or MCM: One thousand circular mils.
63. kV: Kilovolt.
64. kVA: Kilovolt-ampere.
65. kvar: Kilovolt-ampere reactive.
66. kW: Kilowatt.
67. kWh: Kilowatt-hour.
68. LAN: Local area network.

69. lb: Pound (weight).
70. lbf: Pound (force).
71. LCD: Liquid-crystal display.
72. LCDI: Leakage-current detector-interrupter.
73. LED: Light-emitting diode.
74. Li-ion: Lithium-ion.
75. lm: Lumen, the SI-derived unit of luminous flux.
76. LNG: Liquefied natural gas.
77. LP-Gas: Liquefied petroleum gas.
78. LRC: Locked-rotor current.
79. LV: Low voltage.
80. m: Meter.
81. MCC: Motor-control center.
82. MDC: Modular data center.
83. MG set: Motor-generator set.
84. MIDI: Musical instrument digital interface.
85. MLO: Main lugs only.
86. MOV: Metal-oxide varistor.
87. MV: Medium voltage.
88. MVA: Megavolt-ampere.
89. mW: Milliwatt.
90. MW: Megawatt.
91. MWh: Megawatt-hour.
92. N.C.: Normally closed.
93. Ni-Cd: Nickel-cadmium.
94. Ni-MH: Nickel-metal hydride.
95. NIU: Network interface unit.
96. N.O.: Normally open.
97. NPT: National (American) standard pipe taper.
98. OCPD: Overcurrent protective device.
99. ONT: Optical network terminal.
100. PC: Personal computer.
101. PCS: Power conversion system.
102. PCU: Power-conditioning unit.
103. PF or pf: Power factor.
104. PHEV: Plug-in hybrid electric vehicle.
105. PLC: Programmable logic controller.
106. PLFA: Power-limited fire alarm.
107. PoE: Power over Ethernet.
108. POTS: Plain old telephone service. See "public switched telephone network" definition.
109. PSTN: Public switched telephone network.
110. PV: Photovoltaic.
111. PVC: Polyvinyl chloride.
112. RFI: (electrical) Radio-frequency interference; (contract) Request for interpretation.
113. RMS or rms: Root-mean-square.
114. RPM or rpm: Revolutions per minute.
115. SCADA: Supervisory control and data acquisition.
116. SCCR: Short-circuit current rating.
117. SCR: Silicon-controlled rectifier.
118. SPD: Surge protective device.

119. sq.: Square.
120. SWD: Switching duty.
121. TCP/IP: Transmission Control Protocol/Internet Protocol.
122. TEFC: Totally enclosed fan-cooled.
123. TR: Tamper resistant.
124. TVSS: Transient voltage surge suppressor.
125. UL: (standards) UL Standards & Engagement Inc.; (product categories) UL, LLC.
126. UL CCN: UL Category Control Number.
127. UPS: Uninterruptible power supply.
128. USB: Universal serial bus.
129. UV: Ultraviolet.
130. V: Volt, unit of electromotive force.
131. V(ac): Volt, alternating current.
132. V(dc): Volt, direct current.
133. VA: Volt-ampere, unit of complex electrical power.
134. VAR: Volt-ampere reactive, unit of reactive electrical power.
135. VFC: Variable-frequency controller.
136. VOM: Volt-ohm-multimeter.
137. VoIP: Voice over Internet Protocol.
138. VPN: Virtual private network.
139. VRLA: Valve regulated lead acid; also called "sealed lead acid (SLA)" or "valve regulated sealed lead acid."
140. W: Watt, unit of real electrical power.
141. WAN: Wide area network.
142. Wh: Watt-hour, unit of electrical energy usage.
143. WPT: Wireless power transfer.
144. WPTE: Wireless power transfer equipment.
145. WR: Weather resistant.

B. Abbreviations and Acronyms for Electrical Raceway Types:

1. EMT: Electrical metallic tubing.
2. EMT-A: Aluminum electrical metallic tubing.
3. EMT-S: Steel electrical metallic tubing.
4. EMT-SS: Stainless steel electrical metallic tubing.
5. ENT: Electrical nonmetallic tubing.
6. EPEC: Electrical HDPE underground conduit (thin wall).
7. EPEC-A: Type A electrical HDPE underground conduit.
8. EPEC-B: Type B electrical HDPE underground conduit.
9. ERMC: Electrical rigid metal conduit.
10. ERMC-A: Aluminum electrical rigid metal conduit.
11. ERMC-S: Steel electrical rigid metal conduit.
12. ERMC-S-G: Galvanized-steel electrical rigid metal conduit.
13. ERMC-S-PVC: PVC-coated-steel electrical rigid metal conduit.
14. ERMC-SS: Stainless steel electrical rigid metal conduit.
15. FMC: Flexible metal conduit.
16. FMC-A: Aluminum flexible metal conduit.
17. FMC-S: Steel flexible metal conduit.
18. FMT: Steel flexible metallic tubing.
19. FNMC: Flexible nonmetallic conduit. See "LFNC."

20. HDPE: HDPE underground conduit (thick wall).
21. HDPE-40: Schedule 40 HDPE underground conduit.
22. HDPE-80: Schedule 80 HDPE underground conduit.
23. IMC: Steel electrical intermediate metal conduit.
24. LFMC: Liquidtight flexible metal conduit.
25. LFMC-A: Aluminum liquidtight flexible metal conduit.
26. LFMC-S: Steel liquidtight flexible metal conduit.
27. LFMC-SS: Stainless steel liquidtight flexible metal conduit.
28. LFNC: Liquidtight flexible nonmetallic conduit.
29. LFNC-A: Layered (Type A) liquidtight flexible nonmetallic conduit.
30. LFNC-B: Integral (Type B) liquidtight flexible nonmetallic conduit.
31. LFNC-C: Corrugated (Type C) liquidtight flexible nonmetallic conduit.
32. PVC: Rigid PVC conduit.
33. PVC-40: Schedule 40 rigid PVC conduit.
34. PVC-80: Schedule 80 rigid PVC Conduit.
35. PVC-A: Type A rigid PVC concrete-encased conduit.
36. PVC-EB: Type EB rigid PVC concrete-encased underground conduit.
37. RGS: See ERMC-S-G.
38. RMC: See ERMC.
39. RTRC: Reinforced thermosetting resin conduit.

C. Abbreviations and Acronyms for Electrical Single-Conductor and Multiple-Conductor Cable Types:

1. AC: Armored cable.
2. CATV: Coaxial general-purpose cable.
3. CATVP: Coaxial plenum cable.
4. CATVR: Coaxial riser cable.
5. CI: Circuit integrity cable.
6. CL2: Class 2 cable.
7. CL2P: Class 2 plenum cable.
8. CL2R: Class 2 riser cable.
9. CL2X: Class 2 cable, limited use.
10. CL3: Class 3 cable.
11. CL3P: Class 3 plenum cable.
12. CL3R: Class 3 riser cable.
13. CL3X: Class 3 cable, limited use.
14. CM: Communications general-purpose cable.
15. CMG: Communications general-purpose cable.
16. CMP: Communications plenum cable.
17. CMR: Communications riser cable.
18. CMUC: Under-carpet communications wire and cable.
19. CMX: Communications cable, limited use.
20. DG: Distributed generation cable.
21. FC: Flat cable.
22. FCC: Flat conductor cable.
23. FPL: Power-limited fire-alarm cable.
24. FPLP: Power-limited fire-alarm plenum cable.
25. FPLR: Power-limited fire-alarm riser cable.
26. IGS: Integrated gas spacer cable.
27. ITC: Instrumentation tray cable.

28. ITC-ER: Instrumentation tray cable, exposed run.
29. MC: Metal-clad cable.
30. MC-HL: Metal-clad cable, hazardous location.
31. MI: Mineral-insulated, metal-sheathed cable.
32. MTW: (machine tool wiring) Moisture-, heat-, and oil-resistant thermoplastic cable.
33. MV: Medium-voltage cable.
34. NM: Nonmetallic sheathed cable.
35. NMC: Nonmetallic sheathed cable with corrosion-resistant nonmetallic jacket.
36. NMS: Nonmetallic sheathed cable with signaling, data, and communications conductors, plus power or control conductors.
37. NPLF: Non-power-limited fire-alarm circuit cable.
38. NPLFP: Non-power-limited fire-alarm circuit cable for environmental air spaces.
39. NPLFR: Non-power-limited fire-alarm circuit riser cable.
40. NUCC: Nonmetallic underground HDPE conduit with conductors.
41. OFC: Conductive optical fiber general-purpose cable.
42. OFCG: Conductive optical fiber general-purpose cable.
43. OFCP: Conductive optical fiber plenum cable.
44. OFCR: Conductive optical fiber riser cable.
45. OFN: Nonconductive optical fiber general-purpose cable.
46. OFNG: Nonconductive optical fiber general-purpose cable.
47. OFNP: Nonconductive optical fiber plenum cable.
48. OFNR: Nonconductive optical fiber riser cable.
49. P: Marine shipboard cable.
50. PLTC: Power-limited tray cable.
51. PLTC-ER: Power-limited tray cable, exposed run.
52. PV: Photovoltaic cable.
53. RHH: (high heat) Thermoset rubber, heat-resistant cable.
54. RHW: Thermoset rubber, moisture-resistant cable.
55. SA: Silicone rubber cable.
56. SE: Service-entrance cable.
57. SER: Service-entrance cable, round.
58. SEU: Service-entrance cable, flat.
59. SIS: Thermoset cable for switchboard and switchgear wiring.
60. TBS: Thermoplastic cable with outer braid.
61. TC: Tray cable.
62. TC-ER: Tray cable, exposed run.
63. TC-ER-HL: Tray cable, exposed run, hazardous location.
64. THW: Thermoplastic, heat- and moisture-resistant cable.
65. THHN: Thermoplastic, heat-resistant cable with nylon jacket outer sheath.
66. THHW: Thermoplastic, heat- and moisture-resistant cable.
67. THWN: Thermoplastic, moisture- and heat-resistant cable with nylon jacket outer sheath.
68. TW: Thermoplastic, moisture-resistant cable.
69. UF: Underground feeder and branch-circuit cable.
70. USE: Underground service-entrance cable.
71. XHH: Cross-linked polyethylene, heat-resistant cable.
72. XHHW: Cross-linked polyethylene, heat- and moisture-resistant cable.

D. Abbreviations and Acronyms for Electrical Flexible Cord Types:

1. SEO: 600 V extra-hard-usage, hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp locations.
2. SEOW: 600 V extra-hard-usage, hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp or wet locations.
3. SEOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp locations.
4. SEOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer covering for damp or wet locations.
5. SJEO: 300 V hard-usage, junior hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp locations.
6. SJEOW: 300 V hard-usage, junior hard-service cord with thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp or wet locations.
7. SJEOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp locations.
8. SJEOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic elastomer insulation and oil-resistant thermoplastic elastomer outer cover for damp or wet locations.
9. SJO: 300 V hard-usage, junior hard-service cord with thermoset insulation and oil-resistant thermoset outer cover for damp locations.
10. SJOW: 300 V hard-usage, junior hard-service cord with thermoset insulation and oil-resistant thermoset outer cover for damp or wet locations.
11. SJOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer cover for damp locations.
12. SJOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer cover for damp or wet locations.
13. SJTO: 300 V hard-usage, junior hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer cover for damp locations.
14. SJTOW: 300 V hard-usage, junior hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer cover for damp or wet locations.
15. SJTOO: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer cover for damp locations.
16. SJTOOW: 300 V hard-usage, junior hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer cover for damp or wet locations.
17. SO: 600 V extra-hard-usage, hard-service cord with thermoset insulation and oil-resistant thermoset outer covering for damp locations.
18. SOW: 600 V extra-hard-usage, hard-service cord with thermoset insulation and oil-resistant thermoset outer covering for damp or wet locations.
19. SOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer covering for damp locations.
20. SOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoset insulation and oil-resistant thermoset outer covering for damp or wet locations.
21. STO: 600 V extra-hard-usage, hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer covering for damp locations.
22. STOW: 600 V extra-hard-usage, hard-service cord with thermoplastic insulation and oil-resistant thermoplastic outer covering for damp or wet locations.
23. STOO: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer covering for damp locations.
24. STOOW: 600 V extra-hard-usage, hard-service cord with oil-resistant thermoplastic insulation and oil-resistant thermoplastic outer covering for damp or wet locations.

E. Definitions:

1. 8-Position 8-Contact (8P8C) Modular Jack: An unkeyed jack with up to eight contacts commonly used to terminate twisted pair and multiconductor Ethernet cable. Also called a "TIA-1096 miniature 8-position series jack" (8PSJ), or an "IEC 8877 8-pole jack."

    a. Be careful when suppliers use "RJ45" generically. Obsolete RJ45 jacks used for analog telephone cables have rejection keys. 8P8C jacks used for digital telephone cables and Ethernet cables do not have rejection keys.

2. Basic Impulse Insulation Level (BIL): Reference insulation level expressed in impulse crest voltage with a standard wave not longer than 1.5 times 50 microseconds and 1.5 times 40 microseconds.
3. Cable: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "cable" is (1) a conductor with insulation, or a stranded conductor with or without insulation (single-conductor cable); or (2) a combination of conductors insulated from one another (multiple-conductor cable).
4. Communications Jack: A fixed connecting device designed for insertion of a communications cable plug.
5. Communications Outlet: One or more communications jacks, or cables and plugs, mounted in a box or ring, with a suitable protective cover.
6. Conductor: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "conductor" is (1) a wire or combination of wires not insulated from one another, suitable for carrying an electric current; (2) (National Electrical Safety Code) a material, usually in the form of wire, cable, or bar, suitable for carrying an electric current; or (3) (general) a substance or body that allows a current of electricity to pass continuously along it.
7. Conduit: A structure containing one or more duct raceways.
8. Direct Buried: Installed underground without encasement in concrete or other protective material.
9. Duct Bank: An arrangement of conduit providing one or more continuous duct raceways between two points.
10. Duct Raceway: A single enclosed raceway for conductors or cable.
11. Electrical Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.
12. Enclosure: The case or housing of an apparatus, or the fence or wall(s) surrounding an installation, to prevent personnel from accidentally contacting energized parts or to protect the equipment from physical damage. Types of enclosures and enclosure covers include the following:

    a. Cabinet: An enclosure that is designed for either surface mounting or flush mounting and is provided with a frame, mat, or trim in which a swinging door or doors are or can be hung.
    b. Concrete Box: A box intended for use in poured concrete.
    c. Conduit Body: A means for providing access to the interior of a conduit or tubing system through one or more removable covers at a junction or terminal point. In the United States, conduit bodies are listed in accordance with outlet box requirements.
    d. Conduit Box: A box having threaded openings or knockouts for conduit, EMT, or fittings.
    e. Cover Plate: A cover designed for protecting wiring devices installed in flush-mounted device boxes while permitting their safe operation; also called a faceplate or wallplate.
    f. Cutout Box: An enclosure designed for surface mounting that has swinging doors or covers secured directly to and telescoping with the walls of the enclosure.
    g. Device Box: A box with provisions for mounting a wiring device directly to the box.

h. Extension Ring: A ring intended to extend the sides of an outlet box or device box to increase the box depth, volume, or both.
i. Floor Box: A box mounted in the floor intended for use with a floor box cover and other components to complete the floor box enclosure.
j. Floor-Mounted Enclosure: A floor box and floor box cover assembly with means to mount in the floor that is sealed against the entrance of scrub water at the floor level.
k. Floor Nozzle: An enclosure used on a wiring system, intended primarily as a housing for a receptacle, provided with a means, such as a collar, for surface-mounting on a floor, which may or may not include a stem to support it above the floor level, and is sealed against the entrance of scrub water at the floor level.
l. Junction Box: A box with a blank cover that joins different runs of raceway or cable and provides space for connection and branching of the enclosed conductors.
m. Outlet Box: A box that provides access to a wiring system having pryout openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for the entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting an outlet box cover, but without provisions for mounting a wiring device directly to the box.
n. Pedestal Floor Box Cover: A floor box cover that, when installed as intended, provides a means for typically vertical or near-vertical mounting of receptacle outlets above the floor's finished surface.
o. Pull Box: A box with a blank cover that joins different runs of raceway and provides access for pulling or replacing the enclosed cables or conductors.
p. Recessed Access Floor Box: A floor box with provisions for mounting wiring devices below the floor surface.
q. Recessed Access Floor Box Cover: A floor box cover with provisions for passage of cords to recessed wiring devices mounted within a recessed floor box.
r. Ring: A sleeve, which is not necessarily round, used for positioning a recessed wiring device flush with the plaster, concrete, drywall, or other wall surface.
s. Ring Cover: A box cover, with raised center portion to accommodate a specific wall or ceiling thickness, for mounting wiring devices or luminaires flush with the surface.
t. Termination Box: An enclosure designed for installation of termination base assemblies consisting of bus bars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors, or both.

13. Emergency Systems: Those systems legally required and classed as emergency by municipal, state, federal, or other codes, or by any governmental agency having jurisdiction that are designed to ensure continuity of lighting, electrical power, or both, to designated areas and equipment in the event of failure of the normal supply for safety to human life.
14. Fault Limited: Providing or being served by a source of electrical power that is limited to not more than 100 W when tested in accordance with UL 62368-1.

    a. The term "fault limited" is intended to encompass most Class 1, 2, and 3 power-limited sources complying with Article 725 of NFPA 70; Class ES1 and ES2 electrical energy sources that are Class PS1 electrical power sources (e.g., USB); and Class ES3 electrical energy sources that are Class PS1 and PS2 electrical power sources (e.g., PoE). See UL 62368-1 for discussion of classes of electrical energy sources and classes of electrical power sources.

15. High-Performance Building: A building that integrates and optimizes on a life-cycle basis all major high-performance attributes, including energy conservation, environment, safety, security, durability, accessibility, cost-benefit, productivity, sustainability, functionality, and operational considerations.
16. Jacket: A continuous nonmetallic outer covering for conductors or cables.

17. Luminaire: A complete lighting unit consisting of a light source such as a lamp, together with the parts designed to position the light source and connect it to the power supply. It may also include parts to protect the light source or the ballast or to distribute the light.
18. Mode: The terms "Active Mode," "Off Mode," and "Standby Mode" are used as defined in the Energy Independence and Security Act (EISA) of 2007.
19. Multi-Outlet Assembly: A type of surface, flush, or freestanding raceway designed to hold conductors, receptacles, and switches, assembled in the field or at the factory.
20. One-Line Diagram: A diagram that shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein. Also called "single-line diagram."
21. Plenum: A compartment or chamber to which one or more air ducts are connected and that forms part of the air distribution system.
22. Protective Device: A device that senses when an abnormal current flow, abnormal voltage potential, or other abnormal electrical waveform exists and then disconnects the affected portion of the circuit from the system. Common protective devices include fuses, circuit breakers, relays, ground-fault circuit interrupters, and arc-fault circuit interrupters.
23. Receptacle: A fixed connecting device arranged for insertion of a power cord plug. Also called a power jack.
24. Receptacle Outlet: One or more receptacles mounted in a box with a suitable protective cover.
25. Sheath: A continuous metallic covering for conductors or cables.
26. UL Category Control Number (CCN): An alphabetic or alphanumeric code used to identify product categories covered by UL's Listing, Classification, and Recognition Services.
27. Voice over Internet Protocol (VoIP): Digital telephone packet technology that uses the internet for its transmission medium.
28. Voltage Class: For specified circuits and equipment, voltage classes are defined as follows:

    a. Control Voltage: Having electromotive force between any two conductors, or between a single conductor and ground, that is supplied from a battery or other Class 2 or Class 3 power-limited source.
    b. Line Voltage: (1) (controls) Designed to operate using the supplied low-voltage power without transformation. (2) (transmission lines, transformers, SPDs) The line-to-line voltage of the supplying power system.
    c. Extra-Low Voltage (ELV): Not having electromotive force between any two conductors, or between a single conductor and ground, exceeding 30 V(ac rms), 42 V(ac peak), or 60 V(dc).
    d. Low Voltage (LV): Having electromotive force between any two conductors, or between a single conductor and ground, that is rated above 30 V but not exceeding 1000 V.

29. Wire: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "wire" is a slender rod or filament of drawn metal. A group of small wires used as a single wire is properly called a "stranded wire." A wire or stranded wire covered with insulation is properly called an "insulated wire" or a "single-conductor cable." Nevertheless, when the context indicates that the wire is insulated, the term "wire" will be understood to include the insulation.

1.4 SEQUENCING

A. Conduct and submit results of power system studies before submitting product data and Shop Drawings for electrical equipment.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF ELECTRICAL WORK

A. Unless more stringent requirements are specified in the Contract Documents or manufacturers' written instructions, comply with NFPA 70 and NECA NEIS 1 for installation of electrical Work on the Project. Consult the Commissioner for resolution of conflicting requirements.

END OF SECTION 260010

SECTION 260519 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 RELATED DOCUIMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Copper building wire.
2. Aluminum building wire.
3. Metal-clad cable, Type MC.
4. Armored cable, Type AC.
5. Mineral-insulated cable, Type MI.
6. Fire-alarm wire and cable.
7. Connectors and splices.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260523 "Control-Voltage Electrical Power Cables" for control systems communications cables and Classes 1, 2, and 3 control cables.
3. Section 271513 "Communications Copper Horizontal Cabling" for twisted pair cabling used for data circuits.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data:

1. Copper building wire.
2. Aluminum building wire.
3. Metal-clad cable, Type MC.
4. Armored cable, Type AC.
5. Mineral-insulated cable, Type MI.

6. Fire-alarm wire and cable.
7. Connectors and splices.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 COPPER BUILDING WIRE

A. Description: Flexible, insulated and uninsulated, drawn copper current-carrying conductor with an overall insulation layer or jacket, or both, rated 600 V or less.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Alpha Wire; brand of Belden, Inc.
2. Belden Inc.
3. General Cable; Prysmian Group North America.
4. Okonite Company (The).
5. Service Wire Co.
6. Southwire Company, LLC.
7. WESCO.
8. Or approved equal.

C. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Conductors: Copper, complying with ASTM B3 for bare annealed copper and with ASTM B8 ASTM B496 for stranded conductors.

E. Conductor Insulation:

1. Type RHH and Type RHW-2. Comply with UL 44.
2. Type THHN Type THWN-2. Comply with UL 83.
3. Type XHHW-2. Comply with UL 44.

2.2 ALUMINUM BUILDING WIRE

A. Description: Flexible, insulated and uninsulated, drawn aluminum current-carrying conductor with an overall insulation layer or jacket, or both, rated 600 V or less.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Alpha Wire; brand of Belden, Inc.
2. Belden Inc.
3. Okonite Company (The).
4. Southwire Company, LLC.
5. WESCO.
6. Or approved equal.

C. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Conductors: Aluminum, complying with ASTM B800 and ASTM B801.

E. Conductor Insulation:

1. Type RHH and Type RHW-2. Comply with UL 44.
2. Type THHN and Type THWN-2. Comply with UL 83.
3. Type XHHW-2. Comply with UL 44.

2.3 METAL-CLAD CABLE, TYPE MC

A. Description: A factory assembly of one or more current-carrying insulated conductors in an overall metallic sheath.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Alpha Wire; brand of Belden, Inc.
2. Belden Inc.
3. General Cable; Prysmian Group North America.
4. Okonite Company (The).
5. Southwire Company, LLC.
6. WESCO.
7. Or approved equal.

C. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. Comply with UL 1569.
3. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Circuits:

1. Single circuit multicircuit with color-coded conductors.

E. Ground Conductor: Bare or Insulated.

F. Conductor Insulation:

1. Type TFN/THHN/THWN-2. Comply with UL 83.
2. Type XHHW-2. Comply with UL 44.

2.4 ARMORED CABLE, TYPE AC

A. Description: A factory assembly of insulated current-carrying conductors with or without an equipment grounding conductor in an overall metallic sheath.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFC Cable Systems; Atkore International.
2. Alpha Wire; brand of Belden, Inc.
3. Belden Inc.
4. General Cable; Prysmian Group North America.
5. Okonite Company (The).
6. Southwire Company, LLC.
7. WESCO.
8. Or approved equal.

C. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. Comply with UL 4.
3. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Circuits:

1. Single circuit multicircuit with color-coded conductors.

E. Conductors: Copper, complying with ASTM B3 for bare annealed copper and with ASTM B8 for stranded conductors.

F. Ground Conductor: Insulated.

G. Conductor Insulation: Type THHN/THWN-2. Comply with UL 83.

H. Armor: Steel, interlocked.

2.5 MINERAL-INSULATED CABLE, TYPE MI

A. Description: Solid copper conductors encased in compressed metal oxide with an outer metallic sheath, rated 600 V or less.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. KME America, Inc.
2. PYROTENAX; brand of nVent Electrical plc.
3. Watlow Electric Manufacturing Company.
4. Or approved equal.

C. Standards:

1. Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.
2. UL 2196 for fire resistance.
3. Conductor and Cable Marking: Comply with wire and cable marking according to UL's "Wire and Cable Marking and Application Guide."

D. Insulation: Compressed magnesium oxide.

E. Sheath: Copper.

2.6 FIRE-ALARM WIRE AND CABLE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Allied Wire & Cable Inc.
2. CommScope, Inc.
3. Genesis Cable Products; Honeywell International, Inc.
4. PYROTENAX; brand of nVent Electrical plc.
5. Rockbestos-Suprenant Cable Corp.
6. Superior Essex Inc.; subsidiary of LS Corp.
7. West Penn Wire; brand of Belden, Inc.
8. Or approved equal.

B. General Wire and Cable Requirements: NRTL listed and labeled as complying with NFPA 70, Article 760.

C. Signaling Line Circuits: Twisted, shielded pair, No. 18 AWG size as recommended by system manufacturer.

D. Non-Power-Limited Circuits: Solid-copper conductors with 600 V rated, 75 deg C, color-coded insulation, and complying with requirements in UL 2196 for a two-hour rating.

1. Low-Voltage Circuits: No. 16 AWG, minimum, in pathway.
2. Line-Voltage Circuits: No. 12 AWG, minimum, in pathway.
3. Multiconductor Armored Cable: NFPA 70, Type MC, copper conductors, Type TFN/THHN conductor insulation, copper drain wire, copper armor with outer jacket with red identifier stripe, NTRL listed for fire-alarm and cable tray installation, plenum rated.

2.7 CONNECTORS AND SPLICES

A. Description: Factory-fabricated connectors, splices, and lugs of size, ampacity rating, material, type, and class for application and service indicated; listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and use.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB, Electrification Business.
2. AFC Cable Systems; Atkore International.
3. Hubbell Utility Solutions; Hubbell Incorporated.
4. ILSCO.
5. Ideal Industries, Inc.
6. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
7. Service Wire Co.
8. TE Connectivity Ltd.
9. Or approved equal.

C. Jacketed Cable Connectors: For steel and aluminum jacketed cables, zinc die-cast with set screws, designed to connect conductors specified in this Section.

D. Lugs: One piece, seamless, designed to terminate conductors specified in this Section.

1. Material: Copper.
2. Type: Two hole with standard barrels.
3. Termination: Compression.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders:

1. Copper; solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.
2. Copper for feeders smaller than No. 4 AWG; copper or aluminum for feeders No. 4 AWG and larger. Conductors must be solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Branch Circuits:

1. Copper:

a. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

C. Power-Limited Fire Alarm and Control: Solid for No. 12 AWG and smaller.

3.3 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Service Entrance: Type THHN/THWN-2, single conductors in raceway Type XHHW-2, single conductors in raceway Type USE, single conductor in raceway Mineral-insulated, metal-sheathed cable, Type MI Multiconductor cable, Type SE.

B. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspaces: Type THHN/THWN-2, single conductors in raceway, and Armored cable, Type AC Metal-clad cable, Type MC. Mineral-insulated, metal-sheathed cable, Type MI Nonmetallic-sheathed cable, Type NM.

3.4 INSTALLATION, GENERAL

A. Conceal cables in finished walls, ceilings, and floors unless otherwise indicated.

B. Complete raceway installation between conductor and cable termination points in accordance with Section 260533.13 "Conduits for Electrical Systems" prior to pulling conductors and cables.

C. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

D. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

E. Install exposed cables parallel and perpendicular to surfaces of exposed structural members, and follow surface contours where possible.

F. Support cables according to Section 260529 "Hangers and Supports for Electrical Systems."

3.5 INSTALLATION OF FIRE-ALARM WIRE AND CABLE

A. Comply with NFPA 72.

B. Wiring Method: Install wiring in metal pathway according to below

1. Install plenum cable in environmental airspaces, including plenum ceilings.
2. Fire-alarm circuits and equipment control wiring associated with fire-alarm system must be installed in a dedicated pathway system.

    a. Cables and pathways used for fire-alarm circuits, and equipment control wiring associated with fire-alarm system, may not contain any other wire or cable.

3. Fire-Rated Cables: Use of two-hour, fire-rated fire-alarm cables, NFPA 70, Types MI and CI, is permitted.

4. Signaling Line Circuits: Power-limited fire-alarm cables must not be installed in the same cable or pathway as signaling line circuits.

C. Wiring within Enclosures: Separate power-limited and non-power-limited conductors as recommended by manufacturer. Install conductors parallel with or at right angles to sides and back of the enclosure. Bundle, lace, and train conductors to terminal points with no excess. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with fire-alarm system to terminal blocks. Mark each terminal according to system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

D. Cable Taps: Use numbered terminal strips in junction, pull, and outlet boxes; cabinets; or equipment enclosures where circuit connections are made.

E. Color-Coding: Color-code fire-alarm conductors differently from the normal building power wiring. Use one color-code for alarm circuit wiring and another for supervisory circuits. Color-code audible alarm-indicating circuits differently from alarm-initiating circuits. Use different colors for visible alarm-indicating devices. Paint fire-alarm system junction boxes and covers red.

F. Risers: Install at least two vertical cable risers to serve the fire-alarm system. Separate risers in close proximity to each other with a minimum one-hour-rated wall, so the loss of one riser does not prevent receipt or transmission of signals from other floors or zones.

G. Wiring to Remote Alarm Transmitting Device: 1 inch conduit between the fire-alarm control panel and the transmitter. Install number of conductors and electrical supervision for connecting wiring as needed to suit monitoring function.

3.6 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

B. Make splices, terminations, and taps that are compatible with conductor material.

1. Use oxide inhibitor in each splice, termination, and tap for aluminum conductors.

C. Wiring at Outlets: Install conductor at each outlet, with at least 6 inch of slack.

3.7 IDENTIFICATION

A. Identify and color-code conductors and cables according to Section 260553 "Identification for Electrical Systems."

B. Identify each spare conductor at each end with identity number and location of other end of conductor, and identify as spare conductor.

3.8 SLEEVE AND SLEEVE-SEAL INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies. Comply with requirements in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."

3.9 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Section 078413 "Penetration Firestopping."

3.10 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors for compliance with requirements.
2. Perform each of the following visual and electrical tests:

    a. Inspect exposed sections of conductor and cable for physical damage and correct connection according to the single-line diagram.
    b. Test bolted connections for high resistance using one of the following:

        1) A low-resistance ohmmeter.
        2) Calibrated torque wrench.

    c. Inspect compression-applied connectors for correct cable match and indentation.
    d. Inspect for correct identification.
    e. Inspect cable jacket and condition.
    f. Continuity test on each conductor and cable.

B. Cables will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports to record the following:

1. Procedures used.
2. Results that comply with requirements.
3. Results that do not comply with requirements, and corrective action taken to achieve compliance with requirements.

END OF SECTION 260519

SECTION 260523 - CONTROL-VOLTAGE ELECTRICAL POWER CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Control cable.
2. Control-circuit conductors.
3. Fire-alarm wire and cable.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data for the following:

1. Control cable.
2. Control-circuit conductors.
3. Fire-alarm wire and cable.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Flame Travel and Smoke Density in Plenums: As determined by testing identical products according to NFPA 262, by a qualified testing agency. Identify products for installation in plenums with appropriate markings of applicable testing agency.

1. Flame Travel Distance: 60 inch or less.
2. Peak Optical Smoke Density: 0.5 or less.
3. Average Optical Smoke Density: 0.15 or less.

C. Flame Travel and Smoke Density for Riser Cables in Non-Plenum Building Spaces: As determined by testing identical products according to UL 1666.

D. Flame Travel and Smoke Density for Cables in Non-Riser Applications and Non-Plenum Building Spaces: As determined by testing identical products according to UL 1685.

2.2 CONTROL CABLE

A. Paired Cable: NFPA 70, Type CMG.

1. One Multi-pair, twisted, No. 16 AWG, stranded (19x29) No. 18 AWG, stranded (19x30) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1685.

B. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

1. One Multi-pair, twisted, No. 16 AWG, stranded (19x29) No. 18 AWG, stranded (19x30) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with NFPA 262.

2.3 CONTROL-CIRCUIT CONDUCTORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Encore Wire Corporation.
2. General Cable; General Cable Corporation.

3. Service Wire Co.
4. Southwire Company.
5. Or approved equal.

B. Class 1 Control Circuits: Stranded copper, Type THHN/THWN-2, complying with UL 83 in raceway.

C. Class 2 Control Circuits: Stranded copper, Type THHN/THWN-2, complying with UL 83 in raceway.

2.4 FIRE-ALARM WIRE AND CABLE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Allied Wire & Cable Inc.
2. CommScope, Inc.
3. Genesis Cable Products; Honeywell International, Inc.
4. PYROTENAX; brand of nVent Electrical plc.
5. Prysmian Group North America.
6. West Penn Wire.
7. Or approved equal.

B. General Wire and Cable Requirements: NRTL listed and labeled as complying with NFPA 70, Article 760.

C. Signaling Line Circuits: Twisted, shielded pair, No. 18 AWG size as recommended by system manufacturer.

1. Circuit Integrity Cable: Twisted shielded pair, NFPA 70, Article 760, Classification CI, for power-limited fire-alarm signal service Type FPL. NRTL listed and labeled as complying with UL 1424 and UL 2196 for a two-hour rating.

D. Non-Power-Limited Circuits: Solid-copper conductors with 600 V rated, 75 deg C, color-coded insulation, and complying with requirements in UL 2196 for a two-hour rating.

1. Control-Voltage Circuits: No. 16 AWG, minimum, in pathway.
2. Low-Voltage Circuits: No. 12 AWG, minimum, in pathway.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Test cables on receipt at Project site.

1. Test each pair of twisted pair cable for open and short circuits.

3.3 INSTALLATION OF RACEWAYS AND BOXES

A. Comply with requirements in Section 260533.13 "Conduits for Electrical Systems" for raceway selection and installation requirements for conduits as supplemented or modified in this Section.

B. Comply with requirements in Section 260533.23 "Surface Raceways for Electrical Systems" for raceway selection and installation requirements for wireways as supplemented or modified in this Section.

C. Comply with requirements in Section 260533.16 "Boxes and Covers for Electrical Systems" for raceway selection and installation requirements for boxes as supplemented or modified in this Section.

1. Outlet boxes must be no smaller than 2 inch wide, 3 inch high, and 2-1/2 inch deep.
2. Flexible metal conduit must not be used.

D. Comply with TIA-569-D for pull-box sizing and length of conduit and number of bends between pull points.

E. Install manufactured conduit sweeps and long-radius elbows if possible.

F. Raceway Installation in Equipment Rooms:

1. Position conduit ends adjacent to a corner on backboard if a single piece of plywood is installed, or in the corner of the room if multiple sheets of plywood are installed around perimeter walls of the room.
2. Install cable trays to route cables if conduits cannot be located in these positions.
3. Secure conduits to backboard if entering the room from overhead.
4. Extend conduits 3 inch above finished floor.
5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

3.4 INSTALLATION OF CONDUCTORS AND CABLES

A. Comply with NECA 1.

B. General Requirements for Cabling:

1. Comply with TIA-568-C Series of standards.
2. Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems."
3. Terminate all conductors; cable must not contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
4. Cables may not be spliced and must be continuous from terminal to terminal. Do not splice cable between termination, tap, or junction points.
5. Cables serving a common system may be grouped in a common raceway. Install network cabling and control wiring and cable in separate raceway from power wiring. Do not group conductors from different systems or different voltages.
6. Secure and support cables at intervals not exceeding 30 inch and not more than 6 inch from cabinets, boxes, fittings, outlets, racks, frames, and terminals.

7. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Install lacing bars and distribution spools.
8. Do not install bruised, kinked, scored, deformed, or abraded cable. Remove and discard cable if damaged during installation and replace it with new cable.
9. Cold-Weather Installation: Bring cable to room temperature before dereeling. Do not use heat lamps for heating.
10. Pulling Cable: Comply with BICSI ITSIMM, Ch. 5, "Copper Structured Cabling Systems." Monitor cable pull tensions.
11. Support: Do not allow cables to lie on removable ceiling tiles.
12. Secure: Fasten securely in place with hardware specifically designed and installed so as to not damage cables.
13. Provide strain relief.
14. Keep runs short. Allow extra length for connecting to terminals. Do not bend cables in a radius less than 10 times the cable OD. Use sleeves or grommets to protect cables from vibration at points where they pass around sharp corners and through penetrations.
15. Ground wire must be copper, and grounding methods must comply with IEEE C2. Demonstrate ground resistance.

C. Balanced Twisted Pair Cable Installation:

1. Comply with TIA-568-C.2.
2. Install termination hardware as specified in Section 271513 "Communications Copper Horizontal Cabling" unless otherwise indicated.
3. Do not untwist balanced twisted pair cables more than 1/2 inch at the point of termination to maintain cable geometry.

D. Installation of Control-Circuit Conductors:

1. Install wiring in raceways.
2. Use insulated spade lugs for wire and cable connection to screw terminals.

E. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend copper cable not in a wireway or pathway a minimum of 8 inch above ceilings by cable supports not more than 30 inch apart.
3. Cable must not be run through or on structural members or in contact with pipes, ducts, or other potentially damaging items. Do not run cables between structural members and corrugated panels.

F. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.
3. Below each feed point, neatly coil a minimum of 72 inch of cable in a coil not less than 12 inch in diameter.

G. Separation from EMI Sources:

1. Comply with BICSI TDMM and TIA-569-D recommendations for separating unshielded copper voice and data communications cable from potential EMI sources including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment must be as follows:

    a. Electrical Equipment or Circuit Rating Less Than 2 kVA: A minimum of 5 inch.
    b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of 12 inch.
    c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of 24 inch.

3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment must be as follows:

    a. Electrical Equipment or Circuit Rating Less Than 2 kVA: A minimum of 2-1/2 inch.
    b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of 6 inch.
    c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of 12 inch.

4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures must be as follows:

    a. Electrical Equipment or Circuit Rating Less Than 2 kVA: No requirement.
    b. Electrical Equipment or Circuit Rating between 2 and 5 kVA: A minimum of 3 inch.
    c. Electrical Equipment or Circuit Rating More Than 5 kVA: A minimum of 6 inch.

5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or 5 HP and Larger: A minimum of 48 inch.
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inch.

3.5 REMOVAL OF CONDUCTORS AND CABLES

A. Remove abandoned conductors and cables. Abandoned conductors and cables are those installed that are not terminated at equipment and are not identified with a tag for future use.

3.6 CONTROL-CIRCUIT CONDUCTORS

A. Minimum Conductor Sizes:

1. Class 1 remote-control and signal circuits; No 14 AWG.
2. Class 2 low-energy, remote-control, and signal circuits; No. 16 AWG.
3. Class 3 low-energy, remote-control, alarm, and signal circuits; No 12 AWG.

3.7 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI TDMM, "Firestopping" Chapter.

3.8 GROUNDING

A. For data communication wiring, comply with TIA-607-B and with BICSI TDMM, "Bonding and Grounding (Earthing)" Chapter.

B. For control-voltage wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.9 IDENTIFICATION

A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Identify data and communications system components, wiring, and cabling according to TIA-606-B; label printers must use label stocks, laminating adhesives, and inks complying with UL 969.

C. Identify each wire on each end and at each terminal with a number-coded identification tag. Each wire must have a unique tag.

3.10 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Visually inspect cable jacket materials for UL or third-party certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA-568-C.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.

B. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

C. End-to-end cabling will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

END OF SECTION 260523

SECTION 260526 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Grounding and bonding conductors.
2. Grounding and bonding clamps.
3. Grounding and bonding bushings.
4. Grounding and bonding hubs.
5. Grounding and bonding connectors.
6. Intersystem bonding bridge grounding connectors.
7. Grounding and bonding busbars.
8. Grounding (earthing) electrodes.
9. Grounding electrode enclosures.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
2. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data:

1. In addition to items specified in Section 260010 "Supplemental Requirements for Electrical," include the following:

a. Plans showing locations of grounding features described in "Field Quality Control for Grounding and Bonding" Article, including the following:

1) Grounding electrodes.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.6 SERVICE CONDITIONS FOR ELECTRICAL EQUIPMENT

A. Electrical and ICT Equipment Grounding (Earthing): Do not exceed 25 Ω resistance to ground (earth).

1. Contact Commissioner for resolution if 25 Ω specified resistance to ground (earth) is not attained after complying with prescriptive requirements in Article 250 of NFPA 70.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory, and marked for intended location and application.

2.2 GROUNDING AND BONDING CONDUCTORS

A. Equipment Grounding Conductor:

1. Standard Features: 600 V, THHN/THWN-2 THWN-2, copper or wire or cable, green color, in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. ASTM - Bare Copper Grounding and Bonding Conductor:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ERICO; brand of nVent Electrical plc.
b. Harger Lightning & Grounding; business of Harger, Inc.
c. Southwire
d. Or approved equal.

2. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

C. UL KDER - Armored Grounding Wire:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. LS Cable & System USA; subsidiary of LS Corp.
b. Southwire Company, LLC.
c. Superior Essex Inc.; subsidiary of LS Corp.

d. Viakon; brand of Conductores Monterrey S.A. de C.V.; a subsidiary of Xignux.
e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

3. Standard Features: Single corrosion-resistant copper, aluminum, or copper-clad aluminum conductor within helically formed steel armor.

2.3 GROUNDING AND BONDING CLAMPS

A. Description: Clamps suitable for attachment of grounding and bonding conductors to grounding electrodes, pipes, tubing, and rebar. Grounding and bonding clamps specified in this article are also suitable for use with communications applications.

B. UL KDER and KDSH - Hex-Fitting-Type Pipe and Rod Grounding and Bonding Clamp :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. America Fujikura Ltd. (AFL); Fujikura Ltd.
c. Arlington Industries, Inc.
d. B-Line; a division of Eaton, Electrical Sector.
e. ERICO; brand of nVent Electrical plc.
f. Greaves Corp.; Essex Products Group, Inc.
g. Harger Lightning & Grounding; business of Harger, Inc.
h. ILSCO.
i. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
j. Panduit Corp.
k. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

4. Standard Features:

a. Two pieces with zinc-plated stainless steel bolts.
b. Clamp Material: Die-cast zinc alloy or Aluminum.
c. Listed for outdoor use.

C. UL KDER and KDSH - U-Bolt-Type Pipe and Rod Grounding and Bonding Clamp :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. America Fujikura Ltd. (AFL); Fujikura Ltd.

c. Arlington Industries, Inc.
d. B-Line; a division of Eaton, Electrical Sector.
e. ERICO; brand of nVent Electrical plc.
f. Greaves Corp.; Essex Products Group, Inc.
g. Harger Lightning & Grounding; business of Harger, Inc.
h. ILSCO.
i. Panduit Corp.
j. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
k. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

4. Standard Features:

a. Clamp Material: Aluminum.
b. Listed for outdoor use.

D. UL KDER and KDSH - Strap-Type Pipe and Rod Grounding and Bonding Clamp :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
b. Crouse-Hinds; brand of Eaton, Electrical Sector.
c. ERICO; brand of nVent Electrical plc.
d. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
e. Panduit Corp.
f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

4. Standard Features:

a. Clamp Material: Copper or Tinned copper.
b. Listed for outdoor use.

E. UL KDER - Beam Grounding and Bonding Clamp :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Anderson; brand of Hubbell Utility Solutions; Hubbell Incorporated.

c. Panduit Corp.
d. Penn-Union Corp.; subsidiary of Nesco, Inc.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

4. Standard Features: Mechanical-type, terminal, ground wire access from four directions; with dual, tin-plated or silicon bronze bolts.

F. UL KDER - Exothermically Welded Connection :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated.
c. Crouse-Hinds; brand of Eaton, Electrical Sector.
d. ERICO; brand of nVent Electrical plc.
e. Harger Lightning & Grounding; business of Harger, Inc.
f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.
b. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

4. Standard Features: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

2.4 GROUNDING AND BONDING BUSHINGS

A. Description: Bonding bushings connect conduit fittings, tubing fittings, threaded metal conduit, and unthreaded metal conduit to metal boxes and equipment enclosures, and have one or more bonding screws intended to provide electrical continuity between bushing and enclosure. Grounding bushings have provision for connection of bonding or grounding conductor and may or may not also have bonding screws.

B. UL KDER - Bonding Bushing :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Arlington Industries, Inc.
c. Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
d. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.

e. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

4. Standard Features: Threaded bushing with insulated throat.

C. UL KDER - Grounding Bushing :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Arlington Industries, Inc.
c. Crouse-Hinds; brand of Eaton, Electrical Sector.
d. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
e. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

4. Standard Features: Threaded bushing with insulated throat and mechanical-type wire terminal.

2.5 GROUNDING AND BONDING HUBS

A. UL KDER - Grounding and Bonding Hub :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Arlington Industries, Inc.
c. Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
d. Crouse-Hinds; brand of Eaton, Electrical Sector.
e. Greaves Corp.; Essex Products Group, Inc.
f. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
g. Penn-Union Corp.; subsidiary of Nesco, Inc.
h. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

4. Standard Features: Insulated, gasketed, watertight hub with mechanical-type wire terminal.

2.6 INTERSYSTEM BONDING BRIDGE GROUNDING CONNECTORS

A. Description: Devices that provide means for connecting communications systems grounding and bonding conductors at service equipment or at disconnecting means for buildings or structures.

B. UL KDSH - Two-Piece Intersystem Bonding Bridge Grounding Connector :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
b. Crouse-Hinds; brand of Eaton, Electrical Sector.
c. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment for Communications: UL CCN KDSH; including UL 467.

3. Standard Features: Copper body and polycarbonate cover; four terminating points.

2.7 GROUNDING AND BONDING BUSBARS

A. Description: Miscellaneous grounding and bonding devices that serve as common connection for multiple grounding and bonding conductors.

B. UL KDER - Equipment Room Grounding and Bonding Busbar :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. B-Line; a division of Eaton, Electrical Sector.
b. Chatsworth Products, Inc.
c. ERICO; brand of nVent Electrical plc.
d. Harger Lightning & Grounding; business of Harger, Inc.
e. Hoffman; brand of nVent Electrical plc.
f. ILSCO.
g. Panduit Corp.
h. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

4. Standard Features:

a. Bus: Rectangular bar of annealed copper.
b. Mounting Stand-Off Insulators: Lexan or PVC.

1) Comply with UL 891 for use in 600 V switchboards, impulse tested at 5000 V.

5. Other Available Features Required by the Project:

a. Dimensions: 1/4 by 4 inch in cross section; length as indicated on the Drawings.
b. Predrilled Hole Pattern: Complying with BICSI N3 and TIA-607 9/32 inch holes spaced 1-1/8 inch apart.

2.8 GROUNDING (EARTHING) ELECTRODES

A. UL KDER - Rod Electrode :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Continental Industries; brand of Hubbell Utility Solutions; Hubbell Incorporated.
c. ERICO; brand of nVent Electrical plc.
d. Galvan Industries, Inc.; Electrical Products Division, LLC.
e. Harger Lightning & Grounding; business of Harger, Inc.
f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Grounding and Bonding Equipment: UL CCN KDER; including UL 467.

4. Standard Features: Copper-clad Zinc-coated Stainless steel, sectional type; 3/4 inch by 10 ft 5/8 inch by 8 ft.

2.9 GROUNDING ELECTRODE ENCLOSURES

A. Description: Enclosures designed to protect grounding electrodes from damage while providing access for inspection and testing of the grounding system.

B. Grounding Electrode Access Well Enclosure :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ERICO; brand of nVent Electrical plc.
b. Harger Lightning & Grounding; business of Harger, Inc.
c. Quazite; brand of Hubbell Utility Solutions; Hubbell Incorporated.
d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Standard Features:

a. Well Material: Concrete,HDPE, or Schedule 40 PVC.
b. Cover Material: Cast iron, Concrete, or Steel.
c. Cover Strength: Sidewalk or turf use.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine facility's grounding electrode system and equipment grounding for compliance with requirements for maximum ground-resistance level and other conditions affecting performance of grounding and bonding of electrical system.

B. Inspect test results of grounding system measured at point of electrical service equipment connection.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with connection of electrical service equipment only after unsatisfactory conditions have been corrected.

3.3 SELECTION OF GROUNDING AND BONDING PRODUCTS

A. Grounding and Bonding Conductors:

1. Provide solid conductor for 8 AWG and smaller, and stranded conductors for 6 AWG and larger unless otherwise indicated.
2. Custom-Length Insulated Equipment Bonding Jumpers: 6 AWG, 19-strand, Type THHN.
3. Bonding Cable: 28 kcmil, 14 strands of 17 AWG conductor, 1/4 inch in diameter.
4. Bonding Conductor: 4 AWG or 6 AWG, stranded conductor.
5. Bonding Jumper: Copper tape, braided conductors terminated with copper ferrules; 1-5/8 inch wide and 1/16 inch thick.
6. Tinned Bonding Jumper: Tinned-copper tape, braided conductors terminated with copper ferrules; 1-5/8 inch wide and 1/16 inch thick.
7. Underground Grounding Conductors: Install bare copper conductor, 2/0 AWG minimum.

B. Grounding and Bonding Connectors:

1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
2. Underground Connections: Welded connectors except at test wells and as otherwise indicated.
3. Connections to Ground Rods at Test Wells: Bolted connectors.
4. Connections to Structural Steel: Welded connectors.

C. Grounding and Bonding Busbars: Provide in electrical equipment rooms, in rooms housing service equipment, and elsewhere as indicated on the Drawings.

3.4 SELECTION OF GROUNDING AND BONDING PRODUCTS FOR COMMUNICATIONS

A. Comply with Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings."

3.5 INSTALLATION OF GROUNDING AND BONDING

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Electrical Construction: NYC Building Code, NYC Electrical Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Communications Work: BICSI N1.
6. Work in ITE Rooms: NFPA 75.
7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
8. Work in Confined Spaces: NFPA 350.
9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.

C. Special Techniques:

1. Grounding and Bonding Conductors:

   a. Route along shortest and straightest paths possible unless otherwise indicated or required by Code. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
   b. Underground Grounding Conductors:

      1) Bury at least 30 inch below grade.
      2) Duct-Bank Grounding Conductor: Bury 12 inch above duct bank when indicated as part of duct-bank installation.

2. Grounding and Bonding Connectors: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.

   a. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
   b. Make connections with clean, bare metal at points of contact.
   c. Make aluminum-to-steel connections with stainless steel separators and mechanical clamps.
   d. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
   e. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

f. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance except where routed through short lengths of conduit.

1) Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate adjacent parts.
2) Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install bonding so vibration is not transmitted to rigidly mounted equipment.
3) Use exothermic-welded connectors for outdoor locations; if disconnect-type connection is required, use bolted clamp.

g. Grounding and Bonding for Piping:

1) Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes; use bolted clamp connector or bolt lug-type connector to pipe flange by using one of lug bolts of flange. Where dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
2) Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with bolted connector.
3) Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

h. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install tinned bonding jumper to bond across flexible duct connections to achieve continuity.

i. Grounding for Steel Building Structure: Install driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 ft apart.

3. Grounding and Bonding Busbars:

a. Install busbar horizontally, on insulated spacers 2 inch minimum from wall, 6 inch above finished floor unless otherwise indicated.
b. Where busbars are indicated on both sides of doorways, route bonding conductor up to top of door frame, across top of doorway, and down; connect to continuation of horizontal busbar.

4. Electrodes:

a. Ground Rods: Drive rods until tops are 2 inch below finished floor or final grade unless otherwise indicated.

1) Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating if any.
2) Use exothermic welds for below-grade connections.

b. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least same distance from other grounding electrodes, and connect to service grounding electrode conductor.

c. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Section 260543 "Underground Ducts and Raceways for Electrical Systems," and must be at least 12 inch deep, with cover.

1) Install at least one test well for each service unless otherwise indicated. Install at ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.

5. Grounding at Service:

a. Equipment grounding conductors and grounding electrode conductors must be connected to ground busbar. Install main bonding jumper between neutral and ground buses.

6. Grounding Underground Distribution System Components:

a. Duct-Bank Grounding Conductor: Bury 12 inch above duct bank when indicated as part of duct-bank installation.
b. Comply with IEEE C2 grounding requirements.
c. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields in accordance with manufacturer's published instructions with splicing and termination kits.

7. Equipment Grounding and Bonding:

a. Install insulated equipment grounding conductors with feeders and branch circuits.
b. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:

1) Feeders and branch circuits.
2) Lighting circuits.
3) Receptacle circuits.
4) Single-phase motor and appliance branch circuits.
5) Three-phase motor and appliance branch circuits.
6) Flexible raceway runs.
7) Armored and metal-clad cable runs.
8) Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.

c. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.
d. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.
e. Metallic Fences: Comply with requirements of IEEE C2.

1) Grounding Conductor: Bare, tinned copper, not less than 8 AWG.

3.6 FIELD QUALITY CONTROL FOR GROUNDING AND BONDING

A. Administrant for Electrical Power Tests and Inspections:

1. Administer and perform tests and inspections.

B. Tests and Inspections:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with calibrated torque wrench in accordance with manufacturer's published instructions.
3. Test completed grounding system at each location where maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal, at ground test wells, and at individual ground rods. Make tests at ground rods before conductors are connected.

    a. Measure ground resistance no fewer than two full days after last trace of precipitation and without soil being moistened by means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
    b. Perform tests by fall-of-potential method in accordance with IEEE Std 81.

4. Prepare dimensioned Drawings locating each test well, ground rod and ground-rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to record of tests and observations. Include number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

C. Nonconforming Work:

1. Grounding system will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective components and retest.

D. Collect, assemble, and submit test and inspection reports.

1. Report measured ground resistances that exceed the following values:

    a. Power and Lighting Equipment or System with Capacity of 500 kVA and Less: 10.

3.7 PROTECTION

A. After installation, protect grounding and bonding cables and equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 260526

SECTION 260529 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Support systems.
2. Mounting, anchoring, and attachment components.
3. Installation of fabricated metal supports.
4. Installation of concrete bases.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for the following:

a. Slotted support systems, hardware, and accessories.
b. Clamps.
c. Hangers.
d. Sockets.
e. Eye nuts.
f. Fasteners.
g. Anchors.
h. Saddles.
i. Brackets.

2. Include rated capacities and furnished specialties and accessories.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame Rating: Class 1.
2. Self-extinguishing according to ASTM D635.

2.2 SUPPORT SYSTEMS

A. Steel Slotted Support Systems :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Allied Tube & Conduit; Atkore International.
c. B-Line; a division of Eaton, Electrical Sector.
d. Flex-Strut Inc.
e. Gripple Inc.
f. MIRO Industries Inc.
g. Unistrut; an Atkore International, Inc. brand.
h. Or approved equal.

2. Standard Features: Preformed steel channels and angles with minimum 13/32 inch diameter holes at a maximum of 8 inch on center in at least one surface.

a. Referenced Standard: MFMA-4 factory-fabricated components for field assembly.
b. Material for Channel, Fittings, and Accessories: Galvanized steel, Stainless steel, Type 304, or Stainless steel, Type 316.
c. Channel Width: Selected for applicable load criteria.
d. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
e. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
f. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Aluminum Slotted Support Systems :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.

b. Eaton.
c. Flex-Strut Inc.
d. MKT Metal Manufacturing.
e. Unistrut; an Atkore International, Inc. brand.
f. Or approved equal.

2. Standard Features: Extruded-aluminum channels and angles with minimum 13/32 inch diameter holes at a maximum of 8 inch on center in at least one surface.

a. Referenced Standard: MFMA-4 factory-fabricated components for field assembly.
b. Channel Material: 6063-T5 aluminum alloy.
c. Fittings and Accessories Material: 5052-H32 aluminum alloy.
d. Channel Width: Selected for applicable load criteria.
e. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.3 MOUNTING, ANCHORING, AND ATTACHMENT COMPONENTS

A. Powder-Actuated Fasteners :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Hilti, Inc.
b. ITW Ramset/Red Head; Illinois Tool Works, Inc.
c. MKT Fastening, LLC.
d. ThomasInsert manufacturer's name.
e. Or approved equal.

2. Standard Features: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

B. Mechanical-Expansion Anchors :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. B-Line; a division of Eaton, Electrical Sector.
b. Empire Industries, Inc.
c. Hilti, Inc.
d. ITW Ramset/Red Head; Illinois Tool Works, Inc.
e. MKT Fastening, LLC.
f. Or approved equal.

2. Standard Features: Insert-wedge-type, zinc-coated stainless steel, for use in hardened portland cement concrete, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

C. Concrete Inserts:

1. Standard Features: Steel or malleable-iron, slotted support system units are similar to MSS Type 18 units and comply with MFMA-4 or MSS SP-58.

D. Clamps for Attachment to Steel Structural Elements:

1. Standard Features: MSS SP-58 units are suitable for attached structural element.

E. Through Bolts:

1. Standard Features: Structural type, hex head, and high strength. Comply with ASTM F3125/F3125M, Grade A325.

F. Hanger Rods:

1. Standard Features: Threaded steel.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 SELECTION OF HANGERS AND SUPPORTS

A. Maximum Support Spacing and Minimum Hanger Rod Size for Raceways: Space supports for EMT, IMC, and ERMC as required by NFPA 70. Minimum rod size must be 1/4 inch in diameter.

B. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.

1. Secure raceways and cables to these supports with two-bolt conduit clamps.

C. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2 inch and smaller raceways serving branch circuits and communication systems above suspended ceilings, and for fastening raceways to trapeze supports.

3.3 INSTALLATION OF HANGERS AND SUPPORTS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Electrical Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Hot Work: NFPA 51B.

3. Work in Confined Spaces: NFPA 350.
4. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
5. Installation of Steel Conduit: NECA NEIS 101.
6. Installation of Aluminum Conduit: NECA NEIS 102.
7. Installation of Metal Cable Tray Systems: NECA NEIS 105.

C. Special Installation Techniques:

1. Raceway Support Methods: In addition to methods described in NECA NEIS 1, EMT IMC and ERMC may be supported by openings through structure members, in accordance with NFPA 70.
2. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination must be weight of supported components plus 200 lb.
3. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:

    a. To Wood: Fasten with lag screws or through bolts.
    b. To New Concrete: Bolt to concrete inserts.
    c. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
    d. To Existing Concrete: Expansion anchor fasteners.
    e. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inch thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inch thick.
    f. To Steel: Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts Beam clamps (MSS SP-58, Type 19, 21, 23, 25, or 27), complying with MSS SP-69.
    g. To Light Steel: Sheet metal screws.
    h. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that comply with seismic-restraint strength and anchorage requirements.

4. Drill holes for expansion anchors in concrete at locations and to depths that avoid the need for reinforcing bars.

D. Interfaces with Other Work:

1. Provide vibration controls with hangers and supports.
2. Touchup Finishes:

    a. Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

        1) Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.

    b. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780.

3. Installation of Fabricated Metal Supports:

a. Provide site-fabricated metal supports.
b. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.
c. Field Welding: Comply with AWS D1.1/D1.1M. Submit welding certificates.

4. Installation of Concrete Bases:

a. Provide concrete bases of dimensions indicated, but not less than 4 inch larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.
b. Use 3000 psi, 28-day compressive-strength concrete.
c. Anchor equipment to concrete base as follows:

1) Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
2) Install anchor bolts to elevations required for proper attachment to supported equipment.
3) Install anchor bolts according to anchor-bolt manufacturer's written instructions.

END OF SECTION 260529

SECTION 260533.13 - CONDUITS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Type EMT duct raceways and elbows.
2. Type ENT duct raceways and fittings.
3. Type ERMC duct raceways, elbows, couplings, and nipples.
4. Type FMC duct raceways.
5. Type IMC duct raceways.
6. Type LFMC duct raceways.
7. Fittings for conduit, tubing, and cable.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
2. Section 260519 "Low-Voltage for Electrical Power Conductors and Cables" specifies nonmetallic underground conduit with conductors (Type NUCC).
3. Section 260529 "Hangers and Supports for Electrical Systems" specifies conduit hangers and supports referenced by this Section.
4. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels.

1.3 REFERENCES

A. Abbreviations and Acronyms for Electrical Raceway Types:

1. EMT: Electrical metallic tubing.
2. EMT-A: Aluminum electrical metallic tubing.
3. EMT-S: Steel electrical metallic tubing.
4. EMT-SS: Stainless steel electrical metallic tubing.
5. ENT: Electrical nonmetallic tubing.
6. EPEC: Electrical HDPE underground conduit (thin wall).
7. EPEC-A: Type A electrical HDPE underground conduit.
8. EPEC-B: Type B electrical HDPE underground conduit.
9. ERMC: Electrical rigid metal conduit.
10. ERMC-A: Aluminum electrical rigid metal conduit.

11. ERMC-S: Steel electrical rigid metal conduit.
12. ERMC-S-G: Galvanized-steel electrical rigid metal conduit.
13. ERMC-SS: Stainless steel electrical rigid metal conduit.
14. FMC: Flexible metal conduit.
15. FMC-A: Aluminum flexible metal conduit.
16. FMC-S: Steel flexible metal conduit.
17. FMT: Steel flexible metallic tubing.
18. FNMC: Flexible nonmetallic conduit. See "LFNC."
19. HDPE: HDPE underground conduit (thick wall).
20. HDPE-40: Schedule 40 HDPE underground conduit.
21. HDPE-80: Schedule 80 HDPE underground conduit.
22. LFMC: Liquidtight flexible metal conduit.
23. LFMC-A: Aluminum liquidtight flexible metal conduit.
24. LFMC-S: Steel liquidtight flexible metal conduit.
25. LFMC-SS: Stainless steel liquidtight flexible metal conduit.
26. LFNC: Liquidtight flexible nonmetallic conduit.
27. LFNC-A: Layered (Type A) liquidtight flexible nonmetallic conduit.
28. LFNC-B: Integral (Type B) liquidtight flexible nonmetallic conduit.
29. LFNC-C: Corrugated (Type C) liquidtight flexible nonmetallic conduit.
30. PVC: Rigid PVC conduit.
31. PVC-40: Schedule 40 rigid PVC conduit.
32. PVC-80: Schedule 80 rigid PVC Conduit.
33. PVC-A: Type A rigid PVC concrete-encased conduit.
34. PVC-EB: Type EB rigid PVC concrete-encased underground conduit.
35. RGS: See ERMC-S-G.
36. RMC: See ERMC.

B. Definitions:

1. Conduit: A structure containing one or more duct raceways.
2. Direct Buried: Installed underground without encasement in concrete or other protective material.
3. Duct Bank: An arrangement of conduit providing one or more continuous duct raceways between two points.
4. Duct Raceway: A single enclosed raceway for conductors or cable.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory, and marked for intended location and application.

2.2 TYPE EMT DUCT RACEWAYS AND ELBOWS

A. UL FJMX - Aluminum Electrical Metal Tubing (EMT-A) and Elbows:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Patriot Aluminum Products, LLC.
b. Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway.
c. Wheatland Tube Company.
d. Or approved equal.

2. Standard Features:

a. Material: Aluminum.
b. Minimum Trade Size: Metric designator 21 (trade size 3/4).

B. UL FJMX - Steel Electrical Metal Tubing (EMT-S) and Elbows:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Allied Tube & Conduit; Atkore International.
b. Calconduit; Atkore International.
c. Emerson Electric Co., Automation Solutions.
d. Topaz Lighting & Electric.
e. Wheatland Tube; Zekelman Industries.
f. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN FJMX; including UL 797.

3. Standard Features:

a. Material: Steel.
b. Exterior Coating: Zinc or Alternate corrosion-resistant coating.
c. Interior Coating: Zinc.
d. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.3 TYPE ENT DUCT RACEWAYS AND FITTINGS

A. UL FKHU - Electrical Nonmetallic Tubing (ENT) and Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Cantex Inc.
c. JM Eagle.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN FKHU; including UL 1653.

3. Other Available Features Required by the Project:

a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.4 TYPE ERMC DUCT RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. UL DYWV - Aluminum Electrical Rigid Metal Conduit (ERMC-A), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Allied Tube & Conduit; Atkore International.
c. American Conduit; Norsk Hydro ASA, Hydro Extrusion USA LLC.
d. Calconduit; Atkore International.
e. Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway.
f. Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V..
g. Wheatland Tube; Zekelman Industries.
h. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DYWV; including UL 6A.

3. Standard Features:

a. Material: Aluminum.
b. Protective Coating: Provide protective coating for use in concrete direct burial.
c. Minimum Trade Size: Metric designator 21 (trade size 3/4).

B. UL DYWV - Stainless Steel Electrical Rigid Metal Conduit (ERMC-SS), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Allied Tube & Conduit; Atkore International.
c. Calconduit; Atkore International.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DYWV; including UL 6A.

3. Standard Features:

a. Material: Stainless steel.
b. Minimum Trade Size: Metric designator 21 (trade size 3/4).

C. UL DYIX - Galvanized-Steel Electrical Rigid Metal Conduit (ERMC-S-G), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Allied Tube & Conduit; Atkore International.
b. Calconduit; Atkore International.
c. Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V_.
d. Wheatland Tube; Zekelman Industries.
e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DYIX; including UL 6.

3. Standard Features:

a. Exterior Coating: Zinc.
b. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.5 TYPE FMC DUCT RACEWAYS

A. UL DXUZ - Steel Flexible Metal Conduit (FMC-S):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Electri-Flex Company.
c. Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway.
d. Southwire.
e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN DXUZ; including UL 1.

3. Standard Features:

   a. Material: Steel.
   b. Minimum Trade Size: Metric designator 21 (trade size 3/4).

B. UL DXUZ - Aluminum Flexible Metal Conduit (FMC-A):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. ABB, Electrification Business.
   b. Electri-Flex Company.
   c. Topaz Lighting & Electric.
   d. Southwire.
   e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN DXUZ; including UL 1.

3. Standard Features:

   a. Material: Aluminum.
   b. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.6 TYPE IMC DUCT RACEWAYS

A. UL DYBY - Steel Intermediate Metal Conduit (IMC):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. ABB, Electrification Business.
   b. Allied Tube & Conduit; Atkore International.
   c. Calconduit; Atkore International.
   d. Rymco USA brand; manufactured and listed by subsidiary Conduit S.A. de C.V..
   e. Wheatland Tube; Zekelman Industries.
   f. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN DYBY; including UL 1242.

3. Standard Features:

a. Exterior Coating: Zinc Alternative corrosion-resistant coating.
b. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.7 TYPE LFMC DUCT RACEWAYS

A. UL DXHR - Steel Liquidtight Flexible Metal Conduit (LFMC-S):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Electri-Flex Company.
c. International Metal Hose Co.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DXHR; including UL 360.

3. Standard Features:

a. Material: Steel.
b. Minimum Trade Size: Metric designator 21 (trade size 3/4).

B. UL DXHR - Stainless Steel Liquidtight Flexible Metal Conduit (LFMC-SS):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Anaconda Sealtite; Anamet Electrical, Inc.
c. Electri-Flex Company.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DXHR; including UL 360.

3. Standard Features:

a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.8 FITTINGS FOR CONDUIT, TUBING, AND CABLE

A. UL DWTT - Fittings for Type ERMC, Type IMC, Type PVC, Type HDPE, Type EPEC, and Type RTRC Duct Raceways:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
c. Penn Aluminum Conduit & EMT; Penn Aluminum International LLC; Berkshire Hathaway.
d. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. Southwire Company, LLC.
f. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN DWTT; including UL 514B.

3. Standard Features:

a. Material: Steel.
b. Coupling Method: Compression coupling or Raintight compression coupling with distinctive color gland nut .

B. UL FKAV - Fittings for Type EMT Duct Raceways:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Allied Tube & Conduit; Atkore International.
c. Calconduit; Atkore International.
d. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
e. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
f. Southwire Company, LLC.
g. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN FKAV; including UL 514B.

3. Standard Features:

a. Material: Steel.
b. Coupling Method: Compression coupling or Raintight compression coupling with distinctive color gland nut.

C. UL ILNR - Fittings for Type FMC Duct Raceways:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Fittings Corp. (AMFICO).
b. Liquid Tight Connector Co.
c. Southwire Company, LLC.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. UL CCN ILNR; including UL 514B.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 SELECTION OF CONDUITS FOR ELECTRICAL SYSTEMS

A. Unless more stringent requirements are specified in the Contract Documents or manufacturer's published instructions, comply with NFPA 70 for selection of duct raceways. Consult Commissioner for resolution of conflicting requirements.

B. Indoors:

1. Hazardous Classified Locations: ERMC or IMC.
2. Exposed and Subject to Severe Physical Damage: ERMC or IMC.
3. Exposed and Subject to Physical Damage: ERMC, IMC, or EMT.
4. Exposed and Not Subject to Physical Damage: EMT.
5. Concealed in Ceilings and Interior Walls and Partitions: EMT.
6. Damp or Wet Locations: ERMC, IMC or Corrosion-resistant EMT.
7. Circuits Operating Above 60 Hz: EMT-A. Provide nonmetallic sleeve where aluminum duct raceways pass through concrete.

C. Duct Fittings: Select fittings in accordance with NEMA FB 2.10 guidelines.

1. ERMC and IMC: Provide threaded-type fittings unless otherwise indicated.

3.3 INSTALLATION OF CONDUITS FOR ELECTRICAL SYSTEMS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Electrical Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Commissioning of Active and Passive Fire Protection Features: NFPA 3 and NFPA 4.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Communications Work: BICSI N1.
6. Life Safety and Means of Egress Work: NFPA 101.
7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.

8. Work in Confined Spaces: NFPA 350.
9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
10. Type EMT-A: Article 358 of NFPA 70 and NECA NEIS 102.
11. Type EMT-SS: Article 358 of NFPA 70 and NECA NEIS 101.
12. Type EMT-S: Article 358 of NFPA 70 and NECA NEIS 101.
13. Type ENT: Article 362 of NFPA 70 and NECA NEIS 102.
14. Type HDPE and Type EPEC: Article 353 of NFPA 70 and NECA NEIS 111.
15. Type ERMC-A: Article 344 of NFPA 70 and NECA NEIS 102.
16. Type ERMC-SS: Article 344 of NFPA 70 and NECA NEIS 101.
17. Type ERMC-S: Article 344 of NFPA 70 and NECA NEIS 101.
18. Type FMC-S: Article 348 of NFPA 70 and NECA NEIS 101.
19. Type FMC-A: Article 348 of NFPA 70 and NECA NEIS 102.
20. Type FMT: Article 360 of NFPA 70 and NECA NEIS 101.
21. Type IMC: Article 342 of NFPA 70 and NECA NEIS 101.
22. Type LFMC: Article 350 of NFPA 70 and NECA NEIS 101.
23. Type LFNC: Article 342 of NFPA 70 and NECA NEIS 111.
24. Type PVC: Article 356 of NFPA 70 and NECA NEIS 111.
25. Type RTRC: Article 355 of NFPA 70 and NECA NEIS 111.
26. Expansion Fittings: NEMA FB 2.40.
27. Consult Commissioner for resolution of conflicting requirements.

C. Special Installation Techniques:

1. General Requirements for Installation of Duct Raceways:

   a. Complete duct raceway installation before starting conductor installation.
   b. Provide stub-ups through floors with coupling threaded inside for plugs, set flush with finished floor. Plug coupling until conduit is extended above floor to final destination or a minimum of 2 ft above finished floor.
   c. Install no more than equivalent of three 90-degree bends in conduit run except for control wiring conduits, for which no more than equivalent of two 90-degree fewer bends are permitted. Support within 12 inch of changes in direction.
   d. Make bends in duct raceway using large-radius preformed ells except for parallel bends. Field bending must be in accordance with NFPA 70 minimum radii requirements. Provide only equipment specifically designed for material and size involved.
   e. Conceal conduit within finished walls, ceilings, and floors unless otherwise indicated. Install conduits parallel or perpendicular to building lines.
   f. Support conduit within 12 inch of enclosures to which attached.
   g. Install duct sealing fittings at accessible locations in accordance with NFPA 70 and fill them with listed sealing compound. For concealed duct raceways, install fitting in flush steel box with blank cover plate having finish similar to that of adjacent plates or surfaces. Install duct sealing fittings in accordance with NFPA 70.
   h. Install devices to seal duct raceway interiors at accessible locations. Locate seals so no fittings or boxes are between the seal and the following changes of environments. Seal interior of duct raceways at the following points:

      1) Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
      2) Where an underground service duct raceway enters a building or structure.
      3) Conduit extending from interior to exterior of building.

4) Conduit extending into pressurized duct raceway and equipment.
5) Conduit extending into pressurized zones that are automatically controlled to maintain different pressure set points.
6) Where otherwise required by NFPA 70.

i. Do not install duct raceways or electrical items on "explosion-relief" walls or rotating equipment.
j. Do not install conduits within 2 inch of the bottom side of a metal deck roof.
k. Keep duct raceways at least 6 inch away from parallel runs of flues and steam or hot-water pipes. Install horizontal duct raceway runs above water and steam piping.
l. Cut conduit perpendicular to the length. For conduits metric designator 53 (trade size 2) and larger, use roll cutter or a guide to make cut straight and perpendicular to the length. Ream inside of conduit to remove burrs.
m. Install pull wires in empty duct raceways. Provide polypropylene or monofilament plastic line with not less than 200 lb tensile strength. Leave at least 12 inch of slack at both ends of pull wire. Cap underground duct raceways designated as spare above grade alongside duct raceways in use.
n. Install duct raceways square to the enclosure and terminate at enclosures without hubs with locknuts on both sides of enclosure wall. Install locknuts hand tight, plus one-quarter turn more.

1) Termination fittings with shoulders do not require two locknuts.

o. Terminate threaded conduits into threaded hubs or with locknuts on inside and outside of boxes or cabinets. Install bushings on conduits up to metric designator 35 (trade size 1-1/4) and insulated throat metal bushings on metric designator 41 (trade size 1-1/2) and larger conduits terminated with locknuts. Install insulated throat metal grounding bushings on service conduits.

2. Types EMT-A, ERMC-A, and FMC-A: Do not install aluminum duct raceways or fittings in contact with concrete or earth.
3. Types ERMC and IMC:

a. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound that maintains electrical conductivity to threads of duct raceway and fittings before making up joints. Follow compound manufacturer's published instructions.

4. Type ERMC-S-PVC:

a. Follow manufacturer's installation instructions for clamping, cutting, threading, bending, and assembly.
b. Provide PVC-coated sealing locknut for exposed male threads transitioning into female NPT threads that do not have sealing sleeves, including transitions from PVC couplings/female adapters to Type ERMC-S-PVC elbows in direct-burial applications. PVC-coated sealing locknuts must not be used in place of conduit hub. PVC-coated sealing locknut must cover exposed threads on Type ERMC-S-PVC duct raceway.
c. Coat field-cut threads on PVC-coated duct raceway with manufacturer-approved corrosion-preventing conductive compound prior to assembly.

5. Types FMC, LFMC, and LFNC:

a. Provide a maximum of 36 inch of flexible conduit for recessed and semirecessed luminaires, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.

6. Stub-ups to Above Recessed Ceilings:

a. Provide EMT, IMC, or ERMC for duct raceways.
b. Provide a conduit bushing or insulated fitting to terminate stub-ups not terminated in hubs or in an enclosure.

7. Duct Fittings: Install fittings in accordance with NEMA FB 2.10 guidelines.

a. EMT: Provide compression, steel fittings. Comply with NEMA FB 2.10.
b. Flexible Conduit: Provide only fittings listed for use with flexible conduit type. Comply with NEMA FB 2.20.

8. Expansion-Joint Fittings:

a. Install in runs of aboveground PVC that are located where environmental temperature change may exceed 30 deg F and that have straight-run length that exceeds 25 ft. Install in runs of aboveground ERMC and EMT conduit that are located where environmental temperature change may exceed 100 deg F and that have straight-run length that exceeds 100 ft.
b. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change for PVC conduits. Install fitting(s) that provide expansion and contraction for at least 0.000078 inch per foot of length of straight run per deg F of temperature change for metal conduits.
c. Install expansion fittings at locations where conduits cross building or structure expansion joints.
d. Install expansion-joint fitting with position, mounting, and piston setting selected in accordance with manufacturer's published instructions for conditions at specific location at time of installation. Install conduit supports to allow for expansion movement.

9. Duct Raceways Penetrating Rooms or Walls with Acoustical Requirements: Seal duct raceway openings on both sides of rooms or walls with acoustically rated putty or firestopping.
10. Identification: Provide labels for conduit assemblies, duct raceways, and associated electrical equipment.

a. Provide warning signs.

D. Interfaces with Other Work:

1. Firestop penetrations of fire-rated floor and wall assemblies.
2. Provide conduit hangers and supports.

3.4 FIELD QUALITY CONTROL OF CONDUITS FOR ELECTRICAL SYSTEMS

A. Administrant for Electrical Power Tests and Inspections:

1. Administer and perform tests and inspections.

B. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide minimum 12 inch long mandrel equal to duct size minus 1/4 inch. If obstructions are indicated, remove obstructions and retest.
3. Conduit Placement:

    a. Verify that center-line location and offsets are in accordance with the Drawings.
    b. Verify that hangers and supports for conduits are attached to structure as directed by qualified structural engineer licensed in the State of New York.
    c. Verify that nuts on bolts or hanger rods are secure.
    d. Verify that space between raceways and cored holes are filled with non-shrinking grout or other approved material indicated on the Drawings and the Specifications.
    e. Verify that expansion devices are installed at locations indicated on the Drawings and the Specifications.
    f. Verify that ends are cut square to provide flush-butting surfaces when spliced and inside edges are free of burrs that could impede installation of cables.
    g. Verify minimum separation of utilities, or that approved mechanical protection has been provided to surrounding conduit(s) where minimum separation cannot be achieved.

4. Document all changes on Record Drawings.

C. Nonconforming Work:

1. Conduit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.5 CLEANING

A. Verify that bentonite or other drilling fluids are contained and removed, and site is restored to its original or improved condition.

3.6 PROTECTION

A. Protect coatings, finishes, and cabinets from damage and deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 260533.13

SECTION 260533.16 - BOXES AND COVERS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Metallic outlet boxes, device boxes, rings, and covers.
2. Nonmetallic outlet boxes, device boxes, rings, and covers.
3. Junction boxes and pull boxes.
4. Cover plates for device boxes.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
2. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
3. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.
4. Section 260573 "Power System Studies" specifies arc-flash hazard analysis and warning labels referenced by this Section.
5. Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings" specifies additional requirements for identification of communications equipment and cabling.

1.3 DEFINITIONS

A. Communications Outlet: One or more communications jacks, or cables and plugs, mounted in a box or ring, with a suitable protective cover.

B. Enclosure: The case or housing of an apparatus, or the fence or wall(s) surrounding an installation, to prevent personnel from accidentally contacting energized parts or to protect the equipment from physical damage. Types of enclosures and enclosure covers include the following:

1. Cabinet: An enclosure that is designed for either surface mounting or flush mounting and is provided with a frame, mat, or trim in which a swinging door or doors are or can be hung.
2. Concrete Box: A box intended for use in poured concrete.

3. Conduit Body: A means for providing access to the interior of a conduit or tubing system through one or more removable covers at a junction or terminal point. In the United States, conduit bodies are listed in accordance with outlet box requirements.
4. Conduit Box: A box having threaded openings or knockouts for conduit, EMT, or fittings.
5. Cover Plate: A cover designed for protecting wiring devices installed in flush-mounted device boxes while permitting their safe operation; also called a faceplate or wallplate.
6. Cutout Box: An enclosure designed for surface mounting that has swinging doors or covers secured directly to and telescoping with the walls of the enclosure.
7. Device Box: A box with provisions for mounting a wiring device directly to the box.
8. Extension Ring: A ring intended to extend the sides of an outlet box or device box to increase the box depth, volume, or both.
9. Floor Box: A box mounted in the floor intended for use with a floor box cover and other components to complete the floor box enclosure.
10. Floor-Mounted Enclosure: A floor box and floor box cover assembly with means to mount in the floor that is sealed against the entrance of scrub water at the floor level.
11. Floor Nozzle: An enclosure used on a wiring system, intended primarily as a housing for a receptacle, provided with a means, such as a collar, for surface-mounting on a floor, which may or may not include a stem to support it above the floor level, and is sealed against the entrance of scrub water at the floor level.
12. Junction Box: A box with a blank cover that joins different runs of raceway or cable and provides space for connection and branching of the enclosed conductors.
13. Outlet Box: A box that provides access to a wiring system having pryout openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for the entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting an outlet box cover, but without provisions for mounting a wiring device directly to the box.
14. Pedestal Floor Box Cover: A floor box cover that, when installed as intended, provides a means for typically vertical or near-vertical mounting of receptacle outlets above the floor's finished surface.
15. Pull Box: A box with a blank cover that joins different runs of raceway and provides access for pulling or replacing the enclosed cables or conductors.
16. Raised-Floor Box: A floor box intended for use in raised floors.
17. Recessed Access Floor Box: A floor box with provisions for mounting wiring devices below the floor surface.
18. Recessed Access Floor Box Cover: A floor box cover with provisions for passage of cords to recessed wiring devices mounted within a recessed floor box.
19. Ring: A sleeve, which is not necessarily round, used for positioning a recessed wiring device flush with the plaster, concrete, drywall, or other wall surface.
20. Ring Cover: A box cover, with raised center portion to accommodate a specific wall or ceiling thickness, for mounting wiring devices or luminaires flush with the surface.
21. Termination Box: An enclosure designed for installation of termination base assemblies consisting of bus bars, terminal strips, or terminal blocks with provision for wire connectors to accommodate incoming or outgoing conductors, or both.

C. Receptacle: A fixed connecting device arranged for insertion of a power cord plug. Also called a power jack.

D. Receptacle Outlet: One or more receptacles mounted in a box with a suitable protective cover.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Prepare and submit the following:

1. Shop Drawings for Floor Boxes: Show that floor boxes are located to avoid interferences and are structurally allowable. Indicate floor thickness at location where boxes are embedded in concrete floors and underfloor clearances where boxes are installed in raised floors.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory, and marked for intended location and application.

2.2 METALLIC OUTLET BOXES, DEVICE BOXES, RINGS, AND COVERS

A. UL QCIT - Metallic Outlet Boxes and Covers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Appleton; Emerson Electric Co., Automation Solutions.
c. Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
d. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
f. Pass & Seymour; Legrand North America, LLC.
g. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
h. Wiremold; Legrand North America, LLC.
i. Or approved equal.

2. Standard Features:

a. Box having pryout openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting outlet box cover, but without provisions for mounting wiring device directly to box.

B. UL QCIT - Metallic Conduit Bodies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
c. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
d. Pass & Seymour; Legrand North America, LLC.
e. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
f. Topaz Lighting & Electric.
g. Or approved equal.

C. UL QCIT - Metallic Device Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Appleton; Emerson Electric Co., Automation Solutions.
c. Crouse-Hinds; brand of Eaton, Electrical Sector.
d. Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
f. Killark; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
g. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
h. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
i. Topaz Lighting & Electric.
j. Or approved equal.

2. Standard Features:

a. Box with provisions for mounting wiring device directly to box.

D. UL QCIT - Metallic Extension Rings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. B-Line; a division of Eaton, Electrical Sector.
c. Crouse-Hinds; brand of Eaton, Electrical Sector.
d. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
f. Pass & Seymour; Legrand North America, LLC.
g. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
h. Or approved equal.

2.3 NONMETALLIC OUTLET BOXES, DEVICE BOXES, RINGS, AND COVERS

A. UL QCMZ - Nonmetallic Outlet Boxes and Covers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Allied Tube & Conduit; Atkore International.
c. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.

d. Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. JM Eagle.
f. Leviton Manufacturing Co., Inc.
g. Panduit Corp.
h. Pass & Seymour; Legrand North America, LLC.
i. Topaz Lighting & Electric.
j. Wiremold; Legrand North America, LLC.
k. Or approved equal.

2. Standard Features: Box having pryout openings, knockouts, threaded entries, or hubs in either the sides or the back, or both, for entrance of conduit, conduit or cable fittings, or cables, with provisions for mounting outlet box cover, but without provisions for mounting wiring device directly to box.

B. UL QCMZ - Nonmetallic Conduit Bodies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Allied Tube & Conduit; Atkore International.
c. JM Eagle.
d. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. Topaz Lighting & Electric.
f. Or approved equal.

C. UL QCMZ - Nonmetallic Device Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Allied Tube & Conduit; Atkore International.
c. Crouse-Hinds; brand of Eaton, Electrical Sector.
d. Pass & Seymour; Legrand North America, LLC.
e. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
f. Or approved equal.

D. UL QCMZ - Nonmetallic Extension Rings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
c. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
d. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. Or approved equal.

2. Standard Features: Ring intended to extend sides of outlet box or device box to increase box depth, volume, or both.

2.4 JUNCTION BOXES AND PULL BOXES

A. UL BGUZ - Indoor Sheet Metal Junction and Pull Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. B-Line; a division of Eaton, Electrical Sector.
b. FSR Inc.
c. Hoffman; brand of nVent Electrical plc.
d. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
f. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
g. Square D; Schneider Electric USA.
h. Or approved equal.

2. Standard Features:

a. Box with a blank cover that serves the purpose of joining different runs of raceway or cable.

B. UL BGUZ - Indoor Cast-Metal Junction and Pull Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Adalet.
b. Appleton; Emerson Electric Co., Automation Solutions.
c. Crouse-Hinds; brand of Eaton, Electrical Sector.
d. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
e. Square D.
f. Or approved equal.

2. Standard Features:

a. Box with a blank cover that serves the purpose of joining different runs of raceway or cable.

C. UL BGUZ - Outdoor Sheet Metal Junction and Pull Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. B-Line; a division of Eaton, Electrical Sector.
b. FSR Inc.
c. Hoffman; brand of nVent Electrical plc.
d. Hubbell Industrial Controls; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
f. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
g. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
h. Square D; Schneider Electric USA.
i. Or approved equal.

2. Standard Features:

a. Box with a blank cover that serves the purpose of joining different runs of raceway or cable.

D. UL BGUZ - Outdoor Cast-Metal Junction and Pull Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Adalet.
b. Crouse-Hinds; brand of Eaton, Electrical Sector.
c. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
d. Square D.
e. Or approved equal.

2. Standard Features:

a. Box with a blank cover that serves the purpose of joining different runs of raceway or cable.

2.5 COVER PLATES FOR DEVICE BOXES

A. UL QCIT or QCMZ - Metallic Cover Plates for Device Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
c. Crouse-Hinds; brand of Eaton, Electrical Sector.
d. Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
e. Leviton Manufacturing Co., Inc.
f. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
g. Panduit Corp.
h. Pass & Seymour; Legrand North America, LLC.
i. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
j. Wiremold; Legrand North America, LLC.
k. Or approved equal.

2. Standard Features:

a. Cover plate-Securing Screws: Metal with head color to match cover plate finish.
b. Damp and Wet Locations: Listed, labeled, and marked for location and use. Provide gaskets and accessories necessary for compliance with listing.
c. Cover Plate Material: As indicated on architectural Drawings.

B. UL QCIT or QCMZ - Nonmetallic Cover Plates for Device Boxes:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
c. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
d. Leviton Manufacturing Co., Inc.

e. O-Z/Gedney; brand of Emerson Electric Co., Automation Solutions, Appleton Group.
f. Panduit Corp.
g. Pass & Seymour; Legrand North America, LLC.
h. Raco Taymac Bell; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
i. Wiremold; Legrand North America, LLC.
j. Or approved equal.

2. Standard Features:

a. Cover Plate-Securing Screws: Metal with head color to match cover plate finish.
b. Damp and Wet Locations: Listed, labeled, and marked for location and use. Provide gaskets and accessories necessary for compliance with listing.
c. Color: As indicated on architectural Drawings.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 SELECTION OF BOXES AND COVERS FOR ELECTRICAL SYSTEMS

A. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NFPA 70 for selection of boxes and enclosures. Consult Commissioner for resolution of conflicting requirements.

B. Degree of Protection:

1. Outdoors:

a. Type 3R unless otherwise indicated.
b. Locations Exposed to Hosedown: Type 4.
c. Locations Subject to Potential Flooding: Type 6P.
d. Locations Aboveground Where Mechanism Must Operate When Ice Covered: Type 3S.
e. Locations in-Ground or Exposed to Corrosive Agents: Type 4X.

2. Indoors:

a. Type 1 unless otherwise indicated.
b. Damp or Dusty Locations: Type 4.
c. Surface Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: Type 12.
d. Flush Mounted in Kitchens and Other Locations Exposed to Oil or Coolants: Type 12.
e. Locations Exposed to Airborne Dust, Lint, Fibers, or Flyings: Type 4.
f. Locations Exposed to Hosedown: Type 4.
g. Locations Exposed to Spraying Oil or Coolants: Type 13.

C. Exposed Boxes Installed Less Than 2.5 m (8 ft) Above Floor:

1. Provide cast-metal boxes.

2. Provide exposed cover. Flat covers with angled mounting slots or knockouts are prohibited.

3.3 INSTALLATION OF BOXES AND COVERS FOR ELECTRICAL SYSTEMS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Electrical Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Commissioning of Active and Passive Fire Protection Features: NFPA 3 and NFPA 4.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Communications Work: BICSI N1.
6. Life Safety and Means of Egress Work: NFPA 101.
7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
8. Work in Confined Spaces: NFPA 350.
9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
10. Outlet, Device, Pull, and Junction Boxes: Article 314 of NFPA 70.

C. Special Installation Techniques:

1. Provide boxes in wiring and raceway systems wherever required for pulling of wires, making connections, and mounting of devices or fixtures.
2. Mount boxes at heights indicated on Drawings. If mounting heights of boxes are not individually indicated, give priority to ADA requirements. Install boxes with height measured to center of box unless otherwise indicated.
3. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall. Prepare block surfaces to provide a flat surface for a raintight connection between box and cover plate or supported equipment and box, whether installed indoors or outdoors.
4. Horizontally separate boxes mounted on opposite sides of walls so they are not in the same vertical channel.
5. Locate boxes so that cover or plate will not span different building finishes.
6. Support boxes in recessed ceilings independent of ceiling tiles and ceiling grid.
7. Support boxes of three gangs or more from more than one side by spanning two framing members or mounting on brackets specifically designed for purpose.
8. Fasten junction and pull boxes to, or support from, building structure. Do not support boxes by conduits.
9. Set metal floor boxes level and flush with finished floor surface.
10. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.
11. Do not install aluminum boxes, enclosures, or fittings in contact with concrete or earth.
12. Do not rely on locknuts to penetrate nonconductive coatings on enclosures. Remove coatings in the locknut area prior to assembling conduit to enclosure to ensure a continuous ground path.
13. Boxes and Enclosures in Areas or Walls with Acoustical Requirements:

    a. Seal openings and knockouts in back and sides of boxes and enclosures with acoustically rated putty.
    b. Provide gaskets for cover plates and covers.

D. Interfaces with Other Work:

1. Identification: Provide labels for boxes and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.
c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

3.4 CLEANING

A. Remove construction dust and debris from boxes before installing cover plates, covers, and hoods.

3.5 PROTECTION

A. After installation, protect boxes from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 260533.16

SECTION 260533.23 - SURFACE RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Surface metal raceways and fittings.
2. Surface nonmetallic raceways.
3. Wireways and auxiliary gutters.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
2. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
3. Section 260553 "Identification for Electrical Systems" specifies warning signs referenced by this Section.
4. Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings" specifies additional requirements for identification of communications equipment and cabling.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory, and marked for intended location and application.

2.2 SURFACE METAL RACEWAYS AND FITTINGS

A. UL RJBT - Surface Metal Raceways and Fittings with Metal Covers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
b. Wiremold; Legrand North America, LLC.
c. Legrand.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN RJBT; including UL 5.

3. Standard Features:

a. Galvanized steel or Aluminum base with snap-on covers.

2.3 SURFACE NONMETALLIC RACEWAYS

A. UL RJTX - Surface Nonmetallic Raceways and Fittings with Nonmetallic Covers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
b. Panduit Corp.
c. Wiremold; Legrand North America, LLC.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. UL CCN RJTX; including UL 5A.
b. UL 94, V-0 requirements for self-extinguishing characteristics.

2.4 WIREWAYS AND AUXILIARY GUTTERS

A. UL ZOYX - Metal Wireways and Auxiliary Gutters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. ABB, Electrification Business.
    b. B-Line; a division of Eaton, Electrical Sector.
    c. Square D; Schneider Electric USA.
    d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. UL CCN ZOYX; including UL 870.

3. Standard Features:

    a. Fittings and Accessories: Include covers, couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.
    b. Finish: Manufacturer's standard enamel finish.
    c. Wireway Covers: Hinged type, Screw-cover type, or Flanged-and-gasketed type unless otherwise indicated.

4. Other Available Features Required by the Project:

    a. Degree of Protection: Type 1 unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF SURFACE RACEWAYS FOR ELECTRICAL SYSTEMS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Communications Work: BICSI N1.
5. Work in Confined Spaces: NFPA 350.
6. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
7. Auxiliary Gutters: Article 366 of NFPA 70.
8. Surface Metal Raceway: Article 386 of NFPA 70.
9. Surface Nonmetallic Raceway: Article 388 of NFPA 70.

C. Special Installation Techniques:

1. Install surface raceways only where indicated on Drawings.
2. Install surface raceway with a minimum 2 inch radius control at bend points.
3. Secure surface raceway with screws or other anchor-type devices at intervals not exceeding 48 inch and with no less than two supports per straight raceway section. Support surface raceway in accordance with manufacturer's published instructions. Tape and glue are unacceptable support methods.

D. Interfaces with Other Work:

1. Identification: Provide labels for surface raceways and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Provide warning signs.

3.3 CLEANING

A. Remove construction dust and debris from surface raceways before installing covers.

3.4 PROTECTION

A. After installation, protect surface raceways from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 260533.23

SECTION 260543 - UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Type EPEC raceways and fittings.
2. Type ERMC-SS raceways, elbows, couplings, and nipples.
3. Type ERMC-S raceways, elbows, couplings, and nipples.
4. Type IMC raceways.
5. Type PVC raceways and fittings.
6. Fittings for conduit, tubing, and cable.
7. Duct sealing.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 260519 "Low-Voltage for Electrical Power Conductors and Cables" specifies nonmetallic underground conduit with conductors (Type NUCC).
3. Section 260553 "Identification for Electrical Systems" specifies underground-line warning tape and concrete cable routing markers (warning planks).

1.3 DEFINITIONS

A. Duct: A single raceway or multiple raceways, installed singly or as components of a duct bank.

B. Duct Bank: Two or more ducts installed in parallel, direct buried or with additional casing materials such as concrete.

C. Handhole: An underground chamber containing electrical cables, sized such that personnel are not required to enter in order to access the cables.

D. Manhole: An underground chamber containing electrical cables and equipment, sized to provide access with working space clearances.

E. Trafficways: Locations where vehicular or pedestrian traffic is a normal course of events.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Shop Drawings:

1. Electric Utility Duct Banks and Structures:

a. Include plans, elevations, sections, and details, including attachments to other Work.
b. Indicate locations of private property boundaries and utility easements.
c. Include information required for approval by electric utility and for obtaining public space utility work permits.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.7 REGULATORY AGENCY APPROVALS

A. Shop Drawing submittals for electric utility duct banks and structures must be signed and sealed by qualified New York State licensed electrical professional engineer responsible for their preparation. Submit for action by Commissoner prior to submitting for approval by electric utility.

B. Submit Shop Drawings for electric utility duct banks and structures for action by Commissioner prior to submitting for approval by electric utility.

PART 2 - PRODUCTS

2.1 TYPE EPEC RACEWAYS AND FITTINGS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 651A and UL CCN EAZX.

B. Schedule 40 Electrical HDPE Underground Conduit (EPEC-40):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Blue Diamond Industries.
b. JM Eagle; J-M Manufacturing Co., Inc.
c. Petroflex North America.

d. Prysmian Cables and Systems; Prysmian Group North America.
e. Southwire Company.
f. Or approved equal.

2. Dimensional Specifications: Schedule 40.
3. Options:

a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

C. Schedule 80 Electrical HDPE Underground Conduit (EPEC-80):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Blue Diamond Industries.
b. JM Eagle; J-M Manufacturing Co., Inc.
c. Petroflex North America.
d. Prysmian Cables and Systems; Prysmian Group North America.
e. Southwire Company.
f. Or approved equal.

2. Dimensional Specifications: Schedule 80.
3. Options:

a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.2 TYPE ERMC-SS RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 6A and UL CCN DYWV.

B. Stainless Steel Electrical Rigid Metal Conduit (ERMC-SS), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Products Division.
b. Allied Tube & Conduit; Atkore International.
c. Calconduit; Atkore International.
d. Crouse-Hinds; Eaton, Electrical Sector.
e. Patriot Aluminum Products, LLC.
f. Or approved equal.

2. Material: Stainless steel.
3. Options:

a. Minimum Trade Size: Metric designator 21 (trade size 3/4).
b. Colors: As indicated on Drawings.

2.3 TYPE ERMC-S RACEWAYS, ELBOWS, COUPLINGS, AND NIPPLES

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 6 and UL CCN DYIX.

B. Galvanized-Steel Electrical Rigid Metal Conduit (ERMC-S-G), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Allied Tube & Conduit; Atkore International.
b. Crouse-Hinds; Eaton, Electrical Sector.
c. Killark; Hubbell Incorporated, Construction and Energy.
d. Patriot Aluminum Products, LLC.
e. Topaz Lighting & Electric.
f. Wheatland Tube; Zekelman Industries.
g. Or approved equal.

2. Exterior Coating: Zinc.
3. Options:

a. Interior Coating: Zinc with organic top coating or Zinc.
b. Minimum Trade Size: Metric designator 21 (trade size 3/4).
c. Colors: As indicated on Drawings.

C. PVC-Coated-Steel Electrical Rigid Metal Conduit (ERMC-S-PVC), Elbows, Couplings, and Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Products Division.
b. Bluesteel Services LLC.
c. Calbond; Atkore International.
d. KorKap; Robroy Industries.
e. Perma-Cote; Robroy Industries.
f. Or approved equal.

2. Fittings for PVC-Coated Conduit:

a. Minimum coating thickness of 0.040 inch, with overlapping sleeves protecting threaded joints.
b. Conduit bodies must be Form 8 with effective seal and positive placement feature to ease and assure proper installation. Certified results confirming seal performance at 15 psig (positive) and 25 inch Hg (vacuum) for 72 hours must be available. Conduit bodies must be supplied with plastic-encapsulated stainless steel cover screws.
c. Form 2 inch long or one pipe diameter long, whichever is less, PVC sleeve at openings of female fittings, except unions. Inside sleeve diameter must be matched to outside diameter of metal conduit.

d. PVC coating on outside of conduit couplings must be protected from tool damage during installation.
e. Female threads on fittings and couplings must be protected by urethane coating.
f. Fittings must be from same manufacturer as conduit.
g. Beam clamps and U bolts must be formed and sized to fit outside diameter of coated conduit. Plastic-encapsulated nuts must cover exposed portions of threads.

3. Options:

a. Interior Coating: Zinc.
b. Colors: As indicated on Drawings.
c. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
d. Expansion and Deflection Fittings: UL 651 with flexible external bonding jumper.

2.4 TYPE IMC RACEWAYS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 1242 and UL CCN DYBY.

B. Steel Electrical Intermediate Metal Conduit (IMC):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Products Division.
b. Allied Tube & Conduit; Atkore International.
c. Topaz Lighting & Electric.
d. Wheatland Tube; Zekelman Industries.
e. Or approved equal.

2. Options:

a. Exterior Coating: Alternative corrosion-resistant coating.
b. Minimum Trade Size: Metric designator 21 (trade size 3/4).
c. Colors: As indicated on Drawings.

2.5 TYPE PVC RACEWAYS AND FITTINGS

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.
2. General Characteristics: UL 651 and UL CCN DZYR.

B. Schedule 40 Rigid PVC Conduit (PVC-40) and Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Products Division.
b. JM Eagle; J-M Manufacturing Co., Inc.
c. NAPCO; Westlake Chemical Corp.
d. Topaz Lighting & Electric.
e. Or approved equal.

2. Dimensional Specifications: Schedule 40.
3. Options:

a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

C. Schedule 80 Rigid PVC Conduit (PVC-80) and Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Products Division.
b. Calconduit; Atkore International.
c. JM Eagle; J-M Manufacturing Co., Inc.
d. Topaz Lighting & Electric.
e. Or approved equal.

2. Dimensional Specifications: Schedule 80.
3. Options:

a. Minimum Trade Size: Metric designator 21 (trade size 3/4).

2.6 FITTINGS FOR CONDUIT, TUBING, AND CABLE

A. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and use.

B. Metallic Fittings for Type ERMC, Type IMC, Type PVC, Type EPEC, and Type RTRC Raceways:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Products Division.
b. Crouse-Hinds; Eaton, Electrical Sector.
c. Konkore Fittings; Atkore International.
d. O-Z/Gedney; Emerson Electric Co., Automation Solutions, Appleton Group.
e. Raco Taymac Bell; Hubbell Incorporated, Commercial and Industrial.
f. Southwire Company.
g. Topaz Lighting & Electric.
h. Or approved equal.

2. General Characteristics: UL 514B and UL CCN DWTT.
3. Options:

a. Material: Steel.
b. Coupling Method: Compression coupling or Raintight compression coupling with distinctive color gland nut.
c. Conduit Fittings for Hazardous (Classified) Locations: UL 1203.
d. Expansion and Deflection Fittings: UL 651 with flexible external bonding jumper.

2.7 DUCT SEALING

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB, Electrification Business.
2. CommScope, Inc.
3. Gardner Bender.
4. TE Connectivity Ltd.
5. Or approved equal.

B. Duct-Sealing Compound: Nonhardening, safe for contact with human skin, not deleterious to cable insulation, and workable at temperatures as low as 35 deg F. Compound must be capable of withstanding temperature of 300 deg F without slump and adhering to clean surfaces of plastic ducts, metallic conduit, conduit and duct coatings, concrete, masonry, lead, cable sheaths, cable jackets, insulation materials, and common metals. Duct sealing compound must be removable without damaging ducts or cables.

C. Inflatable Duct-Sealing System: Wraparound inflatable bladder that seals ducts that are empty or containing conductors against air and water infiltration. System is suitable for use in steel, plastic, or concrete ducts and penetrations.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Coordinate layout and installation of duct, duct bank, manholes, handholes, and boxes with final arrangement of other utilities, site grading, and surface features as determined in field. Notify Commissioner if there is conflict between areas of excavation and existing structures or archaeological sites to remain.

B. Coordinate elevations of duct and duct-bank entrances into manholes, handholes, and boxes with final locations and profiles of duct and duct banks, as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations as required to suit field conditions and to ensure that duct and duct bank will drain to manholes and handholes, and as approved by Commissioner.

3.3 SELECTION OF UNDERGROUND DUCTS

A. Duct for Electrical Feeders 600 V and Less:RMC, concrete encased or direct buried unless otherwise indicated.

B. Underground Ducts Crossing Paved Paths: RMC, direct buried or encased in reinforced concrete.

3.4 SELECTION OF UNDERGROUND ENCLOSURES

A. Handholes and Boxes:

1. Cover design load must not exceed load rating of handhole or box.

3.5 EARTHWORK

A. Excavation and Backfill: Comply with Section 312000 "Earth Moving," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restoration: Restore area after construction vehicle traffic in immediate area is complete.

C. Restore surface features at areas disturbed by excavation, and re-establish original grades unless otherwise indicated. Replace removed sod immediately after backfilling is completed.

D. Cut and patch existing pavement in path of underground duct, duct bank, and underground structures in accordance with "Cutting and Patching" requirements in DDC General Conditions.

3.6 INSTALLATION OF DUCTS AND DUCT BANKS

A. Reference Standards:

1. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NEMA TCB 2 for installation of underground ducts and duct banks.
2. Consult Commissioner for resolution of conflicting requirements.

B. Special Techniques:

1. Where indicated on Drawings, install duct, spacers, and accessories into duct-bank configuration shown. Duct installation requirements in this Section also apply to duct bank.
2. Slope: Pitch duct minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope duct from high point between two manholes to drain in both directions.
3. Expansion and Deflection Fittings: Install expansion and deflection fitting in each duct in area of disturbed earth adjacent to manhole or handhole.
4. Install expansion fitting near center of straight line duct with calculated expansion of more than 3/4 inch.

5. Joints: Use solvent-cemented joints in nonmetallic duct and fittings and make watertight in accordance with manufacturer's published instructions. Stagger couplings so those of adjacent duct do not lie in same plane. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with minimum 3 inch of concrete for minimum of 12 inch on each side of coupling.

    a. Install insulated grounding bushings on steel raceway terminations that are less than 12 inch below grade or floor level and do not terminate in hubs.

6. Installation Adjacent to High-Temperature Steam Lines: Where duct is installed parallel to underground steam lines, perform calculations showing duct will not be subject to environmental temperatures above 104 deg F. Where environmental temperatures are calculated to rise above 104 deg F, and anywhere duct crosses above underground steam line, install insulation blankets listed for direct burial to isolate duct bank from steam line to maintain maximum environmental temperature of 104 deg F.
7. End Bell Entrances to Manholes and Concrete and Polymer Concrete Handholes: Use end bells, spaced approximately 10 inch o.c. for 5 inch duct, and vary proportionately for other duct sizes.

    a. Begin change from regular spacing to end-bell spacing 10 ft from end bell, without reducing duct slope and without forming trap in line.
    b. Grout end bells into structure walls from both sides to provide watertight entrances.

8. Duct Terminators for Entrances to Cast-in-Place Manholes and Concrete Handholes: Use manufactured, cast-in-place duct terminators, with entrances into structure spaced approximately 6 inch o.c. for 4 inch duct, and vary proportionately for other duct sizes.

    a. Begin change from regular spacing to terminator spacing 10 ft from terminator, without reducing duct line slope and without forming trap in line.

9. Building Wall Penetrations: Make transition from underground duct to steel raceway at least 10 ft outside building wall, without reducing duct line slope away from building and without forming trap in line. Use fittings manufactured for transition to steel raceway type installed. Install steel raceway penetrations of building walls as specified in Section 260544 "Sleeves and Sleeve Seals for Electrical Raceways and Cabling."
10. Install manufactured steel raceway elbows for stub-ups at poles unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.

    a. Couple steel elbows to ducts with adapters designed for this purpose, and encase coupling with minimum 3 inch of concrete for minimum of 12 inch on each side of coupling.

11. Sealing: Provide temporary closure at terminations of duct with pulled cables. Seal spare duct at terminations. Use sealing compound and plugs to withstand at least 15 psig hydrostatic pressure.
12. Pulling Cord: Install 200 lbf test nylon cord in empty ducts.
13. Concrete-Encased Ducts and Duct Bank:

    a. Excavate trench bottom to provide firm and uniform support for duct. Prepare trench bottoms as specified in Section 312000 "Earth Moving" for pipes 6 inch or less in nominal diameter.
    b. Width: Excavate trench 3 inch wider than duct on each side.
    c. Depth: Install so top of duct envelope is at least 24 inch below finished grade in areas not subject to deliberate traffic, and at least 30 inch below finished grade in deliberate traffic paths for vehicles unless otherwise indicated. Install so top of duct envelope is below local frost line.

d. Support duct on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
e. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 ft of duct. Place spacers within 24 inch of duct ends. Stagger spacers approximately 6 inch between tiers. Secure spacers to earth and to duct to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
f. Minimum Space between Ducts: 3 inch between edge of duct and exterior envelope wall, 2 inch between ducts for like services, and 4 inch between power and communications ducts.
g. Elbows:

    1) Use manufactured duct elbows for stub-ups and at changes of direction in duct unless otherwise indicated. Extend encasement throughout length of elbow.
    2) Use manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct run.

h. Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally minimum of 60 inch from edge of wall. Install insulated grounding bushings on terminations at equipment.

    1) Stub-ups must be minimum 4 inch above finished floor and no less than 3 inch from conduit side to edge of slab.

i. Reinforcement: Reinforce concrete-encased duct where crossing disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
j. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
k. Concrete Cover: Install minimum of 3 inch of concrete cover between edge of duct to exterior envelope wall, 2 inch between duct of like services, and 4 inch between power and communications ducts.
l. Place minimum 6 inch of engineered fill above concrete encasement of duct.
m. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.

    1) Start at one end and finish at other, allowing for expansion and contraction of duct as its temperature changes during and after pour. Use expansion fittings installed in accordance with manufacturer's published instructions, or use other specific measures to prevent expansion-contraction damage.
    2) If more than one pour is necessary, terminate each pour in vertical plane and install 3/4 inch reinforcing-rod dowels extending minimum of 18 inch into concrete on both sides of joint near corners of envelope.

n. Pouring Concrete: Comply with requirements in "Installation of Cast-in-Place Concrete" Article in Section 033000 "Cast-in-Place Concrete." Place concrete carefully during pours to prevent voids under and between duct and at exterior surface of envelope. Do not allow heavy mass of concrete to fall directly onto ducts. Allow concrete to flow around duct and rise up in middle, uniformly filling open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-installation application.

14. Direct-Buried Duct and Duct Bank:

a. Excavate trench bottom to provide firm and uniform support for duct. Comply with requirements in Section 312000 "Earth Moving" for preparation of trench bottoms for pipes less than 6 inch in nominal diameter.
b. Width: Excavate trench 3 inch wider than duct on each side.
c. Depth: Install top of duct at least 36 inch below finished grade unless otherwise indicated.
d. Set elevation of top of duct bank below frost line.
e. Place minimum 3 inch of sand as bed for duct. Place sand to minimum of 6 inch above top level of duct.
f. Support ducts on duct spacers coordinated with duct size, duct spacing, and outdoor temperature.
g. Spacer Installation: Place spacers close enough to prevent sagging and deforming of duct, with not less than four spacers per 20 ft of duct. Place spacers within 24 inch of duct ends. Stagger spacers approximately 6 inch between tiers. Secure spacers to earth and to ducts to prevent floating during concreting. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
h. Install duct with minimum of 3 inch between ducts for like services and 6 inch between power and communications duct.
i. Install manufactured duct elbows for stub-ups, at building entrances, and at changes of direction in duct direction unless otherwise indicated. Encase elbows for stub-up ducts throughout length of elbow.
j. Install manufactured steel elbows for stub-ups, at building entrances, and at changes of direction in duct.

    1) Couple RNC duct to steel raceway with adapters designed for this purpose, and encase coupling with minimum 3 inch of concrete.
    2) Stub-ups to Outdoor Equipment: Extend concrete-encased steel raceway horizontally minimum of 60 inch from edge of base. Install insulated grounding bushings on terminations at equipment.

        a) Stub-ups must be minimum 4 inch above finished base and minimum 3 inch from conduit side to edge of base.

    3) Stub-ups to Indoor Equipment: Extend concrete-encased steel raceway horizontally on exterior of wall minimum of 60 inch from edge of wall. Install insulated grounding bushings on terminations at equipment.
    4) Stub-ups through interior floors must be minimum 4 inch above finished floor and no less than 3 inch from conduit side to edge of equipment pad or floor slab.

k. After installing first tier of duct, backfill and compact. Start at tie-in point and work toward end of duct run, leaving ducts at end of run free to move with expansion and contraction as temperature changes during this process. Repeat procedure after placing each tier. After placing last tier, hand place backfill to 4 inch over duct and hand tamp. Firmly tamp backfill around ducts to provide maximum supporting strength. Use hand tamper only. After placing controlled backfill over final tier, make final duct connections at end of run and complete backfilling with normal compaction. Comply with requirements in Section 312000 "Earth Moving" for installation of backfill materials.

15. Warning Planks: Bury warning planks approximately 12 inch above direct-buried duct, placing them 36 inch o.c. Align planks along width and along centerline of duct or duct bank. Provide additional plank for each 12 inch increment of duct-bank width over nominal 18 inch. Space additional planks 12 inch apart, horizontally across width of ducts.
16. Ground ducts and duct banks in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new products with existing conditions.

3.7 INSTALLATION OF CONCRETE MANHOLES, HANDHOLES, AND BOXES

A. Reference Standards:

1. Precast Concrete Handholes: Comply with ASTM C891 unless otherwise indicated.
2. Consult Commissioner for resolution of conflicting requirements.

B. Special Techniques:

1. Cast-in-Place Manholes:

a. Finish interior surfaces with smooth-troweled finish.
b. Knockouts for Future Duct Connections: Form and pour concrete knockout panels 1-1/2 to 2 inch thick, arranged as indicated.
c. Comply with requirements in Section 033000 "Cast-in-Place Concrete" for cast-in-place concrete, formwork, and reinforcement.

2. Precast Concrete Handholes and Manholes:

a. Install units level and plumb and with orientation and depth coordinated with connecting duct to minimize bends and deflections required for proper entrances.
b. Unless otherwise indicated, support units on level bed of crushed stone or gravel graded from 1 inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.
c. Field-cut openings for conduits in accordance with enclosure manufacturer's published instructions. Cut wall of enclosure with tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3. Elevations:

a. Manhole Roof: Install with rooftop at least 15 inch below finished grade.
b. Manhole Frame: In paved areas and trafficways, set frames flush with finished grade. Set other manhole frames 1 inch above finished grade.
c. Handhole Covers: In paved areas and trafficways, set surface flush with finished grade. Set covers of other handholes 1 inch above finished grade.
d. Where indicated, cast handhole cover frame integrally with handhole structure.

4. Drainage: Install drains in bottom of manholes where indicated. Coordinate with drainage provisions indicated.
5. Manhole Access: Circular opening in manhole roof; sized to match cover size.

    a. Manholes with Fixed Ladders: Offset access opening from manhole centerlines to align with ladder.

6. Waterproofing: Apply waterproofing to exterior surfaces of manholes and handholes after concrete has cured at least three days.. After duct has been connected and grouted, and before backfilling, waterproof joints and connections, and touch up abrasions and scars. Waterproof exterior of manhole chimneys after mortar has cured at least three days.
7. Hardware: Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated.
8. Field-Installed Bolting Anchors in Manholes and Concrete Handholes: Do not drill deeper than 3-7/8 inch for manholes and 2 inch for handholes, for anchor bolts installed in field. Use minimum of two anchors for each cable stanchion.
9. Ground manholes, handholes, and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new products with existing conditions.

3.8 INSTALLATION OF HANDHOLES AND BOXES OTHER THAN PRECAST CONCRETE

A. Reference Standards:

1. Consult Commissioner for resolution of conflicting requirements.

B. Special Techniques:

1. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting duct, to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of duct, and seal joint between box and extension as recommended by manufacturer.
2. Unless otherwise indicated, support units on level bed of crushed stone or gravel, graded from 1/2 inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.
3. Elevation: In paved areas and trafficways, set cover flush with finished grade. Set covers of other handholes 1 inch above finished grade.
4. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in enclosure.
5. Field cut openings for duct in accordance with enclosure manufacturer's published instructions. Cut wall of enclosure with tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.
6. Ground handholes and boxes in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Interfaces with Other Work:

1. Coordinate installation of new productswith existing conditions.

3.9 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Demonstrate capability and compliance with requirements on completion of installation of underground duct, duct bank, and utility structures.
2. Pull solid aluminum or wood test mandrel through duct to prove joint integrity and adequate bend radii, and test for out-of-round duct. Provide minimum 12 inch long mandrel equal to duct size minus 1/4 inch. If obstructions are indicated, remove obstructions and retest.
3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 260526 "Grounding and Bonding for Electrical Systems."

B. Nonconforming Work:

1. Underground ducts, raceways, and structures will be considered defective if they do not pass tests and inspections.
2. Correct deficiencies and retest as specified above to demonstrate compliance.

C. Field Quality-Control Reports: Collect, assemble and submit test and inspection reports.

D. Manufacturer Services: Engage factory-authorized service representative to support field tests and inspections.

3.10 CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of duct until duct cleaner indicates that duct is clear of dirt and debris. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

B. Clean internal surfaces of manholes, including sump, and building interiors affected by Work.

1. Sweep floor, removing dirt and debris.
2. Remove foreign material.

END OF SECTION 260543

SECTION 260544 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Round sleeves.
2. Sleeve-seal systems.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 078413 "Penetration Firestopping" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 ROUND SLEEVES

A. Steel Wall Sleeves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Advance Products & Systems, LLC.
    b. Flexicraft Industries.
    c. GPT; an EnPro Industries company.
    d. Or approved equal.

2. General Characteristics: ASTM A53/A53M, Type E, Grade B, Schedule 40, zinc coated, plain ends and integral waterstop.

B. Cast-Iron Wall Sleeves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. American Ductile Iron Pipe.
    b. Flexicraft Industries.
    c. McWane Ductile.
    d. Or approved equal.

2. General Characteristics: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop.

C. PVC Molded Sleeves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. ABB, Electrification Business.
    b. Arlington Industries, Inc.
    c. Reliance Worldwide Corporation.
    d. Or approved equal.

2. General Characteristics: With nailing flange for attaching to wooden forms.

2.2 RECTANGULAR SLEEVES

A. Rectangular, Galvanized-Steel, Sheet Metal Sleeves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Abesco Fire LLC.
    b. Specified Technologies, Inc.
    c. Wiremold; Legrand North America, LLC.
    d. Or approved equal.

2. General Characteristics:

    a. Material: Galvanized sheet steel.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF SLEEVES FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

A. Sleeves for Conduits Penetrating Above-Grade, Non-Fire-Rated, Concrete and Masonry-Unit Floors and Walls:

1. Interior Penetrations of Non-Fire-Rated Walls and Floors:

a. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall or floor so no voids remain. Tool exposed surfaces smooth; protect material while curing.
b. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Joint Sealants."

2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
3. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.

B. Sleeves for Conduits Penetrating Non-Fire-Rated Wall Assemblies:

1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
2. Seal space outside of sleeves with approved joint compound for wall assemblies.

C. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

D. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel or cast-iron pipe sleeves and mechanical sleeve-seal systems. Size sleeves to allow for 1 inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

E. Underground, Exterior-Wall and Floor Penetrations:

1. Install steel pipe sleeves with integral waterstops. Size sleeves to allow for 1 inch annular clear space between raceway or cable and sleeve for installing sleeve-seal system. Install sleeve during construction of floor or wall.
2. Install steel pipe sleeves. Size sleeves to allow for 1 inch annular clear space between raceway or cable and sleeve for installing sleeve-seal system. Grout sleeve into wall or floor opening.

3.3 INSTALLATION OF SLEEVE-SEAL SYSTEMS

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.

B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

END OF SECTION 260544

SECTION 260553 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Labels.
2. Bands.
3. Tapes and stencils.
4. Tags.
5. Signs.
6. Cable ties.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Identification Schedule: For each piece of electrical equipment and electrical system components to be index of nomenclature for electrical equipment and system components used in identification signs and labels. Use same designations indicated on Drawings.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 LABELS

A. UL PGDQ2 - Self-Adhesive Wraparound Labels: Preprintedor Write-on, 3 mil thick, vinyl flexible label with acrylic pressure-sensitive adhesive.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Brady Corporation.
b. emedco.
c. Ideal Industries, Inc.
d. LEM Products Inc.
e. Marking Services Inc.
f. Panduit Corp.
g. Or approved equal.

2. Self-Lamination: Clear; UV-, weather-, and chemical-resistant; self-laminating, with protective shield over legend. Size labels such that clear shield overlaps entire printed legend.
3. Marker for Labels:

a. Permanent, waterproof, black ink marker recommended by tag manufacturer.
b. Machine-printed, permanent, waterproof, black ink recommended by printer manufacturer.

B. UL PGDQ2 - Self-Adhesive Labels: , thermal, transfer-printed, 3 mil thick, multicolor, weather- and UV-resistant, pressure-sensitive adhesive labels, configured for intended use and location.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Brady Corporation.
b. emedco.
c. HellermannTyton.
d. Ideal Industries, Inc.
e. LEM Products Inc.
f. Marking Services Inc.
g. Panduit Corp.
h. Or approved equal.

2. Minimum Nominal Size:

a. 1-1/2 by 6 inch for raceway and conductors.
b. 3-1/2 by 5 inch for equipment.

2.2 BANDS

A. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inch long, with diameters sized to suit diameters and that stay in place by gripping action.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Brady Corporation.
    b. HellermannTyton.
    c. Marking Services Inc.
    d. Panduit Corp.
    e. Or approved equal.

2.3 TAPES AND STENCILS

A. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Brady Corporation.
    b. HellermannTyton.
    c. Ideal Industries, Inc.
    d. Marking Services Inc.
    e. Panduit Corp.
    f. Or approved equal.

B. Tape and Stencil: 4 inch wide black stripes on 10 inch centers placed diagonally over orange background and are 12 inch wide. Stop stripes at legends.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. HellermannTyton.
    b. LEM Products Inc.
    c. Marking Services Inc.
    d. Pipemarker.com; Brimar Industries, Inc.
    e. Seton Identification Products; a Brady Corporation company.
    f. Or approved equal.

C. Floor Marking Tape: 2 inch wide, 5 mil pressure-sensitive vinyl tape, with black and white stripes and clear vinyl overlay.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Brady Corporation.
    b. Carlton Industries, LP.
    c. Seton Identification Products; a Brady Corporation company.
    d. Or approved equal.

D. Concrete Cable Route Markers :

1. Description: Concrete markers visually aid tracing the route of electrical cables. Monument markers are typically installed at grade. Protective cover markers are typically installed above the cables at grade or below grade.

2. Product Characteristics:

a. Material: Precast reinforced concrete.

b. Legend: "DANGER - ELECTRICITY","ELECTRIC CABLES", or "ELECTRIC SPLICE".
c. Lettering: Approximately 1/8 inch deep, not less than 1 inch high, symmetrically spaced; marked on both sides to allow for reversal.

3. Required Product Options:

a. Color: Red dye added to concrete during batching.
b. Attach metal medallion or sign stamped with feeder number.

E. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height must be 1 inch.

2.4 TAGS

A. Nonmetallic Preprinted Tags: Polyethylene tags, 0.023 inch thick, color-coded for phase and voltage level, with factory printed permanent designations; punched for use with self-locking cable tie fastener.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Brady Corporation.
b. emedco.
c. LEM Products Inc.
d. Marking Services Inc.
e. Panduit Corp.
f. Or approved equal.

B. Write-on Tags:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. LEM Products Inc.
b. Pipemarker.com; Brimar Industries, Inc.
c. Or approved equal.

2. Polyester Tags: 0.015 inch thick, with corrosion-resistant grommet and cable tie for attachment.

2.5 SIGNS

A. Baked-Enamel Signs:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Brady Corporation.
b. Carlton Industries, LP.
c. emedco.
d. Marking Services Inc.
e. Or approved equal.

2. Preprinted aluminum signs, high-intensity reflective, punched or drilled for fasteners, with colors, legend, and size required for application.
3. 1/4 inch grommets in corners for mounting.
4. Nominal Size: 7 by 10 inch.

B. Metal-Backed Butyrate Signs:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Brady Corporation.
    b. Champion America.
    c. emedco.
    d. Marking Services Inc.
    e. Or approved equal.

2. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs, with 0.0396 inch galvanized-steel backing, punched and drilled for fasteners, and with colors, legend, and size required for application.
3. 1/4 inch grommets in corners for mounting.
4. Nominal Size: 10 by 14 inch.

C. Laminated Acrylic or Melamine Plastic Signs:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Brady Corporation.
    b. Carlton Industries, LP.
    c. emedco.
    d. Marking Services Inc.
    e. Or approved equal.

2. Engraved legend.
3. Thickness:

    a. For signs up to 20 sq. inch, minimum 1/16 inch thick.
    b. For signs larger than 20 sq. inch, 1/8 inch thick.
    c. Engraved legend with black letters on white face.
    d. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

2.6 CABLE TIES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. HellermannTyton.
2. Ideal Industries, Inc.
3. Marking Services Inc.
4. Panduit Corp.
5. Or approved equal.

B. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.
2. Listing Criteria: UL CCN ZODZ; including UL 1565 or UL 62275.

C. UL ZODZ - General-Purpose Cable Ties: Fungus inert, self-extinguishing, one piece, self-locking, and Type 6/6 nylon.

1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 deg F in accordance with ASTM D638: 12,000 psi.
3. Temperature Range: Minus 40 to plus 185 deg F.
4. Color: Black, except where used for color-coding.

D. UL ZODZ - Plenum-Rated Cable Ties: Self-extinguishing, UV stabilized, one piece, and self-locking.

1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 deg F in accordance with ASTM D638: 7000 psi.
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: Minus 50 to plus 284 deg F.
5. Color: Black.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Self-Adhesive Identification Products: Before applying electrical identification products, clean substrates of substances that could impair bond, using materials and methods recommended by manufacturer of identification product.

3.3 SELECTION OF COLORS AND IDENTIFICATION MARKINGS

A. Comply with 29 CFR 1910.144 for color identification of hazards, and the following:

1. Fire-protection and fire-alarm equipment, including raceways, must be finished, painted, or suitably marked safety red.

B. Pipe and Conduit Labeling: Comply with ASME A13.1 and IEEE C2.

C. Color-Coding for Phase- and Voltage-Level Identification, 1000 V or Less: Use colors listed below for ungrounded service feeder and branch-circuit conductors.

1. Color must be factory applied or field applied for sizes larger than 6 AWG.

2. Colors for 208Y/120 V Circuits:

   a. Phase A: Black.
   b. Phase B: Red.
   c. Phase C: Blue.

3. Colors for 240 V Circuits:

   a. Phase A: Black.
   b. Phase B: Red.

4. Color for Neutral (Grounded Conductor): White.
5. Color for Equipment Ground: Bare copper or Green.
6. Color for Isolated Ground: Green with two or more yellow stripes.

D. Color-Coding Raceways, Cable Trays, Junction Boxes, and Conductors for Intrinsically-Safe Circuits: Light blue. When used to identify intrinsically-safe circuits, Article 504 of NFPA 70 requires that the color light blue not be used for any other purpose.

E. Color-Coding Instructional Signs: Self-adhesive labels, including color code for grounded and ungrounded conductors.

F. Accessible Fittings for Raceways: Identify cover of junction and pull box of the following systems with wiring system legend and system voltage. System legends must be as follows:

1. "EMERGENCY POWER."
2. "POWER."
3. "UPS."

G. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

H. Locations of Underground Lines: Underground-line warning tape for power and lighting.

I. Vaults, Manholes, Handholes, and Pull and Junction Boxes, More Than 1000 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use write-on tags.

J. Concealed Raceways, Duct Banks, More Than 1000 V, within Buildings: Tape and stencil. Stencil legend "DANGER - CONCEALED HIGH-VOLTAGE WIRING" with 3 inch high, black letters on 20 inch centers.

1. Locate identification at changes in direction, at penetrations of walls and floors, and at 10 ft maximum intervals.
2. Identify system voltage and system or service type with black letters on orange field.
3. Apply floor marking tape to the following finished surfaces:

   a. Floor surface directly above conduits running beneath and within 12 inch of floor that is in contact with earth or is framed above unexcavated space.
   b. Wall surfaces directly external to raceways concealed within wall.
   c. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in building, or concealed above suspended ceilings.

K. Vaults, Manholes, Handholes, and Pull and Junction Boxes, 1000 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use vinyl wraparound labels to identify phase.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50 ft maximum intervals in straight runs, and at 25 ft maximum intervals in congested areas.
2. Identify system voltage and system or service type with black letters on orange field.

L. Accessible Raceways and Metal-Clad Cables, 1000 V or Less, for Service, Feeder, and Branch Circuits, More Than 30 A and 120 V to Ground: Identify with self-adhesive raceway labels.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50 ft maximum intervals in straight runs, and at 25 ft maximum intervals in congested areas.
2. Identify system voltage and system or service type with black letters on orange field.

M. Cover Plates: Label individual cover plates with self-adhesive labels. Place label at top of cover plate. Label cover plate with the following information, in the order listed:

1. Panelboard designation.
2. Colon or dash.
3. Branch circuit number.

N. Workspace Indication: Apply tape and stencil to finished surfaces. Show working clearances in direction of access to live parts. Workspace must comply with NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

O. Equipment Identification Labels:

1. Black letters on white field.
2. Indoor Equipment: Baked-enamel signs .
3. Outdoor Equipment: Laminated acrylic or melamine sign.
4. Equipment to Be Labeled:

    a. Racks, Frames, and Enclosures: Identify front and rear of each with self-adhesive labels containing equipment designation.
    b. Panelboards: Typewritten directory of circuits in location provided by panelboard manufacturer. Panelboard identification must be in form of self-adhesive, engraved, laminated acrylic or melamine label.
    c. Enclosures and electrical cabinets.
    d. Access doors and panels for concealed electrical items.
    e. Switchgear.
    f. Switchboards.
    g. Transformers: Label that includes tag designation indicated on Drawings for transformer, feeder, and panelboards or equipment supplied by secondary.
    h. Emergency system boxes and enclosures.
    i. Motor-control centers.
    j. Enclosed switches.
    k. Enclosed circuit breakers.
    l. Enclosed controllers.
    m. Variable-speed controllers.
    n. Push-button stations.

o. Contactors.
p. Remote-controlled switches, dimmer modules, and control devices.
q. Uninterruptible power supplies.
r. Battery-inverter units.
s. Monitoring and control equipment.

P. Cable Ties: General purpose, for attaching tags, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

3.4 SELECTION OF SIGNS AND HAZARD MARKINGS

A. Comply with 29 CFR 1910.145 for danger, caution, warning, and safety instruction signs.

B. Signs, labels, and tags required for personnel safety must comply with the following standards:

1. Safety Colors: NEMA Z535.1.
2. Facility Safety Signs: NEMA Z535.2.
3. Safety Symbols: NEMA Z535.3.
4. Product Safety Signs and Labels: NEMA Z535.4.
5. Safety Tags and Barricade Tapes for Temporary Hazards: NEMA Z535.5.

C. Electrical Hazard Warnings:

1. Arc-Flash Hazard Warning: Self-adhesive labels. Comply with NFPA 70E requirements for arc-flash hazard warning labels.
2. Raceways and Cables Carrying Circuits at More Than 1000 V:

a. Black letters on orange field.
b. Legend: "DANGER - CONCEALED HIGH VOLTAGE WIRING."

3. Multiple Power Sources Warning Legend: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
4. OSHA Workspace Clearance Warning Legend: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 3 FEET MINIMUM."

D. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Baked-enamel warning signs.

1. Apply to exterior of door, cover, or other access.

E. Operating Instruction Signs: Baked-enamel warning signs.

3.5 SELECTION OF IDENTIFICATION PRODUCTS FOR COMMUNICATIONS, CONTROL, AUXILIARY, AND LIFE SAFETY SYSTEMS

A. Comply with Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings."

3.6 INSTALLATION

A. Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment. Install access doors or panels to provide view of identifying devices.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes typical for electrical equipment environments.

C. Paint: Comply with requirements in painting Sections for paint materials and application requirements.

D. Fasteners for Labels and Signs: Self-tapping, stainless steel screws or stainless steel machine screws with nuts and flat and lock washers.

E. Verify and coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and operation and maintenance manual. Use consistent designations throughout Project.

F. Install identifying devices before installing acoustical ceilings and similar concealment.

G. Verify identity of item before installing identification products.

H. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and operation and maintenance manual.

I. Apply identification devices to surfaces that require finish after completing finish work.

J. Install signs with approved legend to facilitate proper identification, operation, and maintenance of electrical systems and connected items.

K. Elevated Components: Increase sizes of labels, signs, and letters to those appropriate for viewing from floor.

L. Self-Adhesive Wraparound Labels: Secure tight to surface at location with high visibility and accessibility.

M. Snap-Around Color-Coding Bands: Secure tight to surface at location with high visibility and accessibility.

N. Marker Tapes: Secure tight to surface at location with high visibility and accessibility.

O. Tape and Stencil: Comply with requirements in painting Sections for surface preparation and paint application.

P. Floor Marking Tape: Apply stripes to finished surfaces following manufacturer's instructions.

Q. Concrete Cable Route Markers: [As indicated on Drawings] <Insert Project-specific requirements>.

R. Nonmetallic Preprinted Tags:

1. Place in location with high visibility and accessibility.

2. Secure using general-purpose cable ties.

S. Write-on Tags:

1. Place in location with high visibility and accessibility.
2. Secure using [general-purpose] [UV-stabilized] [plenum-rated] cable ties.

T. Baked-Enamel Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

U. Metal-Backed Butyrate Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

V. Laminated Acrylic or Melamine Plastic Signs: Attach signs that are not self-adhesive type with mechanical fasteners appropriate to location and substrate.

END OF SECTION 260553

SECTION 260573 - POWER SYSTEM STUDIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. The Work of this Section Includes:

1. Short-circuit study.
2. Overcurrent protective device coordination study.
3. Arc-flash hazard study.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.

1.3 DEFINITIONS

A. Digital Twin: The digital representation of a real-world entity, concept, or notion, either physical or perceived.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Power System Study Reports:

1. Submit reports after approval of system protective devices submittals. Submittals may be in digital form.
2. Submit short-circuit study input data, including completed computer-program input data sheets.
3. Submit coordination study input data, including completed computer-program input data sheets.

    a. Submit load-flow, voltage-drop, and motor-starting data with coordination study.

4. Submit arc-flash study input data, including completed computer-program input data sheets.

5. Submit study report for action prior to receiving final approval of distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Commissioner for preliminary submittal of sufficient study data to ensure that selection of devices and associated characteristics is satisfactory.
6. Submit revised one-line diagram, reflecting field investigation results and results of short-circuit study.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Submittals for power system studies must be signed and sealed by the qualified, New York State licensed electrical professional engineer responsible for their preparation.

C. Studies must be performed using commercially developed and distributed software designed specifically for power system analysis.

D. Manual calculations are unacceptable.

PART 2 - PRODUCTS

2.1 POWER SYSTEM ANALYSIS SOFTWARE

A. Standard Features:

1. Power System Analysis:

a. Power-systems-analysis software applications must have analytical capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 3002 series standards.
b. Computer software application must be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program must report device settings and ratings of overcurrent protective devices and must demonstrate selective coordination by computer-generated, time-current coordination plots.
c. Computer software application must be designed to perform arc-flash analysis or have function, component, or add-on module designed to perform arc-flash analysis.

2. Analysis Standards:

a. Short-Circuit Current Analysis: In accordance with IEEE 3002.3.
b. Device Coordination Analysis: In accordance with IEEE 3004.3 and IEEE 3004.5.
c. Arc-Flash Hazard Analysis: In accordance with IEEE 1584.

3. Capable of printing arc-flash hazard warnings for equipment on vinyl, weather- and UV-resistant, pressure-sensitive adhesive labels complying with NFPA 70E.

a. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard study:

1) Equipment designation.

2) Nominal voltage.
3) Protection boundaries.

a) Arc-flash boundary.
b) Restricted approach boundary.

4) Arc-flash PPE category.
5) Working distance.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Collect and analyze data for power system studies.

1. Verify completeness of data supplied in one-line diagram on Drawings. Call discrepancies to Commissioner's attention.
2. For equipment included as Work on the Project, use characteristics submitted under provisions of action submittals and information submittals for the Project.
3. Gather and tabulate required input data to support power system studies. Comply with requirements in DDC General Conditions Section 017839 "Contract Record Documents" for recording circuit protective device characteristics. Record data on Record Document copy of one-line diagram. Comply with recommendations in IEEE 3002 series standards as to amount of detail that is required to be acquired in field. Field data gathering must be by, or under supervision of, qualified electrical professional engineer licensed in the State of New York. Data include, but are not limited to, the following:

a. Product data for the Project's overcurrent protective devices involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
b. Electrical power utility impedance at service.
c. Power sources and ties.
d. Short-circuit current at each system bus (three phase and line to ground).
e. Full-load current of loads.
f. Voltage level at each bus.
g. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
h. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.
i. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
j. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.

k. Maximum demands from service meters.
l. Busway manufacturer and model designation, current rating, impedance, lengths, and conductor material.
m. Motor horsepower and NEMA MG 1 code letter designation.
n. Low-voltage cable sizes, lengths, number, conductor material, and conduit material (magnetic or nonmagnetic).
o. Medium-voltage cable sizes, lengths, conductor material, cable construction, metallic shield performance parameters, and conduit material (magnetic or nonmagnetic).
p. Derating factors.

3.3 PREPARATION

A. Preparation of Data for Short-Circuit Study:

1. Verify completeness of data supplied on one-line diagram. Call discrepancies to Commissioner's attention.
2. For equipment included as Work on the Project, use characteristics submitted under provisions of action submittals and information submittals for the Project.
3. Prepare one-line diagram of modeled power system, showing the following:

a. Protective device designations and ampere ratings.
b. Conductor types, sizes, and lengths.
c. Transformer kVA and voltage ratings.
d. Motor and generator designations and kVA ratings.
e. Switchgear, switchboard, motor-control center, and panelboard designations and ratings.
f. Derating factors and environmental conditions.
g. Revisions to electrical equipment required by study.

B. Preparation of Data for Overcurrent Protective Device Coordination Study:

1. Prepare data sheets to supplement electrical distribution system one-line diagram, cross-referenced with tag numbers on diagram, indicating the following:

a. Special load considerations, including starting inrush currents and frequent starting and stopping.
b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
d. Generator thermal-damage curve.
e. Ratings, types, and settings of utility company's overcurrent protective devices.
f. Special overcurrent protective device settings or types stipulated by utility company.
g. Time-current-characteristic curves of devices indicated to be coordinated.
h. Manufacturer, frame size, interrupting rating in amperes root mean square (rms) symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
j. Switchgear, switchboards, motor-control centers, and panelboards ampacity, and SCCR in amperes rms symmetrical.

k. Identify series-rated interrupting devices for condition where available fault current is greater than interrupting rating of downstream equipment. Obtain device data details to allow verification that series application of these devices complies with NFPA 70 and UL 489 requirements.

2. Examine the Project's overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance of the Work. Devices to be coordinated are indicated on Drawings.
3. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

C. Preparation of Data for Arc-Flash Hazard Study:

1. Assemble data from short-circuit study and overcurrent protective device coordination study.
2. Proceed with arc-flash study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to arc-flash study may not be used in study.

3.4 SHORT-CIRCUIT STUDY

A. Base study on device characteristics supplied by device manufacturer.

B. Extent of electrical power system to be studied is indicated on Drawings.

C. Begin short-circuit current analysis at service, extending down to system overcurrent protective devices as follows:

1. To normal system low-voltage load buses where fault current is 5 kA or less.

D. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for the Project. Study cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

E. Include AC fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase AC systems. Also account for fault-current DC decrement to address asymmetrical requirements of interrupting equipment.

F. Calculate short-circuit momentary and interrupting duties for three-phase bolted fault and single line-to-ground fault at equipment indicated on one-line diagram.

1. For grounded systems, provide bolted line-to-ground fault-current study for areas as defined for three-phase bolted fault short-circuit study.

G. Include in report identification of protective device applied outside its capacity.

3.5 OVERCURRENT PROTECTIVE DEVICE COORDINATION STUDY

A. Base study on device characteristics supplied by device manufacturer. When analysis of full range of device is impractical, limiting scope of analysis from 10 to 100 percent of device range is acceptable.

B. Extent of electrical power system to be studied is indicated on Drawings.

C. Begin analysis at service, extending down to system overcurrent protective devices as follows:

1. To normal system low-voltage load buses where fault current is 5 kA or less.

D. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for the Project. Study cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

E. Transformer Primary Overcurrent Protective Devices:

1. Device must not operate in response to the following:

a. Inrush current when first energized.
b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
c. Permissible transformer overloads in accordance with IEEE C57.96 if required by unusual loading or emergency conditions.

2. Device settings must protect transformers in accordance with IEEE C57.12.00, for fault currents.

F. Motor Protection:

1. Select protection for low-voltage motors in accordance with IEEE 3004.8 and NFPA 70.
2. Select protection for motors served at voltages more than 600 V in accordance with IEEE 620.

G. Conductor Protection: Protect cables against damage from fault currents in accordance with ICEA P-32-382, ICEA P-45-482, and protection recommendations in IEEE 3004.7. Demonstrate that equipment withstands maximum short-circuit current for time equivalent to tripping time of primary relay protection or total clearing time of fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

H. Generator Protection: Select protection in accordance with manufacturer's published instructions and IEEE C37.102.

I. Include AC fault-current decay from induction motors, synchronous motors, and asynchronous generators and apply to low- and medium-voltage, three-phase AC systems. Also account for fault-current DC decrement, to address asymmetrical requirements of interrupting equipment.

J. Include coordination of ground-fault protection devices.

K. Calculate short-circuit momentary and interrupting duties for three-phase bolted fault and single line-to-ground fault at equipment indicated on one-line diagram.

1. For grounded systems, provide bolted line-to-ground fault-current study for areas as defined for three-phase bolted fault short-circuit study.

L. Protective Device Evaluation:

1. Evaluate equipment and protective devices and compare to short-circuit ratings.
2. Adequacy of switchgear, motor-control centers, and panelboard bus bars to withstand short-circuit stresses.
3. Application of series-rated devices must be recertified, complying with requirements in NFPA 70.
4. Include in report identification of protective device applied outside its capacity.

3.6 ARC-FLASH HAZARD STUDY

A. Comply with NFPA 70E, including Annex D, for arc-flash hazard study.

B. Preparatory Studies: Obtain short-circuit study and overcurrent protective device coordination study results prior to starting arc-flash hazard study.

C. Calculate maximum and minimum contributions of fault-current size.

1. Maximum calculation must assume maximum contribution from utility and must assume motors to be operating under full-load conditions.
2. Calculate arc-flash energy at 85 percent of maximum short-circuit current in accordance with IEEE 1584 recommendations.
3. Calculate arc-flash energy at 38 percent of maximum short-circuit current in accordance with NFPA 70E recommendations.
4. Calculate arc-flash energy with utility contribution at minimum and assume no motor contribution.

D. Calculate arc-flash protection boundary and incident energy at locations in electrical distribution system where personnel could perform work on energized parts.

E. Include medium- and low-voltage equipment locations, except nominal arc-flash hazard warning data may be provided for equipment fed from transformers rated below 240 V(ac), 2000 A, instead of documenting precise calculations.

F. Calculate limited, restricted, and prohibited approach boundaries for each location.

G. Incident energy calculations must consider accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations must account for changing current contributions, as sources are interrupted or decremented with time. Fault contribution from motors and generators must be decremented as follows:

1. Fault contribution from induction motors must not be considered beyond three to five cycles.
2. Fault contribution from synchronous motors and generators must be decayed to match actual decrement of each as closely as possible (for example, contributions from permanent magnet generators will typically decay from 10 p.u. to 3 p.u. after 10 cycles).

H. Arc-flash energy must generally be reported for maximum of line or load side of circuit breaker. However, arc-flash computation must be performed and reported for both line and load side of circuit breaker as follows:

1. When circuit breaker is in separate enclosure.
2. When line terminals of circuit breaker are separate from work location.

I. Base arc-flash calculations on actual overcurrent protective device clearing time. Cap maximum clearing time at two seconds based on IEEE 1584, Section B.1.2.

3.7 POWER SYSTEM STUDY REPORTS

A. Preparation of Power System Study Reports: Prepare and submit the following:

1. Short-Circuit Study Report Contents:

a. Executive summary of study findings.
b. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.
c. One-line diagram of modeled power system, showing the following:

1) Protective device designations and ampere ratings.
2) Conductor types, sizes, and lengths.
3) Transformer kVA and voltage ratings.
4) Motor and generator designations and kVA ratings.
5) Switchgear, switchboard, motor-control center, and panelboard designations and ratings.
6) Derating factors and environmental conditions.
7) Revisions to electrical equipment required by study.

d. Comments and recommendations for system improvements or revisions in written document, separate from one-line diagram.
e. Short-Circuit Study Input Data:

1) One-line diagram of system being studied.
2) Power sources available.
3) Manufacturer, model, and interrupting rating of protective devices.
4) Conductors.
5) Transformer data.

f. Protective Device Evaluation:

1) Evaluate equipment and protective devices and compare to available short-circuit currents. Verify that equipment withstand ratings exceed available short-circuit current at equipment installation locations.
2) Tabulations of circuit breaker, fuse, and other protective device ratings versus calculated short-circuit duties.
3) For 600 V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
4) For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in standards to 1/2-cycle symmetrical fault current.
5) Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

g. Short-Circuit Study Output Reports:

1) Low-Voltage Fault Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

a) Voltage.
b) Calculated fault-current magnitude and angle.
c) Fault-point X/R ratio.
d) Equivalent impedance.

2) Momentary Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

a) Voltage.
b) Calculated symmetrical fault-current magnitude and angle.
c) Fault-point X/R ratio.
d) Calculated asymmetrical fault currents based on fault-point X/R ratio; based on calculated symmetrical value multiplied by 1.6; and based on calculated symmetrical value multiplied by 2.7.

3) Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

a) Voltage.
b) Calculated symmetrical fault-current magnitude and angle.
c) Fault-point X/R ratio.
d) No AC Decrement (NACD) ratio.
e) Equivalent impedance.
f) Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on symmetrical basis.
g) Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on total basis.

2. Overcurrent Protection Device Coordination Study Report Contents:

a. Executive summary of study findings.
b. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.
c. One-line diagram of modeled power system, showing the following:

1) Protective device designations and ampere ratings.
2) Conductor types, sizes, and lengths.
3) Transformer kVA and voltage ratings.
4) Motor and generator designations and kVA ratings.
5) Switchgear, switchboard, motor-control center, and panelboard designations.
6) Revisions to electrical equipment required by study.

d. Report recommended settings of protective devices, ready to be applied in field. Use manufacturer's data sheets for recording recommended setting of overcurrent protective devices when available.

1) Phase and Ground Relays:

a) Device tag.
b) Relay current transformer ratio and tap, time dial, and instantaneous pickup value.
c) Recommendations on improved relaying systems, if applicable.

2) Circuit Breakers:

a) Adjustable pickups and time delays (long time, short time, and ground).
b) Adjustable time-current characteristic.
c) Adjustable instantaneous pickup.
d) Recommendations on improved trip systems, if applicable.

3) Fuses: Show current rating, voltage, and class.

e. Time-Current Coordination Curves: Determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for switching schemes and for emergency periods where power source is local generation. Show the following information:

1) Device tag and title, one-line diagram with legend identifying portion of system covered.
2) Terminate device characteristic curves at point reflecting maximum symmetrical or asymmetrical fault current to which device is exposed.
3) Identify device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
4) Plot the following listed characteristic curves, as applicable:

a) Power utility's overcurrent protective device.
b) Medium-voltage equipment overcurrent relays.
c) Medium- and low-voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.
d) Low-voltage equipment circuit-breaker trip devices, including manufacturer's tolerance bands.
e) Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.
f) Cables and conductors damage curves.
g) Ground-fault protective devices.
h) Motor-starting characteristics and motor damage points.
i) Generator short-circuit decrement curve and generator damage point.
j) Largest feeder circuit breaker in each motor-control center and panelboard.

5) Maintain selectivity for tripping currents caused by overloads.
6) Maintain maximum achievable selectivity for tripping currents caused by overloads on series-rated devices.
7) Provide adequate time margins between device characteristics such that selective operation is achieved.
8) Comments and recommendations for system improvements.

3. Arc-Flash Hazard Study Report Contents:

a. Executive summary of study findings.
b. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of results.
c. One-line diagram, showing the following:

    1) Protective device designations and ampere ratings.
    2) Conductor types, sizes, and lengths.
    3) Transformer kVA and voltage ratings, including derating factors and environmental conditions.
    4) Motor and generator designations and kVA ratings.
    5) Switchgear, switchboard, motor-control center, panelboard designations, and ratings.

d. Short-circuit study output data.
e. Overcurrent protective device coordination study report contents.
f. Arc-Flash Study Output Reports:

    1) Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each equipment location included in report:

        a) Voltage.
        b) Calculated symmetrical fault-current magnitude and angle.
        c) Fault-point X/R ratio.
        d) No AC Decrement (NACD) ratio.
        e) Equivalent impedance.
        f) Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on symmetrical basis.
        g) Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on total basis.

g. Incident Energy and Flash Protection Boundary Calculations:

    1) Arcing fault magnitude.
    2) Protective device clearing time.
    3) Duration of arc.
    4) Arc-flash boundary.
    5) Restricted approach boundary.
    6) Limited approach boundary.
    7) Working distance.
    8) Incident energy.
    9) Hazard risk category.
    10) Recommendations for arc-flash energy reduction.

h. Fault study input data, case descriptions, and fault-current calculations including definition of terms and guide for interpretation of computer printout.

3.8 WARNING LABELING OF ARC-FLASH HAZARDS

A. Apply one arc-flash label on front cover of each section of equipment for each equipment included in study, including each piece of equipment listed below:

1. Low-voltage switchgear.
2. Switchboards.
3. Panelboards.
4. Motor-control centers.
5. Low voltage transformers.
6. Safety switches.
7. Control panels.

B. Base arc-flash label data on highest values calculated at each location.

C. Machine print warning labels with no handwritten or field-applied markings.

D. Install arc-flash warning labels under direct supervision and control of qualified electrical professional engineer licensed in the State of New York.

E. Indicate on record Drawings location of equipment where personnel could be exposed to arc-flash hazard during their work.

1. Indicate arc-flash energy.
2. Indicate protection level required.

END OF SECTION 260573

SECTION 260800 - COMMISSIONING OF ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section includes:

1. Cx process requirements for the following Normal and Emergency electrical systems, assemblies, and equipment:

    a. Distribution panelboards.

2. Controls and instrumentation, including the following:

    a. Equipment monitoring systems.
    b. Energy monitoring and control systems.
    c. Electrical metering and metering system.
    d. Lighting control systems.
    e. Fire-alarm systems.

3. Systems testing and verification, including Normal electrical systems.

B. Related Requirements:

1. DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for general Cx process and testing requirements and CxA responsibilities.
2. For Construction Checklists, comply with requirements in various Division 26 Sections specifying electrical systems, system components, equipment, and products.

1.3 DEFINITIONS

A. BAS: Building automation system.

B. Cx: Commissioning, as defined in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems."

C. CxA: Commissioning Agent (Aka Commissioning Authority), as defined in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems."

1. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the Owner's Project Requirement's as detailed in the Contract Documents.

D. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they mean "as-built" systems, assemblies, subsystems, equipment, and components.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 INFORMATIONAL SUBMITTALS

A. Construction Checklists:

1. Draft Cx plan, including draft Construction Checklists to be prepared by CxA under DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems." Div. 26 Subcontractor is to review Construction Checklist in accordance with requirements in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" and ASHRAE 202 and to resolve any issues with the CxA.

B. Test Equipment and Instruments: For all test equipment and instruments to be used in conducting Cx tests, provide the following:

1. Equipment/instrument identification number.
2. Planned Cx application or use.
3. Manufacturer, make, model, and serial number.
4. Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.
5. Equipment manufacturers' instrumentation and tools. For each instrument or tool, identify the following:

    a. Instrument or tool identification number.
    b. Equipment schedule designation of equipment for which the instrument or tool is required.
    c. Manufacturer, make, model, and serial number.
    d. Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.

1.6 CLOSEOUT SUBMITTALS

A. Provide operation and maintenance manuals complying with requirements of DDC General Conditions Section 017839 "Contract Record Documents" and Section 019113 "General Commissioning Requirements for MEP Systems."

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Testing Equipment and Instrumentation Quality and Calibration:

1. For test equipment and instrumentation required to perform electrical Cx work, perform the following:

a. Submit test equipment and instrumentation list. For each equipment or instrument, identify the following:

1) Equipment/instrument identification number.
2) Planned Cx application or use.
3) Manufacturer, make, model, and serial number.
4) Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.

b. Test equipment and instrumentation must meet the following criteria:

1) Capable of testing and measuring performance within the specified acceptance criteria.
2) Be calibrated at manufacturer's recommended intervals with current calibration tags permanently affixed to the instrument being used.
3) Be maintained in good repair and operating condition throughout duration of use on Project.
4) Be recalibrated/repaired if dropped or damaged in any way since last calibrated at no additional cost to City of New York.

C. Test Instrumentation and Tools:

1. Equipment Manufacturer's Instrumentation and Tools: For installed equipment included in the Cx process, test instrumentation and tools manufactured or prescribed by equipment manufacturer to service, calibrate, adjust, repair, or otherwise work on its equipment or required as a condition of equipment warranty, perform the following:

a. Submit instrumentation and tools list. For each instrument or tool, identify the following:

1) Instrument or tool identification number.
2) Equipment schedule designation of equipment for which the instrument or tool is required.
3) Manufacturer, make, model, and serial number.
4) Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.

b. Include a separate list of test instrumentation and tools in operation and maintenance manuals.

2. Electrical test instrumentation and tools become property of City of New York at the time of Substantial Completion.

1.8 COORDINATION

A. Refer to "Coordination" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for coordination requirements including the following:

1. Commissioning Kick-Off and other required meetings.
2. Construction Documents distribution to CxA.
3. Testing Coordination.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 Cx PROCESS:

A. Perform Cx process in accordance with DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for BAS and electrical systems in accordance with the following:

1. New York City Energy Conservation Code.
2. ASHRAE 202.

3.3 CONTRACTOR’S RESPONSIBILITIES

A. In addition to the Contractor's responsibilities indicated in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" the Contractor is responsible for the following:

1. Comply with Construction Checklist requirements, including material verification, installation checks, startup, and performance test requirements specified in Division 26 Sections specifying electrical systems and equipment.
2. Attend construction phase controls coordination meetings and ensure that the electrical and controls Subcontractors attend.
3. Prepare preliminary schedule for electrical system orientations and inspections, operation and maintenance manual submissions, orientation sessions, megger, NETA, and continuity tests and task completion for the City of New York.
4. Distribute preliminary schedule to commissioning team members at the beginning of the construction phase.

B. The Contractor to provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-systems are operating as designed.

1. Electrical equipment including switchgear, panelboards, and all other equipment furnished in Division 26 specification sections.
2. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers furnished in Division 07 specification sections.
3. Fire detection and smoke detection devices furnished in Division 28 specification sections.

3.4 CONSTRUCTION CHECKLISTS

A. Preliminary detailed Construction Checklists are to be prepared under Section 019113 "General Commissioning Requirements for MEP Systems" for each BAS and electrical system, assembly, subsystem, equipment, and component required to be commissioned, as detailed in ASHRAE 202. Contractor performs the following:

1. Review BAS and electrical preliminary Construction Checklists and provide written comments on checklist items where appropriate.
2. Return preliminary Construction Checklist with review comments within 10 days of receipt.
3. When review comments have been resolved, the CxA will provide final Construction Checklists marked "Approved for Use, (date)."
4. Use only Construction Checklists marked "Approved for Use, (date)" When performing tests. Mark Construction Checklists in the appropriate place as indicated Project events are completed, and provide pertinent details and other information.

B. Systems Required to Be Commissioned:

1. Instrumentation and control for electrical systems.
2. Instrumentation and control for lighting control systems.
3. Switchgear and switchboard assemblies rated 1200 A or greater.
4. Metering devices.
5. Grounding systems.
6. Panelboards.
7. Receptacles and devices.
8. Lighting.

3.5 Cx TESTING PREPARATION

A. Refer to "Testing Procedures" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for preparation requirements prior to Functional Testing.

3.6 ELECTRICAL TESTING REQUIREMENTS

A. In addition to the requirements in the "General Testing Requirements" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems", provide the following:

1. Include entire electrical installation, from central equipment through distribution systems, to each space. Testing must include measuring capacities and effectiveness of operational and control functions.
2. Prepare detailed testing plans, procedures, and checklists for electrical systems, subsystems, and equipment in conjunction with the CxA. Contractor to ensure the participation of the electrical Subcontractor, HVAC controls Subcontractor and the fire alarm Subcontractor as needed for this work.
3. If tests cannot be completed because of a deficiency outside the scope of the electrical system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

3.7 Cx TEST CONDITIONS

A. Refer to "General Testing Requirements" Article, and "Testing Procedures" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for satisfying Cx requirements related to testing.

3.8 ELECTRICAL SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 26 sections. Provide submittals, test data, inspector record, and certifications to the CxA.

B. Electrical Tests: Test requirements are specified in Division 26. Electrical Subcontractor will execute and record results for all megger, continuity, or other electrical tests. Contractor to provide reports to the CxA.

3.9 Cx TESTS COMMON TO ELECTRICAL SYSTEMS

A. Measure capacities and effectiveness of systems, assemblies, subsystems, equipment, and components, including operational and control functions, to verify compliance with acceptance criteria.

B. Test systems, assemblies, subsystems, equipment, and components for operating modes, interlocks, control responses, responses to abnormal or emergency conditions, and response in accordance with acceptance criteria.

C. Coordinate schedule with, and perform Cx activities at the direction of, CxA.

D. Comply with Construction Checklist requirements, including material verification, installation checks, startup, and performance test requirements specified in Division 26 Sections specifying electrical systems and equipment.

E. Provide technicians, instrumentation, tools, and equipment to perform and document the following:

1. Cx Construction Checklist verification tests.
2. Cx Construction Checklist verification test demonstrations.

3.10 Cx TESTS FOR ELECTRICAL SYSTEMS

A. Verification of Normal Electrical System Operation:

1. Prerequisites: Acceptance of results for Construction Checklists for Division 26 electrical components associated with Normal electrical system.
2. Equipment and Systems to Be Tested: Division 26 electrical equipment.
3. Test Purpose: Verify operation of Normal electrical system.
4. Test Conditions: Energize components of Normal electrical system, one at a time.
5. Acceptance Criteria: Proper operation of Normal electrical system.

B. Verification of Control and Instrumentation:

1. Prerequisites: Acceptance of results for Construction Checklists.

    a. Section 260913 "Electrical Power Monitoring and Control."
    b. Section 260923 "Lighting Control Devices."
    c. Section 262713 "Electricity Metering."

C. Test Purpose: Verify operation of control and monitoring systems for Normal and Essential electrical systems.

D. Test Conditions:

1. Energize components of Normal electrical system.
2. Test operation of equipment.

E. Acceptance Criteria: Operation of equipment according to OPR.

3.11 GUARANTY REVIEW / SEASONAL TESTING

A. Refer to "Guaranty Review / Seasonal Testing" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for guaranty review and seasonal testing requirements.

END OF SECTION 260800

SECTION 260913 - ELECTRICAL POWER MONITORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Power meters.
2. Surge protection devices.

B. Related Requirements:

a. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

2. Section 262713 "Electricity Metering" for equipment to meter electricity consumption and demand for tenant submetering.

1.3 DEFINITIONS

A. Active Power: The average power consumed by a unit. Also known as "real power."

B. Analog: A continuously varying signal value, such as current, flow, pressure, or temperature.

C. Apparent (Phasor) Power: "S = VI" where "S" is the apparent power, "V" is the RMS value of the voltage, and "I" is the RMS value of the current.

D. Firmware: Software (programs or data) that has been written onto read-only memory (ROM). Firmware is a combination of software and hardware. Storage media with ROMs that have data or programs recorded on them are firmware.

E. KY Pulse: A method of measuring consumption of electricity that is based on a relay operating like a SPST switch.

F. KYZ Pulse: A method of measuring consumption of electricity based on a relay operating like a SPDT switch.

G. L-G: Line to ground.

H. L-L: Line to line.

I. L-N: Line to neutral.

J. MODBUS TCP/IP: An open protocol for exchange of process data.

K. Monitoring: Acquisition, processing, communication, and display of equipment status data, metered electrical parameter values, power quality evaluation data, event and alarm signals, tabulated reports, and event logs.

L. N-G: Neutral to ground.

M. Power Factor: The ratio of active power to apparent power, sometimes expressed in percentage.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data:

1. Power meters.
2. Surge protection devices.

B. Shop Drawings: For power monitoring and control equipment.

1. Include details of equipment assemblies. Indicate dimensions, method of field assembly, components, and location and size of each field connection.

a. Attach copies of approved Product Data submittals for products (such as switchboards, switchgear, and motor-control centers) that describe the following:

1.6 COORDINATION

A. Coordinate features of distribution equipment and power monitoring and control components to form an integrated interconnection of compatible components.

1. Match components and interconnections for optimum performance of specified functions.

B. Coordinate Work of this Section with those in Sections specifying distribution components that are monitored or controlled by power monitoring and control equipment.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with UL 61010-1 and marked for intended location and application.

2.2 PERFORMANCE REQUIREMENTS

A. Surge Protection: For external wiring of each conductor entry connection to components to protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads.

1. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Comply with requirements as recommended by manufacturer for type of line being protected.

B. Addressable Devices: Transmitters and receivers must communicate unique device identification and status reports to monitoring and control clients.

C. Backup Power Source:

1. Electrical power distribution equipment served by a backup power source for controls must have associated power monitoring and control system products that monitor and control such systems and equipment also served from a backup power source.

2.3 POWER METERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton.
2. Leviton Manufacturing Co., Inc.
3. Schneider Electric USA, Inc.
4. Satec.
5. Or approved equal.

B. Description: Separately mounted, modular, permanently installed, solid-state, digital I/O instrument for power monitoring and control; complying with UL 61010-1.

1. Capable of metering four-wire wye, three-wire wye, three-wire delta, and single-phase power systems.

C. Accuracy:

1. Comply with ANSI C12.20, Class 0.5.
2. Waveform Sampling: 32 per cycle.

D. Data Link:

1. MODBUS TIA-485 RTU protocol, 2 4-wire connection.

    a. Provide for firmware and software updates through the communications port.

E. Meter Physical Characteristics:

1. Display: Backlit LCD with antiglare and scratch-resistant lens.

    a. Meters, including those listed under the following:

        1) Measurements.
        2) THD.
        3) Energy.
        4) Demand.
        5) Power demand.

F. Sampling Rate: Continuously sample and record voltage and current at a rate not less than 32 samples per cycle, simultaneously on voltage and current channels of the meter.

G. Meters:

1. Measurements: Instantaneous, in real time, RMS to the 15th harmonic.

    a. Voltage: L-L each phase, L-N each phase, and three-phase average.
    b. Current: Each phase, three-phase average, and neutral.
    c. Active Power (+/- kW): Each phase and three-phase total.
    d. Frequency.

2. THD from measurements simultaneously from the same cycle, through 15th harmonic.

    a. Voltage THD: L-L each phase, L-N each phase, and three-phase average.

3. Energy: Accumulated, indicate whether in-flow or out-flow, net and absolute values. Store the values in instrument's nonvolatile memory.

    a. Active kWh.

4. Demand: Present, last, predicted, peak.

    a. Three-phase average current.
    b. Three-phase total active power (kW).

H. Power Demand, User Selectable:

1. Demand Calculation Initiated by a Synchronization Signal:

    a. Signal is a communication signal. Calculation must be configurable as either a block or rolling block calculation.
    b. Provide for synchronizing the demand with the internal of this instrument.

I. Alarms: Transmit a digital output and show on display when alarmed. Provide for no fewer than 15 metered items. Each alarm must be user configured, by using the following options:

1. Date and time stamp.
2. Enable-disable (default) or enable.
3. Pickup magnitude.
4. Pickup time delay.
5. Dropout magnitude.
6. Dropout time delay.
7. Alarm type.
8. Alarm label.

J. Capacities and Characteristics:

1. Power Supply: 120 V(ac), 60 Hz.
2. Circuit Connections:

    a. Frequency: 45 to 65 Hz.

2.4 SURGE PROTECTION DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB (Electrification Products Division).
2. Eaton.
3. Leviton Manufacturing Co., Inc.
4. Mersen USA.
5. Schneider Electric USA, Inc.
6. Siemens Industry, Inc., Energy Management Division.
7. Or approved equal.

B. SPDs: Comply with UL 1449, Type 1 Type 2.

1. Include LED indicator lights for power and protection status.
2. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.

C. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase must not be less than 100 kA. The peak surge current rating must be the arithmetic sum of the ratings of the individual metal-oxide varistors in a given mode.

D. Comply with UL 1283.

E. Protection modes and UL 1449 SPD for grounded wye circuits with 480Y/277 V 208Y/120 V, three-phase, four-wire circuits must not exceed the following:

1. L-N: 1200 V for 480Y/277 V 700 V for 208Y/120 V.
2. L-G: 1200 V for 480Y/277 V 700 V for 208Y/120 V.
3. N-G: 1200 V for 480Y/277 V 700 V for 208Y/120 V.

4. L-L: 2000 V for 480Y/277 V 1200 V for 208Y/120 V.

F. SCCR: Equal or exceed 100 or 200 kA.

G. Indoor Enclosures: NEMA 250, Type 1.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine pathway elements intended for cables. Check raceways, cable trays, and other elements for compliance with space allocations, installation tolerances, hazards to cable installation, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION OF POWER MONITORING AND CONTROL SYSTEMS

A. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.

B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

C. Wiring and Cabling Installation:

1. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
2. Comply with Section 260523 "Control-Voltage Electrical Power Cables" for control wiring.

D. Raceways Installation:

1. Comply with Section 270528 "Pathways for Communications Systems" for control wiring, TIA-232 cable, and NFPA 70 Class 2 remote-control and signaling circuits.

E. Identification Installation:

1. Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for electrical power wiring.
2. Comply with Section 271513 "Communications Copper Horizontal Cabling" for identification products and cable management system requirements for twisted pair cable, TIA-485 cable, control-voltage cable, and TIA-232 cable.
3. Comply with Section 271523 "Communications Optical Fiber Horizontal Cabling" for identification products and cable management system requirements for optical-fiber cable.

3.4 GROUNDING

A. For data communication wiring, comply with BICSI N1.

B. For control-voltage wiring and cabling, comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."

3.5 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of components.

B. Nonconforming Work:

1. Wiring and cabling will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.6 FINAL REVIEW

A. Submit written request to Commissioner when the power monitoring and control system is ready for final review. Written request must state the following:

1. The system has been thoroughly inspected for compliance with Contract Documents and found to be in full compliance.
2. The system has been calibrated, adjusted, and tested and found to comply with requirements of operational stability, accuracy, speed, and other performance requirements indicated.
3. The system monitoring and control of electrical distribution systems results in operation according to sequences of operation indicated.
4. The system is complete and ready for final review.

B. Review by Commissioner will be made after receipt of written request. A field report must be issued to document observations and deficiencies.

C. Take prompt action to remedy deficiencies indicated in field report and submit a second written request when deficiencies have been corrected. Repeat process until no deficiencies are reported.

D. Final review must include a demonstration to parties participating in final review.

END OF SECTION 260913

SECTION 260923 - LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Time switches.
2. Outdoor photoelectric switches.
3. Daylight-harvesting controls.
4. Business occupancy and vacancy sensors.
5. Emergency lighting controls.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
2. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding of lighting control devices referenced by this Section.
3. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers and supports referenced by this Section.
4. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
5. Section 262726 "Wiring Devices" Section 262726.11 "General-Use Switches, Dimmer Switches, and Fan-Speed Controller Switches" for wall-box dimmers and manual light switches.

1.3 DEFINITIONS

A. BCELTS: Branch circuit emergency lighting transfer switch.

B. DPDT: Double pole double throw.

C. DPST: Double pole single throw.

D. N.C.: Normally closed.

E. N.O.: Normally open.

F. PIR: Passive infrared.

G. SPDT: Single pole double throw.

H. SPST: Single pole single throw.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's sample extended warranty language.

B. Shop Drawings: Prepare and submit the following:

1. Show installation details for the following:

a. Occupancy sensors.
b. Vacancy sensors.

2. Interconnection diagrams showing field-installed wiring.
3. Diagrams for power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements:

1. Products or components listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.
2. Must comply with CCR Title 24.

2.2 TIME SWITCHES

A. UL WGZR - Electronic Time Switch :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Eaton.
    b. Leviton Manufacturing Co., Inc.
    c. Schneider Electric USA, Inc.
    d. TE Connectivity Ltd.
    e. Touché Lighting Control.
    f. Lutron
    g. nLight by AcuityInsert manufacturer's name.
    h. Or approved equal.

2. Standard Features:

    a. Programs:

        1) Eight on-off set points on a 24-hour schedule and an annual holiday schedule that overrides the weekly operation on holidays.
    b. Astronomic Time: All Selected channels.
    c. Automatic daylight savings time changeover.
    d. Battery Backup: Not less than seven days' reserve, to maintain schedules and time clock.

B. UL WGZR - Digital Timer Light Switch :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Eaton.
    b. Leviton Manufacturing Co., Inc.
    c. Schneider Electric USA, Inc.
    d. TE Connectivity Ltd.
    e. Lutron
    f. Touche
    g. nLight by Acuity.
    h. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

    a. Combination digital timer and conventional switch lighting control unit. Switchbox-mounted, backlit LCD display, with selectable time interval in 10 20-minute increments.
    b. Rated 960 W at 120 V(ac) for tungsten lighting, 10 A at 120 V(ac) or 10 A at 277 V(ac) for fluorescent or LED lighting, and 1/4 hp at 120 V(ac).
    c. Standards: Comply with UL 20.
    d. Integral relay for connection to BAS.
    e. Voltage: Match the circuit voltage 120 V 277 V Dual voltage - 120 and 277 V.
    f. Faceplate: Color matched to switch.

2.3 OUTDOOR PHOTOELECTRIC SWITCHES

A. UL WJFX - Solid-State Outdoor Photoelectric Switch, Flexible Mounting :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Eaton.
b. Leviton Manufacturing Co., Inc.
c. nLight; Acuity Brands Lighting, Inc.
d. TE Connectivity Ltd.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory, and marked for intended location and application.
b. Light-Level Monitoring Range: 1.5 to 10 fc, with an adjustment for turn-on and turn-off levels within that range, and a directional lens in front of the photocell to prevent fixed light sources from causing turn-off.
c. Time Delay: Fifteen-second minimum, to prevent false operation.
d. Mounting: Twist lock complies with ANSI C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure from same source and manufacturer as switch.
e. Failure Mode: Luminaire stays ON.

2.4 DAYLIGHT-HARVESTING CONTROLS

A. UL WJCT - Daylight-Harvesting Control Switch :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Eaton.
b. Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
c. Leviton Manufacturing Co., Inc.
d. Lithonia Lighting; Acuity Brands Lighting, Inc.
e. nLight; Acuity Brands Lighting, Inc.
f. TE Connectivity Ltd.
g. WattStopper; Legrand North America, LLC.
h. Touche
i. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

B. UL WJCT - Daylight-Harvesting Digital Control Dimmer :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Eaton.
b. Leviton Manufacturing Co., Inc.
c. Lithonia Lighting; Acuity Brands Lighting, Inc.
d. nLight; Acuity Brands Lighting, Inc.
e. Touche
f. WattStopper; Legrand North America, LLC.
g. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

2.5 BUSINESS OCCUPANCY AND VACANCY SENSORS

A. Passive-Infrared (PIR) Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cooper Lighting Solutions; Signify North America Corp.
b. Crestron Electronics, Inc.
c. Hubbell Control Solutions; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
d. Leviton Manufacturing Co., Inc.
e. Lithonia Lighting; Acuity Brands Lighting, Inc.
f. Lutron Electronics Co., Inc.
g. Napco Security Technologies, Inc.
h. Pass & Seymour; Legrand North America, LLC
i. Touche.
j. WattStopper; Legrand North America, LLC.
k. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. Wall and Ceiling-mounted, solid-state indoor occupancy and vacancy sensors.
b. Integrated or Separate power pack.
c. Hardwired or Wireless connection to switch and BAS; and BAS and lighting control system.
d. Power: .
e. Power Pack: Dry contacts rated for 20 A driver or LED load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
f. Detector Sensitivity: Detect occurrences of 6 inch minimum movement of any portion of a human body that presents a target of not less than 36 sq. inch.

1) Detection Coverage (Room, Ceiling Mounted): Detect occupancy anywhere in a circular area of 1000 sq. ft when mounted on a 96 inch high ceiling.

4. Operation:

a. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

B. Ultrasonic Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cooper Lighting Solutions; Signify North America Corp.
b. Eaton.
c. Lutron Electronics Co., Inc.
d. Touche
e. WattStopper; Legrand North America, LLC.
f. nLightInsert manufacturer's name.
g. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. Wall or Ceiling-mounted, solid-state indoor occupancy and vacancy sensors.
b. Power: Line voltage.
c. Power Pack: Dry contacts rated for 20 A driver or LED load at 120 and 277 V(ac), for 13 A tungsten at 120 V(ac), and for 1 hp at 120 V(ac). Sensor has 24 V(dc), 150 mA, Class 2 power source.
d. Bypass Switch: Override the "on" function in case of sensor failure.
e. Detector Sensitivity: Detect a person of average size and weight moving not less than 12 inch in either a horizontal or a vertical manner at an approximate speed of 12 inch/s.

1) Detection Coverage (Small Room): Detect occupancy anywhere within a circular area of 600 sq. ft when mounted on a 96 inch high ceiling.
2) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft when mounted on a 96 inch high ceiling.
3) Detection Coverage (Large Room): Detect occupancy anywhere within a circular area of 2000 sq. ft when mounted on a 96 inch high ceiling.
4) Detection Coverage (Corridor): Detect occupancy anywhere within 90 ft when mounted on a 10 ft high ceiling in a corridor not wider than 14 ft.

4. Operation:

a. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

C. Dual-Technology, Passive-Infrared (PIR) and Ultrasonic, Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cooper Lighting Solutions; Signify North America Corp.
b. Lutron
c. Touche
d. nLight
e. WattstopperInsert manufacturer's name.
f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. Wall or Ceiling-mounted, solid-state indoor occupancy and vacancy sensors.
b. Sensitivity Adjustment: Separate for each sensing technology.
c. Detector Sensitivity: Detect occurrences of 6 inch minimum movement of any portion of a human body that presents a target of not less than 36 sq. inch, and detect a person of average size and weight moving not less than 12 inch in either a horizontal or a vertical manner at an approximate speed of 12 inch/s.

1) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft when mounted on a 96 inch high ceiling.

4. Operation:

a. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

D. Dual-Technology, Passive-Infrared (PIR) and Passive-Acoustic, Occupancy or Vacancy Sensor :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Lithonia Lighting; Acuity Brands Lighting, Inc.
b. SensorWorx; brand of BLP Technologies, Inc.
c. Lutron
d. Wattstopper
e. Touche
f. nLightInsert manufacturer's name.
g. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. Wall or Ceiling-mounted, solid-state indoor occupancy and vacancy sensors.
b. Sensitivity Adjustment: Separate for each sensing technology.
c. Detector Sensitivity: Detect occurrences of 6 inch minimum movement of any portion of a human body that presents a target of not less than 36 sq. inch, and detect a person of average size and weight moving not less than 12 inch in either a horizontal or a vertical manner at an approximate speed of 12 inch/s.

1) Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft when mounted on a 96 inch high ceiling.

4. Operation:

a. Combination Sensor: Unless otherwise indicated, sensor must be programmed to turn lights on when coverage area is occupied and turn them off when unoccupied, or to turn off lights that have been manually turned on; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

E. Wall-Switch Occupancy Sensor :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Eaton.
b. Leviton Manufacturing Co., Inc.
c. Lithonia Lighting; Acuity Brands Lighting, Inc.
d. Lutron Electronics Co., Inc.
e. nLight; Acuity Brands Lighting, Inc.
f. WattStopper; Legrand North America, LLC.
g. Touche
h. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. Automatic-wall-switch occupancy sensor with manual on-off switch, suitable for mounting in single gang switchbox, with provisions for connection to BAS using hardwired connectionor using wireless connection.

1) Occupancy Sensor Operation: Unless otherwise indicated, turn lights on when coverage area is occupied, and turn lights off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.
2) Operating Ambient Conditions: Dry interior conditions, 32 to 120 deg F.

b. Capable of controlling load in three-way application.
c. Voltage: Match circuit voltage 120 V 277 V Dual voltage - 120 and 277 V.
d. Ambient-Light Override: Concealed, field-adjustable, light-level sensor from 10 to 150 fc. Switch prevents lights from turning on when light level is higher than set point of sensor.
e. Time Delay:

1) Concealed, field-adjustable, "off" time-delay selector at up to 30 minutes.

f. Adaptive Technology: Self-adjusting circuitry detects and memorizes usage patterns of the space and helps eliminate false "off" switching.
g. Faceplate: Color matched to switch.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine lighting control devices before installation. Reject lighting control devices that are wet, moisture damaged, or mold damaged.

B. Examine walls and ceilings for suitable conditions where lighting control devices will be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 SELECTION OF CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Classes 2 and 3 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than 18 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

C. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than 18 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 INSTALLATION OF LIGHTING CONTROL DEVICES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC FIre Code, IFC, NFPA 1, NFPA 70, and NECA NEIS 1, and the NYC Electrical Code.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
5. Communications Work: BICSI N1.
6. Life Safety and Means of Egress Work: NFPA 101.
7. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.

C. Special Installation Techniques:

1. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression systems, and partition assemblies.
2. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's instructions.
3. Installation of Wiring:

    a. Conduit: Minimum conduit size is 1/2 inch.
    b. Wiring within Enclosures: Separate power-limited and nonpower-limited conductors in accordance with conductor manufacturer's published instructions.
    c. Size conductors in accordance with lighting control device manufacturer's published instructions unless otherwise indicated.
    d. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, device, and outlet boxes; terminal cabinets; and equipment enclosures.

D. Interfaces with Other Work:

1. Identification: Provide labels for lighting control devices and associated electrical equipment.

    a. Identify field-installed conductors, interconnecting wiring, and components.
    b. Label each enclosure with engraved metal or laminated-plastic nameplate.
    c. Identify controlled circuits in lighting contactors.
    d. Identify circuits or luminaires controlled by photoelectric and occupancy sensors at each sensor.
    e. Label time switches and contactors with a unique designation.

3.5 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting lighting control devices to suit actual occupied conditions. Provide up to two visits to the Project site during other-than-normal occupancy hours for this purpose. Some of the Work may be required during hours of darkness.

1. For occupancy and motion sensors, verify operation at outer limits of detector range. Set time delay to suit facility operations.
2. For daylighting controls, adjust set points and deadband controls to suit facility operations.
3. Align high-bay occupancy sensors using manufacturer's laser aiming tool.

3.6 CLOSEOUT ACTIVITIES

A. Demonstration:

1. With assistance from factory-authorized service representatives, demonstrate to City of New York's personnel how to operate the following systems and equipment:

    a. Lighting control devices.

B. Instruction:

1. With assistance from factory-authorized service representatives, instruct City of New York's personnel on the following topics:

    a. How to adjust, and operate lighting control devices.

END OF SECTION 260923

SECTION 262300 - LOW-VOLTAGE SWITCHGEAR

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. The Work of This Section Includes:

1. Metal-enclosed, low-voltage switchgear, with drawout power circuit breakers and metering and control accessories.

    a. Switchgear structure.
    b. Circuit breakers.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 262713 "Electricity Metering" for equipment to meter electricity consumption and demand for submetering.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data:

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for switchgear.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings:

1. For low-voltage switchgear.

a. System Power One-Line Diagrams: Depict power sources, feeders, distribution components, and major loads. Include as-built data for low-voltage power switchgear and connections as follows:

1) Frame size of circuit breakers.
2) Trip rating for circuit breakers.
3) Conduit and wire size for feeders.

b. Include plans, elevations, sections, shipping splits, and mounting details.
c. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of field connections.
d. Wire Termination Diagrams and Schedules: Include diagrams for power, signal, and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features. Differentiate between manufacturer-installed and field-installed wiring.

1.5 CLOSEOUT SUBMITTALS

A. System Power Riser Diagram: For switchgear, using non-fugitive ink on high-quality paper. Post on wall at switchgear location.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Indoor Switchgear Storage: Store in dry, clean location, placed on level surface to prevent strain and possible distortion. During construction period, provide protection against dust, dirt, falling objects, dripping water, water, excessive moisture, and other possible causes of damage to equipment. Temporary covering may not restrict ventilation and may not be removed until equipment is ready for installation. Store indoor equipment within heated building. Take special precaution to keep equipment sufficiently warm with adequate ventilation to prevent condensation during storage period. Install temporary heating if necessary.

B. When provisions for temporary power connection are provided as part of switchgear assembly, provisions must be included to prevent energization of primary buses or connections by means of backfeed through fuses or control power transformers connected to primary buses or connections.

C. If outdoor switchgear cannot be installed and energized, temporary power must be provided for operation of space heaters provided so as to prevent condensation of moisture within housing.

D. Ventilation openings must be left open to permit proper air circulation.

PART 2 - PRODUCTS

2.1 LOW-VOLTAGE SWITCHGEAR

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB, Electrification Products Division.
2. Eaton.
3. Siemens Industry, Inc., Energy Management Division.
4. Square D; Schneider Electric USA.
5. Electrotech.
6. Or approved equal.

2.2 SYSTEM DESCRIPTION

A. Description: Metal-enclosed, low-voltage switchgear with drawout fused power circuit breakers, with accessories and metering components.

1. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory, and marked for intended location and application.
2. Comply with IEEE C37.20.1.
3. Listed and labeled as complying with UL 1558.
4. Listed and labeled for use as service entrance equipment.

2.3 PERFORMANCE REQUIREMENTS

A. Capacities and Characteristics:

1. Nominal System Voltage: 208/120 V, four wire, 60 Hz.
2. Rated Power Frequency: 60 Hz.
3. Rated Insulation Level: Power frequency withstand must be not less than 2.2 kV(rms).
4. Rated Continuous Current:

    a. Main-Bus Continuous: 1600 A.
    b. Vertical Section Bus Riser: Equal to frame size of low-voltage power circuit breaker connected to that riser.

5. Rated Short-Circuit Withstand Current: 65 000 A(sym).
6. Short-Time and Short-Circuit Current: Match rating of integrated short-circuit current rating.

2.4 SWITCHGEAR STRUCTURE

A. Bus isolation barriers must be arranged to isolate line bus from load bus at main and tie circuit breaker. Extend section barriers between main and tie circuit breakers to rear of section.

B. Switchgear Bus:

1. Use bus bars to connect compartments and vertical sections. Cable connections are not permitted.
2. Main Phase Bus: Uniform capacity entire length of assembly.
3. Bus Material and Connections:

    a. Phase- and Neutral-Bus Material:

        1) Hard-drawn copper of 98 percent minimum conductivity, with copper feeder circuit-breaker line connections.

    b. Use copper for connecting circuit-breaker line to copper bus.

2.5 ADDITIONAL REQUIREMENTS FOR INDOOR SWITCHGEAR

A. Enclosure Rating: Indoor.

B. Enclosure Material: Steel.

C. Enclosure Finish: IEEE C37.20.1, manufacturer's standard gray finish over rust-inhibiting primer on phosphatizing-treated metal surfaces.

2.6 ADDITIONAL REQUIREMENTS FOR OUTDOOR SWITCHGEAR

A. Features:

1. Aisle-Less Construction: Vertical sections must have the following:

    a. Hinged front door with padlocking provisions.

2. Common Internal Aisle-Type Construction:

    a. Interior Space Conditioning:

        1) Air conditioned.

2.7 SURGE SUPPRESSION

A. Factory Installed: Integral part of low-voltage switchgear, complying with UL 1449 SPD, Type 1, with the following features and accessories:

1. Integral disconnect switch.
2. Internal thermal protection that disconnects SPD before damaging internal suppressor components.
3. Indicator light display for protection status.

B. Field Mounted: Complying with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits." Include the following features and accessories:

1. Internal thermal protection that disconnects SPD before damaging internal suppressor components.

2.8 SOURCE QUALITY CONTROL

A. Testing Administrant: Engage qualified testing agency to evaluate low-voltage switchgear.

B. Factory Tests and Inspections: Test and inspect low-voltage switchgear, by, or under supervision of, qualified electrical testing laboratory in accordance with IEEE C37.20.1 before delivering to site. Affix label with name and date of manufacturer's certification of system compliance on control units. Drawout circuit breakers need not be tested in assembly if they are tested separately.

1. Perform mechanical operation tests to ensure proper functioning of operating mechanism, mechanical interlocks, and interchangeability of removable elements that are designed to be interchangeable.
2. Test effectiveness of grounding of metal-case instrument transformer frame or case.
3. Verify that control wiring is correct by verifying continuity. Perform electrical operation of component devices to ensure that they function properly and in intended sequence.
4. Perform control wiring insulation tests.
5. Verify correct polarity of connections between instrument transformers and meters and relays.

C. Serial communications devices within equipment must be addressed at factory and tested to verify reliable communications to equipment's Ethernet gateway.

D. Nonconforming Work:

1. Low-voltage switchgear assembly will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine areas and space conditions for compliance with requirements for secondary unit substations and other conditions affecting performance of the Work.

B. Examine roughing-in of conduits and grounding systems to verify the following:

1. Wiring entries comply with layout requirements.
2. Entries are within conduit-entry tolerances specified by manufacturer, and no feeders will have to cross section barriers to reach load or line lugs.

C. Examine walls, floors, roofs, and concrete bases for suitable conditions where switchgear will be installed.

D. Verify that ground connections are in place and that requirements in Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance must be 5 ohms at switchgear location.

E. On delivery of switchgear and prior to unloading, inspect equipment for damage.

1. Verify that tie rods and chains are undamaged and tight, and that blocking and bracing are tight.
2. Verify that there is no evidence of load shifting in transit, and that readings from transportation shock recorders, if equipped, are within manufacturer's published instructions.
3. Examine switchgear for external damage, including dents or scratches in doors and sill, and termination provisions.
4. Compare switchgear and accessories received with bill of materials to verify that shipment is complete. Verify that switchgear and accessories comply with manufacturer's published instructions and Shop Drawings. If shipment is incomplete or does not comply with Project requirements, notify manufacturer in writing immediately.
5. Unload switchgear, observing packing label warnings and handling instructions.
6. Open compartment doors and inspect components for damage or displaced parts, loose or broken connections, cracked or chipped insulators, bent mounting flanges, dirt or foreign material, and water or moisture.

F. Handling:

1. Handle switchgear, in accordance with manufacturer's published instructions; avoid damage to enclosure, termination compartments, base, frame, tank, and internal components. Do not subject switchgear to impact, jolting, jarring, or rough handling.
2. Protect switchgear compartments against entrance of dust, rain, and snow.
3. Transport switchgear upright, to avoid internal stresses on equipment mounting assemblies. Do not tilt or tip switchgear.
4. Use spreaders or lifting beam to obtain vertical lift and to protect switchgear from straps bearing against enclosure. Lifting cable pull angles may not be greater than 15 degrees from vertical.
5. Do not damage structure when handling switchgear.

G. Proceed with installation only after examinations are complete and unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Install switchgear on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 260529 "Hangers and Supports for Electrical Systems."

B. Comply with requirements for vibration isolation and seismic-control devices specified in Section 260529 "Hangers and Supports for Electrical Systems".

C. Maintain minimum clearances and workspace at equipment in accordance with manufacturer's published instructions and NFPA 70.

3.4 CONNECTIONS

A. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

B. Grounding Connections at Exterior Locations:

1. Install tinned bare copper conductors not smaller than 4/0 AWG, for ground conductors buried not less than 30 inch below grade interconnecting grounding electrodes.
2. Bond surge arrester and neutrals directly to switchgear enclosure and then to grounding electrode system with bare copper conductors, sized as indicated.
3. Keep lead lengths as short as practicable with no kinks or sharp bends.
4. Make joints in grounding conductors and loops by exothermic weld or compression connector.

C. Terminate grounding and bonding conductors on common equipment grounding terminal on switchgear enclosure. Install supplemental terminal bars, lugs, and bonding jumpers as required to accommodate number of conductors for termination.

D. Complete switchgear grounding and surge-protector connections prior to making other electrical connections.

3.5 IDENTIFICATION

A. Comply with installation requirements for labels and signs specified in Section 260553 "Identification for Electrical Systems."

B. Install warning signs as required to comply with OSHA 29 CFR 1910.269.

C. Compartment Nameplates: Engraved, laminated-acrylic, as described in Section 260553 "Identification for Electrical Systems," for compartments, mounted with corrosion-resistant screws.

D. Mimic Bus: Continuous mimic bus, arranged in single-line diagram format, using symbols and lettered designations consistent with approved mimic-bus diagram.

1. Mimic-bus segments coordinated with devices in switchgear sections to which applied, to produce concise visual presentation of principal switchgear components and connections.
2. Medium: Painted graphics, as selected by Commissioner.
3. Color: Contrasting with factory-finish background; as selected by Commissioner from manufacturer's full range.

E. Arc-Flash Warning Labels:

1. Comply with requirements in Section 260553 "Identification for Electrical Systems." Produce 3.5 by 5 inch self-adhesive equipment label for work locations included in analysis. Labels must be machine printed, with no field-applied markings.

a. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard analysis:

1) Location designation.

2) Nominal voltage.
3) Flash protection boundary.
4) Hazard risk category.
5) Incident energy.
6) Working distance.
7) Engineering report number, revision number, and issue date.

b. Labels must be machine printed, with no field-applied markings.

3.6 FOLLOW UP SERVICE

A. Voltage Monitoring and Adjusting: After Substantial Completion, but not more than six months after Final Acceptance, and if requested by Commissioner, perform the following voltage monitoring:

1. During period of normal load cycles as evaluated by Commissioner, perform seven days of three-phase voltage recording at switchgear outgoing sections. Use voltmeters with calibration traceable to NIST standards and with chart speed of not less than 1 inch per hour. Voltage unbalance greater than 1 percent between phases, or deviation of phase voltage from nominal value by more than plus or minus 5 percent during test period, is unacceptable.
2. Corrective Action: If test results are unacceptable, perform the following corrective action, as appropriate:

   a. Adjust switchgear taps.
   b. Prepare published request for voltage adjustment by electric utility.

3. Retests: Repeat monitoring, after corrective action has been performed, until specified results are obtained.
4. Report:

   a. Prepare published report covering monitoring performed and corrective action taken.

B. Infrared Inspection: Perform survey during periods of maximum possible loading. Remove covers prior to inspection.

1. After Substantial Completion, but not more than 60 days after Final Acceptance, perform infrared inspection of electrical power connections of switchgear.
2. Instrument: Inspect distribution systems with imaging equipment capable of detecting minimum temperature difference of 1 deg C at 30 deg C.
3. Record of Infrared Inspection: Prepare certified report that identifies testing technician and equipment used and that lists results as follows:

   a. Description of equipment to be tested.
   b. Discrepancies.
   c. Temperature difference between area of concern and reference area.
   d. Probable cause of temperature difference.
   e. Areas inspected. Identify inaccessible and unobservable areas and equipment.
   f. Identify load conditions at time of inspection.
   g. Provide photographs and thermograms of deficient area.

4. Act on inspection results in accordance with recommendations in NETA ATS, Table 100.18. Correct possible and probable deficiencies as soon as City of New York's operations permit. Retest until deficiencies are corrected.

END OF SECTION 262300

SECTION 262416 - PANELBOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Panelboards.
2. Disconnecting and overcurrent protective devices.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional abbreviations, definitions, submittals, qualifications, testing agencies, and other requirements applicable to the Work for electrical, communications, and electronic safety and security systems on Project, including wiring methods.
2. Section 260529 "Hangers and Supports for Electrical Systems" specifies concrete bases and supports for panelboards installed by this Section.
3. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.
4. Section 260913 "Electrical Power Monitoring" specifies power monitoring and control systems installed by this Section.
5. Section 262813 "Fuses" specifies fuses and spare-fuse cabinets installed by this Section.
6. Section 264313 "Surge Protective Devices for Low-Voltage Electrical Power Circuits" specifies Type 1 and Type 2 surge protective devices installed by this Section.

1.3 DEFINITIONS

A. MCCB: Molded-case circuit breaker.

B. VPR: Voltage protection rating.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Shop Drawings: For each panelboard and related equipment:

1. Include dimensioned plans, elevations, sections, and details.
2. Show tabulations of installed devices with nameplates, conductor termination sizes, equipment features, and ratings.
3. Detail enclosure types including mounting and anchorage, environmental protection, knockouts, corner treatments, covers and doors, gaskets, hinges, and locks.
4. Detail bus configuration, current, and voltage ratings.
5. Short-circuit current rating of panelboards and overcurrent protective devices.
6. Include evidence of listing by qualified electrical testing laboratory for series rating of installed devices.
7. Include evidence of listing by qualified electrical testing laboratory for SPD as installed in panelboard.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include wiring diagrams for power, signal, and control wiring.
10. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Include selectable ranges for each type of overcurrent protective device. Include Internet link for electronic access to downloadable PDF of coordination curves.

1.6 INFORMATIONAL SUBMITTALS

A. Panelboard Schedules: For installation in panelboards.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.8 DELIVERY, STORAGE, AND HANDLING

A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

B. Handle and prepare panelboards for installation in accordance with NECA 407and NEMA PB 1.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory, and marked for intended location and application.

B. Enclosures: Flush and Surface-mounted, dead-front cabinets.

1. Rated for environmental conditions at installed location.

   a. Indoor Dry and Clean Locations: UL 50E, Type 1.
   b. Other Wet or Damp Indoor Locations: UL 50E, Type 4.

2. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover. Trims must cover live parts and may have no exposed hardware.
3. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.
4. Finishes:

    a. Panels and Trim: Steel and galvanized steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.

C. Phase, Neutral, and Ground Buses:

1. Material: Tin-plated aluminum or Hard-drawn copper, 98 percent conductivity.

    a. Plating must run entire length.

2. Interiors must be factory assembled into unit. Replacing switching and protective devices may not disturb adjacent units or require removing main bus connectors.
3. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.

D. Quality-Control Label: Panelboards or load centers must be labeled, by qualified electrical testing laboratory, for use as service equipment with one or more main service disconnecting and overcurrent protective devices. Panelboards or load centers must have meter enclosures, wiring, connections, and other provisions for utility metering. Coordinate with utility company for exact requirements.

E. Future Devices: Panelboards or load centers must have mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

1. Percentage of Future Space Capacity: 20 percent.

F. Panelboard Short-Circuit Current Rating:

1. Fully rated to interrupt symmetrical short-circuit current available at terminals. Assembly listed by qualified electrical testing laboratory for 100 percent interrupting capacity.

    a. Panelboards and overcurrent protective devices rated 240 V or less must have short-circuit ratings as shown on Drawings, but not less than 10 000 A(rms) symmetrical.
    b. Panelboards and overcurrent protective devices rated above 240 V and less than 600 V must have short-circuit ratings as shown on Drawings, but not less than 14 000 A(rms) symmetrical.

2.2 PANELBOARDS

A. UL QEUY - Distribution Panelboard :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. ABB, Electrification Business.
    b. Eaton.

c. Siemens Industry, Inc., Energy Management Division.
d. Square D; Schneider Electric USA.
e. Or approved equal.

2. Standard Features:

a. Doors: Secured with vault-type latch with tumbler lock; keyed alike.

1) For doors more than 36 inch high, provide two latches, keyed alike.

b. Mains: Circuit breaker or Fused switch.

1) Location: Top Bottom Convertible between top and bottom.

c. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Plug-in circuit breakers or Bolt-on circuit breakers.

3. Other Available Features Required by Project:

a. Surge Suppression: Factory installed as integral part of indicated panelboards, complying with UL 1449 SPD Type 1.
b. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure.

B. UL QEUY - Lighting and Appliance Branch-Circuit Panelboard :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. ABB, Electrification Business.
b. Bender Inc.; Bender GmbH & Co. KG.
c. Eaton.
d. Siemens Industry, Inc., Energy Management Division.
e. Square D; Schneider Electric USA.
f. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Lighting and Appliance Branch-Circuit Type Panelboards: UL CCN QEUY; including UL 67 and NEMA PB 1.

3. Standard Features:

a. Mains: Circuit breaker or lugs only.

1) Location: Convertible between top and bottom.

b. Branch Overcurrent Protective Devices: Plug-in or Bolt-on circuit breakers, replaceable without disturbing adjacent units.

5. Other Available Features Required by Project:

a. Surge Suppression: Factory installed as integral part of indicated panelboards, complying with UL 1449 SPD Type 1 .
b. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure.

2.3 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB, Electrification Business.
2. Eaton.
3. Siemens Industry, Inc., Energy Management Division.
4. Square D; Schneider Electric USA.
5. Or approved equal.

B. MCCB: Comply with UL 489, with to meet available fault currents.

1. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6 mA trip).
2. MCCB Features and Accessories:

a. Ground-Fault Protection: Integrally mounted Remote-mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.

C. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

1. Provide fuses and spare fuse cabinet.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Verify actual conditions with field measurements prior to ordering panelboards to verify that equipment fits in allocated space in, and comply with, minimum required clearances specified in NFPA 70.

B. Receive, inspect, handle, and store panelboards in accordance with NECA 407 and NEMA PB 1.1.

C. Examine panelboards before installation. Reject panelboards that are damaged, rusted, or have been subjected to water saturation.

D. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Panelboards: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NECA 407 and NEMA PB 1.1.

C. Special Techniques:

1. Equipment Mounting:

    a. Install floor-mounted panelboards on cast-in-place concrete equipment base(s).
    b. Attach panelboard to vertical finished or structural surface behind panelboard.
    c. Mount surface-mounted panelboards to steel slotted supports 1-1/4 inch in depth. Orient steel slotted supports vertically.

2. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.
3. Provide mounting and anchoring devices.
4. Mount top of trim 6'-6" above finished floor unless otherwise indicated.
5. Mount panelboard cabinet plumb and rigid without distortion of box.
6. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.
7. Install overcurrent protective devices and controllers not already factory installed.

    a. Set field-adjustable, circuit-breaker trip ranges.
    b. Tighten bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver in accordance with manufacturer's published instructions.

8. Make grounding connections and bond neutral for services and separately derived systems to ground. Make connections to grounding electrodes, separate grounds for isolated ground bars, and connections to separate ground bars.
9. Install filler plates in unused spaces.
10. Stub four 1 inch empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in future. Stub four 1 inch empty conduits into raised floor space or below slab not on grade.
11. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.
12. Mount spare fuse cabinet in accessible location.

D. Interfaces with Other Work:

1. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

3.4 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components.

B. Install warning signs.

C. Panelboard Nameplates: Label each panelboard with nameplate.

D. Device Nameplates: Label each branch circuit device in power panelboards with nameplate.

E. Panelboard Label: Manufacturer's name and trademark, voltage, amperage, number of phases, and number of poles must be located on interior of panelboard door.

F. Breaker Labels: Faceplate must list current rating, UL and IEC certification standards, and AIC rating.

G. Circuit Directory:

1. Provide directory card inside panelboard door, mounted in metal frame with transparent protective cover.

a. Circuit directory must identify specific purpose with detail sufficient to distinguish it from other circuits.

2. Provide computer-generated circuit directory mounted inside panelboard door with transparent plastic protective cover.

a. Circuit directory must identify specific purpose with detail sufficient to distinguish it from other circuits.

3. Create directory to indicate installed circuit loads after balancing panelboard loads; incorporate City of New York's final room designations. Obtain approval before installing. Handwritten directories are not acceptable. Install directory inside panelboard door.

3.5 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges.

C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes. Prior to making circuit changes to achieve load balancing, inform Commissioner of effect on phase color coding.

1. Measure loads during period of normal facility operations.
2. Perform circuit changes to achieve load balancing outside normal facility operation schedule or at times directed by Commissioner. Avoid disrupting services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
3. After changing circuits to achieve load balancing, recheck loads during normal facility operations. Record load readings before and after changing circuits to achieve load balancing.
4. Tolerance: Maximum difference between phase loads, within panelboard, may not exceed 20 percent.

3.6 PROTECTION

A. Temporary Heating: Prior to energizing panelboards, apply temporary heat to maintain temperature in accordance with manufacturer's published instructions.

END OF SECTION 262416

SECTION 262713 - ELECTRICITY METERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Electricity meter.
2. Work to accommodate utility company revenue meters, and City of New York's electricity meters used to manage electrical power system.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

1.3 DEFINITIONS

A. KY or KYZ Pulse: Term used by metering industry to describe method of measuring consumption of electricity (kWh) that is based on relay opening and closing in response to rotation of disk in meter. Electronic meters generate pulses electronically.

1.4 COORDINATION

A. Electrical Service Connections:

1. Coordinate with utility companies and utility-furnished components.

a. Comply with requirements of utility providing electrical power services.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Product Data:

1. For each type of meter.
2. For metering infrastructure components.
3. For metering software.

B. Shop Drawings: For electricity-metering equipment.

1. Include elevation views of front panels of control and indicating devices and control stations.
2. Include diagrams for power, signal, and control wiring.
3. Wire Termination Diagrams and Schedules: Include diagrams for power, signal, and control wiring. Identify terminals and wiring designations and color-codes to facilitate installation, operation, and maintenance. Indicate recommended types, wire sizes, and circuiting arrangements for field-installed wiring, and show circuit protection features. Differentiate between manufacturer-installed and field-installed wiring.
4. Include series-combination rating data for modular meter centers with main disconnect device.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.

B. Comply with UL 916.

2.2 UTILITY METERING INFRASTRUCTURE

A. Install metering accessories furnished by utility company, complying with its requirements.

B. Current-Transformer Cabinets: Comply with requirements of electrical-power utility company.

C. Modular Meter Center: Factory-coordinated assembly of main service , wireways, meter socket modules, and feeder circuit breakers arranged in adjacent vertical sections complete with interconnecting buses.

1. Comply with requirements of utility company for meter center.

a. Comply with UL 67.

2. Surge Protection:

a. Field-mounted external to main disconnect, UL 1449 Type 2, with integral disconnect and overcurrent protective device. Comply with Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."

D. Arc-Flash Warning Labels;

1. Comply with requirements for "Self-Adhesive Equipment Labels" and "Signs" in Section 260553 "Identification for Electrical Systems." Apply 3-1/2-by-5 inch thermal transfer label of high-adhesion polyester for each work location included in the analysis. Labels must be machine printed, with no field-applied markings.

    a. Label must have orange header with wording, "WARNING, ARC-FLASH HAZARD," and must include the following information taken directly from arc-flash hazard analysis:

        1) Nominal voltage.
        2) Flash protection boundary.
        3) Hazard risk category.
        4) Working distance.

2.3 ELECTRICITY METERS

A. System Description: Able to meter designated activity loads, with or without external alarm, control, and communication capabilities, or other optional features.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton.
2. E-Mon.
3. Leviton Manufacturing Co., Inc.
4. Siemens Industry, Inc., Energy Management Division.
5. Square D; Schneider Electric USA.
6. SatecInsert manufacturer's name.
7. Or approved equal.

C. General Requirements for Meters:

1. Enclosure: Supplied by meter manufacturer, UL 50E, Type 1 Type 3R Type 4X minimum, with provisions for locking or sealing.
2. Identification: Comply with requirements in Section 260553 "Identification for Electrical Systems."
3. Onboard Nonvolatile Data Storage: kWh, until reset.
4. Sensors: Current-sensing type, supplied by electronic meter manufacturer, with current or voltage output, selected for optimum range and accuracy for meters indicated for this application.

    a. Type: Split and solid core, complying with recommendation of meter manufacturer.

D. kWh Meter: Electronic single-phase and three-phase meters, measuring electricity use.

1. Voltage and Phase Configuration: Meter must be designed for use on circuits with voltage rating and phase configuration indicated for its application.
2. Display:

    a. LCD with characters not less than 0.25 inch high, indicating accumulative kWh and current kilowatt load. Retain accumulated kWh in nonvolatile memory, until reset.

E. kWhd Meter: Electronic single-phase and three-phase meters, measuring electricity use and demand. Demand must be integrated over 15-minute Insert time interval.

1. Voltage and Phase Configuration: Meter must be designed for use on circuits with voltage rating and phase configuration indicated for its application.
2. Display: LCD with characters not less than 0.25 inch high, indicating the following:

a. Accumulative kWh.
b. Current time and date.
c. Current demand.

3. Retain accumulated kWh and historic peak demand in nonvolatile memory, until reset.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Install modular meter center according to switchboard installation requirements in NECA 400.
2. Install arc-flash labels as required by NFPA 70.

C. Special Techniques:

1. Install meters furnished by utility company. Install raceways and equipment according to utility company's published instructions. Provide empty conduits for metering leads and extend grounding connections as required by utility company.
2. Wiring Methods:

a. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables" and Section 260533.13 "Conduits for Electrical Systems."
b. Install unshielded, twisted-pair cable for control and signal transmission conductors, complying with Section 271513 "Communications Copper Horizontal Cabling."
c. Minimum conduit size is metric designator 16 (trade size 1/2).

3.3 IDENTIFICATION

A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

1. Series Combination Warning Label: Self-adhesive labels, with text as required by NFPA 70.

3.4 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Equipment and Software Setup:

a. Set meter date and time clock.
b. Test, calibrate, and connect pulse metering system.

B. Nonconforming Work:

1. Electricity metering will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

C. Collect, assemble, and submit test and inspection reports.

3.5 PROTECTION

A. After installation, protect metering equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 262713

SECTION 262726 - WIRING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. General-use switches, dimmer switches, and fan-speed controller switches.
2. General-grade single straight-blade receptacles.
3. General-grade duplex straight-blade receptacles.
4. Receptacles with arc-fault and ground-fault protective devices.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project, including wiring methods.
2. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
3. Section 260533.16 "Boxes and Covers for Electrical Systems" specifies covers and cover plates referenced by this Section.
4. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
5. Section 260923 "Lighting Control Devices" for occupancy sensors, timers, control-voltage switches, and control-voltage dimmers.
6. Section 262726.37 "Receptacles with Arc-Fault and Ground-Fault Protective Devices" for additional wiring device products.
7. Section 270528 "Pathways for Communications Systems" and Section 271100 "Communications Equipment Room Fittings" specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.

1.3 DEFINITIONS

A. AFCI: Arc-Fault Circuit Interrupter.

B. GFCI: Ground-Fault Circuit Interrupter.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.7 QUALIFICATIONS

A. Electrical Power Testing and Inspecting Agency: Entity possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements" and possessing active credentials from a qualified electrical testing laboratory.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory, and marked for intended location and application.

2.2 GENERAL-USE SWITCHES, DIMMER SWITCHES, AND FAN-SPEED CONTROLLER SWITCHES

A. Toggle Switch :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
    b. Leviton Manufacturing Co., Inc.
    c. Pass & Seymour; Legrand North America, LLC.
    d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: UL CCN WMUZ and UL 20.
4. Standard Features:

    a. Device Color: As indicated on architectural Drawings.
    b. Configuration:

        1) General-duty, 120-277 V, 20 A, single pole double pole three way four way.

5. Accessories:

    a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
    b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Rocker Switch :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
    b. Leviton Manufacturing Co., Inc.
    c. Pass & Seymour; Legrand North America, LLC.
    d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: UL CCN WMUZ and UL 20.
4. Standard Features:

    a. Device Color: As indicated on architectural Drawings.
    b. Configuration:

        1) 120-277 V, 20 A, single pole double pole three way four way.

C. Type I Dimmer Switch :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
    b. Leviton Manufacturing Co., Inc.
    c. Lutron Electronics Co., Inc.
    d. Pass & Seymour; Legrand North America, LLC.
    e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: UL CCN EOYX and UL 1472.
4. Standard Features:

    a. UL 1472 Type I dimmer.
    b. Device Color: As indicated on architectural Drawings.
    c. Switch Style: Rocker or Push button.
    d. Dimming Control Style: Slide or Rotary.

D. Air-Gap Fan-Speed Controller Switch :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
    b. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
    c. Leviton Manufacturing Co., Inc.

d. Pass & Seymour; Legrand North America, LLC.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: UL CCN GQHG and UL 1917.
4. Standard Features:

a. Device Color: As indicated on architectural Drawings.

5. Accessories:

a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.3 GENERAL-GRADE SINGLE STRAIGHT-BLADE RECEPTACLES

A. Single Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
b. Leviton Manufacturing Co., Inc.
c. Pass & Seymour; Legrand North America, LLC.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.

3. Standard Features:

a. Device Color: As indicated on architectural Drawings.
b. Configuration:

1) General-duty, NEMA 5-20R, NEMA 5-30R.
2) General-duty, NEMA 6-15R, NEMA 6-20R, and NEMA 6-30R.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

2.4 GENERAL-GRADE DUPLEX STRAIGHT-BLADE RECEPTACLES

A. Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.

b. Leviton Manufacturing Co., Inc.
c. Pass & Seymour; Legrand North America, LLC.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

a. Device Color: As indicated on architectural Drawings.
b. Configuration:

1) General-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. Tamper-Resistant Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
b. Leviton Manufacturing Co., Inc.
c. Pass & Seymour; Legrand North America, LLC.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

a. Device Color: As indicated on architectural Drawings.
b. Configuration:

1) General-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

C. Tamper-Resistant Duplex Straight-Blade Receptacle with USB Outlet to Power Class 2 Equipment :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
b. Leviton Manufacturing Co., Inc.
c. Pass & Seymour; Legrand North America, LLC.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacles for Plugs and Attachment Plugs: UL CCN RTRT and UL 498.
b. Surge Protective Devices: UL 1449, Type 3.

3. Standard Features:

a. Device Color: As indicated on architectural Drawings.
b. Configuration:

1) General-duty, NEMA 5-20R; one USB-A port; one USB-C port.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

D. Wired Full-Controlled Duplex Straight-Blade Receptacle :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Hubbell Lighting; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
b. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
c. Pass & Seymour; Legrand North America, LLC.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Receptacles with Integral Switching Means: UL CCN RTXI and UL Subject 498B.

3. Standard Features:

   a. Device Color: As indicated on architectural Drawings.
   b. Configuration: NEMA 5-20R.

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

   a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
   b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

2.5 RECEPTACLES WITH ARC-FAULT AND GROUND-FAULT PROTECTIVE DEVICES

A. General-Grade, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
   b. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
   c. Leviton Manufacturing Co., Inc.
   d. Pass & Seymour; Legrand North America, LLC.
   e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

   a. Device Color: As indicated on architectural Drawings.
   b. Configuration: Heavy-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

   a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

B. General-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
b. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
c. Leviton Manufacturing Co., Inc.
d. Pass & Seymour; Legrand North America, LLC.
e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: As indicated on architectural Drawings.
b. Configuration: Heavy-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Receptacles:

1. Verify that receptacles to be procured and installed for City of New York-furnished equipment are compatible with mating attachment plugs on equipment.

B. Cord Reels:

1. Examine roughing-in for cord reel mounting and power connections to verify actual locations of mounts and power connections before cord reel installation.
2. Examine walls, floors, and ceilings for suitable conditions where cord reel will be installed.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 SELECTION OF CONTROLLED AND UNCONTROLLED RECEPTACLES

A. Private and Open Office Spaces:

1. Uncontrolled Receptacles at Workstations: Coordinate final locations of receptacles with furniture plan such that at least one uncontrolled receptacle is selected for installation not greater than 6 ft. from each workstation.
2. Controlled Receptacles at Workstations: Coordinate final locations of receptacles with furniture plan such that at least one controlled receptacle is selected for installation not greater than 6 ft. from each workstation.
3. Contact Commissioner for resolution of discrepancies between these requirements and Drawings.

3.4 INSTALLATION OF SWITCHES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Life Safety and Means of Egress Work: NFPA 101.
4. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
5. Wiring Devices: NECA NEIS 130.
6. Mounting Heights: NECA NEIS 1.

C. Interfaces with Other Work:

1. Identification:

a. Identify cover or cover plate for device with panelboard identification and circuit number.
b. Mark cover or cover plate using hot, stamped, or engraved machine printing with black -filled lettering, and provide durable wire markers or tags inside device box or outlet box.
c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

3.5 INSTALLATION OF STRAIGHT-BLADE RECEPTACLES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Work in ITE Rooms: NFPA 75.
5. Work in Confined Spaces: NFPA 350.
6. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
7. Installing and Maintaining Wiring Devices: NECA NEIS 130.
8. Mounting Heights: Unless otherwise indicated in the Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
9. Receptacle Orientation: Unless otherwise indicated in the Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.

C. Interfaces with Other Work:

1. Identification: Provide labels for receptacles and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.

1) Identify cover or cover plate for device with panelboard identification and circuit number.
2) Mark cover or cover plate using hot, stamped, or engraved machine printing with black -filled lettering, and provide durable wire markers or tags inside device box or outlet box.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

3.6 FIELD QUALITY CONTROL OF SWITCHES

A. Administrant for Electrical Power Tests and Inspections:

1. Administer and perform tests and inspections.

B. Tests and Inspections:

1. Perform tests and inspections in accordance with manufacturers' published instructions.

C. Nonconforming Work:

1. Unit will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.7 FIELD QUALITY CONTROL OF STRAIGHT-BLADE RECEPTACLES

A. Administrant for Electrical Power Tests and Inspections:

1. Administer and perform tests and inspections.

B. Tests and Inspections:

1. Insert and remove test plug to verify that device is securely mounted.
2. Verify polarity of hot and neutral pins.
3. Measure line voltage.
4. Measure percent voltage drop.
5. Measure grounding circuit continuity; impedance must be not greater than 2 ohms.
6. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' published instructions.

C. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.8 SYSTEM STARTUP FOR SWITCHES

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.

3.9 ADJUSTING

A. Occupancy Adjustments for Controlled Receptacles: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to the Project during other-than-normal occupancy hours for this purpose.

3.10 PROTECTION

A. Devices:

1. Schedule and sequence installation to minimize risk of contamination of wires and cables, devices, device boxes, outlet boxes, covers, and cover plates by plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other materials.
2. After installation, protect wires and cables, devices, device boxes, outlet boxes, covers, and cover plates from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 262726

SECTION 262726.37 - RECEPTACLES WITH ARC-FAULT AND GROUND-FAULT PROTECTIVE DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Receptacles with GFCI devices.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
2. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
3. Section 260533.16 "Boxes and Covers for Electrical Systems" specifies covers and cover plates referenced by this Section.
4. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.

1.3 DEFINITIONS

A. AFCI: Arc-Fault Circuit Interrupter.

B. GFCI: Ground-Fault Circuit Interrupter.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by a qualified electrical testing laboratory, and marked for intended location and application.

2.2 RECEPTACLES WITH GFCI DEVICES

A. General-Grade Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
b. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
c. Leviton Manufacturing Co., Inc.
d. Pass & Seymour; Legrand North America, LLC.
e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: As indicated on architectural Drawings.
b. Configuration: Heavy-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

B. General-Grade, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
b. Leviton Manufacturing Co., Inc.
c. Pass & Seymour; Legrand North America, LLC.
d. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

    a. Device Color: As indicated on architectural Drawings.
    b. Configuration: Heavy-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

C. General-Grade, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
    b. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
    c. Leviton Manufacturing Co., Inc.
    d. Pass & Seymour; Legrand North America, LLC.
    e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

    a. Device Color: As indicated on architectural Drawings.
    b. Configuration: Heavy-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

    a. Has factory-terminated connectors on wiring device pigtails for quick installation.

D. General-Grade, Weather-Resistant Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
    b. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
    c. Leviton Manufacturing Co., Inc.
    d. Pass & Seymour; Legrand North America, LLC.
    e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: As indicated on architectural Drawings.
b. Configuration: Heavy-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

E. General-Grade, Weather-Resistant, Tamper-Resistant Duplex Straight-Blade Receptacle with GFCI Device:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
b. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
c. Leviton Manufacturing Co., Inc.
d. Pass & Seymour; Legrand North America, LLC.
e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: As indicated on architectural Drawings.
b. Configuration: Heavy-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

F. General-Grade, Weather-Resistant, Tamper-Resistant, Nightlight-Type, Lighted Duplex Straight-Blade Receptacle with GFCI Device :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrow Hart, Wiring Devices; Eaton, Electrical Sector.
b. Hubbell Wiring Device-Kellems; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
c. Leviton Manufacturing Co., Inc.
d. Pass & Seymour; Legrand North America, LLC.
e. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Receptacle GFCIs: UL CCN KCXS, UL 498, and UL 943.

3. Standard Features:

a. Device Color: As indicated on architectural Drawings.
b. Configuration: Heavy-duty, NEMA 5-20R.

4. Other Available Features Required by the Project:

a. Has factory-terminated connectors on wiring device pigtails for quick installation.

5. Accessories:

a. Cover Plate: 0.060 inch thick, high-impact thermoplastic (nylon) with smooth finish and color matching wiring device; from same manufacturer as wiring device.
b. Securing Screws for Cover Plate: Metal with head color matching wallplate finish.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Verify that receptacles to be procured and installed for City of New York-furnished equipment are compatible with mating attachment plugs on equipment.

3.3 SELECTION OF GFCI RECEPTACLES

A. Healthcare Facilities: Unless protection of downstream branch-circuit wiring, cord sets, and power-supply cords is required by NFPA 70 or NFPA 99, provide non-feed-through GFCI receptacles.

3.4 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Electrical Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Safety: NFPA 70E.
3. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
4. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
5. Installing and Maintaining Wiring Devices: NECA NEIS 130.
6. Mounting Heights: Unless otherwise indicated in the Contract Documents, comply with mounting heights recommended in NECA NEIS 1.
7. Receptacle Orientation: Unless otherwise indicated in the Contract Documents, orient receptacle to match configuration diagram in NEMA WD 6.

C. Interfaces with Other Work:

1. Identification: Provide labels for receptacles and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.

1) Identify cover or cover plate for device with panelboard identification and circuit number.

c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.

2. Do not install Type 3 SPD, including surge-protected relocatable taps and power strips, on branch circuit downstream of GFCI device.

3.5 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. Administer and perform tests and inspections.

B. Tests and Inspections:

1. Insert and remove test plug to verify that device is securely mounted.
2. Verify polarity of hot and neutral pins.
3. Measure line voltage.
4. Measure percent voltage drop.
5. Healthcare Facilities: Test straight-blade receptacles in patient care spaces with receptacle pin tension test instrument in accordance with NFPA 99. Retention force of ground pin must be not less than 115 g (4 oz).
6. Perform additional installation and maintenance inspections and diagnostic tests in accordance with NECA NEIS 130 and manufacturers' published instructions.

C. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.6 PROTECTION

A. Schedule and sequence installation to minimize risk of contamination of wires and cables, devices, device boxes, outlet boxes, covers, and cover plates by plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other materials.

B. After installation, protect wires and cables, devices, device boxes, outlet boxes, covers, and cover plates from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 262726.37

SECTION 262813 - FUSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Nonrenewable cartridge fuses.
2. Spare-fuse cabinets.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
2. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
3. Section 260573 "Power System Studies" specifies coordination studies, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.6 FIELD CONDITIONS

A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F or more than 100 deg F, apply manufacturer's ambient temperature adjustment factors to fuse ratings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by a qualified electrical testing laboratory, and marked for intended location and application.

2.2 NONRENEWABLE CARTRIDGE FUSES

A. Class CC Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Bussmann, an Eaton business.
b. Edison; a brand of Bussmann by Eaton.
c. Littelfuse, Inc.
d. Mersen USA.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. NEMA FU 1, Class CC, 200 kA(sym) interrupt rating, current limiting, sizes up to 30 A, 600 V(ac), 12 s minimum time-delay at 200 percent, with rejection feature.

B. Class J Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Bussmann, an Eaton business.
b. Edison; a brand of Bussmann by Eaton.
c. Littelfuse, Inc.
d. Mersen USA.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. NEMA FU 1, Class J, 200 kA(sym) interrupt rating, current limiting, sizes up to 600 A, 600 V(ac), 8 to 10 s minimum time-delay at 500 percent, with rejection feature.

C. Class L Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Bussmann, an Eaton business.

b. Edison; a brand of Bussmann by Eaton.
c. Littelfuse, Inc.
d. Mersen USA.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. NEMA FU 1, Class L, 300 kA(sym) interrupt rating, current limiting, sizes 100 to 6000 A, 600 V(ac), 10 s minimum time-delay at 500 percent , with rejection feature, with bolt-on terminals.

D. Class RK1 Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Bussmann, an Eaton business.
b. Edison; a brand of Bussmann by Eaton.
c. Littelfuse, Inc.
d. Mersen USA.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. NEMA FU 1, Class RK1, 200 kA(sym) interrupt rating, current limiting, sizes up to 600 A, 600 V(ac), 8 to 10 s minimum time-delay at 500 percent, with rejection feature.

1) Select ferrule terminals or knife blade terminals to match equipment where fuse is installed.

E. Class RK5 Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Bussmann, an Eaton business.
b. Edison; a brand of Bussmann by Eaton.
c. Littelfuse, Inc.
d. Mersen USA.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. NEMA FU 1, Class RK5, 200 kA(sym) interrupt rating, current limiting, sizes up to 600 A, 600 V(ac), 8 to 10 s minimum time-delay at 500 percent, with rejection feature.

1) Select ferrule terminals or knife blade terminals to match equipment where fuse is installed.

F. Class T Nonrenewable Cartridge Fuse :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Bussmann, an Eaton business.
b. Edison; a brand of Bussmann by Eaton.
c. Littelfuse, Inc.
d. Mersen USA.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Standard Features:

a. NEMA FU 1, Class T, 200 kA(sym) interrupt rating, current limiting, sizes up to 1200 A, 600 V(ac), 8 to 10 s minimum time-delay at 500 percent , with rejection feature.

1) Select ferrule terminals or knife blade terminals to match equipment where fuse is installed.

2.3 SPARE-FUSE CABINET

A. Characteristics: Wall-mounted steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.

1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
2. Finish: Gray, baked enamel.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.

B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.

C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.

D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION OF FUSES

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Electrical Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Work in Confined Spaces: NFPA 350.
5. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
6. Fuse Applications: NECA NEIS 420.
7. Work with Fuses in Motor Control Centers: NECA NEIS 402.

C. Provide open-fuse indicator fuses or fuse covers with open fuse indication.

D. Install spare-fuse cabinet(s) in location indicated on the Drawings or as indicated in the field by Commissioner.

E. Interfaces with Other Work:

1. Identification: Provide labels for spare fuse cabinet.

a. Legend: "SPARE FUSES" in 1-1/2 inch high letters on exterior of door.

2. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with results of coordination study and arc-flash hazard analysis.

END OF SECTION 262813

SECTION 262816 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Fusible switches.
2. Nonfusible switches.
3. Shunt trip switches.
4. Enclosures.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.

1.3 DEFINITIONS

A. GFEP: Ground-fault circuit-interrupter for equipment protection.

B. GFLS: Ground-fault circuit-interrupter for life safety.

C. SPDT: Single pole, double throw.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data:

1. For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include nameplate ratings, dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
2. Enclosure types and details for types other than UL 50E, Type 1.
3. Current and voltage ratings.

4. Short-circuit current ratings (interrupting and withstand, as appropriate).

B. Shop Drawings: For enclosed switches and circuit breakers.

1. Include plans, elevations, sections, details, and attachments to other work.
2. Include wiring diagrams for power, signal, and control wiring.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Source Limitations: Obtain products from single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.

2.2 FUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB, Electrification Business.
2. Eaton.
3. Siemens Industry, Inc., Energy Management Division.
4. Square D; Schneider Electric USA.
5. Or approved equal.

B. Type HD, Heavy Duty:

1. Single throw.
2. Three pole.
3. 240 600 V(ac).
4. Lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

C. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Auxiliary Contact Kit: NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open. Contact rating - 120 V(ac).
4. Lugs: Compression type, suitable for number, size, and conductor material.

2.3 NONFUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB, Electrification Business.
2. Eaton.
3. Siemens Industry, Inc., Energy Management Division.
4. Square D; Schneider Electric USA.
5. Or approved equal.

B. Type GD, General Duty, Three Pole, Single Throw, 240 V(ac), 600 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

C. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Auxiliary Contact Kit: NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open. Contact rating - 120 V(ac).
4. Lugs: Compression type, suitable for number, size, and conductor material.

2.4 SHUNT TRIP SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bussmann; Eaton, Electrical Sector.
2. Littelfuse, Inc.
3. Mersen USA.
4. Or approved equal.

B. General Requirements: Comply with ASME A17.1, UL 50, and UL 98, with Class J fuse block and 200 kA interrupting and short-circuit current rating.

C. Type HD, Heavy-Duty, Three Pole, Single-Throw Fusible Switch: 240 600 V(ac), A; UL 98 and NEMA KS 1; integral shunt trip mechanism; horsepower rated, with clips or bolt pads to accommodate fuses; lockable handle with capability to accept three padlocks; interlocked with cover in closed position.

D. Accessories:

1. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
2. Lugs: Compression type, suitable for number, size, and conductor material.

2.5 ENCLOSURES

A. Enclosed Switches and Circuit Breakers: UL 489, NEMA KS 1, UL 50E, and UL 50, to comply with environmental conditions at installed location.

B. Enclosure Finish: Enclosure must be gray baked enamel paint, electrodeposited on cleaned, phosphatized steel (UL 50E Type 1) gray baked enamel paint, electrodeposited on cleaned, phosphatized galvannealed steel (UL 50E Types 3R, 12).

C. Conduit Entry: UL 50E Types 4, 4X, and 12 enclosures may not contain knockouts. UL 50E Types 7 and 9 enclosures must be provided with threaded conduit openings in both endwalls.

D. Operating Mechanism: Circuit-breaker operating handle must be externally operable with operating mechanism being integral part of box, not cover directly operable through front cover of enclosure (UL 50E Type 1). Cover interlock mechanism must have externally operated override. Override may not permanently disable interlock mechanism, which must return to locked position once override is released. Tool used to override cover interlock mechanism must not be required to enter enclosure in order to override interlock.

E. Enclosures designated as UL 50E Type 4, 4X stainless steel, 12, or 12K must have dual cover interlock mechanism to prevent unintentional opening of enclosure cover when circuit breaker is ON and to prevent turning circuit breaker ON when enclosure cover is open.

F. UL 50E Type 7/9 enclosures must be furnished with breather and drain kit to allow their use in outdoor and wet location applications.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Commencement of work will indicate Installer's acceptance of areas and conditions as satisfactory.

3.3 SELECTION OF ENCLOSURES

A. Indoor, Dry and Clean Locations: UL 50E, Type 1.

B. Outdoor Locations: UL 50E, Type 3R.

C. Kitchen Areas: UL 50E, Type 4X, stainless steel.

D. Other Wet or Damp, Indoor Locations: UL 50E, Type 4.

E. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: UL 50E, Type 12.

3.4 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Special Techniques:

1. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
2. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.
3. Temporary Lifting Provisions: Remove temporary lifting of eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
4. Install fuses in fusible devices.

3.5 IDENTIFICATION

A. Comply with requirements in Section 260553 "Identification for Electrical Systems."

1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.6 FIELD QUALITY CONTROL

A. Tests and Inspections for Switches:

1. Visual and Mechanical Inspection:

a. Inspect physical and mechanical condition.
b. Inspect anchorage, alignment, grounding, and clearances.
c. Verify that unit is clean.
d. Verify blade alignment, blade penetration, travel stops, and mechanical operation.
e. Verify that fuse sizes and types match the Specifications and Drawings.
f. Verify that each fuse has adequate mechanical support and contact integrity.
g. Verify that operation and sequencing of interlocking systems is as described in the Specifications and shown on Drawings.
h. Verify correct phase barrier installation.
i. Verify lubrication of moving current-carrying parts and moving and sliding surfaces.

2. Electrical Tests:

a. Perform resistance measurements through bolted connections with low-resistance ohmmeter. Compare bolted connection resistance values to values of similar connections. Investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
b. Measure contact resistance across each switchblade fuseholder. Drop values may not exceed high level of manufacturer's published data. If manufacturer's published data are not available, investigate values that deviate from adjacent poles or similar switches by more than 50 percent of lowest value.
c. Measure fuse resistance. Investigate fuse-resistance values that deviate from each other by more than 15 percent.

B. Nonconforming Work:

1. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

C. Collect, assemble, and submit test and inspection reports.

1. Test procedures used.
2. Include identification of each enclosed switch and circuit breaker tested and describe test results.
3. List deficiencies detected, remedial action taken, and observations after remedial action.

3.7 ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

3.8 PROTECTION

A. After installation, protect enclosed switches and circuit breakers from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 262816

SECTION 263323 - CENTRAL BATTERY EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Emergency lighting and power equipment.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
2. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding referenced by this Section.
3. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
4. Section 260533.13 "Conduits for Electrical Systems" specifies raceways referenced by this Section.
5. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs referenced by this Section.
6. Section 260573 "Power System Studies" specifies coordination study report, arc-flash hazard analysis, warning labels, and circuit-breaker trip ranges referenced by this Section.

1.3 DEFINITIONS

A. Extra-Low Voltage (ELV): Not having electromotive force between any two conductors, or between a single conductor and ground, exceeding 30 V(ac rms), 42 V(ac peak), or 60 V(dc).

B. Interruptible: As used in the Section Text, an off-line, passive-standby or line-interactive, inverter-only unit, with an intentional interruption of power to the load until an internal transfer switch picks up and transfers the load to the unit's inverter and internal battery source on loss of the "normal" source, and then retransfers to the "normal" source when it is restored. Transfer time can be "slow" (up to approximately 1 second) or "fast" (2-4 ms or 40-50 ms, depending on manufacturer).

C. Li-ion: Lithium-ion.

D. Ni-Cd: Nickel-cadmium.

E. OCPD: Overcurrent protective device.

F. PWM: Pulse-width modulated.

G. TDD: Total demand (harmonic current) distortion (also listed as "THD" in catalog data by manufacturers).

H. THD(V): Total harmonic voltage distortion.

I. Uninterruptible: As used in the Section Text, an on-line, double-conversion (rectifier/inverter) unit, with no interruption of power to the load on interruption and restoration of the "normal" source.

J. UPS: Uninterruptible power supply.

K. VRLA: Valve-regulated lead acid.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Shop Drawings: Prepare and submit the following for each central battery equipment unit:

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, ventilation requirements, method of field assembly, components, and location and size of each field connection.
3. Include system one-line diagram, internal and interconnecting wiring, and diagrams for power, signal, and control wiring.
4. Include elevation, details, and legends of control and indication displays.
5. Include -circuit current (withstand) rating of unit.
6. Layout Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around central battery equipment. Show central battery equipment layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

1.6 INFORMATIONAL SUBMITTALS

A. Manufacturer's published instructions.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.8 DELIVERY, STORAGE, AND HANDLING

A. Receive, inspect, handle, and store central battery equipment in accordance with NECA NEIS 411.

B. Deliver equipment in fully enclosed vehicles.

C. Store equipment in spaces having environments controlled in accordance with manufacturer's published instructions for ambient temperature and humidity conditions for non-operating equipment.

1.9 FIELD CONDITIONS

A. Product Selection for Restricted Space: Drawings indicate maximum dimensions for central battery equipment, including clearances between central battery equipment and adjacent surfaces and other items.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Performance Criteria:

1. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory, and marked for intended location and application.
2. Withstand Requirement: Unit must remain in place without separation of parts when subjected to specified criteria during seismic events and unit must be fully operational after seismic events.
3. Component Importance Factor (I_p): 1.5.
4. Component Overstrength Factor (Ω_o): 2.5.

2.2 EMERGENCY LIGHTING AND POWER EQUIPMENT

A. Description: This product group includes electrical emergency lighting and power equipment for use in accordance with UL 924, NFPA 101, Article 700 of NFPA 70, and ICC IBC.

B. Interruptible (Fast-Transfer) Emergency Lighting Inverter :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Dual-Lite; brand of GE Current, a Daintree company; American Industrial Partners (AIP).
c. Eaton.
d. Lithonia Lighting; Acuity Brands Lighting, Inc.
e. Myers Emergency Power Systems.
f. Myers Power Products, Inc.
g. Philips; Signify North America; Signify Holding.
h. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Emergency Lighting and Power Equipment: UL CCN FTBR, including UL 924, NFPA 101, Article 700 of NFPA 70, and ICC IBC.

3. Standard Features:

a. Uninterruptible Power Characteristics: NEMA PE 1.
b. Fast-Transfer Central Battery Equipment: Line-interactive (on-line) system. Automatically sense loss of normal AC supply and use a solid-state static switch to transfer load. Transfer in 2-4 40-50 ms or less from normal supply to battery-inverter supply.
c. Automatic Operation:

1) Normal Conditions: Supply the load with AC power flowing from normal AC power input terminals, bypassing inverter, with battery connected in parallel via rectifier/charger output.
2) Abnormal Supply Conditions: If normal AC supply deviates from specified voltage, transfer switch operates and battery supplies constant, regulated AC power through the inverter to the load, with a momentary loss of power to the load.
3) If normal power fails, transfer switch operates and battery supplies constant, regulated AC power through the inverter to the load, with a momentary loss of power to the load.
4) If a fault occurs in system when being supplied by inverter and current flows in excess of the overload rating of inverter, inverter automatically protects itself against damage from overloads and short circuits by shutting down.
5) When normal AC power is restored at input supply terminals of unit, controls automatically retransfer the load back to the normal AC supply, with a momentary loss of power to the load. Rectifier/charger then recharges battery.
6) If normal power failure is prolonged (more than 90 minutes), integral low-voltage battery protective circuit disconnects battery and prevents battery from damage due to deep discharge.
7) If battery becomes discharged, and when normal AC supply is again available, rectifier/charger recharges battery. When battery is fully charged, rectifier/charger automatically shifts to float-charge mode.
8) If battery is disconnected, and normal AC power is available, central battery equipment continues to supply power to the load with no degradation of its regulation of voltage and frequency of output bus.

d. Unit Operating Requirements:

1) Minimum Off-Line Efficiency: 95 99 percent at 60 Hz, full load.
2) Minimum Displacement Primary-Side Power Factor: 96 98 percent under any load or operating condition.
3) Ambient Temperature Rating (Other than Batteries): Not less than 68 deg F and not exceeding 86 deg F.
4) Ambient Storage Temperature Rating (Other than Batteries): Not less than minus 4 deg F and not exceeding 158 deg F.
5) Ambient Temperature Rating (Batteries): Not less than 32 deg F and not exceeding 104 deg F.
6) Ambient Storage Temperature Rating (Batteries): Not less than 0 deg F and not exceeding 104 deg F.
7) Humidity Rating: Less than 95 percent (noncondensing).
8) Altitude Rating: Not exceeding 3300 ft.
9) Off-Line Overload Capability: 1.1 1.5 times the base load current for 60 seconds; minimum of 1.8 times the base load current for three seconds.

e. Inverter and Controls Logic: Microprocessor based, isolated from all power circuits; provides complete self-diagnostics, periodic automatic testing and reporting; with alarms.
f. Controls and Indication:

1) Status Indication: Door-mounted, labeled LED indicators or digital screen displaying the following conditions:

a) Normal power available.
b) Status of system.
c) Battery charging status.
d) On battery power.
e) System fault.
f) External fault.

2) Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.
3) Keypad: In addition to required programming and control keys, include the following:
4) Digital Display: Plain-English language messages on a digital display; provide the following historical logging information and displays:

a) Alarm Logs: Record and store up to 25 alarms.
b) Metering Functions: Display central battery equipment metering parameters.
c) Alarm Functions: Digital display mounted flush in unit door and connected to display central battery equipment parameters.

5) Remote Signal Interfaces:

a) Remote Indication Interface: A minimum of one programmable (Form C) dry-circuit relay output(s), 120 V(ac), 2 A, for remote indication.

6) Communications Interface: Factory-installed hardware and software to enable a remote PC to program central battery equipment and monitor and display status and alarms.

a) Network Communications Ports: Ethernet.

g. Self-Protection and Reliability Features:

1) Input transient protection by means of surge suppressors to provide protection against damage from supply voltage surges as defined in IEEE C62.45, Category B and C.
2) Integral, programmable, self-diagnostic and self-test circuitry; with alarms and logging.
3) Battery deep-discharge and self-discharge protection; with alarms.
4) Battery self-test circuitry; with alarms and logging.

h. Integral Input Disconnecting Means and OCPD: Thermal-magnetic circuit breaker, complying with UL 489.

1) Integrated Equipment Minimum Short-Circuit Current (Withstand) Rating: 22 kA.

i. Inverter: Solid-state, high-frequency, PWM type, with the following operational features:

1) Automatically regulate output voltage to within plus or minus 3 percent, for all load ranges and for maximum 25 percent step-load changes; regulation may increase to percent for 100 percent step-load changes.
2) Load Power Factor: 0.5 lead to 0.5 lag.
3) Brownout Protection: Produces rated power without draining batteries when input voltage is down to 75 percent of normal.

j. Rectifier/Battery Charger:

1) Solid state, variable rate, temperature compensated; automatically maintains batteries in fully charged condition when normal power is available.
2) Maximum Battery Recharge Time from Fully Discharged State: 24 hours.
3) Low-voltage disconnect circuit reduces battery discharge during extended power outages, monitors battery voltage, and disconnects inverter when battery voltage drops to no less than 87.5 percent of nominal voltage.

k. Batteries: Premium VRLA Ni-Cd, wet-cell batteries.

1) Capable of sustaining full-capacity output of inverter unit for minimum of 90 minutes.
2) Battery Disconnect and OCPD: Manufacturer's standard.

l. Maintenance Bypass Mode:

1) Internal; manual operation only; bypasses central battery equipment power circuits (inverter and static transfer switch); requires local operator selection at central battery equipment. Transfer and retransfer must be break-before-make, with temporary disrupting power to the load.
2) External; manual operation only; bypasses central battery equipment completely; requires local operator selection at external switch enclosure remote from central battery equipment. Transfer and retransfer must be break-before-make, with disrupting power to the load.

m. Bypass Overload Capability: 1.5 times the base load current.
n. Integral Output Disconnecting Means and OCPD:

1) Multiple-Output OCPDs: Thermal-magnetic circuit breakers, complying with UL 489; voltage rating matching unit output voltage rating; 20 A, single pole.

a) Normally Open: 2.

o. Enclosures: UL 50E, listed for environmental conditions at installed location.

1) Dry and Clean Indoor Locations: Type 1 steel cabinets with access to components through hinged doors with flush tumbler lock and latch.
2) Finish: Manufacturer's standard baked-enamel finish over corrosion-resistant prime treatment.

C. Uninterruptible (UPS-Type) Emergency Lighting Inverter :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Dual-Lite; brand of GE Current, a Daintree company; American Industrial Partners (AIP).
c. Eaton.
d. Lithonia Lighting; Acuity Brands Lighting, Inc.
e. Myers Power Products, Inc.
f. Philips; Signify North America; Signify Holding.
g. Or approved equal.

2. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Emergency Lighting and Power Equipment: UL CCN FTBR, including UL 924, NFPA 101, Article 700 of NFPA 70, and ICC IBC.

3. Standard Features:

   a. Uninterruptible Power Characteristics: NEMA PE 1.
   b. Type: On-line, double conversion.
   c. Continuously provide uninterrupted AC power to connected emergency electrical lighting system.
   d. Automatic Operation:

      1) Normal Conditions: Supply the load with AC power flowing from normal AC power input terminals, through rectifier and inverter, with battery connected in parallel with rectifier output.
      2) Abnormal Supply Conditions: If normal AC supply deviates from specified and adjustable voltage, voltage waveform, or frequency limits, battery supplies constant, regulated, inverter AC power output to the load without switching or disturbance.
      3) If normal power fails, battery continues to supply regulated AC power through the inverter to the load without switching or disturbance.
      4) When power is restored at normal supply terminals of system, controls automatically synchronize inverter with the external source before transferring the load. Rectifier then supplies power to the load through the inverter and simultaneously recharges battery.
      5) If battery becomes discharged and normal supply is available, rectifier charges battery. When battery is fully charged, rectifier automatically shifts to float-charge mode.
      6) If any element in the rectifier/inverter string fails and power is available at normal supply terminals of system, static transfer switch transfers the load to normal AC supply circuit without disturbance or interruption of supply.
      7) If a fault occurs in system supplied by the inverter output, and current flows in excess of the overload rating of the inverter, static transfer switch operates to bypass fault current to normal AC supply circuit for fault clearing.
      8) When fault has cleared, static transfer switch returns the load to inverter output.
      9) If battery is disconnected, inverter continues to supply power to the load with no degradation of its regulation of voltage and frequency of output bus.

   e. Manual Operation:

      1) Turning inverter off causes static transfer switch to transfer the load directly to normal AC supply circuit without disturbance or interruption.

2) Turning inverter on causes static transfer switch to transfer the load to inverter.

f. Unit Operating Requirements:

1) Minimum Off-Line Efficiency: 95 99 percent at 60 Hz, full load.
2) Minimum Displacement Primary-Side Power Factor: 96 98 percent under any load or operating condition.
3) Ambient Temperature Rating (Other than Batteries): Not less than 68 deg F and not exceeding 86 deg F.
4) Ambient Storage Temperature Rating (Other than Batteries): Not less than minus 4 deg F and not exceeding 158 deg F.
5) Ambient Temperature Rating (Batteries): Not less than 32 deg F and not exceeding 104 deg F.
6) Ambient Storage Temperature Rating (Batteries): Not less than 0 deg F and not exceeding 104 deg F.
7) Humidity Rating: Less than 95 percent (noncondensing).
8) Altitude Rating: Not exceeding 3300 ft.

g. Inverter and Controls Logic: Microprocessor based, isolated from all power circuits; provides complete self-diagnostics, periodic automatic testing and reporting; with alarms.

h. Status Indication: Door-mounted, labeled LED indicators or digital screen displaying the following conditions:

1) Normal power available.
2) Status of system.
3) Battery charging status.
4) On battery power.
5) System fault.
6) External fault.

i. Panel-Mounted Operator Station: Manufacturer's standard front-accessible, sealed keypad and plain-English language digital display; allows complete programming, program copying, operating, monitoring, and diagnostic capability.

1) Keypad.
2) Digital Display: Plain-English language messages on a digital display; provide the following historical logging information and displays:

a) Real-time clock with current time and date.
b) Tests and Events Logs: Record and store up to 50 tests and events.

3) Alarm Logs: Record and store up to 50 alarms.
4) Alarm Functions: Digital display mounted flush in unit door and connected to display central battery equipment parameters.

j. Remote Signal Interfaces:

1) Communications Interface: Factory-installed hardware and software to enable a remote PC to monitor and display status and alarms.

a) Network Communications Ports: Ethernet.

k. Self-Protection and Reliability Features:

1) Input transient protection by means of surge suppressors to provide protection against damage from supply voltage surges as defined in IEEE C62.45, Category B and C.
2) Integral, programmable, self-diagnostic and self-test circuitry; with alarms and logging.
3) Battery deep-discharge and self-discharge protection; with alarms.
4) Battery self-test circuitry; with alarms and logging.

l. Integral Input Disconnecting Means and OCPD: Thermal-magnetic circuit breaker, complying with UL 489.

1) Integrated Equipment Minimum Short-Circuit Current (Withstand) Rating: 22 kA.

m. Rectifier: Solid state, with the following operational features:

1) Automatically convert incoming AC voltage to regulated DC bus voltage, with less than 2 percent RMS ripple voltage with inverter fully loaded and batteries disconnected.
2) Rectified Efficiency: Not less than 97 percent.

n. Battery Charger:

1) Solid state, variable rate, temperature compensated; automatically maintains batteries in fully charged condition when normal power is available.
2) Maximum Battery Recharge Time from Fully Discharged State: 24 hours.
3) Low-voltage disconnect circuit reduces battery discharge during extended power outages, monitors battery voltage, and disconnects inverter when battery voltage drops to no less than 87.5 percent of nominal voltage.

o. Batteries: Premium VRLA Ni-Cd, wet-cell batteries.

1) Capable of sustaining full-capacity output of inverter unit for minimum of 90 minutes.
2) Battery Disconnect and OCPD: Manufacturer's standard.

p. Maintenance Bypass Mode:

1) Internal; manual operation only; bypasses central battery equipment power circuits (inverter and static transfer switch); requires local operator selection at central battery equipment. Transfer and retransfer must be break-before-make, with temporary disrupting power to the load.
2) External; manual operation only; bypasses central battery equipment completely; requires local operator selection at external switch enclosure remote from central battery equipment. Transfer and retransfer must be break-before-make, with disrupting power to the load.

q. Bypass Overload Capability: 1.5 times the base load current.
r. Integral Output Disconnecting Means and OCPD:

1) Single-Output OCPD: Thermal-magnetic circuit breaker, complying with UL 489; manufacturer's standard ratings based on unit output ratings.

2) Multiple-Output OCPDs: Thermal-magnetic circuit breakers, complying with UL 489; voltage rating matching unit output voltage rating; 20 A, single pole.

a) Normally Closed: 2 ; with trip alarm ; with time delay.

s. Enclosures: UL 50E, listed for environmental conditions at installed location.

1) Dry and Clean Indoor Locations: Type 1 steel cabinets with access to components through hinged doors with flush tumbler lock and latch.
2) Finish: Manufacturer's standard baked-enamel finish over corrosion-resistant prime treatment.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine areas, surfaces, and substrates to receive central battery equipment, with Installer present, for compliance with requirements for installation tolerances, structural support, ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that manufacturer's published instructions for environmental conditions have been permanently established in spaces where equipment will be installed, before installation begins.

B. Examine equipment before installation. Reject equipment that is wet, moisture damaged, or mold damaged.

C. Examine roughing-in for electrical connections to verify actual locations of connections before installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION OF CENTRAL BATTERY EQUIPMENT

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Electrical Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Electrical Maintenance: NFPA 70B.
3. Electrical Safety: NFPA 70E.
4. Commissioning of Electrical Systems: NECA NEIS 90.
5. Commissioning of Active and Passive Fire Protection Features: NFPA 3 and NFPA 4.
6. Fire-Alarm and Premises Security Work: NFPA 72 and NECA NEIS 305.
7. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.

8. Work in ITE Rooms: NFPA 75.
9. Life-Safety and Means-of-Egress Work: NFPA 101.
10. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
11. Work in Confined Spaces: NFPA 350.
12. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
13. Evaluation of Unlabeled Electrical Equipment: NFPA 791.
14. Installing and Maintaining Uninterruptible Power Supplies: NECA NEIS 411.

C. Special Installation Techniques:

1. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
2. Coordinate layout and installation of central battery equipment with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.
3. Wall-Mounted Central Battery Equipment: Install central battery equipment on walls with tops at uniform height and with disconnect operating handles not higher than 79 inch above finished floor unless otherwise indicated. Bolt units to wall or mount on lightweight structural-steel channels bolted to wall.
4. Connections: Interconnect system components. Make connections to supply and load circuits in accordance with manufacturer's wiring diagrams unless otherwise indicated.
5. Wiring Methods:

    a. Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters.
    b. Install cables in raceways and cable trays except within consoles, cabinets, desks, counters, accessible ceiling spaces, and gypsum board partitions where unenclosed wiring method may be used.
    c. Install conductors and cables concealed in accessible ceilings, walls, and floors where possible.
    d. Conceal raceway and cables except in unfinished spaces.
    e. Provide plenum-rated cable, where installed exposed or in open cable tray, within environmental airspaces, including plenum ceilings.
    f. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

D. Interfaces with Other Work:

1. Hangers and Supports:

    a. Suspended-Mounted Central Battery Equipment: Suspend central battery equipment from structural ceiling components using hangers, clamps, and associated fittings, designed for types and sizes of units to be supported.
    b. Floor-Mounted Central Battery Equipment: Install central battery equipment on concrete base.

        1) Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18 inch centers around the full perimeter of concrete base.
        2) For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

3) Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4) Install anchor bolts to elevations required for proper attachment to supported equipment.

2. Grounding and Bonding: Ground and bond equipment.

a. Separately Derived Systems: Make grounding connections to grounding electrodes and bonding connections to metallic piping systems as indicated; comply with Article 250 of NFPA 70.

3. Identification: Provide labels for central battery equipment and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label each enclosure with engraved metal or laminated-plastic nameplate.
c. Provide warning signs and arc-flash hazard warning labels for electrical equipment.
d. Operating Instructions: Frame printed operating instructions for central battery equipment, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of central battery equipment units.

3.4 FIELD QUALITY CONTROL

A. Administrant for Electrical Power Tests and Inspections:

1. Administer and perform tests and inspections.

B. Acceptance Testing Preparation:

1. Inspect and Test Each Component:

a. Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.
b. Test insulation resistance for all external branch circuit, feeder, control, and alarm wiring connected to central battery equipment element and component.
c. Test continuity of each circuit.

C. Tests and Inspections:

1. Inspect central battery equipment, wiring, components, connections, and equipment installation. Test and adjust components and equipment.
2. Test insulation resistance for all external branch circuit, feeder, control, and alarm wiring connected to central battery equipment element and component.
3. Test continuity of each circuit.
4. Perform each visual and mechanical inspection and electrical test stated in manufacturer's published instructions and in NETA ATS, including specifically those for batteries, battery chargers, and UPS, regardless of the type of central battery equipment provided. Certify compliance with test parameters.
5. Perform a load-duration test at rated voltage and rated output current to verify the correct functional operation of the unit under full-load stable operating conditions for the minimum time limits required by UL 924. Monitor and record ambient temperature and temperatures within the unit.
6. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

D. Nonconforming Work:

1. Equipment will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports. Include notation of deficiencies detected, remedial action taken, and observations made after remedial action.

3.5 STARTUP SERVICE

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.

B. Manufacturer Services: Engage factory-authorized service representative to support system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at the Project site.

3.6 ADJUSTING

A. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

B. Set field-adjustable switches, auxiliary relays, and other adjustable parts.

C. Adjust the trip settings of thermal-magnetic circuit breakers with adjustable, instantaneous-trip elements; install fuses if not factory installed.

D. Set the automatic system test parameters.

E. Set field-adjustable, circuit-breaker trip ranges in accordance with Coordination Study Report.

3.7 CLOSEOUT ACTIVITIES

A. Instruction:

1. Instruct City of New York's personnel on the following topics:

a. How to adjust and operate central battery equipment.
b. How to use and reprogram microprocessor-based control, monitoring, and display functions.

2. Allow City of New York to record instruction sessions.

3.8 PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature in accordance with manufacturer's published instructions until controllers are ready to be energized and placed into service.

B. Replace central battery equipment whose interiors have been exposed to water or other liquids prior to Substantial Completion.

END OF SECTION 263323

SECTION 264313 - SURGE PROTECTIVE DEVICES FOR LOW-VOLTAGE ELECTRICAL POWER CIRCUITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract ."

1.2 SUMMARY

A. Section Includes:

1. Type 1 surge protective devices (SPDs).
2. Type 2 surge protective devices (SPDs).
3. Conductors and cables.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" for additional abbreviations, definitions, submittals, qualifications, testing agencies, and other Project requirements applicable to Work specified in this Section.
2. Section 262416 "Panelboards" for integral SPDs installed by panelboard manufacturer.
3. Section 262726 "Wiring Devices" for integral SPDs installed by receptacle manufacturer.

1.3 DEFINITIONS

A. I_n: Nominal discharge current.

B. Maximum Continuous Operating Voltage (MCOV): The maximum designated RMS value of the power frequency voltage that may be continuously applied to the mode of protection of an SPD.

C. Metal-Oxide Varistor (MOV): An electronic component with a significant bidirectional, nonlinear current-voltage characteristic.

D. Mode(s), Modes of Protection, or Protection Modes: Electrical paths where the SPD offers defense against transient overvoltages. Examples include: line to neutral (L-N), line to ground (L-G), line to line (L-L), and neutral to ground (N-G).

E. SCCR: Short-circuit current rating.

F. Type 1 SPDs: Permanently connected SPDs intended for installation between the secondary of the service transformer and the line side of the service disconnect overcurrent device.

G. Type 2 SPDs: Permanently connected SPDs intended for installation on the load side of the service disconnect overcurrent device, including SPDs located at the branch panel.

H. Type 3 SPDs: Point of utilization SPDs.

I. Type 4 SPDs: Component SPDs, including discrete components, as well as assemblies.

J. Type 5 SPDs: Discrete component surge suppressors, such as MOVs that may be mounted on a printed wiring board, connected by its leads or provided within an enclosure with mounting means and wiring terminations.

K. Voltage Protection Rating (VPR): A rating selected from UL 1449 list of preferred values assigned to each mode of protection.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.

a. Include electrical characteristics, specialties, and accessories for SPDs.
b. Certification of compliance with UL 1449 by qualified electrical testing laboratory including the following information:

1) Tested values for VPRs.
2) In ratings.
3) MCOV, type designations.
4) OCPD requirements.
5) Manufacturer's model number.
6) System voltage.
7) Modes of protection.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 TYPE 1 SURGE PROTECTIVE DEVICES (SPDs)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB (Electrification Products Division).
2. Citel, Inc.
3. Eaton.
4. Leviton Manufacturing Co., Inc.
5. Liebert; a brand of Vertiv.
6. Mersen USA.
7. Schneider Electric USA, Inc.
8. Siemens Industry, Inc., Energy Management Division.
9. Or approved equal.

B. Source Limitations: Obtain devices from single source from single manufacturer.

C. General Characteristics:

1. Reference Standards: UL 1449, Type 1.
2. MCOV: Not less than 125 percent of nominal system voltage for 208Y/120 V and 120/240 V power systems, and not less than 115 percent of nominal system voltage for 480Y/277 V power systems.
3. Protection modes and UL 1449 VPR for grounded wye circuits with 208Y/120 V, three-phase, four-wire circuits must not exceed the following:

    a. Line to Neutral: 700 V for 208Y/120 V.
    b. Line to Line: 1200 V for 208Y/120 V.

4. SCCR: Not less than 200 kA.
5. In Rating: 20 kA.

2.2 TYPE 2 SURGE PROTECTIVE DEVICES (SPDs)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB (Electrification Products Division).
2. Citel, Inc.
3. Eaton.
4. Leviton Manufacturing Co., Inc.
5. Liebert; a brand of Vertiv.
6. Mersen USA.
7. Schneider Electric USA, Inc.
8. Siemens Industry, Inc., Energy Management Division.
9. Or approved equal.

B. Source Limitations: Obtain devices from single source from single manufacturer.

C. General Characteristics:

1. Reference Standards: UL 1449, Type 2; UL 1283.
2. Protection modes and UL 1449 VPR for grounded wye circuits with 208Y/120 V, three-phase, four-wire circuits must not exceed the following:

a. Line to Neutral: 700 V for 208Y/120 V.
b. Line to Ground: 700 V for 208Y/120 V.
c. Neutral to Ground: 700 V for 208Y/120 V.
d. Line to Line: 1200 V for 208Y/120 V.

3. SCCR: Equal or exceed 200 kA.

D. Options:

1. Include LED indicator lights for power and protection status.
2. Include internal thermal protection that disconnects the SPD before damaging internal suppressor components.
3. Include surge counter.

2.3 CONDUCTORS AND CABLES

A. Power Wiring: Same size as SPD leads, complying with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Provide OCPD and disconnect for installation of SPD in accordance with UL 1449 and manufacturer's instructions.

B. Install leads between disconnects and SPDs short, straight, twisted, and in accordance with manufacturer's instructions. Comply with wiring methods in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

1. Do not splice and extend SPD leads unless specifically permitted by manufacturer.
2. Do not exceed manufacturer's recommended lead length.
3. Do not bond neutral and ground.

C. Use crimped connectors and splices only. Wire nuts are unacceptable.

3.3 FIELD QUALITY CONTROL

A. Prepare test and inspection reports.

B. Manufacturer Services:

1. Engage factory-authorized service representative to support field tests and inspections.

3.4 STARTUP SERVICE

A. Complete startup checks in accordance with manufacturer's instructions.

B. Do not perform insulation-resistance tests of the distribution wiring equipment with SPDs installed. Disconnect SPDs before conducting insulation-resistance tests; reconnect them immediately after the testing is over.

C. Energize SPDs after power system has been energized, stabilized, and tested.

END OF SECTION 264313

SECTION 265000 - LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Luminaires.
2. Luminaire fittings.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
2. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" Section 260523 "Control-Voltage Electrical Power Cables" specifies wiring connections installed by this Section.
3. Section 260529 "Hangers and Supports for Electrical Systems" specifies channel and angle supports installed by this Section.
4. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.
5. Section 260923 "Lighting Control Devices" specifies automatic control of lighting, including time switches, photoelectric relays, occupancy sensors, and multipole lighting relays and contactors installed by this Section.

1.3 DEFINITIONS

A. BUG Rating: Backlight, uplight, and glare rating for light pollution from exterior luminaires.

B. Correlated Color Temperature (CCT): The absolute temperature (in kelvins) of a blackbody whose chromaticity (color quality) most nearly resembles that of the light source.

C. Color Rendering Index (CRI): The measure of the degree of color shift objects undergo when illuminated by the light source as compared with the color of those same objects when illuminated by a reference light source. The lower the CRI of a light source, the more difficult it is to identify colors and stripes on electronic components and wiring.

D. IDA: International Dark-Sky Association.

E. IES: Illuminating Engineering Society.

F. LPD: Lighting power density.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Luminaires: Include the following additional information:

a. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

1) If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
2) Listing criteria identified in approval letter must match specified listing criteria. Approval of only equipment's enclosure is not considered approval of equipment for intended application.
3) Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for similar products are not acceptable.

b. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
c. Include operating characteristics, electrical characteristics, and furnished accessories.
d. Include schedule of submitted lighting products. Arrange schedule and accompanying product data in order by luminaire and lamp designations indicated on the Drawings.
e. Include battery and charger data for emergency lighting units.
f. Include ballast factor.
g. Include life, output (lumens, CCT, and CRI), and energy-efficiency data.
h. Include photometric data and adjustment factors obtained from qualified laboratory tests.
i. Include manufacturer's sample warranty language.

2. Luminaire Fittings: Include the following additional information:

a. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

1) If listed manufacturer differs from selling manufacturer, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
2) Listing criteria identified in approval letter must match specified listing criteria. Approval of only equipment's enclosure is not considered approval of equipment for intended application.
3) Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for similar products are not acceptable.

b. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
c. Include operating characteristics, electrical characteristics, and furnished accessories.
d. Include schedule of submitted lighting products. Arrange schedule and accompanying product data in order by luminaire and lamp designations indicated on the Drawings.
e. Include manufacturer's sample warranty language.

B. Samples:

1. Luminaires: One for each kind of luminaire with specified rating, size, finish, color, and texture.
2. Luminaire Fittings: One for each kind of luminaire fitting with specified rating, size, finish, color, and texture.

C. Shop Drawings: Prepare and submit the following:

1. Drawings, Diagrams, and Supporting Documents for Custom Luminaires:

a. Include plans, elevations, sections, and mounting and attachment details.
b. Include details of luminaire assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
c. Include diagrams for power, signal, and control wiring.

D. Sustainable Design Submittals:

1. Product data for sustainable design features for each type of product.
2. ASHRAE/IES 90.1 LPD Compliance Documentation: Prepare plans and calculations demonstrating that as-constructed lighting power density complies with mandatory provisions of ASHRAE/IES 90.1 and that as-constructed lighting, including daylighting and controls, improves on baseline energy performance. If included with Project, indicate locations of energy meters for lighting loads.

E. Field quality-control reports.

1.6 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.7 MOCKUPS

A. Provide mockups as indicated on the Drawings to verify selections made under Sample submittals and to set quality standards for materials and execution.

1. Build mockup of luminaires in room or space, complete with power and control connections.
2. Obtain Commissioner's approval of mockups before starting installation of related Work on the Project.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
4. Maintain mockups during construction in undisturbed condition as standard for judging the completed Work.

5. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.9 QUALIFICATIONS

A. Electrical Power Testing and Inspecting Agency: Entity possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements" and possessing active credentials from a qualified electrical testing laboratory.

B. Luminaire Photometric Testing Laboratory: Entity possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements," accredited under the NVLAP for Energy Efficient Lighting Products, and complying with applicable IES testing standards.

C. Lighting Testing and Inspecting Agency: Entity possessing active qualifications specified in DDC General Conditions Section 014000 "Quality Requirements" with documented training and experience with testing and inspecting lighting installations in accordance with applicable IES standards.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Protect exposed surface finishes on lighting equipment by applying strippable, temporary protective covering before shipping.

1.11 WARRANTY FOR LUMINAIRES

A. Special Manufacturer Warranty: Manufacturer warrants that luminaires perform in accordance with specified requirements and agrees to provide materials for repair or replacement of products that fail to perform as specified within warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

1.12 WARRANTY FOR BATTERIES

A. Special Manufacturer Warranty for Batteries: Manufacturer warrants that batteries perform in accordance with specified requirements and agrees to provide materials for repair or replacement of batteries that fail to perform as specified within warranty period.

1. Warranty Period for Li-ion Batteries: Three years from date of Substantial Completion; full coverage for materials only.
2. Warranty Period for Ni-Cd Batteries: Three years from date of Substantial Completion; full coverage for materials only.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 by qualified electrical testing laboratory, and marked for intended location and application.

2.2 LUMINAIRES

A. Surface-Mounted Luminaire LT05:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lucifer Lighting or comparable product by one of the following:

   a. USAI.
   b. LFI.
   c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

   a. LED Luminaires: UL CCN IFAO; including UL 1598
   b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling surface mounted adjustable 2-1/2" cylinder.
5. Standard Features:
   a. Nominal Operating Voltage: 120 V(ac).
   b. Nominal Luminaire Operating Power Rating: Less than 15 W.
   c. CRI: 90+.
   d. Ballast or Driver Location: Internal.
   e. Materials:

      1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
      2) Lenses, Diffusers, and Globes:

         a) Fixed lens.

      3) Visible variations in metal finishes are unacceptable in adjoining components.

   f. LED Luminaires (UL CCN IFAO):

      1) Output Intensity: Not less than 800 lm.
      2) Efficacy: Not less than 84 lm/W.
      3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

B. Surface-Mounted Luminaire LT05A:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lucifer Lighting or comparable product by one of the following:

   a. USAI.
   b. LFI.
   c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

   a. LED Luminaires: UL CCN IFAO; including UL 1598
   b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling surface mounted adjustable 2-1/2" cylinder.
5. Standard Features:

   a. Nominal Operating Voltage: 120 V(ac).
   b. Nominal Luminaire Operating Power Rating: Less than 15 W.
   c. CRI: 90+.
   d. Ballast or Driver Location: Internal.
   e. Materials:

      1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
      2) Lenses, Diffusers, and Globes:

         a) Fixed lens.

      3) Visible variations in metal finishes are unacceptable in adjoining components.

   f. LED Luminaires (UL CCN IFAO):

      1) Output Intensity: Not less than 800 lumens.
      2) Efficacy: Not less than 84 lm/W.
      3) CCT: 3000 K .

6. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

C. Surface-Mounted Luminaire LT06A:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Coronet Lighting or comparable product by one of the following:

    a. Elliptipar.
    b. SPI.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Wall mounted indirect uplight, 12" L x 3.9" D x 6"H.
5. Standard Features:

    a. Nominal Operating Voltage: 120 V(ac).
    b. Nominal Luminaire Operating Power Rating: Less than 20 W.
    c. CRI: 90+.
    d. Ballast or Driver Location: Internal.
    e. Materials:

        1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
        2) Lenses, Diffusers, and Globes:

            a) Fixed lens.
            b) Acrylic Lens.

        3) Visible variations in metal finishes are unacceptable in adjoining components.

    f. LED Luminaires (UL CCN IFAO):

        1) Output Intensity: Not less than 600 lm
        2) Efficacy: Not less than 75 lm/W.
        3) CCT: 3000 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

D. Surface-Mounted Luminaire LT06B:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Coronet Lighting or comparable product by one of the following:

    a. Elliptipar.
    b. SPI.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Wall mounted indirect uplight, 24" L x 3.9" D x 6"H
5. Standard Features:

    a. Nominal Operating Voltage: 120 V(ac).
    b. Nominal Luminaire Operating Power Rating: Less than 20 W.
    c. CRI: 90+.
    d. Ballast or Driver Location: Internal.
    e. Materials:

        1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
        2) Lenses, Diffusers, and Globes:

            a) Fixed lens.
            b) Acrylic Lens.

        3) Visible variations in metal finishes are unacceptable in adjoining components.

    f. LED Luminaires (UL CCN IFAO):

        1) Output Intensity: Not less than 1200 lm.
        2) Efficacy: Not less than 75 lm/W.
        3) CCT: 3000 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.Copy and revise first paragraph below for each configuration indicated on the Drawings.

E. Surface-Mounted Luminaire LT07A:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx Lighting or comparable product by one of the following:

    a. Coronet.
    b. Axis.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598

b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling suspended linear direct-indirect pendant, 2-3/8"W x 4-1/2"H.
5. Standard Features:

a. Nominal Operating Voltage: 120 V(ac).
b. Nominal Luminaire Operating Power Rating: Less than 7 W/ft.
c. CRI: 80+.
d. Ballast or Driver Location: Internal.
e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.
b) Direct: Flood distribution, Indirect: Wide light distribution.

3) Visible variations in metal finishes are unacceptable in adjoining components.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Direct: Not less than 350 lm/ft. Indirect: Not less than 500 lm/ft.
2) Efficacy: Not less than 100 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain

F. Surface-Mounted Luminaire LT07B:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx Lighting or comparable product by one of the following:

a. Coronet.
b. Axis.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling suspended linear direct-indirect pendant, 2-3/8"W x 4-1/2"H.
5. Standard Features:

a. Nominal Operating Voltage: 120 V(ac).
b. Nominal Luminaire Operating Power Rating: Less than 9 W.
c. CRI: 80+.
d. Ballast or Driver Location: Internal.
e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.
b) Direct: Flood distribution; Indirect: Wide light distribution.

3) Visible variations in metal finishes are unacceptable in adjoining components.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Direct: Not less that 350 lm/ft; Indirect: Not less than 750 lm/ft.
2) Efficacy: Not less than 100 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

G. Surface-Mounted Luminaire LT07C:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx Lighting or comparable product by one of the following:

a. Coronet.
b. Axis.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling suspended linear direct-indirect pendant, 2-3/8"W x 4-1/2"H.
5. Standard Features:

a. Nominal Operating Voltage: 120 V(ac).
b. Nominal Luminaire Operating Power Rating: Less than 13 W/ft.
c. CRI: 80+.
d. Ballast or Driver Location: Internal.
e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.
b) Direct: Flood distribution; Indirect: Wide light distribution.

3) Visible variations in metal finishes are unacceptable in adjoining components.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Direct: Not less than 500 lm/ft; Indirect: Not less than 1,000 lm/ft.
2) Efficacy: Not less than 100 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

H. Surface-Mounted Luminaire LT09:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Jesco Lighting or comparable product by one of the following:

a. QTL.
b. Lumini.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Surface mounted field curvable low voltage LED strip .
5. Standard Features:

a. Nominal Operating Voltage: 24 V.
b. Nominal Luminaire Operating Power Rating: Less than 3W/ft.
c. CRI: 90+.
d. Ballast or Driver Location: Remote.
e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 200 lm/ft.
2) Efficacy: Not less than 95 lm/W.

3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

I. Surface-Mounted Luminaire LT10:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Elliptipar Lighting or comparable product by one of the following:

a. Insight.
b. SPI.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Wall mounted cantilevered adjustable wall washing art light.
5. Standard Features:

a. Nominal Operating Voltage: 120 V(ac).
b. Nominal Luminaire Operating Power Rating: Less than 7 W/ft.
c. CRI: 90+.
d. Ballast or Driver Location: Remote.
e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Adjustable lens.

3) Visible variations in metal finishes are unacceptable in adjoining components.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 975 lm/ft.
2) Efficacy: Not less than 140 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

J. Surface-Mounted Luminaire LT11:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Resident Lighting or comparable product by one of the following:

    a. RBW.
    b. Louis Poulsen.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling suspended decorative pendant fixture.
5. Standard Features:

    a. Nominal Operating Voltage: 120 V(ac).
    b. Nominal Luminaire Operating Power Rating: Less than 10 W.
    c. CRI: 90+.
    d. Materials:

        1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
        2) Visible variations in metal finishes are unacceptable in adjoining components.

    e. LED Luminaires (UL CCN IFAO):

        1) CCT: 2700 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

K. Surface-Mounted Luminaire LT13:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Axis Lighting or comparable product by one of the following:

    a. Lumenwerx.
    b. Coronet.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598

b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Surface mounted square profile fixture with two adjacent luminous right angle lens, 2 ½" on each side.
5. Standard Features:

a. Nominal Operating Voltage: 120 V(ac).
b. Nominal Luminaire Operating Power Rating: Less than 10 W/ft.
c. CRI: 80+.
d. Ballast or Driver Location: Internal.
e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Visible variations in metal finishes are unacceptable in adjoining components.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 250 lm /ft.
2) Efficacy: Not less than 90 lm/W
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

L. Surface-Mounted Luminaire LT14A:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Extant Lighting or comparable product by one of the following:

a. Luminii.
b. Xico.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling T-Grid mounted linear 3" aperture x 1.39"H.
5. Standard Features:

a. Nominal Operating Voltage: 120 V(ac).
b. Nominal Luminaire Operating Power Rating: Less than 3 W/ft.
c. CRI: 80+.
d. Ballast or Driver Location: Remote.

e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.

3) Visible variations in metal finishes are unacceptable in adjoining components.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 310 lm/ft.
2) Efficacy: Not less than 120 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

M. Surface-Mounted Luminaire LT14B:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Extant Lighting or comparable product by one of the following:

a. Luminii.
b. Xico.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling T-Grid mounted linear 3" aperture x 1.39"H.
5. Standard Features:

a. Nominal Operating Voltage: 120 V(ac).
b. Nominal Luminaire Operating Power Rating: Less than 3 W/ft.
c. CRI: 80+.
d. Ballast or Driver Location: Remote.
e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.

3) Visible variations in metal finishes are unacceptable in adjoining components.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 550 lm/ft.
2) Efficacy: Not less than 120 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

N. Surface-Mounted Luminaire LT14C:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Extant Lighting or comparable product by one of the following:

a. Luminii.
b. Xico.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling T-Grid mounted linear 3" aperture x 1.39"H.
5. Standard Features:

a. Nominal Operating Voltage: 120 V(ac).
b. Nominal Luminaire Operating Power Rating: Less than 7 W/ft.
c. CRI: 80+.
d. Ballast or Driver Location: Remote.
e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.

3) Visible variations in metal finishes are unacceptable in adjoining components.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 758 lm/ft.
2) Efficacy: Not less than 110 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

O. Surface-Mounted Luminaire LT15:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Picasso Lighting or comparable product by one of the following:

    a. Halo.
    b. Lumenwerx.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Under cabinet light fixture with shallow 1" extruded aluminum housing.
5. Standard Features:

    a. Nominal Operating Voltage: 120 V(ac).
    b. Nominal Luminaire Operating Power Rating: Less than 4 W/ft.
    c. CRI: 80+.
    d. Ballast or Driver Location: Integral.
    e. Materials:

        1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
        2) Lenses, Diffusers, and Globes:

            a) Fixed lens.

        3) Visible variations in metal finishes are unacceptable in adjoining components.

    f. LED Luminaires (UL CCN IFAO):

        1) Output Intensity: Not less than 350 lm/ft.
        2) Efficacy: Not less than 95 lm/W.
        3) CCT: 3000 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

P. Surface-Mounted Luminaire LT16:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Bega Lighting or comparable product by one of the following:

    a. Lumascape.
    b. WE-EF.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Wall mounted downward light for exterior locations.
5. Standard Features:

    a. Nominal Operating Voltage: 120 V(ac).
    b. Nominal Luminaire Operating Power Rating: Less than 12 W.
    c. CRI: 80+.
    d. Ballast or Driver Location: Integral.
    e. Materials:

        1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IP64.
        2) Lenses, Diffusers, and Globes:

            a) Fixed lens.
            b) Spotlight distribution.

        3) Visible variations in metal finishes are unacceptable in adjoining components.

    f. LED Luminaires (UL CCN IFAO):

        1) Output Intensity: Not less than 740 lm.
        2) Efficacy: Not less than 70 lm/W.
        3) CCT: 3000 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

Q. Surface-Mounted Luminaire LT17:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx Lighting or comparable product by one of the following:

    a. Axis.
    b. Coronet.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Wall mounted linear direct lighting, 2-3/4"W x 3-3/4"H.

5. Standard Features:

    a. Nominal Operating Voltage: 120 V(ac).
    b. Nominal Luminaire Operating Power Rating: Less than 5 W/ft.
    c. CRI: 80+.
    d. Ballast or Driver Location: Integral.
    e. Materials:

        1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
        2) Lenses, Diffusers, and Globes:

            a) Fixed lens.

        3) Visible variations in metal finishes are unacceptable in adjoining components.

    f. LED Luminaires (UL CCN IFAO):

        1) Output Intensity: Not less than 500 lmft/.
        2) Efficacy: Not less than 100 lm/W.
        3) CCT: 3000 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

R. Surface-Mounted Luminaire LT18A:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Picasso Lighting or comparable product by one of the following:

    a. Coronet.
    b. HE Williams.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Surface mounted linear fixture, with curved acrylic lens.

5. Standard Features:

   a. Nominal Operating Voltage: 120 V(ac).
   b. Nominal Luminaire Operating Power Rating: Less than 12 W.
   c. CRI: 80+.
   d. Ballast or Driver Location: Integral.
   e. Materials:

      1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
      2) Lenses, Diffusers, and Globes:

         a) Fixed lens.

      3) Visible variations in metal finishes are unacceptable in adjoining components.

   f. LED Luminaires (UL CCN IFAO):

      1) Output Intensity: Not less than 350 lmft/.
      2) Efficacy: Not less than 120 lm/W.
      3) CCT: 3000 K .

6. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

S. Surface-Mounted Luminaire LT18B:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Picasso Lighting or comparable product by one of the following:

   a. Coronet.
   b. HE Williams.
   c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

   a. LED Luminaires: UL CCN IFAO; including UL 1598
   b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Surface mounted linear fixture, with curved acrylic lens.
5. Standard Features:

   a. Nominal Operating Voltage: 120 V(ac).
   b. Nominal Luminaire Operating Power Rating: Less than 20 W.
   c. CRI: 80+.

d. Ballast or Driver Location: Integral.
e. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.

3) Visible variations in metal finishes are unacceptable in adjoining components.

f. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 500 lm/ft.
2) Efficacy: Not less than 120 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

T. Recessed Luminaire LT01:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx or comparable product by one of the following:

a. Amerlux.
b. Alphabet.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling recessed adjustable downlight, 3-13/16" OD trim.
5. Standard Features:

a. Ceiling Compatibility: NEMA LE 4.
b. Openings: Doors, frames, and access panels must operate smoothly, not leak light under operating conditions, and permit relamping without use of tools or parts falling from enclosure.
c. Nominal Operating Voltage: 120 V(ac).
d. Nominal Luminaire Operating Power Rating: Less than 12 W.
e. CRI: 80+.
f. Ballast or Driver Location: Internal.
g. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20 .

2) Lenses, Diffusers, and Globes:

a) Fixed Adjustable lens.
b) Spot Medium Wide light distribution.

3) Visible variations in metal finishes are unacceptable in adjoining components.

h. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 1000 lm.
2) Efficacy: Not less than 100 lm/W.
3) CCT: 3000 K.

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain

U. Recessed Luminaire LT02A:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx or comparable product by one of the following:

a. Amerlux.
b. Alphabet.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Insert description of desired shape and dimensional limitations.Ceiling recessed downlight, 3-13/16" OD trim.
5. Standard Features:

a. Ceiling Compatibility: NEMA LE 4.
b. Openings: Doors, frames, and access panels must operate smoothly, not leak light under operating conditions, and permit relamping without use of tools or parts falling from enclosure.
c. Nominal Operating Voltage: 120 V(ac).
d. Nominal Luminaire Operating Power Rating: Less than 12 W.
e. CRI: 80+.
f. Ballast or Driver Location: Internal.
g. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.
b) Narrow flood light distribution.

3) Visible variations in metal finishes are unacceptable in adjoining components.

h. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 1000 lm.
2) Efficacy: Not less than 100 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

V. Recessed Luminaire LT02B:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx or comparable product by one of the following:

a. Amerlux.
b. Alphabet.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling recessed downlight, 3-13/16" OD trim.
5. Standard Features:

a. Ceiling Compatibility: NEMA LE 4.
b. Openings: Doors, frames, and access panels must operate smoothly, not leak light under operating conditions, and permit relamping without use of tools or parts falling from enclosure.
c. Nominal Operating Voltage: 120 V(ac).
d. Nominal Luminaire Operating Power Rating: Less than 12 W.
e. CRI: 80+.
f. Ballast or Driver Location: Internal.
g. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.
b) Wide light distribution.

3) Visible variations in metal finishes are unacceptable in adjoining components.

h. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 1000 lm.
2) Efficacy: Not less than 100 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

W. Recessed Luminaire LT02C:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx or comparable product by one of the following:

a. Amerlux.
b. Alphabet.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling recessed downlight, 3-13/16" OD trim.
5. Standard Features:

a. Ceiling Compatibility: NEMA LE 4.
b. Openings: Doors, frames, and access panels must operate smoothly, not leak light under operating conditions, and permit relamping without use of tools or parts falling from enclosure.
c. Nominal Operating Voltage: 120 V(ac).
d. Nominal Luminaire Operating Power Rating: Less than 12 W.
e. CRI: 80+.
f. Ballast or Driver Location: Internal.
g. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.
b) Wide light distribution.

3) Visible variations in metal finishes are unacceptable in adjoining components.

h. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 900 lm.
2) Efficacy: Not less than 90 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

X. Recessed Luminaire LT03:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx or comparable product by one of the following:

a. Amerlux.
b. Alphabet.
c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

a. LED Luminaires: UL CCN IFAO; including UL 1598
b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling recessed downlight, 3-13/16" OD trim.
5. Standard Features:

a. Ceiling Compatibility: NEMA LE 4.
b. Openings: Doors, frames, and access panels must operate smoothly, not leak light under operating conditions, and permit relamping without use of tools or parts falling from enclosure.
c. Nominal Operating Voltage: 120 V(ac).
d. Nominal Luminaire Operating Power Rating: Less than 12 W.
e. CRI: 80+.
f. Ballast or Driver Location: Internal.
g. Materials:

1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
2) Lenses, Diffusers, and Globes:

a) Fixed lens.

3) Visible variations in metal finishes are unacceptable in adjoining components.

h. LED Luminaires (UL CCN IFAO):

1) Output Intensity: Not less than 600 lm.
2) Efficacy: Not less than 60 lm/W.
3) CCT: 3000 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

Y. Recessed Luminaire LT04A:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by DMF Lighting or comparable product by one of the following:

    a. USAI.
    b. Alphabet.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling recessed downlight with decorative diffuser ring, 3-1/12 OD trim.
5. Standard Features:

    a. Ceiling Compatibility: NEMA LE 4.
    b. Openings: Doors, frames, and access panels must operate smoothly, not leak light under operating conditions, and permit relamping without use of tools or parts falling from enclosure.
    c. Nominal Operating Voltage: 120 V(ac).
    d. Nominal Luminaire Operating Power Rating: Less than 10 W.
    e. CRI: 90+.
    f. Ballast or Driver Location: Internal.
    g. Materials:

        1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
        2) Lenses, Diffusers, and Globes:

            a) Fixed lens.

        3) Visible variations in metal finishes are unacceptable in adjoining components.

    h. LED Luminaires (UL CCN IFAO):

        1) Output Intensity: Not less than 750 lm.
        2) Efficacy: Not less than 75 lm/W.
        3) CCT: 3000 K .

6. Sustainable Design Features:

a. Corporate SustainSustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

Z. Recessed Luminaire LT04B:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by DMF Lighting or comparable product by one of the following:

   a. USAI.
   b. Alphabet.
   c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

   a. LED Luminaires: UL CCN IFAO; including UL 1598
   b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling recessed downlight with decorative diffuser ring, 3-1/12 OD trim.
5. Standard Features:

   a. Ceiling Compatibility: NEMA LE 4.
   b. Openings: Doors, frames, and access panels must operate smoothly, not leak light under operating conditions, and permit relamping without use of tools or parts falling from enclosure.
   c. Nominal Operating Voltage: 120 V(ac).
   d. Nominal Luminaire Operating Power Rating: Less than 15 W.
   e. CRI: 90+.
   f. Ballast or Driver Location: Internal.
   g. Materials:

      1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
      2) Lenses, Diffusers, and Globes:

         a) Fixed lens.

      3) Visible variations in metal finishes are unacceptable in adjoining components.

   h. LED Luminaires (UL CCN IFAO):

      1) Output Intensity: Not less than 1000 lm.
      2) Efficacy: Not less than 80 lm/W.
      3) CCT: 3000 K .

6. Sustainable Design Features:

   a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

AA. Recessed Luminaire LT08:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx or comparable product by one of the following:

    a. Coronet.
    b. Axis.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling recessed linear lighting, with 2-3/8"W x 3-3/4"H aperture.
5. Standard Features:

    a. Ceiling Compatibility: NEMA LE 4.
    b. Openings: Doors, frames, and access panels must operate smoothly, not leak light under operating conditions, and permit relamping without use of tools or parts falling from enclosure.
    c. Nominal Operating Voltage: 120 V(ac).
    d. Nominal Luminaire Operating Power Rating: Less than 5 W/ft.
    e. CRI: 80+.
    f. Ballast or Driver Location: Internal.
    g. Materials:

        1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
        2) Lenses, Diffusers, and Globes:

            a) Fixed lens.
            b) Lambertian direct optic.

        3) Visible variations in metal finishes are unacceptable in adjoining components.

    h. LED Luminaires (UL CCN IFAO):

        1) Output Intensity: Not less than 500 lm/ft.
        2) Efficacy: Not less than 100 lm/W.
        3) CCT: 3000 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

BB. Recessed Luminaire LT12:

1. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Lumenwerx or comparable product by one of the following:

    a. Coronet.
    b. Axis.
    c. Or approved equal.

2. Source Limitations: Obtain products for this luminaire type from single manufacturer.
3. Listing Criteria:

    a. LED Luminaires: UL CCN IFAO; including UL 1598
    b. Marked in accordance with UL CCN HYXT, including UL 1598, for compatible power supply, installation location, and environmental conditions.

4. Luminaire Description: Ceiling recessed perimeter lighting, 3-9/16" W x 6-1/2"H.
5. Standard Features:

    a. Ceiling Compatibility: NEMA LE 4.
    b. Openings: Doors, frames, and access panels must operate smoothly, not leak light under operating conditions, and permit relamping without use of tools or parts falling from enclosure.
    c. Nominal Operating Voltage: 120 V(ac).
    d. Nominal Luminaire Operating Power Rating: Less than 6 W/ft.
    e. CRI: 80+.
    f. Ballast or Driver Location: Internal.
    g. Materials:

        1) Enclosure Ingress Protection Rating: UL 50E Type 1 or IEC 60529 IP20.
        2) Lenses, Diffusers, and Globes:

            a) Fixed lens.

        3) Visible variations in metal finishes are unacceptable in adjoining components.

    h. LED Luminaires (UL CCN IFAO):

        1) Output Intensity: Not less than 500 lm/ft.
        2) Efficacy: Not less than 90 lm/ft.
        3) CCT: 3000 K .

6. Sustainable Design Features:

    a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

CC. UL FTBR or FTBV - Emergency Lighting and Power Equipment EM

1. Basis-of-Design Product: Subject to compliance with requirements, provide Cooper Lighting AtLite REUR Series or comparable product by one of the following:

    a. ESW.

b. Exit Light Company.
c. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Product Description: Recessed Mount Edge-lit Exit Sign.

4. Standard Features:

a. Nominal Operating Voltage: 120 V(ac).
b. Light Source: LED head(s).

5. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain

2.3 LUMINAIRE FITTINGS

A. Luminaire Support Accessories:

1. Standard Features:

a. Sized and rated for luminaire weight.
b. Capable of maintaining luminaire position after cleaning and relamping.
c. Capable of supporting luminaire without causing deflection of ceiling or wall.
d. Capable of supporting horizontal force equal to 100 percent of luminaire weight and vertical force equal to 400 percent of luminaire weight.

2. Sustainable Design Features:

a. Corporate Sustainability Report: Provide corporate sustainability report that is publicly available from manufacturer and that includes environmental impacts of extraction operations and activities associated with product and its supply chain.

3. Other Available Features Required by the Project:

a. Wires: ASTM A641/A641M, Class 3, soft temper, zinc-coated steel, wire supports in length.
b. Aircraft Cables: diameter aircraft cable supports in length.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine roughing-in for luminaire to verify actual locations of luminaire and electrical connections before luminaire installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Temporary Lighting: If approved by Commissioner, specified luminaires for the Project may be installed for temporary lighting. Install and energize minimum quantity of luminaires necessary to meet needs of construction activities. When construction is sufficiently complete, remove, disassemble, clean, and relamp luminaires used for temporary lighting before reinstalling for the Project's delivery.

3.4 INSTALLATION OF LIGHTING

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Fire Code, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Grounding and Bonding: NECA NEIS 331 and Article 250 of NFPA 70.
3. Work in Confined Spaces: NFPA 350.
4. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
5. Installation of Indoor Lighting Systems: NECA NEIS 500.
6. Installation of Exterior Lighting Systems: NECA NEIS 501.
7. Installation of Industrial Lighting Systems: NECA NEIS 502.
8. Installation of Luminaires, Lampholders, and Lamps: Article 410 of NFPA 70.
9. Installation of Extra-Low-Voltage Lighting: Article 411 of NFPA 70.
10. Installation of Lighting for Sensitive Electronic Equipment: Article 647 of NFPA 70.
11. Installation of Emergency Lighting and Exit Signs: NYC Building Code, NYC Fire Code, NFPA 101, and Parts IV and V in Article 700 of NFPA 70.
12. Consult Commissioner for resolution of conflicting requirements.

C. Special Installation Techniques:

1. Install luminaires level, plumb, and square with finished floor or grade unless otherwise indicated.
2. Install luminaires at height and aiming angle as indicated on the Drawings.
3. Coordinate layout and installation of luminaires with other construction.
4. Adjust luminaires that require field adjustment or aiming. Include adjustment of photoelectric device to prevent false operation of relay by artificial light sources, favoring a north orientation.
5. Exterior Corrosion Prevention:

    a. Do not use aluminum in contact with earth or concrete. When in direct contact with dissimilar metals, protect aluminum with insulating fittings or treatment.

b. When embedding steel conduits in concrete, wrap conduit with 10 mil thick, pipe-wrapping plastic tape applied with a 50 percent overlap.

6. Flush-Mounted Luminaire Support:

a. Secured to outlet box.
b. Attached to ceiling structural members at four points equally spaced around circumference of luminaire.

7. Wall-Mounted Luminaire Support: Attached to a minimum 3/4 inch backing plate attached to wall structural members.

8. Suspended Luminaire Support:

a. Ceiling Mount:

1) Two aircraft cables per 8-foot length.

b. Do not use ceiling grid as support for pendant luminaires. Connect support wires or rods to building structure.

9. Ceiling-Grid-Mounted Luminaire Support:

a. Support Clips: Fasten to luminaires and to ceiling grid members at or near each luminaire corner with clips that are UL listed for application.

10. Remote Mounting of Ballasts or Drivers: Do not exceed distance between ballast or driver and luminaire recommended by ballast or driver manufacturer.
11. Identification: Provide labels for luminaires and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.

D. Systems Integration: Integrate lighting control devices and equipment with electrical power connections for operation of luminaires as specified.

3.5 FIELD QUALITY CONTROL OF LIGHTING

A. Administrant for Field Tests and Inspections of Lighting Installations:

1. Contractor to administer and perform tests and inspections.

B. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Operational Test: After installing luminaires, switches, and accessories, and after electrical circuitry has been energized, test units to confirm proper operation.
3. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery power and retransfer to normal.

C. Nonconforming Work:

1. Luminaire will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Field Quality-Control Reports: Collect, assemble, and submit test and inspection reports.

3.6 SYSTEM STARTUP

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.

3.7 ADJUSTING

A. Luminaire Aiming Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting aiming direction of luminaires to suit occupied conditions. Make up to two visits to the Project's site during other-than-normal hours for this purpose. Some of the Work may be required during hours of darkness.

1. During adjustment visits, inspect all luminaires. Replace lamps or luminaires that are defective.
2. Parts and supplies must be manufacturer's authorized replacement parts and supplies.
3. Adjust aim of luminaires and lock aiming angle in presence of Commissioner.

3.8 CLOSEOUT ACTIVITIES

A. Instruction:

1. Instruct City of New York's personnel on the following topics:

a. How to adjust and operate luminaires.

2. Allow City of New York to record instruction sessions.

3.9 PROTECTION

A. After installation, protect lighting equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by City of New York.

END OF SECTION 265000

SECTION 270528 - PATHWAYS FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Type OFR and Type CR communications raceways and fittings.
2. Cable supports and positioning devices.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.
2. Section 078413 "Penetration Firestopping" specifies firestopping for communications pathways installed by this Section.
3. Section 260526 "Grounding and Bonding for Electrical Systems" specifies grounding and bonding conductors and connectors for communications pathways installed by this Section.
4. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers and supports for communications pathways installed by this Section.
5. Section 260533.13 "Conduits for Electrical Systems" specifies the following installed by this Section:

    a. Type EMT-A and Type EMT-SS duct raceways and elbows.
    b. Type EMT-S duct raceways and elbows.
    c. Type ENT duct raceways and fittings.
    d. Type HDPE and Type EPEC duct raceways and fittings.
    e. Type ERMC-A and Type ERMC-SS duct raceways, elbows, couplings, and nipples.
    f. Type ERMC-S duct raceways, elbows, couplings, and nipples.
    g. Type FMC-S and Type FMC-A duct raceways.
    h. Type FMT duct raceways.
    i. Type IMC duct raceways.
    j. Type LFMC duct raceways.
    k. Type LFNC duct raceways.
    l. Type PVC duct raceways and fittings.
    m. Type RTRC-AG duct raceways and fittings.
    n. Type RTRC-BG duct raceways and fittings.
    o. Fittings for conduit, tubing, and cable.
    p. Electrically conductive corrosion-resistant compounds for threaded conduit.
    q. Solvent cements.

6. Section 260533.16 "Boxes and Covers for Electrical Systems" specifies the following installed by this Section:

    a. Metallic outlet boxes, device boxes, rings, and covers.
    b. Nonmetallic outlet boxes, device boxes, rings, and covers.
    c. Junction boxes and pull boxes.
    d. Cover plates for device boxes.
    e. Hoods for outlet boxes.

7. Section 260533.23 "Surface Raceways for Electrical Systems" specifies the following installed by this Section:

    a. Surface metal raceways and fittings.
    b. Surface nonmetallic raceways.
    c. Strut-type channel raceways and fittings.
    d. Wireways and auxiliary gutters.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.

    a. Product Listing: Include copy of unexpired approval letter, on letterhead of qualified electrical testing agency, certifying product's compliance with specified listing criteria.

        1) If listed manufacturer differs from selling manufacture, indicate relationship between entities on submittal. Clearly indicate which entity warrants product performance and fitness for purpose.
        2) Product identification in approval letter must match product branding and model numbers in submittal. Approval letters for similar products are not acceptable.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 TYPE OFR AND TYPE CR COMMUNICATIONS RACEWAYS AND FITTINGS

A. Description: This product group covers raceways and fittings for installation of conductive and nonconductive optical-fiber cable, communications cable, power-limited fire-alarm cable, signaling cable, and coaxial cable in accordance with NFPA 70.

B. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.
2. Listing Criteria:

a. Optical-Fiber Cable Raceway: UL CCN QAZM; including UL 2024.
b. Communications Cable Raceway: UL CCN QBAA; including UL 2024.

C. UL QAZM - Type OFR-GP General-Purpose Optical-Fiber Raceway :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. 3M.
b. Corning Optical Communications; Corning Incorporated.
c. Dura-Line.
d. Endot Industries Inc.
e. Ipex Electrical Inc.
f. Panduit Corp.
g. Petroflex North America.
h. Premier Conduit Inc.
i. Tii Technologies Inc.
j. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Product Characteristics:

a. Texture: Smooth or Ribbed.
b. Splicing: Glue or Fusion.

4. Required Product Options:

a. Colors:

1) For Optical Fiber: Orange.
2) For Coaxial Cable: Black or Yellow.
3) For Communications: Blue or Orange or White or Yellow.
4) For Signaling: Black or, Yellow.

D. UL QAZM - Type OFR-P Plenum Optical-Fiber Raceway :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Atkore Plastic Pipe Corp.
    b. Belden Canada ULC.
    c. Corning Optical Communications; Corning Incorporated.
    d. Premier Conduit Inc.
    e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Product Characteristics:

    a. Meets UL 2024 test requirements for "PLENUM" marking.
    b. Texture: Smooth or Ribbed.
    c. Splicing: Glue or Fusion.

4. Required Product Options:

    a. Colors:

        1) For Optical Fiber: Orange or Yellow.
        2) For Coaxial Cable: Black or White.
        3) For Communications: Blue or Green,.
        4) For Signaling: Black,.

E. UL QAZM - Type OFR-R Riser Optical-Fiber Raceway :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Belden Canada ULC.
    b. Corning Optical Communications; Corning Incorporated.
    c. Panduit Corp.
    d. Premier Conduit Inc.
    e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Product Characteristics:

    a. Meets UL 2024 test requirements for "RISER" marking.
    b. Texture: Smooth or Ribbed.
    c. Splicing: Glue or Fusion.

4. Required Product Options:

    a. Colors:

        1) For Optical Fiber: Orange or Yellow.
        2) For Coaxial Cable: Black or White.
        3) For Communications: Blue or Green or White.
        4) For Signaling: Black or White.

F. UL QBAA - Type CR-GP General-Purpose Communications Cable Raceway :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. CommScope, Inc.
   b. Multilink Inc.
   c. Ortronics, Inc.
   d. Panduit Corp.
   e. Premier Conduit Inc.
   f. Telect, Inc.
   g. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Product Characteristics:

   a. Texture: Smooth or Ribbed.
   b. Splicing: Glue or Fusion.

4. Required Product Options:

   a. Colors:

      1) For Optical Fiber: Yellow.
      2) For Coaxial Cable: Black.
      3) For Communications: Blue.
      4) For Signaling: White.

G. UL QBAA - Type CR-P Plenum Communications Cable Raceway :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. America Fujikura Ltd. (AFL); Fujikura Ltd.
   b. Atkore Plastic Pipe Corp.
   c. Belden Canada ULC.
   d. Milliken & Company.
   e. Premier Conduit Inc.
   f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Product Characteristics:

   a. Meets UL 2024 test requirements for "PLENUM" marking.
   b. Texture: Smooth or Ribbed.
   c. Splicing: Glue or Fusion.

4. Required Product Options:

   a. Colors:

      1) For Optical Fiber: Orange or Yellow.

2) For Coaxial Cable: Black or White.
3) For Communications: Blue or Green or White.
4) For Signaling: Black or White.

H. UL QBAA - Type CR-R Riser Communications Cable Raceway :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. America Fujikura Ltd. (AFL); Fujikura Ltd.
b. Belden Canada ULC.
c. Panduit Corp.
d. Premier Conduit Inc.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Product Characteristics:

a. Meets UL 2024 test requirements for "RISER" marking.
b. Texture: Smooth or Ribbed.
c. Splicing: Glue or Fusion.

4. Required Product Options:

a. Colors:

1) For Optical Fiber: Orange or Yellow.
2) For Coaxial Cable: Black or White.
3) For Communications: Blue or Green or White or Yellow.
4) For Signaling: Black or White.

2.2 CABLE SUPPORTS AND POSITIONING DEVICES

A. Description: This category covers straps, hooks, and similar types of hardware for installation and use in communications cabling systems in accordance with NFPA 70 and manufacturer's installation instructions

B. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.

C. UL DWMU - J-Hook or G-Hook Cable Support :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ABB, Electrification Business.
b. Panduit Corp.
c. Southwire Company, LLC.
d. Or approved equal.

2. Product Listing Criteria: UL CCN DWMU; including UL 2239 or UL 1565.

D. UL DWMU - Conduit or Cable Support Strap :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Cooper B-line; brand of Eaton, Electrical Sector.
    b. Hilti, Inc.
    c. Southwire Company, LLC.
    d. Or approved equal.
2. Product Listing Criteria: UL CCN DWMU; including UL 2239 or UL 1565.
3. Product Characteristics:

    a. Mounting Orientation: Vertical or Horizontal.

E. UL ZODZ - Cable Tie or Management System T-100:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. 3M Company, Electrical Markets Div (EMD).
    b. Ace Hardware Corp.
    c. Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
    d. Fastenal Co.
    e. Hilti, Inc.
    f. Ideal Industries, Inc.
    g. Southwire Company, LLC.
    h. TE Connectivity Ltd.
    i. Velcro USA Inc.
    j. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Product Listing Criteria: UL CCN ZODZ; including UL 62275.
4. Product Characteristics:

    a. Classification: Type 2 or 21 .
    b. Mechanical Strength: 50 N.

F. UL ZODZ - Cable Clamp, Clip, or Mount Positioning Device :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Burndy; brand of Hubbell Electrical Solutions; Hubbell Incorporated.
    b. Hilti, Inc.
    c. Panduit Corp.
    d. Southwire Company, LLC.
    e. Or approved equal.
2. Product Characteristics:

    a. Materials: Metallic, Nonmetallic or Composite.
    b. Mechanical Strength: 5 kg .

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 SELECTION OF PATHWAYS FOR COMMUNICATIONS SYSTEMS

A. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NFPA 70 for selection of duct raceways. Consult Commissioner for resolution of conflicting requirements.

B. Type OFR and Type CR Communications Raceways: Comply with Table 800.154(b) of NFPA 70.

C. Minimum Pathway Size:

1. For Copper and Aluminum Cables: Metric designator 21 (trade size 3/4).
2. For Optical-Fiber Cables: Metric designator 25 (trade size 1).

D. Maximum Pathway Length Between Cable Access Points: 75 ft.

E. Temperature Limitations:

1. Type PVC, Type HDPE, Type EPEC, Type OFR, and Type CR: Do not install where ambient temperature exceeds 122 deg F. Conductor ratings must be limited to 75 deg C except where installed in a trench outside buildings with concrete encasement, where 90 deg C conductors are permitted.

F. Outdoor Pathways:

1. Exposed and Subject to Severe Physical Damage: IMC.

G. Indoor Pathways:

1. Hazardous Classified Locations: ERMC or IMC.
2. Exposed and Subject to Severe Physical Damage: ERMC or IMC. Locations include the following:

a. Loading docks.
b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
c. Mechanical rooms.
d. Gymnasiums.

3. Exposed and Not Subject to Physical Damage: ERMC or IMC or EMT or PVC-80 or RTRC-AGLFMC or LFNC or Cable tray.
4. Concealed above Suspended Ceilings: ERMC or IMC or EMT or PVC-80 or PVC-40 or RTRC-AG LFMC or OFR or CR or Cable tray or Hooks.
5. Concealed in Ceilings and Interior Walls and Partitions: ERMC or IMC or EMT or PVC-80 or PVC-40 or RTRC-AG or LFMC or LFNC or OFR or CR.

6. Damp or Wet Locations: ERMC or IMC or RTRC-AG or Corrosion-resistant EMT or LFMC or LFNC.
7. Innerducts inside Metal Raceway: ENT or RTRC-AG or OFR or CR.
8. Exposed to Environmental Air: ERMC or IMC or EMT or PVC-80 or PVC-40 or RTRC-AG or OFR-P or CR-P.
9. In Vertical Runs: ERMC or IMC or EMT or RTRC-AG or OFR-P or OFR-R or CR-P or CR-R.
10. Supported by Solid Cable Tray: ENT or RTRC-AG or OFR or CR.
11. Supported by Open Cable Tray: OFR-P or CR-P.

H. Cable Supports and Positioning Devices:

1. Size hooks to allow minimum of 25 percent future capacity without exceeding design capacity limits.
2. Support hooks directly from building structure. Do not use ceiling grid support rods or wires.
3. Hook spacing must allow no more than 6 inch of slack. Lowest point of cables must be no closer than 6 inch to ceiling tiles, mechanical ductwork and fittings, luminaires, power conduits, power and telecommunications outlets, and other electrical and communications equipment.
4. Space hooks no more than 5 ft on center.
5. Provide hook at each change in direction.

I. Boxes and Enclosures:

1. Outdoors, Aboveground: UL 50E Type 3R or Type 4.
2. Indoors: UL 50E Type 1, except use Type 4 stainless steel, nonmetallic units in institutional and commercial kitchens and damp or wet locations.

J. Identification of Underground Pathways, Handholes, and Structures:

1. Use "COMMUNICATIONS" for legend on warning planks, underground warning tape, and covers.

3.3 SELECTION OF GROUNDING AND BONDING PRODUCTS

A. Grounding and Bonding Conductors:

1. Communications Busbar Connections:

a. TBC: Not smaller than 1/0 AWG and no smaller than largest TBB.
b. TBB: Not smaller than 2 kcmil per linear ft of conductor length, but not larger than 750 kcmil, unless otherwise indicated on Drawings.
c. BBC: Not smaller than largest TBB to which it is connected unless otherwise indicated on Drawings.
d. TEBC: Not smaller than 2 AWG Insert wire size unless otherwise indicated on Drawings. Provide bolted connectors.
e. Bonding Conductors to Structural Steel: Not smaller than 6 AWG unless otherwise indicated on Drawings. Provide bolted clamp connectors.

2. Cable Tray Connections:

a. Cable Tray Equipment Grounding Conductor: 6 AWG.

b. Cable Tray Bonding Jumper: If not supplied by cable manufacturer, provide bonding jumper not smaller than 6 AWG and not longer than 12 inch. If jumper is wire, it must be terminated with lug having one hole and standard barrel for one crimp, two holes and long barrel for two crimps. If jumper is flexible braid, it must be terminated with one- or two-hole ferrule, one-hole ferrule. Attach with bonding screw or connector provided by cable tray manufacturer.

3. Underground Connections: Not smaller than 2 AWG. Provide welded connectors, except bolted connectors may be used in handholes or manholes and as otherwise indicated on Drawings.

3.4 SELECTION OF COLORS AND IDENTIFICATION MARKINGS

A. Comply with 29 CFR 1910.144 for color identification of hazards, and the following:

1. Fire-protection and fire-alarm equipment, including raceways, must be finished, painted, or suitably marked safety red.
2. Ceiling-mounted hangers, supports, cable trays, and raceways must be finished, painted, or suitably marked safety yellow where less than 7.7 ft above finished floor.

B. Pipe and Conduit Labeling: Comply with ASME A13.1 and IEEE C2.

C. Color Coding Scheme for Communications Cable and Terminations: Comply with BICSI N1 and TIA-598.

D. Accessible Fittings for Raceways: Identify cover of junction and pull box of the following systems with wiring system legend and system voltage. System legends must be as follows:

1. "COMMUNICATIONS."
2. "FIRE ALARM."
3. "SECURITY."

E. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

F. Locations of Underground Lines: Underground-line warning tape for communication, control wiring, and optical-fiber cable.

G. Communications Vaults, Manholes, Handholes, and Pull and Junction Boxes: For conductors in vaults, pull and junction boxes, manholes, and handholes, use vinyl wraparound labels to identify phase.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50 ft maximum intervals in straight runs, and at 25 ft maximum intervals in congested areas.

H. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use write-on tags, self-adhesive labels with conductor or cable designation, origin, and destination.

I. Control-Circuit Conductor Termination Identification: For identification at terminations, provide self-adhesive labels with conductor designation.

J. Conductors To Be Extended in Future: Attach write-on tags to conductors and list source.

K. Auxiliary Electrical Systems Conductor Identification: Self-adhesive vinyl tape that is uniform and consistent with system used by manufacturer for factory-installed connections.

L. Equipment and Cabling Identification for Administrative Records and Labeling: Comply with TIA-606 requirements for Class 1 network administration.

M. Equipment Identification Labels:

1. Indoor Equipment: Self-adhesive label, Baked-enamel signs, Metal-backed butyrate signs,Laminated acrylic or melamine plastic sign.
2. Equipment To Be Labeled:

    a. Racks, Frames, and Enclosures: Identify front and rear of each enclosure with self-adhesive labels containing equipment designation.
    b. Patch Panels: Label individual rows in each rack, starting at top and working down, with self-adhesive labels.
    c. Communications cabinets.
    d. Access doors and panels for concealed communications items.
    e. Emergency system boxes and enclosures.
    f. Contactors.
    g. Remote-controlled switches, dimmer modules, and control devices.
    h. Monitoring and control equipment.
    i. Fire-alarm equipment.
    j. Security equipment.
    k. Life-safety communications equipment.

N. Backbone Cables: Label each cable with a vinyl-wraparound label indicating the location of the far or other end of the backbone cable. Patch panel or punch down block where cable is terminated should be labeled identically.

O. Horizontal Cables: Label each cable with a self-adhesive wraparound label.

P. Cover Plates: Label individual cover plates with self-adhesive labels. Place label at top of cover plate. Identify cover plate in accordance with TIA-606.

Q. Cable Ties: General purpose, for attaching tags, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

3.5 SELECTION OF SIGNS AND HAZARD MARKINGS

A. Comply with 29 CFR 1910.145 for danger, caution, warning, and safety instruction signs.

B. Signs, labels, and tags required for personnel safety must comply with the following standards:

1. Safety Colors: NEMA Z535.1.
2. Facility Safety Signs: NEMA Z535.2.
3. Safety Symbols: NEMA Z535.3.

4. Product Safety Signs and Labels: NEMA Z535.4.
5. Safety Tags and Barricade Tapes for Temporary Hazards: NEMA Z535.5.

C. Electrical Hazard Warnings:

1. Multiple Power Sources Warning Legend: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT/RACK HAS MULTIPLE POWER SOURCES."

D. Operating Instruction Signs: Self-adhesive labels.

E. Emergency Operating Instruction Signs: Self-adhesive labels with white legend on red background with minimum 3/8 inch high letters for emergency instructions at equipment used for DeGraw Emergency operation .

3.6 INSTALLATION OF PATHWAYS FOR COMMUNICATIONS SYSTEMS

A. Comply with manufacturers' published instructions, including limitations on distance, bends, and bend radius.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Type OFR Optical-Fiber Raceways: Article 800 of NFPA 70 and BICSI N1.
2. Type CR Communications Raceways: Article 800 of NFPA 70 and BICSI N1.
3. Cable Supports and Positioning Devices: Article 800 of NFPA 70 and BICSI N1.
4. Consult Commissioner for resolution of conflicting requirements.

C. Interfaces with Other Work:

1. Coordinate installation of new communications pathways with existing conditions.
2. Grounding and Bonding: Bond metallic communications boxes and enclosures to metallic pathways. Coordinate with Section 271100 "Communications Equipment Room Fittings" for grounding and bonding of communications pathways to communications equipment room fittings.

3.7 PROTECTION

A. Protect coatings and finishes of pathways, boxes, and enclosures from damage and deterioration.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC coatings or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 270528

SECTION 271100 - COMMUNICATIONS EQUIPMENT ROOM FITTINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Communications-circuit accessories.

B. Products Installed, but Not Furnished, under This Section:

1. Section 061000 "Rough Carpentry" furnishes equipment backing panels installed by this Section.
2. Section 260526 "Grounding and Bonding for Electrical Systems" furnishes the following installed by this Section:

    a. Grounding and bonding conductors.
    b. Grounding and bonding clamps.
    c. Grounding and bonding bushings.
    d. Grounding and bonding hubs.
    e. Grounding and bonding connectors.
    f. Intersystem bonding bridge grounding connector.
    g. Grounding and bonding busbars.
    h. Signal reference grids.

3. Section 260529 "Hangers and Supports for Electrical Systems" furnishes hangers, supports, and concrete bases for communications equipment installed by this Section.
4. Section 260533.16 "Boxes and Covers for Electrical Systems" furnishes the following installed by this Section:

    a. Metallic outlet boxes, device boxes, rings, and covers.
    b. Junction boxes and pull boxes.
    c. Cover plates for device boxes.

5. Section 260553 "Identification for Electrical Systems" furnishes labels and warning signs for communications pathways installed by this Section.

C. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.

2. Section 270528 "Pathways for Communications Systems" for installation of cable pathways serving communications equipment room fittings installed under this Section.

1.3 DEFINITIONS

A. Abbreviations for Communications Spaces:

1. EF: Entrance facility; generally serves campus or building. EF may include an ER.
2. ER: Equipment room; generally serves campus or building.
3. TE: Telecommunications enclosure; generally serves a single tenant or floor.
4. TR: Telecommunications room; generally serves a single tenant or floor.

B. Abbreviations for Communications Facilities:

1. HC: Horizontal cross-connect; also called "floor distributor" (FD).
2. IC: Intermediate cross-connect; also called "building distributor" (BD).
3. MC: Main cross-connect; also called "campus distributor" (CD).

C. Abbreviations for Grounding and Bonding:

1. BBC: Backbone bonding conductor, for connecting multiple TBBs serving the same floor.
2. PBB: Primary bonding busbar; located in main distribution frame room, ideally near electrical service entrance.
3. RBB: Rack bonding busbar; located in equipment cabinets and racks.
4. SBB: Secondary bonding busbar; located in intermediate distribution frame rooms.
5. TBB: Telecommunications bonding backbone, for connecting SBBs to PBB.
6. TBC: Telecommunications bonding conductor, for connecting PBB to intersystem bonding termination device or busbar at electrical service entrance.
7. TEBC: Telecommunications equipment bonding conductor, for connecting RBBs to SBBs or PBB.
8. UBC: Unit bonding conductor, for connecting individual communications equipment to RBBs or SBBs.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Degraw Firehouse 299 DeGraw Street, Brooklyn, NY.

B. Preinstallation Coordination Meeting(s): For communications equipment room planning. Conduct meeting(s) as videoconference

1. Attendees: Commissioner and information and communications technology staff that will be installing electronic equipment and cables. Notify Commissioner of scheduled meeting dates.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Shop Drawings:

1. Communications equipment room drawings, diagrams, and supporting documents.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 COMMUNICATIONS-CIRCUIT ACCESSORIES

A. Description: This category covers devices intended for connecting communications circuits in accordance with Article 800 of NFPA 70.

B. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.
2. Listing Criteria:

a. For Communications Circuits: UL CCN DUXR; including UL 1863 and UL 467.
b. For Audio/Video, Data, and Signaling Circuits: UL CCN DUXR; including UL 1977 and UL 467.

C. UL DUXR - 66-Style or 110-Style Cross-Connect Frame:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Belden Canada ULC.
b. CommScope, Inc.
c. Optical Cable Corporation (OCC).
d. Ortronics, Inc.
e. Panduit Corp.
f. Or approved equal.

2. Description: This product type includes the frame only. Block inserts and related termination equipment are specified in communications cabling Sections.

D. UL DUXR - Patch Panel :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. CommScope, Inc.
b. Hubbell Premise Wiring; brand of Hubbell Electrical Solutions; Hubbell Incorporated.

c. Leviton Manufacturing Co., Inc.
d. Ortronics, Inc.
e. Panduit Corp.
f. Siemon Co. (The).
g. Or approved equal.

2. Product Characteristics:

a. Mounting: Equipment rack.
b. Style: Modular Prepopulated 110 punch down.
c. EMI Compatibility: Shielded or Unshielded.
d. Configuration: Standard orHigh density; flat or angled.
e. Include provisions for labeling ports.

3. Required Product Options:

a. Distribution Port Quantity: 24 or 48 .
b. Cable Type: Cat. 6a .

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Shop Drawings: Prepare and submit the following:

1. Communications Equipment Room Drawings, Diagrams, and Supporting Documents:

a. Include plans, elevations, sections, details, and attachments to other work.
b. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
c. Equipment Racks and Cabinets: Indicate workspace requirements and access for cable connections.
d. Switchboards, Panelboards, and Safety Switches: Indicate workspace requirements and access for cable connections.
e. Grounding and Bonding: Indicate location of busbars and their mounting details showing standoff insulators and wall mounting brackets.
f. Cable Trays, Large Raceways, Ducts, and Piping: Indicate elevation and route of vertical and horizontal cable trays, raceways or ducts larger than 2 inch wide, and fire-suppression piping located inside communications equipment room.
g. Luminaires: Indicate elevation, orientation, and size of luminaires inside the communications equipment room for coordination with cable trays, equipment racks, cabinets, and other equipment.
h. Access Panels: Indicate locations, dimensions, and clearances required to open access panels in ducts, walls, or ceilings inside communications equipment room.

i. Controls: Indicate locations of sensors, switches, and push-buttons for HVAC, fire suppression, fire alarm, and standby power.
j. Adjust configurations and locations of distribution frames, cross-connects, and patch panels in equipment rooms to accommodate and optimize configurations and space requirements of communications equipment.
k. Adjust configurations and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in equipment room.
l. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.

B. Contact telecommunications service provider and arrange for installation of demarcation point, protected entrance terminals, and a housing when so directed by service provider.

3.3 SELECTION OF GROUNDING AND BONDING PRODUCTS FOR COMMUNICATIONS

A. Grounding and Bonding Conductors:

1. Communications Busbar Connections:

a. TBC: Not smaller than 3/0 AWG and no smaller than largest TBB.
b. TEBC: Not smaller than 2 AWG unless otherwise indicated on Drawings. Provide bolted connectors.
c. UBC: Not smaller than 6 AWG unless otherwise indicated on Drawings. Provide bolted connectors.

2. Cable Tray Connections:

a. Cable Tray Equipment Grounding Conductor: 8 AWG .
b. Cable Tray Bonding Jumper: If not supplied by cable manufacturer, provide bonding jumper not smaller than 6 AWGand not longer than 12 inch. If jumper is wire, it must be terminated with lug having two holes and long barrel for two crimps. If jumper is flexible braid, it must be terminated with one- or two-hole ferrule. Attach with bonding screw or connector provided by cable tray manufacturer.

B. Grounding and Bonding Busbars:

1. PBB:

a. Dimensions: 1/4 inch thick by 4 inch high.
b. Stand-Off Distance: 2 inch or 4 inch.

2. SBB:

a. Dimensions: 1/4 inch thick by 4 inch high.
b. Stand-Off Distance: 2 inch or 4 inch.

C. Access Floor Signal Reference Grid:

1. Provide low-impedance path between telecommunications cabinets, equipment racks, and reference grid, by installing 6 AWG bonding conductors in a grid pattern under the floor.

3.4 SELECTION OF COLORS AND IDENTIFICATION MARKINGS

A. Comply with 29 CFR 1910.144 for color identification of hazards, and the following:

1. Fire-protection and fire-alarm equipment, including raceways, must be finished, painted, or suitably marked safety red.
2. Ceiling-mounted hangers, supports, cable trays, and raceways must be finished, painted, or suitably marked safety yellow where less than 7.7 ft above finished floor.

B. Pipe and Conduit Labeling: Comply with ASME A13.1.

C. Color Coding Scheme for Communications Cable and Terminations: Comply with BICSI N1 and TIA-598.

D. Accessible Fittings for Raceways: Identify cover of junction and pull box of the following systems with wiring system legend and system voltage. System legends must be as follows:

1. "COMMUNICATIONS."
2. "FIRE ALARM."
3. "SECURITY."

E. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, pull points, and locations of high visibility. Identify by system and circuit designation.

F. Locations of Underground Lines: Underground-line warning tape for communication, control wiring, and optical-fiber cable.

G. Communications Vaults, Manholes, Handholes, and Pull and Junction Boxes: For conductors in vaults, pull and junction boxes, manholes, and handholes, use vinyl wraparound labels to identify phase.

1. Locate identification at changes in direction, at penetrations of walls and floors, at 50 ft maximum intervals in straight runs, and at 25 ft maximum intervals in congested areas.

H. Control-Circuit Conductor Identification: For conductors and cables in pull and junction boxes, manholes, and handholes, use write-on tags or self-adhesive labels with conductor or cable designation, origin, and destination.

I. Control-Circuit Conductor Termination Identification: For identification at terminations, provide self-adhesive labels with conductor designation.

J. Conductors to Be Extended in Future: Attach write-on tags or marker tape to conductors and list source.

K. Auxiliary Electrical Systems Conductor Identification: Marker tape or Self-adhesive vinyl tape that is uniform and consistent with system used by manufacturer for factory-installed connections.

L. Equipment and Cabling Identification for Administrative Records and Labeling: Comply with TIA-606 requirements for Class 1 network administration.

M. Equipment Identification Labels:

1. Black letters on white field.
2. Indoor Equipment: Self-adhesive label .
3. Equipment to Be Labeled:

    a. Racks, Frames, and Enclosures: Identify front and rear of each enclosure with self-adhesive labels containing equipment designation.
    b. Patch Panels: Label individual rows in each rack, starting at top and working down, with self-adhesive labels. or Label individual rows and outlets, starting at to left and working down, with self-adhesive labels.
    c. Communications cabinets.
    d. Access doors and panels for concealed communications items.
    e. Emergency system boxes and enclosures.
    f. Contactors.
    g. Remote-controlled switches, dimmer modules, and control devices.
    h. Monitoring and control equipment.
    i. Fire-alarm equipment.
    j. Security equipment.
    k. Life-safety communications equipment.

N. Backbone Cables: Label each cable with a vinyl-wraparound label indicating the location of the far or other end of the backbone cable. Patch panel or punch down block where cable is terminated should be labeled identically.

O. Horizontal Cables: Label each cable with a self-adhesive wraparound label.

P. Cover Plates: Label individual cover plates with self-adhesive labels. Place label at top of cover plate. Identify cover plate in accordance with TIA-606.

Q. Cable Ties: General purpose, for attaching tags, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

3.5 SELECTION OF SIGNS AND HAZARD MARKINGS

A. Comply with 29 CFR 1910.145 for danger, caution, warning, and safety instruction signs.

B. Signs, labels, and tags required for personnel safety must comply with the following standards:

1. Safety Colors: NEMA Z535.1.
2. Facility Safety Signs: NEMA Z535.2.
3. Safety Symbols: NEMA Z535.3.
4. Product Safety Signs and Labels: NEMA Z535.4.
5. Safety Tags and Barricade Tapes for Temporary Hazards: NEMA Z535.5.

C. Electrical Hazard Warnings:

1. Multiple Power Sources Warning Legend: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT/RACK HAS MULTIPLE POWER SOURCES."

D. Operating Instruction Signs: Self-adhesive labels.

E. Emergency Operating Instruction Signs: Self-adhesive labels or Baked-enamel warning signs or Metal-backed, butyrate warning signs or Laminated acrylic or melamine plastic signs with white legend on red background with minimum 3/8 inch high letters for emergency instructions at equipment used for DeGraw Firehouse Emergency Operation.

F. Label TBC, TBBs, and BBCs at attachment points with legend: "WARNING! COMMUNICATIONS BONDING CONDUCTOR. DO NOT REMOVE OR DISCONNECT!"

3.6 FIELD-FABRICATION OF FITTINGS FOR TELECOMMUNICATIONS ROOMS

A. Reference Standards for Installation: Unless more stringent installation requirements are specified in Contract Documents or manufacturers' published instructions, comply with the following:

1. Designated Critical Operations Areas: Comply with Article 708 of NFPA 70.
2. Communications Systems: Comply with Ch. 8 of NFPA 70 and with BICSI N1.
3. Grounding and Bonding: Comply with Article 250 of NFPA 70 and with BICSI N3.
4. Consult Commissioner for resolution of conflicting requirements.

B. Provide the following specified products in intermediate distribution frame room or space:

1. One equipment backing panel .

    a. Install from 6 inch to 8 ftabove finished floor. If plywood is fire treated, ensure that fire-treatment stamp is visible after installation.

2. One PBB T-100.
3. One 19 inch open equipment rack with RBB and enclosure-mounted relocatable power tap .
4. Two 48-Port patch panel T-100.

3.7 INSTALLATION OF BONDING FOR COMMUNICATIONS

A. Grounding of Communications: Bond PBB and SBBs to grounding electrode conductors at electrical power service entrance, and at electrical power derived systems serving communications equipment, using intersystem bonding termination device.

1. Structural Steel: Where structural steel of steel frame building is readily accessible within room or space, bond each SBB and PBB to vertical steel of building frame.

B. Comply with manufacturer's published instructions.

C. Reference Standards:

1. Bonding of Communications: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with BICSI N3.

2. Consult Commissioner for resolution of conflicting requirements.

D. Special Techniques:

1. Bonding of Busbars:

   a. Indicate locations of grounding busbars on Drawings. Install busbars horizontally, on insulated spacers 12 inch above finished floor unless otherwise indicated.
   b. Where busbars are indicated on both sides of doorways, route bonding conductor up to top of door frame, across top of doorway, and down; connect to continuation of horizontal busbar.

2. Bonding Conductors:

   a. Stacking of conductors under a single bolt is not permitted when connecting to busbars.
   b. Assemble wire connector to conductor, complying with manufacturer's published instructions and as follows:

      1) Use crimping tool and die specific to connector.
      2) Pretwist conductor.
      3) Apply antioxidant compound to bolted and compression connections.

   c. Install in straightest and shortest route between origination and termination point, and no longer than required. Bend radius must not be smaller than 10 times diameter of conductor. No single bend may exceed 90 degrees.
   d. Install without splices.
   e. Support conductors at not more than 36 inch intervals.
   f. Outside telecommunications rooms, install conductors in metric designator 21 (trade size 3/4) PVC-80 conduit until conduit enters telecommunications room. Install bonding conductors in EMT-A or EMT-SS when routed through plenum. Do not install bonding conductors in EMT-S unless otherwise indicated on Drawings.

      1) If bonding conductor must be installed in EMT-S or other ferrous metallic raceway, bond conductor to raceway using grounding bushing and bond both ends of raceway to SBB.

3. Provide TBC and terminate ends to PBB and intersystem bonding busbar at electrical service entrance in accordance with Section 250.94, "Bonding for Communication Systems," of NFPA 70.
4. Busbar Interconnections: Bond SBBs to PBB with TBBs. If more than one TBB is installed, bond TBBs together with BBCs where required by TIA-607.
5. Communications Enclosures: Bond metallic enclosures of telecommunications equipment with UBCs to nearest SBB or PBB.
6. Equipment Racks: Bond metallic components of enclosures to RBB using UBCs. Provide RBB if not provided by enclosure or rack manufacturer. Bond RBB to SBB with TEBC. Power connection must comply with NFPA 70; equipment grounding conductor in power cord of cord- and plug-connected equipment must be considered supplemental to bonding requirements in this Section.
7. Shielded Cable: Bond shield of shielded cable to SBB in communications rooms and spaces. Comply with TIA-568.1 and TIA-568.2 when grounding shielded balanced twisted-pair cables.
8. Primary Protector: Bond to PBB with insulated bonding conductor.
9. Electrical Power Panelboards: Where electrical panelboards for communications equipment are located in same room or space, bond each ground bar of panelboard to SBB.

10. Cable Trays: Provide continuous electrical path by installing bonding clips and jumpers. Bond each end to nearest SBB.
11. Ladder Racks: Provide continuous electrical path by installing bonding clips and jumpers. Bond each end to nearest SBB.
12. Access Floors: Bond metal parts of access floors to SBB.

3.8 FIELD QUALITY CONTROL FOR BONDING OF COMMUNICATIONS

A. Field tests and inspections must be witnessed by Commissioner,.

B. Tests and Inspections:

1. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with calibrated torque wrench according to manufacturer's published instructions.
2. Test bonding connections of system using AC earth ground-resistance tester, taking two-point bonding measurements in each telecommunications equipment room containing PBB or SBB, using process recommended by BICSI N1. Conduct tests with facility in operation.

a. Measure resistance between PBB and electrical service intersystem termination point. Maximum acceptable value is 100 mOhms.

1) If measured resistance from electrical service equipment to ground exceeds 5 Ohms, notify Commissioner and include recommendations to reduce resistance to ground.

b. Measure resistance between SBBs and PBB. Maximum acceptable value is 100 mOhms.

3. Test for ground loop currents using digital clamp-on ammeter, with full scale not more than 10 A, displaying current in increments of 0.01 A at accuracy of plus or minus 2.0 percent.

a. With grounding infrastructure completed and communications system electronics operating, measure current in bonding conductors connected to PBB and to SBBs. Maximum acceptable AC current level is 1 A.

C. Nonconforming Work:

1. Communications bonding will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Collect, assemble, and submit test and inspection reports.

3.9 PROTECTION

A. After installation, protect communications equipment room fittings from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 271100

SECTION 271323 - COMMUNICATIONS OPTICAL FIBER BACKBONE CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Type OFCR optical fiber cable.
2. Types OFC and OFCG optical fiber cable.
3. Optical fiber cable hardware.

1.3 DEFINITIONS

A. Conductive Cable: Cable containing non-current-carrying electrically-conductive members such as metallic strength members and metallic vapor barriers.

B. Cross-Connect: A facility enabling termination of cable elements and their interconnection or cross-connection.

C. Type OFCR: Conductive cable for use as riser in vertical shafts or from floor to floor.

D. Types OFC and OFCG: Conductive cable for general purpose use.

1.4 COORDINATION

A. Coordinate layout and installation of telecommunications pathways and cabling with City of New York's telecommunications and LAN equipment and service suppliers.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Sustainable Design Submittals:

1. Environmental Product Declaration: For each product.

1.7 INFORMATIONAL SUBMITTALS

A. Source quality-control reports.

1.8 CLOSEOUT SUBMITTALS

A. Guaranty Service Agreement:

1. Software service agreement.

B. Maintenance Data: For optical fiber cable, splices, and connectors.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.10 DELIVERY, STORAGE, AND HANDLING

A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet-work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during remainder of construction period.

B. Test cables upon receipt at Project site.

1. Test optical fiber cable to determine continuity of strand end to end. Use optical fiber flashlightor optical loss test set.
2. Test optical fiber cable while on reels. Use optical time domain reflectometer to verify cable length and locate cable defects, splices, and connector, including loss value of each. Retain test data and include record in maintenance data.
3. Test with Bare Fiber Adapter for this purpose on an OTDR.

PART 2 - PRODUCTS

2.1 TYPE OFCR OPTICAL FIBER CABLE

A. Type OFCR Optical Fiber Cable: This category covers jacketed optical fiber cable for use as risers in vertical runs in shaft or between floors within buildings in accordance with Article 770 of NFPA 70 containing noncurrent-carrying electrically conductive materials.

B. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and application.
2. Listing Criteria: UL CCN QAYK; including UL 1651.
3. General Characteristics:

a. Performance: TIA-568.3.
b. Inside Plant Mechanical Properties: ICEA S-83-596.
c. Inside-Outside Plant Mechanical Properties: ICEA S-104-696.
d. Jacket:

1) Cable cordage jacket, fiber, unit, and group color in accordance with TIA-598.
2) Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inch.

C. Type OFCR, Designation OM1, Multimode Optical Fiber Cable :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Belden Inc.
b. Berk-Tek Leviton; a Nexans/Leviton alliance.
c. Corning Optical Communications; Corning Incorporated.
d. General Cable; Prysmian Group North America.
e. Hitachi Cable America Inc.
f. Mohawk; a division of Belden Networking, Inc.
g. Superior Essex Inc.
h. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Additional Characteristics:

a. Construction: TIA-492AAAA; 62.5 µm core diameter, 125 µm cladding diameter.
b. Minimum Overfilled Modal Bandwidth-Length Product: 200 MHz-km at 850 nm wavelength; 500 MHz-km at 1300 nm wavelength.

4. Options:

a. Configuration: 12 -fiber or tight buffer or optical fiber cable.
b. Maximum Attenuation: 3.50 dB/km at 850 nm wavelength or 1.5 dB/km at 1300 nm wavelength.
c. Jacket Color: Orange .
d. Armor: Aluminum.

2.2 TYPES OFC AND OFCG OPTICAL FIBER CABLE

A. Types OFC and OFCG Optical Fiber Cable: This category covers jacketed optical fiber cable for general use within buildings in accordance with Article 770 of NFPA 70 containing noncurrent-carrying electrically conductive materials.

B. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and application.
2. Listing Criteria: UL CCN QAYK; including UL 1651.
3. General Characteristics:

a. Performance: TIA-568.3.
b. Inside Plant Mechanical Properties: ICEA S-83-596.
c. Jacket:

1) Cable cordage jacket, fiber, unit, and group color in accordance with TIA-598.
2) Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inch.

2.3 OPTICAL FIBER CABLE HARDWARE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bel Fuse Inc.
2. Belden, Inc.
3. Berk-Tek Leviton; a Nexans/Leviton alliance.
4. Corning Optical Communications; Corning Incorporated.
5. Optical Cable Corporation.
6. Or approved equal.

B. Performance Criteria:

1. Fiber Optic Connector Intermateability Standard (FOCIS) specifications of TIA-604 series.
2. TIA-568.3.

C. Cross-Connects and Patch Panels: Modular panels housing multiple-numbered, duplex cable connectors.

1. Number of Connectors per Field: One for each fiber of cable or cables assigned to field, plus spares and blank positions adequate to suit specified expansion criteria.

D. Connector Type: Type SC complying with TIA-604-3, connectors.

E. Plugs and Plug Assemblies:

1. Male; color-coded modular telecommunications connector designed for termination of single optical fiber cable.
2. Insertion loss not more than 0.75 dB.
3. Marked to indicate transmission performance.

F. Jacks and Jack Assemblies:

1. Female; quick-connect, simplex and duplex; fixed telecommunications connector designed for termination of single optical fiber cable.
2. Insertion loss not more than 0.25 dB.
3. Marked to indicate transmission performance.
4. Designed to snap-in to patch panel or faceplate.

2.4 SOURCE QUALITY CONTROL

A. Commissioner will witness required factory tests. Notify Commissioner at least 14 days before date of tests and indicate their approximate duration.

B. Testing Administrant: Engage qualified testing agency to evaluate cables.

C. Factory Tests and Inspections:

1. Test and inspect multimode optical fiber cables, by, or under supervision of, qualified electrical testing laboratory in accordance with TIA-526-14 and TIA-568.3 before delivering to site. Affix label with name and date of manufacturer's qualified electrical testing laboratory's certification of system compliance.
2. Test and inspect pre-terminated optical fiber cable assemblies, by, or under supervision of, qualified electrical testing laboratory in accordance with TIA-526-14 and TIA-568.3 before delivering to site. Affix label with name and date of manufacturer's qualified electrical testing laboratory's certification of system compliance.

D. Nonconforming Work:

1. Cables that do not pass tests and inspections will be considered defective.

E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Coordinate backbone cabling with protectors and demarcation point provided by communications service provider.

3.3 SELECTION OF OPTICAL FIBER TYPE

A. Installed in Vertical Shaft or Floor-to-Floor Riser:

1. Nonconductive:

a. Type OFNR or Type OFNP in listed plenum communications raceway.
b. Type OFNR or Type OFNP in metallic conduit.

2. Conductive:

a. Type OFCR or Type OFCP in listed plenum communications raceway.

b. Type OFCR or Type OFCP in metallic conduit.

B. Installed in Plenum, Duct, or Other Space Handling Environmental Air:

1. Nonconductive:

a. Type OFNP in listed plenum communications raceway.
b. Type OFNP in metallic conduit.

2. Conductive:

a. Type OFCP in listed plenum communications raceway.
b. Type OFC or Type OFCP in metallic conduit.

C. Installed in Location Other Than Riser or Plenum:

1. Nonconductive: or Type OFNP in metallic conduit.
2. Conductive: Type OFC Type OFCP in metallic conduit.

3.4 INSTALLATION OF OPTICAL FIBER BACKBONE CABLES

A. Optical fiber backbone cabling system must provide interconnections between communications equipment rooms, main terminal space, and entrance facilities in telecommunications cabling system structure. Cabling system consists of backbone cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for backbone-to-backbone cross-connection.

B. Backbone cabling cross-connects may be located in communications equipment rooms or at entrance facilities. Bridged taps and splitters may not be used as part of backbone cabling.

C. Comply with BICSI N1, NECA NEIS 1, and NECA NEIS 301.

D. Backbone cabling system must comply with transmission standards in TIA-568.1.

E. Telecommunications Pathways and Spaces: Comply with TIA-569.

F. Wiring Methods:

1. Not in Raceway: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.
2. In Raceway: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces, in attics, and in gypsum board partitions where unenclosed wiring method may be used. Conceal raceway and cables except in unfinished spaces.

a. Install plenum cable in environmental airspaces, including plenum ceilings.
b. Comply with requirements for pathways specified in Section 270528 "Pathways for Communications Systems."

3. In Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

G. Optical Fiber Cabling Installation:

1. Comply with TIA-568.1 and TIA-568.3.
2. Comply with BICSI ITSIMM, Ch. 6, "Cable Termination Practices."
3. Terminate all cables; no cable may contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inch and not more than 6 inch from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
5. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
6. Bundle, lace, and train cable to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, "Cabling Termination Practices" Chapter. Use lacing bars and distribution spools.
7. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
8. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps may not be used for heating.
9. In communications equipment room, provide 10 ft long service loop on each end of cable.
10. Pulling Cable: Comply with BICSI ITSIMM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
11. Cable may be terminated on connecting hardware that is rack or cabinet mounted.

H. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Cable may not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

I. Group connecting hardware for cables into separate logical fields.

3.5 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569, Annex A, "Firestopping."

C. Comply with BICSI ITSIMM, "Firestopping" Chapter.

3.6 GROUNDING

A. Install grounding in accordance with BICSI ITSIMM, "Grounding (Earthing), Bonding, and Electrical Protection" Chapter.

B. Comply with TIA-607 and NECA/BICSI-607.

C. Locate grounding bus bar to minimize length of bonding conductors. Fasten to wall allowing at least 2 inch clearance behind grounding bus bar. Connect grounding bus bar with minimum 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.

D. Bond metallic equipment to grounding bus bar, using not smaller than 6 AWG equipment grounding conductor.

3.7 IDENTIFICATION

A. Identify system components, wiring, and cabling complying with TIA-606. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

1. Administration Class: Class 1, Class 2.
2. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.

B. Paint and label colors for equipment identification must comply with TIA-606 for Class 2 level of administration.

C. Comply with requirements in Section 271523 "Communications Optical Fiber Horizontal Cabling" for cable and asset management software.

D. Cable Schedule: Install in prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish electronic copy of final comprehensive schedules for Project.

E. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, backbone pathways and cables, entrance pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors.

F. Cable and Wire Identification:

1. Label each cable within 4 inch of each termination and tap, where it is accessible in cabinet or junction or outlet box, and elsewhere as indicated.
2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
3. Exposed Cables and Cables in Cable Trays and Wire Troughs: Label each cable at intervals not exceeding 15 ft.
4. Label each unit and field within distribution racks and frames.
5. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use different color for jacks and plugs of each service.

G. Labels must be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in TIA 606, for the following:

1. Flexible vinyl or polyester that flexes as cables are bent.

3.8 FIELD QUALITY CONTROL

A. Field tests and inspections must be witnessed by Commissioner.

B. Tests and Inspections:

1. Visually inspect optical fiber jacket materials for qualified electrical testing laboratory certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments, and inspect cabling connections for compliance with TIA-568.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Optical Fiber Cable Tests:

    a. Test instruments must meet or exceed applicable requirements in TIA-568.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    b. Link End-to-End Attenuation Tests:

        1) Horizontal and multimode backbone link measurements: Test at 850 or 1300 nm in one direction in accordance with TIA-526-14, Method B, One Reference Jumper.
        2) Attenuation test results for backbone links must be less than 2.0 dB. Attenuation test results must be less than those calculated in accordance with equation in TIA-568.1.

C. Nonconforming Work:

1. Cables will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective cables and retest.

D. Collect, assemble, and submit test and inspection reports.

1. Data for each measurement must be documented.
2. Data for field quality-control report submittals must be printed in summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from instrument to computer, saved as text files, and printed and submitted.

3.9 SERVICING

A. Software Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software service agreement includes software support for one year.
2. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within one year from date of Substantial Completion. Verify that upgrading software includes operating system and new or revised licenses for using software.

    a. Upgrade Notice: No fewer than 30 days to allow NPF to schedule and access the system and to upgrade computer equipment if necessary.

3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 271323

SECTION 271513 - COMMUNICATIONS COPPER HORIZONTAL CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Category 6a twisted pair cable.
2. Twisted pair cable hardware.
3. Multiuser telecommunications outlet assembly (MUTOA).
4. Cable management system.
5. Identification products.

1.3 DEFINITIONS

A. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.

B. EMI: Electromagnetic interference.

C. FTP: Shielded twisted pair.

D. F/FTP: Overall foil screened cable with foil screened twisted pair.

E. F/UTP: Overall foil screened cable with unscreened twisted pair.

F. IDC: Insulation displacement connector.

G. Jack: Also commonly called an "outlet," it is the fixed, female connector.

H. LAN: Local area network.

I. Plug: Also commonly called a "connector," it is the removable, male telecommunications connector.

J. Screen: A metallic layer, either a foil or braid, placed around a pair or group of conductors.

K. Shield: A metallic layer, either a foil or braid, placed around a pair or group of conductors.

L. S/FTP: Overall braid screened cable with foil screened twisted pair.

M. S/UTP: Overall braid screened cable with unscreened twisted pairs.

N. UTP: Unscreened (unshielded) twisted pair.

1.4 COPPER HORIZONTAL CABLING DESCRIPTION

A. Horizontal cable cabling system shall provide interconnections between Distributor A, Distributor B, or Distributor C, and the equipment outlet, otherwise known as "Cabling Subsystem 1," in the telecommunications cabling system structure. Cabling system consists of horizontal cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for horizontal-to-horizontal cross-connection.

1. TIA-568-C.1 requires that a minimum of two equipment outlets be installed for each work area.
2. Horizontal cabling shall contain no more than one transition point or consolidation point between the horizontal cross-connect and the telecommunications equipment outlet.
3. Bridged taps and splices shall not be installed in the horizontal cabling.

B. A work area is approximately 100 sq. ft., and includes the components that extend from the equipment outlets to the station equipment.

C. The maximum allowable horizontal cable length is 295 feet. This maximum allowable length does not include an allowance for the length of 16 feet to the workstation equipment or in the horizontal cross-connect.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Product Data:

1. Category 6a twisted pair cable.
2. Twisted pair cable hardware.
3. Multiuser telecommunications outlet assembly (MUTOA).
4. Cable management system.
5. Identification products.

B. Shop Drawings: Reviewed and stamped by RCDD.

1. System Labeling Schedules:

a. Electronic copy of labeling schedules that are part of cabling and asset identification system of software.

2. Cabling administration Drawings and printouts.
3. Wiring diagrams and installation details of telecommunications equipment, to show location and layout of telecommunications equipment, including the following:

a. Telecommunications rooms plans and elevations.
b. Telecommunications pathways.
c. Telecommunications system access points.
d. Telecommunications grounding system.
e. Telecommunications conductor drop locations.
f. Typical telecommunications details.
g. Mechanical, electrical, and plumbing systems.

C. Twisted pair cable testing plan.

D. Sustainable Design Submittals:

1. Product Data: For each conductor and cable indicating lead content.
2. Environmental Product Declaration: For each product.
3. Health Product Declaration: For each product.
4. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
5. Environmental Product Declaration: For each product.
6. Environmental Product Declaration: For each product.
7. Environmental Product Declaration: For each product.
8. Third-Party Certifications: For each product.
9. Third-Party Certified Life Cycle Assessment: For each product.

E. Samples: For telecommunications jacks and plugs, in specified finish, one for each type and configurationand cover plates for color selection and evaluation of technical features.

F. Field quality-control reports.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of product.

C. Source quality-control reports.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: For splices and connectors to include in maintenance manuals.

B. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On USB media or compact disk, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.

C. Testing Agency Qualifications: Testing agency must have personnel certified by BICSI on staff.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Test cables upon receipt at Project site.

1. Test each pair of twisted pair cable for open and short circuits.

1.11 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.12 COORDINATION

A. Coordinate layout and installation of telecommunications pathways and cabling with City of New York's telecommunications and LAN equipment and service suppliers.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Horizontal cabling system shall comply with transmission standards in TIA-568-C.1, when tested according to test procedures of this standard.

B. Telecommunications Pathways and Spaces: Comply with TIA-569-D.

C. Grounding: Comply with TIA-607-B.

2.2 GENERAL CABLE CHARACTERISTICS

A. Listed and labeled by an NRTL as complying with the applicable standard and NFPA 70 for the following types:

1. Communications, Plenum Rated:

a. Type CMP complying with UL 1685 or Type CMP in listed plenum communications raceway.

B. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50450Insert value or less.

C. RoHS compliant.

2.3 CATEGORY 6a TWISTED PAIR CABLE

A. Category 6a Twisted Pair Cable: Four-pair, balanced-twisted pair cable, with internal spline, certified to meet transmission characteristics of Category 6a cable at frequencies up to 500 MHz.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. 3M.
2. Belden.
3. Berk-Tek Leviton.
4. Genesis Cable Products; Honeywell International, Inc.
5. Hitachi Cable America Inc.
6. Mohawk; a division of Belden Networking, Inc.
7. Superior Essex Inc.
8. Or approved equal.

C. Standard: Comply with TIA-568-C.2 for Category 6a cables.

D. Conductors: 100-ohm, 23 AWG solid copper.

1. Lead Content: Less than 300 parts per million.

E. Shielding/Screening: Unshielded twisted pairs (UTP).

F. Cable Rating: Riser.

G. Jacket: White or Gray or Blue or Yellow thermoplastic.

2.4 TWISTED PAIR CABLE HARDWARE

A. Twisted Pair Cable Hardware: Hardware designed to connect, splice, and terminate twisted pair copper communications cable.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. 3M.
2. American Technology Systems Industries, Inc.
3. Belden.
4. Berk-Tek Leviton.
5. Genesis Cable Products; Honeywell International, Inc.
6. Leviton Manufacturing Co., Inc.

7. Mohawk; a division of Belden Networking, Inc.
8. Panduit Corp.
9. Superior Essex Inc.
10. Or approved equal.

C. General Requirements for Twisted Pair Cable Hardware:

1. Comply with the performance requirements of Category 6a.
2. Comply with TIA-568-C.2, IDC type, with modules designed for punch-down caps or tools.
3. Cables shall be terminated with connecting hardware of same category or higher.

D. Source Limitations: Obtain twisted pair cable hardware from single source from single manufacturer.Obtain twisted pair cable hardware from same manufacturer as twisted pair cable, from single source.

E. Connecting Blocks:

1. 110-style IDC for Category 6a.
2. Provide blocks for the number of cables terminated on the block, plus 25 percent spare, integral with connector bodies, including plugs and jacks where indicated.

F. Cross-Connect: Modular array of connecting blocks arranged to terminate building cables and permit interconnection between cables.

1. Number of Terminals per Field: One for each conductor in assigned cables.

G. Patch Panel: Modular panels housing numbered jack units with IDC-type connectors at each jack location for permanent termination of pair groups of installed cables.

1. Features:

a. Universal T568A and T568B wiring labels.
b. Labeling areas adjacent to conductors.
c. Replaceable connectors.
d. 24 or 48 ports.

2. Construction: 16-gauge steel and mountable on 19-inch equipment racks.
3. Number of Jacks per Field: One for each four-pair cable indicated.

H. Patch Cords: Factory-made, four-pair cables in 36-inch lengths; terminated with an eight-position modular plug at each end.

1. Patch cords shall have bend-relief-compliant boots and color-coded icons to ensure performance. Patch cords shall have latch guards to protect against snagging.
2. Patch cords shall have color-coded boots for circuit identification.

I. Plugs and Plug Assemblies:

1. Male; eight position; color-coded modular telecommunications connector designed for termination of a single four-pair, 100-ohm, unshielded or shielded twisted pair cable.
2. Standard: Comply with TIA-568-C.2.
3. Marked to indicate transmission performance.

J. Jacks and Jack Assemblies:

1. Female; eight position; modular; fixed telecommunications connector designed for termination of a single four-pair, 100-ohm, unshielded or shielded twisted pair cable.
2. Designed to snap-in to a patch panel or cover plate.
3. Standard: Comply with TIA-568-C.2.
4. Marked to indicate transmission performance.

K. Cover Plate:

1. TwoFourSix port, vertical single gang cover plates designed to mount to single gang wall boxes.
2. EightTenTwelve port, vertical double gang cover plates designed to mount to double gang wall boxes.
3. Plastic Cover Plate: High-impact plastic. Coordinate color with Section 260533.16 "Boxes and Covers for Electrical Systems."

L. Legend:

1. Machine printed, in the field, using adhesive-tape label.
2. Snap-in, clear-label covers and machine-printed paper inserts.

2.5 MULTIUSER TELECOMMUNICATIONS OUTLET ASSEMBLY (MUTOA)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Belden.
2. Chatsworth Products, Inc.
3. Hubbell Premise Wiring; Hubbell Incorporated, Commercial and Industrial.
4. Ortronics, Inc.
5. Panduit Corp.
6. Or approved equal.

B. Description: MUTOAs shall meet the requirements of "Twisted Pair Cable Hardware" Article.

1. Number of Terminals per Field: One for each conductor in assigned cables.
2. Number of Connectors per Field:

    a. One for each four-pair unshielded or shielded twisted-pair group of indicated cables, plus 25 percent spare positions.

3. Mounting: Wall.
4. NRTL listed as complying with UL 50 and UL 1863.
5. Label shall include maximum length of work area cords, based on TIA-568-C.1.
6. When installed in plenums used for environmental air, NRTL listed as complying with UL 2043.

2.6 CABLE MANAGEMENT SYSTEM

A. Cable Management System: Computer-based cable management system, with integrated database and graphic capabilities.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. iTRACS Corporation.
2. Telsoft Solutions.
3. Hubbell Premise Wiring Inc..
4. Or approved equal.

C. Document physical characteristics by recording the network, TIA details, and connections between equipment and cable.

D. Information shall be presented in database view, schematic plans, or technical drawings.

1. Microsoft Visio Professional or AutoCAD drawing software shall be used as drawing and schematic plans software.

2.7 IDENTIFICATION PRODUCTS

A. Comply with TIA-606-B and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

2.8 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.

B. Factory test cables on reels according to TIA-568-C.1.

C. Factory test twisted pair cables according to TIA-568-C.2.

D. Cable will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 WIRING METHODS

A. Routing:

1. Install cables in raceways and cable trays, except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces, attics, and gypsum board partitions where unenclosed wiring method may be used. Conceal raceway and cables, except in unfinished spaces.

a. Install plenum cable in environmental air spaces, including plenum ceilings.

b. Comply with requirements for raceways and boxes specified in Section 270528 "Pathways for Communications Systems."

2. Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

B. Wiring within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools. Install conductors parallel with or at right angles to sides and back of enclosure.

3.3 INSTALLATION OF PATHWAYS

A. Comply with requirements for demarcation point, cabinets, and racks specified in Section 271100 "Communications Equipment Room Fittings."

B. Comply with Section 270528 "Pathways for Communications Systems."

C. Comply with Section 260529 "Hangers and Supports for Electrical Systems."

D. Drawings indicate general arrangement of pathways and fittings.

3.4 INSTALLATION OF TWISTED-PAIR HORIZONTAL CABLES

A. Comply with NECA 1 and NECA/BICSI 568.

B. General Requirements for Cabling:

1. Comply with TIA-568-C.0, TIA-568-C.1, and TIA-568-C.2.
2. Comply with BICSI's "Information Transport Systems Installation Methods Manual (ITSIMM), Ch. 5, "Copper Structured Cabling Systems," "Cable Termination Practices" Section.
3. Install 110-style IDC termination hardware unless otherwise indicated.
4. Do not untwist twisted pair cables more than 1/2 inch from the point of termination to maintain cable geometry.
5. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
6. MUTOA shall not be used as a cross-connect point.
7. Consolidation points may be used only for making a direct connection to equipment outlets:

   a. Do not use consolidation point as a cross-connect point, as a patch connection, or for direct connection to workstation equipment.
   b. Locate consolidation points for twisted-pair cables at least 49 feet from communications equipment room.

8. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
9. Install lacing bars to restrain cables, prevent straining connections, and prevent bending cables to smaller radii than minimums recommended by manufacturer.

10. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI Information Transport Systems Installation Methods Manual, Ch. 5, "Copper Structured Cabling Systems," "Cable Termination Practices" Section. Use lacing bars and distribution spools.
11. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation, and replace it with new cable.
12. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
13. In the communications equipment room, install a 10-foot- long service loop on each end of cable.
14. Pulling Cable: Comply with BICSI Information Transport Systems Installation Methods Manual, Ch. 5, "Copper Structured Cabling Systems," "Pulling and Installing Cable" Section. Monitor cable pull tensions.

C. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend twisted pair cabling, not in a wireway or pathway, a minimum of 8 inches above ceilings by cable supports not more than 60 inches apart.
3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

D. Group connecting hardware for cables into separate logical fields.

E. Separation from EMI Sources:

1. Comply with recommendations from BICSI's "Telecommunications Distribution Methods Manual" and TIA-569-D for separating unshielded copper communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:

    a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches.
    b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches.
    c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches.

3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:

    a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches.
    b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches.
    c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches.

4. Separation between communications cables in grounded metallic raceways, power lines, and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:

    a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
    b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches.
    c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches.

5. Separation between Communications Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches.
6. Separation between Communications Cables and Fluorescent Fixtures: A minimum of 5 inches.

3.5 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with "Firestopping Systems" Article in BISCI's "Telecommunications Distribution Methods Manual."

3.6 GROUNDING

A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.

B. Install grounding according to the "Grounding, Bonding, and Electrical Protection" chapter in BICSI's "Telecommunications Distribution Methods Manual."

C. Comply with TIA-607-B and NECA/BICSI-607.

D. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall, allowing at least a 2-inch clearance behind the grounding bus bar. Connect grounding bus bar to suitable electrical building ground, using a minimum No. 4 AWG grounding electrode conductor.

E. Bond metallic equipment to the grounding bus bar, using not smaller than a No. 6 AWG equipment grounding conductor.

3.7 IDENTIFICATION

A. Identify system components, wiring, and cabling complying with TIA-606-B. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

1. Administration Class: Class 1.
2. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.

B. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.

C. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors.

D. Cable and Wire Identification:

1. Label each cable within 4 inches of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
2. Each wire connected to building-mounted devices is not required to be numbered at the device if wire color is consistent with associated wire connected and numbered within panel or cabinet.
3. Exposed Cables and Cables in Cable Trays and Wire Troughs: Label each cable at intervals not exceeding 15 feet.
4. Label each terminal strip, and screw terminal in each cabinet, rack, or panel.

    a. Individually number wiring conductors connected to terminal strips, and identify each cable or wiring group, extended from a panel or cabinet to a building-mounted device, with the name and number of a particular device.
    b. Label each unit and field within distribution racks and frames.

5. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and -connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use a different color for jacks and plugs of each service.

E. Labels shall be preprinted or computer-printed type, with a printing area and font color that contrast with cable jacket color but still comply with TIA-606-B requirements for the following:

1. Cables use flexible vinyl or polyester that flexes as cables are bent.

3.8 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

1. Field testing is crucial to ensure the integrity and performance of telecommunications cabling systems. Acceptance testing must be performed by qualified technician and in accordance with BICSI standard found in Field Testing of Structured Cable (Chapter 12 of 15th Edition). Field testing of cabling requires a set of measurable transmission performance parameters (or limits) along with the necessary field test instruments. Test measurements are used to determine if the channel meet specification.

B. Field tests and inspections must be witnessed by Commissioner.

C. Tests and Inspections:

1. Visually inspect jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments, and inspect cabling connections for compliance with TIA-568-C.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Test twisted pair cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not cross-connection.

a. Test instruments shall meet or exceed applicable requirements in TIA-568-C.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

D. Data for each measurement shall be documented. Data for submittals shall be printed in a summary report that is formatted similarly to Table 10.1 in BICSI's "Telecommunications Distribution Methods Manual," or shall be transferred from the instrument to the computer, saved as text files, printed, and submitted.

E. Nonconforming Work:

1. End-to-end cabling will be considered defective if it does not pass tests and inspections.
2. Remove and replace cabling where test results indicate that they do not comply with specified requirements.

F. Collect, assemble, and submit test and inspection reports.

G. Manufacturer Services:

1. Engage factory-authorized service representative to support field tests and inspections.

3.9 SERVICING

A. Software Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software service agreement includes software support for one year.
2. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within one year from date of Substantial Completion. Verify that upgrading software includes operating system and new or revised licenses for using software.

a. Upgrade Notice: No fewer than 30 days to allow City of New York to schedule and access the system and to upgrade computer equipment if necessary.

3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 271513

SECTION 271523 - COMMUNICATIONS OPTICAL FIBER HORIZONTAL CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. 62.5/125-micrometer, multimode, optical fiber cable (OM1).
2. Optical fiber cable hardware.
3. Cross-connects and patch panels.
4. Grounding.
5. Identification products.

1.3 DEFINITIONS

A. BICSI: Building Industry Consulting Service International.

B. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.

1.4 OPTICAL FIBER HORIZONTAL CABLING DESCRIPTION

A. Optical fiber horizontal cabling system is to provide interconnections between Distributor A, Distributor B, or Distributor C and the equipment outlet, otherwise known as "Cabling Subsystem 1" in the telecommunications cabling system structure. Cabling system consists of horizontal cables, intermediate and main cross-connects, mechanical terminations, and patch cords or jumpers used for horizontal-to-horizontal cross-connection.

1. TIA-568-C.1 requires that a minimum of two equipment outlets be installed for each work area.
2. Horizontal cabling is to contain no more than one transition point or consolidation point between the horizontal cross-connect and the equipment outlet.
3. Bridged taps and splices are not to be installed in the horizontal cabling.
4. Specialty work areas, such as monitor displays, printers, or other usage, may be singular in nature and not dual.

B. A work area is approximately 100 sq. ft., and includes the components that extend from the equipment outlets to the equipment.

C. The maximum allowable horizontal cable length is 295 feet. This maximum allowable length does not include an allowance for the length of 16 feet to the workstation equipment or in the horizontal cross-connect. All jumpers, cross-connects and service loops must be included within the 295 feet.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Product Data for the following::

1. 62.5/125-micrometer, multimode, optical fiber cable (OM1).
2. Optical fiber cable hardware.
3. Cross-connects and patch panels.
4. Grounding.
5. Identification products.

B. Shop Drawings:

1. System Labeling Schedules:

a. Electronic copy of labeling schedules that are part of the cabling and asset identification system of the software.

2. Cabling administration Drawings and printouts.
3. Wiring diagrams and installation details of telecommunications equipment, to show location and layout of telecommunications equipment, including the following:

a. Telecommunications rooms plans and elevations.
b. Telecommunications pathways.
c. Telecommunications system access points.
d. Telecommunications grounding system.
e. Telecommunications conductor drop locations.
f. Typical telecommunications details.

C. Fiber optic cable testing plan.

D. Sustainable Design Submittals:

1. Environmental Product Declaration: For each product.
2. Health Product Declaration: For each product.
3. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

E. Samples: For telecommunications jacks and plugs, in specified finish, one for each type and configuration.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and for testing agency.

B. Product Certificates: For each type of product.

C. Source quality-control reports.

D. Field quality-control reports.

1.8 CLOSEOUT SUBMITTALS

A. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On USB media or compact disk, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.

B. Maintenance Data: For optical fiber cable, splices, and connectors to include in maintenance manuals.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.

C. Testing Agency Qualifications: Testing agency must have personnel certified by BICSI on staff.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Test cables upon receipt at Project site.

1. Test optical fiber cable to determine the continuity of the strand end to end. Use optical fiber flashlight.
2. Test optical fiber cable while on reels. Use an optical time domain reflectometer to verify the cable length and locate cable defects, splices, and connector, including the loss value of each. Retain test data and include the record in maintenance data.

1.11 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install cables and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.12 COORDINATION

A. Coordinate layout and installation of telecommunications pathways and cabling with City of New York's telecommunications equipment and service suppliers.

1.13 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning with Substantial Completion, provide software support for one year.

B. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within one year from date of Substantial Completion. Upgrading software is to include operating system. Upgrade is to include new or revised licenses for use of software.

1. Provide 30 days' notice to City of New York to allow scheduling and access to system and to allow City of New York to upgrade computer equipment if necessary.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Horizontal cabling system is to comply with transmission standards in TIA-568-C.1, when tested according to test procedures of this standard.

B. Telecommunications Pathways and Spaces: Comply with TIA-569-D.

C. Grounding: Comply with TIA-607-B.

2.2 62.5/125-MICROMETER, MULTIMODE, OPTICAL FIBER CABLE (OM1)

A. Description: Multimode, 62.5/125-micrometer, 2 or 4 -fiber, conductive, tight buffer, Armored, optical fiber cable.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Belden Inc.
2. Berk-Tek, a Leviton Company.
3. Corning Optical Communications; Corning Incorporated.
4. General Cable; Prysmian Group North America.
5. Hitachi Cable America Inc.
6. Mohawk; a division of Belden Networking, Inc.
7. Superior Essex Inc.; subsidiary of LS Corp.
8. Or approved equal.

C. Standards:

1. Comply with ICEA S-83-596 for mechanical properties.

2. Comply with TIA-568-C.3 for performance specifications.
3. Comply with TIA-492AAAA for detailed specifications.

D. Conductive cable is to be steel or aluminum armored type.

E. Maximum Attenuation: 3.50 dB/km at 850 nm; or 1.5 dB/km at 1300 nm.

F. Minimum Overfilled Modal Bandwidth-length Product: 200 MHz-km at 850 nm; 500 MHz-km at 1300 nm.

G. Jacket:

1. Jacket Color: Orange.
2. Cable cordage jacket, fiber, unit, and group color is to be according to TIA-598-D.
3. Imprinted with fiber count, fiber type, and aggregate length at regular intervals not to exceed 40 inches.

2.3 OPTICAL FIBER CABLE HARDWARE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Belden Inc.
2. Berk-Tek, a Leviton Company.
3. Corning Optical Communications; Corning Incorporated.
4. Optical Cable Corporation (OCC).
5. Stewart Connector, a Bel group company; Bel Fuse Inc.
6. Or approved equal.

B. Standards:

1. Comply with Fiber Optic Connector Intermateability Standard (FOCIS) specifications of the TIA-604 series.
2. Comply with TIA-568-C.3.

C. Cross-Connects and Patch Panels: Modular panels housing multiple-numbered, duplex cable connectors.

1. Number of Connectors per Field: One for each fiber of cable or cables assigned to field, plus spares and blank positions adequate to suit specified expansion criteria.

D. Patch Cords: Factory-made, single-fiber cables in 36-inch lengths.

E. Connector Type: Type SC complying with TIA-604-3-B, connectors.

F. Jacks and Jack Assemblies:

1. Female; quick-connect, simplex and duplex; fixed telecommunications connector designed for termination of a single optical fiber cable.
2. Insertion loss not more than 0.75 dB.
3. Marked to indicate transmission performance.
4. Designed to snap-in to a patch panel or faceplate.

G. Faceplate:

1. Two, Four, Six -port, vertical single-gang faceplates designed to mount to single-gang wall boxes.
2. Plastic Faceplate: High-impact plastic. Coordinate color with Section 262726 "Wiring Devices."
3. For use with snap-in jacks accommodating any combination of twisted pair, optical fiber, and coaxial work area cords.

    a. Flush mounting jacks, positioning the cord at a 45-degree angle.

2.4 GROUNDING

A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems" for grounding conductors and connectors.

B. Comply with TIA-607-B.

2.5 IDENTIFICATION PRODUCTS

A. Comply with TIA-606-B and UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

2.6 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.

B. Factory test multimode optical fiber cables according to TIA-526-14-B and TIA-568-C.3.

C. Factory test preterminated optical fiber cable assemblies according to TIA-526-14-B and TIA-568-C.3.

D. Cable will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 WIRING METHODS

A. Wiring Method, Raceways: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables except in unfinished spaces.

1. Comply with requirements for pathways specified in Section 270528 "Pathways for Communications Systems."

B. Wiring Method, Concealed: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

C. Wiring within Enclosures: Bundle, lace, and train cables within enclosures. Connect to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

3.3 INSTALLATION OF OPTICAL FIBER BACKBONE CABLES

A. Comply with NECA 1, NECA 301 and NECA/BICSI 568.

B. General Requirements for Optical Fiber Cabling Installation:

1. Comply with TIA-568-C.1 and TIA-568-C.3.
2. Comply with BICSI ITSIMM, Ch. 6, "Cable Termination Practices."
3. Terminate all cables; no cable is to contain unterminated elements. Make terminations only at indicated outlets, terminals, cross-connects, and patch panels.
4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
5. Install lacing bars to restrain cables, to prevent straining connections, and to prevent bending cables to smaller radii than minimums recommended by manufacturer.
6. Bundle, lace, and train cable to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIMM, "Cabling Termination Practices" Chapter. Use lacing bars and distribution spools.
7. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
8. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps are not to be used for heating.
9. In the communications equipment room, provide a 10-foot- long service loop on each end of cable.
10. Pulling Cable: Comply with BICSI ITSIMM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.
11. Cable may be terminated on connecting hardware that is rack or cabinet mounted.
12. All service loops must be included in the 295-foot distance calculations

C. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Cable is not to be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

D. Installation of Cable Routed Exposed under Raised Floors:

1. Install plenum-rated cable only.
2. Install cabling after the flooring system has been installed in raised floor areas.

3. Coil cable 6 feet long not less than 12 inches in diameter below each feed point.
4. All coils must be included in the 295-foot distance calculations

E. Group connecting hardware for cables into separate logical fields.

3.4 FIRESTOPPING

A. Comply with requirements in Section 078413 "Penetration Firestopping."

B. Comply with TIA-569-D, Annex A, "Firestopping."

C. Comply with BICSI ITSIMM, "Firestopping" Chapter.

3.5 INSTALLATION OF GROUNDING

A. Install grounding according to BICSI ITSIMM, "Grounding (Earthing), Bonding, and Electrical Protection" Chapter.

B. Comply with TIA-607-B and NECA/BICSI-607.

C. Locate grounding bus bar to minimize the length of bonding conductors. Fasten to wall allowing at least 2-inch clearance behind the grounding bus bar. Connect grounding bus bar with a minimum No. 4 AWG grounding electrode conductor from grounding bus bar to suitable electrical building ground.

D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

3.6 IDENTIFICATION

A. Identify system components, wiring, and cabling complying with TIA-606-B. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

1. Administration Class: Class 1.
2. Color-code cross-connect fields and apply colors to voice and data service backboards, connections, covers, and labels.

B. Paint and label colors for equipment identification are to comply with TIA-606-B for level of administration including optional identification requirements of this standard.

C. Cable Schedule: Install in a prominent location in each equipment room and wiring closet. List incoming and outgoing cables and their designations, origins, and destinations. Protect with rigid frame and clear plastic cover. Furnish an electronic copy of final comprehensive schedules for Project.

D. Cabling Administration Drawings: Show building floor plans with cabling administration-point labeling. Identify labeling convention and show labels for telecommunications closets, horizontal pathways and cables, terminal hardware and positions, horizontal cables, work areas and workstation terminal positions, grounding buses and pathways, and equipment grounding conductors.

E. Cable and Wire Identification:

1. Label each cable within 4 inches of each termination and tap, where it is accessible in a cabinet or junction or outlet box, and elsewhere as indicated.
2. Each wire connected to building-mounted devices is not required to be numbered at device if color of wire is consistent with associated wire connected and numbered within panel or cabinet.
3. Exposed Cables and Cables in Cable Trays and Wire Troughs: Label each cable at intervals not exceeding 15 feet.
4. Label each unit and field within distribution racks and frames.
5. Identification within Connector Fields in Equipment Rooms and Wiring Closets: Label each connector and each discrete unit of cable-terminating and connecting hardware. Where similar jacks and plugs are used for both voice and data communication cabling, use a different color for jacks and plugs of each service.

F. Labels are to be preprinted or computer-printed type with printing area and font color that contrasts with cable jacket color but still complies with requirements in TIA 606-B, for the following:

1. Flexible vinyl or polyester that flexes as cables are bent.

3.7 FIELD QUALITY CONTROL

A. Perform tests and inspections with the assistance of a factory-authorized service representative.

B. Tests and Inspections:

1. Visually inspect optical fiber jacket materials for NRTL certification markings. Inspect cabling terminations in communications equipment rooms for compliance with color-coding for pin assignments, and inspect cabling connections for compliance with TIA-568-C.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Optical Fiber Cable Tests:

    a. Test instruments are to meet or exceed applicable requirements in TIA-568-C.1. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.
    b. Link End-to-End Attenuation Tests:

        1) Horizontal and Multimode Horizontal Link Measurements: Test at 850 or 1300 nm in one direction according to TIA-526-14-B, Method B, One Reference Jumper.
        2) Attenuation test results for horizontal links are to be less than 2.0 dB. Attenuation test results are to be less than those calculated according to equation in TIA-568-C.1.

C. Data for each measurement are to be documented. Data for submittals are to be printed in a summary report that is formatted similar to Table 10.1 in BICSI TDMM, or transferred from the instrument to the computer, saved as text files, and printed and submitted.

D. Remove and replace cabling where test results indicate that it does not comply with specified requirements.

E. End-to-end cabling will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

END OF SECTION 271523

SECTION 274116 - INTEGRATED AUDIO-VIDEO SYSTEMS AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. This Section includes:

1. Digital Signal Matrix Switching and Transmission System
2. Monitors
3. Video Projectors
4. Projection Screens
5. Smartboard
6. Audio-visual Accesories
7. Power Amplifiers
8. Wireless Hearing Assistance Systems - Induction Loop Systems

1.3 DEFINITIONS

A. AVIXA: Audiovisual and Integrated Experience Association

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data for the following:

1. Digital Signal Matrix Switching and Transmission system
2. Monitors
3. Video Projectors
4. Projection Screens
5. Smartboard
6. Audio-Visual Accessories
7. Power Amplifiers
8. Wireless Hearing Assistance systems - Induction Loop Systems

B. Shop Drawings: Show fabrication and installation details of Audio-visual products included in this section.

1. Include plans, elevations, sections, details, and attachments to other Work.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Installer Qualifications: Audio-visual installer must have personnel certified by AVIXA on staff.

C. Testing Agency Qualifications: Testing agency must have personnel certified by AVIXA on staff.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Digital Signal Matrix Switching and Transmission system

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crestron Electronics
b. Extron
c. Huawei
d. Or approved equal

2. The system must be composed of the following components:
a. Automation and control system

1) Hardware control processor
2) Hardware and software user interfaces

b. Digital Signal matrix switcher unit with card cage architecture to house digital signal input and output cards.
1) Digital signal input and output cards
c. Long distance transmission devices for:
1) UTP and STP cables
2) Multi-mode fiber cable
3) Single mode fiber cable
d. Software for:
1) System configuration
2) System managment

B. Monitors

1. Manufacturer: Subject to compliance with requirements, provide products by one of the following:

a. Toshiba
b. Sanyo
c. Panasonic
d. Samsung

e. Sharp
f. Or approved equal.

2. The system must be comprised of the following components:

a. Flat-Panel Display, nominal diagonal screen size, with native 3840x2160 resolution or higher, LED backlit, rated brightness of 350 nit or greater, rated for 16/7 operation with multiple HDMI inputs, with Ethernet and serial port for control

C. Video Projectors

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Christie Digital.
b. Epson
c. Panasonic
d. Or approved equal

2. The system must be comprised of the following components:

a. Video Projector, single chip DLP, native 1920x1080 resolution, nominal 10,000 ISO lumens, solid state laser phosphor light engine, with horizontal and vertical lens shift, image geometry correction, digital video input, serial control input, with interchangeable zoom lens as required

D. Projection Screens

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Da-Lite Tensioned Professional Electrol, with LVC and Matte White fabric
b. Draper Paragon V, with LVC and Matte White fabric
c. Aeon CLR series
d. Or approved equal

2. The system must be comprised of the following components

a. Motorized projection screen, matte white, with a nominal screen gain of 1.0, 16:9 aspect ratio, black drop as required to place the viewing area at the height confirmed by NPF, black drop as required to place the viewing area at the confirmed height, wall/ceiling mount enclosure with brackets and hardware as required, with low voltage control interface.

E. Audio-Visual Accessories

1. Video Projector Mount, compatible with projectors chosen above, with screw-actuated adjustment of pitch, yaw and roll, and custom adapter plate.

a. Basis of Design Product: Subject to compliance with requirements, provide product indicated on drawings: Premier Mounts PDS Series; or comparable product by one of the following:

1) Epson
2) Peerless AV
3) Or approved equal.

2. Display Screen wall mount

    a. Basis of Design Product: Subject to compliance with requirements, provide product indicated on drawings Legrand TS38SU display wall mount; or comparable product by one of the following:
        1) ULINE
        2) Peerless AV
        3) Or approved equal

F. Power Amplifiers

1. Basis of Design Product: Subject to compliance with requirements, provide product indicated on drawings: QSC CX-QN 4K4; or comparable product by one of the following:
    a. JBL
    b. AtlasIED
    c. Or approved equal.

2. The system must be comprised of the following components:

    a. Type 1 Power Amplifier, 600 watts per channel at 8 ohms, with 70V output mode, maximum 20A mains connector, with self-protection for shorted circuits and current limiting, with rack ears, with digital audio input compatible with Digital Audio Processor

G. Assistive Listening Induction Loop Systems

1. Performance/Design Criteria

    a. Loop amplifier performance must meet IEC 60118-4 system performance requirements when loop system is designed and installed correctly. Specifications/testing must conform to IEC 62489-1 benchmark testing standards.
    b. 3.0mm2 Flat Copper Tape, for installation under floor coverings
    c. Speaker cable AWG 14.
    d. Loop design to be provided by loop manufacturer
    e. Induction Loop wireless hearing assistance systems, all components of the same manufacturer

        1) Basis of Design Product: Subject to compliance with requirements, provide product indicated on drawings: Listen Technologies - #14 AWG solid core copper wire; or comparable product by one of the following:
            a) Williams AV
            b) Contacta Inc.
            c) Or approved equal.

    f. Induction Loop driver.

        1) Basis of Design Product: Subject to compliance with requirements, provide product indicated on drawings: Listen Technologies - C7-2D solid core copper wire; or comparable product by one of the following:
            a) Williams AV
            b) Contacta Inc
            c) Or approved equal.

g. Induction Loop receiver.

1) Basis of Design Product: Subject to compliance with requirements, provide product indicated on drawings: Listen Technologies - TILR03+; or comparable product by one of the following
   a) Williams AV
   b) Contacta Inc
   c) Or approved equal.

H. Audio Networking Module, LAN input to XLR output

1. Basis of Design Product: Subject to compliance with requirements, provide product indicated on drawings: Dante Systems; or comparable product by one of the following

   a. Yamaha
   b. Allen & Heath
   c. Or approved equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. General

1. Installation and connection of audio-visual communication system equipment, materials, cable and cable fittings must only be performed by experienced audio-visual communication systems installers. Each installer must have access to a complete copy of the specifications at the job site.
2. All materials and equipment are to be installed in accordance with all applicable standards of the National Electric Code (NEC). New York City Local Law 81, and all other safety codes and ordinances.

B. Installation

1. Unless otherwise noted, all audio circuits must be two wire with shield, with the red or white wire used for the "high" side of the line and connected to pin 2 of microphone connectors or to the "tip" of patch panel and other phone jacks. The black wire must be used for the "low" side of the line and must connect to pin 3 of mcrophone connectors or to the "ring" of phone jacks. The shield (drain) wire must connect to pin 1 of microphone connectors or to the sleeve of phone jacks.

2. All audio circuits (red or white and black conductors) must be ungrounded except as provided by single ended amplifier inputs and where grounding of unbalanced circuits is directed during system tests. Shields for line level audio circuits must be grounded to rack sheet metal at each cable termination where line level audio circuits connect to audio transformers, shields must connect to transformer electrostatic shields and case grounds. At each cable termination shield or shield drain, wire length must be approximately equal to the length of the insulated conductors. Shield drain wires must be sheathed in green PVC sleeving. Circuit shields must not otherwise connect to each other nor ground to electrical conduit at wall boxes etc. Microphone circuit shields must be grounded only at mixer inputs.

3. Where resistors are indicated to terminate an audio circuit, install each resistor at the end of the line at the input to the following transformer or amplifier.

4. All wire joints and connections in the audio system must be made with rosin core solder and a small soldering iron; or with approved mechanical connectors. Soldering must be neat and must not exhibit "cold" solder joints. Connections to screw type terminals must be made with mechanically connected, uninsulated, spade type lugs selected for the particular wire size in use.

5. Connections made with miniature screw actuated, phoenix type connectors must be made by stripping approximately ¼-inch of insulation from stranded conductor, inserting the untinned wire into the pressure terminal, and tightening the terminal screw using a small screwdriver which securely fits the screw head.

6. High impedance unbalanced audio circuits must not extend more than 20 feet.

7. Loudspeaker connections within loudspeaker enclosures (and at other in-line locations where necessary) must be made with crimped insulated butt connectors. Wire nuts and/or electrical tape will not be allowed.

8. Loudspeakers must be installed so there are no obstructions to the loudspeaker coverage pattern. Loudspeakers must be connected "in phase" and proper impedance matching must be maintained between amplifiers and loudspeakers.

9. Tie-wrap and secure all loudspeaker line matching transformer leads and loudspeaker cable away from loudspeakers to prevent "rattling" when loudspeakers are energized.

10. All analog video circuits, except as indicated otherwise, must be shielded 75-ohm coaxial cable. Shields for video circuits must be grounded only at the connected equipment and must not ground at electrical conduit at wall boxes, etc.
11. No field terminated digital video connectors will be permitted unless otherwise noted in these specifications or drawings (HDMI, DVI, DisplayPort).
12. No soldering of video connectors will be permitted.

13. All non-locking video connectors shall be secured to the installed equipment such that the connectors cannot be easily disturbed or disconnected.

14. All HDMI, DisplayPort and DVI cables shall not exceed 25 feet in length without the installation of an active HDMI or DVI Cable Equalizer, with the exception of cables terminating or originating at equipment which features integral cable equalization. These cables shall be limited in length as indicated by the equipment manufacturer’s recommendations.

15. Induction loop solid core copper wire shall be mounted above ceiling, provide a #14AWG twisted feed copper wire from induction loop driver to induction loop wiring.

C. Preliminary System Tests and Adjustments

1. Preliminary system tests and adjustments shall include but not be limited to the following:

a. Verification that all loudspeakers are properly installed, tapped, and circuited as indicated on the specification

b. Measurement of each loudspeaker line impedance to verify that no short/open circuits exist (including shorts to conduit/ground) and proper/expected loads are connected.

c. Testing of each loudspeaker to ascertain that none of the units "squawk" or "rattle" when energized with one-third octave bands of pink noise at a nominal input power of two watts.

d. Phasing of all microphones, microphone cables, and microphone inputs.

e. Alignment, convergence and source input settings for each video projector.

f. Verification that each display meets the following criteria: a minimum resolution compatibility of 1920x1080 @ 60Hz, HDCP compliance where required, appropriate color reproduction, and confirmation that the number of malfunctioning pixels does not exceed the manufacturer’s tolerance.

g. Functional tests of all individual audio and video equipment

h. Functional tests of all control equipment and custom user interfaces. All control communication shall be verified and tested to perform the functions listed in these specifications and detailed in the custom touchpanel interface.

i. Setup of all dedicated networks, including assignment of appropriate IP addresses for all equipment, setup of any DHCP servers and wireless access points, and switch configuration.

j. Unbox, assemble, test, and all store portable equipment where appropriate.

k. Installation of the latest product firmware and software

l. Functional tests of the installed system(s) as required to assure that the system(s) are ready for final tests and adjustments.

END OF SECTION 274116

SECTION 280800 - COMMISSIONING OF FIRE ALARM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section includes Cx process requirements for the following conventional fire alarm systems and accessories:

1. Electrical equipment connected to fire alarm systems that provide an alternative source of power in the absence of power from the Normal electrical system, including the following:

    a. Uninterruptible Power Supply.

2. Controls and instrumentation, including the following:

    a. Smoke detectors.
    b. Duct smoke detectors.
    c. Heat detectors.
    d. Waterflow switches.
    e. Tamper switches.
    f. Data gathering panels.
    g. Associated fire/smoke dampers.
    h. Audio/Visual alarm devices.
    i. Elevator recall operation.

B. Related Requirements:

1. DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for general Cx process requirements and CxA responsibilities.
2. For Construction Checklists, comply with requirements in Division 28 Sections specifying fire alarm systems, system components, equipment, and products.

1.3 DEFINITIONS

A. BAS: Building automation system.

B. Cx: Commissioning, as defined in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems."

C. CxA: Commissioning Agent (Aka Commissioning Authority), as defined in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems."

1. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the Owner's Project Requirement's as detailed in the Contract Documents.

D. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used, together or separately, they mean "as-built" systems, assemblies, subsystems, equipment, and components.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 INFORMATIONAL SUBMITTALS

A. Construction Checklists:

1. Draft Cx plan, including draft Construction Checklists to be prepared by CxA under DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems." Div. 28 Subcontractor is to review Construction Checklist in accordance with requirements in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" and ASHRAE 202 and to resolve any issues with the CxA.

B. Test Equipment and Instruments: For all test equipment and instruments to be used in conducting Cx tests by Div. 28 Subcontractor, provide the following:

1. Equipment/instrument identification number.
2. Planned Cx application or use.
3. Manufacturer, make, model, and serial number.
4. Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.
5. Equipment manufacturers' instrumentation and tools. For each instrument or tool, identify the following:

a. Instrument or tool identification number.
b. Equipment schedule designation of equipment for which the instrument or tool is required.
c. Manufacturer, make, model, and serial number.
d. Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.

1.6 CLOSEOUT SUBMITTALS

A. Provide operation and maintenance manuals complying with requirements of DDC General Conditions Section 017839 "Contract Record Documents" and Section 019113 "General Commissioning Requirements for MEP Systems."

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Testing Equipment and Instrumentation Quality and Calibration: For test equipment and instrumentation required to perform electrical Cx work, perform the following:

1. Submit test equipment and instrumentation list. For each equipment or instrument, identify the following:

a. Equipment/instrument identification number.
b. Planned Cx application or use.
c. Manufacturer, make, model, and serial number.
d. Calibration history, including certificates from agencies that calibrate the equipment and instrumentation.

2. Test equipment and instrumentation must meet the following criteria:

a. Capable of testing and measuring performance within the specified acceptance criteria.
b. Be calibrated at manufacturer's recommended intervals with current calibration tags permanently affixed to the instrument being used.
c. Be maintained in good repair and operating condition throughout duration of use on Project.
d. Be recalibrated/repaired if dropped or damaged in any way since last calibrated at no additional cost to City of New York.

C. Test Instrumentation and Tools:

1. Equipment Manufacturer's Instrumentation and Tools: For installed equipment included in the Cx process, test instrumentation and tools manufactured or prescribed by equipment manufacturer to service, calibrate, adjust, repair, or otherwise work on its equipment or required as a condition of equipment warranty, perform the following:

a. Submit instrumentation and tools list. For each instrument or tool, identify the following:

1) Instrument or tool identification number.
2) Equipment schedule designation of equipment for which the instrument or tool is required.
3) Manufacturer, make, model, and serial number.
4) Calibration history, including certificates from agencies that calibrate the instrument or tool, where appropriate.

b. Include a separate list of test instrumentation and tools in operation and maintenance manuals.
c. Electrical test instrumentation and tools become property of City of New York at the time of Substantial Completion.

1.8 COORDINATION

A. Refer to "Coordination" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for coordination requirements including the following:

1. Commissioning Kick-Off and other required meetings.
2. Construction Documents distribution to CxA.
3. Testing Coordination.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 Cx PROCESS:

A. Perform Cx process in accordance with DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for BAS and fire alarm systems in accordance with the following:

1. Applicable NFPA codes.
2. New York City Energy Conservation Code.
3. ASHRAE 202.

3.3 CONTRACTOR’S RESPONSIBILITIES

A. In addition to the Contractor's responsibilities indicated in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" the Contractor is responsible for the following:

1. Comply with Construction Checklist requirements, including material verification, installation checks, startup, and performance test requirements specified in Division 28 Sections specifying fire alarm systems and equipment.
2. Attend construction phase controls coordination meetings and ensure that the electrical and controls Subcontractors attend.
3. Prepare preliminary schedule for fire alarm system orientations and inspections, operation and maintenance manual submissions, orientation sessions, and task completion for the City of New York.
4. Distribute preliminary schedule to commissioning team members at the beginning of the construction phase.

B. The Contractor to provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-systems are operating as designed.

1. Conventional fire Alarm system including all detectors, modules, devices and all integrated equipment and systems furnished in Division 28 specification section.
2. Fire detection, heat detection, and smoke detection devices furnished in Division 28 specification sections.

3.4 CONSTRUCTION CHECKLISTS

A. Preliminary detailed Construction Checklists are to be prepared under Section 019113 "General Commissioning Requirements for MEP Systems" for each BAS and electrical system, assembly, subsystem, equipment, and component required to be commissioned, as detailed in ASHRAE 202. Contractor performs the following:

1. Review BAS HVAC and fire alarm preliminary Construction Checklists and provide written comments on checklist items where appropriate.
2. Return preliminary Construction Checklist with review comments within 10 days of receipt.
3. When review comments have been resolved, the CxA will provide final Construction Checklists marked "Approved for Use, (date)."
4. Use only Construction Checklists marked "Approved for Use, (date)" when performing tests. Mark Construction Checklists in the appropriate place as indicated Project events are completed, and provide pertinent details and other information.

3.5 Cx TESTING PREPARATION

A. Refer to "Testing Procedures" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for preparation requirements prior to Functional Testing.

3.6 ELECTRICAL TESTING REQUIREMENTS

A. In addition to the requirements in the "General Testing Requirements" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems," provide the following:

1. Prepare detailed testing plans, procedures, and checklists for electrical systems, subsystems, and equipment in conjunction with the CxA. Contractor to ensure the participation of the electrical Subcontractor, HVAC controls Subcontractor and the fire alarm Subcontractor as needed for this work.
2. If tests cannot be completed because of a deficiency outside the scope of the fire alarm system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

3.7 Cx TEST CONDITIONS

A. Refer to "General Testing Requirements" Article, and "Testing Procedures" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for satisfying Cx requirements related to testing.

3.8 ELECTRICAL SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 28 sections. Provide submittals, test data, inspector record, and certifications to the CxA.

B. Fire Alarm Tests: Test requirements are specified in Division 28. Fire alarm Subcontractor is to execute and record results for all required tests to be performed per Div. 28. Fire alarm Subcontractor is to provide reports to the CxA.

3.9 Cx TESTS COMMON TO FIRE ALARM SYSTEMS

A. Measure capacities and effectiveness of systems, assemblies, subsystems, equipment, and components, including operational and control functions, to verify compliance with acceptance criteria.

B. Test systems, assemblies, subsystems, equipment, and components for operating modes, interlocks, control responses, responses to abnormal or emergency conditions, and responses in accordance with acceptance criteria.

C. Coordinate schedule with, and perform Cx activities at the direction of, CxA.

D. Comply with Construction Checklist requirements, including material verification, installation checks, startup, and performance test requirements specified in Division 28 Sections specifying fire alarm systems and equipment.

E. Provide technicians, instrumentation, tools, and equipment to perform and document the following:

1. Cx Construction Checklist verification tests.
2. Cx Construction Checklist verification test demonstrations.

3.10 Cx TESTS FOR FIRE ALARM SYSTEMS

A. Verification of Fire Alarm System Operation:

1. Prerequisites: Acceptance of results for Construction Checklists for Division 28 components associated with the fire alarm system.
2. Equipment and Systems to Be Tested: Division 28 fire alarm equipment.
3. Test Purpose: Verify operation of fire alarm system.
4. Test Conditions: Verify each system input triggers the designed system outputs upon activation per the approved fire alarm matrix and overall system design.
5. Acceptance Criteria: Proper operation of all devices per the Owner’s Project Requirements (OPR) and approved system design.

3.11 GUARANTY REVIEW / SEASONAL TESTING

A. Refer to "Guaranty Review / Seasonal Testing" Article in DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for guaranty review and seasonal testing requirements.

END OF SECTION 280800

SECTION 281000 - ACCESS CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Access control system.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.
2. Section 087100 "Door Hardware" specifies the following:

    a. Electric strike(s).
    b. Electromagnetic lock(s).
    c. Delayed-egress electromagnetic lock(s).
    d. Electromechanical lock(s).
    e. Self-contained electronic lock(s).
    f. Exit lock(s) and alarm(s).
    g. Auxiliary electrified door hardware.

3. Section 281300 "Access Control Software and Database Management" specifies the following:

    a. Access control system unit operating system software.
    b. Access control system unit antivirus and security protection software.
    c. Visitor management database software.
    d. Mobile credential validation database software.
    e. Access control system supplementary computer equipment operating system software.
    f. Access control system supplementary computer equipment antivirus and security protection software.
    g. Credential card personalization software.
    h. Credential card printer and encoder software.

4. Section 281400 "Access Control System Hardware" specifies the following:

    a. Access control system server(s).
    b. Access control system DGP(s).
    c. Access control system door controller(s).

d. Access control system input/output interface(s).
e. Access control system power supply and battery charger(s).
f. Access control system workstation(s).
g. Access control system printer(s) and encoder(s).

1.3 DEFINITIONS

A. DGP: Data gathering panel.

B. NFC: Near field communications.

C. REX: Request-to-exit.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Comply with DDC General Conditions Section 013100 "Project Management and Coordination" for preinstallation conference requirements.

B. Preinstallation Coordination Meeting(s): For access control. Conduct meeting(s) as videoconference or at Project site before installation.

1. Attendees: Installers, fabricators, representatives of manufacturers, and administrants for field tests and inspections. Notify Commissioner of scheduled meeting dates.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Shop Drawings:

1. Project general notes.
2. Head-end hardware, equipment, and device locations.
3. Block diagram and cable/conduit routing illustrating end-to-end system wiring.
4. End-to-end system communications details.

1.7 CLOSEOUT SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:

1. Installation and programming instructions for operating system software, including all applicable software add-ons.
2. Installation and programming instructions for antivirus and security protection software.

3. Manufacturer's recommended setup and testing procedure for operating system software and applicable software add-ons.
4. Troubleshooting instructions for operating system software and applicable software add-ons.
5. Manufacturer's recommended setup and testing procedure for antivirus and security protection software.
6. Troubleshooting instructions for antivirus and security protection software.
7. Installation instructions for access control system servers.
8. Installation instructions for access control system DGPs.
9. Installation instructions for access control system input/output interface.
10. Installation instructions for access control system door controllers.
11. Installation instructions for access control system workstation.
12. Installation instructions for access control system power supplies and battery chargers.
13. Installation instructions for access control system printers.
14. Manufacturer's recommended testing and inspection procedure for operation of access control system servers, panels, input/output interfaces, door controllers, and workstations.
15. Manufacturer's recommended testing and inspection procedure for operation of access control system power supplies and battery chargers.
16. Manufacturer's recommended testing and inspection procedure for operation of access control system printers.
17. Installation instructions for integrated credential readers and entry management devices.
18. Printing, programming, and handling instructions for access control credentials.
19. Installation instructions for electrified locking devices and accessories.
20. Installation instructions for egress management devices.
21. Installation instructions for access control remote devices.
22. Installation instructions for telephone entry systems.
23. Installation instructions for intercom entry systems.
24. Installation instructions for electronic key management systems.
25. Installation instructions for access control electronic turnstiles and mobility systems.
26. Manufacturer's recommended tests and inspections for integrated credential readers and entry management devices.
27. Manufacturer's recommended tests and inspections for electrified locking devices and accessories.
28. Manufacturer's recommended tests and inspections for egress management devices.
29. Manufacturer's recommended tests and inspections for access control remote devices.
30. Manufacturer's recommended tests and inspections for telephone entry systems.
31. Manufacturer's recommended tests and inspections for intercom entry systems.
32. Manufacturer's recommended tests and inspections for electronic key management systems.
33. Manufacturer's recommended tests and inspections for access control electronic turnstiles and mobility systems.
34. Manufacturer's recommended testing and inspection procedure for end-to-end operation of access control system software, hardware, and integrated hardware devices.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.9 REGULATORY AGENCY APPROVALS

A. Submittals for access control system requiring approval by commissioner must be signed and sealed by qualified life safety professional engineer licensed in the State of New York responsible for their preparation.

B. Submittals for access control system require action by Commissioner prior to submitting for approval by commissioner.

1.10 WARRANTY FOR ACCESS CONTROL SYSTEM

A. Special Manufacturer Warranty: Manufacturer warrants that components of access control system perform in accordance with specified requirements and agrees to provide repair or replacement of components that fail to perform as specified within warranty period.

1. Warranty Period: Three years from date of Substantial Completion; full coverage for labor, materials, and equipment.

1.11 WARRANTY FOR BATTERIES

A. Special Manufacturer Warranty for Batteries: Manufacturer warrants that batteries perform in accordance with specified requirements and agrees to provide components and materials for repair or replacement of batteries that fail to perform as specified within warranted cycle life.

1. Warranty Period for Li-ion Batteries: Three years from date of Substantial Completion; full coverage for materials only.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF ACCESS CONTROL SYSTEM

A. Description: Access control system provides a means of regulating or controlling physical entry into an area, or access to or use of a device by electrical, electronic, and/or mechanical means. Typical access control system includes a card reader at a controlled door, which reads a user credential and sends the collected data to a centrally located DGP over the cabling infrastructure. DGP may hold a user database onboard or may communicate with a user database over the network. If user is authorized for access at a controlled door, DGP signals the electronic lock at the door to unlock. If user credential is not authorized according to user database, the door remains locked and access is denied. In addition to card readers and electronic locks, access control systems may include various other connected devices programmed for a desired function.

B. Performance Criteria:

1. Regulatory Requirements:

a. Components listed and labeled in accordance with NFPA 70 and NFPA 72, by qualified electrical testing laboratory and marked for intended location and application.
b. Comply with NFPA 1, NFPA 730, NFPA 731, and the NYC Construction Codes.
c. Certification: Provide certificate, authorized under UL Certification Service, that access control system installation complies with installation requirements of UL CCN ALOV.

2. Listing Criteria: UL CCN ALOV and UL CCN ALVY; including UL 294.
3. Consult Commissioner for resolution of conflicting requirements.

C. Selection of Access Control System Components:

1. Source Limitations: Obtain components for access control system from sources approved by manufacturer warranting performance of entire system.
2. Provide the following specified products with the access control system:

a. Access Control Software and Database Management:

1) Access control system unit operating system software.
2) Access control system unit antivirus and security protection software.
3) Visitor management database software.
4) Mobile credential validation database software.
5) Access control system supplementary computer equipment operating system software.
6) Access control system supplementary computer equipment antivirus and security protection software.
7) Credential card personalization software.
8) Credential card printer and encoder software.

b. Access Control System Hardware:

1) Quantity as indicated on Drawings of access control system server(s) .
2) Quantity as indicated on Drawings of access control system DGP(s) .
3) Quantity as indicated on Drawings of access control system door controller(s) .
4) Quantity as indicated on Drawings of access control system input/output interface(s) .

5) Quantity as indicated on Drawings of access control system power supply and battery charger(s) .
6) Quantity as indicated on Drawings of access control system .
7) Quantity as indicated on Drawings of access control system printer(s) and encoder(s) .

c. Security Door Hardware:

1) Quantity as indicated on Drawings of electric strike(s) .
2) Quantity as indicated on Drawings of electromagnetic lock(s) .
3) Quantity as indicated on Drawings of delayed-egress electromagnetic lock(s) .
4) Quantity as indicated on Drawings of electromechanical lock(s) .
5) Quantity as indicated on Drawings of door operator controls .
6) Quantity as indicated on Drawings of panic exit device(s) with electric strike .

d. Integrated Credential Readers and Entry Management:

1) Quantity as indicated on Drawings of swipe card reader(s) .
2) Quantity as indicated on Drawings of chip card reader(s) .

e. Access Control Credentials:

1) Quantity as indicated on Drawings of access control cards .

f. Electrified Locking Devices and Accessories:

1) Quantity as indicated on Drawings of REX motion sensor(s) .
2) Quantity as indicated on Drawings of REX push-button(s) .

g. Egress Management Devices:

1) Quantity as indicated on Drawings of magnetic lock hardware with special locking arrangement .
2) Quantity as indicated on Drawings of panic hardware with special locking arrangement .

h. Access Control Remote Devices:

1) Quantity as indicated on Drawings of NFC access control device(s) .

i. Telephone Entry Systems:

1) Quantity as indicated on Drawings of digital audio-video telephone entry system(s) .

j. Intercom Entry Systems:

1) Quantity as indicated on Drawings of digital audio intercom entry system(s) .

k. Electronic Key Management Systems:

1) Quantity as indicated on Drawings of mechanical key management system unit(s) .

D. Special Techniques:

1. Comply with manufacturer's published instructions.
2. Mounting Heights: Mount field devices in accessible locations in accordance with United States Access Board ADA-ABA Accessibility Guidelines standards.
3. Wiring Methods:

    a. Backbone Cable Type: Single-mode fiber multi-mode fiber.
    b. Cable Type: Shielded.
    c. Analog Maximum Cable Length: 1000 ft.
    d. Digital Maximum Cable Length: 300 ft.

E. Interfaces with Other Work:

1. Coordinate installation of new access control system components with existing conditions.
2. Coordinate with Section 230923 "Direct Digital Control (DDC) System for HVAC" for interfacing access control system with temperature controls to turn HVAC system on and off.
3. Coordinate with Section 284700 "Mass Notification" for unlocking secured doors that are in exit ways, with or without delay.

F. Systems Integration:

1. Coordinate with Section 283100 "Intrusion Detection" for integrating access control system with intrusion detection system.
2. Coordinate with Section 282000 "Video Surveillance" for integrating access control system with video surveillance controls.

3.3 FIELD QUALITY CONTROL OF ACCESS CONTROL SYSTEM COMPONENTS

A. Field tests and inspections must be witnessed by Commissioner.

B. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections for access control system components.
2. Perform industry standard tests and inspections for power supplies, batteries, and other standby power provisions.
3. Engage factory-authorized service representative to test end-to-end system connection and functionality.
4. Verify monitoring of access control system status and diagnostics information.

C. Nonconforming Work:

1. Access control equipment will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Collect, assemble, and submit test and inspection reports.

3.4 SYSTEM STARTUP

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.

3.5 ADJUSTING

A. Control Sensor Adjustments: Adjust control devices to suit actual occupied conditions.

1. For proximity motion sensors, verify operation at outer limits of detector range. Set time delay to suit City of New York's operations.

3.6 PROTECTION

A. After installation, protect access control system components from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

3.7 CONTROL SENSOR READJUSTMENTS

A. Control Sensor Readjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in readjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

END OF SECTION 281000

SECTION 281300 - ACCESS CONTROL SOFTWARE AND DATABASE MANAGEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Software for access control system units.
2. Software for access control system supplementary computer equipment.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.
2. Section 281400 "Access Control System Hardware" for hardware required to run software specified in this Section.
3. Section 281500 "Integrated Access Control Hardware Devices" for access control field devices controlled by software specified in this Section.

1.3 DEFINITIONS

A. RAM: Random-access memory.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data:

1. Software for access control system units.
2. Software for access control system supplementary computer equipment.

1.6 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installationtesting and troubleshooting instructions issued to Installer by manufacturer for the following:

1. Installation and programming instructions for operating system software, including all applicable software add-ons.
2. Manufacturer's recommended setup and testing procedure for operating system software and applicable software add-ons.
3. Troubleshooting instructions for operating system software and applicable software add-ons.
4. Installation and programming instructions for antivirus and security protection software.
5. Manufacturer's recommended setup and testing procedure for antivirus and security protection software.
6. Troubleshooting instructions for antivirus and security protection software.

1.7 CLOSEOUT SUBMITTALS

A. Guaranty Service Aggreement:

1. Software and firmware service agreement.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 SOFTWARE FOR ACCESS CONTROL SYSTEM UNITS

A. Description: This category covers software products intended for installation on access control system units.

B. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled in accordance with NFPA 70 and NFPA 72, by qualified electrical testing laboratory and marked for intended location and application.
b. Comply with NFPA 1, NFPA 730, NFPA 731, and NYC Construction Codes.

2. Listing Criteria:

a. Cybersecurity: UL CCN CYBR; including UL 2900-1 and UL 2900-2-3.
b. Access Control System Functionality: UL CCN ALVY; including UL 294.
c. Hardware that Interfaces with Fire Alarm or Mass Notification: UL CCN UOJK; including UL 864.

C. Access Control System Unit Operating System Software:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cansec Systems Ltd.
b. HID Global; ASSA ABLOY.
c. Honeywell Commercial Security; Honeywell International, Inc.
d. Tyco Software House; Tyco International, Ltd.
e. Inner Range Access Control Integriti Business Edition
f. Genetec
g. Or approved equal.

2. Additional Characteristics:

a. Provides event logging, notification, and escalation.
b. Provides threat-level management and response actions.
c. Provides dashboard view of system health and status.
d. Maintains credential-driven user records and access history.
e. Supports network-connected credential readers and controlled doors.
f. Supports add-on software.
g. Supports video-surveillance system integration.
h. Provides email and text message alerts.
i. Provides Integration for room booking from active directory.

1) Manages credentials of new and existing guests
2) Provides administrative control to manage credentials
3) Verify spaces used for guest management with City of New York
4) Provides mobile NFC credentials via email or text message

3. Options:

a. Operating System: Windows 10.
b. User Interface: Web browser.
c. Web Browser: Google Chrome.
d. Drive Space: 500 GB.
e. Memory: 8 GB RAM.
f. Screen Resolution: 1920x1080.
g. Number of Cardholders: Up to 1000.
h. Number of Supported Readers: Up to 100.
i. Number of Inputs: 128.
j. Number of Outputs: 128.
k. Simultaneous Users: Five.

CI. Access Control System Unit Antivirus and Security Protection Software:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Avast Software s.r.o.
b. McAfee, LLC.

c. Microsoft Corporation.
d. S.C. Bitdefender S.R.L.
e. Or approved equal.

2. Additional Characteristics:

a. Endpoint detection and response.
b. Anti-ransomware.
c. Managed threat response.
d. Exploit prevention.
e. Active adversary mitigations.
f. Email alerts.

3. Options:

a. Operating System: Windows 10 or Windows 11.
b. User Interface: Web browser.
c. Web Browser: Google Chrome.
d. Drive Space: 8 GB.
e. Memory: 1 GB RAM.

E. Visitor Management Database Software:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. BluBØX Security, Inc.
b. HID Global; ASSA ABLOY.
c. Splan Inc.
d. Inner Range Access Control Integriti Business Edition
e. Genetec
f. Nexudus
g. Or approved equal.

2. Additional Characteristics:

a. Visitor registration.
b. Visitor audit trails and reporting.
c. Badge printing.
d. Unassisted visitor registration and badging.
e. Preconfigured security levels of users.
f. Filters out unsolicited visitors.
g. Supports integrated credential readers.

3. Options:

a. Operating System: Windows 10 or Windows 11.
b. User Interface: Web browser.
c. Web Browser: Google Chrome.
d. Drive Space: 100 MB .
e. Memory: 1 GB RAM.

f. Automated Alerts:

1) Visitor check-in.
2) Package check-in.
3) Watch list alert.
4) Expired badges.
5) Panic message.
6) Current visitor.
7) Maximum visitor.
8) Frequent visitor.
9) Time based.

F. Mobile Credential Validation Database Software:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. HID Global; ASSA ABLOY.
b. Avigilon.
c. Inner Range Access Control Integriti Business Edition
d. Or approved equal.

2. Additional Characteristics:

a. Mobile Validator and Mobile Registration engines.
b. Network-based functionality and database synchronization.
c. Credential audit trail exporting.
d. Contact or contactless verification.
e. Integrated card reader.

3. Options:

a. Operating System: Windows CE 5.0 .
b. Multi-Factor Authentication: Two factor authentication.
c. Drive Space: 1 GB .
d. Memory: 1 GB RAM.
e. Credentials:

1) PIV.
2) PIV-1.
3) TWIC.
4) FRAC.
5) CAC.
6) CIV.
7) Prox.
8) DESFire.

2.2 SOFTWARE FOR ACCESS CONTROL SYSTEM SUPPLEMENTARY COMPUTER EQUIPMENT

A. Description: This category covers software products for installation on access control system supplementary computer equipment that do not inhibit safety or intended operation of access control system hardware devices when they are shut off, lose power, or otherwise fail.

B. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled in accordance with NFPA 70 and NFPA 72, by qualified electrical testing laboratory and marked for intended location and application.

2. Listing Criteria:

a. Cybersecurity: UL CCN CYBR; including UL 2900-1 and UL 2900-2-3.

C. Access Control System Supplementary Computer Equipment Operating System Software:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cansec Systems Ltd.
b. HID Global; ASSA ABLOY.
c. Honeywell Commercial Security; Honeywell International, Inc.
d. Tyco Software House; Tyco International, Ltd.
e. Or approved equal.

2. Additional Characteristics:

a. Provides event logging, notification, and escalation.
b. Provides threat-level management and response actions.
c. Provides dashboard view of system health and status.
d. Maintains credential-driven user records and access history.
e. Supports network-connected credential readers and controlled doors.
f. Supports add-on software.
g. Supports video-surveillance system integration.

3. Options:

a. Operating System: Windows 10 or Windows 11.
b. User Interface: Web browser.
c. Web Browser: Google Chrome.
d. Drive Space: 32 GB .
e. Memory: 8 GB RAM.
f. Screen Resolution: 1920x1080.
g. Number of Cardholders: Up to 1000.
h. Number of Supported Readers: Up to 100.
i. Number of Inputs: 128.

j. Number of Outputs: 128.
k. Simultaneous Users: Five .

D. Access Control System Supplementary Computer Equipment Antivirus and Security Protection Software:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Avast Software s.r.o.
b. McAfee, LLC.
c. Microsoft Corporation.
d. S.C. Bitdefender S.R.L.
e. Or approved equal.

2. Additional Characteristics:

a. Endpoint detection and response.
b. Anti-ransomware.
c. Managed threat response.
d. Exploit prevention.
e. Active adversary mitigations.
f. Email alerts.

3. Options:

a. Operating System: Windows 10 or Windows 11.
b. User Interface: Web browser.
c. Web Browser: Microsoft Edge or Google Chrome.
d. Drive Space: 8 GB .
e. Memory: 1 GB RAM.

DI. Credential Card Personalization Software:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. CardLogix Corporation.
b. HID Global; ASSA ABLOY.
c. Identisource.
d. Or approved equal.

2. Additional Characteristics:

a. Credential card design and data-entry customization.
b. Card data fields populated directly from internal or networked database.
c. User-defined privileges.
d. Quick filter for searching internal database.
e. Global find for searching all networked databases.
f. Customized reporting.

3. Options:

a. Operating System: Windows 10 or Windows 11.
b. User Interface: Web browser.
c. Web Browser: Google Chrome .
d. Drive Space: 1 GB.
e. Memory: 1 GB RAM.

F. Credential Card Printer and Encoder Software:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. CardLogix Corporation.
b. HID Global; ASSA ABLOY.
c. Identisource.
d. Or approved equal.

2. Additional Characteristics:

a. Printer status and diagnostics information.
b. Diagnostics information.
c. Printer integration enables control of printing and encoding through software APIs.
d. Integrates with credential management systems through standard application programming interfaces (APIs).

3. Options:

a. Operating System: Windows 10.
b. User Interface: Web browser.
c. Web Browser: Google Chrome.
d. Drive Space: 1 GB.
e. Memory: 1 GB RAM.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF ACCESS CONTROL SOFTWARE

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Installation of Access Control Software: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with requirements in guide information for UL CCN ALVY, UL CCN CYBR, and UL CCN UOJK.
2. Consult Commissioner for resolution of conflicting requirements.

C. Interfaces with Other Work:

1. Coordinate installation of new access control software with existing equipment and network conditions or other proposed systems.
2. Coordinate with Section 281000 "Access Control" for physical and functional interfaces with access control system and for compliance with system-wide performance requirements.
3. Coordinate with Section 281400 "Access Control System Hardware" for products that require access control software specified in this Section for operation and compliance with system-wide performance requirements.

D. Systems Integration:

1. Provide Integration of Access Control software for room booking. Endure that alll objectives are met from additional characteristics of access control software.

3.3 FIELD QUALITY CONTROL OF ACCESS CONTROL SOFTWARE

A. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.

B. Nonconforming Work:

1. Software will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective software and retest.

C. Collect, assemble, and submit test and inspection reports.

D. Manufacturer Services:

1. Engage factory-authorized service representative to support field tests and inspections.

3.4 SYSTEM STARTUP

A. Engage a factory-authorized service representative to assist with system startup service.

1. Complete software installation and startup checks in accordance with manufacturer's published instructions.

3.5 SOFTWARE AND FIRMWARE SERVICE AGREEMENT

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software and firmware support for one year.

2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within one year from date of Substantial Completion. Verify that upgrading software includes operating system and new or revised licenses for using software.

    a. Upgrade Notice: No fewer than 30 days to allow NPF to schedule and access the system and to upgrade computer equipment if necessary.

3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 281300

SECTION 281400 - ACCESS CONTROL SYSTEM HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Access control system units.
2. Access control system power supplies and battery chargers.
3. Access control system supplementary computer equipment.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.
2. Section 281300 "Access Control Software and Database Management " for software required to run hardware specified in this Section.
3. Section 281500 "Integrated Access Control Hardware Devices" for access control field devices controlled by hardware specified in this Section.

1.3 DEFINITIONS

A. DGP: Data gathering panel.

B. LAN: Local area network.

C. RAID: Redundant array of inexpensive disks; redundant array of independent disks.

D. RAM: Random-access memory.

E. WAN: Wide area network.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Coordination Meeting(s): For access control system hardware. Conduct meeting(s) as videoconference or at Project site before installation.

1. Attendees: Installers, fabricators, representatives of manufacturers, representatives from telecommunications, City of New York's IT representatives, and administrants for field tests and inspections. Notify Commissioner of scheduled meeting dates.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Product Data:

1. Access control system units.
2. Access control system power supplies and battery chargers.
3. Access control system supplementary computer equipment.

B. Shop Drawings:

1. Project general notes.
2. Hardware and equipment locations.
3. Block diagram and cable/conduit routing.
4. System communications details.
5. Hardware and equipment installation details.
6. Secondary power calculations.

C. Certificates:

1. Manufacturer documentation.

D. Field quality-control reports.

1.7 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:

1. Installation instructions for access control system servers.
2. Installation instructions for access control system DGPs.
3. Installation instructions for access control system input/output interface.
4. Installation instructions for access control system door controllers.
5. Installation instructions for access control system workstation.
6. Manufacturer's recommended testing and inspection procedure for operation of access control system servers, panels, input/output interfaces, door controllers, and workstations.
7. Installation instructions for access control system power supplies and battery chargers.
8. Manufacturer's recommended testing and inspection procedure for operation of access control system power supplies and battery chargers.
9. Installation instructions for access control system printers.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.9 WARRANTY FOR ACCESS CONTROL SYSTEM HARDWARE

A. Special Manufacturer Warranty: Manufacturer warrants that access control system hardware perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within warranty period.

1. Warranty Period: Three years from date of Substantial Completion; full coverage for labor, materials, and equipment.

PART 2 - PRODUCTS

2.1 ACCESS CONTROL SYSTEM UNITS

A. Description: This category covers head end units for access control systems, providing a means of regulating or controlling physical entry into an area, or access to or use of device by electrical, electronic, and/or mechanical means. Access control systems are investigated as complete configuration based upon manufacturer's specified system components. Access control systems are intended to comply with applicable life safety access and egress requirements.

B. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled in accordance with NFPA 70 and NFPA 72, by qualified electrical testing laboratory and marked for intended location and application.
b. Comply with NFPA 1, NFPA 730, NFPA 731, NYC Building Code, NYC Electrical Code, NYC Fire Code.

2. Listing Criteria: UL CCN ALVY; including UL 294.

C. Access Control System Server :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cisco Systems, Inc.
b. Dell Technologies Inc.
c. International Business Machines Corp. (IBM).
d. Vivotek
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Additional Characteristics:

a. Ethernet port for connection to LAN/WAN.

4. Options:

    a. Input Voltage: 120 V(ac).
    b. Operating Temperature: 50 to 82 deg F.
    c. Server Size: One rack-unit (1U) or Two rack-units (2U) depending on server model.
    d. Memory: 32 GB RAM.
    e. Mounting: EIA/ECA-310 standard 19 inch rack mount orcabinet mount.

5. Accessories:

    a. DIN rails for mounting.

D. Access Control System DGPs :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Honeywell Commercial Security; Honeywell International, Inc.
    b. RS2 Technologies; ACRE, LLC.
    c. Inner Range.
    d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Additional Characteristics:

    a. Data ports for connection to LAN and downstream DGPs.
    b. Integral terminal blocks secured to enclosure.
    c. Enclosure lock with tamper switch and monitoring.

4. Options:

    a. Input Voltage: 120 V(ac).
    b. Internal Power Supply: 16.5 V(ac) transformer or 24 V(dc) power supply.
    c. Operating Temperature: 32 to 120 deg F.
    d. Materials: Steel.
    e. Finishes: Black Matte.
    f. Battery Backup: 12 V or 24 V .
    g. DGP Communication: Ethernet, TIA-485 .
    h. Mounting: Rack mount .

E. Access Control System Door Controllers :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. HID Global; ASSA ABLOY.
    b. IDTECK Global, Inc.
    c. Openpath Security, Inc.
    d. RS2 Technologies; ACRE, LLC.
    e. Inner Range
    f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.

3. Additional Characteristics:

   a. Data ports for connection to LAN and downstream controllers.
   b. Integral terminal blocks for connection of inputs/outputs to field devices.
   c. Controller Inputs:

      1) Auxiliary input.
      2) Door contact.
      3) Request to exit.
      4) Cabinet tamper.
      5) Power monitor.

   d. Controller Outputs:

      1) Auxiliary output.
      2) Door strike.
      3) Door operators.
      4) Credential readers.

4. Options:

   a. Input Voltage: 12 to 24 V(dc).
   b. Operating Temperature: 32 to 158 deg F.
   c. Controller Communication: Ethernet, TIA-232, or TIA-485 .
   d. Mounting: Cabinet mount.

2.2 ACCESS CONTROL SYSTEM POWER SUPPLIES AND BATTERY CHARGERS

A. Description: This category covers power supplies and battery chargers for access control system units, controllers, input/output interfaces, workstations, printers, and encoders.

B. Performance Criteria:

1. Regulatory Requirements:

   a. Listed and labeled in accordance with NFPA 70 and NFPA 72, by qualified electrical testing laboratory and marked for intended location and application.
   b. Comply with NFPA 1, NFPA 730, NFPA 731, NYC Building Code, NYC Electrical Code, and NYC Fire Code.

2. Listing Criteria: UL CCN ALVY; including UL 294.

C. Access Control System Power Supply and Battery Charger SC-100.00:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Altronix Corp.
   b. Honeywell Commercial Security; Honeywell International, Inc.
   c. LifeSafety Power (LSP); ASSA ABLOY.
   d. Inner Range

e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Additional Characteristics:

a. Input Voltage: 120 V(ac).
b. Output Voltage: 12 to 24 V(dc).
c. Operating Temperature: 32 to 120 deg F.
d. Network connection for remote supervision, management, and testing.
e. Enclosure lock with tamper switch and monitoring.
f. Built-in battery charger.
g. Enclosure Size: 2U.
h. Battery Size: 2U.
i. Materials: Steel.
j. Finishes: Black Matte.

4. Options:

a. Output Current: 2.5 A .
b. Number of Outputs: Four .
c. Mounting: Rack mount.

5. Accessories:

a. DIN rails for mounting.

2.3 ACCESS CONTROL SYSTEM SUPPLEMENTARY COMPUTER EQUIPMENT

A. Description: This category covers access control system supplementary computer equipment that does not inhibit safety or intended operation of access control system hardware devices when they are shut off, lose power, or otherwise fail.

B. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled in accordance with NFPA 70 and NFPA 72, by qualified electrical testing laboratory and marked for intended location and application.

2. Listing Criteria: UL CCN NWGQ; including UL 294.

C. Access Control System Workstation :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Apple Inc.
b. ASUSTek Computer Inc.
c. Dell Technologies Inc.
d. HP Inc.
e. Lenovo Holding Co., Inc.; Lenovo Group Ltd.

f. LG Electronics USA, Inc.; LG Electronics Inc.
g. Microsoft Corporation.
h. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Additional Characteristics:

a. Input Voltage: 120 V(ac).
b. Operating Temperature: 50 to 82 deg F.
c. Ethernet port for connection to LAN/WAN.
d. PC-based operating system with high-definition display.

4. Options:

a. Operating System: Windows 7 or Windows 10 or Windows 11.
b. Display Size: 22 inch or 24 inch or 27 inch.
c. Display Resolution: 1280×720 or 1920×1080.
d. Drive Space: 1 TB .
e. Memory: 24 GB RAM.
f. User Control: Touchscreen or keyboard and mouse.
g. Mounting: desktop mount.

5. Accessories:

a. Printer for identification/credential cards.
b. Encoder for programming of access control credentials.

D. Access Control System Printers and Encoders :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. HID Global; ASSA ABLOY.
b. Magicard Ltd.
c. Zebra Technologies Corp.
d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Additional Characteristics:

a. Password-protected access for secure printing.
b. User Control: Touchscreen graphical display.
c. Mounting: Desktop mounted or 19" rack mounted.

4. Options:

a. Input Voltage: 100 to 240 V(ac).
b. Operating Temperature: 65 to 80 deg F.
c. Operating System: Windows 7 or Windows 10.
d. Data Connection: USB 2.0 or Ethernet.
e. Standard Card Size: CR-79 or CR-80.
f. Printing Resolution: 300 dpi.

g. Memory: 1 GB RAM.
h. Access Control Credential Programming: Proximity smart card .
i. Interface with secure visitor management solutions.

5. Accessories:

a. WiFi accessory for Ethernet-enabled printers.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF ACCESS CONTROL SYSTEM HARDWARE

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Installation of Access Control System Hardware and Wiring: Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with requirements in guide information for UL CCN ALVY.
2. Consult Commissioner for resolution of conflicting requirements.

C. Interfaces with Other Work:

1. Coordinate installation of new products for access control system hardware with existing conditions.
2. Coordinate with Section 281000 "Access Control" for physical and functional interfaces with access control system and for compliance with system-wide performance requirements.

3.3 FIELD QUALITY CONTROL OF ACCESS CONTROL SYSTEM HARDWARE

A. Field tests and inspections must be witnessed by Commissioner or NYC Department of Buildings Inspector if required by the NYC Building Code.

B. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.

C. Nonconforming Work:

1. Hardware and components will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Collect, assemble, and submit test and inspection reports.

E. Manufacturer Services:

1. Engage factory-authorized service representative to support field tests and inspections.

3.4 SYSTEM STARTUP

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.

3.5 ADJUSTING

A. Adjust printers and ribbons to function smoothly, and lubricate as recommended in writing by manufacturer.

3.6 PROTECTION

A. After installation, protect access control system hardware from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by City of New York.

END OF SECTION 281400

SECTION 281500 - INTEGRATED ACCESS CONTROL HARDWARE DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Integrated credential readers and entry management.
2. Access control credentials.
3. Electrified locking devices and accessories.
4. Egress management devices.
5. Access control remote devices.
6. Electronic key management systems.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.
2. Section 281511 "Integrated Credential Readers and Entry Management" for additional integrated access control hardware device products.
3. Section 281513 "Access Control Credentials" for additional access control hardware credential products.
4. Section 281523 "Intercom Entry Systems" for access control intercom entry products.

1.3 DEFINITIONS

A. NFC: Near Field Communications.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Coordination Meeting(s): For integrated access control hardware devices. Conduct meeting(s) as videoconference or at Project site before installation.

1. Attendees: Installers, fabricators, representatives of manufacturers, representatives from telecommunications and administrants for field tests and inspections. Notify Commissioner, and City of New York's Commissioning Authority of scheduled meeting dates.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Product Data:

1. Integrated Credential Readers and Entry Management:

a. Credential readers.
b. Combination reader devices.

2. Access Control Credentials:

a. Access control cards.

3. Electrified Locking Devices and Accessories:

a. Electrically controlled single-point locks and latches.
b. Status monitoring and egress devices.

4. Egress Management Devices:

a. Panic hardware with special locking arrangement.
b. Fire-exit hardware with special locking arrangement.

5. Access Control Remote Devices:

a. NFC access control devices.

6. Electronic Key Management Systems:

a. Electronic key management system units.

B. Shop Drawings:

1. Project general notes.
2. Device layout.
3. Block diagram and cable/conduit routing.
4. System communications details.
5. System mounting details.
6. Secondary power calculations.

C. Field quality-control reports.

1.7 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:

1. Installation instructions for integrated credential readers and entry management devices.
2. Manufacturer's recommended tests and inspections for integrated credential readers and entry management devices.
3. Printing, programming, and handling instructions for access control credentials.
4. Installation instructions for electrified locking devices and accessories.
5. Manufacturer's recommended tests and inspections for electrified locking devices and accessories.
6. Installation instructions for egress management devices.
7. Manufacturer's recommended tests and inspections for egress management devices.
8. Installation instructions for access control remote devices.
9. Manufacturer's recommended tests and inspections for access control remote devices.
10. Installation instructions for electronic key management systems.
11. Manufacturer's recommended tests and inspections for electronic key management systems.

1.8 CLOSEOUT SUBMITTALS

A. Guaranty Service Agreement:

1. Software and firmware service agreements.

B. Warranty documentation.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.10 REGULATORY AGENCY APPROVALS FOR EGRESS MANAGEMENT DEVICES

A. Submittals for egress management devices requiring approval by The NYC Department of Buildings must be signed and sealed by qualified life safety professional engineer licensed in the State of New York responsible for their preparation. Obtain approval by The NYC Department of Buildings prior to submitting for action by Commissioner.

B. Submittals for egress management devices require action by Commissioner prior to submitting for approval by The NYC Department of Buildings.

1.11 WARRANTY

A. Integrated Credential Readers and Entry Management Devices Warranty:

1. Special Manufacturer Warranty: Manufacturer warrants that integrated credential readers and entry management devices perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within warranty period.

a. Warranty Period: Three years from date of Substantial Completion; full coverage for labor, materials, and equipment.

B. Electrified Locking Devices and Accessories Warranty:

1. Special Manufacturer Warranty: Manufacturer warrants that electrified locking devices and accessories perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within warranty period.

a. Warranty Period: Three years from date of Substantial Completion; full coverage for labor, materials, and equipment.

PART 2 - PRODUCTS

2.1 INTEGRATED CREDENTIAL READERS AND ENTRY MANAGEMENT

A. Proximity Reader for Card, Fob, or Smartphone :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMAG Technology; G4S USA.
b. Farpointe Data Inc.; DORMA USA, Inc.; dormakaba Group.
c. HID Global; ASSA ABLOY.
d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Performance Criteria:

a. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and application.
b. Listing Criteria:

1) UL CCN ALVY; including UL 294.
2) Plastic Enclosure: UL CCN QMFZ2; including UL 94.

c. General Characteristics: Visual LED indication of card read.

4. Options:

a. Enclosure Rating: IEC 60529 or IP55 or IP65 or IP66.
b. Input Voltage: 5 to 16 V(dc) PoE.
c. Operating Temperature: Minus 40 to plus 160 deg F.
d. Read Range: Up to 2 inch 3 inch.
e. Transmit Frequency: 125 kHz, or 13.56 MHz, or 2.4 GHz.
f. Materials: Long-wearing polymeric plastic, or Polycarbonate, or Metal.
g. Colors: Black or Gray.
h. Climate: Indoor and outdoor.
i. Size: Single gang or double gang.

5. Accessories:

a. Long-range receiver module.

2.2 ACCESS CONTROL CREDENTIALS

A. Access Control Cards :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cansec Systems Ltd.
b. Farpointe Data Inc.; DORMA USA, Inc.; dormakaba Group.
c. HID Global; ASSA ABLOY.
d. Hirsch; a brand of Identiv, Inc.
e. Honeywell Commercial Security; Honeywell International, Inc.
f. IDTECK Global, Inc.
g. Viking Electronics, Inc.
h. Or approved equal.

2. Performance Criteria:

a. Reference Standards:

1) Personal Identity Verification (PIV): FIPS PUB 201-2.
2) Physical: IEC 7810; IEC 10373; IEC 7816 for contact cards; and IEC 14443 for contactless cards.
3) Functional: UL 294; IEC 60839-11-1; and IEC 60839-11-2.
4) Material Durability: INCITS 322.

b. Format: Customizable, including artwork.

1) On Front: Photograph, full name (surname first).
2) On Back: , card number, magnetic stripe, linear bar code,
3) Stored Data Elements: PIN, employee ID number

3. Options:

a. Data Format: Wiegand 26 bit or 34 bit or 37 bit.
b. Transmit Frequency: 125 kHz and 13.56 MHz.
c. Data Retention:5 or10 or20 years.
d. Memory Capacity: 2.5 kB or 8 kB or 16 kB or 32 kB.
e. Operating Temperature: Minus 40 to plus 185 deg F.
f. Materials: Plastic or ABS or PVC laminate.
g. Color: White or Off-white or Glossy white.
h. Reading Medium: Multi-criteria use Proximity .

2.3 ELECTRIFIED LOCKING DEVICES AND ACCESSORIES

A. Electrically Controlled Single-Point Latch :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Corbin Russwin, Inc.; an ASSA ABLOY Group company.
    b. Schlage; an Allegion brand.
    c. Yale Security Inc; an ASSA ABLOY Group company.
    d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Performance Criteria:

    a. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and application.
    b. Listing Criteria:

        1) Special Locking Arrangements: UL CCN FWAX; including UL 294, NFPA 101, NYC Building Code, NYC Electrical Code and NYC Fire Code.
        2) Electrically Controlled Single-Point Locks and Latches: UL CCN GYQS, UL 10B, and UL 10C; designed to be used with Class 2 control-voltage circuits in accordance with Article 725 of NFPA 70.

4. Options:

    a. Audible and visual indication of door unlock.
    b. Input Power: 12 V(ac/dc) or 24 V(ac/dc) .
    c. Operating Temperature: Minus 31 to plus 151 deg F.
    d. Connectivity: Hardwired .
    e. Materials: Zinc .
    f. Finishes: US26D Satin Chrome.
    g. Integrated Credential Reader:

        1) Proximity (125 kHz).
        2) Smart (13.56 MHz).
    h. Failure Mode: Fail-safe or Fail-secure.
    i. Mechanical key override.
    j. Latch bolt monitor.

2.4 EGRESS MANAGEMENT DEVICES

A. Magnetic Lock Hardware with Special Locking Arrangement for Fire-Rated Doors :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Alarm Controls; Hanchett Entry Systems, Inc.; ASSA ABLOY Group.
    b. Gianni Electro Magnet (GEM); Gianni Industries, Inc.
    c. Schlage; an Allegion brand.
    d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Performance Criteria:

a. Regulatory Requirements:

1) Listed and labeled in accordance with NFPA 70 and marked for intended location and application.
2) Compliant with NFPA 101, NYC Building Code, NYC Electrical Code, and NYC Fire Code requirements for use along means of egress.

b. Listing Criteria:

1) Special Locking Arrangements: UL CCN FWAX or UL CCN FWAX2; including UL 294, NFPA 101, and NYC Building Code .
2) Electromagnetic Locks for Fire-Rated Doors: UL CCN GWXT; including UL 10B and UL 10C.

4. Options:

a. Input Voltage: 12 to 24 V(dc).
b. Holding Force: 1200 lbf.
c. Release Delay: Zero or Five or 10 or 15 seconds.
d. Dry contact for external alarm relay to security system or to fire-alarm system .

B. Panic Hardware with Special Locking Arrangement for Fire-Rated Doors SC-101.00:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ASSA ABLOY Electronic Security Hardware; ASSA ABLOY.
b. Corbin Russwin, Inc.; an ASSA ABLOY Group company.
c. Yale Security Inc; an ASSA ABLOY Group company.
d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Performance Criteria:

a. Regulatory Requirements:

1) Listed and labeled in accordance with NFPA 70 and marked for intended location and application.
2) Compliant with NFPA 101, NYC Building Code, NYC Electrical Code and NYC Fire code for use along means of egress.

b. Listing Criteria:

1) Special Locking Arrangements: UL CCN FWAX or UL CCN FWAX2; including UL 294, NFPA 101, and ICC IBC.
2) Panic Hardware for Fire-Rated Doors: UL CCN GXHX, UL 10C, and UL 305.
3) Controlled-Exit Panic Devices: UL CCN FULA; including UL 305.

4. Options:

a. Input Voltage: 12 to 24 V(dc).

b. Release Delay: Zero or 15 seconds.
c. Dry contact for external alarm relay to security system or to fire-alarm system .
d. Secondary Power: 9 V battery.

2.5 ACCESS CONTROL REMOTE DEVICES

A. Near Field Communications (NFC) Access Control Devices :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMAG Technology; G4S USA.
b. HID Global; ASSA ABLOY.
c. IDenticard Systems; Precision Dynamics Corporation.
d. Or approved equal.

2. Performance Criteria:

a. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and application.
b. Listing Criteria: UL CCN ALVY; including UL 294.

2.6 ELECTRONIC KEY MANAGEMENT SYSTEMS

A. Electronic Key Management System Unit :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Deister Electronic USA, Inc.
b. KEYper Systems; Marcon International, Inc.
c. MATRIX Cabinet.
d. Or approved equal.

2. Performance Criteria:

a. Regulatory Requirements: Listed and labeled in accordance with NFPA 70 and marked for intended location and application.
b. Listing Criteria: UL CCN ALZK; including UL 294.

3. Operation:

a. Access Method: Proximity card biometrics keypad and standard key.
b. Alarm output: Local sounder or Output contacts.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 DEPLOYMENT OF CREDENTIALS

A. Comply with manufacturer's published instructions.

B. Third-Party Issuing of Access Control Credentials:

1. Printing of New Credentials: Contractor must be capable of programming and issuing credentials compatible with City of New York's access control system.

a. Initial Issuance: Provide spreadsheet or form for collecting data for generation of credentials. City of New York will submit completed form containing data for personnel to be issued credentials. Print and provide initial run, printed and programmed credentials in specified format within four weeks of request.
b. Ongoing Issuance: Produce additional credentials upon City of New York request. City of New York will submit completed form containing data for personnel to be issued credentials. Print and program credentials in specified format within two weeks of request.

3.3 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Special Techniques:

1. Cable Type: Shielded.
2. Analog Maximum Cable Length: 1000 ft.
3. Digital Maximum Cable Length: 295ft.

C. Interfaces with Other Work:

1. Coordinate installation of new products for access control hardware devices with existing conditions.
2. Coordinate access control credentials with integrated credential readers and access control system architecture.
3. Egress Management Interfaces:

a. Coordinate with Section 282000 "Video Surveillance" for automatic video feed callup upon delayed egress activation.
b. Coordinate with Section 230923 "Direct Digital Control (DDC) System for HVAC" for monitoring of egress management device alarms by BMS.

3.4 FIELD QUALITY CONTROL

A. Field tests and inspections must be witnessed by Commissioner and NYC Department of Buildings Inspector.

B. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.

C. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Collect, assemble, and submit test and inspection reports.

E. Manufacturer Services:

1. Engage factory-authorized service representative to support field tests and inspections.

3.5 PROTECTION

A. After installation, protect integrated access control hardware devices from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by City of New York.

3.6 SERVICE AGREEMENT

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software and firmware support for one year.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within one year from date of Substantial Completion.

    a. Upgrade Notice: No fewer than 30 days to allow City of New York to schedule and access the system and to upgrade computer equipment if necessary.

3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 281500

SECTION 281511 - INTEGRATED CREDENTIAL READERS AND ENTRY MANAGEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Credential readers.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.
2. Section 281513 "Access Control Credentials" for credential products for use with reader devices.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Coordination Meeting(s): For integrated credential readers and entry management systems. Conduct meeting(s) as videoconference or at Project site before installation.

1. Attendees: Installers, fabricators, representatives of manufacturers, representatives from telecommunications, IT representatives, and administrants for field tests and inspections. Notify Commissioner, and City of New York's Commissioning Authority of scheduled meeting dates.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data:

1. Credential readers.
2. Keypads.
3. Biometric identity devices.
4. Combination reader devices.

B. Shop Drawings:

1. Project general notes.
2. Device layout.
3. Block diagram and cable/conduit routing.
4. System communications details.
5. System mounting details.
6. Secondary power calculations.

C. Certificates:

1. Manufacturer certifications.

D. Field Quality-Control Submittals:

1. Field quality-control reports.

1.6 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:

1. Installation instructions for integrated credential readers and entry management devices.
2. Inspection and testing recommendations for integrated credential readers and entry management devices.

1.7 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.8 MAINTENANCE MATERIAL SUBMITTALS

A. Special Tools: Furnish to City of New York proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to integrated credential readers and entry management devices, that are packaged with protective covering for storage on-site and identified with labels describing contents.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.10 WARRANTY

A. Special Manufacturer Warranty: Manufacturer warrants that integrated credential readers and entry management devices perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within warranty period.

1. Warranty Period: Three years from date of Substantial Completion; full coverage for labor, materials, and equipment.

PART 2 - PRODUCTS

2.1 CREDENTIAL READERS

A. Description: Electronic devices that read one or more types of access credentials and are part of overall access control system. These devices read and transfer credential info to access control system for control of door locks and other access control components.

B. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.
2. Listing Criteria:

    a. UL CCN ALVY; including UL 294.
    b. Plastic Enclosure: UL CCN QMFZ2; including UL 94.

3. General Characteristics:

    a. Visual LED indication of credential authorization.

C. Proximity Reader for Card, Fob, or Smartphone :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. HID Global; ASSA ABLOY.
    b. IDenticard Systems; Precision Dynamics Corporation.
    c. XceedID; an Allegion brand.
    d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Options:

    a. Enclosure Rating: IEC 60529 or IP66.
    b. Input Voltage: 5 to 16 V(dc).
    c. Operating Temperature: Minus 40 to plus 160 deg F.
    d. Read Range: Up to 3 inch.
    e. Transmit Frequency: 125 kHz, or 13.56 MHz, or 2.4 GHz.
    f. Materials: Long-wearing polymeric plastic, or Polycarbonate, or Metal.
    g. Colors: Black, or Gray.
    h. Climate: Indoor, and outdoor.
    i. Size: Single gang .

4. Accessories:

a. Long-range receiver module.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Special Techniques:

1. Cable Type: Shielded.
2. Maximum Cable Length: 295ft.

3.3 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

B. Field tests and inspections must be witnessed by Commissioner and NYC Department of Buildings Inspectors. Testing of devices along means of egress must be witnessed by NYC Department of Buildings Inspectors.

C. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections for the following:

a. Credential readers.

D. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services:

1. Engage factory-authorized service representative to support field tests and inspections.

3.4 PROTECTION

A. After installation, protect integrated credential readers and entry management devices from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

3.5 SERVICE AGREEMENT

A. Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software and firmware support for one year.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within one year from date of Substantial Completion.

    a. Upgrade Notice: No fewer than 30 days to allow City of New York to schedule and access the system.

3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 281511

SECTION 281513 - ACCESS CONTROL CREDENTIALS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Access control cards.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data:

1. Access control cards.
2. Wireless key fobs.

B. Certificates:

1. Manufacturer warranties and certifications.

1.5 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official deployment and testing instructions issued to Contractor by manufacturer for the following:

1. Printing, programming, and handling instructions for access control credentials.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 ACCESS CONTROL CARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cansec Systems Ltd.
2. HID Global; ASSA ABLOY.
3. Hirsch; a brand of Identiv, Inc.
4. Honeywell Commercial Security; Honeywell International, Inc.
5. IDTECK Global, Inc.
6. Viking Electronics, Inc.
7. or approved equal.

B. Performance Criteria:

1. General Characteristics:

a. Reference Standards:

1) Personal Identity Verification (PIV): FIPS PUB 201-2.
2) Physical: IEC 7810; IEC 10373; IEC 7816 for contact cards; and IEC 14443 for contactless cards.
3) Functional: UL 294; IEC 60839-11-1; and IEC 60839-11-2.
4) Material Durability: INCITS 322.

b. Format: Customizable, including artwork. Provide credential template with provisions for the following:

1) On Front: Photograph, full name (surname first), affiliation, organization, card expiration date, color-coding, organization's name, and logo, two-dimensional bar code.
2) On Back: Physical characteristics of cardholder, employee ID number, card number, magnetic stripe, linear bar code, return address. Include the following message:

a) For Authorized Use Only.

3) Stored Data Elements: PIN, employee ID number, two fingerprint templates, electronic facial image, one iris image, digital signature private key and certificate, key management private key and certificate, card authenticate data, and PIV authentication data.

C. Options:

1. Data Format: Wiegand 34 bit.

2. Data Retention: 10 years.
3. Memory Capacity: 32 kB.
4. Operating Temperature: Minus 40 to plus 185 deg F.
5. Materials: Plastic, ABS, PVC laminate.
6. Color: Off-white.
7. Reading Medium: Multi-criteria use , chip and magnetic strip.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 DEPLOYMENT

A. Comply with manufacturer's published instructions.

B. Third-Party Issuing of Access Control Credentials:

1. Printing of New Credentials: Contractor must be capable of programming and issuing credentials compatible with City of New York's access control system.

    a. Initial Issuance: Provide spreadsheet or form for collecting data for generation of credentials. Commissioner will submit completed form containing data for personnel to be issued credentials. Print and provide initial run, printed and programmed credentials in specified format within four weeks of request.
    b. Ongoing Issuance: Produce additional credentials upon Commissioner request. Commissioner will submit completed form containing data for personnel to be issued credentials. Print and program credentials in specified format within two weeks of request.

C. Interfaces with Other Work:

1. Coordinate access control credentials with integrated credential readers and access control system architecture.

END OF SECTION 281513

SECTION 281523 - INTERCOM ENTRY SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Digital audio intercom entry systems.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Coordination Meeting(s): For intercom entry system. Conduct meeting(s) as videoconference or at Project site before construction activity.

1. Attendees: Installers, fabricators, representatives from telecommunications, and administrants for field tests and inspections. Notify Commissioner, and City of New York's Commissioning Authority of scheduled meeting dates.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data:

1. Digital audio intercom entry systems.
2. Digital audio-video intercom entry systems.

B. Shop Drawings:

1. Project general notes.
2. Device layout.

3. Block diagram and cable/conduit routing.
4. System communications details.
5. System mounting details.
6. Secondary power calculations.

C. Certificates:

1. Manufacturer Certifications.

D. Field Quality-Control Submittals:

1. Field quality-control reports.

1.6 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:

1. Installation and startup instructions for intercom entry systems.
2. Manufacturer's recommended tests and inspections for intercom entry systems.

B. Manufacturer warranties.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Special Tools: Furnish to City of New York proprietary equipment, keys, and software required to operate, maintain, repair, adjust, or implement future changes to intercom entry system, that are packaged with protective covering for storage on-site and identified with labels describing contents.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.9 WARRANTY

A. Special Manufacturer Warranty: Manufacturer warrants that intercom entry system perform in accordance with specified requirements and agrees to provide repair or replacement of components or products that fail to perform as specified within warranty period.

1. Warranty Period: Three years from date of Substantial Completion; full coverage for labor, materials, and equipment.
2. Follow-On Warranty Period: Six years from date of Substantial Completion; prorated coverage for materials that failed because of transient voltage surges only.

PART 2 - PRODUCTS

2.1 DIGITAL AUDIO INTERCOM ENTRY SYSTEMS

A. Description: This category covers digital audio intercom entry systems, together with controls and accessories for use with such operators, and similar devices.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aiphone Corporation.
2. Stentofon; a brand of Zenitel USA.
3. 2N.
4. Or approved equal.

C. Performance Criteria:

1. Regulatory Requirements: Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.
2. Listing Criteria: UL CCN ALVY; including UL 294.

D. Options:

1. Operating Temperature: Minus 29 to plus 150 deg F.
2. Input Power: 18 to 24 V(dc).
3. Connectivity: Hardwired .
4. Minimum Ring Voltage: 25 V(ac rms).
5. Maximum Ring Voltage: 90 V(ac rms).
6. Speaker Volume: Approximately 70 dB maximum at 1 m.
7. Materials: Stainless steel.
8. Finishes: Brushed stainless steel.
9. Climate: and outdoor.
10. Mounting: Devices must be wall flush mounted.
11. Push-to-talk button.

E. Accessories:

1. Recessed back box.
2. External keypad.
3. Mounting adaptor plate.
4. Mullion mounting bracket.
5. Desk stand.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Comply with manufacturer's published instructions.

B. Special Techniques:

1. Hardwired System:

a. Cable Type: Unshielded.
b. Maximum Line Loop Cable Length: 6300 ft.
c. Maximum Power-over-Ethernet Cable Length: 300 ft.

2. Wireless Systems:

a. Maintain compliance with City of New York's Project wireless standards specified in Division 27.

C. Wireless Security:

1. IP Security:

a. Hardware Root of Trust.
b. SSH.
c. HTTPS.
d. Firewall.

2. Software Integrity Check: SHA256.
3. Access to system management is restricted via a separate interface.
4. Smartphone Interface: Enable smartphone connectivity.

3.3 FIELD QUALITY CONTROL

A. Acceptance Testing Preparation:

1. As per Manufacturer specifications.

B. Field tests and inspections must be witnessed by Commissioner .

C. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.

D. Nonconforming Work:

1. System will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

E. Collect, assemble, and submit test and inspection reports.

F. Manufacturer Services:

1. Engage factory-authorized service representative to support field tests and inspections.

3.4 SYSTEM STARTUP

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.

3.5 PROTECTION

A. After installation, protect intercom entry system from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

3.6 GUARANTY SERVICE

A. Software and Firmware Service Agreement:

1. Technical Support: Beginning at Substantial Completion, verify that software and firmware service agreement includes software and firmware support for one year.
2. Upgrade Service: At Substantial Completion, update software and firmware to latest version. Install and program software and firmware upgrades that become available within one year from date of Substantial Completion. Verify that upgrading software includes operating system and new or revised licenses for using software.

a. Upgrade Notice: No fewer than 30 days to allow City of New York to schedule and access the system and to upgrade computer equipment if necessary.

3. Upgrade Reports: Prepare report after each update, documenting upgrades installed.

END OF SECTION 281523

SECTION 282000 - VIDEO SURVEILLANCE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section includes a video surveillance system consisting of cameras, digital video recorder, data transmission wiring, and a control station with its associated equipment.

B. Related Requirements:

1. Section 281300 "Access Control System Software and Database Management" to integrate access control system interface and control.
2. Section 283100 "Intrusion Detection" to integrate video surveillance used for intrusion detection.

1.3 DEFINITIONS

A. AGC: Automatic gain control.

B. BNC: Bayonet Neill-Concelman - type of connector.

C. B/W: Black and white.

D. CCD: Charge-coupled device.

E. FTP: File transfer protocol.

F. IP: Internet protocol.

G. LAN: Local area network.

H. MPEG: Moving picture experts group.

I. NTSC: National Television System Committee.

J. PC: Personal computer.

K. PTZ: Pan-tilt-zoom.

L. RAID: Redundant array of independent disks.

M. TCP: Transmission control protocol - connects hosts on the Internet.

N. UPS: Uninterruptible power supply.

O. WAN: Wide area network.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated. Include dimensions and data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: For video surveillance. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Functional Block Diagram: Show single-line interconnections between components for signal transmission and control. Show cable types and sizes.
3. Dimensioned plan and elevations of equipment racks, control panels, and consoles. Show access and workspace requirements.
4. UPS: Sizing calculations.
5. Wiring Diagrams: For power, signal, and control wiring.

C. Design Data: Include an equipment list consisting of every piece of equipment by model number, manufacturer, serial number, location, and date of original installation. Add pretesting record of each piece of equipment, listing name of person testing, date of test, set points of adjustments, name and description of the view of preset positions, description of alarms, and description of unit output responses to an alarm.

1.6 INFORMATIONAL SUBMITTALS

A. Seismic Qualification Data: Certificates, for cameras, camera-supporting equipment, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

B. Field quality-control reports.

C. Product Warranty: Sample of special warranty.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.8 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Control Station: Rated for continuous operation in ambient temperatures of 60 to 85 deg F and a relative humidity of 20 to 80 percent, noncondensing.
2. Interior, Controlled Environment: System components, except central-station control unit, installed in temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
3. Interior, Uncontrolled Environment: System components installed in non- temperature-controlled interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing. Use NEMA 250, Type 4 enclosures.
4. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of cameras, equipment related to camera operation, and control-station equipment that fail in materials or workmanship within specified warranty period.

1. Warranty Period: One year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYSTEM REQUIREMENTS

A. Video-signal format shall comply with NTSC standard, composite interlaced video. Composite video-signal termination shall be 75 ohms.

B. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor's entry connection to components.

1. Minimum Protection for Power Connections 120 V and More: Auxiliary panel suppressors complying with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Connections: Comply with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits" as recommended by manufacturer for type of line being protected.

C. Tamper Protection: Tamper switches on enclosures, control units, pull boxes, junction boxes, cabinets, and other system components shall initiate a tamper-alarm signal when unit is opened or partially disassembled. Control-station, control-unit alarm display shall identify tamper alarms and indicate locations.

2.2 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Video surveillance system shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NECA 1.

D. Comply with NFPA 70.

E. Electronic data exchange between video surveillance system with an access-control system shall comply with SIA TVAC.

2.3 REINFORCED DOME CAMERAS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Extreme CCTV Surveillance Systems.
2. Vivotek
3. Honeywell
4. Or approved equal.

B. Camera: Designed for high-abuse locations, with a weathertight semirecessed surface mounting, impact-resistance polycarbonate dome, and heavy-gage, 6061 T6 aluminum body.

1. Suitable for exterior environment, rated for continuous operation in ambient temperatures of minus 40 to plus 122 deg F dry bulb and up to 85 percent relative humidity.
2. Pickup Device: CCD interline transfer, 290,000 510(H) by 492(V) pixels.
3. Horizontal Resolution: 350 lines.
4. Signal-to-Noise Ratio: Not less than 46 dB.
5. With AGC and automatic backlight compensation.
6. Sensitivity: Camera shall provide usable images in low-light conditions, delivering an image at a scene illumination of 6 lux at f/2.0.
7. Scanning Synchronization: Determined by external synch over the coaxial cable. Camera shall revert to internally generated synchronization on loss of external synch signal.
8. White Balance: Auto-tracing white balance.

2.4 POWER SUPPLIES

A. Low-voltage power supplies matched for voltage and current requirements of cameras and accessories, and of type as recommended by manufacturer of camera, infrared illuminator, and lens.

1. Enclosure: NEMA 250, Type 3.

2.5 CAMERA-SUPPORTING EQUIPMENT

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bosch Security Systems, Inc.
2. GE Security, Inc.
3. Honeywell Security Products- Americas.
4. Panasonic Corporation of North America.
5. Pelco.
6. Visiontech.
7. Or approved equal.

B. Minimum Load Rating: Rated for load in excess of the total weight supported times a minimum safety factor of two.

C. Pan Units: Motorized automatic-scanning units arranged to provide remote-controlled manual and automatic camera panning action, and equipped with matching mounting brackets.

D. Scanning Operation: Silent, smooth, and positive.

1. Stops: Adjustable without disassembly, to limit the scanning arc.

E. Mounting Brackets for Fixed Cameras: Type matched to items supported and mounting conditions. Include manual pan-and-tilt adjustment.

F. Protective Housings for Fixed and Movable Cameras: Steel or 6061 T6 aluminum enclosures with internal camera mounting and connecting provisions that are matched to camera/lens combination and mounting and installing arrangement of camera to be housed.

1. Tamper switch on access cover sounds an alarm signal when unit is opened or partially disassembled. Central-control unit shall identify tamper alarms and indicate location in alarm display. Tamper switches and central-control unit are specified in Section 283100 "Intrusion Detection."
2. Camera Viewing Window: Polycarbonate, or Lexan window, aligned with camera lens.
3. Duplex Receptacle: Internally mounted.
4. Alignment Provisions: Camera mounting shall provide for field aiming of camera and permit removal and reinstallation of camera lens without disturbing camera alignment.
5. Built-in, thermostat-activated heater and blower units. Units shall be automatically controlled so the environmental limits of the camera equipment are not exceeded.
6. Sun shield shall not interfere with normal airflow around the housing.
7. Mounting bracket and hardware for wall or ceiling mounting of the housing. Bracket shall be of same material as the housing; mounting hardware shall be stainless steel.

8. Finish: Housing and mounting bracket shall be factory finished using manufacturer's standard finishing process suitable for the environment.
9. Enclosure Rating: Type 4 Enclosure IIP54.

2.6 MONITORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bosch Security Systems, Inc.
2. GE Security, Inc.
3. Honeywell Security Products- Americas.
4. Panasonic Corporation of North America.
5. Pelco.
6. Or approved equal.

B. Monochrome:

1. Metal cabinet units designed for continuous operation.
2. Screen Size (Diagonal Dimension): 27-inches.
3. Horizontal Resolution: 1080P lines, minimum, at center.
4. Minimum Front Panel Devices and Controls: Power switch; power-on indicator; and brightness, horizontal-hold, vertical-hold, and contrast controls.
5. Mounting: Adjustable tilting and training.
6. Mounting: Single, 14-inch, Dual, 9-inch, vertical, EIA 19-inch electronic equipment rack or cabinet complying with CEA 310-E.
7. Electrical: 120-V ac, 60 Hz.

C. Color:

1. Metal cabinet units designed for continuous operation.
2. Screen Size (Diagonal Dimension): 27-inches.
3. Horizontal Resolution: 1080P lines.
4. Minimum Front Panel Devices and Controls: Power switch; power-on indicator; and brightness, contrast, color, and tint controls.
5. Degaussing: Automatic.
6. Mounting: Single, 14-inch, Dual, 9-inch, vertical, EIA 19-inch electronic equipment rack or cabinet complying with CEA 310-E.
7. Electrical: 120-V ac, 60 Hz.

2.7 NETWORK VIDEO RECORDERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bosch Security Systems, Inc.
2. GE Security, Inc.
3. Honeywell Security Products- Americas.
4. Panasonic Corporation of North America.
5. Pelco.
6. Vivotek

7. Or approved equal.

B. External storage or internal 250-1, 500-GB hard disk drive.

1. Video and audio recording over TCP/IP network.
2. Video recording of MPEG-2 and MPEG-4 streams.
3. Video recording up to 48 Mbps for internal storage and up to 100 Mbps for external storage.
4. Duplex Operation: Simultaneous recording and playback.
5. Continuous and alarm-based recording.
6. Full-Featured Search Capabilities: Search based on camera, time, or date.
7. Automatic data replenishment to ensure recording even if network is down.
8. Digital certification by watermarking.
9. Internal RAID storage or non-RAID storage of up to 1500 GB.
10. Capable of adding external RAID storage up to 7000 GB for models with no internal storage.
11. Full integration with LAN, Intranet, or Internet through standard Web browser or video management software.
12. Integrated Web server FTP server functionality.
13. Supports up to 16 or devices.

2.8 IP VIDEO SYSTEMS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bosch Security Systems, Inc.
2. GE Security, Inc.
3. Honeywell Security Products- Americas.
4. JVC Americas Corp.
5. Panasonic Corporation of North America.
6. Pelco.
7. Salient Systems Inc.
8. Vivotek
9. Or approved equal.

B. Description:

1. System shall provide high-quality delivery and processing of IP-based video, audio, and control data using standard Ethernet-based networks.
2. System shall have seamless integration of all video surveillance and control functions.
3. Graphical user interface software shall manage all IP-based video matrix switching and camera control functions, two-way audio communication, alarm monitoring and control, and recording and archive/retrieval management. IP system shall also be capable of integrating into larger system environments.
4. System design shall include all necessary compression software for high-performance, dual-stream, MPEG-2/MPEG-4 video. Unit shall provide connections for all video cameras, camera PTZ control data, bidirectional audio, discreet sensor inputs, and control system outputs.
5. All camera signals shall be compressed, encoded, and delivered onto the network for processing and control by the IP video-management software.
6. Camera system units shall be ruggedly built and designed for extreme adverse environments, complying with NEMA Type environmental standards.

7. Encoder/decoder combinations shall place video, audio, and data network stream that can be managed from multiple workstations on the user's LAN or WAN.
8. All system interconnect cables, workstation PCs, PTZ joysticks, and network intermediate devices shall be provided for full performance of specified system.

2.9 VIDEO MOTION SENSORS (INTERIOR)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AXCESS International Inc.
2. ICU Security, Inc.
3. Tyco International Limited.
4. Visiontech.
5. Or approved equal.

B. Device Performance: Detect changes in video signal within a user-defined protected zone. Video inputs shall be composite video as defined in SMPTE 170M. Provide an alarm output for each video input.

1. Detect movement within protected zone of intruders wearing clothing with a reflectivity that differs from that of background scene by a factor of two. Reject all other changes in video signal.
2. Modular design that allows for expansion or modification of number of inputs.
3. Mounting: Standard 19-inch rack complying with CEA 310-E.

2.10 CONTROL STATIONS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bosch Security Systems, Inc.
2. GE Security, Inc.
3. Honeywell Security Products- Americas.
4. Panasonic Corporation of North America.
5. Pelco.
6. Or approved equal.

B. Description: Heavy-duty, freestanding, modular, metal furniture units arranged to house electronic equipment. Coordinate component arrangement and wiring with components and wiring of other systems.

C. Equipment Mounting: Standard 19-inch rack complying with CEA 310-E.

D. Normal System Power Supply: 120 V, 60 Hz, through a locked disconnect device and an isolation transformer in central-station control unit. Central-station control unit shall supply power to all components connected to it unless otherwise indicated.

E. Power Continuity for Control Station: Batteries in power supplies of central-station control units and individual system components shall maintain continuous system operation during outages of both normal and backup ac system supply.

1. Batteries: Rechargeable, valve-regulated, recombinant, sealed, lead-acid type with nominal 10-year life expectancy. Capacity adequate to operate portions of system served including audible trouble signal devices for up to four hours and audible and visual alarm devices under alarm conditions for an additional 10 minutes.
2. Battery Charger: Solid-state, fully automatic, variable-charging-rate type. Charger shall recharge fully discharged battery within 24 hours.

F. Annunciation: Indicate change in system condition and switching of system or component to backup power.

2.11 SIGNAL TRANSMISSION COMPONENTS

A. Cable: Coaxial cable elements have 75-ohm nominal impedance. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Video Surveillance Coaxial Cable Connectors: BNC type, 75 ohms. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.

B. Examine roughing-in for LAN, WAN, and IP network before device installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 WIRING

A. Comply with requirements in Section 270528 "Pathways for Communications Systems."

B. Wiring Method: Install cables in raceways unless otherwise indicated.

1. Except raceways are not required in accessible indoor ceiling spaces and attics.
2. Except raceways are not required in hollow gypsum board partitions.
3. Conceal raceways and wiring except in unfinished spaces.

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

D. Splices, Taps, and Terminations: For power and control wiring, use numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

E. For communication wiring, comply with the following:

1. Section 271523 "Communications Optical Fiber Horizontal Cabling."

F. Grounding: Provide independent-signal circuit grounding recommended in writing by manufacturer.

3.4 VIDEO SURVEILLANCE SYSTEM INSTALLATION

A. Install cameras and infrared illuminators level and plumb.

B. Install cameras with 84-inch- minimum clear space below cameras and their mountings. Change type of mounting to achieve required clearance.

C. Set pan unit and pan-and-tilt unit stops to suit final camera position and to obtain the field of view required for camera. Connect all controls and alarms, and adjust.

D. Install power supplies and other auxiliary components at control stations unless otherwise indicated.

E. Install tamper switches on components indicated to receive tamper switches, arranged to detect unauthorized entry into system-component enclosures and mounted in self-protected, inconspicuous positions.

F. Avoid ground loops by making ground connections only at the control station.

1. For 12- and 24-V dc cameras, connect the coaxial cable shields only at the monitor end.

3.5 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
2. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements. Conduct tests at varying lighting levels, including day and night scenes as applicable. Prepare video-surveillance equipment for acceptance and operational testing as follows:

    a. Prepare equipment list described in "Informational Submittals" Article.
    b. Verify operation of auto-iris lenses.
    c. Set back-focus of fixed focal length lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Adjust until image is in focus with and without the filter.

d. Set back-focus of zoom lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Additionally, set zoom to full wide angle and aim camera at an object 50 to 75 feet away. Adjust until image is in focus from full wide angle to full telephoto, with the filter in place.
e. Set and name all preset positions; consult City of New York's personnel.
f. Set sensitivity of motion detection.
g. Connect and verify responses to alarms.
h. Verify operation of control-station equipment.

3. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least 14 days. Provide a minimum of 10 days' notice of test schedule.
4. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.

C. Video surveillance system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.6 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:

1. Check cable connections.
2. Check proper operation of cameras and lenses. Verify operation of auto-iris lenses and adjust back-focus as needed.
3. Adjust all preset positions; consult City of New York's personnel.
4. Recommend changes to cameras, lenses, and associated equipment to improve City of New York's use of video surveillance system.
5. Provide a written report of adjustments and recommendations.

3.7 CLEANING

A. Clean installed items using methods and materials recommended in writing by manufacturer.

B. Clean video-surveillance-system components, including camera-housing windows, lenses, and monitor screens.

3.8 DEMONSTRATION

A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate video-surveillance equipment.

END OF SECTION 282000

SECTION 283100 - INTRUSION DETECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Intrusion detection with communication links to perform monitoring, alarm, and control functions.
2. Integration of other electronic and electrical systems and equipment.

B. Related Sections:

1. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for power cabling between master control units and field-mounted devices and control units.
2. Section 271323 "Communications Optical Fiber Backbone Cabling" for multi- and single-mode backbone (riser-rated) optical fiber.
3. Section 271513 "Communications Copper Horizontal Cabling" for Category 5e, 6, and 7 horizontal (general use, riser-, and plenum-rated) cabling.
4. Section 271523 "Communications Optical Fiber Horizontal Cabling" for multi- and single-mode horizontal (general use, riser-, and plenum-rated) optical fiber.
5. Section 281300 "Access Control System Software and Database Management" for applications, interfaces, and workstations.
6. Section 282000 "Video Surveillance" for CCTV cameras that are used as devices for video motion detection.

1.3 DEFINITIONS

A. CCTV: Closed-circuit television.

B. PIR: Passive infrared.

C. RFI: Radio-frequency interference.

D. UPS: Uninterruptible power supply.

E. Control Unit: System component that monitors inputs and controls outputs through various circuits.

F. Master Control Unit: System component that accepts inputs from other control units and may also perform control-unit functions. The unit has limited capacity for the number of protected zones and is installed at an unattended location or at a location where it is not the attendant's primary function to monitor the security system.

G. Monitoring Station: Facility that receives signals and has personnel in attendance at all times to respond to signals. A central station is a monitoring station that is listed.

H. Protected Zone: A protected premises or an area within a protected premises that is provided with means to prevent an unwanted event.

I. Standard Intruder: A person who weighs 100 lb or less and whose height is 60 inches or less; dressed in a long-sleeved shirt, slacks, and shoes unless environmental conditions at the site require protective clothing.

J. Standard-Intruder Movement: Any movement, such as walking, running, crawling, rolling, or jumping, of a "standard intruder" in a protected zone.

K. Systems Integration: The bringing together of components of several systems containing interacting components to achieve indicated functional operation of combined systems.

L. Zone. A defined area within a protected premises. It is a space or area for which an intrusion must be detected and uniquely identified. The sensor or group of sensors must then be assigned to perform the detection, and any interface equipment between sensors and communication must link to master control unit.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: Components for sensing, detecting, systems integration, and control, including dimensions and data on features, performance, electrical characteristics, ratings, and finishes.

B. Shop Drawings: Detail assemblies of standard components that are custom assembled for specific application on this Project.

1. Functional Block Diagram: Show single-line interconnections between components including interconnections between components specified in this Section and those furnished under other Sections. Indicate methods used to achieve systems integration. Indicate control, signal, and data communication paths and identify programmable logic controllers, networks, and control interface devices and media to be used. Describe characteristics of network and other data communication lines.

    a. Indicate methods used to achieve systems integration.
    b. Indicate control, signal, and data communication paths and identify PLCs, networks, control interface devices, and media to be used.
    c. Describe characteristics of network and other data communication lines.

d. Describe methods used to protect against power outages and transient voltages including types and ratings of isolation and surge suppression devices used in data, communication, signal, control, and ac and dc power circuits.

2. Raceway Riser Diagrams: Detail raceway runs required for intrusion detection and for systems integration. Include designation of devices connected by raceway, raceway type and size, and type and size of wire and cable fill for each raceway run.
3. UPS: Sizing calculations.
4. Site and Floor Plans: Indicate final outlet and device locations, routing of raceways, and cables inside and outside the building. Include room layout for master control-unit console, terminal cabinet, racks, and UPS.
5. Master Control-Unit Console Layout: Show required artwork and device identification.
6. Device Address List: Coordinate with final system programming.
7. System Wiring Diagrams: Include system diagrams unique to Project. Show connections for all devices, components, and auxiliary equipment. Include diagrams for equipment and for system with all terminals and interconnections identified.
8. Details of surge-protection devices and their installation.
9. Sensor detection patterns and adjustment ranges.

C. Design Data: Include method of operation and supervision of each component and each type of circuit. Show sequence of operations for manually and automatically initiated system or equipment inputs. Description must cover this specific Project; manufacturer's standard descriptions for generic systems are unacceptable.

D. Samples for Initial Selection: For units with factory-applied color finishes.

E. Samples for Verification: For each type of exposed finish required.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, intrusion detection systems integrator, testing agency.

B. Field quality-control reports.

1. Anchor inspection reports documenting inspections of built-in and cast-in anchors.

C. Product Warranty: Provide Warranty.

D. Field Test Reports: Test plan and report defining all tests required to ensure that system meets technical, operational, and performance specifications within 60 days of date of Contract award.

E. Evaluation Reports: Examination reports documenting inspections of substrates, areas, and conditions.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For intrusion detection system to include in emergency, operation, and maintenance manuals. In addition to items as required per DDC General Conditions, include the following:

1. Data for each type of product, including features and operating sequences, both automatic and manual.

2. Master control-unit hardware and software data.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Installer Qualifications:

1. An Installer who is trained and approved by manufacturer for installation of units required for this Project.

C. Intrusion Detection Systems Integrator Qualifications: An experienced intrusion detection equipment supplier and Installer who has completed systems integration work for installations similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

D. Testing Agency Qualifications: Certified by BICSI.

1.9 PROJECT CONDITIONS

A. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:

1. Altitude: Sea level to 4000 feet.
2. Master Control Unit: Rated for continuous operation in an ambient of 60 to 85 deg F and a relative humidity of 20 to 80 percent, noncondensing.
3. Interior, Controlled Environment: System components, except master control unit, installed in temperature-controlled interior environments shall be rated for continuous operation in ambients of 36 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing.
4. Interior, Uncontrolled Environment: System components installed in non-temperature-controlled interior environments shall be rated for continuous operation in ambients of 0 to 122 deg F dry bulb and 20 to 90 percent relative humidity, noncondensing.
5. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambients of minus 30 to plus 122 deg F dry bulb and 20 to 90 percent relative humidity, condensing. Comply with UL 294 and UL 639 for outdoor-use equipment. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph and snow cover up to 24 inches thick.
6. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers or flyings shall be rated, listed, and installed according to NFPA 70.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of intrusion detection devices and equipment that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 FUNCTIONAL DESCRIPTION OF SYSTEM

A. Description: Hard-wired Multiplexed, modular, microprocessor-based controls, intrusion sensors and detection devices, and communication links to perform monitoring, alarm, and control functions.

B. Supervision: System components shall be continuously monitored for normal, alarm, supervisory, and trouble conditions. Indicate deviations from normal conditions at any location in system. Indication includes identification of device or circuit in which deviation has occurred and whether deviation is an alarm or malfunction.

1. Alarm Signal: Display at master control unit and actuate audible and visual alarm devices.
2. Trouble Condition Signal: Distinct from other signals, indicating that system is not fully functional. Trouble signal shall indicate system problems such as battery failure, open or shorted transmission line conductors, or control-unit failure.
3. Supervisory Condition Signal: Distinct from other signals, indicating an abnormal condition as specified for the particular device or control unit.

C. System Control: Master control unit shall directly monitor intrusion detection units and connecting wiring.

D. System Control: Master control unit shall directly monitor intrusion detection devices, perimeter detection units, , control units associated with perimeter detection units, and connecting wiring in a multiplexed distributed control system or as part of a network.

E. System shall automatically reboot program without error or loss of status or alarm data after any system disturbance.

F. Operator Commands:

1. Help with System Operation: Display all commands available to operator. Help command, followed by a specific command, shall produce a short explanation of the purpose, use, and system reaction to that command.
2. Acknowledge Alarm: To indicate that alarm message has been observed by operator.
3. Place Protected Zone in Access: Disable all intrusion-alarm circuits of a specific protected zone. Tamper circuits may not be disabled by operator.
4. Place Protected Zone in Secure: Activate all intrusion-alarm circuits of a protected zone.
5. Protected Zone Test: Initiate operational test of a specific protected zone.
6. System Test: Initiate system-wide operational test.
7. Print reports.

G. Timed Control at Master Control Unit: Allow automatically timed "secure" and "access" functions of selected protected zones.

H. Automatic Control of Related Systems: Alarm or supervisory signals from certain intrusion detection devices control the following functions in related systems:

1. Switch selected lights.

2. Shift elevator control to a different mode.
3. Open a signal path between certain intercommunication stations.
4. Shift sound system to "listening mode" and open a signal path to certain system speakers.
5. Switch signal to selected monitor from CCTV camera in vicinity of sensor signaling an alarm.

I. Printed Record of Events: Print a record of alarm, supervisory, and trouble events on system printer. Sort and report by protected zone, device, and function. When master control unit receives a signal, print a report of alarm, supervisory, or trouble condition. Report type of signal (alarm, supervisory, or trouble), protected zone description, date, and time of occurrence. Differentiate alarm signals from other indications. When system is reset, report reset event with the same information concerning device, location, date, and time. Commands shall initiate the reporting of a list of current alarm, supervisory, and trouble conditions in system or a log of past events.

J. Response Time: Two seconds between actuation of any alarm and its indication at master control unit.

K. ircuit Supervision: Supervise all signal and data transmission lines, links with other systems, and sensors from master control unit. Indicate circuit and detection device faults with both protected zone and trouble signals, sound a distinctive audible tone, and illuminate an LED. Maximum permissible elapsed time between occurrence of a trouble condition and indication at master control unit is 20 seconds. Initiate an alarm in response to opening, closing, shorting, or grounding of a signal or data transmission line.

L. Programmed Secure-Access Control: System shall be programmable to automatically change status of various combinations of protected zones between secure and access conditions at scheduled times. Status changes may be preset for repetitive, daily, and weekly; specially scheduled operations may be preset up to a year in advance. Manual secure-access control stations shall override programmed settings.

M. Manual Secure-Access Control: Coded entries at manual stations shall change status of associated protected zone between secure and access conditions.

2.2 SYSTEM COMPONENT REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Control Units, Devices, and Communications with Monitoring Station: Listed and labeled by a qualified testing agency for compliance with SIA CP-01.

C. FM Global Compliance: FM-Approved and -labeled intrusion detection devices and equipment.

D. Comply with NFPA 70.

E. Compatibility: Detection devices and their communication features, connecting wiring, and master control unit shall be selected and configured with accessories for full compatibility with the following equipment:

1. Door hardware specified in Section 087100 "Door Hardware."
2. Elevators specified in Section 142400 "Hydraulic Elevators."
3. Lighting controls specified in Section 260923 "Lighting Control Devices."
4. Access control system specified in Section 281300 "Access Control System Software and Database Management."
5. Video surveillance system specified in Section 282000 "Video Surveillance."

F. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor entry connection to components.

1. Minimum Protection for Power Lines 120 V and More: Auxiliary panel suppressors complying with requirements in Section 264313 "Surge Protection for Low-Voltage Electrical Power Circuits."
2. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Lines: Listed and labeled by a qualified testing agency for compliance with NFPA 731.

G. Intrusion Detection Units: Listed and labeled by a qualified testing agency for compliance with UL 639.

H. Interference Protection: Components shall be unaffected by radiated RFI and electrical induction of 15 V/m over a frequency range of 10 to 10,000 MHz and conducted interference signals up to 0.25-V rms injected into power supply lines at 10 to 10,000 MHz.

I. Tamper Protection: Tamper switches on detection devices, control units, annunciators, pull boxes, junction boxes, cabinets, and other system components shall initiate a tamper-alarm signal when unit is opened or partially disassembled and when entering conductors are cut or disconnected. Master control-unit alarm display shall identify tamper alarms and indicate locations.

J. Self-Testing Devices: Automatically test themselves periodically, but not less than once per hour, to verify normal device functioning and alarm initiation capability. Devices transmit test failure to master control unit.

K. Antimasking Devices: Automatically check operation continuously or at intervals of a minute or less, and use signal-processing logic to detect blocking, masking, jamming, tampering, or other operational dysfunction. Devices transmit detection of operational dysfunction to master control unit as an alarm signal.

L. Addressable Devices: Transmitter and receivers shall communicate unique device identification and status reports to master control unit.

M. Remote-Controlled Devices: Individually and remotely adjustable for sensitivity and individually monitored at master control unit for calibration, sensitivity, and alarm condition.

2.3 ENCLOSURES

A. Interior Sensors: Enclosures that protect against dust, falling dirt, and dripping noncorrosive liquids.

B. Interior Electronics: NEMA 250, Type 12.

C. Exterior Electronics: NEMA 250, Type 4X, fiberglass.

D. Corrosion Resistant: NEMA 250, Type 4X, PVC.

E. Screw Covers: Where enclosures are readily accessible, secure with security fasteners of type appropriate for enclosure.

2.4 SECURE AND ACCESS DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bosch Security Systems, Inc.
2. Digital Security Controls Ltd.
3. Edwards Signaling; UTC Fire & Security.
4. Honeywell International Inc.
5. Visonic Inc.
6. Or approved equal.

B. Key-Operated Switch: Change protected zone between secure and access conditions.

2.5 DOOR AND WINDOW SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aleph America Corporation.
2. GE Security, Inc.
3. George Risk Industries.
4. Honeywell International Inc.
5. Honeywell Security Products- Americas.
6. Or approved equal.

B. Description: Balanced-magnetic switch, complying with UL 634, installed on frame with integral overcurrent device to limit current to 80 percent of switch capacity. Bias magnet and minimum of two encapsulated reed switches shall resist compromise from introduction of foreign magnetic fields.

C. Flush-Mounted Switches: Unobtrusive and flush with surface of door and window frame.

D. Overhead Door Switch: Balanced-magnetic type, listed for outdoor locations, and having door-mounted magnet and floor-mounted switch unit.

E. Remote Test: Simulate movement of actuating magnet from master control unit.

2.6 PIR SENSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aleph America Corporation.
2. Bosch Security Systems, Inc.
3. Crow Electronic Engineering, Inc.
4. Or approved equal.

B. Listed and labeled by a qualified testing agency for compliance with SIA PIR-01.

C. Description: Sensors detect intrusion by monitoring infrared wavelengths emitted from a human body within their protected zone and by being insensitive to general thermal variations.

1. Wall-Mounted Unit Maximum Detection Range: 125 percent of indicated distance for individual units and not less than 50 feet.
2. Ceiling-Mounted Unit Spot-Detection Pattern: Full 360-degree conical.
3. Ceiling-Mounted Unit Pattern Size: 84-inch diameter at floor level for units mounted 96 inches above floor; 18-foot diameter at floor level for units mounted 25 feet above floor.

D. Device Performance:

1. Sensitivity: Adjustable pattern coverage to detect a change in temperature of 2 deg F or less, and standard-intruder movement within sensor's detection patterns at any speed between 0.3 to 7.5 fps across two adjacent segments of detector's field of view.
2. Test Indicator: LED test indicator that is not visible during normal operation. When visible, indicator shall light when sensor detects an intruder. Locate test enabling switch under sensor housing cover.
3. Remote Test: When initiated by master control unit, start a test sequence for each detector element that simulates standard-intruder movement within sensor's detection patterns, causing an alarm.

2.7 MICROWAVE INTRUSION DETECTORS (INTERIOR)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bosch Security Systems, Inc.
2. Crow Electronic Engineering, Inc.
3. Digital Security Controls Ltd.
4. GE Security, Inc.
5. Visonic Inc.
6. Or approved equal.

B. Device Performance: Microwave transmitter establishes an electromagnetic field in an adjustable detection pattern and detects intrusion by monitoring changes in that pattern.

1. Sensitivity: Adjustable, able to detect standard-intruder movement within sensor's detection pattern at any speed between 0.3 to 7.5 fps. Sensor sensitivity adjustments shall be accessible only when sensor housing is removed, and sensors shall comply with 47 CFR 15.
2. Activation Indicator: LED indicator shall not be visible during normal operation. Indicator shall light when sensor detects a standard intruder. Locate test-enabling switch under sensor housing cover.
3. Remote Test: When initiated by master control unit, start a test sequence for each detector element that simulates standard-intruder movement within sensor's detection patterns, causing an alarm.

2.8 ACOUSTIC-TYPE, GLASS-BREAK SENSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. GE Security, Inc.
2. Honeywell International Inc.
3. International Electronics, Inc.
4. Potter Electric Signal Company, LLC.
5. Or approved equal.

B. Listed and labeled by a qualified testing agency for compliance with SIA GB-01.

C. Device Performance: Detect unique, airborne acoustic energy spectrum caused by breaking glass.

1. Sensor Element: Microprocessor-based, digital device to detect breakage of plate, laminate, tempered, and wired glass while rejecting common causes of false alarms. Detection pattern shall be at least a 20-foot range.
2. Hookup Cable: Factory installed, not less than 72 inches.
3. Activation Indicator: LED on sensor housing that lights when responding to vibrations, remaining on until manually reset at sensor control unit or at master control unit.
4. Control Unit: Integral with sensor housing or in a separate assembly, locally adjustable by control under housing cover.
5. Glass-Break Simulator: A device to induce frequencies into protected glass pane that simulate breaking glass without causing damage to glass.

2.9 PIEZOELECTRIC-TYPE, GLASS-BREAK SENSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. GE Security, Inc.
2. Honeywell International Inc.
3. Potter Electric Signal Company, LLC.
4. Visonic Inc.
5. Or approved equal.

B. Listed and labeled by a qualified testing agency for compliance with SIA GB-01.

C. Device Performance: Detect unique, high-frequency vibrations caused by breaking glass.

1. Sensor Element: Piezoelectric crystals in a housing designed to mount directly to glass surface with adhesive provided by element manufacturer. Circular detection pattern, with at least a 60-inch radius on a continuous glass pane. Sensor element shall not be larger than 4 sq. in..
2. Hookup Cable: Factory installed, not less than 72 inches.
3. Activation Indicator: LED on sensor housing that lights when responding to vibrations, remaining on until manually reset at sensor control unit or at master control unit.
4. Control Unit: Integral with sensor housing or in a separate assembly, locally adjustable by control under housing cover.
5. Glass-Break Simulator: A device to induce frequencies into protected glass pane that simulate breaking glass without causing damage to glass.

2.10 VIBRATION SENSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. GE Security, Inc.
2. Honeywell International Inc.
3. Potter Electric Signal Company, LLC.
4. Or approved equal.

B. Listed and labeled by a qualified testing agency for compliance with SIA GB-01.

C. Description: A sensor control unit and piezoelectric crystal sensor elements that are designed to be rigidly mounted to structure being protected.

D. Device Performance: Detects high-frequency vibrations generated by use of such tools as oxyacetylene torches, oxygen lances, high-speed drills and saws, and explosives that penetrate a structure while not responding to any other mechanical vibration.

1. Circular detection pattern, with at least a 72-inch radius on protected structure.
2. Hookup Cable: Factory installed, not less than 72 inches.
3. Control Unit: Integral with sensor housing or in a separate assembly, locally adjustable by control under housing cover.
4. Glass-Break Simulator: A device to induce frequencies to protected glass pane that simulate breaking glass without causing damage to glass.

2.11 PHOTOELECTRIC SENSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. GE Security, Inc.
2. Honeywell International Inc.
3. Optex Inc.
4. Or approved equal.

B. Device Performance: Detect an interruption of a pulsed, infrared, light beam that links transmitter and receiver.

1. Sensitivity: Detect standard-intruder movement within sensor's detection patterns at any speed of less than 7.5 fps though the beam. Allow installation of multiple sensors within same protected zone that will not interfere with each other.
2. Activation Indicator: LED indicator shall not be visible during normal operation. Indicator shall light when sensor detects a standard intruder. Locate test enabling switch under sensor housing cover.
3. Remote Test: When initiated by master control unit, start a test sequence for each detector element that simulates standard-intruder movement within sensor's detection patterns, causing an alarm.

2.12 MICROWAVE-PIR DUAL-TECHNOLOGY SENSORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. GE Security, Inc.
2. Honeywell International Inc.
3. Visonic Inc.
4. Or approved equal.

B. Description: Single unit combining a sensor that detects changes in microwave signals and a PIR sensor that detects changes in ambient level of infrared emissions caused by standard-intruder movement within detection pattern.

C. Listed and labeled by a qualified testing agency for compliance with SIA PIR-01.

D. Device Performance: An alarm is transmitted when either sensor detects a standard intruder within a period of three to eight seconds from when the other sensor detects a standard intruder.

1. Minimum Detection Pattern: A room 20 by 30 feet.
2. PIR Sensor Sensitivity: Adjustable pattern coverage to detect a change in temperature of 2 deg F or less, and standard-intruder movement within sensor's detection patterns at any speed between 0.3 to 7.5 fps across two adjacent segments of detector's field of view.
3. Microwave Sensor Sensitivity: Adjustable, able to detect standard-intruder movement within sensor's detection pattern at any speed between 0.3 to 7.5 fps. Sensor sensitivity adjustments shall be accessible only when sensor housing is removed, and sensors shall comply with 47 CFR 15.
4. Activation Indicator: LED indicator shall not be visible during normal operation. Indicator shall light when sensor detects a standard intruder. Locate test enabling switch under sensor housing cover.
5. Remote Test: When initiated by master control unit, start a test sequence for each detector element that simulates standard-intruder movement within sensor's detection patterns, causing an alarm.

2.13 DURESS-ALARM SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. GE Security, Inc.
2. Honeywell International Inc.
3. Visonic Inc.
4. Or approved equal.

B. Description: A switch with a shroud over the activating lever that allows an individual to covertly send a duress signal to master control unit, with no visible or audible indication when activated. Switch shall lock in activated position until reset with a key.

1. Minimum Switch Rating: 50,000 operations.
2. Foot Rail: Foot activated, floor mounting.
3. Push Button: Finger activated, suitable for mounting on horizontal or vertical surface.

2.14 VIDEO MOTION SENSORS (INTERIOR)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aleph America Corporation.
2. GE Security, Inc.
3. Visonic Inc.
4. Or approved equal.

B. Device Performance: Detect changes in video signal within a user-defined protected zone. Provide an alarm output for each video input.

1. Detect movement within protected zone of standard intruders wearing clothing with a reflectivity that differs from that of background scene by a factor of 2. Reject all other changes in video signal.

2. Modular design that allows for expansion or modification of number of inputs.
3. Controls:

    a. Number of detection zones.
    b. Size of detection zones.
    c. Sensitivity of detection of each protected zone.

4. Mounting: Standard 19-inch rack as described in EIA/ECA 310-E.

2.15 MASTER CONTROL UNIT

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bosch Security Systems, Inc.
2. DAQ Electronics, Inc.
3. GE Security, Inc.
4. Honeywell International Inc.
5. Honeywell Security Products- Americas.
6. Or approved equal.

B. Description: Supervise sensors and detection subsystems and their connecting communication links, status control (secure or access) of sensors and detector subsystems, activation of alarms and supervisory and trouble signals, and other indicated functions.

1. System software and programs shall be held in flash electrically erasable programmable read-only memory (EEPROM), retaining the information through failure of primary and secondary power supplies.
2. Include a real-time clock for time annotation of events on the event recorder and printer.
3. Addressable initiation devices that communicate device identity and status.
4. Control circuits for operation of mechanical equipment in response to an alarm.

C. Construction: Freestanding equipment rack, or Desk-mounted console, modular, with separate and independent alarm and supervisory system modules. Alarm-initiating protected zone boards shall be plug-in cards. Arrangements that require removal of field wiring for module replacement are unacceptable.

D. Comply with UL 609, UL 1023, UL 1076.

E. Console Controls and Displays: Arranged for interface between human operator at master control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.

1. Annunciator and Display: LCD, one line(s) of 40 characters, minimum.
2. Keypad: Arranged to permit entry and execution of programming, display, and control commands.
3. Control-Unit Network: Automatic communication of alarm, status changes, commands, and other communications required for system operation. Communication shall return to normal after partial or total network interruption such as power loss or transient event. Total or partial signaling network failures shall identify the failure and record the failure at the annunciator display and at the system printer.

4. Field Device Network: Communicate between the control unit and field devices of the system. Communications shall consist of alarm, network status, and status and control of field-mounted processors. Each field-mounted device shall be interrogated during each interrogation cycle.
5. Operator Controls: Manual switches and push-to-test buttons that do not require a key to operate. Prevent resetting of alarm, supervisory, or trouble signals while alarm or trouble condition persists. Include the following:

    a. Acknowledge alarm.
    b. Silence alarm.
    c. System reset.
    d. LED test.

6. Timing Unit: Solid state, programmable, 365 days.
7. Alarm Indication: Audible signal sounds and an LED lights at master control unit identifying the protected zone originating the alarm. Annunciator panel displays a common alarm light and sounds an audible tone.
8. Alarm Indication: Audible signal sounds and a plain-language identification of the protected zone addressable detector originating the alarm appears on LED or display at master control unit. Annunciator panel displays a common alarm light and sounds an audible tone.
9. Alarm Indication: Audible signal sounds and a plain-language identification of the protected zone addressable detector originating the alarm appears on LED, LCD or cathode-ray-tubedisplay at master control unit. Annunciator panel alarm light and audible tone identify protected zone signaling an alarm.
10. Alarm activation sounds a bell or siren and strobe.

F. Protected Zones: Quantity of alarm and supervisory zones as indicated, with capacity for expanding number of protected zones by a minimum of 25 percent.

G. Power Supply Circuits: Master control units shall provide power for remote power-consuming detection devices. Circuit capacity shall be adequate for at least a 25 percent increase in load.

H. Cabinet: Lockable, steel enclosure arranged so operations required for testing, normal operation, and maintenance are performed from front of enclosure. If more than a single cabinet is required to form a complete control unit, provide exactly matching modular enclosures. Accommodate all components and allow ample gutter space for field wiring. Identify each enclosure by an engraved, laminated, phenolic-resin nameplate. Lettering on enclosure nameplate shall not be less than 1 inch high. Identify, with permanent labels, individual components and modules within cabinets.

I. Transmission to Monitoring Station: A communications device to automatically transmit alarm, supervisory, and trouble signals to the monitoring station, operating over a standard voice grade telephone leased line. Comply with UL 1635.

J. Printout of Events: On receipt of signal, print alarm, supervisory, and trouble events. Identify zone, device, and function. Include type of signal (alarm, supervisory, or trouble) and date and time of occurrence. Differentiate alarm signals from all other printed indications. Also print system reset event, including same information for device, location, date, and time. Commands initiate the printing of a list of existing alarm, supervisory, and trouble conditions in the system and a historical log of events.

2.16 AUDIBLE AND VISUAL ALARM DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Alarm Controls Corporation.
2. Edwards Signaling; UTC Fire & Security.
3. Honeywell International Inc.
4. Potter Electric Signal Company, LLC.
5. Wheelock; a brand of Eaton.
6. Or approved equal.

B. Bell: 10 inches in diameter, rated to produce a minimum sound output of 84 dB at 10 feet from master control unit.

1. Enclosure: Weather-resistant steel box equipped with tamper switches on cover and on back of box.

C. Klaxon Weatherproof Motor-Driven Hooter: UL listed, rated to produce a minimum sound output of 120 dB at 3 feet, plus or minus 3 dB, at a frequency of 470 Hz. Rated for intermittent use: two minutes on and five minutes off.

1. Designed for use in industrial areas and in high-noise, severe-weather marine environments.

D. Siren: 30-W speaker with siren driver, rated to produce a minimum sound output of 103 dB at 10 feet from master control unit.

1. Enclosure: Weather-resistant steel box with tamper switches on cover and on back of box.

E. Strobe: Xenon light complying with UL 1638, with a clear polycarbonate lens.

1. Light Output: 115 cd, minimum.
2. Flash Rate: 60 per minute.

2.17 SECURITY FASTENERS

A. Operable only by tools produced for use on specific type of fastener by fastener manufacturer or other licensed fabricator. Drive system type, head style, material, and protective coating as required for assembly, installation, and strength.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Acument Global Technologies; Acument Intellectual Properties, LLC.
2. Safety Socket LLC.
3. Tamper-Pruf Screws.
4. Or approved equal.

C. Drive System Types: Pinned Torx-Plus, pinned Torx or pinned hex (Allen).

D. Socket Flat Countersunk Head Fasteners:

1. Heat-treated alloy steel, ASTM F 835.
2. Stainless steel, ASTM F 879, Group 1 CW.

E. Socket Button Head Fasteners:

1. Heat-treated alloy steel, ASTM F 835.
2. Stainless steel, ASTM F 879, Group 1 CW.

F. Socket Head Cap Fasteners:

1. Heat-treated alloy steel, ASTM A 574.
2. Stainless steel, ASTM F 837, Group 1 CW.

G. Protective Coatings for Heat-Treated Alloy Steel:

1. Zinc chromate, ASTM F 1135, Grade 3 or Grade 4, for exterior applications and interior applications where indicated.
2. Zinc phosphate with oil, ASTM F 1137, Grade I, or black oxide unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of intrusion detection.

B. Examine roughing-in for embedded and built-in anchors to verify actual locations of intrusion detection connections before intrusion detection installation.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of intrusion detection.

D. Inspect built-in and cast-in anchor installations, before installing intrusion detection, to verify that anchor installations comply with requirements. Prepare inspection reports.

1. Remove and replace anchors where inspections indicate that they do not comply with requirements. Reinspect after repairs or replacements are made.
2. Perform additional inspections to determine compliance of replaced or additional anchor installations. Prepare inspection reports.

E. For material whose orientation is critical for its performance as a ballistic barrier, verify installation orientation.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 SYSTEM INTEGRATION

A. Integrate intrusion detection system with the following systems and equipment:

1. Electronic door hardware.
2. Elevators.
3. Network lighting controls.
4. Intercommunications and program systems.
5. Public address and mass notification systems.
6. Access control.
7. Fire-alarm system.
8. Perimeter security system.
9. Video surveillance.

3.4 SYSTEM INSTALLATION

A. Comply with UL 681 and NFPA 731.

B. Equipment Mounting: Install master control unit on finished floor with tops of cabinets not more than 72 inches above the finished floor.

C. Install wall-mounted equipment, with tops of cabinets not more than 72 inches above the finished floor.

D. Connecting to Existing Equipment: Verify that existing perimeter security system is operational before making changes or connections.

1. Connect new equipment to existing control panel in existing part of the building.
2. Connect new equipment to existing monitoring equipment at the Supervising Station.
3. Expand, modify, and supplement existing control and monitoring equipment as necessary to extend existing control and monitoring functions to the new points. New components shall be capable of merging with existing configuration without degrading the performance of either system.

3.5 WIRING INSTALLATION

A. Wiring Method: Install wiring in metal raceways according to Section 270528 "Pathways for Communications Systems," except in accessible indoor ceiling spaces and in interior hollow gypsum board partitions where cable may be used. Conceal raceways and wiring except in unfinished spaces and as indicated. Minimum conduit size shall be 1/2 inch. Control and data transmission wiring shall not share conduit with other building wiring systems.

B. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points. Use lacing bars and distribution spools. Separate power-limited and non-power-limited conductors as recommended in writing by manufacturer. Install conductors parallel with or at right angles to sides and back of enclosure. Connect conductors that are terminated, spliced, or interrupted in any enclosure associated with intrusion system to terminal blocks. Mark each terminal according to system's wiring diagrams. Make all connections with approved crimp-on terminal spade lugs, pressure-type terminal blocks, or plug connectors.

C. Wires and Cables:

1. Conductors: Size as recommended in writing by system manufacturer unless otherwise indicated.
2. 120-V Power Wiring: Install according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables" unless otherwise indicated.
3. Control and Signal Transmission Conductors: Install unshielded, twisted-pair cable unless otherwise indicated or if manufacturer recommends shielded cable, according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
4. Data and Television Signal Transmission Cables: Install according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

E. Install power supplies and other auxiliary components for detection devices at control units unless otherwise indicated or required by manufacturer. Do not install such items near devices they serve.

3.6 IDENTIFICATION

A. Install instructions frame in a location visible from master control unit.

3.7 GROUNDING

A. Ground the master control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to master control unit.

B. Ground system components and conductor and cable shields to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.

C. Signal Ground Terminal: Locate at main equipment rack or cabinet. Isolate from power system and equipment grounding. Provide 5 -ohm ground. Measure, record, and report ground resistance.

3.8 FIELD QUALITY CONTROL

A. Pretesting: After installation, align, adjust, and balance system and perform complete pretesting to determine compliance of system with requirements in the Contract Documents. Correct deficiencies observed in pretesting. Replace malfunctioning or damaged items with new ones and retest until satisfactory performance and conditions are achieved. Prepare forms for systematic recording of acceptance test results.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections: Comply with provisions in NFPA 731, Ch. 9, "Testing and Inspections."

1. Inspection: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified.

2. Test Methods: Intrusion detection systems and other systems and equipment that are associated with detection and accessory equipment shall be tested according to Table "Test Methods" and Table "Test Methods of Initiating Devices."

D. Documentation: Comply with provisions in NFPA 731, Ch. 4, "Documentation."

E. Tag all equipment, stations, and other components for which tests have been satisfactorily completed.

3.9 ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three visits to Project during other-than-normal occupancy hours for this purpose. Visits for this purpose shall be in addition to any required by warranty.

3.10 DEMONSTRATION

A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate the intrusion detection system. Comply with documentation provisions in NFPA 731, Ch. 4, "Documentation and User Instruction."

END OF SECTION 283100

SECTION 284600 - FIRE DETECTION AND ALARM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Fire-alarm system control units.
2. Releasing device control units.
3. Fire-alarm terminal cabinets.
4. Manual fire-alarm boxes.
5. Heat-sensing fire detectors.
6. Smoke-sensing fire detectors.
7. Audible notification appliances.
8. Visual notification appliances.
9. Combination audible/visual notification appliances.
10. Fire-alarm supervised control module interfaces for fire safety functions.
11. Fire-alarm supervisory signal-initiating devices.
12. Fire-alarm digital alarm communicator transmitters.
13. Fire-alarm radio alarm transmitters.
14. Fire-alarm cables.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional requirements applicable to coordinating, scheduling, and sequencing of the Work specified in this Section.
2. Section 078413 "Penetration Firestopping" specifies materials and methods for sealing penetrations of rated walls and partitions referenced by this Section.
3. Section 087100 "Door Hardware" specifies door hardware control interfaces referenced by this Section.
4. Section 142400 "Hydraulic Elevators" specifies elevator control interfaces referenced by this Section.
5. Section 230923 "Direct Digital Control System for HVAC" specifies HVAC control interfaces referenced by this Section.
6. Section 260529 "Hangers and Supports for Electrical Systems" specifies hangers, supports, and concrete bases referenced by this Section.
7. Section 260533.13 "Conduits for Electrical Systems" specifies raceway types installed by this Section.
8. Section 260553 "Identification for Electrical Systems" specifies electrical equipment labels and warning signs installed by this Section.

9. Section 260923 "Lighting Control Devices" specifies emergency lighting control interfaces referenced by this Section.
10. Section 270528 "Pathways for Communications Systems" specifies additional requirements for raceway materials, routing, locations, and identification of communications equipment and cabling.
11. Section 284700 "Mass Notification" specifies mass notification system interfaces referenced by this Section.
12. Section 284800 "Emergency Response Systems" specifies ERCES referenced by this Section.

1.3 REFERENCES

A. Abbreviations and Acronyms for Electrical Terms and Units of Measure:

1. AWG: American wire gauge; see ASTM B258.
2. BAS: Building automation system.
3. BMS: Building management system.
4. cd: Candela, the SI fundamental unit of luminous intensity.
5. DACR: Digital alarm communicator receiver.
6. DACT: Digital alarm communicator transmitter.
7. dB(A-weighted) or dB(A): Decibel acoustical sound pressure level with A-weighting applied in accordance with IEC 61672-1.
8. EMP: Electrical maintenance program (operation and maintenance); electromagnetic pulse (transient analysis).
9. EPS: Emergency power supply.
10. EPSS: Emergency power supply system.
11. ERCES: Emergency responder communications enhancement system.
12. ESS: Energy storage system.
13. FACU: Fire-alarm control unit.
14. FAS: Fire-alarm system.
15. IDC: Initiating device circuit.
16. IP: Internet Protocol
17. IR: Infrared.
18. LAN: Local area network.
19. LCD: Liquid-crystal display.
20. LED: Light-emitting diode.
21. Li-ion: Lithium-ion.
22. NAC: Notification appliance circuit.
23. N.C.: Normally closed.
24. Ni-Cd: Nickel-cadmium.
25. Ni-MH: Nickel-metal hydride.
26. N.O.: Normally open.
27. PC: Personal computer.
28. PLFA: Power-limited fire alarm.
29. PoE: Power over Ethernet.
30. POTS: Plain old telephone service. See "public switched telephone network" definition.
31. PSTN: Public switched telephone network.
32. RAT: Radio alarm transmitter.
33. SLC: Signaling-line circuit.
34. TR: Tamper resistant.
35. UL: (standards) UL Standards & Engagement Inc.; (product categories) UL Solutions, Inc.
36. UL CCN: UL Category Control Number.

37. UPS: Uninterruptible power supply.
38. VoIP: Voice over Internet Protocol.
39. VPN: Virtual private network.
40. VRLA: Valve regulated lead acid; also called "sealed lead acid (SLA)" or "valve regulated sealed lead acid."
41. WAN: Wide area network.
42. WR: Weather resistant.

B. Abbreviations and Acronyms for Electrical Raceway Types:

1. EMT: Electrical metallic tubing.
2. EMT-A: Aluminum electrical metallic tubing.
3. EMT-S: Steel electrical metallic tubing.
4. EMT-SS: Stainless steel electrical metallic tubing.
5. ERMC-A: Aluminum electrical rigid metal conduit.
6. ERMC-S: Steel electrical rigid metal conduit.
7. ERMC-S-G: Galvanized-steel electrical rigid metal conduit.
8. ERMC-S-PVC: PVC-coated-steel electrical rigid metal conduit.
9. ERMC-SS: Stainless steel electrical rigid metal conduit.
10. FMC: Flexible metal conduit.
11. FMC-A: Aluminum flexible metal conduit.
12. FMC-S: Steel flexible metal conduit.
13. IMC: Steel electrical intermediate metal conduit.
14. LFMC: Liquidtight flexible metal conduit.
15. LFMC-A: Aluminum liquidtight flexible metal conduit.
16. LFMC-S: Steel liquidtight flexible metal conduit.
17. LFMC-SS: Stainless steel liquidtight flexible metal conduit.
18. LFNC: Liquidtight flexible nonmetallic conduit.
19. LFNC-A: Layered (Type A) liquidtight flexible nonmetallic conduit.
20. LFNC-B: Integral (Type B) liquidtight flexible nonmetallic conduit.
21. LFNC-C: Corrugated (Type C) liquidtight flexible nonmetallic conduit.
22. PVC: Rigid PVC conduit.
23. PVC-40: Schedule 40 rigid PVC conduit.
24. PVC-80: Schedule 80 rigid PVC Conduit.
25. RGS: See ERMC-S-G.
26. RMC: See ERMC raceway types above.

C. Abbreviations and Acronyms for Electrical Single-Conductor and Multiple-Conductor Cable Types:

1. CI: Circuit integrity cable.
2. FPL: Power-limited fire-alarm cable.
3. FPLP: Power-limited fire-alarm plenum cable.
4. FPLR: Power-limited fire-alarm riser cable.
5. MC-FPL/FPLR/FPLP: Metal-clad cable containing FPL, FPLR, or FPLP.
6. NPLF: Non-power-limited fire-alarm circuit cable.
7. NPLFP: Non-power-limited fire-alarm circuit cable for environmental air spaces.
8. NPLFR: Non-power-limited fire-alarm circuit riser cable.
9. OFC: Conductive optical fiber general-purpose cable.
10. OFCG: Conductive optical fiber general-purpose cable.
11. OFCP: Conductive optical fiber plenum cable.

12. OFCR: Conductive optical fiber riser cable.
13. OFN: Nonconductive optical fiber general-purpose cable.
14. OFNG: Nonconductive optical fiber general-purpose cable.
15. OFNP: Nonconductive optical fiber plenum cable.
16. OFNR: Nonconductive optical fiber riser cable.

D. Definitions:

1. Cable: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "cable" is (1) a conductor with insulation, or a stranded conductor with or without insulation (single-conductor cable); or (2) a combination of conductors insulated from one another (multiple-conductor cable).
2. Conductor: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "conductor" is (1) a wire or combination of wires not insulated from one another, suitable for carrying an electric current; (2) (National Electrical Safety Code) a material, usually in the form of wire, cable, or bar, suitable for carrying an electric current; or (3) (general) a substance or body that allows a current of electricity to pass continuously along it.
3. Conduit: A structure containing one or more duct raceways.
4. Direct Buried: Installed underground without encasement in concrete or other protective material.
5. Duct Bank: An arrangement of conduit providing one or more continuous duct raceways between two points.
6. Duct Raceway: A single enclosed raceway for conductors or cable.
7. Emergency Systems: Those systems legally required and classed as emergency by municipal, state, federal, or other codes, or by any governmental agency having jurisdiction that are designed to ensure continuity of lighting, electrical power, or both, to designated areas and equipment in the event of failure of the normal supply for safety to human life.
8. Public Switched Telephone Network (PSTN): Analog telephone technology that uses twisted pair cables from a telephone-provider central office for the transmission medium. "PSTN" refers to the telephone network; "POTS" refers to the individual subscriber line.
9. Voice over Internet Protocol (VoIP): Digital telephone packet technology that uses the internet for its transmission medium.
10. Wire: In accordance with NIST NBS Circular 37 and IEEE standards, in the United States for the purpose of interstate commerce, the definition of "wire" is a slender rod or filament of drawn metal. A group of small wires used as a single wire is properly called a "stranded wire." A wire or stranded wire covered with insulation is properly called an "insulated wire" or a "single-conductor cable." Nevertheless, when the context indicates that the wire is insulated, the term "wire" will be understood to include the insulation.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures".

1.5 ACTION SUBMITTALS

A. Shop Drawings: Prepare and submit the following:

1. Cover sheet indicating protected premises name and location and Project information, device legend and symbols in accordance with NFPA 170, and date of issue and any revision dates.

2. Floor Plans:

    a. Floor or level identification.
    b. Point of compass (indication of north).
    c. Graphic scale.
    d. All walls and doors.
    e. Room and area descriptions.
    f. Acoustically distinguishable spaces.
    g. System devices/component locations.
    h. Locations of the system's primary power disconnecting means.
    i. Locations of monitor/control interfaces to other systems.
    j. Type and number of system components/devices on each circuit, on each floor or level.
    k. Type and quantity of conductors and conduit for each circuit.
    l. Pathway class designations, including the location of any end-of-line supervisory or power devices that are required by the pathway class.
    m. Pathway survivability level designations.

3. Wiring Diagrams:

    a. System riser diagrams coordinated with the floor plans and indicating the following information:

        1) Number of risers
        2) Type and number of circuits in each riser.
        3) Type and number of system components/devices on each circuit, on each floor or level.
        4) Number of conductors for each circuit.
        5) Pathway class designation, including the location of any end-of-line supervisory or power devices that are required by the pathway class.
        6) Pathway survivability level designations.

    b. Control unit diagrams for all control equipment, power supplies, battery chargers, and annunciators indicating the following information:

        1) Identification of control equipment depicted.
        2) Location(s) of control equipment.
        3) All field wiring terminals and terminal identifications.
        4) All circuits connected to field wiring terminals and circuit identifications.
        5) All indicators and manual controls.
        6) Field connections to supervising station signaling equipment, releasing equipment, and emergency safety control interfaces.

    c. Typical fire-alarm component schematic wiring diagrams for all initiating devices, notification appliances, remote indicators, , and annunciators.

4. Fire-Alarm Input/Output Sequence: Include a narrative description or input/output matrix of operation to describe the fire-alarm system sequence of operation.
5. Details:

    a. Component installation details.
    b. Custom graphic annunciator layout.

6. Calculations:

   a. Battery calculations.
   b. Voltage-drop calculations.
   c. Speaker circuit calculations.
   d. Spare capacity circuit calculations.

1.6 REGULATORY AGENCY APPROVALS

A. Submittals for fire detection and alarm system requiring approval by Commisoner must be signed by qualified NICET FAS engineering technician or life-safety professional engineer licensed in the State of New York responsible for their preparation. Submit for action by Commissioner prior to submitting for approval by Department of Buildings and the Fire Department of New York.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Products or components listed and labeled in accordance with NFPA 70 or NFPA 72 by qualified electrical testing laboratory, and marked for intended location and application.

B. System Description: Noncoded, UL-certified addressable system with multiplexed signal transmission and horn-and-strobe notification for evacuation.

C. System Inputs:

1. Fire-alarm signal initiation must be by one or more of the following devices and systems:

   a. Manual fire-alarm boxes.
   b. Heat detectors.
   c. Smoke detectors.
   d. Duct smoke detectors.
   e. Automatic sprinkler system water flow.
   f. Fire standpipe system.
   g. Dry-pipe sprinkler system pressure flow switch.
   h. Fire pump is running.

2. Supervisory signal initiation must be by one or more of the following devices and actions:

   a. Valve supervisory switch.
   b. Duct smoke detectors.
   c. Elevator shunt-trip control circuit supervision.
   d. Fire pump is running.

e. Fire pump has lost power.
f. Power to the fire pump has phase reversal.
g. Zones or individual devices have been disabled.
h. FACU has lost communication with network.

3. System trouble signal initiation must be by one or more of the following devices and actions:

a. Open circuits, shorts, and grounds in designated circuits.
b. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
c. Loss of communication with addressable sensor, input module, relay, control module, remote annunciator, or ethernet module.
d. Loss of primary power at FACU.
e. Ground or single break in internal circuits of FACU.
f. Abnormal AC voltage at FACU.
g. Break in standby battery circuitry.
h. Failure of battery charging.
i. Abnormal position of switch at FACU or remote annunciator.

D. System Outputs:

1. Fire-alarm signal must initiate the following actions:

a. Continuously operate alarm notification appliances.
b. Identify alarm and specific initiating device at FACU.
c. Transmit alarm signal to remote alarm receiving station.
d. Unlock electric door locks in designated egress paths.
e. Release fire and smoke doors held open by magnetic door holders.
f. Activate voice/alarm communication system.
g. Switch HVAC equipment controls to fire-alarm mode.
h. Activate smoke-control system (smoke management) at firefighters' smoke-control system panel.
i. Close smoke dampers in air ducts of designated air-conditioning duct systems.
j. Recall elevators to designated or alternate recall levels only upon activation of smoke detectors in respective elevator lobbies, machine rooms, or hoistways.
k. Activate elevator power shunt trip only upon activation of associated heat detector.
l. Record events in system memory.
m. Indicate device in alarm on graphic annunciator.

2. System supervisory signal must initiate the following actions:

a. Initiate supervisory notification appliances.
b. Identify specific device initiating event at FACU.
c. After time delay of 200 seconds, transmit trouble or supervisory signal to remote alarm receiving station.
d. Transmit system status to building management system.
e. Display system status on graphic annunciator.

2.2 FIRE-ALARM SYSTEM CONTROL UNITS

A. Description: A component of the fire-alarm system, provided with primary and secondary power sources, which receives signals from initiating devices or other fire-alarm control units, and processes these signals to determine part or all of the required fire-alarm system output functions.

B. UL UOJZ - Addressable Fire-Alarm System Control Units :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Fike Corporation.
b. Firecom, Inc.
c. Keltron Corporation.
d. Kidde; Carrier Global Corporation.
e. Potter Electric Signal Company, LLC.
f. Siemens Industry, Inc.; Fire Safety Division.
g. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
h. Tyco Security Products and Solutions; brand of Johnson Controls.
i. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Electrical Control Units for Fire-Protective Signaling Systems: UL CCN UOJZ, including UL 864 and NFPA 72.

4. Standard Features:

a. Non-voice/alarm communications.
b. Indication of which communication zones have been silenced.
c. Real-time clock for time annotation of events on the event recorder and printer.
d. Communication between the FACU and remote circuit interface panels, annunciators, and displays.
e. The FACU must be listed for connection to a central station signaling system service.
f. Provide non-volatile memory for system database, logic, operating system, and event history.
g. Minimum of two Class B signaling-line circuits with expansion capability to add circuits.
h. Minimum of two Class B notification appliance circuits with expansion capability to add circuits.
i. Synchronization of notification appliance circuits.

5. Other Available Features Required by Project:

a. Smoke-alarm verification.

C. UL UOJZ - Conventional Fire-Alarm System Control Units :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Bosch Security Systems, Inc.
b. Edwards; Carrier Global Corporation.
c. Notifier; Honeywell International, Inc.
d. Siemens Industry, Inc.; Fire Safety Division.
e. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Electrical Control Units for Fire-Protective Signaling Systems: UL CCN UOJZ, including UL 864 and NFPA 72.

4. Standard Features:

a. Communication between devices and control panel is limited and has only three states: Standby, Fault, and Fire.
b. Built-in alarm and trouble relays.
c. Capable of being interfaced to supervise third-party systems or equipment via dry contact closure.
d. Synchronization of notification appliance circuits.

2.3 RELEASING DEVICE CONTROL UNITS

A. Description: A protected premises fire-alarm control unit specifically listed for releasing service that is part of a fire-suppression system and which provides control outputs to release a fire-suppression agent based on either automatic or manual input.

B. UL SYZV - Addressable Non-Extinguishing and Non-Water-Based Releasing Device Control Unit :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Johnson Controls, Inc.
b. Silent Knight; Honeywell International, Inc.
c. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Releasing Device Control Units for Fire-Protective Signaling Systems: UL CCN SYZV, including UL 864 and NFPA 72.

4. Other Available Features Required by Project:

a. Synchronization of notification appliance circuits.

2.4 MANUAL FIRE-ALARM BOXES

A. Description: A manually operated device used to initiate a fire-alarm signal. Manual fire-alarm boxes come in both conventional or addressable models and may require a single-action (pull down) or double-action (push in and pull down) to initiate a fire-alarm signal. These initiating devices are sometimes referred to as manual fire-alarm stations, pull stations, or call points.

B. UL UNIU - Single-Action Manual Fire-Alarm Boxes :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Edwards; Carrier Global Corporation.
b. Firecom, Inc.
c. Gamewell-FCI; Honeywell International, Inc.
d. Kidde; Carrier Global Corporation.
e. Kingfisher Company, Inc.
f. Notifier; Honeywell International, Inc.
g. Safety Technology International, Inc.
h. Siemens Industry, Inc.; Fire Safety Division.
i. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
j. System Sensor; Honeywell International, Inc.
k. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Non-Coded Fire-Alarm Boxes: UL CCN UNIU, including UL 38 and NFPA 72.

4. Standard Features:

a. Product Reference Standards: Ch. 17 of NFPA 72.
b. Colored red with raised letters providing operating instructions.
c. Surface mounted.
d. Station Reset: Key operated switch.
e. Material: Polycarbonate or Metal.

C. UL UNIU - Double-Action Manual Fire-Alarm Boxes :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Edwards; Carrier Global Corporation.
b. Firecom, Inc.
c. Gamewell-FCI; Honeywell International, Inc.
d. Kidde; Carrier Global Corporation.
e. Kingfisher Company, Inc.
f. Notifier; Honeywell International, Inc.
g. Safety Technology International, Inc.
h. Siemens Industry, Inc.; Fire Safety Division.

i. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
j. System Sensor; Honeywell International, Inc.
k. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Non-Coded Fire-Alarm Boxes: UL CCN UNIU, including UL 38 and NFPA 72.

4. Standard Features:

a. Product Reference Standards: Chs. 10 and 17 of NFPA 72.
b. Colored red with raised letters providing operating instructions.
c. Surface mounted.
d. Station Reset: Key operated switch.
e. Material: Polycarbonate or Metal.

D. Accessories:

1. Factory-fabricated clear plastic enclosure with battery-operated sounder.
2. Weatherproof protective shield for conventional manual fire-alarm boxes located outdoors.

2.5 HEAT-SENSING FIRE DETECTORS

A. Description: A fire detector that detects either abnormally high temperatures or rate-of-temperature rise, or both.

B. UL UQGS - Fixed-Temperature Heat Detectors :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Edwards; Carrier Global Corporation.
b. Fire-Lite Alarms; Honeywell International, Inc.
c. Gamewell-FCI; Honeywell International, Inc.
d. Honeywell International Inc.
e. Johnson Controls, Inc.
f. Kidde; Carrier Global Corporation.
g. Notifier; Honeywell International, Inc.
h. Siemens Industry, Inc.; Fire Safety Division.
i. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Heat-Detecting-Type Automatic Fire Detectors: UL CCN UQGS, including UL 521 and NFPA 72.

4. Standard Features:

a. Addressable-type initiating device.

C. UL UQGS - Rate-Compensated Heat Detectors :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Edwards; Carrier Global Corporation.
   b. Gamewell-FCI; Honeywell International, Inc.
   c. Honeywell International Inc.
   d. Johnson Controls, Inc.
   e. Notifier; Honeywell International, Inc.
   f. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
   g. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Heat-Detecting-Type Automatic Fire Detectors: UL CCN UQGS, including UL 521 and NFPA 72.

4. Standard Features:

   a. Product Reference Standards: Ch. 17 of NFPA 72.
   b. Outer metal construction and inner metal components, which eliminate nuisance alarms due to thermal lag.

D. UL UQGS - Spot-Type Heat Detectors :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Edwards; Carrier Global Corporation.
   b. Fire-Lite Alarms; Honeywell International, Inc.
   c. Gamewell-FCI; Honeywell International, Inc.
   d. Honeywell International Inc.
   e. Johnson Controls, Inc.
   f. Kidde; Carrier Global Corporation.
   g. Notifier; Honeywell International, Inc.
   h. Siemens Industry, Inc.; Fire Safety Division.
   i. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

   a. Heat-Detecting-Type Automatic Fire Detectors: UL CCN UQGS, including UL 521 and NFPA 72.

4. Standard Features:

a. Product Reference Standards: Ch. 17 of NFPA 72.
b. Field programmable.
c. Resettable from the control unit.
d. Removable from the base assembly without the use of tools and without disturbing the wiring connections.
e. Addressable-type initiating device.
f. Detector must have functional humidity range of 10 to 90 percent.

E. Accessories:

1. Heat detector protective guard.

2.6 SMOKE-SENSING FIRE DETECTORS

A. Description: A device that detects visible or invisible particles of combustion and initiates an action. Types of smoke-sensing fire detectors include spot-type detectors, air-sampling detectors, projected beam-type detectors, duct detectors, multi-criteria detectors, and video image smoke detectors.

B. UL UROX - Spot-Type Smoke Detectors :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Edwards; Carrier Global Corporation.
b. Fire-Lite Alarms; Honeywell International, Inc.
c. Gamewell-FCI; Honeywell International, Inc.
d. Honeywell International Inc.
e. Johnson Controls, Inc.
f. Kidde; Carrier Global Corporation.
g. Notifier; Honeywell International, Inc.
h. Siemens Industry, Inc.; Fire Safety Division.
i. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Detectors Designed for Smoke Particles: UL CCN UROX, including UL 268 and NFPA 72.

4. Standard Features:

a. Product Reference Standards: Ch. 17 of NFPA 72.
b. Field programmable.
c. Resettable from the control unit.
d. Removable from the base assembly without the use of tools and without disturbing the wiring connections.
e. Sensing Type: Photoelectric or Ionization.

C. UL UROX - Duct Smoke Detectors :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Edwards; Carrier Global Corporation.
    b. Fire-Lite Alarms; Honeywell International, Inc.
    c. Gamewell-FCI; Honeywell International, Inc.
    d. Honeywell International Inc.
    e. Johnson Controls, Inc.
    f. Kidde; Carrier Global Corporation.
    g. Notifier; Honeywell International, Inc.
    h. Siemens Industry, Inc.; Fire Safety Division.
    i. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

    a. Detectors Designed for Smoke Particles: UL CCN UROX, including UL 268 and NFPA 72.

4. Standard Features:

    a. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to FACU.
    b. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
    c. Integral Visual-Indicating Light: LED type, indicating detector has operated.
    d. Detectors must be four- or two-wire type.
    e. Detector address must be accessible from fire-alarm control unit and must be able to identify the detector's location within the system and its sensitivity setting.

2.7 AUDIBLE NOTIFICATION APPLIANCES

A. Description: A fire-alarm system component such as a horn or loudspeaker that provides audible output to alert occupants by the sense of hearing.

B. UL ULSZ - Horns :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Cerberus; Siemens Industry, Inc.
    b. Cooper Wheelock; brand of Eaton.
    c. Edwards; Carrier Global Corporation.
    d. Siemens Industry, Inc.; Fire Safety Division.
    e. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
    f. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Electrically Operated Signal-Sounding Appliances: UL CCN ULSZ, including UL 464 and NFPA 72.

4. Standard Features:

a. Operating Temperature Range: 32 deg F to 120 deg F.
b. Field-selectable volume settings.
c. Designed to provide accurate reproduction of audible emergency and protective signals.
d. Flexibility of mounting on vertical or horizontal positions.

C. Accessories:

1. Audible appliance protective guard.

2.8 VISUAL NOTIFICATION APPLIANCES

A. Description: A fire-alarm system component that provides a visible output to alert occupants by the sense of sight, including visual strobes.

B. UL UVAV - Strobe :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cooper Wheelock; brand of Eaton.
b. Edwards; Carrier Global Corporation.
c. Gentex Corporation.
d. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
e. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Visual-Signal Appliances for Fire-Protective Signaling Applications: UL CCN UVAV, including UL 1638 and NFPA 72.

4. Standard Features:

a. Operating Temperature Range: 32 deg F to 120 deg F.
b. Compatible with wires up to 12 AWG.
c. Field-selectable candela settings.
d. Clear or nominal white polycarbonate lens mounted on faceplate.

5. Other Available Features Required by Project:

a. For units with guards to prevent physical damage, light output ratings must be determined with guards in place.
b. Weather resistant to provide protection against water, humidity, and corrosion.

C. Accessories:

1. Visual appliance protective guard.

2.9 COMBINATION AUDIBLE/VISUAL NOTIFICATION APPLIANCES

A. Description: A fire-alarm system component such as a horn/strobe or loudspeaker/strobe that provides both an audible and a visible output to alert occupants by the sense of hearing and sight.

B. UL ULSZ and UVAV - Combination Horn/Strobe Appliances :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cooper Wheelock; brand of Eaton.
b. Gentex Corporation.
c. Potter Electric Signal Company, LLC.
d. VES Fire Detection Systems; Hochiki America Corporation.
e. Kiddie fire alarm systems
f. Simplex.
g. Notifier
h. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Electrically Operated Signal-Sounding Appliances or Visual-Signal Appliances for Fire-Protective Signaling Applications: UL CCN ULSZ and UVAV, including UL 464, UL 1638, and NFPA 72.

4. Standard Features:

a. Product Reference Standards: Ch. 18 of NFPA 72.
b. Operating Temperature Range: 32 deg F to 120 deg F.
c. Compatible with wires up to 12 AWG.
d. Clear or nominal white polycarbonate lens mounted on faceplate.
e. Strobe flash rate of 1 Hz over its entire operating range.
f. Operates on a coded or non-coded power supply.
g. Field-selectable candela settings.
h. Field-selectable volume settings.
i. Universal mounting plate for ceiling units.

5. Other Available Features Required by Project:

a. For units with guards to prevent physical damage, light output ratings must be determined with guards in place.
b. Weather resistant to provide protection against water, humidity, and corrosion.

2.10 FIRE-ALARM SUPERVISED CONTROL MODULE INTERFACES FOR FIRE SAFETY FUNCTIONS

A. Description: An addressable fire-alarm control module that interfaces to another building system for the purpose of initiating an action for that system based upon activation of a supervisory or alarm condition on the fire-alarm system. The interface between the control module and the other building system or equipment is supervised.

B. UL UOXX - Fire-Alarm Supervised Control Module :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Fire-Lite Alarms; Honeywell International, Inc.
b. Firecom, Inc.
c. Gamewell-FCI; Honeywell International, Inc.
d. Johnson Controls, Inc.
e. Notifier; Honeywell International, Inc.
f. Siemens Industry, Inc.; Fire Safety Division.
g. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Control Unit Accessories - Addressable Control Modules: UL CCN UOXX, including UL 864 and NFPA 72.

4. Standard Features:

a. Field programmable.
b. Resettable from the control unit.
c. Supervises Class A and Class B initiating device circuits.
d. Capable of interfacing with the following systems:

1) Elevator controller.
2) Elevator power shunt-trip.
3) Elevator shunt-trip power monitoring.
4) HVAC line voltage.
5) Building management system.
6) Magnetic door hold-open circuits.
7) High-volume low-speed fans.
8) Door release.
9) Electrically locked doors.

2.11 FIRE-ALARM SUPERVISORY SIGNAL-INITIATING DEVICES

A. UL USQT - Control Valve Supervisory Signal-Initiating Devices :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Kopler, LLC.
b. Potter Electric Signal Company, LLC.
c. Tyco Fire and Building Products; brand of Johnson Controls International plc, Building Solutions North America.
d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Extinguishing System Attachments: UL CCN USQT, including UL 346 and NFPA 72.

4. Standard Features:

a. Initiation of two separate and distinct signals; one indicating movement of the valve from its normal position, and the other indicating restoration of the valve to its normal position.
b. Off-normal signal must be initiated during the first two revolutions of the handwheel, or during one-fifth of the travel distance of the valve from its normal position.
c. Off-normal signal must not be restored at any valve position except normal.

2.12 FIRE-ALARM DIGITAL ALARM COMMUNICATOR TRANSMITTERS

A. Description: A fire-alarm system component at the protected premises to which the fire-alarm control unit connects and transmit signals indicating a status change of initiating devices or groups of devices. The DACT seizes the connected telephone line ethernet network, dials a preselected number to connect to a DACR, and transmits signals indicating a status change of the initiating devices.

B. UL UOXX - Fire-Alarm Digital Alarm Communicator Transmitter :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Ademco; Honeywell.
b. Fire-Lite Alarms; Honeywell International, Inc.
c. Firecom, Inc.
d. Gamewell-FCI; Honeywell International, Inc.
e. Kidde; Carrier Global Corporation.
f. Kingfisher Company, Inc.
g. Notifier; Honeywell International, Inc.
h. Siemens Industry, Inc.; Fire Safety Division.
i. Silent Knight; Honeywell International, Inc.
j. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
k. Tyco Security Products and Solutions; brand of Johnson Controls.
l. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Control Unit Accessories for Fire-Protective Signaling Systems: UL CCN UOXX, including UL 864 and NFPA 72.

4. Standard Features:

a. Compatible with central station receiver.
b. Receive alarm, supervisory, or trouble signals from FACU and automatically transmit to central station via telephone line(s), cellular network, and internet.
c. Indicate trouble signal at FACU upon loss of communication with the central station.
d. Indicate local trouble signal upon loss of communication with the FACU.
e. Secondary Power: Integral rechargeable battery and automatic charger.
f. Digital data transmission of the following signals:

1) Address of alarm-initiating device.
2) Address of supervisory signal.
3) Address of trouble-initiating device.
4) Loss of AC supply.
5) Loss of power.
6) Low battery.
7) Abnormal test signal.
8) Communication bus failure.

g. Self-test automatically performed every 24 hours with report transmitted to central station.

2.13 FIRE-ALARM RADIO ALARM TRANSMITTERS

A. Description: A fire-alarm system component at the protected premises to which the fire-alarm control unit connects and transmit signals indicating a status change of initiating devices or groups of devices. The RAT transmits signals through a dedicated, licensed radio channel to the radio alarm receiver.

B. UL UOXX - Fire-Alarm Radio Alarm Transmitter :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AES Corporation (The).
b. Keltron Corporation.
c. Kingfisher Company, Inc.
d. Or approved equal.

2. Source Limitations: Obtain products from single manufacturer.
3. Listing Criteria: Investigated, labeled, and marked by qualified electrical testing laboratory in accordance with guide information and standards specified for the following UL product categories:

a. Control Unit Accessories for Fire-Protective Signaling Systems: UL CCN UOXX, including UL 864 and NFPA 72.

4. Standard Features:

a. Product Reference Standards: Ch. 26 of NFPA 72.

b. Modular UL 50E, Type 1 metal enclosure with tamper-resistant flush tumbler lock.
c. Compatible and coordinated with operating characteristics of remote-alarm receiving-station receiver.
d. Indicate trouble signal at FACU upon loss of communication with the remote alarm receiving station.
e. Indicate local trouble signal upon loss of communication with the FACU.
f. Normal Power Input: 120 V(ac).
g. Omnidirectional, coaxial half-wave, dipole-type antenna with driving point impedance matched to transmitter and antenna cable output impedance.
h. Dry-contact inputs and serial communications interface to receive connections from fire-alarm system circuit boards, modules, and other auxiliary devices

i. Self-test automatically performed every 24 hours with report transmitted to central station.

2.14 FIRE-ALARM CABLES

A. UL HNHT - Non-Power-Limited Fire-Alarm Circuit Cable (NPLF) :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Genesis; Resideo Technologies, Inc.
b. Prysmian Cables and Systems; Prysmian Group North America.
c. Radix Wire.
d. Southwire Company, LLC.
e. Superior Essex Inc.; subsidiary of LS Corp.
f. West Penn Wire; brand of Belden, Inc.
g. Or approved equal.

2. Listing Criteria:

a. Non-Power-Limited Fire-Alarm Cable: UL CCN HNHT; including UL 1425 and Article 760 of NFPA 70.

3. Standard Features:

a. Stranded copper conductors with 600 V rated, 75 deg C, color-coded insulation.
b. Minimum Conductor Size: 18 AWG, 16 AWG, 14 AWG, and 12 AWG.

B. UL HNHT - Non-Power-Limited Fire-Alarm Circuit Plenum Cable (NPLFP) :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Prysmian Cables and Systems; Prysmian Group North America.
b. Southwire Company, LLC.
c. West Penn Wire; brand of Belden, Inc.
d. Or approved equal.

2. Listing Criteria:

a. Non-Power-Limited Fire-Alarm Cable: UL CCN HNHT; including UL 1425 and Article 760 of NFPA 70.
b. Vertical-Tray Flame Test: UL 1685.
c. Limited Smoke "ST1" Marking: UL 1685 or UL 2556.
d. Plenum Rating: NFPA 262 and New York City Electrical Code.

3. Standard Features:

a. Stranded copper conductors with 600 V rated, 75 deg C, color-coded insulation.
b. Minimum Conductor Size: 18 AWG, 16 AWG, 14 AWG, and 12 AWG.

C. UL HNHT - Non-Power-Limited Fire-Alarm Circuit Riser Cable (NPLFR) :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Prysmian Cables and Systems; Prysmian Group North America.
b. Radix Wire.
c. Southwire Company, LLC.
d. Or approved equal.

2. Listing Criteria:

a. Non-Power-Limited Fire-Alarm Cable: UL CCN HNHT; including UL 1425 and Article 760 of NFPA 70.
b. Vertical-Tray Flame Test: UL 1685.
c. Limited Smoke "ST1" Marking: UL 1685 or UL 2556.
d. Riser Rating: UL 1666.

3. Standard Features:

a. Stranded copper conductors with 600 V rated, 75 deg C, color-coded insulation.
b. Minimum Conductor Size: 18 AWG, 16 AWG, 14 AWG, and 12 AWG.

D. UL HNIR - Power-Limited Fire-Alarm Cable (FPL) :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Genesis; Resideo Technologies, Inc.
b. Prysmian Cables and Systems; Prysmian Group North America.
c. Radix Wire.
d. Southwire Company, LLC.
e. West Penn Wire; brand of Belden, Inc.
f. Or approved equal.

2. Listing Criteria:

a. Power-Limited Fire-Alarm Cable: UL CCN HNIR; including UL 1424 and Article 760 of NFPA 70.
b. Vertical-Tray Flame Test: UL 1685.
c. Limited Smoke "ST1" Marking: UL 1685 or UL 2556.

3. Standard Features:

    a. Stranded copper conductors with 300 V rated, 75 deg C, color-coded insulation.
    b. Minimum Conductor Size: 18 AWG, 16 AWG, 14 AWG, and 12 AWG.

E. UL HNIR - Power-Limited Fire-Alarm Plenum Cable (FPLP) :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Genesis; Resideo Technologies, Inc.
    b. Prysmian Cables and Systems; Prysmian Group North America.
    c. Radix Wire.
    d. Southwire Company, LLC.
    e. Superior Essex Inc.; subsidiary of LS Corp.
    f. West Penn Wire; brand of Belden, Inc.
    g. Or approved equal.

2. Listing Criteria:

    a. Power-Limited Fire-Alarm Cable: UL CCN HNIR; including UL 1424 and Article 760 of NFPA 70.
    b. Vertical-Tray Flame Test: UL 1685.
    c. Limited Smoke "ST1" Marking: UL 1685 or UL 2556.
    d. Plenum Rating: NFPA 262 and New York City Electrical Code.

3. Standard Features:

    a. Stranded copper conductors with 300 V rated, 75 deg C, color-coded insulation.
    b. Minimum Conductor Size: 18 AWG, 16 AWG, 14 AWG, and 12 AWG.

F. UL HNIR and FHJR - Fire-Resistive Circuit Integrity Power-Limited Fire-Alarm Riser Cable (FPLR-CI) :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Belden Inc.
    b. Radix Wire.
    c. VITALink; Omni Cable.
    d. Or approved equal.

2. Listing Criteria:

    a. Power-Limited Fire-Alarm Cable: UL CCN HNIR; including UL 1424 and Article 760 of NFPA 70.
    b. Vertical-Tray Flame Test: UL 1685.
    c. Fire-Resistive Circuit Integrity "CI" Marking: UL CCN FHJR; including UL 2196.
    d. Riser Rating: UL 1666.

3. Other Available Features Required by Project:

    a. Limited Smoke "ST1" Marking: UL 1685 or UL 2556.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine field conditions with Installer present for compliance with requirements for fire detection and alarm systems and other conditions affecting performance of the Work.

B. Examine all materials, products, and equipment received for defects or damage.

C. Reject all materials, products, and equipment that show signs of defects or damage.

D. Examine roughing-in for fire detection and alarm system piping to verify actual locations of piping connections before equipment installation.

E. Examine walls, floors, ceilings, and roofs for suitable conditions where fire detection and alarm system components will be installed.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 SELECTION OF CABLING FOR FIRE ALARM

A. Field Circuits:

1. SLC: 12 to 18 AWG twisted pair.
2. NAC: 12 to 18 AWG shielded twisted pair .
3. Audio Circuits: 12 to 18 AWG shielded twisted pair.
4. Auxiliary Power Circuits: 12 to 18 AWG twisted pair.
5. Network Communication Circuits: twisted pair .

3.4 SELECTION OF RACEWAYS FOR FIRE ALARM

A. Identification: At a minimum, all junction box covers for fire-alarm raceways must be identified using the color red.

B. Outdoor Pathways:

1. Exposed and Subject to Physical Damage: ERMC. Locations include the following:

a. Locations less than 2.5 m (8 ft) above finished grade.

2. Exposed and Not Subject to Physical Damage: ERMC .

C. Indoor Pathways:

1. Hazardous Classified Locations: ERMC IMC.
2. Concealed above Suspended Ceilings: EMT.
3. Concealed in Ceilings and Interior Walls and Partitions: EMT.
4. Damp or Wet Locations: Corrosion-resistant EMT.
5. In Vertical Runs: EMT.

3.5 INSTALLATION OF FIRE DETECTION AND ALARM SYSTEMS

A. Comply with manufacturer's published instructions.

B. Reference Standards for Installation: Unless more stringent installation requirements are specified in the Contract Documents or manufacturer's published instructions, comply with the following:

1. Electrical Construction: NYC Building Code, NYC Electrical Code, NYC Fire Code, ICC IFC, NFPA 1, NFPA 70, and NECA NEIS 1.
2. Commissioning of Electrical Systems: NECA NEIS 90.
3. Commissioning of Active and Passive Fire Protection Features: NFPA 3 and NFPA 4.
4. Fire-Alarm and Premises Security Work: NFPA 72, NFPA 731, NFPA 1225, and NECA NEIS 305.
5. Work in ITE Rooms: NFPA 75.
6. Life-Safety and Means-of-Egress Work: NFPA 101.
7. Emergency and Standby Power Work: NFPA 110, NFPA 111, and NECA NEIS 416.
8. Work in Confined Spaces: NFPA 350.
9. Work in Basements and Other Developed Subterranean Spaces: NFPA 520.
10. Work in Museums, Libraries, Places of Worship, and Historic Structures: NFPA 909 and NFPA 914.
11. Fire-Alarm Circuits and Pathways: Ch. 12 of NFPA 72 and Article 760 of NFPA 70.
12. Fire-Alarm Initiating Devices: Ch. 17 of NFPA 72.
13. Fire-Alarm Notification Appliances: Ch. 18 of NFPA 72.
14. Fire-Alarm Control Equipment: Ch. 23 of NFPA 72.
15. Fire-Alarm Transmitting Equipment: Ch. 23 and Ch. 26 of NFPA 72.

C. Interfaces with Other Work:

1. Identification: Provide labels for all initiating devices, control equipment cabinets, and associated electrical equipment.

a. Identify field-installed conductors, interconnecting wiring, and components.
b. Label initiating devices with unique identification.
c. Identify source of AC power inside each control equipment cabinet.
d. Identify circuit disconnecting means at AC power source with red engraved label. Provide approved locking device for circuit disconnecting means.
e. Label enclosures with engraved metal or laminated-plastic nameplate.
f. Identify junction box covers using the color red.

3.6 FIELD QUALITY CONTROL OF FIRE DETECTION AND ALARM SYSTEMS

A. Administrant for Fire-Alarm Tests and Inspections:

1. Administer and perform tests and inspections.

B. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Perform system acceptance testing in accordance with Ch. 14 and Appendix D of NFPA 72.
3. Contractor is responsible for completing pre-acceptance testing to verify proper operation of the fire detection and alarm systems. Correct system deficiencies prior to scheduling a final acceptance test.

C. Nonconforming Work:

1. Initiating devices, notification appliances, control equipment, and system accessories will be considered defective if they do not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Manufacturer Services: Engage factory-authorized service representative to support field tests and inspections.

1. Manufacturer's Field Reports for Field Quality-Control Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at Project site.

3.7 SYSTEM STARTUP

A. Perform startup service.

1. Complete installation and startup checks in accordance with manufacturer's published instructions.
2. Provide power to the FACU and configure internal settings.
3. Test all field wiring prior to connecting field devices and prior to connecting to the FACU. Ensure field wiring is free from ground faults and short circuits.
4. Connect field devices to field wiring.
5. Connect field wiring inside FACU cabinet.
6. Ensure system is normal and free from ground faults, open circuits, or short circuits.
7. Allow system burn-in for 60 days.
8. Correct any issues that occur during the system burn-in period.

B. Manufacturer Services: Engage factory-authorized service representative to support system startup.

1. Manufacturer's Field Reports for System Startup Support: Prepare and submit report after each visit by factory-authorized service representative, documenting activities performed at Project site.

3.8 PROTECTION

A. After installation, protect fire detection and alarm system equipment from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by Commissioner.

END OF SECTION 284600

SECTION 284700 - MASS NOTIFICATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Mass notification system (MNS).
2. Autonomous control units (ACUs).
3. Prerecorded message devices.
4. Audio amplifiers.
5. Audible signaling devices.
6. Speaker-based notification appliances.
7. Text displays.
8. Visible signaling devices for hearing impaired.
9. Software.

1.3 DEFINITIONS

A. ATP: Acceptance Test Procedure.

B. Broadcast Media: Loudspeakers, radios, cellular phones, and other media that will carry the selected message to the selected audience.

C. Control Unit: A system component that monitors inputs and controls outputs through various types of circuits.

1. Autonomous Control Unit (ACU): The primary control unit for an in-building mass notification system (MNS).
2. Emergency Communications Control Unit (ECCU): A system capable of sending mass notification messages to individual buildings, zones of buildings, individual outdoor loudspeaker arrays, or zones of outdoor loudspeaker arrays; or a building, multiple buildings, outside areas, or a combination of these.
3. Fire-alarm control unit (FACU).
4. Wireless Control Unit: A component that transmits/receives and processes wireless signals.

D. Emergency Communications System (ECS): A system for the protection of life by indicating the existence of an emergency situation and communicating information necessary to facilitate an appropriate response and action.

1. Distributed Recipient Mass Notification System (DRMNS): A system meant to communicate directly to targeted individuals and groups that might not be in a contiguous area.
2. Emergency Voice/Alarm Communications System (EVACS): Dedicated manual or automatic facilities for originating and distributing voice instructions, as well as evacuation signals pertaining to an emergency, to the occupants of a building.
3. Mass Notification System (MNS): A system used to provide information and instructions to people in buildings or other spaces using intelligible voice communications and including visual signals, text, graphics, tactile, or other communication methods (in-building MNS); and could have the capability to provide real-time information to outdoor areas and to communicate with other notification systems provided for a campus, region, or global geographic setting (wide-area MNS).

E. High Power Speaker Array (HPSA): A product providing capability for voice and tone communication to large outdoor areas.

F. Local Operator Console (LOC): Equipment used by authorized personnel and emergency responders to activate and operate a mass notification system (MNS).

G. NICET: National Institute for Certification in Engineering Technologies.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
3. Power calculations.
4. Battery capacity calculations with the following supporting information:

    a. Supervisory power requirements for all equipment.
    b. Alarm power requirements for all equipment.
    c. Power supply rating.
    d. Voltage drop calculations for wiring runs demonstrating worst-case condition.
    e. Notification appliance circuit design.

B. Shop Drawings: For MNS, prepared by qualified Installer.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Detail fabrication and assembly of the following:

    a. Loudspeaker clusters on poles.

b. Racks with amplifiers and terminations.
c. Control units.

4. Include diagrams for power, signal, and control wiring.

C. Engineering Services Submittals: For items listed below, indicate compliance with performance requirements and design criteria, including analysis data signed and sealed by the New York State licensed professional engineer responsible for their preparation.

1. Speaker placement.
2. Speaker sound level output.
3. Amplifier output.
4. Remote power booster rating and locations.
5. Battery sizing calculations.
6. Voltage drop calculations.
7. Seismic mounting and supports.
8. Location of ACU and all LOCs.

1.6 INFORMATIONAL SUBMITTALS

A. Certificates:

1. Seismic Performance Certificates: For FACU, accessories, and components, from manufacturer. Include the following information:

a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
c. Detailed description of equipment anchorage devices on which certification is based and their installation requirements.

B. Test and Evaluation Reports:

1. Product Test Reports: For each amplifier and loudspeaker, for tests performed by a third-party.

C. Source Quality-Control Reports from manufacturer:

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For amplifiers and loudspeakers to include in emergency, operation, and maintenance manuals.

B. Computer-generated instruction card mounted behind a Lexan plastic or glass cover in a stainless steel or aluminum frame. Card must indicate those steps to be taken by an operator when a signal is received as well as functional operation of system under all conditions: normal, alarm, supervisory, and trouble.

C. Record Documentation: System documentation to Commissioner including, but not limited to, the following:

1. System record Drawings and wiring details, including one set of full-size printed Drawings, and CD-ROM with copies of record Drawings in PDF format and DXF format.
2. Documentation of all component and wiring identification, including a copy of each equipment nameplate.
3. System matrix showing interaction of all input signals with output commands.
4. Documentation of system voltage, current, and resistance readings taken during installation, testing, and ATP phases of system installation.

D. System program showing control devices and operations, and system functions of equipment and devices.

E. Software: For PC-based control systems, including installation media and unrestricted, permanent, licenses for installed operating system and applications.

F. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On USB media or approved online or cloud solution.
3. Device address list.
4. Printout of software application and graphic screens.

1.8 MAINTENANCE MATERIAL SUBMITTALS

A. Tools:

1. Equipment and software required to implement future changes to MNS.

B. Schedule of maintenance material items.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Installer Qualifications:

1. Personnel must be trained and certified by manufacturer for installation of units required for this Project.

1.10 FIELD CONDITIONS

A. Seismic Conditions: Unless otherwise indicated on Contract Documents, specified Work in this Section must withstand the seismic hazard design loads determined in accordance with ASCE/SEI 7 for installed elevation above or below grade.

1. The term "withstand" means "unit must remain in place without separation of parts from unit when subjected to specified seismic hazard design loads and unit must be fully operational after seismic event."
2. Component Importance Factor: 1.5.

B. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

1.11 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of MNS that fail(s) in materials or workmanship within specified warranty period.

1. Warranty Period: Two year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MASS NOTIFICATION SYSTEM (MNS)

A. Source Limitations: Obtain MNS from single source or producer.

B. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 2572 and marked for intended location and application.

2. General Characteristics:

a. ECS Classification: One-way, in-building EVACS .
b. Provide the following specified products with the MNS:

1) ACU.
2) Prerecorded message device.
3) Audio amplifiers.
4) Audible signaling devices.
5) Indoor speakers for voice notification.
6) Outdoor HPSAs.
7) Text displays.
8) Visible signaling devices for hearing impaired.
9) Web interfaces.
10) Overvoltage and surge protection.
11) LOCs.
12) Software.

c. Software-operated, network-based communications system with wired and wireless access points for control interface. Designated operators must be able to log in via a web browser and have complete access to their own portion of MNS.

d. ACU must monitor and control the notification appliance network and provide consoles for local operation. Authorized personnel must be able to use a console to initiate delivery of prerecorded voice messages, provide live voice messages and instructions, and initiate visual strobe and optional textual message notification appliances. ACU must override audible fire-alarm notification signals and voice messages based on the approved sequence of operation described in the risk analysis.

e. MNS messaging system must be capable of the following:

1) Communicating through use of wired networks, or wireless networks via wireless control units, for one- or two-way communications and control between a building or area and emergency personnel.
2) Automatically distribute no fewer than 100 simultaneous and unique messages to appropriate notification appliances.
3) Allow multiple operators to send messages simultaneously.
4) Grant access for control to another control station if location in control becomes inoperable and/or authorized operator at that control station can no longer operate the control station.
5) Send voice messages and text messages with an indication of the source of message that can only be sent from message source.
6) Send alert messages to end users (recipients) via multiple delivery methods including, but not limited to, the following:

a) Audio-visual network alerts to computers via desktop pop-up.
b) Text alerts to cellular phones and pagers.
c) Text alerts to email clients.
d) Text alerts to textual visible appliances.
e) Alerts to visible appliances.
f) Audio alerts to phones.
g) Audio alerts to loudspeakers.
h) Audio alerts to existing wide-area or in-building ECS.
i) Network alerts to other IP-connected devices via standard XML and CAP protocols.

7) Suppress contact information for other end users with messages or in message headers.

f. Live announcements or prerecorded messages. Live messages must take precedence over prerecorded messages.

g. Notification appliance network must consist of loudspeakers and visual notification devices located to provide intelligible instructions at all acoustically distinguishable spaces designated by the Commissioner to receive messages. .

h. Interface with FACU to use voice modules, visual alarms, and loudspeakers of fire-alarm system.

i. Give priority to MNS announcements over other audible announcements of the system including fire-alarm system in a normal or alarm state based on the approved risk analysis. When an emergency announcement other than fire is activated during a fire alarm, fire-alarm system functions must continue in an alarm state, except for output signals of fire-alarm audible and visual notification appliances.

j. Comply with speech intelligibility requirements of NFPA 72.

k. Capable of overriding local control of loudspeaker volume levels for emergency communications. Local controls must be permitted to adjust volume levels of non-emergency signals only, such as, but not limited to, background music and convenience paging.
l. Capable of providing separate messages to one individual building or to multiple buildings at given time if MNS serves more than one building.
m. Capable of monitoring emergency notifications from multiple data sources (National Weather Service, Emergency Managers Weather Information Network, Naval Meteorology and Oceanography, and others as determined locally) and automatically send out notifications to designated facilities and personnel based on predefined rules.
n. Capable of centrally tracking, in real-time, all alerting activities for each individual recipient, including sending, receiving, and responding to alerts, and of generating reports based on tracked information.
o. Capable of operating remote printer via USB output. Provide matching printer listed and labeled as part of MNS.
p. Primary Power: Must be sized to supply not less than 125 percent of the total connected load in a worst-case condition.

1) Devices Powered by 24 V dc:

a) Control units.
b) Notification appliances.
c) Text displays.
d) Trouble signals.
e) Supervisory signals.
f) Supervisory and digital alarm communicator transmitters.
g) Digital alarm radio transmitters.

q. Secondary Power: Must be sized to supply not less than 125 percent of the total connected load in a worst-case condition.

1) Batteries: Sealed lead calcium .

2.2 AUTONOMOUS CONTROL UNITS (ACUs)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Autocall; brand of Johnson Controls International plc, Building Solutions North America.
2. Notifier; Honeywell International, Inc.
3. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
4. Or approved equal.

B. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 2572 and marked for intended location and application.

2. General Characteristics:

a. Fully enclosed in a lockable steel cabinet with access for testing, and maintenance from the front of enclosure.
b. Solid-state, modular components, internally mounted and arranged for easy access for power, supervision, control, and logic for system.
c. 120 V ac, 60 Hz power supply.
d. An indicator for each message source must indicate which sources are available and which are selected.
e. Indicators for broadcast media used to convey the selected message to selected audience must indicate which sources are available and which are selected.
f. Capable of confirming receipt of a message. If message was not confirmed received, system must be capable of using other means of contact until receipt of confirmation or until a preset time has elapsed.
g. Capable of automatically sending another message after receipt of a new information or messages.
h. Operator Access Functions:

    1) Select prerecorded message for transmission.
    2) Select microphone for live broadcast.
    3) Initiate message broadcast.
    4) Terminate message broadcast.

i. Supervisory Access Functions:

    1) Reset time and date.
    2) Enable or disable printouts, initiators, and event-initiated programs.
    3) Enable or disable individual message sources and broadcast media.
    4) Supervisory level functions must not require computer programming skills. MNS must record changes to program functions, to be maintained in ACU for a minimum of one year. ACU must maintain the ID of supervisor making the change.

j. System Operator Level Access Functions:

    1) Clear supervisory trouble alarms.
    2) Revise programming.
    3) Revise prerecorded messages.
    4) Assign access rights to all levels.
    5) MNS must record changes at system operator level in ACU, to be maintained for a minimum of one year. ACU must maintain the ID of system operator making the change.

k. Capable of no fewer than users, with each user having its own log-in and password credentials and no fewer than four contact methods.
l. Capable of storing users in one or multiple groups and able to create a minimum of groups.
m. Each panel must have supervisory functions for power failure, internal component failure, and operation.
n. MNS must have complete set of self-diagnostics for controller and appliance network, and local diagnostic information display, local diagnostic information, and system event log.
o. Printed records of changes, supervisory functions, message transmission, and operator actions must be maintained for a minimum of one year.

2.3 PRERECORDED MESSAGE DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Autocall; brand of Johnson Controls International plc, Building Solutions North America.
2. Notifier; Honeywell International, Inc.
3. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
4. Or approved equal.

B. Description: Hardware that stores and outputs audible signals or messages.

C. Performance Criteria:

1. Regulatory Characteristics:

a. Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 2572 and marked for intended location and application.

2. General Characteristics:

a. One-way, multichannel voice notification system incorporating no fewer than eight distinct sounds selectable by user for tone signaling and incorporating a voice module for delivery of prerecorded or live messages.
b. Redundant microphones, preamplifiers, amplifiers, and tone generators provided in separate main and remote cabinets.
c. Voice notification system must support facility-wide public address paging.
d. Audible appliances must produce an initial message stating "May I have your attention please?" followed by a voice message with instructions as defined by the risk analysis that is repeated until ACU is reset or silenced. If the intent is for building or floor evacuation, the standard temporal pattern complying with ASA S3.41 will follow the message.
e. Automatic messages must be broadcast through loudspeakers throughout the building or facility, but not in stairs or elevators.
f. When using microphones, live messages must be broadcast throughout a selected floor or floors or all call, including stairs and elevators.
g. Loudspeakers must not be installed in near a microphone that will be used for live messaging.
h. Live voice message must override automatic or recorded audible output through use of a microphone input at ACU or the remote cabinet.
i. Number of alarm channels must be indicated for automatic, simultaneous transmission of different announcements to different zones or for manual transmission of announcements by use of the central-control microphone.

1) Allow sending an evacuation signal to selected zones and, concurrently, allow voice paging to other zones selectively or in combination.
2) Programmable tone and message sequence selection.
3) Standard digitally recorded messages for "Evacuation" and "All Clear."

2.4 AUDIO AMPLIFIERS

A. Basis-of-Design Product: Subject to compliance with requirements, provide product indicated on Drawings as manufactured by Listen Technologies; C7-L or comparable product by one of the following:

1. Autocall; brand of Johnson Controls International plc, Building Solutions North America
2. Notifier; Honeywell International, Inc.
3. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
4. Or approved equal.

B. Performance Criteria:

1. Regulatory Characteristics:

a. Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 1711 and marked for intended location and application.
b. ISO 7240-16.

2. General Characteristics:

a. Audio output must be selectable for line level. Minimum amplifier output must be 100 W rms.
b. Capable of operating all loudspeakers at the same time with fiber connection.
c. Loss of operating power, supervisory power, or other malfunction that could render the voice module inoperative must automatically cause the standard temporal tone pattern complying with ASA S3.41 to take over all functions assigned to failed unit in the event an alarm is activated.

2.5 AUDIBLE SIGNALING DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Autocall; brand of Johnson Controls International plc, Building Solutions North America.
2. Gamewell-FCI; Honeywell International, Inc.
3. Notifier; Honeywell International, Inc.
4. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
5. Or approved equal.

B. Description: Hardware for broadcast of live voice messages.

C. Performance Criteria:

1. Regulatory Characteristics:

a. Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 464 and marked for intended location and application.

2. General Characteristics:

a. Handheld push-to-talk microphone must be supervised and a key must be required to enable remote microphone use.
b. Microprocessor must actively integrate circuitry, field wiring, and digital coding necessary for immediate and accurate rebroadcasting of stored voice data into appropriate amplifier input.

2.6 SPEAKER-BASED NOTIFICATION APPLIANCES

A. Description: Hardware for public alert/message output.

B. Indoor Speakers for Voice Notification:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Edwards; Carrier Global Corporation.
b. Kidde; Carrier Global Corporation.
c. Notifier; Honeywell International, Inc.
d. Or approved equal.

2. Performance Criteria:

a. Regulatory Characteristics:

1) Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 1480 and marked for intended location and application.

3. General Characteristics:

a. Construction: High-efficiency, sealed back; for maximum output at minimum power across a frequency range of 150 to 10 000 Hz.
b. High-Range Units: Rated 2 to 15 W.
c. Low-Range Units: Rated 1 to 2 W.
d. Mounting: Flush semi-recessed surface mounted and bidirectional.
e. Matching Transformers: Tap range matched to acoustical environment of loudspeaker location.

C. High Power Speaker Arrays (HPSAs):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Edwards; Carrier Global Corporation.
b. Kidde; Carrier Global Corporation.
c. Notifier; Honeywell International, Inc.
d. Or approved equal.

2. Performance Criteria:

a. Regulatory Characteristics:

1) Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 1480 and marked for intended location and application.

3. General Characteristics:

   a. HPSAs, 1600 3200 W, with acoustic performance and intelligibility features.
   b. Sound Dispersion: Omnidirectional Horizontal 70 degrees, vertical 80 degrees.
   c. Control unit providing signal processing, amplification, gain control, battery backup, and antenna surge protection.

2.7 TEXT DISPLAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Autocall; brand of Johnson Controls International plc, Building Solutions North America.
2. Gamewell-FCI; Honeywell International, Inc.
3. Notifier; Honeywell International, Inc.
4. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
5. Or approved equal.

B. Performance Criteria:

1. Regulatory Characteristics:

   a. Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 1638 and marked for intended location and application.

2. General Characteristics:

   a. Indicate location of digital displays on Drawings.
   b. Programmable, digital text displays having a minimum of 4 inch high letters for hearing-impaired occupants displaying content of voice message being played.
   c. Capable of sending static, flashing, or scrolling messages to textual visible appliances.
   d. ACU must interface with and control the programmable display controller to activate the proper message.
   e. Textual visible notification must be primary notification when it is the only method used to convey emergency MNS information to general public or to specific individuals.

2.8 VISIBLE SIGNALING DEVICES FOR HEARING IMPAIRED

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Autocall; brand of Johnson Controls International plc, Building Solutions North America.
2. Gamewell-FCI; Honeywell International, Inc.
3. Notifier; Honeywell International, Inc.
4. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
5. Or approved equal.

B. Performance Criteria:

1. Regulatory Characteristics:

a. Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 1971 and marked for intended location and application.

2. General Characteristics:

a. Strobes must be visually distinct from fire-alarm notification strobes.
b. Strobes used solely for MNS must be clear, comply with UL 1971, and have the word "ALERT" factory printed on the trim.
c. Strobes used in combination systems, where the same strobe is used for both MNS and fire notification, must be clear and comply with UL 1971.
d. Strobes used for MNS must be synchronized in accordance with requirements of NFPA 72.

2.9 SOFTWARE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Gartner, Inc. (Digital Markets - Capterra Inc.).
2. HipLink Software.
3. Omnilert LLC.
4. Or approved equal.

B. Description: PC-based equipment that is field programmable for control, notification, and supervisory functions; menu-driven program configuration; password protected.

C. Performance Criteria:

1. Regulatory Characteristics:

a. Listed and labeled by a NRTL in accordance with NFPA 70, Article 760; NFPA 72, Ch. 24; and UL 2572 and marked for intended location and application.

2. General Characteristics:

a. Loading and editing instructions and operating sequences as necessary.
b. Storing and downloading while the system is in operation.
c. Second set of operating software must reside in control units as backup if primary operating software is corrupted.
d. Allows 10 to 50 remote users.
e. Operating system used must be compatible with manufacturer software operating system.
f. Memory: Software operations must be stored in nonvolatile programmable memory within MNS control unit. Loss of primary and secondary power must not erase nonvolatile programmable memory.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Comply with installation requirements in NFPA 70, NFPA 72, and NECA 1.

B. Install remote amplification and control units in terminal cabinets. Power each remote amplification and control unit from a wiring riser specifically for that use or from a local emergency power panel located on the same floor as remote unit.

C. Equipment Installation: Install MNS cabinets with seismic-rated anchors and mounting apparatus.

D. Comply with requirements in Section 260519 "Low-Voltage Power Conductors and Cables" for cables and conductors for MNS.

E. Wiring Method: Install cables in raceways and cable trays except within consoles, cabinets, desks, and counters and except in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring method may be used. Conceal raceway and cables except in unfinished spaces.

1. Install plenum cable in environmental airspaces, including plenum ceilings and in accessible ceiling spaces and in gypsum board partitions where unenclosed wiring is used.
2. Comply with requirements for raceways and boxes specified in Section 270528 "Pathways for Communications Systems."
3. Conceal conductors and cables in accessible ceilings, walls, and floors where possible. Suspend cable not in a wireway or pathway a minimum of 8 inch above ceiling by cable supports not more than 60 inch apart.
4. Do not install cable through structural members or in contact with pipes, ducts, or other potentially damaging items.
5. Secure and support cables at intervals not exceeding 30 inch and not more than 6 inch from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
6. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's written limitations on bending radii. Maintain separation of conductor types as recommended by manufacturer. Install lacing bars and distribution spools.
7. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation, and replace it with new cable.
8. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamp use is prohibited.
9. Separation of Wires: Separate loudspeaker-microphone, line-level, loudspeaker-level, and power wiring runs. Install MNS wiring in separate raceways or, where exposed or in same enclosure, separate conductors at least 12 inch apart for loudspeaker-microphone wiring and adjacent parallel power and telephone wiring. Separate other intercommunication equipment conductors as recommended by equipment manufacturer.

10. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's written limitations on bending radii. Install lacing bars and distribution spools. Route conductors to allow accessibility to equipment for adjustment and maintenance.
11. Connections:

    a. Make all terminations on numbered terminal strips in terminal cabinets or equipment enclosures. No splices or butt joints will be accepted.
    b. Terminate all conductors; no cable must contain unterminated elements.
    c. Crimp-on spade lugs must be used for terminations of stranded conductors to binder screw or stud terminals. Spade lugs must have upset legs and insulation sleeves sized for conductors.

12. Mount all devices and appliances to or in an approved electrical box.

F. Install operating instruction placard on the interior of ACU.

G. Install operating instruction placard on the frame in location acceptable to Commissioner and observable from ACU.

H. Weatherproof Equipment: For units that are mounted outdoors, in damp locations, or where exposed to weather, install consistent with requirements of weatherproof rating.

I. Cybersecurity:

1. Software:

    a. Coordinate security requirements with City of New York's IT Department.
    b. Ensure that latest stable software release is installed and properly operating.
    c. Disable or change default passwords to password using a combination of uppercase and lower letters, numbers, and symbols no fewer than eight characters in length. Record passwords and turn over to party responsible for system operation and administration.

2. Hardware:

    a. Coordinate location and access requirements with City of New York's IT Department.
    b. Enable highest level of wireless encryption that is compatible with City of New York's ICT network.
    c. Disable dual network connections.

3.4 GROUNDING

A. Ground cable shields and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.

B. Signal Ground Terminal: Locate at main equipment cabinet. Connect to instrument ground system and isolate from power system and equipment grounding.

3.5 IDENTIFICATION

A. Comply with requirements in Section 260553 "Identification for Electrical Systems."

B. Color-code conductors and apply wire and cable marking tape to designate wires and cables so they identify media in coordination with system wiring diagrams.

C. Permanently label or mark each conductor at both ends with permanent alphanumeric wire markers.

D. Install framed instructions in a location visible from mass notification control unit.

3.6 FIELD QUALITY CONTROL

A. Prepare a written ATP for testing MNS components and installation in accordance with NFPA 72 and this Section. Demonstrate specified function of system and verify the correct operation of all system components, circuits, and programming.

1. Prepare a complete listing of device labels for alphanumeric annunciator displays prior to ATP.

B. Field tests must be witnessed by the Commissioner and the NYC Department of Building inspectors.

C. Testing Administrant:

1. Engage a qualified third-party testing agency to administer and perform tests and inspections.
2. Administer and perform tests and inspections with assistance of factory-authorized service representative.

D. Tests and Inspections:

1. Take resistance, current, and voltage readings as work progresses.
2. Signal Ground Test: Measure and report ground resistance at public address equipment signal ground. Comply with testing requirements specified in Section 260526 "Grounding and Bonding for Electrical Systems."
3. Verify that wiring for each device is terminated at properly identified terminals.
4. Test wiring runs for continuity, short circuits, and grounds before system is energized.
5. All test equipment, instruments, tools, and labor required to conduct system tests must be made available by installing Contractor. The following equipment must be a minimum for conducting tests:

    a. Ladders and scaffolds as required to access all installed equipment.
    b. Multi-meter for reading voltage, current, and resistance.
    c. Two-way radios and flashlights.
    d. Decibel meter.
    e. In addition to testing specified to be performed by a third-party qualified Contractor, installation must be subject to test by Commissioner.

6. Schedule tests with no fewer than seven days' advance notice of test performance.
7. Perform tests in all zones and rooms.
8. Perform indoor sound tests in a single test location in rooms less than 20-by-20 ft.. Tests must be made on a 20-by-20 ft. grid for larger rooms.
9. Sound level measurements must be taken at a worst-case location within each room or grid, not near loudspeakers.

10. Operational Test: Perform tests that include originating messages at microphone outlets, prerecorded messages, remote wired and non-wired inputs, telephone, cellular and other inputs. Verify proper routing and volume levels and that system is free of noise and distortion.
11. Signal-to-Noise Ratio Test: Measure signal-to-noise ratio of complete system at normal gain settings as follows:

    a. Disconnect microphone at connector or jack closest to it and replace it in the circuit with a signal generator using a 1000 Hz signal. Measure signal-to-noise ratio.
    b. Repeat test for each separately controlled zone of loudspeakers.
    c. Minimum acceptance ratio is 50 dB.

12. Distortion Test: Measure distortion at normal gain settings and rated power. Feed signals at frequencies of 50, 200, 400, 1000, 3000, 8000, and 12 000 Hz into each preamplifier channel. For each frequency, measure distortion in the paging and all-call amplifier outputs. Maximum acceptable distortion at any frequency is 3 percent total harmonics.
13. Intelligibility Test: Test for intelligibility in accordance with NFPA 72.
14. Power Output Test: Measure electrical power output of each power amplifier at normal gain settings of 50, 1000, and 12 000 Hz. Maximum variation in power output at these frequencies must not exceed plus or minus 1 dB. Outdoor sound levels where personnel may be present must not exceed 120 dB(A-weighted) when measured on the A-scale of a standard sound level meter at slow response. Sound levels must not exceed 85 dB(A-weighted) at local microphone of MNS under the same conditions.
15. System notification appliances must be demonstrated as follows:

    a. All alarm notification appliances actuate as programmed.
    b. Audibility and visibility at required levels.
    c. Messages are intelligible in all areas.

16. System indications must be demonstrated as follows:

    a. Correct message display at MNS ACU for each alarm input.
    b. Correct message display at remote panels and annunciators for each alarm input.
    c. Correct history logging for all system activity.

17. System off-site reporting functions must be demonstrated as follows:

    a. Correct zone transmitted for each alarm input.
    b. Trouble signals received.

E. MNS will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to instruct City of New York's personnel to adjust and operate units.

1. Instruct a minimum of four employees of City of New York.
2. Instruct on installed equipment after acceptance testing.

3. Instruct on system operation, including manual control of output functions from ACU.
4. Instruct on testing of system, including logging of system tests, field test of devices, and response to common troubles.
5. Total instruction requirement must be a minimum of four hours but must be sufficient to cover all items specified.

3.8 SOFTWARE SERVICE AGREEMENT

A. Technical Support: Beginning at Substantial Completion, service agreement must include software support for one year.

B. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within one year from date of Substantial Completion. Upgrading software must include operating system and new or revised licenses for using software.

1. Upgrade Notice: No fewer than 30 days to allow City of New York to schedule and access the system and to upgrade computer equipment if necessary.

END OF SECTION 284700

SECTION 284800 - EMERGENCY RESPONSE SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Emergency responder telephone systems.
2. Two-way emergency communications systems for rescue assistance.

B. Related Requirements:

1. Section 260010 "Supplemental Requirements for Electrical" specifies additional coordination, scheduling, sequencing, submittal, and installation requirements applicable to the Work for electrical, communications, and electronic safety and security systems on the Project.
2. Section 284700 "Mass Notification" for interfacing emergency response systems with mass notification systems.

1.3 DEFINITIONS

A. BDA: Bi-directional amplifier.

B. ERCES: Emergency responder communications enhancement system.

C. PES: Public emergency service.

D. RF: Radio frequency.

E. UHF: Ultra-high frequency.

F. FACU: Fire Alarm Control Unit

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Coordination Meeting(s): For emergency communications systems. Conduct meeting(s) as videoconference or at Project site before installation.

1. Attendees: Installers, fabricators, and administrants for field tests and inspections. Notify Commissioner of scheduled meeting dates.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 ACTION SUBMITTALS

A. Product Data:

1. Emergency Responder Telephone Systems:

a. Master control station.
b. Remote telephone cabinets.
c. Remote telephone jack stations.
d. Handsets.

2. Two-Way Emergency Communications Systems for Rescue Assistance:

a. Master control station.
b. Remote communications stations.

B. Shop Drawings:

1. Project general notes.
2. ERCESs:

a. Device layout.
b. Block diagrams and cable/conduit routing.
c. Pathway class and survivability identification.
d. System communications details.
e. System sequence of operations.
f. System mounting details.
g. Secondary power calculations.

3. Emergency Responder Telephone Systems:

a. Device layout.
b. Block diagrams and cable/conduit routing.
c. Pathway class and survivability identification.
d. System communications details.
e. System sequence of operations.
f. System mounting details.
g. Secondary power calculations.

4. Two-Way Emergency Communications Systems for Rescue Assistance:

a. Device layout.
b. Block diagrams and cable/conduit routing.
c. Pathway class and survivability identification.
d. System communications details.

e. System sequence of operations.
f. System mounting details.
g. Secondary power calculations.

C. Certificates:

1. Certification from each system manufacturer that equipment and components are compatible and represent a complete system in accordance with NFPA 72, NFPA 1221, and specified requirements.

D. Field Quality-Control reports.

1.7 INFORMATIONAL SUBMITTALS

A. Manufacturers' Published Instructions: Record copy of official installation and testing instructions issued to Installer by manufacturer for the following:

1. Installation instructions for emergency responder telephone systems.
2. Installation instructions for two-way emergency communications systems for rescue assistance.
3. Recommended tests and inspections for ERCESs.
4. Recommended tests and inspections for emergency responder telephone systems.
5. Recommended tests and inspections for two-way emergency communications systems for rescue assistance.

B. Baseline Radio Signal Strength Testing Report:

1. Detailed report indicating NFPA 72 and NFPA 1221 plotted interior radio signal strength or delivered audio quality score throughout building critical and general areas with construction of interior partitions and doors completed, but without ERCES installed.

C. System Record of Inspection and Testing: Record copy of completed system acceptance testing.

1.8 CLOSEOUT SUBMITTALS

A. Warranty documentation.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.10 REGULATORY AGENCY APPROVALS

A. Submittals for emergency communications systems requiring approval by NYC Department of Buildings must be signed and sealed by qualified, New York State licensed electrical professional engineer or qualified, New York State licensed fire protection professional engineer responsible for their preparation. Obtain approval by the NYC Department of Buildings prior to submitting for action by Commissioner.

B. Submittals for emergency communications systems require action by Commissioner prior to submitting for approval by the NYC Department of Buildings.

1.11 WARRANTY FOR EMERGENCY RESPONSE SYSTEMS

A. Special Manufacturer Warranty for Batteries: Manufacturer warrants that batteries perform in accordance with specified requirements and agrees to provide repair or replacement of batteries that fail to perform as specified within warranty period.

1. Warranty Period for Li-ion Batteries: Five years from date of Substantial Completion; full coverage for materials only.
2. Warranty Period for Ni-MH Batteries: Three years from date of Substantial Completion; prorated coverage for materials only.
3. Warranty Period for Ni-Cd Batteries: Five years from date of Substantial Completion; prorated coverage for materials only.
4. Warranted Cycle Life for Valve Regulated (Sealed) Lead Acid Batteries: Equal to or greater than that represented in manufacturer's published table, but not less than the following, based on annual average battery temperature of 77 deg F:

    a. For discharge rate not faster than eight hours, discharge duration not longer than eight hours, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than six discharge cycles.
    b. For discharge rate not faster than 30 minutes, discharge duration not longer than 30 minutes, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 20 discharge cycles.
    c. For discharge rate not faster than 15 minutes, discharge duration not longer than 45 seconds, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 120 discharge cycles.

5. Warranted Cycle Life for Premium Valve Regulated (Sealed) Lead Acid Batteries: Equal to or greater than that represented in manufacturer's published table, but not less than the following, based on annual average battery temperature of 77 deg F:

    a. For discharge rate not faster than eight hours, discharge duration not longer than eight hours, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 40 discharge cycles.
    b. For discharge rate not faster than 30 minutes, discharge duration not longer than 30 minutes, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 125 discharge cycles.
    c. For discharge rate not faster than 15 minutes, discharge duration not longer than 90 seconds, and voltage at end of discharge not less than 1.67 V, warranted life must be not fewer than 750 discharge cycles.

PART 2 - PRODUCTS

2.1 EMERGENCY RESPONDER TELEPHONE SYSTEMS

A. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.
b. Unless otherwise indicated in Contract Documents, products must comply with NFPA 1, NFPA 70, NFPA 72, NFPA 101, NYC Electrical Code,and NYC Fire Code.

B. Emergency Responder Telephone Connected to Fire Alarm :

1. Description: This category includes telephone equipment accessories for use with fire-protective signaling systems. Operation of this equipment depends upon connection to fire-alarm control unit.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Bosch Security Systems, Inc.
b. Edwards; Carrier Global Corporation.
c. Firecom; Sonetics Corporation.
d. Fire-Lite Alarms; Honeywell International, Inc.
e. Hochiki America Corporation.
f. Mircom Technologies, Ltd.
g. Notifier; Honeywell International, Inc.
h. Potter Electric Signal Company, LLC.
i. Siemens Industry, Inc., Building Technologies Division.
j. Silent Knight; Honeywell International, Inc.
k. Simplex; brand of Johnson Controls International plc, Building Solutions North America.
l. Space Age Electronics, Inc.
m. Tyco Security Products; brand of Johnson Controls International plc, Building Solutions North America.
n. VES Fire Detection Systems; Hochiki America Corporation.
o. Or approved equal.

3. Listing Criteria: UL CCN UOXX and marked Type T; including UL 864 and NFPA 72.
4. Options:

a. System Type:

1) Common-talk type for firefighter use only.

b. Master Control Station: Mount adjacent to FACU to provide power, supervision, and control for emergency responder telephone system.

1) Power Supply: 24 V(dc) supply system including batteries, automatic float-charge battery charger, and automatic transfer switch.
2) Communicate between master control station handset and remote telephone handsets.
3) Annunciate visual and audible signal at master control station when remote telephone handset is lifted from cradle or when phone is plugged into designated remote jack.
4) Silence audible signal when master control station handset is removed and remote telephone handset is acknowledged.

c. Remote Telephone Cabinet: Flush- or surface-mounted cabinet as indicated; factory-standard red finish; with handset.

1) Install one-piece handset to cabinet with vandal-resistant armored cord. Silk-screened or engraved label on cabinet door, designating "Fire Emergency Phone."
2) With "break-glass" door access lock.

d. Remote Telephone Jack Stations: Single-gang, stainless steel-plate mounted plug, engraved "Fire Emergency Phone."
e. Handsets: push-to-talk sets with noise-canceling microphone stored in cabinet adjacent to FACU in fire command center.
f. Pathway Survivability:

1) Riser Cables: Level 2 or 3.
2) Feeder Cables: Level 0 FPLR Shielded in both Riser and Horizontal.

2.2 TWO-WAY EMERGENCY COMMUNICATIONS SYSTEMS FOR RESCUE ASSISTANCE

A. Description: This category includes equipment for providing two-way emergency voice communication for areas of refuge, stairway landings, elevator landings, and occupant evacuation elevator lobbies in accordance with NFPA 72.

B. Manufacturert: Subject to compliance with requirements, provide product name or designation or comparable product by one of the following:

1. Honeywell AOR Solutions .
2. RATH Smart Command AoR System.
3. Cornell Communications
4. Or approved equal.

C. Performance Criteria:

1. Regulatory Requirements:

a. Listed and labeled in accordance with NFPA 70, by qualified electrical testing laboratory and marked for intended location and application.
b. Unless otherwise indicated in Contract Documents, products must comply with NFPA 1, NFPA 70, NFPA 72, NFPA 101, NYC Electrical Code,and NYC Fire Code.

2. Listing Criteria: UL 2525 and NFPA 72.

D. General Characteristics:

1. Master Control Station: Mount in lobby and counter constantly attended location to provide power, supervision, and control for two-way emergency communications systems for rescue assistance.

a. Power Supply: 24 V(dc) supply system including batteries, automatic float-charge battery charger, and automatic transfer switch.
b. Communicate between master control station handset and remote communications stations.
c. Annunciate visual and audible signal at master control station when remote telephone handset is lifted from cradle or when phone is plugged into designated remote jack.

d. Silence audible signal when master control station handset is removed and remote telephone handset is acknowledged.
e. Display identification for location of remote communications stations in building.

2. Remote Communications Stations: , stainless steel-plate mounted station with hands-free, two-way communication.
3. Pathway Survivability:

a. Riser Cables: Level 2 or 3.
b. Feeder Cables: Level 0 FPLR Shielded in both Riser and Horizontal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 COMMON INSTALLATION REQUIREMENTS FOR EMERGENCY RESPONSE SYSTEMS

A. Comply with manufacturer's published instructions.

B. Reference Standards:

1. Unless more stringent requirements are specified in Contract Documents or manufacturers' published instructions, comply with NFPA 1, NFPA 70, NFPA 72, NFPA 1221, NFPA 101, NYC Electrical Code,and NYC Fire Code for installation of emergency communications systems.
2. Comply with NECA 305 for installation of emergency communications systems devices and their connections to fire-alarm system.
3. Consult Commissioner for resolution of conflicting requirements.

C. Installation for Survivability:

1. Where NFPA 72 or NFPA 1221 Survivability Level 2 or 3 pathways are indicated or required, install cables and pathways within 2-hour fire-resistance-rated enclosures or provide fire-resistive pathway installation in accordance with NFPA 72 or NFPA 1221. Plenum rated innerduct.
2. Install control equipment, power supplies, junction boxes, terminal cabinets, or similar components within dedicated 2-hour fire-resistance-rated fire-alarm system equipment rooms if components originate from or comprise a portion of NFPA 72 or NFPA 1221 Survivability Level 2 or 3 pathway.

3.3 INSTALLATION OF ERCES

A. Special Techniques:

a. Pathway Survivability:

1) Riser Coaxial Cables: Level 2 or 3.
2) Feeder Coaxial Cables: Level 0.

2. Determine in-building service antenna locations based on baseline radio signal strength testing.
3. Request approval from City of New York to omit emergency responder radio coverage system from areas of building where baseline radio signal strength testing demonstrates that minimum required radio signal strength values are achieved without radio coverage system.
4. Install outdoor donor antenna with clear view to donor site with minimum 2 ft vertical clearance above nearby obstacles.

B. Interfaces with Other Work:

1. Coordinate installation of new products for emergency responder radio coverage systems with existing conditions.

3.4 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5 FIELD QUALITY CONTROL OF EMERGENCY RESPONDER RADIO COVERAGE SYSTEMS

A. Field tests and inspections must be witnessed by Commissioner and NYC Department of Buildings Inspector.

B. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Perform field tests and inspections required by NFPA 72 and NFPA 1221.
3. Baseline radio signal strength testing.

C. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Collect, assemble, and submit test and inspection reports.

3.6 FIELD QUALITY CONTROL OF EMERGENCY RESPONDER TELEPHONE SYSTEMS

A. Field tests and inspections must be witnessed by Commissioner and NYC Department of Buildings Inspector.

B. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Perform field tests and inspections required by NFPA 72 and NFPA 1221.

C. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.

2. Remove and replace defective units and retest.

D. Collect, assemble, and submit test and inspection reports.

3.7 FIELD QUALITY CONTROL OF TWO-WAY EMERGENCY COMMUNICATIONS SYSTEMS FOR RESCUE ASSISTANCE

A. Field tests and inspections must be witnessed by Commissioner and NYC Department of Buildings Inspector.

B. Tests and Inspections:

1. Perform manufacturer's recommended tests and inspections.
2. Perform field tests and inspections required by NFPA 72 and NFPA 1221.

C. Nonconforming Work:

1. Device will be considered defective if it does not pass tests and inspections.
2. Remove and replace defective units and retest.

D. Collect, assemble, and submit test and inspection reports.

3.8 PROTECTION

A. After installation, protect emergency communications systems devices from construction activities. Remove and replace items that are contaminated, defaced, damaged, or otherwise caused to be unfit for use prior to acceptance by City of New York.

END OF SECTION 284800

SECTION 310913 - MONITORING OF ADJACENT STRUCTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Work in this Section includes, but is not necessarily limited to the following:

1. All labor, materials, equipment, and services necessary to document conditions and protect existing structures (including but not limited to buildings, roadways, sidewalks and utilities) from damage during construction.
2. All engineering, surveying, layout, monitoring, and submittals in connection with the work in this Section.
3. Photographic documentation of pre-construction conditions of adjacent structures and nearby historic landmark buildings.
4. Survey monitoring of adjacent structures and nearby historic landmark buildings for the duration of construction.
5. Crack propagation monitoring of adjacent structures and nearby historic landmark buildings for the duration of construction.
6. Vibration monitoring of adjacent structures and nearby historic landmark buildings during excavation, foundation installation and other below-grade construction for the duration of construction.
7. Review of existing relevant, subject building and structural drawings as needed to perform a structural stability assessment by a New York State licensed professional engineer engaged by the Contractor.
8. Other labor and materials as may be reasonably inferred to be required to make the work under this Section complete.

B. Related Work Specified elsewhere:

1. Section 312000 - Earth Moving
2. Section 315000 - Excavation Support and Protection

C. Definitions:

1. Where "structure" is used herein, it must include all buildings, tunnels, sheds, roadways, sidewalks, utilities, poles, curbs, pavements, and other appurtenances which are to remain during construction.
2. "Review Level": The instrumentation value above which will trigger the evaluation of current construction methodology and, if necessary, implementation of mitigative action as shown in this specification to avoid detrimental effects on the surrounding facilities.

3. "Alert Level": The instrumentation value above which will halt the construction, require evaluation of subject, relevant structures affected, and necessitate mitigative action as shown in this specification to prevent damages to surrounding structures. The action must be such that the Alert Level is not exceeded in subsequent construction.

1.3 REFERENCES

A. All work must comply with applicable codes and requirements of the Building Code of the City of New York (Building Code), requirements of the New York State Department of Labor, requirements of Occupational Safety and Health Administration (OSHA), requirements of New York State Department of Health (NYSDOH), requirements of the New York State Department of Environmental Conservation (NYSDEC), requirements of the New York City Department of Environmental Protection (NYCDEP), requirements of the New York State Department of Transportation (NYSDOT), and requirements of New York City Department of Transportation (NYCDOT).

B. New York City Department of Buildings (DOB) Technical Policy and Procedure Notice (TPPN) #10/88, published on 6 June 1988.

C. United States Bureau of Mines (USBM), Report of Investigations (RI) 8507, "Structure Response and Damage Produced by Ground Vibrations from Surface Blasting," by D. E. Siskind, M. S. Stagg, J. W. Kopp, and C. H. Dowding, dated 1980.

D. Deutsches Institut für Normung (DIN) 18723 - Field Procedure for Precision Testing of Surveying Instruments.

E. National Institute of Standards and Technology (NIST).

F. The following project-specific documents must be referenced for the work of this Section:

1. Geotechnical Engineering Report dated 10 June 2024 and prepared by MFS Consulting Engineers and Surveyor, D.P.C. (MFS).

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions section 013300 "Submittal Procedures".

1.5 ACTION SUBMITTALS

A. Unless noted otherwise, the Contractor must prepare and submit the following items to the Commissioner for approval at least 30 days before the start of said work.

B. Submit documentation verifying that those performing the monitoring program have the required qualifications as specified herein.

C. Survey Monitoring Plan: The Contractor must submit a survey monitoring plan prepared by a licensed professional land surveyor. The plan must show the location of all installed monitoring points and the survey benchmark(s) that will be used for optical survey monitoring. Submit monitoring plan and periodic elevation and lateral position control point monitoring data for temporary support of excavation (SOE) and underpinning systems, neighboring/bordering structures, lots, and adjacent sidewalks as specified herein. Monitoring Plan must be in accordance with Section BC 3309.16. Monitoring Plan for underpinning operations must be in accordance with Section BC 1814.3. The monitoring plan, will be implemented by the Contractor, as required by NYC Building Code (BC) 3309.6 and BC 3309.4.4.

D. Monitoring Reports: Provide results of monitoring point survey within 24 hours of taking the readings. Weekly monitoring reports must be submitted to the Commissioner for review. The reports must include incremental and cumulative deviation in vertical, longitudinal, and transverse axes; vertical and horizontal deviation at crack gauges; elevation of and change in groundwater level at observation wells; maximum daily peak particle velocity in vertical, longitudinal, and transverse axes; waveform recording of vibrations that exceed the threshold specified below.

E. Vibration Monitoring Plan: The Contractor must submit a vibration monitoring plan showing the location of the vibration measuring devices, specifications of the vibration measuring devices, data reporting.

F. Preconstruction Conditions Documentation Report: Submit a pre-construction conditions documentation report for neighboring buildings/structures of interest. The report must be prepared, signed and sealed by a professional engineer licensed in the State of New York.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions section 014000 "Quality Requirements".

B. Optical monitoring must be performed by a Professional Land Surveyor retained by the Contractor and licensed in the State of New York with experience in deformation measurements of the types and accuracies specified herein.

C. Crack propagation, groundwater, and vibration monitoring must be performed under the supervision of a Professional Engineer retained by the Contractor and licensed in the State of New York in monitoring of the types and accuracies specified herein.

D. The engineer responsible for Structural Stability of adjacent structures must be a Professional Engineer retained by the Contractor and licensed in the State of New York in performing structural stability assessment.

1.7 PROJECT CONDITIONS

A. The Contractor must visit the site and must review the above mentioned geotechnical engineering studies to become familiar with the existing conditions. The site is adjacent to occupied buildings and streets containing numerous underground and above-ground utilities. All nearby existing building elements and utilities must be inspected by the Contractor.

B. The project site is an urban area and there are sensitive buildings adjacent to and within the vicinity of the site. The work must be executed so that no damage or injury will occur to the existing adjoining or adjacent structures, streets, or utilities. Should any damage or injury occur that is caused by the Contractor, or by anyone in Contractor's employ, or by the work under this section, the Contractor must repair such damage at own expense and must assume all responsibility for such injury.

C. The project site is located at 299 Degraw Street, Brooklyn, New York. The site is bound by 20 Douglass Street to the north, 301 Degraw Street to the east, Degraw Street to the south, and 297 Degraw Street to the west. The site is currently occupied by an inactive 2-story firehouse.

D. Buildings/Structures of Interest for Preconstruction Documentation and Monitoring Purposes: The property is bordered by several buildings. The buildings/structures of interest for preconstruction conditions documentation and monitoring during construction include the following:

1. 297 Degraw Street - west of the site
2. 301 Degraw Street - east of the site.
3. Temporary Support of Excavation (SOE) System (monitoring purposes only)

E. The soils underlying the site contain obstructions (fill, boulders). The Contractor must take into account these obstructions.

F. No guarantee is expressed or implied for the inferred information based on the subsurface logs and profiles provided in the geotechnical studies mentioned above. Boring logs are available for the Contractor's review. The City of New York makes no predictions or representations regarding the character or extent of soil, rock, or other subsurface conditions to be encountered during the work. No information derived from such boring logs or plans will, in any way, relieve the Contractor from the responsibility of making evaluations, inspections and determinations in regards to the conditions at the site. The Contractor must make assumptions of subsurface conditions that may affect methods of construction of the work hereunder. Additional borings and other exploratory operations may be performed by the Contractor, at the Contractor's expense and following the Commissioner's approval. No change in the Contract Sum will be authorized for such additional exploration undertaken by the Contractor.

G. The Contractor must be held to have visited the site and to become familiar with the existing conditions of adjacent properties, utilities and buildings.

H. Existing Utilities: Locate existing underground utilities in and beyond the areas of work. If utilities are indicated to remain in place, provide adequate means of support and protection during the work. The locations of utilities must be verified in the field by the Contractor prior to work. Protection of all utilities located on the site is the sole responsibility of the Contractor.

1. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility owner immediately for directions. Cooperate with the Commissioner and utility companies in keeping respective services and facilities in operation. Repair damaged utilities to satisfaction of the Commissioner.
2. Do not interrupt existing utilities serving facilities occupied by the City of New York and surrounding buildings, during occupied hours, except when permitted in writing by the Commissioner and then only after acceptable temporary utility services have been provided. Provide minimum of 48 hour notice to the Commissioner, and receive written notice to proceed before interrupting any utility.
3. Demolish and completely remove from site existing underground utilities indicated to be removed. Coordinate with utility companies for shutoff of services if lines are active.

I. The Contractor, by careful examination, must stay informed of the nature and location of the work, the conformation of the ground, the nature of the subsurface conditions, the locations of the groundwater table, the character, quality and quantity of the materials to be encountered, the character of the equipment and facilities needed prior to and during the execution of the work, and all other matters which can in any way affect the work. The Contractor must investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, and ingress and egress of the site of the work. The Contractor must conform to all New York City and State, and Federal regulations in regard to the transportation of materials to and from and at the job site and must secure in advance such permits as may be required.

J. Coordination: Examine drawings to determine sequence of operations, and relation to work of other trades. Start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.

K. Comply with all federal, state and local environmental and health and safety regulators, including but not limited to Occupational Safety and Health Administration (OSHA).

L. The Contractor must verify all dimensions, distances, elevations, and basements of existing adjacent structures prior to start of work.

PART 2 - PRODUCTS

2.1 MONITORING EQUIPMENT

A. Optical Survey Monitoring Points and Equipment

1. Optical monitoring points on buildings for vertical and lateral displacement must be mountable targets or prisms.
2. Settlement monitoring points may be set using pins or cross hatches in the structure to be monitored.
3. Accuracy of the survey monitoring readings must be within 1/16 inch (0.005 ft) or better. Use appropriate calibrated survey equipment and procedures to achieve the specified accuracy level.

B. Crack Gauges for Adjacent Structures and Existing Building

1. If allowed by the City of New York and Adjacent Property Owners, clear plastic crack gauges with reference line and measuring grid must be used. Crack gauges must be attached to structures using epoxy or bolts in accordance with manufacturer's recommendations. Photographic documentation should be used for monitoring.
2. If the Adjacent Property Owners will not allow installation of crack gauges, reference lines may be used. A reference line should be drawn across and perpendicular to the crack. Two measurement points (one on either side of the crack) should be drawn and the initial distance between the two measurement points recorded for future comparison. Measurements should be taken in 1/32- inch increments.

C. Vibration Monitoring Equipment

1. Portable seismographs with the ability to record vibration events up to 10 inches per second (in/sec) with an accuracy of ±5% over a range of frequencies from 2 to 250 Hz.

2. Seismographs must have the ability for remote monitoring and must be set up to send recorded data at least twice daily and send out immediate, automatic alerts if threshold values are exceeded.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PROTECTION OF ADJACENT STRUCTURES

A. The above must also include the protection of all existing utilities (including sewers, water lines, electrical lines and telecommunication lines) to remain in use within and adjacent to the area affected by the work of this project.

B. Prior to commencement of any work, consult the records for existing utilities, and note all conditions and limitations which might affect the work required under this Section. The Contractor must not damage any utilities that are to remain and must leave them accessible.

C. Monuments, benchmarks and other reference features on streets bounding this project, must be protected. Should these be disturbed in any manner, the Contractor must have them replaced at no cost to the City of New York.

3.3 PRE-CONSTRUCTION CONDITIONS DOCUMENTATION

A. General: The Contractor must perform a condition documentation of all the adjoining properties and structures within 50 feet of the site prior to beginning of excavation. The buildings of interest for this task are 297 Degraw Street and 301 Degraw Street.

1. Existing conditions documentation must include photographs, sketches, crack reference lines, elevation control points and measurements of ambient vibrations. The sections to be documented and surveyed must at least include exterior facades and interior rooms/spaces directly facing the construction site, and other adjoining facades and rooms/spaces within 25 feet of the façades facing directly the construction site. The sections to be documented must include, but not limited to, walls, rooms, basements, floors, and windows.

B. Photographs: Take photographs of the buildings, building elements, walls of the adjoining properties so that the surfaces may be examined during construction and compared with the pre-work condition. If any cracks or other stress signs are exhibited by the buildings, halt operations until corrective action has been provided and is acceptable to the Commissioner.

C. Crack Reference Lines/Gauges: Install several crack monitoring gauges or lines on any nearby existing crack on adjacent buildings and the existing building section to remain. Monitor the lines/gauges during construction and compare with the pre-work condition. If increased stress signs are observed on the crack reference lines/gauges, halt operations until corrective action has been provided and is acceptable to the Commissioner.

D. Before starting work, the Contractor's Professional Engineer and Land Surveyor must check and verify governing dimensions and elevations, survey conditions of adjoining properties and historic landmark buildings, and record any prior settlement or cracking of structures, pavements, and other improvements. The Contractor must video all relevant, subject structures prior to the beginning of any construction activities.

3.4 MONITORING OF EXISTING STRUCTURES

A. The Contractor and licensed professional engineer/surveyor retained by the Contractor must perform monitoring of the buildings identified in Section 3.3.

B. Monitoring must be performed during key construction operations, which include ground improvement work, excavation, shoring, underpinning, dewatering, subgrade preparations until the first floor slab is constructed.

C. For this project, the buildings, structures, elements of interest for monitoring purposes are identified in the Part 1 of these specifications.

D. Vertical and Lateral Displacements:

1. Monitor each building/structure/element of interest identified in Section 1.7.
2. Install a minimum of 10 optical survey monitoring points on each of the buildings/structures of interest (minimum of 5 sets of 2 points each - each set consisting of one point within the lower level (street level) and one point at the roof line, at a minimum) for monitoring vertical and lateral displacement. Additionally, monitoring points/locations must not be spaced at intervals exceeding 25 feet laterally. Install additional sets of monitoring points as necessary to maintain this spacing.Install a minimum of 5 settlement monitoring points (at 25 feet on center) on the adjacent sidewalks, roadways and adjacent building entryways for monitoring vertical displacement.
3. The Contractor must install and monitor points at a maximum horizontal spacing of 25-feet on-center around the entire perimeter of the excavation, to monitor the ground movements behind the support of excavation (SOE). As the excavation proceeds, install points on the SOE elements at the top of excavation) to measure potential lateral deflection. These locations must be subject to review by the Commissioner.
4. All monitoring locations must be subject to review by the Commissioner.
5. The monitoring points must be established and monitored by the Contractor employing a Professional Land Surveyor licensed in the State of New York, and referenced to a fixed, off-site benchmark.
6. The Contractor may establish additional monitoring points on the existing adjacent structures, subject to the Adjacent Property Owner's approval, to adequately monitor and otherwise stay informed of the structures' conditions during the work.

E. Crack Gauge Monitoring

1. Install crack gauges at visible cracks in the walls on the buildings/structures of interest to monitor changes in crack width during construction. Install a crack gauge on each visible crack but the number of crack gauges must not need to be more than 8 per building/structure. Initial conditions of the crack gauges must be measured and/or documented photographically.
2. Location of crack gauges must be coordinated between the Adjacent Property Owners, Contractor, the Contractor's engineer responsible for Structural Stability and the Commissioner.

F. Vibration Monitoring

1. Install at least 1 seismograph in each adjacent/neighboring building (297 Degraw Street building and 301 Degraw Street building). Seismographs are to be installed at the lowest level of each building (if approved by the Adjacent Property Owners) at a point closest to the construction anticipated to cause maximum vibrations.
2. Alerts must be sent out automatically to designated recipients (Commissioner, Contractor, and Contractor's engineer responsible for Structural Stability) if threshold levels specified below are exceeded.
3. Waveform recording of vibrations must be provided for vibration events exceeding a peak particle velocity of 0.250 inches per second as measured along any axis.

3.5 FREQUENCY AND REPORTING

A. Optical Survey Monitoring

1. Monitoring must be performed by the Contractor's Professional Land Surveyor once weekly during demolition and all below-grade construction (ground improvement, excavation, SOE installation, underpinning, anchor installation, or foundation construction) until the first floor slab work is completed. The accuracy (margin of error) of the survey readings must be 0.005 feet or better. All monitoring data must be transmitted to the Commissioner on a weekly basis.
2. After the first floor slab has been poured, monitoring must be performed by the Contractor's Professional Land Surveyor once monthly until structural work is completed. All monitoring data must be transmitted to the Commissioner on a monthly basis.

B. Crack gauges must be monitored once a week during demolition and below-grade construction activities. Monitoring must consist of measuring the distance between the points established during installation or by documenting the crack gauge photographically.

C. Vibration monitoring must be performed on a continual basis during demolition and below-grade construction activities.

D. Should movements or vibrations exceed the specified thresholds, monitoring intervals must be increased to daily unless otherwise instructed by the Commissioner.

3.6 ALERTING

A. Alerts must be generated when data collected are determined by those responsible for that aspect of monitoring to have reached or exceeded the Review and Alert Level thresholds as defined herein.

B. Alerts for Review and Alert Level thresholds must be promptly forwarded to the Commissioner. The alert must contain the monitoring point that has exceeded its Review and Alert Level threshold, the data, the date and time of the reading, the reading value and the Review or Alert Level. For vibrations exceeding the Review or Alert Level thresholds, the alert should include the waveform recording of the vibrations.

C. The alert system must include a means for the recipient of the alert to acknowledge that the alert has been received and to disable repeated alarming on that sensor.

D. The Contractor must make every effort to work with those responsible for monitoring to provide timely readings for review of data and sending of alerts.

3.7 THRESHOLD LIMITING VALUES

A. The Contractor must take every precaution to guard against excessive movement, settlement, groundwater drawdown, vibration, or damage of adjacent buildings and structures. The Contractor is solely and entirely responsible for the safety and support of such structures, and liable for any damage and injury caused thereby or resulting therefrom.

B. The following Review Level Thresholds must require that the Contractor cease construction, review their means and methods of construction and suggest revised means and methods to limit movements and vibrations in adjacent structures. A written description of revised means and methods must be submitted by the Contractor before work can proceed.

1. Vertical or Horizontal Movements:

    a. Buildings or other Structures: Two consecutive readings of 1/8-inch of movement, or one confirmed reading of 1/4-inch.
    b. Excavation Support Systems: Three consecutive readings of 1/4-inch of movement, or one confirmed reading of 1/4-inch.

2. Crack Gauges: three consecutive readings of 1-millimeter, or one confirmed reading of 3-millimeters.
3. Vibrations: Buildings of Interest and Other Structures: Peak Particle Velocity exceeding 0.500 inches per second measured along any axis.

C. The following Alert Level Threshold values must require the Contractor to cease construction activities and notify the Commissioner and Department of Buildings (DOB) Excavation Unit immediately. The Engineer for Structural Stability engaged by the Contractor will make an inspection of the affected building within 24 hours of the reported exceedances. The Contractor's Engineer will prepare a report assessing the condition of the affected building and any required remediation. The report will be submitted to the Commissioner and the DOB Excavation Unit within 48 hours of the incident. If the building is judged to be in an unstable condition, the DOB will be notified immediately. Construction activities must not continue until adequate measures are in place to achieve stability of adjacent structures or excavation support systems. Where significant movements are detected the frequency of data collection must be increased to once daily or as directed by the Commissioner.

1. Alert Level Vertical and Horizontal Movements

    a. Buildings or other Structures: 0.4-inch total vertical or 0.4-inch total horizontal, whichever is more stringent.
    b. Excavation Support Systems: 0.65-inch total movement. For underpinning piers the limit is 0.5 inch.

2. Crack Gauges: 4 millimeter increase in crack width.
3. Vibrations:

a. Buildings of Interest: Peak particle velocities (PPV) exceeding the USBM plot of allowable PPV versus frequency as published in RI 8507 (graphically shown below). In no case PPV must exceed 1.5 inch per second (ips).

D. Any movement or vibration levels exceeding the above criteria must be reported immediately to the Commissioner. If the above thresholds are exceeded:

1. The Contractor will immediately stop work in the vicinity of the exceedance.
2. The Engineer for Structural Stability engaged by the Contractor will make an inspection of the affected building or structure within 24 hours of the reported exceedances. The Contractor's Engineer will prepare a report assessing the condition of the affected building and any required remediation. The report will be submitted to the Commissioner and the DOB Excavation Unit within 48 hours of the incident.
3. The Contractor must develop alternate methods and procedures, subject to the review and approval of the Commissioner and the affected Adjacent Property Owners.
4. Resume work using the agreed upon alternative method.
5. Corrective measures to achieve stability of adjacent structures must be the responsibility of the Contractor. The Contractor must restore by repair or otherwise, the portions of buildings, or their contents, altered by the Contractor's work. Restoration must be completed to the conditions which existed prior to the start of work.

END OF SECTION 310913

SECTION 312000 - EARTH MOVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Related Requirements:

1. Section 315000 "Excavation Support and Protection" for shoring, bracing, and sheet piling of excavations.
2. Refer to specification section 314000 – Environmental Management.

1.3 DEFINITIONS

A. Backfill: Soil material or controlled low-strength material used to fill an excavation.

1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
2. Final Backfill: Backfill placed over initial backfill to fill a trench.

B. Base Course: Aggregate layer placed between the subbase course and hot-mix asphalt paving.

C. Bedding Course: Aggregate layer placed over the excavated subgrade in a trench before laying pipe.

D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.

E. Drainage Course: Aggregate layer supporting the slab-on-grade that also minimizes upward capillary flow of pore water.

F. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.

1. Bulk Excavation: Excavation more than 10 feet in width and more than 30 feet in length.
2. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by Commissioner. Unauthorized excavation, as well as remedial work directed by Commissioner, will be without additional compensation.

G. Fill: Soil materials used to raise existing grades.

H. Rock:

1. Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material that exceed 1 cu. yd. for bulk excavation or 3/4 cu. yd. for footing, trench, and pit excavation that cannot be removed by rock-excavating equipment equivalent to the following in size and performance ratings, without systematic drilling, ram hammering, ripping, or blasting, when permitted:

    a. Equipment for Footing, Trench, and Pit Excavation: Late-model, track-mounted hydraulic excavator; equipped with a 42-inch- maximum-width, short-tip-radius rock bucket; rated at not less than 138-hp flywheel power with bucket-curling force of not less than 28,700 lbf and stick-crowd force of not less than 18,400 lbf with extra-long reach boom.
    b. Equipment for Bulk Excavation: Late-model, track-mounted loader; rated at not less than 230-hp flywheel power and developing a minimum of 47,992-lbf breakout force with a general-purpose bare bucket.

2. Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material 3/4 cu. yd. or more in volume that exceed a standard penetration resistance of 100 blows/2 inches when tested by a geotechnical testing agency, according to ASTM D1586.

I. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other fabricated stationary features constructed above or below the ground surface.

J. Subbase Course: Aggregate layer placed between the subgrade and base course for hot-mix asphalt pavement, or aggregate layer placed between the subgrade and a cement concrete pavement or a cement concrete or hot-mix asphalt walk.

K. Subgrade: Uppermost surface of an excavation or the top surface of a fill or backfill immediately below subbase, drainage fill, drainage course, or topsoil materials.

L. Utilities: On-site underground pipes, conduits, ducts, and cables as well as underground services within buildings.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.6 INFORMATIONAL SUBMITTALS

A. Material Test Reports: For each on-site and borrow soil material proposed for fill and backfill as follows:

1. Classification according to ASTM D2487.
2. Laboratory compaction curve according to ASTM D698 ASTM D1557.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.8 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during earth-moving operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Commissioner and NYCDOT.
2. Provide alternate routes around closed or obstructed traffic ways if required by Commissioner or NYCDOT.

B. Utility Locator Service: Notify utility locator service "Call Before You Dig" or "Dig Safe System" or "One Call" for area where Project is located before beginning earth-moving operations.

C. Do not commence earth-moving operations until temporary site fencing and erosion- and sedimentation-control measures as required by DDC General Conditions.

D. The following practices are prohibited within protection zones:

1. Storage of construction materials, debris, or excavated material.
2. Parking vehicles or equipment.
3. Foot traffic.
4. Erection of sheds or structures.
5. Impoundment of water.
6. Excavation or other digging unless otherwise indicated.
7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

E. Do not direct vehicle or equipment exhaust towards protection zones.

F. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations. Refer to specification section 314000 – Environmental Management.

B. Satisfactory Soils: Soil Classification , or a combination of these groups; free of rock or gravel larger than in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.

C. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 90 percent passing a 1-1/2-inch sieve and not more than 12 percent passing a No. 200 sieve.

D. Base Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 95 percent passing a 1-1/2-inch sieve and not more than 8 percent passing a No. 200 sieve.

E. Engineered Fill/Imported Backfill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 90 percent passing a 1-1/2-inch sieve and not more than 10 percent passing a No. 200 sieve. Refer to specification section 314000 – Environmental Management.

F. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; except with 100 percent passing a 1-inch sieve and not more than 8 percent passing a No. 200 sieve.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earth-moving operations.

B. Protect and maintain erosion and sedimentation controls during earth-moving operations.

C. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection before placing subsequent materials.

3.3 DEWATERING

A. Provide dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of ground water and permit excavation and construction to proceed on dry, stable subgrades.

B. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.

C. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.

1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.

D. Dispose of water removed by dewatering in a manner that avoids endangering public health, property, and portions of work under construction or completed. Dispose of water and sediment in a manner that avoids inconvenience to others.

3.4 EXPLOSIVES

A. Explosives:

1. Do not use explosives.
2. Obtain written permission from the Commissioner before bringing explosives to Project site or using explosives on Project site.

a. Perform blasting without damaging adjacent structures, property, or site improvements.
b. Perform blasting without weakening the bearing capacity of rock subgrade and with the least-practicable disturbance to rock to remain.

3.5 EXCAVATION, GENERAL

A. Unclassified Excavation: Excavate to subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation or removal of obstructions.Refer to specification section 314000 – Environmental Management.

1. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory soil materials. Refer to specification section 314000 – Environmental Management.
2. Remove rock to lines and grades indicated to permit installation of permanent construction without exceeding the following dimensions:

a. 24 inches outside of concrete forms other than at footings.
b. 12 inches outside of concrete forms at footings.
c. 6 inches outside of minimum required dimensions of concrete cast against grade.
d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
e. 6 inches beneath bottom of concrete slabs-on-grade.
f. 6 inches beneath pipe in trenches and the greater of 24 inches wider than pipe or 42 inches wide.

B. Classified Excavation: Excavate to subgrade elevations. Material to be excavated will be classified as earth and rock. Do not excavate rock until it has been classified and cross sectioned by Commissioner. Refer to specification section 314000 – Environmental Management.

1. Earth excavation includes excavating pavements and obstructions visible on surface; underground structures, utilities, and other items indicated to be removed; and soil, boulders, and other materials not classified as rock or unauthorized excavation.

a. Intermittent drilling; blasting, if permitted; ram hammering; or ripping of material not classified as rock excavation is earth excavation.

2. Rock excavation includes removal and disposal of rock. Remove rock to lines and subgrade elevations indicated to permit installation of permanent construction without exceeding the following dimensions:

a. 24 inches outside of concrete forms other than at footings.
b. 12 inches outside of concrete forms at footings.
c. 6 inches outside of minimum required dimensions of concrete cast against grade.
d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
e. 6 inches beneath bottom of concrete slabs-on-grade.
f. 6 inches beneath pipe in trenches and the greater of 24 inches wider than pipe or 42 inches wide.

3.6 EXCAVATION FOR STRUCTURES

A. Refer to specification section 314000 - Environmental Management. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch. If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.

1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.
2. Excavation for Underground Tanks, Basins, and Mechanical or Electrical Utility Structures: Excavate to elevations and dimensions indicated within a tolerance of plus or minus 1 inch. Do not disturb bottom of excavations intended as bearing surfaces.

B. Excavations at Edges of Tree- and Plant-Protection Zones:

1. Excavate by hand or with an air spade to indicated lines, cross sections, elevations, and subgrades. If excavating by hand, use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.

3.7 EXCAVATION FOR WALKS AND PAVEMENTS

A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.8 EXCAVATION FOR UTILITY TRENCHES

A. Excavate trenches to indicated gradients, lines, depths, and elevations.

1. Beyond building perimeter, excavate trenches to allow installation of top of pipe below frost line.

B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches higher than top of pipe or conduit unless otherwise indicated.

1. Clearance: 12 inches each side of pipe or conduit.

C. Trench Bottoms:

1. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.

    a. For pipes and conduit less than 6 inches in nominal diameter, hand-excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
    b. For pipes and conduit 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe or conduit circumference. Fill depressions with tamped sand backfill.
    c. For flat-bottomed, multiple-duct conduit units, hand-excavate trench bottoms and support conduit on an undisturbed subgrade.
    d. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

2. Excavate trenches 4 inches deeper than bottom of pipe and conduit elevations to allow for bedding course. Hand-excavate deeper for bells of pipe.

    a. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

D. Trenches in Tree- and Plant-Protection Zones:

1. Hand-excavate to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
2. Do not cut main lateral roots or taproots; cut only smaller roots that interfere with installation of utilities.

3.9 EXCAVATION FOR ELEVATOR CYLINDER

A. Drill well hole plumb in elevator pit to accommodate installation of elevator-cylinder assembly. Coordinate with applicable requirements for diameter and tolerances in Section 142400 "Hydraulic Elevators."

B. Provide well casing as necessary to retain walls of well hole.

3.10 SUBGRADE INSPECTION

A. Notify Commissioner when excavations have reached required subgrade.

B. If Commissioner determines that unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.

C. Proof-roll subgrade below the building slabs and pavements with a pneumatic-tired and loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.

2. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Commissioner, and replace with compacted backfill or fill as directed.

D. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Commissioner, without additional compensation.

3.11 UNAUTHORIZED EXCAVATION

A. Refer to specification section 314000 - Environmental Management. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill, with 28-day compressive strength of 2500 psi, may be used when approved by Commissioner.

1. Fill unauthorized excavations under other construction, pipe, or conduit as directed by Commissioner.

3.12 STORAGE OF SOIL MATERIALS

A. Refer to specification section 314000 - Environmental Management. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.

1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.

3.13 BACKFILL

A. Refer to specification section 314000 - Environmental Management. Place and compact backfill in excavations promptly, but not before completing the following:

1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
2. Surveying locations of underground utilities for Record Documents.
3. Testing and inspecting underground utilities.
4. Removing concrete formwork.
5. Removing trash and debris.
6. Removing temporary shoring, bracing, and sheeting.
7. Installing permanent or temporary horizontal bracing on horizontally supported walls.

B. Place backfill on subgrades free of mud, frost, snow, or ice.

3.14 UTILITY TRENCH BACKFILL

A. Place backfill on subgrades free of mud, frost, snow, or ice.

B. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.

C. Trenches under Footings: Backfill trenches excavated under footings and within 18 inches of bottom of footings with satisfactory soil; fill with concrete to elevation of bottom of footings. Concrete is specified in Section 033000 "Cast-in-Place Concrete."

D. Trenches under Roadways: Provide 4-inch- thick, concrete-base slab support for piping or conduit less than 30 inches below surface of roadways. After installing and testing, completely encase piping or conduit in a minimum of 4 inches of concrete before backfilling or placing roadway subbase course. Concrete is specified in Section 033000 "Cast-in-Place Concrete."

E. Backfill voids with satisfactory soil while removing shoring and bracing.

F. Refer to specification section 314000 - Environmental Management. Initial Backfill:

1. Soil Backfill: Place and compact initial backfill of subbase material satisfactory soil, free of particles larger than 1 inch in any dimension, to a height of 12 inches over the pipe or conduit.

    a. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.

G. Final Backfill:

1. Soil Backfill: Place and compact final backfill of satisfactory soil to final subgrade elevation.

3.15 SOIL FILL

A. Refer to specification section 314000 - Environmental Management. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.

B. Place and compact fill material in layers to required elevations as follows:

1. Under grass and planted areas, use satisfactory soil material.
2. Under walks and pavements, use satisfactory soil material.
3. Under steps and ramps, use engineered fill.
4. Under building slabs, use engineered fill.
5. Under footings and foundations, use engineered fill.

C. Place soil fill on subgrades free of mud, frost, snow, or ice.

3.16 SOIL MOISTURE CONTROL

A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.

1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.
2. Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

3.17 COMPACTION OF SOIL BACKFILLS AND FILLS

A. Place backfill and fill soil materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment and not more than 4 inches in loose depth for material compacted by hand-operated tampers.

B. Place backfill and fill soil materials evenly on all sides of structures to required elevations and uniformly along the full length of each structure.

C. Compact soil materials to not less than the following percentages of maximum dry unit weight according to ASTM D698:

1. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches of existing subgrade and each layer of backfill or fill soil material at 95 percent.
2. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 92 percent.
3. Under turf or unpaved areas, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 85 percent.
4. For utility trenches, compact each layer of initial and final backfill soil material at 85 percent.

3.18 GRADING

A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.

1. Provide a smooth transition between adjacent existing grades and new grades.
2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.

B. Site Rough Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to elevations required to achieve indicated finish elevations, within the following subgrade tolerances:

1. Turf or Unpaved Areas: Plus or minus 1 inch.
2. Walks: Plus or minus 1 inch.
3. Pavements: Plus or minus 1/2 inch.

C. Grading inside Building Lines: Finish subgrade to a tolerance of 1/2 inch when tested with a 10-foot straightedge.

3.19 SUBSURFACE DRAINAGE

A. Subsurface Drain: Place subsurface drainage geotextile around perimeter of subdrainage trench. Place a 6-inch course of filter material on subsurface drainage geotextile to support subdrainage pipe. Encase subdrainage pipe in a minimum of 12 inches of filter material, placed in compacted layers 6 inches thick, and wrap in subsurface drainage geotextile, overlapping sides and ends at least 6 inches.

1. Compact each filter material layer to 85 percent of maximum dry unit weight according to ASTM D698 with a minimum of two passes of a plate-type vibratory compactor.

B. Drainage Backfill: Place and compact filter material over subsurface drain, in width indicated, to within 12 inches of final subgrade, in compacted layers 6 inches thick. Overlay drainage backfill with one layer of subsurface drainage geotextile, overlapping sides and ends at least 6 inches.

1. Compact each filter material layer to 85 percent of maximum dry unit weight according to ASTM D698 with a minimum of two passes of a plate-type vibratory compactor.
2. Place and compact impervious fill over drainage backfill in 6-inch- thick compacted layers to final subgrade.

3.20 SUBBASE AND BASE COURSES UNDER PAVEMENTS AND WALKS

A. Place subbase course and base course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place subbase course and base course under pavements and walks as follows:

1. Place base course material over subbase course under hot-mix asphalt pavement.
2. Shape subbase course and base course to required crown elevations and cross-slope grades.
3. Place subbase course and base course 6 inches or less in compacted thickness in a single layer.
4. Place subbase course and base course that exceeds 6 inches in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches thick or less than 3 inches thick.
5. Compact subbase course and base course at optimum moisture content to required grades, lines, cross sections, and thickness to not less than 95 percent of maximum dry unit weight according to ASTM D698.

C. Pavement Shoulders: Place shoulders along edges of subbase course and base course to prevent lateral movement. Construct shoulders, at least 12 inches wide, of satisfactory soil materials and compact simultaneously with each subbase and base layer to not less than 95 percent of maximum dry unit weight according to ASTM D698.

3.21 PROTECTION

A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.

B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.

1. Scarify or remove and replace soil material to depth as directed by Commissioner; reshape and recompact.

C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.

1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.22 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus satisfactory soil and waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off City of New York's property.

B. Transport surplus satisfactory soil to designated storage areas on City of New York's property. Stockpile or spread soil as directed by Commissioner.

1. Remove waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off City of New York's property.

END OF SECTION 312000

SECTION 313000 - VAPOR MITIGATION SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. This Section generally includes, but is not limited to, the following components of the vapor mitigation system: vapor barrier; and an active subslab depressurization system (SSDS) consisting of polyvinyl chloride (PVC) underground collection piping, gas permeable aggregate (GPA), geotextile fabric, pipe trenching, galvanized steel aboveground riser piping, and exhaust stack as shown on Drawings ENV-001 through ENV-105. The following related documents also apply to the required work for the Project:

1. SSDS Drawings ENV-001 thru ENV-105 and EN-900.00 (the Drawings)
2. Environmental Management: Section 314000
3. Earthwork: Section 315000
4. Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York prepared by the New York State Department of Health (NYSDOH) dated October 2006; updated May 2017 and February 2024.
5. OSWER Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air, USEPA, June 2015.
6. Draft Remedial Action Workplan, prepared by AKRF, Inc., dated June 2025.
7. New York City Mechanical Code Section MC 512 - Sub-slab Soil Exhaust Systems
8. New York City Building Code

B. Scope and Purpose

1. This document defines the requirements to install the SSDS (which is intended to operate continuously following startup and commissioning), and vapor barrier. In general, it outlines the requirements, procedures, and operating conditions to guide the Contractor involved in the practice.
2. All work must be accomplished in accordance with federal, state, and local requirements and accepted safety standards. Before initiating the work, consult applicable regulatory and permit requirements with the appropriate government agencies. Contractor is responsible to advise the Commissioner of any conflict between applicable regulatory requirements and this specification.

3. All work must be performed in accordance with the Drawings and Specifications, and New York City Department of Environmental Protection (NYCDEP)-approved Remedial Action Plan (RAP). Commissioner reserves the right to inspect all work performed under this specification. In addition, the Commissioner reserves the right to reject all work that does not comply with the terms of this specification. Commissioner must not be held accountable for any costs associated with the rejection, and reinstallation or replacement of work not performed in accordance with this specification. The Commissioner must approve any deviations to this specification in writing. The work, as defined by this specification, must be fully completed by the Contractor within the mutually agreed upon schedule.
4. All Vapor Barrier work must be coordinated and installed in conjunction with the Architectural Drawings and Specifications.

C. Work Included: Provide products and product installation as specified and as shown on the Drawings, including the following:

1. Under-slab and under-rat slab 20-mil sheet membrane vapor barrier.
2. Liquid-applied vapor barrier.
3. Three (3) vapor monitoring points comprising solid 1-inch Schedule 80 PVC pipe, 1-inch PVC cap, and ¼-inch threaded quick disconnect shut-off valve and viton seal, and flush-mount manhole cover.
4. Non-woven geotextile fabric.
5. Under-slab gas-permeable aggregate layer, ASTM C33 Size #5 aggregate.
6. SSDS-1: 4-inch diameter Schedule 40 PVC 0.020-inch slotted pipe under the cellar slab to a 4-inch diameter Schedule 40 PVC solid underground pipe transitioning to aboveground 4-inch galvanized steel riser via a coupling.
7. SSDS-2: 4-inch diameter Schedule 40 PVC vertical solid pipe installed as a penetration through the rat slab and extending 3-inches into the gas-permeable aggregate layer. Transition to horizontal 4-inch diameter Schedule 40 galvanized steel pipe via a coupling and run above rat slab grade to the manifold.
8. SSDS-3: 4-inch diameter Schedule 40 PVC slotted pipe under the private office slab, penetrating through the foundation wall and transitioning (via a coupling) to 4-inch Schedule 40 galvanized steel pipe and run above and horizontal to rat slab grade to the manifold. SSDS-3 must also include a 1 inch diameter Schedule 40 galvanized steel condensate drain.
9. 4-inch diameter Schedule 40 galvanized steel riser from the manifold to roof through roof to blower and exhaust stack.
10. 6-inch diameter Schedule 40 stainless steel pipe sleeves and 4-inch Schedule 40 stainless steel communication sleeves for penetrations through concrete foundation elements, as required.
11. Additional condensate drains, as necessary at all low points in solid piping that cannot be sloped towards slotted piping.
12. System accessories including, but not limited to: butterfly valves, cleanouts, sample ports, vacuum indicators/magnehelic pressure gauges, couplings, flow meters, and vibration isolating pipe mounts as described in Article 2.1(H) and (I).
13. Two (2) suction fans , one for immediate application and one for future use.
14. 4-inch Schedule 40 galvanized steel exhaust stack connecting the suction fan outlet.
15. Variable frequency drive (VFD) to damp fan operation.
16. Differential pressure switch (DPS) and remote telemetry system to signal low vacuum alarm notification to a contact list.

17. Electrical supply must be provided for the blower, differential pressure switch alarm indicator, and any other system element requiring electrical supply. The Contractor must also provide a connection between the differential pressure switch and the alarm indicator. The differential pressure switch must be functional following installation and calibrated, as necessary, in accordance with manufacturer's requirements.

D. The Contractor must supply all labor, materials, equipment, services, and incidentals necessary or required to perform the work in accordance with applicable New York State Department of Buildings (NYSDOB), New York City Department of Environmental Protection (NYCDEP) regulations and these specifications.

E. Extent of Work:

1. Install the vapor barrier system as shown on the Drawings, throughout the Site to prevent migration of gas vapor from below the building slab.
2. Install the active SSDS to allow the lateral movement, collection, and venting of gas vapor from the below the building to the roof discharge point. System components include, but are not limited to: 4-inch Schedule 40 PVC solid and 0.020-inch slotted pipe to 4-inch Schedule 40 PVC solid pipe installed within a gas permeable aggregate layer. Minimum 6-inch deep gas-permeable aggregate layer in all non-piping areas, 16-inch wide by 16-inch deep aggregate layer in pipe trench areas. 4-inch Schedule 40 PVC pipe transition via couplings to 4-inch galvanized steel pipe above grade to the manifold, transitioning to 4-inch galvanized steel pipe to roof surface, suction fan, and exhaust stack. Three (3) vapor monitoring points are to be installed as indicated on the Drawings; exact locations to be coordinated with Commissioner. All solid pipe to be installed with minimum 1% slope to slotted piping or condensate drains (as needed).

F. Furnish and install at each 4-inch riser leg: a coupling, a cleanout, vacuum indicator/magnehelic pressure gauge, sample port, flow meter, and butterfly valve, all located in the ground level. Furnish and install one magnehelic pressure gauge, and a differential pressure switch connected to an remote telemetry system in the 4-inch riser after the manifold header pipe. Furnish and install a blind flange, a vacuum indicator, and a sample port at the roof prior to fan. Furnish and install all parts and materials necessary to connect each SSDS vent riser manifold to the fan and exhaust stack.

G. Install all system components as indicated, specified, and required in these Drawings and Specifications, and in accordance with all applicable NYCDOB, NYCDEP regulations.

H. The Contractor must assume full responsibility for compliance all applicable NYCDOB, NYCDEP regulations pertaining to work practices, materials, installation, and testing of the SSDS. Contractor is responsible to advise the Commissioner in the event that there are any deviations from the applicable regulations.

1.3 PRE-INSTALLATION MEETING

A. The Contractor will arrange for and convene a pre-installation meeting prior to the start of work described in this Section to review installation procedures, protection, and coordination with other work. Attendance of parties directly affecting work of this Section, including representatives from the vapor mitigation system installer(s), the vapor barrier installer(s) and manufacturer(s), mechanical and plumbing subcontractors, and the Commissioner will be required. The Contractor will schedule the pre-installation meeting at a time and at a location that is agreeable to the Commissioner. The meeting will be held on a date which is a minimum of ten (10) business days prior to start of the work of this Section.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures".

1.5 SUBMITTALS

A. The Contractor must provide a complete submittal schedule and milestone inspection schedule to outline the pre-approval and work completion timelines for Commissioner's review.

B. Shop Drawings: Submit shop drawings for vapor barrier penetration details, piping, condensate drain, and monitoring point installations, pipe fittings, couplings, connections, and any other materials proposed, including all related accessories, aggregate dimensional data, flow rates, and installation instructions. Submit itemized pipe and fitting materials for each specified application. Submit coordinated piping layout and riser layout drawings to Commissioner.

C. Product Data: All product data and shop drawing submittals must be provided to Commissioner for review and approval prior to procurement of materials and/or installation. Provide sieve analysis for the gas permeable aggregate, and the manufacturer's product data for piping and fittings, geotextile fabric, vapor barrier, fans, VFD, DPS, butterfly valves, magnehelic pressure gauges, vacuum indicators, flow meters, and any other materials proposed, including all related accessories, dimensional data, and installation instructions.

D. Certifications: Submit Certification signed by the Contractor and the installer of the vapor barrier, and SSDS stating that the installed materials conform to the specified requirements and that the system was successfully inspected and tested prior to covering.

E. As-Built Drawings: Provide as-built drawings in hardcopy form, as well as unsigned CAD format drawings, indicating actual locations and dimensions of completed vapor barrier, and SSDS.

1.6 APPLICABLE STANDARDS, REGULATIONS, AND CODES

A. All federal, state, and local regulations, codes, and ordinances, as applicable.

1. ASTM C33 - Specification for Concrete Aggregate.
2. ASTM D1785 - Standard specification for PVC plastic pipe, schedules 40, 80, 120.
3. ASTM D2241 - Standard Specification for PVC Pressure Rated Pipe.
4. ASTM D2564 - Standard Specification for Solvent Cements for PVC Plastic Piping Systems.
5. ASTM D2774 - Standard practice for underground installation of thermoplastic pressure piping.
6. ASTM D2855 - Standard Practice for Making Solvent-Cemented Joints with Poly Vinyl Chloride) (PVC) Pipe and Fittings.
7. ASTM D5926 - Standard Specification for Poly-Vinyl Chloride (PVC) Gaskets for Drain, Waste, and Vent (DWV), Sewer, Sanitary, and Storm Plumbing Systems.
8. ASTM E1643 - Standard Practice for Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.
9. ASTM E1745-17 - Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs.

1.7 COORDINATION

A. Notify the Commissioner within one business day of any significant installation milestones including, but not limited to, the inspections listed in Article 3.2 (D) of this Section.

B. Coordinate location and installation of the vapor barrier, and SSDS with installation of under slab foundations, trenches, sumps, and utilities.

C. Coordinate location and installation of the pipe risers, control panels, VFDs, and fans with installation of other vent piping, water proofing construction of floor slabs, pipe chases, and roof penetrations.

D. The required inspections must be conducted and the work in question must be approved by the Commissioner prior to proceeding with subsequent portions of the system installation work.

1.8 JOB CONDITIONS

A. Perform work only when existing and forecasted weather conditions are within manufacturer's recommendations for the material and product used. Do not install SSDS in snow, rain, fog, or mist.

B. The Contractor must coordinate with all trades involved, the scheduling of excavation and backfill to ensure that all necessary components of work due to be buried are installed, thus avoiding duplication of excavation work, unless otherwise shown on the Drawings or noted in other sections of the documents.

C. No other work should be performed above any portion of the vapor barrier, and SSDS until the Commissioner has conducted an inspection and approved the work.

D. The Contractor must verify that there are no interferences with other existing or proposed subsurface systems.

E. Gas permeable aggregate must be rolled flat and non-angular.

F. All plumbing, electrical, mechanical, and structural items to be under or passing through the vapor barrier must be positively secured in their proper positions and appropriately sealed and protected prior to vapor barrier application as shown on Drawings and in accordance with manufacturer's recommendations.

G. Surface preparation must be per manufacturer's specification and in accordance with civil and structural requirements not outlined in this Section.

H. Maintain adequate ventilation during preparation and application of SSDS materials.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements".

B. Installer Qualifications: Engage subcontractors or be able to self-qualify to meet the experience requirements identified herein:

1. The Contractor must be or must subcontract, a New York City-licensed plumbing subcontractor to perform SSDS work as required by NYCDOB.
2. The Contractor must be or must subcontract, a New York City - licensed electrical subcontractor to perform electrical work on the SSDS.
3. The Contractor must be or must subcontract, a manufacturer-approved installer to install the sheet-membrane and liquid-applied vapor barrier.
4. The Contractor must be or must subcontract an environmental subcontractor to conduct the SSDS inspections, and at a minimum must conduct the inspections identified in Article 3.2 (D). The environmental subcontractor must have completed the 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) training course that meets OSHA requirements of 29 CFR Part 1910, Occupational Safety and Health Standards. In addition, all personnel in contaminated work zones will have up-to-date 8-hour refresher training and medical monitoring. The consultant must have experience conducting SSDS inspections in the NYC area and must have inspected SSDS systems of comparable or greater complexity.

C. Pre-Installation Conference: Conduct conference at Site to comply with the following requirements:

1. Before installing SSDS, coordinate meeting with Commissioner.
2. Review requirements for SSDS, including surface preparation specified under other Sections, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, inspection and testing procedures, and protection, replacement, and reinstallation, if necessary.
3. Notify participants at least 7 days before conference.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the site after submittals have been reviewed and approved. Deliver materials to the site in original unbroken packages bearing manufacturer's label showing brand, weight, volume, and batch number.

B. Store materials at the site in strict compliance with manufacturer's instructions. Store materials in a clean, dry area on-site. Do not allow materials to freeze in containers.

C. Protect materials during handling and installation to prevent damage. Replace any damaged materials at no cost to the Commissioner unless the damaged material can be replaced or reinstalled per the manufacturer's requirements and to the satisfaction of the Commissioner and such that vapor barrier is not compromised.

1.11 WARRANTY

A. The Contractor must provide manufacturer warranties on all parts supplied and installed under this Specification for one year following all systems being fully operational and accepted by the Commissioner by the date of Substantial Completion. Provide warranty documentation for all vapor barrier products, SSDS fans, VFD, and any other applicable items following installation in accordance with manufacturer's specifications.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the site after submittals have been reviewed and approved. Deliver materials to the site in original unbroken packages bearing manufacturer's label showing brand, weight, volume, and batch number.

B. Store materials at the site in strict compliance with manufacturer's instructions. Store materials in a clean, dry area on-site. Do not allow materials to freeze in containers.

C. Protect materials during handling and installation to prevent damage. Replace any damaged materials at no cost to the Commissioner unless the damaged material can be replaced or reinstalled per the manufacturer's requirements and to the satisfaction of the Commissioner and such that vapor barrier is not compromised.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Gas-Permeable Aggregate

1. The gas-permeable aggregate layer must be free of organic, frozen, or other deleterious matter. Aggregate must have a nominal size of 1 inch to 1/2-inch and conform to ASTM C33 Standard Specification for Concrete Aggregate Size #5 gradation as per table below:

Sieve Size	**Percent Finer Than by Mass**
1.5-inch	100
1-inch	90 to 100
3/4-inch	20 to 55
1/2-inch	0 to 10
3/8-inch	0 to 5

B. Material selected for use as gas permeable aggregate will be virgin stone obtained from a licensed quarry/mine and will be composed of particles that will not be reduced in size due to forces exerted on the material during placement and construction as by the Los Angeles wear test (ASTM C131).

C. Gas-permeable aggregate layer must consist of a minimum of 6 inches below the entire building slab, and 16 inches (6 inches above and 6 inches below 4-inch sub-slab pipes) in all sub-slab SSDS pipe trenches. All communication sleeves must be filled with gas-permeable aggregate.

D. Non-Woven Geotextile Material

1. Basis-of-Design Product: Subject to compliance with requirements, provide Mirafi N-series type 140NL as manufactured by TenCate, or comparable product from one of the following:

a. AgTec 3 oz. Non-Woven Geotextile
b. Geotex 451-EGNW4
c. Or approved equal.

2. Geotextile material to be placed on the prepared subgrade below the aggregate layer must be a non-woven polypropylene type.
3. Geotextile material must be installed following backfilling of the excavation to the subgrade and prior to installation of the gas-permeable aggregate layer.

E. Subsurface PVC Collection Pipe Network and Appurtenances

1. PVC pipe for vapor collection applications for underground installation must be 4-inch diameter Schedule 40 pipe having 0.020-inch slotted and solid pipe installed as per manufacturer's recommendations. Raw, unslotted pipe will have a wall thickness of 0.237-inches, a maximum working pressure of 220 pounds per square inch (PSI) by gauge at 73 degrees F, and weigh approximately 2.01 lbs/foot. Joints must be solvent-welded. Threaded joints will not be used.
2. All horizontal portions of solid SSDS piping must be pitched a minimum of 1% towards slotted piping segments (or condensate drains, to be recommended by Contractor in shop drawings pitching towards slotted pipe is infeasible). Condensate drain installation details are included in the Drawings.
3. All fittings must be of the same manufacturer, material, class, and Schedule as the pipe. Sweep type fittings must be used as appropriate. Any required threaded joints must be provided with Teflon tape or flange joints with nitrile or urethane gaskets.
4. Solvent cement joints for the pipe and pipe installation must be made in accordance with the manufacturer's recommendations and ASTM D2855.

F. Vapor Barrier

1. Basis-of-Design Product: Subject to compliance with requirements, provide 20-mil sheet membrane vapor barrier for under-slab application, Drago Wrap, as manufactured by Stego Industries, LLC, or comparable product from one of the following:

    a. Grace - Florprufe
    b. Viaflex - VaporBlock Plus 20-mil
    c. Or approved equal.

2. Basis-of-Design Product: Subject to compliance with requirements, provide liquid-applied vapor barrier for application on vertical walls, Geoseal, as manufactured by Epro, or comparable product from one of the following:

    a. Kemperol 2K-PUR
    b. Aquafin SG-3
    c. Or approved equal.

3. Contractor required to seal all seams, penetrations, and terminations at footings/pile caps, grade beams, and perimeter walls, etc. as per manufacturer's instructions.
4. Sheet membrane vapor barrier must be installed beneath the slab-on-grade and rat slab. Contractor required to seal vapor barrier to slabs and footings and to seal all seams and penetrations as per manufacturer's instructions and the Drawings.
5. Liquid-applied vapor barrier products must be installed on surfaces that are prepared in accordance with manufacturer's requirements, including cleaning, and preparing all applicable surfaces, and crack and joint sealing using manufacturer-approved products.
6. Provide additional vapor barrier installation accessories as necessary to install the products to the manufacturer's specifications.
7. Ensure accessories are from same manufacturer as product.

8. Contractor to ensure that transitions between different vapor barrier products are made in accordance with manufacturer's specifications.

G. Collection Network Transition, Riser Pipes, and Building Penetrations

1. Underground SSDS piping must remain 4-inch Schedule 40 0.020-inch slotted or solid PVC pipe and transition (via couplings) to above grade 4-inch galvanized steel piping after piping penetrates through the slab-on-grade and rat slab. The above-grade 4-inch galvanized steel pipes will transition to a manifold and then to a 4-inch Schedule 40 galvanized steel pipe. which must extend to the roof-mounted SSDS fans and exhaust stack.
2. Cleanouts, unions, and cleanout plugs are to be provided in accordance with all applicable NYCDOB standards and codes.
3. Cleanouts must be installed within the first 12-inches of the cellar slab penetration on the interior side of each riser leg location. Additional cleanouts, unions, and cleanout plugs to be provided in accordance with all applicable NYCDOB standards and codes.
4. Following the cleanouts and other accessories, the 4-inch Schedule 40 PVC pipes will transition to 4-inch galvanized steel pipe above grade (via coupling), to the manifold and to a 4-inch Schedule 40 galvanized steel riser. The 4-inch Schedule 40 galvanized steel riser will also connect all sub-roof piping to the fan on the roof.
5. All horizontal solid pipe segments (both PVC and galvanized steel, aboveground and underground) must slope a minimum of 1% uniformly toward underground slotted piping or vertical pipe segments. Condensate drains must be installed along solid pipe runs as necessary if 1% slope towards slotted or vertical pipe segments cannot be maintained.
6. All building penetrations must be in accordance with the Drawings and provided with sleeves and/or fire-stop material in accordance with all applicable NYCDOB standards and codes.
7. 4-inch butterfly valves, vacuum gauges, and air flow rate assemblies will be installed on each individual manifold leg, and a differential pressure switch connected to remote telemetry system, and a vacuum indicator will be installed on the 4-inch galvanized steel riser pipe.
8. Following the accessories and piping manifold, the 4-inch Schedule 40 galvanized steel riser pipe will extend thought the building and connect to the roof-mounted flanged connections, and exhaust stack, as shown on the Drawings. Additional cleanouts, unions, cleanout plugs will be provided (and installed as necessary) in accordance with all applicable NYCDOB standards and codes.

H. Condensate Drains

1. A condensate drain will be installed on SSDS-3 as shown on the Drawings.
2. Additional condensate drains must be installed at all low points in SSDS piping when 1% slope to slotted pipe is unachievable.
3. Condensate drains must be of the same construction as SSDS piping and must be constructed as shown on the Drawings.
4. Condensate drains must be constructed as necessary to maintain pipe slope and located on shop drawing submittals.

I. Monitoring Points

1. The monitoring points must be installed in the subsurface aggregate layer, through the slab, as shown on the Drawings.
2. Monitoring points must be constructed with 1-inch diameter solid-wall Schedule 80 PVC. Monitoring points will terminate 3 inches below the top of the gas permeable aggregate to evaluate pressure beneath the floor slab.

3. Completed monitoring points must be air-tight, preventing the potential for migration of gas from the sub-slab into the building.
4. The 1-inch diameter Schedule 80 PVC pipe must be completed with a 1-inch diameter Schedule 80 PVC cap with quick-disconnect fitting with ¼-inch threads, shut off valve and viton seal as shown on the Drawings.
5. Access cover shall be flush mounted 6-inch diameter, cast iron cleanout or approved equal. Three inches of hydraulic cement must be poured inside cleanout over properly sealed penetration.
6. Label each monitoring point with engraved metal tag on chain around PVC pipe with: "SSDS MONITORING POINT" and the monitoring point ID (e.g., MP-1). Letter height must be 1/4-inch minimum.
7. Any damaged monitoring points during the construction must be replaced, or reinstalled to the satisfaction of the Commissioner.

J. Manifold Accessories: The following accessories must also be installed at the ground level on the individual riser legs before the solid galvanized steel pipes are manifolded. The accessories must be made accessible via wall access panel, or other access ways to be provided by the Contractor:

1. Cleanout

    a. Cleanouts must be provided for each leg of the manifold within 12-inches of the pipe entry into the building.

2. Flow Meter

    a. Flow meter assemblies must be provided for each leg of the manifold to measure flow associated with each section of piping (total of 3 for the SSDS manifold).
    b. Flow meters must be installed on each SSDS leg such that it is located a minimum of 1 foot away from the cleanout and the butterfly valve, to maximize spacing between these SSDS accessories.
    c. Each flow meter assembly must include the pitot tube measurement probe, magnehelic differential pressure gauge with a range of 0-0.5 inches WC, and any ancillary hardware necessary to install and provide differential pressure readings measured in units of inches of water column (as a surrogate for air flow rate and to be converted to cubic feet per minute during inspections).
    d. Flow meter pitot tubes must be installed a minimum of 1 foot away from any fittings and/or accessories that disrupt laminar air flow within the riser pipe assembly (i.e., the butterfly valve, or any pipe fittings that change the direction of air flow).
    e. Each flow meter must be labeled to correspond to the associated riser leg.

3. Pressure Gauge/Vacuum Indicators

    a. The pressure gauges must be mounted on each 4-inch riser leg, and the 4-inch riser pipe above the manifold (total of 4).
    b. Indoor gauges must have a range of 0-10 inches of water column (WC).

4. Butterfly Valve

    a. Butterfly valves must be mounted on each riser leg (total of 3 for the SSDS manifold).
    b. Butterfly valves must be installed near the manifold header such that it is the furthest SSDS line accessory from the SSDS line slab penetration.

K. Riser Pipe Accessories: The following accessories must also be installed on each galvanized steel riser pipe and/or on the roof-level for each blower:

1. Differential Pressure Switch, and remote telemetry system:

   a. The differential pressure switch must be mounted on the 4-inch riser pipe prior to the fans.
   b. The set point of the switch should be adjusted after the SSDS is fully operational. The switch must be weatherproof, and Underwriters Laboratories (UL) listed.
   c. Each switch must have National Pipe Thread (NPT) conduit connection and NPT process connection.
   d. The differential pressure switch must signal notification to the remote telemetry system on low vacuum conditions.
   e. The remote telemetry system must be capable of notifying off-site personnel of any alarm conditions via email and text/cellular phone.
   f. Electrical supply must be provided for the differential pressure switches, alarm panel, and remote telemetry system. Internet connection must be provided for the remote telemetry system. The Contractor must also provide a connection between the differential switches and the alarm panel. The differential pressure switch must be functional following installation and calibrated, if necessary, in accordance with manufacturer's requirements. All electrical work for the vapor mitigation system must be coordinated with the electrician.

2. Cleanout/Blind Flange

   a. A cleanout/blind flange must be provided on riser after penetration through the roof and before stack.

3. Vacuum Indicator

   a. The vacuum indicator must be mounted on the 4-inch riser leg on the roof before each SSDS fan, in accordance with the Drawings.
   b. The outdoor pressure gauges (vacuum indicator) must have a range of 0-10 inches WC.

4. Sample Port

   a. Sample ports must be installed as shown in Drawings and must consist of a ¼" NPT tap by 1/4-inch stainless-steel nipple, and ¼" smooth-nosed sampling tap with a 1/4-inch stainless-steel ball valve.

5. Electrical

   a. The Contractor will provide electrical connections at the roof for the SSDS fan, and at the manifold location for remote telemetry alarm station.
   b. Provide local power disconnect switch for manual termination of the blower, as shown on the Drawings.
   c. All electrical work for the vapor mitigation system must be coordinated with the Commissioner.

L. Suction Fan and Accessories

1. The blowers (total of 2, 1 for immediate use, and 1 for future use) and associated accessories will meet or exceed the following specifications:

    a. Basis-of-Design Product: Subject to compliance with requirements, provide Compact GI Size 106 as manufactured by New York Blower, or comparable product from one of the following:

        1) IPF Colasit CHVS125
        2) OBAR GBR 89
        3) Or approved equal.

    b. Each fan must be direct-drive medium-pressure radial fan capable of: flow rate of 150 CFM at a static pressure of 7 inches water column vacuum.
    c. The motor, supplied by the fan manufacturer, must be three phase 0.5 HP, 60 Hz, 120/208 V, direct drive, totally enclosed and fan cooled with appropriate NEMA mounting.
    d. Blower will be installed within a totally insulated UL rated enclosure, NEMA Class: UL Type 4, 4X, 6, 6P, 12 and 13. The enclosure will comply with UL 508 and be equipped with manufacturer's supplied wall fastening lugs.
    e. The suction fan will be installed with flexible connectors on the fan inlets and the damper discharges. Flexible connectors will be as supplied or recommended by the suction fan manufacturer
    f. Floor mounted steel vibration isolators must be provided for the fan and related equipment as manufactured by the fan manufacturer, pursuant to the recommendations of the fan manufacturer.
    g. Fans operating at full capacity must not generate combined noise levels greater than 65 dB at 30 feet.
    h. Contractor must provide manufacturer's recommended grease and grease gun, and 10 inlet filters.
    i. An additional fan must be provided for future use.

2. Other

    a. The Contractor must install the fan and accessories in-line between the roof riser pipe termination and the exhaust stack, as shown on the Drawings.
    b. The Contractor must provide local power disconnect switch for manual termination of each fan.

3. VFD

    a. VFD must be connected to the fan and mounted at a location that is accessible for inspection.
    b. The VFD make and model must be selected, and drive must be compatible with the proposed SSDS fan and Drawings.

4. Exhaust Stack

    a. On discharge of the exhaust fan, Contractor must install one 4-inch Schedule 40 galvanized steel exhaust stack with rain cap in accordance with the Drawings.
    b. The stack must be secured in accordance with applicable Sections of the construction documents and NYCDOB code requirements.
    c. The exhaust stack must be secured to the bulkhead wall using vibration isolating mounts.

d. Exhaust Stack will terminate a minimum of 7 feet above the finished roof. The exhaust stack will be at least 10 feet away from adjoining or adjacent buildings, air intakes/inlets and operable windows and in accordance with NYCDOB code requirements. The exhaust stack will be supported by vibration-isolating pipe hangers and wall mounts and/or guy wires in accordance with architectural/mechanical specifications and as required to meet NYCDOB code, including for wind loads. The Contractor must coordinate the location of the riser/exhaust stack with the appropriate trades to ensure that these location requirements are met.

M. General

1. Provide additional installation accessories as necessary for a complete SSDS ready for use. Ensure accessories are from same manufacturers as products.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION/INSPECTION

A. Verify substrate is visibly dry and free of moisture.

B. At a minimum, all components identified on the following Inspection Schedule for the installation of the vapor barrier, and SSDS must be inspected and approved by the Commissioner prior to completing each phase of work. Additional inspections, examinations, and quality control measures may be required as per manufacturer's recommendation and are the responsibility of the Contractor.

C. The Commissioner reserves the right to perform additional inspections or quality control tests as deemed necessary by the Commissioner at any point during the construction process at no additional cost to the City of NY.

D. The Contractor must notify the Commissioner to schedule the following milestone inspections.

#	**Inspections**
1	Sub-base (filter fabric, aggregate layer) preparation following foundation footing and pier installation.
2	Delivery to the Site of gas permeable aggregate, prior to use.
3	Installation of collection pipe network, couplings, and riser "stub-outs" prior to completion of gravel layer.
	Installation of crawl space SSDS components before crawl space enclosure
4	Installation by section or of all vapor barrier appurtenance and seals.
5	Final Inspection of all SSDS subsurface components, including monitoring points and vapor barrier, prior to concrete slab pours.
6	Observation of pressure test of completed interior riser pipes. See the following Section 3.3 regarding test requirements.
7	Completed installation of all portions of interior riser pipe prior to enclosure within sheetrock/interior walls.

#	**Inspections**
8	Fan installation, startup, alarm and accessories diagnostics testing.
9	Final inspection of the completed system and confirmation of properly installed sampling ports and gauges.

3.3 INTERIOR RISER PRESSURE TESTING

A. The interior risers must undergo a pressure test to ensure all components, excluding the differential pressure switches, flow meters, and magnehelic gauges, can withstand 5 pounds per square inch (psi) pressure for 30 minutes.

1. A cleanout must be permanently installed on each pipe within 12 inches of the pipe entry (or nearest coupling) into the cellar level and prior to any additional joints, couplings, or pipe segments. A pressure-stop balloon must be inflated between the foundation wall or slab and the cleanout creating an airtight seal. A temporary airtight seal must be placed at the riser termination on the roof. A static pressure of at least 5 psi must be applied to the pipe at the cleanout location and maintained for a minimum of 30 minutes. All materials, gauges, and equipment for this test must be provided by the Contractor. The Commissioner must observe the performance of this test as per the Milestones Schedule.
2. If the pipe risers do not successfully maintain pressure, it is the responsibility of the Contractor to identify and seal all leaks. The test must be performed following all application of sealants as necessary until successful.

3.4 SURFACE PREPARATION

A. Preparation of all surfaces prior to the installation of the vapor barrier and SSDS will be as specified in the Contract Documents and Drawings.

1. Clean, prepare, and treat substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for vapor barrier application.
2. Mask off adjoining surfaces not receiving vapor barrier to prevent spillage affecting other construction.
3. Remove grease, oil, form release agents, and other penetrating contaminants from concrete.
4. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.
5. Prepare, fill, prime, and treat joints and cracks in substrate. Remove dust and dirt from joints and cracks according to ASTM D4258.

3.5 INSTALLATION

A. All components of the SSDS must be installed as specified in the Contract Documents and Drawings.

1. Non-Woven Geotextile Fabric

a. Product - Nonwoven geotextile must be installed following backfilling of the excavation to the subgrade and prior to installation of the gas-permeable aggregate.

b. Placement - When constructing any utility trenches, the geotextile should be placed perpendicular to the direction of flow and shingled in the down-gradient direction. Geotextile rolls which are damaged or contain imperfections must be reinstalled or replaced as directed. The geotextile must be laid flat and smooth so that it is in direct contact with the subgrade. The geotextile must also be free of tensile stresses, folds, and wrinkles. Geotextile panels must be continuously overlapped a minimum of 12 inches at all longitudinal and transverse joints.

c. Damage and Reinstallation - The geotextile must be protected during installation from clogging, tears, and other damage. Damaged geotextile must be reinstalled or replaced as directed. Torn or damaged geotextile must be replaced. Clogged areas of geotextile must be removed. Reinstallation must be performed by placing a patch of the same type of geotextile over the damaged area. The patch must extend a minimum of 12 inches beyond the edge of the damaged area. Patches must be continuously fastened using approved methods. Replacements and/or reinstallations must be performed at no additional cost to the Commissioner.

d. Penetrations - Engineered penetrations of the geotextile fabric must be constructed by methods recommended by the geotextile manufacturer.

e. Covering - Geotextile must not be covered prior to inspection and approval by the Commissioner. Aggregate must be placed in a manner that prevents any gravel particles from entering the geotextile overlap zone, prevents tensile stress from being mobilized in the geotextile, and prevents wrinkles from folding over onto themselves. Aggregate must not be dropped onto the geotextile from a height greater than 3 feet. No equipment must be operated directly on top of the geotextile without approval of the Commissioner.

2. Aggregate and Collection Pipe Network

a. Minimum 6-inch layer of aggregate must be placed and compacted as necessary on the geotextile fabric/prepared subgrade.

b. The collection pipe must be assembled and placed as identified on the Drawings. In collection pipe trench areas, collection pipe must slope away from interior riser location as shown on the Drawings.

c. A minimum of 6 inches of aggregate bedding and 6 inches of aggregate cover must be provided at all pipe locations. Aggregate must be placed a minimum of 6 inches on either side of the pipe to maintain the correct layout prior to inspection. Pipe hangers must be placed in accordance with the Architectural, Plumbing, and HVAC specifications.

d. Collection pipe that requires installation through concrete foundation members must be installed through a stainless steel sleeve as shown on the Drawings and in accordance with all applicable specification sections.

e. Subgrade piping will penetrate through the foundation and slabs-on-grade at the proposed locations shown in the Drawings. The actual location of the pipe penetrations must be coordinated with all applicable trades and proposed for approval in a shop drawing submittal.

f. Following installation, inspection, and approval of all subgrade piping inclusive of risers that will penetrate through the foundation or slabs-on-grade, aggregate must be placed and backfilled to the bottom of slab elevation.

g. Following backfilling, the vapor barrier layer must be installed, in accordance with this specification.

3. Application of Vapor Barrier

a. The vapor barrier products must be installed in accordance with manufacturer's recommendations.

b. The vapor barrier consists of the placement of the sealing of all concrete joints, contact points and penetration piping (including the vapor monitoring point and SSDS pipe sleeves through the slab) with the manufacturer's recommended materials.
c. For sheet membrane vapor barrier, unroll the product over the area where the slab is to be poured. Sheet membrane vapor barrier should completely cover the floor and sidewalls prior to backfilling and concrete restoration. All joints/seams should be overlapped six inches and taped along the continuous lengths of all seams and joints using the manufacturer's specified tape.
d. For liquid-applied vapor barrier products, prepare the applicable surfaces in accordance with manufacturer's requirements prior to application of the product.
e. Riser and other penetrations (including groundwater monitoring well penetrations) must be sealed with the manufacturer's specified tape and/or mastic in accordance with the manufacturer's recommendations.
f. Contractor to ensure that application of vapor barrier and connections to footings are in accordance with NYCDOB code.

4. Vapor Monitoring Points

a. Three (3) 1-inch Schedule 80 PVC pipes must be installed approximately 3 inches into the gas permeable aggregate layer and finished in flush-mount, 6-inch diameter watertight access manways in accordance with the drawings. Monitoring point construction extends through concrete slabs, vapor barrier, and gas-permeable aggregate layer. Contractor must coordinate penetration installation with other trades and design documents to ensure proper penetration through slabs and vapor barrier.

5. Solid Vertical Risers

a. The solid risers must be located as identified in the Drawings. All risers must be installed, tested, labeled, and enclosed, as identified, in the interior wall cavities.
b. A minimum of one sign per floor and one on the roof location must be permanently installed on each riser and must read:
CAUTION: DO NOT ALTER.
SUBSURFACE VENT PIPE.

6. Piping (General)

a. The run and arrangements of all pipes must be approximately as shown on drawings or specified and as directed during installation, and must be as straight and direct as possible, forming right angles or parallel lines with building walls and other pipes, and neatly spaced. No pipe must be installed where the headroom will be interfered with unless permission is obtained from the Commissioner. Offsets will be permitted where walls reduce in thickness or beams interfere with direct runs; offsets must be made at an angle of 45 degree to the vertical; in no case must the space between the pipes, partitions, walls, etc., exceed 5 inches. All exposed risers must be erected plumb, standing free, close to and parallel with walls and other pipes and be uniformly spaced. All horizontal runs of piping hung from structural floor, slab or floor beams must be erected as closely as possible to bottom of floor slabs, ceilings, or I-beams as the case may be. In no case must the headroom, beneath the pipe, be less than (7'-0") where the pipe is installed more than (1'-0") from wall, partition, etc. unless otherwise specified.
b. Condensate drains must be installed at all low points in the underground piping that are not sloped back to the underground slotted pipe. All piping must be sloped a minimum of 1% toward the underground slotted pipe or condensate drain.

c. Roughing underground or concealed in the floor or wall construction must be properly installed, tested, and inspected before any of the roughing is covered up. Should any work be covered up before being inspected and tested, it must be uncovered and recovered at the expense of the Contractor. Plugged fittings must be installed when specified.
d. All lines of piping and branches for fixtures passing through or in connection with the vapor barrier must be brought to the proper locations and levels so that fixtures and piping may be installed without disturbing the vapor barrier. All penetrations must be sealed per manufacturer's specifications and the Drawings.
e. All solid above ground and underground portions of piping will be sloped a minimum of 1% towards the slotted piping.
f. The exhaust stack will be located, installed, and permanently supported in accordance with the Drawings, the Contract Specifications, and New York City Building Code requirements.
g. Pipe hangers, bracing, and supports will be provided and installed as required by the Contract drawings and specifications, and New York City building code.

7. Suction Fans and Accessories

a. The suction fan exhaust stack must be located, installed, and permanently supported in accordance with the SSDS Drawings, the Specifications, and with NYCDOB requirements.
b. Suction fans must be electrically grounded.
c. Contractor must locate, install, and permanently support all system components in accordance with Building Code requirements.
d. Install accessories and fans in accordance with the Drawings at locations to be coordinated with the Commissioner. These accessories must be installed after pressure test.
e. Install in-line pressure gauges with threaded air-tight connections. The pressure gauges must be installed such that gauges can be easily removed and replaced.
f. Install and label the differential pressure switch for the fan installation. Connect differential pressure switch to the alarm panel so that the following condition is indicated: low vacuum.
g. Arrange roof piping with 1% slope down towards riser pipe termination, as shown on the Drawings, to prevent accumulation of condensate.
h. Contractor must start up SSDS and demonstrate satisfactory operation, including operation of instrumentation and connection to the alarm panel, in the presence of the Commissioner.

3.6 PROTECTION

A. General: It is the responsibility of the Contractor to ensure that no damage occurs to components of the SSDS, and vapor barrier, prior to, during, or following installation of the system, or during any subsequent performance of construction for the facility as identified on the Drawings and Specifications. This includes the installation of all subsurface utilities required for the operation of building systems. Any damages to the SSDS during performance of the Work must be replaced or reinstalled, and tested at no additional cost to the City of New York.

B. Protect vapor barrier from damage and wear during application and remainder of construction period, according to manufacturer's written instructions.

C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.7 RECORDKEEPING

A. The Contractor must maintain the following information on-site:

1. Permits, registrations, affidavits, and other regulatory notifications.
2. Document that the utilities were marked.
3. Document all field problems (i.e., areas of contamination, utility conflicts, etc.) and how they were resolved.
4. Truck logs and manifests/bills of lading for incoming gas-permeable aggregate.
5. Logs of vapor barrier installation inspections by manufacturer's representative as backup for final vapor barrier warranty following completion of installation.

3.8 GUARANTY, AND SCHEDULE

A. The Contractor must guaranty all parts supplied and installed under this Specification for one year following all systems being fully operational and accepted by the Commissioner by the date of Substantial Completion. All operational issues for the system as installed by the Contractor that are identified within one year of Substantial Completion and accepted by the Commissioner , and to the extent that the operational issues are deemed by the Commissioner to be a result of the Contractor's installation, will be conducted at no charge to the City of NY.

B. Upon Substantial Completion of the installation work by a manufacturer certified installer, furnish the membrane manufacturer's written materials warranty.

C. Provide a complete submittal schedule and milestone inspection schedule to outline the pre-approval and work completion timelines for Commissioner review.

END OF SECTION 313000

SECTION 314000- ENVIRONMENTAL MANAGEMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY OF WORK

A. Reference the following documents included in the Appendix.

1. Phase I Environmental Site Assessment, prepared by Louis Berger U.S., Inc., August 2024.
2. Subsurface (Phase II) Investigation, prepared by Louis Berger U.S., Inc., February 2025.
3. Draft Remedial Action Plan (RAP), prepared by AKRF, Inc. (AKRF), dated May 2025.

B. Contractor is aware that the site is environmentally impacted. Contractor must review the Phase I Environmental Site Assessment (ESA), Subsurface (Phase II) Investigation Report, Draft Remedial Action Plan (RAP) and the Construction Health and Safety Plan (CHASP) provided as Appendix A to the RAP. Contractor must comply with all requirements of the RAP and CHASP, including but not limited to the following subject areas:

1. Soil/Fill Excavation and Removal
2. Stockpile Management
3. Disposal Facility Selection and Recordkeeping, Including Manifests and Weight Tickets
4. Transportation, including trucking permits and procedures (liners, covers, etc.)
5. Odor and Dust Control
6. Stabilized Construction Entrance, Truck Inspection, Equipment Decontamination
7. Import requirements for Soil/Fill/Aggregate
8. Signage
9. Worker Training, including 40-Hour OSHA Certifications and Medical Monitoring as required
10. Storm Preparedness

C. Perform Work in accordance with the requirements of Related Sections/Drawings

1. Section 026200 - Excavation and Disposal of Potential Contaminated Soils
2. Section 312000 - Earth Moving
3. Section 313000 - Vapor Mitigation System
4. Section 315000 - Excavation Support and Protection
5. Section 329113 - Soil Preparation
6. Section 071416 - Cold Fluid-Applied Waterproofing

D. Contractor must segregate any construction and demolition (C&D) and other materials from soil/fill. All C&D and related wastes must be disposed in accordance with applicable United States Environmental Protection Agency (US EPA), New York State Department of Environmental Conservation (NYSDEC), and New York City Department of Environmental Protection (NYCDEP) regulations.

E. Contamination may be encountered during excavation activities. Upon discovery of evidence of soil contamination, such as staining, sheen, or odor, the Contractor must notify the Commissioner immediately. Any reporting requirements to US EPA, NYSDEC and NYCDEP must be conducted by the Commissioner.

1. Contaminated materials must be segregated from other excavated materials and properly characterized for disposal in accordance with applicable US EPA, NYSDEC and NYCDEP regulations.

F. Hazardous materials, if identified or encountered, must be transported and disposed of in accordance with all applicable regulations, including but not limited to those under the Toxic Substances Control Act (TSCA), Resource Conservation and Recovery Act (RCRA), Hazardous Materials Transportation Act (HMTA), and the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

G. Contact Commissioner to provide a hazardous waste generator identification number, if required.

H. Contractor must assume full responsibility for compliance with all applicable Federal, State, and local regulations pertaining to work practices, hauling, treatment, discharge, and/or and disposal of C&D, soil/fill, and water. Contractor is responsible to advise the Commissioner of any conflict between applicable US EPA, NYSDEC and NYCDEP requirements and this specification.

I. Contractor must perform all work in accordance with these specifications and associated approvals/requirements of NYSDEC and NYCDEP.

J. Contractor must obtain acceptance of the excavated material by an appropriate waste disposal facility(s) according to applicable regulations, and must perform any associated waste characterization sampling.

K. Contractor must transport excavated materials to waste/disposal facilities using appropriately permitted waste haulers according to applicable regulations.

L. Contractor must prepare a site-specific Health and Safety Plan (HASP) and submit it for review by the Commissioner prior to any excavation activities. Details on health and safety requirements are provided in Article 1.6 of this Section.

M. Contractor must handle the excavated material in a manner to protect site personnel, the public, and the environment in accordance with all applicable regulations, including supplying and installing any barricades as necessary to delineate and safeguard the exclusion zone and/or any other restricted access zones established in accordance with the requirements of the NYCDEP-approved RAP/CHASP and as directed by the Commissioner.

N. Regulatory Requirements, References, and Standards: In addition to Contract Documents, work must be accomplished in strict adherence to applicable US EPA, NYSDEC and NYCDEP regulations. Wherever there is a conflict or overlap of the regulatory requirements, references, standards and these specifications, the more stringent provision must apply.

1. Before starting the work, Contractor must examine this Specification for compliance with codes and regulations applicable to the work and immediately report any discrepancy to the Commissioner at least 5 days prior to scheduled start of work.
2. Contractor must comply with additional requirements specified in Article 1.6 - Health and Safety below.

O. Authority to Stop Work: Causes for suspension/stopping of work may be at any time if a determination is made that conditions do not conform with this Specification or applicable regulations. The stoppage of work must continue until conditions have been corrected to the satisfaction of the Commissioner. Standby time taken to resolve any problems must be at no additional expense to the Commissioner.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 SUBMITTALS

A. Initial submittals must be provided for review and approved by the Commissioner:

1. Details of proposed disposal facilities for soil/fill and C&D debris, including sampling requirements (if any).
2. Details of all sources of imported soil, fill, or other material, which must be approved by the Commissioner prior to import of any material to the site.
3. Submit a Statement of Qualifications for review and approval. The Statement should provide sufficient data and information to relate that the Contractor is fully experienced in the removal, handling, transportation, and disposal of soil, water, and other wastes.
4. The Contractor must obtain all applicable permits before commencing any work.
5. The Contractor must prepare a site Health and Safety Plan (HASP). All Contractor site personnel will be required to read and sign the HASP.
6. Environmental Materials Management Plan (EMMP).
7. Waste Characterization Plan.

B. Project Submittals

1. Contractor must submit an EMMP to the Commissioner for approval in accordance with this section. The plan must include listing of all proposed disposal facilities and transporters, including waste characterization/acceptance criteria and permits. The plan must also include proposed sources of imported topsoil and any fill materials required for the project. The plan must outline procedures, permits, and related requirements to manage water and associated discharge in accordance with this Section. The Commissioner must have the right to accept or reject the use of any facilities proposed by the Contractor at no additional cost to the City of New York. In accordance with Plan, at least 10 days prior to initiation of off-site material disposal activity, submit to the Commissioner the location for off-site material disposal and any required waste classification documentation. Upon disposal, submit documentation of final satisfactory disposal (i.e., manifests) within 30 days in accordance with Plan.
2. Submit copies of permits and licenses for the Contractor's waste hauler(s) and disposal facility.

3. The Waste Characterization Plan must include information on the estimated volume of material to be disposed of off-site, method of sample collection (e.g., soil borings, test pits, etc.), proposed pre-characterization sampling locations and sample types (e.g., grab vs composite), proposed laboratory analytical methods, and details on the environmental sampling personnel and environmental testing laboratory. Samples must be collected under the supervision of a Qualified Environmental Professional (QEP) as defined in 6NYCRR Part 360.2 and analyzed in a NYSDOH-certified laboratory.
4. Submit waste characterization data and approval letter(s) from the intended disposal facility(s) that any pre-characterization sampling results meet the applicable acceptance criteria and the facility has adequate capacity to receive the waste material in accordance with the EMMP. The approval letter prepared by the disposal facility must acknowledge receipt of the waste characterization results and all applicable Related Documents outlined in Article 1.2(B) of the Section. Such acceptance letters must be subject to the review and approval of the Commissioner prior to shipping any materials off-site. Upon disposal, submit documentation of final satisfactory disposal (i.e., manifests) within 14 days in accordance with the Plan.
5. Source certification and other information for proposed import material (including backfill) must be submitted to the Commissioner for approval at least two weeks prior to import and are subject to Article 3.3 (C) of this Specification.
6. All submittals related to soil disposal and/or material import require review by the Commissioner and NYCDEP prior to off-site disposal or import to the site. The review process may lead to longer review times. No delay claims related to the Commissioner and NYCDEP review submittals will be accepted.
7. If dewatering is required, provide equipment specifications associated with the dewatering system, including pumps, settling/frac tanks, filter equipment, etc.

C. Post Project / Contract Closeout Submittals

1. Contractor will compile and submit to the Commissioner all completed and signed waste shipment record forms, bills of lading, manifests, and disposal receipts pertaining to this Project.

D. Regulatory Requirements, References, and Standards: In addition to Contract Documents, work must be accomplished in strict adherence to applicable Federal, State, and local regulations. Wherever there is a conflict or overlap of the regulatory requirements, references, standards and these specifications, the more stringent provision must apply.

1. Before starting the work, Contractor must examine this Specification for compliance with codes and regulations applicable to the work and immediately report any discrepancy to the Commissioner at least five (5) business days prior to scheduled start of work.
2. Contractor must comply with additional requirements specified in Article 1.6 - Health and Safety below.

E. Stop Work Authority: Causes for suspension/stopping of work may be at any time if a determination is made that conditions are not within those set within this Specification or applicable regulations. The stoppage of work must continue until conditions have been corrected to the satisfaction of the Commissioner. Standby time taken to resolve any problems must be at no additional expense to the City of New York.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.6 HEALTH AND SAFETY

A. Toxic Effects: The Contractor must assume all responsibility for any toxic effects to workers or authorized visitors from the air supplied to respirators or from toxic or damaging vapors or residues resulting from petroleum, solvents, or other hazardous substances in soil or groundwater.

B. Chemical Hazards: Soil and groundwater at the site may be contaminated with petroleum, methane, solvents, or other hazardous substances. Contractor must provide materials, equipment, and training to workers and authorized visitors to ensure their protection from these and any other hazards which may be identified during the course of this work. Workers in areas with evidence of contaminated material or known hazardous waste must have completed a 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) training course that meets OSHA requirements of 29 CFR Part 1910, Occupational Safety and Health Standards. In addition, all personnel in contaminated work zones will have up-to-date 8-hour refresher training and medical monitoring.

C. Physical Hazards: Contractor must provide safety equipment and training to workers and authorized visitors to ensure their protection from any physical hazards including but not limited to trip/fall hazards, working at elevation, heat stress, contact with energized (hot) active equipment, noise, overhead bump hazards, and electrical shock that may be present during the Work.

D. Safety Act: The Williams-Steiger Occupational and Safety Health Act (OSHA) of 1970, as amended, must be strictly complied with during the course of this Project. This Act must govern the conduct of the Contractor's workers, subcontractors, and visitors to the Project site.

E. Accident Prevention and Reporting:

1. To protect the lives and health of workers and authorized visitors, Contractor must comply with all pertinent provisions of the latest edition of the "Manual of Accident Prevention in Construction" issued by the Associated General Contractors of America, Inc.
2. Contractor must maintain an accurate record of all accidents that occur during the work, and must report any injury or loss of life to the Commissioner immediately.

F. Emergency Response: Contractor must establish an Emergency Response Team made up of members of its work force. Team members must be trained, organized, and capable of responding in the event of an accident, fire, or other emergency at the work site. Contractor must designate a Site Safety Coordinator to train team members regarding the location and use of site-specific fire/life safety equipment. As a minimum requirement, members of the Emergency Response Team must be knowledgeable in standard first aid and CPR techniques, fire extinguisher use, and evacuation procedures.

G. Worker Protection: Contractor must provide and maintain all safety measures necessary to properly protect workers.

H. Emergency Actions: In an emergency affecting the safety of life, the work, or adjoining property, the Contractor, to prevent such threatened loss or injury without special instruction or authorization from the Commissioner is hereby permitted to act at own discretion.

I. Hazard Communication Act: Comply with the Hazard Communication Standard promulgated by OSHA (29CFR1910.1200).

J. The Contractor must prepare a site-specific HASP and implement it during any time that contaminated soil is being handled. The HASP must include, but not be limited to, the following elements:

1. General HASP introduction including project location, scope of work covered by HASP, names, addresses, and telephone numbers for the Contractor's project manager, the Health and Safety Officer (HSO), and emergency assistance telephone numbers;
2. A sign-off sheet indicating acceptance by Contractor's project manager and HSO;
3. Position description of health and safety personnel;
4. Project description;
5. Site map;
6. Hazard assessment for construction workers;
7. Training requirements;
8. Definition and identification of work zones;
9. Site access restrictions;
10. Contaminant description/characterization;
11. Personal protection equipment (PPE) requirements;
12. Air monitoring procedures;
13. Action levels triggering PPE upgrades, dust suppression, etc.;
14. Decontamination and disposal procedures; and
15. Affidavit of site workers.

K. Work Zones

1. Prior to commencing work, work zones should be defined by: location, type of work performed, and personnel allowed access.
2. The work zone(s) must be delineated using safety fencing and/or other barricades according to applicable regulations. Access to the work zone(s) by unauthorized personnel must be prohibited.

L. Work Zone and Community Air Monitoring

1. At a minimum, the Commissioner will conduct initial air monitoring for volatile organic compounds (VOCs) or particulates at a frequency that complies with the NYCDEP-approved RAP/CHASP.
2. Based on initial air monitoring results and/or other site conditions, the Commissioner may initiate more frequent air monitoring to ensure that concentrations of VOCs and/or dust do not exceed safe action levels at the perimeter of the work zone in accordance with typical OSHA Short-term Exposure Limits (STELs) and typical community air monitoring requirements. If perimeter action levels specified in the RAP and/or determined appropriate by the Commissioner are exceeded, the Commissioner will direct Contractor to implement dust suppression measures, abatement of organic vapors, and/or temporary work stoppage, as appropriate. Commissioner will not accept any delay claims associated with conducting dust suppression or abatement of organic vapors and/or methane.
3. Contractor must protect and ensure that the Commissioner's air monitoring equipment is not damaged or stolen. The cost to repair any damage to equipment caused by the Contractor.

M. Applicable Health and Safety Regulations/Publications

1. Occupational Safety and Health Administration (OSHA), Standards and Regulations, 29 CFR 1910 and 1926.
2. NIOSH/OSHA/USCG/EPA Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities.

3. U.S. Department of Health and Human Services (DHHS) "NIOSH Sampling and Analytical Methods", DHHS (NIOSH) Publication 84-100.
4. ANSI, Practice for Respiratory Protection, Z88.2 (1980).
5. ANSI, Emergency Eyewash and Shower Equipment, Z41.1 (1983).
6. ANSI, Protective Footwear, Z358.1 (198 1).
7. ANSI, Physical Qualifications for Respirator Use, Z88.6 (1984).
8. ANSI, Practice for Occupational and Educational Eye and Face Protection, Z87.1 (1968).

N. Dust Control

1. The Contractor must furnish, operate and maintain equipment and employ methods to prevent migration of vapors, odors, and dust beyond the boundaries of the active work area.
2. Dust and odor suppression measures must at a minimum include:

    a. Wetting of the soil prior to disturbance and during disturbance as needed to prevent dust generation.
    b. Maintaining appropriate low vehicle speeds in unpaved areas.
    c. Maintaining gravel roadways or existing site ground coverings (e.g., existing pavement) until disturbance is required for construction and stabilizing exposed soil with ground surface covering as soon as practical.
    d. Discontinuing activities if generation of dust is observed and using alternate methods.
    e. Complying with additional requirements of the Contract Documents and guidance, laws and regulations of US EPA, NYSDEC and NYCDEP agencies.

3. A source of clean, potable water must be made continuously available to wet down exposed soil surfaces.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Reuse and Imported Backfill

1. No material must be reused on-site unless specifically allowed under this Section and approved by the Commissioner and NYCDEP. The protocol for the evaluation of excavated material for potential reuse on Site is outlined in Section 3.2.1 and 3.2.2. the NYCDEP-approved RAP.
2. Imported backfill materials are subject to Article 3.3(C) of this Section.
3. On-site existing concrete slabs, masonry, and asphalt must not be utilized (reused) as fill material unless specifically allowed under this Section and approved by the Commissioner and NYCDEP.
4. Commissioner must have the right to accept or reject the reuse of excavated materials and/or use of any specific source of imported material proposed by Contractor at no additional cost to the City of New York.

B. Demarcation Fabric

1. Demarcation fabric must be provided for identifying the interface between imported clean backfill and remaining soil/fill.
2. Demarcation fabric must be highly visible synthetic geotextile or other synthetic material approved by the Commissioner, as specified in Section 313000 "Vapor Mitigation System").

C. Storage Containers

1. U.S. Department of Transportation (DOT)-approved containers and drums must be provided for storage, transportation and disposal of C&D, soil, dewatering and drilling fluids, decontamination water, used PPE, and/or used sampling equipment.

D. Plastic Sheeting

1. Polyethylene sheeting of 6-millimeter (6-mil) or greater thickness must be provided for stockpiling and covering soil/fill or other waste materials.

E. Hay Bales

1. Hay or straw bales must be provided for constructing berms around soil stockpiled above site grade. Silt fencing may also be used for this purpose.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Verification of Conditions

1. Contractor and, as applicable, Contractor's subcontractor for waste disposal, must be held to have field-verified the types and quantity of wastes to be removed and must have become familiar with all variable field conditions existing at the Project site facility.
2. Contractor must notify the Commissioner of excavation activities. Commissioner must reserve the right to field verify quantities of contaminated soil.

3.3 DESCRIPTION OF WORK

A. Excavation and Disposal of Soil and Fill

1. Contractor must excavate and dispose of all excavated soil and fill material that cannot be reused on-site in accordance with the requirements set forth below, and in accordance with NYCDEP and NYSDEC requirements.
2. Excavated material must be segregated based on the intended disposal facility and/or classification of the material, which may include but not limited to, the following categories:

a. Excavated material intended for on-site reuse in accordance with section 3.2.1 of the NYCDEP-approved RAP.

b. Non-hazardous excavated soil/historical fill requiring off-site disposal. This material may contain VOCs, metals, pesticides, polychlorinated biphenyls (PCBs), and/or semi-volatile organic compounds (SVOCs) exceeding 6 NYCRR Part 375 NYSDEC Unrestricted Use or Restricted Use Soil Cleanup Objectives (SCOs).
c. Non-hazardous petroleum-contaminated soil.
d. Hazardous lead-contaminated soil as defined within the Code of Federal Regulations Title 40 Part 261.

3. Stockpiling

a. Contractor must arrange for approval from the disposal facility(s) to allow for direct loading of soil to minimize the need for staging or stockpiling of soil on-site. To the extent that staging or stockpiling of soil is necessary, procedures are outlined below.
b. The Contractor must prepare an area of the site approved by the Commissioner for stockpiling segregated soil.
c. The area will be prepared by placing 6-mil plastic on the ground with a straw bale barrier (or equivalent) placed around its perimeter to prevent run-off. If the material is contaminated, at the direction of the Commissioner, a double layer of 6-mil plastic must be used.
d. The Contractor must stockpile the excavated soil separately from any excavated soil that is determined by the Commissioner to be historic fill, petroleum-contaminated, or hazardous waste.
e. At the end of each workday, the Contractor must cover all excavated soil stockpiles with 6-mil plastic sheeting, weighted with tires or other suitable weights to maintain the cover and prevent rain and wind erosion.
f. The stockpiles will be frequently inspected. Damaged tarp covers / sheeting will be promptly replaced. Stockpiles will be protected with silt fences. Hay bales will be used, as needed to protect any storm water catch basins or other discharge points.

4. Groundwater, if encountered in the excavation, must be handled and discharged in accordance with Article 3.3 (D) of this specification.
5. Waste Characterization Sampling

a. Contractor must conduct waste characterization sampling as necessary to satisfy proposed facility requirements. Contractor must complete a Waste Characterization Report documenting sampling procedures, location, and analytical results. The Report must be submitted to the Commissioner.
b. If supplemental waste characterization samples are required during excavation, Contractor must assist the Commissioner in collecting such samples.
c. Laboratory analysis of samples may require five (5) or more business days. If waste characterization is conducted by the Commissioner, the Commissioner will accept no delay claims associated with the sampling and testing procedures performed.

6. End Point Sampling

a. If evidence of contamination is encountered during excavation, the Commissioner may be required to collect end point samples from the excavation sidewalls and bottom in accordance with NYSDEC requirements. Contractor must assist the Commissioner in collecting such samples.
b. Laboratory analysis of samples may require five (5) or more business days. Commissioner will accept no delay claims associated with the sampling and testing procedures performed.

7. Disposal Facility and Waste Hauler

    a. Waste classification results must be used for acceptance of excavated material at an approved waste disposal facility, for ensuring that the facility is properly permitted to accept the stated material, and that the facility provides the stated storage and/or disposal services.
    b. Contractor must obtain letters of commitment from the waste hauler and disposal facility to haul and accept shipments. The letter must indicate agreement to handle and accept the specified estimated quantities and types of material during the time period specified in the project schedule.
    c. Prior to the excavated material leaving the site, the waste hauler and disposal facility commitment letters will be submitted by the Commissioner for approval.
    d. In the event that the identified and approved facility ceases to accept the stated materials or the facility ceases operations, it is the Contractor's responsibility to locate an alternate approved and permitted facility for accepting materials. The Contractor is responsible for making the necessary arrangements to utilize the facility. This must be done at no extra cost or delay to the City of New York.
    e. Commissioner must have the right to accept or reject the use of any specific disposal facilities proposed by Contractor at no additional cost to the City of New York.

8. Schedule and Notification

    a. Contractor is responsible for notifying the Commissioner at least 48 hours before the scheduled date for the off-site disposal of excavated material at the facility approved by the Commissioner and also approved by the actual disposal facility. The Commissioner must be on-site during material removal operations.

9. Recordkeeping

    a. Contractor must organize and maintain the material shipment records/manifests required by the Federal Resources Conservation and Recovery Act (RCRA) (Public Law 94-580), the State of New York and the state where the disposal facility is located.
    b. Contractor must coordinate manifesting and placarding of shipments. All quantities must also be measured and recorded upon arrival at the disposal facility. If any deviation between the two records occurs, the matter is to be reported immediately to the Commissioner.
    c. Commissioner will obtain an EPA hazardous waste generator identification number, if necessary.
    d. The Contractor must not deliver waste to any facility other than the waste disposal facility listed on the shipping manifest.
    e. The Contractor must provide a copy of all manifests, weight tickets, and bill of lading to the Commissioner.

10. Truck Decontamination

    a. The Contractor must ensure that trucks are protected against contamination by properly covering and lining them with compatible material (such as polyethylene) or by decontaminating them prior to any use other than hauling hazardous materials.

b. The Contractor must install an outbound-truck inspection station close to the site exit. Before exiting the site, trucks will be required to stop at the truck inspection station and will be examined for evidence of contaminated soil on the undercarriage, body, and wheels. Soil and debris will be removed. Brooms, shovels and potable water will be utilized for the removal of soil from vehicles and equipment, as necessary.
c. The Contractor must inspect all vehicles leaving the project site to ensure that contaminated soil adhering to the wheels or undercarriage is removed prior to the vehicle leaving the site.
d. The Contractor must be responsible for any and all action necessary to remedy situations involving material spilled in transit or mud and dust tracked off-site. This clean-up must be accomplished at the Contractor's expense.

11. Vehicle Routes

a. The Contractor is responsible for planning vehicle routes to ensure adequate road conditions and overhead clearance, and to verify that trucks do not exceed weight restrictions.
b. The Contractor must ensure that drivers of trucks leaving the site with soil/fill will be instructed to proceed without stopping in the vicinity of the site to prevent neighborhood impacts.

B. Reuse of Excavated Soil

1. Excavated material may not be reused on-site without prior testing and approval by Commissioner. If the Contractor anticipates reuse of site material, the Contractor must notify Commissioner of the area with a minimum 2-week notice prior to reuse to allow for sampling and approval by Commissioner.

C. Importing of Fill Material

1. All backfill materials must be imported in accordance with the requirements set forth below.
2. The Contractor must provide documentation regarding the origin of the material, amount of material to be imported, address and Block/Lot identification, ownership and a brief history of the source site.
3. Unless otherwise approved by the Commissioner, Contractor must import only soil, fill, or other material that meets one of the following criteria. If there is a conflict between applicable regulations and this Section, the more stringent criteria must apply.

a. Virgin quarried material from a licensed quarry or mine.
b. Material from a facility that possesses a current Beneficial Use Determination (BUD) from the NYSDEC that includes testing at a minimum frequency of one sample per 1,000 cubic yards and such results are below the lower of Protection of Groundwater and Restricted Residential Use SCOs set forth in NYSDEC 6 NYCRR Part 375. Any testing must be conducted in accordance with this Section.
c. Material from any other site where testing results performed by the Commissioner demonstrate that the material meets the lower of the Groundwater Protection SCOs and the Restricted Residential SCOs set forth in NYSDEC 6 NYCRR Part 375 in accordance with the following procedures:

1) Contractor must establish a designated stockpile of soil intended for import to the site for the Commissioner to sample. Designated stockpile must remain undisturbed until tested by the Commissioner and loaded and transported to the site.

2) The samples will be analyzed for Target Compound List (TCL) VOCs, SVOCs, pesticides, PCBs, and Target Analyte List (TAL) metals at a minimum sampling frequency of one (1) five-point composite sample per 500 cubic yards imported to the site.
3) Laboratory analysis and approval of samples may require five (5) to ten (10) business days. Commissioner will accept no delay claims associated with the sampling, testing and approval procedures performed by the Commissioner.
4) Contractor must reimburse the Commissioner for any costs associated with resampling of soil that fails the criteria set forth above (the lower of the Groundwater Protection and Restricted Residential SCOs).
5) Material may not be imported for use as backfill without prior testing and approval by the Commissioner.

4. Commissioner may accept or reject the use of any specific source of imported material proposed by Contractor at no additional cost to the City of New York.
5. Schedule and Notification

a. Contractor is responsible for notifying the Commissioner at least two weeks before the scheduled date for importing material to review the source, associated documentation, and conduct sampling, if necessary, in accordance with the Environmental Materials Management Plan. Commissioner must be on-site when importing material to the site.

D. Management of Water

1. This work must consist of the proper removal and disposal of all groundwater and decontamination water generated during construction operations. The Contractor must be solely responsible for the proper removal and disposal or discharge of all groundwater and/or contaminated water generated at the job site, in accordance with any necessary permits.
2. The Contractor will have the option of treating water on-site for discharge to the combined sanitary/storm sewer system or removing contaminated water for off-site disposal. The Contractor must be responsible to choose a method compatible with the construction. If water will be discharged into the combined sanitary/storm sewer system, the Contractor must ensure that all water is treated to comply with the NYCDEP Sanitary/Combined and Storm Sewer Effluent Limit concentrations prior to discharge. The Contractor is responsible for providing settling or filtering tanks, treatment systems, and any other apparatus required by NYCDEP. Alternatively, the Contractor can provide a plan for transport and disposal at an off-site waste disposal facility.
3. On-site treatment and discharge into New York City combined sanitary/storm sewers.

a. Regulations: The Contractor must comply with all applicable regulations. This includes but may not be limited to Title 15 - NYCDEP Sewer Use Regulations.
b. Permits: The Contractor is solely responsible to obtain all necessary and appropriate Federal, State and Local permits and approvals, including but not limited to NYCDEP and/or NYSDEC, for dewatering discharge and off-site disposal of water, if necessary. The Contractor will be responsible for performing all and any system pilot tests required for permit approval. This includes but may not be limited to:

1) Industrial waste approval for the New York City sewer system.
2) Groundwater discharge permit for the New York City sewer system (NYCDEP Division of Sewer Regulation and Control), if discharge to sewer exceeds 10,000 gallons per day.

3) The Contractor must comply with NYSDEC State Pollutant Discharge Elimination System (SPDES) Permit Number GP-0-10-001, General Permit for Stormwater Discharges and/or any other NYSDEC discharge permitting requirements.
4) Wastewater quality control application, NYCDEP.

a) Identification and design of Contractor's proposed treatment to assure that the water meets the NYCDEP sewer use guidelines prior to discharge to the sewer, including identification of all materials, procedures, settling or filtering tanks, filters, treatment units, and other appurtenances proposed for treatment and disposal of contaminated water.
b) Copies of all submitted permit applications and approved permits the Contractor have received.

c. The Contractor must supply all settling or filtering tanks, pumps, filters, treatment devices and other appurtenances for treatment, temporary storage and disposal of contaminated water. All equipment must be suitable for the work described herein.
d. The Contractor is solely responsible for disposal of all water, in accordance with all of the US EPA, NYSDEC and NYCDEP l regulations.
e. The Contractor is responsible for sampling and testing of water in accordance with the NYCDEP and/or NYSDEC permit requirements.
f. The Contractor must be responsible to maintain the discharge rate to the sewer such that all permit requirements are met, the capacity of the sewer is not exceeded and no surcharging occurs downstream due to the Contractor's actions.
g. The Contractor must be responsible for disposal of any and all treatment media and decontamination of any treatment units, including disposal of any decontamination fluids and/or any other wastes associated with the dewatering activities.

END OF SECTION 314000

SECTION 315000 - EXCAVATION SUPPORT AND PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section includes temporary excavation support and protection systems.

B. Related Requirements:

1. Section 312000 "Earth Moving" for excavating and backfilling, for controlling surface-water runoff and ponding, and for dewatering excavations.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, performance properties, and dimensions of individual components and profiles, and calculations for excavation support and protection system.

B. Shop Drawings: For excavation support and protection system, prepared by or under the supervision of a qualified professional engineer licensed in the State of New York.

1. Include plans, elevations, sections, and details.
2. Show arrangement, locations, and details of soldier piles, piling, lagging, tiebacks, bracing, and other components of excavation support and protection system according to engineering design.
3. Indicate type and location of waterproofing.
4. Include a written plan for excavation support and protection, including sequence of construction of support and protection coordinated with progress of excavation.

C. Engineering Services Submittal: For excavation support and protection systems, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For the following:

1. Land surveyor.
2. Professional Engineer: Experience with providing engineering services of the type indicated, including documentation that engineer is licensed in the state of New York.

B. Contractor Calculations: For excavation support and protection system. Include analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation.

C. Existing Conditions: Using photographs, show existing conditions of adjacent construction and site improvements that might be misconstrued as damage caused by inadequate performance of excavation support and protection systems. Submit before Work begins.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.7 FIELD CONDITIONS

A. Interruption of Existing Utilities: Do not interrupt any utility-serving facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:

1. Notify Commissioner no fewer than two days in advance of proposed interruption of utility.
2. Do not proceed with interruption of utility without Commissioner's written permission.

B. Survey Work: Engage a licensed land surveyor or professional engineer licensed in the State of New York to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks, and record existing elevations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Engineering Services: Engage a qualified professional engineer, licensed in the State of New York as defined in DDC General Conditions, to design excavation support and protection systems to resist all lateral loading and surcharge, including but not limited to, retained soil, groundwater pressure, adjacent building loads, adjacent traffic loads, construction traffic loads, material stockpile loads, and seismic loads, based on the following:

1. Compliance with OSHA Standards and interpretations, 29 CFR 1926, Subpart P.
2. Compliance with requirements of the New York City Building Code.
3. Compliance with utility company requirements.

2.2 MATERIALS

A. Provide materials that are either new or in serviceable condition.

B. Wood Lagging: Lumber, mixed hardwood, nominal rough thickness of size and strength required for application.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards that could develop during excavation support and protection system operations.

1. Shore, support, and protect utilities encountered.

3.3 INSTALLATION - GENERAL

A. Locate excavation support and protection systems clear of permanent construction, so that construction and finishing of other work is not impeded.

B. Install excavation support and protection systems to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Commissioner and the Department of Buildings.
2. Provide alternate routes around closed or obstructed traffic ways if required by the Department of Buildings.

C. Install excavation support and protection systems without damaging existing buildings, structures, and site improvements adjacent to excavation.

3.4 SOLDIER PILES AND LAGGING

A. Install steel soldier piles before starting excavation.

1. Extend soldier piles below excavation grade level to depths adequate to prevent lateral movement.
2. Space soldier piles at regular intervals not to exceed allowable flexural strength of wood lagging.
3. Accurately align exposed faces of flanges to vary not more than 2 inches from a horizontal line and not more than 1:120 out of vertical alignment.

B. Install wood lagging within flanges of soldier piles as excavation proceeds.

1. Trim excavation as required to install lagging.
2. Fill voids behind lagging with soil, and compact.

C. Install wales horizontally at locations indicated on Drawings and secure to soldier piles.

3.5 BRACING

A. Locate bracing to clear columns, floor framing construction, and other permanent work. If necessary to move brace, install new bracing before removing original brace.

1. Do not place bracing where it will be cast into or included in permanent concrete work unless otherwise approved by Commissioner.
2. Install internal bracing if required to prevent spreading or distortion of braced frames.
3. Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.6 UPKEEP

A. Monitor and maintain excavation support and protection system.

B. Prevent surface water from entering excavations by grading, dikes, or other means.

C. Continuously monitor vibrations, settlements, and movements to ensure stability of excavations and constructed slopes and to ensure that damage to permanent structures is prevented.

3.7 FIELD QUALITY CONTROL

A. Survey-Work Benchmarks: Resurvey benchmarks daily during installation of excavation support and protection systems, excavation progress, and for as long as excavation remains open.

1. Maintain an accurate log of surveyed elevations and positions for comparison with original elevations and positions.
2. Promptly notify Commissioner if changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.

B. Promptly correct detected bulges, breakage, or other evidence of movement to ensure that excavation support and protection system remains stable.

C. Promptly repair damages to adjacent facilities caused by installation or faulty performance of excavation support and protection systems.

3.8 REMOVAL

A. Remove excavation support and protection systems when construction has progressed sufficiently to support excavation and earth and hydrostatic pressures.

1. Remove in stages to avoid disturbing underlying soils and rock or damaging structures, pavements, facilities, and utilities.
2. Remove excavation support and protection systems to a minimum depth of 48 inches below overlying construction, and abandon remainder.
3. Fill voids immediately with approved backfill compacted to density specified in Section 312000 "Earth Moving."
4. Repair or replace, as approved by Commissioner, adjacent work damaged or displaced by removing excavation support and protection systems.

END OF SECTION 315000

SECTION 321216 - ASPHALT PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Hot-mix asphalt paving.
2. Hot-mix asphalt overlay.
3. Cold milling of existing asphalt pavement.
4. Hot-mix asphalt patching.
5. Asphalt curbs.
6. Asphalt traffic-calming devices.
7. Asphalt surface treatments.

B. Related Requirements:

1. Section 312000 "Earth Moving" for subgrade preparation, fill material, separation geotextiles, unbound-aggregate subbase and base courses, and aggregate pavement shoulders.
2. Section 321313 "Concrete Paving" for concrete pavement and for separate concrete curbs, gutters, and driveway aprons.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to hot-mix asphalt paving including, but not limited to, the following:

a. Review proposed sources of paving materials, including capabilities and location of plant that will manufacture hot-mix asphalt.
b. Review requirements for protecting paving work, including restriction of traffic during installation period and for remainder of construction period.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: Include technical data and tested physical and performance properties.

1. Herbicide.
2. Paving geotextile.
3. Joint sealant.

B. Hot-Mix Asphalt Designs:

1. Submit to the Commissioner for approval of each hot-mix asphalt design proposed for the Work.
2. For each hot-mix asphalt design proposed for the Work.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For paving-mix manufacturer and testing agency.

B. Material Certificates: Include statement that mixes containing recycled materials will perform equal to mixes produced from all new materials.

1. Aggregates.
2. Asphalt binder.
3. Asphalt cement.
4. Cutback prime coat.
5. Emulsified asphalt prime coat.
6. Tack coat.
7. Fog seal.

C. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Manufacturer Qualifications: A paving-mix manufacturer registered with and approved by the New York City Department of Transportation.

C. Testing Agency Qualifications: Qualified in accordance with ASTM D3666 for testing indicated.

D. Regulatory Requirements: Requirements for Asphaltic concrete, including, but not limited to handling, equipment, transportation etc., not specified herein must conform to the more stringent requirements of the latest editions of the New York City Department of Transportation's Standard Highway Specifications, New York State Department of Transportation Standard Specifications, and AASHTO "Standard Specification for Transportation, Materials, Methods of Sampling and Testing."

1.8 FIELD CONDITIONS

A. Environmental Limitations: Do not apply asphalt materials if subgrade is wet or excessively damp, if rain is imminent or expected before time required for adequate cure, or if the following conditions are not met:

1. Prime Coat: Minimum surface temperature of 60 deg F.
2. Tack Coat: Minimum surface temperature of 60 deg F.
3. Slurry Coat: Comply with weather limitations in ASTM D3910.
4. Asphalt Base Course and Binder Course: Minimum surface temperature of 40 deg F and rising at time of placement.
5. Asphalt Surface Course: Minimum surface temperature of 60 deg F at time of placement.

PART 2 - PRODUCTS

2.1 AGGREGATES

A. General: Use materials and gradations that have performed satisfactorily in previous installations.

B. Coarse Aggregate: ASTM D692/D692M, sound; angular crushed stone, crushed gravel, or cured, crushed blast-furnace slag.

C. Fine Aggregate: ASTM D1073 or AASHTO M 29, sharp-edged natural sand or sand prepared from stone, gravel, cured blast-furnace slag, or combinations thereof.

1. For hot-mix asphalt, limit natural sand to a maximum of 20 percent by weight of the total aggregate mass.

D. Mineral Filler: ASTM D242/D242M or AASHTO M 17, rock or slag dust, hydraulic cement, or other inert material.

2.2 ASPHALT MATERIALS

A. Asphalt Binder: ASTM D6373 or AASHTO M 320 binder designation .

B. Asphalt Cement: ASTM D3381/D3381M for viscosity-graded material ASTM D946/D946M for penetration-graded material.

C. Cutback Prime Coat: ASTM D2027/D2027M, medium-curing cutback asphalt, MC-30 or MC-70 MC-250.

D. Emulsified Asphalt Prime Coat: ASTM D977 or AASHTO M 140 emulsified asphalt, or ASTM D2397/D2397M or AASHTO M 208 cationic emulsified asphalt, slow setting, diluted in water, of suitable grade and consistency for application.

E. Tack Coat: ASTM D977 or AASHTO M 140 emulsified asphalt, or ASTM D2397/D2397M or AASHTO M 208 cationic emulsified asphalt, slow setting, diluted in water, of suitable grade and consistency for application.

F. Fog Seal: ASTM D977 or AASHTO M 140 emulsified asphalt, or ASTM D2397/D2397M or AASHTO M 208 cationic emulsified asphalt, slow setting, factory diluted in water, of suitable grade and consistency for application.

2.3 AUXILIARY MATERIALS

A. Joint Sealant: ASTM D6690, , hot-applied, single-component, polymer-modified bituminous sealant.

2.4 MIXES

A. Recycled Content of Hot-Mix Asphalt: Postconsumer recycled content plus one-half of preconsumer recycled content not less than percent or more than percent by weight.

1. Surface Course Limit: Recycled content no more than percent by weight.

B. Hot-Mix Asphalt: Dense-graded, hot-laid, hot-mix asphalt plant mixes approved by the New York City Department of Transportation ; designed in accordance with procedures in AI MS-2, "Asphalt Mix Design Methods"; and complying with the following requirements:

1. Provide mixes with a history of satisfactory performance in geographical area where Project is located.
2. Base Course: Per NYC DOT.
3. Binder Course: Per NYC DOT.
4. Surface Course: Per NYC DOT.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Verify that subgrade is dry and in suitable condition to begin paving.

B. Proceed with paving only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Protection: Provide protective materials, procedures, and worker training to prevent asphalt materials from spilling, coating, or building up on curbs, driveway aprons, manholes, and other surfaces adjacent to the Work.

B. Proof-roll subgrade below pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph.
2. Proof-roll with a loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons.
3. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Commissioner, and replace with compacted backfill or fill as directed.

3.4 COLD MILLING

A. Clean existing pavement surface of loose and deleterious material immediately before cold milling. Remove existing asphalt pavement by cold milling to grades and cross sections indicated.

1. Mill to a depth of 2 inches.
2. Mill to a uniform finished surface free of excessive gouges, grooves, and ridges.
3. Control rate of milling to prevent tearing of existing asphalt course.
4. Repair or replace curbs, driveway aprons, manholes, and other construction damaged during cold milling.
5. Excavate and trim unbound-aggregate base course, if encountered, and keep material separate from milled hot-mix asphalt.
6. Patch surface depressions deeper than 1 inch after milling, before wearing course is laid.
7. Handle milled asphalt material in accordance with approved waste management plan required in DDC General Conditions Section 017419 "Construction Waste Management and Disposal."
8. Keep milled pavement surface free of loose material and dust.
9. Do not allow milled materials to accumulate on-site.

3.5 PATCHING

A. Asphalt Pavement: Saw cut perimeter of patch and excavate existing pavement section to sound base. Excavate rectangular or trapezoidal patches, extending 12 inches into perimeter of adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Remove excavated material. Recompact existing unbound-aggregate base course to form new subgrade.

B. Portland Cement Concrete Pavement: Break cracked slabs and roll as required to reseat concrete pieces firmly.

1. Undersealing: Pump hot undersealing asphalt under rocking slab until slab is stabilized or, if necessary, crack slab into pieces and roll to reseat pieces firmly.
2. Remove disintegrated or badly cracked pavement. Excavate rectangular or trapezoidal patches, extending into perimeter of adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Recompact existing unbound-aggregate base course to form new subgrade.

C. Tack Coat: Before placing patch material, apply tack coat uniformly to vertical asphalt surfaces abutting the patch. Apply at a rate of 0.05 to 0.15 gal./sq. yd..

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.
2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

D. Placing Single-Course Patch Material: Fill excavated pavement areas with hot-mix asphalt base mix for full thickness of patch and, while still hot, compact flush with adjacent surface.

E. Placing Two-Course Patch Material: Partially fill excavated pavements with hot-mix asphalt base course mix and, while still hot, compact. Cover asphalt base course with compacted layer of hot-mix asphalt surface course, finished flush with adjacent surfaces.

3.6 CORRECTIVE WORK

A. Leveling Course: Install and compact leveling course consisting of hot-mix asphalt surface course to level sags and fill depressions deeper than 1 inch in existing pavements.

1. Install leveling wedges in compacted lifts not exceeding 3 inches thick.

B. Crack and Joint Filling: Remove existing joint filler material from cracks or joints to a depth of 1/4 inch.

1. Clean cracks and joints in existing hot-mix asphalt pavement.
2. Use emulsified-asphalt slurry to seal cracks and joints less than 1/4 inch wide. Fill flush with surface of existing pavement and remove excess.
3. Use hot-applied joint sealant to seal cracks and joints more than 1/4 inch wide. Fill flush with surface of existing pavement and remove excess.

3.7 SURFACE PREPARATION

A. Ensure that prepared subgrade has been proof-rolled and is ready to receive paving. Immediately before placing asphalt materials, remove loose and deleterious material from substrate surfaces.

B. Cutback Prime Coat: Apply uniformly over surface of compacted unbound-aggregate base course at a rate of 0.15 to 0.50 gal./sq. yd.. Apply enough material to penetrate and seal, but not flood, surface. Allow prime coat to cure.

1. If prime coat is not entirely absorbed within 24 hours after application, spread sand over surface to blot excess asphalt. Use enough sand to prevent pickup under traffic. Remove loose sand by sweeping before pavement is placed and after volatiles have evaporated.
2. Protect primed substrate from damage until ready to receive paving.

C. Emulsified Asphalt Prime Coat: Apply uniformly over surface of compacted unbound-aggregate base course at a rate of 0.10 to 0.30 gal./sq. yd. per inch depth. Apply enough material to penetrate and seal, but not flood, surface. Allow prime coat to cure.

1. If prime coat is not entirely absorbed within 24 hours after application, spread sand over surface to blot excess asphalt. Use enough sand to prevent pickup under traffic. Remove loose sand by sweeping before pavement is placed and after volatiles have evaporated.
2. Protect primed substrate from damage until ready to receive paving.

D. Tack Coat: Apply uniformly to surfaces of existing pavement at a rate of 0.05 to 0.15 gal./sq. yd..

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.

2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

3.8 HOT-MIX ASPHALT PLACEMENT

A. Machine place hot-mix asphalt on prepared surface, spread uniformly, and strike off. Place asphalt mix by hand in areas inaccessible to equipment in a manner that prevents segregation of mix. Place each course to required grade, cross section, and thickness when compacted.

1. Place hot-mix asphalt base course and binder course in number of lifts and thicknesses indicated.
2. Place hot-mix asphalt surface course in single lift.
3. Spread mix at a minimum temperature of 250 deg F.
4. Begin applying mix along centerline of crown for crowned sections and on high side of one-way slopes unless otherwise indicated.
5. Regulate paver machine speed to obtain smooth, continuous surface free of pulls and tears in asphalt-paving mat.

B. Place paving in consecutive strips not less than 10 feet wide unless infill edge strips of a lesser width are required.

1. After first strip has been placed and rolled, place succeeding strips and extend rolling to overlap previous strips. Overlap mix placement about 1 to 1-1/2 inches from strip to strip to ensure proper compaction of mix along longitudinal joints.
2. Complete a section of asphalt base course and binder course before placing asphalt surface course.

C. Promptly correct surface irregularities in paving course behind paver. Use suitable hand tools to remove excess material forming high spots. Fill depressions with hot-mix asphalt to prevent segregation of mix; use suitable hand tools to smooth surface.

3.9 JOINTS

A. Construct joints to ensure a continuous bond between adjoining paving sections. Construct joints free of depressions, with same texture and smoothness as other sections of hot-mix asphalt course.

1. Clean contact surfaces and apply tack coat to joints.
2. Offset longitudinal joints, in successive courses, a minimum of 6 inches.
3. Offset transverse joints, in successive courses, a minimum of 24 inches.
4. Construct transverse joints at each point where paver ends a day's work and resumes work at a subsequent time. Construct these joints using either "bulkhead" or "papered" method in accordance with AI MS-22, for both "Ending a Lane" and "Resumption of Paving Operations." as indicated on Drawings.
5. Compact joints as soon as hot-mix asphalt will bear roller weight without excessive displacement.
6. Compact asphalt at joints to a density within 2 percent of specified course density.

3.10 COMPACTION

A. General: Begin compaction as soon as placed hot-mix paving will bear roller weight without excessive displacement. Compact hot-mix paving with hot hand tampers or with vibratory-plate compactors in areas inaccessible to rollers.

1. Complete compaction before mix temperature cools to 185 deg F.

B. Breakdown Rolling: Complete breakdown or initial rolling immediately after rolling joints and outside edge. Examine surface immediately after breakdown rolling for indicated crown, grade, and smoothness. Correct laydown and rolling operations to comply with requirements.

C. Intermediate Rolling: Begin intermediate rolling immediately after breakdown rolling while hot-mix asphalt is still hot enough to achieve specified density. Continue rolling until hot-mix asphalt course has been uniformly compacted to the following density:

1. Average Density, Marshall Test Method: 96 percent of reference laboratory density in accordance with ASTM D6927 or AASHTO T 245, but not less than 94 percent or greater than 100 percent.
2. Average Density, Rice Test Method: 92 percent of reference maximum theoretical density in accordance with ASTM D2041/D2041M, but not less than 90 percent or greater than 96 percent.

D. Finish Rolling: Finish roll paved surfaces to remove roller marks while hot-mix asphalt is still warm.

E. Edge Shaping: While surface is being compacted and finished, trim edges of pavement to proper alignment. Bevel edges while asphalt is still hot; compact thoroughly.

F. Repairs: Remove paved areas that are defective or contaminated with foreign materials and replace with fresh, hot-mix asphalt. Compact by rolling to specified density and surface smoothness.

G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened.

H. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.11 ASPHALT CURBS

A. Construct hot-mix asphalt curbs over compacted pavement surfaces. Apply a light tack coat unless pavement surface is still tacky and free from dust. Spread hot-mix asphalt at a minimum temperature of 250 deg F.

1. Hot-Mix Asphalt: Same as pavement surface-course mix.

B. Place hot-mix asphalt to curb cross section indicated or, if not indicated, to local standard shapes, by machine or by hand in wood or metal forms. Tamp hand-placed materials and screed to smooth finish. Remove forms after hot-mix asphalt has cooled.

3.12 ASPHALT TRAFFIC-CALMING DEVICES

A. Construct hot-mix asphalt speed bumps humps cushions and tables over compacted pavement surfaces. Apply a tack coat unless pavement surface is still tacky and free from dust. Spread hot-mix asphalt at a minimum temperature of 250 deg F.

1. Tack Coat Application: Apply uniformly to surfaces of existing pavement at a rate of 0.05 to 0.15 gal./sq. yd..
2. Hot-Mix Asphalt: Same as pavement surface-course mix.

3. Before installation, mill pavement that will be in contact with bottom of traffic-calming device. Mill to a depth of 1 inch from top of pavement to a clean, rough profile.

B. Place and compact hot-mix asphalt to cross section indicated, by machine or by hand in wood or metal forms. Tamp hand-placed materials and screed to smooth finish. Remove forms after hot-mix asphalt has cooled.

3.13 INSTALLATION TOLERANCES

A. Pavement Thickness: Compact each course to produce thickness indicated within the following tolerances:

1. Base Course and Binder Course: Plus or minus 1/2 inch.
2. Surface Course: Plus 1/4 inch, no minus.

B. Pavement Surface Smoothness: Compact each course to produce surface smoothness within the following tolerances as determined by using a 10-foot straightedge applied transversely or longitudinally to paved areas:

1. Base Course and Binder Course: 1/4 inch.
2. Surface Course: 1/8 inch.
3. Crowned Surfaces: Test with crowned template centered and at right angle to crown. Maximum allowable variance from template is 1/4 inch.

C. Asphalt Traffic-Calming Devices: Compact and form asphalt to the shapes indicated and within a tolerance of plus or minus 1/8 inch of height indicated above pavement surface.

3.14 SURFACE TREATMENTS

A. Fog Seals: Apply fog seal at a rate of 0.10 to 0.15 gal./sq. yd. to existing asphalt pavement and allow to cure. With fine sand, lightly dust areas receiving excess fog seal.

B. Slurry Seals: Apply slurry coat in a uniform thickness in accordance with ASTM D3910 and allow to cure.

1. Roll slurry seal to remove ridges and provide a uniform, smooth surface.

3.15 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Thickness: In-place compacted thickness of hot-mix asphalt courses will be determined in accordance with ASTM D3549/D3549M.

C. Surface Smoothness: Finished surface of each hot-mix asphalt course will be tested for compliance with smoothness tolerances.

D. Asphalt Traffic-Calming Devices: Finished height of traffic-calming devices above pavement will be measured for compliance with tolerances.

E. In-Place Density: Testing agency will take samples of uncompacted paving mixtures and compacted pavement in accordance with ASTM D979/D979M or AASHTO T 168.

1. Reference maximum theoretical density will be determined by averaging results from four samples of hot-mix asphalt-paving mixture delivered daily to site, prepared in accordance with ASTM D2041/D2041M, and compacted in accordance with job-mix specifications.
2. In-place density of compacted pavement will be determined by testing core samples in accordance with ASTM D1188 or ASTM D2726/D2726M.

a. One core sample will be taken for every 1000 sq. yd. or less of installed pavement, with no fewer than three cores taken.
b. Field density of in-place compacted pavement may also be determined by nuclear method in accordance with ASTM D2950/D2950M and coordinated with ASTM D1188 or ASTM D2726/D2726M.

F. Replace and compact hot-mix asphalt where core tests were taken.

G. Remove and replace or install additional hot-mix asphalt where test results or measurements indicate that it does not comply with specified requirements.

3.16 WASTE HANDLING

A. General: Handle asphalt-paving waste according to approved waste management plan. Comply with DDC General Conditions.

END OF SECTION 321216

SECTION 321313 - CONCRETE PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Provide Concrete sidewalks in accordance with the requirements of the Contract Documents.

1. Concrete sidewalk installed on site (private & public) property and consisting of single course concrete laid on a stone base, meeting all requirements of New York State Department of Transportation (NYSDOT) and New York City Department of Transportation (NYCDOT).

B. Related Requirements:

1. Section 321373 "Concrete Paving Joint Sealants" for joint sealants in expansion and contraction joints within concrete paving and in joints between concrete paving and asphalt paving or adjacent construction.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Environmental Product Declaration (EPD): For each product.
2. Laboratory Test Reports: For concrete paving mixtures, documentation indicating that cured concrete complies with Solar Reflectance Index requirements.

C. Samples for Initial Selection: For each type of product, ingredient, or admixture requiring color selection.

D. Design Mixtures: For each concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

E. Concrete Formula: Before the contractor begins to manufacture concrete, the contractor must secure the Commissioner approval of the formula being proposed. The contractor must submit the purpose statement, in writing, of the sources of all ingredient materials, the type and brand of the cement and the number of pounds of each of the materials in a saturated surface-dry condition making up on cubic yard of concrete. The range of water-cement ratios within which the concrete will be manufactured and the method of mixing to be employed must also be stated. The approved formula must not be changed without written permission of the Commissioner.

F. Welded Wire Fabric: Shop drawings of reinforcing steel showing the location and type of supports and tie wires must be submitted to the Commissioner for their approval before any work covered by these drawings is undertaken.

G. Material Certificates: Submit materials certificate to the Commissioner which is signed by material producer and Contractor, certifying that materials comply with, or exceed, the requirements herein.

H. Contractor must prepare and obtain all required permits prior to construction unless otherwise directed by The City of New York. Supply permits to the Commissioner.

1.6 INFORMATIONAL SUBMITTALS

A. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Steel reinforcement and reinforcement accessories.
3. Admixtures.
4. Applied finish materials.

B. Material Test Reports: For each of the following:

1. Aggregates: Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

C. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Stamped Detectable Warning Installer Qualifications: An employer of workers who are properly trained by manufacturer of stamped concrete paving systems.

C. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.

1.8 FIELD CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:

1. When air temperature has fallen to or is expected to fall below 40 deg F, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F and not more than 80 deg F at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.

C. Hot-Weather Concrete Placement: Comply with ACI 301 and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. Refer to NYC DOT Standard Concrete Sidewalk Specification as noted on Builders Pavement Plan Drawings.

PART 3 - EXECUTION (NOT USED)

END OF SECTION 321313

SECTION 321373 - CONCRETE PAVING JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Related Requirements:

1. Section 079200 "Joint Sealants" for sealing nontraffic and traffic joints in locations not specified in this Section.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.4 ACTION SUBMITTALS

A. Product Data:

1. Concrete pavement joint sealants.
2. Joint-sealant backer materials.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.6 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 JOINT SEALANTS, GENERAL

A. Refer to NYC DOT Standard Concrete Sidewalk Specification as noted on Builders Pavement Plan Drawings for Concrete Paving Joint Sealants.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PAVING-JOINT-SEALANT SCHEDULE

A. Joints within concrete paving, refer to NYC DOT Standard Concrete Sidewalk Specification as noted on Builders Pavement Plan Drawings.

END OF SECTION 321373

SECTION 321400 - UNIT PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) theSpecifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New YorkStandard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Concrete pavers.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data:

1. For materials other than water and aggregates.
2. For the following:

    a. Pavers.

B. Samples for Verification: For full-size units of each type of unit paver indicated. Assemble no fewer than five Samples of each type of unit on suitable backing and grout joints. Include Samples of the following:

1. Joint materials.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for unit pavers, indicating compliance with requirements.

1. For solid interlocking paving units, include test data for freezing and thawing according to ASTM C67.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Installer Qualifications: An entity that employs installers who have Concrete Paver Installer Certification from the Interlocking Concrete Pavement Institute (ICPI) with the following designation:

1. Commercial Paver Technician Designation.

C. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store pavers on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

1.9 FIELD CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain each type of unit paver, joint material, and setting material from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.2 CONCRETE PAVERS

A. Concrete Pavers, Solid Interlocking Paving Units: Complying with ASTM C936/C936M and resistant to freezing and thawing when tested according to ASTM C67, made from normal-weight aggregates.

1. Thickness: 4 inches.
2. Face Size and Shape:

a. 3-1/4"-inch by 17-7/8" inch rectangle.

3. Color: Natural light - As selected by Commissioner from manufacturer's full range.

2.3 ACCESSORIES

A. Cork Joint Filler: Preformed strips complying with ASTM D1752, Type II.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine surfaces indicated to receive unit paving, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Where unit paving is to be installed over waterproofing, examine waterproofing installation, with waterproofing Installer present, for protection from paving operations, including areas where waterproofing system is turned up or flashed against vertical surfaces.

C. Proceed with installation only after unsatisfactory conditions have been corrected and waterproofing protection is in place.

3.3 PREPARATION

A. Remove substances from concrete substrates that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.

B. Sweep concrete substrates to remove dirt, dust, debris, and loose particles.

C. Proof-roll prepared subgrade according to requirements in Section 312000 "Earth Moving" to identify soft pockets and areas of excess yielding. Proceed with unit paver installation only after deficient subgrades have been corrected and are ready to receive subbase and base course for unit pavers.

3.4 INSTALLATION, GENERAL

A. Do not use unit pavers with chips, cracks, voids, discolorations, or other defects that might be visible or cause staining in finished work.

B. Mix pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

C. Cut unit pavers with motor-driven masonry saw equipment to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.

1. For concrete pavers, a block splitter may be used.

D. Handle protective-coated brick pavers to prevent coated surfaces from contacting backs or edges of other units. If, despite these precautions, coating does contact bonding surfaces of brick, remove coating from bonding surfaces before setting brick.

E. Joint Pattern: As indicated.

F. Pavers over Waterproofing: Exercise care in placing pavers and setting materials over waterproofing so protection materials are not displaced and waterproofing is not punctured or otherwise damaged. Carefully replace protection materials that become displaced and arrange for repair of damaged waterproofing before covering with paving.

1. Provide joint filler at waterproofing that is turned up on vertical surfaces.

G. Tolerances:

1. Do not exceed 1/32-inch unit-to-unit offset from flush (lippage) or 1/8 inch in 10 feet from level, or indicated slope, for finished surface of paving.
2. Do not exceed 1/16-inch unit-to-unit offset from flush (lippage) nor 1/8 inch in 24 inches and 1/4 inch in 10 feet from level, or indicated slope, for finished surface of paving.

H. Provide edge restraints as indicated. Install edge restraints before placing unit pavers.

1. Install edge restraints to comply with manufacturer's written instructions. Install stakes at intervals required to hold edge restraints in place during and after unit paver installation.
2. For metal edge restraints with top edge exposed, drive stakes at least 1 inch below top edge.
3. Install job-built concrete edge restraints to comply with requirements in Section 033000 "Cast-in-Place Concrete."
4. Where pavers set in mortar bed are indicated as edge restraints for pavers set in aggregate setting bed, install pavers set in mortar and allow mortar to cure before placing aggregate setting bed and remainder of pavers. Cut off mortar bed at a steep angle so it will not interfere with aggregate setting bed.
5. Where pavers embedded in concrete are indicated as edge restraints for pavers set in aggregate setting bed, install pavers embedded in concrete and allow concrete to cure before placing aggregate setting bed and remainder of pavers. Hold top of concrete below aggregate setting bed.

I. Provide steps made of pavers as indicated. Install paver steps before installing adjacent pavers.

1. Where pavers set in mortar bed are indicated for steps constructed adjacent to pavers set in aggregate setting bed, install steps and allow mortar to cure before placing aggregate setting bed and remainder of pavers. Cut off mortar bed at a steep angle so it will not interfere with aggregate setting bed.

3.5 AGGREGATE SETTING-BED APPLICATIONS

A. Compact soil subgrade uniformly to at least 95 percent of ASTM D1557 laboratory density.

B. Proof-roll prepared subgrade to identify soft pockets and areas of excess yielding. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Commissioner, and replace with compacted backfill or fill as directed.

C. Place separation geotextile over prepared subgrade, overlapping ends and edges at least 12 inches.

D. Place aggregate subbase and base, compact by tamping with plate vibrator, and screed to depth indicated.

E. Place aggregate subbase and base, compact to 100 percent of ASTM D1557 maximum laboratory density, and screed to depth indicated.

F. Place drainage geotextile over compacted base course, overlapping ends and edges at least 12 inches.

G. Place leveling course and screed to a thickness of 1 to 1-1/2 inches, taking care that moisture content remains constant and density is loose and uniform until pavers are set and compacted.

H. Treat leveling course with herbicide to inhibit growth of grass and weeds.

I. Set pavers with a minimum joint width of 1/16 inch and a maximum of 1/8 inch, being careful not to disturb leveling base. If pavers have spacer bars, place pavers hand tight against spacer bars. Use string lines to keep straight lines. Fill gaps between units that exceed 3/8 inch with pieces cut to fit from full-size unit pavers.

1. When installation is performed with mechanical equipment, use only unit pavers with spacer bars on sides of each unit.

J. Vibrate pavers into leveling course with a low-amplitude plate vibrator capable of a 3500- to 5000-lbf compaction force at 80 to 90 Hz. Use vibrator with neoprene mat on face of plate or other means as needed to prevent cracking and chipping of pavers. Perform at least three passes across paving with vibrator.

1. Compact pavers when there is sufficient surface to accommodate operation of vibrator, leaving at least 36 inches of uncompacted pavers adjacent to temporary edges.
2. Before ending each day's work, compact installed concrete pavers except for 36-inch width of uncompacted pavers adjacent to temporary edges (laying faces).
3. As work progresses to perimeter of installation, compact installed pavers that are adjacent to permanent edges unless they are within 36 inches of laying face.
4. Before ending each day's work and when rain interrupts work, cover pavers that have not been compacted and cover leveling course on which pavers have not been placed with nonstaining plastic sheets to protect them from rain.

K. Spread dry sand and fill joints immediately after vibrating pavers into leveling course. Vibrate pavers and add sand until joints are completely filled, then remove excess sand. Leave a slight surplus of sand on the surface for joint filling.

L. Do not allow traffic on installed pavers until sand has been vibrated into joints.

M. Repeat joint-filling process 30 days later.

3.6 CORRECTIVE WORK, POINTING, AND CLEANING

A. Remove and replace unit pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.

B. Pointing: During tooling of joints, enlarge voids or holes and completely fill with grout. Point joints at sealant joints to provide a neat, uniform appearance, properly prepared for sealant application.

C. Cleaning: Remove excess grout from exposed paver surfaces; wash and scrub clean.

1. Remove temporary protective coating as recommended by coating manufacturer and as acceptable to paver and grout manufacturers.
2. Do not allow protective coating to enter floor drains. Trap, collect, and remove coating material.

END OF SECTION 321400

SECTION 329113 - SOIL PREPARATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section includes planting soils specified by composition of the mixes.

B. Related Requirements:

1. Section 329300 "Plants" for placing planting soil for plantings.

1.3 DEFINITIONS

A. AAPFCO: Association of American Plant Food Control Officials.

B. Backfill: The earth used to replace or the act of replacing earth in an excavation. This can be amended or unamended soil as indicated.

C. CEC: Cation exchange capacity.

D. Compost: The product resulting from the controlled biological decomposition of organic material that has been sanitized through the generation of heat and stabilized to the point that it is beneficial to plant growth.

E. Duff Layer: A surface layer of soil, typical of forested areas, that is composed of mostly decayed leaves, twigs, and detritus.

F. Imported Soil: Soil that is transported to Project site for use.

G. Layered Soil Assembly: A designed series of planting soils, layered on each other, that together produce an environment for plant growth.

H. Manufactured Soil: Soil produced by blending soils, sand, stabilized organic soil amendments, and other materials to produce planting soil.

I. NAPT: North American Proficiency Testing Program. An SSSA program to assist soil-, plant-, and water-testing laboratories through interlaboratory sample exchanges and statistical evaluation of analytical data.

J. Organic Matter: The total of organic materials in soil exclusive of undecayed plant and animal tissues, their partial decomposition products, and the soil biomass; also called "humus" or "soil organic matter."

K. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified as specified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

L. RCRA Metals: Hazardous metals identified by the EPA under the Resource Conservation and Recovery Act.

M. SSSA: Soil Science Society of America.

N. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

O. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

P. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil"; but in disturbed areas such as urban environments, the surface soil can be subsoil.

Q. USCC: U.S. Composting Council.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include test data substantiating that products comply with requirements.
2. Include sieve analyses for aggregate materials.
3. Material Certificates: For each type of imported soil and soil amendment and fertilizer before delivery to the site, according to the following:

    a. Manufacturer's qualified testing agency's certified analysis of standard products.
    b. Analysis of fertilizers, by a qualified testing agency, made according to AAPFCO methods for testing and labeling and according to AAPFCO's SUIP #25.
    c. Analysis of nonstandard materials, by a qualified testing agency, made according to SSSA methods, where applicable.

B. Samples: For each bulk-supplied material, 1-quart volume of each in sealed containers labeled with content, source, and date obtained. Each Sample must be typical of the lot of material to be furnished; provide an accurate representation of composition, color, and texture.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Testing Agency Qualifications: An independent, state-operated, or university-operated laboratory; experienced in soil science, soil testing, and plant nutrition; with the experience and capability to conduct the testing indicated; and that specializes in types of tests to be performed.

1.7 SOIL-SAMPLING REQUIREMENTS

A. General: Extract soil samples according to requirements in this article.

B. Sample Collection and Labeling: Have samples taken and labeled by Commissioner soil scientist (CPSS) certified by SSSA under the direction of the testing agency.

1. Number and Location of Samples: Minimum o three representative soil samples manufacturer's stockpile for each soil to be used or amended for landscaping purposes.
2. Procedures and Depth of Samples: As directed by Commissioner.
3. Division of Samples: Split each sample into two, equal parts. Send half to the testing agency and half to Commissioner for records.
4. Labeling: Label each sample with the date, location keyed to a site plan or other location system, visible soil condition, and sampling depth.

1.8 TESTING REQUIREMENTS

A. General: Perform tests on soil samples according to requirements in this article.

B. Physical Testing:

1. Soil Texture: Soil-particle, size-distribution analysis by one of the following methods according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods":

    a. Sieving Method: Report sand-gradation percentages for very coarse, coarse, medium, fine, and very fine sand; and fragment-gradation (gravel) percentages for fine, medium, and coarse fragments; according to USDA sand and fragment sizes.
    b. Hydrometer Method: Report percentages of sand, silt, and clay.

2. Total Porosity: Calculate using particle density and bulk density according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
3. Water Retention: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."
4. Saturated Hydraulic Conductivity: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods"; at 85% compaction according to ASTM D 698 (Standard Proctor).

C. Chemical Testing:

1. CEC: Analysis by sodium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 3-Chemical Methods."
2. Clay Mineralogy: Analysis and estimated percentage of expandable clay minerals using CEC by ammonium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 1- Physical and Mineralogical Methods."

3. Metals Hazardous to Human Health: Test for presence and quantities of RCRA metals including aluminum, arsenic, barium, copper, cadmium, chromium, cobalt, lead, lithium, and vanadium. If RCRA metals are present, include recommendations for corrective action.
4. Phytotoxicity: Test for plant-available concentrations of phytotoxic minerals including aluminum, arsenic, barium, cadmium, chlorides, chromium, cobalt, copper, lead, lithium, mercury, nickel, selenium, silver, sodium, strontium, tin, titanium, vanadium, and zinc.

D. Fertility Testing: Soil-fertility analysis according to standard laboratory protocol of SSSA NAPT NEC-67 including the following:

1. Percentage of organic matter.
2. CEC, calcium percent of CEC, and magnesium percent of CEC.
3. Soil reaction (acidity/alkalinity pH value).
4. Buffered acidity or alkalinity.
5. Nitrogen ppm.
6. Phosphorous ppm.
7. Potassium ppm.
8. Manganese ppm.
9. Manganese-availability ppm.
10. Zinc ppm.
11. Zinc availability ppm.
12. Copper ppm.
13. Sodium ppm and sodium absorption ratio.
14. Soluble-salts ppm.
15. Presence and quantities of problem materials including salts and metals cited in the Standard protocol. If such problem materials are present, provide additional recommendations for corrective action.
16. Other deleterious materials, including their characteristics and content of each.

E. Organic-Matter Content: Analysis using loss-by-ignition method according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."

F. Recommendations: Based on the test results, state recommendations for soil treatments and soil amendments to be incorporated to produce satisfactory planting soil suitable for healthy, viable plants indicated. Include, at a minimum, recommendations for nitrogen, phosphorous, and potassium fertilization, and for micronutrients.

1. Fertilizers and Soil Amendment Rates: State recommendations in weight per 1000 sq. ft. for 6-inch depth of soil.
2. Soil Reaction: State the recommended liming rates for raising pH or sulfur for lowering pH according to the buffered acidity or buffered alkalinity in weight per 1000 sq. ft. for 6-inch depth of soil.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and compliance with state and Federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Do not move or handle materials when they are wet or frozen.
4. Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates.

PART 2 - PRODUCTS

2.1 PLANTING SOILS SPECIFIED BY COMPOSITION

A. General: Soil amendments, fertilizers, and rates of application specified in this article are guidelines that may need revision based on testing laboratory's recommendations after preconstruction soil analyses are performed.

B. Planting-Soil Type : Existing, on-site surface soil, with the duff layer, if any, retained; modified to produce viable planting soil. Blend existing, on-site surface soil with the following soil amendments and fertilizers in the following quantities to produce planting soil:

1. Ratio of Loose Compost to Soil: 1:3 by volume.

C. Planting-Soil Type 1 : Imported, naturally formed soil from off-site sources and consisting of soil according to USDA textures; and modified to produce viable planting soil.

D. Planting-Soil Type 1: Manufactured soil consisting of manufacturer's basic sandy loam according to USDA textures, blended in a manufacturing facility with sand, stabilized organic soil amendments, and other materials to produce viable planting soil.

1. Additional Properties of Manufacturer's Basic Soil before Amending: Soil reaction of pH 6 to 7 and minimum of percent organic-matter content, friable, and with sufficient structure to give good tilth and aeration.
2. Unacceptable Properties: Manufactured soil must not contain the following:

    a. Unacceptable Materials: Concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
    b. Unsuitable Materials: Stones, roots, plants, sod, clay lumps, and pockets of coarse sand that exceed a combined maximum of 5 Insert number percent by dry weight of the manufactured soil.
    c. Large Materials: Stones, clods, roots, clay lumps, and pockets of coarse sand exceeding in any dimension.

3. Blend manufacturer's basic soil with the following soil amendments and fertilizers in the following quantities to produce planting soil:

    a. Ratio of Loose Compost to Soil: 1:3 by volume.
    b. Volume of Sand: 50% per cu. yd.

2.2 ORGANIC SOIL AMENDMENTS

A. Compost: Well-composted, stable, and weed-free organic matter produced by composting feedstock, and bearing USCC's "Seal of Testing Assurance," and as follows:

1. Feedstock: May include animal waste.
2. Reaction: pH of 5.5 to 8.
3. Soluble-Salt Concentration: Less than 4 dS/m.
4. Moisture Content: 35 to 55 percent by weight.
5. Organic-Matter Content: 50 to 60 percent of dry weight.
6. Particle Size: Minimum of 98 percent passing through a 1/2-inch sieve.

B. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, debris, and material harmful to plant growth.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

A. Place planting soil and fertilizers according to requirements in other Specification Sections.

B. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in planting soil.

C. Proceed with placement only after unsatisfactory conditions have been corrected.

3.3 PREPARATION OF UNAMENDED, ON-SITE SOIL BEFORE AMENDING

A. Excavation: Excavate soil from designated area(s) to a depth of 6 inches and stockpile until amended.

B. Screening: Pass unamended soil through a 2-inch sieve to remove large materials.

3.4 PLACING AND MIXING PLANTING SOIL OVER EXPOSED SUBGRADE

A. General: Apply and mix unamended soil with amendments on-site to produce required planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Subgrade Preparation: Till subgrade to a minimum depth of 4 inches Remove stones larger than 1-1/2 inches in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off City of New York's property.

1. Apply, add soil amendments, and mix approximately half the thickness of unamended soil over prepared, loosened subgrade according to "Mixing" Paragraph below. Mix thoroughly into top 2 inches of subgrade. Spread remainder of planting soil.

C. Mixing: Spread unamended soil to total depth of 4 inches, but not less than required to meet finish grades after mixing with amendments and natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.

1. Amendments: Apply soil amendments except compost, and fertilizer, if required, evenly on surface, and thoroughly blend them with unamended soil to produce planting soil.
2. Lifts: Apply and mix unamended soil and amendments in lifts not exceeding 8 inches in loose depth for material compacted by compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.

D. Compaction: Compact each blended lift of planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D 698 and tested in-place.

E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.5 PLACING MANUFACTURED PLANTING SOIL OVER EXPOSED SUBGRADE

A. General: Apply manufactured soil on-site in its final, blended condition. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Subgrade Preparation: Till subgrade to a minimum depth of 4 inches. Remove stones larger than 1-1/2 inches in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off City of New York's property.

1. Apply approximately half the thickness of planting soil over prepared, loosened subgrade. Mix thoroughly into top 2 inches of subgrade. Spread remainder of planting soil.

C. Application: Spread planting soil to total depth of 4 inches indicated on Drawings, but not less than required to meet finish grades after natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.

1. Lifts: Apply planting soil in lifts not exceeding 8 inches in loose depth for 4 inches in loose depth for material compacted by hand-operated tampers.

D. Compaction: Compact each lift of planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D 698.

E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.6 BLENDING PLANTING SOIL IN PLACE

A. General: Mix amendments with in-place, unamended soil to produce required planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Compaction: Compact blended planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D 698.

3.7 APPLYING COMPOST TO SURFACE OF PLANTING SOIL

A. Application: Apply compost component of planting-soil mix4 inches of compostto surface of in-place planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Finish Grading: Grade surface to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.8 CLEANING

A. Protect areas adjacent to planting-soil preparation and placement areas from contamination. Keep adjacent paving and construction clean and work area in an orderly condition.

B. Remove surplus soil and waste material including excess subsoil, unsuitable materials, trash, and debris and legally dispose of them off City of New York's property unless otherwise indicated.

1. Dispose of excess subsoil and unsuitable materials on-site where directed by the Commissioner.

END OF SECTION 329113

SECTION 329300 - PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Plant materials.
2. Fertilizers.
3. Weed-control barriers.
4. Mulches.
5. Landscape edgings.

1.3 COORDINATION

A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data Submittals: For each product.

1. Plant Materials: Include quantities, sizes, quality, and verified sources for plant materials.

1.6 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of manufactured product, from manufacturer, and complying with manufacturer's certified analysis of standard products.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

1.8 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, or walkways and pavements; or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk materials with appropriate certificates.

C. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.

D. Handle planting stock by root ball.

E. Store bulbs, corms, and tubers in a dry place at 60 to 65 deg F until planting.

F. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

G. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

H. Deliver plants after preparations for planting have been completed, and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.

1. Heel-in bare-root stock. Soak roots that are in less than moist condition in water for two hours. Reject plants with dry roots.
2. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
3. Do not remove container-grown stock from containers before time of planting.
4. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

B. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.

C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions in accordance with manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 PLANT MATERIALS

A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

1. Trees with damaged, crooked, or multiple leaders; with tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); with crossing trunks; with cut-off limbs more than 3/4 inch in diameter; or with stem girdling roots are unacceptable.
2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.

B. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Commissioner, with a proportionate increase in size of roots or balls.

C. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare in accordance with ANSI Z60.1.

D. If formal arrangements or consecutive order of plants is indicated on Drawings, select stock for uniform height and spread, and number the labels to ensure symmetry in planting.

E. Annuals and Biennials: Provide healthy, disease-free plants of species and variety shown or listed, with well-established root systems reaching to sides of the container to maintain a firm ball, but not with excessive root growth encircling the container. Provide only plants that are acclimated to outdoor conditions before delivery.

2.2 FERTILIZERS

A. Mycorrhizal Fungi: Dry, granular inoculant containing at least 5300 spores per lb of vesicular-arbuscular mycorrhizal fungi and 95 million spores per lb of ectomycorrhizal fungi, 33 percent hydrogel, and maximum of 5.5 percent inert material.

2.3 WEED-CONTROL BARRIERS

A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. minimum, composed of fibers inert to biological degradation and naturally resistant to chemicals, alkalis, and acids, formed into a stable network so that fibers retain their relative position.

2.4 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:

1. Type: Shredded hardwood.
2. Size Range: 3 inches maximum, 1/2 inch minimum.
3. Color: Natural.

2.5 LANDSCAPE EDGINGS

A. Aluminum Edging: Standard-profile extruded-aluminum slotted edging, ASTM B221, Alloy 6063-T6, fabricated in standard lengths

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Curv-Rite, Inc.
b. J. D. Russell Company (The).
c. Permaloc Corporation.
d. Sure-loc Edging Corporation.
e. Or approved equal.

2. Edging Size: 7.5" by 8.5".
3. Finish: Mill (natural aluminum).

2.6 MISCELLANEOUS PRODUCTS

A. Planter Drainage Gravel: Washed, sound crushed stone or gravel complying with .

B. Planter Filter Fabric: Woven geotextile manufactured for separation applications and made of polypropylene, polyolefin, or polyester fibers or combination of them.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine areas to receive plants, with Installer present, for compliance with requirements and conditions affecting installation and performance of the Work.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Verify that plants and vehicles loaded with plants can travel to planting locations with adequate overhead clearance.
3. Suspend planting operations during periods of excessive soil moisture until moisture content reaches acceptable levels to attain required results.
4. Uniformly moisten excessively dry soil that is not workable or which is dusty.

B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove soil and contamination as directed by Commissioner and replace with new planting soil.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Commissioner's acceptance of layout before excavating or planting. Make minor adjustments as required.

D. Lay out plants at locations directed by Commissioner. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

3.4 PLANTING AREA ESTABLISHMENT

A. General: Prepare planting area for soil placement and mix planting soil in accordance with Section 329113 "Soil Preparation."

B. Placing Planting Soil: Place and mix planting soil in-place over exposed subgrade

C. Before planting, obtain Commissioner's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

D. Application of Mycorrhizal Fungi: At time directed by Commissioner, broadcast dry product uniformly over prepared soil at application rate in accordance with manufacturer's written instructions.

3.5 EXCAVATION FOR TREES AND SHRUBS

A. Planting Pits and Trenches: Excavate circular planting pits.

1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.
2. Excavate approximately three times as wide as ball diameter for container-grown
3. Excavate at least 4" inches wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
4. Do not excavate deeper than depth of root ball, measured from the root flare to the bottom of root ball.
5. If area under the plant was initially dug too deep, add soil to raise it to correct level and thoroughly tamp the added soil to prevent settling.
6. Maintain angles of repose of adjacent materials to ensure stability. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
7. If drain tile is indicated on Drawings or required under planting areas, excavate to top of porous backfill over tile.

B. Backfill Soil: Subsoil and topsoil removed from excavations may be used as backfill soil unless otherwise indicated.

C. Obstructions: Notify Commissioner if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.

D. Drainage: Notify Commissioner if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow to percolate away before positioning trees and shrubs.

3.6 TREE, SHRUB, AND VINE PLANTING

A. Inspection: At time of planting, verify that root flare is visible at top of root ball in accordance with ANSI Z60.1. If root flare is not visible, remove soil in a level manner from root ball to where the top-most root emerges from the trunk. After soil removal to expose root flare, verify that root ball still meets size requirements.

B. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

C. Container-GrownStock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch above adjacent finish grades.

3.7 MECHANIZED TREE-SPADE PLANTING

A. Plant trees with approved mechanized tree spade at designated locations. Do not use tree spade to move trees larger than maximum size allowed for similar field-grown, balled-and-burlapped, root-ball diameter in accordance with ANSI Z60.1, or trees larger than manufacturer's maximum size recommendation for tree spade being used, whichever is smaller.

B. Use same tree spade to excavate the planting hole as will be used to extract and transport the tree.

C. When extracting tree, center the trunk within the tree spade and move tree with solid ball of earth.

D. Cut exposed roots cleanly during transplanting operations.

E. Plant trees following procedures in "Tree, Shrub, and Vine Planting" Article.

F. Where possible, orient the tree in same direction as in its original location.

3.8 TREE, SHRUB, AND VINE PRUNING

A. Remove only dead, dying, or broken branches. Do not prune for shape.

B. Prune, thin, and shape trees, shrubs, and vines as directed by Commissioner.

C. Prune, thin, and shape trees, shrubs, and vines in accordance with standard professional horticultural and arboricultural practices. Unless otherwise indicated by Commissioner, do not cut tree leaders; remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.

D. Do not apply pruning paint to wounds.

3.9 PLACING SOIL IN PLANTERS

A. Cover bottom with filter fabric and wrap filter fabric 6 inchesup on all sides. Duct tape along the entire top edge of filter fabric, to secure filter fabric against the sides during soil-filling process.

B. Fill planter with planting soil . Place soil in lightly compacted layers to elevation of 1/2 inches below top of planter, allowing natural settlement.

3.10 GROUND COVER AND PLANT PLANTING

A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated on Drawings.

B. Use planting soil for backfill.

C. Dig holes large enough to allow spreading of roots.

D. For rooted cutting plants supplied in flats, plant each in a manner that minimally disturbs the root system but to depth not less than two nodes.

E. Work soil around roots to eliminate air pockets and leave slight saucer indentation around plants to hold water.

F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.11 INSTALLATION OF MULCHES

A. Mulch backfilled surfaces of planting areas and other areas indicated.

1. Organic Mulch in Planting Areas: Apply 2-inch average thickness of organic mulch , and finish level with adjacent finish grades. Do not place mulch within 1 inch of trunks or stems.

3.12 INSTALLATION OF LANDSCAPE EDGINGS

A. Aluminum Edging: Install aluminum edging where indicated in accordance with manufacturer's written instructions. Anchor with 18" inchesapart, driven below top elevation of edging.

B. Mow-Strip Installation:

1. Install weed-control barrier before mulching, covering area of mow strip, and overlapping and pinning edges of barrier at least 6 inches and in accordance with manufacturer's written instructions.

3.13 PLANT MAINTENANCE

A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings.

B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.

C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices when possible to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.14 CORRECTIVE WORK AND REPLACEMENT

A. Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Commissioner.

1. Submit details of proposed pruning and repairs.
2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Commissioner.

B. Remove and replace trees that are more than 25 percent dead or in unhealthy condition before end of corrections period or are damaged during construction operations that Commissioner determines are incapable of restoring to normal growth pattern.

1. Provide new trees of same size as those being replaced for each tree of4 inches or smaller in caliper size.

3.15 CLEANING AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off City of New York's property.

C. Protect plants from damage due to landscape operations and operations of other subcontractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.

D. After installation and before Substantial Completion, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

E. At time of Substantial Completion, verify that tree-watering devices are in good working order and leave them in place. Replace improperly functioning devices.

END OF SECTION 329300

SECTION 329300.01 STAINLESS STEEL WIRE TRELLIS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Provide stainless steel wire rope trellis system, including accessories and standoffs, for mounting on brick masonry.

1.3 REFERENCES

A. American Iron and Steel Institute (AISI) - Steel Product Manual; Stainless and Heat Resisting Steel.

B. ASTM A 276 - Stainless and Heat-Resisting Steel Bars and Shapes.

C. ASTM A 380 - Practice for Cleaning and Descaling Stainless Steel Parts, Equipment and Systems.

D. ASTM A 492 - Specification for Stainless Steel Rope Wire.

E. ASTM A 555 - Stainless Steel Wire.

F. ASTM A 582 - Specification for Free-Machining Stainless and Heat-Resisting Steel Bars.

G. ASTM B 912 - Specification for Passivation of Stainless Steels Using Electropolishing.

H. ASTM F 1145 - Specification for Turnbuckles, Swaged, Welded, Forged.

I. MIL-C-5688 - Pre-Stretching and Proof-Testing of Wire Rope Assemblies.

1.4 PERFORMANCE REQUIREMENTS

A. Structural Requirements: Provide stainless steel trellis systems capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated on the Drawings:

B. Components: Design and size to withstand dead and live loads of components, plants, rain, snow and ice and loads caused by positive and negative wind pressure acting normal to plane of trellis as calculated in accordance with applicable code.

1. Trellis systems to be designed, fabricated, and installed to accommodate expansion and contraction of metal components without causing undue stress, buckling, opening of joints, and distortion.

2. Design supports and hardware to withstand loads encountered without excessive deflection or distortion when cables are tensioned to required amounts required to conform to applicable building codes.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.6 SUBMITTALS

A. Shop Drawings: Submit Shop Drawings for fabrication and installation. Include the following:

1. Elevations, and detail sections.
2. Indicate materials, methods, finishes, fittings, fasteners, anchorages, and accessory items.
3. Provide setting diagrams and templates for anchorages, sleeves, and bolts.

B. Verification Samples: Two samples representing actual products and finishes as follows:

1. Wire rope with fitting, minimum size 12 inches long.
2. Rods, minimum size 12 inches long.
3. Typical fittings.

C. Installation Instructions: Manufacturer's printed installation instructions.

D. Operation and Maintenance Data: Include methods for maintaining installed products and precautions against cleaning materials and methods detrimental to finishes and performance.

E. Manufacturer's Certificates: Certify products meet or exceed specified requirements.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Installer Qualifications. Company specializing in installation of trellis systems, fittings, and other stainless steel components with 3 years minimum successful experience.

C. Pre-installation Meetings: Conduct meetings including Contractor, Commissioner, installer and other subcontractors whose work involves cable trellis system to verify project requirements, framing and support conditions, mounting surfaces and manufacturer's installation. Comply with DDC General Conditions.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Handle and store products according to manufacturer's recommendations. Leave products wrapped or otherwise protected and under clean and dry storage conditions until required for installation.

C. Exercise care not to scratch, mark, dent, or bend metal components during delivery, storage, and installation.

1.9 PROJECT CONDITIONS

A. Verify field measurements before installation; show recorded measurements on shop drawings.

B. Coordinate installation schedule with construction progress to avoid construction delays.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Provide all cable, materials, fittings and components from a single manufacturer.

B. Basis-of-Design Product: Subject to compliance with requirements, provide Green Solutions "Green Kit" Trellis System as manufactured by Jakob Rope System, or comparable product by one the following:

1. Carl Stahl DecorCable
2. Ronstan Tensile Architecture, a subsidiary of Ronstan International Inc.
3. Or approved equal.

2.2 STAINLESS STEEL

A. Tubing: ASTM A 554, Grade MT 316.

B. Bars and Shapes: ASTM A 276, Type 316.

C. Wire Rope: ASTM A 492, Type 316.

D. General: Unless otherwise indicated, provide Type 316 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633, Class Fe/Zn 5, at exterior walls.

E. Stainless-Steel Bolts and Nuts: Acorn bolt Regular hexagon-head annealed stainless-steel bolts, nuts and, where indicated, flat washers; ASTM F 593 for bolts and ASTM F 594 for nuts, Alloy Group 2.

2.3 FASTENERS

A. Expansion Anchors: Alloy Group 2 stainless-steel bolts complying with ASTM F 593 and nuts complying with ASTM F 594.

1. Bracket, anchor bolt and sleeve assembly must have capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.

2.4 FITTINGS

A. Provide fittings required to attach and connect stainless-steel wire rope grid system components.

B. Types: Fabricate from AISI Type 316 and 316L stainless steel complying with ASTM F 1145.

C. Shop applied swaged rope ends: Threaded external and internal swivel ends, turnbuckles, tensioning screws, end stops, clevis ends, eye ends, loop ends, and end cones.

D. Screwed rope ends for on-site assembly: Threaded external and internal swivel ends, turnbuckles, tensioning screws, end stops, clevis ends, eye ends, loop ends, and end cones.

E. Clamps: Ring clamps, cross clamps, wire rope clamping cones, and connecting wire rope clamps.

F. Post fittings: Straight, angled, and spherical

G. Anchoring systems: Studs, clevis, eye end, eye bolt, slotted, spacer baskets, radial clevis holder, cross clamp with support disk, slotted rope deflector, ball cage.

H. Accessories: Provide threaded couplings, tensioning screws, cover disks, eye bolts, eye nuts, carabineers, shackles, clips, welded rings, screws, washers, lock nuts, hexagonal nuts, dome nuts, wall anchors, screws, and wire end caps as required to complete the installation.

2.5 FINISH

A. After fabrication, clean and de-scale stainless steel wire rope, fittings, and other components in accordance with ASTM A 380.

B. Finish components with AISI No. 4 brushed satin finish in accordance with ASTM B 912.

2.6 FABRICATION

A. Tolerances: Verify dimensions on site prior to shop fabrication.

B. Fabricate stainless steel in accordance with AISI Steel Product Manual and the manufacturers requirements.

C. Shop-fabricate to designs indicated on Drawings and to meet performance requirements specified.

D. Shop-fabricate fittings, interfacing parts and assemblies so that field cutting adjustments are not necessary.

E. Coordinate requirements, dimensions and spacing of trellis system to ensure required factory drilled holes in supporting framework are correctly located.

F. Make exposed joints butt, flush, and hairline.

G. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Before beginning installation, verify that conditions installed under other sections are acceptable for installation of cable trellis systems in accordance with manufacturer's installation instructions.

B. Supply items required to be cast into concrete or embedded in masonry with setting templates, to appropriate Sections.

C. Verify supporting system for stainless steel wire rope trellis is prepared for attachment of anchors, fittings, wire rope, and wire netting and transfer of calculated loads.

D. If conditions are the responsibility of another installer, notify Commissioner of unsatisfactory preparation before proceeding.

3.3 PREPARATION

A. Verify alignment, support dimensions, and tolerances are correct.

B. Inventory components to ensure all required items are available for installation. Inspect components for damage. Remove damaged components from site and replace.

3.4 INSTALLATION

A. Install wire rope trellis system in accordance with manufacturer's instructions and the approved shop drawings.

B. Provide anchorage devices and fittings to secure posts to in-place construction; including threaded fittings for concrete inserts, toggle bolts and through-bolts.

C. Install infill plumb, level, square, and rigid without kinks or sags.

D. Attach trellis system to truss supports and posts as indicated on the Drawings.

E. Separate dissimilar materials with bushings, grommets or washers to prevent electrolytic corrosion.

F. Use manufacturer's supplied cable hardware.

G. Ensure cables are clean, parallel to each other, and without kinks or sags.

H. Adjust wire rope tension and connecting hardware. Tension cable with hand or hydraulic equipment so that no slack is visible.

I. After final adjustment provide tamper resistant Loctite materials on all fittings.

3.5 ADJUSTING AND CLEANING

A. Remove from project site and legally dispose of construction debris associated with this work.

3.6 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

C. Protect installed products and finished surfaces from damage during construction.

D. Replace defective or damaged components as directed by Commissioner.

END OF SECTION 329300.01

SECTION 330500 - COMMON WORK RESULTS FOR UTILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Piping joining materials.
2. Transition fittings.
3. Dielectric fittings.
4. Sleeves.
5. Identification devices.
6. Grout.
7. Flowable fill.
8. Piped utility demolition.
9. Piping system common requirements.
10. Equipment installation common requirements.
11. Painting.
12. Concrete bases.
13. Metal supports and anchorages.

1.3 DEFINITIONS

A. Exposed Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions.

B. Concealed Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

C. ABS: Acrylonitrile-butadiene-styrene plastic.

D. CPVC: Chlorinated polyvinyl chloride plastic.

E. PE: Polyethylene plastic.

F. PVC: Polyvinyl chloride plastic.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For the following:

1. Dielectric fittings.
2. Identification devices.

1.6 INFORMATIONAL SUBMITTALS

A. Welding certificates.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Steel Support Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Steel Piping Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

D. Comply with ASME A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.9 COORDINATION

A. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

B. Coordinate installation of identifying devices after completing covering and painting if devices are applied to surfaces.

C. Coordinate size and location of concrete bases. Formwork, reinforcement, and concrete requirements are specified in Section 033000 "Cast-in-Place Concrete."

PART 2 - PRODUCTS

2.1 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness, unless otherwise indicated.

2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

D. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.2 TRANSITION FITTINGS

A. Transition Fittings, General: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.

B. Transition Couplings NPS 1-1/2 and Smaller:

1. Underground Piping: Manufactured piping coupling or specified piping system fitting.

C. AWWA Transition Couplings NPS 2 and Larger:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cascade Waterworks Mfg. Co.
b. Dresser, Inc.
c. Ford Meter Box Company, Inc. (The).
d. JCM Industries, Inc.
e. Smith-Blair, Inc.
f. Viking Johnson.
g. Or approved equal.

2. Description: AWWA C219, metal sleeve-type coupling for underground pressure piping.

D. Plastic-to-Metal Transition Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Spears Manufacturing Company.
    b. Charlotte Pipe and Foundary
    c. McMaster-Carr
    d. NIBCO
    e. Or approved equal.

2. Description: CPVC and PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-jointend.

E. Plastic-to-Metal Transition Unions:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Colonial Engineering, Inc.
    b. NIBCO INC.
    c. Spears Manufacturing Company.
    d. Or approved equal.

2. Description: MSS SP-107, CPVC and PVC four-part union. Include brass threaded end, solvent-cement-joint plastic end, rubber O-ring, and union nut.

F. Flexible Transition Couplings for Underground Nonpressure Drainage Piping:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Cascade Waterworks Mfg. Co.
    b. Fernco Inc.
    c. Mission Rubber Company.
    d. Plastic Oddities.
    e. Or approved equal.

2.3 DIELECTRIC FITTINGS

A. Dielectric Fittings, General: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.

B. Dielectric Unions:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Capitol Manufacturing Co.
    b. Central Plastics Company.
    c. Epco Sales, Inc.
    d. HART Industrial Unions, LLC.
    e. WATTS.
    f. Zurn Industries, LLC.
    g. Or approved equal.

2. Description: Factory fabricated, union, NPS 2 and smaller.

    a. Pressure Rating: 150 psig minimum at 180 deg F.
    b. End Connections: Solder-joint copper alloy and threaded ferrous; threaded ferrous.

C. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Capitol Manufacturing Co.
    b. Central Plastics Company.
    c. Epco Sales, Inc.
    d. WATTS.
    e. Zurn Industries, LLC.
    f. Or approved equal.

2. Description: Factory-fabricated, bolted, companion-flange assembly, NPS 2-1/2 to NPS 4 and larger.

    a. Pressure Rating: 150 psig minimum.
    b. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Advance Products & Systems, Inc.
    b. Calpico, Inc.
    c. GF Piping Systems: Georg Fischer LLC.
    d. Or approved equal.

2. Description: Nonconducting materials for field assembly of companion flanges, NPS 2-1/2 and larger.

    a. Pressure Rating: 150 psig minimum.
    b. Gasket: Neoprene or phenolic.
    c. Bolt Sleeves: Phenolic or polyethylene.
    d. Washers: Phenolic with steel backing washers.

E. Dielectric Couplings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Calpico, Inc.
    b. Lochinvar, LLC.
    c. Matco-Norca
    d. Or approved equal.

2. Description: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining, NPS 3 and smaller.

   a. Pressure Rating: 300 psig at 225 deg F.
   b. End Connections: Threaded.

F. Dielectric Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Elster Perfection Corporation.
   b. Precision Plumbing Products.
   c. Victaulic Company.
   d. Or approved equal.

2. Description: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining.

   a. Pressure Rating: 300 psig at 225 deg F.

2.4 SLEEVES

A. Mechanical sleeve seals for pipe penetrations are specified in Section 220500 "Common Work Results for Plumbing."

B. Galvanized-Steel Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

C. Steel Pipe Sleeves: ASTM A53/A53M, Type E, Grade B, Schedule 40, galvanized, plain ends.

D. Cast-Iron Sleeves: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

E. Molded PVC Sleeves: Permanent, with nailing flange for attaching to wooden forms.

F. PVC Pipe Sleeves: ASTM D1785, Schedule 40.

G. Molded PE Sleeves: Reusable, PE, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.5 IDENTIFICATION DEVICES

A. General: Products specified are for applications referenced in other utilities Sections. If more than single type is specified for listed applications, selection is Installer's option.

B. Equipment Nameplates: Metal permanently fastened to equipment with data engraved or stamped.

1. Data: Manufacturer, product name, model number, serial number, capacity, operating and power characteristics, labels of tested compliances, and essential data.
2. Location: Accessible and visible.

2.6 GROUT

A. Description: ASTM C1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

2.7 FLOWABLE FILL

A. Description: Low-strength-concrete, flowable-slurry mix.

1. Cement: ASTM C150, Type I, portland.
2. Density: 115- to 145-lb/cu. ft..
3. Aggregates:

a. ASTM C33, natural sand, fine and crushed gravel or stone, coarse.

4. Admixture: ASTM C618, fly-ash mineral.
5. Water: Comply with ASTM C94/C94M.
6. Strength: 100 to 200 psig at 28 days.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PIPED UTILITY DEMOLITION

A. Refer to Section 024119 "Selective Demolition" for general demolition requirements and procedures.

B. Disconnect, demolish, and remove piped utility systems, equipment, and components indicated to be removed.

1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
2. Piping to Be Abandoned in Place: Drain piping. Fill abandoned piping with flowable fill, and cap or plug piping with same or compatible piping material.
3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make operational.
5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to City of New York.

C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.3 DIELECTRIC FITTING APPLICATIONS

A. Dry Piping Systems: Connect piping of dissimilar metals with the following:

1. NPS 2 and Smaller: Dielectric unions.
2. NPS 2-1/2 to NPS 12: Dielectric flanges or dielectric flange kits.

B. Wet Piping Systems: Connect piping of dissimilar metals with the following:

1. NPS 2 and Smaller: Dielectric couplings couplings or dielectric nipples nipples.
2. NPS 2-1/2 to NPS 4: Dielectric nipples.
3. NPS 2-1/2 to NPS 8: Dielectric nipples or dielectric flange kits.
4. NPS 10 and NPS 12: Dielectric flange kits.

3.4 INSTALLATION OF PIPING

A. Install piping according to the following requirements and utilities Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on the Coordination Drawings.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping to permit valve servicing.

E. Install piping at indicated slopes.

F. Install piping free of sags and bends.

G. Install fittings for changes in direction and branch connections.

H. Select system components with pressure rating equal to or greater than system operating pressure.

I. Sleeves are not required for core-drilled holes.

J. Permanent sleeves are not required for holes formed by removable PE sleeves.

K. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of equipment areas or other wet areas 2 inches above finished floor level.

2. Install sleeves in new walls and slabs as new walls and slabs are constructed.

   a. Pipe Sleeves: Steel. For pipes smaller than NPS 6.
   b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.

L. Verify final equipment locations for roughing-in.

M. Refer to equipment specifications in other Sections for roughing-in requirements.

3.5 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and utilities Sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

E. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

F. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

G. Grooved Joints: Assemble joints with grooved-end pipe coupling with coupling housing, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.

H. Soldered Joints: Apply ASTM B813 water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B828 or CDA's "Copper Tube Handbook," using lead-free solder alloy (0.20 percent maximum lead content) complying with ASTM B32.

I. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

J. Pressure-Sealed Joints: Assemble joints for plain-end copper tube and mechanical pressure seal fitting with proprietary crimping tool to according to fitting manufacturer's written instructions.

K. Plastic Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.

L. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D3139.

M. Plastic Nonpressure Piping Gasketed Joints: Join according to ASTM D3212.

N. Plastic Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D2657.

1. Plain-End PE Pipe and Fittings: Use butt fusion.
2. Plain-End PE Pipe and Socket Fittings: Use socket fusion.

O. Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.6 PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping NPS 2 and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Install dielectric fittings at connections of dissimilar metal pipes.

3.7 INSTALLATION OF EQUIPMENT

A. Install equipment level and plumb, unless otherwise indicated.

B. Install equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference with other installations. Extend grease fittings to an accessible location.

C. Install equipment to allow right of way to piping systems installed at required slope.

3.8 PAINTING

A. Painting of piped utility systems, equipment, and components is specified in Section 099113 "Exterior Painting," and Section 099123 "Interior Painting,".

B. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.9 IDENTIFICATION

A. Piping Systems: Install pipe markers on each system. Include arrows showing normal direction of flow.

1. Stenciled Markers: According to ASME A13.1.

2. Plastic markers, with application systems. Install on insulation segment if required for hot noninsulated piping.
3. Locate pipe markers on exposed piping according to the following:

    a. Near each valve and control device.
    b. Near each branch, excluding short takeoffs for equipment and terminal units. Mark each pipe at branch if flow pattern is not obvious.
    c. Near locations where pipes pass through walls or floors or enter inaccessible enclosures.
    d. At manholes and similar access points that permit view of concealed piping.
    e. Near major equipment items and other points of origination and termination.

B. Equipment: Install engraved plastic-laminate sign or equipment marker on or near each major item of equipment.

1. Lettering Size: Minimum 1/4 inch high for name of unit if viewing distance is less than 24 inches, 1/2 inch high for distances up to 72 inches, and proportionately larger lettering for greater distances. Provide secondary lettering two-thirds to three-fourths of size of principal lettering.
2. Text of Signs: Provide name of identified unit. Include text to distinguish among multiple units, inform user of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.

C. Adjusting: Relocate identifying devices that become visually blocked by work of this or other Divisions.

3.10 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
7. Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Section 033000 "Cast-in-Place Concrete."

3.11 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Section 055000 "Metal Fabrications" for structural steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor piped utility materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

3.12 GROUTING

A. Mix and install grout for equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

END OF SECTION 330500

SECTION 334200 - STORMWATER CONVEYANCE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract "City of New York Standard Construction Contract."

1.2 SUMMARY

A. Section Includes:

1. Ductile-iron culvert pipe and fittings.
2. Cleanouts.
3. Drains.

1.3 DEFINITIONS

A. FRP: Fiberglass-reinforced plastic.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures."

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Cleanout Structures and Pipes. Include plans, elevations, sections, details, frames, covers, and grates.

C. Coordination Drawings: Show pipe sizes, locations, and elevations. Show other piping in same trench and clearances from storm drainage system piping. Indicate interface and spatial relationship between manholes, piping, and proximate structures.

1.6 INFORMATIONAL SUBMITTALS

A. Profile Drawings: Show system piping in elevation. Draw profiles at horizontal scale of not less than 1 inch equals 50 feet and vertical scale of not less than 1 inch equals 5 feet. Indicate manholes and piping. Show types, sizes, materials, and elevations of other utilities crossing system piping.

B. Product Certificates: For each type of cast-iron soil pipe and fitting, from manufacturer.

C. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 "Quality Requirements."

B. Piping materials must bear label, stamp, or other markings of specified testing agency.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Protect pipe, pipe fittings, and seals from dirt and damage.

B. Handle catch basins and stormwater inlets in accordance with manufacturer's written rigging instructions.

1.9 FIELD CONDITIONS

A. Interruption of Existing Storm Drainage Service: Do not interrupt service to facilities occupied by City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary service in accordance with requirements indicated:

1. Notify Commissioner no fewer than two days in advance of proposed interruption of service.
2. Do not proceed with interruption of service without Commissioner's written permission.

PART 2 - PRODUCTS

2.1 DUCTILE-IRON, CULVERT PIPE AND FITTINGS

A. Pipe: ASTM A716, for push-on joints.

B. Standard Fittings: AWWA C110/A21.10, ductile or gray iron, for push-on joints.

C. Compact Fittings: AWWA C153/A21.53, for push-on joints.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EARTHWORK

A. Excavation, trenching, and backfilling are specified in Section 312000 "Earth Moving."

3.3 INSTALLATION OF PIPING

A. General Locations and Arrangements: Drawing plans and details indicate general location and arrangement of underground storm drainage piping. Location and arrangement of piping layout take into account design considerations. Install piping as indicated, to extent practical. Where specific installation is not indicated, follow piping manufacturer's written instructions.

B. Install piping beginning at low point, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings in accordance with manufacturer's written instructions for use of lubricants, cements, and other installation requirements.

3.4 PIPE JOINT CONSTRUCTION

A. Join gravity-flow, nonpressure drainage piping in accordance with the manufacturer recommendations.

3.5 INSTALLATION OF CLEANOUTS PER MANUFACTURER RECOMMENDATIONS.

A. Install cleanouts and riser extensions from sewer pipes to cleanouts at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in sewer pipe. Installation of cleanouts per manufacturer recommendations.

3.6 FIELD QUALITY CONTROL

A. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches of backfill is in place, and again at completion of Project.

1. Submit separate reports for each system inspection.
2. Defects requiring correction include the following:

    a. Alignment: Less than full diameter of inside of pipe is visible between structures.
    b. Deflection: Flexible piping with deflection that prevents passage of ball or cylinder of size not less than 92.5 percent of piping diameter.
    c. Damage: Crushed, broken, cracked, or otherwise damaged piping.
    d. Infiltration: Water leakage into piping.
    e. Exfiltration: Water leakage from or around piping.

3. Replace defective piping using new materials, and repeat inspections until defects are within allowances specified.
4. Reinspect and repeat procedure until results are satisfactory.

B. Test new piping systems, and parts of existing systems that have been altered, extended, or repaired, for leaks and defects in accordance with NYC DEP Standards and specifications as well as the manufacturer recommendations.

3.7 CLEANING

A. Clean interior of piping of dirt and superfluous materials flush with potable water.

END OF SECTION 334200

CITY OF NEW YORK
DEPARTMENT OF DESIGN AND CONSTRUCTION
DIVISION OF PUBLIC BUILDINGS

ADDENDA CONTROL SHEET

BID SUBMISSION DATE/ TIME: February 12, 2026; between 11:30am and 2:00pm
BID OPENING DATE/ TIME: February 12, 2026; 2:30 pm

PROJECT No. : **PV957DGRW**

TITLE: **Degraw Firehouse Renovation**

ADDENDA ISSUED	NO. OF DWG	DATE	APPROVED BY: ARCHITECTURE/ ENGINEERING	GENERAL COUNSEL
#1 Revised Pre-Bid Conference Date		1/22/2026	LW	NA

THE CITY OF NEW YORK
DEPARTMENT OF DESIGN AND CONSTRUCTION
DIVISION OF PUBLIC BUILDINGS

01/22/2026

ADDENDUM No. # 1

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

85026B0058 – PV957DGRW

Degraw Firehouse Renovation

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **The Pre-Bid Conference for the contract described below scheduled forJanuary 26, 2026, at 1:00 pm is rescheduled to January 29, 2026 at 2:00 pm.**

   Contract #1 – General Construction Work

2. **Bidders Questions and Responses to Questions:**
   See Attachment A. (Not Used)

3. **Revisions to Documents:**
   See Attachment B. (Not Used)

4. **Revisions to PASSPort forms:**
   See Attachment C.

Transferring Data Between Rounds of an RFX: A new document titled “Transferring Data Between Rounds of an RFX” has been added to the Documents section of the View RFx tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section via PASSPort (in the Discussions with Buyer section).

DDC PROJECT #: **PV957DGRW**

PROJECT NAME: **DeGraw Firehouse Renovation**

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Plumbing drawings are referenced within the T-001 Sheet Index and there are plumbing specifications; however, the Plumbing Drawings were not included in the downloadable bid documents. Please provide access to the plumbing drawings, thank you.	The plumbing drawings are included with this Addendum.
2	The following drawings are missing from the bid set. All plumbing drawings, E-800, and T103 (Telecommunications).	The Plumbing Drawings are included with this Addendum. Drawings E-800 and T-103 have been removed; refer to updated Title Sheet and Addendum to General Conditions, Schedule C.
3	The following drawings are part of the Bid set, but not listed on the Sheet Index on Drawing T-001: BP-002, T-030, T-031, T-041, M-603, AV-200, AV-201, AV-300, and SC-400. Please advise.	Drawings BPP-002, M-603, AV-200, AV-201, AV-300, and SC-400 have been added to the sheet index. T-030 and T-041 have been removed. Refer to updated Drawings, included with this Addendum.
4	Please provide a signage schedule that lists sign types and sizes so that we may quantify the signage scope. Please provide the dimensions, thickness and materials for the pin letters at the exterior.	Refer to signage schedule added to Drawing A-960, included with this Addendum.

DDC PROJECT #: **PV957DGRW**

PROJECT NAME: **DeGraw Firehouse Renovation**

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Revisions to Volume 2:

2025 Project Labor Agreement is included.

Revisions to Volume 3:

ADDENDUM TO THE GENERAL CONDITIONS
Schedule B: updated to include warranty for section 108213 Exterior Grilles and Screens
Schedule C: drawing list updated to match Bid Drawing set

TABLE OF CONTENTS
Updated to include new section 108213 Exterior Grilles and Screens

SPECIFICATIONS
New Section added: 108213 - Exterior Grilles and Screens

Revisions to Bid Drawings:

T-001: BPP-002, M-603, AV-200, AV-201, AV-300, SC-400 added to Sheet Index; A-960 sheet name revised; E-800 deleted from Sheet Index
A-103: Roof Plan updated to include revised mechanical screen details
A-403: Rooftop mechanical screen and acoustic partition details added
A-960: Signage Schedule added
S-230: Updated framing below DOAS unit based on changes to unit screen system, adjusted locations of HSS posts
S-231: Updated DOAS unit screening system framing and posts to support a full enclosure serving as both acoustic and visual screen
S-602: Revised all details to provide information on construction of new DOAS screening system
P-000: Omitted from previous issuance
P-100: Omitted from previous issuance
P-101: Omitted from previous issuance
P-102: Omitted from previous issuance
P-103: Omitted from previous issuance
P-200: Omitted from previous issuance
P-201: Omitted from previous issuance
P-202: Omitted from previous issuance
P-203: Omitted from previous issuance
P-300: Omitted from previous issuance
P-301: Omitted from previous issuance
P-400: Omitted from previous issuance
P-500: Omitted from previous issuance
P-501: Omitted from previous issuance
P-600: Omitted from previous issuance

DDC PROJECT #: **PV957DGRW**

PROJECT NAME: **DeGraw Firehouse Renovation**

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Please be advised that the Plumbing Drawings are missing from the set provided through the PASSPort site. Please provide drawings and/or a clarification.	The plumbing drawings were included with Addendum #2.
2	As per DDC General Conditions section 018113.04 (Sustainable Design Requirements For LEED v4 Buildings), there is reference to monthly communication between the Sustainable Construction Representative and the Commissioner. Please confirm whether this requirement is intended to be fulfilled through monthly sustainability reports or other means. If the latter, please advise on the form this communication is intended to take.	Communication can be, but is not limited to, monthly reporting, virtual or in-person meetings at the Commissioner's discretion.
3	As per Specification section 310913 (Monitoring of Adjacent Structures), there is reference to a structural stability assessment of adjacent buildings performed by a Professional Engineer. Please advise on the required level of detail for this assessment, and clarify whether it is expected to include structural calculations or is intended to be similar in scope to a pre-construction condition survey.	Contractor is responsible for retaining a Licensed Professional Engineer to assess the structural stability of the adjacent buildings. The assessment tools used to prepare such reports are the responsibility of this Licensed Professional Engineer.
4	As per DDC General Conditions section 014000 (Quality Requirements), the contract documents reference quality control and quality analysis activities. Please advise on the level of detail and degree of oversight DDC expects for QA/QC, including whether daily inspections are anticipated or if compliance is intended to be verified through periodic reviews and standard submittals.	Quality Control and Quality Analysis are monitored by DDC and the Commissioner. Quality inspections and Special Inspections will be coordinated/ performed as frequently as necessary.
5	As per Specification section 310913 (Monitoring of Adjacent Structures), there is reference to the installation of vibration monitors at the lowest level of specific adjacent buildings, subject to approval by the Adjacent Property Owners. In the event such approval is not granted, please advise whether vibration monitors are still required, if so, where they are to be installed. Is there an assumed quantity that should be carried within this bid?	Contractor is responsible for retaining a Licensed Professional Engineer to monitor the adjacent buildings. The locations and number of the vibration monitors must be prepared by the Licensed Professional Engineer and approved by the Commissioner.
6	There is a conflict between the Finish Plans and the Finish Schedule: Hallway 002C, RF-1 vs T-1, Private Studio 002, CPT-1 vs CPT-2, plus many more spaces. Should we follow the Finish Plans (A-130 thru A-132) or the Finish Schedule (A-960)? Please advise.	Refer to revised Finish Schedule on A-960, included with this Addendum.

7	Specification Section 096513-3, Article 2.3B notes Nora Systems T5044 A/C Stair Nosing at 55mm depth. What will the balance of the step material be? Can we recommend a full stair tread approx. 14" deep? Please advise.	Provide full depth stair treads. Refer to revised Finish Schedule Legend on A-960, included with this Addendum.
8	Specification Section 096519-6, Article 3.4H refers to Chemically Bonded Seams. Please confirm if seamless installation is required for all RF-1 24" x 24" rubber tiles.	Chemical bonding of seams in resilient tile flooring is not required. Refer to revised Specification Section 096519, included with this Addendum.
9	In Stair A, will Rubber Risers be required for this bid scope?	No. Rubber risers are not specified.
10	In Stair A, will Rubber Stair Stringers be required for this bid scope?	No. Rubber stringers are not specified.
11	Re: Recessed Entry Mat CPT-4, transition WD-1 to CPT-4 in Room 101 on A-131, and Detail 3 on Drawing A-930, shows butt to and no divider. Please advise.	Provide aluminum angle divider. Refer to revised Drawing 03/A-930, included with this Addendum.
12	On Drawing A-131, the Rubber Legend does not extend from Door 110A.2 to Stair A steps. Please advise.	Specified flooring to be installed throughout Stair A. Refer to revised Drawing 01/A-131, included with this Addendum.
13	B-3 Base is shown on Finish Schedule Drawing A-960 in rooms; 010, 103, 104, 201 & 202. No B-3 Base listed on Finish Schedule Legend. Please advise.	Refer to revised Finish Schedule on A-960, included with this Addendum.
14	Please confirm if Self Level Underlayment is required for all new flooring wall to wall throughout.	Self-leveling underlayment is not required.
15	Will moisture vapor epoxy be required for new flooring in the Cellar or the Slab on grade? Please advise.	Moisture vapor epoxy is not required, unless moisture testing indicates levels exceeding flooring manufacturer limits, or where flooring manufacturers mandate epoxy mitigation regardless of test results. Refer to specification Sections 096400 - Wood Flooring, 096519 - Resilient Tile Flooring, and 096813 - Tile Carpeting, for more information.
16	Please confirm that no diagonal layout required for WD-1 Wood Floor for this bid scope.	Confirmed. All wood flooring installation to be overlay.
17	Please confirm that no herringbone layout required for WD-1 Wood Floor for this bid scope.	Confirmed. All wood flooring installation to be overlay.
18	Please confirm that no diagonal layout required for carpet tile CPT-1 - CPT-3 for this bid scope.	Confirmed. All carpet tile installation layouts to be orthogonal.
19	Please confirm that no ashlar layout required for carpet tile CPT-1 - CPT-3 for this bid scope.	Confirmed. All carpet tile installation layouts to be monolithic.
20	The Civil utility plan shows (1) 6” combined sewer. The Plumbing drawings show a 6” sewer and a 4” storm sewer underground. Please advise.	Storm sewer to be increased to 6" before exiting the building. Please note, the Site Utility Plan (C-140) shows (1) sanitary sewer and (1) storm sewer. Refer to revised Plumbing drawings, included with this Addendum.

21	The elevator pit pump is connected directly to the sanitary line. Code requires it to be indirect connection. Please advise.	Per 2022 NYC Plumbing Code section 712.3.5, connection to horizontal drainage piping must be through a wye fitting into the top of drainage piping, located no less than 10 pipe diameters from the base of any soil stack, waste stack, or fixture drain.
22	The fixture schedule is missing faucets, flushometers and seats. Please provide.	Refer to revised Plumbing Fixture Schedule on A-910, included with this Addendum.
23	The Plumbing Riser Drawing shows a 3” vent up, then increasing to 4” VTR. Code requires the building having a 4” continuous sanitary vent line. Please clarify.	Per 2022 NYC Plumbing Code section 903.2, vent extensions through roof are to be 4" in diameter. Increases in size of vent are to be made no less than 1 foot inside the thermal envelope of the build. Vent increase to 4" is to comply with this requirement. Refer to revised Plumbing drawings, included with this Addendum.
24	The Plumbing Riser Drawing has the vent for the ejector connecting to the fresh air line. That is not to code. Please advise.	Ejector vent to connect to vent riser in ADA Restroom 010. Refer to revised Plumbing drawings, included with this Addendum.
25	The 6” sanitary house trap requires a fresh air inlet, which is not shown on the Drawings. Please advise.	Piping for fresh air inlet is shown on P-200 and P-201. Piping to be connected to the current position of sanitary house trap. Refer to revised Plumbing drawings, included with this Addendum.
26	The combined sewer should split to a sanitary and storm house traps connecting to the 2 systems. In that case, the storm systems would not require running traps. Please advise.	Currently, separate storm and sanitary lines leave the building and connect to the combined street sewer. As the systems are not connected within the building, no running traps are required on the storm system.
27	Per the Bid Breakdown Unit Price Line Items i3-1 to i3-6 includes Temporary Electrical Service, Temporary Heat, Field Office, Rodent and Insect Control, Security Guards and Sidewalk Sheds. Will these items be in addition to the base bid requirements?	Cost for these items are part of the base bid requirements, and are to be included in the Unit Price Schedule for Division 1 only, as shown on the Item Grid in PASSPort. Refer to DDC General Conditions Section 015000 Articles 3.4F, 2.5K, 3.8F, 3.14H, 3.18D and Section 015423 Article 1.9 for clarification.
28	Please advise on the desired lengths of type LT13 fixtures located in the staircases. The elevation drawings referenced do not show lengths for the full quantities.	Lengths of Stair A fixture type LT13 include the following: Cellar - (2) @ 8'; First Intermediate Landing - (2) @ 8'; First Floor - (3) @ 8'; Second Intermediate Landing - (2) @ 6', (2) @ 8';\ Second Floor - (1) @ 8'. Refer to A-600, included with this Addendum, for clarification.
29	As per Roof Drawing A103, a new louver screen is to be provided for mechanical unit ACCU-1. However, there is no structural framing detail provided. Structural framing details are needed for this work. Please provide clarification.	Refer to Drawings S-230, S-231, and S-602, issued with Addendum #2, for this information.

30	Refer to detail 1/FO-400 on Drawing FO-400. The thickness of the vapor barrier as per typical slab on grade detail is (10 MIL). However, the thickness of the vapor barrier as per details on ENV-104 is (20 MIL). Please clarify which thickness is to be used for bidding purposes?	Vapor barrier minimum thickness is (20 MIL). Refer to Drawing ENV-104 and Specification section 313000 for clarification.
31	Are there existing FA and BMS vendors at 299 DeGraw Street? If so, please provide the contact information.	There are no existing FA or BMS vendors for this building.
32	Schedule A in Volume 3 indicates that Builders' Risk is required per Article 22.1.4. Article 22.1.4 indicates "…Such insurance shall be provided on an All Risk basis and include coverage, without limitation, for windstorm (including named windstorm), storm surge, flood and earth movement." Standard Builders' Risk policies include limits for windstorm (including name windstorm), storm surge, flood and earth movement. Procuring policies without limits is very expensive. Please consider removing the requirement to provide a policy without limitation for windstorm (including named windstorm), storm surge, flood and earth movement.	Builder's Risk is required as indicated in Schedule A.
33	Schedule A in Volume 3 indicates the project duration as 720 days, which is approximately 24 months; however, some of the Unit Prices for Div 01 work tab in PASSPort have durations of 30 months. Please clarify.	Project Duration is indicated as 720 CCDs in the Addendum to the General Conditions. As noted in the Item Grid, refer to DDC General Conditions Section 015000 Articles 3.5K (for Temporary Heat) and 3.8F (for Field Office) for clarification.
34	In reference to Drawings A-100 thru A103, General Plan Note 14 says to "remove efflorescence and repointing brick in cellar." Please provide elevation views that show the extent of the work, or provide quantities to include in our bid.	Assume 1,200 square feet of masonry to receive efflorescence removal and repointing.
35	In reference to Drawing A-200, General Exterior Elevation Note 1 asks to restore masonry walls, but the restoration extent is not defined. Please provide percentage or quantity for bidding purposes.	Assume restoration of 100% of exterior masonry.
36	In reference to Drawing A-120, spray on fireproofing tag is shown at rooms# 009 and #007 only. Please clarify if entire new metal deck and steel framing at cellar ceiling requires spray fireproofing, as shown on S-210 and detail 3/A-940, or just these two rooms.	Spray-applied fireproofing is required only for ceiling assemblies at Room 007 and Room 009 as shown on A-120.
37	In reference to Drawing A-502, elevation 04 shows (4'Wx4'8"H) artwork provided by owner. Please confirm if the Contractor is responsible for installation of this artwork.	No, the Contractor is not responsible for this installation.

38	In reference to Drawing C-110, proposed asphalt quantity is 143 SF. However, the legend and list of estimated quantities on Drawing BPP-002 shows 694 SF of proposed asphalt. Please clarify.	C-110 shows the extent of asphalt patching required for utility connections. BPP-002 shows the extent of post-construction resurfacing of the roadway required by NYC DOT. Depending on the sequencing of the work, it may or may not be necessary to patch the roadway prior to resurfacing. This falls under means and methods, which are the responsibility of the Contractor.
39	Specification section 012100 "Allowance for furniture, fixtures and equipment (FF&E)" is included in Volume 3, but no amount is given. Please provide the allowance amount for bidding purposes.	The allowance amount is $500,000. Refer to the Item Grid in PASSPort for this information.

DDC PROJECT #: **PV957DGRW**

PROJECT NAME: **DeGraw Firehouse Renovation**

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Revisions to the Drawings:

A-131: RF-1 hatch expanded to fill area at stair.
A-600: Dimensions added to linear light fixtures
A-910: Plumbing Fixture Schedule remarks revised
A-930: Metal angle border added at recessed mat
A-960: Finish Schedule updated to match Finish Plans; Finish Schedule Legend updated to include stair treads
P-200: Storm sewer updated to match Civil plans
P-201: Fresh air inlet revised
P-202: Vent riser revised
P-301: Riser diagram updated
P-600: DEP sewer revised to match Civil plan

Revisions to Volume 3:

Section 096519 - Resilient Tile Flooring: Revised to delete chemical bonding of seams.

ADDENDUM No. # 4

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

85026B0058 – PV957DGRW

Degraw Firehouse Renovation

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **Bidders Questions and Responses to Questions:**
   See Attachment A.

2. **Revisions to Documents:**
   See Attachment B.

3. **Revisions to PASSPort forms:**
   See Attachment C. (Not Used)

Transferring Data Between Rounds of an RFX: A new document titled "Transferring Data Between Rounds of an RFX" has been added to the Documents section of the View RFx tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section via PASSPort (in the Discussions with Buyer section).

PROJECT NAME: **DeGraw Firehouse Renovation**

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Will the Elevator be available for flooring material hoist?	No
2	The Riser Diagram has the sanitary sewer leaving the building above the slab. The plans have a note that it goes out of the building below the slab. Please clarify.	Sanitary sewer leaves building below cellar slab. 6" sanitary to drop below slab in riser diagram before exiting building. Refer to P-301 in Bid Addendum #03.
3	In reference to Drawing C-001, Removals/ Demolition Note 3H states “Coordination with utility companies regarding working off peak hours or on weekends as may be required to minimize the impact on the affected parties.” Please confirm utility work must be done off hours.	Please refer to the Additional Sections/Sub-Sections of the revised Addendum to the General Conditions in Bid Addendum #4.
