b. Grooved-End, Ductile-Iron-Piping Couplings: AWWA C606, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.

E. Flanges: ASME 16.1, Class 125, cast iron.

2.2. SPECIAL PIPE FITTINGS

A. Ductile-Iron Rigid Expansion Joints:

1. Description: Three-piece, ductile-iron assembly consisting of telescoping sleeve with gaskets and restrained-type, ductile-iron, bell-and-spigot end sections complying with AWWA C110 or AWWA C153. Select and assemble components for expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
2. Pressure Rating: 250 psig (1725 kPa) minimum.

B. Ductile-Iron Flexible Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. EBAA Iron, Inc.
b. Hays Fluid Controls; a division of ROMAC Industries Inc.
c. Star Pipe Products.
d. Or Approved Equal.

2. Description: Compound, ductile-iron fitting with combination of flanged and mechanical-joint ends complying with AWWA C110 or AWWA C153. Include two gasketed ball-joint sections and one or more gasketed sleeve sections. Assemble components for offset and expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.

a. Pressure Rating: 250 psig minimum.

C. Ductile-Iron Deflection Fittings:

1. Description: Compound, ductile-iron coupling fitting with sleeve and 1 or 2 flexing sections for up to 15-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.

a. Pressure Rating: 250 psig minimum.

2.3. JOINGING MATERIALS

A. Refer to Section 220500 "Common Results for Plumbing" for commonly used joining materials.

2.4. PIPING SPECIALTIES

A. Transition Fittings: Manufactured fitting or coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.

B. Tubular-Sleeve Pipe Couplings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Cascade Waterworks Manufacturing.
   b. Dresser, Inc.; Dresser Piping Specialties.
   c. Ford Meter Box Company, Inc. (The); Pipe Products Div.
   d. Hays Fluid Controls; a division of ROMAC Industries Inc.
   e. JCM Industries.
   f. Smith-Blair, Inc.
   g. Viking Johnson.
   h. Or Approved Equal.

2. Description: Metal, bolted, sleeve-type, reducing or transition coupling, with center sleeve, gaskets, end rings, and bolt fasteners and with ends of same sizes as piping to be joined.

   a. Standard: AWWA C219.
   b. Center-Sleeve Material: Manufacturer's standard.
   c. Gasket Material: Natural or synthetic rubber.
   d. Pressure Rating: 200 psig minimum.
   e. Metal Component Finish: Corrosion-resistant coating or material.

C. Split-Sleeve Pipe Couplings:

1. Description: Metal, bolted, split-sleeve-type, reducing or transition coupling with sealing pad and closure plates, O-ring gaskets, and bolt fasteners.

   a. Standard: AWWA C219.
   b. Sleeve Material: Manufacturer's standard.
   c. Sleeve Dimensions: Of thickness and width required to provide pressure rating.
   d. Gasket Material: O-rings made of EPDM rubber, unless otherwise indicated.
   e. Pressure Rating: 200 psig (1380 kPa) minimum.
   f. Metal Component Finish: Corrosion-resistant coating or material.

D. Flexible Connectors:

1. Nonferrous-Metal Piping: Bronze hose covered with bronze wire braid; with copper-tube, pressure-type, solder-joint ends or bronze flanged ends brazed to hose.
2. Ferrous-Metal Piping: Stainless-steel hose covered with stainless-steel wire braid; with ASME B1.20.1, threaded steel pipe nipples or ASME B16.5, steel pipe flanges welded to hose.

E. Dielectric Fittings: Combination of copper alloy and ferrous; threaded, solder, or plain end types; and matching piping system materials.

1. Dielectric Unions: Factory-fabricated union assembly, designed for 250-psig minimum working pressure at 180 deg F. Include insulating material that isolates dissimilar metals and ends with inside threads according to ASME B1.20.1.
2. Dielectric Flanges: Factory-fabricated companion-flange assembly, for 150- or 300-psig minimum working pressure to suit system pressures.
3. Dielectric-Flange Insulation Kits: Field-assembled companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

a. Provide separate companion flanges and steel bolts and nuts for 150- or 300-psig minimum working pressure to suit system pressures.

4. Dielectric Couplings: Galvanized-steel couplings with inert and noncorrosive thermoplastic lining, with threaded ends and 300-psig minimum working pressure at 225 deg F.
5. Dielectric Nipples: Electroplated steel nipples with inert and noncorrosive thermoplastic lining, with combination of plain, threaded, or grooved end types, and 300-psig minimum working pressure at 225 deg F.

2.5. GATE VALVES

A. AWWA, Cast-Iron Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. American AVK Co.; Valves & Fittings Div.
   b. American Cast Iron Pipe Co.; American Flow Control Div.
   c. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
   d. Crane Co.; Crane Valve Group; Stockham Div.
   e. East Jordan Iron Works, Inc.
   f. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
   g. McWane, Inc.; Kennedy Valve Div.
   h. McWane, Inc.; M & H Valve Company Div.
   i. McWane, Inc.; Tyler Pipe Div.; Utilities Div.
   j. Mueller Co.; Water Products Div.
   k. NIBCO INC.
   l. U.S. Pipe and Foundry Company.
   m. Or Approved Equal.

2. Nonrising-Stem, Metal-Seated Gate Valves:

   a. Description: Gray- or ductile-iron body and bonnet; with cast-iron or bronze double-disc gate, bronze gate rings, bronze stem, and stem nut.

      1) Standard: AWWA C500.
      2) Minimum Pressure Rating: 200 psig .
      3) End Connections: Mechanical joint.
      4) Interior Coating: Complying with AWWA C550.

3. Nonrising-Stem, Resilient-Seated Gate Valves:

   a. Description: Gray- or ductile-iron body and bonnet; with bronze or gray- or ductile-iron gate, resilient seats, bronze stem, and stem nut.

      1) Standard: AWWA C509.
      2) Minimum Pressure Rating: 200 psig.
      3) End Connections: Mechanical joint.
      4) Interior Coating: Complying with AWWA C550.

4. OS&Y, Rising-Stem, Metal-Seated Gate Valves:

   a. Description: Cast- or ductile-iron body and bonnet, with cast-iron double disc, bronze disc and seat rings, and bronze stem.

1) Standard: AWWA C500.
2) Minimum Pressure Rating: 200 psig.
3) End Connections: Flanged.

5. OS&Y, Rising-Stem, Resilient-Seated Gate Valves:

a. Description: Cast- or ductile-iron body and bonnet, with bronze or gray- or ductile-iron gate, resilient seats, and bronze stem.

1) Standard: AWWA C509.
2) Minimum Pressure Rating: 200 psig.
3) End Connections: Flanged.

B. UL/FMG, Cast-Iron Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Cast Iron Pipe Co.; American Flow Control Div.
b. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
c. Crane Co.; Crane Valve Group; Stockham Div.
d. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
e. McWane, Inc.; Kennedy Valve Div.
f. McWane, Inc.; M & H Valve Company Div.
g. Mueller Co.; Water Products Div.
h. NIBCO INC.
i. U.S. Pipe and Foundry Company.
j. Or Approved Equal.

2. OS&Y, Rising-Stem Gate Valves:

a. Description: Iron body and bonnet and bronze seating material.

1) Standards: UL 262 and FMG approved.
2) Minimum Pressure Rating: 175 psig .
3) End Connections: Flanged.

C. Bronze Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crane Co.; Crane Valve Group; Crane Valves.
b. Crane Co.; Crane Valve Group; Jenkins Valves.
c. Crane Co.; Crane Valve Group; Stockham Div.
d. Hammond Valve.
e. Milwaukee Valve Company.
f. NIBCO INC.
g. Red-White Valve Corporation.
h. Or Approved Equal.

2. OS&Y, Rising-Stem Gate Valves:

a. Description: Bronze body and bonnet and bronze stem.

1) Standards: UL 262 and FMG approved.
2) Minimum Pressure Rating: 175 psig.
3) End Connections: Threaded.

3. Nonrising-Stem Gate Valves:

a. Description: Class 125, Type 1, bronze with solid wedge, threaded ends, and malleable-iron handwheel.

1) Standard: MSS SP-80.

2.6. GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
b. East Jordan Iron Works, Inc.
c. Flowserve.
d. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
e. McWane, Inc.; Kennedy Valve Div.
f. McWane, Inc.; M & H Valve Company Div.
g. Mueller Co.; Water Products Div.
h. U.S. Pipe and Foundry Company.
i. Or Approved Equal.

2. Description: Sleeve and valve compatible with drilling machine.

a. Standard: MSS SP-60.
b. Tapping Sleeve: Cast- or ductile-iron or stainless-steel, two-piece bolted sleeve with flanged outlet for new branch connection. Include sleeve matching size and type of pipe material being tapped and with recessed flange for branch valve.
c. Valve: AWWA, cast-iron, nonrising-stem, resilient-seated gate valve with one raised face flange mating tapping-sleeve flange.

B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches in diameter.

1. Operating Wrenches: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

2.7. CURB VALVES

A. Manufacturers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Amcast Industrial Corporation; Lee Brass Co.
b. Ford Meter Box Company, Inc. (The); Pipe Products Div.
c. Jones, James Company.

d. Master Meter, Inc.
e. McDonald, A. Y. Mfg. Co.
f. Mueller Co.; Water Products Div.
g. Red Hed Manufacturing & Supply.
h. Or Approved Equal.

B. Service-Saddle Assemblies: Comply with AWWA C800. Include saddle and valve compatible with tapping machine.

1. Service Saddle: Copper alloy with seal and AWWA C800, threaded outlet for corporation valve.
2. Corporation Valve: Bronze body and ground-key plug, with AWWA C800, threaded inlet and outlet matching service piping material.
3. Manifold: Copper fitting with two to four inlets as required, with ends matching corporation valves and outlet matching service piping material.

C. Curb Valves: Comply with AWWA C800. Include bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.

D. Service Boxes for Curb Valves: Similar to AWWA M44 requirements for cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately 3 inches in diameter.

1. Shutoff Rods: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.

2.8. WATER METERS

A. Water meters will be furnished by utility company.

B. Manufacturers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Elster
b. AMCO Water Metering Systems.
c. Badger Meter, Inc.
d. Carlon Meter.
e. Hays Fluid Controls; a division of ROMAC Industries Inc.
f. McCrometer.
g. Mueller Co.; Hersey Meters.
h. Neptune Technology Group Inc.
i. Sensus Metering Systems.
j. Or Approved Equal.

C. Compound-Type Water Meters:

1. Description:

a. Standard: AWWA C702.
b. Registration: Flow in gallons .

D. Remote Registration System:

1. Description: Utility company standard; encoder type. Include meter modified with signal-transmitting assembly, low-voltage connecting wiring, and remote register assembly.

a. Standard: AWWA C707.
b. Registration: Flow in gallons.
c. Data-Acquisition Units: Comply with utility company requirements for type and quantity.
d. Visible Display Units: Comply with utility company requirements for type and quantity.

2.9. BACKFLOW PREVENTERS

A. Double-Check, Backflow-Prevention Assemblies, RPZ:

1. Standard: NYC DEP.
2. Operation: Continuous-pressure applications, unless otherwise indicated.
3. Pressure Loss: 5 psig maximum, through middle 1/3 of flow range.
4. Size: See drawings.
5. Design Flow Rate: See drawings.
6. Pressure Loss at Design Flow Rate: 8 psi maximum.
7. Configuration: Designed for horizontal, flow.
8. Accessories: Ball valves with threaded ends on inlet and outlet of NPS 2 and smaller; OS&Y gate valves with flanged ends on inlet and outlet of NPS 2-1/2 and larger.

B. Backflow Preventer Test Kits:

1. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EARTHWORK

A. Refer to Section 310000 "Earthwork" for excavating, trenching, and backfilling.

3.3. PIPING APPLICATIONS

A. General: Use pipe, fittings, and joining methods for piping systems according to the following applications.

B. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used, unless otherwise indicated.

C. Do not use flanges or unions for underground piping.

D. Flanges, unions, grooved-end-pipe couplings, and special fittings may be used, instead of joints indicated, on aboveground piping and piping in vaults.

E. Underground water-service piping NPS 3 to NPS 8 shall be the following:

1. Ductile-iron, mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical.

F. Aboveground water-service piping NPS 3 to NPS 8 shall be the following:

1. Ductile-iron, grooved-end pipe; ductile-iron, grooved-end appurtenances; and grooved joints.

3.4. VALVE APPLICATIONS

A. General Application: Use mechanical-joint-end valves for NPS 3 and larger underground installation. Use threaded- or flanged-end valves for installation in vaults or above ground.

B. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Underground Valves, NPS 3 and Larger: AWWA, cast-iron, nonrising-stem, metal or resilient-seated gate valves with valve box.
2. Use the following for valves in vaults and aboveground:
   a. Gate Valves, NPS 3 (DN 80) and Larger: AWWA, cast iron, OS&Y rising stem, metal seated or AWWA, cast iron, OS&Y rising stem, resilient seated.

C. Detector Check Valves: Use for water-service piping in vaults and aboveground to detect unauthorized use of water.

3.5. PIPING SYSTEMS – COMMON REQUIREMENTS

A. See Section 220500 "Common Results for Plumbing" for piping-system common requirements.

3.6. PIPING INSTALLATION

A. Water-Main Connection: Tap water main according to requirements of water utility company and of size and in location indicated.

B. Make connections larger than NPS 2 with tapping machine according to the following:

1. Install tapping sleeve and tapping valve according to MSS SP-60.
2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.

C. Make connections NPS 2 and smaller with drilling machine according to the following:

1. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by utility company standards.
2. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.

3. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.
4. Install corporation valves into service-saddle assemblies.
5. Install manifold for multiple taps in water main.
6. Install curb valve in water-service piping with head pointing up and with service box.

D. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.

E. Bury piping with depth of cover over top at least 48 inches below level of maximum frost penetration, and according to the following:

F. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.

G. Extend water-service piping and connect to water-supply source and building-water-piping systems at outside face of building wall in locations and pipe sizes indicated.

1. Terminate water-service piping at building wall until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building-water-piping systems when those systems are installed.

H. Sleeves are specified in Section 220500 "Common Results for Plumbing."

I. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.

J. See Section 221116 "Domestic Water Piping" for potable-water piping inside the building.

3.7. JOINT CONSTRUCTION

A. Make pipe joints according to the following:

1. Ductile-Iron Piping, Gasketed Joints for Water-Service Piping: AWWA C600 and AWWA M41.
2. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.
3. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with grooved-end, ductile-iron-piping couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions.
4. Dissimilar Materials Piping Joints: Use adapters compatible with both piping materials, with OD, and with system working pressure. Refer to Section 220500 "Common Results for Plumbing" for joining piping of dissimilar metals.

3.8. ANCHORAGE INSTALLATION

A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:

1. Concrete thrust blocks.
2. Locking mechanical joints.
3. Set-screw mechanical retainer glands.
4. Bolted flanged joints.

5. Heat-fused joints.
6. Pipe clamps and tie rods.

B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:

1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: According to AWWA C600.

C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.9. VALVE INSTALLATION

A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.

B. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.

C. MSS Valves: Install as component of connected piping system.

D. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.

3.10. WATER METER INSTALLATION

A. Install water meters, piping, and specialties according to utility company's written instructions.

B. Water Meters: Install compound-type water meters, NPS 3 (DN 80) and larger, in meter vaults. Include shutoff valves on water meter inlets and outlets and valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.

3.11. ROUGHING-IN FOR WATER METERS

A. Rough-in piping and specialties for water meter installation according to utility company's written instructions.

3.12. BACKFLOW PREVENTER INSTALLATION

A. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks. Install according to requirements of Commissioner.

B. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.

C. Do not install bypass piping around backflow preventers.

D. Support NPS 2-1/2 and larger backflow preventers, valves, and piping near floor and on brick or concrete piers.

3.13. CONNECTIONS

A. Piping installation requirements are specified in other Plumbing Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect water-distribution piping to existing street water main.

C. Connect water-distribution piping to interior domestic water piping.

D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.14. FIELD QUALITY CONTROL

A. Unless otherwise indicated the following tests shall be performed by the Contractor.

B. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.

C. Hydrostatic Tests: Test at not less than one-and-one-half times working pressure for two hours.

1. Increase pressure in 50-psig increments and inspect each joint between increments. Hold at test pressure for 1 hour; decrease to 0 psig. Slowly increase again to test pressure and hold for 1 more hour. Maximum allowable leakage is 2 quarts (1.89 L) per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.

D. Prepare reports of testing activities.

3.15. IDENTIFICATION

A. Install continuous underground detectable warning tape during backfilling of trench for underground water-distribution piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Section 310000 "Earthwork."

3.16. CLEANING

A. Clean and disinfect water-distribution piping as follows:

1. Purge new water-distribution piping systems and parts of existing systems that have been altered, extended, or restored before use.
2. Use purging and disinfecting procedure prescribed by NYC Department of Buildings or, if method is not prescribed by NYC Department of Buildings, use procedure described in AWWA C651 or do as follows:

a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.

b. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for 3 hours.
c. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
d. Submit water samples in sterile bottles to NYC Department of Buildings. Repeat procedure if biological examination shows evidence of contamination.

B. Prepare reports of purging and disinfecting activities.

END OF SECTION 221113

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 221114
Facility Natural-Gas Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Section Includes:

1. Pipes, tubes, and fittings.
2. Piping specialties.
3. Piping and tubing joining materials.
4. Valves.
5. Pressure regulators.
6. Service meters (Provided by utility company).
7. Mechanical sleeve seals.
8. Grout.
9. Concrete bases.
10. Gas Booster

1.3. DEFINITIONS

A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

1.4. PERFORMANCE REQUIREMENTS

A. Minimum Operating-Pressure Ratings:

1. Piping and Valves: 100 psig minimum unless otherwise indicated.
2. Service Regulators: 65 psig minimum unless otherwise indicated.
3. Minimum Operating Pressure of Service Meter: 5 psig.

B. Natural-Gas System Pressure within Building: 0.5 psig (3.45 kPa) or less.

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of the following:

1. Piping specialties.
2. Corrugated, stainless-steel tubing with associated components.
3. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
4. Pressure regulators. Indicate pressure ratings and capacities.
5. Service meters. Indicate pressure ratings and capacities. Include bypass fittings and meter bars.
6. Dielectric fittings.
7. Mechanical sleeve seals.
8. Escutcheons.

C. Shop Drawings: For facility natural-gas piping layout. Include plans, piping layout and elevations, sections, and details for fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to building structure. Detail location of anchors, alignment guides, and expansion joints and loops.

1. Shop Drawing Scale: 1/4 inch per foot (1:50).
2. Detail mounting, supports, and valve arrangements for service meter assembly and pressure regulator assembly.

D. Engineering Submittal: For natural-gas piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York, responsible for their preparation.

1. Detail fabrication and assembly of seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.

E. Coordination Drawings: Plans and details, drawn to scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.

F. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.

G. Qualification Data: For qualified professional engineer licensed in the State of New York.

H. License Welding certificate issued by the City of New York as per Article 4.07 of the 2008 New York City Fuel Code.

I. Field quality-control reports.

J. Operation and Maintenance Data: For motorized gas valves pressure regulators and service meters to include in emergency, operation, and maintenance manuals.

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Materials and work shall conform to the latest edition of reference specifications specified herein and to applicable codes and requirements of NYC Department of Buildings.

C. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

D. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.7. DELIVERY, STORAGE, AND HANDLING

A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping according to requirements of NYC Department of Buildings.

B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.

D. Protect stored PE pipes and valves from direct sunlight.

1.8. PROJECT CONDITIONS

A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.

1.9. COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces. Comply with requirements in Section 083113 "Access Doors."

PART 2 - PRODUCTS

2.1. PIPES, TUBES, AND FITTINGS

A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.

1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
2. Wrought-Steel Welding Fittings: ASTM A 234/A 234M for butt welding and socket welding.
3. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.
4. Forged-Steel Flanges and Flanged Fittings: ASME B16.5, minimum Class 150, including bolts, nuts, and gaskets of the following material group, end connections, and facings:

    a. Material Group: 1.1.
    b. End Connections: Threaded or butt welding to match pipe.
    c. Lapped Face: Not permitted underground.
    d. Gasket Materials: ASME B16.20, metallic, flat, asbestos free, aluminum o-rings, and spiral-wound metal gaskets.
    e. Bolts and Nuts: ASME B18.2.1, carbon steel aboveground and stainless steel underground.

5. Protective Coating for Underground Piping: Factory-applied, three-layer coating of epoxy, adhesive, and PE.

    a. Joint Cover Kits: Epoxy paint, adhesive, and heat-shrink PE sleeves.

6. Mechanical Couplings:

    a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

        1) Dresser Piping Specialties; Division of Dresser, Inc.
        2) Smith-Blair, Inc.
        3) Victaulic
        4) Or Approved Equal

    b. Steel flanges and tube with epoxy finish.
    c. Buna-nitrile seals.
    d. Steel bolts, washers, and nuts.
    e. Coupling shall be capable of joining PE pipe to PE pipe, steel pipe to PE pipe, or steel pipe to steel pipe.
    f. Steel body couplings installed underground on plastic pipe shall be factory equipped with anode.

2.2. PIPING SPECIALTIES

A. Appliance Flexible Connectors:

1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
2. Indoor, Movable-Appliance Flexible Connectors: Comply with ANSI Z21.69.
3. Operating-Pressure Rating: 0.5 psig (3.45 kPa).

4. End Fittings: Zinc-coated steel.
5. Threaded Ends: Comply with ASME B1.20.1.
6. Maximum Length: 72 inches (1830 mm).

B. Quick-Disconnect Devices: Comply with ANSI Z21.41.

1. Copper-alloy convenience outlet and matching plug connector.
2. Nitrile seals.
3. Hand operated with automatic shutoff when disconnected.
4. For indoor applications.
5. Adjustable, retractable restraining cable.

C. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig (862 kPa).

D. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for NPS 2 (DN 50) and smaller; flanged ends for NPS 2-1/2 (DN 65) and larger.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig (862 kPa).

E. T-Pattern Strainers:

1. Body: Ductile or malleable iron with removable access coupling and end cap for strainer maintenance.
2. End Connections: Grooved ends.
3. Strainer Screen: 60-mesh startup strainer, and perforated stainless-steel basket with 57 percent free area.
4. CWP Rating: 750 psig (5170 kPa).

F. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

2.3. JOINING MATERIALS

A. Joint Compound and Tape: Suitable for natural gas.

B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

C. Brazing Filler Metals: Alloy with melting point greater than 1000 deg F (540 deg C) complying with AWS A5.8/A5.8M. Brazing alloys containing more than 0.05 percent phosphorus are prohibited.

2.4. MANUAL GAS SHUTOFF VALVES

A. See "Aboveground Manual Gas Shutoff Valve Schedule" Articles for where each valve type is applied in various services.

B. General Requirements for Metallic Valves, NPS 2 (DN 50) and Smaller: Comply with ASME B16.33.

1. CWP Rating: 125 psig (862 kPa).
2. Threaded Ends: Comply with ASME B1.20.1.
3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
4. Tamperproof Feature: Locking feature for valves indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
5. Listing: Listed and labeled by an NRTL acceptable to NYC Department of Buildings for valves 1 inch (25 mm) and smaller.
6. Service Mark: Valves 1-1/4 inches (32 mm) to NPS 2 (DN 50) shall have initials "WOG" permanently marked on valve body.

C. General Requirements for Metallic Valves, NPS 2-1/2 (DN 65) and Larger: Comply with ASME B16.38.

1. CWP Rating: 125 psig (862 kPa).
2. Flanged Ends: Comply with ASME B16.5 for steel flanges.
3. Tamperproof Feature: Locking feature for valves indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
4. Service Mark: Initials "WOG" shall be permanently marked on valve body.

D. One-Piece, Bronze Ball Valve with Bronze Trim: MSS SP-110.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. BrassCraft Manufacturing Company; a Masco company.
   b. Conbraco Industries, Inc.; Apollo Div.
   c. Lyall, R. W. & Company, Inc.
   d. McDonald, A. Y. Mfg. Co.
   e. Perfection Corporation; a subsidiary of American Meter Company.
   f. Or approved equal.
2. Body: Bronze, complying with ASTM B 584.
3. Ball: Chrome-plated brass.
4. Stem: Bronze; blowout proof.
5. Seats: Reinforced TFE; blowout proof.
6. Packing: Separate packnut with adjustable-stem packing threaded ends.
7. Ends: Threaded, flared, or socket as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
8. CWP Rating: 600 psig (4140 kPa).
9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to Commissioner.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

E. Two-Piece, Full-Port, Bronze Ball Valves with Bronze Trim: MSS SP-110.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. BrassCraft Manufacturing Company; a Masco company.
   b. Conbraco Industries, Inc.; Apollo Div.
   c. Lyall, R. W. & Company, Inc.
   d. McDonald, A. Y. Mfg. Co.
   e. Perfection Corporation; a subsidiary of American Meter Company.
   f. Or Approved Equal
2. Body: Bronze, complying with ASTM B 584.
3. Ball: Chrome-plated bronze.
4. Stem: Bronze; blowout proof.
5. Seats: Reinforced TFE; blowout proof.
6. Packing: Threaded-body packnut design with adjustable-stem packing.
7. Ends: Threaded, flared, or socket as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
8. CWP Rating: 600 psig (4140 kPa).
9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to NYC Department of Buildings.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

F. Two-Piece, Regular-Port Bronze Ball Valves with Bronze Trim: MSS SP-110.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. BrassCraft Manufacturing Company; a Masco company.
   b. Conbraco Industries, Inc.; Apollo Div.
   c. Lyall, R. W. & Company, Inc.
   d. McDonald, A. Y. Mfg. Co.
   e. Perfection Corporation; a subsidiary of American Meter Company.
   f. Or Approved Equal
2. Body: Bronze, complying with ASTM B 584.
3. Ball: Chrome-plated bronze.
4. Stem: Bronze; blowout proof.
5. Seats: Reinforced TFE.
6. Packing: Threaded-body packnut design with adjustable-stem packing.
7. Ends: Threaded, flared, or socket as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
8. CWP Rating: 600 psig (4140 kPa).
9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to NYC Department of Buildings.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

G. Bronze Plug Valves: MSS SP-78.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Lee Brass Company.

b. McDonald, A. Y. Mfg. Co.
c. Nibco
d. Or Approved Equal

2. Body: Bronze, complying with ASTM B 584.
3. Plug: Bronze.
4. Ends: Threaded, socket, or flanged as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
5. Operator: Square head or lug type with tamperproof feature where indicated.
6. Pressure Class: 125 psig (862 kPa).
7. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to NYC Department of Buildings.
8. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

H. Cast-Iron, Nonlubricated Plug Valves: MSS SP-78.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. McDonald, A. Y. Mfg. Co.
b. Mueller Co.; Gas Products Div.
c. Xomox Corporation; a Crane company.
d. Or Approved Equal

2. Body: Cast iron, complying with ASTM A 126, Class B.
3. Plug: Bronze or nickel-plated cast iron.
4. Seat: Coated with thermoplastic.
5. Stem Seal: Compatible with natural gas.
6. Ends: Threaded or flanged as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
7. Operator: Square head or lug type with tamperproof feature where indicated.
8. Pressure Class: 125 psig (862 kPa).
9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to NYC Department of Buildings.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

I. Cast-Iron, Lubricated Plug Valves: MSS SP-78.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Flowserve.
b. Homestead Valve; a division of Olson Technologies, Inc.
c. McDonald, A. Y. Mfg. Co.
d. Milliken Valve Company.
e. Mueller Co.; Gas Products Div.
f. R&M Energy Systems, A Unit of Robbins & Myers, Inc.
g. Or Approved Equal

2. Body: Cast iron, complying with ASTM A 126, Class B.
3. Plug: Bronze or nickel-plated cast iron.
4. Seat: Coated with thermoplastic.
5. Stem Seal: Compatible with natural gas.

6. Ends: Threaded or flanged as indicated in "Aboveground Manual Gas Shutoff Valve Schedule" Articles.
7. Operator: Square head or lug type with tamperproof feature where indicated.
8. Pressure Class: 125 psig (862 kPa).
9. Listing: Valves NPS 1 (DN 25) and smaller shall be listed and labeled by an NRTL acceptable to NYC Department of Buildings.
10. Service: Suitable for natural-gas service with "WOG" indicated on valve body.

J. Valve Boxes:

1. Cast-iron, two-section box.
2. Top section with cover with "GAS" lettering.
3. Bottom section with base to fit over valve and barrel a minimum of 5 inches (125 mm) in diameter.
4. Adjustable cast-iron extensions of length required for depth of bury.
5. Include tee-handle, steel operating wrench with socket end fitting valve nut or flat head, and with stem of length required to operate valve.

2.5. PRESSURE REGULATORS

A. General Requirements:

1. Single stage and suitable for natural gas.
2. Steel jacket and corrosion-resistant components.
3. Elevation compensator.
4. End Connections: Threaded for regulators NPS 2 (DN 50) and smaller; flanged for regulators NPS 2-1/2 (DN 65) and larger.

B. Line Pressure Regulators: Comply with ANSI Z21.80.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Actaris.
   b. American Meter Company.
   c. Eclipse Combustion, Inc.
   d. Fisher Control Valves and Regulators; Division of Emerson Process Management.
   e. Invensys.
   f. Maxitrol Company.
   g. Richards Industries; Jordan Valve Div.
   h. Or Approved Equal
2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
3. Springs: Zinc-plated steel; interchangeable.
4. Diaphragm Plate: Zinc-plated steel.
5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
6. Orifice: Aluminum; interchangeable.
7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 150 percent of design discharge pressure at shutoff.

10. Overpressure Protection Device: Factory mounted on pressure regulator.
11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
12. Maximum Inlet Pressure: 2 psig (13.8 kPa).

2.6. GENERAL

A. Building Gas System Pressure

1. Low pressure as supplied by Utility Company,
2. Gas Booster:
   a. Furnish and install natural gas booster low capacity. Entire booster shall be hermetically sealed. Gas booster to include standard shaft 208V, ½ HP 3 HP 60 HZ 3,500 RPM class 1, group D explosion proof motor with thermal overload protection and junction box.

2.7. DIELECTRIC FITTINGS

A. Dielectric Unions:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Capitol Manufacturing Company.
   b. Central Plastics Company.
   c. Hart Industries International, Inc.
   d. McDonald, A. Y. Mfg. Co.
   e. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
   f. Wilkins; Zurn Plumbing Products Group.
   g. Or Approved Equal.
2. Minimum Operating-Pressure Rating: 150 psig (1034 kPa).
3. Combination fitting of copper alloy and ferrous materials.
4. Insulating materials suitable for natural gas.
5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

B. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Capitol Manufacturing Company.
   b. Central Plastics Company.
   c. Watts Regulator Co.; Division of Watts Water Technologies, Inc.
   d. Wilkins; Zurn Plumbing Products Group.
   e. Or Approved Equal
2. Minimum Operating-Pressure Rating: 150 psig (1034 kPa).
3. Combination fitting of copper alloy and ferrous materials.
4. Insulating materials suitable for natural gas.

5. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

C. Dielectric-Flange Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Advance Products & Systems, Inc.
   b. Calpico Inc.
   c. Central Plastics Company.
   d. Pipeline Seal and Insulator, Inc.
   e. Or Approved Equal
2. Minimum Operating-Pressure Rating: 150 psig (1034 kPa).
3. Companion-flange assembly for field assembly.
4. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or PE bolt sleeves, phenolic washers, and steel backing washers.
5. Insulating materials suitable for natural gas.
6. Combination fitting of copper alloy and ferrous materials with threaded, brazed-joint, plain, or welded end connections that match piping system materials.

2.8. 2.8 SLEEVES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

2.9. MECHANICAL SLEEVE SEALS

A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Advance Products & Systems, Inc.
   b. Calpico Inc.
   c. Metraflex Company (The).
   d. Pipeline Seal and Insulator, Inc.
   e. Or Approved Equal
2. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe and sleeve.
3. Pressure Plates: Carbon steel.
4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one nut and bolt for each sealing element.

2.10. GROUT

A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

2.11. LABELING AND IDENTIFYING

A. Detectable Warning Tape: Acid- and alkali-resistant, PE film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches (150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (750 mm) deep; colored yellow.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. PREPARATION

A. Close equipment shutoff valves before turning off natural gas to premises or piping section.

B. Inspect natural-gas piping according to NFPA 54 to determine that natural-gas utilization devices are turned off in piping section affected.

C. Comply with NFPA 54 requirements for prevention of accidental ignition.

3.4. INDOOR PIPING INSTALLATION

A. Comply with NFPA 54 for installation and purging of natural-gas piping.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.

D. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

G. Locate valves for easy access.

H. Install natural-gas piping at uniform grade of 2 percent down toward drip and sediment traps.

I. Install piping free of sags and bends.

J. Install fittings for changes in direction and branch connections.

K. Install escutcheons at penetrations of interior walls, ceilings, and floors.

1. New Piping:

a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
b. Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
c. Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
d. Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type and set screw.
e. Piping in Unfinished Service Spaces: One-piece, stamped-steel type with set screw or spring clips.
f. Piping in Equipment Rooms: One-piece, cast-brass type.
g. Piping in Equipment Rooms: One-piece, stamped-steel type with set screw or spring clips.

L. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Section 078413 "Firestops and Smokeseals."

M. Verify final equipment locations for roughing-in.

N. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.

O. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.

1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches (75 mm) long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.

P. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.

Q. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, below grade or floors, and in floor channels unless indicated to be exposed to view.

R. Concealed Location Installations: Except as specified below, install concealed natural-gas piping and piping installed under the building in containment conduit constructed of steel pipe with welded joints as described in Part 2. Install a vent pipe from containment conduit to outdoors and terminate with weatherproof vent cap.

1. Above Accessible Ceilings: Natural-gas piping, fittings, valves, and regulators may be installed in accessible spaces without containment conduit.
2. In Floors: Install natural-gas piping with welded or brazed joints and protective coating in cast-in-place concrete floors. Cover piping to be cast in concrete slabs with minimum of 1-1/2 inches (38 mm) of concrete. Piping may not be in physical contact with other metallic structures such as reinforcing rods or electrically neutral conductors. Do not embed piping in concrete slabs containing quick-set additives or cinder aggregate.
3. In Floor Channels: Install natural-gas piping in floor channels. Channels must have cover and be open to space above cover for ventilation.
4. In Walls or Partitions: Protect tubing installed inside partitions or hollow walls from physical damage using steel striker barriers at rigid supports.
    a. Exception: Tubing passing through partitions or walls does not require striker barriers.
5. Prohibited Locations:
    a. Do not install natural-gas piping in or through circulating air ducts, ventilating ducts, or elevator shafts.
    b. Do not install natural-gas piping in solid walls or partitions.

S. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.

T. Connect branch piping from top or side of horizontal piping.

U. Install unions in pipes NPS 2 (DN 50) and smaller, adjacent to each valve, at final connection to each piece of equipment. Unions are not required at flanged connections.

V. Do not use natural-gas piping as grounding electrode.

W. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.

X. Install pressure gage upstream and downstream from each line regulator.

3.5. SERVICE-METER ASSEMBLY INSTALLATION

A. Install service-meter assemblies aboveground, on concrete bases if required.

B. Install metal shutoff valves upstream from service regulators. Shutoff valves are not required at second regulators if two regulators are installed in series.

C. Install strainer on inlet of service-pressure regulator and meter set.

D. Install service regulators mounted outside with vent outlet horizontal or facing down. Install screen in vent outlet if not integral with service regulator.

E. Install metal shutoff valves upstream from service meters. Install dielectric fittings downstream from service meters.

F. Install service meters downstream from pressure regulators.

3.6. VALVE INSTALLATION

A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.

B. Install underground valves with valve boxes.

C. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.

D. Install anode for metallic valves in underground PE piping.

3.7. PIPING JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Threaded Joints:

1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
2. Cut threads full and clean using sharp dies.
3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints:

1. Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators.
2. Bevel plain ends of steel pipe.

3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

3.8. HANGER AND SUPPORT INSTALLATION

A. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

B. Comply with requirements for pipe hangers and supports specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

C. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:

1. NPS 1 (DN 25) and Smaller: Maximum span, 96 inches (2438 mm); minimum rod size, 3/8 inch (10 mm).
2. NPS 1-1/4 (DN 32): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
3. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): Maximum span, 108 inches (2743 mm); minimum rod size, 3/8 inch (10 mm).
4. NPS 2-1/2 to NPS 3-1/2 (DN 65 to DN 90): Maximum span, 10 feet (3 m); minimum rod size, 1/2 inch (13 mm).
5. NPS 4 (DN 100) and Larger: Maximum span, 10 feet (3 m); minimum rod size, 5/8 inch (15.8 mm).

D. Install hangers for horizontal drawn-temper copper tubing with the following maximum spacing and minimum rod sizes:

1. NPS 3/8 (DN 10): Maximum span, 48 inches (1220 mm); minimum rod size, 3/8 inch (10 mm).
2. NPS 1/2 and NPS 5/8 (DN 15 and DN 18): Maximum span, 72 inches (1830 mm); minimum rod size, 3/8 inch (10 mm).
3. NPS 3/4 and NPS 7/8 (DN 20 and DN 22): Maximum span, 84 inches (2134 mm); minimum rod size, 3/8 inch (10 mm).
4. NPS 1 (DN 25): Maximum span, 96 inches (2440 mm); minimum rod size, 3/8 inch (10 mm).

3.9. CONNECTIONS

A. Connect to utility's gas main according to utility's procedures and requirements.

B. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.

C. Install piping adjacent to appliances to allow service and maintenance of appliances.

D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches (1800 mm) of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.

E. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

3.10. LABELING AND IDENTIFYING

A. Comply with requirements in Section 230553 "Identification for HVAC Piping and Equipment" for piping and valve identification.

B. Install detectable warning tape directly above gas piping, 12 inches (300 mm) below finished grade, except 6 inches (150 mm) below subgrade under pavements and slabs.

3.11. PAINTING

A. Comply with requirements in painting sections 099000 for painting interior and exterior natural-gas piping.

B. Paint exposed, exterior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.

1. Alkyd System: MPI EXT 5.1D.

   a. Prime Coat: Alkyd anticorrosive metal primer.
   b. Intermediate Coat: Exterior alkyd enamel matching topcoat.
   c. Topcoat: Exterior alkyd enamel (flat).
   d. Color: Gray.

C. Paint exposed, interior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.

1. Latex Over Alkyd Primer System: MPI INT 5.1Q.

   a. Prime Coat: Alkyd anticorrosive metal primer.
   b. Intermediate Coat: Interior latex matching topcoat.
   c. Topcoat: Interior latex (flat).
   d. Color: Gray.

2. Alkyd System: MPI INT 5.1E.

   a. Prime Coat: Alkyd anticorrosive metal primer.
   b. Intermediate Coat: Interior alkyd matching topcoat.
   c. Topcoat: Interior alkyd (flat).
   d. Color: Gray.

D. Damage and Touchup: Restore marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.12. CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to seismic codes at Project.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
2. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.
5. Refer to Section 033000 for Structural data.

3.13. FIELD QUALITY CONTROL

A. Contractor shall Perform tests and inspections.

B. Tests and Inspections:

1. Test, inspect, and purge natural gas according to NFPA 54 and NYC Department of Buildings.

C. Natural-gas piping will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.14. INSTRUCTION

A. Engage a factory-authorized service representative to instruct building's operating personnel to adjust, operate, and maintain earthquake valves.

3.15. INDOOR PIPING SCHEDULE FOR SYSTEM PRESSURES LESS THAN 0.5 PSIG (3.45 kPa)

A. Aboveground, branch piping NPS 1 (DN 25) and smaller shall be the following:

1. Steel pipe with malleable-iron fittings and threaded joints.

B. Aboveground, distribution piping shall be one of the following:

1. Steel pipe with malleable-iron fittings and threaded joints.
2. Steel pipe with wrought-steel fittings and welded joints.

C. Containment Conduit: Steel pipe with wrought-steel fittings and welded joints. Coat pipe and fittings with protective coating for steel piping.

D. Containment Conduit Vent Piping: Steel pipe with malleable-iron fittings and threaded or wrought-steel fittings with welded joints. Coat underground pipe and fittings with protective coating for steel piping.

3.16. ABOVEGROUND MANUAL GAS SHUTOFF VALVE SCHEDULE

A. Valves for pipe sizes NPS 2 (DN 50) and smaller at service meter shall be one of the following:

1. One-piece, bronze ball valve with bronze trim.
2. Two-piece, full port, bronze ball valves with bronze trim.
3. Bronze plug valve.

B. Valves for pipe sizes NPS 2-1/2 (DN 65) and larger at service meter shall be one of the following:

1. Two-piece, full-port, bronze ball valves with bronze trim.
2. Bronze plug valve.
3. Cast-iron, nonlubricated plug valve.

C. Distribution piping valves for pipe sizes NPS 2 (DN 50) and smaller shall be one of the following:

1. One-piece, bronze ball valve with bronze trim.
2. Two-piece, full-port, bronze ball valves with bronze trim.
3. Bronze plug valve.

D. Distribution piping valves for pipe sizes NPS 2-1/2 (DN 65) and larger shall be one of the following:

1. Two-piece, full-port, bronze ball valves with bronze trim.
2. Bronze plug valve.
3. Cast-iron, lubricated plug valve.

E. Valves in branch piping for single appliance shall be one of the following:

1. One-piece, bronze ball valve with bronze trim.
2. Two-piece, full-port, bronze ball valves with bronze trim.
3. Bronze plug valve.

END OF SECTION 221114

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 221116
Domestic Water Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Section Includes:

1. Under-building slab and aboveground domestic water pipes, tubes, fittings, and specialties inside the building.
2. Specialty valves.
3. Flexible connectors.
4. Escutcheons.
5. Sleeves and sleeve seals.
6. Wall penetration systems.

B. Related Section:

1. Section 221113 "Facility Water Distribution Piping" for water-service piping and water meters outside the building from source to the point where water-service piping enters the building.

1.3. PERFORMANCE REQUIREMENTS

A. Seismic Performance: Domestic water piping and support and installation shall withstand effects of earthquake motions determined according to ASCE/SEI 7.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For the following products:

1. Specialty valves.
2. Transition fittings.

3. Dielectric fittings.
4. Flexible connectors.
5. Water meters.
6. Escutcheons.
7. Sleeves and sleeve seals.
8. Water penetration systems.

C. Water Samples: Specified in "Cleaning" Article.

D. Coordination Drawings: For piping in equipment rooms and other congested areas, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Fire-suppression-water piping.
2. Domestic water piping.
3. HVAC hydronic piping.

E. Field quality-control reports.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Piping materials shall bear label, stamp, or other markings of specified testing agency.

C. Comply with NSF 61 for potable domestic water piping and components.

D. Materials and work shall conform to the latest edition of reference specifications specified herein and to applicable codes and requirements of NYC Department of Buildings.

1.6. COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1. PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.2. COPPER TUBE AND FITTINGS

A. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) water tube, drawn temper.

1. Cast-Copper Solder-Joint Fittings: ASME B16.18, pressure fittings.
2. Wrought-Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.

3. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

4. Grooved-Joint Copper-Tube Appurtenances:

   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

      1) Anvil International.
      2) Shurjoint Piping Products.
      3) Victaulic Company.
      4) Or Approved Equal.

   b. Copper Grooved-End Fittings: ASTM B 75 copper tube or ASTM B 584 bronze castings.
   c. Grooved-End-Tube Couplings: Copper-tube dimensions and design similar to AWWA C606. Include ferrous housing sections, EPDM-rubber gaskets suitable for hot and cold water, and bolts and nuts.

B. Soft Copper Tube: ASTM B 88, Type K and ASTM B 88, Type L water tube, annealed temper.

1. Copper Solder-Joint Fittings: ASME B16.22, wrought-copper pressure fittings.

2.3. DUCTILE-IRON PIPE AND FITTINGS

A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.

B. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.

2.4. PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free, unless otherwise indicated; full-face or ring type unless otherwise indicated.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

D. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

2.5. TRANSITION FITTINGS

A. General Requirements:

1. Same size as pipes to be joined.
2. Pressure rating at least equal to pipes to be joined.
3. End connections compatible with pipes to be joined.

B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.

C. Sleeve-Type Transition Coupling: AWWA C219.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cascade Waterworks Manufacturing.
b. Dresser, Inc.; Dresser Piping Specialties.
c. Ford Meter Box Company, Inc. (The).
d. JCM Industries.
e. Romac Industries, Inc.
f. Smith-Blair, Inc; a Sensus company.
g. Viking Johnson; c/o Mueller Co.
h. Or Approved Equal.

2.6. DIELECTRIC FITTINGS

A. General Requirements: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.

B. Dielectric Unions:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Capitol Manufacturing Company.
b. EPCO Sales, Inc.
c. Hart Industries International, Inc.
d. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
e. Zurn Plumbing Products Group; Wilkins Water Control Products.
f. Or Approved Equal

2. Description:

a. Pressure Rating: 250 psig at 180 deg F (82 deg C).
b. End Connections: Solder-joint copper alloy and threaded ferrous.

C. Dielectric Flanges:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Capitol Manufacturing Company.
b. EPCO Sales, Inc.
c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
d. Or Approved Equal

2. Description:

a. Factory-fabricated, bolted, companion-flange assembly.
b. Pressure Rating: 175 psig minimum.
c. End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.

D. Dielectric-Flange Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Pipeline Seal and Insulator, Inc.
d. Or Approved Equal

2. Description:

a. Nonconducting materials for field assembly of companion flanges.
b. Pressure Rating: 175 psig
c. Gasket: Neoprene or phenolic.
d. Bolt Sleeves: Phenolic or polyethylene.
e. Washers: Phenolic with steel backing washers.

E. Dielectric Couplings:

3. Description:

a. Galvanized-steel coupling.
b. Pressure Rating: 300 psig at 225 deg F.
c. End Connections: Female threaded.
d. Lining: Inert and noncorrosive, thermoplastic.

F. Dielectric Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Perfection Corporation; a subsidiary of American Meter Company.
b. Precision Plumbing Products, Inc.
c. Victaulic Company.
d. Or Approved Equal

2. Description:

a. Electroplated steel nipple complying with ASTM F 1545.
b. Pressure Rating: 300 psig at 225 deg F.
c. End Connections: Male threaded or grooved.
d. Lining: Inert and noncorrosive, propylene.

2.7. FLEXIBLE CONNECTORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Flex-Hose Co., Inc.
2. Flexicraft Industries.
3. Flex Pression, Ltd.
4. Flex-Weld, Inc.
5. Hyspan Precision Products, Inc.
6. Mercer Rubber Co.
7. Metraflex, Inc.
8. Proco Products, Inc.
9. Tozen Corporation.
10. Unaflex, Inc.
11. Universal Metal Hose; a Hyspan company
12. Or Approved Equal

B. Bronze-Hose Flexible Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.

1. Working-Pressure Rating: Minimum 200 psig.
2. End Connections NPS 2 and Smaller: Threaded copper pipe or plain-end copper tube.
3. End Connections NPS 2-1/2 and Larger: Flanged copper alloy.

C. Stainless-Steel-Hose Flexible Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.

1. Working-Pressure Rating: Minimum 200 psig.
2. End Connections NPS 2 and Smaller: Threaded steel-pipe nipple.
3. End Connections NPS 2-1/2 and Larger: Flanged steel nipple.

2.8. ESCUTCHEONS

A. General: Manufactured ceiling, floor, and wall escutcheons and floor plates.

B. One Piece, Cast Brass: Polished, chrome-plated finish with setscrews.

C. One Piece, Deep Pattern: Deep-drawn, box-shaped brass with chrome-plated finish.

D. One Piece, Stamped Steel: Chrome-plated finish with setscrew or spring clips.

E. Split Casting, Cast Brass: Polished, chrome-plated finish with concealed hinge and setscrew.

F. Split Plate, Stamped Steel: Chrome-plated finish with concealed hinge, setscrew or spring clips.

G. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.

H. Split-Casting Floor Plates: Cast brass with concealed hinge.

2.9. SLEEVES

A. Cast-Iron Wall Pipes: Fabricated of cast iron, and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

B. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc-coated, with plain ends.

D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with setscrews.

2.10. SLEEVE SEALS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Advance Products & Systems, Inc.
2. Calpico, Inc.
3. Metraflex, Inc.
4. Pipeline Seal and Insulator, Inc.
5. Or Approved Equal

B. Description: Modular sealing element unit, designed for field assembly, used to fill annular space between pipe and sleeve.

1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Stainless steel.
3. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements.

2.11. WALL PENETRATION SYSTEMS

A. Description: Wall-sleeve assembly, consisting of housing and gland, gaskets, and pipe sleeve.

1. Carrier-Pipe Deflection: Up to 5 percent without leakage.
2. Housing: Ductile-iron casting with hub, waterstop, anchor ring, and locking devices. Include gland, bolts, and nuts.
3. Housing-to-Sleeve Gasket: EPDM rubber.
4. Housing-to-Carrier-Pipe Gasket: AWWA C111, EPDM rubber.
5. Pipe Sleeve: AWWA C151, ductile-iron pipe.

2.12. GROUT

A. Standard: ASTM C 1107, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink; recommended for interior and exterior applications.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EARTHWORK

A. Comply with requirements in Section 31000 "Earthwork" for excavating, trenching, and backfilling.

3.3. PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install copper tubing under building slab according to CDA's "Copper Tube Handbook."

C. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.

D. Install underground copper tube in PE encasement according to ASTM A 674 or AWWA C105.

E. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve, inside the building at each domestic water service entrance. Comply with requirements in Section 220519 "Meters and Gages for Plumbing Piping" for pressure gages and Section 221119 "Domestic Water Piping Specialties" for drain valves and strainers.

F. Install shutoff valve immediately upstream of each dielectric fitting.

G. Install water-pressure-reducing valves downstream from shutoff valves. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for pressure-reducing valves.

H. Install domestic water piping level without pitch and plumb.

I. Install seismic restraints on piping.

J. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.

K. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.

M. Install piping adjacent to equipment and specialties to allow service and maintenance.

N. Install piping to permit valve servicing.

O. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than system pressure rating used in applications below unless otherwise indicated.

P. Install piping free of sags and bends.

Q. Install fittings for changes in direction and branch connections.

R. Install unions in copper tubing at final connection to each piece of equipment, machine, and specialty.

S. Install pressure gages on suction and discharge piping from each plumbing pump and packaged booster pump. Comply with requirements in Section 220519 "Meters and Gages for Plumbing Piping" for pressure gages.

T. Install thermostats in hot-water circulation piping.

U. Install thermometers on inlet and outlet piping from each water heater. Comply with requirements in Section 220519 "Meters and Gages for Plumbing Piping" for thermometers.

3.4. JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

D. Brazed Joints: Join copper tube and fittings according to CDA's "Copper Tube Handbook," "Brazed Joints" Chapter.

E. Soldered Joints: Apply ASTM B 813, water-flushable flux to end of tube. Join copper tube and fittings according to ASTM B 828 or CDA's "Copper Tube Handbook."

F. Extruded-Tee Connections: Form tee in copper tube according to ASTM F 2014. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.

G. Copper-Tubing Grooved Joints: Roll groove end of tube. Assemble coupling with housing, gasket, lubricant, and bolts. Join copper tube and grooved-end fittings according to AWWA C606 for roll-grooved joints.

H. Ductile-Iron-Piping Grooved Joints: Cut groove end of pipe. Assemble coupling with housing, gasket, lubricant, and bolts. Join ductile-iron pipe and grooved-end fittings according to AWWA C606 for ductile-iron-pipe, cut-grooved joints.

I. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.

J. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.5. VALVE INSTALLATION

A. General-Duty Valves: Comply with requirements in Section 220523 "General-Duty Valves for Plumbing Piping" for valve installations.

B. Install shutoff valve close to water main on each branch and riser serving plumbing fixtures or equipment, on each water supply to equipment, and on each water supply to plumbing fixtures that do not have supply stops. Use ball or gate valves for piping NPS 2 and smaller. Use butterfly or gate valves for piping NPS 2-1/2 and larger.

C. Install drain valves for equipment at base of each water riser, at low points in horizontal piping, and where required to drain water piping. Drain valves are specified in Section 221119 "Domestic Water Piping Specialties."

1. Hose-End Drain Valves: At low points in water mains, risers, and branches.
2. Stop-and-Waste Drain Valves: Instead of hose-end drain valves where indicated.

D. Install balancing valve in each hot-water circulation return branch and discharge side of each pump and circulator. Set balancing valves partly open to restrict but not stop flow. Use ball valves for piping NPS 2 and smaller and butterfly valves for piping NPS 2-1/2 and larger. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for balancing valves.

E. Install calibrated balancing valves in each hot-water circulation return branch and discharge side of each pump and circulator. Set calibrated balancing valves partly open to restrict but not stop flow. Comply with requirements in Section 221119 "Domestic Water Piping Specialties" for calibrated balancing valves.

3.6. TRANSITION FITTING INSTALLATION

A. Install transition couplings at joints of dissimilar piping.

B. Transition Fittings in Underground Domestic Water Piping:

1. NPS 1-1/2 and Smaller: Fitting-type coupling.
2. NPS 2 and Larger: Sleeve-type coupling.

C. Transition Fittings in Aboveground Domestic Water Piping NPS 2 (DN 50) and Smaller: Plastic-to-metal transition fittings or unions.

3.7. DIELECTRIC FITTING INSTALLATION

A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.

B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric unions.

C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges.

D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.8. FLEXIBLE CONNECTOR INSTALLATION

A. Install flexible connectors in suction and discharge piping connections to each domestic water pump and in suction and discharge manifold connections to each domestic water booster pump.

B. Install bronze-hose flexible connectors in copper domestic water tubing.

C. Install stainless-steel-hose flexible connectors in steel domestic water piping.

3.9. WATER METER INSTALLATION

A. Rough-in domestic water piping for water meter installation, and install water meters according to utility company's requirements.

3.10. HANGER AND SUPPORT INSTALLATION

A. Comply with requirements in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support products and installation.

1. Vertical Piping: MSS Type 8 or 42, clamps.
2. Individual, Straight, Horizontal Piping Runs:

   a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
   b. Longer Than 100 Feet : MSS Type 43, adjustable roller hangers.

c. Longer Than 100 Feet If Indicated: MSS Type 49, spring cushion rolls.

3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
4. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Support vertical piping and tubing at base and at each floor.

C. Rod diameter may be reduced one size for double-rod hangers, to a minimum of 3/8 inch.

D. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 3/4 and Smaller: 60 inches with 3/8-inch rod.
2. NPS 1 and NPS 1-1/4: 72 inches with 3/8-inch rod.
3. NPS 1-1/2 and NPS 2 : 96 inches with 3/8-inch rod.
4. NPS 2-1/2: 108 inches with 1/2-inch rod.
5. NPS 3 to NPS 5: 10 feet with 1/2-inch rod.
6. NPS 6: 10 feet with 5/8-inch rod.
7. NPS 8: 10 feet with 3/4-inch rod.

E. Install supports for vertical copper tubing every 10 feet.

F. Support piping and tubing not listed in this article according to MSS SP-69 and manufacturer's written instructions.

3.11. CONNECTIONS

A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified. If Drawings are explicit enough, these requirements may be reduced or omitted.

B. Drawings indicate general arrangement of piping, fittings, and specialties.

C. Install piping adjacent to equipment and machines to allow service and maintenance.

D. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.

E. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:

1. Domestic Water Booster Pumps: Cold-water suction and discharge piping.
2. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
3. Plumbing Fixtures: Cold- and hot-water supply piping in sizes indicated, but not smaller than required by plumbing code. Comply with requirements in plumbing fixture sections for connection sizes.

4. Equipment: Cold- and hot-water supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

3.12. ESCUTCHEON INSTALLATION

A. Install escutcheons for penetrations of walls, ceilings, and floors.

B. Escutcheons for New Piping:

1. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
2. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
3. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece or split casting, cast brass with polished chrome-plated finish.
4. Bare Piping in Unfinished Service Spaces: One piece, cast brass with rough-brass finish.
5. Bare Piping in Equipment Rooms: One piece, cast brass.
6. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

3.13. SLEEVE INSTALLATION

A. General Requirements: Install sleeves for pipes and tubes passing through penetrations in floors, partitions, roofs, and walls.

B. Sleeves are not required for core-drilled holes.

C. Permanent sleeves are not required for holes formed by removable PE sleeves.

D. Cut sleeves to length for mounting flush with both surfaces unless otherwise indicated.

E. Install sleeves in new partitions, slabs, and walls as they are built.

F. For interior wall penetrations, seal annular space between sleeve and pipe or pipe insulation using joint sealants appropriate for size, depth, and location of joint. Comply with requirements in 079200 Section "Interior Joint Sealers" for joint sealants.

G. For exterior wall penetrations above grade, seal annular space between sleeve and pipe using joint sealants appropriate for size, depth, and location of joint. Comply with requirements in 079200 Section "Interior Joint Sealers" for joint sealants.

H. For exterior wall penetrations below grade, seal annular space between sleeve and pipe using wall penetration systems specified in this Section.

I. Seal space outside of sleeves in concrete slabs and walls with grout.

J. Revise first paragraph below as required for seismic design conditions. Coordinate sleeve requirements with pipe insulation specified in Section 220700 "Plumbing Insulation."

K. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation unless otherwise indicated.

L. Install sleeve materials according to the following applications:

1. Sleeves for Piping Passing through Concrete Floor Slabs: Steel pipe.
2. Sleeves for Piping Passing through Concrete Floor Slabs of Mechanical Equipment Areas or Other Wet Areas: Steel pipe.

    a. Extend sleeves 2 inches above finished floor level.
    b. For pipes penetrating floors with membrane waterproofing, extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.

3. Sleeves for Piping Passing through Gypsum-Board Partitions:

    a. Steel pipe sleeves for pipes smaller than NPS 6.
    b. Galvanized-steel sheet sleeves for pipes NPS 6 and larger.
    c. Exception: Sleeves are not required for water supply tubes and waste pipes for individual plumbing fixtures if escutcheons will cover openings.

4. Sleeves for Piping Passing through Concrete Roof Slabs: Steel pipe.
5. Sleeves for Piping Passing through Exterior Concrete Walls:

    a. Steel pipe sleeves for pipes smaller than NPS 6.
    b. Cast-iron wall pipe sleeves for pipes NPS 6 and larger.
    c. Install sleeves that are large enough to provide 1-inch (25-mm) annular clear space between sleeve and pipe or pipe insulation when sleeve seals are used.
    d. Do not use sleeves when wall penetration systems are used.

6. Sleeves for Piping Passing through Interior Concrete Walls:

    a. Steel pipe sleeves for pipes smaller than NPS 6.
    b. Galvanized-steel sheet sleeves for pipes NPS 6 and larger.

M. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Section 078413 "Firestops and Smokeseals" for firestop materials and installations.

3.14. SLEEVE SEAL INSTALLATION

A. Install sleeve seals in sleeves in exterior concrete walls at water-service piping entries into building.

B. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.15. WALL PENETRATION SYSTEM INSTALLATION

A. Install wall penetration systems in new, exterior concrete walls.

B. Assemble wall penetration system components with sleeve pipe. Install so that end of sleeve pipe and face of housing are flush with wall. Adjust locking devices to secure sleeve pipe in housing.

3.16. IDENTIFICATION

A. Identify system components. Comply with requirements in Section 220553 "Identification for Plumbing Piping and Equipment" for identification materials and installation.

B. Label pressure piping with system operating pressure.

3.17. FIELD QUALITY CONTROL

A. Contractor shall Perform tests and inspections.

B. Piping Inspections:

1. Do not enclose, cover, or put piping into operation until it has been inspected and approved by Commissioner.
2. During installation, notify Commissioner at least one day before inspection must be made. Perform tests specified below in presence of Commissioner:
    a. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
    b. Final Inspection: Arrange final inspection for Commissioner to observe tests specified below and to ensure compliance with requirements.
3. Reinspection: If Commissioner finds that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
4. Reports: Prepare inspection reports and have them signed by Commissioner.

C. Piping Tests:

1. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
2. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or restoreed. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
3. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
4. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials but not less than 150 psig . Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be restoreed.

5. Restore leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.
6. Prepare reports for tests and for corrective action required.

D. Domestic water piping will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.18. ADJUSTING

A. Perform the following adjustments before operation:

1. Close drain valves, hydrants, and hose bibbs.
2. Open shutoff valves to fully open position.
3. Open throttling valves to proper setting.
4. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
    a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide flow of hot water in each branch.
    b. Adjust calibrated balancing valves to flows indicated.
5. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
6. Remove and clean strainer screens. Close drain valves and replace drain plugs.
7. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and are clean and ready for use.
8. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.19. CLEANING

A. Clean and disinfect potable and non-potable domestic water piping as follows:

1. Purge new piping and parts of existing piping that have been altered, extended, or restoreed before using.
2. Use purging and disinfecting procedures prescribed by Commissioner; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652:

B. Clean non-potable domestic water piping as follows:

1. Purge new piping and parts of existing piping that have been altered, extended, or restoreed before using.
2. Use purging procedures prescribed by Commissioner or; if methods are not prescribed, follow procedures described below:
    a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
    b. Submit water samples in sterile bottles to Commissioner. Repeat procedures if biological examination shows contamination.

C. Prepare and submit reports of purging and disinfecting activities.

D. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

3.20. PIPING SCHEDULE

A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.

B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.

C. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.

D. Under-building-slab, domestic water, building service piping, NPS 3 (DN 80) and smaller shall be the following:

1. Soft copper tube, ASTM B 88, Type K wrought-copper solder-joint fittings; and brazed joints.

E. Under-building-slab, domestic water, building-service piping, NPS 4 to NPS 8 and larger shall be the following:

1. Soft copper tube, ASTM B 88, Type K; wrought-copper solder-joint fittings; and brazed joints.

F. Under-building-slab, domestic water piping, NPS 2 and smaller, shall be the following:

1. Hard copper tube, ASTM B 88, Type L wrought-copper solder-joint fittings; and brazed joints.

G. Aboveground domestic water piping, NPS 2 and smaller, shall be the following:

1. Hard copper tube, ASTM B 88, Type L cast-or wrought- copper solder-joint fittings; and soldered joints.

H. Aboveground domestic water piping, NPS 2-1/2 to NPS 4, shall be one of the following:

1. Hard copper tube, ASTM B 88, Type L cast- or wrought- copper solder-joint fittings; and soldered joints.
2. Hard copper tube, ASTM B 88, Type L grooved-joint copper-tube appurtenances; and grooved joints.

I. Aboveground domestic water piping, NPS 5 to NPS 8, shall be one of the following:

1. Hard copper tube, ASTM B 88, Type L cast- or wrought- copper solder-joint fittings; and brazed joints.
2. Hard copper tube, ASTM B 88, Type L; grooved-joint copper-tube appurtenances; and grooved joints.

3.21. VALVE SCHEDULE

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Shutoff Duty: Use ball or gate valves for piping NPS 2 and smaller. Use butterfly, ball, or gate valves with flanged ends for piping NPS 2-1/2 and larger.
2. Throttling Duty: Use ball or globe valves for piping NPS 2 and smaller. Use butterfly or ball valves with flanged ends for piping NPS 2-1/2 and larger.
3. Hot-Water Circulation Piping, Balancing Duty: Calibrated balancing valves.
4. Drain Duty: Hose-end drain valves.

B. Use check valves to maintain correct direction of domestic water flow to and from equipment.

C. Iron grooved-end valves may be used with grooved-end piping.

END OF SECTION 221116

SECTION 221119
Domestic Water Piping Specialties

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. This Section includes the following domestic water piping specialties:

1. Vacuum breakers.
2. Backflow preventers.
3. Balancing valves.
4. Temperature-actuated water mixing valves.
5. Strainers.
6. Outlet boxes.
7. Hose stations.
8. Hose bibs.
9. Wall hydrants.
10. Drain valves.
11. Water hammer arresters.
12. Air vents.

B. Related Sections include the following:

1. Section 220500 "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.

2. Section 220519 "Meters and Gages for Plumbing Piping" for thermometers, pressure gages, and flow meters in domestic water piping.

3. Section 220553 "Identification for Plumbing Piping Equipment" for nameplates and signs.
4. Section 221116 "Domestic Water Piping" for water meters.
5. Section 260519 "Low-Voltage Electrical Power Conductors and Cables" for wire connections.
6. Section 260526 "Grounding and Bonding for Electrical Systems" for ground equipment.

1.3. PERFORMANCE REQUIREMENTS

A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig, unless otherwise indicated.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Shop Drawings: Diagram power, signal, and control wiring.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner, and marked for intended use.

C. NSF Compliance:

1. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic domestic water piping components.
2. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9."

D. Materials and work shall conform to applicable codes and requirements of NYC Department of Buildings.

PART 2 - PRODUCTS

2.1. VACUUM BREAKERS

A. Pipe-Applied, Atmospheric-Type Vacuum Breakers :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Ames Co.
b. Cash Acme.
c. Conbraco Industries, Inc.
d. FEBCO; SPX Valves & Controls.

e. Rain Bird Corporation.
f. Toro Company (The); Irrigation Div.
g. Watts Industries, Inc.; Water Products Div.
h. Zurn Plumbing Products Group; Wilkins Div.
i. Or Approved Equal

2. Standard: ASSE 1001.
3. Size: NPS 1/4 to NPS 3, as required to match connected piping.
4. Body: Bronze.
5. Inlet and Outlet Connections: Threaded.
6. Finish: Chrome plated.

B. Hose-Connection Vacuum Breakers :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Arrowhead Brass Products, Inc.
b. Cash Acme.
c. Conbraco Industries, Inc.
d. Legend Valve.
e. MIFAB, Inc.
f. Prier Products, Inc.
g. Watts Industries, Inc.; Water Products Div.
h. Woodford Manufacturing Company.
i. Zurn Plumbing Products Group; Light Commercial Operation.
j. Zurn Plumbing Products Group; Wilkins Div.
k. Or Approved Equal

2. Standard: ASSE 1011.
3. Body: Bronze, nonremovable, with manual drain.
4. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
5. Finish: Chrome or nickel plated.

C. Pressure Vacuum Breakers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Ames Co.
b. Conbraco Industries, Inc.
c. FEBCO; SPX Valves & Controls.
d. Flomatic Corporation.
e. Toro Company (The); Irrigation Div.
f. Watts Industries, Inc.; Water Products Div.
g. Zurn Plumbing Products Group; Wilkins Div.
h. Or Approved Equal

2. Standard: ASSE 1020.
3. Operation: Continuous-pressure applications.

4. Pressure Loss: 5 psig maximum, through middle 1/3 of flow range.
5. Accessories:

    a. Valves: Ball type, on inlet and outlet.

2.2. BACKFLOW PREVENTERS

A. Reduced Pressure Principle Assembly:

1. Standard: ASSE 1015 and NYC MEA
2. Operation: Continuous-pressure applications, unless otherwise indicated.
3. Pressure Loss: 5 psig maximum, through middle 1/3 of flow range.
4. Body: Stainless Steel.
5. End Connections: flanged.
6. Configuration: Designed for horizontal, straight through flow.
7. Accessories:

    a. Valves: with grooved end butterfly valves with integral supervisory switches.

B. Double-Check, Detector-Assembly Backflow Preventers:

1. Standard: ASSE 1048 and FMG approved UL listed and NYC MEA.
2. Operation: Continuous-pressure applications.
3. Pressure Loss: 5 psig maximum, through middle 1/3 of flow range.
4. Body: 304 (Schedule 40) Stainless Steel.
5. End Connections: Flanged.
6. Configuration: Designed for horizontal, straight through flow.
7. Accessories:

    a. Valves: Outside screw and yoke gate-type with flanged ends on inlet and outlet.
    b. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

2.3. BALANCING VALVES

A. Copper-Alloy Calibrated Balancing Valves :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Armstrong International, Inc.
    b. Flo Fab Inc.
    c. ITT Industries; Bell & Gossett Div.
    d. NIBCO INC.
    e. TAC Americas.
    f. Taco, Inc.
    g. Watts Industries, Inc.; Water Products Div.
    h. Or Approved Equal

2. Type: Y-pattern globe valve with two readout ports and memory setting indicator.

3. Body: Brass or bronze
4. Size: Same as connected piping, but not larger than NPS 2.
5. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.

B. Cast-Iron Calibrated Balancing Valves :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Armstrong International, Inc.
   b. Flo Fab Inc.
   c. ITT Industries; Bell & Gossett Div.
   d. NIBCO INC.
   e. TAC Americas.
   f. Watts Industries, Inc.; Water Products Div.
   g. Or Approved Equal

2. Type: Adjustable with Y-pattern globe valve, two readout ports, and memory-setting indicator.
3. Size: Same as connected piping, but not smaller than NPS 2-1/2.

C. Accessories: Meter hoses, fittings, valves, differential pressure meter, and carrying case.

D. Memory-Stop Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Conbraco Industries, Inc.
   b. Crane Co.; Crane Valve Group; Crane Valves.
   c. Crane Co.; Crane Valve Group; Jenkins Valves.
   d. Crane Co.; Crane Valve Group; Stockham Div.
   e. Hammond Valve.
   f. Milwaukee Valve Company.
   g. NIBCO INC.
   h. Red-White Valve Corp.
   i. Or Approved Equal

2. Standard: MSS SP-110 for two-piece, copper-alloy ball valves.
3. Pressure Rating: 400-psig minimum CWP.
4. Size: NPS 2 or smaller.
5. Body: Copper alloy.
6. Port: Standard or full port.
7. Ball: Chrome-plated brass.
8. Seats and Seals: Replaceable.
9. End Connections: Solder joint or threaded.
10. Handle: Vinyl-covered steel with memory-setting device.

2.4. TEMPERATURE-ACTUATED WATER MIXING VALVES

A. Primary, Thermostatic, Water Mixing Valves :

1. Basis-of-Design Product: Subject to compliance with requirements, provide T.A.C TAHP #7 or a comparable product by one of the following:

   a. Armstrong International, Inc.
   b. Lawler Manufacturing Company, Inc.
   c. Leonard Valve Company.
   d. Powers; a Watts Industries Co.
   e. Symmons Industries, Inc.
   f. Or Approved Equal

2. Standard: ASSE 1017.
3. Pressure Rating: 125 psig .
4. Type: Exposed-mounting electronically controlled water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Threaded inlets and outlet.
7. Accessories: Manual temperature control, check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Valve Pressure Rating: 125 psig minimum, unless otherwise indicated.
9. Tempered-Water Setting: 110 deg. F
10. Tempered-Water Design Flow Rate: 45 gpm (max. 64).
11. Selected Valve Flow Rate at 45-psig (310-kPa)
12. Pressure Drop at Design Flow Rate: 1 psig.
13. Valve Finish: Rough bronze.
14. Piping Finish: Copper.

2.5. STRAINERS FOR DOMESTIC WATER PIPING

A. Y-Pattern Strainers :

1. Pressure Rating: 125 psig minimum, unless otherwise indicated.
2. Body: Bronze for NPS 2 and smaller; cast iron with interior lining complying with AWWA C550 or FDA-approved, epoxy coating and for NPS 2-1/2 and larger.
3. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
4. Screen: Stainless steel with round perforations, unless otherwise indicated.
5. Perforation Size:

   a. Strainers NPS 2 and Smaller: 0.020 inch (0.51 mm) 0.033 inch (0.84 mm) 0.062 inch (1.57 mm).
   b. Strainers NPS 2-1/2 to NPS 4: 0.045 inch (1.14 mm) 0.062 inch (1.57 mm) 0.125 inch (3.18 mm).
   c. Strainers NPS 5 (DN 125) and Larger: 0.10 inch (2.54 mm) 0.125 inch (3.18 mm) 0.25 inch (6.35 mm).

6. Drain: Pipe plug Factory-installed, hose-end drain valve.

2.6. HOSE BIBBS

A. Hose Bibbs :

1. Standard: ASME A112.18.1 for sediment faucets.
2. Body Material: Bronze.
3. Seat: Bronze, replaceable.
4. Supply Connections: NPS 3/4 threaded or solder-joint inlet.
5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
6. Pressure Rating: 125 psig.
7. Vacuum Breaker: Integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
8. Finish for Equipment Rooms: Rough bronze, or chrome or nickel plated.
9. Finish for Service Areas: Chrome or nickel plated.
10. Finish for Finished Rooms: Chrome or nickel plated.
11. Operation for Equipment Rooms: Wheel handle or operating key.
12. Operation for Service Areas: Wheel handle.
13. Operation for Finished Rooms: Operating key.
14. Include operating key with each operating-key hose bibb.
15. Include integral wall flange with each chrome- or nickel-plated hose bibb.

2.7. WALL HYDRANTS

A. Nonfreeze Wall Hydrants :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Josam Company.
   b. MIFAB, Inc.
   c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   d. Zurn Plumbing Products Group.
   e. Or Approved Equal
2. Standard: ASME A112.21.3M for concealed-outlet, self-draining wall hydrants.
3. Pressure Rating: 125 psig (860 kPa).
4. Operation: Loose key.
5. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
6. Inlet: NPS 3/4 .
7. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
8. Box: Deep, flush mounting with cover.
9. Box and Cover Finish: Polished nickel bronze.
10. Outlet: Exposed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
11. Nozzle and Wall-Plate Finish: Polished nickel bronze.
12. Operating Keys(s): One with each wall hydrant.

B. Nonfreeze, Hot- and Cold-Water Wall Hydrants:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Josam Company.
   b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   c. Zurn Plumbing Products Group.
   d. Or Approved Equal

2. Standard: ASME A112.21.3M for concealed-outlet, self-draining wall hydrants.
3. Pressure Rating: 125 psig.
4. Operation: Loose key.
5. Casings and Operating Rods: Of length required to match wall thickness. Include wall clamps.
6. Inlets: NPS 3/4.
7. Outlet: Concealed.
8. Box: Deep, flush mounting with cover.
9. Box and Cover Finish: Polished nickel bronze.
10. Vacuum Breaker: Nonremovable, manual-drain-type, hose-connection vacuum breaker complying with ASSE 1011 and with garden-hose thread complying with ASME B1.20.7 on outlet.
11. Operating Keys(s): One with each wall hydrant.

C. Vacuum Breaker Wall Hydrants :

1. Standard: ASSE 1019, Type A or Type B.
2. Type: Freeze-resistant, automatic draining with integral air-inlet valve.
3. Classification: Type B, for automatic draining with hose removed or with hose attached and nozzle closed.
4. Pressure Rating: 125 psig.
5. Operation: Loose key or wheel handle.
6. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
7. Inlet: NPS 3/4.
8. Outlet: Exposed with garden-hose thread complying with ASME B1.20.7.

2.8. DRAIN VALVES

A. Ball-Valve-Type, Hose-End Drain Valves :

1. Standard: MSS SP-110 for standard-port, two-piece ball valves.
2. Pressure Rating: 400-psig minimum CWP.
3. Size: NPS 3/4.
4. Body: Copper alloy.
5. Ball: Chrome-plated brass.
6. Seats and Seals: Replaceable.
7. Handle: Vinyl-covered steel.
8. Inlet: Threaded or solder joint.
9. Outlet: Threaded, short nipple with garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

B. Gate-Valve-Type, Hose-End Drain Valves :

1. Standard: MSS SP-80 for gate valves.

2. Pressure Rating: Class 125.
3. Size: NPS 3/4.
4. Body: ASTM B 62 bronze.
5. Inlet: NPS 3/4 threaded or solder joint.
6. Outlet: Garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

C. Stop-and-Waste Drain Valves :

1. Standard: MSS SP-110 for ball valves or MSS SP-80 for gate valves.
2. Pressure Rating: 200-psig minimum CWP or Class 125.
3. Size: NPS 3/4.
4. Body: Copper alloy or ASTM B 62 bronze.
5. Drain: NPS 1/8 side outlet with cap.

2.9. WATER HAMMER ARRESTERS

A. Water Hammer Arresters :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.
b. Josam Company.
c. MIFAB, Inc.
d. Sioux Chief Manufacturing Company, Inc.
e. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
f. Tyler Pipe; Wade Div.
g. Watts Drainage Products Inc.
h. Zurn Plumbing Products Group; Specification Drainage Operation.
i. Or Approved Equal

2. Standard: ASSE 1010 or PDI-WH 201.
3. Type: Copper tube with piston.
4. Size: ASSE 1010, Sizes AA and A through F or PDI-WH 201, Sizes A through F.

2.10. AIR VENTS

A. Bolted-Construction Automatic Air Vents :

1. Body: Bronze.
2. Pressure Rating: 125-psig minimum pressure rating at 140 deg F.
3. Float: Replaceable, corrosion-resistant metal.
4. Mechanism and Seat: Stainless steel.
5. Size: NPS 1/2 minimum inlet.
6. Inlet and Vent Outlet End Connections: Threaded.

B. Welded-Construction Automatic Air Vents :

1. Body: Stainless steel.

2. Pressure Rating: 150-psig minimum pressure rating.
3. Float: Replaceable, corrosion-resistant metal.
4. Mechanism and Seat: Stainless steel.
5. Size: NPS 3/8 minimum inlet.
6. Inlet and Vent Outlet End Connections: Threaded.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with NYC Department of Buildings.

1. Locate backflow preventers in same room as connected equipment or system.
2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe to floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are not acceptable for this application.
3. Do not install bypass piping around backflow preventers.

B. Install water regulators with inlet and outlet shutoff valves. Install pressure gages on inlet and outlet.

C. Install water control valves with inlet and outlet shutoff valves . Install pressure gages on inlet and outlet.

D. Install balancing valves in locations where they can easily be adjusted.

E. Install temperature-actuated water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.

1. Install thermometers and water regulators if specified.
2. Install cabinet-type units recessed in or surface mounted on wall as specified.

F. Install Y-pattern strainers for water on supply side of each control valve, water pressure-reducing valve, solenoid valve, and pump.

G. Install water hammer arresters in water piping according to PDI-WH 201 and New York City Plumbing Code.

H. Install air vents at high points of water piping.

3.3. CONNECTIONS

A. Piping installation requirements are specified in other plumbing specification sections. Drawings indicate general arrangement of piping and specialties.

3.4. LABELING AND IDENTIFYING

A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:

1. Double-check backflow-prevention assemblies.
2. Double-check, detector-assembly backflow preventers.
3. Calibrated balancing valves.
4. Primary, thermostatic, water mixing valves.
5. Primary water tempering valves.

3.5. FIELD QUALITY CONTROL

A. Perform the following tests and prepare test reports:

1. Test each pressure vacuum breaker double-check backflow-prevention assembly and double-check, detector-assembly backflow preventer according to NYC Department of Buildings and the device's reference standard.

B. Remove and replace malfunctioning domestic water piping specialties and retest as specified above.

3.6. ADJUSTING

A. Set field-adjustable pressure set points of water pressure-reducing valves.

B. Set field-adjustable flow set points of balancing valves.

C. Set field-adjustable temperature set points of temperature-actuated water mixing valves.

END OF SECTION 221119

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 221316
Sanitary Waste and Vent Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. This Section includes the following for soil, waste, and vent piping inside the building:

1. Pipe, tube, and fittings.

1.3. DEFINITIONS

A. EPDM: Ethylene-propylene-diene terpolymer rubber.

B. NBR: Acrylonitrile-butadiene rubber.

1.4. PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressure, unless otherwise indicated:

1. Soil, Waste, and Vent Piping: 25-foot head of water.

B. Seismic Performance: Soil, waste, and vent piping and support and installation shall be capable of withstanding the effects of seismic events determined according New York City Building Code

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For pipe, tube, fittings, and couplings.

B. Product Data: For pipe, tube, fittings, and couplings.

C. Field quality-control inspection and test reports.

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Piping materials shall bear label, stamp, or other markings of specified testing agency.

C. Materials and work shall conform to the latest edition of reference specifications specified herein and to applicable codes and requirements of NYC Department of Buildings.

PART 2 - PRODUCTS

2.1. PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.

2.2. HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 74, Service and Extra-Heavy class(es).

B. Gaskets: ASTM C 564, rubber.

C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

2.3. HUBLESS CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 888 or CISPI 301.

B. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.

1. Standard, Shielded, Stainless-Steel Couplings: CISPI 310, with stainless-steel corrugated shield; stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve.

a. Manufacturers:

1) ANACO.
2) Fernco, Inc.
3) Ideal Div.; Stant Corp.
4) Mission Rubber Co.
5) Tyler Pipe; Soil Pipe Div.
6) Or Approved Equal

2. Heavy-Duty, Shielded, Stainless-Steel Couplings: With stainless-steel shield, stainless-steel bands and tightening devices, and ASTM C 564, rubber sleeve.

   a. Manufacturers:

      1) ANACO.
      2) Clamp-All Corp.
      3) Ideal Div.; Stant Corp.
      4) Mission Rubber Co.
      5) Tyler Pipe; Soil Pipe Div.
      6) Or Approved Equal

3. Heavy-Duty, Shielded, Cast-Iron Couplings: ASTM A 48/A 48M, two-piece, cast-iron housing; stainless-steel bolts and nuts; and ASTM C 564, rubber sleeve.

C. Rigid, Unshielded Couplings: ASTM C 1461, sleeve-type, reducing- or transition-type mechanical coupling molded from ASTM C 1440, TPE material with corrosion-resistant-metal tension band and tightening mechanism on each end.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXCAVATION

A. Refer to Section 310000 "Earthwork" for excavating, trenching, and backfilling.

3.3. PIPING APPLICATIONS

A. Flanges and unions may be used on aboveground pressure piping, unless otherwise indicated.

B. Aboveground, soil and waste piping 10 inches and smaller shall be the following:

1. Hubless cast-iron soil pipe and fittings; standard, shielded, stainless-steel couplings; and hubless-coupling joints.

C. Aboveground, vent piping 10 inches and smaller shall be the following:

1. Hubless cast-iron soil pipe and fittings; standard, shielded, stainless-steel couplings; and hubless-coupling joints.

D. Underground, soil, waste, and vent piping shall be the following:

1. Service class, cast-iron soil piping; gaskets; and gasketed joints.

3.4. PIPING INSTALLATION

A. Basic piping installation requirements are specified in Section 220500 "Common Work Results for Plumbing."

B. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers.

C. Install cleanout fitting with closure plug inside the building in sanitary force-main piping.

D. Install underground, ductile-iron, special pipe fittings according to AWWA C600.

1. Install encasement on piping according to ASTM A 674 or AWWA C105.

E. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Section 220500 "Common Work Results for Plumbing."

F. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

1. Install encasement on underground piping according to ASTM A 674 or AWWA C105.

G. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if 2 fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

H. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

I. Install soil and waste drainage and vent piping at the following minimum slopes, unless otherwise indicated:

1. Building Sanitary Drain: 1/8 inch per 100ft downward in direction of flow for piping.
2. Horizontal Sanitary Drainage Piping: 1/8 inch per 100ft downward in direction of flow.
3. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.

J. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.

K. Install ABS soil and waste drainage and vent piping according to ASTM D 2661.

L. Install PVC soil and waste drainage and vent piping according to ASTM D 2665.

M. Do not enclose, cover, or put piping into operation until it is inspected and approved by NYC Department of Buildings.

3.5. JOINT CONSTRUCTION

A. Basic piping joint construction requirements are specified in Section 220500 "Common Work Results for Plumbing."

B. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

C. Join hub-and-spigot, cast-iron soil piping with calked joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead and oakum calked joints.

D. Join hubless cast-iron soil piping according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.

3.6. HANGER AND SUPPORT INSTALLATION

A. Pipe hangers and supports are specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment." Install the following:

1. Vertical Piping: MSS Type 8 or Type 42, clamps.
2. Install individual, straight, horizontal piping runs according to the following:
    a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
    b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
    c. Longer Than 100 Feet, if Indicated: MSS Type 49, spring cushion rolls.
3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
4. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Install supports according to Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:

1. 1-1/2 and 2 inches: 60 inches with 3/8-inch rod.
2. 3 inches: 60 inches with 1/2-inch rod.
3. 4 and 5 inches: 60 inches with 5/8-inch rod.

4. 6 inches: 60 inches with 3/4-inch rod.
5. 8 to 12 inches: 60 inches with 7/8-inch rod.

F. Install supports for vertical cast-iron soil piping at base and every 15 feet.

G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:

1. 1-1/4 inches: 84 inches with 3/8-inch rod.
2. 1-1/2 inches: 108 inches with 3/8-inch rod.
3. 2 inches: 10 feet with 3/8-inch rod.
4. 2-1/2 inches: 11 feet with 1/2-inch rod.
5. 3 inches: 12 feet with 1/2-inch rod.
6. 4 and 5 inches: 12 feet with 5/8-inch rod.
7. 6 inches: 12 feet with 3/4-inch rod.
8. 8 to 12 inches: 12 feet with 7/8-inch rod.

H. Install supports for vertical steel piping every story .height

I. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.7. CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.

C. Connect drainage and vent piping to the following:

1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code.
2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by Commissioner.
3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code.
4. Equipment: Connect drainage piping as indicated. Provide shutoff valve, if indicated, and union for each connection. Use flanges instead of unions for connections 2-1/2 inches and larger.

3.8. FIELD QUALITY CONTROL

A. During installation, Commissioner at least 24 hours before inspection must be made. Perform tests specified below in presence of Commissioner.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.

2. Final Inspection: Arrange for final inspection by Commissioner to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If Commissioner find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Test sanitary drainage and vent piping according to procedures of Commissioner.

3.9. CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

END OF SECTION 221316

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 221413
Facility Storm Drainage Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. This Section includes the following storm drainage piping inside the building:

1. Pipe, tube, and fittings.
2. Special pipe fittings.
3. Encasement for underground metal piping.

1.3. PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working-pressure, unless otherwise indicated:

1. Storm Drainage Piping: 25-foot head of water.

B. Seismic Performance: Soil, waste, and vent piping and support and installation shall be capable of withstanding the effects of seismic events determined according to New York City Building Code.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For pipe, tube, fittings, and couplings.

C. Shop Drawings:

1. Piping layouts for all piping systems drawn at same scale as ductwork shop drawings; where such piping is completely shown on coordination drawings, separate piping shop drawings for the same area or areas are not required.

2. Piping shop drawings shall show all hangers and supports (type and location), fittings, valves, strainers and accessories. They shall show all sections necessary to establish pipe elevations, shall identify hanger types and loads, and show all tie-ins to HVAC piping, all equipment underground piping, support equipment, and all miscellaneous accessories

D. Field quality-control inspection and test reports.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Materials and work shall conform to applicable codes and requirements of NYC Department of Buildings.

C. Piping materials shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1. PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.

2.2. HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 74, Service and Extra-Heavy class(es).

B. Gaskets: ASTM C 564, rubber.

C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

2.3. HUBLESS CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 888 or CISPI 301.

B. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.

C. Rigid, Unshielded Couplings: ASTM C 1461, sleeve-type, reducing- or transition-type mechanical coupling molded from ASTM C 1440, TPE material with corrosion-resistant-metal tension band and tightening mechanism on each end.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXCAVATION

A. Refer to Section 310000 "Earthwork" for excavating, trenching, and backfilling.

3.3. PIPING APPLICATIONS

A. Flanges and unions may be used on aboveground pressure piping, unless otherwise indicated.

B. Aboveground, storm drainage piping 3 inches to 10 inches shall be the following:

1. Hubless cast-iron soil pipe and fittings; standard, and heavy-duty shielded, stainless-steel couplings; and coupled joints.

C. Underground storm drainage piping all sizes shall be the following:

1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.

3.4. PIPING INSTALLATION

A. Storm sewer and drainage piping outside the building are specified in Section 334100 "Storm Utility Drainage Piping."

B. Basic piping installation requirements are specified in Section 220500 "Common Work Results for Plumbing."

C. Install seismic restraints on piping.

D. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers. Cleanouts are specified in Section 221423 "Storm Drainage Piping Specialties."

E. Install cleanout fitting with closure plug inside the building in storm drainage force-main piping.

F. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Section 220500 "Common Work Results for Plumbing."

G. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

1. Install encasement on underground piping according to ASTM A 674 or AWWA C105.

H. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

I. Lay buried building storm drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

J. Install storm drainage piping at the following minimum slopes, unless otherwise indicated:

1. Building Storm Drain: 1 percent downward in direction of flow
2. Horizontal Storm-Drainage Piping: 1 percent downward in direction of flow.

K. Install engineered controlled-flow storm drainage piping in locations indicated.

L. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.

M. Do not enclose, cover, or put piping into operation until it is inspected and approved by NYC Department of Buildings.

3.5. JOINT CONSTRUCTION

A. Basic piping joint construction requirements are specified in Section 220500 "Common Work Results for Plumbing."

B. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

C. Hub-and-Spigot, Cast-Iron Soil Piping Calked Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead and oakum calked joints.

D. Hubless Cast-Iron Soil Piping Coupled Joints: Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.

3.6. VALVE INSTALLATION

A. General valve installation requirements are specified in Section 220523 "General-Duty Valves for Plumbing Piping."

B. Shutoff Valves: Install shutoff valve on each sump pump discharge.

1. Install gate valve for piping.

3.7. HANGER AND SUPPORT INSTALLATION

A. Pipe hangers and supports are specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment." Install the following:

1. Vertical Piping: MSS Type 8 or Type 42, clamps.

2. Individual, Straight, Horizontal Piping Runs: According to the following:

   a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
   b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
   c. Longer Than 100 Feet, if Indicated: MSS Type 49, spring cushion rolls.

3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
4. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Install supports according to Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:

1. 6 inches and smaller: 12 inches within each fitting and coupling with 5/8-inch rod.
2. 8 inches and larger: 12 inches within each fitting and coupling with 7/8-inch rod.

F. Install supports for vertical cast-iron soil piping every 30 feet.

G. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.8. CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

C. Connect storm drainage piping to roof drains and storm drainage specialties.

3.9. FIELD QUALITY CONTROL

A. During installation, notify Commissioner.at least 24 hours before inspection must be made. Perform tests specified below in presence of Commissioner.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
2. Final Inspection: Arrange for final inspection by Commissioner.to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If Commissioner find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Test storm drainage piping according to procedures of NYC Department of Buildings or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or restoreed. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Test Procedure: Test storm drainage piping, except outside leaders, on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
4. Restore leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

D. Test force-main piping according to procedures of NYC Department of Buildings or, in absence of published procedures, as follows:

1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
2. Cap and subject piping to static-water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be restoreed.
3. Restore leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
4. Prepare reports for tests and required corrective action.

3.10. CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

END OF SECTION 221413

SECTION 221423
Storm Drainage Piping Specialties

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. This Section includes the following storm drainage piping specialties:

1. Cleanouts.
2. Roof drains.
3. Miscellaneous storm drainage piping specialties.
4. Flashing materials.

B. Related Sections include the following:

1. Section 221316 "Sanitary Waste Piping" for floor drains, connected to sanitary sewer, grease interceptors and removal devices, oil interceptors, and solid interceptors.

1.3. DEFINITIONS

A. ABS: Acrylonitrile-butadiene-styrene plastic.

B. FOG: Fats, oils, and greases.

C. FRP: Fiberglass-reinforced plastic.

D. HDPE: High-density polyethylene plastic.

E. PE: Polyethylene plastic.

F. PP: Polypropylene plastic.

G. PUR: Polyurethane plastic.

H. PVC: Polyvinyl chloride plastic.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

1.6. COORDINATION

A. Coordinate size and location of roof penetrations.

PART 2 - PRODUCTS

2.1. CLEANOUTS

A. Exposed Metal Cleanouts

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Josam Company; Josam Div.
   b. MIFAB, Inc.
   c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products Inc.
   f. Zurn Plumbing Products Group; Specification Drainage Operation.
   g. Or Approved Equal

2. Standard: ASME A112.36.2M for cast iron for cleanout test tee.
3. Size: Same as connected drainage piping
4. Body Material: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Bronze plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

B. Metal Floor Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Josam Company; Josam Div.
   b. Sioux Chief Manufacturing Company, Inc.
   c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products Inc.
   f. Zurn Plumbing Products Group; Light Commercial Operation.
   g. Zurn Plumbing Products Group; Specification Drainage Operation.
   h. Or Approved Equal

2. Standard: ASME A112.36.2M for adjustable housing cleanout.
3. Size: Same as connected branch.
4. Type: Adjustable housing.
5. Body or Ferrule: Cast iron.
6. Clamping Device: Required.
7. Outlet Connection: Inside calk.
8. Closure: Bronze Plug.
9. Adjustable Housing Material: Cast iron with set-screws or other device.
10. Frame and Cover Material and Finish: Galvanized Cast Iron.
11. Frame and Cover Shape: Round.
12. Top Loading Classification: Medium Duty.
13. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

2.2. ROOF DRAINS

A. Metal Roof Drains:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Froet.
   b. Josam Company; Josam Div.
   c. MIFAB, Inc.
   d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   e. Tyler Pipe; Wade Div.
   f. Watts Drainage Products Inc.
   g. Zurn Plumbing Products Group; Light Commercial Operation.
   h. Zurn Plumbing Products Group; Specification Drainage Operation.
   i. Or Approved Equal

2. Standard: ASME A112.21.2M.
3. Pattern: Roof drain.
4. Body Material: Cast iron.
5. Combination Flashing Ring and Gravel Stop: Required.
6. Flow-Control Weirs: Not required.
7. Outlet: Bottom.
8. Dome Material: Galvanized Cast iron.
9. Extension Collars: Required.
10. Underdeck Clamp: Required.
11. Sump Receiver: Not required
12. Options:

B. Metal Deck Drains:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Josam Company; Josam Div.
   b. MIFAB, Inc.
   c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.

d. Tyler Pipe; Wade Div.
e. Watts Drainage Products Inc.
f. Zurn Plumbing Products Group; Light Commercial Operation.
g. Zurn Plumbing Products Group; Specification Drainage Operation.
h. Or Approved Equal

2. Standard: ASME A112.21.2M.
3. Pattern: Promenade-deck drain.
4. Body Material: Cast iron.
5. Dimensions of Body: 14" square diameter
6. Combination Flashing Ring and Gravel Stop: Required.
7. Flow-Control Weirs: Not required.
8. Outlet: Bottom.
9. Dome Material: Cast iron.
10. Extension Collars: Required.
11. Underdeck Clamp: Required.
12. Sump Receiver: Not required.
13. Options: Vandal proof, Nickel Bronze finish.

C. Metal Area Drains:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Josam Company; Josam Div.
b. MIFAB, Inc.
c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
d. Tyler Pipe; Wade Div.
e. Watts Drainage Products Inc.
f. Zurn Plumbing Products Group; Light Commercial Operation.
g. Zurn Plumbing Products Group; Specification Drainage Operation.
h. Or Approved Equal

2. Standard: ASME A112.21.2M.
3. Pattern: Promenade-deck drain.
4. Body Material: Cast iron.
5. Dimensions of Body: 14" square diameter.
6. Combination Flashing Ring and Gravel Stop: Required.
7. Flow-Control Weirs: Not required.
8. Outlet: Side.
9. Dome Material: Cast iron.
10. Extension Collars: Not required.
11. Underdeck Clamp: Required.
12. Sump Receiver: Not required.
13. Options: Vandal proof, Nickel Bronze finish.

D. Metal Control Flow Drains:

1. Standard: ASME A112.21.2M.

2. Pattern: Roof drain.
3. Body Material: Galvanized Cast iron.
4. Combination Flashing Ring and Gravel Stop: Required.
5. Flow-Control Weirs: Required.
6. Outlet: Bottom.
7. Dome Material: Cast iron.
8. Extension Collars: Required.
9. Underdeck Clamp: Required.
10. Sump Receiver: Not required.
11. Options: Vandal Proof

2.3. MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES

A. Expansion Joints:

1. Standard: ASME A112.21.2M.
2. Body: Cast iron with bronze sleeve, packing, and gland.
3. End Connections: Matching connected piping.
4. Size: Same as connected piping.

B. Downspout Boots:

1. Description: ASTM A 74, Service class, hub-and-spigot, cast-iron soil pipe.
2. Size: Same as or larger than connected downspout.

2.4. FLASHING MATERIALS

A. Copper Sheet: ASTM B 152/B 152M, 12 oz./sq. ft. thickness.

B. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04-inch minimum thickness, unless otherwise indicated. Include G90 hot-dip galvanized, mill-phosphatized finish for painting if indicated.

C. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil minimum thickness.

D. Fasteners: Metal compatible with material and substrate being fastened.

E. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.

F. Solder: ASTM B 32, lead-free alloy.

G. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Refer to Section 220500 "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.

B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:

1. Size same as drainage piping up to 4 inch Use 4 inch for larger drainage piping unless larger cleanout is indicated.
2. Locate at each change in direction of piping greater than 45 degrees.
3. Locate at minimum intervals of 50 feet.
4. Locate at base of each vertical soil and waste stack.

C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

E. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions. Roofing materials are specified in Section 077100 "Roof Specialties and Accessories."

1. Install roof-drain flashing collar or flange so that there will be no leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
2. Position roof drains for easy access and maintenance.

F. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.

G. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.

H. Install cast-iron soil pipe downspout boots at grade with top of hub 18 inches above grade.

I. Install conductor nozzles at exposed bottom of conductors where they spill onto grade.

J. Install escutcheons at wall, floor, and ceiling penetrations in exposed finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding pipe fittings.

3.3. CONNECTIONS

A. Piping installation requirements are specified in other plumbing specification sections. Drawings indicate general arrangement of piping, fittings, and specialties.

3.4. FLASHING INSTALLATION

A. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:

B. Copper Sheets: Solder joints of copper sheets.

C. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.

1. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches, and skirt or flange extending at least 8 inches around pipe.
2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches around sleeve.
3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches around specialty.

D. Set flashing on floors and roofs in solid coating of bituminous cement.

E. Secure flashing into sleeve and specialty clamping ring or device.

F. Fabricate and install flashing and pans, sumps, and other drainage shapes.

3.5. PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

SECTION 221513

Compressed Air Equipment

PART 1 – GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: Furnish and install a compressed air system with all piping, accessories and appurtenances necessary for a complete installation. Locate the equipment on the 2nd floor and include two (2) air compressor units, two (2) refrigerated air dryers, two (2) vertical air receivers, and four (4) portable compressors. Provide air tool stations and hose reels each with air hose and filter, regulator, lubricator assembly wall mounted as shown on Contract Drawings. Compressed air system shall also supply air to the Fluid Dispensing System as shown.

1.2 SYSTEM DESCRIPTION

A. Air Compressor Units: Design each air compressor unit for intermittent operation under the following conditions with the specified characteristics:

1. Inlet air Conditions:

a.	Temperature range	50 to 100
b.	Relative humidity, percent	1 to 100
c.	Pressure, psia	14.7

2.	Stages	Two
3.	Mounting on intermediate receiver tank	Horizontal
4.	Rated discharge pressure, psig	175
5.	Minimum capacity at rated discharge pressure, scfm	200
6.	Relief valve setting	250
7.	Maximum motor speed, rpm	1000
8.	Maximum compressor speed, rpm	785
9.	Motor horsepower, minimum	30
10.	Motor enclosure	TEFC
11.	Power supply	460V/3 pH/60 Hz

B. Refrigerated Air Dryers: Rate air dryers in accordance with the standard rating conditions of the National Fluid Power Association for Class H Dryers, i.e. 33 to 39 degrees F pressure dew point range at 230 psig and 100 degrees F inlet air, and 100 degrees F ambient air with a maximum pressure drop of 5 psi. Under this rating, provide the dryers with capacities not less than 400 scfm.

C. Vertical Air Receivers: Supply receivers under the following conditions with the specified characteristics:

1.	Minimum capacity, gallons	240
2.	Diameter, inches	24
3.	Position	Vertical
4.	Working pressure, psig	200

1.3 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Contractor's Drawings: Submit shop drawings, including arrangement and erection drawings of the compressed air equipment and control equipment; installation templates; schematic control diagrams, electrical connection diagrams, and complete description of the control system.

C. Quality Control Submittals: Submit the following:

1. Manufacturer's certified performance and material records as specified.

2. Manufacturer's certified copies of Field Test Reports.

D. Operation and Maintenance Manuals: Submit Operation and Maintenance (O&M) instructions for the compressed air equipment.

1.4 DELIVERY, STORAGE AND HANDLING

A. Protect all electrical equipment from the weather during transit and storage by suitable means, including shrink wrapping or hand wrapping and taping.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The compressor, dryer and ancillary equipment shall be provided by the Contractor through one vendor. The Contractor, through the vendor, shall have the responsibility of matching all components and providing equipment which function together as a system.

B. Manufacturers are listed below. Other manufacturers of equivalent products may be submitted for approval.

1. Compressor Units:

   a. Ingersoll-Rand Company.
   b. FSCurtis Air Compressors.
   c. Chicago Pneumatic.
   d. Or approved equal.

2. Flexible Connectors for Compressor:

   a. Anaconda.
   b. Metraflex.
   c. Dayton.
   d. Or approved equal.

3. Air-Cooled Aftercooler:

   a. Ingersoll-Rand Company.
   b. Kaeser Compressors.
   c. AKG
   d. Or approved equal.

4. Refrigerated Air Dryer:

a. Ingersoll-Rand Company.
b. Speedaire
c. Hankinson
d. Or approved equal.

5. Pressure Regulators for Pressure Reducing Stations:

a. A.W. Cash.
b. Fisher Controls.
c. Gast
d. Or approved equal.

6. Equipment for Air Tool Stations:

a. Chicago Pneumatic.
b. Parker-Hannifin Corporation.
c. Gast
d. Or approved equal.

2.2 AIR COMPRESSOR UNITS

A. General: Assemble each air compressor unit to include two simplex compressors and electric motors with V-belt drives and belt take-up as well as suitable belt guard and inlet air filters and silencers mounted on a horizontal air receiver. Unit shall include a pressure gauge, service valve, relief valve, adjustable pressure switch for stop-start control, alternating control panel, anti-vibration pads, flexible pipe connections, and an aftercooler.

B. Design: Provide air compressors of the oil lubricated, reciprocating, air cooled, two-stage, air receiver mounted type, equipped with an automatic pressure regulator, automatic pressure unloader providing no load starting, and oil level or oil pressure protection. Provide two stage units with an intercooler and interstage safety valve.

C. Air Receiver Mounted: Mount each compressor with its motor on a common structural steel base plate which is mounted on an intermediate horizontal receiver tank.

D. Relief Valve: Install an ASME safety relief valve as an integral part of the compressor or between the compressor and discharge check valve.

E. Inlet Filter and Silencer: Provide compressor inlet with an air filter and silencer of the dry filter, radially pleated type enclosed in a steel housing, adequately sized for the capacity of the compressor.

F. Anti-Vibration Pads: Use cork and neoprene vibration pads with flexible connections as recommended by manufacturer. Design the pads to control oscillation and to withstand all lateral forces.

G. Pipe Connections: Provide piping connections to each compressor through corrugated type flexible connectors with a braided protective covering to prevent vibration transmission. Provide piping

from the air compressor to air tool stations and fluid dispensing pumps (See Division 22 Section "Fluid Dispensing System"), and as indicated on the Contract Drawings. Each air tool station shall include a combination filter/regulator/lubricator unit and hose reel with hose and outlet. Compressed air piping shall be stainless steel.

H. Portable Compressor Units: Provide portable 25 horsepower, diesel engine-driven air compressors to serve as an emergency air source. Where specifically required, provide an air dryer.

2.3 AFTERCOOLERS

A. General: Equip each air compressor unit with an air-cooled aftercooler.

B. Air-Cooled Type: Provide each air-cooled aftercooler to cool the compressed air to a maximum of 25 degrees F over ambient air temperature. Pressure relief valves shall be provided for each aftercooler to protect against overpressurization.

2.4 REFRIGERATED AIR DRYERS

A. General: Equip each refrigerated air dryer with a condensing unit, refrigerant evaporator, mechanical separator automatic condensate discharge valve, high discharge air temperature alarm light and switch for actuating a remote alarm, prefilter and afterfilter.

B. Filter: Equip dryers with filters to remove oil carryover, oil aerosols and other foreign matter. Install a prefilter near the dryer inlet and install an afterfilter near the dryer discharge. Design the prefilter for mechanical removal of solid and liquid particles. Prefilter shall be a coalescing- type filter separator that removes oil and water liquid/mist down to 0.5 PPM by weight. Provide and afterfilter of the coalescing type with a 0.5 micron rating or lower.

C. Power: Design dryers for a 460-volt, 3-phase, 60-hertz power supply. Provide refrigerated air dryers which are base mounted.

D. Automatic Drain Valve: Provide automatic drain valves that effectively remove condensate from the air compressor. The drain valves shall be electric condensate drain valves. The drain valve shall be incorporated with a solenoid valve and electric controls, and be 3/8" NPT. The drain valve shall include a manual by pass and a strain/ball valve assembly.

2.5 VERTICAL AIR RECEIVERS

A. General: Construct air receiver tanks of welded steel meeting the requirements of the ASME Boiler and Pressure Vessel Code, Section VIII, for unfired pressure vessels and bearing an ASME stamp. Provide the tanks with dished ends and with feet or a base for mounting in a horizontal or vertical position as specified.

B. Appurtenances: Equip each air receiver with a pressure gauge, plugged inspection openings, a drain valve, an ASME pressure relief valve, and all necessary pipe connections.

1. Fit air receiver with an automatic drain valve to remove condensate at each starting of the compressor.

2.6 PRESSURE CONTROL VALVES

A. General: Provide regulator control valves of the designed for compressed air service. Design the valves to be capable of relieving the specified or scheduled air flow at 10 percent overpressure. Mount the pressure control valve on the air receiver to relieve the full capacity of the compressors at 10 percent overpressure above the set pressure. Furnish valves meeting the requirements of the ASME Code for unfired pressure vessels and bearing the Code stamp.

2.7 GAUGES

A. Provide pressure gauges of the Bourdon tube type with minimum 6 inch diameter dials, plainly marked. Connect each gauge with red brass pipe, fittings and isolating stopcocks. Equip each gauge with a snubber and threaded protective diaphragm seal. Furnish gauges with a range of 0 to 300 psig.

2.8 BEARINGS

A. General: Manufacture each compressor with bearings of the antifriction ball or roller type of ample size to carry the loads imposed under continuous service without overheating.

B. Radial and Thrust: Equip compressors with radial and thrust bearings. One of the bearings in each case may be combined with the thrust bearing.

C. Life: Design all bearings to be accessible and located for convenient repair or replacement with an average B 10 operating life of not less than 100,000 hours according to AFBMA 9 and AFBMA 11.

2.9 LUBRICATION

A. General: Provide oil lubricated compressor bearings.

B. Reservoir: Use a reservoir system or other approved method. Provide all bearings with oil reservoirs to insure a constant supply of clean oil and with suitable gauges to give visual indication that an adequate supply of lubricant is available and is being supplied to the bearings.

C. Drip and Drain: Make provisions to prevent throwing or dripping of lubricant from the bearings and properly drain all oil sumps and pockets.

D. Oil Supply: Supply such oil of the kind and quality specified by the compressor manufacturer, as is necessary to place each compressor unit in regular operation for a period of one year.

2.10 PRESSURE REDUCING STATIONS

A. General: Provide each air tool station with a pressure reducing station consisting of a line filter, pressure regulating valve, bypass, pressure gauge and pressure relief valve. Arrange the pressure reducing station to reduce the supply air pressure to the downstream pressure specified. Provide pressure reducing valve outlet pressures and capacities, and pressure relief valve setting as shown on Contract Drawings.

B. Pressure Regulating Valves: Provide direct acting, spring loaded, diaphragm operated, single seated pressure regulating valves designed for compressed air service. Design the valves to maintain the selected downstream pressures with inlet pressures up to 200 psig. Provide downstream pressure settings to be field adjustable.

C. Other Requirements: Provide pressure gauges as specified in Article 2.7. Provide pressure relief valves as specified in Article 2.6. Equip line filters with a filter element with a 5-micron rating and a manual drain valve.

2.11 AIR TOOL STATIONS

A. General: Construct each air tool station to include a filter and moisture separator, pressure regulator, lubricator, and an air hose assembly. Equip the filter and moisture separator with a manual drain valve designed for a maximum pressure of 300 psi. Equip the pressure regulator with a pressure gauge and provide a pressure regulator of the self-relieving type designed for a maximum pressure of 400 psi. Design the lubricator for a maximum pressure of 300 psi.

B. Air Hose Valve Assembly: At each air tool station, provide one air hose valve assembly consisting of a 1/2-inch globe valve designed to operate satisfactorily at a pressure of 175 psig, adapted to a 1/2 inch safety quick detachable steel hose coupling to prevent airflow until the coupling is fully engaged and locked, and a steel threaded 1/2 inch quick detachable male hose coupling attached to the safety coupling.

1. Furnish 50-foot lengths of 1/2-inch air hose with quick pressure couplings at each end. In addition, furnish an air gun with nozzles and self closing valves for each air tool station.
2. Furnish stainless steel hose reels capable of holding 50-foot length of ½-inch air hose at each air tool station.

2.12 TIRE FILLING STATIONS

A. General: Construct each tire filling station as shown in the Contract Drawings. Tire filling stations shall be located with all air tool stations within the main garage area and BME shop area. Air lines for tools and tire filling shall be independent of each other, but may be from the same branch line.

B. Air Hose Valve Assembly: Provide air hose valve assemblies consisting of a 1/2-inch globe valve designed to operate satisfactorily at a pressure of 175 psig, adapted to a 1/2 inch safety quick detachable steel hose coupling to prevent airflow until the coupling is fully engaged and locked, and a steel threaded 1/2 inch quick detachable male hose coupling attached to the safety coupling.

1. Furnish 50-foot lengths of 1/2-inch air hose with quick pressure couplings at each end. In addition, furnish an air gun with nozzles and self closing valves for each tire filling station.
2. Furnish stainless steel hose reels capable of holding 50-foot length of ½-inch air hose at each tire filling station.

2.13 FLUID DISPENSING SYSTEM

A. Provide compressed air service to pneumatic pumps for the fluid dispensing system as shown in the Contract Drawings and detailed in Division 22 Section "Fluid Dispensing System."

2.14 ACCESSORIES

A. Control Panel: Provide a local control panel from the compressor manufacturer located in the compressor room. Manufacture the control panel to include, but not be limited to, the following equipment:

1. ON OFF/LOCKOUT switch for each compressor.
2. Low oil level or pressure indicating light for each compressor.
3. Low system pressure indicating light.
4. Discharge pressure gauge.
5. Aftercooler discharge temperature gauge.

B. Safety Requirements for Control Panel: Provide all accessories and appurtenances required for the safe, proper operation of the air compressor equipment as described herein whether or not such components have been specifically shown or specified. Provide compressor controls, control panel and wiring.

C. Motors: Design air compressor drive motors for operation at 460 volts, 3 phase, 60 hertz.

2.15 SYSTEM CONTROL

A. Adjustable Pressure Switch: Provide adjustable, heavy duty pressure switches for starting and stopping the compressors and a low pressure alarm switch on the air receiver. Equip the switched with double pole, double throw contacts rated at 10 amperes for 120-volt ac power.

B. Duty Sequence: Arrange the compressor duty sequence to be automatically selected by an automatic alternator to balance compressor operating times.

C. Oil Switches: Equip each compressor with a low level or low oil pressure switch. Design the switch to shut off the compressor and actuate a compressed air system control panel mounted indicating light and a remote alarm. Provide a lubricating oil system switch as recommended by the compressor manufacturer.

D. Temperature Switch: Equip each refrigerated air dryer with a high temperature switch located in the compressed air line near the dryer discharge. Set the switch to actuate a remote refrigerated air dryer failure alarm.

2.16 BUILDING MANAGEMENT SYSTEM INTERFACE

A. Provide the following dry contact alarm points and associated devices for each compressor for wiring to corresponding Building Management System Alarm inputs:

1. Compressor Failure.
2. Low Oil Level Shutdown.

B. Provide the following dry contacts alarm points and associated devices for each air dryer for wiring to corresponding Building Management System Alarms inputs:

1. High Discharge Air Temperature.

C. Provide a system air pressure sensor with 4 to 20 ma output calibrated for the compressed air operating pressure range for wiring to the Building Management System (BMS).

D. Provide commissioning and coordination of the Building Management System (BMS) interface points needed for proper operation of these points.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements

3.2 INSTALLATION

A. Install all compressed air equipment in accordance with manufacturer's recommendations and approved shop drawings.

3.3 FIELD QUALITY CONTROL

A. Mounting System: Each unit shall be mounted on a monolithic concrete base. Install reinforced concrete anchor pad with embedded anchor bolts as shown on the Contract Drawings and in accordance with Division 3 Section "Cast-in-Place Concrete."

B. Piping and Accessories: Install all piping connections and accessories, as specified or shown on Contract Drawings, in accordance with respective manufacturer's recommendations.

1. On each unit discharge, furnish a pressure gauge and a drain cock at the lowest point.
2. All piping shall be run free of traps and shall be pitched to drip pockets provided at all low points.
3. Every branch supply section shall be controlled by a valve.

C. Welding: Joints between sections of pipe and fittings 2 inches and larger shall be electric welded.

1. Welding shall conform to applicable portions of ANSI Standard B 31.1, American Welding Society Standard B 3.0 and the New York City Building Code.
2. Welded angular branch connections shall be made with seamless shaped 45 degree nipples provided the branch welds are reinforced with rings or saddles.
3. Directional changes and branch connections shall be made with factory-fabricated, long pattern, long radius welded fittings. Elbows, reducers, welding tees, and caps shall be manufactured by Crane, Grinnell, Ladish, Taylor, Tube Turns, or approved equal. Field- fabricated and "compact" or short pattern fittings will not be accepted.

3.4 FIELD TESTS

A. Testing: After the installation of the air compressor and all appurtenances, subject the compressor to a field running test under actual operating conditions. Perform field tests as directed and in the presence of the Commissioner. Perform the field tests to demonstrate that under all conditions of operation the unit:

1. Has not been damaged by transportation or installation.
2. Has been properly installed.
3. Has no mechanical defects.
4. Has been properly connected.
5. Is in proper alignment.
6. Is free of overheating of any parts.
7. Is free of all objectionable vibration.
8. Is free of excessive noise.
9. Is free of overloading of any parts.
10. Operates as specified with the control system.

B. Defects: Promptly correct any defects in the equipment or failure to meet the requirements of the Specifications.

C. Manufacturer's Field Services: Furnish the services of a qualified representative of the compressed air equipment manufacturer to inspect the installation of the compressed air equipment, place it in operation, make any necessary adjustments, and instruct the operating personnel in its operation and maintenance.

3.5 PAINTING

A. Paint the compressed air equipment as specified in Division 9 Section "Painting and Finishing."

END OF SECTION 221513

SECTION 221513.10

Motor Fuel Dispensing System

PART 1 – GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Work Included:

1. A fuel dispensing system shall be provided to supply department vehicles with diesel fuel, unleaded gasoline, or E85 as needed.
2. Contractor shall furnish and install containment fill boxes, all single and double wall piping systems, dispensers, vapor recovery equipment, automatic nozzles, hoses, pumps, meters, vertical check and back pressure valves, filters, breakaway valves, hoses, swivels, fuel management system, fuel monitoring system, leak detection equipment, transfer pumps, and all other required trim for a complete and operational system.

B. Related Sections:

1.	Division 22 Section 22 15 13.20	"Fluid Dispensing Systems."
2.	Division 33 Section 33 52 13.13	"Fiberglass Double Containment Piping"
3.	Division 33 Section 33 52 13.16	"Stainless Steel Double Containment Piping"
4.	Division 33 Section 33 56 14	"Underground Storage Tanks."

C. Governing Standards:

1. FDNY Rules.
2. NFPA 30 – Flammable and Combustible Liquids Code.
3. NFPA 30A – Code for Motor Fuel Dispensing Facilities and Repair Garages.
4. NFPA 31 – Installation of Oil-Burning Equipment.
5. NYC Fire Code.
6. NYC Mechanical Code.
7. UFC – Uniform Fire Code.
8. UL 87 – Underwriters Laboratories (UL) Power Operated Dispensing Devices for Petroleum Products.
9. UL 330 – Underwriters Laboratories (UL) Hose and Hose Assemblies for Dispensing

Flammable and Combustible Liquids.
10. UL 842 – Underwriters Laboratories (UL) Standard for Valves for Flammable Fluids.

1.3 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Submit shop drawings and accessory cut sheets for approval. The design drawings shall show principal dimensions, size, type and locations of all connections and fittings and locations of all options/ accessories. Design drawings shall also include catalog cut sheets for associated accessory items and subassemblies.

C. Submit copies of the system installation, operation and maintenance manual prior to delivery.

D. Submit copies of all quality control testing documentation, installation inspection documentation, and written warranty at time of documentation completion.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions, section 01 40 00 "Quality Requirements."

B. Manufacturer shall have a minimum of 3 years experience in producing similar equipment.

C. Contractor shall be a licensed NYC installer having a minimum of 3 years experience in installing similar equipment.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Use every precaution to prevent damage to the equipment during transportation and delivery to the site.

1. Do not allow equipment to be dropped, bumped, dragged, pushed, rolled or moved in any way which will cause damage.
2. If, in the process of transportation or handling, any equipment is damaged, replace or repair such equipment or accessories. Make all required repairs.
3. Materials and equipment shall be delivered in original, undamaged packaging with manufacturer's labels and seals intact.

B. Storage of Materials and Equipment:

1. All materials shall be stored in a dry, enclosed area, off the ground and away from all possible contact with water, ice or snow. Materials shall be protected from extreme heat and direct sunlight.
2. Damage to materials during storage shall be prevented primarily by minimizing the amount of time they are stored at the job-site before being incorporated into the work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers are listed below. Equipment products of other manufacturers may be submitted for approval.

1. Dispensers:

   a. Dresser Wayne.
   b. Gasboy.
   c. OPW.
   d. Or approved equal.

2. Containment Sumps:

   a. Bravo.
   b. Fibrelite.
   c. OPW.
   d. Or approved equal.

3. Pumps:

   a. FE Petro.
   b. Red Jacket.
   c. National Pump Company
   d. Or approved equal.

4. System Management:

   a. OPW.
   b. Gasboy.
   c. Snyder
   d. Or approved equal.

5. Vapor Recovery:

   a. OPW.
   b. EBW.
   c. Morrison.
   d. Goodyear.
   e. Or approved equal.

6. Accessories:

   a. EBW.
   b. Morrison.
   c. OPW.
   d. Goodyear.

e. Or approved equal.

7. Transfer Pump:

a. Simplex.
b. Graco, Inc.
c. Blackmer
d. Or approved equal.

2.2 UNLEADED GASOLINE AND E85 DISPENSERS

A. General:

1. The dispenser shall be a single product, twin hose type with a breakaway connection valve and swivel on each dispensing hose and shall incorporate provisions for a bolted, sealed, flanged connection to the containment sump.
2. Dispenser shall be rated up to 22 gpm at discharges and be designed to dispense gasoline including ethanol blends up to 85 percent (E85), diesel including biodiesel blends up to 20 percent (B20), and kerosene.
3. Aluminum, zinc, or red metals shall not be allowed in flow path.

B. Features:

1. Two volume only and lighted registers with power resets/interlocks.
2. 10:1 pulsers
3. DC junction box in hydraulic cabinet for wire terminations.
4. Explosion-proof AC junction box in hydraulic cabinet for AC wire terminations. A wire from each reset shall be provided to the junction box to facilitate a reset complete signal to an external control system.
5. Stainless steel construction including exterior panels, bezel, top, doors, base, structural columns and frame.
6. Lockable hinged door.
7. Product identification panels at top of cabinet.
8. Two (2) nickel-plated positive displacement two-piston meters with stainless steel sleeves and Teflon piston cups.
9. Minimum 1-inch ID black iron internal piping.
10. Two (2) 1-inch discharge outlets.
11. One (1) high flow ethanol-compatible 1-micron internal filter for each hose outlet.
12. 1-inch nickel-plated brass solenoid valve for each hose outlet.
13. 1-1/2-inch minimum supply inlet with stainless steel inlet strainer.
14. Dispenser shall be compatible with Stage II Vapor Recovery hoses, nozzles, balance adaptors, and other related equipment.

2.3 DIESEL FUEL DISPENSERS

A. General:

1. The dispenser shall be a single product, twin hose type with a breakaway connection valve and swivel on each dispensing hose and shall incorporate provisions for a bolted, sealed, flanged connection to the containment sump.
2. Product hoses shall be lane-oriented.
3. Dispenser shall be rated up to 36 gpm at discharges and be designed to dispense diesel including biodiesel blends up to 20 percent (B20), gasoline including standard oxygenated blends, and kerosene.

B. Features:

1. Two volume only and lighted electronic displays: 6-digit, 1 inch liquid crystal displays (LCD). Minimum display backup of 15 minutes in the event of power loss.
2. Four character ½ inch LCD operator message display for each hose. Message display shall denote authorization status, limits, etc.
3. Electromechanical totalizer: 7-digit non-resettable.
4. Electronic 6-digit non-resettable and resettable totalizers per hose.
5. Dual pulse output interface for each hose for connection to fuel control and tank monitoring system.
6. For each hose, two (2) positive displacements, two-piston meters connected to the same discharge for maximum flow.
7. Integral Hall Effect pulsers.
8. Electronic calibration without the need to set mechanical adjusters.
9. Proportional solenoid valve on discharge of each meter, programmable thru electronic register to set maximum flow rate.
10. Two (2) internal filter with 30-micron elements
11. Two (2) 1 inch discharge outlets.
12. One (1) 2 inch NPT inlet for one product.
13. Explosion-proof junction box in hydraulic cabinet to make all dispenser power and control wiring terminations.
14. Stainless steel construction including exterior panels, bezel, top, doors, base, structural columns and frame.
15. Lockable hinged door.
16. Lighted brand panels labeled "Diesel".
17. Lane-oriented nozzle boot on each dispenser side with lift-to-start nozzle hooks to turn on/off dispenser.

2.4 CONTAINMENT SUMPS

A. General:

1. Containment sumps shall be furnished and installed at locations shown in Contract Drawings. Each sump shall be factory assembled pre-piped, liquid tight and constructed of fiberglass reinforced polymer.
2. Containment sumps shall have provisions to seal and terminate secondary containment pipe within. Piping annular space shall drain into the confines of the sump.
3. Fuel Oil Extraction: In the event of a leak, the fuel oil shall be emptied from the sump by means of a vacuum truck and disposed of according to New York City Fueling and NFPA code.

B. Dispenser Sump:

1. Dispenser sump shall provide access to and secondary containment of dispenser plumbing and breakaway and shear valves.
2. Dispenser sump shall be monitored with leak detection equipment.
3. Dispenser sump shall incorporate provisions for a flanged, sealed and bolted connection with the dispenser.

C. Transition Sump:

1. Contractor shall provide transition sumps at locations shown to allow piping to transition from below ground to above. And shall provide access to and secondary containment of fuel lines as shown. Transition sumps shall be monitored with leak detection equipment.
2. Transition sumps shall have a water tight diamond plate access cover capable of withstanding H20 axle loads.
3. Transition sumps shall incorporate provisions to support a pipe rack system. Pipe rack systems shall be provided where shown, specified or as needed to support above ground piping exiting transition sumps.
4. Positive concrete anchoring shall be incorporated as an integral part of the sump design.
5. Transition sumps shall include 2-inch rigid pipe fittings where pipes exit sump above the ground.
6. Transition sumps shall include above ground factory-sealed electrical connections.

2.5 PUMPS

A. Provide two (2) submersible turbine pumps per fuel tank, manifolded together for a single discharge outlet.

B. Pumps shall be compatible with Diesel including biodiesel up to 20 percent (B20) and Gasoline including ethanol blends up to 85 percent (E85).

C. Pumps shall be designed for class 1, group D hazardous locations.

D. Pumps shall be 1-1/2 hp, 208-230 VAC, 60 Hz, 1-phase.

2.6 SYSTEM MONITORING AND MANAGEMENT

A. System Monitoring: Fuel tanks shall be monitored for leakage and level as described in Division 33 Section "Underground Storage Tanks."

B. Fuel Management:

1. Provide a complete fuel management system for each dispenser to maintain 24 hour controlled access to fuel dispensing, activated by valid operator access card.
2. Fuel management system shall be of a modular design consisting of fuel island terminals, fuel site controller and printer and universal pump controllers as required.
3. Access to product shall be restricted to personnel holding valid magnetic strip cards and who perform a predetermined series of data entry operations including a personal identification number (PIN), equipment identification, and odometer reading.
4. An internal electronic file shall hold data for each local card authorized to use the system.

This file shall contain personnel information on the user issued the card. It shall have the capability to limit the amount of fuel dispensed to predetermined operator allocated amounts. Allocation shall be determined by DSNY. This file shall have the capability to restrict the type of product the user may obtain to only the type used by the equipment entered.

5. System shall be configured using a Windows based configuration utility with on-screen "help" support for explanation of all functions.
6. Fuel Island Terminals (FIT) shall be provided for each fueling island. Terminals shall include a weatherproof cabinet with mounting pedestal, easy-to-read, back-lit, graphics liquid crystal display (LCD), and 12-key keyboard with audible (tone) and tactile feedback (keys move when pressed). Each FIT shall be capable of controlling up to 8 dispensers and be able to selectively access up to 32 hoses. Each FIT shall include a magnetic strip card reader as well as an extra reader bay to allow for updating to other types of cards in the future.
7. Fuel Site Controller (FSC) shall be located within the fueling office and shall have the ability to communicate with up to eight (8) FITs and shall be capable of controlling up to 32 hoses simultaneously. Both mechanical and electronic pumps shall be controllable by the system. The FSC shall include an internal 38.4kbps modem for direct data transmission over phone lines and shall also include an internal 10Base-T Ethernet port for communications via TCP/IP over an intranet.
8. System shall include a 5 x 9 pin dot-matrix bi-directional journal printer located in the fueling office near the FSC to make hard copies of transaction data and reports. The printer shall be capable of operation at 180 characters per second (cps). The printer shall use standard 8 ½ inch x 11 inch pin-feed paper and shall be capable of printing on 1, 2, or 3 part paper.
9. Management system shall be equipped to communicate with system monitoring equipment.
10. The system's card memory shall have a standard capacity of 500 cards and be expandable up to 16,000 cards.
11. The system shall have the capability of being placed in either an "Open" or "Closed" mode by authorized personnel. Fueling is not allowed in the "Closed" mode.

2.7 PIPING

A. Piping located in areas designated as exterior and underground shall be fiberglass double containment piping. Piping located in areas designated as interior and above ground shall be metallic double containment pipe. Piping shall conform to Division 33 Sections "Fiberglass Double Containment Piping" and "Stainless Steel Double Containment Piping."

B. Piping shall slope toward tank to allow any leakage captured by secondary containment pipe to drain back to tank leak detection equipment.

C. Piping between sumps, or equipment shall be double containment pipe.

D. Single wall piping shall be used within sumps and equipment where confines act as secondary containment and have provisions for leak detection.

2.8 TANKS

A. Fuel tanks shall conform to Division 33 Section "Underground Storage Tanks."

B. Fuel tanks shall be located and sized as shown in Contract Drawings.

2.9 VAPOR RECOVERY EQUIPMENT

A. Contractor shall provide Stage II Vapor Recovery equipment compatible with the unleaded gasoline and E85 dispensers including but not limited to automatic shutoff nozzles, hoses, swivels, breakaways, balance adaptors, vapor shear valves and piping.

B. Contractor shall provide vapor recovery equipment compatible with the gasoline and E85 fuel tanks including but not limited to extractor assemblies, ball float vent valves and piping.

C. Contractor shall provide Stage I Vapor Recovery manholes and piping as indicated on contract drawings.

D. Vapor recovery equipment shall be compatible with gasoline including ethanol blends up to 85 percent (E85).

2.10 ACCESSORIES

A. Non-Vapor Recovery Nozzles (NVRN):

1. NVRNs shall be provided for each diesel fuel dispensing hose.
2. NVRNs shall be of a high-flow design and include the following features:

    a. Spout retaining ring.
    b. Two-stage lever.
    c. 50 psi maximum pressure.
    d. Replaceable spout.
    e. 1 inch NPT inlet.
    f. Green hand insulator.

3. NVRNs shall be compatible with card-locked refueling equipment.

B. Hoses:

1. Unleaded gasoline and E85 dispensers shall be equipped with Stage II Vapor Recovery hose compatible with gasoline including ethanol blends up to 85 percent (E85). Hoses shall be 15 feet long.
2. Diesel dispensers shall be equipped with hose compatible with diesel fuel including biodiesel blends up to 20 percent (B20). Hoses shall be 15 feet long.

C. High Hose Retrievers: High hose retrievers shall be provided as shown. High hose retrievers for unleaded gasoline and E85 dispensers shall be compatible with Stage II Vapor Recovery hose. High hose retrievers shall be mounted on schedule 160 pipe, 10 feet above grade. Contractor shall provide all breakaways, swivels and other accessories as shown and required by code.

D. Spill Containment Fill Box Assemblies: Spill containment fill box assemblies shall be provided as shown on contract drawings. See Division 33 Section "Underground Storage Tanks" for details.

E. Emergency Shut-off Push Buttons: Emergency shut-off push buttons shall be located as shown and as required. Push buttons shall disconnect power to all dispensing devices, pumps, and all other electrical equipment in the fueling area. All push buttons shall be interconnected and require manual intervention to reset.

F. Signage: Identification signs shall be provided and installed as shown, specified and as required by New York City Fueling, NFPA code and New York City regulations.

2.11 TRANSFER PUMP

A. Contractor shall supply a packaged, fully enclosed fuel oil pump set and pump controller compatible with and to supply fuel from a main storage tank to the emergency generator day tank.

B. Transfer pumps shall consist of a free standing stainless steel enclosure, duplex pumps, pump controller, and leak containment and sensors.

C. Enclosure shall have separate mechanical and electrical compartments with separate hinged and lockable access doors for each.

D. Enclosure shall incorporate a containment basin for capture of any leaks from the fuel valves, fittings, pumps or piping. The containment basin shall be equipped with a leak sensor to detect any leakage. The sensor shall activate an alarm on the pump set control panel and have dry contacts for remote annunciation.

E. The pump set shall include a 1-inch fuel supply manifold, 1-inch fuel outlet manifold, and a 1- inch fuel return manifold located on the top of the enclosure.

F. The pumps set shall include duplex direct-drive, positive-displacement, motor driven pumps coupled via flexible coupling. Pumps shall be 7 GPM @ 50 PSI high lift pumps. Pumps shall be high pressure, hydraulic type consisting of two intermeshing, hardened steel, precision ground gear assemblies enclosed by a high strength, die cast aluminum housing, hardened drive shaft, pressure loaded mechanical shaft seal. Each pump shall have stainless steel braided flex hoses on the inlets and outlet of each connection.

G. Each pump shall include a pressure relief valve, adjustable type, 30-200 PSI, bronze construction with stainless steel spring. Pressure relief valve shall be connected to pressure- relief return manifold for return to main tank.

H. Shutoff ball valves with bronze construction, stainless steel ball and Teflon seal rated to 600 PSI shall be installed at pump inlets, pump outlets.

I. Each pump shall include a bronze construction spring-type check valve rated to 600 PSI.

J. Canister or y-type strainers shall be installed at each pump and shall have 60-mesh washable elements and differential pressure indicators with panel alarm indicators and remote dry contacts to indicate that the strainers need service.

K. Flow switches shall be installed on each pump outlet. Switches shall sense proper pump operation as required by the control system. Switches shall be bronze construction, shuttle/reed switch type, 400 PSI rated.

L. Motors shall be open drip proof construction, 3/4HP, NEMA type B, continuous duty at 40C, 1725 RPM, 460 VAC, 3-phase, 60 hertz, 1.15 service factor.

M. Pump set shall include an automatic duplex pump controller to provide lead-lag operation with automatic alternation of pumps on successive starts and automatic lag pump starts and runs. Upon time-out of flow switch delay, pump failure circuit is armed and monitors for proper pump flow. Upon sensing of loss of flow, lag pump is started and runs continuously until manually reset, alarm is activated to manual reset. In normal operation, upon subsequent closure of remote control contacts, pump alternate operation. In either normal or alarm operation, pumps do not run simultaneously.

N. Pump set shall include pumps motor starter of full voltage type, non-reversing, with overload relay, circuit breaker and disconnect switch with lockable, externally operable, weatherproof handle mechanism.

O. Pump controller shall include a mode control switch with "Alternate—Both" positions, Pump running indicators, pump set leak indicator, pump failure indicator and control power transformer.

P. Pump Set shall include the following options:

1. Weatherproof stainless steel enclosure.
2. Upgrade for low sulfur diesel fuel use.
3. Pressure gauge with isolation valve, 2 inch.
4. Vacuum gauge with isolation valve, 2 inch.
5. Loss of flow alarm.
6. Strainer differential pressure switch.
7. Digital level indication 115AC-4-20mA level transducer.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. All equipment and system components shall be installed in strict accordance with the most recent installation instructions provided by the manufacturer, NFPA, DEC Standards, local ordinance, recognized engineering procedure, and other New York City Fueling codes.

B. Contractor shall be properly trained by manufacturer, the state, or other approved agency.

3.3 TESTING

A. System tests shall be according to manufacturer's guidelines at time of installation.

B. Manufacturer's Services: The contractor shall engage the supplier to supervise and/or perform checkout and start-up of all system components. As part of these services, the supplier shall include for those equipment items not manufactured by them, the services of an authorized manufacturer's representative

to check the equipment installation and place the equipment in operation. The manufacturer's representative shall be thoroughly knowledgeable about the installation, operation and maintenance of the equipment.

C. A factory instructed representative shall be present at the first tank filling and dispensing operation at the facility.

3.4 INSTRUCTION

A. The manufacturer of the fuel dispensing system shall include one day of on-site classroom and hands-on instruction at the facility. The day is one session of 8 hours.

1. Maintenance: Instruction shall include operation of the system and regular maintenance (electrical, and mechanical). Additionally the City of New York key maintenance personnel shall be allowed to "shadow" the installation process whenever possible.
2. Supervisors: Instruction shall include operation of the system and basic troubleshooting as a minimum.
3. Operators Instruction: Operator instruction shall provide use skills along with safety instruction.

END OF SECTION 221513.10

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 221513.20

Fluid Dispensing System

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2 SUMMARY

A. Work Included:

1. A fluid dispensing system shall be provided to supply bulk motor oil, hydraulic oil, chassis grease, gear oil, and transmission fluid for use in the maintenance bay for servicing department vehicles. Waste oil and antifreeze collections systems shall be provided for the collection of used fluids.
2. Contractor shall furnish and install pumps, dispensing hose reels, dispensing nozzles, leak and level monitoring equipment, moisture separators, pressure regulators, pneumatic hoses, piping, waste oil drain receiver, valves, fittings, and accessories as shown, specified and required for a complete and fully operational system.

B. Related Sections:

1.	Division 22 Section 22 05 53	"Identification for Plumbing Piping and Equipment."
2.	Division 22 Section 22 15 13	"Compressed Air Equipment"
3.	Division 22 Section 22 15 13.10	"Motor Fuel Dispensing Systems."
4.	Division 33 Section 33 52 13.13	"Fiberglass Double Containment Piping."
5.	Division 33 Section 33 56 14	"Underground Storage Tanks."

1.3 REFERENCES

A. FDNY Rules.

B. NFPA 30 – Flammable and Combustible Liquids Code.

C. NFPA 30A - Code for Motor Fuel Dispensing Facilities and Repair Garages.

D. NFPA 31 – Installation of Oil-Burning Equipment.

E. NYC Fire Code.

F. NYC Mechanical Code.

G. UFC – Uniform Fire Code.

H. UL – Power Operated Dispensing Devices for Petroleum Products.

I. UL 842 – Underwriters Laboratories (UL) Standard for Valves for Flammable Fluids.

1.4 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Submit shop drawings and accessory cut sheets for approval. The design drawings shall show principal dimensions, size, type and locations of all connections and fittings and locations of all options/ accessories. Design drawings shall also include catalog cut sheets for associated accessory items and subassemblies.

C. Submit copies of the system installation, operation and maintenance manual prior to delivery.

D. Submit copies of all quality control testing documentation, installation inspection documentation, and written warranty to the engineer at time of documentation completion.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions, section 01 40 00 "Quality Requirements."

B. Manufacturer shall have a minimum of 3 years experience in producing similar equipment.

C. Contractor shall be a licensed NYC installer having a minimum of 3 years experience in installing similar equipment.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Use every precaution to prevent damage to the equipment during transportation and delivery to the site.

1. Do not allow equipment to be dropped, bumped, dragged, pushed, rolled or moved in any way which will cause damage.
2. If, in the process of transportation or handling, any equipment is damaged, replace or repair such equipment or accessories. Make all required repairs.

B. Provide temporary storage on site prior to installation – storage location shall be free of rocks and debris.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers are listed below. Equipment products of other manufacturers may be submitted for approval.

1. Lubrication equipment:

   a. Graco, Inc
   b. Lincoln Industrial Corporation.
   c. OPW.
   d. Or approved equal.

2. Transition Sumps:

   a. Fibrelite.
   b. OPW.
   c. PEI
   d. Or approved equal

3. Pumps:

   a. Graco, Inc
   b. Lincoln Industrial Corporation.
   c. Blackmer.
   d. Or approved equal.

4. Accessories:

   a. Graco.
   b. OPW.
   c. Goodyear.
   d. Eagle.
   e. Hubbell-Wiegmann.
   f. Or approved equal.

2.2 MOTOR OIL AND HYDRAULIC OIL DISPENSING SYSTEMS

A. Contractor shall provide motor oil and hydraulic oil dispensing systems which will dispense product in the maintenance bay at the locations shown on Contract Drawings. Each system shall store product in an underground storage tank located under the fueling area floor. Systems shall be equipped with a wall mounted air powered oil pump, wall mounted pump enclosure, hose reels and nozzles as described below. Each pump shall include a dedicated regulator/dryer/lubricator and shall be connected to the building compressed air system. Each hose reel shall be outfitted with 50 ft of dispensing hose. Dispensing shall be controlled by a centrally located electronic dispensing control console as described below. Contractor shall supply all piping, hangers, placards, containment sumps, vents, monitoring equipment, and other accessories for a complete and operational system.

2.3 CHASSIS GREASE AND TRANSMISSION FLUID DISPENSING EQUIPMENT

A. Contractor shall provide two (2) portable chassis grease and two (2) portable transmission fluid dispensing systems which can be wheeled around the maintenance bay as needed. Systems shall be compatible with 120 lb pails and equipped with an air powered oil pump and nozzle as described below. Each system shall be equipped with a regulator/dryer/lubricator assembly and compatible quick disconnect to allow connection to the building compressed air system. Systems shall include a castor base, lid cover, and 15 ft of dispensing hose.

2.4 GEAR OIL DISPENSING EQUIPMENT

A. Gear oil shall be dispensed directly out of stationary drums using manual hand pumps and located as shown on contract drawings. Contractor shall supply hand pumps and spill containment pallets for drum storage as specified herein.

2.5 WASTE OIL COLLECTION SYSTEM

A. Contractor shall provide a waste oil collection system allowing storage of waste product. System shall include an underground storage tank located under the fueling area floor, two waste oil receivers located in the maintenance bay as shown on Contract Drawings, all single and double wall piping, tank monitoring equipment including a high level sensor and alarm, waste oil extraction port, stick ports, and all other accessories needed for a complete and operational system. Waste oil shall drain by gravity from the receivers in the maintenance bay to the underground storage tank. See Contract Drawings for receiver and extraction port details.

2.6 WASTE ANTIFREEZE COLLECTION SYSTEM

A. Contractor shall provide two (2) portable waste antifreeze collection systems. Systems shall include but not be limited to a green polyethylene 25 gallon tank, 10-inch semi-pneumatic wheels, 3-inch urethane castors, removable filter screen, 22-inch x 24-inch collection bowl, and a 3-inch inspection port. Collection bowl height shall be adjustable with 27-inch travel.

2.7 PUMPS

A. Motor Oil and Hydraulic Oil Pumps:

1. Contractor shall supply one (1) wall mounted positive displacement oil pump for each oil to be dispensed. Pump shall have a 4-inch pumping stroke and cycle on demand only.
2. Pumps shall include a pneumatically operated 4-1/4 inch diameter air motor. Air motor and lower pump section shall be of an in-line design.
3. Air Motor shall include a grounding lug and be equipped an external muffler operating below OSHA noise standards.
4. Air motor shall have a valve in piston design. Cylinder shall be hard coated aluminum and corrosion resistant steel.
5. Air Motor shall include a non-metallic poppet valve.
6. Pump assembly shall have the following characteristics:

a.	Pump Ratio:	10:1
b.	Continuous duty flow rate:	4.1 gpm
c.	Maximum fluid pressure:	1,800 psi

d.	Maximum air inlet pressure:	180 psi
e.	Fluid outlet size:	¾ inch NPT
f.	Air inlet size:	½ inch NPT
g.	Air consumption:	32 cfm per 4.1 gpm

7. Contractor shall supply any accessory components required for proper pump operation including but not limited to thermal relief kit, wall mount bracket, low level cut-off kit, bleed type air shut-off valve, air filter/regulator/lubricator, automatic drain valve for filter, fluid shut-off valve, suction kit, run-away valve, etc.

B. Chassis Grease Pump:

1. Contractor shall supply one (1) drum mounted positive displacement grease pump for each portable chassis grease dispensing system. Pump shall have a 4 inch pumping stroke and cycle on demand only.
2. Pumps shall include a pneumatically operated 4-1/4 inch diameter air motor. Air motor and lower pump section shall be of an in-line design.
3. Air Motor shall include a grounding lug and be equipped an external muffler operating below OSHA noise standards.
4. Air motor shall have a valve in piston design. Cylinder shall be hard coated aluminum and corrosion resistant steel.
5. The pump shall be of the "topper" type with down tube for a 400 pound drum, an integral indictor plate, hose and fitting kit and a pump elevator.
6. Pump assembly shall have the following characteristics:

a.	Pump Ratio:	50:1
b.	Continuous duty flow rate:	5 lbs per minute
c.	Maximum fluid pressure:	7,500 psi
d.	Maximum air inlet pressure:	180 psi
e.	Fluid outlet size:	3/8 inch NPT
f.	Air inlet size:	½ inch NPT
g.	Air consumption:	13 cfm per gallon

7. Contractor shall supply any accessory components required for proper pump operation including but not limited to filter/regulator/lubricator, automatic drain for air filter, air shut-off valve, fluid shut-off valve, runaway valve, etc.

C. Transmission Fluid Pump:

1. Contractor shall supply one (1) drum mounted positive displacement oil pump for each portable transmission fluid dispensing system. Pump shall have a 3 inch pumping stroke and cycle on demand only.
2. Pumps shall include a pneumatically operated 3 inch diameter air motor. Air motor and lower pump section shall be of an in-line design.
3. Air Motor shall include a grounding lug and be equipped an external muffler operating below OSHA noise standards.
4. Air motor shall have a valve in piston design. Cylinder shall be hard coated aluminum and corrosion resistant steel.
5. Air Motor shall include a non-metallic poppet valve.

6. Pump assembly shall have the following characteristics:

a.	Pump Ratio:	5:1
b.	Continuous duty flow rate:	2.8 gpm
c.	Maximum fluid pressure:	900 psi
d.	Maximum air inlet pressure:	180 psi
e.	Fluid outlet size:	½ inch NPT
f.	Air inlet size:	3/8 inch NPT
g.	Air consumption:	10 cfm per 2.8 gpm @ 100 psi

7. Contractor shall supply any accessory components required for proper pump operation including but not limited to filter/regulator/lubricator, automatic drain for air filter, air shut-off valve, fluid shut-off valve, runaway valve, etc.

D. Gear Oil Pumps: Contractor shall supply two (2) drum mounted rotary, dispensing type hand pumps. Pumps shall be self-priming, cast-iron construction and be designed for liquid dispensing of petroleum products from barrels or drums into smaller containers. Pumps shall include pump, grip, crank, 40" suction pipe, bung adaptor, and spout. Each pump shall also include a drip pan kit which includes a built-in bung adapter and drain return to barrel.

2.8 HOSE REEL ASSEMBLIES

A. Motor Oil and Hydraulic Oil Assemblies:

1. Contractor shall supply wall mounted hose reels as indicated on Contract Drawings for motor oil and hydraulic oil. Reels shall have a minimum capacity of 50 feet of ½ inch ID hose.
2. Reel construction: Reel base shall be a double pedestal design made of 10 gauge steel with welded joints and formed ribs. The reel shall incorporate a fully ported hub, guide- arms adjustable to 15 different mounting positions supporting hose guides on both sides, a ZA12 (zinc alloy) ratchet, and external brass swivel housing. The hose guide roller assembly shall be the full width of the spool with 1-1/8 inch diameter rollers, a one-piece roller support and delrin bearings and seals.
3. Hose reels shall have the following characteristics:

a.	Reel outlet:	½ inch NPSM
b.	Reel inlet:	½ inch NPSM
c.	Pressure rating (oil):	1,800 psi

4. Contractor shall supply any accessory components required for proper reel operation including but not limited to hose inlet kit and fluid shut-off valve.
5. Contractor shall supply a minimum of 50 feet of hose per reel so nozzle is reachable from the ground.

2.9 DISPENSING NOZZLES

A. Motor Oil and Hydraulic Oil Nozzles:

1. Motor oil and hydraulic oil dispensing systems shall be equipped with metered dispensing nozzles that can measure the amount of fluid actually dispensed.
2. Dispensing nozzles shall have a locking trigger for hands free operation.
3. Nozzles shall include: electronic lubricant meter, valve handle, rigid 75 degree nozzle wand, lockable trigger, inlet filter, and swivel.
4. Electronic lubricant meter shall have the following characteristics:

a.	Flow Range:	0.12 to 12.0 gpm
b.	Maximum working pressure:	1500 psi
c.	Weight:	1.9 lb
d.	Units of Measure:	gallons, quarts, pints
e.	Maximum Recorded Dispense:	199.99 units
f.	Maximum Totalizer:	19,999 units
g.	Inlet/Outlet:	½ npt, non-directional flow
h.	Battery Specifications:	
1)	Rated Discharge Current:	100 microamps
2)	Rated Capacity:	1.0 amp hour

5. Dispensing nozzles shall have the following characteristics:

a.	Maximum Flow Rate:	12 gpm
b.	Maximum Operating Pressure:	1500 psi
c.	Nozzle Inlet:	½ npt
d.	Outlet:	½ npt

B. Transmission Fluid Nozzles:

1. Transmission fluid dispensing systems shall be equipped with automatic dispensing nozzles that can be set to dispense specific volumes of fluids.
2. Dispensing nozzles shall have a cast aluminum body equipped with a liquid crystal display (LCD), inlet screen, and pressure balanced trigger with trigger lock, guard, and guard boot.
3. Dispensing nozzles shall have the following characteristics:

a.	Flow Range:	0.1 to 14 gpm
b.	Maximum Working Pressure:	1500 psi
c.	Units of Measure:	quarts, pints, gallons, liters
d.	Maximum Totalizer:	999,999 gallons or liters
e.	Maximum Recorded Dispense:	999.99 units
f.	Accuracy:	±0.5 percent
g.	Nozzle Inlet:	½ inch npt
h.	Battery:	4 AA alkaline or 4AA lithium
i.	Battery Duration:	6 to 12 months

C. Chassis Grease Nozzles:

1. Chassis grease dispensing systems shall be equipped with metered dispensing nozzles.

2. Dispensing nozzles shall have lightweight aluminum construction, oval gear metering system, and equipped with a re-settable liquid crystal display (LCD).
3. Dispensing nozzles shall have the following characteristics:

a.	Flow Range:	up to 35.3 oz/min
b.	Maximum Working Pressure:	5000 psi
c.	Units of Measure:	ounces or grams
d.	Maximum Totalizer:	999.9 lbs
e.	Accuracy:	±3 percent
f.	Nozzle Inlet:	¼ inch NPTF
g.	Battery:	2 AA alkaline
h.	Battery Duration:	18 to 24 months

2.10 ELECTRONIC DISPENSING CONTROL CONSOLE

A. Contractor shall provide an operator programmable dispensing control system as described on contract drawings and as specified herein. System shall have a two (2) fluid, seven (7) station capacity and shall control dispensing of motor oil and hydraulic oil. System shall include but not be limited to a programmable control console, pulse meter, fluid solenoid valve, air solenoid valve, ready light, fluid filters, check valves, pressure relief kit, control console shelf, and any signal and electrical wiring required for an operable system.

B. System Operation: The operator shall select the type of fluid, station, and quantity to be dispensed. The controller energizes respective air and fluid solenoid valves. A ready light adjacent to the dispensing station illuminates indicating the system is ready for dispensing. As fluid is dispensed, the pulse meter sends a signal to the controller corresponding to the amount of flow. When the designated amount of fluid has been dispensed, the controller de-energizes the solenoids preventing further dispensing.

C. System shall have the following characteristics:

1.	Fluid System Max Working Pressure:	1500 psi
2.	Power Input:	110/120 Vac
3.	Circuit Breaker:	0.40 amp
4.	Units of Measurement:	
	a. Totalizing:	Gallons/Liters to 19999
	b. Dispensing:	0.01 increments up to 199.99 units
5.	Control Power Output:	24 Vdc at 0.60 amp max to any one valve
6.	Backup Battery :	Lithium, 3.6 V 1.0 amp hour

D. Fluid solenoid valve shall have the following characteristics:

1.	Type:	2 way normally closed
2.	Electrical Rating:	28 Vdc, 0.46 amp
3.	Leads:	18 AWG x 18 inch long
4.	Max Working Pressure:	3000 psi
5.	Inlet/Outlet:	½ npt

6. Min Actuation Volts Required: 20 Vdc

E. Air solenoid valve shall have the following characteristics:

1.	Type:	3-way air valve, normally closed
2.	Electrical Rating:	24 Vdc, 0.25 amps
3.	Leads:	18 AWG x 12 inch long
4.	Inlet/Outlet:	Adapted to ½ npt

2.11 PIPING

A. Piping located below ground between sumps or equipment shall be double containment piping conforming to Division 33 Section "Fiberglass Double Containment Piping."

B. Piping located above ground shall be single wall steel.

C. Double containment piping shall slope toward tank to allow any leakage captured by secondary containment pipe to drain back to tank leak detection equipment.

D. Single wall piping shall be used within sumps and equipment where confines act as secondary containment and have provisions for leak detection.

2.12 TRANSITION SUMPS

A. Containment sumps shall be furnished and installed at locations shown in contract drawings. Each sump shall be factory assembled, pre-pipes, liquid tight and constructed of fiberglass reinforced polymer.

B. Oil Extraction: In the event of a leak, the fuel oil shall be emptied from the sump by means of a vacuum truck and disposed of according to New York City Fueling Code.

C. Contractor shall provide transition sumps at locations shown to allow piping to transition from below ground to above. And shall provide access to and secondary containment of fuel lines as shown. Transition sumps shall be monitored with leak detection equipment.

D. Transition sumps shall have a water tight diamond plate access cover capable of withstanding H20 axle loads.

E. Transition sumps shall incorporate provisions to support a pipe rack system. Pipe rack systems shall be provided where shown, specified or as needed to support above ground piping exiting transition sumps.

F. Positive concrete anchoring shall be incorporated as an integral part of the sump design.

G. Transition sumps shall include 2-inch rigid pipe fittings where pipes exit sump above the ground.

H. Containment sumps shall have provisions to seal and terminate secondary containment pipe within. Piping annular space shall drain into the confines of the sump.

I. Transition sumps shall include above ground factory-sealed electrical connections.

2.13 UNDERGROUND STORAGE TANKS (UST)

A. UST shall conform to Division 33 Section "Underground Storage Tanks."

B. UST shall be located and sized as shown in contract drawings.

2.14 SYSTEM MONITORING

A. UST shall be monitored for leakage and level as described in Division 33 Section "Underground Storage Tanks."

2.15 ACCESSORIES

A. Spill Containment Fill Box Assemblies: Spill containment fill box assemblies shall be provided as shown on contract drawings. See Division 33 Section "Underground Storage Tanks" for details.

B. Spill Containment Pallets: Contractor shall provide six (6) 2-drum spill containment pallets with a minimum sump capacity of 62 US gallons. Pallets shall have a yellow tub with black grating, be constructed of polyethylene, have a load capacity of 2000 pounds and be equipped with a ¾ inch drain plug. Pallets shall have approximate dimension of 51 inches long by 26 ¼ inches wide by 15 inches deep.

C. Wall Mounted Pump Enclosure: Contractor shall provide one (1) wall mounted enclosure to house both the motor oil pump and hydraulic oil pump. Enclosure shall be constructed of type-304 stainless-steel, have a single-door, and have a NEMA 4X rating. Enclosure shall have minimum dimensions of 36 inch long by 36 inch wide by 12 inch deep. Enclosure shall be located as shown on contract drawings.

D. Signage:

1. Identification signs shall be provided and installed as shown, specified and as required by code and New York City regulations.
2. All fueling equipment, dispensers, pipes, sumps, fill boxes, vapor recovery equipment, and related shall be placarded in accordance with all applicable codes and laws including but not limited to any safety labels and instructions.
3. Each fill pipe shall be labeled with a tank information tag securely attached to the inside of the fill box (spot tack welding of the tag is not acceptable).
4. Emergency stop switches shall be clearly identified "EMERGENCY FUEL SHUTOFF".
5. Each dispenser access door shall bear a thirty-six (36) inch agency logo.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.1 INSTALLATION

A. All equipment and system components shall be installed in strict accordance with the most recent installation instructions provided by the manufacturer, NFPA, local ordinance, recognized engineering procedure, and New York City applicable codes.

B. Contractor shall be properly trained by manufacturer, the state, or other approved agency.

3.2 TESTING

A. System tests shall be according to manufacturer's guidelines at time of installation.

B. Manufacturer's Services: The contractor shall engage the supplier to supervise and/or perform checkout and start-up of all system components. As part of these services, the supplier shall include for those equipment items not manufactured by them, the services of an authorized manufacturer's representative to check the equipment installation and place the equipment in operation. The manufacturer's representative shall be thoroughly knowledgeable about the installation, operation and maintenance of the equipment.

C. A factory instructed representative shall be present at the first tank filling and dispensing operation at the facility.

3.3 INSTRUCTION

A. The manufacturer of the fuel dispensing system shall include one day of on-site classroom and hands-on instruction at the facility. The day is one session of 8 hours.

1. Maintenance – Instruction shall include operation of the system and regular maintenance (electrical, and mechanical). Additionally the City of New York key maintenance personnel shall be allowed to "shadow" the installation process whenever possible. By "shadowing" the equipment installation, the highest level of practical knowledge can be obtained.
2. Supervisors – Instruction shall include operation of the system and basic trouble shooting as a minimum.
3. Operators - Instruction shall provide use skills along with safety instruction.

END OF SECTION 221513.20

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 221513.30
General-Service Compressed-Air Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Section includes piping and related specialties for general-service compressed-air systems.

B. Related Requirements:

1. Section 22 15 13 "Compressed Air Equipment" for general-service air compressors and accessories.

1.3. DEFINITIONS

A. Compressed-Air Condensate Waste Piping: System of compressed-air piping for condensate and specialties operating at pressures of 220 psig (1517 kPa) or less.

B. High-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures between 150 and 220 psig (1035 and 1517 kPa).

C. Low-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures of 150 psig (1035 kPa) or less.

1.4. PERFORMANCE REQUIREMENTS

A. Seismic Performance: Compressed-air piping and support and installation shall withstand the effects of earthquake motions.

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For the following:

1. Aluminum tube, fittings, and valves.
2. Safety valves.
3. Pressure regulators. Include rated capacities and operating characteristics.
4. Automatic drain valves.
5. Quick couplings.

1.6. INFORMATIONAL SUBMITTALS

A. Qualification Data:

1. For manufacturer.
2. For installers.

B. Field quality-control reports.

1.7. CLOSEOUT SUBMITTALS

A. Product Brochures and Installation Instructions: To include in maintenance manuals.

1.8. QUALITY ASSURANCE

A. Refer to DDC General Conditions, section 01 40 00 "Quality Requirements."

B. Manufacturer Qualifications: Manufacturer meets the requirements of ISO 9001.

C. ASME Compliance:

1. Comply with ANSI/ASME B31.1, "Power Piping," for high- and low-pressure compressed-air piping.
2. Comply with ANSI/ASME B31.3, "Process Piping," for high- and low-pressure compressed-air piping.

1.9. WARRANTY

A. Manufacturer's Warranty for Aluminum Piping System: Manufacturer warrants aluminum pipe and fitting components to be free of leaks due to manufacturing defects within specified warranty period.

1. Special Warranty for Aluminum Piping System: 10 years from date of substantial completion.

1.10. PROJECT CONDITIONS

A. Interruption of Existing Compressed-Air Service: Do not interrupt compressed-air service to facilities occupied by the City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary compressed-air service according to requirements indicated:

1. Notify Commissioner no fewer than (7) days in advance of proposed interruption of compressed-air service.

1. Do not proceed with interruption of compressed-air service without the Commissioner's written permission.

PART 2 - PRODUCTS

2.1. PIPES, TUBES, AND FITTINGS

A. Aluminum Piping System: Nickel-plated push-connect bite ring couplings, and galvanized ductile-iron roll-groove couplings.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Applied System Technologies; Infinity Piping System and Elevation Piping System or a comparable product by one of the following:

   a. Gardner Denver, Inc.; Quick-Lock.
   b. Ingersoll-Rand; SimplAir.
   c. Or approved equal.

2. Source Limitations: Obtain aluminum piping systems and components from single source from single manufacturer.
3. Pressure and Temperature Range: Aluminum piping and related specialties for general-service compressed-air systems operating at 220 psig (1517 kPa) or less, across a temperature range of minus 4 deg F to plus 176 deg F (minus 20 deg C to plus 80 deg C).
4. Tubing: Aluminum pipe, alloy grade AA 6063-T5.
5. Pipe Coating: Powder coated paint certified non-toxic to AAMA 603 and 605.
6. Tubing shall be quality controlled to meet the tolerances specified by the roll groove or push-to-connect coupling manufacturer. The tubing manufacturer shall follow ISO 9001:2000 quality standards.
7. Pipe Identification: Decal with maximum working pressure and temperature supplied with each length of pipe.
8. Push-Connect Bite Ring Couplings, 14 mm to 63 mm: Solid-brass and nickel-plated body, high nitrile rubber O-ring seal in excess of 36-percent, and AISI Type 304 stainless-steel clamping washer.
9. Fittings: Solid-brass and nickel-plated.
10. Available sizes of couplings in first subparagraph below are 73, 90, 115, 168, 220, and 273 mm, which correspond approximately to piping larger than NPS 2-1/2 (DN 65).
11. Roll-Groove Couplings, 73 mm to 273 mm: Solid ductile-iron, galvanized, ASTM A 536 grade 65-45-12, nitrile rubber standard seals, and fluoroelastomer seals for high temperature applications.
12. Ball Valves, 20 mm to 63 mm: NPT threaded ends, or push-connect bite ring ends.
13. Butterfly Valves, 73 mm to 273 mm: Tube-to-tube, with two roll-groove end couplings.
14. Flanges, 73 mm to 273 mm: ASME B16.5, Class 150.

B. Pipe Hangers and Supports:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Applied System Technologies; hangers and supports or comparable products by one of the following:

   a. Gardner Denver, Inc.; Quick-Lock Hangers.
   b. Ingersoll-Rand; SimplAir Hangers.
   a. Or approved equal.

2. Description: Wire rope utilizing adjustable camlock system with standard threaded stud for connection to provided hangers.
3. Hangers: UV-stabilized nylon and galvanized clevis style.

2.2. JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for compressed-air piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.

a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

2.3. VALVES

A. Metal Ball, Butterfly, Check, and Gate Valves: Comply with requirements in Section 22 05 23 "General Duty Valves for Plumbing Piping".

2.4. FLEXIBLE PIPE CONNECTORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Flex-Hose Co., Inc.
2. Flexicraft Industries.
3. Hyspan Precision Products, Inc.
4. Mercer Rubber Co.
5. Metraflex Company (The).
6. Proco Products, Inc.
7. Unaflex.
8. Universal Metal Hose.
9. Or approved equal.

B. Bronze-Hose Flexible Pipe Connectors: Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.

1. Working-Pressure Rating: 250 psig (1725 kPa) minimum.
2. End Connections, 63 mm and Smaller: Threaded copper pipe or plain-end copper tube.
3. End Connections, 73 mm and Larger: Flanged copper alloy.

C. Stainless-Steel-Hose Flexible Pipe Connectors: Corrugated-stainless-steel tubing with stainless-steel wire-braid covering and ends welded to inner tubing.

1. Working-Pressure Rating: 200 psig minimum.
2. End Connections, 63 mm and Smaller: Threaded steel pipe nipple.
3. End Connections, 73 mm and Larger: Flanged steel nipple.

2.5. SPECIALTIES

A. Safety Valves: ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," construction; National Board certified, labeled, and factory sealed; constructed of bronze body with poppet-type safety valve for compressed-air service.

1. Pressure Settings: Higher than discharge pressure and same or lower than receiver pressure rating.

B. Air-Main Pressure Regulators: Semi-precise pressure regulator.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Applied System Technologies; Optiflo or a comparable product by one of the following:

    a. Gardner Denver, Inc.; XMX.
    b. Ingersoll-Rand; Pace.
    c. Or approved equal.

2. Type: Semi-precise poppet valve operated, aluminum body, direct acting, spring-loaded manual pressure-setting adjustment.
3. Pressure: Maximum inlet pressure 300 psig (2070 kPa), control range of 0 to 160 psig (0 to 1100-kPa).
4. Gages: Supply and demand side gages to accurately control pressure and operate valve.

C. Air-Line Pressure Regulators: Semi-precise pressure regulator.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Applied System Technologies; Optiflo or a comparable product by one of the following:

    a. Gardner Denver, Inc.; XMX.
    b. Ingersoll-Rand; Pace.
    c. Or approved equal.

2. Type: Semi-precise poppet valve operated, aluminum body, direct acting, spring-loaded manual pressure-setting adjustment.
3. Pressure: Maximum inlet pressure 300 psig (2070 kPa), control range of 0 to 160 psig (0 to 1100-kPa).
4. Gages: Supply and demand side gages to accurately control pressure and operate valve.

D. Automatic Drain Valves: Zero loss drains.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Applied System Technologies; Powermizer or a comparable product by one of the following:

    a. Gardner Denver, Inc.
    b. SynergAir.
    c. Or approved equal.
2. Liquid level sensing, capable of automatic discharge of collected condensate.
3. Internal strainer, rated for 12 to 235 psig (83 to 1620 kPa).

E. Coalescing Filters: Coalescing type with activated carbon capable of removing water and oil aerosols; with color-change dye to indicate when carbon is saturated and warning light to indicate when selected maximum pressure drop has been exceeded.

F. Mechanical Filters: Two-stage, mechanical-separation-type, air-line filters. Equip with deflector plates, resin-impregnated-ribbon-type filters with edge filtration, and drain cock.

G. Air-Line Lubricators: With drip chamber and sight dome for observing oil drop entering air stream; with oil-feed adjustment screw and quick-release collar for easy bowl removal.

1. Provide with automatic feed device for supplying oil to lubricator.

2.6. QUICK COUPLINGS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Applied System Technologies; quick couplings or comparable products by one of the following:

1. Aeroquip Corporation.
2. Bowes Manufacturing Inc.
3. Foster Manufacturing, Inc.
4. Milton Industries, Inc.
5. Parker Hannifin Corp.
6. Rectus Corp.
7. Schrader-Bridgeport/Standard Thomson.
8. TOMCO Products Inc.
9. Tuthill Corporation.
10. Or approved equal.

B. General Requirements for Quick Couplings: Assembly with locking-mechanism feature for quick connection and disconnection of compressed-air hose.

C. Automatic-Shutoff Quick Couplings: Straight-through brass body with O-ring or gasket seal and stainless-steel or nickel-plated-steel operating parts.

1. Socket End: With one-way valve and threaded inlet for connection to piping or threaded hose fitting.
2. Plug End: Flow-sensor-bleeder, check-valve type with barbed outlet for attaching hose.

D. Valveless Quick Couplings: Straight-through brass body with stainless-steel or brass, nickel-plated, operating parts.

1. Socket End: With O-ring or gasket seal, without valve, and with barbed inlet for attaching hose.
2. Plug End: With barbed outlet for attaching hose.

2.7. HOSE ASSEMBLIES

A. Description: Compatible hose, clamps, couplings, and splicers suitable for compressed-air service, of nominal diameter indicated, and rated for 300-psig (2070-kPa) minimum working pressure, unless otherwise indicated.

1. Hose: Reinforced double-wire-braid, CR-covered hose for compressed-air service.
2. Hose Clamps: Stainless-steel clamps or bands.
3. Hose Couplings: Two-piece, straight-through, threaded brass or stainless-steel O-ring or gasket-seal swivel coupling with barbed ends for connecting two sections of hose.
4. Hose Splicers: One-piece, straight-through brass or stainless-steel fitting with barbed ends for connecting two sections of hose.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PIPING APPLICATIONS

A. Compressed-Air Piping between Air Compressors and Receivers: Use one of the following piping materials for each size range:

1. INFINITY, 63 mm and Smaller: Aluminum pipe; solid-brass nickel-plated fittings; and push-connect bite ring couplings.
2. ELEVATION, 73 mm and Larger: Aluminum pipe; and roll-groove couplings.

B. Low-Pressure Compressed-Air Distribution Piping: Use one of the following piping materials for each size range:

1. INFINITY, 63 mm and Smaller: Aluminum pipe; solid-brass nickel-plated fittings; and push-connect bite ring couplings.
2. ELEVATION, 73 mm and Larger: Aluminum pipe; and roll-groove couplings.

C. High-Pressure Compressed-Air Distribution Piping: Use one of the following piping materials for each size range:

1. INFINITY, 63 mm and Smaller: Aluminum pipe; solid-brass nickel-plated fittings; and push-connect bite ring couplings.
2. ELEVATION, 73 mm and Larger: Aluminum pipe; and roll-groove couplings.

D. Compressor Drain Lines: For compressor drain lines between air compressor, dryers, receivers, and accessory condensate drains, and the oil-water separator, use the following piping materials for size range:

1. INFINITY, 14 mm: Aluminum pipe; solid-brass nickel-plated fittings; and push-connect bite ring couplings.

3.3. VALVE APPLICATIONS

A. General-Duty Valves for Aluminum Piping Systems: Provide valves, made by piping system manufacturer, that are compatible with piping.

1. Aluminum Piping System: Ball and butterfly valves.

B. Metal General-Duty Valves: Comply with requirements and use valve types specified in 22 05 23 "General Duty Valves for Plumbing Piping" according to the following:

1. Low-Pressure Compressed Air: Valve types specified for low-pressure compressed air.
2. High-Pressure Compressed Air: Valve types specified for high-pressure compressed air.
3. Grooved-end valves may be used with grooved-end piping and grooved joints.

3.4. PIPING INSTALLATION

A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to lay-out are approved on Coordination Drawings.

C. Install piping concealed from view and protected from physical contact by building occupants, unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited, unless otherwise indicated.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.

F. Install piping adjacent to equipment and machines to allow service and maintenance.

G. Install air and drain piping with 1 percent slope downward in direction of flow.

H. Install nipples, flanges, unions, transition and special fittings, and valves with pressure ratings same as or higher than system pressure rating, unless otherwise indicated.

I. Equipment and Specialty Flanged Connections:

1. Use steel companion flange with gasket for connection to steel pipe.
2. Use cast-copper-alloy companion flange with gasket and brazed or soldered joint for connection to copper tube. Do not use soldered joints for connection to air compressors or to equipment or machines producing shock or vibration.

J. Install concentric reducers where compressed-air piping is reduced in direction of flow.

K. Install branch connections 73 mm and larger, to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.

L. Install branch connections 63 mm and smaller, to compressed-air mains using Applied System Technologies reducing outlet tee with water trapping capabilities. Provide drain leg and drain trap at end of each main and branch and at low points.

M. Install thermometer and pressure gage on discharge piping from each air compressor and on each receiver. Comply with requirements in Section 220519 "Meters and Gages for Plumbing Piping."

N. Install piping to permit valve servicing.

O. Install piping free of sags and bends.

P. Install fittings for changes in direction and branch connections.

Q. Install seismic restraints on piping. Seismic-restraint devices are specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

R. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220500 "Common Work Results for Plumbing."

S. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220500 "Common Work Results for Plumbing."

T. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220500 "Common Work Results for Plumbing."

U. ALUMINUM PIPING SYSTEM INSTALLATION, ADDITIONAL REQUIREMENTS

A. Install aluminum piping systems according to manufacturer's instructions, using manufacturer's recommended tools, accessories, and methods.

B. Support aluminum pipe using manufacturer's hangers and supports, designed for use with the system.

C. Allow for expansion and contraction of the aluminum piping system.

D. Do not use plastic components or plastic fittings of any kind within the pressurized aluminum piping system. This applies to main headers, branches, and drops.

3.5. JOINT CONSTRUCTION

A. Deburr outside diameter on ends of tubing to remove burrs.

B. Chamfer outside diameter ends of 14 mm to 63 mm tubing to ensure proper fitting installation.

C. Flanged Joints: Use asbestos-free, nonmetallic gasket suitable for compressed air. Join flanges with gasket and bolts according to ASME B31.9 for bolting procedure.

D. Grooved Joints: Assemble couplings with housing, gasket, lubricant, and bolts. Join according to AWWA C606 for grooved joints. Do not apply lubricant to prelubricated gaskets.

3.6. VALVE INSTALLATION

A. General-Duty Valves: Comply with requirements in Section 22 05 23 "General Duty Valves for Plumbing Piping"

B. Install shutoff valves and unions or flanged joints at compressed-air piping to air compressors.

C. Install shutoff valve at inlet to each automatic drain valve, filter, lubricator, and pressure regulator.

D. Install check valves to maintain correct direction of compressed-air flow to and from compressed-air piping specialties and equipment.

3.7. SPECIALTY INSTALLATION

A. Install safety valves on receivers in quantity and size to relieve at least the capacity of connected air compressors.

B. Install air-main pressure regulators in compressed-air piping at or near compressed-air storage tank.

C. Install air-line pressure regulators in branch piping to equipment and tools.

D. Install automatic drain valves on aftercoolers, receivers, and dryers. Discharge condensate shall be piped and connected to oil-water separator.

E. Install coalescing filters in compressed-air piping at or near air compressors and upstream from mechanical filters.

F. Install mechanical filters in compressed-air piping at or near air compressors and downstream from coalescing filters.

G. Install quick couplings at piping terminals for hose connections.

H. Install hose assemblies at hose connections.

3.8. HANGER AND SUPPORT INSTALLATION

A. Comply with requirements in Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment" for seismic-restraint devices.

B. Use manufacturer's hangers and supports for aluminum piping systems.

C. Comply with requirements in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support devices.

D. Vertical Piping: Supports and clamps approved for use by piping system manufacturer.

E. Individual, Straight, Horizontal Piping Runs:

1. 100 Feet or Less: Adjustable, steel clevis hangers or hangers approved for use by piping system manufacturer.
2. Longer Than 100 Feet : Adjustable, steel clevis hangers or hangers approved for use by piping system manufacturer.

F. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: Support pipe rolls on trapeze.

G. Support horizontal piping within 12 inches (300 mm) of each fitting and coupling.

H. Threaded rod may be used in conjunction with piping system manufacturer's clevis hangers, struts, and strut brackets.

I. Install hangers for aluminum piping every 8 feet

J. Install supports for vertical aluminum piping every 8 feet

3.9. LABELING AND IDENTIFICATION

A. Install identifying labels provided by Applied System Technologies for general-service compressed-air piping system. Comply with requirements in Section 220553 "Identification for Plumbing Piping and Equipment."

3.10. FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Follow provided test instructions from manufacturer.

C. Tests and Inspections:

1. Piping Leak Tests for Aluminum Compressed-Air Piping: Test new piping system and modified parts of existing piping system. Evacuate all areas where test is being performed for duration of testing. Cap and fill general-service compressed-air piping system to pressure of 15 psig (105 kPa), hold pressure for 10 minutes. Repeat until reaching required operating pressure, not to exceed 220 psig (1515 kPa). Once desired operating pressure is met, let stand for one hour.
2. Repair leaks and retest until no leaks exist.
3. Inspect filters, lubricators, and pressure regulators for proper operation.

D. Prepare test and inspection reports.

SECTION 223500
Domestic Water Heat Exchangers

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. This Section includes plate heat exchangers.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.

C. Operation and Maintenance Data: For heat exchangers to include in emergency, operation, and maintenance manuals.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Product Options: Drawings indicate size, profiles, performance, and dimensional requirements of heat exchangers and are based on the specific equipment indicated. Refer to DDC General Condition Section "Product Requirements."

C. ASME Compliance: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

D. ARI Standard 400

PART 2 - PRODUCTS

2.1. PLATE HEAT EXCHANGERS

A. Manufacturers:

1. Plate Concepts
2. Sondex Inc. USA
3. API Heat Transfer Inc.
4. FlatPlate, Inc.
5. ITT Industries; Bell & Gossett.
6. Mueller, Paul Company.
7. Polaris Plate Heat Exchangers.
8. Tranter PHE, Inc.
9. Bell & Gossett.
10. Tigerflow.
11. Or approved equal.

B. Configuration: Brazed assembly consisting of two end plates, one with threaded nozzles and pattern-embossed plates, double wall construction.

C. End-Plate Material: Type 316 stainless steel.

D. Threaded Nozzles: Type 316 stainless steel.

E. Plate Material: Type 316 stainless steel.

F. Brazing Material: Copper.

G. Frame Material: Carbon Steel

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine areas for compliance with requirements for installation tolerances and for structural rigidity, strength, anchors, and other conditions affecting performance of heat exchangers.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. HEAT-EXCHANGER INSTALLATION

A. Concrete Bases: Anchor heat exchanger to concrete base.

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.
5. Cast-in-place concrete materials and placement requirements are specified in Division 03.

3.4. CONNECTIONS

A. Piping installation requirements are specified in Section 23 57 00 "Heat Exchangers for HVAC." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Maintain manufacturer's recommended clearances for service and maintenance. Install piping connections to allow service and maintenance of heat exchangers.

C. Install shutoff valves at heat-exchanger inlet and outlet connections.

D. Install relief valves on heat-exchanger heated-fluid connection and install pipe relief valves, full size of valve connection, to floor drain.

E. Install hose end valve to drain shell.

3.5. FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.

B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Perform the following field tests and inspections and prepare test reports:

1. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, confirm proper operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Remove and replace heat exchangers that do no pass tests and inspections and retest as specified above.

3.6. CLEANING

A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

3.7. DEMONSTRATION

A. Engage a factory-authorized service representative to instruct the City of New York's maintenance personnel to adjust, operate, and maintain heat exchangers. Refer to DDC General Condition Section "Demonstration and Instruction."

END OF SECTION 223500

SECTION 224000
Plumbing Fixtures

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. This Section includes the following conventional plumbing fixtures and related components:

1. Faucets for lavatories, bathtub/showers and sinks.
2. Toilet seats.
3. Protective shielding guards.
4. Fixture supports.
5. Dishwasher air-gap fittings.
6. Water closets.
7. Lavatories.
8. Kitchen sinks.
9. Service sinks.
10. Service basins.
11. Drinking Fountains.
12. Urinals.

B. Related Sections include the following:

1. Section 102813 "Toilet Accessories."
2. Section 221119 "Domestic Water Piping Specialties" for backflow preventers, floor drains, and specialty fixtures not included in this Section.
3. Section 221113 "Facility Water Distribution Piping" for exterior plumbing fixtures and hydrants.

1.3. DEFINITIONS

A. Accessible Fixture: Plumbing fixture that can be approached, entered, and used by people with disabilities.

B. Cast Polymer: Cast-filled-polymer-plastic material. This material includes cultured-marble and solid-surface materials.

C. Cultured Marble: Cast-filled-polymer-plastic material with surface coating.

D. Fitting: Device that controls the flow of water into or out of the plumbing fixture. Fittings specified in this Section include supplies and stops, faucets and spouts, shower heads and tub spouts, drains and tail-pieces, and traps and waste pipes. Piping and general-duty valves are included where indicated.

E. Solid Surface: Nonporous, homogeneous, cast-polymer-plastic material with heat-, impact-, scratch-, and stain-resistance qualities.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of plumbing fixture indicated. Include selected fixture and trim, fittings, accessories, appliances, appurtenances, equipment, and supports. Indicate materials and finishes, dimensions, construction details, and flow-control rates.

C. Operation and Maintenance Data: For plumbing fixtures to include in emergency, operation, and maintenance manuals.

D. Warranty: Special warranty specified in this Section.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Materials and work shall conform to the latest edition of reference specifications specified herein and to codes and requirements of NYC Department of Buildings.

C. Source Limitations: Obtain plumbing fixtures, faucets, and other components of each category through one source from a single manufacturer.

1. Exception: If fixtures, faucets, or other components are not available from a single manufacturer, obtain similar products from other manufacturers specified for that category.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to NYC Department of Buildings, and marked for intended use.

E. Regulatory Requirements: Comply with requirements in ICC A117.1, "Accessible and Usable Buildings and Facilities" for plumbing fixtures for people with disabilities, Public Law 102-486, "Energy Policy Act," about water flow and consumption rates for plumbing fixtures, New York City Plumbing Code.

F. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.

G. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.

H. Comply with the following applicable standards and other requirements specified for plumbing fixtures:

1. Enameled, Cast-Iron Fixtures: ASME A112.19.1M.
2. Plastic Bathtubs: ANSI Z124.1.
3. Plastic Lavatories: ANSI Z124.3.
4. Plastic Laundry Trays: ANSI Z124.6.
5. Plastic Mop-Service Basins: ANSI Z124.6.
6. Plastic Shower Enclosures: ANSI Z124.2.
7. Porcelain-Enameled, Formed-Steel Fixtures: ASME A112.19.4M.
8. Slip-Resistant Bathing Surfaces: ASTM F 462.
9. Solid-Surface-Material Lavatories and Sinks: ANSI/ICPA SS-1.
10. Stainless-Steel Commercial, Handwash Sinks: NSF 2 construction.
11. Stainless-Steel Residential Sinks: ASME A112.19.3.
12. Vitreous-China Fixtures: ASME A112.19.2M.
13. Water-Closet, Flush Valve, Tank Trim: ASME A112.19.M.
14. Sanitary Floor Sink: ASME A112.6.7.

I. Comply with the following applicable standards and other requirements specified for lavatory and sink faucets:

1. Faucets and fixture fittings shall conform to ASME A112.18.1 or CSA B125.
2. NSF Potable-Water Materials: NSF 61.

J. Comply with the following applicable standards and other requirements specified for bathtub and shower faucets:

1. Backflow Protection Devices for Hand-Held Showers: ASME A112.18.3M.
2. Combination, Pressure-Equalizing and Thermostatic-Control Antiscald Faucets: ASSE 1016.
3. Deck-Mounted Bath/Shower Transfer Valves: ASME A112.18.7.
4. Faucets and fixture fittings with hose-connected outlets: ASME A112.18.3.M.
5. Hand-Held Showers: ASSE 1014 or CSA B125.
6. High-Temperature-Limit Controls for Thermal-Shock-Preventing Devices: ASTM F 445.
7. Hose-Coupling Threads: ASME B1.20.7.
8. Manual-Control Antiscald Faucets: ASTM F 444.
9. Pipe Threads: ASME B1.20.1.
10. Pressure-Equalizing-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.
11. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
12. Thermostatic-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.

K. Comply with the following applicable standards and other requirements specified for miscellaneous fittings:

1. Atmospheric Vacuum Breakers: ASSE 1001.
2. Brass and Copper Supplies: ASME A112.18.1.
3. Dishwasher Air-Gap Fittings: ASSE 1021.
4. Manual-Operation Flushometers: ASSE 1037.
5. Brass Waste Fittings: ASME A112.18.2.
6. Sensor-Operation Flushometers: ASSE 1037 and UL 1951.

L. Comply with the following applicable standards and other requirements specified for miscellaneous components:

1. Disposers: ASSE 1008 and UL 430.
2. Dishwasher Air-Gap Fittings: ASSE 1021.
3. Flexible Water Connectors: ASME A112.18.6.
4. Floor Drains: ASME A112.6.3.
5. Grab Bars: ASTM F 446.
6. Hose-Coupling Threads: ASME B1.20.7.
7. Hot-Water Dispensers: ASSE 1023 and UL 499.
8. Off-Floor Fixture Supports: ASME A112.6.1M.
9. Pipe Threads: ASME B1.20.1.
10. Plastic Shower Receptors: ANSI Z124.2.
11. Plastic Toilet Seats: ANSI Z124.5.
12. Supply and Drain Protective Shielding Guards: ICC A117.1.

PART 2 - PRODUCTS

2.1. GENERAL

A. Fixture specifications are for reference information only. Contractor shall obtain approval from Commissioner for all fixtures prior to installation.

B. Fixture model numbers are indicated to establish type and quality. Fixtures shall be white, unless otherwise noted.

C. Trim which includes faucets, strainers, escutcheons, lavatory supplies, etc., shall be made of brass and shall be polished chromium-plated. Material specified as chromium-plated shall be thoroughly and evenly applied and guaranteed not to strip or peel. Plated work shall be highly buffed. Plastic, zinc or white metal will not be approved.

D. All fixtures shall be separately controlled by individual stops. Shower water supplies shall have screwdriver stops.

E. Faucets shall have indexes.

F. All trim shall be permanently stamped with manufacturer's identification and visible after installation.

G. For plumbing fixtures refer to Plumbing Fixture Schedule drawing # A1-603.

H. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Toto.
2. Bradley.
3. Kohler.
4. Delta.
5. American Standard.
6. Or Approved Equal

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Assemble plumbing fixtures, trim, fittings, and other components according to manufacturers' written instructions.

B. Install off-floor supports, affixed to building substrate, for wall-mounting fixtures.

1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.

C. Install floor-mounting fixtures on closet flanges or other attachments to piping or building substrate.

D. Install wall-mounting fixtures with tubular waste piping attached to supports.

E. Install floor-mounting, back-outlet water closets attached to building floor substrate and wall bracket and onto waste fitting seals.

F. Install counter-mounting fixtures in and attached to casework.

G. Install fixtures level and plumb according to roughing-in drawings.

H. Install water-supply piping with stop on each supply to each fixture to be connected to water distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.

1. Exception: Use ball, gate, or globe valves if supply stops are not specified with fixture. Valves are specified in Section 220523 "General-Duty Valves for Plumbing Piping."

I. Install trap and tubular waste piping on drain outlet of each fixture to be directly connected to sanitary drainage system.

J. Install tubular waste piping on drain outlet of each fixture to be indirectly connected to drainage system.

K. Install flushometer valves for accessible water closets and urinals with handle mounted on wide side of compartment. Install other actuators in locations that are easy for people with disabilities to reach.

L. Install tanks for accessible, tank-type water closets with lever handle mounted on wide side of compartment.

M. Install toilet seats on water closets.

N. Install trap-seal liquid in dry urinals.

O. Install faucet-spout fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

P. Install water-supply flow-control fittings with specified flow rates in fixture supplies at stop valves.

Q. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

R. Install shower flow-control fittings with specified maximum flow rates in shower arms.

S. Install traps on fixture outlets.

1. Exception: Omit trap on fixtures with integral traps.
2. Exception: Omit trap on indirect wastes, unless otherwise indicated.

T. Install disposer in outlet of each sink indicated to have disposer. Install switch where indicated or in wall adjacent to sink if location is not indicated.

U. Install dishwasher air-gap fitting at each sink indicated to have air-gap fitting. Connect inlet hose to dishwasher and outlet hose to disposer.

V. Install hot-water dispensers in back top surface of sink or in countertop with spout over sink.

W. Install escutcheons at piping wall ceiling penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding fittings. Escutcheons are specified in Section 220500 "Common Work Results for Plumbing."

X. Set bathtubs and service basins in leveling bed of cement grout. Grout is specified in Section 220500 "Common Work Results for Plumbing."

3.3. CONNECTIONS

A. Piping installation requirements are specified in other plumbing specification sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.

C. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4. FIELD QUALITY CONTROL

A. Verify that installed plumbing fixtures are categories and types specified for locations where installed.

B. Check that plumbing fixtures are complete with trim, faucets, fittings, and other specified components.

C. Inspect installed plumbing fixtures for damage. Replace damaged fixtures and components.

D. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.

E. Install fresh batteries in sensor-operated mechanisms.

3.5. ADJUSTING

A. Operate and adjust faucets and controls. Replace damaged and malfunctioning fixtures, fittings, and controls.

B. Adjust water pressure at faucets to produce proper flow and stream.

C. Replace washers and seals of leaking and dripping faucets and stops.

D. Install fresh batteries in sensor-operated mechanisms.

3.6. CLEANING

A. Clean fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials. Do the following:

1. Remove faucet spouts and strainers, remove sediment and debris, and reinstall strainers and spouts.
2. Remove sediment and debris from drains.

B. After completing installation of exposed, factory-finished fixtures, faucets, and fittings, inspect exposed finishes and restore damaged finishes.

3.7. PROTECTION

A. Provide protective covering for installed fixtures and fittings.

B. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by the Commissioner.

END OF SECTION 224000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 230500
Common Work Results for HVAC

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.
   a. Section 01 33 00 "Submittal Procedures."
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."
   c. Section 01 81 19 "Indoor Air Quality Requirements for LEED Building."

1.2. SUMMARY

A. This specification is intended to cover all the labor and material necessary for proper installation of the following work:

1. Provide air handling systems as indicated on the drawings.
2. Provide duct work, diffusers, registers, dampers, insulation, acoustic lining, accessories, etc., as specified herein or as indicated on the drawings.
3. Provide pumping systems.
4. Provide hot water, refrigerant and condensate drain piping systems, insulation, hangers, etc.
5. All necessary hangers for ducts, equipment and piping.
6. Exhaust systems and return/exhaust systems including all ductwork, hangers and accessories.
7. All temperature controls including control wiring.
8. Testing, adjusting and balancing of all systems.
9. Shop drawings.
10. Record drawings.
11. As-built drawings.
12. Provide seismic bracing and/or anchor for all life safety equipment as per New York City Local Law 17/95.

1.3. COORDINATION

A. Dimensional layout plans of equipment rooms shall be made showing all bases, pads and inertia blocks required for mechanical equipment. Include dimensions of bases, bolt layouts, details, etc.

B. Contractor shall furnish all necessary templates, patterns, etc., for installing work and for purpose of making adjoining work conform, furnish setting plans and shop details to other trades as required.

1.4. ACOUSTICAL PERFORMANCE OF EQUIPMENT AND SYSTEMS

A. Noise levels from operation of motor driven equipment, whether airborne or structure-borne, and noise levels created by or within air handling equipment and air distribution and control media, are not to exceed sound pressure levels determined by the ASHRAE noise criteria curves and NYC Noise Code.

B. Acoustical Tests shall be conducted by an acoustical consultant:

1. The Commissioner may conduct room sound tests for those areas he deems too noisy.

2. If NC level in any space exceeds that in the schedule or the specification due to improper installation or operation of mechanical systems, make remedial changes or restores.

3. Respective Trade is required to retest until specified criteria has been met.

1.5. SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

END OF SECTION 230500

SECTION 230513
Common Motor Requirements For HVAC Equipment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to the following:

1. Providing all motors and motor controls as specified herein, as indicated on the drawings, and as needed for a complete and proper installation.

B. Related Work: The following related items are specified in other sections of the specifications:

2.	Centrifugal HVAC Fans	Section 233416
3.	Instrumentation and Control for HVAC	Section 230900
4.	Sequence of Operations for HVAC Controls	Section 230993

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Codes and Standards:

1. UL Compliance: Construct motors and motor controls in compliance with UL Standards. All electrical components shall be UL listed or labeled.
2. NEC: All fans shall be AMCA certified.
3. NEMA: All electrical devices shall conform to NEMA standards.
4. NEC: All wiring shall conform to the NEC.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Catalog cuts, specifications, installation and instructions.

C. Schedule: List manufacturer, unit type, model number, and performance data for each motor control device unit along with their location.

D. Wiring Diagrams: Submit manufacturer's electrical requirements for power supply wiring to motor control device. Submit manufacturer's wiring diagrams for interlock and control wiring. Clearly differentiate between portions of wiring that are factory-installed and portions to be field installed.

E. Motors furnished, as part of packaged units shall be standard with the unit manufacturer.

1.5. DELIVERY, STORAGE AND HANDLING

A. Handle motors and controls carefully to prevent damage, breaking, denting and scoring. Do not install damaged units or components; replace with new.

B. Store motor controls units in clean dry place. Protect from weather, dirt, fumes, water, construction debris and physical damage.

C. Comply with manufacturer's installation instructions.

PART 2 - PRODUCTS

2.1. GENERAL

A. Motors

1. All motors shall conform to the requirements listed herein.
2. Each motor shall have capacity to start and operate machine it drives without exceeding motor nameplates rating at the speed specified or at any speed and load which may be obtained by drive provided.
3. Each motor that is provided with automatic control shall be capable of making as frequent starts as control device demands without damage and without exceeding the maximum permissible hot spot temperature. Motors not provided with automatic control shall be capable of making not less than 4 starts per hour without damage and without exceeding the maximum permissible hot spot temperature.
4. All belt-connected motors shall be equipped with shafts and bearings that will withstand both the belt pull of drive furnished and momentary or continuous overloads due to acceleration or incorrect belt tension.
5. Motors shall be rated for continuous duty at 100 percent of rated capacity, and temperature rise shall be based on an ambient temperature of 40 degrees centigrade. Service factors shall be as follows:
6. Open Drip Proof Enclosure 1.15
7. Totally Enclosed Fan Cooled 1.00
8. Encapsulated Windings1.00
9. One-half horsepower and larger motors shall be three phase and motors smaller than one-half horsepower shall be single phase. See schedule drawings for details.
10. Three phase motors shall be Type II - Polyphase, Class B insulated, Style A2 (ODP or B2 TEFC) NEMA Design B. squirrel cage induction.
11. Unless otherwise specified, single phase motors shall be of open, capacitor start type. Single phase motors shall be wound for 115 volts, 60 cycle alternating current and may be either single or dual voltage type. In lieu of capacitor start type, 1/6 horsepower and smaller motors may be of the split-phase type except for fan coil units.
12. Motor leads shall be terminated with solderless pressure type connectors.

13. Each direct-connected motor shall be mounted in accurate alignment. The drive shall be free from both angular and parallel misalignment when both motor and driven machine are operating at operating temperatures. Each belt-connected motor shall be provided with an adjustable base to permit installation and adjustment of belts.
14. Insulation resistance between starter conductors and frames of motors at time of final inspection shall be not less than one-half megohm.
15. No shop test of motors will be required but the temperature rise, insulation resistance and general operating characteristics shall be witnessed by the Commissioner at the time of final inspection.
16. Motors shall have cast terminal boxes for watertight flexible watertight connections.
17. Motors weighing over 25 pounds shall be provided with lifting eyes. Bases shall be cast iron frame mounted except where motor frame is attached directly to the load machinery base.
18. Enclosure for motors shall be as follows:
    a. Dry, indoor locations, open drip proof.
    b. Outdoor, 1/2 through 20 horsepower - totally enclosed.
19. Motors shall be single speed as indicated on the drawings.
20. Motors shall have proper characteristics to suit specified makes of equipment. Unless indicated otherwise, the motor horsepower shown shall be the minimum acceptable and the motor speed the maximum acceptable. Motor speed shall be 1800 RPM unless otherwise indicated.
21. Motors and accessories shall comply in all respects with ANSI, MEC and NEMA Standards.
22. Motors size 1 to 25 HP shall be energy efficient type, Gould E-plus, Westinghouse "MAC 11" or Louis Allis "Pacemaker Spartan" or equal.
23. Acceleration time (zero to synchronous speed) shall not exceed 15 seconds.
24. Locked rotor code letter designation (KVA/HP) for all motors shall not exceed "F".
25. All motors shall have sealed bearings.

2.2. POWER FACTOR CORRECTION

A. All motors, 1 1/2HP and larger, having a power factor less than 85%, shall be corrected to at least 90% under rated load conditions. By the use of Power factor correction equipment furnished and installed by this Section of the work. Power factor corrective devices shall be switched with the motors except where this results in an unsafe condition or interferes with the intended operation of the equipment.

2.3. NAMEPLATE DATE

A. The motor nameplate and connection diagram shall be stainless steel and contain the following information:

1. Manufacturer's name
2. Rated volts and full load current
3. Rated frequency and number of phases
4. Rated full load speed
5. Rated temperature rise and rated ambient temperature
6. Time rating
7. Rating horsepower
8. Locked rotor code letter

B. Motors starting on wye connection and running on delta, shall be marked with the code letter corresponding to the wye connection.

C. Dual voltage motors, which have a different locked rotor KVA on the two voltages, shall be marked with the code letter for the voltage giving the highest locked rotor KVA.

1. NEMA design letter
2. Service factor

D. In general, motors shall be furnished integrally mounted on all items of mechanical equipment.

2.4. MOTOR STARTERS AND CONTROLS

A. All motor controllers and starters integral with equipment or furnished as part of the equipment control panel shall be in accordance with the following:

1. Each controller, mounted in NEMA type enclosure shall be suitable for the particular service and/or location as approved.
2. Provide HOA switch in starter covers for all motors automatically controlled. Pushbuttons not required where HOA switches are used.
3. Provide control circuit fusing in all controllers.
4. Provide all necessary auxiliary contacts and transformers in starters as required. Provide time delay relays for all interlocked motors.
5. All pilot lights shall be incandescent; candelabra base receptacles, with red or green jewel as approved. Provide pilot lights where required as follows:
6. Starters with start-up pushbutton: 1 pilot light to indicate "Motor On".
7. Starters with HOA switches: 1 pilot light to indicate "Motor On".
8. All motor controllers and starters individually mounted shall be of the following type:
9. Combination fused or unfused disconnect switch and magnetic unfused controller with overload protection and low voltage protection.
10. Manual toggle switch operation 2 pole or single pole starter with overload protection in approved NEMA enclosure. Where motors are installed remote from starters, provide pilot light.
11. Provide all starters with reset button in cover and overload protection. For 3 phase starters, all three phases shall have overload protection.
12. Provide current limiting fuses in all units requiring fuse protection to suit the Selective Protection System on this job.
13. Enclosure sizes and wiring terminals shall be suitable for the application of both copper and aluminum power control circuit wires.
14. Starters shall be subject to the approval, as to limit of inrush current, as set up by the Utility Company. In general, magnetic starters shall be located close to the equipment controlled.
15. Motor starters for motors 1/2 HP and over and all automatically controlled motors shall be magnetic across the line type.
16. Motor starters for motors smaller than 1/2 HP and not automatically controlled shall be manual thermal overload switch type.

2.5. FACTORY FURNISHED CONTROL PANELS

A. The packaged control panel furnished with packaged units shall be provided with a circuit breaker and a magnetic starter with three (3) overloads for each motor. The incoming line lugs shall be arranged to accept a separate branch circuit to each circuit breaker. A control power transformer shall be provided and served via a transfer relay with power taken from the load side of each incoming line circuit breaker.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. ELECTRICAL WIRING

A. Provide all necessary wiring diagrams indicating wire size and connections as required for the proper operation of the equipment.

B. Contractor shall be responsible for replacing all fuses in the electrical systems during construction, which blow due to tests or malfunction of his motorized or other electrical equipment.

END OF SECTION 230513

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 230516
Expansion Fittings and Loops for HVAC Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Section Includes:

1. Flexible, ball-joint, packed expansion joints.
2. Slip-joint packed expansion joints.
3. Expansion-compensator packless expansion joints.
4. Flexible-hose packless expansion joints.
5. Metal-bellows packless expansion joints.
6. Rubber packless expansion joints.
7. Grooved-joint expansion joints.
8. Pipe loops and swing connections.
9. Alignment guides and anchors.

1.3. PERFORMANCE REQUIREMENTS

A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.

B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated

1. Expansion Compensators and Housed Expansion Joints: Bellows material, pressure rating, temperature rating, compression and elongation allowable motion, maximum installation extension, end fitting information, pressure thrust area and forces.
2. Flexible-Hose Expansion Joints: Bellows, braid and end connection materials, overall length, live length, corrugations per foot, lateral stiffness based on testing at all operating pressures, maximum temperature and pressure ratings, maximum allowable displacement due to seismic motion and thermal motion.
3. Guides: Load ratings for bottom, overhead or side mounting.

C. Engineering Services Submittal: For each anchor and alignment guide indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional Engineer licensed in NY State responsible for their preparation.

1. Engineering Calculations: Calculate requirements for thermal expansion of piping systems and for selecting and designing expansion joints, loops, and swing connections.
2. Anchor Details: Detail fabrication of each anchor indicated. Show dimensions and methods of assembly and attachment to building structure.
3. Alignment Guide Details: Detail field assembly and attachment to building structure.
4. Schedule: Indicate type, manufacturer's number, size, material, pressure rating, end connections, and location for each expansion joint.

D. Welding certificates.

E. Product Certificates: For each type of expansion joint, from manufacturer.

F. Maintenance Data: For expansion joints to include in maintenance manuals.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. ASME Boiler and Pressure Vessel Code: Section IX.

PART 2 - PRODUCTS

2.1. PACKED EXPANSION JOINTS

A. Flexible, Ball-Joint, Packed Expansion Joints:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Mason Industries type BJ assemblies or comparable product by one of the following:

a. Advanced Thermal Systems, Inc.
b. Hyspan Precision Products, Inc.
c. Grainger
d. Or approved equal.

2. Standards: ASME Boiler and Pressure Vessel Code: Section II, "Materials"; and ASME B31.9, "Building Services Piping," for materials and design of pressure-containing parts and bolting.
3. Material: Carbon-steel assembly with asbestos-free composition packing.
4. Design: Provide 360-degree rotation and angular deflection.
5. Minimum Pressure Rating: 250 psig at 400 deg F.
6. Angular Deflection for NPS 2 and Smaller: 30 degree minimum.
7. Angular Deflection for NPS 2-1/2 to NPS 14 inclusive: 15 degree minimum.
8. End Connections for NPS 2-1/2 and Larger: Welded ends.

9. Seal Type: Two carbon steel and graphite seals suitable for continuous operation at temperature up to 650 deg F
10. Internal Ball: Plated with minimum 1 mil chrome cover.
11. Ball Socket: One or two piece design with integral socket/retainer.

    a. Stuffing Box: Incorporates graphite containment seals and compression seals for containment of injectable packing

    b. Packing Cylinders: Providing packing under full line pressure with check valves to prevent blowback.

Ball Joint Pipe Size NPS	Quantity of Packing Cylinders
1-1/2 to 3	3
4	4
5	4
6	5
8	6

B. Slip-Joint Packed Expansion Joints:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Mason Industries type SJ assemblies or comparable product by one of the following:

    a. Advanced Thermal Systems, Inc.
    b. Hyspan Precision Products, Inc.
    c. Or approved equal.

2. Standard: ASTM F 1007.
3. Material: Carbon steel with asbestos-free PTFE packing.
4. Design: Provide internal guide and minimum of two injection ports for repacking with injectable graphite under full system pressure. Housing shall be furnished with drain ports and lifting ring. Include drip connection if used for steam piping.
5. Configuration: Single joint/Single joint with base class unless otherwise indicated.
6. Slip Tube for sizes NPS 1-1/2 through NPS 16: Schedule 80
7. Slip Tube for sizes NPS 18 through NPS 24: Schedule 60
8. Sliding Surface: 2 mil thick chrome finish
9. End Connections: Flanged or weld ends to match piping system.

2.2. PACKLESS EXPANSION JOINTS

A. Metal, Expansion-Compensator Packless Expansion Joints: NPS 3/4 (DN 20) through NPS 4 (DN 100)

1. Basis-of-Design Product: Subject to compliance with requirements, provide Mason Industries type EC assemblies or comparable product by one of the following:

    a. Adsco Manufacturing LLC.
    b. Hyspan Precision Products, Inc.

c. Or approved equal.

2. Minimum Pressure Rating: 200 psig operating pressure and 700 psig minimum burst pressure.
3. Description: Totally enclosed externally pressurized two-ply, stainless-steel bellows isolated from fluid flow by an internal pipe sleeve; carbon or stainless-steel external shroud, two drain plugs and lifting lug for the NPS 3 and larger. The bellows are to have operating clearance between the internal pipe sleeves and the external shrouds. Joints shall be supplied with a built in scale to confirm the starting position and operating movement.

   a. Joint axial movement: 2-inch of compression and .5 in of extension.

4. Permanent Locking Bolts: Set locking bolts to maintain joint lengths during installation. Temporary welding tabs that are removed after installation in lieu of locking bolts are not acceptable.
5. Configurations:

   a. Copper Tubing: Solder joint
   b. Steel Pipe NPS 2 and Smaller: Threaded.
   c. Steel Pipe NPS 2-1/2 to NPS 4: Flanged

      1) Compensators to be furnished with one raised fixed and one floating flange. Two fixed flanges are not acceptable.

B. Metal, Expansion-Compensator Packless Expansion Joints: NPS 2 through NPS 14

1. Basis-of-Design Product: Subject to compliance with requirements, provide Mason Industries type HEJ assemblies or comparable product by one of the following:

   a. Adsco Manufacturing LLC.
   b. Hyspan Precision Products, Inc.
   c. Or approved equal.

2. Pressure Ratings: 225 psig. minimum operating pressure and 788 psig minimum burst pressure.
3. Description: Totally enclosed externally pressurized two-ply, stainless-steel bellows isolated from fluid flow by an internal pipe sleeve; carbon-steel shroud, two drain plugs and lifting lug for the NPS 3 and larger. The bellows are to have operating clearance between the internal pipe sleeves and the external shrouds. Joints shall be supplied with a built in scale to confirm the starting position and operating movement.

   a. Joint axial movement: 4-inch of compression and .75-inch of extension; 8-inch of compression and 1-1/2-inch of extension.

4. Permanent Locking Bolts: Set locking bolts to maintain joint lengths during installation. Temporary welding tabs that are removed after installation in lieu of locking bolts are not acceptable.
5. End Connection Configuration: Flanged; one raised fixed and one floating flange.

C. Rubber, Expansion-Compensator Packless Expansion Joints:

1. Basis-of-Design Product: Subject to compliance with requirements, provide products by Mason Industries, Safeflex SFDEJ, SFEJ or comparable product by one of the following:

   a. General Rubber Corporation.

b. Unaflex.
c. Or approved equal.

2. Description: Flexible spherical expansion joints shall employ peroxide cured EPDM in the covers, liners and Kevlar tire cord frictioning.

a. Solid steel rings shall be used within the raised face rubber flanged ends to prevent pullout. Flexible cable bead wire is not acceptable. Sizes NPS 2 and larger shall have two spheres reinforced with a ductile iron external ring between spheres. Flanges shall be split ductile iron or steel with hooked or similar interlocks. Sizes NPS 3/4 to 2 may have threaded two piece bolted flange assemblies, one sphere and cable retention. Connectors shall be rated at 250 psig up to 170 deg F with a uniform drop in allowable pressure to 215 psig at 250 deg F in sizes NPS 14 and smaller.
b. All expansion joints must be factory tested to 150 percent of rated pressure for 12 minutes before shipment. Safety factors to burst and flange pullout shall be a minimum of 3/1. Concentric reducers to the above ratings may be substituted for equal ended expansion joints. Expansion joints shall be installed in piping gaps equal to the length of the expansion joints under pressure.
c. Mason CR control rods need only be used in unanchored piping locations where the manufacturer determines the installation exceeds the pressure requirement without control rods. If control rods are used, they must have 1/4-inch thick Neoprene washer bushings large enough in diameter to take the thrust at 1000 psig maximum on the washer area. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 dB in vibration accelerations and 10 dB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer.

D. Flexible-Hose Packless Expansion Joints:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Mason Industries type 60 degree VEE assemblies or comparable product by one of the following:

a. Adsco Manufacturing LLC.
b. Hyspan Precision Products, Inc.
c. Or approved equal.

2. Description: Manufactured assembly with inlet and outlet 120-degree elbow fittings, two flexible-metal-hose legs joined by a 60-degree elbow. Loop configuration shall be capable of plus or minus 4 inches of motion in all planes for thermal expansion and contraction or seismic motion
3. Flexible Hose: Corrugated stainless-steel hose and braided stainless-steel sheaths. Minimum live hose lengths and number of corrugations are shown below.

Pipe Size NPS	**Live Length** inch	**Corrugations per Foot**
1/2	14	92
3/4	15	80
1	16	72
1-1/4	17	67

1-1/2	19	63
2	20	58
2-1/2	22	48
3	24	46
4	26	32
5	30	29
6	33	25
8	36	23

4. Connections:
5. Copper Tubing NPS 4 and smaller: Copper-alloy fittings with solder-joint or threaded ends.
6. Steel Piping NPS 4 and Smaller: Carbon-steel fittings with threaded or welded ends.
7. Steel Piping NPS 2 to NPS 12: Carbon-steel fittings with free-floating flanged ends.
8. Rated Pressure: Minimum rated pressures for flanged ends are shown below

PipeSize inch	Rated Pressure at 70 deg F	Rated Pressure at 250 deg F
2	360 psig	330 psig
2-1/2	290 psig	270 psig
3	280 psig	260 psig
4	225 psig	210 psig
5	200 psig	190 psig
6	200 psig	190 psig
8	180 psig	170 psig

E. Metal-Bellows Packless Expansion Joints:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Mason Industries type EJFFL, EJW or comparable product by one of the following:

   a. Adsco Manufacturing LLC.
   b. Hyspan Precision Products, Inc.
   c. Or approved equal.

2. Standards: ASTM F 1120 and EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
3. Type: Circular, corrugated two-ply, stainless-steel bellows with external tie rods.

   a. Joint axial movement: 2-inch

4. End Configurations: Flanged ends.

    a. Expansion joints are to be furnished with one raised fixed and one floating flange. Two fixed flanges are not acceptable.

5. Pressure Rating: 50 psig minimum operating pressure and 175 psig rated burst pressure 250 psig minimum operating pressure
6. Configuration: Single joint class.
7. Expansion Joints for Copper Tubing: Single-ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.

    a. End Connections for Copper Tubing NPS 2 and Smaller: Solder joint or threaded.
    b. End Connections for Copper Tubing NPS 2-1/2 to NPS 4: Threaded.
    c. End Connections for Copper Tubing NPS 5 and Larger: Flanged.

8. Expansion Joints for Steel Piping: Single-ply stainless-steel bellows, steel pipe ends, and carbon-steel shroud.

    a. End Connections for Steel Pipe NPS 2 and Smaller: Threaded.
    b. End Connections for Steel Pipe NPS 2-1/2 and Larger: Flanged.

2.3. GROOVED-JOINT EXPANSION JOINTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following

B. Basis-of-Design Product: Subject to compliance with requirements, provide Victaulic or comparable product by one of the following:

    1. Anvil International, Inc.
    2. Shurjoint Piping Products.
    3. Or approved equal.

C. Description: Factory-assembled expansion joint made of several grooved-end pipe nipples, couplings, and grooved joints.

D. Standard: AWWA C606, for grooved joints.

E. Nipples: Galvanized, ASTM A 53/A 53M, Schedule 40, Type E or S, steel pipe with grooved ends.

F. Couplings: for steel-pipe dimensions. Include ferrous housing sections, gasket suitable for cold and hot water,EPDM gasket suitable for cold and hot water, and bolts and nuts.

2.4. ALIGNMENT GUIDES AND ANCHORS

A. Height Adjustable Sliding Alignment Guides

1. Basis-of-Design Product: Subject to compliance with requirements, provide Mason Industries type ASG assemblies or comparable product by one of the following:

   a. Adsco Manufacturing LLC.
   b. Hyspan Precision Products, Inc.
   c. Or approved equal.

2. Description: Carbon-steel base with holes for attachment to structure, and carbon-steel adjustable pipe support frame attached to base by interfacing stainless-steel sliding alignment guides. the guides allow for axial movement only. The adjustable support frame allows up to 4 in (100mm) of insulation thickness. A minimum of two bolted pipe clamps attach pipe to the guide.

3. Pipe guides shall be manufactured with stainless steel wrapping the carbon steel foot where it passes through horizontal U guides similarly lined to prevent corrosion. The baseplate shall have multiple holes for bolting to beam flanges or flat surfaces. Bases may be welded in position in lieu of bolting. Height must be adjustable to accept different thicknesses of insulation. Guides shall be professionally load rated for bottom, overhead, side mounted, or riser positioning to provide both load bearing and guiding capabilities.

   a. Axial Movement: 4-in for NPS 3/4 to NPS 2-1/2 and 6-in for NPS 3 to NPS 12
   b. Finish: Electro galvanized

B. Anchor Materials:

1. Steel Shapes and Plates: ASTM A 36/A 36M.
2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
3. Washers: ASTM F 844, steel, plain, flat washers.
4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.

   a. Stud: Threaded, zinc-coated carbon steel.
   b. Expansion Plug: Zinc-coated steel.
   c. Washer and Nut: Zinc-coated steel.

5. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.

   a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
   b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud unless otherwise indicated.
   c. Washer and Nut: Zinc-coated steel.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXPANSION-JOINT INSTALLATION

A. Install expansion joints of sizes matching sizes of piping in which they are installed.

B. Install packed-type expansion joints with packing suitable for fluid service.

C. Install metal-bellows expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."

D. Install grooved-joint expansion joints to grooved-end steel piping

3.3. PIPE LOOP AND SWING CONNECTION INSTALLATION

A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature. After installation remove temporary space holders as required.

B. Connect risers and branch connections to mains with at least five pipe fittings including tee in main.

C. Connect risers and branch connections to terminal units with at least four pipe fittings including tee in riser.

D. Connect mains and branch connections to terminal units with at least four pipe fittings including tee in main.

3.4. ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.

B. Install one guide on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.

C. Attach guides to pipe and secure guides to building structure.

D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

E. Anchor Attachments:

1. Anchor Attachment to Steel Pipe: Attach by welding. Comply with ASME B31.9 and ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.

F. Fabricate and install steel anchors by welding steel shapes, plates, and bars. Comply with ASME B31.9 and AWS D1.1/D1.1M.

1. Anchor Attachment to Steel Structural Members: Attach by welding.
2. Anchor Attachment to Concrete Structural Members: Attach by fasteners. Follow fastener manufacturer's written instructions.

G. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

END OF SECTION 220516

SECTION 230519
Meters and Gages for HVAC Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.
   a. Section 01 33 00 "Submittal Procedures."
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. General: Provide all plant, labor, tools, appliances, equipment, materials and services required for the work indicated on the drawings and specified in this Section.

B. Section includes, but not limited to:

1. Bimetallic-actuated thermometers.
2. Liquid-in-glass thermometers.
3. Thermowells.
4. Dial-type pressure gages.
5. Gage attachments.
6. Test plugs.
7. Turbine flowmeters.

C. Related Sections:
1. Division 22 Section "Facility Natural-Gas Piping" for gas meters.

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications: Firm regularly engage in manufacturer of thermometers and gages, of types and sizes required, whose products have been in satisfactory use in similar service for not less than five (3) years.

C. Code and Standards:

1. UL Compliance: Comply with applicable UL standards pertaining to gauges.

2. ANSI and ISA Compliance: Comply with applicable portions of ANSI and Instrument Society of America (ISA) standards pertaining to construction and installation of thermometers and gages. ANSI B 31.1 - Power Piping.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Submit manufacturer's product data, including installation instructions for each type of gage and thermometer. Include scale range, ratings, and calibrated performance curves..

C. Product Certificates: For each type of meter and gage, from manufacturer.

D. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1. BIMETALLIC-ACTUATED THERMOMETERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ernst Flow Industries.
2. Marsh Bellofram.
3. Trerice, H. O. Co.
4. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
5. Weiss Instruments, Inc.
6. WIKA Instrument Corporation - USA.
7. Or approved equal.

B. Standard: ASME B40.200.

C. Case: Hermetically sealed type(s); stainless steel with 3-inch nominal diameter.

D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F.

E. Connector Type(s): Union joint, adjustable angle, with unified-inch screw threads.

F. Connector Size: 1/2 inch, with ASME B1.1 screw threads.

G. Stem: 0.25 in diameter; stainless steel.

H. Window: Double strength glass.

I. Ring: Stainless steel.

J. Element: Bimetal coil.

K. Pointer: Dark-colored metal.

L. Accuracy: Plus or minus 1 percent of scale range.

2.2. LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Ernst Flow Industries.
   b. Trerice, H. O. Co.
   c. Weiss Instruments, Inc.
   d. Or approved equal.
2. Standard: ASME B40.200.
3. Case: Cast aluminum; 9-inch nominal size unless otherwise indicated.
4. Case Form: Adjustable angle unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue or red organic liquid.
6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in deg F.
7. Window: Glass or acrylic.
8. Stem: Aluminum, brass or stainless steel and of length to suit installation.
   a. Design for Air-Duct Installation: With ventilated shroud.
   b. Design for Thermowell Installation: Bare stem.
9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.3. DUCT-THERMOMETER MOUNTING BRACKETS

A. Description: Flanged bracket with screw holes, for attachment to air duct and made to hold thermometer stem.

2.4. THERMOWELLS

A. Thermowells:
   1. Standard: ASME B40.200.
   2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
   3. Material: Brass.
   4. Type: Stepped shank unless straight or tapered shank is indicated.
   5. External Threads: ½ inch, ¾ inch, or 1 inch, ASME B1.20.1 pipe threads.
   6. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
   7. Bore: Diameter required to match thermometer bulb or stem.
   8. Insertion Length: Length required to match thermometer bulb or stem.
   9. Lagging Extension: Include on thermowells for insulated piping and tubing.
   10. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

2.5. PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. AMETEK, Inc.; U.S. Gauge.
   b. Marsh Bellofram.
   c. Trerice, H. O. Co.
   d. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
   e. Weiss Instruments, Inc.
   f. WIKA Instrument Corporation - USA.
   g. Or approved equal.
2. Standard: ASME B40.100.
3. Case: Liquid-filled type(s); stainless steel; 4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: 316L stainless steel, with 1/4 inch, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.
9. Window: Glass.
10. Ring: Stainless steel.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.
12. Range: Scale and indicator shall cover the operating range of equipment or system served.

2.6. GAGE ATTACHMENTS

A. Snubbers: ASME B40.100, brass; with 1/4 inch ASME B1.20.1 pipe threads and surge-dampening device. Include extension for use on insulated piping.

B. Siphons: Loop-shaped section of brass pipe with 1/4 inch pipe threads.

C. Valves: Brass or stainless-steel needle, with 1/4 inch, ASME B1.20.1 pipe threads.

2.7. TEST PLUGS

A. Basis-of-Design Product: Subject to compliance with requirements, provide Petersin Equipment Co. Inc., or comparable product by one of the following:
   1. Trerice, H. O. Co.
   2. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
   3. Weiss Instruments, Inc.
   4. Or approved equal.

B. Description: Test-station fitting made for insertion into piping tee fitting.

C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

D. Thread Size: 1/2 inch, ASME B1.20.1 pipe thread.

E. Minimum Pressure and Temperature Rating: 500 psig at 240 deg F.

F. Core Inserts: Neoprene self-sealing rubber.

2.8. FLOWMETERS

A. Impeller Flowmeters:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Badger Meter Series 3000 by Data Industrial Corp. or comparable product by one of the following:
   a. ABB; Instrumentation and Analytical.
   b. EMCO Flow Systems; a division of Spirax Sarco, Inc.
   c. ERDCO Commissionering Corp.
   d. Hoffer Flow Controls, Inc.
   e. Liquid Controls; a unit of IDEX Corporation.
   f. McCrometer, Inc.
   g. Midwest Instruments & Controls Corp.
   h. ONICON Incorporated.
   i. SeaMetrics, Inc.
   j. Sponsler, Inc.; a unit of IDEX Corporation.
   k. Or approved equal.
2. Description: Flowmeter with sensor and indicator.
3. Flow Range: Sensor and indicator shall cover operating range of equipment or system served.
4. Sensor: Impeller turbine; for inserting into pipe fitting or for installing in piping and measuring flow directly in gallons per minute.
   a. Design: Device or pipe fitting with inline turbine and integral direct-reading scale for water.
   b. Construction: Bronze or stainless-steel body, with plastic turbine or impeller.
   c. Minimum Pressure Rating: 150 psig.
   d. Minimum Temperature Rating: 180 deg F.
5. Indicator: Hand-held meter; either an integral part of sensor or a separate meter.
6. Accuracy: Plus or minus 1 percent.
7. Display: Shows rate of flow, with register to indicate total volume in gallons .
8. Operating Instructions: Include complete instructions with each flowmeter.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Install thermowells with socket extending third of pipe diameter and in vertical position in piping tees.

B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.

C. Install thermowells with extension on insulated piping.

D. Fill thermowells with heat-transfer medium.

E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.

F. Install remote-mounted thermometer bulbs in thermowells and install cases on panels; connect cases with tubing and support tubing to prevent kinks. Use minimum tubing length.

G. Install duct-thermometer mounting brackets in walls of ducts. Attach to duct with screws.

H. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.

I. Install remote-mounted pressure gages on panel.

J. Install valve and snubber in piping for each pressure gage for fluids (except steam).

K. Install valve and syphon fitting in piping for each pressure gage for steam.

L. Install test plugs in piping tees.

M. Install flow indicators in piping systems in accessible positions for easy viewing.

N. Assemble and install connections, tubing, and accessories between flow-measuring elements and flowmeters according to manufacturer's written instructions.

O. Install flowmeter elements in accessible positions in piping systems.

P. Install wafer-orifice flowmeter elements between pipe flanges.

Q. Install differential-pressure-type flowmeter elements, with at least minimum straight lengths of pipe, upstream and downstream from element according to manufacturer's written instructions.

R. Install permanent indicators on walls or brackets in accessible and readable positions.

S. Install connection fittings in accessible locations for attachment to portable indicators.

T. Mount thermal-energy meters on wall if accessible; if not, provide brackets to support meters.

U. Install thermometers in the following locations:

1. Inlet and outlet of each hydronic zone.
2. Inlet and outlet of each hydronic boiler.
3. Two inlets and two outlets of each chiller.
4. Inlet and outlet of each hydronic coil in air-handling units.
5. Two inlets and two outlets of each hydronic heat exchanger.
6. Inlet and outlet of each thermal-storage tank.
7. Outside-, return-, supply- air ducts.

3.3. CONNECTIONS

A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

B. Connect flowmeter-system elements to meters.

C. Connect flowmeter transmitters to meters.

D. Connect thermal-energy meter transmitters to meters.

3.4. ADJUSTING

A. After installation, calibrate meters according to manufacturer's written instructions.

B. Adjust faces of meters and gages to proper angle for best visibility.

3.5. THERMOMETER SCHEDULE

A. Install thermometers at the following locations:

1. Inlet and outlet of each hydronic zone.
2. Inlet and outlet of each hydronic boiler.
3. Inlet and outlet of each hydronic coil in air-handling units and built-up central systems.
4. Inlets and outlets of each hydronic heat exchanger.
5. Inlet and outlet of each thermal-storage tank.
6. At outside-, return-, supply air ducts.

B. Thermometer stems shall be of length to match thermowell insertion length.

C. Install thermometer gage connectors in piping tee where required, located on pipe at most readable position. Secure cap.

3.6. THERMOMETER SCALE-RANGE SCHEDULE

A. Scale Range for Heating, Hot-Water Piping: 20 to 240 deg F.

B. Scale Range for Air Ducts: 0 to 180 deg F.

3.7. PRESSURE-GAGE SCHEDULE

A. Install pressure gages at the following locations:

1. Inlet and outlet of each hydronic boiler.
2. Discharge of each pressure-reducing.
3. Suction and discharge of each pump.
4. Inlet and outlet of the hot water heating coil most remote from pump.
5. Expansion tank.

3.8. PRESSURE-GAGE SCALE-RANGE SCHEDULE

A. Scale Range for Heating, Hot-Water Piping: 0 to 160 psi.

3.9. FLOWMETER SCHEDULE

A. Flowmeters for Heating, Hot-Water Piping: Impeller turbine type.

END OF SECTION 230519

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 230523
General-Duty Valves For HVAC Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. General: Provide all plant, labor, tools, appliances, equipment, materials and services required for the work indicated on the drawings and specified in this section.

B. Work Included: The work includes, but is not necessarily limited to, the following:

1. All labor, materials, equipment, accessories, services and test necessary to complete and make ready for operation, all valves indicated on the drawings and hereinafter specified in other HVAC Piping Sections

C. Related Work: The following related items are specified in other sections of the specifications:

1.	Access Doors	Section 083113
2.	Hangers and Supports for HVAC Piping and Equipment	Section 230529
3.	Identification for HVAC Piping and Equipment	Section 230553
4.	Instrumentation and Control for HVAC	Section 230900

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturers: Firms engaged in manufacturing of valves, of types and sizes required, whose products have been in satisfactory use in similar service for not less than three (3) years.

C. Codes and Standards

1. MSS Compliance: Mark valves in accordance with MSS-25 "Standard Marking System for Valves, Fittings, Flanges and Unions".
2. ANSI Compliance: For face-to-face and end-to-end dimensions.
3. Valves of one type throughout the Project shall be of the same manufacturer.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Submit manufacturer's product data, including installation instructions for each type of valve. Include pressure drop curve or chart for each type and size of valve. Submit valve schedule showing manufacturer's figure number, size, location, and valve features for each required valve.

C. Shop Drawings: Submit manufacturer's assembly-type (exploded view) shop drawing for each type of valve, indicating dimensions, weights, materials, and methods of assembly of components.

D. Maintenance Data: Submit maintenance data and spare parts lists for each type of valve. Include this data, product data, and shop drawings in maintenance manual in accordance with requirements of DDC General Conditions.

PART 2 - PRODUCTS

2.1. VALVE LOCATIONS AND VALVE MANUFACTURERS

A. Provide valves where indicated on the drawings, where required by code and where called for in the specifications. Valves shall be as manufacturer by Nibco, Walworth, Jenkins, Fairbanks Co., Hills McCanna, Or Approved Equal.

B. Where manufacturer's names and model numbers are listed they are intended to represent the type and quality established for the project.

C. Provide valves with manufacturer's name and guaranteed working pressure rating cast stamped on the body of the valve.

D. All valves, including gate valves, check valves, pressure reducers, backflow preventers, butterfly valves, etc., shall be designed for a minimum working pressure of 125 psig to 250 psig range unless otherwise noted.

2.2. VALVE APPLICATIONS

A. Valve 3" size and smaller used for shutoff shall be gate valve type.

B. Valves 4" size and larger used for hot or cold water shutoff shall be butterfly type.

C. Valves 2" size and smaller used for bypass or for flow control shall be ball valve type.

D. Valves 2 1/2" size and larger used for controlling water flow at pumps and at equipment and for bypass control shall be lubricated plug type.

E. Valves used for hot and cold water piping, 3" and smaller, shall be all bronze rising stem 150 psi WSP threaded or solder joint type. All drip valves such as on drain lines, etc., shall be angle, composition disc valves with hose end and cap.

F. Valves used for cold and hot water piping, 4" and larger, shall be OS&Y flanged, IBBM gate Type 150 psi WSP to Type 250 psi WSP.

G. Check valves used for water piping, 3" and smaller, shall be all bronze swing check valves with finished bronze trimmings and brazed or threaded ends.

H. Check valves used for water piping, 4" and larger, shall be cast iron body, bronze trimmings and swing check valves with flanged ends.

I. Check valves as discharge water pumps shall be vertical "silent" lift type, 200-psig designs.

J. Gate valves shall be of the solid wedge type and shall be provided with gland and packing boxes, and have top seat for packing under pressure when wide open.

2.3. BUTTERFLY VALVES

A. Butterfly valves shall be as manufacturer by Hills-McCanna, Jamesbury, Durion, or Approved Equal.

2.4. BALL VALVES

A. Ball valves shall be as manufacturer by Hills-McCanna, Jamesbury, Durion, or Approved Equal

2.5. PLUG VALVES

A. Plug valves of tapered lubricated type shall have fixed adjustment:

B. Valves up to and including 8" shall be wrench operated.

C. Valves shall be furnished with proper lubricant for service intended.

D. Valves shall be flanged type

1. 2 1/2" - 4" Fig. 115 (250#WOG)
2. 4" to 8" Fig. 143 (250#WOG)

2.6. GATE VALVES

A. Gate valves 3" and smaller shall be bronze, screwed, 125#/250# S.W.P. with solid wedge disc and non-rising stem.

B. Gate valves 3" and over shall be iron body, flanged, 125#/250# S.W.P., O.S.& Y., with bronze trim.

2.7. AIR RELIEF VALVES

A. Where the hot and cold water system is trapped and air is liable to be packeted, furnish and install a manual vent to properly relieve the system of air. The discharge from these vents shall be piped with copper tubing to the nearest slop sink, floor drain or to a location easily accessible from the floor.

2.8. DRAIN VALVES (COCKS)

A. Provide drain valves with hose bibb end at all low points of water systems. Drain valves shall be gate type. Minimum 3/4" drain size shall be used up to 4" pipe size. 2" drain size shall be used for pipes 5" size and over. Also provide a fill valve for each water system, with a back-flow preventer as described below. All drain and fill valves shall have caps or plugs as applicable.

2.9. WATER RELIEF VALVES

A. Where required provide ASME water relief valve. Each valve shall be provided with manual lifting lever capable of opening the valve as desired. A discharge line shall be run to floor drain from each valve. No shutoff valve shall be placed between relief valve and system.

2.10. GLOBE VALVES

A. Except valves in pneumatic temperature control piping and pneumatic valves, no globe valve of size larger than 1/2" shall be used, unless otherwise specified or shown on the drawings. Where globe valves are approved, they shall be of the grade called for other valves.

2.11. CHECK VALVES

A. Check valves shall be of heavy pattern, straightway, horizontal swing, re-grinding type with hinged check, ground seat and approved type bronze discs. The discs for check valves, of size larger than 2" may be bronze faced.

B. Lift check valves shall be provided on all pump discharges and shall be globe style, streamline, spring loaded.

1. Up to 2" valves: Bronze body screwed ends, bronze trim.
2. 2 1/2" and larger valves: Iron and bronze body, flanges ends, bronze trim.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Valves shall be installed so that they are readily accessible. For operation of valves not accessible for direct operation, furnish and install chain wheel, guide and sufficient length of chain to operate from floor level. Provide hooks for fastening chains out of the way. No valve shall be installed with the handle pointing downward. If, in the opinion of the Commissioner, valves have been installed so as to create a hazardous and unsafe condition, Contractor shall make corrections as directed, without additional cost to the City of New York.

B. Valves in Mechanical Rooms more than 7'-0" above the floor shall be chain operated, with either double end chain wrenches or chain wheels.

C. Systems shall be supplied with valves in all branches mains, risers, drains, at all pumps, equipment, coils, at all automatic valves and at all apparatus so located and arranged to give complete isolation and regulating control of the water.

D. The entire system shall be supplied with valves so located, arranged and operated as to give a complete regulating control to all fixtures and apparatus. Shut-off valves shall be provided on all risers, branch lines, branch lines from mains, mains and at each piece of equipment or fixture. Every section of branch supply and return piping and all risers of all services shall be controlled by a valve at the main. Every item of equipment shall be independently isolated by means of valves.

E. Valves, except as noted, shall be suitable for a working pressure of not less than 150 psi/250psi.

F. Valves in copper tubing shall have soldered ends for 95-5 solder.

END OF SECTION 230523

SECTION 230529
Hangers and Supports for HVAC Piping and Equipment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to, the following:

1. Hangers, supports and anchors.

B. Related Work: The following related items are specified in other sections of the specifications:

1.	Hydronic Piping	Section 232113
2.	Refrigerant Piping	Section 232300
3.	General-Duty Valves for HVAC Piping	Section 230523
4.	Metal Ducts	Section 233113

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications

1. Firms regularly engaged in manufacturer of supports and anchors, of types and sizes required, whose products have been in satisfactory use in similar service for not less than three (3) years.

C. Codes and Standards

1. MSS Compliance: Comply with MSS SP-58 and MSS SP-69.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data

1. Submit manufacturer's product data, including installation instructions for each type of support and anchor. Submit pipe hanger and support schedule showing manufacturer's figure number, size, location, and features for each required pipe hanger and support.

C. Shop Drawings

1. Submit manufacturer's assembly-type shop drawings for each type of support and anchor, indicating dimensions, weights, required clearances, and methods of assembly of components.

D. Maintenance Data

1. Submit maintenance data and parts list for each type of support and anchor. Include this data, product data, and shop drawings in the maintenance manual.

1.5. DELIVERY

A. Deliver pipe hangers, supports, stands, etc., to the site with one coat of red oxide or zinc chromate primer.

PART 2 - PRODUCTS

2.1. MATERIALS AND MANUFACTURERS

A. Pipe Hangers and Supports Manufacturers:

1. Fee & Mason Mfg. Co.
2. Carpenter & Patterson, Inc.
3. F & S Central Mfg. Co.
4. Grabler Mfg. Co.
5. Grinnell Corp.
6. Or approved equal.

B. Insulated Piping: Each pipe hanger supporting insulated piping shall be provided with a pipe covering protection shield.

C. Hangers for Pipes Smaller than 5 Inches: Each hanger for pipe sized smaller than 5 inches shall be forged or malleable iron ring type, or steel clevis type, supported by a solid steel rod.

D. Hangers for Pipes 5 inches and Larger: Each hanger for pipe sized 5 inches and larger shall be formed of a section of steel angle having a 3/4" diameter steel rod, threaded at both ends, run through a drilled hole near each end of the angle. Secure two nuts at the bottom end of the rid.

E. Sockets: Sockets used on upper ends of rods at beam clamps and on lower ends of rods for single hangers shall be malleable or forged steel with standard machine threads.

F. Pipe Supports:

1. Mains located near floors shall be supported on roller type pipe stands, bedded in cement base. When mains are installed before concrete floor is laid, the mains shall be supported from overhead construction until the pipe stands can be put in place. Any work damaged in connection therewith shall be made good.

2. Horizontal piping connections (near floor) to convectors, etc., located more than 4 feet from risers shall be supported on adjustable iron pipe stands. Pipe stand shall consist of a split ring extension hanger mounted on a hanger flange, which shall be secured to the floor.

G. Inserts:

1. Piping hung from slabs of poured concrete construction shall be supported form the slab by means of inserts. Inserts shall be installed in their proper locations before pouring of the floor slabs. Contractor shall cooperate with all other trades engaged in this project, in the installation of inserts in order to prevent any conflict locations. Inserts shall not be painted.

2. Inserts for pipe anchors shall be provided with bars.

3. Inserts for composite metal decks shall be of a type that is supported entirely by the concrete slab, not be the metal deck. They shall be N.Y.C. Boards of Standards and Appeals approved.

H. Saddles and Shields:

1. Except as otherwise indicated on the drawings; provide saddles or shields under piping hangers and supports, factory-fabricated, for all insulated piping. Size saddles and shields for exact fit to mate with pipe insulation.

   a. Protection Saddles: MSS Type 39; fill interior voids with segments of insulation matching adjoining insulation.
   b. Protection Shields: MSS Type 40; of length recommended by manufacturer to prevent crushing of insulation.
   c. Thermal Hanger Shields: Constructed of 360 deg. insert of high density, 100 psi, waterproofed calcium silicate, encased in 360 deg. sheet metal shield. Provide assembly of same thickness as adjoining insulation.

2. Manufacturers: Subject to compliance with requirements, manufacturers offering thermal hanger shields which may be incorporated in the work include the following:

   a. Elcen Metal Products Co.
   b. Pipe Shields, Inc.
   c. PHD Manufacturing
   d. Or approved equal.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSPECTION

A. Examine areas and conditions under which supports and anchors to be installed. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to the Commissioner.

3.3. PREPARATION

A. Proceed with installation of hangers, supports and anchors only after required building structural work has been completed. Correct inadequacies including (but not limited to) proper placement of inserts, anchors and other building structural attachments.

B. Prior to installation of hangers, supports, anchors and associated work, Contractor shall meet at project site with testing agency representatives and other trades requiring coordination for purpose of reviewing material selections and procedures.

3.4. INSTALLATION OF BUILDING ATTACHMENTS

A. Install building attachments at required locations within concrete or on structural steel for proper piping support. Space attachments within maximum piping span length indicated in MSS SP-69. Install additional concentrated loads at valves, flanges, guides, strainers, expansion joints, and changes in direction of piping. Install concrete inserts before concrete is poured; fasten insert securely to forms. Where concrete with compressive strength less than 2500 psi is indicated, install reinforcing bars through openings at top of inserts.

B. Installation of Hangers and Supports:

1. Install hangers, supports, clamps and attachments to support piping properly from building structure. Arrange for grouping of parallel runs of horizontal piping to be supported together on trapeze type hangers where possible. Install supports with maximum spacings complying with MSS SP-69. Where piping of various sizes is to be supported together by trapeze hangers, space hangers for smallest pipe size or install intermediate supports for smaller diameter pipe. Do not use wire or perforated metal to support piping, and do not support piping from other piping.

2. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers and other accessories. Except as otherwise indicated for exposed continuous pipe runs, install hangers and supports of same type and style as installed for adjacent similar piping.

3. Prevent electrolysis in support of copper tubing by use of hangers and supports which are copper plated or by other recognized industry methods.

4. Provisions for Movement:

   a. Install hangers and supports to allow controlled movement of piping systems, to permit freedom of movement between pipe anchors and to facilitate action of expansion joints, expansion loops, expansion bends and similar units.

   b. Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.

   c. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so that maximum pipe deflections allowed by ANSI B31 Pressure Piping Codes are not exceeded.

5. Insulated Piping: Comply with the following installation requirements.

   a. Clamps: Attach clamps, including spacers (if any), to piping with clamps projecting through insulation; do not exceed pipe stresses allowed by ANSI B31.

b. Shields: Where low-compressive-strength insulation or vapor barriers are indicated on chilled water piping, install coated protective shields. For pipe 8" and over, install wood insulation saddles.

c. Saddles: Where insulation without vapor barrier is indicated, install protection saddles.

C. Installation of Anchors:

1. Install anchors at proper locations to prevent stresses form exceeding those permitted by ANSI B31 and to prevent transfer of loading and stresses to connected equipment.

2. Fabricate and install anchor by welding steel shapes plates and bars to piping and to structure. Comply with ANSI B31 and with AWS standards.

3. Where expansion compensators are indicated, install anchors in accordance with expansion unit manufacturer's written instructions and to limit movement of piping and forces to maximums recommended by manufacturer for each unit.

4. Anchor Spacing: Where not otherwise indicated, install anchors at ends of principal pipe-runs, at intermediate points in pipe-runs between expansion loops and bends. Make provisions for preset of anchors as required to accommodate both expansion and contraction of piping.

D. Equipment Supports:

1. Furnish scaled layouts of all required bases with dimensions of bases and location to column center lines. Furnish also templates, anchor bolts and accessories necessary for base construction.

2. Provide concrete housekeeping bases for all floor-mounted equipment. Size bases to extend minimum of 4" beyond equipment base in any direction; and 4" above finished floor elevation. Construction of reinforced concrete; roughen floor slab beneath base for bond; provide steel rod anchors between floor and base. Locate anchor bolts using equipment manufacturer's templates. Chamfer top and edge corners.

3. Provide structural steel stands to support equipment not floor mounted or hung from structure. Construct of structural steel members or steel pipe and fittings. Provide factory-fabricated tank saddled for tanks mounted on steel stands.

4. Provide inertia pads for all floor mounted pumps and boilers. Inertia pads shall be made of 4" concrete base on top of 2-inch thick isolation mat.

3.5. ADJUSTING AND CLEANING

A. Hanger Adjustments

1. Adjust hangers so as to distribute loads equally on attachments.

B. Support Adjustment

1. Provide grout under supports so as to bring piping and equipment to proper level and elevations.

C. Cleaning

1. Clean factory-installed surfaces. Restore any marred or scratched surfaces with manufacturer's touch-up paint (Refer to Section 099000 – Painting and Finishing).

END OF SECTION 230529

SECTION 230548
Vibration and Seismic Controls for HVAC Piping and Equipment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to the following:

1. Vibration isolation elements for piping and equipment.
2. Equipment isolation bases.
3. Piping flexible connections.

B. Related Work Specified in Other Sections:

1.	Common Work Results for HVAC	Section 230500
2.	Hydronic Piping	Section 232123
3.	Refrigerant Piping	Section 232300
4.	Metal Ducts	Section 233113
5.	Split System Air Conditioners	Section 238126
6.	Centrifugal HVAC Fans	Section 233416
7.	Variable Refrigerant Flow HVAC Systems	Section 238129
8.	Condensing Boilers	Section 235233

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. It is the objective of this Specification to provide the necessary design for the control of excessive noise and vibration in the Building due to the operation of machinery or equipment, and/or due to interconnected piping, ductwork or conduit.

1. All vibration isolators shall have either known undeflected heights or calibration markings so that, after adjustment, when carrying their load, the deflection under load can be verified, thus determining that the load is within the proper range of the device and that the correct degree of vibration isolation is being provided according to the design.
2. All isolators shall operate in the linear portion of their load versus deflection curve. Load versus deflection curve. Load versus deflection curves shall be furnished by the manufacturer, and must be linear over a deflection range of not less than 50% above the design deflection.

3. The theoretical vertical natural frequency for each support point, based upon load per isolator and isolator stiffness, shall not differ from the design objectives for the equipment as a whole by more than + 10%.
4. All neoprene mountings shall have a Shore hardness of 30 to 60 +5, after minimum aging of 20 days or corresponding oven-aging.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data

1. Submit manufacturer's product data and installation instructions for each type of vibration isolation.

2. Submit schedule showing manufacturer's mounting sizes and guarantee deflections noted on the drawings.

C. Shop Drawing

1. Submit shop drawing for the vibration isolating supports required for each item of HVAC equipment, showing the types of isolation supports, equipment bases being furnished and the static deflection and efficiency to be attained.

D. Maintenance Data

1. Submit maintenance data and material lists for each type of vibration isolation system. Include this data, product data and shop drawings in maintenance manual in accordance with requirements of DDC General Conditions.

1.5. DELIVERY, STORAGE AND HANDLING

A. Deliver isolation units to project site in original, unopened packages and store them in fully enclosed space where they will be protected against damage.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Subject to compliance with requirements, manufacturers offering vibration isolators and bases which may be incorporated in the work include the following:

1. Mason Industries, Inc.
2. Vibration Eliminator Co.
3. Vibration Mountings & Controls Inc.
4. Or approved equal.

2.2. MATERIALS

A. Spring Mounts:

1. Housed Spring Mounts: Spring type mounts shall consist of cast telescoping housings containing one or more steel springs. The mount shall be provided with built-in leveling bolt(s), resilient inserts of neoprene to act as guides for upper and lower housing and with ribbed neoprene acoustical pads bonded to the bottom of the lower housing. The lower housing shall have slotted holes in the base, to permit fastening of the mount to the floor when specified.

2. Free standing spring mounts shall be laterally stable without housing. Each mount shall be provided with a leveling bolt, a ribbed neoprene pad on the underside of the base, and means of securing the spring to the floor when specified.

B. Neoprene-in-Shear Mounts

1. Each neoprene-in-shear type mount shall consist of a steel tip plate and steel base plate completely enclosed in oil resistant neoprene. Top plate shall have a threaded bolt hole for attachment of equipment to mount. Base plate shall have bolt holes, to permit fastening of the mount to the floor when specified. Underside of base plate shall have ribbed, neoprene construction. Single neoprene-in-shear mounts shall have a maximum deflection of 0.25 inches. Double neoprene-in-shear mounts shall have a maximum deflection of 0.50-inches.

C. Hanger Type Isolators

1. Hanger type isolators shall consist of a steel housing incorporating a single or double neoprene-in-shear element or a steel spring, or a combination of these two isolators, as needed to achieve the required static deflection. Provide threaded rods for attachment of hanger to overhead structure and to equipment.

D. Steel Bases

1. Integral structural steel bases for belt driven centrifugal fans shall be rectangular in shape, and each member shall be of wide flange beam or channel shaped cross-section. Based for fans having motors in the X or Y position may be of "L" shape configuration. Depth of section shall be equal to minimum of 1/10th of the longest span of the equipment Built-in adjustable motor slide rails shall be provided as an integral part of the base. Joints shall be continuously welded.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PREPARATION

A. For vibration isolation equipment installed indoors, all metal parts, including rails and bases, shall be painted at the factory with one coat of red oxide paint and one coat of aluminum paint. Other means or rust resisting painting may be accepted, subject to prior approval.

B. Vibration isolation equipment installed outdoors shall have all steel parts hot dipped galvanized, all bolts cadmium plated, and all springs cadmium plated and neoprene coated.

3.3. INSTALLATION

A. At each equipment location, provide the required deflection under the imposed load and produce uniform loading and deflection even when equipment weight is not evenly distributed. Jack bases into position and wedge in place before spring loading; leveling bolts shall not be used as jacking screws. After equipment is in place and springs are loaded through leveling bolts, remove wedges and jacks. Isolators shall be suitable for the lowest operating speed of the equipment.

B. Where the floor is waterproofed or finished with waterproof cement, install vibration isolation in such manner that the waterproofing is not damaged.

C. Isolation equipment shall be in accordance with the following table:

Lowest RPM	Inches Deflection (Min.)	% Efficiency	Type
1750 & over	.25	95	Single neoprene-in-shear
1200-1749	.50	95	Double neoprene-in-shear
1100-1199	.75	95	Spring
570-999	1.25	90-95	Spring
330-519	1.5	80-90	Spring
Up to 329	3.5	80	Spring

D. Install combination spring and double deflection neoprene position hangers on the suction and discharge piping at each circulating pump in the hot and/or chilled water system. Each hanger shall be located on the pump side of the flexible hose connection.

3.4. FIELD QUALITY CONTROL

A. On completion of the vibration isolation system herein specified. The representative of the vibration isolation manufacturer shall inspect the completed systems and report in writing any installation error, improperly selected isolation devices, or any other faults that could affect performance. Submit report

indicating steps taken to properly complete the isolation work. Both of these reports shall be reviewed by the Commissioner for final approval.

3.5. SCHEDULE

A. Provide vibration isolation supports for HVAC equipment as indicated in this schedule:

Equipment	Location	Type of Support
Centrifugal fans, belt driven	Roof mounted	Integral steel base with isolators
H & V	Roof mounted	Integral steel base with isolators
Air handling unit	Overhead Supported	Spring and double deflecting neoprene hangers
RTU's unit	Roof mounted	Integral steel base with isolators
Pipe	At pumps	Spring and D.D.* hanger
Generator	Floor mounted	Springs

* D.D. = Double Deflecting

END OF SECTION 230548

THIS PAGE LEFT INTENTIONALLY BLANK

1. Life Safety Systems:

   a. All systems involved with fire protection including fire dampers and smoke exhaust systems.
   b. Fresh air relief systems on emergency control sequence including air handlers, duct, dampers, etc.

2. Positive Attachment:
   a. A positive attachment is defined as a cast-in anchor, a drill-in wedge anchor, a double-sided beam clamp loaded perpendicular to a beam, or a welded or bolted connection to structure. Single sided "C" type beam clamps for support rods of overhead piping, ductwork, fire protection, electrical conduit, bus duct, or cable trays, or any other equipment are not acceptable on this project as seismic anchor points.
3. Tracing Bracing
   a. Restraint(s) applied to limit motion perpendicular to the centerline of the pipe, duct or conduit.
4. Longitudinal Bracing:
   a. Restraint(s) applied to limit motion parallel to the centerline of the pipe, duct or conduit.

1.2. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. The manufacturer of vibration isolation and seismic restraints shall provide submittals for products as follows:

1. Descriptive Data:
   a. Catalog cuts or data sheets on vibration isolators and specific restraints detailing compliance with the specification.
   b. Detailed schedules of flexible and rigidly mounted equipment, showing vibration isolators and seismic restraints by referencing numbered descriptive drawings.
2. Shop Drawings:

   a. Submit fabrication details for equipment bases including dimensions, structural member sizes and support point locations.
   b. Provide all details of suspension and support for ceiling hung equipment.
   c. Where walls, floors, slabs or supplementary steel work are used for seismic restraint locations, details of acceptable attachment methods for ducts, conduit and pipe must be included and approved before the condition is accepted for installation. Restraint manufacturers' submittals must include spacing, static loads and seismic loads at all attachment and support points.

SECTION 230549
HVAC Seismic Specification

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1. HVAC Seismic Bracing applies to all HVAC trades (to withstand applicable forces in shear).
2. The following life safety items shall be seismically braced in accordance with the New York City Building Code requirements.
3. All seismic mounts and bracing shall be in accordance with manufacturer's standards.
   a. Gas burning equipment.

B. Intent

1. All mechanical equipment, piping and ductwork as noted on the equipment schedule or in the specification shall be mounted on vibration isolators to prevent the transmission of vibration and mechanically transmitted sound to the building structure. Vibration isolators shall be selected in accordance with the weight distribution so as to produce reasonably uniform deflections. This applies only to life safety equipment and hazard systems (gas systems).
2. All isolators and isolation materials shall be of the same manufacturer and shall be certified by the manufacturer.
3. All such systems must be installed in strict accordance with seismic codes, component manufacturer's and building construction standards. Whenever a conflict occurs between the manufacturer's and construction standards, the most stringent shall apply.
4. Seismic restraints shall be designed in accordance with seismic force levels as detailed in this section

C. The work in this section applies only to "Life Safety Systems" and includes, but is not limited to the following:

1. Vibration isolation for piping, ductwork and equipment.
2. Equipment isolation bases.
3. Flexible piping connections.
4. Seismic restraints for isolated equipment.
5. Seismic restraints for non-isolated equipment.
6. Certification of seismic restraint designs and installation supervision.
7. Certification of seismic attachment of housekeeping pads.
8. All mechanical systems defined as life safety systems equipment buried underground is excluded but entry of services through the foundation wall is included. Equipment referred to below is typical.
   a. Fans
   b. Piping

D. Definitions

d. Provide specific details of seismic restraints and anchors; include number, size and locations for each piece of equipment.

3. Seismic Certification and Analysis:
   a. Seismic restraint calculations must be provided for all connections of equipment to the structure. Calculations must be stamped by a registered professional engineer with seismic design experience.
   b. All restraining devices shall have a preapproval number showing maximum restraint ratings. Preapprovals based on independent testing are preferred to preapprovals based on calculations. Where preapproved devices are not available, submittals based on independent testing are preferred. Calculations (including the combining of tensile and shear loadings) to support seismic restraint designs must be stamped by a registered professional engineer and licensed in the state of New York. Testing and calculations must include both shear and tensile loads.
   c. Analysis must indicate calculated dead loads, static seismic loads and capacity of materials utilized for connections to equipment and structure. Analysis must detail anchoring methods, bolt diameter, embedment and/or welded length. All seismic restraint devices shall be designed to accept, without failure, the forces detailed in section 1.06 acting through the equipment center of gravity. Overturning moments may exceed forces at ground level.

1.4. CODE AND STANDARDS REQUIREMENTS

A. Typical Applicable codes and Standards

1. New York City LL17/95 2.UBC Section 2312-1990

1.5. MANUFACTURER'S RESPONSIBILITY

A. Manufacturer of vibration isolation and seismic control equipment shall have the following responsibilities:

1. Determine vibration isolation and seismic restraint sizes and locations.
2. Provide vibration isolation and seismic restraints as schedules or specified.
3. Provide calculations and materials if required for restraint of unisolated equipment.
4. Provide installation instructions, drawings and trained field supervision to insure proper installation and performance.

1.6. RELATED WORK

A. Housekeeping Pads

1. Housekeeping pad reinforcement and monolithic pad attachment to the structure details and design shall be prepared by the restraint vendor if not already indicated on the drawings.
2. Housekeeping pads shall be coordinated with restraint vendor and sized to provide a minimum edge distance of ten (10) bolt diameters all around the outermost anchor bolt to allow development of full drill-in wedge anchor ratings. If cast-in anchors are to be used, the

housekeeping pads shall be sized to accommodate the ACI requirements for bolt page coverage and embedment.

B. Supplementary Support Steel

1. Contractor shall supply supplementary support steel for all equipment, piping, ductwork, etc. including roof mounted equipment, as required or specified.

C. Attachments

1. Contractor shall supply restraint attachment plates cast into housekeeping pads, concrete inserts, double sided beam clamps, etc. in accordance with the requirements of the vibration vendor's calculations.

1.7. SEISMIC FORCE LEVELS

A. The following force levels will be used on this project:

1. Minimum "G" Forces Equal to or Exceeding Building Code Listed in 1.3.

SEISMIC ZONE #2	BUILDING CODE	**"G" Forces for Life Safety Equipment either rigidly or flexibly Mounted**	
	NYC LL17/95 AS MODIFIED UBC SECTION 2312-1990	Horiz. 0.6	Vert. 0.2

1.8. INTENT

A. All vibration isolators and seismic restraints described in this section shall be the product of a single manufacturer. Mason Industry's products are the basis of these specifications. Submittals and certification sheets shall be in accordance with section 1.2.

B. Failure is defined as the discontinuance of any attachment point between equipment or structure, vertical permanent deformation greater than 1/8 inch and/or horizontal permanent deformation greater that 1/4 inch.

PART 2 - PRODUCTS

2.1. DESCRIPTIONS

A. Vibration Isolators and Seismic Restraints.

2.2. SPECIFICATION

A. Two layers of 3/4" thick neoprene pad consisting of 2" square waffle modules separated horizontally by a 16 gauge galvanized shim. Load distribution plates shall be used as required.

B. Bridge-bearing neoprene mountings shall have a minimum static deflection of 0.2" and all directional seismic capability. The mount shall consist of a ductile iron casting containing two separated and opposing molded neoprene elements. The elements shall prevent the central threaded sleeve and attachment bolt from contacting the casting during normal operation. The shock absorbing neoprene materials shall be compounded to bridge-bearing specifications. Mountings shall have an Anchorage Pre-approval "R" Number the NYC Seismic Code verifying the maximum certified horizontal and vertical load ratings.

C. Sheet metal panels shall be bolted to the walls or supporting structure by assemblies consisting of a neoprene bushing cushioned between 2 steel sleeves. The outer sleeve prevents the sheet metal from cutting into the neoprene. Enlarge panel holes as required. Neoprene elements pass over the bushing to cushion the back panel horizontally. A steel disc covers the inside neoprene element and the inner steel sleeve is elongated to act as a stop so tightening the anchor bolts does not interfere with panel isolation in 3 planes. Bushing assemblies can be applied to the ends of steel cross members where applicable. All neoprene shall be bridge bearing quality.

D. A one piece molded bridge bearing neoprene washer/bushing. The bushing shall surround the anchor bolt and have a flat washer face to avoid metal to metal contact.

E. Spring isolators shall be free standing and laterally stable without any housing and complete with a molded neoprene cup or 1/4" neoprene acoustical friction pad between the baseplate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Submittals shall include spring diameters, deflection, compressed spring height and solid spring height.

F. Restrained spring mountings shall have an SLF mounting, within a rigid housing that includes vertical limit stops to prevent spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2" shall be maintained around restraining bolts and between the housing and the spring so as not to interfere with the spring action. Limit stops shall be out of contact during normal operation. Since housings will be bolted or welded in position there must be an internal isolation pad. Housing shall be designed to resist all seismic forces. Mountings shall have Anchorage Preapproval "R" Number the NYC Seismic Code certifying the maximum certified horizontal and vertical load ratings.

G. Spring mountings built into a ductile iron or steel housing to provide all directional seismic snubbing. The snubber shall be adjustable vertically and allow a maximum of 1/4 inch travel in all directions before contacting the resilient snubbing collars. Mountings shall have an Anchorage Pre-approval "R" number from the NYC Seismic Code verifying the maximum certified horizontal and vertical load ratings.

H. Air springs shall be manufactured with upper and lower steel sections connected by a replaceable flexible nylon reinforced neoprene element. Air spring configuration shall be multiple bellows to achieve a

maximum natural frequency of 3 Hz. Air Springs shall be designed for a burst pressure that is a minimum of three times the published maximum operating pressure. All air spring systems shall be connected to either the building control air or a supplementary air supply and equipped with three leveling valves to maintain leveling within plus or minus 1/8". Submittals shall include natural frequency, load and damping tests performed by an independent lab or acoustician.

I. Restrained air spring mountings shall have an MT air spring, within a rigid housing that includes vertical limit stops to prevent air spring extension when weight is removed. The housing shall serve as blocking during erection. A steel spacer shall be removed after adjustment. Installed and operating heights are equal. A minimum clearance of 1/2" shall be maintained around restraining bolts and between the housing and the air spring so as not to interfere with the air spring action. Limit stops shall be out of contact during normal operation. Housing shall be designed to resist all seismic forces.

J. Hangers shall consist of rigid steel frames containing minimum 1 1/4" thick neoprene elements at the top and a steel spring with general characteristics seated in a steel washer reinforced neoprene cup on the bottom. The neoprene element and the cup shall have neoprene bushings projecting through the steel box. To maintain stability the boxes shall not be articulated as clevis hangers nor the neoprene element stacked on top of the spring. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30**E** arc from side to side before contacting the rod bushing and short circuiting the spring. Submittals shall include a hanger drawing showing the 30**E** capability.

K. Hangers shall be as described in 10, but they shall be pre-compressed and locked at the rated deflection by means of a resilient seismic upstop to keep the piping or equipment at a fixed elevation during installation. The hangers shall be designed with a release mechanism to free the spring after the installation is complete and the hanger is subjected to its full load. Deflection shall be clearly indicated by means of a scale. Submittals shall include a drawing of the hanger showing the 30 degree capability.

L. Seismic Cable Restraints shall consist of galvanized steel aircraft cables sized to resist seismic loads with a minimum safety factor of two and arranged to provide all-directional restraint. Cable end connections shall be steel assemblies that swivel to final installation angle and utilize two clamping bolts to provide proper cable engagement. Cables must not be allowed to bend across sharp edges. Cable assemblies shall have an Anchorage Pre-approval "R" Number from the NYC Seismic Code verifying the maximum certified load ratings.

M. Seismic solid braces shall consist of steel angles or channels to resist seismic loads with a minimum safety factor of 2 and arranged to provide all directional restraint. Seismic solid brace end connectors shall be steel assemblies that swivel to the final installation angle and utilize two through bolts to provide proper attachment. Seismic solid brace assembly shall have anchorage pre-approval "R" number from the NYC Seismic Code verifying the maximum certified load ratings.

1. Note: At trapeze anchor locations piping must be shackled to the trapeze. Specifications apply to hanging equipment as well.

N. Steel angles, sized to prevent buckling, shall be clamped to pipe or equipment rods utilizing a minimum of three ductile iron clamps at each restraint location when required. Welding of support rods is not acceptable. Rod clamp assemblies shall have an Anchorage Preapproval "R" Number from the NYC Seismic Code.

O. Pipe clevis cross bolt braces are required in all restraint locations. They shall be special purpose preformed channels deep enough to be held in place by bolts passing over the cross bolt. Clevis cross braces shall have an Anchorage Preapproval "R" Number from the NYC Seismic Code.

P. All-directional seismic snubbers shall consist of interlocking steel members restrained by a one-piece molded neoprene bushing of bridge bearing neoprene. Bushing shall be replaceable and a minimum of 1/4 inch thick. Rated loadings shall not exceed 1000 psi. A minimum air gap of 1/8 inch shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. Snubber end caps shall be removable to allow inspection of internal clearances. Neoprene bushings shall be rotated to insure no short circuits exist before systems are activated. Snubbers shall have an Anchorage Preapproval "R" Number from the NYC Seismic Code verifying the maximum certified horizontal and vertical load ratings.

Q. All directional seismic snubbers shall consist of interlocking steel members restrained by shock absorbent rubber materials compounded to bridge bearing specifications. Elastomeric materials shall be replaceable and a minimum of 3/4" thick. Rated loadings shall not exceed 1000 psi. Snubbers shall be manufactured with an air gap between hard and resilient material of not less than 1/8" or more that 1/4". Snubbers shall be installed with factory set clearances. The capacity of the seismic snubber at 3/8" deflection shall be equal or greater than the load assigned to the mounting grouping controlled by the snubber multiplied by the applicable "G" force. Submittals shall include the load deflection curves up to 1/2" deflection in the x, y and z planes. Snubbers shall have an anchorage preapproval "R" number from the NYC Seismic Code verifying the maximum certified horizontal and vertical load ratings.

R. Stud wedge anchors shall be manufactured from full diameter wire, not from undersized wire that is "rolled up" to create the thread. The stud anchor shall also have a safety shoulder, which fully supports the wedge ring under load. The stud anchors shall have an evaluation report number from the I.C.B.O Evaluation Service, Inc. verifying its allowable loads.

S. Female wedge anchors are preferred in floor locations so isolators or equipment can be slid into place after the anchors are installed. Anchors shall be manufactured from full diameter wire, and shall have a safety shoulder to fully support the wedge ring under load. Female wedge anchors shall have an evaluation report number from the I.C.B.O Evaluation Service, Inc. verifying to its allowable loads.

T. Vibration isolation manufacturer shall furnish integral structural steel bases. Rectangular bases are preferred for all equipment. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is a problem. Pump bases for split case pump shall include supports for suction and discharge elbows. All perimeter members shall be steel beams with a minimum depth equal to 1/10 of the longest dimension of the base. Base depth need not exceed 14" provided that the deflection and misalignment is kept within acceptable limits as determined by the manufacturer. Height saving brackets shall be employed in all mounting locations to provide a base clearance of 1".

U. Vibration isolation manufacturer shall furnish rectangular steel concrete pouring forms for floating and inertia foundations. Bases for split case pumps shall be large enough to provide for suction and discharge elbows. Bases shall be a minimum of 1/12 of the longest dimension of the base but not less than 6". The base depth need not exceed 12" unless specifically recommended by the base manufacturer for mass or rigidity. Forms shall include minimum concrete reinforcing consisting of 1/2" bars welded in place on 6" centers running both ways in a layer 1 1/2" above the bottom. Forms shall be furnished with steel templates to hold the anchor bolts sleeves and anchors while concrete is being poured. Height saving

brackets shall be employed in all mounting locations to maintain a 1" clearance below the base. Wooden formed bases leaving a concrete rather then a steel finish are not acceptable.

V. Curb mounted rooftop equipment shall be mounted on spring isolation curbs. The lower member shall consist of a sheet metal Z section containing adjustable and removable steel springs that support the upper floating section. The upper frame must provide continuous support for the equipment and must be captive so as to resiliently resist wind and seismic forces. All directional neoprene snubber bushings shall be a minimum of 1/4" thick. Steel springs shall be laterally stable and rest on 1/4" thick neoprene acoustical pads. Hardware must be plated and the springs provided with a rust resistant finish. The curbs waterproofing shall consist of a continuous galvanized flexible counter flashing nailed over the lower curbs waterproofing and joined at the corners by EPDM bellows. All spring locations shall have access ports with removable waterproof covers. Lower curbs shall have provision for 2" of insulation. The roof curbs shall be built to seismically contain the rooftop unit. The unit must be solidly fastened to the top floating rail, and the lower Z section anchored to the roof structure. Curb shall have anchorage preapproval "R" from the NYC Seismic Code attesting to the maximum certified horizontal and vertical load ratings.

W. Flexible spherical expansion joints shall employ peroxide cured EPDM in the covers, liners and Dacron tire cord frictioning. Solid steel rings shall be used within the raised face rubber ends to prevent pullout. Flexible cable bead wire is not acceptable. Sizes 2" and larger shall have two spheres reinforced with a ring between spheres to maintain shape and complete with split ductile iron or steel flanges with hooked or similar interlocks. Sizes 16" to 24" may be single sphere. Sizes 3/4" to 1 1/2" may have threaded bolted flange assemblies, one sphere and cable retention. 14" and smaller connectors shall be rated at 250 psi up to 190F with a uniform drop in allowable pressure to 190 psi at 250F. 16" and larger connectors are rated 180 psi at 190F and 135 psi at 250F. Safety factors to burst and flange pullout shall be a minimum of 3/1. All joints must have permanent markings verifying a 5 minute factory test at twice the rated pressure. Concentric reducers to the above specifications may be substituted for equal ended expansion joints. Expansion joints shall be installed in piping gaps equal to the length of the expansion joints under pressure. Control rods need only be used in unanchored piping locations where the manufacturer determines the installation exceeds the pressure requirement without control rods, as control rods are not desirable in seismic work. If control rods are used, they must have 1/2" thick Neoprene washer bushings large enough in area to take the thrust at 1000 psi maximum on the washer area. Expansion joints shall be installed on the equipment side of the shut off valves. Submittals shall include two test reports by independent consultants showing minimum reductions of 20 DB in vibration accelerations and 10 DB in sound pressure levels at typical blade passage frequencies on this or a similar product by the same manufacturer. All expansion joints shall be installed on the equipment side of the shut off valves.

X. Flexible stainless steel hose shall have stainless steel braid and carbon steel fittings. Sizes 3" and larger shall be flanged. Smaller sizes shall have male nipples. Minimum lengths shall be as tabulated:

Flanged		Male Nipples	
3 x 14	10 x 26	1/2 x 9	1½ x 13
4 x 15	12 x 28	3/4 x 10	2 x 14
5 x 19	14 x 30	1 x 11	2½ x 18
6 x 20	16 x 32	1¼ x 12	8 x 22

Y. Hoses shall be installed on the equipment side of the shut-off valves horizontally and parallel to the equipment shafts wherever possible.

Z. All-directional acoustical pipe anchor, consisting of two sizes of steel tubing separated by a minimum 1/2" thick 60 durometer neoprene. Vertical restraint shall be provided by similar material arranged to prevent vertical travel in either direction. Allowable loads on the isolation material should not exceed 500 psi and the design shall be balanced for equal resistance in any direction.

AA. Pipe guides shall consist of a telescopic arrangement of two sizes of steel tubing separated by a minimum 1/2" thickness of 60 durometer neoprene. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and re-insertable to allow for selection of pipe movement. Guides shall be capable of + 1 5/8" motion, or to meet location requirements.

BB. Split Wall Seals consist of two bolted pipe halves with minimum 3/4" thick neoprene sponge bonded to the inner faces. The seal shall be tightened around the pipe to eliminate clearance between the inner sponge face and the piping. Concrete may be packed around the seal to make it integral with the floor, wall or ceiling if the seal is not already in place around the pipe prior to the construction of the building member. Seals shall project a minimum of 1" past either face of the wall. Where temperatures exceed 240**E** F, 10# density fiberglass may be used in lieu of the sponge.

CC. The horizontal thrust restraint shall consist of a spring element in series with a neoprene molded cup with the same deflection as specified for the mountings or hangers. The spring element shall be designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4" movement at start and stop. The assembly shall be furnished with 1 rod and angle brackets for attachment to both the equipment and the ductwork or the equipment and the structure. Horizontal restraints shall be attached at the centerline of thrust and symmetrical on either side of the unit.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. GENERAL

A. All vibration isolators and seismic restraint systems must be installed in strict accordance with the manufacturers written instructions and all certified submittal data.

B. Installation of vibration isolators and seismic restraints must not cause any change of position of equipment, piping or ductwork resulting in stresses of misalignment.

C. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system herein specified.

D. The contractor shall not install any equipment, piping, duct or conduit which makes rigid connections with the building unless isolation is not specified. "Building" includes, but is not limited to, slabs, beams, columns, studs and walls.

E. Coordinate work with other trades to avoid rigid contact with the building.

F. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the Commissioner's attention prior to installation.

G. Bring to the architects/engineers attention any discrepancies between the specifications and the field conditions or changes required due to specific equipment selection, prior to installation. Corrective work necessitated by discrepancies after installation shall be at the responsible contractors expense.

H. Correct, at no additional cost, all installations which are deemed defective in workmanship and materials at the contractor's expense.

I. Overstressing of the building structure must not occur because of overhead support of equipment. Contractor must submit loads to the Commissioner for approval. Generally bracing may occur from:

1. Flanges of structural beams.
2. Cast in place inserts or wedge type drill-in concrete anchors.

J. Cable restraints shall be installed slightly slack to avoid short circuiting the isolated suspended equipment, piping or conduit.

K. Cable assemblies are installed taut on non-isolated systems. Seismic solid braces may be used in place of cables on rigidly attached systems only.

L. At locations where restraints are located, the support rods must be braced when necessary to accept compressive loads with braces.

M. At all locations where restraints are attached to pipe clevis's, the clevis cross bolt must be reinforced with braces.

N. Drill-in concrete anchors for ceiling and wall installation, female wedge type for floor mounted equipment.

O. Vibration isolation manufacturer shall furnish integral structural steel bases as required. Independent steel rails are not permitted on this project.

P. Hand built elastomeric expansion joints may be used when pipe sizes exceed 24" or specified movements exceed capabilities.

Q. Where piping passes through walls, floors or ceilings the vibration isolation manufacturer shall provide wall seals.

R. Air handling equipment and centrifugal fans shall be protected against excessive displacement which results from high air thrust in relation to the equipment weight.

S. Locate isolation hangers as near to the overhead support structure as possible.

3.3. VIBRATION ISOLATION OF PIPING

A. Horizontal pipe isolation: The first three pipe hangers in the main lines near the mechanical equipment. Hangers must also be used in all transverse braced isolated locations. Brace hanger rods with SRC clamps. Horizontal runs in all other locations throughout the building shall be isolated by hangers. Floor supported piping shall rest on isolators. Heat exchanger's and expansion tanks are considered part of the piping run. The first three isolators from the isolated equipment will have the same static deflection as specified for the mountings under the connected equipment. If piping is connected to equipment located in basements and hangs from ceilings under occupied spaces the first three hangers shall have 0.75" deflection for pipe sizes up to and including 3", 1 1/2" deflection for pipe sizes up to and including 6", and 2 1/2" deflection thereafter. Hangers shall be located as close to the overhead structure as practical. Where piping connects to mechanical equipment install expansion joints or stainless hoses is not suitable for the service.

B. Riser isolation: Risers shall be suspended from hangers or supported by mountings, anchored with anchors, and guided with sliding guides. Steel springs shall be a minimum of 0.75" except in those expansion locations where additional deflection is required to limit load changes to + 25% of the initial load. Submittals must include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on the building structure, spring deflection changes and seismic loads. Submittal data shall include certification that the riser system has been examined for excessive stresses and that none will exist in the proposed design.

C. Seismic Restraint of Piping

1. Seismically restrain all piping listed as a, b or c below. Use cables if isolated. Restraints may be used on unisolated piping.
   a. Piping located in boiler rooms, mechanical equipment rooms, 1 1/4" I.D. and larger.
   b. All other piping 2 1/2" diameter and larger.
2. Transverse piping restraints shall be at 40' maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads.
3. Longitudinal restraints shall be at 80' maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads.
4. Where thermal expansion is a consideration, guides and anchors may be used as transverse and longitudinal restraints provided they have a capacity equal to or greater than the restraint loads in addition to the loads induced by expansion or contraction.
6. Transverse restraint for one pipe section may also act as a longitudinal restraint for a pipe section of the same size connected perpendicular to it if the restraint is installed within 24" of the elbow or TEE or combined stresses are within allowable limits at longer distances.
7. Hold down clamps must be used to attach pipe to all trapeze members before applying restraints in a manner similar to clevis supports.
8. Branch lines may not be used to restrain main lines.

D. Vibration Isolation of Ductwork

1. All discharge runs for a distance of 50' from the connected equipment shall be isolated from the building structure by means of hangers or floor isolators. Spring deflection shall be a minimum of 0.75".

2. All duct runs having air velocity of 1000 fpm or more shall be isolated from the building structure by hangers or floor supports. Spring deflection shall be a minimum of 0.75".

E. Seismic restraint of ductwork

1. Seismically restrain all ductwork with restraints as listed below:

   a. Restrain rectangular ducts with cross sectional area of 6 sq. or larger.
   b. Restrain round ducts with diameters of 28" or larger.
   c. Restrain flat oval ducts the same as rectangular ducts of the same nominal size.

2. Transverse restraints shall occur at 30' intervals or at both ends of the duct run if less than the specified interval. Transverse restraints shall be installed at each duct turn and at each end of a duct run.
3. Longitudinal restraints shall occur at 60' intervals with at least one restraint per duct run. Transverse restraints for one duct section may also act as a longitudinal restraint for a duct section connected perpendicular to it if the restraints are installed within 4' of the intersection of the ducts and if the restraints are sized for the larger duct. Duct joints shall conform to SMACNA duct construction standards.
4. The ductwork must be reinforced at the restraint locations. Reinforcement shall consist of an additional angle on top of the ductwork that is attached to the support hanger rods. Ductwork is to be attached to both upper angle and lower trapeze.
5. A group of ducts may be combined in a larger frame so that the combined weights and dimensions of the ducts are less than or equal to the maximum weight and dimensions of the duct for which bracing details are selected.
6. Walls, including gypsum board non bearing partitions, which have ducts running through them, may replace a typical transverse brace. Provide channel framing around ducts and solid blocking between the duct and frame.

3.4. SEISMIC RESTRAINT EXCLUSIONS

A. Piping

1. Piping in boiler and mechanical rooms less than 1¼ " inside diameter.
2. All other piping less than 2½" inside diameter.
3. All piping suspended by individual hangers 12" or less as measured from the top of the pipe to the bottom of the support where the hanger is attached. However, if the 12" limit is exceeded by any hanger in the run, seismic bracing is required for the run. The 12" exemption applies for trapeze supported systems if the top of each item supported by the trapeze qualifies.

B. Ductwork

1. Rectangular and square and cuts that are less than 6 square feet in cross sectional area.
2. Oval ducts that are less than 6 square feet in cross sectional area based on nominal size.
3. Round duct less than 28" in diameter.
4. All duct suspended by hangers 12" or less in length as measured from the top of the duct to the point of attachment to the structure. Hangers must be attached within 2" of the top of the

duct with a minimum of two #10 sheet metal screws. If the 12" limit is exceeded by any hanger in the run, seismic bracing is required for the run.

C. Suspended Equipment

1. Fan powered equipment weighing less than 50 lbs. and rigidly connected to the supply side of the duct system and supported with a minimum of 4 hanger rods.

END OF SECTION 230549

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 230553
Identification for HVAC Piping and Equipment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to the following:

1. Provide all the mechanical identification for work indicated on the drawings and as specified in other Sections. The types of identification devices specified in this section included the following:

    a. Painted Identification Materials
    b. Plastic Pipe Markers
    c. Plastic Tape
    d. Plastic Duct Markers
    e. Valve Tags
    f. Valve Schedule Frames
    g. Engraved Plastic-laminate Signs
    h. Plastic Equipment Markers
    i. Plasticized Tags.

2. Mechanical identification furnished as part of factory-fabricated equipment, is specified as part of the equipment assembly.

B. Related Work: The following related items are specified in other sections of the specifications:

1.	Refrigerant Piping	Section 232300
2.	General-Duty Valves for HVAC Piping	Section 230523
3.	Piping Insulation	Section 230700
4.	Centrifugal HVAC Fans	Section 233416
5.	Metal Ducts	Section 233113

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications: Firms regularly engaged in manufacturer of identification devices of types and sizes required, whose products have been in satisfactory use in similar service for not less than three (3) years.

C. Codes and Standards:

1. ANSI Standards: Comply with ANSI A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.
2. NYC Building Code: Comply with NYC Building Code, for tag requirement of each valve.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Submit manufacturer's product data and installation instructions for each identification material and device required.

C. Samples: Submit samples of each color, lettering style and other graphic representation required for each identification material or system.

D. Schedules: Submit valve schedule for each piping system, typewritten and reproduced on 8 1/2" x 11" bond paper. Include valve number, piping system, system abbreviation (as shown on tag), location of valve (room or space), and variations for identification (if any). Mark valves which are intended for emergency shut-off and similar special uses, by special "flags", in margin of schedule. In addition to mounted copies, furnish extra copies for maintenance manuals.

E. Maintenance Data: Include product data and schedules in maintenance manuals in accordance with requirements of DDC General Conditions.

PART 2 - PRODUCTS

2.1. MATERIALS AND MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering mechanical identification materials which may be incorporated in the work include the following:

1. Allen Systems, Inc.
2. Brady (W.H.) Co.
3. Signmark Div.
4. Industrial Safety Supply Co., Inc.
5. Seton Name Plate Corp.
6. Or approved equal.

B. Mechanical Identification Materials: Provide manufacturer's standard products of categories and types required for each application as referenced in other HVAC sections, indicated on the drawings and/or schedules. Where more than single type is specified for application, selections is the Commissioner's option, but provide single selection for each product category.

C. Painted Identification Materials:

1. Stencils: Standard fiberboard stencils, prepared for required applications with letter sizes generally complying with recommendations of ANSI A13.1 for piping and similar applications, but not less than 1 1/4" high letters for ductwork and not less than 3/4" high letters for access door signs and similar operational instructions.

a. Stencil Paint: Standard exterior type stenciling enamel except as otherwise indicated on the drawings; either brushing grade or pressurized spray-can form and grade.
b. Identification Paint: Standard identification enamel of colors indicated or, if not otherwise indicated for piping systems, comply with ANSI A13.1 for colors or selected by the Commissioner.

D. Plastic Pipe Markers:

1. Snap-On Type: Provide manufacturer's standard pre-printed, semi-rigid snap-on, color-coded pipe markers, complying with ANSI A13.1.

2. Pressure-Sensitive Type: Provide manufacturer's standard pre-printed, permanent adhesive, color-coded, pressure-sensitive vinyl pipe markers, complying with ANSI A13.1.

3. Insulation: Furnish 1" thick molded fiberglass insulation with jacket for each plastic pipe marker to be installed on uninsulated pipes subjected to fluid temperatures of 125 degrees F or greater. Cut length to extend 2" beyond each end of plastic pipe marker.

4. Small Pipes: For external diameters less than 6" (including insulation if any), provide full-band pipe markers, extending 360 degrees around pipe at each location, fastened by one of the following methods:

a. Snap-on application of pre-tensioned semi-rigid plastic pipe marker.
b. Adhesive lap joint in pipe marker overlap.
c. Laminated or bonded application of pipe marker to pipe (or insulation).
d. Taped to pipe (or insulation) with color-coded plastic adhesive tapes, not less than 3/4" wide; full circle at both ends of pipe marker, tape lapped 1 ½".

5. Large Pipes: For external diameters of 6" and larger (including insulation if any), provide either full-band or strip-type pipe markers, but not narrower than 3 times letter height (and of required length), fastened by one of the following methods:

a. Laminated or bonded application of pipe marker to pipe (or insulation).
b. Taped to pipe (or insulation) with color-coded plastic adhesive tape, not less than 1 1/2" wide; full circle at both ends of pipe marker, taped lapped 3".
c. Strapped-to-pipe (or insulation) application of semi-rigid type, with manufacturer's standard stainless steel bands.

6. Lettering: Manufacturer's standard pre-printed nomenclature which best describes piping system in each instance, as selected by the Commissioner in cases of variance with name as shown or specified.

a. Arrows: Print each pipe marker with arrows indicating direction of flow, either integrally with piping system service lettering (to accommodate both directions), or as separate unit of plastic.

E. Plastic Duct Markers:

1. Provide manufacturer's standard laminated plastic, color coded duct markers. Conform to the following color code if not specified:

   a. Green: Cold air.
   b. Yellow: Hot air.
   c. Yellow/Green: Supply air.
   d. Blue: Exhaust, outside, return and mixed air.

2. Nomenclature: Include the following:
   a. Direction of air flow.
   b. Duct service (supply, return, exhaust, etc.)
   c. Duct original (from).
   d. Duct destination (to).
   e. Design cfm.

F. Plastic Tape:

1. Provide manufacturer's standard color-coded pressure-sensitive (self-adhesive) vinyl tape, not less than 3 mils thick.

2. Width: Provide 1 1/2" wide tape markers on pipes with outside diameters (including insulation, if any) of less than 6", 2 1/2" wide tape for larger pipes.

3. Color: Comply with ANSI A13.1, except where another color selection is indicated on the drawings or in the schedules.

G. Valve Tags:

1. Brass Valve Tags: Provide 19-gauge polished brass valve tags with stamp-engraved piping system abbreviation in 1/4" high letters and sequenced valve numbers 1/2" high and with 5/32" hole for fastener.

   a. Provide 2" sq. tags except as otherwise shown on the drawings.
   b. Fill tag engraving with black enamel.

2. Plastic laminate valve tags: Provide manufacturer's standard 3/32" thick engraved plastic laminate valve tags, with piping system abbreviation in 1/4" high letters and sequenced valve numbers 1/2" high, and with 5/32" hole for fastener.

H. Valve Schedule Frames:

1. For each page valve schedule, provide single or double thick glass frame, with screws for mounting on masonry walls. Provide 1" wide oak picture molding frame with wood back finished with natural color.

I. Engraved Plastic-Laminate Signs:

1. Provide engraving stick melamine plastic laminate, complying with FS L-P-387, in the sized and thicknesses indicated, engraved with engraver's standard letter style of the sizes and wording indicated, black with white core (letter color) except as otherwise indicated on the drawings, punched for mechanical fastening except where adhesive mounting is necessary because of substrate.

   a. Thickness: 1/8", except as otherwise indicated on the drawings or schedules.
   b. Thickness: 1/6" for units up to 20 sq. in. or 8" length; 1/8" for larger units.
   c. Fasteners: Self-tapping stainless steel screws, except contact-type permanent adhesive where screws cannot or should not penetrate the substrate.

J. Plastic Equipment Markers:

1. Provide manufacturer's standard laminated plastic, color coded equipment markers. Conform to the following color code if not specified otherwise:

   a. Green: Cooling equipment and components.
   b. Yellow: Heating equipment and components.
   c. Yellow/Green: Combination cooling and heating equipment and components.
   d. Brown: Energy reclamation equipment and components.
   e. Blue: Equipment and components that do not meet any of the above criteria.

2. Nomenclature: Include the following matching terminology on schedules as closely as possible:

   a. Name and plan number.
   b. Equipment service.
   c. Design capacity.
   d. Other design parameters such as pressure drop, entering and leaving conditions, rpm, etc.

3. Size: Provide approximate 2 1/2" x 4" markers for control devices, dampers and valves; and 4 1/2" x 6" for equipment.

K. Plasticized Tags:

1. Manufacturer's standard pre-printed or partially pre-printed accident-prevention tags, of plasticized card stock with matt finish suitable for writing, approximately 3 1/4" x 5 5/8" with brass grommets and wire fasteners, and with appropriate pre-printed wording including large-size primary wording (as examples: DANGER, CAUTION, DO NOT OPERATE).

L. Lettering and Graphics:

1. Coordinate names, abbreviations and other designations used in mechanical identification work, with corresponding designations shown, specified or scheduled. Provide numbers, lettering and wording as indicated or, if not otherwise indicated, as recommended by manufacturers or as required for proper identification and operation/maintenance of mechanical systems and equipment.

2. Multiple Systems: Where multiple systems of same generic name are shown and specified, provide identification which indicates individual system number as well as service (as examples: Boiler No. 2, Air Supply No. 1).

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Coordination: Where identification is to be applied to surfaces which require insulation, painting or other covering or finishes, including valve tags in finished mechanical spaces, install identification after completion of covering and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment.

B. Ductwork Identification:

1. Identify air supply, return, exhaust and intake ductwork with duct markers; or provide stenciled signs and arrows, showing ductwork service and direction of flow, in black or white (whichever provides most contrast with ductwork color)

2. Location: In each space where ductwork is exposed, or concealed only removable ceiling system, locate signs near points where ductwork originates or continues into concealed enclosures (shaft, underground or similar concealment), and 50' spacing along exposed runs.

3. Access Doors: Provide duct markers or stenciled signs on each access door in ductwork and housings, indicating purpose of access (to what equipment) and other maintenance and operating instructions, and appreciate, and appropriate safety and procedural information.

4. Concealed Doors: Where access doors are concealed above acoustical ceilings or similar concealment, plasticized tags may be installed for identification in lieu of specified signs at the Commissioner's option.

C. Piping System Identification:

1. Install pipe markers of one of the following types on each system indicated to receive identification, and include arrows to show normal direction of flow:

a. Stenciled markers, including color-coded background band or rectangle, and contrasting lettering of black or white. Extend color band or rectangle 2" beyond ends of lettering.

b. Plastic pipe markers, with application system as indicated under Materials in this section. Install on pipe insulation segment where required for hot non-insulated pipes.

2. Locate pipe markers and color bands as follows wherever piping is exposed to view in occupied spaces, machine rooms, accessible maintenance spaces (shafts, tunnels, plenums) and exterior non-concealed locations.

   a. Near each valve and control device. Near each branch mark each pipe at branch, where there could be question of flow pattern. Near locations where pipes pass through walls or floors/ceilings, or enter non-accessible enclosures. At access doors, manholes and similar access points which permit view of concealing piping near major equipment items and other points of origination and termination.
   b. Space intermediately at maximum spacing of 50' along each piping run, except reduce space to 25' in congested areas of piping and equipment.
   c. On piping above removable acoustical ceilings, except omit intermediately spaced markers.

D. Valve Identification:

1. Provide valve tag on every valve, cock and control device in each piping system; exclude check valves, valves within factory-fabricated equipment units, and shut-off valves at HVAC terminal devices and similar rough-in connections of units. List each tagged valve in valve schedule for each piping system.

   a. Tagging Schedule: Comply in requirements of "Valve Tagging Schedule" as end of this section.

2. Mount valve schedule frames and schedules in machine rooms where indicated or, if not otherwise indicated, where directed by the Commissioner.

3. Where more than one major machine room is shown on the Project, install mounted valve schedule in each major machine room, and repeat only main valves which are to be operated in conjunction with operations of more than single machine room.

E. Mechanical Equipment Identification:

1. Install engraved plastic laminate sign or plastic equipment marker on or near each major item of mechanical equipment and each operational device, as specified herein if not otherwise specified for each item or device. Provide signs for the following general categories of equipment and operational devices:

   a. Main control and operating valves, including safety devices.
   b. Meters, gages, thermometers and similar units.
   c. Pumps and similar motor-driven units.
   d. Coil heat exchangers and similar equipment.
   e. Fans, blowers and primary balancing dampers terminals.
   f. Package HVAC units and condensing units.
   g. Strainers, filters, water treatment systems and similar equipment.

2. Optional Sign Types: Where lettering larger than 1" height is needed for proper identification, stenciled signs may be provided in lieu of engraved plastic, at the City of New York's option.

3. Lettering Size: Minimum 1/4" high lettering for name of unit where viewing distance is less than 2', 1/2" for distances is less than proportionally larger lettering for greater distances. Provide secondary lettering 2/3 to 3/4 of size of principal lettering.

4. Text of Signs: In addition to name of identified unit, provide lettering to distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.

5. Optional Use of Plasticized Tags: At the Commissioner's option, where equipment to be identified is concealed above acoustical ceiling or similar concealment, plasticized tags may be installed within concealed space to reduce amount of text in exposed sign (outside concealment).

   a. Operational valves and similar minor equipment items located in non-occupied spaces (included machine rooms) may, at the Commissioner's option, be identified by installation of plasticized tags in lieu of engraved plastic signs.

3.3. ADJUSTING AND CLEANING

A. Adjusting: Relocate any mechanical identification device which has become visually blocked.

B. Cleaning: Clean face of identification devices, and glass frame of all charts.

3.4. VALVE TAGGING SCHEDULES

A. Numbers: Arrange the numbering of valves in the following manner:

1. In Ground Floor - No. 1 to No. 999.
2. Upper Floors - Floor No. followed by 000 thru 999.
3. Roof - No. R1 to R99.

B. In no case shall a number applying to one floor, be assigned to a valve located in another floor.

END OF SECTION 230553

SECTION 230593
Testing for HVAC

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to the following:

1. All the cleaning and testing for all the HVAC work done in this project, as specified herein, as indicated on the drawings, and as needed for complete and proper installation.

B. Related Work: The following major related items are specified in other sections of the specifications.

1.	Hydronic Piping	Section 232113
2.	Centrifugal HVAC Fans	Section 233416
3.	Hydronic Pumps	Section 232123
4.	Diffuser, Registers, Grilles	Section 233713
5.	Balancing for HVAC	Section 230594
6.	Air Duct Accessories	Section 233300

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Regulatory Requirements:

1. Perform factory testing of factory fabricated equipment in complete accordance with the NYC Department of Buildings.
2. Perform field testing of piping systems in complete accordance with all the NYC Department of Buildings and as specified.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Quality Control Submittals

1. Test Reports (Field Tests):
2. Refrigeration Systems: Submit test results on Refrigeration Systems Pressure.

1.5. PROJECT CONDITIONS

A. Protection

1. During test work, protect controls, gauges and accessories, which are not designed to withstand test pressure. Do not utilize permanently installed gauges for field testing of systems.

1.6. SEQUENCING AND SCHEDULING

A. Transmit written notification of proposed date and time of operational tests to the Commissioner at least 5 days in advance of such tests.

B. Perform cleaning and testing work in the presence of the Commissioner

C. Pressure test piping systems inside building, at the roughing-in stage of installation, before piping is enclosed by construction work, and at other times as directed. Perform test operations in sections as required and directed, to progress the work in a satisfactory manner and not delay the general construction of the building. Valve or cap-off sections of piping to be tested, utilizing valves required to be installed in the permanent piping systems, or temporary valves or caps as required performing the work.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Test Equipment and Instruments

B. Type and kind as required for the particular system under test.

C. Test Media (air, gas, refrigerant, vacuum, water)

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PRELIMINARY WORK

A. Thoroughly clean pipe and tubing prior to installation. During installation, prevent foreign matter from entering systems. Prevent if possible and remove stoppages or obstructions form piping and systems.

3.3. TESTING OF EQUIPMENT, APPARATUS AND APPURTENANCES

A. Damper

1. The dampers, deflectors, etc., shall be tested and adjusted during the balancing of systems work, but this work must be carried out by parties other than the person delegated to supervise the operation of the work and instruct the personnel. For details of damper adjustment, see Section 230594: Balancing for HVAC.

B. Heating, Ventilating and Air Conditioning Systems - Cleaning and Operational Testing:

1. Test and balance all HVAC equipment in accordance with manufacturer installation instruction manual to perform as per specifications.

END OF SECTION 230593

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 230594
Balancing For HVAC

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to, the following:

1. Requirements for adjusting and balancing of all air distribution systems, including the equipment and devices associated with each system.

2. The work includes setting speed and flow, adjusting equipment and devices installed for systems, recording data, preparing and submitting reports, and recommending modifications to the mechanical installation specified in other Sections of the Specifications.

B. Related Work: The following related work is specified in other sections of the specifications, and is not part of the Work of this Section:

1. Installation and start-up of equipment and devices to be adjusted and balanced.

2. Pressure testing of ductwork systems.

3. Electrical hook-up and wiring of equipment and devices to be adjusted and balanced.

C. The Contractor shall engage an independent testing, adjusting, and balancing agency meeting the qualifications as specified, to be the single source of responsibility to test, adjust, and balance the building mechanical systems identified in this project to produce the design objectives. Services shall include checking installations for conformity to design, measurement and establishment of the fluid quantities of the mechanical systems as required to meet design specifications, and recording and reporting the results.

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Submit blank forms of reports indicating all data to be included.

C. Submit certified reports, signed by the balancing specialist. Submit final testing and balancing results on applicable report forms, which is certifying the independent member agency performing the work,

required by this Section. Each final systems report form shall bear the signature of the person performing the work and recording the data and the signature of the certified supervisor for the performing agency.

1.5. PERFORMANCE REQUIREMENTS

A. Procedures, measurements, instruments and reports for adjusting and balancing work shall comply with the applicable provisions of the codes, standards, recommendations of the entities listed below.

1. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE).
2. Sheet Metal and Air Conditioning Contractors National Association (SMACNA).
3. National Environmental Balancing Bureau (NEBB).
4. Associated Air Balance Council (ABBC).
5. New York City Building Code.

B. The air delivery or intake of each diffuser, grille and register shall be as designed or within five percent of the air flow rates shown on the drawings.

C. The fan air flow rate and static pressure rise across the fan shall be within 10 percent above the design value at design speed.

1.6. JOB CONDITIONS

A. The Contractor shall have the balancing agency review their work with the respective manufacturers of the equipment and devices involved, and shall coordinate and schedule all Work.

B. Furnish and install balancing dampers, pressure taps, gauges, valves, and other components as required for a properly balanced system, whether or not specified herein or shown on the drawings, all at no additional cost to the City of New York. Adjustment or replacement of parts recommended by the balancing specialist shall be made in strict accordance with the respective equipment manufacturer's recommendations.

C. Control manufacturer's representative shall see the adjustment of the automatically operated dampers and control valves to operate as required.

PART 2 - PRODUCTS

2.1. PATCHING MATERIALS

A. Unless otherwise indicated on the drawings, use same products as originally installed for patching holes in insulation, ductwork and housings which have been cut or drilled for test purpose, including access for test instruments, attaching jigs, and similar purposes.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSPECTION

A. Do not proceed with adjusting and balancing until unsatisfactory conditions have been corrected in a manner approved by the Commissioner.

B. Examine the air systems to see that they are free from obstructions. Determine that all dampers, grilles and registers are open, that moving equipment is lubricated, that filters are installed, pneumatic and automatic controls are functioning, and perform other inspection and maintenance activities necessary for proper operation of the systems.

3.3. BALANCING AND ADJUSTING

A. Balancing agency shall perform all the procedures and comply all the data for all air systems.

B. Data shall include a schematic diagram locating the air inlets, outlets, fans, equipment, dampers and regulating devices for air systems.

C. All instruments used shall be accurately calibrated and maintained in good working order.

D. Air Systems

The adjusting and balancing of air systems shall include but not be limited to the following:

1. Record and adjust fan rpm to design requirements.
2. Record motor full load amperes.
3. Make Pitot tube traverse of main supply ducts and obtain design flow rate at fans.
4. Record system static pressure, velocity pressure and total pressure.
5. Adjust system for design supply, transfer and return air flow rate.
6. Adjust system for minimum and maximum design flow rates of outside air.
7. Record return air temperatures.
8. Record entering mix air temperatures.
9. Record leaving air temperatures.
10. Adjust all main supply, return, relief and exhaust air ducts to proper design flow rate.
11. Adjust each diffuser, grille and register.
12. Each grille, diffuser and register shall be identified as to location and area on the schematic diagram.
13. Size, type and manufacturer of diffusers, grilles and registers and all tested equipment shall be identified and listed in the final report. Manufacturer's data on all equipment shall be used to make required calculations for adjusting and balancing. Readings of diffusers, grilles and registers shall include design required velocity and resultant velocity, required flow rate and resultant flow rate after adjustments.
14. All diffusers, grilles and registers shall be adjusted to minimize drafts in all areas.
15. Dampers shall be permanently marked after air balance is complete so that they can be restored to their correct position, if disturbed later.
16. Openings in ductwork for Pitot tube insertion shall be sealed with snap-in plugs after air balance is complete.

E. Final adjusting and balancing shall be performed during summer season for air conditioning systems and during winter season for heating systems, including operation when outside conditions are within 5 degrees F wet bulb temperature of maximum summer design condition, and within 10 degrees F dry bulb temperature of minimum winter design condition.

F. Retest, adjust and balance systems subsequent to system modifications. Resubmit test results.

3.4. SAMPLE OF REPORT FORMS

A. Submit reports on ABBC National Standards for Total System Balance forms.

B. Forms shall include but not be limited to the following information:

1. Title Page:

   a. Company name
   b. Company address
   c. Company telephone number
   d. Project name
   e. Project location
   f. Project Architect
   g. Project Engineer
   h. Project Contractor

2. Instrument List:

   a. Instrument
   b. Manufacturer
   c. Model
   d. Serial number
   e. Range
   f. Calibration date

3. Air Moving Equipment:

   a. Location
   b. Manufacturer
   c. Model
   d. Air flow, specified and actual
   e. Return air flow, specified and actual
   f. Outside air flow, specified and actual
   g. Total static pressure (total external), specified and actual
   h. Inlet pressure
   i. Discharge pressure
   j. Fan RPM

4. Exhaust Fan Data:

   a. Location
   b. Manufacturer
   c. Model
   d. Air flow, specified and actual
   e. Total static pressure (total external) specified and actual
   f. Inlet pressure
   g. Discharge pressure

h. Fan RPM

5. Return Air/Outside Air Data:

a. Identification/Location
b. Design air flow
c. Actual air flow
d. Design return air flow
e. Actual return air flow
f. Design outside air flow
g. Actual outside air flow
h. Return air temperature
i. Outside air temperature
j. Required mixed air temperature
k. Actual mixed air temperature
l. Design outside/return air ratio
m. Actual outside/return air ratio

6. Electric Motors:

a. Manufacturer
b. HP/BHP
c. Phase, voltage, amperage; nameplate, actual no load
d. RPM
e. Service factor
f. Starter size, rating, heater elements

7. V-Belt Drive:

a. Identification/location
b. Required driven RPM
c. Driven sheave, diameter and RPM
d. Belt, size and quantity
e. Motor sheave, diameter and RPM
f. Center to center distance, maximum, minimum and actual

8. Duct Traverse:

a. System zone/branch
b. Duct size
c. Area
d. Design velocity
e. Design air flow
f. Test velocity
g. Test air flow
h. Duct Static pressure
i. Air Temperature
j. Air correction factor

9. Air Distribution Test Sheet:

   a. Air outlets and inlets number
   b. Room number/location
   c. Outlets and inlets type
   d. Outlets and inlets size
   e. Area factor
   f. Design velocity
   g. Design air flow
   h. Test (final) velocity
   i. Test (final) air flow
   j. Percent of design air flow

10. Outlets and Inlets Unit Data:

   a. Manufacturer
   b. Type, constant, variable, single duct
   c. Identification/number
   d. Location
   e. Model
   f. Size
   g. Minimum static pressure
   h. Minimum design air flow
   i. Maximum design air flow
   j. Maximum actual air flow
   k. Inlet static pressure

11. Duct Leak Test (as described in SMACNA):

   a. Description of ductwork under test
   b. Duct design operating pressure
   c. Duct design test static pressure
   d. Duct capacity, air flow
   e. Maximum allowable leakage duct capacity times leak factor
   f. Test apparatus:
      i. Blower
      ii. Orifice, tube size
      iii. Orifice size
      iv. Calibrated
   g. Test static pressure
   h. Test orifice differential pressure
   i. Leakage rate
   j. Leakage shall not exceed 5 percent of total air flow.

END OF SECTION 230594

SECTION 230700
Piping Insulation

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.
   a. Section 01 33 00 "Submittal Procedures."
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to the following:

1. Thermal insulation on the piping required on this project as indicated on the drawings, as specified herein and as needed for a complete and proper installation. The types of Piping System insulation specified in this Section include the following: Fiberglass, Cellular Glass, Calcium Silicate, and Flexible Unicellular.

2. Note: All insulation materials shall be free of asbestos.

B. Related Work: The following related items are specified in other sections of the specifications.

1.	Hydronic Piping	Section 232113
2.	Refrigerant Piping	Section 232300
3.	General-Duty Valves for HVAC Piping	Section 230523
4.	Hangers and Supports for HVAC Piping and Equipment	Section 230529
5.	Identification for HVAC Piping and Equipment	Section 230553

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications: Firms regularly engaged in manufacture of mechanical insulation products, of types and sizes required, whose products have been in satisfactory use in similar service for not less than three (3) years.

C. Installer's Qualifications: Firm with at least three (3) years successful installation experience on projects with mechanical insulations similar to that required for this Project.

D. Flame/Smoke Ratings: Provide mechanical insulation with flame spread index of 25 or less, and smoke developed index of 50 or less, as tested by ASTM E 84 method and as defined by N.Y. City Building Code.

E. Code and Standards:

1. Flame spread rating and smoke developed rating shall be as defined in the N.Y.C. Building Code. The entire installation of these materials shall meet all requirements of that Code. Adhesives and coatings shall be fire retardant type.

   a. All insulation material shall have BSA numbers as required.

   b. Comply with ASHRAE Standard and New York State Energy Code Standard.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Submit manufacturer's product data and installation instructions for each type of pipe system insulation. Submit schedule showing manufacturer's product number, k-value, thickness, and furnished accessories for each piping system requiring insulation.

C. Maintenance Data: Submit maintenance data and replacement material lists for each type of pipe system insulation. Include this data and product data in maintenance manual in accordance with the requirement of DDC General Conditions.

D. Samples: Submit manufacturer's sample of each piping insulation type required. Affix label to sample completely describing product.

1.5. DELIVERY, STORAGE AND HANDLING

A. Deliver insulation, coverings, cements, adhesives, and coatings to site in containers with manufacturer's stamp or label, affixed showing fire hazard indexes of products.

B. Protect insulation against dirt, water, and chemical and mechanical damage. Do not install damaged or wet insulation; remove from project site.

1.6. TEMPERATURE REQUIREMENT

A. Apply adhesive, sealers, coating, etc., at the proper temperature as recommended by the manufacturer. If ambient conditions are not acceptable, provide temporary heat as required for proper installation without any delay to the project completion.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Subject to compliance with requirements, manufacturer's offering products which may be incorporated in the work include the following:

1. Armstrong World Industries, Inc.
2. Certain Teed Corp.
3. Knauf Fiber Glass
4. Manville Products Corp.
5. Owens-Corning Fiberglass Corp.
6. Pittsburgh Corning Corp.
7. Benjamin Foster Co.
8. Or approved equal.

2.2. MATERIALS

A. Pipes

1. Fiberglass Piping Insulation: ASTM C547, Class 1 for use to 450 degrees F, one piece molded with a nominal 4 pound density, a thermal conductivity of 0.23 at 75 degrees F mean temperature.

2. Cellular Glass Piping Insulation: ASTM C 552, Type II, Class 2 (Type II - Pipe and Tubing Class 2-Jacketed).

3. Calcium Silicate Piping Insulation: ASTM C 533, Type I, for use to 1200 degrees F.

4. Flexible Unicellular Piping Insulation: ASTM C 534, Type I-Tubular for use between -40 degrees F and 200 degrees F only.

B. Jackets

1. Jackets for Piping Insulation: ASTM C 921, Type I for piping with temperatures below ambient, Type II for piping with temperatures above ambient. Type I may be used for all piping at the City of New York's option. Type -vapor barrier, - Type II-water vapor permeable.

2. Encase pipe fittings insulation with one-piece premolded PVA fitting covers, fastened as per manufacturer's recommendations.

3. Encase exterior piping insulation with aluminum jacket with weather-proof construction.

C. Staples, Bands, Wires and Cement

1. As recommended by insulation manufacturer for applications indicated.

D. Adhesives, Sealers, and Protective Finishes

1. As recommended by insulation manufacturer for applications indicated.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine areas and condition under which the pipe insulation is to be installed. Before applying the insulation, all tests specified in DDC General Conditions and other sections should have been completed. Do not proceed with work until satisfactory conditions have been corrected in a manner acceptable to the Commissioner. However, thermal insulation can be applied to pipes prior to these tests providing that all fittings are left bare to permit detection of possible leaks.

3.3. APPLICATION

A. Insulation Omitted: Omit installation on hot piping within radiation enclosure or unit cabinets, on unions, flanges and strainers.

B. Insulation of Refrigerant Piping

C. Insulation of Piping Exposed to Weather

D. Protect outdoor insulation from weather by installing 0.016 gauge aluminum jacket over insulation as specified herein.

3.4. INSTALLATION

A. Install insulation products in accordance with manufacturer's written instructions, and in accordance with manufacturer's written instructions, and in accordance with recognized industry practices to ensure that insulation services its intended purpose.

B. Install insulation on pipe systems subsequent to installation of heat tracing, painting, testing, and acceptance of tests.

C. Install insulation materials with smooth and even surfaces. Insulate each continuous run of piping with full-length units of insulation, with single cut piece to complete run. Do not use cut pieces or scraps abutting each other.

D. Clean and dry pipe surfaces prior to insulating.

E. Maintain integrity of vapor-barrier jackets on pipe insulation, and protect to prevent puncture or other damage.

F. Cover valves, fittings and similar items in each piping system with equivalent thickness and composition of insulation as applied to adjoining pipe run. Install factory molded, precut or job fabricated units except where specific form or type is indicated on the drawings.

G. Extend piping insulation without interruption through walls, floors and similar piping penetrations, except where otherwise indicated on the drawings.

3.5. PROTECTION AND REPLACEMENT

A. Replace insulation which cannot be restored satisfactorily, including units with vapor barrier damage and moisture saturated units.

B. Protection

1. Insulation worker shall advise contractor of required protection for insulation work during remainder of construction period, to avoid damage and deterioration.

C. Frost-proofing

1. Water piping installed in a location exposed to freezing weather shall be frost proofed.

2. Piping to be frost proofed shall be insulated with two layers (thickness) of molded fiberglass insulation. The outer layer shall have a vapor barrier jacket of white kraft paper outer surface bonded to aluminum foil and reinforced with fiberglass yarn. Longitudinal laps and butt strips shall be smoothly secured with insulation adhesive. The use of pipe insulation having a "self-sealing" lap, and "self-sealing" lap strips is also acceptable. The final insulation shall be protected with a casing of 0.016 minimum thickness aluminum.

END OF SECTION 230700

SECTION 230701
Ductwork Insulation

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.
   a. Section 01 33 00 "Submittal Procedures."
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to, the following:

1. Thermal insulation on the ductwork installed and required on this Project as shown on the drawings, as specified herein and as needed for a complete and proper installation. The types of ductwork insulation specified in this Section include the following: Fiberglass, Cellular Glass, Flexible Unicellular.

2. Note: All insulation materials shall be free of asbestos.

B. Related Work: The following related items are specified in other sections of the specifications:

1.	Hangers and Supports for HVAC Piping and Equipment	Section 230529
2.	Identification for HVAC Piping and Equipment	Section 230553
3.	Metal Ducts	Section 233113

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications: Firms regularly engaged in manufacturer of mechanical insulation products, of types and sizes required, whose products have been in satisfactory use in similar service for not less than three (3) years.

C. Installer's Qualifications: Firm with at least three (3) years successful installation experience on projects with mechanical insulations similar to that required for Project.

D. Flame/Smoke Ratings: Provide mechanical insulation with flame spread index of 25 or less and smoke developed index of 50 or less, as tested by ASTM E 84 method and as defined in the N.Y. City Building Code.

E. Code and Standards; Comply with New York City Building Code, New York State Energy Code and ASHRAE Standards.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Submit manufacturer's product data and installation instructions for each type of duct insulation. Submit schedule showing manufacturer's product number, k-value, thickness and furnished accessories for each duct system requiring insulation.

C. Maintenance Data: Submit maintenance data and replacement material lists for each type of duct insulation. Include this data and product data in maintenance manual in accordance with the requirement of DDC General Conditions.

D. Samples: Submit manufacturer's sample of each duct insulation type required.

1. Affix label to sample completely describing product.

1.5. DELIVERY, STORAGE AND HANDLING

A. Deliver insulation, coverings, cements, adhesives and coatings to site in containers with manufacturer's stamp or label affixed showing fire hazard indexes of products.

B. Protect insulation against dirt, water and chemical and mechanical damages. Do not install damaged or wet insulation; remove from site.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Subject to compliance with requirements, manufacturer offering products which may be incorporated in the work include the following:

1. Armstrong World Industries, Inc.
2. Certain Teed Corp.
3. Knauf Fiber Glass
4. Owens-Corning Fiberglass Corp.
5. Or approved equal.

2.2. MATERIALS

A. Rigid Fiberglass Ductwork Insulation: ASTM C612; Class 1, 400 degrees F; 4.2 pound per cubic feet density glass fiber with a thermal conductivity (k) of .24 at 75 degrees F mean temperature.

B. Flexible Fiberglass Ductwork Insulation: ASTM C553; Type I - Resilient, Flexible; 1 pound per cubic feet density glass fiber with at thermal conductivity (k) of 0.29 at 75 degrees F mean temperature.

C. Cellular Glass Ductwork Insulation: ASTM C 552; Type I, Flat block; Type III, Special Shapes.

D. Flexible Unicellular Ductwork Insulation: ASTM C 534; Type II - Sheet for use between -40 degrees F and 200 degrees F only.

E. Jackets for Ductwork Insulation: ASTM C 921; Type I for ductwork with temperatures below ambient; Type II for ductwork with temperatures above ambient. (Type I - Vapor Barrier, Type II - Water Vapor Permeable).

F. Ductwork Insulation Accessories: Provide staples, bands, wires, tape, anchors, corner angles and similar accessories as recommended by insulation manufacturer for applications indicated.

G. Ductwork Insulation Compounds: Provide cements, adhesives, coatings, sealers, protective finished and similar compounds as recommended by insulation manufacturer for applications indicated.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine areas and conditions under which the duct insulation is to be installed. Before applying the insulation, all tests specified in DDC General Conditions should have been completed. Do not proceed with work until unsatisfactory conditions have been corrected in a manner acceptable to the Commissioner.

3.3. APPLICATION

A. Ductwork System Insulation

1. Insulation Omitted: Do not insulate lined ductwork, except outdoor installed ductwork.

2. Cold Ductwork (Below Ambient Temperature):

a. Application Requirements: Insulate the following cold ductwork:

1. Outdoor air intake ductwork between air entrance and fan inlet or HVAC unit inlet.

2. HVAC supply ductwork between fan discharge, or HVAC unit discharge, and room terminal outlet except ductwork exposed in the room it supplies.

3. HVAC return ductwork between room terminal inlet and return fan inlet, or HVAC unit inlet; except omit insulation on return ductwork located in return air ceiling plenums. Ductwork under roofs shall be insulated even though ductwork runs in plenum.

4. HVAC plenums and unit housings not pre-insulated at factory or lined.

b. Insulate each ductwork system specified above with one of the following types:

1. Rigid Fiberglass: 2" thick also in fan and equipment rooms and exposed on roofs.

2. Flexible Fiberglass: 2" thick, application limited to concealed locations.

3. Ductwork Exposed to Outdoors:

   a. Insulate ductwork with rigid fiberglass with Foil-Skim-Kraft (FSK) jacket 2 inch thick with corner angles on all corners.

   b. Cover insulation with two (2) layers of roofing felt, each held in place by fiberglass cloth.

   c. Impregnate roofing felt and glass cloth with bitumastic applied in two (2) 1/4 inch layers each applied separately.

   d. Seal all openings at roof support points watertight.

3.4. INSTALLATION

A. Install insulation products in accordance with manufacturer's written instructions, and in accordance with recognized industry practices to ensure that insulation serves its intended purpose.

B. Install insulation materials with smooth and even surfaces.

C. Clean and dry ductwork prior to insulating. Butt insulation joints firmly together to ensure complete and tight fit over surfaces to be covered.

D. Maintain integrity of vapor-barrier on ductwork insulation, and protect it to prevent puncture and other damage.

E. Extend ductwork insulation without interruption through walls, floors and similar ductwork penetrations, except where otherwise indicated.

F. Lined Ductwork: Except as otherwise indicated, omit insulation on ductwork where internal insulation or sound absorbing linings have been installed.

3.5. PROTECTION AND REPLACEMENT

A. Replace damaged insulation which cannot be restored satisfactorily, including units with vapor barrier damage and moisture saturated units.

B. Protection: Insulation Worker shall advise Contractor of required protection for insulation work during remainder of construction period, to avoid damage and deterioration.

END OF SECTION 230701

SECTION 23 08 00
COMMISSIONING OF HVAC SYSTEMS

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project: (1) the contract drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. This section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment.

B. Related Sections:

1. DDC General Conditions for general commissioning process requirements.

1.3 DESCRIPTION

A. Commissioning: Commissioning is a systematic process of verifying that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a complete design or installing Sub-Contractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.

B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:

1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing Sub-Contractors.
2. Verify and document proper performance of equipment and systems as per the written procedures.
3. Verify that Operation & Maintenance documentation is complete and transferred to City of New York.
4. Verify that proper orientation program has been implemented for the City of New York's operating personnel.
5. Provide a post occupancy review with O&M staff within 10 months after Substantial Completion.

C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.

D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the City of New York, Contractor, Sub-Contractors, manufacturers and equipment suppliers.

E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

A. Refer to DDC General Conditions for definitions.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for CxA's role.

B. Refer to DDC General Conditions for specific submittal requirements. In addition, provide the following:

1. Certificates of readiness
2. Certificates of completion of installation, pre-start, and startup activities.
3. O&M manuals
4. Field / factory test reports

C. Control Drawings Submittal

1. The control drawings shall have a key to all abbreviations.
2. The control drawings shall contain graphic schematic depictions of the systems and each component.
3. The schematics will include the system and component layout of any equipment that the control system monitors, enables or controls, even if the equipment is primarily controlled by packaged or integral controls.
4. Provide a full points list with at least the following included for each point, as applicable:
   a. Controlled system
   b. Point abbreviation
   c. Point description
   d. Display unit
   e. Control point or set point
   f. Monitoring point
   g. Intermediate point
   h. Calculated point

1.6 QUALITY ASSURANCE

A. Test Equipment Calibration Requirements: The Contractor will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

A. Refer to DDC General Conditions for requirements pertaining to coordination during the commissioning process.

PART II - PRODUCTS

2.1 TEST EQUIPMENT

A. The Contractor shall ensure that the equipment and system perform startup, initial checkout and functional performance testing as outlined in the DDC General Conditions, except for equipment specific to and used by the Contractor in their commissioning responsibilities. A sufficient quantity of two-way radios shall be provided by the Contractor, as necessary.

B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.

C. Test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. The Contractor shall ensure that the manufacturer provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.

D. If required and necessary, data logging equipment and software required for testing will be provided by the CxA, but shall not become the property of the City of New York.

E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of ±0.1°F. Pressure sensors shall have an accuracy of ±2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART III - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

A. With assistance from the Contractor, the CxA will prepare Pre-Functional/ Installation Checklists for commissioned components, equipment, and systems

B. The Contractor shall cause Sub-Contractor(s) to create red-lined Drawings:

1. The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
2. Preliminary red-lined drawings will be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
4. The Contractor will create the as-built drawings.

C. Operation and Maintenance Data:

1. The Contractor shall cause the Sub-Contractor(s) to provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
2. The CxA will review the O&M literature once for conformance to project requirements.
3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.

D. Testing, Demonstration and Orientation:

1. The Contractor shall cause the Sub-Contractor(s) to provide demonstration and operator's orientation program as required by the specifications.
2. A complete orientation program and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any such event.
3. Agenda for each orientation session shall be submitted to the CxA at least one (1) week prior to the session.
4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA. A copy of the test record shall be provided to the CxA and Commissioner.
5. Engage a Factory-authorized service representative to demonstrate City of New York's service personnel to adjust, operate, and maintain specific equipment.
6. Instruct City of New York service personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
7. Review and update data in O&M Manuals.

3.2 CONTRACTOR RESPONSIBILITIES FOR SUB-CONTRACTOR PERFORMANCE

A. The Contractor shall cause the Sub-Contractor to have the following instruction responsibilities in performing Mechanical, Controls and TAB work. The commissioning responsibilities are as follows (all references apply to commissioned equipment/systems only):

1. Perform commissioning tests at the direction of the CxA.
2. Attend construction phase controls coordination meetings.
3. Attend testing, adjusting, and balancing review and coordination meetings.
4. Participate in HVAC&R systems, assemblies, equipment, and component service orientation and inspection as directed by the CxA.
5. Provide information requested by the CxA for final commissioning documentation.
6. Include requirements for submittal data, operation and maintenance data, and instruction in each purchase order or sub-contract written.
7. Prepare preliminary schedule for Mechanical system orientations and inspections, operation and maintenance manual submissions, instruction sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.

8. Update schedule as required throughout the construction period.
9. During the startup and initial checkout process, execute the related portions of the Prefunctional/installation checklists for all commissioned equipment so they can be documented by the CxA.
10. Assist the CxA in all verification and functional performance tests.
11. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
12. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA (45) days after submittal acceptance.
13. Coordinate with the CxA to provide (72) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
14. Notify the CxA a minimum of (2) weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.
15. Participate in, and schedule vendors and Sub-Contractors to participate in the operator's orientation sessions.
16. Provide written notification to the CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
    a. HVAC&R equipment including all fans, air handling units, piping, ductwork, dampers, terminals, and all other equipment furnished under this Division.
    b. Controls system used for equipment monitoring and manipulation
    c. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
    d. Fire detection and smoke detection devices furnished under other divisions of the specification.
17. The Contractor shall ensure that the equipment suppliers document the performance of their equipment.
18. The Contractor shall ensure that the Sub-Contractor perform Test, Adjust and Balance work:
    a. Attend initial commissioning coordination meeting scheduled by the CxA.
    b. Submit the site specific testing and balancing plan to the CxA and Commissioner for review and acceptance.
    c. Attend the testing and balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in testing, adjusting, and balancing the HVAC&R system.
    d. At the completion of the testing and balancing work, and the submittal of the final testing and balancing report, notify the Commissioner.
    e. Participate in verification of the testing and balancing report, which will consist of repeating measurements contained in the testing and balancing reports. Assist in diagnostic purposes when directed.

19. The Contractor shall ensure equipment Suppliers perform the following tasks:
    a. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York, to keep warranties validated.
    b. Assist in equipment testing per agreements with Sub-Contractors.
    c. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
20. Provide instruction of the City of New York service personnel using qualified personnel, as specified.
21. Refer to DDC General Conditions for additional responsibilities.

3.3 CxA RESPONSIBILITIES

A. Refer to DDC General Conditions for CxA's Responsibilities.

3.4 TESTING PREPARATION

A. Certify in writing to the CxA that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.

B. Certify in writing to the CxA that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

C. Certify in writing that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.

D. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

E. Inspect and verify the position of each device and interlock identified on checklists.

F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.

G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 TESTING, ADJUSTING AND BALANCING VERIFICATION

A. Air and water testing, balancing and equipment performance verification shall be accomplished by an independent test and balance firm. The CxA shall spot check this work to verify accuracy of results.

B. Prior to performance of Testing, Adjusting and Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.

C. Notify the CxA at least ten (10) days in advance of testing and balancing work, and provide access for the CxA to witness testing and balancing work.

D. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.

1. The CxA will notify the Contractor and Sub-Contractor performing balancing work ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
2. The Contractor shall cause Sub-Contractor performing balancing work shall use the same instruments (by model and serial number) that were used when original data were collected.
3. Failure of an item includes a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final balancing report.
4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.6 GENERAL TESTING REQUIREMENTS

A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of HVAC&R testing shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include verification of dynamic operation of the system.

C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

D. The CxA along with the Sub-Contractor performing HVAC&R, testing and balancing, and HVAC&R Instrumentation and Control work shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.

E. Tests will be performed using design conditions whenever possible.

F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

G. The CxA may direct to alter set points when simulating conditions is not practical.

H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.

I. If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.7 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 23 sections. Provide submittals, test data, inspector record, and certifications to the CxA.

B. HVAC&R Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections. Assist the CxA with preparation of testing plans.

C. Pipe system cleaning: flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 23 piping Sections. Sub-Contractor performing HVAC&R work shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include but not limited to the following:

1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
2. Description of equipment for flushing operations.
3. Minimum flushing water velocity.
4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.

D. Refrigeration System Testing: The Contractor shall provide technicians, instrumentation, tools, and equipment to test performance of chillers, cooling towers, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

E. HVAC&R Distribution System Testing: The Contractor shall provide technicians, instrumentation, tools, and equipment to test performance of air, steam, and hydronic distribution systems; special exhaust and other distribution systems, including HVAC&R terminal equipment and unitary equipment.

F. Vibration and Sound Tests: The Contractor shall provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

G. Vibration Analysis and Sound Level Testing: Sub-Contractor to prepare a vibration analysis and sound level testing plan for identified rotating equipment. The Contractor to coordinate witnessing of testing with CxA.

H. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The equipment and systems shall be evaluated shall include, but not limited to:

1. HVAC systems
2. Boilers
3. Building Automation System
4. Ductwork and accessories
5. Heating Hot Water System
6. Testing, Adjusting and Balancing
7. Ventilating Fans
8. Monitoring Base Commissioning System

3.8 SEASONAL TESTING

A. Refer to DDC General Conditions for requirements for seasonal testing procedures.

3.9 OPERATION AND MAINTENANCE MANUALS

A. The Operation and Maintenance Manuals shall conform to Contract Document requirements.

B. Refer to the DDC General Conditions for the Contractor and CxA's role in the Operation and Maintenance Manual contribution, review and approval process.

C. An updated as-built version of the control drawings and sequences of operation shall be included in the final controls O&M manual submittal.

3.10 CITY OF NEW YORK'S SERVICE PERSONNEL ORIENTATION

A. Refer to the DDC General Conditions for requirements pertaining to instruction.

B. The Contractor shall cause the respective Sub-Contractor to have the following instruction responsibilities:

1. Provide the CxA with an instruction plan two weeks before the planned instruction.
2. Provide the City of New York service personnel with comprehensive orientation and instruction in the understanding of the systems and the operation and service of each piece of HVAC equipment including, but not limited to, all HVAC equipment (ex. pumps, heat exchangers, chillers, heat rejection equipment, air conditioning units, air handling units, fans, terminal units, controls and water treatment systems, etc.)
3. Instruction shall normally start with classroom sessions followed by hands-on instruction on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installer or manufacturer's representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.
6. Sub-Contractor shall attend instruction sessions other than their respective instruction sessions, as requested, to discuss the interaction of various systems as it relates to the equipment being covered in the instruction session.
7. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference. Instruction shall include but not limited to:
   a. Use of the printed installation, operation and service instruction material included in the O&M manuals.
   b. Include a review of the written O&M instructions emphasizing safe and proper operating requirements, preventative maintenance, special tools needed and spare parts inventory suggestions. The instruction shall include start-up, operation in all modes possible, shut-down, seasonal changeover and any emergency procedures.
   c. Discussion of relevant health and safety issues and concerns.

d. Discussion of warranties and guarantees.

e. Common troubleshooting problems and solutions.

f. Explanatory information included in the O&M manuals and the location of all plans and manuals in the facility.

g. Discussion of any peculiarities of equipment installation or operation.

h. The format and instruction agenda in The HVAC Commissioning Process, ASHRAE Guideline 1-2007, is recommended.

8. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance for all pieces of equipment.

9. Fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.

10. Instruction shall occur after functional testing is complete, unless approved otherwise by the Commissioner.

C. Control System Work: The Contractor shall have the following instruction responsibilities:

1. Provide the CxA and the Commissioner with an instruction plan four weeks before the planned instruction.

2. Provide designated City of New York service personnel instruction on the control system in this facility. The intent is to clearly and completely instruct the City of New York on all the capabilities of the control system.

3. Instruction manuals: The standard operating manual for the control system and any special instruction manuals will be provided for each employee, with three extra copies left for the O&M manuals. In addition, copies of the control system technical manual will be demonstrated during instruction and three copies submitted with the O&M manuals. Manuals shall include detailed description of the subject matter for each session. The manuals will cover all control sequences and have a definitions section that fully describes all relevant words used in the manuals and in all software displays. Manuals will be approved by the CxA. Copies of audiovisuals shall be delivered to the City of New York.

4. The instruction sessions will be tailored to the needs and skill-level of the instructees.

5. The instructors will be knowledgeable on the system and its use in buildings. For the on-site sessions, the most qualified instructor(s) will be used. The Commissioner shall approve the instructor prior to scheduling the instruction.

6. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.

7. Sub-Contractor shall attend sessions other than the controls instruction, as requested, to discuss the interaction of the controls system as it relates to the equipment being discussed.

8. Three (3) instruction sessions shall be provided:

a. Instruction Session I, Control System: The first instruction session shall consist of 8 hours of actual instruction. This instruction may be held on-site or in the supplier's facility. If held off-site, the instruction may occur prior to final completion of the system installation. Upon completion, each employee, using appropriate documentation, should be able to perform elementary operations and describe general hardware architecture and functionality of the system.

b. Instruction Session II, Building Systems: The second session shall be held on-site for a period of 8 hours of actual hands-on instruction after the completion of system commissioning. The session shall include instruction on:

1) Specific hardware configuration of installed systems in this building and specific instruction for operating the installed system, including HVAC systems, lighting controls and any interface with security and communication systems.

2) Security levels, alarms, system start-up, shut-down, power outage and restart routines, changing set points and alarms and other typical changed parameters, overrides, freeze protection, manual operation of equipment, optional control strategies that can be considered, energy savings strategies and set points that if changed will adversely affect energy consumption, energy accounting, procedures for obtaining vendor assistance, etc.

3) All trending and monitoring features (values, change of state, totalization, etc.), including setting up, executing, downloading, viewing both tabular and graphically and printing trends. Employees will actually set-up trends in the presence of the instructor.

4) Every display screen shall be completely discussed, allowing time for questions.

5) Use of keypad or plug-in laptop computer at the zone level.

6) Use of remote access to the system via phone lines or networks.

7) Setting up and changing an air terminal unit controller.

8) Graphics generation.

9) Point database entry and modifications.

10) Understanding of field control panel operating programming (when applicable)

c. Instruction Session III, Operational Q&A: The third instruction session shall be conducted on-site six months after occupancy and consist of 8 hours of instruction. The session will be structured to address specific topics that employees need to discuss and to answer questions concerning operation of the system.

D. Test, Adjust and Balance Work: The Contractor shall have the following instruction responsibilities:

1. Meet with facility staff after completion of Test, Adjust and Balance work and instruct them on the following:

a. Review the final Test, Adjust and Balance report, explaining the layout and meanings of each data type.

b. Discuss any outstanding deficient items in control, ducting or design that may affect the proper delivery of air or water.

c. Identify and discuss any terminal units, duct runs, diffusers, coils, fans and pumps that are not meeting their design capacity.

d. Discuss any temporary settings for any areas that are not finished, and plans to finish the areas.

e. Other salient information that may be useful for facility operations, relative to Test, Adjust and Balance work.

END OF SECTION 23 08 00

SECTION 230900
Instrumentation and Control for HVAC

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. This Section includes control equipment and installation for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-furnished controls.

B. See Section 230993 Sequences of Operation for requirements that relate to this section.

C. Related Work: The following related items are specified in other sections of the specifications:

1. Section 23 08 00 – Commissioning of HVAC
2. Section 23 05 00 – Common Work Results for HVAC
3. Section 23 05 93 – Testing for HVAC
4. Section 26 05 00 – Common Work Results for Electrical
5. Section 26 05 19 – Low Voltage Electrical Power Conductors and Cables
6. Section 26 05 29 – Hangers and Supports for Electrical Systems
7. Section 26 05 33 – Raceway and Boxes for Electrical Systems
8. Section 26 05 53 – Identification for Electrical Systems
9. Section 26 27 26 – Wiring Devices

1.3. DEFINITIONS

A. DDC: Direct digital controls

B. IP: Internet Protocol

C. I/O: Input/Output

D. LAN: Local area network.

E. MS/TP: Master-slave/token-passing. Refer to AHSRAE standard 135-2010

F. TCP: Transfer Control Protocol

G. Scope Terminology

1. Mount = securely fasten or pipe
2. Install = mount and wire
3. Wire = wire only

1.4. SYSTEM DESCRIPTION

A. Furnish and install a networked system of HVAC controls. Incorporate direct digital control (DDC) for central plant equipment, building ventilation equipment, supplemental heating and cooling equipment, unit heaters and terminal units.

B. Provide networking to new direct digital controls equipment using communication standards. System shall be capable of building automation and control networks communication according to ASHRAE standard ANSI/ASHRAE 135-2014 or later for interoperability with smart equipment and for the main IP communication trunk to the BAS Server. The system shall not be limited to only standard protocols, but shall also be able to integrate to a wide variety of third-party devices and applications via drivers and gateways.

C. Provide standalone controls where called for on the drawings or sequences.

1.5. WORK INCLUDED

A. The installation of the control system shall be performed under the direct supervision of the controls manufacturer with the shop drawings, flow diagrams, bill of materials, component designation, or identification number and sequence of operation all bearing the name of the manufacturer.

B. Furnish a complete distributed direct digital control system in accordance with this specification section. This includes all system controllers, logic controllers, and all input/output devices. Items of work included are as follows:

1. Provide a submittal that meets the requirements below for approval.
2. Coordinate installation schedule with the mechanical subcontractor.
3. Provide installation of all panels and devices unless otherwise stated.
4. Coordinate with Electrical Subcontractor for power to be provided to BMS panels and control devices if required voltage above 24 V.
5. Provide all low voltage control wiring and terminations for the direct digital controls system.
6. Provide miscellaneous control wiring for HVAC and related systems regardless of voltage.
7. Provide engineering and technician labor to program and commission software for each system and operator interface. Submit commissioning reports for approval.
8. Participate in commissioning for all equipment that is integrated into the BAS (Refer to Commissioning sections of the equipment or systems in other parts of this specification.)
9. Provide testing, demonstration and instruction as specified in this section.

1.6. SYSTEM PERFORMANCE

A. Comply with the following performance requirements:

1. Graphic Display: Display graphic with minimum 20 dynamic points with current data within 5 seconds.
2. Graphic Refresh: Update graphic with minimum 20 dynamic points with current data within 5 seconds.
3. Object Command: Reaction time of less than 5 seconds between operator command of a binary object and device reaction.
4. Object Scan: Transmit change of state and change of analog values to control units or workstation within 5 seconds.
5. Alarm Response Time: Annunciate alarm at workstation within 2 seconds. Multiple workstations must receive alarms within five seconds of each other.
6. Program Execution Frequency: Programmable controllers shall execute direct digital controls PI control loops, and scan and update process values and outputs at least once per second.
7. Reporting Accuracy and Stability of Control: Report values and maintain measured variables within tolerances as follows:

a. Space Temperature: Plus or minus 1 deg F.
b. Ducted Air Temperature: Plus or minus 1 deg F.
c. Outside Air Temperature: Plus or minus 2 deg F.
d. Dew Point Temperature: Plus or minus 3 deg F.
e. Temperature Differential: Plus or minus 0.25 deg F.
f. Relative Humidity: Plus or minus 2 percent.
g. Airflow (Pressurized Spaces): Plus or minus 3 percent of full scale.
h. Airflow (Measuring Stations): Plus or minus 5 percent of full scale.
i. Airflow (Terminal): Plus or minus 10 percent of full scale.
j. Air Pressure (Space): Plus or minus 0.01-inch wg.
k. Air Pressure (Ducts): Plus or minus 0.1-inch wg.
l. Carbon Monoxide: Plus or minus 5 percent of reading.
m. Carbon Dioxide: Plus or minus 50 ppm.
n. Electrical: Plus or minus 5 percent of reading.

1.7. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Provide submittals for fast track items that need to be approved and released to meet the schedule of the project. Provide submissions for the following items separately:

1. Valve schedule and cut sheets
2. Factory mounting and wiring diagrams and cut sheets
3. Thermostat and/or Temperature sensor locations

C. Provide a complete submittal with all controls system information for approval before construction starts. Include the following:

1. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.
2. Wiring Diagrams: Power, signal, and control wiring.
3. Details of control panel faces, including sizes, controls, instruments, and labeling.
4. Schedule of dampers and actuators including size, leakage, and flow characteristics.
5. If dampers are furnished by other, submit a damper actuator schedule coordinating actuator sizes with the damper schedule.
6. Schedule of valves including leakage and flow characteristics.
7. Written description of the Sequence of Operations.
8. Network riser diagram showing wiring types, network protocols, locations of floor penetrations and number of control panels. Label control panels with network addresses and device instance numbers. Show all routers, switches, hubs and repeaters.
9. Point list for each system controller including both inputs and outputs (I/O), point numbers, controlled device associated with each I/O point, and location of I/O device.
10. Starter and variable frequency drive wiring details of all automatically controlled motors.
11. Reduced size floor plan drawings showing locations of control panels, thermostats/temperature and air quality sensors, ductwork, piping sensors, and any devices mounted in occupied space.

D. Product Data: Include manufacturer's technical literature for each control device indicated, labeled with setting or adjustable range of control. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product

indicated. Submit a write-up of the application software that will be used on the operator workstation including revision level, functionality and software applications required to meet the specifications.

E. Submit PICS statements for all direct digital controllers and interfaces.

F. Submit a description of the application software that will be used on the operator workstation including revision level, functionality and software applications required to meet the specifications.

G. Wiring Diagrams: Detail the wiring of the control devices and the panels. Show point-to-point wiring from field devices to the control panel. Show point-to-point wiring of hardwired interlocks. Show a ladder diagram or schematic of wiring internal to the panels, including numbered terminals. Clearly designate wiring that is done at a factory, at a panel shop or in the field.

H. Submit blank field check-out and commissioning test reports, customized for each panel or system, which will be filled out by the technician during start-up.

I. Submit sample graphics for approval before starting system commissioning.

J. Variance letter: Submit a letter detailing each item in the submission that varies from the contract specification or sequence of operation in any way.

K. After the BAS system is approved for construction, submit sample operator workstation graphics for typical systems for approval and/or meet at BMS vendor's branch office to review and approve system graphics. Print and submit the graphics that the operator will use to view the systems, change setpoints, modify parameters and issue manual commands. Programming shall not commence until typical graphics are approved.

1.8. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Codes

1. Perform all wiring in accordance with Electrical Sections, NEC, and 2014 New York City building code requirements.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to Commissioner, and marked for intended use.
3. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilation Systems."
4. Comply with ASHRAE 135-2014
5. All equipment shall be UL listed and approved and shall meet with all applicable NFPA standards, including UL 916 - PAZX Energy Management Systems,
6. Provide UL 864 – UUKL Smoke Control, where controllers and networks are used for that purpose.
   a. Provide written approvals and certifications after installation has been completed.
7. All electronic equipment shall conform to the requirements of FCC Regulation, Part 15, Governing Radio Frequency Electromagnetic Interference and be so labeled.
8. The manufacturer of the building automation system shall provide documentation supporting compliance with ISO-9002 (Model for Quality Assurance in Production, Installation, and Servicing) and ISO-140001 (The application of well-accepted business management principles to the environment). The intent of this specification requirement is to ensure that the products from the manufacturer are delivered through a Quality System and Framework that will assure consistency in the products delivered for this project.

C. Qualifications

1. The Building Management System (BMS) contractor shall have full service facility within proximity of the project that is staffed with engineers trained and certified by the manufacturer in the configuration, programming and service of the automation system. The contractor's technicians shall be fully capable of providing instructions and routine emergency maintenance on all system components.

D. Final determination of compliance with these specifications shall rest solely with the Commissioner.

E. For any BAS system and equipment submitted for approval, the BAS installer shall state what, if any, specific points of system operation differ from these specifications.

1.9. DELIVERY, STORAGE, AND HANDLING

A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to unit manufacturer.

1.10. COORDINATION

A. Coordinate location of thermostats, temperature sensors, humidistats, panels, and other exposed control components with plans and room details before installation.

B. Coordinate equipment with Section 28 31 11 "Digital, Addressable Fire Alarm" to achieve compatibility with equipment that interfaces with that system.

C. Coordinate power for control units and operator workstation with electrical subcontractor.

D. Coordinate equipment with provider of starters and drives to achieve compatibility with motor starter control coils and VFD control wiring.

E. Coordinate scheduling with the mechanical contractor. Submit a schedule for approval based upon the installation schedule of the mechanical equipment.

F. Integrate to equipment as called for in the sequence of operations.

1.11. WARRANTY

A. Failure of items that are critical for system operation shall be provided within 4 hours of notification from the Commissioner during normal building occupied hours.

B. This warranty shall be 12-months from date of Substantial Completion and apply equally to both hardware and software.

PART 2 - PRODUCTS

2.1. BAS NETWORK

A. All networked control products provided for this project shall be comprised of an industry standard open protocol internetwork. Communication involving control components (i.e. all types of controllers and operator interfaces) shall conform to ASHRAE 135-2014 standard. Networks and protocols proprietary to one company or distributed by one company are prohibited.

B. Access to system data shall not be restricted by the hardware configuration of the building management system. The hardware configuration of the BMS network shall be totally transparent to the user when accessing data or developing control programs.

1. Software applications, features, and functionality, including administrative configurations, shall not be separated into several network control engines working together.

C. The operator interface shall be served up by a Web Server imbedded in a controller field panel.

D. The network architecture shall consist of three levels of networks:

1. Subcontractor furnished network with 1 connection the Field Panel Web Server. All operator interfaces shall be on the City of New York's network.
2. The Automation level network shall be for Building Automation and Control Networks /IP over Ethernet. It shall network the Automation Server, Operator workstations, and BC level controllers. Provide network media converters, routers and switches as necessary for a complete network.
3. The Floor level network shall be for Building Automation and Control Networks over MS/TP. It shall network to all of the direct digital control equipment on a floor or in a system and network to a router that connects to the Automaton level BAS backbone. Controllers for the central plant and large infrastructure air handlers or where applicable shall reside on the backbone IP network.

E. The primary backbone network between the building level controllers shall be based upon IP. Ethernet Network switches shall be strategically placed through the building to cover several floors or several mechanical rooms that are within 300 ft wiring-feet of each other.

F. Application specific controllers for smaller single zone, supplemental or special systems can reside on the IP network or on a subnetwork.

G. Floor level controllers, package AC units, auxiliary equipment, VFDs, meters shall reside on one of the subnetworks above.

H. Use fiber optic cabling for all Ethernet runs longer than 300 ft.

I. Controllers and software shall be listed at the time of installation.

J. Provide all communication media, collectors, connectors, repeaters, bridges, switches, and routers necessary for the internetwork.

K. The system shall meet peer-to-peer communication services such that the values in any one BC or AAC level controller can be read or changed from all other controllers with the need for intermediary devices.

L. The software shall provide transparent transfer of all data, control programs, schedules, trends, and alarms from any one controller through the internetwork to any other controller, regardless of subnetwork routers.

M. Systems that use Point-to-Point (PTP) between controllers, gateways, bridges or networks that are not peer-to-peer are not allowed.

N. Remote Communications: Provide a TCP/IP compatible communication port for connection to the City of New York's network for remote communications. Provide coordination with the Commissioner for addressing and router configuration on both ends of the remote network.

O. Where a smoke control application is required, provide UUKL listed network switches, and NFPA approved cabling, enclosures and installation methods.

P. The system shall be installed with a 10% spare capacity on each subnetwork for the addition of future controllers.

2.2. DISTRIBUTED CONTROL REQUIREMENTS

A. The loss of any one direct digital control shall not affect the operation of other HVAC systems, only for the points connected to the direct digital controller.

B. The system shall be scalable in nature and shall permit expansion of both capacity and functionality through the addition of sensors, actuators, direct digital controllers, and operator devices.

C. System architectural design shall eliminate dependence upon any single device for alarm reporting and control execution. Each direct digital control shall operate independently by performing its own specified control, alarm management, operator I/O, and data collection. The failure of any single component or network connection shall not interrupt the execution of any control strategy, reporting, alarming and trending function, or any function at any operator interface device.

D. Direct digital controls shall be able to access any data from, or send control commands and alarm reports directly to, any other direct digital control on the network without dependence upon a central processing device. Direct digital controls Controllers shall also be able to send alarms to multiple operator workstations without dependence upon a central or intermediate processing device.

E. The direct digital controls control panel shall be mounted in the same mechanical room as the equipment being controlled, or an adjacent utility room.

F. Multiple systems can be programmed on the same controller as long as they are in the same room. Systems on separate floors shall have separate controllers.

G. Remote sensors shall be wired to the control panel of the equipment it is controlling, not across the network.

H. Signals to remote motor control centers shall be hard wired to the control panel, not across the network.

I. Terminal units shall each have their own controller. Only exceptions to sharing a controller are:

1. Groups of reheat coils
2. Groups of exhaust fans

2.3. WEB BASED OPERATOR INTERFACE SOFTWARE

A. Provide a Web-based graphical interface that allows users to access the BAS data via the Internet, extranet, or Intranet (TCP/IP). The Web-based graphical interface shall use HTML-based pages to send and receive data directly from a network of BAS Field Panels to a Web browser.

B. The web server shall support browser access.

C. Cookies are allowed for compatibility

D. The web server shall support access via handheld, web enabled devices through apps.

E. If a field panel cannot serve up the graphics, then dedicated PC-based Web servers or separate "Web Appliance" devices may be allowed for this purpose.

F. The Web server shall allow monitor and control of data in any field panels networked together on the same automation level TCP/IP Ethernet network.

1. The Web server must provide a common alarm display that shows alarms in all field panels on the network.

2. The Web server must be able to provide common graphics that simultaneously display the current value and status for points residing in multiple field panels.
3. The Web server must be able to display daily mode schedules for points from multiple field panels simultaneously.

G. Access to the Web interface shall be username and password protected. A user's rights and privileges to database objects within the BAS shall be configurable on a per-user basis. An option shall exist to only allow users "read" access to BAS objects via the Web browser. Operator sessions shall be configurable for "auto-logoff" after a designated period of user inactivity.

1. A graphic selector list shall allow or limit the graphic displays that a user account has access to.
2. The embedded Web server shall support an unlimited number of user accounts. A minimum of five concurrent user sessions shall be available for simultaneous operator access to the Web server's pages.
3. The embedded Web server shall be compatible with and allow coexistence within standard IT security policies and tools (e.g., Firewall protection).

H. The embedded Web server shall provide the following functionality to users via Web browser, based on their access and privilege rights:

1. Point Navigation – Provide a screen that allows users to see all of the points that are active in the system. The points shall include hardwired, software, schedules, trends, alarms and network setup.
   a. The point navigation shall display the point name, descriptor, command priority, alarm status, and current value.
   b. The user shall be able to run and print a pre-configured point log report through a web interface client that shows the point name, descriptor, command priority, alarm status, and current value.
   c. The interface and report shall allow selection filter such that the operator can select or deselect the types of point that are visible.

2. Alarm Display –displays current BAS alarms to which the user has access will be displayed. Users will be able to acknowledge active alarms, erase resolved alarms, and directly link to the Point Commanding feature.
   a. The alarm display must provide a filter that displays all alarms whether acknowledged or not.
   b. The alarm display must provide a filter that displays only alarms that have not yet been acknowledged.
   c. The alarm display must provide a persistent indication whenever there is one or more unacknowledged alarm in any connected field panel.

3. Point details – users will have access to point detail information including operational status, operational priority, physical address, and alarm limits, for point objects to which they have access rights.
4. Point Commanding – users will be able to override and command points they have access to via the Web browser interface.
5. Scheduling – allows operators, depending on their current user privileges, to override schedules selected by date, and to modify the properties of a selected schedule.
   a. The scheduler display must be able to represent facility mode schedules in a graphical format.
6. Trend Data Report – allows users to run and print a pre-configured trend data report for historical data reporting, including a representation of the alarm status of the each point for each Trend sample. The report shall allow selection of individual points or wildcard selection of points.
   a. Trend data shall be exportable to a data file, such as .csv or other comparable.

7. Network navigation - Provide a screen that allows users to navigate to the panels and terminal units via the network architecture.

I. Graphic Displays – The BAS subcontractor shall provide a graphical display for each system that is controlled.

8. Display of system graphics shall be available for viewing over the Web browser. Graphic displays will automatically refresh with the latest change of values. Users shall have the ability to command and override points directly from the graphic display as determined by their user accounts rights. The Graphic Display shall accommodate a minimum of 10 customized graphics.
9. The Graphic Display shall accommodate the terminal unit graphics related to the Application Specific Controllers tied in to the Field Panels within the system.

J. The web server shall be able to send SMTP text messages to notify users of alarm status. The City of New York shall provide a mail server and a connection port. SSL shall not be required.

K. The operator shall be able to add modify and delete controller database program, including points, schedules, alarms, and trends.

1. The operator shall be able to edit the custom program in the field panel that executes the sequences of operations, control loops and logic for the systems controlled.
2. The operator shall be able to add terminal unit controllers that reside on field panel subnetworks.

L. Internet connections, ISP services, as well as necessary firewalls or proxy servers shall be provided by the City of New York as required to support the Web access feature.

2.4. ELECTRONIC DOCUMENTATION

A. Provide software applications and files to view documentation through the GUI.

B. Provide all controls cut sheets in PDF format. Make them available to any user accessing the system over the Internet.

C. Provide a text version of the sequence of operation. Make the written sequence available from the graphic that represents each system. The sequence shall pop up in a printable format such as HTML or PDF.

2.5. CONTROLLER SOFTWARE (i.e. Building Controller software, Direct Digital Controls software, Field Panel software)

A. Provide a full capability user license to the City of New York for the operator to be able to see, modify, create, upload, download and save control programs to the direct digital controls.

B. The software program shall be provided as an integral part of direct digital controls and shall not be dependent upon any higher level computer or another controller for execution.

C. The software application shall be accessible from a PC, but shall use all of its own services and data files.

D. The software shall be provided with an interactive HELP function to assist operators with syntax, abbreviations, commands and saving programs.

E. Point naming and communication format:

1. All points, panels, and programs shall be identified by a 30-character name. All points shall also be name " Location_comp_subcomp_point type for example: S101_HV1_DAT, S103_VRF_FCU1-

5_ZoneTemp, S101_ERV1_Zone1_NOx, etc. The same names shall be displayed at both Building Controller and the Operator Interface.

2. All digital points shall have a consistent, user-defined, two-state status indication with 8 characters minimum (e.g., Summer, Enabled, Disabled, Abnormal).
3. The Building Controller Software shall be capable of building automation and control network communications. The Building shall have demonstrated interoperability during at least one BTL Interoperability Workshop, have demonstrated compliance to BTL through BTL listing and shall substantially conform to Building Controller device profile as specified in ANSI/ASHRAE 135-2004, Annex L.

F. System Security

1. User access shall be secured using individual security passwords and user names.
2. Passwords shall restrict the user to the objects, applications, and system functions as assigned by the system manager.
3. Building Controllers shall be able to assign a minimum of 50 passwords access and control priorities to each point individually. The logon password (at any Operator Interface or portable operator terminal) shall enable the operator to monitor, adjust and control only the points that the operator is authorized for. All other points shall not be displayed at the Operator Interface or portable terminal. Passwords and priorities for every point shall be fully programmable and adjustable.
4. User Log On/Log Off attempts shall be recorded.
5. The system shall protect itself from unauthorized use by automatically logging off following the last keystroke. The delay time shall be user-definable.
6. Use of workstation resident security as the only means of access control is not an acceptable alternative to resident system security in the direct digital controls software.

G. User Defined Control Applications: The applications software shall program direct digital controls routines to meet the sequences of operations.

1. Building Controllers shall have the ability to perform energy management routines including but not limited to time of day scheduling, calendar-based scheduling, holiday scheduling, temporary schedule overrides, start stop time optimization, automatic daylight savings time switch over, night setback control, enthalpy switch over, peak demand limiting, temperature-compensated duty cycling, heating/cooling interlock, supply temperature reset, priority load shedding, and power failure restart.
2. The Building Controllers shall have the ability to perform the following pre tested control algorithms:
   a. Two position with differential control and time delays
   b. Floating control
   c. Proportional control
   d. Proportional plus integral control
   e. Proportional, integral, plus derivative control
   f. Automatic tuning of control loops
   g. Manual tuning of control loops
   h. Model-free adaptive control
3. Controllers shall be able to execute custom, job-specific processes defined by the user, to automatically perform calculations and special control routines.
4. Each controller shall support plain language text comment lines in the operating program to allow for quick troubleshooting, documentation, and historical summaries of program development.

H. Peer-to-peer access to other direct digital controls

1. It shall be possible to use any actual or virtual point data or status, any system calculated data, a result from any process, or any user-defined constant in any controller in the system.
2. Any process shall be able to issue commands to points in any and all other controllers in the system.
3. Processes shall be able to generate operator messages and advisories to other operator I/O devices. A process shall be able to directly send a message to a specified device or cause the execution of an advanced annunciation feature, such as:
   a. Generate a report
   b. Annunciate an alarm
   c. Issue a text message or email

I. Alarm Management

1. Alarm management shall be provided within the controller software to monitor and direct alarm information to operator devices.
2. Each Building Controller shall perform distributed, independent alarm analysis, minimize network traffic and prevent alarms from being lost. At no time shall the Building Controllers ability to report alarms be affected by either operator or activity at a PC workstation, local I/O device or communications with other panels on the network.
3. Conditional alarming shall allow generation of alarms based upon user defined multiple criteria.
4. An Alarm "shelving" feature shall be provided to disable alarms during testing. (Pull the Plug, etc.).
5. Binary Alarms. Each binary alarm object shall be set to alarm based on the operator-specified state. Provide the capability to automatically and manually disable alarming.
6. Analog Alarms. Each analog alarm object shall have both high and low alarm limits. Alarming must be able to be automatically and manually disabled.
7. All alarm shall include the point's user-defined language description and the time and date of occurrence.
8. Alarm reports and messages shall be routed to user-defined list of operator workstations, or other devices based on time and other conditions. An alarm shall be able to start programs, print reports, be logged in the event log, generate custom messages, and display graphics.
9. The user shall be able to add a 200-character alarm message to each alarm point to more fully describe the alarm condition or direct operator response. Each Building Controller shall be capable of storing a library of at least 50 alarm messages. Each message may be assigned to any number of points in the Controller.
10. Operator-selected alarms shall be capable of initiating a trigger to an advanced annunciation, such as text, email, etc.
11. An alarm history log shall report the start of the alarm condition, acknowledgement by a user and return of the alarm to normal condition.

J. Scheduling:

1. Provide a comprehensive menu driven program to automatically start and stop designated multiple objects or events in the system according to a stored time.
2. Schedules shall reside in the building controller and shall not rely on external processing or network.
3. It shall be possible to define a group of objects as a custom event (i.e., meeting, athletic activity, etc.). Events can then be scheduled to operate all necessary equipment automatically.
4. For points assigned to one common load group, it shall be possible to assign variable time delays between each successive start and/or stop within that group.
5. The operator shall be able to define the following information:
   a. Time, day
   b. Commands such as on, off, auto, etc.

c. Time delays between successive commands.
d. There shall be provisions for manual overriding of each schedule by an authorized operator.

6. It shall be possible to schedule calendar-based events up to one year in advance based on the following:
   a. Weekly Schedule. Provide separate schedules for each day of the week. Each of these schedules should include the capability for start, stop, optimal start, optimal stop, and night economizer. When a group of objects are scheduled together as an Event, provide the capability to adjust the start and stop times for each member.
   b. Exception Schedules. Provide the ability for the operator to designate any day of the year as an exception schedule. Exception schedules may be defined up to a year in advance. Once an exception schedule is executed, it will be discarded and replaced by the standard schedule for that day of the week.

K. Peak Demand Limiting (PDL):

1. The Peak Demand Limiting (PDL) program shall limit the consumption of electricity to prevent electrical peak demand charges
2. PDL shall continuously track the amount of electricity being consumed, by monitoring one or more electrical kilowatt-hour/demand meters. These meters may measure the electrical consumption (kWh), electrical demand (kW), or both.
3. PDL shall sample the meter data to continuously forecast the demand likely to be used during successive time intervals.
4. If the PDL forecasted demand indicates that electricity usage is likely to exceed a user preset maximum allowable level, then PDL shall automatically shed electrical loads.
5. Once the demand peak has passed, loads that have been shed shall be restored and returned to normal control.
6. Any PDL capabilities shall be coordinated with DSNY and approved prior to programming.

L. Temperature-compensated duty cycling

1. User defined conditions shall be able to initiate a Duty Cycle Control Program.
2. The Duty Cycle Control Program (DCCP) shall be configured to periodically stop and start loads according to various patterns.
3. The loads shall be cycled such that there is a net reduction in both the electrical demands and the energy consumed.

M. Automatic Daylight Savings Time Switchover. The system shall provide automatic time adjustment for switching to/from Daylight Savings Time.

N. Night or Unoccupied setback control. The system shall provide the ability to automatically adjust set points for night or unoccupied control.

O. Enthalpy switchover (economizer). The Building Controller Software (BCS) shall control the position of the air handler relief, return, and outside air dampers. If the outside air dry bulb temperature falls below changeover setpoint the BCS will modulate the dampers to provide 100 percent outside air. The user will be able to quickly change over to an economizer system based on dry bulb temperature and will be able to override the economizer cycle and return to minimum outside air operation at any time.

P. Control Loop Algorithm

1. Provide a PID (proportional-integral-derivative) closed-loop control algorithm with direct or reverse action and anti-windup. The algorithm shall calculate a time-varying analog value that is used to

position an output or stage a series of outputs. The controlled variable, setpoint, and weighting parameters shall be accessible from the operator workstation.

Q. Adaptive Loop Tuning

1. Building Controllers shall also provide high resolution sampling capability for verification of direct digital control loop performance. Documented evidence of tuned control loop performance shall be provided on a monthly, seasonal, quarterly, annual period.
2. For Model-Free Adaptive Control loops, evidence of tuned control loop performance shall be provided via graphical plots or trended data logs. Graphical plots shall minimally include depictions of setpoint, process variable (output), and control variable (e.g., temperature). Other parameters that may influence loop control shall also be included in the plot (e.g., fan on/off, mixed-air temp).
3. For PID control loops, operator-initiated automatic and manual loop tuning algorithms shall be provided for all operator-selected PID control loops. Evidence of tuned control loop performance shall be provided via graphical plots or trended data logs for all loops.
   a. In automatic mode, the controller shall perform a step response test with a minimum one-second resolution, evaluate the trend data, calculate the new PID gains and input these values into the selected LOOP statement.
   b. Loop tuning shall be capable of being initiated either locally at the Building Controller, from a network workstation or remotely using dial-in modems. For all loop tuning functions, access shall be limited to authorized personnel through password protection.

R. Logic programming: Provide a software routine that can build ladder logic to control using many conditional statements.

1. The logic programming syntax shall be able to combine ladder logic with other software features, such as combining status, scheduling, PDL and alarm conditions into one conditional decision.
2. Logic programming shall be able to reference conditions in any other controller in the system.

S. Staggered Start:

1. This application shall prevent all controlled equipment from simultaneously restarting after a power outage. The order in which equipment (or groups of equipment) is started, along with the time delay between starts, shall be user definable in an application and shall not require written scripts or ladder logic.
2. Upon the resumption of power, each Building Controller shall analyze the status of all controlled equipment, compare it with normal occupancy scheduling and turn equipment on or off as necessary to resume normal operations.

T. Totalization Features:

1. Run-Time Totalization. Building Controllers shall automatically accumulate and store run-time hours for all digital input and output points. A high runtime alarm shall be assigned, if required, by the operator.
2. Consumption totalization. Building Controllers shall automatically sample, calculate and store consumption totals on a daily, weekly or monthly basis for all analog and digital pulse input type points.
3. Event totalization. Building Controllers shall have the ability to count events such as the number of times a pump or fan system is cycled on and off. Event totalization shall be performed on a daily, weekly or monthly basis for all points. The event totalization feature shall be able to store the records associated with events before reset.

U. Data Collection:

1. A variety of historical data collection utilities shall be provided to manually or automatically sample, store, and display system data for all points.
2. Building Controllers shall store point history data for selected analog and digital inputs and outputs:
3. Any point, physical or calculated may be designated for trending. Any point, regardless of physical location in the network, may be collected and stored in each Building Controllers point group.
4. Two methods of collection shall be allowed: either by up to four pre-defined time intervals or upon a pre-defined change of value. Sample intervals of 1 minute to 7 days shall be provided.
5. Each Building Controller shall have a dedicated RAM-based buffer for trend data and shall be capable of storing a minimum of 10,000 data samples.
6. Trend data shall be stored at the Building Controllers and uploaded to the workstation when retrieval is desired. Uploads shall occur based upon either user-defined interval, manual command or when the trend buffers are full. All trend data shall be available for use in third-party personal computer applications.

2.6. BUILDING CONTROLLERS (B-BC)

A. Provide all necessary hardware for a complete operating system as required. The Building Controller shall be able to operate as a standalone panel and shall not be dependent upon any higher level computer or another controller for operation.

B. This controller shall have the BTL listing and meet the BACnet device profile of a Building Controller (B-BC).

1. The Building Level Controller shall have the capability to be the BACnet/IP Broadcast Management Device (BBMD) and support foreign devices.
2. The Building Level Controller shall have the capability to act as a BACnet router between MS/TP subnetworks and BACnet/IP.

C. This level of controller shall be used for the following types of systems:

1. VRF systems
2. Heating systems
3. Pumping systems
4. ERV units
5. H & V units
6. Rooftop units
7. Exhaust Fans
8. Solar hot water heating
9. Generator
10. Unit heaters
11. Systems with over 24 input/output points

D. Computing power and memory minimum:

1. A 32-bit, stand-alone, multi-tasking, multi-user, real-time 100MHz digital control microprocessor module.
2. Inputs shall be 16-bit minimum analog-to-digital resolution
3. Outputs shall be 10-bit minimum digital-to-analog resolution
4. Memory module (24 Megabyte, minimum) to accommodate all Primary Control Panel software requirements, including but not limited to, its own operating system and databases (see Controllers

Software section), including control processes, energy management applications, alarm management applications, historical/trend data for points specified, maintenance support applications, custom processes, operator I/O, dial-up communications.

5. Real time clock and battery
6. Data collection/ Data Trend module sized for 10,000 data samples.
7. Flash Memory Firmware: Each Building Level Control Panel shall support firmware upgrades without the need to replace hardware.

E. Onboard or Modular hardware and connections:

1. Primary Network communication module, if needed for primary network communications.
2. Secondary Network communication module, if needed for secondary network communications.
3. RJ45 port 10/100Mbaud
4. RS485 ports for subnetworks and point expansion
5. Man to Machine Interface port (MMI)
6. USB Port

F. Input and Output Points Hardware

1. Input/output point modules as required including spare capacity.
2. Monitoring of the status of all hand-off-auto switches. An alarm shall signal at the BMS if the equipment is in hand.
3. Monitoring of all industry standard types of analog and digital inputs and outputs, without the addition of equipment to the primary control panel.
4. Local status indication for each digital input and output for constant, up-to-date verification of all point conditions without the need for an operator I/O device. Each primary control panel shall perform diagnostics on all inputs and outputs and a failure of any input or output shall be indicated both locally and at the operator workstation.
5. Graduated intensity LEDs or analog indication of value for each analog output.

G. Code compliance

1. Approvals and standards: UL916; CE; FCC
2. Provide UL864-UUKL where called for in the sequences of operations.

H. Accessories:

1. Appropriate NEMA rated metal enclosure.
2. Power supplies as required for all associated modules, sensors, actuators, etc.

I. Keypad.

1. Where called for in the sequence of operation, or on the plans, a local keypad and display shall be provided for each controller. The keypad shall be provided for interrogating and editing data. An optional system security password shall be available to prevent unauthorized use of the keypad and display.

J. The operator shall have the ability to manually override automatic or centrally executed commands at the primary control panels via local, point discrete, on-board hand/off/auto operator override switches. If on board switches are not available, provide separate control panels with HOA switches. Mount panel adjacent to primary control panel. Provide hand/off/auto switch for each digital output, including spares.

K. Each Building Level Control Panel shall continuously perform self-diagnostics on all hardware modules and network communications. The System Level Control Panel shall provide both local and remote an-

nunciation of any detected component failures, low battery conditions or repeated failure to establish communication with any system.

L. Panel setup, point definitions and sequencing diagrams shall be backed up on EEPROM memory.

M. Power loss. In the event of the loss of power, there shall be an orderly shutdown of all Building Controllers to prevent the loss of database or operating system software. Non-volatile memory shall be incorporated for all critical controller configuration data and battery backup shall be provided to support the real-time clock and all volatile memory for a minimum of 30 days.

N. Building Level control panels shall provide at least two serial data communication ports for operation of operator I/O devices such as industry standard printers, operator terminals, modems and portable laptop operator's terminals. Primary control panels shall allow temporary use of portable devices without interrupting the normal communications, operation of permanently connected modems, printers or terminals.

O. Building Level Controllers shall have the capability to serve as a gateway between Modus subnetworks and BACnet objects. Provide software, drives and programming.

P. Isolation shall be provided at all primary control panel terminations, as well as all field point terminations to suppress induced voltage transients consistent with IEEE Standards 587-1980.

Q. Spare Capacity: Provide enough inputs and outputs to handle the equipment shown to be "future" on drawings and 10% more of each point type. Provide all hardware modules, software modules, processors, power supplies, communication controllers, etc. required to ensure adding a point to the spare point location only requires the addition of the appropriate sensor/actuator and field wiring/tubing.

R. Environment.

1. Controller hardware shall be suitable for the anticipated ambient conditions.
2. Controllers used outdoors and/or in wet ambient conditions shall be mounted within waterproof enclosures and shall be rated for operation at 32°F to 120°F.
3. Controllers used in conditioned space shall be mounted in dust-proof enclosures and shall be rated for operation at -4°F to 120°F.

S. Immunity to power and noise.

1. Controller shall be able to operate at 90% to 110% of nominal voltage rating and shall perform an orderly shutdown below 80% nominal voltage.
2. Operation shall be protected against electrical noise of 5 to 120 Hz and from keyed radios up to 5 W at 1 m (3 ft).
3. Isolation shall be provided at all primary network terminations, as well as all field point terminations to suppress induced voltage transients consistent with:
   a. RF-Conducted Immunity (RFCI) per ENV 50141 (IEC 1000-4-6) at 3V.
   b. Electro Static Discharge (ESD) Immunity per EN 61000-4-2 (IEC 1000-4-2) at 8 kV air discharge, 4 kV contact.
   c. Electrical Fast Transient (EFT) per EN 61000-4-4 (IEC 1000-4-4) at 500V signal, 1 kV power.
   d. Output Circuit Transients per UL 864 (2,400V, 10A, 1.2 Joule max).
4. Isolation shall be provided at all Building Controller's AC input terminals to suppress induced voltage transients consistent with:
   a. IEEE Standard 587 1980
   b. UL 864 Supply Line Transients
   c. Voltage Sags, Surge, and Dropout per EN 61000-4-11 (EN 1000-4-11)

2.7. ADVANCED APPLICATION CONTROLLERS

A. Provide all necessary hardware for a complete operating system as required. The Advanced Application level control panel shall be able to operate as a standalone panel and shall not be dependent upon any higher level computer or another controller for operation.

B. This controller shall have the BTL listing and meet the building automation and control network device profile of an Advanced Application Controller.

C. Communication:

1. BAS Network: The Advanced Application Controller shall support the following Data Link Layers:
   a. MS/TP Master
2. Serial Communication: Temporary use of portable devices shall not interrupt the BAS communication, nor the normal operation of permanently connected printers or terminals.
   a. Provide at least one EIA-232C serial data communication port for operation of operator I/O devices such as industry standard printers, operator terminals, and portable laptop operator's terminals.
   b. A USB port shall alternatively be available to support local HMI tools connection.

D. Software

1. The software programs specified in this section shall be provided as an integral part of Advanced Application Controllers and shall not be dependent upon any higher level computer or another controller for execution.
2. Advanced Application Controllers shall have the ability to perform energy management routines including but not limited to
   a. scheduling, calendar-based scheduling, holiday scheduling, temporary schedule overrides
   b. automatic daylight savings time switch over
   c. night or unoccupied setback control
   d. economizer switch over using enthalpy, dry bulb or a combination
   e. peak demand limiting,
   f. temperature-compensated duty cycling
   g. heating/cooling interlock
   h. supply temperature reset
   i. priority load shedding
   j. power failure restart
   k. heat recovery
3. The software shall have a routine for automatic tuning of control loops
4. System Security in the Field Panel
   a. User access shall be secured using individual security passwords and user names.
   b. Passwords shall restrict the user to the objects, applications, and system functions as assigned by the system manager.
   c. The system shall protect itself from unauthorized use by automatically logging off following the last keystroke. The delay time shall be user-definable.
   d. Use of workstation resident security as the only means of access control is not an acceptable alternative to resident system security in the field panel.
5. User Defined Control Applications:
   a. Controllers shall be fully-programmable. Controllers shall execute custom, job-specific sequences to automatically perform calculations and special control routines. Factory installed

or pre-configured sequences shall only be allowed if they exactly match the sequence specified herein.

b. Programs shall combine control logic, control loop algorithms, and energy management routines
c. Each controller shall support plain language text comment lines in the operating program to allow for quick troubleshooting, documentation, and historical summaries of program development.
d. Controller shall provide a HELP function key, providing enhanced context sensitive on-line help with task oriented information from the user manual.

E. This level of controller shall be used for the following types of systems:

1. Systems with custom sequences that meet all of the criteria below:
2. No primary pumping systems
3. Secondary Pumping systems that are remote from Central Plants
4. Air handlers up to 15,000 cfm
5. Systems up to 20 input/output points
6. Room control sequences that do not fit into an ASC controller
7. BAS Network or Architecture or Sequences do not require the system to be on an IP network
8. No systems that require integration to meters, VFDs or other smart equipment
9. Integration to smart thermostats is allowed

F. Each System Level Control Panel shall, at a minimum, be provided with:

1. Appropriate NEMA rated metal enclosure.
2. A 32-bit,multi-tasking, real-time 100 MHz digital control microprocessor with plug-in, enclosed processors.
3. Each Advanced Application Controller shall have sufficient memory, a minimum of 24 megabyte, to support its own operating system and databases, including control processes, energy management applications, alarm management applications, historical/trend data for points specified, maintenance support applications, custom processes, and operator I/O.
4. Real time clock and battery
5. Data collection/ Data Trend module sized for 10,000 data samples.
6. Power supplies as required for all associated modules, sensors, actuators, etc.
7. Monitoring of all industry standard types of analog and digital inputs and outputs, without the addition of equipment to the primary control panel.
8. Local status indication for each digital input and output for constant, up-to-date verification of all point conditions without the need for an operator I/O device.
9. Each control panel shall perform diagnostics on all inputs and outputs and a failure of any input or output shall be indicated both locally and at the operator workstation.
10. Graduated intensity LEDs or analog indication of value for each analog output.

G. Power loss. In the event of the loss of power, there shall be an orderly shutdown of all controllers to prevent the loss of database or operating system software. Non-volatile memory shall be incorporated for the operating system software and firmware.

1. Controller shall be able to operate at 90% to 110% of nominal voltage rating and shall perform an orderly shutdown below 80% nominal voltage.
2. Brownout protection and power recovery circuitry protect the controller board from power fluctuations.
3. Battery backup shall be provided to support the real-time clock for 10 years

4. The program and database information stored SDRAM memory shall be battery backed for a minimum of 30 days and up to 60 days. This eliminates the need for time consuming program and database re-entry in the event of an extended power failure.

H. Database Restore: Each AAC controller shall automatically save the latest programmed database. The controller shall be able to automatically restore a lost or corrupt database without involvement from the operator.

I. Each System Level Control Panel shall continuously perform self-diagnostics on all hardware modules and network communications. The System Level Control Panel shall provide both local and remote annunciation of any detected component failures, low battery conditions or repeated failure to establish communication with any system.

J. Each Control Panel shall support firmware upgrades without the need to replace hardware.

1. The AAC level controller shall be upgradable to a BC level controller with a flash upgrade of the firmware.

K. System Level control panels shall provide at least two RS-232C serial data communication ports for operation of operator I/O devices such as operator terminals, and additional memory. Control panels shall allow temporary use of portable operator interface devices without interrupting the normal communications.

L. Immunity to noise.

1. Operation shall be protected against electrical noise of 5 to 120 Hz and from keyed radios up to 5 W at 1 m (3 ft).
2. Isolation shall be provided at all primary network terminations, as well as all field point terminations to suppress induced voltage transients consistent with:
   a. RF-Conducted Immunity (RFCI) per ENV 50141 (IEC 1000-4-6) at 3V.
   b. Electro Static Discharge (ESD) Immunity per EN 61000-4-2 (IEC 1000-4-2) at 8 kV air discharge, 4 kV contact.
   c. Electrical Fast Transient (EFT) per EN 61000-4-4 (IEC 1000-4-4) at 500V signal, 1 kV power.
   d. Output Circuit Transients per UL 864 (2,400V, 10A, 1.2 Joule max).
3. Isolation shall be provided at all Advanced Application Controller's AC input terminals to suppress induced voltage transients consistent with:
   a. IEEE Standard 587 1980
   b. Voltage Sags, Surge, and Dropout per EN 61000-4-11 (EN 1000-4-11)

M. Agency Compliance

1. UL UL916 PAZX (all models)
2. UL916 PAZX7 (all models)
3. FCC Compliance CFR47 Part 15, Subpart B, Class B
4. Australian EMC Framework
5. European EMC Directive (CE)
6. European Low Voltage Directive (LVD)
7. BACnet Testing Laboratories (BTL) Certified

N. Spare Capacity: Provide enough inputs and outputs to handle the equipment shown to be "future" or "existing" on drawings and 10% more of each point type. Provide all hardware modules, software modules, processors, power supplies, communication controllers, etc. required to ensure adding a point to the spare point location only requires the addition of the appropriate sensor/actuator and field wiring/tubing.

O. Local Operator Interfaces: Provide if called for elsewhere in the specification or the sequences of operations.

1. Controllers shall support an optional Operator Interface Module.

2.8. APPLICATION SPECIFIC CONTROLLERS

A. Each Application Level Control Panel shall operate as a stand-alone controller capable of performing its user selectable control routines independently of any other controller in the system. Each Application Specific Controller shall provide standard applications and programmability to provide both reliability and flexibility. Each application specific controller shall be a microprocessor-based, multi-tasking, real-time digital control processor.

B. Configurable control applications. Each Application Specific Controller model must have a set of pre-loaded, selectable and field-adjustable control applications appropriate for the secondary HVAC equipment that the controller model is intended to control. Specific applications must be configurable to meet the user's control strategy requirements, allowing for additional system flexibility.

C. Each Application Specific Controller model must have a set of pre-loaded, selectable and field-adjustable control applications for lighting equipment control, independent from or in conjunction with the HVAC control applications, which can be enabled if the appropriate lighting control devices are connected.

D. Each Application Specific Controller model must have a set of pre-loaded, selectable and field-adjustable control applications for shading equipment control, independent from or in conjunction with the HVAC control applications, which can be enabled if the appropriate shading control devices are connected.

E. The Application Specific Controller shall include all point inputs and outputs necessary to perform the specified HVAC control sequences. The controller shall accept input and provide output signals that comply with industry standards. Controllers utilizing proprietary control output signals shall not be acceptable. Controllers shall provide outputs utilized either for two-state, modulating floating, or proportional control, allowing for additional system flexibility.

1. Analog inputs shall be software configurable to accept sensors using 0-10v (such as RH or CO2 sensors), NTC3k, NTC10k, NTC100k, Ni1000, PT1K 385, and resistance sensors of 1000Ω, 2500 Ω, 10K Ω, and 100k Ω . 24vDC power to drive active sensors shall be an option available from the controller.
2. Digital input
3. Analog Outputs shall support 0-10v HVAC control signals.
4. Digital outputs shall be AC 24V high-side switching triacs, able to switch loads of 250 mA / 6 VA per output.
5. Every installed Application Specific Controller shall be prepared for the addition of occupancy, CO2, CO, NOx and humidity sensors
6. Additional sensors and output modules for occupancy, lighting and shade control within the same space as the HVAC control shall be connected as needed via a sub-network connection on each Application Specific Controller
7. The Application Specific Controller shall be compatible with a room operator unit which combines a display with CO2, temperature and humidity sensing in 1 wall device.
8. The Application Specific Controller shall be compatible with a room operator unit which combines a display with temperature sensing and configurable switches for lighting, shade and scene control in 1 wall device.

F. Application Specific Controller communication

1. Communication over floor level network shall be building automation and control network over MS/TP or building automation and control network IP over Ethernet.
2. A maximum of 96 controllers may be configured on individual building automation and control network MS/TP networks.
3. Each controller that uses building automation and control network IP shall provide at least two Ethernet ports allowing the controllers to be wired in a daisy-chain configuration of up to at least 20 controllers per chain, utilizing standard Ethernet cables of up to 300ft in length between each controller.

G. The Application Specific Controller shall have the BTL listing and meet the building automation and control network device profile of an Application Specific Controller (B-ASC) as specified in ANSI/ASHRAE 135-2012. The controller shall support the following BACnet BIBBs:

1. Data Sharing
   a. DS-RP-A: Data Sharing – Read Property-A
   b. DS-RP-B: Data Sharing – Read Property-B
   c. DS-RPM-A: Data Sharing – Read Property Multiple-A
   d. DS-RPM-B: Data Sharing – Read Property Multiple-B
   e. DS-WP-A: Data Sharing – Write Property-A
   f. DS-WP-B: Data Sharing – Write Property-B
   g. DS-WPM-A: Data Sharing – Write Property Multiple-A
   h. DS-WPM-B: Data Sharing – Write Property Multiple-B
   i. DS-COV-A: Data Sharing – Change of Value -A
   j. DS-COV-B: Data Sharing – Change of Value -B
   k. DS-COVP-A: Data Sharing – Change of Value Property -A
   l. DS-COVP-B: Data Sharing – Change of Value Property –B
2. Alarm and Event
   a. AE-N-I-B: Alarm and Event – Notification Internal-B
   b. AE-ACK-B: Alarm and Event – ACK-B
   c. AE-ASUM-B: Alarm and Event – Alarm Summary-B
   d. AE-ESUM-B: Alarm and Event – Enrollment Summary-B
   e. AE-INFO-B: Alarm and Event – Information-B
   f. AE-EL-I-B: Alarm and Event – Event Log Internal-B
3. Trending
   a. T-VMT-I-B: Trending – Viewing and Modifying Internal-B
   b. T-ATR-B: Trending – Automated Trend Retrieval-B
4. Device Management
   a. DM-DDB-A: Device Management – Dynamic Device Binding-A
   b. DM-DDB-B: Device Management – Dynamic Device Binding-B
   c. DM-DOB-B: Device Management – Dynamic Object Binding-B
   d. DM-DCC-B : Device Management – Device Communication Control-B
   e. DM-TS-B: Device Management – Time Synchronization-B
   f. DM-UTC-B: Device Management – UTC Time Synchronization-B
   g. DM-RD-B: Device Management – Reinitialize Device-B
   h. DM-BR-B: Device Management – Backup and Restore-B
   i. DM-R-B: Device Management – Restart-B
   j. DM-LM-B : Device Management – List Manipulation-B
5. The Application Specific Controller shall support the following Data Link Layers:

a. Building automation and control network MS/TP Master (Clause 9)
b. Building automation and control network IP, Foreign Device

H. Provide a Application Specific Control Panel for each of the following types of equipment:

1. VRF systems
2. Heating systems
3. Pumping systems
4. H & V units
5. ERV units
6. Rooftop units
7. Exhaust Fans
8. Solar hot water heating
9. Generator
10. Unit heaters
11. Systems with over 24 inputs/output points

I. Applications for ERV terminals:

1. The following Unit Ventilator terminal box equipment configurations must be supported with pre-loaded, pre-tested applications that can be selected and configured during commissioning.
   a. Heating and/or Cooling with Outdoor air damper control
2. All ERV applications must support the following options (where appropriate):
   a. DX
   b. Electric
   c. Discharge temperature control
   d. Demand Control Ventilation –if required
   e. Single or multi-speed or Variable speed fan control
   f. Cooling via economizer control of outside air damper.
   g. Occupancy sensor

J. Provide centralized control functions for secondary HVAC control, Lighting

1. Functions for coordinating control across a grouping of rooms, a floor area, entire floor, façade, mechanical or electrical supply chains, or different combinations thereof shall be provided.
2. Support commanding of all group members to a common position or state.
3. Support consolidation of common information from group members for calculation or optimization purposes
4. Central functions shall reside in an Application Specific Controller dedicated to the central control functions specified herein.
5. Members of the groups used by the central functions specified herein shall be assigned and be changeable through standard BACnet services.

K. Central functions for H & V

1. Utilize the HV control status and conditions in a large number of Application Specific Controllers in order to support optimization of H & V units.
   a. Central Supply Air function collects air demand data from rooms (Application Specific Controller flow control loops) to support demand-based run/stop decisions for unit. Garage indicate need for primary heating and ventilation.
   b. Central Supply Air function collects data from rooms (Application Specific Controller flow loops) to minimize duct pressure. Application Specific Controllers provide multiple signals to

support duct pressure reset, including damper command, damper saturation signal and air flow deviation signal. All are available for collection by Central Air application.

c. Central Supply Air function collects data from rooms (Application Specific Controller control loops) to support dynamically optimizing the primary supply air temperature. Data available from the Application Specific Controller includes cooling demand and demand in the room for reheat.

d. Central Supply Air function collects data from rooms (Application Specific Controller control loops) to support dynamically optimizing the outside air intake. Data available from the Application Specific Controller includes ventilation demand, CO, NOx and CO2 levels.

L. Coordination between Application Specific Controllers. In situations where more than one controller is serving a common space, it must be possible through configuration only (not reprogramming) to subordinate one or more Application Specific Controllers to another Application Specific Controller allowing multiple controllers to coordinate HVAC control in a large space.

M. Application Operating Modes - All of the following operating modes shall be supported, with configurable operation of each controlled device during each mode.

1. Comfort, Standby (Pre-comfort), Economy, and Building Protection modes
   a. Comfort: Space is occupied
   b. Standby: Space has been or will be unoccupied for a short time
   c. Economy: Space has been or will be unoccupied for a longer time
   d. Building Protection: Space has been or will be unoccupied for a more than a day
2. Configurable set points and limits for each mode.
   a. The operating mode can be changed by system schedule or command or by conditions in the space such as by presence detection.
   b. All controlled devices shall respond to changes in operating mode in a configurable way such as set point resets after a configurable time to optimize energy consumption.

N. Room Units / HMIs shall provide an intuitive user alert to indicate energy-efficient operation or when there is unnecessary energy consumption, and provide occupants with a one-touch release to return to efficient, comfortable control. Energy efficient operation shall be determined by configurable and programmable algorithms provided by the Application Specific Controller and shall include (but not be limited to) the following conditions:

1. Temperature set point is set outside customer-specified limits
2. Fan Speed is overridden to a higher speed than is required for automated temperature control
3. Manual override of brightness control, lights using more energy than needed to light the space
4. Shades are overridden to position that allows too much solar radiation into the room during cooling modes, wasting HVAC energy

O. The energy efficiency status for each Application Specific Controller and space shall also be available as BACnet object at the BMS for operating and monitoring.

P. Scene control. The Application Specific Controller shall provide a set of configurable and field-adjustable presets of HVAC, lighting levels that can be activated by pressing assigned buttons on the Room Unit / HMI.

Q. Application Specific Controller Configuration and Commissioning Tool

1. Provide industry standard, commercially available laptop to host the Application Specific Controller Configuration and Commissioning Tool. The tool shall plug directly into all controllers as described below:

2. Functionality of the Configuration and Commissioning Tool connected to any Application Specific Controller shall include:
   a. Provide connection capability at either the controller, a related room unit, through a building automation and control network router or controller to access controller information.
      1) When connected via a related room unit to a controller, the tool shall be able to access information of the controller the room unit is connected to and all controllers connected to the same MS/TP or IP network.
      2) Connection of the Tool to a controller shall not interrupt nor interfere with normal network operation in any way, prevent alarms from being transmitted or preclude centrally-initiated commands and system modification.
      3) Tool access to controller shall be password-controlled. Password protection shall be configurable for each operator based on function, points (designating areas of the facility), and edit/view capability.
   b. Provide device discovery, configuration and setup for addressing and network management of multiple devices from one connection point (location) in parallel.
   c. Select, view, command, change, and enable/disable features and functionality of the control application.
   d. Load pre-designed templates of configuration settings and allow copying of templates to other controllers in order to speed the commissioning process.
   e. Provide status, setup, balancing and control reports to support commissioning and troubleshooting activities.
   f. Backup and restore of application configurations
   g. Air flow balancing.
      1) For every air flow sensing channel in the Application Specific Controller control application, the Tool shall offer an interface and menu specifically designed to support the Test, Adjust, and Balance functions. Through the balancing menu, the controller enables the following operations:
         a) Select the operating point for the test from a list of named operating points, including maximum and minimum cooling, maximum and minimum ventilation and maximum and minimum heating.
         b) Accept the balancer's flow measurement as a manually entered value.
         c) Automatically calculate and display the revised flow calibration factor.
         d) Apply the new calibration factor on command.
      2) The Application Specific Controller shall maintain a BACnet object reflecting the TAB state of the controller as: Initial, Balancing, Balanced. The Application Specific Controller records data representing the TAB process, and stores for later retrieval. The controller delivers the data when called for producing reports. Stored data includes:
         a) Air balancer's air flow measurement.
         b) Controller's air flow measurement after correction.
         c) Named test point (max cooling, etc.).
         d) Initial calibration factor.
         e) Applied selected calibration factor
   h. The tool should allow configuring, loading and balancing multiple controllers from one connection point (location) in parallel.

   i. The Ethernet / IP Application Specific Controller models shall provide web pages for troubleshooting and operation and monitoring which can be accessed via a standard web browser.

R. Each Application Specific Controller shall, at a minimum, be provided with:

1. Appropriate NEMA rated enclosure
2. Floor Level network communications ability
3. Power supplies as required for all associated modules, sensors, actuators, etc.
4. Software as required for all sequences of operation, logic sequences and energy management routines.
5. A portable operator terminal connection port
6. Auxiliary enclosure for analog output transducers, isolation relays, etc. Auxiliary enclosure shall be part of primary enclosure or mounted adjacent primary enclosure
7. Each controller measuring air volume shall include provisions for manual and automatic calibration of the differential pressure transducer in order to maintain stable control and insuring against drift over time
8. Each controller measuring air volume shall include a differential pressure transducer
9. Approvals and standards: UL916 PAZX; CE; CUL;FCC

S. Each Application Specific Controller shall continuously perform self-diagnostics on all hardware and secondary network communications. The Application Specific Controller shall provide both local and remote annunciation of any detected component failures, low battery conditions, or repeated failure to establish communication to the system.

T. Provide each Application Specific Controller with sufficient memory to accommodate point databases, operating programs, local alarming and local trending. All databases and programs shall be stored in non-volatile EEPROM, EPROM and PROM. The controllers shall be able to return to full normal operation without user intervention after a power failure of unlimited duration. Provide uninterruptible power supplies (UPSs) of sufficient capacities for all terminal controllers that do not meet this protection requirement. Operating programs shall be field-selectable for specific applications. In addition, specific applications may be modified to meet the user's exact control strategy requirements, allowing for additional system flexibility. Controllers that require factory changes of all applications are not acceptable.

U. All controller configuration settings and programs shall be stored in non-volatile memory. The controllers shall be able to return to full normal operation without user intervention after a power failure of unlimited duration.

V. The Application Specific Controller shall be powered from a 24 VAC source provided by this subcontractor and shall function normally under an operating range of -15% to +20%), allowing for power source fluctuations and voltage drops. Install plenum data line and sensor cable in accordance with local code and NEC. The controllers shall also function normally under ambient conditions of 23 to 122 F (-5 to 50 C) and 5% to 95%RH (non-condensing). Provide each controller with a suitable cover or enclosure to protect the intelligence board assembly.

2.9. ROUTERS

A. Provide a router for each subnetwork to connect the floor level network to the base building backbone level network. The router shall connect BACnet MS/TP subnetworks to BACnet over Ethernet.

B. The router shall be capable of handling all of the BACnet BIBBs that are listed for the controller that reside on the subnetwork.

2.10. CONTROL PANELS

A. Controllers in mechanical rooms shall be mounted in NEMA 1 enclosures.

B. Mount on walls at an approved location or provide a free standing rack.

C. Panels shall be constructed of 16 gauge, furniture-quality steel, or extruded-aluminum alloy, totally enclosed, with hinged doors and keyed lock and with ANSI 61 gray polyester-powder painted finish, UL listed. Provide common keying for all panels.

D. Provide power supplies for control voltage power.

E. Dedicate 1 power supply to the direct digital controller. Other devices shall be on a separate power supply, unless the power for the control device is derived from the controller terminations.

F. Power supplies for controllers shall be a transformer with a fuse or circuit breaker. Power supplies for other devices can be plain transformers.

G. All power supplies for 24V low voltage wiring shall be class 2 rated and less than 100VA. If low voltage devices require more amps, then provide multiple power supplies. If a single device requires more amps, then provide a dedicated power supply in a separate enclosure and run a separate, non-class 2 conduit to the device.

H. Surge transient protection shall be incorporated in design of system to protect electrical components in all direct digital controls and operator's workstations.

I. All devices in a panel shall be permanently mounted, including network switches, modems, media converters, etc.

J. Provide a pocket to hold documentation.

2.11. GENERAL SPECIFICATIONS FOR DEVICES

A. Provide mounting hardware for all devices, including actuator linkages, wells, installation kits for insertion devices, wall boxes and fudge plates, brackets, etc.

B. If a special tool is required to mount a device, provide that tool.

2.12. SENSORS

A. Terminal Unit Space Thermostats

1. Each controller performing space temperature control shall be provided with a matching room temperature sensor.
   a. Plain Space Temperature Sensors – Wired: Where called for in the sequences or on the drawings, provide sensors with plain covers.
   b. The sensing element for the space temperature sensor shall be thermistor type providing the following.

1)	Element Accuracy:	+ /- 1.0°F
2)	Operating Range:	5 to 95°F
3)	Set Point Adjustment Range:	55 to 95°F
4)	Calibration Adjustments:	None required
5)	Installation:	Up to 100 ft. from controller
6)	Auxiliary Communications Port:	As required
7)	Local LCD Temperature Display:	As required
8)	Setpoint Adjustment Dial	As required
9)	Occupancy Override Switch	As required

   c. Auxiliary Communication Port. Each room temperature sensor shall include a terminal jack integral to the sensor assembly. The terminal jack shall be used to connect a portable operator's terminal to control and monitor all hardware and software points associated with the controller.

d. RS-232 communications port shall allow the operator to query and modify operating parameters of the local room terminal unit from the portable operator's terminal.

2. Digital Display temperature sensor specifications – Wired:
   a. As called for in the sequences of operations or on the drawings, provide temperature sensors with digital displays.
   b. The sensing element for the space temperature sensor must be IC-based and provide the following.
      1) Digitally communicating with the Application Specific Controller.
      2) Mountable to and fully covering a 2 x 4 electrical junction box without the need for an adapter wall plate.
      3) IC Element Accuracy: +/- 0.9°F
      4) Operating Range: 55 to 95°F
      5) Setpoint Adjustment Range: User limiting, selectable range between 55 and 95°F
      6) Display of temperature setpoint with numerical temperature values
      7) Display of temperature setpoint graphically, with a visual Hotter/Colder setpoint indication
      8) Calibration: Single point, field adjustable at the space sensor to +/- 5°F
      9) Installation: Up to 100 ft. from controller
      10) Auxiliary Communications Port: Included
      11) Local OLED Temperature Display: Included
      12) Display of Temperature to one decimal place
      13) Temperature Setpoint Adjustment Included
      14) Occupancy Override Function Included
   c. Auxiliary Communication Port. Each room temperature sensor shall include a terminal jack integral to the sensor assembly. The terminal jack shall be used to connect a portable operator's terminal to control and monitor all hardware and software points associated with the controller. RS-232 communications port shall allow the operator to query and modify operating parameters of the local room terminal unit from the portable operator's terminal.

3. Provide the following options as they are called for in the sequences or on the drawings:
   a. Setpoint Adjustment. The setpoint adjustment function shall allow for modification of the temperature by the building operators. Setpoint adjustment may be locked out, overridden, or limited as to time or temperature through software by an authorized operator at any central workstation, Building Controller, room sensor two-line display, or via the portable operator's terminal.
   b. Override Switch. An override button shall initiate override of the night setback mode to normal (day) operation when activated by the occupant and enabled by building operators. The override shall be limited to two (2) hours (adjustable.) The override function may be locked out, overridden, or limited through software by an authorized operator at the operator interface, Building Controller, room sensor two-line display or via the portable operator's terminal.
   c. Space Combination Temperature and Humidity Sensors. Each controller performing space temperature control shall be provided with a matching room temperature sensor, which also includes the ability to measure humidity for either monitoring or control purposes. The combination temperature and humidity sensors shall have the same appearance as the space temperature sensors. Humidity elements shall measure relative humidity with a +/- 2% accuracy over the range of 10 to 90% relative humidity. Humidity element shall be an IC

(integrated circuit) sensing element. Humidity sensing elements shall be removable and field replaceable if needed.

B. Temperature Sensors

1. All temperature sensors shall meet the following specifications:
   a. Accuracy: Plus or minus 0.2 percent at calibration point.
   b. Wire: Twisted, shielded-pair cable.
   c. Vibration and corrosion resistant
2. Space temperature sensors shall meet the following specifications:
   a. 10k ohm type 2 thermisters
3. Insertion Elements in Ducts shall meet the following specifications:
   a. Single point 10k ohm thermister
   b. Use where not affected by temperature stratification
   c. The sensor shall reach more that 1/3 the distance from the duct wall
   d. Junction box for wire splices
4. Averaging Elements in Ducts shall meet the following specifications:
   a. 72 inches (183 cm) long
   b. Flexible
   c. Use where prone to temperature stratification, in front of coils, or where ducts are larger than 9 sq. ft.
   d. Junction box for wire splices
5. Outside-Air Sensors Platinum RTD with 4-20mA transmitter:
   a. Watertight enclosure, shielded from direct sunlight
   b. Circulation fan
   c. Watertight conduit fitting

C. Where called for in the sequences of operations, provide the following feature on space sensors and thermostats:

1. Security Sensors: Stainless-steel cover plate with insulated back and security screws
2. Space sensors with setpoint adjust: Plain white plastic cover with slide potentiometer to signal a setpoint adjustment to the direct digital controls
3. Space Sensors with LCD display:
   a. Operator buttons for adjusting setpoints, setting fans speeds and overriding unit to on/off
   b. Graphical LCD icons for signaling heating/cooling mode, fans speed, schedule mode, actual temperature and current setpoint

D. Humidity Sensors shall meet the following specifications:

1. Bulk polymer sensor element
2. Accuracy: 2 percent full range with linear output
3. Room Sensors: With locking cover matching room thermostats, span of 0 to 100 percent relative humidity
4. Duct and Outside-Air Sensors: With element guard and mounting plate, range of 0 to 100 percent relative humidity

E. Air Static Pressure Transmitter shall meet the following specifications:

1. Non-directional sensor with suitable range for expected input, and temperature compensated.
2. Accuracy: 2 percent of full scale with repeatability of 0.5 percent.
3. Output: 4 to 20 mA.

4. Building Static-Pressure Range: 0 to 0.25 inches wg.
5. Duct Static-Pressure Range: 0 to 5 inches wg.

F. Pressure Transmitters: Direct acting for gas, liquid, or steam service; range suitable for system; proportional output 4 to 20 mA.

G. Equipment operation sensors as follows:

1. Status Inputs for Fans: Differential-pressure switch with adjustable range of 0 to 5 inches wg.
2. Status Inputs for Pumps: Differential-pressure switch piped across pump with adjustable pressure-differential range of 8 to 60 psig.
3. Status Inputs for direct drive electric motors: Current-sensing relay with current transformers, adjustable and sized for 175 percent of rated motor current.
4. Status inputs for belt drive electric motors: Current sensing transmitter with linear 4-20mA output

H. Electronic Valve/Damper Position indication: Visual scale indicating percent of travel and 0 to 10 V dc, feedback signal.

I. Air Differential Pressure Switches: Diaphragm type air differential pressure switches with die cast aluminum housing, adjustable setpoint, minimum 5 amp switch rating at 120VAC, SPDT switches, and the switch pressure range shall be suited for the application. These switches shall be utilized for filter status.

J. Leak detectors: Provide spot leak detectors that can be secured to the floor or secured to a drain pan. The detection shall used a microchip controlled energized probes. The detector shall operate on 24Vor less. Provide a way to adjust the height of the leak probes. The SPDT contacts shall be inside a watertight enclosure.

2.13. ELECTRO-MECHANICAL THERMOSTATS

A. Fire-Protection Thermostats: UL listed with fixed or adjustable settings to operate at not less than 75 deg F above normal maximum operating temperature, with the following:

1. Reset: Automatic with control circuit arranged to require manual reset at central control panel, with pilot light and reset switch on panel labeled to indicate operation.

B. Electric Low-Limit Duct Thermostat: Snap-acting, single-pole, single-throw, manual- or automatic-reset switch that trips if temperature sensed across any 12 inches of bulb length is equal to or below set point. Setpoint shall be adjustable.

1. Bulb Length: Minimum 20 feet.
2. Quantity: One thermostat for every 20 sq. ft. of coil surface.

C. Electric space thermostats: Provide a charged element type stat with snap acting SPDT switch. The switch shall be rated for 16A or 1HP at 120V.

D. Aquastat: Provide a charged element type stat with snap acting SPDT switch. The switch shall be rated for 16A or 1HP at 120V.

2.14. SMOKE DETECTORS

A. Smoke detectors to be provided by the contractor.

B. The provided smoke detector for each unit above 2000 cfm.

2.15. ELECTRONIC ACTUATOR SPECIFICATION

A. ELECTRONIC VALVE ACTUATORS

1. Actuator shall be fully modulating, floating (tri-state), two position, and/or spring return as indicated in the control sequences. Specified fail safe actuators shall require mechanical spring return.
2. Modulating valves shall be positive positioning, responding to a 2-10VDC or 4-20mA signal. There shall be a visual valve position indicator.
3. The actuator shall have the capability of adding auxiliary switches or feedback potentiometer if specified.
4. Actuator shall provide minimum torque required for proper valve close-off. The actuator shall be designed with a current limiting motor protection. A release button (clutch) or handle on the actuator shall be provided to allow for manual override (except when actuator is spring return type).
5. Actuators shall be UL listed. Each damper connected to a fan shall be provided with end switch.

B. ELECTRONIC DAMPER ACTUATORS

1. Actuator shall be direct coupled (over the shaft), enabling it to be mounted directly to the damper shaft without the need for connecting linkage. The actuator-to-shaft clamp shall use a "V" bolt and "V" shaped, toothed cradle to attach to the damper shaft for maximum holding strength. Single bolt or set screw type fasteners are not acceptable.
2. Actuator shall have electronic overload or digital rotation sensing circuitry to prevent damage to the actuator throughout the rotation of the actuator. End switches to deactivate the actuator at the end of rotation or magnetic clutch are not acceptable.
3. For power-failure/safety applications, a mechanical, spring return mechanism shall be used.
4. Actuators with spring return mechanisms shall be capable of either clockwise or counterclockwise spring return operation by simply changing the mounting orientation.
5. Proportional actuators shall accept a 2-10VDC, 4-20mA signal, or be of the 2 point floating type and provide a 2-10VDC actuator position feedback signal.
6. All actuators shall have an external manual gear release (clutch) or manual crank to aid in installation and for allowing manual positioning when the actuator is not powered.
7. All actuators shall have an external direction of rotation switch to aid in installation and to allow proper control response.
8. Actuators shall be provided with a factory-mounted 3-foot electrical cable and conduit fitting to provide easy hook-up to an electrical junction box.
9. Actuators shall be listed under Underwriters Laboratories Standard 873. They must be manufactured under ISO 9001.
10. End switch shall be included on all damper actuators.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. The project plans shall be thoroughly examined for control device and equipment locations. Any discrepancies, conflicts, or omissions shall be reported to the Commissioner for resolution before rough-in work is started.

B. Inspect the site to verify that equipment is installed as shown. Any discrepancies, conflicts, or omissions shall be reported to the Commissioner for resolution before rough-in work is started.

C. Examine the drawings and specifications for other parts of the work. If head room or space conditions appear inadequate—or if any discrepancies occur between the plans and the contractor's work and the plans and the work of other trades—the contractor shall report these discrepancies to the commissioner and shall obtain written instructions for any changes necessary to accommodate the contractor's work with the other trades.

3.3. INSTALLATION

A. Provide all relays, switches, sources of emergency and UPS battery back-up electricity and all other auxiliaries, accessories and connections necessary to make a complete operable system in accordance with the sequences specified. All field wiring shall be by the contractor.

B. Install controls so that adjustments and calibrations can be readily made. Controls are to be installed by the control equipment manufacturer.

C. Mount surface-mounted control devices on brackets to clear the final finished surface on insulation.

D. Install equipment level and plumb.

E. Install control valves horizontally with the power unit up.

F. Unless otherwise noted, install wall mounted thermostats and humidistat 60" above the floor measured to the center line of the instrument, or as otherwise directed by the Commissioner.

G. Install averaging elements in ducts and plenums in horizontal crossing or zigzag pattern.

H. Install outdoor sensors in perforated tube and sunshield.

I. Install damper motors on outside of duct in protected areas, not in locations exposed to outdoor temperatures.

J. Install labels and nameplates on each control panel listing the name of the panel referenced in the graphics and a list of equipment numbers served by that panel.

K. Furnish hydronic instrument wells, valves, and other accessories to the mechanical contractor for installation.

3.4. ELECTRICAL WIRING SCOPE

A. Interlock wiring shall be run in separate conduits from BAS associated wiring.

B. Provide network wiring for equipment that is called to be integrated to the BAS.

3.5. ELECTRICAL WIRING AND CONNECTION INSTALLATION

A. All low voltage control wiring shall be class 2. Control wiring that is not class 2 shall be run in separate conduits from class 2 wiring.

B. Floor level network wiring between terminal units can be combined with thermostat and other low voltage wiring in the same conduit. All other network wiring shall be in dedicated conduits.

C. Install raceways, boxes, and cabinets according to Section 260533 "Raceways and Boxes."

D. Install building wire and cable according to Section 260519 "Conductors and Cables."

E. Installation shall meet the following requirements:

1. Conceal cable and conduit, except in mechanical rooms and areas where other conduit and piping are exposed.
2. Install exposed cable in raceway or conduit.
3. Install concealed cable using plenum rated cable.
4. Bundle and harness multiconductor instrument cable in place of single cables where several cables follow a common path.
5. Fasten flexible conductors, bridging cabinets and doors, along hinge side; protect against abrasion. Tie and support conductors.
6. Number-code or color-code conductors for future identification and service of control system, except local individual room control cables.
7. All wiring in lab areas shall be in conduit.
8. All unsupported risers shall be rigid steel conduit. Supported risers shall be EMT.

F. Rigid conduit shall be steel, hot dip galvanized, threaded with couplings, ¾ inch minimum size, manufactured in accordance with ANSI C-80-1. Electrical metallic tubing (EMT) with compression fittings or intermediate metallic conduit (IMC) may be used as conduit or raceway where permitted by the NEC.

G. Concealed control conduit and wiring shall be provided in all spaces except in the Mechanical Equipment Rooms and in unfinished spaces. Install in parallel banks with all changes in directions made at 90 degree angles.

H. Install conduit adjacent to machine to allow service and maintenance.

I. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.

J. Connect hand-off-auto selector switches to override automatic interlock controls when switch is in hand position.

K. Ground equipment.

3.6. COMMUNICATION WIRING

A. All cabling shall be installed in a neat and workmanlike manner. Follow manufacturer's installation recommendations for all communication cabling.

B. Do not install communication wiring in raceway and enclosures containing Class 1 wiring.

C. Maximum pulling, tension, and bend radius for cable installation, as specified by the cable manufacturer, shall not be exceeded during installation.

D. Contractor shall verify the integrity of the entire network following the cable installation. Use appropriate test measures for each particular cable.

E. Cable bundling:

1. RS485 cabling run open air in accessible areas can be bundled with other class 2 low voltage cabling.
2. RS485 cabling run between terminal units in conduits above ceilings or under floors or in inaccessible areas can be bundled with other class 2 low voltage cabling.
3. RS485 cabling run between floors shall be in a communication only conduit.
4. RS485 conduit run long distances between utility rooms or between buildings shall be in a communication only conduit.

5. Ethernet cabling shall be in a communication only conduit.
6. Ethernet and RS485 can be run together.
7. Fiber optics can be run with Ethernet and RS485 cabling as long as the conduit is bent to fiber optic standards and junction boxes are sized for fiber optic use.

F. RS485 Cabling

1. RS485 cabling shall be used for BACnet MS/TP networks.
2. RS485 shall use low capacitance, 20-24 gauge, twisted shielded pair.
3. The shields shall be tied together at each device.
4. The shield shall be grounded at one end only and capped at the other end.
5. Provide end of line (EOL) termination devices at each end of the RS485 network or subnetwork run, to match the impedance of the cable, 100 to 120ohm.

G. Ethernet Cabling

1. Ethernet shall not be run with any Class 1 or low voltage Class 2 wiring.
2. CAT6, unshielded twisted pair (UTP) cable shall be used for BAS Ethernet.
3. Solid wire shall be used for long runs, between mechanical rooms and between floors. Stranded cable can be used for patch cables and between panels in the same mechanical room up to 50 feet away.
4. When the BAS Ethernet connects to the City of New York's network switch, document the port number on the BAS As-builts.

H. When a cable enters or exits a building, a lightning arrestor must be installed between the lines and ground. The lighting arrestor shall be installed according to the manufacturer's instructions.

I. All runs of communication wiring shall be unspliced length when that length is commercially available.

J. All communication wiring shall be labeled to indicate origination and destination data.

K. Grounding of coaxial cable shall be in accordance with NEC regulations article on "Communications Circuits, Cable, and Protector Grounding."

3.7. IDENTIFICATION

A. Permanent warning labels shall be affixed to all equipment that can be automatically started by the direct digital control system.

1. Labels shall use white lettering (12-point type or larger) on a red background.
2. Warning labels shall read as follows: C A U T I O N This equipment is operating under automatic control and may start or stop at any time without warning. Switch disconnects to "Off" position before servicing.

B. Permanent warning labels shall be affixed to all motor starters and all control panels that are connected to multiple power sources utilizing separate disconnects.

1. Labels shall use white lettering (12-point type or larger) on a red background.
2. Warning labels shall read as follows: C A U T I O N This equipment is fed from more than one power source with separate disconnects. Disconnect all power sources before servicing.

3.8. FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove malfunctioning units, replace with new units, and retest.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment, and retest.
3. Calibration test controllers by disconnecting input sensors and stimulating operation with compatible signal generator.
4. Contractor QC should include a point to point check along with the sensor calibration in the field quality control section.

B. Replace damaged or malfunctioning controls and equipment.

1. Start, test, and adjust control systems.
2. Demonstrate compliance with requirements, including calibration and testing, and control sequences.
3. Adjust, calibrate, and fine tune circuits and equipment to achieve sequence of operation specified.

3.9. SYSTEM CHECKOUT AND STARTUP

A. Inspect each termination in the MER control panels and devices to make sure all wires are connected according to the wiring diagrams and all termination are tight.

B. After the controls devices and panels are installed and power is available to the controls, perform a static checkout of all the points, including the following:

1. Inspect the setup and reading on each temperature sensor against a thermometer to verify its accuracy.
2. Inspect the setup and reading on each humidity sensor against a hygrometer to verify its accuracy.
3. Inspect the reading on each CO2 sensor using a calibration kit to verify the sensor range accuracy matches the direct digital control setup.
4. Inspect the reading of each status switch to verify the direct digital control reads the open and close correctly.
5. Command each relay to open and close to verify its operation.
6. Command each 2-position damper actuator to open and close to verify operation.
7. Command each 2-position valve to open and close to verify operation.
8. Ramp each modulating actuator to 0%, 25%, 50%, 75% and 100% to verify its operation.
9. Ramp each modulating output signal, such as a VFD speed, to verify its operation.
10. Test each safety device with a real life simulation, for instance check freezestats with ice water, water detectors with water, etc.

C. Document that each point was verified and operating correctly. Correct each failed point before proceeding to the dynamic startup. Submit results in writing before proceeding to dynamic startup.

D. Verify that each direct digital controller communicates on its respective network correctly.

E. After all of the points are verified, and power is available to the mechanical system, coordinate a startup of each system with the mechanical contractor. Include the following tests:

1. Start systems from direct digital control.
2. Verify that each setpoint can be met by the system.
3. Change setpoints and verify system response.
4. Change sensor readings to verify system response.
5. Test safety shutdowns.
6. Verify time delays.
7. Verify mode changes.

8. Adjust filter switches and current switches for proper reactions.
9. Adjust proportional bands and integration times to stabilize control loops.

F. Perform all program changes and debugging of the system for a fully operational system.

G. Verify that all graphics at the operator workstations correspond to the systems as installed. Verify that the points on the screens appear and react properly. Verify that all adjustable setpoints and manual commands operate from the operator workstations.

H. After the sequence of operation is verified, setup the trends that are listed in the sequence of operations for logging and archiving for the commissioning procedure.

3.10. SYSTEM COMMISSIONING, INSTRUCTION AND TURNOVER

A. Prepare and submit for approval a complete acceptance test procedure including submittal data relevant to point index, functions, sequence, inter-locks, and associated parameters, and other pertinent information for the operating system. Prior to acceptance of the BAS by the City of New York and Commissioner, the BAS subcontractor shall completely test the BAS using the approved test procedure. The BAS contractor shall provide commissioning agent with a calibration report which includes all sensors and control points organized by location, system, and sub system. The BAS contractor shall work with the commissioning agent on a detailed point to point check report which includes all sensors and control points organized by location, system, and sub system.

B. After the BAS is 100% complete, the Commissioner shall be requested, in writing, to approve the satisfactory operation of the system, sub-systems and accessories. Submit Maintenance and Operating manuals at this time for approval. An acceptance test in the presence of the Commissioner. The City of New York will then shake down the system for a fixed period of time (30 days).

C. Fix punch list items from the Construction Manager, Commissioning Agent and the Commissioner in order to achieve substantial completion of the BMS.

D. When the system performance is deemed satisfactory in whole or in part by these observers, the system parts will be accepted for beneficial use. Beneficial use does not constitute substantial completion and shall not initiate warranty.

3.11. PROJECT RECORD DOCUMENTS

A. Refer to DDC General Conditions for contract record documents.

1. Testing and Commissioning Reports and Checklists. Completed versions of reports, checklists, and trend logs used to meet requirements in the Control System Demonstration and Acceptance section of this specification.
2. Operation and Maintenance (O & M) Manual.
   a. As-built versions of the submittal product data.
   b. Names, addresses, and 24-hour telephone numbers of installing contractors and service representatives for equipment and control systems; all administrative passwords to work stations and controllers.
   c. Operator's Manual with procedures for operating control systems, logging on and off, handling alarms, producing point reports, trending data, overriding computer control, and changing setpoints and variables.
   d. Programming manual or set of manuals with description of programming language and of statements for algorithms and calculations used, of point database creation and modification, of program creation and modification, and of editor use.

e. Engineering, installation, and maintenance manual or set of manuals that explains how to design and install new points, panels, and other hardware; how to perform preventive maintenance and calibration; how to debug hardware problems; and how to repair or replace hardware.
f. Documentation of all programs created using custom programming language, including setpoints, tuning parameters, and object database.
g. Graphic files, programs, and database on electronic media.
h. List of recommended spare parts with part numbers and suppliers.
i. Complete original-issue documentation, installation, and maintenance information for furnished third-party hardware, including computer equipment and sensors.
j. Complete original original-issue copies of furnished software, including operating systems, custom programming language, operator workstation software, and graphics software.
k. Licenses, guarantees, and warranty documents for equipment and systems.
l. Configuration Management Matrix (as specified in the above comments).
m. All administrative passwords to workstation and controllers.

B. Operating manual to serve as instruction and reference manual for all aspects of day-to-day operation of the system. As a minimum include the following:

1. Sequence of operation for automatic and manual operating modes for all building systems. The sequences shall cross-reference the system point names.
2. Description of manual override operation of all control points in system.
3. BMS system manufacturers complete operating manuals.

C. Provide maintenance manual to serve as instruction and reference manual for all aspects of day-to-day maintenance and major system repairs. As a minimum include the following:

1. Complete as-built installation drawings for each building system.
2. Overall system electrical power supply schematic indicating source of electrical power for each system component. Indicate all battery backup provisions.
3. Photographs and/or drawings showing installation details and locations of equipment.
4. Routine preventive maintenance procedures, corrective diagnostics troubleshooting procedures, and calibration procedures.
5. Comprehensive parts list with manufacturer's catalog numbers and ordering information.
6. Lists of ordinary and special tools, operating materials supplies and test equipment recommended for operation and servicing.
7. Manufacturer's operation, set-up, maintenance and catalog literature for each piece of equipment.
8. Maintenance and repair instructions.
9. Recommended spare parts.

D. Provide Programming Manual to serve as instruction and reference manual for all aspects of system programming. As a minimum include the following:

1. Complete programming manuals, and reference guides.
2. Details of any custom software packages and compilers supplied with system.
3. Information and access required for independent programming of system.

3.12. INSTRUCTION

A. During System commissioning and at such time as acceptable performance of the Building Automation System hardware and software has been established, provide on-site operator instruction to the City of New York's operating personnel. Operator instruction during normal working hours shall be performed

by a competent building automation contractor representative familiar with the Building Automation System's software, hardware and accessories.

B. At a time mutually agreed upon, during System commissioning as stated above, give 16-hours of onsite instruction on the operation of all BAS equipment. Describe its intended use with respect to the programmed functions specified. Operator orientation of the automation system shall include, but not be limited to:

1. Explanation of drawings and operator's maintenance manuals.
2. Walk-through of the job to locate all control components.
3. Operator workstation and peripherals.
4. Direct digital controller and ASC operation/sequence.
5. Operator control functions including scheduling, alarming, and trending.
6. Explanation of adjustment, calibration and replacement procedures.

C. Additional 8-hours of instruction shall be given after the 30 day shakedown period.

D. Since the City of New York may require personnel to have more comprehensive understanding of the hardware and software, additional instruction must be available from the Contractor.

SECTION 230993
Sequence of Operations

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. This Section includes control sequences for HVAC systems, subsystems and equipment.

1.3. DEFINITIONS

A. AHU: Air Handling Unit.

B. AI: Analog Input.

C. AO: Analog output.

D. ATC: Automatic Temperature Control.

E. BMS: Building Management System.

F. CFM: Cubic Feet per Minute.

G. DDC: Direct-digital controls.

H. DI: Digital Input.

I. DO: Digital Output.

J. FAS: Fire Alarm System.

K. HVAC: Heating, Ventilating and Air Conditioning.

L. H & V Heating and Ventilating Unit

M. LAN: Local area network.

N. LCD: Liquid Crystal Display

O. MER: Mechanical Equipment Room.

P. PID: Proportional Integral Derivative.

Q. POT: Portable Operators Terminal.

R. RTU: Rooftop Unit.

S. VFD: Variable Frequency Drive.

T. VRF: Variable Refrigerant Flow

U. ERV: Energy Recovery Ventilation

1.4. GENERAL

A. All safety devices shall be hardwired to the starter and shall have a second contact for monitoring via the BMS.

B. A failure alarm, as included in the point list, shall indicate the type of equipment that has failed (pump, fan, valve, etc.) including the specific designation of the piece of equipment (e.g., supply fan SF-1). It is not acceptable to generate a general failure alarm.

C. Alarming devices such as freezestats, pressure safeties, etc. shall be wired so the contacts open in the alarm condition. All alarm points shall be annunciated at the BMS audibly and visually. All alarm points associated with varying values shall be provided with adjustable limits.

D. Freezestats shall be automatic reset type and shall be installed with time delay and latching relays. A freezestat must sense a temperature below 40°F (adj.) for a period of 180 seconds (adj.) prior to initiating a response to a freeze condition. Once the freezestat condition response has been activated, manual reset at the BMS panel shall be required to allow the system to return to normal.

E. Air pressure switches shall be manual reset type and a manual reset at the switch shall be required to allow the system to restart.

F. All setpoints including setpoints internal to control algorithms shall be adjustable from all BMS operator interfaces. All commands shall be overrideable from all BMS operator interfaces. All control points shall be adjustable or overrideable from the same graphic page that displays the points.

G. All points for a specific mechanical system shall be connected to and controlled by the same direct-digital controller unless otherwise specified. For example, it is not acceptable to control a supply fan with one (1) direct-digital controller located at a motor control center and to control the rest of the air-handling unit points with a direct-digital controller located at the air-handling unit.

H. All points required by the sequence of operation including, but not limited to, the points listed in the sequences of operation below, as well as all of the points' associated values, shall be connected to the BMS and available to the BMS operators on all operator workstations and all operator interface devices as part of a graphical display that depicts the mechanical system controlled.

I. The installed BMS shall have dedicated, LAN based communication buses independent of the building IT network for both primary and secondary buses. The BMS shall utilize the building LAN as the primary network. Ethernet drops shall be provided by others as required. Coordinate exact locations of all Ethernet drops. Provide all other wiring, devices, etc required to connect to the LAN. The BMS shall have dedicated communication buses independent of the building network for all secondary buses.

J. All valves, dampers, controllers, control devices, etc. exposed to outside air conditions shall be specifically designed for outside air conditions including, but not limited to, NEMA 4X enclosures, weatherproof enclosures and all other weather precautions recommended by the manufacturer.

K. Furnish, install and wire a UPS for every primary control panel, every switch, and every operator workstation.

L. The BMS shall monitor a contact from the FAS for each smoke zone indicating that a fire condition exists in the zone. One (1) contact shall be monitored for the entire building, each floor, each portion of a floor, etc. that constitutes a smoke zone.

M. No part of the programming specified herein shall be programmed into operator priority.

N. All alarms associated with equipment that is disabled shall be inhibited.

O. All initial field settings applied shall be saved as the default values. These values shall be downloaded to the controller such that they are the default value if the controller loses power. A printed copy shall also be provided to the City of New York as part of the O & M manuals.

P. When the motor controller is equipped with an HOA, the motors shall only be controlled by the BMS when the HOA switch is in the auto position.

Q. Freezestats, pressure safeties, interlocked dampers, etc. shall be wired to shutdown motors when the HOA switch is in both the hand and auto positions. It shall not be possible to override these or any other safety devices or any fire alarm system control functions, except in the case of an engineered smoke control system in which case freeze protection safeties shall be overridden.

R. Where fans and dampers are to be hardwire interlocked, provide hardwire interlocks between the motor terminal strip and dampers such that the damper shall be driven open then the motor is required to start. Motor start-up shall not occur until the damper end switch indicates the damper is in the full open position. Where fans and dampers are hardwire interlocked, the interlocks shall apply in both the "hand" and "auto" positions of the HOA switch at the motor controller.

S. The point lists are provided for convenience and are not intended to be all-inclusive. All points required to provide the Sequence of Operation shall be included as if listed.

T. Refer to the Control Diagrams included in the mechanical drawings for additional information to facilitate the interpretation of the sequences of operation as defined herein. The Control Diagrams are for reference only. All points included herein or required by the sequence of operation are required regardless of whether they are shown in the Control Diagrams.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.6. SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7. SAFETIES

A. Dampers (FSDs interlocked with fan operation, hardwired at unit)

1. All fire/smoke and smoke dampers shall be hardwire interlocked to open/close with fan operation. Supply dampers shall be hardwire interlocked with the supply fan and return dampers shall be interlocked with the return fan.

2. Fire/smoke and smoke dampers directly upstream or downstream of a fan shall be hardwire interlocked to the associated fan starter/VFD such that the fan cannot start until the dampers prove open.
3. Upon the presence of smoke the FAS system will stop the unit via hard wired interlock and send an indication to the BMS. All associated fire/smoke, smoke and isolation dampers shall close.
4. Static Pressure
   a. A high discharge pressure switch for the supply fan shall stop the supply and return fans when duct pressure exceeds design. The fans shall remain off until the pressure switch is manually reset.
   b. A low suction pressure switch for the return fan shall stop the supply and return fans when duct pressure exceeds design. The fans shall remain off until the pressure switch is manually reset.
5. Leak Detector
   a. A leak detector located below each coil shall stop its associated unit from operation and transmit an alarm signal to the BMS console whenever a leak is detected.
6. Supply and Return Fans
   a. There shall always be an equal number of supply and return fans running. If a supply fan is shutdown due to a safety, a return fan shall also be shutdown. Likewise, if a return fan is shutdown due to a safety, a supply fan shall also be shutdown.

1.8. HEATING, VENTILATING AND ROOFTOP UNITS WITH ENERGY RECOVERY EQUIPMENT

A. See BMS drawings

1.9. VRF AND INDDOR RELATED EQUIPMENT

A. See drawings

1.10. EXHAUST FANS – CONTINUOUS OPERATION

A. General: These fans serve different areas: electrical room, restrooms, Elevator EMR

B. Fan Operation

1. The fan shall be energized based upon a manual command and run continuously. The fan shall be started by the BMS system.
2. Upon a command to start, all associated exhaust air damper(s) / isolation damper(s), shall open by the BMS.
3. When all associated dampers located directly upstream or downstream of the exhaust fan are open as proven by end switches, the exhaust air fan shall start.
4. When the fan is off, all associated outside air damper(s) / isolation damper(s), shall close.

C. Emergency Shutdown (where applicable based on fan CFM)

1. The Fire Alarm System will shut down the fan via hard wired interlock and signal the BMS when a fire alarm is present. When the floor or area served is in alarm all associated fire smoke and isolation dampers shall close.

1.11. BOILER OPERATIONS

A. See BMS drawings

1.12. ELECTRIC UNIT HEATERS (ECHU'S, EUH, EH's)

A. The unit will control to maintain the zone temperature set point of 65°F (Adj.) as sensed by the zone temperature sensor.

B. The fan will run anytime the zone temperature drops below heating setpoint unless shutdown on safeties.

C. Monitoring points:

1. Discharge air temperature
2. Fan status.

D. Alarms

1. High Discharge Air Temp: if the discharge air temperature is greater than 120°F (Adj.).
2. Low Discharge Air Temp: If the discharge air temperature is less than 40°F (Adj.).
3. Low Zone Temp: If the zone temperature is less than the heating setpoint by a user definable amount (Adj.). 2. Fan failure alarm – fan commanded on, but the status is off.
4. Fan hand alarm-fan commanded off, but the status is on.

1.13. SMOKE PURGE

A. Smoke Purge Operation

1. The fans inside the H & V's/RTU's shall be enabled by a manual command from the Fire Command Station. The fire/smoke dampers required to purge the desired area/ floor(s) shall be positioned via the Fire Command Station. The Fire Command Station shall control smoke purge set-up and control of equipment and dampers to the appropriate state.

1.14. ELECTRICAL EQUIPMENT MONITORING

A. Emergency Generators, Switchgear, Paralleling Gear, Uninterruptible Power Supplies, Power Distribution Units, Automatic Transfer Switch

1. Provide and wire serial communication interface with each generator, UPS and PDU. Include twenty-five (25) monitoring and control points per generator, UPS and PDU. Include one-hundred (100) points for the switchgear and paralleling gear. Include ten (10) monitoring and control points per ATS.

1.15. ELECTRICAL EQUIPMENT

A. Generators

1. The BMS shall interface to the generators. All information, points, alarms, etc. available via the interface shall be displayed on the BMS operator workstation. Coordinate with the equipment manufacturer to ensure that all available points are picked up by the BMS.

B. UPS

1. The BMS shall interface to the UPS. All information, points, alarms, etc. available via the interface shall be displayed on the BMS operator workstation. Coordinate with the equipment manufacturer to ensure that all available points are picked up by the BMS.

C. ATS

1. The BMS shall interface to the ATS . All information, points, alarms, etc. available via the interface shall be displayed on the BMS operator workstation. Coordinate with the equipment manufacturer to ensure that all available points are picked up by the BMS.

D. Switchgear

1. The BMS shall interface to the switchgear. All information, points, alarms, etc. available via the interface shall be displayed on the BMS operator workstation. Coordinate with the equipment manufacturer to ensure that all available points are picked up by the BMS.

1.16. HEAT TRACING (If applicable)

A. The BMS shall monitor the following:

1. DI – Common alarm (for each heat trace control panel, if available from heat trace manufacturer provided controls).
2. DI – Heat tracing on/off status (as sensed by a current sensing relay; install one (1) per heat tracing circuit and each current sensing relay shall be an individual input to the BMS).

1.17. VARIABLE FREQUENCY DRIVES

A. Provide all required interconnecting control wiring to interface the variable frequency drives and the associated equipment to the BMS.

B. Provide all required wiring from the motor winding heaters to each drive.

C. Provide the following points hardwired to the BMS for each VFD controlled motor:

1. AO – VFD speed control (0-100%).
2. DI – VFD bypass status.
3. DI – VFD status (via current sensing relay, monitoring VFD status is not acceptable).
4. DO – VFD command (start/stop).

D. In addition to the hardwired points indicated above, provide a communication interface to each VFD.

THIS PAGE INTENTIONALLY LEFT BLANK

1.18. EQUIPMENT RESTART PROGRAM

A. Subsequent to any building wide equipment shutdown, due to power failure, smoke control, occupancy scheduling, priority lead shedding, etc., the mechanical equipment restarts shall be staggered and phased to minimize peak electrical loads. Time delays will be adjustable and be provided for each controlled motor. The final sequence will submitted for approval.

B. All motors shall be remotely reset and restarted from the BMS after a safety shutdown.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 230993

SECTION 231217

Vehicle Exhaust System

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. Related Sections:

1. Section "Vibration Control."
2. Section "Adjustable Frequency Drives."

1.2 REFERENCES

A. AMCA – B – Construction of Spark Resistant Fans.

B. ASHRAE - Handbook, Equipment Volume, Chapter "Chimney, Gas Vent, and Fireplace Systems."

C. NFPA 211 - Standard for Chimneys, Fireplaces, Vents, and Solid Fuel-Burning Appliances.

D. SMACNA - HVAC Duct Construction Standards - Metal and Flexible.

1.3 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data and Information: Submit catalog product data indicating dimensions, general assembly, specialties and accessories, weights, rated capacities, performance ratings, materials and finishes, controls, electrical requirements, and wiring diagrams.

C. Shop Drawings: Submit shop drawings indicating components, assembly, equipment locations, dimensions, weights and loadings, required clearances, and location and size of field connections. Include layout drawings showing field location of all hose reel, duct diameters and hanger details.

D. Operations and Maintenance Manuals: Submit Operations and Maintenance Manuals as specified in the DDC General Conditions including manufacturer's descriptive literature including installation and operation instructions, controls, accessories, maintenance and repair data, and parts lists.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Provide equipment from a company specializing in the design and manufacture of vehicle exhaust systems which has a minimum of 3 years experience, and issues complete catalog data on these products

1.5 DELIVERY, STORAGE, AND HANDLING

A. Shipping and Handling: Comply with the manufacturer's instructions for rigging, unloading and transportation of units.

B. Storage and Protection: Store equipment in its original shipping crates or containers, with labeling in place until time of installation. Store equipment in clean, dry place and protect equipment from physical damage.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Nedelman.
2. Movex.
3. Ari-hetra.
4. Or approved equal.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Selkirk Metalbestos.
2. Van Packer.
3. DuraVent.
4. Or approved equal.

2.2 MATERIALS

A. Overview: Provide hose reels complete with hose, nozzle and accessories. Hose reels to be ducted to single central blower. (4) reels to one blower, (3) reels to one blower.

B. Recoil Hose Reel: The reel shall be comprised of 12ga. support steel coated with a 15 micron thickness aluminum alloy finish for corrosion resistance; drum shall be 16ga material similar to support steel. The drum ends shall be formed from a 1/8" steel material. The rewind motor mechanism shall be capable of lifting 95 lbs. The motorized mechanism shall be located outside and offset from drum mechanism. The motorized mechanism shall be a direct drive to the drum 115/1/60 1/3HP. Reel will be equipped with hose guide to ensure hose freely moves and coils on reel uniformly, reel must be capable of handling 6" x 50' of hose. Pendant shall have up / down and fan stop start control

C. Locking Suction Nozzle: The suction nozzle shall be a circular EPDM (Ethylene propylene Diene Monomer) rubber type that will accept up 7" dia. Tailpipe and connection to flex hose is 6" dia. The EPDM rubber end shall be a minimum 8 ½" long and ½" thick. The overall length of nozzle shall be 12" long. The connection to hose is via galvanized rotating connection 16ga. with 360 degree ball bearing rotation to eliminate hose kinking and ease of connection for operator. The nozzle to have a debris screen with 1 ¼" square screen (screen shall not hinder airflow). The attachment mechanism shall be a spring loaded flap valve. Handle to be 4" long with 2 ½" heat isolation handle. (1) Nozzle required per hose reel.

D. Exhaust Hose: Each hose reel shall be supplied with high temperature hose capable of withstanding 1200 degrees. Each hose shall be 6" dia. x 50' long (continuous). The hose construction shall be two ply consisting of an inner ply of Silicon coated glass material and an outer layer Silicon coated nomex with wear strip. The unit shall have a spring steel helix for structure integrity that shall embedded between the ply of materials. The two ply construction shall be Hi-Temp bonded and reinforced for superior flex fatigue. The hose shall be attached to nozzle and hose reel via stainless adjustable clamps with rubber band cover

E. Exhaust blower: The exhaust blower shall be capable of delivering 800 cfm per hose reel. The blower will be powered by a 460 3ph. TEFC motor Blower wheel to be radial type direct drive operating at 3500 rpm. The wheel to be dynamically balanced. Housing is constructed of 10 gauge steel with gray enamel paint inside and outside. The wheel shall be aluminum non-sparking type. The blower to be supplied with slip inlet collar, vibration isolators, duct silencer on discharge, starter with wall mount stop/start and service disconnect switch. The contactor will be responsible for all electrical wiring from the disconnect to the blower motor of unit. Stop/start will be located in shop at the City of New York's discretion.

F. Ductwork and hanging material: The contractor shall supply all ductwork and hanging material necessary to install above equipment and duct reels to central blower and outside building with stack. Duct work to be Stainless Steel with minimum of 22-gauge thickness. Minimum connection to hose reel is 6" dia. Main trunk line shall increase by minimum of 1" dia, increments after branch is made to hose reel. All branches shall be 45 degree (no bull head or 90 degree taps shall be accepted) All elbows shall be smooth bore type and connections of duct shall be done with rivets or self tapping screws with a high temp flexible caulk bead to insure no air leaks. All hanging material shall be galvanized Unistrut type channel minimum of 12ga. with locking clamps and fittings 12 ga.

G. Control Box: NEMA 4 control box for wall mounting. The unit has a Motor starter, motor protector and dry contacts for BMS system. All components are UL approved. Box shall be 14 ga. metal with epoxy coated paint. Furnish and install all necessary components for a complete, operating, and acceptable system with responsibility as follows:

1. Startup of the system
2. All corrections / modification of deficiencies discovered during the installed
3. Testing as required for a fully operational system
4. Instruction and O & M manuals

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for executions requirements.

3.2. EXAMINATION

A. Examine vehicle exhaust system at the time of delivery for damaged or missing components. Do not proceed with installation of units until all items found defective have been corrected.

3.3 INSTALLATION

A. Install all units in accordance with manufacturer's instructions. Make all necessary adjustments to equipment to provide complete and satisfactory operation upon completion of installation.

B. Connect to electrical service.

C. Install fan on vibration isolation. Refer to Section 23 05 48 "Vibration and Seismic Controls."

D. Install ductwork/fume vents in accordance with manufacturer's installation instructions and UL listing. Maintain minimum clearances from combustibles as specified in UL listing.

E. Install ductwork/fume vents with minimum number of joints. Align them accurately at connections, with internal surfaces smooth. Seal joints between sections of positive pressure gas vents in accordance with the manufacturer's installation instructions, and using only sealants recommended by manufacturer.

F. Support ductwork/fume vents from building structures, rigidly, with suitable ties, braces, hangers and anchors to hold to shape and prevent buckling. Support ductwork/fume vents to adjacent structural surfaces or at floor penetrations at 12 foot spacing. Refer to SMACNA HVAC Duct Construction Standards - Metal and Flexible for equivalent duct support configuration and size. Install concrete inserts for support of breechings, gas vents, chimneys, and stacks in coordination with formwork.

G. Support ductwork/fume vents at the intervals recommended by the manufacturer to support the weight of the vent and all accessories, without exceeding loading of appliances.

H. Install ductwork/fume stacks level and plumb.

I. Thermal Expansion: Install expansion joints on ductwork/fume vents to allow for thermal expansion.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Services: Provide the services of a qualified representative of the manufacturer to inspect the installation of the vehicle exhaust system, certify that it meets the manufacturer's recommendations, and instruct the operating personnel in their operation and maintenance.

B. Temporary Closure: At ends of ductwork/fume vents which are not completed or connected to equipment, provide a temporary closure to prevent the entrance of dust and debris until installations are completed.

END OF SECTION 231217

SECTION 232113
Hydronic Piping

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.
   1. Refer to DDC General Conditions.
      a. Section 01 33 00 "Submittal Procedures."
      b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."
      c. Section 01 74 19 "Construction Waste Management and Disposal."

1.2 SUMMARY

A. This Section includes pipe and fitting materials, joining methods, special-duty valves, and specialties for the following:

1. Hot-water heating and Glycol heating piping.
2. Makeup-water piping.
3. Condensate-drain piping.
4. Blowdown-drain piping.
5. Air-vent piping.
6. Safety-valve-inlet and -outlet piping.

B. Related Sections include the following:

1. Division 23 Section 23 21 13 "Hydronic Pumps" for pumps, motors, and accessories for hydronic piping.

1.3 PERFORMANCE REQUIREMENTS

A. Hydronic piping components and installation shall be capable of withstanding the following minimum working pressure and temperature:

1. Hot-Water Heating Piping: 200 psig at 250 deg F.
2. Makeup-Water Piping: 80 psig at 150 deg F.
3. Condensate-Drain Piping: 150 deg F.
4. Blowdown-Drain Piping: 200 deg F.
5. Air-Vent Piping: 200 deg F.
6. Safety-Valve-Inlet and -Outlet Piping: Equal to the pressure of the piping system to which it is attached.
7. Valves. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
8. Air control devices.
9. Hydronic specialties.

B. Shop Drawings: Detail, at 3/8"=1'-0" scale, the piping layout, fabrication of pipe anchors, hangers, supports for multiple pipes, alignment guides, expansion joints and loops, and attachments of the same to the building structure. Detail location of anchors, alignment guides, and expansion joints and loops.
C. Field quality-control test reports.
D. Operation and Maintenance Data: For air control devices, hydronic specialties, and special-duty valves to include in emergency, operation, and maintenance manuals.
E. Environmental Sustainability Documentation: Contractor shall submit for approval, a fully completed Environmental Building Materials Certification Form and backup documentation from the manufacturer or supplier of each type used in this section. Such backup documentation shall be typewritten on the manufacturer's letterhead or product data sheet published by the manufacturer.

1. Adhesives and Sealants
2. Paints and Coatings
3. Brazing: Certify brazing procedures, brazers, and operations in accordance with ASME Boiler and Pressure Vessel Code, Section IX, for shop and job-site brazing of piping work.
4. New York City Building Code: Comply with the New York City Building and Mechanical Code.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

A. Drawn-Temper Copper Tubing: ASTM B 88, Type L
B. DWV Copper Tubing: ASTM B 306, Type DWV.
C. Wrought-Copper Fittings: ASME B16.22.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Victaulic Company of America or a comparable product by one of the following:

   a. Anvil International, Inc.
   b. Grinnell Mechanical Products, Tyco Fire & Building Products.
   c. Or approved equal.

2. Grooved-End Copper Fittings: ASTM B 75, copper tube or ASTM B 584, bronze casting.
3. Grooved-End-Tube Couplings: Rigid pattern, unless otherwise indicated; gasketed fitting. Ductile-iron housing with keys matching pipe and fitting grooves, prelubricated EPDM gasket rated for minimum 230 deg F for use with housing, and steel bolts and nuts. Victaulic Style 607 QuickVic.

4. Basis-of-Design Product: Subject to compliance with requirements, provide Victaulic Company of America or a comparable product by one of the following:

   a. Anvil International, Inc.
   b. Tyco Fire & Building Products.
   c. National Fittings, Inc.
   d. S. P. Fittings; a division of Star Pipe Products.
   e. Or approved equal.

5. Joint Fittings: ASTM A 536, Grade 65-45-12 ductile iron; ASTM A 47/A 47M, Grade 32510 malleable iron; ASTM A 53/A 53M, Type F, E, or S, Grade B fabricated steel; or ASTM A 106, Grade B steel fittings with grooves or shoulders constructed to accept grooved-end couplings; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.
6. Couplings: Ductile- or malleable-iron housing and synthetic rubber gasket of central cavity pressure-responsive design; with nuts, bolts, locking pin, locking toggle, or lugs to secure grooved pipe and fittings.

D. Steel Pipe Nipples: ASTM A 733, made of same materials and wall thicknesses as pipe in which they are installed.

2.2 JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.
   1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch maximum thickness unless thickness or specific material is indicated.
      a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
      b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
C. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
D. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for joining copper with copper; or BAg-1, silver alloy for joining copper with bronze or steel.
E. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
F. Gasket Material: Thickness, material, and type suitable for fluid to be handled and working temperatures and pressures.

2.3 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper-alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
B. Insulating Material: Suitable for system fluid, pressure, and temperature.
C. Dielectric Unions:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
      b. Zurn Plumbing Products Group; AquaSpec Commercial Products Division.
      c. Calpico, Inc.
      d. Or approved equal.

2. Factory-fabricated union assembly, for 250-psig minimum working pressure at 200 deg F.

D. Dielectric Flanges:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
   b. Zurn Plumbing Products Group; AquaSpec Commercial Products Division
   c. Calpico, Inc.
   d. Or approved equal.
2. Factory-fabricated companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.

E. Dielectric-Flange Kits:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
   a. Advance Products & Systems, Inc.
   b. Calpico, Inc.
   c. Central Plastics Company.
   d. Pipeline Seal and Insulator, Inc.
   e. Or approved equal.
2. Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.
3. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig minimum working pressure where required to suit system pressures.

F. Dielectric Couplings:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Calpico, Inc.
   b. Lochinvar Corporation.
   c. Watts Regulator Co.
   d. Or approved equal.
2. Galvanized-steel coupling with inert and noncorrosive thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg F.

G. Dielectric Nipples:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
   a. Perfection Corporation; a subsidiary of American Meter Company.
   b. Precision Plumbing Products, Inc.
   c. Sioux Chief Manufacturing Company, Inc.
   d. Victaulic Company of America.
   e. Or approved equal
2. Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg F.

2.4 VALVES

A. Gate, Globe, Check, Ball, and Butterfly Valves: Comply with requirements specified in Division 23 Section 23 05 23 "General-Duty Valves for HVAC Piping."
B. Automatic Temperature-Control Valves, Actuators, and Sensors: Comply with requirements specified in Division 23 Section 23 09 00 "Instrumentation and Control for HVAC."
C. Bronze, Calibrated-Orifice, Balancing Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Armstrong Pumps, Inc.

b. Bell & Gossett Domestic Pump; a division of ITT Industries.
c. Flow Design Inc.
d. Griswold Controls.
e. Taco.
f. Or approved equal.

2. Body: Bronze, ball or plug type with calibrated orifice or venturi.
3. Ball: Brass or stainless steel.
4. Plug: Resin.
5. Seat: PTFE.
6. End Connections: Threaded or socket.
7. Pressure Gage Connections: Integral seals for portable differential pressure meter.
8. Handle Style: Lever, with memory stop to retain set position.
9. CWP Rating: Minimum 125 psig.
10. Maximum Operating Temperature: 250 deg F.

D. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Armstrong Pumps, Inc.
   b. Bell & Gossett Domestic Pump; a division of ITT Industries.
   c. Flow Design Inc.
   d. Griswold Controls.
   e. Taco.
   f. Tour & Andersson; available through Victaulic Company of America.
   g. Or approved equal.
2. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
3. Ball: Brass or stainless steel.
4. Stem Seals: EPDM O-rings.
5. Disc: Glass and carbon-filled PTFE.
6. Seat: PTFE.
7. End Connections: Flanged or grooved.
8. Pressure Gage Connections: Integral seals for portable differential pressure meter.
9. Handle Style: Lever, with memory stop to retain set position.
10. CWP Rating: Minimum 125 psig.
11. Maximum Operating Temperature: 250 deg F.

E. Diaphragm-Operated Safety Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Amtrol, Inc.
   b. Armstrong Pumps, Inc.
   c. Bell & Gossett Domestic Pump; a division of ITT Industries.
   d. Conbraco Industries, Inc, Apollo Valves.
   e. Spence Engineering Company, Inc.
   f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
   g. Or approved equal

2. Body: Bronze or brass.
3. Disc: Glass and carbon-filled PTFE.
4. Seat: Brass.
5. Stem Seals: EPDM O-rings.
6. Diaphragm: EPT.
7. Wetted, Internal Work Parts: Brass and rubber.
8. Inlet Strainer: removable without system shutdown.
9. Valve Seat and Stem: Noncorrosive.
10. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

F. Automatic Flow-Control Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Flow Design Inc.
   b. Griswold Controls.
   c. Flomatic
   d. Or approved equal.
2. Body: Brass or ferrous metal.
3. Piston and Spring Assembly: Stainless steel, tamper proof, self cleaning, and removable.
4. Combination Assemblies: Include bonze or brass-alloy ball valve.
5. Identification Tag: Marked with zone identification, valve number, and flow rate.
6. Size: Same as pipe in which installed.
7. Performance: Maintain constant flow, plus or minus 5 percent over system pressure fluctuations.
8. Minimum CWP Rating: 300 psig.
9. Maximum Operating Temperature: 250 deg F.

2.5 AIR CONTROL DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bell & Gossett Domestic Pump; a division of ITT Industries.
2. Hoffman Specialty
3. Taco
4. Amtrol
5. Armstrong
6. Or approved equal.

B. Manual Air Vents:

1. Body: Bronze.
2. Internal Parts: Nonferrous.
3. Operator: Screwdriver or thumbscrew.
4. Inlet Connection: ½ in
5. Discharge Connection: 1/8 in.
6. CWP Rating: 150 psig.
7. Maximum Operating Temperature: 240 deg F.

C. Automatic Air Vents:

1. Body: Bronze or cast iron.

2. Internal Parts: Nonferrous.
3. Operator: Noncorrosive metal float.
4. Inlet Connection: ½ in.
5. Discharge Connection: ¼ in.
6. CWP Rating: 150 psig.
7. Maximum Operating Temperature: 240 deg F.

D. Diaphragm-Type Expansion Tanks:

1. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature. Factory test with taps fabricated and supports installed and labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
2. Diaphragm: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
3. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

E. In-Line Air Separators:

1. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
2. Maximum Working Pressure: Up to 175 psig.
3. Maximum Operating Temperature: Up to 300 deg F.

2.6 HYDRONIC PIPING SPECIALTIES

A. Y-Pattern Strainers:

1. Body: ASTM A 126, Class B, cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for 2 inch and smaller; flanged ends for 2-1/2 inch and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

B. Basket Strainers:

1. Body: ASTM A 126, Class B, high-tensile cast iron with bolted cover and bottom drain connection.
2. End Connections: Threaded ends for 2 inch and smaller; flanged ends for 2-1/2 inch and larger.
3. Strainer Screen: 40-mesh startup strainer, and perforated stainless-steel basket with 50 percent free area.
4. CWP Rating: 125 psig.

C. Grooved End Y-Pattern Strainers;

1. Body: ASTM A536, ductile iron.
2. Strainer Screen: 0.125 inch diameter perforations, stainless-steel basket.
3. CWP Rating: 300 psig.

D. Grooved End T-Pattern Strainers;

1. Body: ASTM A536 ductile iron or ASTM A53 carbon steel.
2. Strainer Screen: 0.125 inch diameter perforations, Type 304 stainless-steel basket.
3. CWP Rating: 750 psig.

E. Stainless-Steel Bellow, Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
2. End Connections: Threaded or flanged to match equipment connected.

3. Performance: Capable of 3/4-inch misalignment.
4. CWP Rating: 150 psig.
5. Maximum Operating Temperature: 250 deg F.

F. Spherical, Rubber, Flexible Connectors:

1. Body: Fiber-reinforced rubber body.
2. End Connections: Steel flanges drilled to align with Classes 150 and 300 steel flanges.
3. Performance: Capable of misalignment.
4. CWP Rating: 150 psig.
5. Maximum Operating Temperature: 250 deg F.

G. Expansion fittings are specified in Division 23 Section "Expansion Fittings and Loops for HVAC Piping."

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING APPLICATIONS

A. Hot-water heating piping, aboveground, 2 inch and smaller shall be the following:

1. Type L, hard drawn-temper copper tubing, wrought-copper fittings, and soldered joints.

B. Hot-water heating piping, aboveground, 2 inch to 3 inch shall be one of the following:

1. Type L, hard drawn-temper copper tubing, wrought-copper fittings, and soldered joints.
2. Schedule 40 steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.

C. Hot-water heating piping, aboveground, 4 inch and larger, shall be the following:

1. Schedule 40 steel pipe, wrought-steel fittings and wrought-cast or forged-steel flanges and flange fittings, and welded and flanged joints.
2. Schedule 40 steel pipe; grooved, mechanical joint coupling and fittings; and grooved, mechanical joints.

D. Makeup-water piping installed aboveground shall be the following:

1. Type L, hard drawn-temper copper tubing, wrought-copper fittings, and soldered joints.

E. Condensate-Drain Piping: Type L, hard drawn-temper copper tubing, wrought-copper fittings, and soldered joints.

F. Blowdown-Drain Piping: Same materials and joining methods as for piping specified for the service in which blowdown drain is installed.

G. Air-Vent Piping:

1. Inlet: Same as service where installed with metal-to-plastic transition fittings for plastic piping systems according to the piping manufacturer's written instructions.
2. Outlet: Type K, annealed-temper copper tubing with soldered or flared joints.

H. Safety-Valve-Inlet and -Outlet Piping for Hot-Water Piping: Same materials and joining methods as for piping specified for the service in which safety valve is installed with metal-to-plastic transition fittings for plastic piping systems according to the piping manufacturer's written instructions.

3.3 VALVE APPLICATIONS

A. Install shutoff-duty valves at each branch connection to supply mains, and at supply connection to each piece of equipment.
B. Install calibrated-orifice, balancing valves at each branch connection to return main.
C. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.
D. Install check valves at each pump discharge and elsewhere as required to control flow direction.
E. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; and pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.
F. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

3.4 PIPING INSTALLATIONS

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Piping shown on the drawings shall be considered as diagrammatic for clearness and may or may not, in all parts, be shown in its true position. This fact does not, in any way, relieve the Contractor from full responsibility for the proper erection of a system of piping in every aspect suitable for the work intended. Indicate piping locations and arrangements if such were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
B. Drawings indicate generally sizes and locations of pipelines, but the right is reserved to direct changes in details of pipe work as necessitated by actual conditions. Piping shall be of sizes as recommended by the unit manufacturer. Any pipe size not shown shall be in proportion to the load carried at the same resistance as similar piping, or of size as directed.
C. Piping shall be accurately cut to measurement established at the construction site and shall be worked into place without springing or forcing, properly clearing openings, structural members and other equipment. Overhead piping shall be run as high as possible under structural members.
D. Ream pipes and tubes. Clean off scale and dirt, inside and outside, before assembly. Remove welding slag or other foreign material from piping.
E. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
F. Exposed piping shall be run perpendicular and/or parallel to floors, walls, etc. Piping and valves shall be grouped neatly and shall be run so as to avoid reducing headroom or passage clearance
G. No piping or work of any kind shall be concealed or covered until all required tests have been satisfactorily completed and the work has been approved by the Commissioner as is required by code.
H. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
I. Protect entire installation from damage during construction and be responsible for all damage until final acceptance of the work. All pipes shall be protected with suitable coverings as soon as they are set. All open ends of pipes shall be closed by a plug fitting to prevent obstruction and damage.
J. Grooved joint piping system:

1. Piping systems shall be installed in accordance with the manufacturer's guidelines and recommendations.
2. Piping systems shall not be installed in concealed areas with limited access.
3. All grooved couplings, fittings, valves, and specialties shall be the products of a single manufacturer.
4. Grooving tools shall be of the same manufacturer as the grooved components.

5. The gasket style and elastomeric material (grade) shall be verified as suitable for the intended service as specified. Gaskets shall be molded and produced by same manufacturer.
6. Grooved end shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove for proper gasket sealing.
7. A manufacturer factory-trained field representative shall provide on-site training for contractor's field personnel in the proper use of grooving tools and installation of grooved piping products. Factory-trained representative shall periodically review the product installation.
8. Contractor shall remove and replace any improperly installed products

K. All openings in floors shall be covered and protected during the course of construction.
L. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
M. Install piping to permit valve servicing.
N. Install piping at indicated slopes.
O. Install piping free of sags and bends.
P. Install fittings for changes in direction and branch connections.
Q. Install piping to allow application of insulation.
R. Select system components with pressure rating equal to or greater than system operating pressure.
S. Install groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.
T. Install drains, consisting of a tee fitting, ¾ inch ball valve, and short ¾ inch threaded nipple with cap, at low points in piping system mains and elsewhere as required for system drainage.
U. Install piping at a uniform grade of 0.2 percent upward in direction of flow.
V. Reduce pipe sizes using eccentric reducer fitting installed with level side up.
W. Install branch connections to mains using tee fittings in main pipe, with the branch connected to the bottom of the main pipe. For up-feed risers, connect the branch to the top of the main pipe.
X. Install valves according to Division 23 Section 23 05 23 "General-Duty Valves for HVAC Piping."
Y. Install unions in piping, 2 inch and smaller, adjacent to valves, at final connections of equipment, and elsewhere as indicated.
Z. Install flanges in piping, 2 ½ inch and larger, at final connections of equipment and elsewhere as indicated.
AA. Install strainers on inlet side of each control valve, pressure-reducing valve, solenoid valve, in-line pump, and elsewhere as indicated. Install ¾ inch nipple and ball valve in blowdown connection of strainers 2 inch and larger. Match size of strainer blowoff connection for strainers smaller than 2 inch.
BB. Install expansion loops, expansion joints, anchors, and pipe alignment guides as specified in Division 23 Section 23 05 16 "Expansion Fittings and Loops for HVAC Piping."
CC. Identify piping as specified in Division 23 Section 23 05 53 "Identification for HVAC Piping and Equipment."

3.5 HANGERS AND SUPPORTS

A. Hanger, support, and anchor devices are specified in Division 23 Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment." Comply with the following requirements for maximum spacing of supports.
B. Seismic restraints are specified in Division 23 Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."
C. Install the following pipe attachments:
   1. Adjustable steel clevis hangers for individual horizontal piping less than 20 feet long.
   2. Adjustable roller hangers and spring hangers for individual horizontal piping 20 feet or longer.
   3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
   4. Spring hangers to support vertical runs.

5. Provide copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
6. On plastic pipe, install pads or cushions on bearing surfaces to prevent hanger from scratching pipe.

D. Install hangers for piping with the following maximum spacing and minimum rod sizes:

1. Up to 1-1/2 inches: Maximum span, 6 feet; minimum rod size, 3/8 inch.
2. 2 inches and larger: Maximum span, 9 feet; minimum rod size, 1/2 inch.

E. Support vertical runs at roof, at each floor, and at 10-foot intervals between floors.

3.6 PIPE JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and Division 23 Sections specifying piping systems.
B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Welded Joints: Construct joints according to AWS D10.12/D10.12M, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
I. Grooved Joints: Assemble joints with coupling and gasket, lubricant, and bolts. Cut or roll grooves in ends of pipe based on pipe and coupling manufacturer's written instructions for pipe wall thickness. Use grooved-end fittings and rigid, grooved-end-pipe couplings.

3.7 HYDRONIC SPECIALTIES INSTALLATION

A. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Manual vents at heat-transfer coils and elsewhere as required for air venting.
B. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.
C. Install in-line air separators in pump suction. Install drain valve on air separators 2 inch and larger.
D. Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure tank is properly charged with air to suit system Project requirements.

3.8 TERMINAL EQUIPMENT CONNECTIONS

A. Sizes for supply and return piping connections shall be the same as or larger than equipment connections.
B. Install control valves in accessible locations close to connected equipment.
C. Install bypass piping with globe valve around control valve. If parallel control valves are installed, only one bypass is required.

D. Install ports for pressure gages and thermometers at coil inlet and outlet connections according to Division 23 Section 23 05 19 "Meters and Gages for HVAC Piping."

3.9 FIELD QUALITY CONTROL

A. Prepare hydronic piping according to ASME B31.9 and as follows:

1. Leave joints, including welds, uninsulated and exposed for examination during test.
2. Provide temporary restraints for expansion joints that cannot sustain reactions due to test pressure. If temporary restraints are impractical, isolate expansion joints from testing.
3. Flush hydronic piping systems with clean water; then remove and clean or replace strainer screens.
4. Isolate equipment from piping. If a valve is used to isolate equipment, its closure shall be capable of sealing against test pressure without damage to valve. Install blinds in flanged joints to isolate equipment.
5. Install safety valve, set at a pressure no more than one-third higher than test pressure, to protect against damage by expanding liquid or other source of overpressure during test.

B. Perform the following tests on hydronic piping:

1. Use ambient temperature water as a testing medium unless there is risk of damage due to freezing. Another liquid that is safe for workers and compatible with piping may be used.
2. While filling system, use vents installed at high points of system to release air. Use drains installed at low points for complete draining of test liquid.
3. Isolate expansion tanks and determine that hydronic system is full of water.
4. Subject piping system to hydrostatic test pressure that is not less than 1.5 times the system's working pressure. Test pressure shall not exceed maximum pressure for any vessel, pump, valve, or other component in system under test. Verify that stress due to pressure at bottom of vertical runs does not exceed 90 percent of specified minimum yield strength or 1.7 times "SE" value in Appendix A in ASME B31.9, "Building Services Piping."
5. After hydrostatic test pressure has been applied for at least 2 hours, examine piping, joints, and connections for leakage. Eliminate leaks by tightening, repairing, or replacing components, and repeat hydrostatic test until there are no leaks.
6. Prepare written report of testing.

C. Perform the following before operating the system:

1. Open manual valves fully.
2. Inspect pumps for proper rotation.
3. Set makeup pressure-reducing valves for required system pressure.
4. Inspect air vents at high points of system and determine if all are installed and operating freely (automatic type), or bleed air completely (manual type).
5. Set temperature controls so all coils are calling for full flow.
6. Inspect and set operating temperatures of hydronic equipment, such as boilers, chillers, cooling towers, to specified values.
7. Verify lubrication of motors and bearings.

END OF SECTION 232113

SECTION 232116
Hydronic Piping Specialties

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract)

B. LEED General Requirements.
   1. Refer to DDC General Conditions.
      a. Section 01 33 00 "Submittal Procedures."
      b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2. SUMMARY

A. Section Includes:
   1. Hydronic specialty valves.
   2. Air-control devices.
   3. Strainers.
   4. Connectors.
   5. Glycol water system

1.3. SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4. SUBMITTALS

A. Product Data: For each type of product:
   1. Include construction details and material descriptions for hydronic piping specialties.
   2. Include rated capacities, operating characteristics, and furnished specialties and accessories.
   3. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
   4. Operation and Maintenance Data: For hydronic piping specialties to include in emergency, operation, and maintenance manuals

1.5. MAINTENANCE MATERIAL SUBMITTALS

A. Differential Pressure Meter: For each type of balancing valve and automatic flow control valve, include flowmeter, probes, hoses, flow charts, and carrying case.

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Pipe Welding: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code: Section IX.

C. Safety Valves and Pressure Vessels: Shall bear the appropriate ASME label. Fabricate and stamp air separators and expansion tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

PART 2 - PRODUCTS

2.1. HYDRONIC SPECIALTY VALVES

A. Bronze or Brass, Calibrated-Orifice, Balancing Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Hays Fluid Controls; Venturi Type Manual Balancing Valve or a comparable product by one of the following:

    a. Flow Design, Inc.
    b. Griswold Controls.
    c. Oventrop Corporation.
    d. Tour & Andersson; available through Victaulic Company.
    e. Or approved equal.

2. Body: Bronze or brass, ball or plug type with calibrated orifice or venturi.
3. Ball: Brass or stainless steel.
4. Plug: Resin.
5. Seat: PTFE.
6. End Connections: Threaded or socket.
7. Pressure Gage Connections: Integral seals for portable differential pressure meter.
8. Handle Style: Lever, with memory stop to retain set position.
9. CWP Rating: Minimum 125 psig.
10. Maximum Operating Temperature: 250 deg F.

B. Cast-Iron or Steel, Calibrated-Orifice, Balancing Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Hays Fluid Controls; Series CBVF Combination Butterfly/Venturi with Flange or a comparable product by one of the following:

    a. Flow Design, Inc.
    b. Griswold Controls.
    c. Oventrop Corporation.
    d. Red White Valve Corp.
    e. Tour & Andersson; available through Victaulic Company.
    f. Or approved equal.

2. Body: Cast-iron or steel body, ball, plug, or globe pattern with calibrated orifice or venturi.
3. Ball: Combination butterfly valve, brass, or stainless steel.
4. Stem Seals: EPDM O-rings.

5. Disc, NPS 2-1/2 to NPS 8: Aluminum-bronze sand casting, ASTM B148 C95800.
6. Seat: PTFE, bonded EPDM.
7. End Connections: Flanged or grooved.
8. Pressure Gage Connections: Integral seals for portable differential pressure meter.
9. Handle Style: Combination infinite/10-position memory stop plate, a one-piece disc/shaft, and a triple shaft bearing.
10. CWP Rating: Minimum 125 psig.
11. Maximum Operating Temperature: 250 deg F.

C. Diaphragm-Operated Safety Valves: ASME labeled.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AMTROL, Inc.
   b. Apollo Valves; Conbraco Industries, Inc.
   c. Armstrong Pumps, Inc.
   d. Bell & Gossett; a Xylem brand.
   e. Spence Commissionering Company, Inc.
   f. WATTS.
   g. Or approved equal.

2. Body: Bronze or brass.
3. Disc: Glass and carbon-filled PTFE.
4. Seat: Brass.
5. Stem Seals: EPDM O-rings.
6. Diaphragm: EPT.
7. Wetted, Internal Work Parts: Brass and rubber.
8. Inlet Strainer: removable without system shutdown.
9. Valve Seat and Stem: Noncorrosive.
10. Valve Size, Capacity, and Operating Pressure: Comply with ASME Boiler and Pressure Vessel Code: Section IV, and selected to suit system in which installed, with operating pressure and capacity factory set and field adjustable.

D. Automatic Flow-Control Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Hays Fluid Controls; Mesurflo or a comparable product by one of the following:

   a. Flow Design, Inc.
   b. Griswold Controls.
   c. Oventrop.
   d. Or approved equal.

2. Body: Brass or ferrous metal.
3. Flow Control Assembly: Mesurflo elastomeric diaphragm and polyphenylsulfone orifice plate, within 2- to 80-psig differential pressure operating ranges. The corrosion-resistant, tamper-proof, self-

cleaning, and removable flow control assembly device shall be warranted for the life of the HVAC system in which it was originally installed, provided only water-based hydronic fluids are used at usual HVAC temperatures and installed according to product installation and operation specifications.

4. Combination Assemblies: Include bronze or brass-alloy ball valve.
5. Identification Tag: Marked with zone identification, valve number, and flow rate.
6. Size: Same as pipe in which installed.
7. Performance: Maintain constant flow at a minimum of plus or minus 10 percent, of system pressure fluctuations.
8. Minimum CWP Rating: 400 psig.
9. Maximum Operating Temperature: 225 deg F.

2.2. AIR-CONTROL DEVICES

A. Air vents aid in system filling. Air removal after initial startup is accomplished by air separator or boiler dip-tube.

B. Leakage from automatic air vents may cause damage to ceilings and other finished surfaces. Manual air vents may be preferred over automatic air vents in finished spaces.

C. Manual Air Vents:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Hays Fluid Controls or a comparable product by one of the following:

   a. AMTROL, Inc.
   b. Armstrong Pumps, Inc.
   c. HCI; Hydronics Components Inc.
   d. NuTech Hydronic Specialty Products.
   e. TACO Comfort Solutions, Inc.
   f. Or approved equal.

2. Body: Bronze or brass.
3. Internal Parts: Nonferrous.
4. Operator: Wrench or thumbscrew.
5. Inlet Connection: NPS 1/2.
6. Discharge Connection: NPS 1/8.
7. CWP Rating: 150 psig.
8. Maximum Operating Temperature: 225 deg F.

D. Automatic Air Vents:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AMTROL, Inc.
   b. Armstrong Pumps, Inc.
   c. Bell & Gossett; a Xylem brand.
   d. Nexus Valve, Inc.
   e. NuTech Hydronic Specialty Products.
   f. Spirotherm, Inc.

g. TACO Comfort Solutions, Inc.
h. Or approved equal.

2. Body: Bronze or cast iron.
3. Internal Parts: Nonferrous.
4. Operator: Noncorrosive metal float.
5. Inlet Connection: NPS 1/2.
6. Discharge Connection: NPS 1/4.
7. CWP Rating: 150 psig.
8. Maximum Operating Temperature: 240 deg F.

E. Expansion Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.
b. Armstrong Pumps, Inc.
c. Bell & Gossett; a Xylem brand.
d. Flo Fab Inc.
e. TACO Comfort Solutions, Inc.
f. Or approved equal.

2. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature, with taps in bottom of tank for tank fitting and taps in end of tank for gage glass. Tanks shall be factory tested after taps are fabricated and shall be labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
3. Air-Control Tank Fitting: Cast-iron body, copper-plated tube, brass vent tube plug, and stainless-steel ball check, 100-gal. unit only; sized for compression-tank diameter. Provide tank fittings for 125-psig working pressure and 250 deg F maximum operating temperature.
4. Tank Drain Fitting: Brass body, nonferrous internal parts; 125-psig working pressure and 240 deg F maximum operating temperature; constructed to admit air to compression tank, drain water, and close off system.
5. Gage Glass: Full height with dual manual shutoff valves, 5"-inch- diameter gage glass, and slotted-metal glass guard.

F. Bladder-Type Expansion Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.
b. Armstrong Pumps, Inc.
c. Bell & Gossett; a Xylem brand.
d. Flo Fab Inc.
e. TACO Comfort Solutions, Inc.
f. Or approved equal.

2. Tank: Welded steel, rated for 125-psig working pressure and 375 deg F maximum operating temperature. Factory test after taps are fabricated and supports installed and are labeled according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
3. Bladder: Securely sealed into tank to separate air charge from system water to maintain required expansion capacity.
4. Air-Charge Fittings: Schrader valve, stainless steel with EPDM seats.

G. Coalescing-Type Air and Dirt Separators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Armstrong Pumps, Inc.
   b. Bell & Gossett; a Xylem brand.
   c. Spirotherm, Inc.
   d. Or approved equal.
2. Tank: Fabricated steel tank; ASME constructed and stamped for 125-psig working pressure and 270 deg F maximum operating temperature.
3. Coalescing Medium: Stainless steel.
4. Air Vent: Threaded to the top of the separator.
5. Inline Inlet and Outlet Connections: Threaded for NPS 2 (DN 50) and smaller; Class 150 flanged connections for NPS 2-1/2 (DN 65) and larger.
6. Blowdown Connection: Threaded to the bottom of the separator.
7. Size: Match system flow capacity.

H. Tangential-Type Air Separators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. AMTROL, Inc.
   b. Armstrong Pumps, Inc.
   c. Bell & Gossett; a Xylem brand.
   d. TACO Comfort Solutions, Inc.
   e. Or approved equal.
2. Tank: Welded steel; ASME constructed and labeled for 125-psig minimum working pressure and 375 deg F maximum operating temperature.
3. Air Collector Tube: Perforated stainless steel, constructed to direct released air into expansion tank.
4. Tangential Inlet and Outlet Connections: Threaded for NPS 2 and smaller; flanged connections for NPS 2-1/2 and larger.
5. Blowdown Connection: Threaded.
6. Size: Match system flow capacity.

I. In-Line Air Separators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.
b. Armstrong Products, Inc.
c. Bell & Gossett; a Xylem brand.
d. Spirotherm, Inc.
e. TACO Comfort Solutions, Inc.
f. Or approved equal

2. Tank: One-piece cast iron with an integral weir constructed to decelerate system flow to maximize air separation.
3. Maximum Working Pressure: Up to 175 psig.
4. Maximum Operating Temperature: Up to 300 deg F.

J. Air Purgers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AMTROL, Inc.
b. Armstrong Pumps, Inc.
c. Bell & Gossett; a Xylem brand.
d. TACO Comfort Solutions, Inc.
e. Or approved equal.

2. Body: Cast iron with internal baffles that slow the water velocity to separate the air from solution and divert it to the vent for quick removal.
3. Maximum Working Pressure: 150 psig.
4. Maximum Operating Temperature: 250 deg F.

2.3. STRAINERS

A. Y-Pattern Strainers:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Hays Fluid Controls or comparable product by one of the following:

a. Flow Design, Inc.
b. Griswold Controls.
c. HCI; Hydronics Components Inc.
d. Or approved equal.

2. Body: Brass or ASTM A 126, Class B, with bolted cover and bottom drain connection.
3. End Connections: Threaded ends for NPS 2 and smaller; flanged ends for NPS 2-1/2 and larger.
4. Strainer Screen: Stainless-steel, 20-mesh strainer, or perforated stainless-steel basket.
5. CWP Rating: 125 psig.

2.4. CONNECTORS

A. Stainless-Steel Bellow, Flexible Connectors:

1. Body: Stainless-steel bellows with woven, flexible, bronze, wire-reinforcing protective jacket.
2. End Connections: Threaded or flanged to match equipment connected.
3. Performance: Capable of 3/4-inch misalignment.
4. CWP Rating: 150 psig.
5. Maximum Operating Temperature: 250 deg F.

2.5 GLYCOL WATER SYSTEM

A. Each glycol system consists of piping, fittings, isolation/control/relief valves, pressure gauges, pressure switches, pumps, expansion tank, operating controls and accessories for glycol refill and charging the hydronic coil with glycol-water solution.

B. Pumps: positive displacement type, bronze construction, shaft seals, close coupled electric motors with built-in thermal overload protection.

C. Glycol- water solution: pre-mixed corrosion inhibited, propylene, 40% selected for freeze protection.

D. Corrosion inhibitor: formulated chemical treatment product that is designated to passivate hydronic piping and equipment metal surfaces, and buffer the formation of acids.

E. Water quality: mixture dilution water that contains less than 25 ppm of chlorides, less than 25 ppm of sulfates and total hardness less than 100 ppm CACO3 is acceptable.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. VALVE APPLICATIONS

A. Install shut off-duty valves at each branch connection to supply mains and at supply connection to each piece of equipment.

B. Install calibrated-orifice, balancing valves at each branch connection to return main.

C. Install calibrated-orifice, balancing valves in the return pipe of each heating or cooling terminal.

D. Install check valves at each pump discharge and elsewhere as required to control flow direction.

E. Install safety valves at hot-water generators and elsewhere as required by ASME Boiler and Pressure Vessel Code. Install drip-pan elbow on safety-valve outlet and pipe without valves to the outdoors; pipe drain to nearest floor drain or as indicated on Drawings. Comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1, for installation requirements.

F. Install pressure-reducing valves at makeup-water connection to regulate system fill pressure.

3.3. HYDRONIC SPECIALTIES INSTALLATION

A. Install manual air vents at high points in piping, at heat-transfer coils, and elsewhere as required for system air venting.

B. Install automatic air vents at high points of system piping in mechanical equipment rooms only. Install manual vents at heat-transfer coils and elsewhere as required for air venting.

C. Install piping from boiler air outlet, air separator, or air purger to expansion tank with a 2 percent upward slope toward tank.

D. Install in-line air separators in pump suction. Install drain valve on air separators NPS 2 (DN 50) and larger.

E. Install tangential air separator in pump suction. Install blowdown piping with gate or full-port ball valve; extend full size to nearest floor drain.

F. Install expansion tanks above the air separator. Install tank fitting in tank bottom and charge tank. Use manual vent for initial fill to establish proper water level in tank.
   1. Install tank fittings that are shipped loose.
   2. Support tank from floor or structure above with sufficient strength to carry weight of tank, piping connections, fittings, plus tank full of water. Do not overload building components and structural members.

G. Install expansion tanks on the floor. Vent and purge air from hydronic system, and ensure that tank is properly charged with air to suit system Project requirements.

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 232123
Hydronic Pumps

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 33 00 "Submittal Procedures."

b. Section 01 74 19 "Construction Waste Management and Disposal."

c. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings."

1.2. SUMMARY

A. General: Provide all plant, labor, tools, appliances, equipment, materials and services required for the work indicated on the drawings and specified in this section.

B. This Section includes but not limited to the following:

1. Close-coupled, in-line centrifugal pumps.

1.3. DEFINITIONS

A. Buna-N: Nitrile rubber.

B. EPT: Propylene terpolymer.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. Product Data: Include certified performance curves and rated capacities, operating characteristics, furnished specialties, final impeller dimensions, and accessories for each type of product indicated. Indicate pump's operating point on curves.

C. Shop Drawings: Show pump layout and connections. Include setting drawings with templates for installing foundation and anchor bolts and other anchorages.

1. Wiring Diagrams: Power, signal, and control wiring.

D. Operation and Maintenance Data: For pumps to include in emergency, operation, and maintenance manuals.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Source Limitations: Obtain hydronic pumps through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of hydronic pumps and are based on the specific system indicated. Refer to DDC General Condition Section "Product Requirements."

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to is required by code, and marked for intended use.

E. UL Compliance: Comply with UL 778 for motor-operated water pumps.

F. HI Compliance: Design, manufacture, and install HVAC pumps in accordance with HI "Hydraulic Institute Standards".

G. Performance Certification: Provide pumps whose performances, under specified operating conditions, are certified by manufacturer.

1.6. DELIVERY, STORAGE, AND HANDLING

A. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.

B. Store pumps in dry location.

C. Acquire protective covers for flanges and protective coatings during storage.

D. Protect bearings and couplings against damage from sand, grit, and other foreign matter.

E. Comply with pump manufacturer's written rigging instructions.

1.7. COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

PART 2 - PRODUCTS

2.1. CLOSE-COUPLED, IN-LINE CENTRIFUGAL PUMPS

A. Manufacturers:

1. Armstrong Pumps Inc.
2. Bell & Gossett; Div. of ITT Industries.
3. Flo-Fab.
4. Taco, Inc.
5. Weinman; Div. of Crane Pumps & Systems.
6. Or approved equal.

B. Description: Factory-assembled and -tested, centrifugal, overhung-impeller, close-coupled, in-line pump as defined in HI 1.1-1.2 and HI 1.3; designed for installation with pump and motor shafts mounted horizontally or vertically. Rate pump for 140-psig minimum working pressure and a continuous water temperature of 250 deg F.

C. Pump Construction:

1. Casing: Radially split, cast iron, with replaceable bronze wear rings, threaded gage tappings at inlet and outlet, and threaded connections.
2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, keyed to shaft, and secured with a locking cap screw. Trim impeller to match specified performance.
3. Pump Shaft: Carbon Steel
4. Mechanical Seal: Carbon rotating ring against a ceramic seat held by a stainless-steel spring, and bellows and gasket. Include water slinger on shaft between motor and seal.
5. Pump Bearings: Oil lubricated; bronze-journal or thrust type.

D. Motor: Single speed, with grease-lubricated ball bearings, unless otherwise indicated; and rigidly mounted to pump casing. Comply with requirements in Division 23 Section 23 05 13 "Common Motor Requirements for HVAC Equipment." Pumps 1 HP and larger shall be NEMA premium efficiency rated.

2.2. PUMP SPECIALTY FITTINGS

A. Suction Diffuser: Angle pattern, 175-psig pressure rating, cast-iron body and end cap, pump-inlet fitting; with bronze startup and bronze or stainless-steel permanent strainers; bronze or stainless-steel straightening vanes; drain plug; and factory-fabricated support.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine equipment foundations and anchor-bolt locations for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. CONCRETE BASES

A. Install concrete bases of dimensions indicated for pumps and controllers. Refer to Division 23 Section 23 05 00 "Common Work Results for HVAC."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around full perimeter of base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.

B. Cast-in-place concrete materials and placement requirements are specified in Division 03.

3.4. PUMP INSTALLATION

A. Comply with HI 1.4.

B. Install pumps with access for periodic maintenance including removal of motors, impellers, couplings, and accessories.

C. Independently support pumps and piping so weight of piping is not supported by pumps and weight of pumps is not supported by piping.

D. Install continuous-thread hanger rods and spring hangers of sufficient size to support pump weight. Vibration isolation devices are specified in Division 23 Section 21 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment." Fabricate brackets or supports as required. Hanger and support materials are specified in Division 23 Section 23 05 29 "Hangers and Supports for HVAC Piping and Equipment."

E. Suspend vertically mounted, in-line centrifugal pumps independent of piping. Install pumps with motor and pump shafts vertical. Use continuous-thread hanger rods and spring hangers of sufficient size to support pump weight. Vibration isolation devices are specified in Division 21 Section 21 05 48 "Vibration and Seismic Controls for Fire-Suppression Piping and Equipment." Hanger and support materials are specified in Division 23 Section 23 05 29 "Hangers and Supports for Plumbing Piping and Equipment."

F. Automatic Condensate Pump Units: Install units for collecting condensate and extend to open drain.

3.5. CONNECTIONS

A. Piping installation requirements are specified in other Section 23 05 00 Common Work Results for HVAC. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to machine to allow service and maintenance.

C. Connect piping to pumps. Install valves that are same size as piping connected to pumps.

D. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.

E. Install separate shutoff, balancing and check valve on discharge side of pumps.

F. Install suction diffuser and shutoff valve on suction side of pumps.

G. Install flexible connectors on suction and discharge sides of base-mounted pumps between pump casing and valves.

H. Install pressure gages on pump suction and discharge, at integral pressure-gage tapping, or install single gage with multiple input selector valve.

I. Ground equipment according to Division 26 Section 26 05 26 "Grounding and Bonding for Electrical Systems."

J. Connect wiring according to Division 26 Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.6. STARTUP

A. Complete installation and startup checks according to manufacturer's written instructions.

B. Check piping connections for tightness.

C. Lubricate pumps before start-up.

3.7. DEMONSTRATION

A. Engage a factory-authorized service representative to instruct the City of New York's maintenance personnel to adjust, operate, and maintain hydronic pumps. Refer to DDC General Condition Section "Demonstration and Owners Pre-Acceptance Orientation."

END OF SECTION 232123

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 232300
Refrigerant Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. This Section includes refrigerant piping used for air-conditioning applications.

1.3. PERFORMANCE REQUIREMENTS

A. Line Test Pressure for Refrigerant R-410A:

1. Suction Lines for Air-Conditioning Applications: 300 psig.
2. Hot-Gas and Liquid Lines: 535 psig.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of valve and refrigerant piping specialty indicated. Include pressure drop, based on manufacturer's test data, for the following:

1. Thermostatic expansion valves.
2. Solenoid valves.
3. Hot-gas bypass valves.
4. Filter dryers.
5. Strainers.
6. Pressure-regulating valves.

C. Shop Drawings: Show layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes, flow capacities, valve arrangements and locations, slopes of horizontal runs, oil traps, double risers, wall and floor penetrations, and equipment connection details. Show interface and spatial relationships between piping and equipment.

1. Shop Drawing Scale: 3/8 inch equals 1 foot.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."

C. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."

1.6. PRODUCT STORAGE AND HANDLING

A. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

1.7. COORDINATION

A. Coordinate size and location of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077100 "Roof Specialties and Accessories."

PART 2 - PRODUCTS

2.1. COPPER TUBE AND FITTINGS

A. Copper Tube: ASTM B 88, Type L.

B. Wrought-Copper Fittings: ASME B16.22.

C. Wrought-Copper Unions: ASME B16.22.

D. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.

E. Brazing Filler Metals: AWS A5.8.

F. Flexible Connectors:

1. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.
2. End Connections: Socket ends.
3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch- long assembly.
4. Pressure Rating: Factory test at minimum 500 psig.
5. Maximum Operating Temperature: 250 deg F.

2.2. VALVES AND SPECIALTIES

A. Manufacturers: Subject to compliance with requirements by one of the following:

1. Mueller Industries
2. Sporian Co
3. Superior Valve Co.
4. Or Approved Equal

B. Diaphragm Packless Valves:

1. Body and Bonnet: Forged brass or cast bronze; globe design with straight-through or angle pattern.
2. Diaphragm: Phosphor bronze and stainless steel with stainless-steel spring.
3. Operator: Rising stem and hand wheel.
4. Seat: Nylon.
5. End Connections: Socket, union, or flanged.
6. Working Pressure Rating: 500 psig.
7. Maximum Operating Temperature: 275 deg F.

C. Packed-Angle Valves:

1. Body and Bonnet: Forged brass or cast bronze.
2. Packing: Molded stem, back seating, and replaceable under pressure.
3. Operator: Rising stem.
4. Seat: Nonrotating, self-aligning polytetrafluoroethylene.
5. Seal Cap: Forged-brass or valox hex cap.
6. End Connections: Socket, union, threaded, or flanged.
7. Working Pressure Rating: 500 psig.
8. Maximum Operating Temperature: 275 deg F.

D. Check Valves:

1. Body: Ductile iron, forged brass, or cast bronze; globe pattern.
2. Bonnet: Bolted ductile iron, forged brass, or cast bronze; or brass hex plug.
3. Piston: Removable polytetrafluoroethylene seat.
4. Closing Spring: Stainless steel.
5. End Connections: Socket, union, threaded, or flanged.
6. Maximum Opening Pressure: 0.50 psig.
7. Working Pressure Rating: 500 psig.
8. Maximum Operating Temperature: 275 deg F.

E. Service Valves:

1. Body: Forged brass with brass cap including key end to remove core.
2. Core: Removable ball-type check valve with stainless-steel spring.
3. Seat: Polytetrafluoroethylene.
4. End Connections: Copper spring.
5. Working Pressure Rating: 500 psig.

F. Solenoid Valves: Comply with ARI 760 and UL 429; listed and labeled by an NRTL.

1. Body and Bonnet: Plated steel.

2. Solenoid Tube, Plunger, Closing Spring, and Seat Orifice: Stainless steel.
3. Seat: Polytetrafluoroethylene.
4. End Connections: Threaded.
5. Electrical: Molded, watertight coil in NEMA 250 enclosure of type required by location with 1/2-inch conduit adapter, and 115-V ac coil.
6. Working Pressure Rating: 400 psig.
7. Maximum Operating Temperature: 240 deg F.

G. Safety Relief Valves: Comply with ASME Boiler and Pressure Vessel Code; listed and labeled by an NRTL.

1. Body and Bonnet: Ductile iron and steel, with neoprene O-ring seal.
2. Piston, Closing Spring, and Seat Insert: Stainless steel.
3. Seat Disc: Polytetrafluoroethylene.
4. End Connections: Threaded.
5. Working Pressure Rating: 400 psig.
6. Maximum Operating Temperature: 240 deg F.

H. Thermostatic Expansion Valves: Comply with ARI 750.

1. Body, Bonnet, and Seal Cap: Forged brass or steel.
2. Diaphragm, Piston, Closing Spring, and Seat Insert: Stainless steel.
3. Packing and Gaskets: Non-asbestos.
4. Capillary and Bulb: Copper tubing filled with refrigerant charge.
5. Suction Temperature: 40 deg F.
6. Superheat: Adjustable.
7. Reverse-flow option.
8. End Connections: Socket, flare, or threaded union.
9. Working Pressure Rating: 400 psig.

I. Angle-Type Strainers:

1. Body: Forged brass or cast bronze.
2. Drain Plug: Brass hex plug.
3. Screen: 100-mesh monel.
4. End Connections: Socket or flare.
5. Working Pressure Rating: 500 psig.
6. Maximum Operating Temperature: 275 deg F.

2.3. REFRIGERANTS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. Atofina Chemicals, Inc.
2. DuPont Company; Fluorochemicals Div.
3. Honeywell, Inc.; Genetron Refrigerants.
4. INEOS Fluor Americas LLC.

5. Or Approved Equal.

B. ASHRAE 34, R-410A: Pentafluoroethane/Difluoromethane.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PIPING APPLICATIONS FOR REFRIGERANT R-410A

A. Suction Lines 1-1/2 inch and Smaller for Conventional Air-Conditioning Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed or soldered joints.

B. Hot-Gas and Liquid Lines: Copper, Type ACR L, annealed- or drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.

C. Safety-Relief-Valve Discharge Piping: Copper, Type ACR L, annealed- or drawn-temper tubing and wrought-copper fittings with brazed or soldered joints.

3.3. VALVE AND SPECIALTY APPLICATIONS

A. Install service valves for gage taps at inlet and outlet of hot-gas bypass valves and strainers if they are not an integral part of valves and strainers.

B. Install a check valve at the compressor discharge and a liquid accumulator at the compressor suction connection.

C. Except as otherwise indicated, install valves on inlet and outlet side of filter dryers.

D. Install thermostatic expansion valves as close as possible to distributors on evaporators.

1. Install valve so diaphragm case is warmer than bulb.
2. If external equalizer lines are required, make connection where it will reflect suction-line pressure at bulb location.

E. Install safety relief valves where required by ASME Boiler and Pressure Vessel Code. Pipe safety-relief-valve discharge line to outside according to ASHRAE 15.

F. Install moisture/liquid indicators in liquid line at the inlet of the thermostatic expansion valve or at the inlet of the evaporator coil capillary tube.

G. Install strainers upstream from and adjacent to the following unless they are furnished as an integral assembly for device being protected:

1. Solenoid valves.

2. Thermostatic expansion valves.
3. Hot-gas bypass valves.
4. Compressor.

H. Install filter dryers in liquid line between compressor and thermostatic expansion valve.

I. Install flexible connectors at compressors.

3.4. PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

B. Install refrigerant piping according to ASHRAE 15.

C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping adjacent to machines to allow service and maintenance.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Select system components with pressure rating equal to or greater than system operating pressure.

J. Refer to Section 230900 "Instrumentation and Control for HVAC" and 230993 "Sequence of Operation for HVAC Controls" for solenoid valve controllers, control wiring, and sequence of operation.

K. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.

L. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Section 083113 "Access Doors" if valves or equipment requiring maintenance is concealed behind finished surfaces.

M. Install refrigerant piping in protective conduit where installed belowground.

N. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.

O. Slope refrigerant piping as follows:

1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
2. Install horizontal suction lines with a uniform slope downward to compressor.
3. Install traps and double risers to entrain oil in vertical runs.
4. Liquid lines may be installed level.

P. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.

Q. Install pipe sleeves at penetrations in exterior walls and floor assemblies.

R. Seal penetrations through fire and smoke barriers according to Section 078413 "Penetration Firestops and Smokeseals"

S. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.

T. Install sleeves through floors, walls, or ceilings, sized to permit installation of full-thickness insulation.

U. Seal pipe penetrations through exterior walls according to Section 079201 "Exterior Joint Sealants" for materials and methods.

V. Identify refrigerant piping and valves according to Section 230553 "Identification for HVAC Piping and Equipment."

3.5. PIPE JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Soldered Joints: Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook."

D. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."

1. Use Type BcuP, copper-phosphorus alloy for joining copper socket fittings with copper pipe.
2. Use Type BAg, cadmium-free silver alloy for joining copper with bronze or steel.

E. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

F. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.

G. Welded Joints: Construct joints according to AWS D10.12/D10.12M.

H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.6. HANGERS AND SUPPORTS

A. Hanger, support, and anchor products are specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

B. Install the following pipe attachments:

1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet long.
2. Roller hangers and spring hangers for individual horizontal runs 20 feet or longer.
3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
4. Spring hangers to support vertical runs.
5. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.

C. Install hangers for copper tubing with the following maximum spacing and minimum rod sizes:

1. Up to 1-1/2 inches: Maximum span, 6 feet; minimum rod size, 3/8 inch.
2. 2 inches and larger: Maximum span, 9 feet; minimum rod size, 1/2 inch.

D. Support multifloor vertical runs at least at each floor.

3.7. FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

B. Tests and Inspections:

1. Comply with ASME B31.5, Chapter VI.
2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in Part 1 "Performance Requirements" Article.

    a. Fill system with nitrogen to the required test pressure.
    b. System shall maintain test pressure at the manifold gage throughout duration of test.
    c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
    d. Remake leaking joints using new materials and retest until satisfactory results are achieved.

3.8. SYSTEM CHARGING

A. Charge system using the following procedures:

1. Install core in filter dryers after leak test but before evacuation.
2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
4. Charge system with a new filter-dryer core in charging line.

3.9. ADJUSTING

A. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.

B. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.

C. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:

1. Open shutoff valves in condenser water circuit.
2. Verify that compressor oil level is correct.
3. Open compressor suction and discharge valves.
4. Open refrigerant valves except bypass valves that are used for other purposes.
5. Check open compressor-motor alignment and verify lubrication for motors and bearings.

D. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 232500
HVAC Water Treatment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. This Section includes the following HVAC water-treatment systems:

1. Bypass chemical-feed equipment and controls.
2. Chemical treatment test equipment.
3. HVAC water-treatment chemicals.

1.3. DEFINITIONS

A. EEPROM: Electrically erasable, programmable read-only memory.

B. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

1.4. PERFORMANCE REQUIREMENTS

A. Water quality for HVAC systems shall minimize corrosion, scale buildup, and biological growth for optimum efficiency of HVAC equipment without creating a hazard to operating personnel or the environment.

B. Base HVAC water treatment on quality of water available at Project site, HVAC system equipment material characteristics and functional performance characteristics, and operating personnel capabilities.

C. Closed hydronic systems, including hot-water heating system have the following water qualities:

1. pH: Maintain a value within 8.5 to 9.5.
2. Soluble Copper: Maintain a maximum value of 0.20 ppm.
3. TDS: Maintain a maximum value of 10 ppm.
4. Iron Bacteria: Maintain a maximum value of 0.2 organisms/ml.
5. Water Conditioning Company may submit recommendations for changes in the aforementioned chemicals or concentrations to the Commissioner for approval. Do not make any changes in treatment concentrations, chemicals or methods without the written permission of the Commissioner.

D. Document all cleaning, passivating and fill procedures. Final test results shall include concentrations for the following parameters: pH, inhibitors, glycol, bacteria, iron, copper, suspended solids, phosphate (steel inhibitor), azoles (copper inhibitor).

E. Passivation for Galvanized Steel: For the first 60 days of operation.

1. pH: Maintain a value within 7.5-8.0.
2. Calcium Carbonate Hardness: Maintain a value within 125-200 ppm.
3. Calcium Carbonate Alkalinity: Maintain a value within 125-200 ppm.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Provide the services of an independent professional water conditioning company for the testing and chemical treatment of heating and air conditioning water systems installed under the Work of this Contract, as approved by the Commissioner.

C. Upon the request of the Commissioner, the water conditioning company shall provide a list of at least three (3) installations of similar capacity in New York.

D. The water conditioning company shall make an analysis of the year round raw water supply to the building and recommend the chemical dosages to be used and shall periodically check, at least six (6) times a year, on the effectiveness of the treatment.

E. The water conditioning company shall instruct operating personnel, selected by the Commissioner in the procedures and tests required to maintain chemical control, and shall during the period of the guarantee make at least six (6) periodic visits to check the effectiveness and adequacy of the chemical treatment.

F. HVAC Water-Treatment Service Provider Qualifications: An experienced HVAC water-treatment service provider capable of analyzing water qualities, installing water-treatment equipment, and applying water treatment as specified in this Section.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by an acceptable testing agency and marked for intended use.

1.6. SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7. SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for the following products:

1. Bypass feeders.
2. Injection pumps.

3. pH controllers.
4. Chemical solution tank
5. Chemical material safety data sheets.

6. Shop Drawings: Pretreatment and chemical treatment equipment showing tanks, maintenance space required, and piping connections to HVAC systems. Include plans, elevations, sections, details, and attachments to other work. Wiring Diagrams: Power and control wiring.

B. Field quality-control test reports.

C. Operation and Maintenance Data: For sensors, injection pumps, and controllers to include in emergency, operation, and maintenance manuals.

D. Other Informational Submittals:

1. Water-Treatment Program: Written sequence of operation on an annual basis for the application equipment required to achieve water quality defined in the "Performance Requirements" Article above.
2. Water Analysis: Illustrate water quality available at Project site.
3. Passivation Confirmation Report: Verify passivation of galvanized-steel surfaces, and confirm this observation in a letter to the Commissioner.

1.8. GUARANTEE SERVICE

A. Scope of Guarantee Service: Provide chemicals and service program to maintain water conditions required above to inhibit corrosion, scale formation, and biological growth for heating, hot-water piping and equipment. Services and chemicals shall be provided for a period of one year from date of Substantial Completion, and shall include the following:

1. Initial water analysis and HVAC water-treatment recommendations.
2. Glycol solution concentration for heat exchangers shall be performed at starting of heating season.
3. Startup assistance to flush the systems, clean with detergents, and initially fill systems with required chemical treatment prior to operation.
4. Periodic field service and consultation.
5. Customer report charts and log sheets.
6. Laboratory technical analysis.
7. Analyses and reports of all chemical items concerning safety and compliance with government regulations.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Ampion Corp.
2. Anderson Chemical Co, Inc.
3. Aqua-Chem, Inc.; Cleaver-Brooks Div.
4. Barclay Chemical Co.; Water Management, Inc.
5. Boland Trane Services
6. GE Betz.
7. GE Osmonics.
8. H-O-H Chemicals, Inc.
9. Metro Group. Inc. (The); Metropolitan Refining Div.
10. ONDEO Nalco Company.
11. Watcon, Inc.
12. Or approved equal.

2.2. CHEMICAL EQUIPMENT

A. Manual chemical feed Equipment

1. Bypass Feeders: Steel, with corrosion-resistant exterior coating, minimum 3-1/2-inch fill opening in the top, and 3/4 inch bottom inlet and top side outlet. Quarter turn or threaded fill cap with gasket seal and diaphragm to lock the top on the feeder when exposed to system pressure in the vessel.

    1. Capacity: 5 gal.
    2. Minimum Working Pressure: 150psig.

B. pH Controller:

1. Microprocessor-based controller, 1 percent accuracy in a range from zero to 14 units. Incorporate solid-state integrated circuits and digital LCD display in NEMA 250, Type 12 enclosure with gasketed and lockable door
2. Digital display and touch pad for input.
3. Sensor probe adaptable to sample stream manifold.
4. High, low, and normal pH indication.
5. High or low pH alarm light, trip points field adjustable; with silence switch.
6. Hand-off-auto switch for acid pump.
7. Internal adjustable hysteresis or deadband.

C. Chemical Solution Tanks:

1. Chemical-resistant reservoirs fabricated from high-density opaque polyethylene with minimum 110 percent containment vessel.
2. Molded cover with recess for mounting pump.
3. Capacity: 30 gal

D. Chemical Solution Injection Pumps:

1. Self-priming, positive-displacement; rated for intended chemical with minimum 25 percent safety factor for design pressure and temperature.
2. Adjustable flow rate.
3. Metal and thermoplastic construction.
4. Built-in relief valve.
5. Fully enclosed, continuous-duty, single-phase motor. Comply with requirements in Division 23 Section 23 05 13 "Common Motor Requirements for HVAC Equipment."

E. Chemical Solution Tubing: Polyethylene tubing with compression fittings and joints except ASTM A 269, Type 304, stainless steel for steam boiler injection assemblies.

F. Injection Assembly:

1. Quill: Minimum NPS 1/2 with insertion length sufficient to discharge into at least 25 percent of pipe diameter.
2. Ball Valve: Two-piece, stainless steel as described in "Stainless-Steel Pipes and Fittings" Article below; and selected to fit quill.
3. Packing Gland: Mechanical seal on quill of sufficient length to allow quill removal during system operation.
4. Assembly Pressure/Temperature Rating: Minimum 600 psig at 200 deg F.

2.3. CHEMICAL TREATMENT TEST EQUIPMENT

A. Test Kit: Manufacturer-recommended equipment and chemicals in a wall-mounting cabinet for testing pH, TDS, inhibitor, chloride, alkalinity, and hardness;.

B. Corrosion Test-Coupon Assembly: Constructed of corrosive-resistant material, complete with piping, valves, and mild steel and copper coupons. Locate copper coupon downstream from mild steel coupon in the test-coupon assembly.

2.4. CHEMICALS.

A. Chemicals shall be as recommended by water-treatment system manufacturer that are compatible with piping system components and connected equipment, and that can attain water quality specified in Part 1 "Performance Requirements" Article.

B. Water Softener Chemicals:

1. Mineral: High-capacity, sulfonated-polystyrene ion-exchange resin that is stable over entire pH range with good resistance to bead fracture from attrition or shock. Resin exchange capacity minimum 30,000 grains/cu. ft. of calcium carbonate of resin when regenerated with 15 lb of salt.
2. Salt for Brine Tanks: High-purity sodium chloride, free of dirt and foreign material. Rock and granulated forms are not acceptable.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Install chemical application equipment on concrete bases, level and plumb. Maintain manufacturer's recommended clearances. Arrange units so controls and devices that require servicing are accessible. Anchor chemical tanks and floor-mounting accessories to substrate.

B. Install seismic restraints for equipment and floor-mounting accessories and anchor to building structure. Refer to Division 23 Section "Vibration and Seismic Controls for HVAC Piping and Equipment" for seismic restraints.

C. Install water testing equipment on wall near water chemical application equipment.

D. Install interconnecting control wiring for chemical treatment controls and sensors.

E. Mount sensors and injectors in piping circuits.

F. Bypass Feeders: Install in closed hydronic systems, including hot-water heating and equipped with the following:

1. Install bypass feeder in a bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
2. Install test-coupon assembly in bypass circuit around circulating pumps, unless otherwise indicated on Drawings.
3. Install a gate or full-port ball isolation valves on inlet, outlet, and drain below feeder inlet.
4. Install a swing check on inlet after the isolation valve.

3.3. CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Section 23 05 00 Common Work Results for HVAC. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.

C. Make piping connections between HVAC water-treatment equipment and dissimilar-metal piping with dielectric fittings. Dielectric fittings are specified in Division 23 Section 23 05 00 "Common Work Results for HVAC."

D. Install shutoff valves on HVAC water-treatment equipment inlet and outlet. Metal general-duty valves are specified in Division 23 Section 23 05 23 "General-Duty Valves for HVAC Piping."

E. Confirm applicable electrical requirements in Division 26 Sections for connecting electrical equipment.

F. Ground equipment according to Division 26 Section 26 05 26 "Grounding and Bonding for Electrical Systems."

G. Connect wiring according to Division 26 Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.4. FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Remove and replace malfunctioning units and retest as specified above.

C. Sample boiler water at one-week intervals after boiler startup for a period of five weeks, and prepare test report advising Commissioner of changes necessary to adhere to Part 1 "Performance Requirements" Article for each required characteristic. Sample boiler water at four-week intervals following the testing noted above to show that automatic chemical-feed systems are maintaining water quality within performance requirements specified in this Section.

D. At four week intervals following Substantial Completion, perform separate water analyses on hydronic systems to show that manual chemical-feed systems are maintaining water quality within performance requirements specified in this Section. Submit written reports of water analysis advising Commissioner of changes necessary to adhere to Part 1 "Performance Requirements" Article.

E. Comply with ASTM D 3370 and with the following standards:

1. Silica: ASTM D 859.
2. Steam System: ASTM D 1066.
3. Acidity and Alkalinity: ASTM D 1067.
4. Iron: ASTM D 1068.
5. Water Hardness: ASTM D 1126.

3.5. DEMONSTRATION

A. Engage a factory-authorized service representative to instruct the City of New York maintenance personnel to adjust, operate, and maintain HVAC water-treatment systems and equipment.

B. Instruction: Provide a "how-to-use" self-contained breathing apparatus video that details exact operating procedures of equipment.

END OF SECTION 232500

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 233113
Metal Ducts

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.
   a. Section 01 33 00 "Submittal Procedures."
   b. Section 01 74 19 "Construction Waste Management and Disposal."
   c. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings."

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to the following:

1. Ductwork as specified herein, as indicated on the drawings, and as needed for a complete and proper installation.

B. Related Work: The following related items are specified in other sections of the specifications.

1.	Common Work Results for HVAC	Section 230500
2.	Vibration and Seismic Controls for HVAC Piping and Equipment	Section 230548
3.	Ductwork Insulation	Section 230701
4.	Air Duct Accessories	Section 233300
5.	Dampers	Section 233301
6.	Registers, Diffusers and Grilles	Section 233713
7.	Instrumentation and Control for HVAC	Section 230900
8.	Testing for HVAC	Section 230593
9.	Balancing for HVAC	Section 230594

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications

1. Firms regularly engaged in manufacture of metal ductwork products of types, materials and sizes required, whose products have been in satisfactory use in similar service for not less than 3 years.

C. Installer's Qualifications

1. Firm with at least 3 years of successful installation experience on projects with ductwork systems similar to that required for project.

1.4. CODES AND STANDARDS

A. SMACNA Standards: Comply with SMACNA's HVAC Duct Construction Standards, Metals and Flexible" for fabrication and installation of metal ductwork.

1. NFPA Compliance: Comply with NFPA 90A "Standard for the Installation of Air Conditioning and Ventilating Systems" and NFPA 90B "Standard for the Installation of Warm Air Heating and Air Conditioning Systems".

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data

1. Submit manufacturer's product data including gages, materials, type of joints, sealing materials and installation instruction for metal ductwork materials and products.

C. Shop Drawings:

1. Submit scaled layout drawings (3/8" = 1'-0") of metal ductwork and fittings including, but not limited to, duct sizes, locations, elevations, slopes of horizontal runs, wall and floor penetrations and connections. Show modifications of indicated requirements made to conform to local shop practice, and how those modifications ensure that free area, materials and rigidity are not reduced.
2. Layouts should include all the room plans, mechanical equipment rooms, etc.
3. Method of attachment of duct hangers to building construction all with all the support details.
4. Coordinate shop drawings with related trades prior to submission.

D. Maintenance Data

1. Submit maintenance data and parts lists for metal ductwork materials and products. Include this data, product data and shop drawings in maintenance manual

1.6. DELIVERY, STORAGE AND HANDLING

A. Protection

1. Protect shop-fabricated and factory-fabricated ductwork, accessories and purchased products from damage during shipping, storage and handling. Prevent end damage, dirt and moisture from entering ducts and fittings.

B. Storage

1. Where possible, store ductwork inside and protect from weather. Where necessary to store outside, store above grade and enclose with waterproof wrapping.

C. During construction, cover the duct openings with sheet metal blanks. Blanks shall be removed just prior to the grilles and end section installation.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Sheet Metal:

1. Aluminum: ASTM B-209, Alloy 3003, Temper H-14.
2. Copper: ASTM B-370.
3. Galvanized Steel: ASTM A527 lock forming quality-galvanizing; ASTM A525 coating designation G-90.
4. Monel: ASTM B-127.
5. Stainless Steel: AISI Type 304.

B. Gauge of Metal:

1. Galvanized steel sheets for ducts, etc., shall be in accordance with the following table, except otherwise specified:
   a. Up to 30 inches (either dimension) — No. 24 gauge
   b. 30 Inches to 54 inches (either dimension) — No. 22 gauge
   c. 54 Inches to 72 inches (either dimension) — No. 20 gauge
   d. 72 Inches and over (either dimension) — No. 16 gauge

C. Duct Hangers:

1. Strap Hangers: Same material as ducts except that hangers for stainless steel duct in unfinished spaces may be galvanized steel.
2. Rod Type Hangers: Mild low carbon steel, unless otherwise specified; fully threaded or threaded each end, with 2 removable nuts each end for positioning and locking rod in place. Unless stainless steel, galvanized or cadmium plated; shop coat with read lead or zinc chromate primer paint.

D. Miscellaneous Ductwork Materials:

1. Sheet metal screws, machine bolts, rivets and nuts, tinned, cadmium plated or approved rust resistant. Bolts shall be button-head stove bolts, 1/4 x 3/4 inch unless otherwise specified.
2. Welding Studs: Erico Fastening Systems, capacitor discharge, low carbon steel, copper flashed.
3. Structural (carbon) steel shapes and steel plates: ASTM A36 shop primed.
4. Stainless steel shapes and plates: ASTM A276 and ASTM A666.
5. Machine Bolt Expansion Anchors:
   a. Non-caulking single unit type: FS FF-S-325, Group II, Type 2, Class, Style 1.
   b. Non-caulking double unit type: FS FF-S-325, Group II, Type 2, Class 2, Style 2.
   c. Self-drilling type: FS FF-3-325, Group III, Types 1 and 2.
6. Duct Liner: Fibrous glass, complying with Thermal Insulation Manufacturers Association (TIMA) AHC-101; of thickness indicated on the drawings.

7. Duct Liner Adhesive: Comply with ASTM C 916 "Specifications for Adhesives for Duct Thermal Insulation".

8. Duct Liner Adhesive: Comply with SMACNA HVAC Duct Construction Standards, Article S2.11.

9. Duct Sealant: Non-hardening, non-migrating mastic or liquid elastic sealant, type applicable for fabrication/installation detail, as compounded and recommend by manufacturer specifically for sealing joints and seams in ductwork.

10. Duct Cement: Non-hardening migrating mastic or liquid neoprene based cement, type applicable for fabrication/installation detail, as compounded and recommended by manufacturer specifically for cementing fitting components, or longitudinal seams in ductwork.

11. Flexible Ducts: Either spiral-wound spring steel with flameproof vinyl sheathing or corrugated aluminum; complying with UL 181. Where installed in unconditioned spaces other than return air plenums, provide 1" thick continuous flexible fiberglass sheath with vinyl vapor barrier jacket.

12. Seams and Joints: Duct seams and joints shall be made in accordance with SMACNA Standards, except as noted. All ducts exposed to weather or located on the roof shall have their transverse joints sealed with tape to make the joints airtight. Tape shall be 1-1/2 inch wide synthetic rubber sealant.

2.2. FABRICATION - GENERAL

A. Fabricate ductwork from galvanized sheet metal of the gauges specified, except as follows:

1. Angles used in conjunction with various types of ductwork shall be fabricated of the same material as the ductwork. Ducts shall be assembled in accordance with SMACNA or ASHRAE Standards.

B. Dissimilar Metals

1. Separate dissimilar metals used for ductwork with gaskets. No separation is required between screws or rivets and the materials they are inserted in.

C. Fabricate duct fittings to match adjoining ducts, and to comply with duct requirements as applicable to fittings. Fabricate elbows with center line radius equal to associated duct width; and fabricate fittings to include turning valves in elbows where shorter radius is necessary. Limit angular tapers to 30 degrees for diverging concentric transition and 60 degrees for converging concentric transition unless otherwise shown on the drawings.

D. Fabricate ductwork with accessories installed during fabrication to the greatest extent possible. Refer to Section 233300 – "Air Duct Accessories" for accessory requirements and Section 233301 -"Dampers" for damper requirement.

E. Fabricate ductwork with a duct liner where indicated on the drawings. Laminate liner to internal surfaces of duct in accordance with instructions by manufacturers of lining and adhesive, and fasten with mechanical fasteners.

F. Provide sleeves and flanges at ductwork penetrations of inside walls, except fire walls where fire dampers (Refer to Section 233301 - "Dampers") are installed. Extend ductwork insulation and vapor barrier through the ductwork sleeve. Sleeves shall be two inches larger than the ductwork plus its insulation.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSPECTION

A. Examine areas and conditions under which metal ductwork is to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.3. INSTALLATION - GENERAL

A. Install ductwork to allow maximum headroom. Properly fabricate seams, brace, stiffen, support and render ducts mechanically airtight. Adjust ducts to suit job conditions. Dimensions may be changed as approved, if cross sectional area is maintained.

B. Pitch horizontal ducts connected to hoods downward toward hood not less than 1 inch in 10 feet.

C. Provide necessary transformation pieces and flexible fiberglass connections (Refer to Section 233300- "Air Duct Accessories" of this specification) for ductwork connected to air handling equipment or air inlet and outlet devices.

D. Field Fabrication

1. Complete fabrication of work at project as necessary to match shop-fabrication work and accommodate installation requirements.

E. Routing

1. Locate ductwork runs, except as otherwise indicated on the drawings, vertically and horizontally and avoid diagonal runs wherever possible. Locate runs as indicated by diagrams, details and notations or, if not otherwise indicated, run ductwork in shortest route which does not obstruct useable space or block access for servicing building equipment. Hold ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of the building. Limit clearance to 1/2" where furring is indicated for enclosure or concealment of ducts, but allow for insulation thickness, if any. Where possible, locate insulated ductwork for minimum of 1" clearance outside of insulation. In finished and occupied spaces, conceal ductwork from view, by location in mechanical shafts, furred wall construction or above suspended ceilings. Do not encase horizontal runs in solid partitions, except where specifically indicated. Coordinate layouts with suspended ceiling and lighting layouts and similar finished work.

F. Electrical Equipment Spaces

1. Do not route ductwork through electric service room and equipment spaces.

G. Penetrations

1. Where ducts pass through interior partitions and are exposed to view, conceal space between construction opening and duct or duct insulation with sheet metal flanges of same gauge as duct. Overlap opening on 4 sides by at least 1 1/2". Where ducts pass through fire-rated floors, walls or partitions, provide firestopping between duct and fire dampers in accordance with requirements of 07 84 13 Firestops and Smokeseals.

H. Coordination

1. Coordinate duct installation with installation of accessories, dampers, equipment, controls and other associated work of ductwork system.

3.4. INSTALLATION OF DUCT LINER

A. Install duct liner in accordance with SMACNA HVAC Duct Construction Standards.

3.5. INSTALLATION OF FLEXIBLE DUCTS

A. Maximum Length

1. For any duct run using flexible ductwork, do not exceed 5'-0" extended length.

B. Installation

1. Install in accordance with Section III of SMACNA's "HVAC Duct Construction Standards, Metal and Flexible" and manufacturer's specifications.

3.6. SEALING SEAMS, JOINTS AND PENETRATIONS

A. Seal ductwork in accordance with the SMACNA Manual except for the following:

1. Ductwork Specified to be Insulated: Conform with Seal Class A for all pressure classes.
2. Cooking Equipment Exhaust Ductwork: Conform with NFPA 96.
3. Horizontal Ductwork for Dishwashing Exhaust:
   a. Continuously seal transverse joints vaporite along bottom, and up both sides 2 inches minimum.
   b. Continuously seal longitudinal seams vaporite if seams are approved to be located at bottom of duct.

3.7. HANGER AND SUPPORT

A. All ducts shall be run at the levels indicated on the drawings, as close to the ceiling as possible, excepting where pipes or electric conduits are indicated as passing above them. They shall be installed within enclosing work (hung ceiling or furring) indicated on the drawings and shall not interfere with its construction. Horizontal ducts shall be supported on galvanized steel hangers. For duct having a cross-sectional area of 4-square feet or less, the hangers shall be located near each duct joint and shall be spaced not more than 8-feet apart. For ducts having a cross-sectional area greater than 4-square feet, the hangers shall be located near each duct joint and duct brace, and shall be spaced not more than 4-feet apart. Where one duct is run below another duct of greater width, the lower duct shall be hung from the braces of the upper duct by means of strap hangers bolted to the braces of the upper duct. The braces of the upper duct. The braces of the upper duct shall be increased in thickness in such cases.

B. Inserts

1. When the floor and/or roof slab construction for the project is of conventional reinforced poured concrete type, the following directions apply: Overhead ductwork shall be supported by hangers secured to inserts before the floor slabs are poured. Inserts shall be approved by the New York City Department of Buildings. Attachment of hangers to existing slabs of this type of construction shall be made with NYC DOB approved self-drilling concrete anchors.

2. When the floor and/or roof slab construction are pre-cast concrete slabs. The following directions apply; overhead ductwork shall be supported by hangers secured to the precast slabs.

C. Vertical ducts shall be supported at each floor level with steel angle braces extending around duct and with an end of an angle extending beyond duct and resting on the floor construction at each corner of the duct. Supporting angles shall be 1" x 1" x 1/8" for ducts up to 30-inches (in either dimension). 1-1/4" x 1-1/4" x 1/8" from 30 to 60 inches and 1-1/2" x 1-1/2" x 1/8" 60 inches and above.

3.8. HANGERS FOR DUCTS

A. Install hangers for ducts as specified in the SMACNA Manual with the following exceptions:

1. Rectangular ducts up to 42 inches wide, not having welded or soldered seams, and supported from overhead construction shall have strap hangers extended down each side of the duct and turned under bottom of duct a minimum of 2 inches. Secure hanger to duct with 3 full thread sheet metal screws, one in the bottom and 2 in the side of the duct.

2. Rectangular ducts 43 inches wide and over, and all sizes of duct with welded or soldered seams, and supported from overhead construction; use trapeze hangers.

3. Prime coat plain steel rods threaded at the site immediately after installation with zinc chromate primer paint.

3.9. UPPER HANGER ATTACHMENTS

A. General:

1. Secure hanger attachments to structural steel or steel bar joists wherever possible
2. Do not use drive-in beam clamps, flat bars or bent rods, as upper hanger attachments.
3. Do not attach hangers to steel deck which are not to receive concrete fill.
4. Do not attach hangers to cast in place concrete planks less than 2-3/4 inches thick.
5. Avoid damage to reinforcing members in concrete construction.
6. Metallic fasteners installed with electrically operated or power driven tools may be used as upper hanger attachments, in accordance with the SMACNA Manual, with the following exceptions:
   a. Do not use power driven drive pins or expansion nails.
   b. Do not attach power driven or welded studs to structural steel less than 3/16 inch thick.
   c. Do not support a load, in excess of 250 lbs. from any single welded or power driven stud.
   d. Do not use power driven fasteners in cast in place concrete.

B. Attachment to Steel Frame Construction

1. Provide intermediate structural steel members where required by ductwork support spacing. Select steel members for use as intermediate supports based on a minimum safety factor of 5.
2. Secure upper hanger attachments to steel bar joists at panel point of joists.
3. Do not drill holes in main structural steel members.

C. Attachment to Cast in Place Concrete:

1. Secure hangers to overhead construction with self-drilling type expansion anchors and machine bolts.
2. Secure hanger attachments required to be supported form wall or floor construction with single unit expansion anchors or self-drilling type expansion anchors and machine bolts.

3.10. DUCT RISER SUPPORTS, UNDER 2 INCHES W.G.

A. Unless otherwise specified or shown on the drawings, support vertical rectangular duct by means of two steel angles, secured to duct and resting on floor slab or adjacent structural steel member at every other floor through which the duct passes. Size supports as follows:

Max. Side Dimension (Inches)	Support Angle (Inches)	Secure to Duct With	Min. Bearing at Each End (Inches)
36	1 x 1 x 1/8	Screws	2
48	1-1/2 x 1-1/2 x 1/8	Bolts	3

3.11. OPENINGS IN WALLS AND FLOORS

A. In Walls

1. In general, form openings in walls for the passage of ducts. Coordinate the exact location and size (including clearances) of each opening required. The openings shall be cut, framed and provided with sufficiently strong lintels. The jambs shall be built square and plumb and shall be finished to match the adjoining work.

B. In Floors

1. When the floor and/or roof slab construction for the project is the composite metal deck type, consisting of corrugated sheet steel and reinforced concrete, the following directions apply: Any opening, which is not framed by structural steel beams on all sides (refer to the structural steel drawings) and which is required in steel decking for the installation of HVAC work shall be cut by the HVAC installer. Openings shall be made by installing the proper size form (prior to the pouring of concrete) and cutting the metal deck when the ducts are to be installed. Holes greater than 6 inches but less than 30 inches in any dimension must be reinforced. Holes 6-inches or less in any dimension need not be reinforced.

2. When the floor or roof slab construction for the project is precast concrete, concrete type, the following directions apply: provide openings in the slabs for the passage of ducts.

3.12. FIELD QUALITY CONTROL

A. Leakage Tests

1. After duct system is completed, test for duct leakage in accordance with SMACNA HVAC Air Duct Leakage Test Manual. Seal ductwork in accordance with the SMACNA Manual to confirm to Seal Class A. All leakage tests to be performed by NEBB-certified Testing and Balancing Contractor.

3.13. CONNECTIONS

A. General

1. Connect metal ductwork to equipment as indicated, provide flexible connection for each ductwork connected to equipment mounted on vibration isolators, and/or equipment containing rotating machinery. (Refer to Section 233300 - "Ductwork Accessories", for flexible connectors).

B. Coordinate to ensure that access doors have been provided in hung ceilings and any other required places for proper operation and maintenance.

3.14. ADJUSTING AND CLEANING

A. Clean ductwork internally of dust and debris as it is installed. Clean external surfaces of foreign substances which might cause corrosive deterioration of metal or where ductwork is to be painted might interface with painting or cause paint deterioration.

B. Paint the ductwork as per Section 099000- "Painting and Finishing."

C. Balancing

1. Refer to Section 230594- "Balancing for HVAC." Seal any leaks in ductwork that become apparent in balancing process.

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 233300
Air Duct Accessories

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to, the following:

1. All the duct accessories specified herein, as shown on the drawings along with all the auxiliary work needed for a complete and proper installation. The types of ductwork accessories specified in this section include the following: turning vanes, duct hardware, duct access doors and flexible connections.

B. Related Work: The following related items are specified herein and in other sections of the specifications:

1.	Common Work Results for HVAC	Section 230500
2.	Identification for HVAC Piping and Equipment	Section 230553
3.	Metal Ducts	Section 233113
4.	Instrumentation and Control for HVAC	Section 230900
5.	Sequence of Operations for HVAC Controls	Section 230993
6.	Testing for HVAC	Section 230593
7.	Balancing for HVAC	Section 230594

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications: Firms regularly engaged in manufacture of ductwork accessories of types and sizes required whose products have been in satisfactory use in similar service for not less than 3 years.

C. Codes and Standards:

1. SMACNA Compliance: Comply with applicable portions of SMACNA "HVAC Duct Construction Standards, Metal and Flexible".

2. Industry Standards: Comply with ASHRAE recommendations pertaining to construction of ductwork accessories, except as otherwise indicated on the drawings.

3. NFPA Compliance: Comply with applicable provisions of NFPA 90A "Air Conditioning and Ventilating Systems", pertaining to installation of ductwork accessories.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1. Product Data: Submit manufacturer's catalog sheets product data for each type of ductwork accessory, including dimensions capacities, and materials of construction; and installation instructions.

2. Shop Drawings: Submit manufacturer's assembly-type shop drawings for each type of ductwork accessory showing interfacing requirements with ductwork, method of fastening or support, and methods of assembly of components. Submit SMACNA Figure Numbers for each shop fabricated item.

3. Maintenance Data: Submit manufacturer's maintenance data including parts lists for each type of duct accessory. Include this data, product data, and shop drawings in maintenance manual; in accordance with requirements of DDC General Conditions.

PART 2 - PRODUCTS

2.1. MATERIALS AND MANUFACTURERS

A. Turning Vanes:

1. Fabricated Turning Vanes: Provide fabricated turning vanes and vane runners, constructed in accordance with SMACNA "HVAC Duct Construction Standards".

2. Acoustic turning Vanes: Provide acoustic turning vanes constructed of airfoil shaped aluminum extrusions with perforated faces and fiberglass fill.

3. Manufacturer: Subject to compliance with the specification requirements, provide turning vanes of one of the following:

a. Anemostat Products Div; Dynamics Corp of America. Duro Dyne Corp.
b. Tuttle & Bailey, Hart & Cooley Mfg. Co.
c. Titus Product, Div. of Phillips Inds.
d. Or Approved Equal

B. Duct Hardware:

1. Provide test hole fittings for making air readings, on both (opposite) sides of discharge duct from all supply and exhaust fans, at set dampers on supply branch ducts, and at other locations where shown on the drawings for the proper adjusting and testing of the ventilating systems. No test hole fittings are required for roof type or other propeller type fans. Each fitting shall consist of an aluminum casting similar in design to that shown on the Detail

Drawings. If required, provide test hole fitting for microprocessor type of instrument reading either local or remote.

2. Manufacturer: Subject to compliance with the specification requirements, provide duct hardware of one of the following:

   a. Duro Dyne Corp.
   b. Young Regulator Co.
   c. Titus Product, Div. of Phillips Inds.
   d. Or Approved Equal

C. Duct Access Doors:

1. General: Provide where indicate, duct access doors of size indicated and at locations required to permit inspections, operation and maintenance of all valves, all coils, controls, fire dampers, fire/smoke dampers, automatic or motorized dampers, or other apparatus concealed behind the sheet metal work.

2. Construction: Construct of same or greater gage as ductwork served, provide insulated doors for insulated ductwork. Provide flush frames for uninsulated ductwork, extended frames for externally insulated duct. Provide one size hinged, other side with one handle-type latch for doors 12" high and smaller, 2 handle-type latches for larger doors.

3. Refer to Section 083113 Access Doors: specifications for access doors for access to valves, dampers and all the equipment mentioned above which are concealed in walls, furring and hung ceilings, or as indicated on the drawings.

4. Manufacturer: Subject to compliance with requirements, provide duct access doors of one of the following:

   a. Air Balance Inc.
   b. Duro Dyne Corp.
   c. Rushkin Mfg. Co.
   d. Or Approved Equal

D. Fan Connections (Flexible Connections)

1. Provide an air-tight fabric neck at the inlet and at the outlet connection of all air handling unit, supply fans and exhaust fans and where ductwork connects to any vibration isolation equipments.
2. Necks shall be not less than 3-inches nor more than 10 inches in width and both sides shall be secured in a crimped lock seam for the entire perimeter to galvanized sheet steel bands 3-inches in width. This assembly shall be securely fastened to ducts and to fans, and the joints shall be made airtight. Necks shall not be oiled or painted. Neck fabric shall be one of the following materials:

a. Cotton duck, 10-ounces per square yard minimum weight (treated for fire, water, and mildew resistance).

b. Flameproof elastomeric coated glass fabric, weighing not less than 14-ounces per square yard, having a tensile strength of 200 psi (minimum) and having a heat resistance of up to 500 degrees F.

c. Close woven glass cloth, double neoprene coated, 28-ounces per square yard minimum weight.

3. Manufacturer: Subject to compliance with the specification requirements, provide fans connections of one of the following:

a. Duro Dyne Corp.
b. Flexaust (The) Co.
c. Rushkin Mfg. Co.
d. Or Approved Equal

E. Heat and Smoke Detecting Devices

1. Install heat detecting devices and smoke detecting devices in the ductwork at various locations or as indicated on the drawings. Provide access door in the duct near each detector. Operate the fans of the ventilating systems concerned, for the purpose of testing the heat and smoke detectors when so requested.

2. Inform of the proper temperature setting required for each heat detector. This temperature shall be approximately 40 degrees F (but not more than 50 degrees F) higher than the operating temperature of the system in which the heat detector is located.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSPECTION

A. Examine areas and conditions under which ductwork accessories will be installed. Do not proceed with work until unsatisfactory conditions have been corrected in manner acceptable to the Commissioner.

3.3. INSTALLATION OF DUCTWORK ACCESSORIES

A. Install ductwork accessories in accordance with manufacturer's installation instructions, with applicable portions of details of construction as shown in SMACNA standards, and in accordance with recognized industry practices to ensure that products serve intended function.

B. Install turning vanes in square or rectangular 90 degree elbows in supply and exhaust air systems, and elsewhere as indicated on the drawings.

C. Install access doors to open against system air pressure, with latches operable from either side, except outside only where duct is too small for person to enter.

D. Coordinate with other work, including ductwork, as necessary to interface installation of ductwork accessories properly with other work.

3.4. FIELD QUALITY CONTROL

A. Operate installed ductwork accessories to demonstrate compliance with requirements. Test for air leakage while system is operating. Restore or replace faulty accessories, as required to obtain proper operation and leakproof performance.

3.5. ADJUSTING AND CLEANING

A. Adjusting: Adjusting ductwork accessories for proper settings.

B. Label access doors in accordance with Section 230553 "Identification for HVAC Piping and Equipment".

C. Cleaning: Clean factory-finished surfaces. Restore any marred or scratched surfaces with manufacturer's touch-up paint.

END OF SECTION 233300

SECTION 233301
Dampers

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to the following:

1. All dampers specified herein, as indicated the drawings or as needed for a complete and proper installation.

1.3. RELATED WORK

A. The following related items are specified in other sections of the specification:

1.	Common Work Results for HVAC	Section 230500
2.	Identification for HVAC Piping and Equipment	Section 230553
3.	Metal Ducts	Section 233113
4.	Air Duct Accessories	Section 233300
5.	Testing for HVAC	Section 230593
6.	Balancing for HVAC	Section 230594
7.	Instrumentation and Control for HVAC	Section 230900
8.	Sequence of Operations for HVAC Controls	Section 230993

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications: Firms regularly engaged in manufacturer of dampers, of types and sizes required, whose products have been in satisfactory in similar service for not less than three (3) years.

C. Codes and Standards:

1. SMACNA Compliance: Comply with applicable portions of SMACNA "HVAC Duct Construction Standards, Metal and Flexible".

2. UL Compliance: Construct, test and label fire damper in accordance with UL Standard 555 "Fire Dampers and Ceiling Dampers".

1.5. SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.6. SUBMITTALS

A. Product Data: Submit catalog sheets data for each type of damper, including dimensions, and materials of construction and installation instructions.

B. Shop Drawings: Submit manufacturer's assembly-type shop drawings for each type of damper showing interfacing requirements with ductwork, method of fastening or support, and methods of assembly of components.

C. Maintenance Data: Submit manufacturer's maintenance data including parts lists for each type of dampers. Include this data, product data, and shop drawings in maintenance manual.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Manufacturer: Subject to compliance with requirements, provide dampers of one of the following:

1. Air Balance, Inc.
2. Penn Ventilator Co.
3. Ruskin Mfg. Co.
4. Or approved equal.

B. Volume Control Dampers

1. Opposed blade type, frames of all welded construction utilizing channel iron members in galvanized steel ducts, extruded members in aluminum ducts and stainless steel in stainless steel ducts. Fabricate frames of 2 inch wide x 1/2 inch legs x 1/8 inch thick (minimum) members for dampers less than 10 sq.ft. in size and 2 inch wide x 1 inch leg x 1/8 inch thick (minimum) for larger sizes. Fabricate blades from No. 16 gage (minimum) metal, of same material as duct in which installed with 3 horizontal grooves, 2 turned edges and trunnion mounted in brass sleeve or ball bearings. Space bearings on maximum 48 inch centers. Single blade dampers are unacceptable for duct over 11 inches in height. Weld motor

mounting bracket to damper frame for electric motor operated dampers. Provide cable operated dampers at all branches where access doors cannot be installed.

C. Splitter Dampers

1. Fabricate dampers of same material as duct in which installed with rolled or hemmed edges. Provide blades in ducts having a maximum side dimension less than 24 inches of same gage as duct, and in ducts having a maximum side dimension 24 inches and over provide blades 2 gages heavier than duct.

2.2. DAMPER MOTORS

A. Manufacturers:

1. Barber-Colman Co.
2. Honeywell Inc.
3. Johnson Controls, Inc.
4. Or Approved Equal

B. Two position spring return capacitor type gear motor with nylon bearings and oil immersed gear train, designed to operate on 120V, 60Hz, 1 phase service. Furnish suitable damper linkage with each motor.

1. Operation: When motor is energized, damper blades open when de-energized spring return closes damper.

2.3. FIRE AND SMOKE DAMPERS

A. Fire Dampers

1. Provide fire dampers of types and sizes indicated on the drawings. Construct casings of galvanized steel with bonded red acrylic enamel finish. Provide fusible link rated at 160 degrees to 165 degrees F unless otherwise indicated. Provide damper with positive lock in closed position and with the following additional features:

a. Blade Material: Steel, match casing.

B. Fire/Smoke Dampers

1. Provide motor-driven fire smoke dampers in types and sizes indicated on the drawings, with casing constructed of galvanized steel, fire rated at 212 degrees F, stainless steel negator spring to assure positive closing when mounted in either vertical or horizontal position together with stainless steel jamb gasket to provide a Class II fire retardant smoke seal. The damper shall also close upon power interruption from the smoke detectors. Dampers operators shall be electric motors equipped with instant closure clutch, stainless steel cable damper blade linkage, motor mounting brackets, and long wire leads for connecting to smoke detector. Damper shall have the following construction feature:

a. Unit Assembly: Motor mounted outside air stream.

2.4. AUTOMATIC DAMPERS

A. Install automatic dampers supplied by the automatic control system manufacturer. Notch end of rod and label duct or casing to indicate open or closed position.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSPECTION

A. Examine areas and conditions under which dampers will be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Install damper in accordance with manufacturer's installation instructions.

B. Install access doors and fire rated access door as required.

C. Coordinate with other work, including ductwork, as necessary to interfere installation of damper properly with other work. Dampers shall but depend on duct and ductwork hangers for their support.

3.4. FIELD QUALITY CONTROL

A. Operate damper to demonstrate compliance with requirements. Test for air leakage while system is operating. Restore or replace faulty components, as required to obtain proper operation and leakproof performance.

3.5. ADJUSTING

A. Adjust damper for proper settings, install fusible links in fire dampers and adjust for proper action.

B. Label access doors in accordance with Section 230553: "Identification for HVAC Piping and Equipment".

C. Final positioning of manual dampers is specified in Section 230594: "Balancing for HVAC".

END OF SECTION 233301

SECTION 233416
Centrifugal HVAC Fans

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.
   a. Section 01 33 00 "Submittal Procedures."
   b. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings."
   c. Section 01 91 13 General Commissioning Requirements for MEP Systems.

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to, the following:

1. Power centrifugal fans as specified herein, as indicated on the drawings, and as required for a complete and proper installation.

B. Related Work: The following related items are specified in other sections of the specifications:

1.	Metal Ducts	Section 233113
2.	Instrumentation and Control for HVAC	Section 230900
3.	Sequence of Operations for HVAC Controls	Section 230993
4.	Common Motor Requirements for HVAC Equipment	Section 230513
5.	Testing for HVAC	Section 230593
6.	Balancing for HVAC	Section 230594

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications: Firms regularly engaged in manufacture of centrifugal fans of types and sizes required, whose products have been in satisfactory use in similar service for not less than 3 years.

C. Code and Standards:

1. AMCA Compliance: Provide centrifugal fans bearing the AMCA Certified Ratings Seal. Sound rate centrifugal fans in accordance with AMCA 300 "Test Code for Sound Rating Air Moving Devices".

2. UL Compliance: Provide centrifugal fan electrical components, which have been listed and labeled by UL.

3. ASHRAE Compliance: Test and rate centrifugal fans in accordance with ASHRAE 51 (AMCA 210) "Laboratory methods of Testing Fans for Rating".

1.4. SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.5. SUBMITTALS

A. Submit manufacturer's product data for power centrifugal fans, including specifications, capacity ratings, and fan performance curves with operating point clearly indicated, gages and finishes of materials, dimensions, weights, accessories furnished, and installation instructions.

B. Shop Drawings: Submit assembly-type shop drawings showing fan dimensions, required clearances, construction details, and field connection details.

C. Wiring Diagrams: Submit manufacturer's electrical requirements for power supply wiring to fan units. Submit manufacturer's wiring diagrams for interlock and control wiring. Clearly differentiate between portions of wiring that are factory installed and portions to be field installed.

D. Test Reports: Submit for each fan, complete performance curves showing Static Pressure vs CFM; HP vs CFM and efficiency vs CFM. Curves shall show operator all she rated RPM and at 20% above and below the rated RPM. In addition submit the noise rating in decibels (flat response without network), at the design (flat response without network), at the design operation point for each fan.

E. Maintenance Data: Submit maintenance instructions, including lubrication instructions, motor and drive replacement, and spare parts lists. Include this data, product data, shop drawings, and wiring diagrams in maintenance manuals.

1.6. DELIVERY, STORAGE AND HANDLING

A. Deliver centrifugal fans with factory-installed shipping skids and lifting lugs; pack components in factory-fabricated protective containers.

B. Handle centrifugal fans carefully to avoid damage to components, enclosures and finish. Do not install damaged components, replace and return damaged components to manufacturer.

C. Store centrifugal fans in clean dry place and protect from weather and construction traffic.

D. Comply with manufacturer's rigging and installation instructions for unloading centrifugal fans and moving them to final location.

1.7. SITE CONDITIONS

A. Examine the drawings, visit the site, and take measurements to make sure that the equipment will fit in the spaces allocated, and that the equipment can be brought to the site.

PART 2 - PRODUCTS

2.1. FANS

A. General

1. Fans shall be of type, capacity, motor location, discharge location, rotation and constructed for Class 1 operating limits, unless otherwise indicated. Fans shall be guaranteed not to overload the motor under any condition. Unless otherwise called for, all fans shall be arrangement No. 3 or as noted on the drawings.

2. Select fans for the air quantities and static pressure indicated on the drawings, of size and speed so as to allow for a change in volume, without operating in an unstable range.

3. The requirements of this Section do not apply to centrifugal fans incorporated in catalogued completed packaged units, unless otherwise indicated.

2.2. CENTRIFUGAL FANS

A. General

1. Provide centrifugal fans of sizes and arrangement, and of capacities and having accessories as scheduled and as indicated on the drawings.

B. Fan Units

1. Provide factory-assembled and tested fan units consisting of housing, wheel, fan shaft, bearings, and side support structure. Clean condition and prime paint sheet metal parts prior to final assembly. Apply final coat of enamel to exterior surfaces after assembly (Refer to Painting - Section 09900). Each fan shall bear the Certified Ratings Performance Seal of the AMCA, do not cover the seal with paint. All outdoor installed fans shall be weatherproof construction.

C. Housings

1. Provide curved scroll housings; lockseam construction for sizes 36" and smaller and spot welded construction for sizes 36" to 60".

D. Wheels

1. Provide backwardly inclined plate-type blades for sizes 22" and smaller, non-power-overloading backwardly inclined air foil blades for sizes 24" and larger. Weld blades to wheel rim and hub plate. Key wheels to shafts. Statically and dynamically balance wheels after assembly.

E. Shafts

1. Construct of solid hot-rolled steel, turned and polished.

F. Provide either oil lubricated babbitted sleeve bearings or grease lubricated ball (or roller) bearings, in accordance with the following requirements.

1. Sleeve Bearings: These bearings shall be lined with the best grade babbitted metal and shall be self-lubricated by means or ring oilers. An oil cup and an oil gauge with shield shall be provided for each bearing and shall be installed in an accessible location. Graphite

impregnated bearings will not be accepted. Wearing surfaces of each bearing shall be self-aligning, easy of adjustment and larger enough to operate with minimum heating. They shall be enclosed in heavy wrought or cast iron standards, securely bolted in place. Bearings on the drive side of fans shall be non-expansion type, and those on the opposite side shall be expansion type.

2. Ball or Roller Bearings

a. These bearings shall be designed for heavy duty service. Bearings on drive side of fans shall be non-expansion type, and those on the opposite side shall be expansion type. Bearings shall be self-aligning pillow-block type with either single row ball or double row spherical roller in one-piece or two-piece cast iron housing.

b. Fan manufacturer shall certify that bearings being furnished have been selected in accordance with bearing manufacturer's recommendation for a minimum B-10 life of 40,000 hours (average life of 200,000 hours), based on the optimum speed range of the fan's AMCA class. Calculations of bearing manufacturer shall be supplied, if required.

c. Each bearing shall be equipped with a lubrication pressure fitting, provided with pressure relief feature to prevent excessive pressure build-up on the seals. Contractor shall furnish to the Commissioner one pound of recommend lubricant for each fan, and one lubrication gun for the entire project.

d. Each fan having a wheel diameter of 27 inches or less shall have two ball bearings, either in a single pillow block or in separate pillow blocks.

e. Manufacturers:

1. Dodge Manufacturing Co.
2. Fafnir Bearing Co.
3. Link-Belt Co.
4. Sealmaster
5. SKF Industries
6. Or Approved Equal

G. Motors

1. Provide energy efficient motors in accordance with Section 230513 "Common Motor Requirements for HVAC Equipment".

H. Drive

1. Provide multiple matched V-belt drive with minimum 1.4 times rated motor horsepower. Provide adjustable pitch sheave on motor shaft, selected for midpoint at design conditions.

I. Vibration Control

1. Provide as specified on Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

J. Accessories

1. Provide the following accessories as indicated and/or scheduled on the drawings:
2. Access Doors: Provide access door in scroll housing, with latch-type handles, flush mounted.
3. Extended Grease Lines: Extend grease lines from bearings to outside of inlet duct flange, terminate with grease fitting.
4. Heat Slingers: Provide metal disc between bearings and fan wheel, to dissipate heat from shaft.
5. Shaft Seals: Provide tight seal around shaft on drive side.
6. Belt Guards: Provide ventilated belt guards with tachometer opening for fan speed measurements, in accordance with OSHA requirements.
7. For fans mounted on the roof, provide outdoor construction design and protective weather hood with stamped vents over motor and drive compartment.

K. Manufacturers

1. Subject to compliance and approval with requirements, manufacturers offering centrifugal fans which may be incorporated in the work include the following:
   a. Greenheck
   b. Cook
   c. Penn Ventilator Co. Inc.
   d. Or approved equal.

2.3. INLINE CENTRIFUGAL FANS

A. General: Provide inline centrifugal fans of sizes and arrangement as indicated and of capacities and having accessories as scheduled all as indicated on the drawings.

B. Fans shall be of the duct mounted centrifugal belt driven in-line type.

C. The fan housing shall be of the square design constructed of heavy gauge galvanized steel and shall include square duct mounting collars.

D. Fan construction shall include two removable access panels located perpendicular to the motor mounting panel. The access panels must be of sufficient size to permit easy access to all interior components.

E. The fan wheel shall be centrifugal backward inclined, constructed of aluminum and shall include a wheel cone carefully matched to the inlet cone for precise running tolerances. Wheels shall be statically and dynamically balanced.

F. Motors shall be heavy duty ball bearing type, carefully matched to the fan load and furnished at the specified voltage, phase and enclosure. Motors and drives shall be mounted out of the air stream. Motors shall be readily accessible for maintenance.

G. Precision ground and polished fan shafts shall be mounted in permanently sealed, lubricated pillow block ball bearings. Bearings shall be selected for a minimum (L50) life in excess of 200,000 hours at maximum cataloged operating speed.

H. Drives shall be sized for a minimum of 150% of driven horsepower.

I. Pulleys shall be of the fully machined cast iron type, keyed and securely attached to the wheel and motor shafts.

J. Motor pulleys shall be adjustable for final system balancing. A NEMA 1 disconnect switch shall be provided as standard. Factory wiring shall be provided from motor to the handy box.

K. Each fan shall bear a permanently affixed manufacturer's nameplate containing the model number and individual serial number for future identification.

L. Gas room ventilation fan shall be explosion proof construction.

2.4 BACKWARD-INCLINED CENTRIFUGAL FANS

A. Description: Factory-fabricated, -assembled, -tested, and -finished, belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, and support structure.

B. Housings: Formed panels to make curved-scroll housings with shaped cutoff; with doors or panels to allow access to internal parts and components.

C. Panel Bracing: Steel angle- or channel-iron member supports for mounting and supporting fan scroll, wheel, motor, and accessories. Split housings are an optional configuration.

1. Horizontally split, bolted-flange housing.

2. Spun inlet cone with flange.

3. Outlet flange.

D. Backward-Inclined Wheels: Single-width-single-inlet and double-width-double-inlet construction with curved inlet flange, backplate, backward-inclined blades welded or riveted to flange and backplate; cast-iron or cast-steel hub riveted to backplate and fastened to shaft with set screws.

E. Shafts: Statically and dynamically balanced and selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.

1. Turned, ground, and polished hot-rolled steel with keyway. Ship with a protective coating of lubricating oil. Designed to operate at no more than 70 percent of first critical speed at top of fan's speed range.

F. Prelubricated and Sealed Shaft Bearings: Self-aligning, pillow-block-type ball bearings.

G. Belt Drives: Factory mounted, with final alignment and belt adjustment made after installation.

H. Scroll Access Doors: Shaped to conform to scroll, with quick-opening latches and gaskets.

1. Cleanout Door: Bolted gasketed door allowing access to fan scroll, of same material as housing.

2. Companion Flanges: Rolled flanges for duct connections of same material as housing.

3. Variable Inlet Vanes: With blades supported at both ends with two permanently lubricated bearings of same material as housing. Variable mechanism terminating in single control lever with control shaft

for double-width fans. Discharge Dampers: Assembly with opposed blades constructed of two plates formed around and to shaft, channel frame, and sealed ball bearings; with blades linked outside of airstream to single control lever of same material as housing.

4. Inlet Screens: Grid screen of same material as housing.

5. Shaft Cooler: Metal disk between bearings and fan wheel, designed to dissipate heat from shaft.

6. Spark-Resistant Construction: AMCA 99.

7. Shaft Seals: Airtight seals installed around shaft on drive side of single-width fans.

8. Weather Cover: Enameled-steel sheet with ventilation slots, bolted to housing.

I. Motors: Comply with requirements in Division 23 Section 23 05 13 "Common Motor Requirements for HVAC Equipment."

2.5 SHOP PAINTING

A. Fans and steel fabrication shall be factory coated with one coat of zinc chromate primer and one coat of machine enamel on both the exterior and interior surfaces, except the name plates. Apply finish paint after erection.

B. For roof mounted fans, all steel components shall be coated with thermally fused epoxy.

2.6 SHOP TESTS

A. Balance fan wheels statically and dynamically prior to final operating tests with motor and drive in place.

B. Test, rate and certify fans in accordance with AMCA Standard 210 at an AMCA approved laboratory; fans shall bear AMCA seals. In lieu of shop performance tests, unless otherwise specified in the Schedules shown on the drawings, certified performance characteristic curves of prototype fans of similar units may be submitted for approval.

C. Sound rate fans in accordance with AMCA Standard 300; fans shall bear AMCA seals. Sound rating shall be based upon actual fan tests or upon prototype tests of similar units.

PART 3-EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Examine areas and conditions under which fans are to be installed. Do not proceed with work until satisfactory conditions have been corrected.

B. General: Install fans in the location indicated on the drawings and in accordance with manufacturer's installation instructions, and with recognized industry practices, to ensure that centrifugal fans comply with requirements and serve intended purposes.

C. Access: Provide access and service space around centrifugal fans as indicated, but in no case less than that recommended by manufacturer.

D. Isolation: Set centrifugal fans on vibration isolators; fasten in accordance with manufacturer's installation instructions.

E. Electrical Wiring: Install electrical devices furnished by manufacturer but not specified to be factory-mounted. Furnish copy of manufacturer's wiring diagram submittal. Verify that electrical wiring installation is in accordance with manufacturer's submittal and installation requirements of project specifications. Ensure that rotation is in direction indicated and intended for proper performance. Do not proceed with centrifugal fan start-up until wiring installation is acceptable. Interlock wiring between fan units; and between fans and field-installed control devices. Provide control wiring between field-installed controls, indicated devices and fan starters.

F. Controls: Provide controls specified under Section 230900 "Instrumentation and Control for HVAC".

G. Ductwork Connections: Provide flexible connections on inlet and outlet duct connections as required.

H. Coordinate all trades to ensure that the installation of fans is not in conflict with the work performed by other trades.

3.3. FIELD QUALITY CONTROL

A. Upon completion of installation of centrifugal fans, and after motor has been energized with normal power source, test equipment to demonstrate compliance with requirements. Where possible, field correct malfunctioning equipment, then retest to demonstrate compliance. Replace equipment, which cannot be satisfactorily corrected.

3.3 ADJUSTING AND CLEANING

A. Start-up, test, and adjust centrifugal fans in presence of manufacturer's authorized representative.

END OF SECTION 233416

SECTION 233433
Air Curtains

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes air curtains with hot-water heat and glycol heating fluid.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in the City of New York and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of air curtains that are similar to those indicated for this Project in material, design, and extent.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of air curtains and are based on the specific product indicated. Refer to Division 01 Section "Product Requirements."

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by an acceptable testing agency and marked for intended use.

E. Comply with AMCA 220, "Test Methods for Air Curtain Units," for airflow, outlet velocity, and power consumption.

F. Comply with ARI 410, "Forced-Circulation Air-Cooling and Air-Heating Coils," for components, construction, and rating.

1. Certify coils according to ARI 410.

G. Comply with NSF 37, "Air Curtains for Entranceways in Food and Food Service Establishments."

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each unit.

B. Shop Drawings: Signed and sealed by a qualified professional engineer.

1. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints.
2. Include plans, elevations, sections, details, and attachments to other work.
3. Wiring Diagrams: Power, signal, and control wiring.

C. Coordination Drawings: Plans and details drawn to scale and coordinating penetrations of exterior walls.
D. Samples for Initial Selection: For units with factory-applied color finishes.

E. Operation and Maintenance Data: For air curtains to include in maintenance manuals.
F. Warranties: Special warranties specified in this Section.

1.6 COORDINATION

A. Coordinate layout and installation of air curtains and suspension system components with other construction, including light fixtures, fire-suppression-system components, and partition assemblies.
B. Coordinate installation of wall penetrations and louvers. These items are specified in Division 08 Section "Louvers and Vents."

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of air curtains that fail in materials or workmanship within specified warranty period.
1. Warranty Period (Water or Steam Heating Units): Five years.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below, before construction begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Furnish one set of filters and fan belts for each unit.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Berner International Corp.
2. Marley Engineered Products.
3. Mars Air Products; Mars Air Door Division.

4. Or approved equal

2.2 MATERIALS

A. Housing Materials: Galvanized steel with electrostatically applied epoxy enamel finish over powdered mirror.
B. Housing Materials: One-piece, molded, high-impact, white polymer material.
C. Housing Materials: Heavy-gage, electroplated-zinc steel with welded construction and polyester-coated finish.
D. Housing Materials: Heavy-gage, aluminum construction.

1. Anodized Finish: Match finish and color of adjacent architectural metals. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
2. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

a. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.

3. Mounting Brackets: Steel, for wall mounting.

E. Intake Louvers: Integral part of the housing. Discharge Nozzle: Integral part of the housing, containing adjustable air-directional vanes with 15 degree sweep front to back.

2.3 FANS

A. Fans: Galvanized steel statically and dynamically balanced.
B. Fan Drives: Belt, equipped with belt guards and adjustable sheaves and pulleys for adjusting air-outlet velocity.

2.4 MOTORS

A. Motor Type: single speed TEFC
B. Bearings: Permanently sealed, lifetime, pre-lubricated, ball bearings.
C. Disconnect: Internal power cord with plug and receptacle.

2.5 WATER/GLYCOL COILS

A. Description: Continuous-circuit coil.
B. Piping Connections: Threaded on same end.
C. Tubes: Copper, complying with ASTM B 75

1. Tube Diameter: 5/8"

D. Fins: Aluminum with fin spacing
E. Fin and Tube Joint: Silver brazed.

F. Headers: Seamless copper tube with brazed joints, prime coated
G. Frames: Galvanized-steel channel frame
H. Ratings: According to ASHRAE 33.

1. Working-Pressure Ratings: 200 psig, 325 deg F

I. Source Quality Control: Test to 300 psig and to 200 psig underwater.

2.6 FILTERS

A. Disposable Panel Filters: Factory-fabricated, viscous-coated, flat-panel-type, disposable air filters with glass-fiber media sprayed with nonflammable adhesive in galvanized-steel frame.
B. Washable Panel Filters: Removable, stainless-steel, baffle-type filters with spring-loaded fastening; with minimum 0.0781-inch thick, stainless-steel filter frame.
C. Mounting Frames: Welded, galvanized steel with gaskets and fasteners and suitable for bolting together into built-up filter banks.

2.7 ACCESSORIES

A. Built-in Thermostat: Line voltage, factory installed and wired to the junction box on air curtain.
B. Automatic Door Switch: Plunger type installed in door area to activate air curtain when door opens and to deactivate air curtain when door closes.
C. Start-Stop, Push-Button Switch: Manually activates and deactivates air curtain.
D. Time-Delay Relay: Factory installed and adjustable to allow air curtain to operate from 0.5 seconds to 10 hours.
E. Motor-Control Panel: Complete with motor starter, 115-V ac transformer with primary and secondary fuses, terminal strip, and NEMA 250, Type 1enclosure.
F. Mounting Brackets: Adjustable mounting brackets for drum-type roll-up doors.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine areas and conditions where air curtains will be installed for compliance with requirements for installation tolerances and other conditions affecting performance.
B. Examine roughing-in for hot-water/ glycol piping systems to verify actual locations of piping connections before air-curtain installation.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Install air curtains with clearance for equipment service and maintenance.

3.4 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
B. Install piping adjacent to air curtain to allow service and maintenance.
C. Breaching: Comply with applicable requirements in Division 23 Section, "Breechings, Chimneys, and Stacks." Connect breaching to full size at flue outlet.
D. Ground equipment according to Division 26 Section "Grounding and Bonding for Electrical Systems."
E. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. After installing air curtains completely, perform visual and mechanical check of individual components.
2. After electrical circuitry has been energized, start unit to confirm motor rotation and unit operation. Certify compliance with test parameters.
3. Test gas train and verify that there are no gas leaks.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Repair or replace malfunctioning units and retest as specified above.

3.6 ADJUSTING

A. Adjust belt tension.
B. Adjust motor and fan speed to achieve specified airflow.
C. Adjust discharge louver and dampers to regulate airflow.
D. Adjust air-directional vanes.

3.7 DEMONSTRATION

A. Engage a factory-authorized service representative to instruct the City of New York's maintenance personnel to adjust, operate, and maintain air curtains.

END OF SECTION 233433

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 233713
Diffusers, Registers and Grilles

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to the following:

1. Provide all air inlets and outlets as specified herein, as indicated on the drawings, and as needed for a complete and proper installation.

B. Related Work:

The following related items are specified in other sections of the specifications:

1.	Metal Ducts	Section 233113
2.	Air Duct Accessories	Section 233300
3.	Testing for HVAC	Section 230593
4.	Balancing for HVAC	Section 230594

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications: Firms regularly engaged in manufacture of registers, grilles and diffusers of types and sizes required, whose products have been in satisfactory use in similar service for not less than 3 years.

C. Codes and Standards:

1. ARI Compliance: Test and rate air outlets in accordance with ARI Standard 650 "Standard Air Outlets and Inlets".

2. ASHRAE Compliance: Test and rate air outlets and inlets in accordance with ASHRAE 70 "Method of Testing for Rating the Air Flow Performance of Outlets and Inlets".

3. ADC Seal: Provide air outlets and inlets bearing ADC certified Rating Seal.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Submit manufacturer's catalog sheet product data for air outlets and inlets including the following:

1. Schedule of air outlets and inlets indicating drawing, designation, room location, number furnished, model number, size, and accessories furnished.

2. Data sheet for each type of air outlet and inlet, and accessory furnished; indicating construction, finish and mounting details.

3. Performance data for each type of air outlet and inlet furnished, including blade setting angle, cfm, pressure drop, temperature and velocity traverses, throw and drop, and noise criteria ratings. Indicate selections on data.

C. Shop Drawings: Submit assembly-type shop drawing for each type of air outlet and inlet, indicating materials and methods of assembly of components.

D. Maintenance Data: Submit maintenance data, including cleaning instructions for finished, and spare parts lists. Include this data, product data, and shop drawings in maintenance manuals.

1.5. DELIVERY, STORAGE AND HANDLING

A. Deliver air outlets and inlets wrapped in factory-fabricated fiber-board type containers. Identify on outside of container type of outlet or inlet and location to be installed. Avoid crushing or bending and prevent dirt and debris from entering and settling in devices.

B. Store air outlets and inlets in original cartons and protect from weather and construction work traffic. Where possible, store indoors; when necessary to store outdoors, store above grade and enclose with waterproof wrapping.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Subject to compliance with requirements, provide products by of one of the following:

1. Titus Products Div.
2. Anemostat Products Div.
3. Carnes
4. Tuttle and Bailey
5. Or Approved Equal

2.2. FABRICATION

A. Return or Exhaust Registers: Return or exhausts registers shall be equipped with an opposed blade or multi-shutter volume control device of steel, with the blades linked to operate in unison. This device shall be attached to the back of the register flange, and shall be adjustable for required air volumes by use of a screw driver, Allen wrench, (or other approved means) through the front face of the register. Opening area through the blades in each case shall be not less than the opening area of the register.

B. Supply Registers

1. The volume of air delivered through each supply register shall be controlled as follows: Where the branch duct connection is more than 2 feet long, an opposed blade volume control shall be secured to the back of the register flange. Where the branch duct connection, and opposed blade volume control shall be secured to the back of register flange. Each opposed blade volume control shall have its blades linked so as to operate in unison. Volume control shall be adjustable for required air volume by use of a screw driver, Allen wrench, (or other approved means) through the front face of the register.

2. All supply registers shall be constructed so that the bars can be adjusted to such positions as to produce the distribution of the air called for on the drawings. All supply registers shall be adjustable horizontally and vertically; the registers shall have double cores with the bars of each core adjustable.

C. Fire Damper Registers (Supply & Return/Exhaust)

1. Where the drawings indicate a fire damper register (6x6 T.R.W/FD) to be installed, Contractor shall supply a register, an interlocking blade type fire damper and a volume control device, all assembled and installed as required. Register volume control shall be as specified.

D. Air Diffusers:

1. Air diffusers shall be of the square or rectangular type as indicated on the drawings and shall be of the size to deliver the cubic feet of air per minute required. Diffusers shall be made of steel with baked enamel finish in a color as selected by the Commissioner.

2. Each diffuser shall be securely fastened to the ductwork by screws equally spaced around the collar. Contractor shall furnish proper size No. 14 gauge galvanized steel frames for the air diffusers to be installed in gypsum board ceilings and shall deliver them to the Contractor who shall install them.

3. Each square diffuser shall be provided with equalizing deflector vanes and with a splitter damper for volume control. Splitter damper shall be operable from the face of the diffuser.

E. Exhaust or transfer grilles shall be the same kind as return exhaust registers without volume balancing damper.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSPECTION

A. Examine areas and conditions under which registers and diffusers are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Install air outlets and inlets in accordance with manufacturers written instructions.

B. Coordinate with other work, including ductwork and duct accessories, as necessary to interface installation of air outlets and inlets with other work.

C. Coordinate the proper frame style with the ceiling construction.

D. Coordinate the air outlet and inlet location with the reflected ceiling plans, lighting plans, sections and/or details.

E. Coordinate the color requirements for all registers and diffusers with the Commissioner.

END OF SECTION 233713

SECTION 235100
HVAC Breeching, Chimneys and Stack

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.
   a. Section 01 33 00 "Submittal Procedures."
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."
   c. Section 01 74 19 "Construction Waste Management and Disposal."
   d. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings."

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to, the following:

1. Stainless steel AL29-4C double wall vent for gas-fired boilers and double wall gas-fired generator vent, as indicated on the drawings, and as required for a complete and proper installation

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code--Steel," for hangers and supports and AWS D9.1/D9.1M, "Sheet Metal Welding Code," for shop and field welding of joints and seams in vents, and stacks.

C. Certified Sizing Calculations: Manufacturer shall certify venting system sizing calculations

D. Codes and Standards:

1. NFPA: Comply with NFPA 211 "Standard for Chimneys, Fireplaces, Vents and Solid Fuel Burning Appliances".
2. UL: Comply with applicable portions of UL safety standards; provide products which have been UL listed and labeled.
3. SMACNA: Comply with SMACNA Low Pressure Duct Standards for fabricated breeching.

4. ASHRAE: Comply with the ASHRAE Equipment Handbook, for chimneys, gas vents, and fireplace systems, material requirements and design criteria.
5. Comply with the 2014 NYC Building Code

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Submit product data including materials, dimensions, weights and accessories.

C. Shop Drawings

1. Submit shop drawings showing fabrication and installation details for breechings, chimneys and stacks. Include plans, elevations, sections, details and attachments. Detail assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components such as anchors, pipe guides and vent caps, hangers and seismic restraints and location and size of each field connection. Shop drawings shall indicate:

   a. Layout of each boiler and generator vent.

2. Maintain on site copies of approved shop drawings that are complete, as outlined above. Work shall not proceed without approvals.

D. Quality Control Submittals:

1. Certificates: Submit certificates of materials compliance with specified ASTM, UL and ASHRAE requirements.
2. Certificates: Submit Welder=s Qualification Certificates.

E. New York City Department of Environmental Protection: Submit copy of Bureau of Air Resources approval of application and plans.

1. Manufacturer Seismic Qualification Certification: Submit certification that factory-fabricated vents, and stacks; accessories; and components will withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment." Include the following:

   a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   b. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."
   c. Dimensioned Outline Drawings of Vents and Stacks: Identify center of gravity and locate and describe mounting and anchorage provisions.
   d. Detailed description of anchorage devices on which the certification is based and their installation requirements.

1.5. PROJECT CONDITIONS

A. Should conditions at the site necessitate a change in the arrangement of the breeching from that shown on the working drawings, Contractor shall submit for approval, a detailed drawing (to scale) of the proposed change. In such a case, Contractor shall not begin to fabricate the vent until the Contractor's drawing has been approved by the Commissioner.

1.6. WARRANTY

A. Submit manufacturers ten (10) year warranty for the venting from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1. MANUFACTURERS AND MATERIALS

A. Stainless Steel Vents

1. Manufacturers: Subject to compliance with requirements, provide all stainlees steel, positive/negative pressure vents of one of the following:

    a. Heat-Fab
    b. Selkirk Metalbestos
    c. Van Packer
    d. Or approved equal

2. Description: UL-labeled manufacturer approved stainless steel vent for boiler vent; double wall for 1400 deg F for generator vent, to comply with NFPA 211.
3. Construction: Stainless steel, (UL 1738)
4. Accessories: UL-labeled tees, elbows, increasers, heater outlet connectors, storm collar, support assembly, thimbles, fire stop spacers, and fasteners fabricated of similar materials and designs as vent pipe straight sections.
5. Sealant: Manufacturer's standard high-temperature sealant.
6. Insulating Fill: Manufacturer's standard high-temperature insulation fill material in annular space surrounding chimney liner including high-temperature, ceramic-fiber insulation required to seal chimney at top and bottom.
7. Inner Shell: ASTM A 959, Type 29-4C stainless steel.for boiler vent; inner shell and outer jacket separated by at least a 1/2-inch airspace.
8. Inner shell: ASTM A 666, Type 304/Type 316 stainless steel for generator vent.
9. Outer Jacket: Stainless steel.
10. Termination with exit cone for boiler vent and flip for generator vent.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Install all stainless steel gas vent and stack in accordance with manufacturer's installation instructions and UL listing. Maintain minimum clearances from combustibles specified in UL listing.

B. Seal joints between sections of positive pressure vent in accordance with manufacturer's installation instructions, and using only sealants recommended by manufacturer.

C. Support vent at intervals recommended by the manufacturer to support the weight of the breeching and all accessories, without exceeding loading of appliances.

D. The vent installer shall provide all test holes required for the implementation of the performance test sufficiently in advance of the scheduled inspection in accordance and in compliance with the requirements of the New York City Department of Environmental protection and Division of Air Resources All test holes shall be kept closed with a stainless steel sheet metal, screw or other acceptable method when not being used for testing purposes and shall be marked in such a way that their location can be readily determined.

3.3 GUYING AND BRACING MATERIALS

Cable: Three galvanized, stranded wires of the following thickness:

Minimum Size: 1/4 inch in diameter.
For ID Sizes 4 to 15 Inches: 5/16 inch

Pipe: Three galvanized steel, NPS 1-1/4

Angle Iron: Three galvanized steel, 2 by 2 by 0.25 inch

3.3. ADJUSTING AND CLEANING

A. Clean the vent internally during installation, to remove dust and debris.

3.4. PROTECTION

A. Temporary Closure

1. At ends of the vents which are not completed or connected to equipment, provide temporary closures which will prevent entrance of dust and debris until installation is completed.

END OF SECTION 235100

SECTION 235233
Condensing Boilers

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / EPP General Requirements:
   1. Refer to – DDC Standard General Conditions.
      a. Section 01 33 00 "Submittal Procedures."
      b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."
      c. Section 01 91 13 General Commissioning Requirements for MEP Systems."

1.2. SUMMARY

A. Section includes gas-fired, water-tube condensing boilers, trim, and accessories for generating hot water.

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.4. SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5. SUBMITTALS

A. Product Data: For each type of product.

   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for boilers.
   2. Include rated capacities, operating characteristics, and furnished specialties and accessories.

B. Shop Drawings: For boilers, boiler trim, and accessories.

   1. Include plans, elevations, sections, and mounting attachment details.

   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

   3. Include diagrams for power, signal, and control wiring.

1.6. INFORMATIONAL SUBMITTALS

A. Source quality-control reports.
B. Field quality-control reports.
C. Sample Warranty: For special warranty.
D. Other Informational Submittals:

1. ASME Stamp Certification and Report: Submit "A," "S," or "PP" stamp certificate of authorization, as required by is required by code, and document hydrostatic testing of piping external to boiler.
2. CSA B51 pressure vessel Canadian Registration Number (CRN).

1.7. CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For boilers to include in emergency, operation, and maintenance manuals.

1.8. WARRANTY

A. Manufacturer's Warranty: Verify available warranties and warranty periods for units and components.
   1. Warranty Period for Fulton EDR+ 5000 Water-Tube Condensing Boilers: 25 years from date of Substantial Completion. Standard Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of boilers that fail in materials or workmanship within specified warranty period.
   2. Warranty Period for the Pressure Vessel and Heat Exchanger: The boiler manufacturer shall warranty against failure due to:
      a. Flue gas condensate corrosion, and/or defective material or workmanship for a period of ten (10) years, non-prorated, from the date of shipment from the factory.
      b. Thermal shock for the lifetime of the boiler.
   3. Warranty Period for the Burner: The boiler manufacturer shall warranty the burner against defective material or workmanship for a period of five (5) years, non-prorated, from the date of shipment from the factory.
   4. Warranty Period for all other components: The boiler manufacturer will repair or replace any part of the boiler that is found to be defective in workmanship or material within eighteen (18) months of shipment from the factory or twelve (12) months from start-up, whichever comes first.
   5. Warranties are only valid provided the boiler is installed, controlled, operated and maintained in accordance with the Installation, Operation and Maintenance Manual.

PART 2 - PRODUCTS

2.1. PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. ASME Compliance: Fabricate and label boilers, ASME H Stamp, to comply with the latest edition of the ASME Boiler and Pressure Vessel Code.
C. "ASHRAE/IES 90.1 Compliance" Paragraph below may be required to comply with Project requirements or is required by code and is required for sustainable design systems.
D. ASHRAE/IES 90.1 Compliance: Boilers shall have minimum efficiency according to "Gas and Oil Fired Boilers - Minimum Efficiency Requirements."
E. DOE Compliance:

1. Boiler thermal and combustion efficiencies shall be certified and listed by AHRI.
2. Boiler AFUE shall be certified and listed by AHRI.

F. CSA Compliance: Test boilers for compliance with the latest edition of ANSI Z 21.13/CSA 4.9.
G. Air Quality Compliance: Meets or exceeds the requirements of the most stringent air quality management codes, including SCAQMD and BAAQMD.
H. Mounting Base: For securing boiler to concrete base.

1. Seismic Fabrication Requirements: Fabricate mounting base and attachment to boiler pressure vessel, accessories, and components with reinforcement strong enough to withstand seismic forces defined in Section 230548 "Vibration and Seismic Controls for HVAC" when mounting base is anchored to building structure.

2.2. WATER-TUBE CONDENSING BOILERS – 1,600 TO 6,000 MBH

A. Basis-of-Design Product: Subject to compliance with requirements, provide Fulton EDR+ Model ENDURA 5000 boiler or comparable product by one of the following:
    1. Fulton, Inc.
    2. RBI; A Division of Mestek, Inc.
    3. Thermal Solutions LLC.
    4. Aerco.
    5. Or approved equal

B. Description: Factory-fabricated, -assembled, and -pressure tested, duplex stainless steel firetube condensing boiler with heat exchanger sealed pressure tight, built on a steel base; including flue gas vent; combustion air intake connections, water supply, water return, condensate drain, and controls. The boiler, burner and controls shall be completely factory assembled as a self-contained unit. Each boiler shall be neatly finished, thoroughly tested, and properly packaged for shipping. Closed-loop water heating service only.

C. Heat Exchanger

1. The heat exchanger is defined as the surfaces of the pressure vessel where combustion gases transfer heat to the hydronic fluid.

D. Boiler

1. The boiler shall be a single-pass firetube design, such that all combustion chamber components are within water-backed areas. Watertube boilers will not be accepted.
2. Furnace to tube connections shall be constructed with low weld intensity, a tube to tube minimum spacing of 2 tube diameters center to center, minimum 1 tube diameter tube to tube ligament, and shall not contain any overlapping welds.
3. Heat transfer capability shall be maximized via the use of corrugated firetubes. The corrugation process shall not remove any material from the tubes. Finned, twisted tape, or coil type tube inserts negatively impact ease of maintenance and will not be accepted.
4. The boiler shall compensate for heat exchanger thermal expansion using a stress relief deflection element external to the pressure vessel shell. The deflection element shall act to protect the boiler tubes and tubesheets from exposure to longitudinal thermal expansion stresses. The deflection element shall not be in contact with flue gases.

a. Designs using the tubes, tubesheets, or furnace components to compensate for thermal expansion require cutting, welding, tube repair, or complete heat exchanger replacement in the event of deflection element failure and are not accepted.

b. Designs which do not compensate for thermal expansion stresses are not accepted.

5. Tubesheet to tube weld stresses while the boiler is in operation shall never exceed 1.0 ksi.
6. Material: The heat exchanger furnace, tubesheets, and firetubes shall be constructed of duplex alloy stainless steel. Austenitic stainless steels, such as 316L or 304, and ferritic stainless steels, such as 439, are not accepted.
7. For long term durability, heat exchanger material of construction must have a minimum Ultimate Tensile Strength of 94 ksi, and a minimum 0.2% Yield Strength of 65 ksi. Weaker materials of construction with reduced strength are not accepted. Boilers seeking an approval must provide documentation that supports this requirement or will be rejected.
8. Heat exchangers constructed of cast aluminum, mild steel, cast iron or copper finned tube materials are not accepted.
9. Exhaust manifold shall be minimum 0.5" thick stainless steel, ASME designation SA-351 CF3M, and shall be a water-backed design to enhance heat transfer. Dry-back style flue gas condensate collection pan exhaust manifolds are not accepted.
10. Pressure Vessel: Design and construction shall be in accordance with Section IV of the ASME Code for heating boilers.
11. The shell shall be minimum 0.375" thick steel, SA-53B ERW.
12. The top head shall be a minimum 0.50" thick steel, SA-790 or SA-516 Grade 70.
13. The pressure vessel shall be a counter-flow design with internal water-baffling plates.
14. The boiler return and supply water connections shall be 150# ANSI flanged. The water connections shall not be designed to support an external structural load from the piping system.
15. The water volume of the boiler shall not be less than 80 gallons.
16. The maximum water pressure drop across the boiler inlet and outlet connections shall not exceed 4.1 PSID at 472 GPM for 5,000 MBTU/hr boiler.
17. Fuel/Air Mixture Combustion System: Air and gas pre-mix on the suction side of the fan.
18. Closed-loop oxygen sensor feedback shall automatically adjust the fuel/air ratio. O2 monitoring-only systems that cannot adjust for operation variability shall not be accepted.

19. Combustion air flow shall be controlled by fan speed and a servo-motor actuated butterfly valve. Fuel flow shall be controlled by a servo-motor actuated butterfly valve. Zero governor or negative regulation systems offer less precision and are not capable of independent air and gas control, and are not accepted.

E. Burner:
1. Standard natural gas, forced draft, woven fiber mesh design.
2. Turndown: Shall be no less than EDR+6000: 15:1.
3. Excess Air: The burner shall operate at no greater than 8.0% excess O_2 over the entire modulation range to maximize seasonal combustion and thermal efficiencies.
4. NOx Emissions: When operating on natural gas, the burner shall maintain a level of <20 ppm over the complete combustion range at a 3% O_2 correction. The natural gas burner shall be configurable down to <9 ppm NOx when operating on 460/3/60 electrical service.

F. Blower:
1. Variable speed centrifugal fan to operate during each burner firing sequence and to pre-purge and post-purge the combustion chamber.
2. Motor: Totally enclosed fan-cooled premium efficiency AC motor, Class H insulation, variable speed capable with sealed bearings.
a. Variable speed drive: IP20 housing, 0-400Hz frequency output capability, overload capacity of 150% for 60 seconds and 200% for 3 seconds, shall fully modulate fan speed according to burner input requirements.
b. Motor Alternate: Closed-loop brushless DC variable speed motor with hall effect sensor feedback; internal electronic commutation controller with built in speed control and protection features; long life, sealed, ball bearing with high temperature grease.

G. Main Fuel Train:
1. A factory mounted fuel train shall be supplied. The fuel train shall be fully assembled and enclosed within the boiler cabinet, complete with factory mounted and wired high and low gas pressure switches in compliance with CSD-1.
2. Ignition: Direct spark ignition with transformer. A UV scanner shall be utilized to ensure precise communication of flame status back to the flame programmer. Flame rods are not accepted.

H. Boiler Enclosure:
1. Cabinet: Jacketed steel enclosure with left hinged full height front access door, fully removable latching access panels, mounted on a steel skid with steel plate decking.
2. Control Enclosure: NEMA 250, Type 1.
3. Finish: Cabinet shall be powder coated, pressure vessel assembly shall be painted.
4. Combustion Air: Factory mounted air filter directly coupled to the blower inlet.
5. Rigging and Placement: The boiler shall include lifting eyes and fork hole accessibility for rigging.
6. Characteristics and Capacities:
a. Standard capacities shall be based on 100% water.
b. Minimum Design Water Pressure Rating: 160 psig.
c. Minimum Return Water Temperature: No minimum temperature requirements.
d. Maximum Allowable Water Temperature (ASME): 210°F
e. Minimum Water Flow Rate: EDR+5000 75 gpm.

f. Maximum Delta-T: 100°F
g. Maximum Allowable Operating Setpoint: 200°F
h. Jacket Losses: External convection and radiation heat losses to the boiler room from the boiler shall comply with IAW ASHRAE 103-2007, and shall not exceed 0.2% of the rated boiler input at maximum capacity.

7. Flow switches, dedicated circulator pumps, or primary-secondary arrangements shall not be required to protect the boiler from thermal shock. Boilers requiring the use of flow switches or primary-secondary piping arrangements will not be accepted.
8. The dimensions of the boiler from where service clearances are measured shall not be more than (Height x Width x Depth) EDR+5000 79" x 34" x 117".
9. The equipment shall be in strict compliance with the requirements of this specification and shall be the manufacturer's standard commercial product unless specified otherwise. Additional equipment features, details, accessories, etc. which are not specifically identified but which are a part of the manufacturer's standard commercial product, shall be included in the equipment being furnished.

I. Trim
1. Safety Relief Valve: ASME rated .
2. Pressure and Temperature Gauge: Minimum 3-1/2" diameter, combination pressure and temperature gauge.
3. Flue Gas Condensate Drain Trap: A flue gas condensate drain trap shall be provided to prevent positive pressure exhaust gases from entering the boiler room.
4. Flue Gas Condensate Neutralization: pH neutralization shall be provided

J. Controls
1. The boiler electrical control panel shall include the following devices and features:
2. 7" color touch screen control display factory mounted on the front cabinet panel door.
a. The control display shall serve as a user interface for programming parameters, boiler control and monitoring; and shall feature a screen saver, boiler status, configuration, history and diagnostics.
3. Controls Transformers: 120VAC, 24 VDC, 12 VDC.
4. Flame safeguard control with 9 combustion fuel/air load profile points.
5. All standard controls shall be factory mounted and wired according to UL requirements.

K. Burner Operating Controls:
1. To maintain safe operating conditions, factory mounted and wired burner safety controls limit burner operation:
2. High Limit: A manual reset mechanical Aquastat device shall stop the burner if operating conditions rise above maximum boiler design temperature.
3. Low-Water Cut Off: Electronic probe type mounted in the pressure vessel shall prevent burner operation on low water alarm.
4. Air Safety Switch: Prevent operation unless sufficient combustion air is proven.
5. Blocked Exhaust: Prevent operation in the event of a blocked flue gas exhaust stack.

L. O2 Compensation:
1. To maximize efficiency throughout seasonality, factory mounted and wired.

2. A wide band Oxygen sensor shall be factory mounted and measure the Oxygen level present in combustion byproducts during run. The current Oxygen level shall be displayed to the user. The Oxygen sensor minimum requirements shall be:
a. Lambda range: $\lambda = 0.65$ to ∞
b. Lambda accuracy: ± 0.008 @ $\lambda=1.00$; ± 0.01 @ $\lambda=0.80$; ± 0.05 @ $\lambda=1.70$
3. The O2 Compensation system shall utilize a combination open-loop and closed-loop control system to tune the air/fuel ratio during operation, optimizing combustion reliability, flame stability, combustion efficiency, and the dewpoint temperature for formation of flue gas condensate.
4. Boilers listed as an alternate to the Basis of Design that do not include a closed-loop O2 Compensation control system in compliance with this specification shall be required to provide and commission a Siemens LMV52 Burner Management System with the QGO20 Oxygen Sensor, PLL52.110A100 O2 Trim Module, and associated installation parts.
5. Boiler Operating Controls and Features:
a. Inlet Water Temperature Monitoring.
b. Combustion Air Temperature Monitoring.
c. Flue Gas Exhaust Temperature Monitoring: Sensor probe shall be stainless steel.
d. Proportional Integral Derivative (PID) temperature load control capability for hydronic and domestic hot water in standalone or lead/lag operation.
e. Operating temperature sensor for automatic start and stop.
f. The temperature sensor shall have tolerance according to IEC 60751
g. Time of day display.
h. Customizable boiler name display.
i. Two customizable boiler interlock terminals displayed.
j. Alarm history for a minimum 100 most recent alarms including status at time of lockout.
k. Administrative password protection options.
l. Indirect domestic hot water priority.

M. Outdoor air setting:
1. The temperature sensor shall be field installed in an outdoor area not exposed to direct sunlight or the exhaust of other mechanical equipment, and wired the boiler controller.
a. The control shall be field programmed with the outdoor reset schedule.

N. Variable Speed System (Secondary) Pump Control:
1. When installed in a variable primary flow configuration, the boiler controller shall provide the capability to control two variable speed hydronic heating pumps. One pump shall be duty, and one standby.
2. The duty system pump shall be enabled upon the outdoor air temperature dropping below the warm weather shutdown temperature. Pumps shall be automatically rotated.
3. Variable speed signal shall be provided to modulate pump speed according to hydronic heating loop Delta-T. A user selectable parameter allows for Delta-P in place of Delta-T.

O. Motorized isolation valve control:
1. Upon heat demand for the boiler, the control shall provide an enable/open signal.
a. After the burner is disabled and upon the heat exchanger delta-T dropping to a user programmable delta-T, the signal will be disabled.
b. Boilers which utilize only a time delay close as the only means of valve actuation are unable to optimize for residual heat, and will not be accepted.

c. In variable primary arrangements, the control shall hold the lead boiler isolation valve open at all times.

P. Lead/Lag Control of Modular (Multiple) Boiler Plants:
1. Lead/Lag capabilities shall be integral to the boiler controller for all the boilers installed in the same hydronic loop and shall not require an external panel.
2. The boiler manufacturer shall provide a supply water header temperature sensor.
a. The temperature sensor shall have tolerance according to IEC 60751, field installed in the common supply water piping.
3. Lead/lag operation shall not require a master boiler or external control panel. Field wired sensors or communication may be connected to any boiler in the lead/lag sequence.
4. The boilers shall communicate with each other via a private Ethernet/IP addressed network.
a. Field wiring between boilers shall be shielded Cat5e or Cat6 Ethernet cable.
b. In the event a communication cable becomes damaged or interrupted, communication shall be lost with only one boiler and not the entire lead/lag operation. Daisy chain style wiring lacks this redundancy and shall not be accepted.

Q. Sequence of Operation:
1. Upon loop temperature dropping below start point, the lead boiler shall be enabled at low fire and shall modulate according to the heating demand.
a. As lag boiler stages are enabled according to heating demand, burners shall return to low fire. Boilers shall modulate in parallel as a cohesive unit according to heating demand.
b. When all boilers are active they shall be released to modulate in parallel up to full fire according to the heating demand. As heating demand decreases, the sequence shall operate in reverse. Rotation of the lead and subsequent lag boilers shall be automatic.
c. Building Automation System Interface: Hardware and software to enable building automation system (BAS) to monitor, control, and display boiler status and alarms.

R. Venting
1. The boiler shall be capable of operating with a stack effect not exceeding -0.10" W.C. and a combined air intake and exhaust venting pressure drop not exceeding EDR+5000: +1.0" W.C.
2. Combustion Air Intake: It shall be acceptable to either direct vent the boiler using sealed combustion by drawing combustion air in from the outdoors or by drawing air from the mechanical space itself.
3. Sealed Combustion: Schedule smooth-walled galvanized steel, vent termination with 1/2" x 1/2" mesh bird screen.
4. Flue Gas Exhaust: The flue gas exhaust stack shall be AL 29-4C or 316L stainless steel, listed and labeled to UL-1738 / C-UL S636 for use with Category II/IV appliances, guaranteed appropriate for the application by the manufacturer and supplier of the venting.
5. Condensate drain piping must be galvanized, stainless steel, or Schedule 40 CPVC.

2.3. ELECTRICAL POWER

A. Controllers, Electrical Devices, and Wiring: Electrical devices and connections are specified in electrical Sections.

B. Single-Point Field Power Connection: Factory-installed and -wired switches, motor controllers, transformers, and other electrical devices necessary shall provide a single-point field power connection to boiler.

a. House in NEMA 250, Type 1 enclosure.
b. Wiring shall be numbered and color coded to match wiring diagram.
c. Install factory wiring outside of an enclosure in a metal raceway.
d. Field power interface shall be to circuit breaker.
e. Provide branch power circuit to each motor and to controls with a disconnect switch or circuit breaker.
f. Provide each motor with overcurrent protection.

2.4. SOURCE QUALITY CONTROL

A. Burner and Hydrostatic Test: Factory adjust burner to eliminate excess oxygen, carbon dioxide, oxides of nitrogen emissions, and carbon monoxide in flue gas and to achieve combustion efficiency; perform hydrostatic test
B. Test and inspect factory-assembled boilers, before shipping, according to the latest edition of ASME Boiler and Pressure Vessel Code.
C. Assembled boiler must be factory tested for safety and functionality; boiler filled with water, fired throughout firing range, with all burner safety components proven. Results recorded for future reference.
D. Allow The City of New York access to source quality-control testing of boilers. Notify Commissioner 14 days in advance of testing.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine roughing-in for concrete equipment bases, anchor-bolt sizes and locations, and piping and electrical connections to verify actual locations, sizes, and other conditions affecting performance of the Work.
B. Final boiler locations indicated on Drawings are approximate. Determine exact locations before roughing-in for piping and electrical connections.
C. Examine mechanical spaces for suitable conditions where boilers will be installed.
D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. BOILER INSTALLATION

A. Equipment Mounting:

B. Install boilers on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete." Retain one of two subparagraphs below. Retain first for projects in seismic areas; retain second for projects not in seismic

areas. Indicate vibration isolation and seismic-restraint device type and minimum deflection in supported equipment schedule on Drawings.

Comply with requirements for vibration isolation and seismic-restraint devices specified in Section 230548 "Vibration and Seismic Controls for HVAC."

C. Comply with requirements for vibration isolation devices specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

D. Install gas-fired boilers according to NFPA 54.

E. Assemble and install any optional boiler trim.

F. Install electrical devices furnished with boiler but not specified to be factory mounted.

G. Install control wiring to field-mounted electrical devices.

3.4. CONNECTIONS

A. Coordinate piping installations and specialty arrangements with schematics on Drawings and with requirements specified in piping systems. If Drawings are explicit enough, these requirements may be reduced or omitted.

B. Piping installation requirements are specified in other Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

C. Install piping adjacent to boiler to allow service and maintenance.

D. Install piping from equipment drain connection to nearest floor drain. Piping shall be at least full size of connection. Provide an isolation valve if required.

E. Connect piping to boilers, except safety relief valve connections, with flexible connectors of materials suitable for service. Flexible connectors and their installation are specified in Section 232116 "Hydronic Piping Specialties."

F. Connect gas piping to boiler gas-train inlet with union. Piping shall be at least full size of gas-train connection. Provide a reducer if required.

G. Connect hot-water piping to supply- and return-boiler tappings with shutoff valve and union or flange at each connection.

H. Connect steam and condensate piping to supply-, return-, and blowdown-boiler tappings with shutoff valve and union or flange at each connection.

I. Install piping from safety relief valves to nearest floor drain.

J. Install piping from safety valves to drip-pan elbow and to nearest floor drain.

K. Boiler Venting:

1. Install flue venting kit and combustion-air intake.
2. Connect full size to boiler connections. Comply with requirements in Section 235123 "Gas Vents."

L. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

M. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5. FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Perform installation and startup checks according to manufacturer's written instructions.
2. Leak Test: Hydrostatic test. Repair leaks and retest until no leaks exist.
3. Operational Test: Start units to confirm proper motor rotation and unit operation. Adjust air-fuel ratio and combustion.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
    a. Check and adjust initial operating set points and high- and low-limit safety set points of fuel supply, water level, and water temperature.
    b. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
    c. Boiler will be considered defective if it does not pass tests and inspections.
    d. Prepare test and inspection reports
    e. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.
    f. Performance Tests
5. Engage a factory-authorized service representative to inspect component assemblies and equipment installations, including connections, and to conduct performance testing.
6. Boilers shall comply with performance requirements indicated, as determined by field performance tests. Adjust, modify, or replace equipment to comply.
7. Perform field performance tests to determine capacity and efficiency of boilers.
    a. Test for full capacity.
    b. Test for boiler efficiency at low fire 20, 40, 60, 80, 100, 80, 60, 40, and 20 percent of full capacity. Determine efficiency at each test point.
8. Repeat tests until results comply with requirements indicated.
9. Provide analysis equipment required to determine performance.
10. Provide temporary equipment and system modifications necessary to dissipate the heat produced during tests if building systems are inadequate.
11. Notify The City of New York 24 hours minimum in advance of test dates.
12. Document test results in a report and submit to Commissioner.

3.6. DEMONSTRATION

A. Engage a factory-authorized service representative to instruct maintenance personnel to adjust, operate, and maintain boilers.

END OF SECTION 235233

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 23 56 00
Solar Hot Water System

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1. LEED General Requirements

2. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 74 19 "Construction Waste Management and Disposal"
   c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. This specification addresses the installation of solar thermal hot water systems for use in domestic hot water heating.

B. All documentation and components furnished by contractor shall be developed, designed, and/or fabricated using high quality design, materials, and workmanship meeting the requirements of the City of New York and all applicable industry codes and standards. Reference is made in these specifications to various standards under which the Work is to be performed or tested. The installations shall comply with at least, but not limited to, the latest approved versions of the International Building Code (IBC) and National Electrical Code (NEC).

C. Contractor shall conform to all specification and guidelines from equipment manufacturers.

1.3 SCOPE OF WORK

A. Contractor shall provide all necessary labor, materials, equipment, and services required to install complete integrated turnkey solar thermal systems. Contractor shall supply all solar collectors, mounting equipment, piping, pumps, controls, metering, related wiring, monitoring equipment, and all ancillary equipment necessary to install the solar system and interconnect it to the hot water system. The solar system installations shall comply with all contract requirements, technical specifications, approved Contract Ddocuments, and applicable regulatory codes and requirements. Contractor shall submit As-Built Construction Drawings in hard copy with two (2) sets and an electronic copy in DWG format on compact disc to the Commissioner after completion of the proving period for each system at each site.

B. Contractor will be responsible for locating, identifying and protecting existing underground utilities conduits, piping, substructures, etc. and ensuring that no damage is inflicted upon existing infrastructure. In addition to USA Dig and utility line-locating, a private line-locator must be used for any project requiring underground work.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Shop Drawings

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Installer Qualifications:

1. The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope, size and type to the required work.

C. Manufacturer Qualifications:

1. The manufacturer providing the material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.

D. Contractor shall implement a Quality Assurance / Quality Control (QA/QC) plan for construction activities at site. At least 30 days prior to the planned commencement of construction, Contractor shall submit a copy of the QA/QC Plan for review and approval by the Commissioner.

E. To ensure the highest quality of the installation, Contractor shall:

1. Implement policies and procedures to ensure proper oversight of construction work, verification of adherence to construction documents and contractual requirements, and rapid identification and mitigation of issues and risks.

2. Utilize best practice methods for communicating progress, performing work according to the approved Project schedule, and completing the Project on-time.

3. Keep the Site clean and orderly throughout the duration of construction. All trash and rubbish shall be disposed of off-site by licensed waste disposal companies and in accordance with applicable 2014 NYC Building Code.

4. Provide equipment marking, as well as labeling and signage for the Project that shall be removed after Project completion.

5. Fully comply with all applicable notification, safety and Work rules (including The City of New York safety standards) when working on or near the City of New York's facilities.

6. Route all electrical collection system wiring and conduits in a neat and orderly fashion and in accordance with all applicable code requirements. All cable terminations, excluding module-to-module and module-to-cable harness connections, shall be permanently labeled.

7. Torque all mechanical and electrical connections and terminations according to manufacturer specifications, with marking/sealing of all electrical terminations at appropriate torque point.

8. Provide all temporary road and warning signs, flagmen or equipment as required to safely execute the Work. Street sweeping services shall also be provided as required to keep any dirt, soil, mud, etc. off of roads. Comply with all state and local storm water pollution prevention (SWPP) ordinances.

1.7 REFERENCE STANDARDS AND REGULATIONS

A. The design, products, and installation shall comply with at least, but not limited to, the following industry standards:

1. Institute of Electrical and Electronics Engineers (IEEE) Standards
2. National Electrical Manufacturers Association (NEMA)
3. National Electric Code (NEC)
4. Solar Rating and Certification Corporation (SRCC)
5. Underwriters Laboratories, Inc. (UL)
6. National Fire Protection Association (NFPA)
7. American National Standards Institute (ANSI)
8. Occupational Health and Safety Administration (OSHA)
9. American Society for Testing and Materials (ASTM)
10. National Electrical Testing Association (NETA)
11. International Association of Plumbing and Mechanical Officials (IAPMO)
12. IAPMO Backflow Prevention Reference Manual Second Edition

B. In addition to the above, the solar collectors shall comply with at least, but not limited to, the following:

1. Solar Rating & Certification Corporation Standard 100 Minimum Standards for Solar Thermal Collectors (SRCC OG-100)
2. Solar Rating & Certification Corporation Standard 300 Minimum Standards for Solar Water Heating Systems (SRCC OG-300)
3. All equipment shall be new, undamaged, fully warranted without defect.
4. All equipment and installation shall qualify for available solar hot water incentives.
5. Acceptable mounting methods for panels shall be provided by the manufacturer. Bolted and similar connections shall be non-corrosive and include locking devices designed to prevent twisting.
6. If collectors using hazardous materials are to be provided, then the environmental impact of the hazardous material usage must be disclosed, including any special maintenance requirements and proper disposal/recycling of the collectors are the end of their useful life.

7. Glazed Closed Loop Flat Plate Collector: Provide minimum 65% optical efficiency, rugged high quality construction using impact-resistant, anti-reflective solar glass, copper meander/serpentine absorber tube, selective-surface absorber plate, non-degrading thermal insulation and optional rapid connections kits to interconnect collectors, ports for collector temperature sensors, air vents and electronic differential controls.

8. The collector shall have no less than 95% transmission, eta conversion factor of no less than 0.75 by gross area.

1.8 WARRANTY

A. Provide for the following warranties:

1. All solar collectors must have a minimum of a 10 year manufacturer's performance warranty to protect against defects and a 15% performance degradation. Additionally, the Contractor shall provide a 20-year warranty option if commercially available.

2. All systems must have a minimum 10 year performance warranty to protect the host against more than a 15% degradation of system performance over the 10 year period that may occur as a result of faulty installation.

3. All systems must have a minimum 1 year warranty on installation labor and workmanship not otherwise covered by the manufacturer's performance warranty.

4. The mounting system shall have a 20-year warranty covering at least structural integrity and corrosion.

5. Provide a comprehensive ten (10) year warranty on all system components against defects in materials and workmanship under normal application, installation, and use and service conditions.

6. All warranties must be documented in advance and be fully transferable to the City of New York.

PART II - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. SunMaxx Solar Hot Water Solutions

2. Sun Earth

3. Alternate Energy Technologies

4. Or approved equal

2.2 MATERIALS

A. Materials and equipment incorporated in the Work shall be new and suitable for the use intended. No material or equipment shall be used for any purpose other than that for which it is designed, specified or indicated.

B. Contractor shall use means necessary to protect the materials and equipment before, during and after installation. Contractor shall promptly replace lost or damaged materials and equipment with equal, or Commissioner-approved, replacements, or repair them, at no additional cost to the City of New York

2.3 SOLAR COLLECTOR ARRAY

A. Array Layout: Collector array shall be oriented so that all collectors face the same direction. Space collectors arranged in multiple rows so that no shading from other collectors is evident between 1000 hours and 1500 hours solar time on December 21. Indicate minimum spacing between rows. Collector array must have a minimum surface orientation factor (SOF) of 0.75.

B. Piping: Connect interconnecting array piping between solar collectors, in a reverse-return configuration with approximately equal pipe length for any possible flow path. Indicate flow rate through the collector array. Provide each collector bank isolated by valves, with a pressure relief valve and with the capability of being drained. Locate manually operated air vents at system high points, and pitch array piping a minimum of 0.25 inch per foot so that piping can be drained by gravity. Supply calibrated balancing valves at the outlet of each collector bank as indicated.

C. Supports for Solar Collector Array: Utilize the existing support structure and recertify that it will be covered under the Contractors warranty of 10 years with an optional 20 warranty. If a new support is proposed, the Contractor must provide a support structure for the collector array of aluminum, stainless steel, or other corrosion-resistant approved material. Furnish a support structure which secures the collector array at the proper tilt angle with respect to horizontal and orientation with respect to true south. Provide a support structure that will withstand the static weight of filled collectors and piping, wind, seismic, and other anticipated loads without damage. Provide a support structure which allows access to all equipment for maintenance, repair, and replacement. Neoprene or EPDM washers shall separate all dissimilar metals. Depending on system type, supports for solar array could terminate in ballast blocks to avoid roof penetrations.

2.4 TRANSPORT SUBSYSTEM

A. Heat Exchanger: For a heat exchanger, provide a minimum design pressure rating of 150 psi. Construct heat exchanger of 316 stainless steel, titanium, copper-nickel, or brass. Furnish heat exchanger with a capability of withstanding temperatures of at least 240 °F. Tube-in-tube copper side-arm heat exchangers are acceptable for appropriate system types.

B. Pumps: For active solar system designs requiring a pump, provide electrically- driven, single-stage, centrifugal type circulating pumps. Support pumps on a concrete foundation or mounting intended for the purpose, or by the piping on which installed if appropriate to the size. Construct the pump shaft of corrosion resistant alloy steel with a mechanical seal. Provide stainless steel impellers and casings of bronze. Pump motor start stop shall be controlled by the solar thermal temperature control system that is compatible with open communication protocol and meets CSI thermal incentive program requirements complete with manual override (Hand-Off-Automatic). Pumps shall be installed with isolation valves so the pump can be serviced without draining the system.

C. Heat Transfer Fluid Heat transfer fluid shall be compatible with all materials in the system. The nature and amount of heat transfer fluid will depend on the type of system proposed and the freeze conditions encountered at the site. Any anti-freeze, conditioners or corrosion inhibitors added to the heat transfer fluid must be non-toxic and intended for use in potable water systems when used with single wall heat exchangers.

2.5 PIPING SYSTEM

A. Provide a piping system complete with pipe, pipe fittings, valves, strainers, expansion loops, pipe hangers, inserts, supports, anchors, guides, sleeves, and accessories with this specification and the drawings. Pipe shall be designed to observe limits on flow velocity, pressure drop and gauge pressure associated with the pipe type and characteristics.

B. Provide piping flow rates below 5 feet per second. Piping shall be Type L or Type M copper tubing, ASTM B- 88, with 95-5 tin-antimony soldered joints. If cold water piping supplying the SWH system is of another type, such as PVC, it shall be replaced within 10 feet of the SWH system with copper to avoid bulging and rupture due to proximity to the higher temperatures of the solar system.

C. All work performed as described herein including but not limited to piping, fixtures, fitting, solder, flux and panels shall meet California Code requirements for Lead Free products and the installation of these products as set forth in California Health and Safety Code, Sections 116875-116880.

1. Provide outside array piping insulation with a capability of withstanding 250 °F, except that piping insulation within 1.5 feet of collector connections shall be capable of withstanding 400°F. Protect outside piping insulation from water damage and ultraviolet degradation with a suitable outer coating manufactured for this purpose (aluminum, sunlight resistant PVC or approved equal).

2. If systems are proposed with multiple collector banks, provide calibrated balancing valves suitable for 125 psig and 250 °F service. Furnish calibrated balancing valves with bronze body/brass ball construction with seat rings compatible with system fluid and differential readout ports across valve seat area. Provide readout ports fitted with internal insert of compatible material and check valve. Provide calibrated balancing valves with a memory stop feature to allow valve to be closed for service and reopened to set point without disturbing balance position, and with a calibrated nameplate to assure specific valve settings. Provide calibrated balancing valves and ball valves at the outlet of each collector bank. The balancing valves are specified to allow the array to be flow balanced. The ball valves are required to enable the array to be disconnected for maintenance or repair.

3. Provide pressure gauges with throttling type needle valve or a pulsation dampener and shutoff valve. Furnish a 3-1/2 inch minimum dial size.

4. Supply thermometers with wells and separable bronze sockets.

5. Support and hang piping so that the weight of the piping is not supported by drywall, siding, or other building members not designed to bear load. Support piping so that thermal expansion and contraction of pipe lengths is accommodated. Supports shall be replaced to ensure piping does not sag.

6. Provide valves compatible with the piping. Ball valves shall be used for shutoff, with full port, bronze body, bronze ball and Teflon seat. Bronze hose-end gate valves shall be used for draining low points of piping.

7. All exposed and accessible hot water piping must be insulated with material which has a minimum of R2.6 value.

2.6 ELECTRICAL COMPONENTS

A. Provide electrical equipment and wiring in accordance with NFPA 70, the NEC, and UL. Furnish motor starters complete with thermal overload protection and other appurtenances necessary for the motor control

specified. Provide each motor of sufficient size to drive the equipment at the specified capacity without exceeding the nameplate rating of the motor. Motors shall be high efficiency motors.

2.7 MOUNTING SYSTEM

A. The mounting systems shall be designed and installed such that the panels may be fixed with reliable components proven in similar projects, and shall be designed to resist dead load, live load, corrosion, UV degradation, wind loads, and seismic loads appropriate to the geographic area over the expected 25-year lifetime. The design shall sufficiently respond to the design requirements imposed by Federal, State, and local jurisdictions in effect. Conduct an analysis, and submit evidence thereof, including calculations, of each structure affected by the performance of the scope described herein. The analysis shall demonstrate that existing structures are not compromised or adversely impacted by the installation of panels, equipment, or other activity related to this scope. Mounting systems must also meet the following requirements at a minimum:

1. All structural components, including array structures, shall be designed in a manner commensurate with attaining a minimum 25-year design life. Particular attention shall be given to the prevention of corrosion at the connections between dissimilar metals.

2. Thermal loads caused by fluctuations of component and ambient temperatures shall be accounted for and selection of mounting systems such that neither the mounting system nor the surface on which it is mounted shall degrade or be damaged over time.

3. Each collector mounting system must be certified by the collector manufacturer as (1) an acceptable mounting system that shall not void the module warranty, and (2) that it conforms to the module manufacturer's mounting parameters.

4. Final coating and paint colors shall be reviewed and approved by the Commissioner.

5. Painting or other coatings must not interfere with the grounding and bonding of the array.

2.8 CORROSION CONTROL

A. In addition to the above, Corrosion Control must comply with at least, but not limited to the following requirements:

1. Fasteners and hardware throughout system shall be stainless steel or material of equivalent corrosion resistance

2. Racking components shall be anodized aluminum, hot-dipped galvanized steel, or material of equivalent corrosion resistance

3. Unprotected steel not to be used in any components

4. Each system and associated components must be designed and selected to withstand the environmental conditions of the site (e.g., temperatures, winds, rain, flooding, etc.) to which they will be exposed.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 ROOFING REQUIREMENTS

A. The installation of collectors and other equipment shall provide adequate room for access and maintenance of existing equipment on the building roofs. A minimum of three feet of clearance will be provided between equipment and existing mechanical equipment and other equipment mounted on the roof. A minimum of four feet of clearance shall be provided between equipment and the edge of the roof. Clearance guidelines shall be followed. The equipment shall not be installed in a way that obstructs air flow into or out of building systems or equipment.

B. Roof top mounted systems may be ballasted, standing seam attachment, or penetrating systems and must meet or exceed the following requirements:

1. Systems shall not exceed the ability of the existing structure to support the entire solar thermal system and withstand increased wind uplift and seismic loads. The capability of the existing structure to support proposed solar systems shall be verified by Contractor prior to design approval.

2. Roof penetrations, if part of the mounting solution, shall be kept to a minimum.

3. Contractor shall perform all work so that existing roof warranties shall not be voided, reduced, or otherwise negatively impacted.

4. No work shall compromise roof drainage, cause damming or standing water or cause excessive soil build-up.

5. All materials and/or sealants must be chemically compatible.

6. Thermal movement that causes scuffing to the roof must be mitigated as part of the mounting solution.

7. All penetrations shall be waterproofed.

8. Detail(s) for the sealing of any roof penetrations shall be approved in writing by the Commissioner, as well as the manufacturer of the existing roofing system, as part of system design review and approval – prior to Contractor proceeding with work.

9. Include signed certificates from the roofing manufacturer stating:

   a. The roofing contractor is certified installer of Complete Roofing System.
   b. The manufacturer's Technical Representative is qualified and authorized to approve the work.
   c. Project Plans and specs meet the requirements of the warranty of the Complete Roofing System for the specified period.
   d. Existing warranty incorporates the new roofing work and flashing work.
   e. Any damage to roofing material during installation of solar systems must be remedied by Contractor.
   f. The installation of panels and other equipment on building roofs will be designed to minimize visibility of the equipment from the ground.

3.3 MONITORING SYSTEMS

A. Contractor shall build, activate and ensure proper functioning of the necessary Data Acquisition Systems (DAS) that enable the City of New York to track the performance of the Solar Systems as well as environmental.

B. Metering and monitoring equipment installed shall include, but is not limited to a data acquisition system, a BTU meter, i.e. a flow meter, a temperature sensor pair, and a calculator. Btu meters must satisfy maximum permissible errors of OIML R75 Class 1 accuracy. Assembled Btu meters are allowable if Btu calculations are only performed when there is flow.

C. Data must be collected in 15-minute intervals that will be available on a daily basis. Data collected must include date, time, solar Btu delivered, cold water supply temperature, solar hot water delivery temperature, collector temperature, run time of pump(s) and log data which will include alarms, system messages, system events and trends.

D. The monitoring system must have remote communication capability whereby performance data can be collected, accessed remotely and uploaded for processing by a Performance Data Provider (PDP). The PDP provider must retain performance date for five years from the data collection end date.

E. A Monitoring Manual shall be provided to the City of New York in printed or on-line form that describes how to use the monitoring system, including the export of data and the creation of custom reports.

3.4 FREEZE AND STAGNATION PROTECTION

A. Contractor is responsible for installing a solar system that meets freeze protection requirements set forth by SRCC and IAMPO for the appropriate climate zone of the site.

B. Contractor is responsible for installing a solar system that meets stagnation and overheat protection requirements set forth by SRCC or IAPMO.

C. Closed loop drainback systems must have a controller which will shut down a pump when the storage tank temperature limit has been reached.

D. For closed loop systems, acceptable stagnation control measures include, but are not limited to advanced controller with thermal cycling function, heat dump radiator, steam back, pressure stagnation protection.

3.5 SHADING

A. Contractor shall adhere to the following requirements in order to avoid excessive shading on panels. For any object near an array that is higher than the lowest point of that array by height H, Contractor shall locate the array farther from the object than:

1. 2H to the North of the object
2. 2H to the East or West of the object
3. 2H to any non-cardinal direction of the object

B. Any trees that are in the footprint of systems to be installed by the Contractor shall be removed by the Contractor at their expense, subject to the approval of the City of New York. A tree shall be considered to be in the footprint of a system if its canopy would extend over any part of the system, including structural components or modules. The Contractor shall be responsible for any required tree remediation efforts resulting from tree removal that is deemed the Contractor's responsibility.

3.6 CLEANING

A. Clean and disinfect potable-water distribution piping as follows:

1. Purge new piping and parts of existing water piping that have been altered, extended, or repaired before using. Use purging and disinfecting procedure prescribed by a procedure described in either AWWA C651 or AWWA C652. Submit water samples in sterile bottles. Repeat procedure if biological examination shows contamination.

B. Clean the non-potable solar thermal side of the system including the solar thermal collectors and heat exchanger according to manufacturer's recommendations. Clean all piping by flushing the piping system with clean, potable water until dirty water does not appear at outlets.

3.7 TESTING AND COMMISSIONING

A. Following completion of construction, Contractor shall provide the following services related to startup and performance testing of the systems:

1. Acceptance Testing
2. System Startup
3. Proving Period

B. A detailed Testing Plan covering each of the phases above shall be submitted and approved by the City of New York prior to substantial completion of construction. A detailed description of each phase is provided below.

3.8 ACCEPTANCE TESTING

A. Contractor shall perform a complete acceptance test for each System. The acceptance test procedures include component tests as well as other standard tests, inspections, safety and quality checks. All testing and commissioning shall be conducted in accordance with the manufacturer's specifications.

B. The section of the Testing Plan that covers Acceptance Testing cover at least the following:

1. Detailed test methods, including sample calculations and reference to standards as required or applicable, and list of tested equipment.
2. Pre-test checklist to ensure readiness and any safety measures are in-place.
3. Detailed list of all items to be inspected and tests to be conducted.
4. Acceptance Criteria: For each test phase, specifically indicate what is considered an acceptable test result.

C. The Acceptance Testing section of the Testing Plan shall include (but not be limited to) the following tests:

1. Testing performance of the collectors relative to insolation, ambient temperature and inlet temperature
2. Testing of all sensors of the DAS
3. Temperature sensor diagnostics
4. Testing of the Data Presentation interface of the DAS
5. Piping hydraulic pressure test

6. Water potability test

D. After Contractor conducts all Acceptance Testing based on the Testing Plan approved by the Commissioner prior to substantial completion, Contractor shall submit a detailed Acceptance Test Report to the Commissioner for review.

E. The Acceptance Test Report shall document the results of the tests conducted following the Testing Plan, and include additional information such as the date and time each test was performed. It shall also make reference to any problem and deficiencies found during testing. If there was troubleshooting done, the Report shall describe the troubleshooting methods and strategy. Contractor shall be responsible for providing the labor and equipment necessary to troubleshoot the System.

3.9 SYSTEM STARTUP

A. Following The City of New York approval of the Acceptance Test Report, Contractor shall conduct tests over twenty-four (24) hours and at a time resolution of fifteen (15) minutes, recording the following data:

1. Thermal output (Btu)
2. In-plane irradiance
3. Ambient temperature
4. Collector inlet temperature
5. Thermal energy storage temperatures

B. These data points shall be presented in a manner that best depicts the actual performance of the system for The City of New York's review and approval and shall be submitted as part of the Startup Test Report.

3.10 PROVING PERIOD (30 DAYS)

A. Upon completion of Acceptance Testing and System Startup, and approval by the Commissioner, Contractor shall monitor the system during a thirty (30) day Proving Period and submit a report for Commissioner review and approval prior to final acceptance by the Commissioner. This includes monitoring system output and ensuring the correct functioning of system components over this time. The values for the following data shall be acquired every fifteen (15) minutes over thirty (30) days:

1. Date and Time of data points
2. Thermal output (Btu)
3. Total Btu's delivered (per tank if system has multiple tanks)
4. In-plane irradiance
5. Ambient temperature
6. Collector inlet temperature
7. Thermal energy storage temperatures
8. Quantity of back-up fuel consumption

9. System availability

B. Contractor shall utilize calibrated test instruments and DAS and monitoring system to collect the test data described above, which shall be made available to the Commissioner for access throughout the proving period. Contractor shall determine through analysis of data from the proving period whether the solar thermal system delivers the expected production as determined by Contract Documents. Actual production shall be compared against expected production using actual weather data and other system inputs for calculating expected production.

C. All data and reports required in system testing shall be fully functional and available to the City of New York at the commencement of the proving period. Data and reporting requirements are included in the testing scope of the proving period and deficiencies in these areas (including missing data, inaccurate reports, and other issues that make validation of system performance inconclusive) shall be grounds for denying approval of the proving period report.

D. If the solar thermal system does not perform to the specifications, diagnostic testing shall be performed by Contractor, deficiencies shall be identified with proposed corrective actions submitted to the Commissioner, and the Proving Period test repeated. Contractor shall be responsible for providing the labor and equipment necessary to troubleshoot the system. The Proving Period Report shall be submitted after the successful completion of this phase and submitted to the Commissioner for review and approval. The report shall contain, but not be limited to, the following information; calculations shall be provided in Excel format with formulas visible to allow for peer review:

1. System description
2. Test period
3. Test results
4. Anomalies identified during test
5. Corrective action performed
6. Actual measured performance
7. Calculations detailing expected performance under TMY conditions

3.11 CLOSE-OUT DOCUMENTATION REQUIREMENTS

A. Close-Out documents prepared by Contractor must include at minimum, but not limited to, the following items:

1. Final As-Built Drawing Set, provided in (2) hard copy sets and an electronic copy in DWG format (or as desired by The City of New York)
2. O&M Manuals – Contractor shall provide two (2) copies of O&M Manuals. Updated editions of O&M Manuals shall be sent electronically to the Commissioner as they become available.

3.12 PREVENTATIVE SERVICE

A. Preventive Service shall be performed once and include:

1. Test system performance vs. insolation and ambient temperature to verify continued performance at or near design levels

2. System level testing including tests of individual major components

3. System visual inspection to include but not be limited to the list below. All discovered issues shall be resolved as needed.

   a. Inspect for stolen, broken or damaged collectors, record damage and location. Report to the Commissioner and wait for the Commissioner to authorize a course of action.
   b. Check mechanical attachments of the collectors and racking system.
   c. Inspect all metallic parts for corrosion.
   d. Survey entire jobsite for debris or obstructions.
   e. Inspect fasteners for proper torque and corrosion.
   f. Check for proper operation and reporting of monitoring hardware.
   g. Inspect pipe connections for leaks
   h. Inspect piping and other hardware for signs of damage from vandalism or animal damage.
   i. Inspect storage tank(s) for signs of damage

4. System maintenance to include correction of loose water pipe connections, replacement if defective collectors found during testing, other minor maintenance repair work.

5. Collector cleaning, at a frequency to be determined by the ongoing monitoring of the system such that effect on production is no more than 5%, but not less often than twice a year.

6. DAS maintenance to include sensor calibration and data integrity check

3.13 MAJOR COMPONENT SERVICE

A. Pump repair and component replacement and refurbishment as required in the event of pump failure.

B. Pump inspection and regular servicing as required under pump manufacturer's warranty specifications. Those include but are not limited to the following annually by manufacturer:

   1. Check for corrosion on all fittings

   2. Check all connections.

   3. Perform a complete visual inspection of all connected systems including expansion tank and back-up water heater.

   4. Record all inspections completed.

   5. Inform pump manufacturer of all deficiencies identified.

   6. Oversee pump manufacturer performance of In-Warranty replacement of failed pump components.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 235700
Heat Exchangers for HVAC

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. This Section includes plate heat exchangers.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
B. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories.
C. Operation and Maintenance Data: For heat exchangers to include in emergency, operation, and maintenance manuals.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
B. Product Options: Drawings indicate size, profiles, performance, and dimensional requirements of heat exchangers and are based on the specific equipment indicated. Refer to DDC General Conditions Section "Product Requirements."
C. ASME Compliance: Fabricate and label heat exchangers to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.
D. ARI Standard 400

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Plate Concepts
2. API Heat Transfer Inc.
3. FlatPlate, Inc.
4. ITT Industries; Bell & Gossett.

5. Polaris Plate Heat Exchangers.
6. Or approved equal

B. Configuration: Brazed assembly consisting of two end plates, one with threaded nozzles and pattern-embossed plates, double wall construction.
C. End-Plate Material: Type 316 stainless steel.
D. Threaded Nozzles: Type 316 stainless steel.
E. Plate Material: Type 316 stainless steel.
F. Brazing Material: Copper.
G. Frame Material: Carbon Steel

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine areas for compliance with requirements for installation tolerances and for structural rigidity, strength, anchors, and other conditions affecting performance of heat exchangers.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. HEAT-EXCHANGER INSTALLATION

A. Ceiling Hung with vibration isolators.

3.4. CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
B. Maintain manufacturer's recommended clearances for service and maintenance. Install piping connections to allow service and maintenance of heat exchangers.
C. Install shutoff valves at heat-exchanger inlet and outlet connections.
D. Install relief valves on heat-exchanger heated-fluid connection and install pipe relief valves, full size of valve connection, to floor drain.
E. Install hose end valve to drain shell.

3.5. FIELD QUALITY CONTROL

A. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.6. CLEANING

A. After completing system installation, including outlet fitting and devices, inspect exposed finish. Remove burrs, dirt, and construction debris and repair damaged finishes.

3.7. DEMONSTRATION

A. Instruct the City of New York's maintenance personnel to adjust, operate, and maintain heat exchangers. Refer to DDC General Conditions Section "Demonstration and Owner's Pre-Acceptance Orientation."

END OF SECTION 235700

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 237200
Heating and Ventilating / Rooftop Units with Energy Recovery Equipment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:
   1. Refer to DDC General Conditions:
      a. Section 01 33 00 "Submittal Procedures."
      b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."
      c. Section 01 91 13 General Commissioning Requirements for MEP Systems.

1.2. SUMMARY

A. Section Includes:

   1. Heating and Ventilating and Rooftop units with energy recovery equipment.

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. AHRI Compliance: Capacity ratings for each energy recovery equipment shall comply with AHRI 1060, "Rating Air-to-Air Energy Recovery Equipment."

D. NRCA Compliance: Roof curbs for roof-mounted equipment shall be constructed according to recommendations of NRCA.

E. UL Compliance: Packaged heat recovery ventilators shall comply with requirements in UL 1812, "Ducted Heat Recovery Ventilators"; or UL 1815, "Nonducted Heat Recovery Ventilators."

F. Coordinate layout and installation of Heating and Ventilating and Rooftop units energy recovery equipment and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

G. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

1.4. SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5. SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, furnished specialties, and accessories.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.

C. Coordination Drawings: Plans, elevations, and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Suspended ceiling components.
2. Structural members to which equipment or suspension systems will be attached.

D. Field quality-control reports.

E. Operation and Maintenance Data: Include manufacturer maintenance manuals for Heating and Ventilating and Rooftop units.

1.6. WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of the equipment that fails in materials or workmanship within specified warranty period.

PART 2 - PRODUCTS

2.1. OUTDOOR ENERGY RECOVERY UNIT

A. Construction of the Energy Recovery Equipment

1. The energy recovery component shall be of fixed-plate cross-flow construction, with no moving parts.
2. No condensate drain pans or drains shall be allowed and unit shall be capable of operating in both winter and summer conditions without generating condensate.
3. The unit case shall be constructed of G90 galvanized, 20-gauge steel, with lapped corners and zinc plated screw fasteners. The unit roof shall be once piece or have watertight standing seam joints and shall overlap wall panels and doors in order to positively shed water.
4. Access doors shall provide easy access to blowers, ERV cores, and filters. Doors shall have an airtight compression seal using closed cell foam gaskets rated for outdoor exposure. Pressure taps, with captive plugs, shall be provided allowing cross-core pressure measurement allowing for accurate airflow measurement.
5. Weatherhoods shall be screened to exclude birds and animals. Inlet weatherhoods shall be sized to maintain inlet velocities below 500 fpm, and equipped with rain excluder baffles.
6. Case walls and doors shall be insulated with 1inch, 4 pound density, foil/scrim faced,high-density fiberglass board insulation, providing a cleanable surface and eliminating the possibility of exposing the fresh air to glass fibers, and with minimum R-value of 4.3 (hr-ft2-F/BTU).

7. The energy recovery cores shall be protected by a MERV-13 rated, 2" nominal, pleated, disposable filter in both airstreams.
8. Unit shall have single-point power connection and a single-point 24 VAC contactor connection.
9. Blower motors shall be Premium Efficiency, EISA compliant for energy efficiency. The blower motors shall be totally enclosed (TEFC) and shall be supplied with factory installed motor starters. Direct drive models shall be EISA compliant for energy efficiency with open drip proof design and integral thermal protection.
10. Blowers shall be quiet running, forward curve type and be either direct drive or belt drive. Belt drive motors shall be provided with adjustable pulleys and motor mounts allowing for blower speed adjustment, proper motor shaft orientation and proper belt tensioning.
11. The unit electrical box shall include a factory installed, non-fused disconnect switch and a 24 VAC, Class II transformer/relay package.
12. The energy recovery equipment shall be provided "inverter-ready" allowing for applications of inverters supplied and installed by others.
13. Provide unit and duct connection orientation per project schedule.
14. Provide double wall construction with 24-guage galvanized steel liner.
15. Provide 14 inch high, non-pitched roof curbs as available from the factory. Pitched curbs, vibration curbs, seismic curbs and other custom curbs are available directly from curb manufacturer.

PART 3 - EXECUTION

3.1. EXAMINATION

A. Examine areas and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine casing insulation materials and filter media before air-to-air energy recovery equipment installation. Reject insulation materials and filter media that are wet, moisture damaged, or mold damaged.
C. Examine roughing-in for electrical services to verify actual locations of connections before installation.
D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2. INSTALLATION

A. Install fixed-plate heat exchangers so supply and exhaust airstreams flow in opposite directions.

1. Install unit access doors in both supply and exhaust ducts, both upstream and downstream, for access to heat exchanger. Access doors and panels are specified in Division 23 Section 23 33 00 "Air Duct Accessories."

B. Roof Curb: Install on roof structure or concrete base, level and secure, according to NRCA's "Low-Slope Membrane Roofing Construction Details Manual," Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts." Install air-to-air energy recovery equipment on curbs and coordinate roof penetrations and flashing with roof construction specified in Division 07 Section 07 71 00 "Roof Accessories and Specialties." Secure air-to-air energy recovery equipment to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.
C. Suspended Units: Suspend units from structural-steel support frame using threaded steel rods and spring hangers. Comply with requirements for vibration isolation devices specified in Division 23 Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."
D. Install units with clearances for service and maintenance.

E. Install new filters at completion of equipment installation and before testing, adjusting, and balancing.
F. Pipe drains from units and drains pans to nearest floor drain; use same size as condensate drain connection.
G. Unit Location and Placement

1. Locate and orient unit to provide the shortest and most straight duct connections. Provide service clearances as indicated on the plans. Locate units distant from sound critical occupancies.
2. Install a structurally sound, weathertight, level and properly insulated roof curb with nailers, curb gasket and tiedowns to meet local wind load requirements.
3. Insure roof decking penetrations inside curb are properly positioned and sixed for ducts. Seal all penetrations and gaps between ducts and decking with appropriate fire, weather and acoustic sealant system.
4. Install fiberglass batt insulation over the decking inside the curb. Insulation thickness to be determined by local thermal requirements.
5. Use proper rigging, including spreader bars, for safe lifting and placement.

H. Vibration Isolation

1. Provide spring type vibration rails or curb to match the specific unit corner weights.
2. Provide flexible duct connections at unit duct flanges.

I. Duct Design

1. All ductwork shall be designed, constructed, supported and sealed in accordance with SMACNA HVAC Duct Construction Standards and pressure classifications.
2. Ductwork shall be installed to the curb duct adaptors before unit is set in place.
3. Both the return and the supply ducts shall be thermally insulated at levels appropriate to the local climate from the unit through the curb and continuous until at least the first elbow or tee. A continuous vapor barrier shall also be provided on warm surface of the insulation.

3.3. CONNECTIONS

A. Comply with requirements for piping specified in Division 23 Section 23 21 13 "Hydronic Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
B. Comply with requirements for ductwork specified in Division 23 Section 23 31 13 "Metal Ducts."
C. Install piping adjacent to machine to allow service and maintenance.

3.4. FIELD QUALITY CONTROL

A. Perform tests and inspections.
B. Tests and Inspections:

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
2. Adjust seals and purge.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

4. Set initial temperature and humidity set points.
5. Set field-adjustable switches and circuit-breaker trip ranges as indicated.
6. Test and Balancing may not begin until 100% of the installation is complete and fully functional.
7. Follow National Environmental Balancing Bureau (NEBB) air test and balance procedures specific to Heat Recovery Ventilator Balancing Procedure including standard reports to the Commissioner.

C. Heating and Ventilating and Rooftop units' energy recovery equipment will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.5. DEMONSTRATION

A. Instruct the City of New York's maintenance personnel to adjust, operate, and maintain air-to-air energy recovery units.

END OF SECTION 237200

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 238126
Split-System Air-Conditioners

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. This Section includes split-system air-conditioning and heat pump units consisting of separate evaporator-fan and compressor-condenser components. Units are designed for exposed or concealed mounting, and may be connected to ducts.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.

C. Shop Drawings: Diagram power, signal, and control wiring.

D. Samples for Initial Selection: For units with factory-applied color finishes.

E. Operation and Maintenance Data: For split-system air-conditioning units to include in emergency, operation, and maintenance manuals.

F. Warranty: Special warranty specified in this Section.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Product Options: Drawings indicate size, profiles, and dimensional requirements of split-system units and are based on the specific system indicated.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to NYC Department of Building, and marked for intended use.

D. ASHRAE/IESNA 90.1-2013 Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2013, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. Energy Star Qualified.

F. In addition, the contractor or subcontractor must be licensed or approved by the manufacturer.

G. The contractor or subcontractor performing the work specified of this section must, within the last three (3) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope, size, and type to the required work, based on architectural style, construction method and materials and age of building for this particular project. One such prior project of the three must have involved a landmarked building, as officially designated by the City, State or Federal government.

H. The manufacturer providing the material or equipment specified in this section must, for the past three (3) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than three (3) years.

1.5. COORDINATION

A. Coordinate size and location of concrete bases for units. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in 033000 Section "Cast-in-Place Concrete."

B. Coordinate size, location, and connection details with roof curbs, equipment supports, and roof penetrations specified in 077100 Section "Roof Accessories."

1.6. WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to restore or replace components of split-system air-conditioning units that fails in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products as scheduled on drawings or by one of the following:

1. Daikin
2. Carrier Air Conditioning; Div. of Carrier Corporation.
3. Mitsubishi Electronics America, Inc.; HVAC Division.
4. Trane Company (The); Unitary Products Group.
5. York International Corp.

2.2. CONCEALED EVAPORATOR-FAN COMPONENTS

A. Cabinet: The cabinet shall be constructed of scratch resistant heavy duty G90 galvanized steel. The evaporator drain pan shall be constructed of stainless steel and shall be IAQ compliant. The complete unit shall be mounted on heavy-duty channels to accommodate hanging rods for ceiling/slab floor mounting.

B. Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel.

C. Insulation: Acoustical insulation shall be a minimum density of 2 lbs. and be installed on the interior top, side and bottom pans and panels.

D. Drain Pans: Galvanized steel, with connection for drain; insulated

E. Refrigerant Coil: The evaporator coil shall be of draw-thru airflow design. The coil shall be made with 3/8" O. D. heavy wall seamless copper tubes. Tubing shall be mechanically expanded to corrugated aluminum fins with drawn self-spacing collars. All evaporator coils / circuits shall be fed by an adjustable thermostatic expansion valve with external equalizer, complying with ARI 210/240, protective coating and with thermal-expansion valve.

F. Blower Assembly: The blower assembly shall be belt driven with the ability to deliver up to 1" ESP (motor and drive package may be non-standard). The blower housing shall be a galvanized heavy-duty gauge steel double inlet type. The blower wheel shall be mounted on a solid steel keyed shaft. The shaft shall be mounted on resiliently mounted permanently lubricated ball bearings. The blower pulley shall be of cast iron construction and keyed to the blower shaft.

G. Fan Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment." The motor shall have internal protection from over-heating. Motor shall have permanently lubricated ball bearings. The motor shall be mounted to an adjustable motor frame. Motor pulley shall be cast iron, keyed, and variable pitch design to allow for field adjustment of specific airflow and static requirements.

H. Disposable Filters: 1 inch thick, in fiberboard frames with ASHRAE 52.2 MERV rating of 8 or higher.

I. Electrical: The unit shall have dual electrical control panels, one in the evaporator section and the other in the condensing section. This shall enable the unit, if split in the field, to be power wired independently. All components (fan motors, compressors) shall have their own definite purpose contactor. Compressor(s) shall be protected by non-adjustable high and low-pressure controls with auto reset and a manual reset lock out relay in each refrigeration circuit. Unit(s) with electric heat or microprocessor control shall incorporate an air pressure differential switch. This shall enable the unit(s) to shut down in the event of an evaporator motor, blower or belt failure. A low voltage transformer with integral protection shall be provided to supply 24 VAC to the control circuit. Clearly labeled low voltage terminal strips will be provided for field wiring of thermostat.

J. Wiring Terminations: Connect motor to chassis wiring with plug connection.

2.3. AIR-COOLED DUCTED, COMPRESSOR-CONDENSER COMPONENTS

A. Casing: Steel, finished with baked enamel in color selected by Commissioner, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing.

B. Compressor: The compressor(s) shall be a high efficiency heavy-duty heat pump, full hermetic scroll type. The compressor(s) shall be internally protected from over-heating. The compressor(s) shall have an integral crankcase heater if optional flooded condenser is included. Compressor(s) shall be vibration isolated with external mounting.

1. Compressor Type: Scroll.
2. High-pressure switch and automatic-reset low-pressure switch.
3. Refrigerant: R-410A.

C. Refrigerant Coil: The condenser coil shall be of draw-thru airflow design. The coil shall be made with 3/8" O. D. heavy wall seamless copper tubes. Tubing shall be mechanically expanded to louvered aluminum fins with drawn self-spacing collars. Comply with ARI 210/240.

D. Fan: Dynamically balanced.

E. Motor: Permanently lubricated, with integral thermal-overload protection.

F. Low Ambient Kit: Permits operation down to 35 deg F.

G. Refrigeration Circuit: The refrigeration circuit shall include high and low side access fittings, sight glass with integral moisture indicator, filter-drier, high and low pressure switches. The refrigeration circuit shall be field splittable with reusable quick-connects to prevent loss of factory charge when split in the field.

H. Service Access: The unit shall be accessible from the sides only. Access doors shall be held in place by screws. Access to the refrigeration circuit, including compressor and sight glass, shall be on the opposite side of the unit

I. Minimum Energy Efficiency: Comply with ASHRAE/IESNA 90.1-2007, "Energy Standard for Buildings except Low-Rise Residential Buildings" and New York State Energy Conservation Construction Code.

2.4. INDOOR CEILING-CONCEALED DUCTED INDOOR UNIT (VRF)

A. General: The unit shall be a ceiling concealed ducted indoor fan coil that mounts above the ceiling with a fixed rear return and a horizontal discharge supply, and shall have a modulating linear expansion device. The unit shall be used with the outdoor unit. The unit shall support individual control using M-NET Direct Digitals Controllers.

B. Indoor Unit: The indoor unit shall be factory assembled, wired and run tested. Contained within the unit shall be all factory wiring, piping, electronic modulating linear expansion device, control circuit board and fan motor. The unit shall have a self-diagnostic function, 3-minute time delay mechanism, and an auto re-

start function. Indoor unit and refrigerant pipes shall be charged with dehydrated air before shipment from the factory.

C. Unit Cabinet:

1. The cabinet shall be ceiling-concealed, ducted.
2. The cabinet panel shall have provisions for a field installed filtered outside air intake.

D. Fan:

1. The indoor unit fan shall be an assembly with one or two fan(s) direct driven by a single motor.
2. The indoor fan shall be statically and dynamically balanced to run on a motor with permanently lubricated bearings.
3. The indoor unit shall have a ducted air outlet system and ducted return air system.

E. Filter:

1. Return air shall be filtered by a field-supplied filter.
2. Optional rear return filter box with long-life filter shall available for all indoor units.

F. Coil:

1. The indoor coil shall be of nonferrous construction with smooth plate fins on copper tubing.
2. The tubing shall have inner grooves for high efficiency heat exchange.
3. All tube joints shall be brazed with phos-copper or silver alloy.
4. The coils shall be pressure tested at the factory.
5. A condensate pan and drain shall be provided under the coil.
6. The condensate shall be gravity drained from the fan coil.
7. Both refrigerant lines to the indoor units shall be insulated.

G. Electrical:

1. The unit electrical power shall be 208/230 volts, 1-phase, 60 hertz.
2. The system shall be capable of satisfactory operation within voltage limits of 187-228 volts (208V/60Hz) or 207-253 volts (230V/60Hz).

H. Controls:

1. This unit shall use controls provided by manufacturer to perform functions necessary to operate the system.
2. Indoor unit shall compensate for the higher temperature sensed by the return air sensor compared to the temperature at level of the occupant when in HEAT mode. Disabling of compensation shall be possible for individual units to accommodate instances when compensation is not required.
3. Control board shall include contacts for control of external heat source. External heat may be energized as second stage with 1.8°F – 9.0°F adjustable deadband from set point.
4. Indoor unit shall include no less than four (4) digital inputs capable of being used for customizable control strategies.

5. Indoor unit shall include no less than three (3) digital outputs capable of being used for customizable control strategies.

2.5. INDOOR UNIT – CEILING CASSETTE UNIT (VRF)

A. General: The model shall be a ceiling cassette fan coil unit, operable with R410A refrigerant, equipped with an electronic expansion valve, for installation into the ceiling cavity equipped with an air panel grille. It shall be a four-way air distribution type, ivory white, impact resistant, and washable decoration panel. The supply air is distributed via motorized louvers which can be horizontally and vertically adjusted from 0° to 90.

1. The indoor unit shall be completely factory assembled and tested. Included in the unit is factory wiring, piping, electronic proportional expansion valve, control circuit board, fan motor thermal protector, flare connections, condensate drain pan, condensate drain pump, self-diagnostics, auto-restart function, 3-minute fused time delay, and test run switch.
2. Indoor unit and refrigerant pipes will be charged with dehydrated air prior to shipment from the factory.
3. Both refrigerant lines shall be insulated from the outdoor unit.
4. The 4-way supply air flow can be field modified to 3-way and 2-way airflow to accommodate various installation configurations including corner installations.
5. Return air shall be through the panel, which includes a mold resistant filter.
6. The indoor units shall be equipped with a condensate pan and condensate pump. The condensate pump provides up to 21" of lift.
7. The indoor units shall be equipped with a return air thermistor.
8. The indoor unit will be separately powered with 208~230V/1-phase/60Hz.

B. Performance: Each unit's performance is based on nominal operating conditions and drawing schedules.

C. Cabinet: The cabinet shall be space saving and shall be located into the ceiling. Three auto-swing positions shall be available to choose, which include standard, draft prevention and ceiling stain prevention. The air-flow of the unit shall have the ability to shut down one or two sides allowing for simpler corner installation. The cabinet shall be constructed with sound absorbing foamed polystyrene and polyethylene insulation.

D. Fan: The fan shall be direct-drive turbo fan type with statically and dynamically balanced impeller with high and low fan speeds available. The fan motor shall operate on 208/230 volts, 1 phase, and 60 hertz. The air flow rate shall be available in high and low settings. The fan motor shall be thermally protected.

E. Filter: The return air shall be filtered by means of a washable long-life filter with mildew proof resin.

F. Coil: Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance. The coil shall be a cross fin copper evaporator coil, completely factory tested. The refrigerant connections shall be flare connections and the condensate will be 1 -1/4 inch outside diameter. A condensate pan shall be located under the coil. A condensate pump with a 21 inch lift shall be located below the coil in the condensate pan with a built in safety alarm. A thermistor will be located on the liquid and gas line.

G. Electrical: A separate power supply will be required of 208/230 volts, 1 phase, 60 hertz.

2.6. INDOOR UNIT – WALL MOUNTED UNIT (VRF)

A. General: Unit shall be an indoor wall mounted fan coil unit, operable with refrigerant R410A, equipped with an electronic expansion valve, for installation onto a wall within a conditioned space. The indoor unit shall be completely factory assembled and tested. Included in the unit is factory wiring, piping, electronic proportional expansion valve, control circuit board, fan motor thermal protector, flare connections, condensate drain pan, self-diagnostics, auto-restart function, 3-minute fused time delay, and test run switch. The unit shall have an auto-swing louver which ensures efficient air distribution, which closes automatically when the unit stops. The front grille shall be easily removed for washing. The discharge angle shall automatically set at the same angle as the previous operation upon restart. The drain pipe can be fitted to from either left or right sides.

1. Indoor unit and refrigerant pipes will be charged with dehydrated air prior to shipment from the factory.
2. Both refrigerant lines shall be insulated from the outdoor unit.
3. Return air shall be through a resin net mold resistant filter.
4. The indoor units shall be equipped with a condensate pan.
5. The indoor units shall be equipped with a return air thermistor.
6. The indoor unit will be separately powered with 208~230V/1-phase/60Hz.

B. Performance: Each unit's performance is based on nominal operating conditions and drawing schedules.

C. Cabinet: The cabinet shall be affixed to a factory supplied wall mounting template and located in the conditioned space. The cabinet shall be constructed with sound absorbing foamed polystyrene and polyethylene insulation.

D. Fan: The fan shall be a direct-drive cross-flow fan, statically and dynamically balanced impeller with high and low fan speeds available. The fan motor shall operate on 208/230 volts, 1 phase, 60 hertz. The air flow rate shall be available in high and low settings. The fan motor shall be thermally protected.

E. Coil: Coils shall be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond. The coil shall be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance. The coil shall be a cross fin copper evaporator coil completely factory tested. The refrigerant connections shall be flare connections and the condensate will be 1-1/4 inch outside diameter. A thermistor will be located on the liquid and gas line. A condensate pan shall be located in the unit.

F. Electrical: A separate power supply will be required of 208/230 volts, 1 phase, 60 hertz. The acceptable voltage range shall be 187 to 253 volts.

2.7. ACCESSORIES

A. Thermostat: Low voltage with sub base to control compressor and evaporator fan.

B. Automatic-reset timer to prevent rapid cycling of compressor.

C. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.

1. Minimum Insulation Thickness: 1/2 -inch- thick.

D. Long Length Application Kit: Provide additional accessories and system modifications for reliable system operation for long length applications up to 250 feet.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Install units level and plumb.

B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.

C. Install ground-mounting, compressor-condenser components on 4-inch thick, reinforced concrete base; 6 inches larger on each side than unit. Concrete, reinforcement, and formwork are specified in 033000 Section "Cast-in-Place Concrete." Coordinate anchor installation with concrete base.

D. Install roof-mounting compressor-condenser components on equipment supports specified in 077100 Section "Roof Accessories." Anchor units to supports with removable, cadmium-plated fasteners.

E. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.3. CONNECTIONS

A. Piping installation requirements are specified in other specification sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to unit to allow service and maintenance.

C. Duct Connections: Duct installation requirements are specified in Section 233113 "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in 233300 Section "Air Duct Accessories."

D. Ground equipment according to 260526 Section "Grounding and Bonding for Electrical Systems."

E. Electrical Connections: Comply with requirements in electrical specification sections for power wiring, switches, and motor controls.

3.4. FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Leak Test: After installation, charge system and test for leaks. Restore leaks and retest until no leaks exist.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
4. Progress Inspections as per New York City Energy Conservation Code.

B. Remove and replace malfunctioning units and retest as specified above.

3.5. STARTUP

A. System startup shall be performed by the equipment manufacturer.

3.6. DEMONSTRATION

A. Engage a factory-authorized service representative to instruct project's maintenance personnel to adjust, operate, and maintain units. Refer to DDC General Conditions.

END OF SECTION 238126

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 23 81 29
Variable Refrigerant Flow HVAC Systems

PART 1 - GENERAL

1.1. RELATED REQUIREMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract)

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 33 00 "Submittal Procedures."

b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

c. Section 01 91 13 General Commissioning Requirements for MEP Systems.

d. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings."

1.2. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. The units shall be tested by a Nationally Recognized Testing Laboratory (NRTL) in accordance with AHRI 1230, and bear the Listed Mark. All wiring shall be in accordance with the National Electrical Code (NEC).The system shall be produced in an ISO 9001 and ISO 14001 facility. The system shall be factory tested for safety and function. The condensing unit will be factory charged with R-410A.

1.3. SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4. DELIVERY, STORAGE, AND HANDLING

A. All variable refrigerant system equipment shall be stored, handled and delivered according to the manufacturer's recommendations.

1.5. WARRANTY

A. Manufacturer's warranty shall be from the date of Substantial Completion. Contractor's guarantee shall be one (1) year only.

B. Condensing Unit

1. Parts: 5 Years
2. Labor: 1 Year
3. Compressor: 7 Years
4. Indoor units and accessories
5. Parts: 1 Year

C. Fan Coil Unit and Indoor Accessories

1. Parts: 1 Year

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Basis of Design: Subject to compliance with requirements, provide Daikin HVAC equipment or comparable product by one of the following:

1. LG Electronics
2. Mitsubishi
3. Carrier
4. Or approved equal

2.2. HVAC SYSTEM DESIGN - SYSTEM DESCRIPTION:

A. The variable capacity heat recovery air conditioning system shall be a Variable Refrigerant Flow Series (heat and cool model) system as specified.

B. The system shall consist of multiple evaporators using PID control, Y style joints, a two-pipe refrigeration distribution system and VRF condenser unit.

C. The condenser shall be a direct expansion (DX) air-cooled heat pump, multi-zone air-conditioning system with variable speed natural gas engine with belt-driven compressors using R-410A refrigerant

D. The condensing unit may connect an indoor evaporator capacity up to 130% of the condensing unit capacity. All zones are capable of operating separately with individual temperature control.

E. The condensing unit shall be interconnected to indoor unit, and shall range in capacity from 7,500 Btu/h to 180,000 Btu/h in accordance with manufacturer data book detailing each available indoor unit.

F. The indoor units shall be connected to the condensing unit utilizing piping joints to ensure correct refrigerant flow and balancing. T-style joints are not acceptable for a variable refrigerant system.

G. Operation of the system shall permit either cooling or heating of all of the indoor units simultaneously. Each indoor unit or group of indoor units shall be able to provide set temperatures independently via a local remote controller, a centralized controller or a BMS interface.

2.3. VRF FEATURES

A. Voltage Platform –Variable Refrigerant Flow (VRF) condensing units shall be available for 460V/3PH/60Hz power supply.

B. Advanced Zoning – A single outdoor unit shall provide for up to twenty-nine (29) zones (see table from 2.02)

C. Independent Control – Each indoor unit shall use a dedicated electronic expansion valve with 2000 positions for independent control.

D. Variable Refrigerant Temperature – Each condensing unit shall use high efficiency, variable speed belt-driven compressor(s) coupled with variable speed fan motors to optimize part load performance. The system capacity and refrigerant temperatures shall be modulated automatically to set suction and condensing pressures while varying the refrigerant volume for the needs of the cooling or heating loads. The control will be automatic and customizable depending on load and weather conditions Heat Recovery – Engine exhaust heat recovery will be built in to increase heat output. Indoor units shall use PID to control superheat to deliver a comfortable room temperature conditions and optimize efficiency.

E. Flexible Design – Systems shall be capable of up to 557 ft. (656 ft. equivalent) of linear piping between the condensing unit and furthest located indoor unit. Systems shall be capable of up to 2100 ft. total "one-way" piping in the piping network. Systems shall have a vertical (height) separation of up to 164 ft. between the condensing unit and the indoor units Systems shall be capable of operating up to 295 ft. from the first Y branch point. The condensing unit shall have the ability to connect an indoor unit evaporator capacity of up to 130% of the condensing unit capacity. Systems shall be capable of 49 ft. of vertical separation between indoor units. VRF condensing units can be combined to a maximum of sixteen (16) outdoor units per one (1) Remote Monitoring System. Oil Return – Each system shall be furnished with a centrifugal oil separator and active oil recovery cycle. Simple Wiring – Systems shall use 16/18 AWG, 2 wire, multi-stranded, non-shielded and non-polarized daisy chain control wiring. Space Saving – Each system shall have a condensing unit module foot-print of 86 x 67 x 32 (H x W x D) inches or smaller. Advanced Diagnostics – Systems shall include a self-diagnostic auto-check function to detect malfunctions and display the type and location. Advanced Controls – Each system shall have at least one (1) remote controller capable of controlling up to sixteen (16) indoor units. Each system shall be capable of integrating with open protocol BACnet and LonWorks building management systems. Low Sound Levels – Each system shall have quiet operation mode of 55 dB(A) or lower measured at a distance of 3.3 ft. from condensing unit. System shall have remote monitoring capabilities.

2.4. PERFORMANCE

A. The VRF system rated performance shall be based on below conditions.

B. Performance Conditions:

1. Cooling:
   a. Indoor temperature of 80°F DB, 67°F WB
   b. Outdoor temperature of 95°F DB, 75°F WB
2. Heating:
   a. Indoor temperature of 70°F DB, 60°F WB
   b. Outdoor temperature of 47°F DB, 43°F WB
3. External piping:
   a. 100 ft. equivalent piping length and 0 ft. level difference.

C. Operating Range:

1. The operating range in cooling will be 32 to 115°F DB (14 to 115°F DB with optional air guard) intake air temperature for outdoor unit.
2. The indoor temperature and humidity range in cooling will be 61 to 88°F DB at 80% RH or less.
3. The operating range in heating will be -4 to 95°F DB intake air temperature for the outdoor unit.
4. The indoor temperature range in heating will be 61 to 88°F DB

2.5. REFRIGERANT PIPING

A. The system shall be capable of refrigerant piping up to 557 actual ft. or 656 equivalent ft. from the condensing unit to the furthest indoor unit, and a total combined liquid line length of 2100 ft. of piping between the condensing and indoor units with 164 ft. maximum vertical difference without any oil traps or additional components.

B. Refrigerant piping joints shall be used to ensure proper refrigerant balance and flow for optimum system capacity and performance. T style joints shall not be acceptable as this will negatively impact proper refrigerant balance and flow for optimum system capacity and performance.

2.6. CONDENSING UNIT

A. General:

1. The condensing unit is designed specifically for use with VRF series components. The condensing unit shall be factory assembled and pre-wired with all necessary electronic and refrigerant controls. The refrigeration circuit of the condensing unit shall consist of belt-driven scroll compressors, motors, fans, condenser coils, electronic expansion valves, solenoid valves, 4-way valves, distribution headers and capillaries, filters, shut off valves, oil coolers, service ports, refrigerant receivers and refrigerant accumulators. Liquid and suction lines must be individually insulated between the condensing and indoor units. The condensing unit can be wired and piped with access from the left, right, rear or bottom. The connection ratio of indoor units to condensing unit shall be permitted up to 130%.
2. Each condensing unit shall be able to support the connection of a maximum of twenty-nine (29) indoor units depending on the model of the condensing unit.
3. The sound pressure level standard shall be that value as listed in the equipment manual for the specified models at 3.3 ft. from the front of the unit. The condensing unit shall be capable of operating automatically at further reduced noise during night time or via an external input. The condensing unit shall be modular in design, and should allow for side-by-side installation with minimum spacing. The following safety devices shall be included on the condensing unit: high pressure sensor and switch, low pressure sensor, control circuit fuses, crankcase heaters and fan motors and over current protection. To ensure the liquid refrigerant does not flash when supplying to the various indoor units, the circuit shall be provided with a sub-cooling feature. The oil recovery cycle shall automatically occur one (1) hour after the start of operation. The condensing unit shall be capable of heating operation at -4°F DB ambient temperature without additional low ambient controls or air guard.

B. Unit Cabinet:

1. The condensing unit shall be completely weatherproof and corrosion resistant. The unit shall be constructed from rust-proofed mild steel panels coated with a baked enamel finish.

C. Fan:

1. Each condensing unit shall consist of two (2) propeller type, direct-drive fan motors that have multiple speed operation. The fan shall be a vertical discharge configuration with a nominal airflow up to 13,400 CFM depending on model specified. Nominal sound pressure levels shall be as shown in the table below or less, when measured at a distance of 3.3 ft. The fan motor shall have inherent protection and permanently lubricated bearings. The fan motor shall be provided with a fan guard to prevent contact with moving parts. Quiet control of the fan motor for low noise operation by way of automatically limiting the maximum speed shall be a standard feature. Operation sound level shall be selectable from two (2) steps.

D. Condenser Coil:

1. The condenser coil shall be manufactured from copper tubes expanded into aluminum fins to form a mechanical bond. The heat exchanger coil shall be of a waffle louver fin and rifled bore tube design to ensure high efficiency performance.
2. The heat exchanger on the condensing units shall be installed for engine heat recovery. The fins and side plates shall be covered with an anti-corrosion, anti-salt coating as standard with a salt spray test rating of 480 hours (JRA 9002).

E. Compressor:

1. The belt-driven scroll compressors shall be variable speed controlled and capable of changing the speed to follow the variations in total cooling and heating load as determined by the suction gas pressure as measured in the condensing unit. The target suction pressure should be capable of automatic reset based on outdoor temperatures and system load to improve efficiency. In addition, samplings of evaporator and condenser temperatures shall be made so that the high/low pressures always detect and calculate. With each reading, the compressor capacity shall be controlled by the gas engine to eliminate deviation from target value.
2. The compressors in the condensing unit shall be of highly efficient reluctance hermetically sealed scroll compressors. The capacity control range shall be as low as 10% to 100%. Each compressor shall be equipped with a crankcase heater, high pressure safety switch. The oil cooler shall be standard with the equipment together with an intelligent oil management system. The compressor shall be bracket mounted to avoid the transmission of vibration. Each condensing unit shall consist of two (2) belt-driven controlled compressors.

F. Electrical:

1. The power supply to the condensing unit shall be:

Power Supply Voltage	Voltage Range
208-240V/1ϕ/60Hz	187V-264V

2. The control voltage between the indoor and condensing units shall be 16VDC non-shielded, stranded 2 conductor cable. The control wiring shall be a two-wire multiplex transmission system, making it possible to connect multiple indoor units to one (1) condensing unit with one (1) 2-cable wire, thus simplifying the wiring installation
3. The control wiring shall be 16/18 AWG, two-wire, non-polarity, non-shielded, stranded and have maximum lengths as shown in the table below.

Max. Total Comm. Wiring	Max. Condenser to Indoor Units Wiring	Max. Indoor Unit to Remote Control
6,562 ft.	3,281 ft.	1,640 ft.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

END OF SECTION 238129

SECTION 238233
Radiators

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. This Section includes the following:

1. Hydronic panel radiators.

1.3 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Plans, elevations, sections, and details.
2. Location and arrangement of piping valves and specialties.
3. Location and arrangement of integral controls.

D. Coordination Drawings: Floor plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Structural members, including wall construction, to which convection units will be attached.

E. Color Samples for Initial Selection: For units with factory-applied color finishes.

F. Color Samples for Verification: For each type of exposed finish required.

G. Field quality-control test reports.

H. Operation and Maintenance Data: For convection heating units to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements.

B. Devices and Accessories: Listed and labeled by an acceptable testing agency and marked for intended use.

PART 2 - PRODUCTS

2.1 PANEL RADIATORS

A. Manufacturers: Subject to compliance with requirements, provide

1. Embassy Industries, Inc.
2. Panel Radiator, Inc., a div. of Hydro-Air Components.
3. Runtal North America, Inc.
4. Or approved equal.

B. Heating Elements: Steel, welded and formed into flat, square, steel header with minimum thickness of 0.109 inches. Include threaded piping and air vent connections.

1. Working Pressure 56 psig: 0.048 inch

C. Mounting: Wall brackets/ Floor pedestal/Ceiling brackets on spacing as recommended by the manufacturer.

D. Finish: Baked-enamel finish in manufacturer's standard color as selected by Commissioner.

E. Accessories:

1. Steel piping covers finished to match radiator finish.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine areas to receive heating units for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in for hydronic-piping connections to verify actual locations before convection heating unit installation.

3.3 RADIATOR INSTALLATION

A. Install units level and plumb.

B. Install panel radiators according to Guide 2000 - Residential Hydronic Heating.

C. Join sections with splice plates and filler pieces to provide continuous enclosure.

D. Install access doors for access to valves.

E. Terminate enclosures with manufacturer's end caps except where enclosures are indicated to extend to adjoining walls.

F. Install valves within reach of access door provided in enclosure.

G. Install piping within pedestals for freestanding units or ceiling hangers for ceiling installation.

H. Install piping covers.

3.4 CONNECTIONS

A. Piping installation requirements are specified in Division 23 Section 23 21 13 "Hydronic Piping". Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect hot-water units and components to piping according to Division 23 Section 23 21 13 "Hydronic Piping."

1. Install shutoff valves on inlet and outlet, and balancing valve on outlet.

C. Install control valves as required by Division 23 Section 23 09 00 "Instrumentation and Control for HVAC."

D. Install piping adjacent to heating units to allow service and maintenance.

3.5 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

END OF SECTION 238233

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 238239
Unit Heaters

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Work Included: The work includes, but is not necessarily limited to, the following:

1. Cabinets heaters as specified herein, as indicated on the drawings, as needed for a complete and proper installation.

B. Related Work: The following related items are specified in other sections of the specifications:

1.	Common Motor Requirements for HVAC Equipment	Section 230513
2.	Testing for HVAC	Section 230593

1.3. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer's Qualifications

1. Firms regularly engaged in manufacture of cabinet heaters, of types and sizes required, whose products have been in satisfactory use in similar service for not less than three (3) years.

C. Codes and Standards:

1. All electrical components and cabinet heaters shall be UL listed and labeled.
2. All fans shall be AMCA certified.
3. All electrical devices shall conform to NEMA standards.
4. All wiring shall conform to the NEC.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Catalog cuts, specifications, installation and instructions.

C. Shop Drawings: Submit assembly-type shop drawings showing unit dimensions, construction details, and field connection details.

D. Schedule: List manufacturer, unit type, model number, and performance data for each cabinet heater.

E. Wiring Diagram: Submit manufacturer's electrical requirements for power supply wiring to cabinet heaters. Submit manufacturer's wiring diagram for interlock and control wiring. Clearly differentiate between portions of wiring that are factory-installed and portions to be field-installed.

F. Samples: Submit samples of each type of cabinet finish furnished.

G. Maintenance Data: Submit maintenance instructions and spare parts lists. Include this data, products data, shop drawings and schedule in maintenance manuals.

1.5. DELIVERY, STORAGE AND HANDLING

A. Handle cabinet heaters carefully to prevent damage, breaking, denting and scoring. Do not install damaged units, cabinets or components; replace with new.

B. Store cabinet heaters in clean dry place. Protect from weather, dirt, fumes, water, construction debris and physical damage.

C. Comply with manufacturer's rigging and installation instructions for unloading cabinet heaters, and moving them to final location.

PART 2 - PRODUCTS

2.1. UNIT HEATERS, CABINET HEATERS:

A. Materials

1. General: Provide cabinet heaters of types, capacities, speeds, etc., as indicated on the drawings. Each cabinet heater shall be complete with centrifugal forward curved fan, motor, heating coil, casing, etc. Cabinet heaters shall each be securely supported by the Contractor.
2. Vertical Basic Unit: Basic units shall include a chassis, coil, fan wheel, fan housing and motor. The chassis shall be the structural frame, constructed of 18-gauge galvanized steel and continuous from the top of the unit to the floor. The unit shall be acoustically and thermally insulated with closed cell insulation.
3. Vertical Cabinet: Front panels shall be 16-gauge galvanized steel. All other panel parts shall be rigidized by channel forming. The end panel is removable. The discharge grille shall be recessed to resist condensate formations. The hinged access door shall be flush with the top. The front panel shall be removable without the use of tools.
4. Finish: All cabinet parts and exposed recessed panels shall be cleaned, bonderized, phosphatized and painted with any of six available decorator colors. Standard finish meets ASTM B117 specifications (salt spray test).
5. Fans: The aluminum fan wheels shall be centrifugal forward-curved and double-width. Fan wheels and housings shall be corrosion resistant. Fan housings shall be constructed of formed sheet metal.
6. Motors: All motors are permanent split capacitor motor run tested i assembled units. All motors shall have integral thermal overload protection and are permanently lubricated. Motors shall be capable of starting at 78 percent of rated voltage and operating at 90 percent of rated voltage on all speed settings. Motors shall be capable of being operated at 10 percent over voltage without undue magnetic noise and with a temperature rise by the winding resistance method not exceeding 50 C at full speed, and 55 C at reduced speeds.
7. Filters: Filters shall be concealed from sight and easily removable without displacing front panels and with no additional tools required. Filters shall be 1-inch throwaway.
8. Coils: Mechanically bonded copper/aluminum, pressure tested at 250 psi.
9. Power Supply: All units shall be single-point power. All fan motors shall be single phase.
10. Controls: All units shall be unit mounted thermostat.

B. Manufacturers:

1. Modine
2. Markel
3. Sterling
4. INDEECO
5. Or approved equal

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSPECTION

A. Examine areas and conditions under which cabinet heaters are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Install the work of this section in accordance with the manufacturer's printed installation instructions, unless otherwise specified.

B. Install electrical devices furnished by the manufacturer but not specified to be factory-mounted. Verify that electrical wiring installation is in accordance with manufacturer's submittal and installation requirements of electrical specification sections. Do not proceed with equipment start-up until wiring installation is acceptable.

3.4. ADJUSTING AND CLEANING

A. General

1. After construction is completed, clean unit exposed surfaces, vacuum inside the unit heaters. Retouch any marred or scratched surfaces, using finish materials furnished by the manufacturer.

SECTION 260500
Common Work Results For Electrical

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. Section Includes:

1. Electrical equipment coordination and installation.
2. Sleeves for raceways and cables.
3. Sleeve seals.
4. Grout.
5. Common electrical installation requirements.

B. Related Sections:

1. Section 078413 "Firestops and Smokeseals" for sleeve and firestopping selection/application and firestop material compliance
2. Section 079200 "Interior Joint Sealants" for joint sealant size, depth, and location.
3. Section 083113 "Access Doors" for access doors and panels.

1.3. DEFINITIONS

A. EPDM: Ethylene-propylene-diene terpolymer rubber.

B. NBR: Acrylonitrile-butadiene rubber.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For sleeve seals.

1.5. COORDINATION

A. Coordinate arrangement, mounting, and support of electrical equipment:

1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
3. To allow right of way for piping and conduit installed at required slope.
4. So connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed. Access door and panels are specified in Section 083113 "Access Doors."

C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed

D. Coordinate sleeve selection and application with selection and application of firestopping specified in Section 078413 "Firestops and Smokeseals."

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

PART 2 - PRODUCTS

2.1. SLEEVES FOR RACEWAYS AND CABLES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

C. Sleeves for Rectangular Openings: Galvanized sheet steel.

1. Minimum Metal Thickness:

a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and no side more than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches (1270 mm) and 1 or more sides equal to, or more than, 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

2.2. SLEEVE SEALS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

1. Manufacturers: Subject to compliance with all requirements:

   a. Advance Products & Systems, Inc.
   b. Calpico, Inc.
   c. Metraflex Co.
   d. Pipeline Seal and Insulator, Inc.
   e. Or approved equal.

2. Sealing Elements: EPDM NBR interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
3. Pressure Plates: Plastic or Carbon steel. Include two for each sealing element.
4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.3. GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

A. Comply with NECA 1.

B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.

C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.

D. Equipment: Install to facilitate service, maintenance, and restoration or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

E. Right of Way: Give to piping systems installed at a required slope.

3.3. SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

E. Cut sleeves to length for mounting flush with both surfaces of walls.

F. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level.

G. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and raceway or cable, unless indicated otherwise.

H. Seal space outside of sleeves with grout for penetrations of concrete and masonry

1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.

I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Interior Joint Sealants."

J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Section 078413 "Firestops and Smokeseals."

K. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

L. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

3.4. FIRESTOPPING

A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly.

END OF SECTION 260500

SECTION 260519
Low-Voltage Electrical Power Conductors And Cables

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. This Section includes the following:

1. Building wires and cables rated 600 V and less.
2. Connectors, splices, and terminations rated 600 V and less.
3. Sleeves and sleeve seals for cables.

B. Related Sections include the following:

1. 079200 Section "Joint Sealants" for joint sealant size, depth, and location.
2. 078413 Section "Firestops and Smokeseals" for sleeve and firestopping selection and application.
3. 260553 Section "Identification for Electrical Systems" for identifying and color-coding conductors and cables.
4. 271500 Section "Communications Horizontal Cabling" for cabling used for voice and data circuits.

1.3. DEFINITIONS

A. EPDM: Ethylene-propylene-diene terpolymer rubber.

B. NBR: Acrylonitrile-butadiene rubber.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Qualification Data: For testing agency.

D. Field quality-control test reports.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to the Commissioner.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner, and marked for intended use.

D. Comply with NFPA 70.

1.6. COORDINATION

A. Set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

PART 2 - PRODUCTS

2.1. CONDUCTORS AND CABLES

A. Copper Conductors: Comply with NEMA WC 70.

B. Conductor Insulation: Comply with NEMA WC 70 for Types THW, THHN-THWN, XHHW, UF, USE and mineral-insulated (type MI).

C. Multiconductor Cable: Comply with NEMA WC 70 for armored cable, metal-clad cable, (Type MC).

2.2. CONNECTORS AND SPLICES

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. AFC Cable Systems, Inc.
2. Hubbell Power Systems, Inc.
3. O-Z/Gedney; EGS Electrical Group LLC.
4. 3M; Electrical Products Division.
5. Or Approved Equal

B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. CONDUCTOR MATERIAL APPLICATIONS

A. Feeders: Copper for all feeders. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

3.3. CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Service Entrance: Type USE-75, single conductors in raceway.

B. Exposed Feeders: Type THHN-THWN, single conductors in raceway.

C. Feeders Concealed in Ceilings, Walls, Partitions: Type THHN-THWN, single conductors in raceway.

D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway.

E. Exposed Branch Circuits: Type THHN-THWN, single conductors in raceway.

F. Branch Circuits Concealed in Ceilings, Walls: Type THHN-THWN, single conductors in raceway.

G. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain relief device at terminations to suit application.

H. Class 1 Control Circuits: Type THHN-THWN, in raceway.

3.4. INSTALLATION OF CONDUCTORS AND CABLES

A. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated.

B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

C. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips that will not damage cables or raceway.

D. Identify and color-code conductors and cables according to 260553 Section "Identification for Electrical Systems."

3.5. CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

C. Wiring at Outlets: Install conductor at each outlet, with at least 12 inches (300 mm) of slack.

3.6. SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Coordinate sleeve selection and application with selection and application of firestopping specified in Section 078413 "Firestops and Smokeseals."

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Rectangular Sleeve Minimum Metal Thickness:

1. For sleeve rectangle perimeter less than 50 inches (1270 mm) and no side greater than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
2. For sleeve rectangle perimeter equal to, or greater than, 50 inches (1270 mm) and 1 or more sides equal to, or greater than, 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

E. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

F. Cut sleeves to length for mounting flush with both wall surfaces.

G. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level.

H. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.

I. Seal space outside of sleeves with grout for penetrations of concrete and masonry.

J. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and cable, using joint sealant appropriate for size, depth, and location of joint according to 079200 Section "Joint Sealants."

K. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at cable penetrations.

L. Roof-Penetration Sleeves: Seal penetration of individual cables with flexible boot-type flashing units applied in coordination with roofing work.

M. Aboveground Exterior-Wall Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Size sleeves to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

N. Underground Exterior-Wall Penetrations: Install cast-iron "wall pipes" for sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between cable and sleeve for installing mechanical sleeve seals.

3.7. SLEEVE-SEAL INSTALLATION

A. Install to seal underground exterior-wall penetrations.

B. Use type and number of sealing elements recommended by manufacturer for cable material and size. Position cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.8. FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to 078413 Section "Firestops and Smokeseals"

3.9. FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Perform tests and inspections and prepare test reports.

C. Tests and Inspections:

1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors, and conductors feeding the following critical equipment and services for compliance with requirements.

2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

3. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each splice in cables and conductors No. 3 AWG and larger. Remove box and equipment covers so splices are accessible to portable scanner.

D. Test Reports: Prepare a written report to record the following:

1. Test procedures used.
2. Test results that comply with requirements.
3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

E. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 260519

SECTION 260526
Grounding And Bonding For Electrical Systems

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. This Section includes methods and materials for grounding systems and equipment:

1. Overhead-lines grounding.
2. Underground distribution grounding.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features specified in Part 3 "Field Quality Control" Article, including the following:

1. Test wells.
2. Ground rods.
3. Ground rings.
4. Grounding arrangements and connections for separately derived systems.

D. Qualification Data: For testing agency and testing agency's field supervisor.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For grounding to include the following in emergency, operation, and maintenance manuals:

1. Instructions for periodic testing and inspection of grounding features at test wells ground rings grounding connections for separately derived systems based on NFPA 70B.
   a. Tests shall be to determine if ground resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if they do not.
   b. Include recommended testing intervals.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to the Commissioner.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner, and marked for intended use.

D. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 - PRODUCTS

2.1. CONDUCTORS

A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise required by applicable Code or NYC Department of Buildings.

B. Bare Copper Conductors:

1. Solid Conductors: ASTM B 3.
2. Stranded Conductors: ASTM B 8.
3. Tinned Conductors: ASTM B 33.
4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch (6 mm) in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
6. Bonding Jumper: Copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.
7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches (41 mm) wide and 1/16 inch (1.6 mm) thick.

C. Grounding Bus: Rectangular bars of annealed copper, 1/4 by 2 inches (6 by 50 mm) in cross section, unless otherwise indicated; with insulators.

2.2. CONNECTORS

A. Listed and labeled by a nationally recognized testing laboratory acceptable to the Commissioner for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.

B. Bolted Connectors for Conductors and Pipes: Copper or copper alloy, bolted pressure-type, with at least two bolts.

1. Pipe Connectors: Clamp type, sized for pipe.

C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

2.3. GROUNDING ELECTRODES

A. Ground Rods: Copper-clad steel, 3/4 inch by10 feet (19 mm by 3 m) in diameter.

B. Chemical-Enhanced Grounding Electrodes: Copper tube, straight or L-shaped, charged with nonhazardous electrolytic chemical salts.

1. Termination: Factory-attached No. 4/0 AWG bare conductor at least 48 inches (1200 mm) long.
2. Backfill Material: Electrode manufacturer's recommended material.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. APPLICATIONS

A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger, unless otherwise indicated.

B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. 2/0 AWG minimum.

1. Bury at least 24 inches (600 mm) below grade.
2. Duct-Bank Grounding Conductor: Bury 12 inches (300 mm) above duct bank when indicated as part of duct-bank installation.

C. Isolated Grounding Conductors: Green-colored insulation with continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow.

D. Grounding Bus: Install in electrical and telephone equipment rooms, in rooms housing service equipment, and elsewhere as indicated.

1. Install bus on insulated spacers 1 inch (25 mm), minimum, from wall 6 inches (150 mm) above finished floor, unless otherwise indicated.
2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, down to specified height above floor, and connect to horizontal bus.

E. Conductor Terminations and Connections:

1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
2. Underground Connections: Welded connectors, except at test wells and as otherwise indicated.
3. Connections to Ground Rods at Test Wells: Bolted connectors.
4. Connections to Structural Steel: Welded connectors.

3.3. GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Comply with IEEE C2 grounding requirements.

B. Grounding: Install a driven ground rod close to wall, and set rod depth so 4 inches (100 mm) will extend above finished floor. If necessary, install ground rod before exterior well is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into the earth.

3.4. EQUIPMENT GROUNDING

A. Install insulated equipment grounding conductors with all feeders and branch circuits.

B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:

1. Feeders and branch circuits.
2. Lighting circuits.
3. Receptacle circuits.
4. Single-phase motor and appliance branch circuits.
5. Three-phase motor and appliance branch circuits.
6. Flexible raceway runs.
7. Armored and metal-clad cable runs.
8. Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in the switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.
9. Computer and Rack-Mounted Electronic Equipment Circuits: Install insulated equipment grounding conductor in branch-circuit runs from equipment-area power panels and power-distribution units.

C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.

D. Water Heater, Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.

E. Signal and Communication Equipment: For telephone, alarm, voice and data, and other communication equipment, provide No. 4 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.

1. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-2-by-12-inch (6-by-50-by-300-mm) grounding bus.
2. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.

3.5. INSTALLATION

A. Grounding Conductors: Route along shortest and straightest paths possible. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Common Ground Bonding with Lightning Protection System: Comply with NFPA 780 and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor, and install in conduit.

C. Ground Rods: Drive rods until tops are 2 inches (50 mm) below finished floor or final grade, unless otherwise indicated.

1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating, if any.
2. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.

D. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.

1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.
3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.

E. Grounding and Bonding for Piping:

1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes, using a bolted clamp connector or by bolting a lug-type connector to a pipe flange, using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

3.6. FIELD QUALITY CONTROL

A. Testing Agency will engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:

B. Perform the following tests and inspections and prepare test reports:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal. Make tests at ground rods before any conductors are connected.

a. Measure ground resistance not less than two full days after last trace of precipitation and without soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.
b. Perform tests by fall-of-potential method according to IEEE 81.

3. Prepare dimensioned drawings locating each test well, ground rod and ground rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location, and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

C. Report measured ground resistances that exceed the following values:

1. Power and Lighting Equipment or System with Capacity 500 kVA and Less: 10 ohms.
2. Power Distribution Units or Panelboards Serving Electronic Equipment: 1 ohm(s).

D. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify Commissioner promptly and include recommendations to reduce ground resistance.

END OF SECTION 260526

SECTION 260529
Hangers and Supports For Electrical Systems

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. This Section includes the following:

1. Hangers and supports for electrical equipment and systems.
2. Construction requirements for concrete bases.

B. Related Sections include the following:

1. 260548 Section "Vibration And Seismic Controls For Electrical Systems" for products and installation requirements necessary for compliance with seismic criteria.

1.3. DEFINITIONS

A. EMT: Electrical metallic tubing.

B. IMC: Intermediate metal conduit.

C. RMC: Rigid metal conduit.

1.4. PERFORMANCE REQUIREMENTS

A. Engineering Requirements: Engineer supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, licensed in the State of New York, using performance requirements and design criteria indicated.

B. Engineer supports for multiple raceways capable of supporting combined weight of supported systems and its contents.

C. Engineer equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

D. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For the following:

1. Steel slotted support systems.
2. Nonmetallic slotted support systems.

C. Shop Drawings: Show fabrication and installation details and include calculations for the following:

1. Trapeze hangers. Include Product Data for components.
2. Steel slotted channel systems. Include Product Data for components.
3. Nonmetallic slotted channel systems. Include Product Data for components.
4. Equipment supports.

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Comply with NFPA 70.

1.7. COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in concrete specification sections.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in 077100 Section "Roof Specialties and Accessories."

PART 2 - PRODUCTS

2.1. SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.

1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

   a. Allied Tube & Conduit.
   b. Cooper B-Line, Inc.; a division of Cooper Industries.
   c. GS Metals Corp.
   d. Thomas & Betts Corporation.
   e. Unistrut; Tyco International, Ltd.
   f. Or Approved Equal

2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
4. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
5. Channel Dimensions: Selected for applicable load criteria.

B. Raceway and Cable Supports: As described in NECA 1 and NECA 101.

C. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

D. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.

E. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

F. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:

1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.

   a. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

      1) Hilti Inc.
      2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      3) MKT Fastening, LLC.
      4) Or Approved Equal

2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.

a. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1) Cooper B-Line, Inc.; a division of Cooper Industries.
2) Empire Tool and Manufacturing Co., Inc.
3) Hilti Inc.
4) Or Approved Equal

3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
6. Toggle Bolts: All-steel springhead type.
7. Hanger Rods: Threaded steel.

2.2. FABRICATED METAL EQUIPMENT SUPPORT ASSEMBLIES

A. Description: Welded or bolted, structural-steel shapes, shop or field fabricated to fit dimensions of supported equipment.

B. Materials: Comply with requirements in 055000 Section "Miscellaneous Metals" for steel shapes and plates.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. APPLICATION

A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.

B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as NFPA 70. Minimum rod size shall be 1/4 inch (6 mm) in diameter.

C. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.

1. Secure raceways and cables to these supports with single-bolt conduit clamps.

D. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch (38-mm) and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

3.3. SUPPORT INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.

B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC, and RMC may be supported by openings through structure members, as permitted in NFPA 70.

C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb (90 kg).

D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:

1. To Wood: Fasten with lag screws or through bolts.
2. To New Concrete: Bolt to concrete inserts.
3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
4. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches (100 mm) thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches (100 mm) thick.
5. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69.
6. To Light Steel: Sheet metal screws.
7. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.

E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

3.4. INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in 055000 Section "Miscellaneous Metals" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

3.5. CONCRETE BASES

A. Construct concrete bases of dimensions indicated but not less than 4 inches (100 mm) larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.

B. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in 033000 Section "Cast-in-Place Concrete."

C. Anchor equipment to concrete base.

1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
2. Install anchor bolts to elevations required for proper attachment to supported equipment.
3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.6. PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils (0.05 mm).

B. Touchup: Comply with requirements in Section 099000 Painting and Finishing for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-restore paint to comply with ASTM A 780.

END OF SECTION 260529

SECTION 260533
Raceway and Boxes For Electrical Systems

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. This Section includes raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

B. Related Sections include the following:

1. Section 260543 "Underground Ducts and Raceways for Electrical Systems" for exterior ductbanks, manholes, and underground utility construction.

C. This Section describes steel, aluminum, and non-metallic raceways. Unless an exception is approved by the Commissioner, all raceways shall be steel (GRS, IMC, or EMT). Armored cables of MC cables are not permitted. Aluminum conduits are not permitted.

1.3. DEFINITIONS

A. EMT: Electrical metallic tubing.

B. EPDM: Ethylene-propylene-diene terpolymer rubber.

C. FMC: Flexible metal conduit.

D. IMC: Intermediate metal conduit.

E. LFMC: Liquidtight flexible metal conduit.

F. NBR: Acrylonitrile-butadiene rubber.

G. RNC: Rigid nonmetallic conduit.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

C. Shop Drawings: For the following raceway components. Include plans, elevations, sections, details, and attachments to other work.

1. Custom enclosures and cabinets.
2. For handholes and boxes for underground wiring, including the following:

    a. Duct entry provisions, including locations and duct sizes.
    b. Frame and cover design.
    c. Grounding details.
    d. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.
    e. Joint details.

D. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Structural members in the paths of conduit groups with common supports.
2. HVAC and plumbing items and architectural features in the paths of conduit groups with common supports.

E. Qualification Data: For professional engineer licensed in the State of New York and testing agency.

F. Source quality-control test reports.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner and marked for intended use.

C. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1. METAL CONDUIT AND TUBING

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. Allied Tube & Conduit; a Tyco International Ltd. Co.
2. Anamet Electrical, Inc.; Anaconda Metal Hose.

3. Maverick Tube Corporation.
4. Wheatland Tube Company.
5. Or Approved Equal.

B. Rigid Steel Conduit: ANSI C80.1.

C. IMC: ANSI C80.6.

D. PVC-Coated Steel Conduit: PVC-coated rigid steel conduit, IMC.

1. Comply with NEMA RN 1.
2. Coating Thickness: 0.040 inch (1 mm), minimum.

E. EMT: ANSI C80.3.

F. FMC: Zinc-coated steel or aluminum.

G. LFMC: Flexible steel conduit with PVC jacket.

H. Fittings for Conduit, EMT, and Cable: NEMA FB 1; listed for type and size raceway with which used, and for application and environment in which installed.

1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886.
2. Fittings for EMT: Steel or die-cast, compression type.
3. Coating for Fittings for PVC-Coated Conduit: Minimum thickness, 0.040 inch (1 mm), with overlapping sleeves protecting threaded joints.

I. Joint Compound for Rigid Steel Conduit or IMC: Listed for use in cable connector assemblies, and compounded for use to lubricate and protect threaded raceway joints from corrosion and enhance their conductivity.

2.2. NONMETALLIC CONDUIT AND TUBING

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Arnco Corporation.
2. CANTEX Inc.
3. CertainTeed Corp.; Pipe & Plastics Group.
4. Condux International, Inc.
5. Electri-Flex Co.
6. RACO; a Hubbell Company.
7. Or Approved Equal.

B. ENT: NEMA TC 13.

C. RNC: NEMA TC 2, Type EPC-40-PVC, unless otherwise indicated.

D. LFNC: UL 1660.

E. Fittings for ENT and RNC: NEMA TC 3; match to conduit or tubing type and material.

F. Fittings for LFNC: UL 514B.

2.3. OPTICAL FIBER/COMMUNICATIONS CABLE RACEWAY AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Arnco Corporation.
2. Endot Industries Inc.
3. IPEX Inc.
4. Lamson & Sessions; Carlon Electrical Products.
5. Or Approved Equal.

B. Description: Comply with UL 2024; flexible type, approved for general-use installation.

2.4. METAL WIREWAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper B-Line, Inc.
2. Hoffman.
3. Square D; Schneider Electric.
4. Or Approved Equal.

B. Description: Sheet metal sized and shaped as indicated, NEMA 250, Type , unless otherwise indicated.

C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

D. Wireway Covers: Screw-cover type or Flanged-and-gasketed type.

E. Finish: Manufacturer's standard enamel finish.

2.5. SURFACE RACEWAYS

A. Surface Metal Raceways: Galvanized steel with snap-on covers. Manufacturer's standard enamel finish in color selected by Commissioner.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Thomas & Betts Corporation.
b. Walker Systems, Inc.; Wiremold Company (The).
c. Wiremold Company (The); Electrical Sales Division.
d. Or Approved Equal

B. Surface Nonmetallic Raceways: Two-piece construction, manufactured of rigid PVC with texture and color selected by Commissioner from colors.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Butler Manufacturing Company; Walker Division.
   b. Enduro Systems, Inc.; Composite Products Division.
   c. Hubbell Incorporated; Wiring Device-Kellems Division.
   d. Lamson & Sessions; Carlon Electrical Products.
   e. Panduit Corp.
   f. Wiremold Company (The); Electrical Sales Division.
   g. Or Approved Equal

2.6. BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   1. Cooper Crouse-Hinds; Div. of Cooper Industries, Inc.
   2. EGS/Appleton Electric.
   3. Erickson Electrical Equipment Company.
   4. Hoffman.
   5. Hubbell Incorporated; Killark Electric Manufacturing Co. Division.
   6. O-Z/Gedney; a unit of General Signal.
   7. RACO; a Hubbell Company.
   8. Spring City Electrical Manufacturing Company.
   9. Thomas & Betts Corporation.
   10. Or Approved Equal

B. Sheet Metal Outlet and Device Boxes: NEMA OS 1.

C. Cast-Metal Outlet and Device Boxes: NEMA FB 1, ferrous alloy, Type FD, with gasketed cover.

D. Metal Floor Boxes: Cast or sheet metal, fully adjustable, rectangular.

E. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1.

F. Cast-Metal Access, Pull, and Junction Boxes: NEMA FB 1, galvanized, cast iron with gasketed cover.

G. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous-hinge cover with flush latch, unless otherwise indicated.

   1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.
   2. Nonmetallic Enclosures: Plastic.

H. Cabinets:

   1. NEMA 250, Type 1, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
   2. Hinged door in front cover with flush latch and concealed hinge.
   3. Key latch to match panelboards.

4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.

2.7. HANDHOLES AND BOXES FOR EXTERIOR UNDERGROUND WIRING

A. Description: Comply with SCTE 77.

1. Color of Frame and Cover: Gray.
2. Configuration: Units shall be designed for flush burial and have closed bottom, unless otherwise indicated.
3. Cover: Weatherproof, secured by tamper-resistant locking devices and having structural load rating consistent with enclosure.
4. Cover Finish: Nonskid finish shall have a minimum coefficient of friction of 0.50.
5. Cover Legend: Molded lettering, "ELECTRIC." "TELEPHONE." as indicated for each service.
6. Conduit Entrance Provisions: Conduit-terminating fittings shall mate with entering ducts for secure, fixed installation in enclosure wall.
7. Handholes 12 inches wide by 24 inches long (300 mm wide by 600 mm long) and larger shall have inserts for cable racks and pulling-in irons installed before concrete is poured.

B. Fiberglass Handholes and Boxes: Molded of fiberglass-reinforced polyester resin, with covers of hot-dip galvanized-steel diamond plate or fiberglass

1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

a. Carson Industries LLC.
b. Christy Concrete Products.
c. Nordic Fiberglass, Inc.
d. Or Approved Equal.

2.8. SLEEVES FOR RACEWAYS

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

C. Sleeves for Rectangular Openings: Galvanized sheet steel with minimum 0.052- or 0.138-inch (1.3- or 3.5-mm) thickness as indicated and of length to suit application.

D. Coordinate sleeve selection and application with selection and application of firestopping specified in 07 Section 078413 "Firestops and Smokeseals"

2.9. SLEEVE SEALS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Advance Products & Systems, Inc.
2. Calpico, Inc.
3. Metraflex Co.
4. Pipeline Seal and Insulator, Inc.
5. Or Approved Equal

B. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and cable.

1. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
2. Pressure Plates: Plastic. Include two for each sealing element.
3. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.10. SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by a independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A professional engineer licensed in the State of New York shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. RACEWAY APPLICATION

A. Outdoors: Apply raceway products as specified below, unless otherwise indicated:

1. Exposed Conduit: Rigid steel conduit, IMC, Type EPC-80-PVC.
2. Concealed Conduit, Aboveground: Rigid steel conduit, IMC, Type EPC-40-PVC.
3. Underground Conduit: Rigid steel conduit, Type EPC-40 –PVC.
4. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
5. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
6. Application of Handholes and Boxes for Underground Wiring:

a. Handholes and Pull Boxes in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Polymer concrete SCTE 77, Tier 15 structural load rating.
b. Handholes and Pull Boxes in Sidewalk and Similar Applications with a Safety Factor for Nondeliberate Loading by Vehicles: Polymer-concrete units, SCTE 77, Tier 8 structural load rating.
c. Handholes and Pull Boxes Subject to Light-Duty Pedestrian Traffic Only: Fiberglass-reinforced polyester resin, structurally tested according to SCTE 77 with 3000-lbf (13 345-N) vertical loading.

B. Comply with the following indoor applications, unless otherwise indicated:

1. Exposed, Not Subject to Physical Damage: Rigid steel.
2. Exposed, Not Subject to Severe Physical Damage: Rigid steel.
3. Exposed and Subject to Severe Physical Damage: Rigid steel conduit. Includes raceways in the following locations:

a. Loading dock.
b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
c. Mechanical rooms.

4. Concealed in Ceilings and Interior Walls and Partitions: EMT.
5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
6. Damp or Wet Locations: Rigid steel conduit IMC.
7. Raceways for Optical Fiber or Communications Cable Risers in Vertical Shafts: Riser-type, optical fiber/communications cable raceway EMT.
8. Raceways for Concealed General Purpose Distribution of Optical Fiber or Communications Cable: General-use, optical fiber/communications cable raceway or EMT.
9. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4, nonmetallic in damp or wet locations.

C. Minimum Raceway Size: 3/4-inch (21-mm) trade size.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.

1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.
2. PVC Externally Coated, Rigid Steel Conduits: Use only fittings listed for use with that material. Patch and seal all joints, nicks, and scrapes in PVC coating after installing conduits and fittings. Use sealant recommended by fitting manufacturer.

3.3. INSTALLATION

A. Comply with NECA 1 for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter.

B. Keep raceways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

C. Complete raceway installation before starting conductor installation.

D. Support raceways as specified in Section 260529 "Hangers and Supports for Electrical Systems."

E. Arrange stub-ups so curved portions of bends are not visible above the finished slab.

F. Install no more than the equivalent of three 90-degree bends in any conduit run except for communications conduits, for which fewer bends are allowed.

G. Conceal conduit and EMT within finished walls, ceilings, and floors, unless otherwise indicated.

H. Raceways Embedded in Slabs:

1. Run conduit larger than 1-inch (27-mm) trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support.
2. Arrange raceways to cross building expansion joints at right angles with expansion fittings.

I. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.

J. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors, including conductors smaller than No. 4 AWG.

K. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb (90-kg) tensile strength. Leave at least 12 inches (300 mm) of slack at each end of pull wire.

L. Raceways for Optical Fiber and Communications Cable: Install raceways, metallic and nonmetallic, rigid and flexible, as follows:

1. 3/4-Inch (19-mm) Trade Size and Smaller: Install raceways in maximum lengths of 50 feet (15 m).
2. 1-Inch (25-mm) Trade Size and Larger: Install raceways in maximum lengths of 75 feet (23 m).
3. Install with a maximum of two 90-degree bends or equivalent for each length of raceway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.

M. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where otherwise required by NFPA 70.

N. Flexible Conduit Connections: Use maximum of 72 inches (1830 mm) of flexible conduit for recessed and semirecessed lighting fixtures, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.

1. Use LFMC in damp or wet locations.

O. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall.

P. Set metal floor boxes level and flush with finished floor surface.

3.4. INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:

1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Section 310000 "Earthwork" for pipe less than 6 inches (150 mm) in nominal diameter.
2. Install backfill as specified in Section 310000 "Earthwork."
3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches (300 mm) of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Section 310000 "Earthwork."
4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of the elbow.
5. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.

    a. Couple steel conduits to ducts with adapters designed for this purpose, and encase coupling with 3 inches (75 mm) of concrete.
    b. For stub-ups at equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches (1500 mm) from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.

6. Warning Planks: Bury warning planks approximately 12 inches (300 mm) above direct-buried conduits, placing them 24 inches (600 mm) o.c. Align planks along the width and along the centerline of conduit.

3.5. SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Coordinate sleeve selection and application with selection and application of firestopping specified in Section 078413 "Firestops and Smokeseals."

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Rectangular Sleeve Minimum Metal Thickness:

1. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and no side greater than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
2. For sleeve cross-section rectangle perimeter equal to, or greater than, 50 inches (1270 mm) and 1 or more sides equal to, or greater than, 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

E. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

F. Cut sleeves to length for mounting flush with both surfaces of walls.

G. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level.

H. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and raceway unless sleeve seal is to be installed.

I. Seal space outside of sleeves with grout for penetrations of concrete and masonry.

J. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway, using joint sealant appropriate for size, depth, and location of joint.

K. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway penetrations. Install sleeves and seal with firestop materials. Comply with Section 078413 "Firestops and Smokeseals."

L. Roof-Penetration Sleeves: Seal penetration of individual raceways with flexible, boot-type flashing units applied in coordination with roofing work.

M. Aboveground, Exterior-Wall Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

N. Underground, Exterior-Wall Penetrations: Install cast-iron "wall pipes" for sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between raceway and sleeve for installing mechanical sleeve seals.

3.6. SLEEVE-SEAL INSTALLATION

A. Install to seal underground, exterior wall penetrations.

B. Use type and number of sealing elements recommended by manufacturer for raceway material and size. Position raceway in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.7. FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Section 078413 "Firestops and Smokeseals."

3.8. PROTECTION

A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.

1. Restore damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Restore damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 260533

SECTION 260543
Underground Ducts And Raceways For Electrical Systems

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements.

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. This Section includes the following:

1. Conduit, ducts, and duct accessories for direct-buried and concrete-encased duct banks, and in single duct runs.

1.3. DEFINITION

A. RNC: Rigid nonmetallic conduit.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For the following:

1. Duct-bank materials, including separators and miscellaneous components.
2. Ducts and conduits and their accessories, including elbows, end bells, bends, fittings, and solvent cement.
3. Accessories for manholes, handholes, boxes.
4. Warning tape.
5. Warning planks.

C. Shop Drawings for Precast or Factory-Fabricated Underground Utility Structures: Include plans, elevations, sections, details, attachments to other work, and accessories, including the following:

1. Duct entry provisions, including locations and duct sizes.
2. Reinforcement details.

3. Frame and cover design and manhole frame support rings.
4. Ladder/ Step details.
5. Grounding details.
6. Dimensioned locations of cable rack inserts, pulling-in and lifting irons, and sumps.
7. Joint details.

D. Shop Drawings for Factory-Fabricated Handholes and Boxes Other Than Precast Concrete: Include dimensioned plans, sections, and elevations, and fabrication and installation details, including the following:

1. Duct entry provisions, including locations and duct sizes.
2. Cover design.
3. Grounding details.
4. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.

E. Duct-Bank Coordination Drawings: Show duct profiles and coordination with other utilities and underground structures.

1. Include plans and sections, drawn to scale, and show bends and locations of expansion fittings.
2. Drawings shall be signed and sealed by a qualified professional engineer licensed in the State of New York.

F. Qualification Data: For professional engineer licensed in the state of New York and testing agency.

G. Source quality-control test reports.

H. Field quality-control test reports.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

C. Comply with ANSI C2.

D. Comply with NFPA 70.

1.6. DELIVERY, STORAGE, AND HANDLING

A. Deliver ducts to Project site with ends capped. Store nonmetallic ducts with supports to prevent bending, warping, and deforming.

B. Store underground utility structures at Project site as recommended by manufacturer to prevent physical damage. Arrange so identification markings are visible.

C. Lift and support precast concrete units only at designated lifting or supporting points.

1.7. COORDINATION

A. Coordinate layout and installation of ducts and boxes with final arrangement of other utilities, site grading, and surface features as determined in the field.

B. Coordinate elevations of ducts and duct-bank entrances and boxes with final locations and profiles of ducts and duct banks as determined by coordination with other utilities, underground obstructions, and surface features. Revise locations and elevations from those indicated as required to suit field conditions and to ensure that duct runs drain to manholes and handholes, and as approved by Commissioner.

PART 2 - PRODUCTS

2.1. CONDUIT

A. Rigid Steel Conduit: Galvanized. Comply with ANSI C80.1.

B. RNC: NEMA TC 2, Type EPC-80-PVC, UL 651, with matching fittings by same manufacturer as the conduit, complying with NEMA TC 3 and UL 514B.

2.2. NONMETALLIC DUCTS AND DUCT ACCESSORIES

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ARNCO Corp.
2. Beck Manufacturing.
3. Cantex, Inc.
4. CertainTeed Corp.; Pipe & Plastics Group.
5. Condux International, Inc.
6. ElecSys, Inc.
7. Electri-Flex Company.
8. IPEX Inc.
9. Lamson & Sessions; Carlon Electrical Products.
10. Manhattan/CDT; a division of Cable Design Technologies.
11. Spiraduct/AFC Cable Systems, Inc.
12. Or Approved Equal

B. Underground Plastic Utilities Duct: NEMA TC 6 & 8, Type DB-120-PVC, ASTM F 512, with matching fittings by the same manufacturer as the duct, complying with NEMA TC 9.

C. Duct Accessories:

1. Duct Separators: Factory-fabricated rigid PVC interlocking spacers, sized for type and sizes of ducts with which used, and selected to provide minimum duct spacing indicated while supporting ducts during concreting or backfilling.
2. Warning Tape: Underground-line warning tape specified in Section 260553 "Identification for Electrical Systems."

3. Concrete Warning Planks: Nominal 12 by 24 by 3 inches (300 by 600 by 76 mm) in size, manufactured from 6000-psi (41-MPa) concrete.

   a. Color: Red dye added to concrete during batching.
   b. Mark each plank with "ELECTRIC" in 2-inch- (50-mm-) high, 3/8-inch- (10-mm-) deep letters.

2.3. SOURCE QUALITY CONTROL

A. Test and inspect precast concrete utility structures according to ASTM C 1037.

B. Pull-Box Prototype Test: Test prototypes of boxes for compliance with SCTE 77. Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by a independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or the manufacturer. A qualified registered professional engineer licensed in the State of New York shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. UNDERGROUND DUCT APPLICATION

A. Ducts for Electrical Feeders 600 V and Less: RNC, NEMA Type EPC-80-PVC, in concrete-encased duct bank, unless otherwise indicated.

B. Underground Ducts Crossing Paved Paths, Walks and Driveways, Roadways: RNC, NEMA Type EPC-40-PVC, encased in reinforced concrete.

3.3. EARTHWORK

A. Excavation and Backfill: Comply with Section 310000 "Earthwork," but do not use heavy-duty, hydraulic-operated, compaction equipment.

B. Restore surface features at areas disturbed by excavation and reestablish original grades, unless otherwise indicated. Replace removed sod immediately after backfilling is completed.

C. Restore areas disturbed by trenching, storing of dirt, cable laying, and other work. Restore vegetation and include necessary topsoiling, fertilizing, liming, seeding, sodding, sprigging, and mulching.

D. Cut and patch existing pavement in the path of underground ducts and utility structures.

3.4. DUCT INSTALLATION

A. Slope: Pitch ducts a minimum slope of 1:300 down toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between two manholes to drain in both directions.

B. Curves and Bends: Use 5-degree angle couplings for small changes in direction. Use manufactured long sweep bends with a minimum radius of 48 inches (1220 mm) 12.5 feet (4 m) 25 feet (7.5 m), both horizontally and vertically, at other locations, unless otherwise indicated.

C. Joints: Use solvent-cemented joints in ducts and fittings and make watertight according to manufacturer's written instructions. Stagger couplings so those of adjacent ducts do not lie in same plane.

D. Building Wall Penetrations: Make a transition from underground duct to rigid steel conduit at least 10 feet (3 m) outside the building wall without reducing duct line slope away from the building, and without forming a trap in the line. Use fittings manufactured for duct-to-conduit transition. Install conduit penetrations of building walls as specified in Section 260500 "Common Work Results for Electrical."

E. Sealing: Provide temporary closure at terminations of ducts that have cables pulled. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15-psig (1.03-MPa) hydrostatic pressure.

F. Pulling Cord: Install 100-lbf- (445-N-) test nylon cord in ducts, including spares.

G. Concrete-Encased Ducts: Support ducts on duct separators.

1. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, with not less than 5 spacers per 20 feet (6 m) of duct. Secure separators to earth and to ducts to prevent floating during concreting. Stagger separators approximately 6 inches (150 mm) between tiers. Tie entire assembly together using fabric straps; do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.
2. Concreting Sequence: Pour each run of envelope between manholes or other terminations in one continuous operation.
    a. Start at one end and finish at the other, allowing for expansion and contraction of ducts as their temperature changes during and after the pour. Use expansion fittings installed according to manufacturer's written recommendations, or use other specific measures to prevent expansion-contraction damage.
    b. If more than one pour is necessary, terminate each pour in a vertical plane and install 3/4-inch (19-mm) reinforcing rod dowels extending 18 inches (450 mm) into concrete on both sides of joint near corners of envelope.
3. Pouring Concrete: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not allow a heavy mass of concrete to fall directly onto ducts. Use a plank to direct concrete down sides of bank assembly to trench bottom. Allow concrete to flow to center of bank and rise up in middle, uniformly filling all open spaces. Do not use power-driven agitating equipment unless specifically designed for duct-bank application.

4. Reinforcement: Reinforce concrete-encased duct banks where they cross disturbed earth and where indicated. Arrange reinforcing rods and ties without forming conductive or magnetic loops around ducts or duct groups.
5. Forms: Use walls of trench to form side walls of duct bank where soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
6. Minimum Space between Ducts: 3 inches (75 mm) between ducts and exterior envelope wall, 2 inches (50 mm) between ducts for like services, and 4 inches (100 mm) between power and signal ducts.
7. Depth: Install top of duct bank at least 24 inches (600 mm) below finished grade in areas not subject to deliberate traffic, and at least 30 inches (750 mm) below finished grade in deliberate traffic paths for vehicles, unless otherwise indicated.
8. Stub-Ups: Use manufactured duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Extend concrete encasement throughout the length of the elbow.
9. Warning Tape: Bury warning tape approximately 12 inches (300 mm) above all concrete-encased ducts and duct banks. Align tape parallel to and within 3 inches (75 mm) of the centerline of duct bank. Provide an additional warning tape for each 12-inch (300-mm) increment of duct-bank width over a nominal 18 inches (450 mm). Space additional tapes 12 inches (300 mm) apart, horizontally.

3.5. INSTALLATION OF BOXES OTHER THAN PRECAST CONCRETE

A. Install boxes level and plumb and with orientation and depth coordinated with connecting ducts to minimize bends and deflections required for proper entrances. Use box extension if required to match depths of ducts, and seal joint between box and extension as recommended by the manufacturer.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch (12.7-mm) sieve to No. 4 (4.75-mm) sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas and trafficways, set so cover surface will be flush with finished grade. Set covers of other handholes 1 inch (25 mm) above finished grade.

D. Install handholes and boxes with bottom below the frost line at 30" below grade.

E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.

F. Field-cut openings for ducts and conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

G. For enclosures installed in asphalt paving and subject to occasional, nondeliberate, heavy-vehicle loading, form and pour a concrete ring encircling, and in contact with, enclosure and with top surface screeded to top of box cover frame. Bottom of ring shall rest on compacted earth.

1. Concrete: 3000 psi (20 kPa), 28-day strength, complying with Section 033000 "Cast-in-Place Concrete," with a troweled finish.

2. Dimensions: 10 inches wide by 12 inches deep (250 mm wide by 300 mm deep).

3.6. GROUNDING

A. Ground underground ducts and utility structures according to Section 260526 "Grounding and Bonding for Electrical Systems."

3.7. FIELD QUALITY CONTROL

A. Perform the following tests and inspections and prepare test reports:

1. Demonstrate capability and compliance with requirements on completion of installation of underground ducts and utility structures.
2. Pull aluminum or wood test mandrel through duct to prove joint integrity and test for out-of-round duct. Provide mandrel equal to 80 percent fill of duct. If obstructions are indicated, remove obstructions and retest.
3. Test manhole and handhole grounding to ensure electrical continuity of grounding and bonding connections. Measure and report ground resistance as specified in Section 260526 "Grounding and Bonding for Electrical Systems."

B. Correct deficiencies and retest as specified above to demonstrate compliance.

3.8. CLEANING

A. Pull leather-washer-type duct cleaner, with graduated washer sizes, through full length of ducts. Follow with rubber duct swab for final cleaning and to assist in spreading lubricant throughout ducts.

B. Clean internal surfaces of manholes, including sump. Remove foreign material.

END OF SECTION 260543

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 260548
Vibration And Seismic Controls For Electrical Systems

PART 1 - GENERAL

1.1. RELATED DOCUMENT:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUBMITTAL DATA REQUIREMENTS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

PART 2 - PRODUCT

2.1. SPECIFICATION

A. Electrical switchboards, generators, panelboards and UPS systems shall be vibration isolated with steel spring isolation mounting assemblies utilizing bare springs with the spring diameter not less than 0.8 of the loaded operating height of the spring. Each isolator shall be designed and installed so that the ends of the spring remain parallel. The spring specified minimum deflection from loaded operating height shall be 50% of the rated deflection.

B. Neoprene-in-shear isolation mounting assemblies shall utilize bare neoprene elements with unit type design molded in oil resistant neoprene. The neoprene shall be compounded to meet the following:

1. Not greater than 70 durometer.
2. Minimum tensile strength of 2000 PSI.
3. Minimum elongation of 300%.
4. Maximum compression at 25% of original deflection.

C. Vibration isolation equipment submittal drawings shall include the following information:

1. Isolation mounting deflections.
2. Spring diameters, compressed spring heights at rated load; solid spring heights, where steel spring isolation mountings are used.
3. Equipment operating frequencies.
4. Calculations showing that the spring surge frequency is not coincided with any forcing frequencies/harmonics of the equipment to be mounted.

D. Mounting Transformers Less than 150Kva

1. Each transformer shall be either floor mounted or hung from structural members on an integral one-piece base or frame, reinforced as necessary, to prevent flexure.
2. The structural base/frame shall be supported by neoprene mountings with a minimum static deflection of 3/8 inch. Isolator types shall be one of the following:

   a. Floor mounts:
      1) Type ND – Mason Industries
      2) Type 368SD – Vibration Eliminator Company
      3) Type RD – Vibration Mountings and Controls
      4) Or Approved Equal
   b. Hung Mounts:
      1) Type HD – Mason Industries
      2) Type CD – Vibration Eliminator Company
      3) Type RHD – Vibration Mountings and Controls
      4) Or Approved Equal

E. Floor Mounting of Electrical switchboards, generators and panel boards.

1. Each switchboard, generator and panelboard shall be mounted on an integral one-piece structural base that is reinforced as necessary to prevent flexure of the base. The structural frame shall be drilled and tapped as necessary, to receive equipment so that the frame shall act as a template.
2. The structural steel integral base shall be supported on steel spring mountings with a minimum static deflection of 1.5" (+/- 10%). These mountings shall be positioned in accordance with the weight distribution to ensure adequate deflection and vibration isolation. Housing or snubbing devices shall not be used to contain the isolator springs. Isolator types shall be one of the following, or as approved:
   a. Type SLF – Mason Industries Inc.
   b. Type OST – Vibration Eliminator Company.
   c. Type AN – Vibration Mountings and Controls, Inc.
   d. Or Approved Equal
3. A minimum 0.75" thick neoprene-in-shear pad at a maximum loading og 50 psi shall be provided between the spring isolator and the floor.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. GENERAL

A. All vibration isolators and seismic restraint systems must be installed in strict accordance with the manufacturers written instructions and all certified submittal data.

B. Installation of vibration isolators and seismic restraints must not cause any change of position of equipment resulting in stresses of misalignment.

C. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system herein specified.

D. The contractor shall not install any equipment or conduit which makes rigid connections with the building unless isolation is not specified. "Building" includes, but is not limited to, slabs, beams, columns, studs and walls.

E. Coordinate work with other trades to avoid rigid contact with the building.

F. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the Commissioner's attention prior to installation.

G. Bring to the commissioner's attention any discrepancies between the specifications and the field conditions or changes required due to specific equipment selection, prior to installation.

H. Overstressing of the building structure must not occur because of overhead support of equipment. Contractor must submit loads to the structural engineer of record for approval. Generally bracing may occur from:

   a. Flanges of structural beams.

   b. Upper truss cords in bar joist construction.

   c. Cast in place inserts or wedge type drill-in concrete anchors.

I. Specification 12 cable restraints shall be installed slightly slack to avoid short circuiting the isolated suspended equipment, piping or conduit.

J. Specification 12 cable assemblies are installed taut on non-isolated systems. Specification 13 seismic solid braces may be used in place of cables on rigidly attached systems only.

K. At locations where specification 12 or 13 restraints are located, the support rods must be braced when necessary to accept compressive loads with specification 14 braces.

L. At all locations where specification 12 or 13 restraints are attached to pipe clevis's, the clevis cross bolt must be reinforced with specification type 15 braces.

M. Drill-in concrete anchors for ceiling and wall installation shall be specification type 18, and specification type 19 female wedge type for floor mounted equipment.

N. Vibration isolation manufacturer shall furnish integral structural steel bases as required. Independent steel rails are not permitted on this project.

O. Hand built elastomeric expansion joints may be used when pipe sizes exceed 24" or specified movements exceed specification 23 capabilities.

P. Where piping passes through walls, floors or ceilings the vibration isolation manufacturer shall provide specification 27 wall seals.

Q. Air handling equipment and centrifugal fans shall be protected against excessive displacement which results from high air thrust in relation to the equipment weight. Horizontal thrust restraint shall be specification type 28.

R. Locate isolation hangers as near to the overhead support structure as possible.

END OF SECTION 260548

SECTION 260553
Identification For Electrical Systems

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. Section Includes:

1. Identification for conductors.
2. Underground-line warning tape.
3. Warning labels and signs.
4. Instruction signs.
5. Equipment identification labels.
6. Miscellaneous identification products.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each electrical identification product indicated.

C. Samples: For each type of label and sign to illustrate size, colors, lettering style, mounting provisions, and graphic features of identification products.

D. Identification Schedule: An index of nomenclature of electrical equipment and system components used in identification signs and labels.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Comply with ANSI A13.1 and IEEE C2.

C. Comply with NFPA 70.

D. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.

E. Comply with ANSI Z535.4 for safety signs and labels.

F. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

1.5. COORDINATION

A. Coordinate identification names, abbreviations, colors, and other features with requirements in other Sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual; and with those required by 29 CFR 1910.145. Use consistent designations throughout Project.

B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

C. Coordinate installation of identifying devices with location of access panels and doors.

D. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1. CONDUCTOR IDENTIFICATION MATERIALS

A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils (0.08 mm) thick by 1 to 2 inches (25 to 50 mm) wide.

B. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

C. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeve, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

D. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeve, 2 inches (50 mm) long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

E. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

F. Write-On Tags: Polyester tag, 0.010 inch (0.25 mm) 0.015 inch (0.38 mm) thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.

1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

2.2. FLOOR MARKING TAPE

A. 2-inch- (50-mm-) wide, 5-mil (0.125-mm) pressure-sensitive vinyl tape, with black and white stripes and clear vinyl overlay.

2.3. UNDERGROUND-LINE WARNING TAPE

A. Tape:

1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical and communications utility lines.
2. Printing on tape shall be permanent and shall not be damaged by burial operations.
3. Tape material and ink shall be chemically inert, and not subject to degrading when exposed to acids, alkalis, and other destructive substances commonly found in soils.

B. Color and Printing:

1. Comply with ANSI Z535.1 through ANSI Z535.5.
2. Inscriptions for Red-Colored Tapes: ELECTRIC LINE, HIGH VOLTAGE.
3. Inscriptions for Orange-Colored Tapes: TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE.

C. Tag: Type II:

1. Multilayer laminate consisting of high-density polyethylene scrim coated with pigmented polyolefin, bright-colored, compounded for direct-burial service.
2. Thickness: 12 mils (0.3 mm).
3. Weight: 36.1 lb/1000 sq. ft. (17.6 kg/100 sq. m).
4. 3-Inch (75-mm) Tensile According to ASTM D 882: 400 lbf (1780 N), and 11,500 psi (79.2 MPa).

2.4. WARNING LABELS AND SIGNS

A. Comply with NFPA 70 and 29 CFR 1910.145.

B. Self-Adhesive Warning Labels: Factory-printed, multicolor, pressure-sensitive adhesive labels, configured for display on front cover, door, or other access to equipment unless otherwise indicated.

C. Baked-Enamel Warning Signs:

1. Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for application.
2. 1/4-inch (6.4-mm) grommets in corners for mounting.
3. Nominal size, 7 by 10 inches (180 by 250 mm).

D. Metal-Backed, Butyrate Warning Signs:

1. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch (1-mm) galvanized-steel backing; and with colors, legend, and size required for application.
2. 1/4-inch (6.4-mm) grommets in corners for mounting.
3. Nominal size, 10 by 14 inches (250 by 360 mm).

E. Warning label and sign shall include, but are not limited to, the following legends:

1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES (915 MM)."

2.5. INSTRUCTION SIGNS

A. Engraved, laminated acrylic or melamine plastic, minimum 1/16 inch (1.6 mm) thick for signs up to 20 sq. inches (129 sq. cm) and 1/8 inch (3.2 mm) thick for larger sizes.

1. Engraved legend with black letters on white face .
2. Punched or drilled for mechanical fasteners.
3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

B. Adhesive Film Label: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch (10 mm).

C. Adhesive Film Label with Clear Protective Overlay: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch (10 mm). Overlay shall provide a weatherproof and UV-resistant seal for label.

2.6. EQUIPMENT IDENTIFICATION LABELS

A. Adhesive Film Label: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch (10 mm).

B. Adhesive Film Label with Clear Protective Overlay: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch (10 mm). Overlay shall provide a weatherproof and UV-resistant seal for label.

C. Self-Adhesive, Engraved, Laminated Acrylic or Melamine Label: Adhesive backed, with white letters on a dark-gray background. Minimum letter height shall be 3/8 inch (10 mm).

D. Engraved, Laminated Acrylic or Melamine Label: Punched or drilled for screw mounting. White letters on a dark-gray background. Minimum letter height shall be 3/8 inch (10 mm).

E. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height shall be 1 inch (25 mm).

2.7. CABLE TIES

A. General-Purpose Cable Ties: Fungus inert, self extinguishing, one piece, self locking, Type 6/6 nylon.

1. Minimum Width: 3/16 inch (5 mm).
2. Tensile Strength at 73 deg F (23 deg C), According to ASTM D 638: 12,000 psi (82.7 MPa).
3. Temperature Range: Minus 40 to plus 185 deg F (Minus 40 to plus 85 deg C).
4. Color: Black except where used for color-coding.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Verify identity of each item before installing identification products.

B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.

C. Apply identification devices to surfaces that require finish after completing finish work.

D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.

E. Attach signs and plastic labels that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.

F. System Identification Color-Coding Bands for Raceways and Cables: Each color-coding band shall completely encircle cable or conduit. Place adjacent bands of two-color markings in contact, side by side. Locate bands at changes in direction, at penetrations of walls and floors, at 50-foot (15-m) maximum intervals in straight runs, and at 25-foot (7.6-m) maximum intervals in congested areas.

G. Aluminum Wraparound Marker Labels and Metal Tags: Secure tight to surface of conductor or cable at a location with high visibility and accessibility.

H. Cable Ties: For attaching tags. Use general-purpose type, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

I. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at 6 to 8 inches (150 to 200 mm) below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches (400 mm) overall.

J. Painted Identification: Comply with requirements in Section 099000 "Painting and Finishing," for surface preparation and paint application.

3.3. IDENTIFICATION SCHEDULE

A. Concealed Raceways, Duct Banks, More Than 600 V, within Buildings: Tape and stencil 4-inch- (100-mm-) wide black stripes on 10-inch (250-mm) centers over orange background that extends full length of raceway or duct and is 12 inches (300 mm) wide. Stencil legend "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch- (75-mm-) high black letters on 20-inch (500-mm) centers. Stop stripes at legends. Apply to the following finished surfaces:

1. Floor surface directly above conduits running beneath and within 12 inches (300 mm) of a floor that is in contact with earth or is framed above unexcavated space.
2. Wall surfaces directly external to raceways concealed within wall.
3. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in the building, or concealed above suspended ceilings.

B. Accessible Raceways, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 30 A, and 120 V to ground: Identify with self-adhesive vinyl label. Install labels at 30-foot (10-m) maximum intervals.

C. Accessible Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive vinyl labels with the wiring system legend and system voltage. System legends shall be as follows:

1. Emergency Power.
2. Power.

D. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use color-coding conductor tape to identify the phase.

1. Color-Coding for Phase Identification, 600 V or Less: Use colors listed below for ungrounded service feeder and branch-circuit conductors.

   a. Color shall be factory applied or field applied for sizes larger than No. 8 AWG.
   b. Colors for 208/120-V Circuits:

      1) Phase A: Black.
      2) Phase B: Red.
      3) Phase C: Blue.

   c. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches (150 mm) from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Locate bands to avoid obscuring factory cable markings.

E. Install instructional sign including the color-code for grounded and ungrounded conductors using adhesive-film-type labels.

F. Conductors to Be Extended in the Future: Attach write-on tags/ marker tape to conductors and list source.

G. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.

1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual.

H. Locations of Underground Lines: Identify with underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable.

1. Limit use of underground-line warning tape to direct-buried cables.
2. Install underground-line warning tape for both direct-buried cables and cables in raceway.

I. Workspace Indication: Install floor marking tape to show working clearances in the direction of access to live parts. Workspace shall be as required by NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

J. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Self-adhesive warning labels.

1. Comply with 29 CFR 1910.145.
2. Identify system voltage with black letters on an orange background.
3. Apply to exterior of door, cover, or other access.
4. For equipment with multiple power or control sources, apply to door or cover of equipment including, but not limited to, the following:

   a. Power transfer switches.
   b. Controls with external control power connections.

K. Operating Instruction Signs: Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation.

L. Emergency Operating Instruction Signs: Install instruction signs with white legend on a red background with minimum 3/8-inch- (10-mm-) high letters for emergency instructions at equipment used for power transfer.

M. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and the Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.

1. Labeling Instructions:

   a. Indoor Equipment: Self-adhesive, engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high letters on 1-1/2-inch- (38-mm-) high label; where two lines of text are required, use labels 2 inches (50 mm) high.
   b. Outdoor Equipment: Engraved, laminated acrylic or melamine label - Stenciled legend 4 inches (100 mm) high.
   c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.
   d. Unless provided with self-adhesive means of attachment, fasten labels with appropriate mechanical fasteners that do not change the NEMA or NRTL rating of the enclosure.

2. Equipment to Be Labeled:

   a. Panelboards: Typewritten directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be self-adhesive, engraved, laminated acrylic or melamine label.
   b. Enclosures and electrical cabinets.
   c. Access doors and panels for concealed electrical items.
   d. Switchgear.
   e. Switchboards.
   f. Emergency system boxes and enclosures.
   g. Enclosed switches.
   h. Enclosed circuit breakers.
   i. Enclosed controllers.
   j. Push-button stations.
   k. Power transfer equipment.
   l. Contactors.
   m. Remote-controlled switches, dimmer modules, and control devices.
   n. Power-generating units.
   o. Monitoring and control equipment.

END OF SECTION 260553

SECTION 260573
Overcurrent Protective Device Coordination Study

PART 1 - GENERAL

1.1. RELATED DOCUMENT

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 33 00 "Submittal Procedures."
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Provide a Short-Circuit and Protective Device Evaluation Study, a Protective Device Coordination Study, and an Arc-Flash Hazard Study, as specified herein.

B. Obtain the short circuit current value at the main service switchboard for the specific project location from the utility. Bear all costs associated with obtaining the available short circuit current value.

C. Adjust all required protective device settings based on the results of the Protective Device Coordination Study and Arc-Flash Hazard Study.

D. Install Arc-Flash and Shock Hazard labels on all electrical equipment, as specified herein.

1.3. DESCRIPTION OF THE WORK

A. Short-Circuit and Protective Device Evaluation Study

1. Contractor shall provide a Short-Circuit and Protective Device Evaluation Study to verify the proposed equipment ratings and protective device ratings.

2. Unless specified otherwise, the scope of the study shall include all proposed distribution equipment supplied under this Contract, as well as all directly affected existing distribution equipment at the facility. The study shall include all portions of the existing and proposed electrical distribution system from the electric utility power source(s) and emergency power source(s) down to and including each switchboard, distribution panel, transfer switch (automatic or manual), motor control center, variable frequency drive, distribution panelboard, branch circuit panelboard, busway, enclosed circuit breaker and fused disconnect switch.

B. Protective Device Coordination Study

1. Contractor shall provide a Protective Device Coordination Study to determine and coordinate the selective tripping of protective devices for the proposed equipment.

2. Unless specified otherwise, the scope of the study shall include all proposed distribution equipment supplied under this Contract, as well as all directly affected existing distribution equipment at the facility. The study shall include all portions of the existing and proposed electrical distribution system from the electric utility power source(s) and emergency power source(s) down to and including the smallest adjustable trip circuit breaker and fused disconnect switch in the system.

C. Arc-Flash Hazard Study

1. Contractor shall provide an Arc-Flash Hazard Study to determine potential arc-flash incident energies, arc-flash boundaries, shock hazard boundaries; required personal protective equipment (PPE) for all energized electrical equipment; and arc-flash and shock hazard warning labels.

2. Unless specified otherwise, the study shall include all electrical circuits from the electric utility power source(s) and emergency power source(s) to and including all electrical equipment and panelboards rated 208 V and greater.

3. Wherever possible, the proposed electrical equipment shall be designed, manufactured, and supplied to limit the potential arc-flash incident energy to 8 cal/sq cm or less (PPE Category 2). The firm performing the studies shall coordinate with Contractor and the electrical equipment manufacturers to assist in achieving this requirement.

D. Field Verification

1. Contractor shall provide the services of an independent testing firm performing the studies to field verify that all protective devices are set in accordance with the accepted short-circuit/coordination study requirements and recommendations. In addition, the firm shall verify that all arc- flash and stock hazard labels have been installed.

1.4. REFERENCE STANDARDS AND CODES

A. Unless specified otherwise, all calculations, analyses, and studies, including application of same to equipment and settings shall meet or exceed the applicable requirements of the following standards and codes:

B. Institute of Electrical and Electronics Engineers, Inc. (IEEE):

1. IEEE 141 — Recommended Practice for Electric Power Distribution for Industrial Plants

2. IEEE 142 — Recommended Practice for Grounding of Industrial and Commercial Power Systems

3. IEEE 241 — Recommended Practice for Electric Power Systems in Commercial Buildings

4. IEEE 242 — Recommended Practice for Protection and Coordination of Industrial and Commercial Power Systems

5. IEEE 399 — Recommended Practice for Industrial and Commercial Power System Analysis

6. IEEE 551 — Recommended Practice for Calculating Short-Circuit Currents in Industrial and Commercial Power Systems

7. IEEE 1015 — Recommended Practice for Applying Low-Voltage Circuit Breakers Used in Industrial and Commercial Power Systems

8. IEEE 1584 - Guide for Performing Arc-Flash Hazard Calculations.

C. American National Standards Institute (ANSI):

1. ANSI C37.010 — Standard Application Guide for AC High-Voltage Circuit Breakers Rated on a Symmetrical Current Basis

2. ANSI C37.13 — Standard for Low-Voltage AC Power Circuit Breakers Used in Enclosures

3. ANSI C37.41 — Standard Design Tests for High-Voltage Fuses, Fuse and Disconnecting Cutouts, Distribution Enclosed Single-Pole Air Switches, Fuse Disconnecting Switches, and Fuse Links and Accessories Used with These Devices.

4. ANSI C57.12.00 — Standard General Requirements for Liquid-Immersed Distribution, Power, and Regulating Transformers

D. Code of Federal Regulations:

1. CFR 29, Subpart R, Part 1910.269, Occupational Safety and Health Standards - Electric Power Generation, Transmission, and Distribution.

2. CFR 29, Subpart S, Part 1910.301 through 1910.399, Occupational Safety and Health Standards - Electrical.

E. The National Fire Protection Association (NFPA):

1. NFPA 70 - National Electrical Code, 2008 edition and NYC amendments (2011)

2. NFPA 70E — Standard for Electrical Safety in the Workplace

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Computer Software Information

1. Submit product literature/brochure for computer software to be utilized for the studies. Submit computer software statement of compliance with IEEE, ANSI, and NFPA 70E standards and requirements.

C. Qualification Information

1. Submit qualification information specified in Part 1.6 herein.

D. Utility Information

1. Submit letter from utility with available short circuit current value at the main service switchboard. As a minimum, the utility letter shall include the following: project address, service voltage and configuration, main service switchboard amperage, short circuit current (3-phase and phase-ground), 3-phase and phase- ground X/R ratios, service transformer kVA and impedance, and service conductor size, number, and length.

E. Study Results and Report

1. The results of the Short-Circuit and Protective Device Evaluation Study, Protective Device Coordination Study, and Arc-Flash Hazard Study shall be summarized in a well-organized, comprehensive report. The report shall address all study requirements specified in Part 2 herein. A sample outline for the report is provided below:

   a. Section 1 - Executive Summary

   b. Section 2 - Short-Circuit and Protective Device Evaluation Study

      i. Short-Circuit Analysis Objectives
      ii. System Modeling
      iii. Short-Circuit Results
      iv. Equipment, Material, and Protective Device Evaluation

   c. Section 3 - Protective Device Coordination Study

      i. General Description and Protection Philosophy
      ii. Codes and Standards
      iii. Coordination Objectives
      iv. Coordination Results
      v. Coordination Recommendations
      vi. Time-Current Characteristic Plots

   d. Section 4 - Recommended Protective Device Settings

   e. Section 5 - Short-Circuit Analysis Computer Reports

      i. Report Interpretation
      ii. Short-Circuit Input Data Report

iii. Short-Circuit Analysis Results Report - Utility Source
iv. Short-Circuit Analysis Results Report - Generator Source
v. Short-Circuit Analysis Results Report - Single-Phase

f. Section 6 - Arc-Flash Hazard Study

i. General Description
ii. Analysis Procedure
iii. Arc-Flash Analysis Results
iv. Arc-Flash Analysis Recommendations
v. Arc-Flash Labels and Location Drawings

g. Section 7 - Single Line Diagrams

i. Power System Study Diagram
ii. Reference Drawing Single Line Diagrams

2. Unless specified otherwise, Contractor shall provide all computer software project study files to the City of New York in electronic format. In addition, a copy of the computer analysis software viewer program shall be provided with the electronic project files, to allow the Commissioner to review all aspects of the project and print single line diagrams, arc-flash labels, etc.

E. Coordination of Studies and Equipment Submittals

1. The Short-Circuit and Protective Device Coordination Studies shall be submitted to the Commissioner prior to receiving final acceptance of the related equipment shop drawings and prior to equipment fabrication. If formal completion of the studies may cause delay in equipment fabrication and delivery, approval from the Commissioner may be obtained for preliminary submittal of sufficient study data to ensure that the proposed equipment ratings and protective device selection/characteristics will be satisfactory.

1.6. QUALIFICATIONS

A. The firm performing the specified studies shall be experienced in the application of computer software used for power system studies, and shall have performed studies of similar magnitude on electrical systems using similar equipment and devices.

B. The short-circuit, protective device coordination, and arc-flash hazard studies shall be conducted under the direct supervision and control of a Professional Electrical Engineer licensed in the State of New York skilled in performing and interpreting the power system studies. Each study report shall be signed and stamped by that Professional Electrical Engineer.

PART 2 - PRODUCTS

2.1. GENERAL REQUIREMENTS

A. Short-Circuit and Protective Device Evaluation Study, Protective Device Coordination Study, and Arc-Flash Hazard Study shall be performed by the same entity.

B. The studies shall be submitted prior to fabrication of any electrical distribution equipment. Written approval will be required prior to equipment fabrication.

C. The studies shall include all portions of the electrical system including the electric utility power source and emergency power sources, and contributions from inductive loads on low voltage (208V) distribution system.

D. All induction motors greater than 50 HP shall be included individually with associated starters and feeder impedance. Unless specified otherwise, all induction motors 50 HP or less and fed from the same bus may be grouped together.

E. Normal system connections and those which result in maximum fault conditions shall be adequately evaluated in the studies.

F. The studies shall be performed using analysis software. Software shall comply with all applicable IEEE, ANSI, and NFPA 70E standards and requirements.

2.2. DATA COLLECTION

A. Contractor shall be responsible to collect all data as required for the power system studies.

B. The firm performing the system studies shall furnish the Contractor with a listing of the required data and the Contractor shall expedite collection of the data to assure completion of the studies prior to final approval of the distribution equipment shop drawings and/or release of the equipment for manufacture.

C. As a minimum, the following input data shall be collected and tabulated:

1. Product data for overcurrent protective devices involved in overcurrent protective device coordination studies. Use equipment names/tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.

2. Minimum and maximum fault contribution, impedance, and X/R ratio of the electric power utility service transformer. Rating, type, and settings of the primary overcurrent protective device that protects the service transformer. Conductor data from the protective device to the service transformer. Contractor shall obtain the required electrical service information directly from the electric power utility. Contractor shall be responsible for all coordination and costs associated with obtaining the utility information.

3. Ampacity and interrupting rating in amperes RMS symmetrical for all switchboards, motor control centers, and panelboards.

4. Circuit breaker and fuse current ratings and types within each switchboard, motor control center, panelboard, variable frequency drive, and equipment control panel.

5. Manufacturer, frame size, interrupting rating in amperes RMS symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.

6. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.

7. Time-current-characteristic curves of protective devices indicated to be coordinated.

8. Distribution system transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.

9. Standby generator kVA, size, voltage, source impedance, and thermal- damage curve.

10. Conductors: conduit material, sizes of conductors, number of conductors per phase, conductor material, insulation, and length.

11. Motor horsepower and code letter designation according to NEMA MG 1. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.

D. Contractor shall obtain required existing equipment data as necessary to satisfy the study requirements.

2.3. SINGLE LINE DIAGRAM

A. A single line diagram of the electrical distribution system shall be prepared in hard-copy and electronic-copy formats.

B. As a minimum, the single line diagram shall show the following:

1. All individual switchboard, motor control center, and panelboard equipment buses with voltage, bus ampere ratings, and short-circuit current ratings.

2. Circuit breaker and fuses with current ratings, amperes interrupting ratings, and types.

3. Motors labeled with horsepower and code letter designation according to NEMA MG 1.

4. Conductor and bus connections between the equipment.

5. Conductor sizes, number of conductors per phase, conductor material and insulation, conductor length, and conduit material.

6. Transformers labeled with size (kVA), voltage, configuration, impedance, and X/R ratio.

7. Generators labeled with size (kVA), voltage, and source impedance.

8. Transfer switches labeled with ampere rating and short-circuit current rating.

2.4. SHORT-CIRCUIT AND PROTECTIVE DEVICE EVALUATION STUDY

A. Use actual conductor impedances if known. If unknown, use typical conductor impedances based on IEEE Standard 141.

B. Transformer design impedances shall be used when test impedances are not available.

C. As a minimum, provide the following:

1. Calculation methods and assumptions
2. Selected base per unit quantities
3. Source impedance data, including electric power utility system and motor fault contribution characteristics
4. Single line diagram of the system being evaluated with available fault at each bus, and interrupting rating of devices noted
5. Results, conclusions, and recommendations.

D. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault at each:

1. Electric power utility's supply termination point
2. Incoming switchgear
3. Unit substation primary and secondary terminals
4. Low voltage switchgear and/or switchboard
5. Motor control center
6. Distribution panelboard
7. Branch circuit panelboard
8. Variable frequency drive
9. Standby generator and automatic transfer switch
10. Equipment control panels
11. Other significant locations throughout the system.

E. For grounded systems, provide a bolted line-to-ground fault current study for areas as defined for the three-phase bolted fault short-circuit study.

F. Equipment, Material, and Protective Device Evaluations:

1. Evaluate equipment and protective devices and compare to proposed short-circuit ratings.
2. Evaluate adequacy of switchgear, switchboard, motor control center, and panelboard bus bars/bracing to withstand short-circuit stresses.
3. Evaluate adequacy of transformer windings to withstand short-circuit stresses.
4. Evaluate conductors and busways for ability to withstand short-circuit heating.
5. Identify any existing circuit protective devices improperly rated for the calculated available fault current.
6. Tabulate all evaluation results.

2.5. PROTECTIVE DEVICE COORDINATION STUDY

A. Perform the protective device study using the approved computer software program. Utilize the results of the short-circuit analysis. Coordination study shall be performed in compliance with IEEE 399.

1. Model 1/2 cycle network (sub-transient network), 1.5 to 4 cycle network (transient), and 30 cycle network (steady-state network). Calculate 1/2 cycle, 1.5 to 4 cycle, and 30 cycle balanced and unbalanced faults for 3- phase, L-G, L-L, and L-L-G.
2. Calculate the maximum and minimum 1/2 cycle short-circuit currents.
3. Calculate the maximum and minimum interrupting duty (5 cycles to 2 seconds) short-circuit currents.
4. Calculate the maximum and minimum ground-fault currents.

B. Fault currents and time intervals shall comply with IEEE 241 recommendations.

C. Protect conductors against damage from fault currents according to Insulated Cable Engineers Association (ICEA) Publication P-32-382, ICEA P-45-482, and conductor melting curves in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

D. Protect transformers against damage from through-fault currents according to ANSI C57.109, IEEE C57.12.00, and IEEE 242.

E. Provide computer software generated time-current characteristic (TCC) plots of all overcurrent protective devices on log-log sheets graphically indicating the coordination for all of the key systems.

F. Perform a sequence of operation that evaluates, verifies, and confirms the operation and selectivity of the protective devices for various types of faults via normalized TCC plots and the single-line diagram. Provide adequate time margins between device characteristics such that selective operation is provided, while providing proper protection.

G. Establish settings and/or ratings of overcurrent protective devices to achieve selective coordination between devices. Graphically illustrate that adequate time separation exists between devices installed in series, including electric power utility's upstream devices. Prepare separate sets of plots for the switching schemes and for emergency periods where the power source is via the emergency standby generator(s).

H. On each TCC plot, include reference voltage, a complete title, and single line diagram with legend identifying the specific portion of the system covered.

I. Identify the device associated with each curve by device designation/tag, manufacturer, type, and function. Terminate the protective device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device will be exposed.

J. The electric power utility's relay, fuse, or protective device shall be plotted with all load protective devices at the same voltage.

K. Transformer primary protective device, transformer magnetic inrush, transformer ANSI withstand points, secondary voltage fuse or circuit breaker and largest feeder fuse or circuit breaker shall be plotted at the secondary voltage.

L. Fuse curves shall include no damage, melting, and clearing curves as applicable.

M. Circuit breaker curves shall include complete operating bands, terminating with the appropriate available short-circuit current.

N. When the main circuit breaker is provided with an arc-flash reduction maintenance system to reduce the arc fault level, both settings shall be included in the study.

O. Low voltage circuit breakers with adjustable overcurrent protection shall have instantaneous, short delay, and long-time pick-up identified on the plot. Low voltage circuit breakers with ground fault protection shall have ground fault trip settings, ground fault ampere, and time delay settings identified on the plot. Sensor or monitor rating shall be stated for each circuit breaker. All regions of the circuit breaker curve shall be identified.

P. Feeder circuit breakers shall have the time-damage curve of the feeder conductors plotted to indicate protection of the conductor insulation at the total clearing time of the circuit breaker or fuse. This time-damage point shall be calculated for the specific parameters of conductor insulation used, with average 3 phase RMS asymmetrical amperes at 1/2 cycle calculated using actual resistance and reactance values of the source plus all motor contributions which exist at the load end of the feeder conductors. Conductor initial temperature and conductor maximum transient temperature for short-circuits, as recommended by ICEA, shall be indicated.

Q. The coordination plots shall include significant motor starting characteristics and large motor protective devices.

R. As a minimum, TCC coordination plots shall be provided for the following:

1. Electric power utility's overcurrent protective device
2. Medium voltage equipment overcurrent relays
3. Medium and low voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands
4. Low voltage circuit breakers and fuses, including manufacturer's tolerance bands
5. Transformer full-load and 150, 400, or 600 percent currents, magnetizing inrush current, and ANSI through-fault protection curves
6. Conductor damage curves
7. Ground fault protective devices, as applicable
8. Pertinent motor starting characteristics and motor damage points. For motor control circuits, show motor control center full-load current plus symmetrical and asymmetrical of the largest motor starting current and time to ensure protective devices will not trip during major or group start operation.
9. Pertinent generator short-circuit decrement curve and generator damage point, where applicable. Provide phase and ground coordination of the generator protective devices. Obtain the required input information from the generator manufacturer and include the generator actual impedance value, time constants, and current boost data in the study. Do not use typical values for the generator.
10. Other system load protective devices, including branch circuits and feeder circuit breakers in each motor control center, and main circuit breaker in each branch panelboard.

S. A summary tabulation shall be provided listing the designation/tag, manufacturer, and type for all overcurrent and ground fault protective devices, and all recommended settings of each adjustable band included for each device.

T. Provide an evaluation of the degree of system protection and service continuity possible with the overcurrent devices supplied.

2.6. ARC-FLASH HAZARD STUDY

A. The arc-flash hazard study shall be performed according to the IEEE 1584 guidelines and equations presented in NFPA 70E-2015, Annex D. The analysis shall be performed in conjunction with the Short-Circuit and Protective Device Evaluation Study, and the Protective Device Coordination Study.

B. The flash-protection boundary and the incident energy shall be calculated at all equipment locations in the electrical distribution system where work could be performed on energized parts, including, but not limited to, the following: switchboards, motor control centers, panelboards, busway and splitters, and equipment control panels.

C. The Arc-Flash Hazard Study shall include all 208V locations. In addition, the Arc-Flash Hazard Study shall include all DC locations of 5OV or greater.

D. Safe working distances shall be based upon the calculated arc-flash boundary considering an incident energy of 1.2 cal/sq cm.

E. When appropriate, the short-circuit calculations and the clearing times of the overcurrent protective devices shall be retrieved from the short-circuit and protective device coordination study model. Ground overcurrent relays should not be taken into consideration when determining the clearing time when performing incident energy calculations.

F. The short-circuit calculations and the corresponding incident energy calculations for multiple system scenarios shall be compared, and the greatest incident energy shall be uniquely reported for each equipment location. Calculations shall be performed to represent the maximum and minimum contributions of fault current magnitude for all normal and emergency operating conditions. The minimum calculation shall assume that the electric power utility contribution is at a minimum and shall assume a minimum motor contribution (all motors off). Conversely, the maximum calculation shall assume a maximum contribution from the electric power utility and shall assume the maximum amount of motors to be operating under full-load conditions. Calculations shall take into consideration the parallel operation of synchronous generators with the electric power utility, where applicable.

G. The incident energy calculations shall consider the accumulation of energy over time when performing arc-flash calculations on buses with multiple sources. Iterative calculations shall take into account the changing current contributions, as the sources are interrupted or decremented with time. Fault contribution from motors and generators shall be decremented as follows:

1. Fault contribution from induction motors should not be considered beyond 3-5 cycles.

2. Fault contribution from synchronous motors and generators should be decayed to match the actual decrement of each as closely as possible (e.g. contributions from permanent magnet generators will typically decay from 10 per unit to 3 per unit after 10 cycles).

H. For each equipment location with a separately enclosed main device (where there is adequate separation between the line side terminals of the main protective device and the work location), calculations for incident energy and flash-protection boundary shall include both the line and load side of the main breaker.

I. When performing incident energy calculations on the line side of a main breaker (as required per above), the line side and load side contributions shall be included in the fault calculation.

J. Mis-coordination shall be checked amongst all devices within the branch containing the immediate protective device upstream of the calculation location and the calculation shall utilize the fastest device to compute the incident energy for the corresponding location.

K. Arc-flash calculations shall be based on actual overcurrent protective device clearing time. Maximum clearing time will be capped at 2 seconds based on IEEE 1584, Section B.1.2. Where it is not physically possible to move outside of the flash-protection boundary in less than 2 seconds during an arc-flash event, a maximum clearing time based on the specific location shall be utilized.

L. Determine incident energy and arc-flash PPE requirements for each equipment location. For main circuit breakers with arc-flash reduction maintenance systems, determine two (2) incident energies (one for normal duty and one for maintenance duty).

M. Calculate shock hazard approach boundaries (limited approach boundary and restricted approach boundary) for each equipment location.

N. Provide recommendations to reduce arc-flash hazard energy and exposure.

O. Coordinate with manufacturers/suppliers of the electrical equipment.

2.7. STUDY DATA

A. The results of all study calculations, analyses, evaluations, and determinations specified in Part 2 herein shall be presented in a detailed, comprehensive report. In addition, data from the computer software analyses shall be included in the study report along with data evaluation and recommendations. Computer analysis data, data evaluation, and recommendations shall include, but not be limited to, the following:

B. Study Input Data

1. Feeder input data including feeder type (cable or bus), size, length, number per phase, conduit type (magnetic or non-magnetic) and conductor material (copper or aluminum).

2. Transformer input data, including winding connections, secondary neutral-ground connection, primary and secondary voltage ratings, kVA rating, impedance, percent taps and phase shift.

3. Reactor data, including voltage rating, and impedance.

4. Generation contribution data, (synchronous generators and electric power utility), including short-circuit reactance (X"d), rated MVA, rated voltage, three-phase and single-line to ground contribution (for electric power utility sources) and X/R ratio.

5. Motor contribution data (induction motors and synchronous motors), including short-circuit reactance, rated horsepower or kVA, rated voltage, and X/R ratio.

C. Short-Circuit Study

1. Low Voltage Fault Report shall include a section for three-phase and unbalanced fault calculations and shall show the following information for each applicable location:
   a. Voltage (600V and less)
   b. Calculated fault current magnitude and angle
   c. Fault point X/R ratio

d. Equivalent impedance

D. Protective Device Coordinating Study:

1. Recommendations for Phase and Ground Relays:

a. Current transformer ratio
b. Current setting
c. Time setting
d. Instantaneous setting
e. Recommendations on improved relaying systems, if applicable.

2. Recommendations for Circuit Breakers:

a. Adjustable pickups and time delays (long time, short time, ground)
b. Adjustable time-current characteristic
c. Adjustable instantaneous pickup
d. Recommendations on improved trip systems, if applicable.

E. Arc-Flash Hazard Study:

1. Incident Energy Calculations:

a. Arcing fault magnitude
b. Protective device clearing time
c. Duration of arc
d. Incident energy

2. Arc-Flash Protection Boundary Calculations and Recommendations:

a. Arc-flash boundary
b. Shock hazard approach boundaries
c. Personal protective equipment
d. Recommendations for arc-flash energy reduction.

2.8. IMPLEMENTATION OF STUDY RESULTS

A. Prior to fabrication, Contractor shall coordinate the study results with the manufacturers and suppliers of electrical equipment to incorporate the recommendations and modifications therein.

2.9. ARC-FLASH AND SHOCK HAZARD LABELS

A. General

1. Labels shall be 4" x 6" thermal transfer type labels of UV resistant high adhesion polyester. Labels shall be machine printed, with no field markings.

2. Labels shall comply with the requirements of the NEC, NPFA 70E, and ANSI Z535.4.

3. All labels shall be based on recommended overcurrent protective device settings and shall be provided after the results of the analyses have been accepted by the Commissioner and after any system changes, upgrades or modifications have been incorporated into the system.

4. In general, the arc-flash labels shall be based on the maximum calculated incident energies for the worst case operating scenario. However, where arc-flash reduction maintenance systems are specified, provide two (2) sets of arc-flash labels (one for normal duty and one for maintenance duty).

5. The firm performing the Study shall provide all labels. Equipment elevations drawings showing the location of each label shall be prepared by the firm performing the Study.

6. For outdoor electrical panels with interior enclosures and outer NEMA 3R wrappers, labels shall be provided on both outer and inner doors, as follows:

   a. For incident energy levels less than 40 cal/sq cm, each outer door section shall be provided with a warning label stating "WARNING, ARC-FLASH AND SHOCK HAZARD, APPROPRIATE PPE REQUIRED". The label color scheme shall match the inner arc-flash warning label.

   b. For incident energy levels greater than 40 cal/sq cm, each outer door section shall be provided with a danger label stating "DANGER, ARC-FLASH AND SHOCK HAZARD, NO SAFE PPE EXISTS, ENERGIZED WORK PROHIBITED". The label color scheme shall match the inner arc-flash danger label.

   c. Inner doors shall be provided with arc-flash labels as specified in Parts B and C below.

7. Labels shall be provided for each switchboard, distribution panel, transfer switch (automatic or manual), motor control center, variable frequency drive, distribution panelboard, branch circuit panelboard, busway, enclosed circuit breaker and disconnect switch in a readily visible location in accordance with NEC and OSHA requirements.

8. Where incident energy levels vary across a panel line-up, such as a motor control center, a separate label shall be provided for each section or compartment with a different incident energy level. As a minimum, labels shall be installed every four feet.

B. Warning Labels

1. Warning labels shall be white with an orange stripe and black letters.

2. Warning labels shall include the following information:

   a. "WARNING, ARC-FLASH AND SHOCK HAZARDS, APPROPRIATE PPE REQUIRED".
   b. Arc-flash hazard boundary.
   c. Available incident energy (cal/sq cm) and working distance.
   d. Recommended (minimum) PPE from NFPA Table 70E H.3(b)
   e. Maximum available fault current (Isc).
   f. Shock hazard when cover is removed.
   g. Glove class.
   h. Limited approach distance.
   i. Restricted approach distance.
   j. Equipment description and location.

k. Protective device description.
l. Operating scenario
m. Firm identification (prepared by).
n. Label preparation date

C. Danger Labels

1. Danger labels shall be white with a red warning stripe and black letters. A sample danger label is presented at the end of this Section.

2. Danger labels shall include the following information:

a. "DANGER, ARC-FLASH AND SHOCK HAZARDS, ENERGIZED WORK PROHIBITED".
b. Arc-flash hazard boundary.
c. Available incident energy (cal/sq cm) and working distance.
d. No safe PPE exists — Do not work on equipment while energized.
e. Available fault current (Isc).
f. Shock hazard when cover is removed.
g. Glove class.
h. Limited approach distance.
i. Restricted approach distance.
j. Equipment description and location.
k. Protective device description.
l. Operating Scenario.
m. Firm identification (prepared by).
n. Label preparation date.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PROTECTIVE DEVICE SELECTION AND SETTING

A. Field setting of the protective devices shall be performed as required to place the equipment in final operating condition. The settings shall be in accordance with the approved short-circuit study, protective device evaluation study, and protective device coordination study. Confirmation of protective device selection and performance of device field setting shall be witnessed and verified by the testing consultant performing electrical system testing or by the firm performing the studies.

B. Contractor shall set all relays, overcurrent devices and ground fault protection devices, and confirm selection of fuse overcurrent devices as follows:

1. Relays: Reset all adjustable relay settings from factory defaults settings to the settings recommended in the studies specified herein.

2. Circuit Breakers: Reset all adjustable trip settings from factory default settings to the settings recommended in the studies specified herein.

3. Ground Fault Protection Devices: Reset all adjustable device settings from the factory defaults settings to the settings recommended in the studies specified herein.

4. Fuses: Confirm that fuse types installed on the project are as recommended in the studies specified herein.

C. Necessary field adjustments of devices and minor modifications to equipment to accomplish conformance with the approved studies shall be performed at no additional cost to the City of New York.

D. Contractor shall verify the proper short-circuit duty and amperage rating of all protective devices and bussing. Equipment short-circuit duty and amperage ratings shall be in accordance with the Drawings and equipment specifications, and shall meet or exceed the ratings recommended in the studies specified herein.

3.3. ARC-FLASH AND SOCK HAZARD LABEL INSTALLATION

A. Affix arc-flash and shock hazard labels to all electrical equipment as required by NFPA 70 and NFPA 70E.

B. Install labels in accordance with the approved label location drawings and as specified herein.

3.4. FIELD REPORT

A. The firm witnessing the confirmation of protective device selection and performance of device field setting shall provide a detailed report showing that selections and settings of protective devices are in compliance with the studies and requirements specified herein. In addition, the report shall include a photographic record of all installed arc- flash labels, including locations. The report shall be submitted for acceptance as a submittal document.

END OF SECTION 260573

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 26 08 00
COMMISSIONING OF ELECTRICAL

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project: (1) the contract drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. This section includes commissioning process requirements for Electrical systems, assemblies, and equipment.

B. Related Sections:

1. Refer to DDC General Conditions for commissioning process requirements.

1.3 DESCRIPTION

A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a complete design or installing Sub-Contractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.

B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:

1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing Sub-Contractors.
2. Verify and document proper performance of equipment and systems.
3. Verify that Operation & Maintenance documentation is complete and transferred to City of New York.
4. Verify that proper orientation program has been implemented for the City of New York service personnel.
5. Ensure that provisions are in place for a post occupancy review with O&M staff within 10 months after Substantial Completion.

C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.

D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the City of New York, Contractor, Sub-Contractors, manufacturers and equipment suppliers.

E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

A. Refer to DDC General Conditions for definitions.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for CxA's role.

B. Refer to DDC General Conditions for specific submittal requirements. In addition, provide the following:

1. Certificates of readiness
2. Certificates of completion of installation, prestart, and startup activities.
3. O&M manuals
4. Field / factory Test reports

1.6 QUALITY ASSURANCE

A. Test Equipment Calibration Requirements: The Contractor will comply with test equipment manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

A. Refer to DDC General Conditions for requirements pertaining to coordination during the commissioning process.

PART II - PRODUCTS

2.1 TEST EQUIPMENT

A. The Contractor shall ensure that the equipment and system perform startup, initial checkout and functional performance testing as outlined in the DDC General Conditions. For example, the Contractor shall ultimately be responsible for all standard testing equipment for the electrical systems and control systems in Division 26. A sufficient quantity of two-way radios shall be provided by the Contractor.

B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.

C. Test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. The Contractor shall ensure that the manufacturer provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.

D. If required and necessary, data logging equipment and software required for testing will be provided by the CxA, but shall not become the property of the City of New York.

E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications.

PART III - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

A. The Contractor shall cause the Sub-Contractor(s) to provide instruction responsibility to the CxA in preparing Installation Check Sheets for all commissioned components, equipment, and systems.

B. Red-lined Drawings:

1. The Contractor shall cause the Sub-Contractor(s) to verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
4. The Contractor will create the as-built drawings.

C. Operation and Maintenance Data:

1. The Contractor shall cause the Sub-Contractor to provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
2. The CxA will review the O&M literature once for conformance to project requirements.
3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.

D. Demonstration and Instruction:

1. The Contractor shall cause the Sub-Contractor to provide demonstration and operator's instruction as required by the contract documents.
2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any such event.
3. Agenda for each instruction session shall be submitted to the CxA at least one (1) week prior to the session.

4. The CxA shall be notified at least seventy-two (72) hours in advance of scheduled tests so that testing may be observed by the CxA. A copy of the test record shall be provided to the CxA and Commissioner.
5. Engage a Factory-authorized service representative to demonstrate City of New York service personnel to adjust, operate, and maintain specific equipment.
6. Instruct City of New York service personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
7. Review and update data in O&M Manuals.

3.2 CONTRACTOR RESPONSIBILITIES FOR SUB-CONTRACTOR PERFORMANCE

A. The Contractor shall cause the specified Sub-Contractor to have the following instruction responsibilities in performing electrical System work: The commissioning responsibilities are as follows (all references apply to commissioned system and equipment only):

1. Perform commissioning tests as per the written procedures and at the direction of the CxA
2. Attend construction phase controls coordination meetings.
3. Participate in Electrical systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
4. Provide information requested by the CxA for final commissioning documentation.
5. Include requirements for submittal data, operation and maintenance data, and instruction in each purchase order or sub-contract written.
6. Prepare preliminary schedule for Electrical system orientations and inspections, operation and maintenance manual submissions, instruction sessions, equipment start-up and task completion for the Commissioner. Distribute preliminary schedule to commissioning team members.
7. Update schedule as required throughout the construction period.
8. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
9. Perform all verification and functional performance tests in the presence of the CxA as required.
10. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
11. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA forty five (45) days after submittal acceptance.
12. Coordinate with the CxA to provide seventy-two (72) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
13. Notify the CxA a minimum of (2) weeks in advance for start of the testing work.
14. Participate in, and schedule vendors and respective Sub-Contractors to participate in the operator's orientation sessions.

15. Provide written notification to the CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
    a. Electrical equipment including switchgear, panel boards, motor control centers, lighting, receptacles, and all other equipment furnished under this Division.
    b. Fire alarm system
    c. Lighting System
16. The Contractor shall ensure that the equipment suppliers documents the performance of their equipment.
17. The Contractor shall ensure equipment Suppliers perform the following tasks:
    a. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York, to keep warranties in force.
    b. Assist in equipment testing per agreements.
    c. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
18. The Contractor shall attend the 10-month warranty walkthrough with the facility representative and the CxA.
19. Provide instruction of the City of New York service personnel using qualified personnel, as specified.
20. Refer to DDC General Conditions for additional responsibilities.

3.3 CxA's RESPONSIBILITIES

A. Refer to DDC General Conditions for CxA's Responsibilities.

3.4 TESTING PREPARATION

A. Certify in writing to the CxA that Electrical systems, subsystems, and equipment have been installed, meggered, calibrated, and started and are operating according to the Contract Documents.

B. Certify in writing to the CxA that Electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.

D. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

E. Inspect and verify the position of each device and interlock identified on checklists.

F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.

G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 GENERAL TESTING REQUIREMENTS

A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of Electrical testing shall include the entire Electrical installation, from the incoming power equipment throughout the distribution system. Testing shall include measuring, but not limited to resistance, voltage, and amperage of system(s) and devices.

C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

D. The Contractor and other Sub-Contractors, including trade performing fire alarm work shall prepare detailed testing plans, procedures, and checklists for Electrical systems, subsystems, and equipment with guidance from CxA.

E. Tests will be performed using design conditions whenever possible.

F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

G. The CxA may direct that set points be altered when simulating conditions is not practical.

H. If tests cannot be completed because of a deficiency outside the scope of the Electrical system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

I. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.6 GENERAL REQUIREMENT FOR PV SYSTEM

A. PV System is defined as all components required for a complete installation per project specifications, (Photovoltaic Panels, Panel Mounting Racks, Inverters, Inverter Interfaces, Disconnects, Isolation Transformers, Safeties, Meters, Alarms, Displays, Wiring, Conduit, etc.)

B. Verify that PV System was constructed, shipped and installed with all options specified.

C. Provide a complete list of nameplate data and serial number(s) for all PV System components.

D. Document dates, times, operating conditions and names of parties involved with any tests performed.

E. Each test form shall be reviewed and signed by the Contractor. The Contractor has the responsibility to inform the City of New York and CxA if the test is identified to be witnessed.

F. The Contractor shall document procedures, forms and submissions required to initiate & maintain manufacturer's warranty.

G. The Contractor shall provide copies of all applicable Operation & Maintenance instructions.

H. List all rejected items, failed tests, abnormalities observed or remedial action required by the Commissioner that were not completely rectified during construction punchlist process. After deficiencies are resolved, reschedule tests.

I. Refer to DDC General Conditions for additional contract and responsibilities.

3.7 ELECTRICAL SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in Division 26. Provide submittals, test data, inspector record, infrared camera and certifications to the CxA.

B. Electrical Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 26. Assist the CxA with preparation of testing plans.

C. Fire Detection and Alarm System Testing: The Contractor shall provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

D. Electrical Distribution System Testing: The Contractor shall provide technicians, load banks, infrared cameras, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested

E. Variable Frequency Drive System Testing: The Contractor to prepare a variable frequency drive system testing plan to include tuning to minimize vibration. The Contractor to coordinate witnessing of testing with CxA.

F. Vibration and Sound Tests: The Contractor shall provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

G. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The scope of commissioning work shall include but not limited to the following equipment and systems:

1. Electrical Main Switchboards and Transformers
2. Electrical Distribution system and panels.
3. Lighting and Lighting Controls
4. Fire Alarm Systems
5. Generators
6. ATS
7. PV Systems
8. Solar Hot Water Heaters
9. Pull the Plug Testing

3.8 PV SYSTEM AND EQUIPMENT FOR TESTING PROCEDURES

A. The Contractor shall ensure PV Sub-Contractor perform the following tasks:

1. Confirm wiring has been completed and protection devices, (fuses, heaters, breakers, etc.), have been installed to meet applicable specifications for all PV System components installed.
2. Verify all disconnect and/or H-O-A switches have been installed and tested.
3. Ensure all pilot lights, control switches, touchpads and operating displays are fully functional.
4. Document that unit has been programmed for the specific type of installation outlined in specifications.
5. Verify PV System failure modes, (Power failure, Over current, Under voltage, etc.), have been reviewed with the Commissioner to ensure they meet facility Standard Operating Procedures.
6. Check and document that all PV System start-up, transfer to grid, transfer from grid, shutdown and failure modes have been tested.
7. If applicable, document that all remote monitoring or EMCS network interfaces with PV System operating parameters, faults or alarms have been tested and calibrated.
8. If applicable, enable password protection of PV System programming and confirm password matrix of access levels and privileges has been approved and implemented per the City of New York's requirement.
9. Provide list of all PV System programming parameters and settings.
10. Any non-permanent or disposable batteries have been installed and tested and all battery locations, types, and recommended replacement intervals have been documented.
11. Document that all factory recommended start-up and check-out procedures have been completed.
12. Measure and document both DC open circuit voltage (Voc), short circuit current (Isc), and peak power (Pp), and AC voltage, frequency, amperage, and power factor at multiple sunlight and temperature conditions to establish an operating baseline and ensure they are within manufacturer's specifications. Ensure that factory performance test results of all modules have been received and properly recorded.
13. If applicable, document monitoring of PV System through dial-up or Internet connection has been completed and tested with lists of all phone numbers, modem settings, IP addresses, passwords, etc.
14. Confirm layout, orientation and slope/tilt of PV Panel Modules & Grid System match specifications.
15. Ensure all PV System component locations are not subject to temperatures beyond manufacturer's published operating limits.
16. Check that adequate clearances exist for cooling air and routine service of all PV System components.
17. Verify locations of electronic enclosures are not subject to excessive moisture, spray, or dirt.

18. Make sure all exterior enclosure penetrations are watertight and/or do not void weather ratings.
19. Confirm equipment, component, and device labels, tags or signs have been installed per specifications.
20. Ensure that mounting hardware does not subject modules to physical stress, i.e. check that structural elements are straight and not twisted.
21. Perform visual inspection of all modules to check for cracked cells.
22. Check the location and orientation of all sensors, (anemometers, air temperature, PV cell temp, pyranometer, etc.) to ensure they are installed per manufacturer's instructions and will not experience interference from adjacent surfaces or structures.
23. Document calibration of all sensors through full range of operating conditions

3.9 SEASONAL TESTING

A. Refer to DDC General Conditions for requirements pertaining to seasonal testing.

3.10 OPERATION AND MAINTENANCE MANUALS

A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements.

B. Refer the DDC General Conditions for the requirements for the Contractor and CxA roles in the Operation and Maintenance Manual contribution, review, and approval process.

3.11 INSTRUCTION OF FACILTY PERSONNEL

A. Refer to DDC General Conditions for requirements pertaining to instruction.

B. The Contractor shall have the following instruction responsibilities:

1. Provide the CxA with an instruction plan four weeks before the planned instruction.
2. Provide the City of New York service personnel with comprehensive instruction in the understanding of the systems and the operation and maintenance of each major piece of commissioned electrical equipment or system.
3. Instruction shall be recorded by the CxA and start with classroom sessions, if necessary, followed by hands on instruction on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing Sub-Contractor or manufacturer's representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.

6. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference. Instruction shall include but not limited to:
   a. Use the printed installation, operation and maintenance instruction material included in the O&M manuals.
   b. Include a review of the written O&M instructions emphasizing safe and proper operating requirements, preventative maintenance, special tools needed and spare parts inventory suggestions. The instruction shall include start-up, operation in all modes possible, shut-down, seasonal changeover and any emergency procedures.
   c. Discuss relevant health and safety issues and concerns.
   d. Discuss warranties and guarantees.
   e. Cover common troubleshooting problems and solutions.
   f. Explain information included in the O&M manuals and the location of all plans and manuals in the facility.
   g. Discuss any peculiarities of equipment installation or operation.
7. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance of all pieces of equipment.
8. The Contractor shall fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.
9. Instruction shall occur after functional testing is complete, unless approved otherwise by the Commissioner.

END OF SECTION 26 08 00

SECTION 260923
Lighting Control Devices

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only

1.2. SUMMARY

A. This Section includes the following lighting control devices:

1. Time switches.
2. Outdoor and indoor photoelectric switches.
3. Indoor occupancy sensors.
4. Outdoor motion sensors.
5. Lighting contactors.
6. Emergency shunt relays.

B. Related Sections include the following:

1. Section 262726 "Wiring Devices" for wall-box dimmers, wall-switch occupancy sensors, and manual light switches.

1.3. DEFINITIONS

A. LED: Light-emitting diode.

B. PIR: Passive infrared.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Shop Drawings: Show installation details for occupancy and light-level sensors.

1. Interconnection diagrams showing field-installed wiring.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to NYC Department of Buildings, and marked for intended use.

1.6. COORDINATION

A. Coordinate layout and installation of ceiling-mounted devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, smoke detectors, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.1. TIME SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide:

1. Wattstopper,Inc
2. Area Lighting Research, Inc.; Tyco Electronics.
3. Leviton Mfg. Company Inc.
4. Lightolier Controls; a Genlyte Company.
5. Lithonia Lighting; Acuity Lighting Group, Inc.
6. Square D; Schneider Electric.
7. TORK.
8. Philips Lighting Controls.
9. Or Approved Equal

B. Electronic Time Switches: Electronic, solid-state programmable units with alphanumeric display; complying with UL 917.

1. Contact Configuration: DPST.
2. Contact Rating: 20-A ballast load, 120/240-V ac.
3. Programs: 20 channels; each channel shall be individually programmable with 8 on-off set points on a 24-hour schedule.
4. Circuitry: Allow connection of a photoelectric relay as substitute for on-off function of a program on selected channels.
5. Astronomic Time: Selected channels.
6. Battery Backup: For schedules and time clock.

2.2. OUTDOOR PHOTOELECTRIC SWITCHES

A. Manufactures: Subject to compliance with requirements, provide:

1. Wattstopper, Inc.
2. Lithonia Lighting; Acuity Lighting Group, Inc.
3. Square D; Schneider Electric.
4. TORK.
5. Touch-Plate, Inc.
6. Or Approved Equal

B. Description: Solid state, with SPST, DPST dry contacts rated for 1800-VA tungsten or 1000-VA inductive, to operate connected relay, contactor coils, or microprocessor input; complying with UL 773A.

1. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lx), with an adjustment for turn-on and turn-off levels within that range, and a directional lens in front of photocell to prevent fixed light sources from causing turn-off.
2. Time Delay: 15-second minimum, to prevent false operation.
3. Surge Protection: Metal-oxide varistor, complying with IEEE C62.41.1, IEEE C62.41.2, and IEEE 62.45 for Category A1 locations.
4. Mounting: Twist lock complying with IEEE C136.10, with base-and-stem mounting or stem-and-swivel mounting accessories as required to direct sensor to the north sky exposure.

C. Description: Solid state, with SPST,DPST dry contacts rated for 1800 VA to operate connected load, relay, or contactor coils; complying with UL 773.

1. Light-Level Monitoring Range: 1.5 to 10 fc (16.14 to 108 lx), with an adjustment for turn-on and turn-off levels within that range.
2. Time Delay: 30-second minimum, to prevent false operation.
3. Lightning Arrester: Air-gap type.
4. Mounting: Twist lock complying with IEEE C136.10, with base.

2.3. INDOOR OCCUPANCY SENSORS

A. Manufactures: Subject to compliance with requirements, provide:

1. Wattstopper, Inc.
2. Hubbell Lighting.
3. Leviton Mfg. Company Inc.
4. Lithonia Lighting; Acuity Lighting Group, Inc.
5. TORK.
6. Philips Lighting Controls.
7. Or Approved Equal.

B. General Description: Wall- or ceiling-mounting, solid-state units with a separate relay unit.

1. Operation: Unless otherwise indicated, turn lights on when covered area is occupied and off when unoccupied; with a time delay for turning lights off, adjustable over a minimum range of 1 to 15 minutes.

2. Sensor Output: Contacts rated to operate the connected relay, complying with UL 773A. Sensor shall be powered from the relay unit.
3. Relay Unit: Dry contacts rated for 20-A ballast load at 120- V ac, for 13-A tungsten at 120-V ac, and for 1 hp at 120-V ac. Power supply to sensor shall be 24-V dc, 150-mA, Class 2 power source as defined by NFPA 70.
4. Mounting:

   a. Sensor: Suitable for mounting in any position on a standard outlet box.
   b. Relay: Externally mounted through a 1/2-inch (13-mm) knockout in a standard electrical enclosure.
   c. Time-Delay and Sensitivity Adjustments: Recessed and concealed behind hinged door.

5. Indicator: LED, to show when motion is being detected during testing and normal operation of the sensor.
6. Bypass Switch: Override the on function in case of sensor failure.
7. Automatic Light-Level Sensor: Adjustable from 2 to 200 fc (21.5 to 2152 lx); keep lighting off when selected lighting level is present.

C. Dual-Technology Type: Ceiling mounting; detect occupancy by using a combination of PIR and ultrasonic detection methods in area of coverage. Particular technology or combination of technologies that controls on-off functions shall be selectable in the field by operating controls on unit.

1. Sensitivity Adjustment: Separate for each sensing technology.
2. Detector Sensitivity: Detect occurrences of 6-inch- (150-mm-) minimum movement of any portion of a human body that presents a target of not less than 36 sq. in. (232 sq. cm), and detect a person of average size and weight moving not less than 12 inches (305 mm) in either a horizontal or a vertical manner at an approximate speed of 12 inches/s (305 mm/s).
3. Detection Coverage (Standard Room): Detect occupancy anywhere within a circular area of 1000 sq. ft. (93 sq. m) when mounted on a 96-inch- (2440-mm-) high ceiling.

2.4. LIGHTING CONTACTORS

A. Manufactures: Subject to compliance with requirements, provide:

1. Wattstopper, Inc.
2. ASCO Power Technologies, LP; a division of Emerson Electric Co.
3. Eaton Electrical Inc.; Cutler-Hammer Products.
4. GE Industrial Systems; Total Lighting Control.
5. Hubbell Lighting.
6. Lithonia Lighting; Acuity Lighting Group, Inc.
7. Square D; Schneider Electric.
8. TORK.
9. Or Approved Equal.

B. Description: Electrically operated and mechanically held, combination type with fusible switch and non-fused disconnect, complying with NEMA ICS 2 and UL 508.

1. Current Rating for Switching: Listing or rating consistent with type of load served, including tungsten filament, inductive, and high-inrush ballast (ballast with 15 percent or less total harmonic distortion of normal load current).
2. Fault Current Withstand Rating: Equal to or exceeding the available fault current at the point of installation.
3. Enclosure: Comply with NEMA 250.
4. Provide with control and pilot devices as scheduled, matching the NEMA type specified for the enclosure.

2.5. CONDUCTORS AND CABLES

A. Power Wiring to Supply Side of Remote-Control Power Sources: Not smaller than No. 12 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Class 1 Control Cable: Multiconductor cable with stranded-copper conductors not smaller than No. 14 AWG. Comply with requirements in Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. SENSOR INSTALLATION

A. Install and aim sensors in locations to achieve not less than 90 percent coverage of areas indicated. Do not exceed coverage limits specified in manufacturer's written instructions.

3.3. CONTACTOR INSTALLATION

A. A. Mount electrically held lighting contactors with elastomeric isolator pads, to eliminate structure-borne vibration, unless contactors are installed in an enclosure with factory-installed vibration isolators.

3.4. WIRING INSTALLATION

A. Wiring Method: Comply with Section 260519 "Low-Voltage Electrical Power Conductors and Cables." Minimum conduit size shall be ¾" conduit.

B. Wiring within Enclosures: Comply with NECA 1. Separate power-limited and nonpower-limited conductors according to conductor manufacturer's written instructions.

C. Size conductors according to lighting control device manufacturer's written instructions, unless otherwise indicated.

D. Splices, Taps, and Terminations: Make connections only on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.

3.5. IDENTIFICATION

A. Identify components and power and control wiring according to Section 260553 "Identification for Electrical Systems."

1. Identify controlled circuits in lighting contactors.
2. Identify circuits or luminaries controlled by photoelectric and occupancy sensors at each sensor.

B. Label time switches and contactors with a unique designation.

3.6. FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. After installing time switches and sensors, and after electrical circuitry has been energized, adjust and test for compliance with requirements.
2. Operational Test: Verify operation of each lighting control device, and adjust time delays.

B. Lighting control devices that fail tests and inspections are defective work.

3.7. ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting sensors to suit occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.8. DEMONSTRATION

A. Coordinate demonstration of products specified in this Section.

B. Engage a factory-authorized service representative to instruct building's maintenance personnel to adjust, operate, and maintain lighting control devices.

END OF SECTION 260923

SECTION 26 09 33
Distributed Lighting Control System

PART I – GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section Includes:
   1. Digital Lighting Controls
   2. Relay Panels
   3. Emergency Lighting Control (if applicable)
B. Related Sections:
   1. Section 262726 - Wiring Devices: Receptacles
   2. Section 265113 – Architectural Luminaires, Lamps, and Ballasts.
   3. Electrical Sections, including wiring devices, apply to the work of this Section.
C. Control Intent – Control Intent includes, but is not limited to:
   1. Defaults and initial calibration settings for such items as time delay, sensitivity, fade rates, etc.
   2. Initial sensor and switching zones
   3. Initial time switch settings
   4. Task lighting and receptacle controls

1.4 SYSTEM DESCRIPTION & OPERATION

A. The Lighting Control and Automation system as defined under this section covers the following equipment:
1. Digital Occupancy Sensors – Self-configuring, digitally addressable and calibrated occupancy sensors with LCD display and two-way active infrared (IR) communications.
2. Digital Switches – Self-configuring, digitally addressable pushbutton on/off, dimming, and scene switches with two-way active infrared (IR) communications.
3. Handheld remotes for personal control – One-button dimming, two-button on/off, or five-button scene remotes provide control using infrared communications. Remote may be configured in the field to control selected loads or scenes without special tools.
4. Digital Daylighting Sensors – Single-zone closed loop, multi-zone open loop and single-zone dual-loop daylighting sensors with two-way active infrared (IR) communications can provide switching, bi-level, tri-level or dimming control for daylight harvesting.
5. Digital Room Controllers – Self-configuring, digitally addressable one, two or three relay plenum-rated controllers for on/off control. Selected models include 0-10 volt or line voltage forward phase control dimming outputs and integral current monitoring capabilities.
6. Digital Plug-Load Controllers – Self-configuring, digitally addressable, single relay, plenum-rated application-specific controllers. Selected models include integral current monitoring capabilities.
7. Configuration Tools – Handheld remote for room configuration and relay panel programming provides two way infrared (IR) communications to digital devices and allows complete configuration and reconfiguration of the device / room from up to 30 feet away. Unit to have Organic LED display, simple pushbutton interface, and allow bi-directional communication of room variables and occupancy sensor settings. Computer software also customizes room settings.
8. Digital Lighting Management (DLM) local network – Free topology, plug-in wiring system (Cat 5e) for power and data to room devices.
9. Digital Lighting Management (DLM) segment network – Linear topology, BACnet MS/TP network (1.5 twisted pair, shielded,) to connect multiple DLM local networks for centralized control
10. Network Bridge – provides BACnet MS/TP-compliant digital networked communication between rooms, panels and the Segment Manager or building automation system (BAS) and automatically creates BACnet objects representative of connected devices.
11. Segment Manager – provides web browser-based user interface for system control, scheduling, power monitoring, room device parameter administration and reporting.
12. Programming and Configuration software – Optional PC-native application capable of accessing DLM control parameters within a room, for the local network, via a USB adapter, or globally, for many segment networks simultaneously, via BACnet/IP communication.
13. Digital Lighting Management Relay Panel – provides up to 8, 24, or 48 mechanically latching relays. Relays include a manual override and a single push-on connector for easy installation or removal from the panel. Panel accepts program changes from handheld configuration tool for date and time, location, holidays, event scheduling, button binding and group programming. Provides BACnet MS/TP-compliant digital networked communication between other lighting controls and/or building automation system (BAS).
14. Digital Zone Controller. Accepts program changes from handheld configuration tool for date and time, location, holidays, event scheduling, button binding and group programming. Provides BACnet MS/TP-compliant digital networked communication between other lighting controls and/or building automation system (BAS).

15. Emergency Lighting Control Unit (ELCU) – allows a standard lighting control device to control emergency lighting in conjunction with normal lighting in any area within a building

1.5 LIGHTING CONTROL APPLICATIONS AND PROGRAMS

A. Provide a minimum application of lighting controls as follows:
   1. Space Control Requirements – Provide occupancy/vacancy sensors with Manual- or Partial-ON functionality in all spaces except toilet rooms, storerooms, library stacks, or other applications where hands-free operation is desirable and Automatic-ON occupancy sensors are more appropriate. Provide Manual-ON occupancy/vacancy sensors for any enclosed office, conference room, meeting room, open plan system and instructing room. For spaces with multiple occupants, or where line-of-sight may be obscured, provide ceiling- or corner-mounted sensors and Manual-ON switches.
   2. Bi-Level Lighting – Provide multi-level controls in all spaces except toilet rooms, storerooms, library stacks, or applications where variable dimming is used.
   3. Task Lighting / Plug Loads – Provide automatic shut off of non-essential plug loads and task lighting in all spaces except toilet rooms and storerooms. Provide Automatic-ON of plug loads whenever spaces are occupied. For spaces with multiple occupants a single shut off consistent with the overhead lighting may be used for the area.
   4. Daylit Areas – Provide daylight-responsive automatic control in all spaces, conditioned or unconditioned, where daylight contribution is available:
      a. All luminaires within code-defined daylight zones shall be controlled separately from luminaires outside of daylit zones.
      b. Daytime setpoints for total ambient illumination, combined daylight and electric light levels that initiate dimming shall be programmed.
      c. Multiple-leveled switched daylight harvesting controls may be utilized for areas marked on drawings.
      d. Provide smooth and continuous daylight dimming for areas marked on drawings. Daylighting control system may be designed to turn off electric lighting when daylight is at or above required lighting levels, only if system functions to turn lamps back on at dimmed level, rather than turning full-on prior to dimming.

B. Emergency Egress (Determined by Commissioner)
   1. Luminaires connected to the emergency system shall be connected to the adjacent zone and seamlessly controlled (dimmed or switched) along with the adjacent luminaires.
   2. Night lights (24-hour emergency fixtures) shall be strategically placed in public circulation areas parking garage, and stairs.

C. Typical Private Offices and Open Offices
   1. Open Offices shall be controlled via a bi-level dimmer switch with four preset buttons (on, med, low, off) plus two/raise lower dimming buttons. When entering the open offices, the lights will turn partially on to 50% of the lighting power and turn off automatically after 20 minutes when no occupancy has been detected via a ceiling mounted occupancy sensor.
   2. Private Office 250 sq/ft or more shall have a bi-level dimmer switch with four preset buttons (on, med, low, off) plus two/raise lower dimming buttons. During working hours, when entering the space, the the lights shall automatically turn on to a preset 50% via the bi-level switch, with the ability to dim the lights up or down as desired. When vacant, a ceiling mounted occupancy sensor shall turn the lights off automatically after 20 minutes of no occupancy.
   3. Private Office 250 sq/ft or less shall have a bi-level dimmer switch with four preset buttons (on, med, low, off) plus two/raise lower dimming buttons. During working hours, when entering the space, the occupant shall manually turn the lights on to a preset 50% via the bi-level switch, with the ability to

dim the lights up or down as desired. When vacant, a wall mounted vacancy sensor shall turn the lights off automatically after 20 minutes of no occupancy.

4. Supplemental task lighting with individual control for each user shall be added for additional flexibility and to allow users to boost illumination if and where desired.

D. Lunch/Breakroom
   1. Fixtures shall be dimmable. These spaces shall be controlled via a bi-level dimmer switch with four preset buttons (on, med, low, off) plus two/raise lower dimming buttons and a ceiling-mounted occupancy sensor. All undercabinet lighting shall be controlled via an integral motion sensor.
   2. During working hours, when entering the space, lights shall automatically turn ON to a preset 50% for energy conservation, with the ability to dim the lights up or down as desired, via a bi-level dimmer switch. When vacant, the occupancy sensor shall automatically turn the lights OFF after a predetermined time as required by code.
   3. Per code, fixtures located within the "daylight zones" shall be zoned separately from the ambient lighting in the space, in each cardinal direction (i.e. north, south, east and west). The daylight zone shall be controlled via automatic daylight controls and photosensors. All spaces with a connected load lower than 150W shall be exempt from automatic daylight controls.

E. Typical Meeting Room, Muster Area
   1. Fixtures shall be dimmable. These spaces shall be controlled via bi-level dimmer switch with four preset buttons (on, med, low, off) plus two/raise lower dimming buttons and a ceiling occupancy sensor.
   2. During working hours, when entering the space, lights shall automatically turn ON to a preset 50% for energy conservation, with the ability to dim the lights up or down as desired, via a bi-level dimmer switch. When vacant, the occupancy sensor shall automatically turn the lights OFF 20 minutes.
   3. Per code, fixtures located in the "daylight zones" shall be zoned separately from the ambient lighting in the space. In each cardinal direction (i.e. north, south, east and west). The daylight zone shall be controlled via automatic daylight controls and photosensors. All spaces with a connected load lower than 150W shall be exempt from automatic daylight controls.

F. Locker Room and Restrooms
   1. Shower Areas: Due to the height of the partitions, multiple sensors may be required as to not leave an occupant in the dark at any time. For good sanitation and health practices, these spaces shall be controlled via ceiling-mounted occupancy sensors.
   2. Locker Rooms: When entering the space, the lights shall automatically turn on to 70% or as prescribed by the Commissioner. When the space is left unoccupied, the lights shall automatically turn OFF when unoccupied for 30 minutes or as prescribed by the Commissioner. A wall-mounted bi-level dimmer switch shall provide the ability to override the occupancy sensor at any time for a period as permitted by code. These override switches shall be in an area controlled by staff or as determined by code. If located in public spaces, all controls shall be locked in a wall box with access by staff only.
   3. Restrooms: When entering the space, the lights shall automatically turn on to 100%. When the space is left unoccupied for 30 minutes, the lights shall automatically dim to 50%. Local control with lock box to be provided. For bathrooms 150 sq/ft or less locked wall boxes are not required and lights can be automatically turn off after 20 minutes.

G. Storage, Janitor's Closets, IT Rooms
   1. Storage Room 50 sq/ft or less will have a local control of on/off with integral wall mounted vacancy sensor.
   2. Storage Room 50sq/ft -1000 sq/ft shall have ceiling mounted occupancy sensors that turn lights on to 50% of power automatically. Lights will automatically turn off when 20 minutes if no occupancy has been detected. Local bi-level with four preset buttons (on, med, low, off) control to be provided per code.

3. Storage Rooms 1000 sq/ft or more shall have ceiling mounted occupancy sensors that turn lights on to 50% of power automatically. Lights will automatically reduce to 50% of power in space when 20 minutes of no occupancy has been detected. After 40 minutes lights will automatically turn off if no occupancy has been detected. Local bi-level with four preset buttons (on, med, low, off) control to be provided per code.

H. Electrical and Mechanical Rooms
   1. These spaces shall be controlled via local bi-level dimming switch only.
   2. When using the switch, the occupants shall manually turn the lights ON/OFF or dim.

I. Public Circulation, Vestibules, Elevator Lobbies
   1. Fixtures shall be dimmable.
   2. These spaces shall be controlled via a local switch and occupancy sensor.
   3. During working hours, the lights shall be turned on to 100%. When unoccupied, the occupancy sensor shall partially dim the lights to 50% and off after a certain time. During after-hours, when moving through the space, the occupancy sensors shall turn the lights on and will shut off the same zone of lighting after 20 minutes if motion is not detected. Final scenes to be approved by the Commissioner.
   4. Ceiling-mounted occupancy sensors shall be used wherever possible.
   5. A wall-mounted dimmer switch shall provide the ability to override the occupancy sensor at any time for a period as permitted by code. These override switches shall be in an area controlled by staff or as determined by code. If located in public spaces, all controls shall be locked in a wall box with access by staff only.
   6. Per code, fixtures located within the "daylight zones" shall be zoned separately from the ambient lighting in the space. In each cardinal direction (i.e north, south, east and west). The daylight zone shall be controlled via automatic daylight controls and photosensors. All spaces with a connected load lower than 150W shall be exempt from automatic daylight controls.

J. Stairs
   1. Lighting required for egress and emergency shall be on 24 hours a day as prescribed by code.
   2. Per code, fixtures located in the "daylight zones" shall be zoned separately from the ambient lighting in the space. In each cardinal direction (i.e. north, south, east and west). The daylight zone shall be controlled via automatic daylight controls and photosensors. All spaces with a connected load lower than 150W shall be exempt from automatic daylight controls.
   3. Ceiling or fixture mounted occupancy sensors (auto on/off) shall reduce stairwell lighting by at least 50% for additional load shedding.

K. Parking Garage
   1. An astronomical time clock will engage the lighting to a set level as prescribed by the Commissioner.
   2. Washbays will be zoned separately and shall have wet location occ sensors that will reduce light levels by 30% after 20 min of not detecting motion.
   3. When the space is unoccupied the occupancy sensors shall automatically reduce light levels by 30% when there is no detected activity within a lighting zone for 20 minutes. When motion is detected, lighting fixtures within the appropriate zone shall be brought to full output. Lighting zones shall be no larger than 3600 sq. ft.
   4. For safety reasons, Repair Areas shall be exempt and operate strictly through an ON/OFF switch.
   5. These switches shall be in an area controlled by staff or as determined by code. If located in public spaces, all controls shall be locked in a wall box with access by staff only.
   6. Threshold lighting shall be controlled separately from ambient lighting fixtures to improve visual adaptation of drivers and pedestrians entering from the exterior. These fixtures shall slowly dim down/up as the sun is setting/rising and shall be dimmed during night hours.
   7. controllers, interfaces, and network bridges for designated lighting zones accordingly.

L. Exterior Parking, Vehicular Lanes, and Terrace
1. Number of zones to be determined.
2. X10 adjustable cylinder fixtures at the New Building Level 02 exterior landscape area to be dimmable. Dimming switches shall be in an area controlled by staffed or as determined by code. If located in public spaces, all controls shall be locked in a wall box with access by staff only. The Commissioner to approve switch locations.
3. Pole Lights will have integral photocell.
4. These spaces shall be controlled via an astronomical time clock and photocell.
5. Site lighting Fueling station / Building-mounted lighting: An astronomical time clock will engage the lighting to a set level and stay ON after dusk and during the night.
6. Salt shed lighting to have local dimmable control located in the New Building to set the correct light levels. An astronomical time clock will engage the lighting to a set level and stay ON after dusk and during the night.
7. Signage / flag pole lighting: An astronomical timeclock will engage the lighting to a set level after Dusk. Light shall be OFF from 12am to 6am, per LEED requirements.
8. OSHA bollards adjacent to the Salt Shed shall have local ON/OFF switches located in the Existing Building.

1.6 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7 SUBMITTALS

A. Shop Drawings:
1. Composite wiring and/or schematic diagram of each control circuit as proposed to be installed.
2. Show exact location of all digital devices, including at minimum sensors, room controllers, and switches for each area on reflected ceiling plans. Contractor must provide AutoCAD format reflected ceiling plans.
3. Provide room/area details including products and sequence of operation for each room or area. Illustrate typical acceptable room/area connection topologies.
4. Network riser diagram including floor and building level details. Include network cable specification and end-of-line termination details, if required. Illustrate points of connection to integrated systems. Coordinate integration with mechanical and/or other trades.

B. Product Data: Catalog sheets, specifications and installation instructions.
C. Include data for each device which:
1. Indicates where sensor is proposed to be installed.
2. Prove that the sensor is suitable for the proposed application.

1.8 PROJECT CONDITIONS

A. Do not install equipment until following conditions can be maintained in spaces to receive equipment:
1. Ambient temperature: 0° to 40° C (32° to 104° F).
2. Relative humidity: Maximum 90 percent, non-condensing.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART II - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Subject to compliance with requirements, provide WattStopper DLM or comparable product by one of the following::
   1. Leviton IRC
   2. Acuity nLight
   3. Or approved equal

2.2 DIGITAL LIGHTING CONTROLS

A. Furnish system which accommodates the square-footage coverage requirements for each area controlled, utilizing room controllers, digital occupancy sensors, switches, daylighting sensors and accessories which suit the lighting and electrical system parameters.

2.3 DIGITAL WALL SWITCH OCCUPANCY SENSORS

A. Wallbox mounted passive infrared PIR or dual technology, passive infrared and ultrasonic, digital occupancy sensor with 1 or 2 switch buttons.
B. Digital Occupancy Sensors shall provide scrolling LCD display for digital calibration and electronic documentation. Features include the following:
   1. Digital calibration and pushbutton configuration for the following variables:
      a. Sensitivity – 0-100% in 10% increments
      b. Time delay – 1-30 minutes in 1 minute increments
      c. Test mode – Five second time delay
      d. Detection technology – PIR, Dual Technology activation and/or re-activation.
      e. Walk-through mode
      f. Load parameters including Auto/Manual-ON, blink warning, and daylight enable/disable when photosensors are included in the DLM local network.
   2. Programmable control functionality including:
      a. Each sensor may be programmed to control specific loads within a local network.
      b. Sensor shall be capable of activating one of 16 user-definable lighting scenes.
      c. Adjustable retrigger time period for manual-on loads. Load will retrigger (turn on) automatically during the configurable period of time, default 10 seconds, after turning off.
      d. On dual technology sensors, independently configurable trigger modes are available for both Normal (NH) and After Hours (AH) time periods. The retrigger mode can be programmed to use the following technologies:
         1. Ultrasonic and Passive Infrared
         2. Ultrasonic or Passive Infrared
         3. Ultrasonic only
         4. Passive Infrared only

3. Independently configurable sensitivity settings for passive infrared and ultrasonic technologies on dual technology sensors for both Normal (NH) and After Hour (AH) time periods.
4. Two ports for connection to DLM local network.
5. Two-way infrared (IR) transceiver to allow remote programming through handheld configuration tool and control by remote personal controls.
6. Device Status LEDs including:
   a. PIR detection
   b. Ultrasonic detection
   c. Configuration mode
   d. Load binding
7. Assignment of occupancy sensor to a specific load within the room without wiring or special tools.
8. Assignment of local buttons to specific loads within the room without wiring or special tools
9. Manual override of controlled loads.
10. All digital parameter data programmed into an individual wall switch sensor shall be retained in non-volatile FLASH memory within the wall switch sensor itself. Memory shall have an expected life of no less than 10 years.

C. BACnet object information shall be available for the following objects:
   1. Detection state
   2. Occupancy sensor time delay
   3. Occupancy sensor sensitivity, PIR and Ultrasonic
   4. Button state
   5. Switch lock control
   6. Switch lock status
D. Units shall not have any dip switches or potentiometers for field settings.
E. Multiple occupancy sensors may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration will be required.
F. Two-button wall switch occupancy sensors, when connected to a single relay dimming room controller, shall operate in the following sequence as a factory default:
   1. Left button
      a. Press and release - Turn load on
      b. Press and hold - Raise dimming load
   2. Right button
      a. Press and release - Turn load off
      b. Press and hold - Lower dimming load
G. Low voltage momentary pushbuttons shall include the following features:
   1. Load/Scene Status LED on each switch button with the following characteristics:
      a. Bi-level LED
      b. Dim locator level indicates power to switch
      c. Bright status level indicates that load or scene is active
   2. The following button attributes may be changed or selected using a wireless configuration tool:
      a. Load and Scene button function may be reconfigured for individual buttons (from Load to Scene, and vice versa).
      b. Individual button function may be configured to Toggle, On only or Off only.
      c. Individual scenes may be locked to prevent unauthorized change.
      d. Fade Up and Fade Down times for individual scenes may be adjusted from 0 seconds to 18 hours.
      e. Ramp rate may be adjusted for each dimmer switch.

f. Switch buttons may be bound to any load on a room controller and are not load type dependent; each button may be bound to multiple loads.

2.4 DIGITAL WALL OR CEILING MOUNTED OCCUPANCY SENSOR

A. Wall or ceiling mounted, to suit installation, passive infrared (PIR), ultrasonic or dual technology digital, passive infrared and ultrasonic occupancy sensor.

B. Digital Occupancy Sensors shall provide graphic LCD display for digital calibration and electronic documentation. Features include the following:
   1. Digital calibration and pushbutton configuration for the following variables:
      a. Sensitivity – 0-100% in 10% increments
      b. Time delay – 1-30 minutes in 1 minute increments
      c. Test mode – Five second time delay
      d. Detection technology – PIR, Ultrasonic or Dual Technology activation and/or re-activation.
      e. Walk-through mode
      f. Load parameters including Auto/Manual-ON, blink warning, and daylight enable/disable when photosensors are included in the DLM local network.
   2. Programmable control functionality including:
      a. Each sensor may be programmed to control specific loads within a local network.
      b. Sensor shall be capable of activating one of 16 user-definable lighting scenes.
      c. Adjustable retrigger time period for manual-on loads. Load will retrigger (turn on) automatically within a configurable period of time, default 10 seconds, after turning off.
      d. On dual technology sensors, independently configurable trigger modes are available for both Normal (NH) and After Hours (AH) time periods. The retrigger mode can be programmed to use the following technologies:
         i Ultrasonic and Passive Infrared
         ii Ultrasonic or Passive Infrared
         iii Ultrasonic only
         iv Passive Infrared only
   3. Independently configurable sensitivity settings for passive infrared and ultrasonic technologies on dual technology sensors for both Normal (NH) and After Hour (AH) time periods.
   4. One or two RJ-45 port(s) for connection to DLM local network.
   5. Two-way infrared (IR) transceiver to allow remote programming through handheld commissioning tool and control by remote personal controls.
   6. Device Status LEDs, which may be disabled for selected applications, including:
      a. PIR detection
      b. Ultrasonic detection
      c. Configuration mode
      d. Load binding
   7. Assignment of occupancy sensor to a specific load within the room without wiring or special tools.
   8. Manual override of controlled loads.
   9. All digital parameter data programmed into an individual occupancy sensor shall be retained in non-volatile FLASH memory within the sensor itself. Memory shall have an expected life of no less than 10 years.

C. BACnet object information shall be available for the following objects:
   1. Detection state
   2. Occupancy sensor time delay
   3. Occupancy sensor sensitivity, PIR and Ultrasonic

D. Units shall not have any dip switches or potentiometers for field settings.
E. Multiple occupancy sensors may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration will be required.

2.5 DIGITAL WALL SWITCHES

A. Low voltage momentary pushbutton switches in 1, 2, 3, 4, 5 and 8 button configurations. Wall switches shall include the following features.
   1. Two-way infrared (IR) transceiver for use with personal and configuration remote controls.
   2. Removable buttons for field replacement with engraved buttons and/or alternate color buttons. Button replacement may be completed without removing the switch from the wall.
   3. Configuration LED on each switch that blinks to indicate data transmission.
   4. Load/Scene Status LED on each switch button with the following characteristics:
      a. Bi-level LED
      b. Dim locator level indicates power to switch
      c. Bright status level indicates that load or scene is active
   5. Dimming switches shall include seven bi-level LEDs to indicate load levels using 14 steps.
   6. Programmable control functionality including:
      a. Button priority may be configured to any BACnet priority level, from 1-16, corresponding to networked operation allowing local actions to utilize life safety priority
      b. Scene patterns may be saved to any button other than dimming rockers. Once set, buttons may be digitally locked to prevent overwriting of the preset levels.
   7. All digital parameter data programmed into an individual wall switch shall be retained in non-volatile FLASH memory within the wall switch itself. Memory shall have an expected life of no less than 10 years.
B. BACnet object information shall be available for the following objects:
   1. Button state
   2. Switch lock control
   3. Switch lock status
C. Two RJ-45 ports for connection to DLM local network.
D. Multiple digital wall switches may be installed in a room by simply connecting them to the free topology DLM local network. No additional configuration shall be required to achieve multi-way switching.
E. The following switch attributes may be changed or selected using a wireless configuration tool:
   1. Load and Scene button function may be reconfigured for individual buttons (from Load to Scene, and vice versa).
   2. Individual button function may be configured to Toggle, On only or Off only.
   3. Individual scenes may be locked to prevent unauthorized change.
   4. Fade Up and Fade Down times for individual scenes may be adjusted from 0 seconds to 18 hours.
   5. Ramp rate may be adjusted for each dimmer switch.
   6. Switch buttons may be bound to any load on a room controller and are not load type dependent; each button may be bound to multiple loads.

2.6 HANDHELD REMOTE CONTROLS

A. Battery-operated handheld devices in 1, 2 and 5 button configurations for remote switching or dimming control. Remote controls shall include the following features:
   1. Two-way infrared (IR) transceiver for line of sight communication with DLM local network within up to 30 feet.

2. LED on each button confirms button press.
3. Load buttons may be bound to any load on a room controller and are not load type dependent; each button may be bound to multiple loads.
4. Inactivity timeout to save battery life.

B. A wall mount holster and mounting hardware shall be included with each remote control.

2.7 DIGITAL PARTITION CONTROLS

A. Partition controls shall enable manual or automatic coordination of lighting controls in flexible spaces with up to four moveable walls by reconfiguring the connected digital switches and occupancy sensors.

B. Four-button low voltage pushbutton switch for manual control.
1. Two-way infrared (IR) transceiver for use with configuration remote control.
2. Removable buttons for field replacement with engraved buttons and/or alternate color buttons. Button replacement may be completed without removing the switch from the wall.
3. Configuration LED on each switch that blinks to indicate data transmission.
4. Each button represents one wall; Green button LED indicates status.
5. Two RJ-45 ports for connection to DLM local network.

C. Contact closure interface for automatic control via input from limit switches on movable walls.
1. Operates on Class 2 power supplied by DLM local network.
2. Includes 24VDC output and four input terminals for maintained third party contract closure inputs.
   a. Input max. sink/source current: 1-5mA
   b. Logic input signal voltage High: >18VDC
   c. Logic input signal voltage Low: <2VDC
3. Four status LEDs under hinged cover indicate if walls are open or closed.
4. Two RJ-45 ports for connection to DLM local network.

2.8 DIGITAL DAYLIGHTING SENSORS

A. Digital daylighting sensors shall work with room controllers to provide automatic switching, bi-level, or tri-level or dimming daylight harvesting capabilities for any load type connected to a room controller. Daylighting sensors shall be interchangeable without the need for rewiring.
1. Closed loop sensors measure the ambient light in the space and control a single lighting zone.
2. Open loop sensors measure incoming daylight in the space and are capable of controlling up to three lighting zones.
3. Dual loop sensors measure both ambient and incoming daylight in the space to ensure that proper light levels are maintained as changes to reflective materials are made in a single zone.

B. Digital daylighting sensors shall include the following features:
1. The sensor's internal photodiode shall only measure lightwaves within the visible spectrum. The photodiode's spectral response curve shall closely match the entire photopic curve. The photodiode shall not measure energy in either the ultraviolet or infrared spectrums. The photocell shall have a sensitivity of less than 5% for any wavelengths less than 400 nanometers or greater than 700 nanometers.
2. Sensor light level range shall be from 1-6,553 footcandles (fc).
3. The capability of ON/OFF, bi-level or tri-level switching, or dimming, for each controlled zone, depending on the selection of room controller(s) and load binding to room controller(s).
4. For switching daylight harvesting, the photosensor shall provide a field-selectable deadband, or a separation, between the "ON Setpoint" and the "OFF Setpoint" that will prevent the lights from cycling excessively after they turn off.

5. For dimming daylight harvesting, the photosensor shall provide the option, when the daylight contribution is sufficient, of turning lights off or dimming lights to a field-selectable minimum level.
6. Photosensors shall have a digital, independently configurable fade rate for both increasing and decreasing light level in units of percent per second.
7. Photosensors shall provide adjustable cut-off time. Cut-off time is defined by the number of selected minutes the load is at the minimum output before the load turns off. Selectable range between 0-240 minutes including option to never cut-off.
8. Optional wall switch override shall allow occupants to reduce lighting level to increase energy savings or, if permitted by system administrator, raise lighting levels for a selectable period of time or cycle of occupancy.
9. Integral infrared (IR) transceiver for configuration and/or commissioning with a handheld configuration tool, to transmit detected light level to wireless configuration tool, and for communication with personal remote controls.
10. Configuration LED status light on device that blinks to indicate data transmission.
11. Status LED indicates test mode, override mode and load binding.
12. Recessed switch on device to turn controlled load(s) ON and OFF.
13. BACnet object information shall be available for the following daylighting sensor objects, based on the specific photocell's settings:
    a. Light level
    a. Day and night setpoints
    b. Off time delay
    c. On and off setpoints
    d. Up to three zone setpoints
    e. Operating mode – on/off, bi-level, tri-level or dimming
14. One port for connection to DLM local network.
15. A choice of accessories to accommodate multiple mounting methods and building materials. The photosensors may be mounted on a ceiling tile, skylight light well, suspended lighting fixture or backbox. Standard tube photosensors accommodate mounting materials from 0-0.62" thickness Extended tube photosensors accommodate mounting materials from 0.62"-1.25" thickness. Mounting brackets are compatible with J boxes and wall mounting. Photosensor to be mounted on included bracket below skylight well.
16. Any load or group of loads in the room can be assigned to a daylighting zone
17. Each load within a daylighting zone can be individually enabled or disabled for discrete control of load independence.
18. All digital parameter data programmed into a photosensor shall be retained in non-volatile FLASH memory within the photosensor itself. Memory shall have an expected life of no less than 10 years.

C. Closed loop digital photosensors shall include the following additional features:
   1. An internal photodiode that measures light in a 100-degree angle, cutting off the unwanted light from bright sources outside of this cone.
   2. Automatic self-calibration, initiated from the photosensor, a wireless configuration tool or a PC with appropriate software.
   3. Automatically establishes application-specific setpoints following self-calibration. For switching operation, an adequate deadband between the ON and OFF setpoints shall prevent the lights from cycling; for dimming operation a sliding setpoint control algorithm with separate Day and Night setpoints shall prevent abrupt ramping of loads.

D. Open loop digital photosensors shall include the following additional features:
   1. An internal photodiode that measures light in a 60-degree angle cutting off the unwanted light from the interior of the room.

2. Automatically establishes application-specific setpoints following manual calibration using a wireless configuration tool or a PC with appropriate software. For switching operation, an adequate deadband between the ON and OFF setpoints for each zone shall prevent the lights from cycling; for dimming operation, a proportional control algorithm shall maintain the design lighting level in each zone.
3. Each of the three discrete daylight zones can include any non overlapping group of loads in the room.

E. Dual loop digital photosensors shall include the following additional features:
1. Close loop portion of dual loop device must have an internal photodiode that measures light in a 100 degree angle, cutting off the unwanted light from outside sources.
2. Open loop portion of dual loop device must have an internal photodiode that can measure light in a 60 degree angle, cutting off the unwanted light from the interior of the room.
3. Automatically establishes application-specific set-points following self-calibration. For switching operation, an adequate deadband between the ON and OFF setpoints shall prevent the lights from cycling; for dimming operation a sliding setpoint control algorithm with separate Day and Night setpoints shall prevent abrupt ramping of load.
4. Device must reference closed loop photosensor information as a base line reference. The device must be able to analyze the open loop photosensor information to determine if an adjustment in light levels is required.
5. Device must be able to automatically commission setpoints each night to provide adjustments to electrical lighting based on changes in overall lighting in the space due to changes in reflectance within the space or changes to daylight contribution based on seasonal changes.
6. Device must include extendable mounting arm to properly position sensor within a skylight well.

2.9 DIGITAL ROOM CONTROLLERS AND PLUG-LOAD CONTROLLERS

A. Digital controllers for lighting and plug loads automatically bind the room loads to the connected devices in the space without commissioning or the use of any tools. Room and plug load controllers shall be provided to match the room lighting and plug load control requirements. The controllers will be simple to install, and will not have dip switches or potentiometers, or require special configuration for standard. The control units will include the following features:
1. Automatic room configuration to the most energy-efficient sequence of operation based upon the devices in the room.
2. Simple replacement – Using the default automatic configuration capabilities, a room controller may be replaced with an off-the-shelf.
3. Multiple room controllers connected together in a local network must automatically prioritize each room controller, without requiring any configuration or setup, so that loads are sequentially assigned using room controller device ID's from highest to lowest.
4. Device Status LEDs to indicate:
   a. Data transmission
   b. Device has power
   c. Status for each load
   d. Configuration status
5. Quick installation features including:
   a. Standard junction box mounting
   b. Quick low voltage connections using standard patch cable
6. Based on individual configuration, each load shall be capable of the following behavior on power up following the loss of normal power:
   a. Turn on to 100%
   b. Remain off

c. Turn on to last level

7. Each load shall be configurable to operate in the following sequences based on occupancy:
   a. Auto-on/Auto-off (Follow on and off)
   b. Manual-on/Auto-off (Follow off only)
8. The polarity of each load output shall be reversible, via digital configuration, so that on is off and off is on.
9. BACnet object information shall be available for the following objects:
   a. Load status
   b. Electrical current
   c. Total watts per controller
   d. Schedule state – normal or after-hours
   e. Demand response control and cap level
   f. Room occupancy status
   g. Total room lighting and plug loads watts
   h. Total room watts/sq ft
   i. Force on/off all loads
10. UL 2043 plenum rated
11. Manual override and LED indication for each load
12. Dual voltage (120/277 VAC, 60 Hz), or 347 VAC, 60 Hz, selected models only. 120/277 volt models rated for 20A total load, derating to 16A required for some dimmed loads (forward phase dimming); 347 volt models rated for 15A total load; plug load controllers carry application-specific UL 20 rating for receptacle control.
13. Zero cross circuitry for each load
14. All digital parameter data programmed into an individual room controller or plug load controller shall be retained in non-volatile FLASH memory within the controller itself. Memory shall have an expected life of no less than 10 years.

B. On/Off Room Controllers shall include:
   1. One or two relay configuration
   2. Efficient 150 mA switching power supply
   3. Three local network ports with integral strain relief and dust cover

C. On/Off/Dimming enhanced Room Controllers shall include:
   1. Real time current monitoring
   2. Multiple relay configurations
      a. One, two or three relays
      b. One or two relays
   3. Efficient 250 mA switching power supply
   4. Four local network ports with integral strain relief and dust cover
   5. One dimming output per relay
      a. 0-10V Dimming - Where indicated, one 0-10 volt analog output per relay for control of compatible ballasts and LED drivers. The 0-10 volt output shall automatically open upon loss of power to the Room Controller to assure full light output from the controlled lighting.
      b. Line Voltage, Forward Phase Dimming - Where indicated, one forward phase control line voltage dimming output per relay for control of compatible two-wire or three-wire ballasts, LED drivers, MLV, forward phase compatible ELV, neon/cold cathode and incandescent loads.
      c. Each dimming output channel shall have an independently configurable minimum and maximum calibration trim level to set the dimming range to match the true dynamic range of the connected ballast or driver.

d. The LED level indicators on bound dimming switches shall utilize this new maximum and minimum trim.
e. Each dimming output channel shall have an independently configurable minimum and maximum trim level to set the dynamic range of the output within the new 0-100% dimming range defined by the minimum and maximum calibration trim.
f. Calibration and trim levels must be set per output channel.
g. Devices that set calibration or trim levels per controller are not acceptable.
h. All configuration shall be digital. Devices that set calibration or trim levels per output channel via trim pots or dip-switches are not acceptable.

6. Each load shall have an independently configurable preset on level for Normal Hours and After Hours events to allow different dimmed levels to be established at the start of both Normal Hours and After Hours events.
7. Fade rates for dimming loads shall be specific to bound switch buttons, and the load shall maintain a default value for any bound buttons that do not specify a unique value.
8. The following dimming attributes may be changed or selected using a wireless configuration tool:
   a. Establish preset level for each load from 0-100%
   b. Set high and low trim for each load
   c. Set lamp burn in time for each load up to 100 hours
9. Override button for each load provides the following functions:
   a. Press and release for on/off control
   b. Press and hold for dimming control

D. Plug Load Room Controllers shall include:
1. One relay configuration with additional connection for unswitched load
2. Configurable additive time delay to extend plug load time delay beyond occupancy sensor time delay, e.g. a 10 minute additive delay in a space with a 20 minute occupancy sensor delay ensures that plug loads turn off 30 minutes after the space is vacated.
3. Factory default operation is Auto-on/Auto-off, based on occupancy
4. Real time current monitoring of both switched and un-switched load
5. Efficient switching power supply
   a. 150mA
   b. 250mA
6. Local network ports
   a. Three ports
   b. Four ports

2.10 DLM LOCAL NETWORK - Room Network

A. The DLM local network is a free topology lighting control physical connection and communication protocol designed to control a small area of a building.
B. Features of the DLM local network include:
1. Automatic configuration and binding of occupancy sensors, switches and lighting loads to the most energy-efficient sequence of operation based upon the device attached.
2. Simple replacement of any device in the network with a standard off the shelf unit without requiring commissioning, configuration or setup.
3. Configuration to change the automatic configuration, including binding and load parameters without tools, using only the buttons on the digital devices in the local network.

4. Two-way infrared communications for control by handheld remotes, and configuration by a handheld tool including adjusting load parameters, sensor configuration and binding, within a line of sight of up to 30 feet from a sensor, wall switch or IR receiver.

C. Digital room devices connect to the local network using pre-terminated Cat 5e cables with RJ-45 connectors, which provide both data and power to room devices. Systems that utilize patch cords but do not provide serial communication data from individual end devices are not acceptable.

D. If manufacturer's pre-terminated Cat 5e cables are not used for the installation, the Contractor is responsible for testing each cable following installation and supplying manufacturer with test results.

2.11 DLM SEGMENT NETWORK - Room to Room Network

A. The segment network shall be a linear topology, BACnet-based MS/TP subnet to connect DLM local networks (rooms) and relay panels for centralized control.

B. Each connected DLM local network shall include a single network bridge, and the network bridge is the only room-based device that is connected to the segment network.

C. Network bridges, relay panels and segment managers shall include terminal blocks, with provisions for separate "in" and "out" terminations, for segment network connections.

D. The segment network shall utilize 1.5 twisted pair, shielded, cable supplied by the lighting control manufacturer. The maximum cable run for each segment is 4,000 feet. Conductor-to-conductor capacitance of the twisted pair shall be less than 30 pf/ft and have a characteristic impedance of 120 Ohms.

E. Network signal integrity requires that each conductor and ground wire be correctly terminated at every connected device.

F. Utilization of non-manufacturer-supplied cable must be pre-approved: Manufacturer will not certify network reliability, and reserves the right to void warranty, if non-approved cable is installed, and if terminations are not completed according to manufacturer's specific requirements.

G. Segment networks shall be capable of connecting to BACnet-compliant BAS (provided by others) either directly, via MS/TP, or through NB-ROUTERs, via BACnet/IP or BACnet/Ethernet. Systems whose room-connected network infrastructure require gateway devices to provide BACnet data to a BAS are unacceptable.

2.12 CONFIGURATION TOOLS

A. A wireless configuration tool facilitates optional customization of DLM local networks using two-way infrared communications, while PC software connects to each local network via a USB interface.

B. Features and functionality of the wireless configuration tool shall include but not be limited to:
   1. Two-way infrared (IR) communication with DLM IR-enabled devices within a range of approximately 30 feet.
   2. High visibility organic LED (OLED) display, pushbutton user interface and menu-driven operation.
   3. Must be able to read and modify parameters for room controllers, occupancy sensors, wall switches, daylighting sensors, network bridges and relay panels, and identify room devices by type and serial number.
   4. Save up to eight occupancy sensor setting profiles, and apply profiles to selected sensors.
   5. Temporarily adjust light level of any load(s) on the local network, and incorporate those levels in scene setting. Set room mode for testing of Normal Hours (NH) and After Hours (AH) parameter settings.
   6. Adjust or fine-tune daylighting settings established during auto-configuration, and input light level data to complete configuration of open loop daylighting controls.
   7. Set room mode for testing of Normal Hours (NH) and After Hours (AH) parameter settings.
   8. Verify status of building level network devices.

2.13 NETWORK BRIDGE

A. The network bridge module connects a DLM local network to a BACnet-compliant segment network for communication between rooms, relay panels and a segment manager or BAS. Each local network shall include a network bridge component to provide a connection to the local network room devices. The network bridge shall use industry standard BACnet MS/TP network communication and an optically isolated EIA/TIA RS-485 transceiver.
   1. The network bridge shall be provided as a separate module connected on the local network through an available port.
   2. Provide operation to automatically discover room devices connected to the local network and make all device parameters visible to the segment manager via the segment network. No commissioning shall be required for set up of the network bridge on the local network.
   3. The network bridge shall automatically create standard BACnet objects for selected room device parameters to allow any BACnet-compliant BAS to include lighting control and power monitoring features as provided by the DLM room devices on each local network. BACnet objects will be created for the addition or replacement of any given in-room DLM device for the installed life of the system. Products requiring that an application-specific point database be loaded to create or map BACnet objects are not acceptable. Systems not capable of providing BACnet data for control devices via a dedicated BACnet Device ID and physical MS/TP termination per room are not acceptable. Standard BACnet objects shall be provided as follows:
      a. Read/write the normal or after hours schedule state for the room
      b. Read the detection state of each occupancy sensor
      c. Read the aggregate occupancy state of the room
      d. Read/write the On/Off state of loads
      e. Read/write the dimmed light level of loads
      f. Read the button states of switches
      g. Read total current in amps, and total power in watts through the room controller
      h. Read/write occupancy sensor time delay, PIR sensitivity and ultrasonic sensitivity settings
      i. Activate a preset scene for the room
      j. Read/write daylight sensor fade time and day and night setpoints
      k. Read the current light level, in footcandles, from interior and exterior photosensors and photocells
      l. Set daylight sensor operating mode
      m. Read/write wall switch lock status
      n. Read watts per square foot for the entire controlled room
      o. Write maximum light level per load for demand response mode
      p. Read/write activation of demand response mode for the room
      q. Activate/restore demand response mode for the room

2.14 SEGMENT MANAGER

A. For networked applications, the Digital Lighting Management system shall include at least one segment manager to manage network communication. It shall be capable of serving up a graphical user interface via a standard web browser utilizing either unencrypted TCP/IP traffic via a configurable port (default is 80) or 256 bit AES encrypted SSL TCP/IP traffic via a configurable port (default is 443).

B. Each segment manager shall have integral support for at least three segment networks. Segment networks may alternately be connected to the segment manger via external routers and switches, using standard Ethernet structured wiring. Each router shall accommodate one segment network. Provide the quantity of routers and switches as shown on the plans.

C. Operational features of the Segment Manager shall include the following:
   1. Connection to PC or LAN via standard Ethernet TCP/IP via standard Ethernet TCP/IP with the option to use SSL encrypted connections for all traffic.
   2. Easy to learn and use graphical user interface, compatible with a website browser. Shall not require installation of any lighting control software to an end-user PC.
   3. Log in security capable of restricting some users to view-only or other limited operations.
   4. Automatic discovery of DLM devices and relay panels on the segment network(s). Commissioning beyond activation of the discovery function shall not be required to provide communication, monitoring or control of all local networks and lighting control panels.
   5. After discovery, all rooms and panels shall be presented in a standard navigation tree format. Selecting a device from the tree will allow the device settings and operational parameters to be viewed and changed by the user.
   6. Ability to view and modify room device operational parameters. It shall be possible to set device parameters independently for normal hours and after hours operation including sensor time delays and sensitivities, and load response to sensor including Manual-On or Auto-On.
   7. Ability to set up schedules for rooms and panels, view and override current status of panel channels and relays, and assign relays to groups. Schedules shall automatically set controlled zones or areas to either a normal hours or after hours mode of operation. Support for a minimum of 100 unique schedules, each with up to four time events per day. Support for annual schedules, holiday schedules and unique date-bound schedules.
   8. Ability to group rooms and loads for common control by schedules, switches or network commands.
   9. Ability to monitor connected load current and display power consumption for areas equipped with room controllers incorporating the integral current monitoring feature.
   10. Provide capabilities for integration with a BAS via BACnet protocol. At a minimum, the following points shall be available to the BAS via BACnet IP connection to the segment manager: room occupancy state; room schedule mode; room switch lock control; individual occupancy sensor state; room lighting power; room plug-load power; load ON/OFF state; load dimming level; panel channel schedule state; panel relay state; and Segment Manager Group schedule state control.

D. Segment Manager shall support multiple DLM rooms as follows:
   1. Support up to 120 network bridges and 900 digital in-room devices.
   2. Support up to 300 network bridges and 2,200 digital in room devices, connected via network routers and switches.

2.15 PROGRAMMING, CONFIGURATION AND DOCUMENTATION SOFTWARE

A. PC-native application for optional programming of detailed technician-level parameter information for all DLM products, including all parameters not accessible via BACnet and the handled IR configuration tool. Software must be capable of accessing room-level parameter information locally within the room when connected via the programming adapter, or globally for many segment networks simultaneously utilizing standard BACnet/IP communication.
   1. Additional parameters exposed through this method include:
      a. Occupancy sensor detection LED disable for performance and other aesthetic spaces where blinking LEDs present a distraction.
      b. Six occupancy sensor action behaviors for each controlled load, separately configurable for normal hours and after hours modes. Modes include: No Action, Follow Off Only, Follow On Only, Follow On and Off, Follow On Only with Override Time Delay, Follow Off Only with Blink Warn Grace Time, Follow On and Off with Blink Warn Grace Time.
      c. Separate fade time adjustments per load for both normal and after hours from 0 - 4 hours.

d. Configurable occupancy sensor re-trigger grace period from 0 - 4 minutes separate for both normal hours and after hours.
e. Separate normal hours and after hours per-load button mode with modes including: Do nothing, on only, off only, on and off.
f. Load control polarity reversal so that on events turn loads off and vice versa.
g. Per-load DR (demand response) shed level in units of percent.
h. Load output pulse mode in increments of 1second.
i. Fade trip point for each load for normal hours and after hours that establishes the dimmer command level at which a switched load closes its relay to allow for staggered On of switched loads in response to a dimmer.

2. Generation of reports at the whole file, partial file, or room level. Reports include but are not limited to:
   a. Device list report: All devices in a project listed by type.
   b. Load binding report: All load controller bindings showing interaction with sensors, switches, and daylighting.
   c. BACnet points report: Per room Device ID report of the valid BACnet points for a given site's BOM.
   d. Room summary report: Device manifest for each room, aggregated by common BOM, showing basic sequence of operations.
   e. Device parameter report: Per-room lists of all configured parameters accessible via hand held IR programmer for use with O&M documentation.
   f. Scene report: All project scene pattern values not left at defaults (i.e. 1 = all loads 100%, 2 = all loads 75%, 3 = all loads 50%, 4 = all loads 25%, 5-16 = same as scene 1).
   g. Occupancy sensor report: Basic settings including time delay and sensitivity(ies) for all occupancy sensors.

3. Network-wide programming of parameter data in a spreadsheet-like programming environment including but not limited to the following operations:
   a. Set, copy/paste an entire project site of sensor time delays.
   b. Set, copy/paste an entire project site of sensor sensitivity settings.
   c. Search based on room name and text labels.
   d. Filter by product type to allow parameter set by product.
   e. Filter by parameter value to search for product with specific configurations.
4. Network-wide firmware upgrading remotely via the BACnet/IP network.
   a. Mass firmware update of entire rooms.
   b. Mass firmware update of specifically selected rooms or areas.
   c. Mass firmware upgrade of specific products.

2.16 LIGHTING CONTROL PANELS

A. Provide lighting control panels in the locations and capacities as indicated on the plans and schedules. Each panel shall be of modular construction and consist of the following components:
   1. Enclosure/Tub shall be NEMA 1, sized to accept an interior with 1 - 8 relays, 1 - 24 relays and 6 four-pole contactors, or 1 - 48 relays and 6 four-pole contactors.
   2. Cover shall be configured for surface or flush wall mounting of the panel as indicated on the plans. The panel cover shall have a hinged and lockable door with restricted access to line voltage section of the panel.

3. Interior assembly shall be supplied as a factory assembled component specifically designed and listed for field installation. The interior construction shall provide total isolation of high voltage (Class 1) wiring from low voltage (Class 2) wiring within the assembled panel. The interior assembly shall include intelligence boards, power supply, DIN rails for mounting optional Class 2 control devices, and individually replaceable latching type relays. The panel interiors shall include the following features:
   a. Removable, plug-in terminal blocks with connections for all low voltage terminations.
   b. Individual terminal block, override pushbutton, and LED status light for each relay.
   c. Direct wired switch inputs associated with each relay shall support 2-wire momentary switches only.
   d. Digital inputs (four RJ-45 jacks) shall support 1-, 2-, 3-, 4-, and 8-button digital switches; digital IO modules capable of receiving 0-5V or 0-10V analog photocell inputs; digital IO modules capable of receiving momentary or maintained contact closure inputs or analog sensor inputs; digital daylighting sensors; and digital occupancy sensors. Inputs are divided into two separate digital networks, each capable of supplying 250mA to connected devices.
   e. True relay state shall be indicated by the on-board LED and shall be available to external control devices and systems via BACnet.
   f. Automatically sequenced operation of relays to reduce impact on the electrical distribution system when large loads are controlled simultaneously.
   g. Group and pattern control of relays shall be provided through a simple keypad interface from a handheld IR programmer. Any set of relays can be associated with a group for direct on/off control or pattern (scene) control via a simple programming sequence using the relay override pushbuttons and LED displays for groups 1-8 or a handheld IR programmer for groups 1-99.
   h. Relay group status for shall be provided through LED indicators for groups 1-8 and via BACnet for groups 1-99. A solid LED indicates that the last group action called for an ON state and relays in the group are on or in a mixed state.
   i. Single-pole latching relays with modular plug-in design. Relays shall provide the following ratings and features:
      a) Electrical:
         i. 30 amp ballast at 277V
         ii. 20 amp ballast at 347V
         iii. 20amp tungsten at 120V
         iv. 30 amp resistive at 347V
         v. HP motor at 120V
         vi. 14,000 amp short circuit current rating (SCCR) at 347V
         vii. Relays shall be specifically UL 20 listed for control of plug-loads
      b) Mechanical:
         i. Replaceable, ½" KO mounting with removable Class 2 wire harness.
         ii. Actuator on relay housing provides manual override and visual status indication, accessible from Class 2 section of panel.
         iii. Dual line and load terminals each support two #14 - #12 solid or stranded conductors.
         iv. Tested to 300,000 mechanical on/off cycles.
4. Isolated low voltage contacts provide for true relay status feedback and pilot light indication.
5. Power supply shall be a multi-voltage transformer assembly with rated power to supply all electronics, occupancy sensors, switches, pilot lights, and photocells as necessary to meet the project requirements. Power supply to have internal over-current protection with automatic reset and metal oxide varistor protection.
6. Where indicated, lighting control panels designated for control of emergency lighting shall be provided with factory installed provision for automatic by pass of relays controlling emergency circuits upon

loss of normal power. Panels shall be properly listed and labeled for use on emergency lighting circuits and shall meet the requirements of UL924 and NFPA 70 - Article 700.

7. Integral system clock shall provide scheduling capabilities for panel-only projects without DLM segment networks or BAS control.
   a. Each panel shall include digital clock capability able to issue system wide automation commands to up to (11) eleven other panels for a total of (12) twelve networked lighting control panels. The clock shall provide capability for up to 254 independent schedule events per panel for each of the ninety-nine system wide channel groups.
   b. The clock capability of each panel shall support the time-based energy saving requirements.
   c. The clock module shall provide astronomic capabilities, time delays, blink warning, daylight savings, and holiday functions and will include a battery back up for the clock function and program retention in non-volatile FLASH memory. Clocks that require multiple events to meet local code lighting shut off requirements shall not be allowed.
   d. The clock capability of each panel shall operate on a basis of ON/OFF or Normal Hours/After Hours messages to automation groups that implement pre-configured control scenarios. Scenarios shall include:
      i Scheduled ON / OFF
      ii Manual ON / Scheduled OFF
      iii Astro ON / OFF (or Photo ON / OFF)
      iv Astro and Schedule ON / OFF (or Photo and Schedule ON / OFF)
   e. The user interface shall be a portable IR handheld remote control capable of programming any panel in the system (LMCT-100)
   f. The clock capability of each panel shall employ non-volatile memory and shall retain user programming and time for a minimum of 10 years.
   g. Schedules programmed into the clock of any one panel shall be capable of executing panel local schedule or Dark/Light (photocell or Astro) events for that panel in the event that global network communication is lost. Lighting control panels that are not capable of executing events independently of the global network shall not be acceptable.
8. The lighting control panel can operate as a stand-alone system, or can support schedule, group, and photocell control functions via a segment network connection.
9. The lighting control panel shall support digital communications to facilitate the extension of control to include interoperation with building automation systems and other intelligent field devices. Digital communications shall be RS485 MS/TP-based using the BACnet protocol.
   a. The panel shall have provision for an individual BACnet device ID and shall support the full 2^{22} range (0 – 4,193,304). The device ID description property shall be writable via the network to allow unique identification of the lighting control panel on the network.
   b. The panel shall support MS/TP MAC addresses in the range of 0 – 127 and baud rates of 9600k, 38400k, 76800k, and 115.2k bits per second.
   c. Lighting control relays shall be controllable as binary output objects in the instance range of 1 – 64. The state of each relay shall be readable and writable by the BAS via the object present value property.
   d. Lighting control relays shall report their true on/off state as binary input objects in the instance range of 1 – 64.
   e. The 99 group Normal Hours/After Hours control objects associated with the panel shall be represented by binary value objects in the instance range of 201 – 299. The occupancy state of each channel group shall be readable and writable by the BAS via the object present value

property. Commanding 1 to a channel group will put all relays associated with the channel into the normal hours mode. Commanding 0 or NULL shall put the relays into the after hours mode.

f. Setup and commissioning of the panel shall not require manufacturer-specific software or a computer. All configuration of the lighting control panel shall be performed using standard BACnet objects or via the handheld IR programming remote. Provide BACnet objects for panel setup and control as follows:

   i Binary output objects in the instance range of 1 – 64 (one per relay) for on/off control of relays.

   ii Binary value objects in the instance range of 1 – 99 (one per channel) for normal hours/after hours schedule control.

   iii Binary input objects in the instance range of 1 – 64 (one per relay) for reading true on/off state of the relays.

   iv Analog value objects in the instance range of 101 – 199 (one per channel group) shall assign a blink warn time value to each channel. A value of 5 shall activate the blink warn feature for the channel and set a 5-minute grace-time period. A value of 250 shall activate the sweep feature for the channel and enable the use of sweep type automatic wall switches.

g. The description property for all objects shall be writable via the network and shall be saved in non-volatile memory within the panel.

h. The BO and BV 1 – 99 objects shall support BACnet priority array with a relinquish default of off and after hours respectively. Prioritized writes to the channel BV objects shall propagate prioritized control to each member relay in a way analogous to the BACnet Channel object described in addendum aa.

i. Panel-aggregate control of relay Force Off at priority 2 shall be available via a single BV5 object. Force On at priority 1 shall be available via a single BV4 object.

j. Lockout of all digital switch buttons connected to a given panel shall be command-able via a single BV2 object. The lock status of any connected switch station shall be represented as BV101-196.

B. USER INTERFACE

1. Each lighting control panel system shall be supplied with at least (1) handheld configuration tool. As a remote programming interface the configuration tool shall allow setup, configuration, and diagnostics of the panel without the need for software or connection of a computer. The user interface shall have the following panel-specific functions as a minimum:
2. Set network parameters including panel device ID, MS/TP MAC address, baud rate and max master range.
3. Relay Group creation of up to 99 groups. Group creation shall result in programming of all seven key relay parameters for member relays. The seven parameters are as follows: After-hours Override Time Delay, Normal Hours Override Time Delay, Action on Transition to Normal Hours, Action on Transition to After Hours, Sensor Action During Normal Hours, Sensor Action During After Hours, Blink-Warn Time for After Hours.
4. Program up to 254 separate scheduled events. Events shall occur on seven day intervals with each day selectable as active or inactive, and shall be configurable as to whether the event is active on holidays. Holidays are also defined through the User Interface.
5. Program up to 32 separate Dark/Light events. Events shall have a selectable source as either calculated Astro with delay, or a digital IO module with an integral 0-5V or 0-10V analog photocell. Dark/Light events shall occur on seven day intervals with each day selectable as active or inactive, and shall be configurable as to whether the event is active on holidays.

6. Button binding of digital switches to groups shall be accessible via the handheld IR remote and accomplished from the digital switch station.
7. Programming of panel location information shall be accomplished by the handheld IR remote and include at a minimum LAT, LON, DST zone, and an approximate city/state location.

2.17 EMERGENCY LIGHTING CONTROL DEVICES

A. Emergency Lighting Control Unit – A UL 924 listed device that monitors a switched circuit providing normal lighting to an area. The unit provides normal ON/OFF control of emergency lighting along with the normal lighting. Upon normal power failure the emergency lighting circuit will close, forcing the emergency lighting ON until normal power is restored. Features include:
   1. 120/277 volts, 50/60 Hz, 20 amp ballast rating
   2. Push to test button
   3. Auxiliary contact for remote test or fire alarm system interface

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 OPTIONAL PRE-INSTALLATION MEETING

A. A factory authorized manufacturer's representative shall provide a functional overview of the lighting control system prior to installation. The Contractor shall schedule the pre-installation site visit after receipt of approved submittals to review the following:
   1. Confirm the location and mounting of all digital devices, with special attention to placement of occupancy and daylighting sensors.
   2. Review the specifications for low voltage control wiring and termination.
   3. Discuss the functionality and configuration of all products, including sequences of operation, per design requirements.
   4. Discuss requirements for integration with other trades.

3.3 CONTRACTOR INSTALLATION AND SERVICES

A. All line voltage connections to be tagged to indicate circuit and switched legs.
B. Contractor to install all room/area devices using manufacturer's factory-tested Cat 5e cable with pre-terminated RJ-45 connectors. If pre-terminated cable is not used for room/area wiring, the Contractor is responsible for testing each field-terminated cable following installation, and shall supply the lighting controls manufacturer with test results. Contractor to install any room to room network devices using manufacturer-supplied network wire. Network wire substitution is not permitted. Low voltage wiring topology must comply with manufacturer's specifications. Contractor shall route network wiring as shown in submittal drawings as closely as possible, and shall document final wiring location, routing and topology on as built drawings.
C. Install the work of this Section in accordance with manufacturer's printed instructions unless otherwise indicated. Before start up, Contractor shall test all devices to ensure proper communication.

D. Calibrate all sensor time delays and sensitivity to guarantee proper detection of occupants and energy savings.
   1. Adjust time delay so that controlled area remains lighted while occupied.
E. Provide written or computer-generated documentation on the configuration of the system including room by room description including:
   1. Sensor parameters, time delays, sensitivities, and daylighting setpoints.
   2. Sequence of operation, (e.g. manual ON, Auto OFF. etc.)
   3. Load Parameters (e.g. blink warning, etc.)
F. Post start-up tuning – After 30 days from occupancy Contractor shall adjust sensor time delays and sensitivities to meet the City of New York's requirements. Provide a detailed report to the Commissioner of post start-up activity.

3.4 FACTORY SERVICES

A. Upon completion of the installation, the manufacturer's factory authorized representative shall assist the Contractor with verify a complete fully functional system.
B. The Contractor shall provide both the manufacturer and the Commissioner with three weeks written notice of the system start up and adjustment date.
C. Upon completion of the system start up, the factory-authorized technician shall provide the proper instructing to the City of New York's personnel on the adjustment and maintenance of the system.

END OF SECTION 26 09 33

SECTION 262200
Low-Voltage Transformers

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contrast Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 33 00 "Submittal Procedures."

b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2 SUMMARY

A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 500 kVA:

1. Dry type transformers.

1.3 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer indicated.

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, and control wiring.

D. Manufacturer Seismic Qualification Certification: Submit certification that transformers, accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

E. Source quality-control test reports.

F. Field quality-control test reports.

G. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Source Limitations: Obtain each transformer type through one source from a single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the NYC Electrical Code, and marked for intended use.

D. Comply with IEEE C57.12.91, UL Standard 506 & 1561, ANSI C57.12.00, C57.96, CE7.110, JEMA TP1 and TP2, "Test Code for Dry-Type Distribution and Power Transformers."

1.5 DELIVERY, STORAGE, AND HANDLING

A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

1.6 COORDINATION

A. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of wall-mounting and structure-hanging supports with actual transformer provided.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ACME Electric Corporation; Power Distribution Products Division.
2. Challenger Electrical Equipment Corp.; a division of Eaton Corp.
3. Controlled Power Company.
4. Eaton Electrical Inc.; Cutler-Hammer Products.
5. Federal Pacific Transformer Company; Division of Electro-Mechanical Corp.
6. General Electric Company.
7. Hammond Co.; Matra Electric, Inc.
8. Micron Industries Corp.
9. Myers Power Products, Inc.
10. Siemens Energy & Automation, Inc.
11. Square D; Schneider Electric.
12. Or approved equal.

2.2 GENERAL TRANSFORMER REQUIREMENTS

A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service. Transformers shall be 115°C temperature rise above 40°C ambient. Transformers shall be capable of carrying @ 15% continuous overload without exceeding a 150°C rise in a 40°C ambient.

B. Cores: Grain-oriented, non-aging silicon steel.

C. Coils: Continuous windings without splices except for taps.

1. Internal Coil Connections: Brazed or pressure type.
2. Coil Material: Copper.

2.3 DRY TYPE TRANSFORMERS

A. Comply with NEMA ST 20, and list and label as complying with UL 1561.

B. Provide transformers that are constructed to withstand seismic forces specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

C. Cores: One leg per phase.

D. Enclosure: Totally enclosed, nonventilated, NEMA 250, Type 2.

1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.

E. Transformer Enclosure Finish: Comply with NEMA 250.

1. Finish Color: ANSI 49 gray.

F. Taps for Transformers Smaller Than 3 kVA.

G. Taps for Transformers 7.5 to 24 kVA: One 5 percent tap above and one 5 percent tap below normal full capacity.

H. Taps for Transformers 25 kVA and Larger: Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity.

I. Insulation Class: 220 deg C, UL-component-recognized insulation system with a maximum of deg C rise above 40 deg C ambient temperature.

J. Energy Efficiency for Transformers Rated 15 kVA and Larger:

1. Complying with NEMA TP 1, Class 1 efficiency levels.
2. Tested according to NEMA TP 2.

K. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor.

1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor.
2. Indicate value of K-factor on transformer nameplate.

L. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.

1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
2. Include special terminal for grounding the shield.
3. Shield Effectiveness:

a. Capacitance between Primary and Secondary Windings: Not to exceed 33 picofarads over a frequency range of 20 Hz to 1 MHz.
b. Common-Mode Noise Attenuation: Minimum of minus 120 dBA at 0.5 to 1.5 kHz; minimum of minus 65 dBA at 1.5 to 100 kHz.
c. Normal-Mode Noise Attenuation: Minimum of minus 52 dBA at 1.5 to 10 kHz.

M. Wall Brackets: Manufacturer's standard brackets.

N. Fungus Proofing: Permanent fungicidal treatment for coil and core.

O. Low-Sound-Level Requirements: Minimum of 3 dBA less than NEMA ST 20 standard sound levels when factory tested according to IEEE C57.12.91.

P. Low-Sound-Level Requirements: Maximum sound levels, when factory tested according to IEEE C57.12.91, as follows:

Size in KVA	Specification	ANSI Standard
9 KVA and Less	37 dB	40 dB
30 to 50 KVA	45 dB	45 dB

51 to 150 KVA	45 dB	50 dB
151 to 300 KVA	45 dB	55 dB
301 to 500 KVA	55 dB	60 dB
501 to 750 KVA	60 dB	62 dB
751 to 1000 KVA	62 dB	64 dB

2.4 IDENTIFICATION DEVICES

A. Nameplates: Engraved, laminated-plastic or metal nameplate for each **distribution** transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Section 260553 "Identification for Electrical Systems."

2.5 SOURCE QUALITY CONTROL

A. Test and inspect transformers according to IEEE C57.12.91.

B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.

B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

D. Verify that ground connections are in place and requirements in Division 26 Section 260548 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Install wall-mounting transformers level and plumb with wall brackets fabricated by transformer manufacturer.

1. Brace wall-mounting transformers as specified in Division 26 Section 260548 "Vibration and Seismic Controls for Electrical Systems.

B. Construct concrete bases (house-keeping pad 4" high concrete) and anchor floor-mounting transformers according to manufacturer's written instructions and requirements in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

3.4 CONNECTIONS

A. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

C. Remove and replace units that do not pass tests or inspections and retest as specified above.

D. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of transformer connections.

1. Use an infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
2. Perform 2 follow-up infrared scans of transformers, one at 4 months and the other at 11 months after Substantial Completion.
3. Prepare a certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.

E. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.6 ADJUSTING

A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.7 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION 262200

SECTION 262413
Switchboards

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 33 00 "Submittal Procedures"

b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Section Includes:

1. Service and distribution switchboards rated 600 V and less.
2. Disconnecting and overcurrent protective devices.
3. Accessory components and features.

1.3. PERFORMANCE REQUIREMENTS

A. Seismic Performance: Switchboards shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified .

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of switchboard, overcurrent protective device, transient voltage suppression device, ground-fault protector, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

C. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.

2. Detail enclosure types for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
6. Detail utility company's metering provisions with indication of approval by utility company.
7. Include evidence of NRTL listing for series rating of installed devices.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.
10. Include diagram and details of proposed mimic bus.
11. Include schematic and wiring diagrams for power, signal, and control wiring.

D. Samples: Representative portion of mimic bus with specified material and finish, for color selection.

E. Both NECA 400 and NEMA PB 2.1 recommend that installers be "qualified," which is defined in NFPA 70.

F. Seismic Qualification Certificates: Submit certification that switchboards, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

G. Field Quality-Control Reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

H. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions," include the following:

1. Routine maintenance requirements for switchboards and all installed components.
2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
3. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Installer Qualifications: Qualified as defined in NEMA PB 2.1 and properly trained in electrical safety as required by NFPA 70E.

C. Testing Agency Qualifications: Member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

D. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

E. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Comply with NEMA PB 2.

H. Comply with NFPA 70.

I. Comply with UL 891.

1.6. DELIVERY, STORAGE, AND HANDLING

A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.

B. Remove loose packing and flammable materials from inside switchboards and install temporary electric heating (250 W per section) to prevent condensation.

C. Handle and prepare switchboards for installation according to NECA 400, NEMA PB 2.

1.7. PROJECT CONDITIONS

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

B. Environmental Limitations:

1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

   a. Ambient Temperature: Not exceeding 104 deg F (40 deg C).
   b. Altitude: Not exceeding 6600 feet (2000 m).

C. Service Conditions: NEMA PB 2, usual service conditions, as follows:

1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet (2000 m).

1.8. COORDINATION

A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in concrete specification sections.

1.9. WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to restore or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1. MANUFACTURED UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include the following:

1. Electric Switchboard.
2. All City Switchboard.
3. Electrotech.
4. Lincoln Electric.
5. Or Approved Equal

B. Front-Connected, Front-Accessible Switchboards:

1. Main Devices: Fixed, individually mounted.
2. Branch Devices: Panel mounted.
3. Sections front and rear aligned.

C. Nominal System Voltage: 480/277VY.

D. Main-Bus Continuous: As noted.

E. Seismic Requirements: Fabricate and test switchboards according to IEEE 344 to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

F. Indoor Enclosures: Steel, NEMA 250, Type 1.

G. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.

H. Insulation and isolation for main and vertical buses of feeder sections.

I. Cubical Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.

J. Utility Metering Compartment: Fabricated, barrier compartment and section complying with utility company's requirements; hinged sealed door; buses provisioned for mounting utility company's current transformers and potential transformers or potential taps as required by utility company. If separate vertical section is required for utility metering, match and align with basic switchboard. Provide service entrance label and necessary applicable service entrance features.

K. Customer Metering Compartment: A separate customer metering compartment and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks. Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.

L. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

M. Removable, Hinged Rear Doors and Compartment Covers: Secured by standard bolts, for access to rear interior of switchboard.

N. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.

O. Pull Box on Top of Switchboard:

1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
2. Set back from front to clear circuit-breaker removal mechanism.
3. Removable covers shall form top, front, and sides. Top covers at rear shall be easily removable for drilling and cutting.
4. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into switchboard.
5. Cable supports shall be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.

P. Buses and Connections: Three phase, four wire unless otherwise indicated.

1. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity, silver-plated, with copper tin-plated copper feeder circuit-breaker line connections.
2. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with mechanical connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of switches position.
3. Ground Bus: Minimum-size required by UL 891, hard-drawn copper of 98 percent conductivity, equipped with mechanical connectors for feeder and branch-circuit ground conductors.
4. Main Phase Buses and Equipment Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
5. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables.
6. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.

Q. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of switch compartment.

R. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.

2.2. DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Bolted-Pressure Contact Switch: (over 800A) OPERATING mechanism uses rotary-mechanical-bolting action to produce and maintain high clamping pressure on the switch blade after it engages the stationary contacts.

1. Manufacturers: Subject to compliance with requirements:

   a. Boltswitch, Inc.
   b. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   c. Pringle Electrical Manufacturing Company, Inc.
   d. Siemens Energy & Automation, Inc.
   e. Square D; a brand of Schneider Electric.
   f. Or Approved Equal

2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.
3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.

   a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
   b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.

4. Auxiliary Switches: Factory installed, single pole, double throw, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
5. Service-Rated Switches: Labeled for use as service equipment.

B. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

C. Fuses are specified in Section 262813 "Fuses."

2.3. IDENTIFICATION

A. Service Equipment Label: NRTL labeled for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Receive, inspect, handle, and store switchboards according to NECA 400, NEMA PB 2.1.

B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.

C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Install switchboards and accessories according to NECA 400, NEMA PB 2.1.

B. Equipment Mounting: Install switchboards on concrete base, 4-inch (100-mm) nominal thickness. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to switchboards.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from switchboard units and components.

D. Comply with mounting and anchoring requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

E. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.

F. Install filler plates in unused spaces of panel-mounted sections.

G. Install overcurrent protective devices, transient voltage suppression devices, and instrumentation.

1. Set field-adjustable switches/fuse ranges.

H. Install spare-fuse cabinet.

I. Comply with NECA 1.

3.4. CONNECTIONS

A. Comply with requirements for terminating feeder bus specified in electrical specification sections. Drawings indicate general arrangement of bus, fittings, and specialties.

3.5. IDENTIFICATION

A. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.6. FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:

a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchboard. Remove front and rear panels so joints and connections are accessible to portable scanner.
b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.

c. Instruments and Equipment:

1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

D. Switchboard will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.7. ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as indicated.

3.8. PROTECTION

A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

3.9. INSTRUCTION

A. Engage a factory-authorized service representative to instruct building's operating personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories.

END OF SECTION 262413

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 262414
Electronic Sub-Metering System

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions:

a. Section 01 33 00 "Submittal Procedures."

b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2 SUMMARY

A. Contractor shall provide the Automated Metering System in accordance with Contract Documents.

B. The system shall consist of revenue grade meters with electronic electricity meters installed at each individual distribution panel or point to be metered, as noted in the electrical diagrams, necessary current transformers, potential taps, related wiring and accessories, and a central computer complete with modem or means of communication for Automatic Meter Reading (AMR).

C. Contractor shall furnish, install and verify as operational an electric, computerized metering system which shall be microprocessor controlled, consisting of all solid-state components. Electricity meters shall be manually readable using local Liquid Crystal Display (LCD) and push-button, and automatically readable utilizing one or more of the following methods: Frequency Hopping Spread Spectrum Power Line Carrier Communication, Telephone Modem Communication, RS-232 Serial Port Communication. The system shall be capable of using all of these methods of communication at the same property.

D. Manufacturers:

1. Subject to compliance with requirements, provide:

a. Quad Logic Controls Corporation, Mini Closet 5.
b. SATEC BFM 136.
c. Schneider Electric Power Logic BCPM
d. Or Approved Equal.

1.3 RELATED WORK

A. Related work specified in other Sections:

1. Hangers And Supports For Electrical Systems (Section 260529)
2. Raceway And Boxes For Electrical Systems (Section 260533)
3. Grounding And Bonding For Electrical Systems (260526)

1.4 STANDARDS

A. Listed by Underwriters Laboratories, Inc.
B. FCC Part 15, Subpart J, Class B
C. Modems Registered with the FCC under Part 68 Rules & Regulations
D. Approved by the New York City Advisory Board for code compliance

1.5 SUBMITTALS

A. Shop Drawings: Submit shop drawings and manufacturer's data for each component of the system, installation and user instructions, installation verification instructions and field test requirements.

B. Detail of panel installation with dimensions.

C. Compliance with city and state regulatory agencies.

PART 2 – PRODUCTS

2.1 SYSTEM REQUIREMENTS

A. The system shall be a fully automated, microprocessor based utilities measurement system. At its minimum configuration it will measure and record the usage of electricity in non-volatile memory (CMOS RAM), and communicate the reading to an on-site or remote computer (i.e. the billing computer).

B. Each meter shall interface to the electrical load being measured with a direct voltage tap, up to 600VAC, and with current transformers (solid or split core). The preferred current transformers shall have a 100mA secondary, but provision shall be available to interface with 5A secondary current transformers.

C. Each meter shall display its readings on a local LCD display. The consumption readings shall be up to nine (9) digits. In the default display, up to six (6) digits to the left of a decimal point shall be for kilowatt-hours, and three (3) digits to the right of a decimal point shall be for watt-hours. Read-out shall be to a single watt-hour for a 100A meter, and at the same ratio for all configurations not requiring and HCA (High Current Adapter). The consumption readings of all other measured parameters (e.g. kVARh, kVAh) shall be in the same format.

D. Each meter shall be equipped with a clock/calendar that automatically accommodates leap years and daylight savings time. The daylight savings time feature can be disabled when not required. The clock/calendar shall be backed up by battery and continue operating during power outages.

E. Each meter shall measure and record peak kW Demand along with the time and date at which it occurs. Peak demands shall be capable of being read and reset by the billing computer. The demand interval shall be factory programmed in each meter and shall be permanent.

F. Each meter shall maintain a forty (40) day log of daily Time-of-Use consumption and peak demand readings along with the time and date at which the daily peak demands occur. The consumption recorded shall be the reading at the end of the Time-of-Use period of the end of the day. The peak demand recorded in the log shall be the peak demand for the Time-of-Use period for that day. The log shall include reactive and apparent energy consumption and peak demands, with time and date stamp, if those options are enabled. The log shall contain a single "All Hours" Time-of-Use period even when the Time-of-Use feature is not explicitly used. See Section 2.2 below, for a description of the options.

G. Each meter shall perform Phase Diagnostics. Phase Diagnostic Registers shall include multipliers for amperage, voltage and watts, and line frequency. On a Per phase basis Phase Diagnostics shall include voltage, VAR phase shift, accumulated kWh and VARh, and instantaneous amps, watts, VAR's, VA's, phase angel (degrees displacement between current and voltage waveforms), and Power Factor.

H. Each meter shall perform Event Diagnostics. The Event Diagnostic Registers hall include Time and Date and the number of times the time has been changed, number of tampers and number of times the box was closed with the time and date of last occurrence number of power downs, power ups and start ups (POST) with time and date of last occurrence, and the number of times the accumulated peak demand has been reset, also with the time and date of the last occurrence. Meters that communicate by Power Line Carrier shall also include counts of properly received messages, rejected messages and the number of transmissions without reply.

2.2. THE SYSTEM SHALL BE CAPABLE OF THE OPTIONS NOTED BELOW:

A. Each meter shall be capable of measuring and recording reactive energy: kVARh consumption and kVAR demand. Demand shall be recorded along with the time and date at which it occurs. Peak de mands shall be capable of being read and reset by the billing computer. The demand interval shall be factory programmed in each meter and shall be permanent.

B. Each meter shall be capable of measuring and recording apparent energy: kVAh consumption and kVA demand. Demand shall be recorded along with the time and date at which it occurs. Peak demands shall be capable of being read and reset by the billing computer. The demand interval shall be factory programmed in each meter and shall be permanent.

C. Each meter shall be capable of reading up to three (3) dry contact, Form A pulse inputs to automate the reading of other utilities such as gas, water or BTU's. The pulse inputs shall be individually factory programmable as counter, as above, or as timers for such applications as run-time measurement.

D. Each meter shall be capable of providing a KYZ, (dry contact, Form C), pulse output to interface with energy management or building automation systems. The KYZ output can be factory programmed as

Kwh, kVARh, or kVAh. The value of an output pulse can also be factory programmed to meet customer requirements.

E. Each meter shall be capable of maintaining a one hundred twenty (120) day log of fifteen (15) minute demands with time and date stamp. The log is capable of being used as a 120 day log for a single energy parameter (e.g. kW), as two 60 day logs for two parameters (e.g. kW and kVAR or kVA), or as three 40 day logs for three parameters (e.g. kW, kVAR and kVA).

F. The system shall be able to communicate with the billing computer by one or more of the methods noted below.

1. Power Line Carrier. Each meter shall be capable of communication over the billing's electrical power wiring to a Scan Transponder via bidirectional, frequency hopping, spread spectrum power line carrier communications. These signals shall pass through transformers rated 600 kVA or less. The Scan Transponder and each meter shall select the best available f phase, frequency range and baud rate for communication at any given time.

2. The number of meters reporting to a single Scan Transponder is determined by the information to communicated and the amount of non-volatile memory in the Scan Transponder. The range is from 1 to 2,048 meters. All communication shall be direct between Scan Transponder and each meter, and under control of the Scan Transponder. Meters will not repeat messages from other meters nor will message routing be determined by meters.

3. One Scan Transponder shall be provided per electrical service entrance at the site. Each Scan Transponder shall be equipped with an RS-232 serial port. One Scan Transponder at the site shall be equipped with a Modem if the billing computer is remote.

   Multiple Scan Transponders shall be connected by Data Link. Meters may also be connected to the Scan Transponder by Data Link.

G. Modem. Individual meters shall be capable of being equipped with a modem for direct connection to a telephone line.

H. RS-232 Serial Port. All meters shall be capable of being equipped with a local serial port for Direct connection to a terminal or PC.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 CALIBRATION

A. Meters shall be factory calibrated. This calibration shall be valid for the life of the meter.

3.3 SYSTEM COMMISSIONING

A. Verification of proper installation and operation of each meter in the system shall be provided and made available from the factory or from local Authorized service centers.

3.4 SYSTEM MAINTENANCE

A. Maintenance of the system shall be performed by the installing Contractor, Authorized Service Center or factory personnel, as required, during the warranty period. 3 Year extended maintenance contracts shall be provided and made available from the Authorized Service Center or the factory.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train maintenance personnel on the system for period of minimum of two 3 hour sessions.

END OF SECTION 262414

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 262416
Panelboards

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. Section Includes:

1. Distribution panelboards.
2. Lighting and appliance branch-circuit panelboards.

1.3. DEFINITIONS

A. SVR: Suppressed voltage rating.

1.4. PERFORMANCE REQUIREMENTS

A. Seismic Performance: Panelboards shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified.

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of panelboard, switching and overcurrent protective device, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

C. Shop Drawings: For each panelboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types and details for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Short-circuit current rating of panelboards and overcurrent protective devices.
5. Include evidence of NRTL listing for series rating of installed devices.
6. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
7. Include wiring diagrams for power, signal, and control wiring.
8. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

D. Qualification Data: For qualified testing agency.

E. Seismic Qualification Certificates: Submit certification that panelboards, overcurrent protective devices, accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

F. Field Quality-Control Reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

G. Panelboard Schedules: For installation in panelboards. Submit final versions after load balancing.

H. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions include the following:

1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Testing Agency Qualifications: Member company of NETA or an NRTL.

C. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Comply with NEMA PB 1.

G. Comply with NFPA 70.

1.7. DELIVERY, STORAGE, AND HANDLING

A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

B. Handle and prepare panelboards for installation according to NECA 407 NEMA PB 1.

1.8. PROJECT CONDITIONS

A. Environmental Limitations:

1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

    a. Ambient Temperature: Not exceeding minus 22 deg F (minus 30 deg C) to plus 104 deg F (plus 40 deg C).
    b. Altitude: Not exceeding 6600 feet (2000 m).

B. Service Conditions: NEMA PB 1, usual service conditions, as follows:

1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet (2000 m).

1.9. COORDINATION

A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in concrete specification sections.

1.10. WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to restore or replace transient voltage suppression devices that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1. GENERAL REQUIREMENTS FOR PANELBOARDS

A. Fabricate and test panelboards according to IEEE 344 to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

B. Enclosures: Flush- and surface-mounted cabinets.

1. Rated for environmental conditions at installed location.

   a. Indoor Dry and Clean Locations: NEMA 250, Type 1.
   b. Outdoor Locations: NEMA 250, Type 3R.
   c. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12.

2. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box.
3. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover.
4. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.
5. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
6. Finishes:

   a. Panels and Trim: galvanized steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
   b. Back Boxes: Same finish as panels and trim.
   c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.

7. Directory Card: Inside panelboard door, mounted in metal frame with transparent protective cover.

C. Incoming Mains Location: Top and bottom.

D. Phase, Neutral, and Ground Buses:

1. Material: Hard-drawn copper, 98 percent conductivity.
2. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
3. Extra-Capacity Neutral Bus: Neutral bus rated 200 percent of phase bus and UL listed as suitable for nonlinear loads.
4. Split Bus: Vertical buses divided into individual vertical sections.

E. Conductor Connectors: Suitable for use with conductor material and sizes.

1. Material: Hard-drawn copper, 98 percent conductivity.
2. Main and Neutral Lugs: Mechanical type.
3. Ground Lugs and Bus-Configured Terminators: Mechanical type.
4. Feed-Through Lugs: Mechanical type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
5. Subfeed (Double) Lugs: Mechanical type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
6. Gutter-Tap Lugs: Mechanical type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.

F. Service Equipment Label: NRTL labeled for use as service equipment for panelboards or load centers with one or more main service disconnecting and overcurrent protective devices.

G. Future Devices: Mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

H. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals.

2.2. DISTRIBUTION PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. Or approved equal.

B. Panelboards: NEMA PB 1, power and feeder distribution type.

C. Doors: Secured with vault-type latch with tumbler lock; keyed alike.

1. For doors more than 36 inches (914 mm) high, provide two latches, keyed alike.

D. Mains: Fused switch.

E. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers.

F. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers.

G. Branch Overcurrent Protective Devices: Fused switches.

2.3. LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

A. Manufacturers: Subject to compliance with requirements:

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. Or Approved Equal

B. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.

C. Mains: Circuit breaker or lugs only.

D. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.

E. Doors: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.

F. Column-Type Panelboards: Narrow gutter extension, with cover, to overhead junction box equipped with ground and neutral terminal buses.

2.4. DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Manufacturers: Subject to compliance with requirements:

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. Or Approved Equal

B. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads, and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
3. Electronic trip circuit breakers with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:

    a. Instantaneous trip.
    b. Long- and short-time pickup levels.
    c. Long- and short-time time adjustments.
    d. Ground-fault pickup level, time delay, and I^2t response.

4. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller; let-through ratings less than NEMA FU 1, RK-5.
5. GFCI Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).
6. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
7. Arc-Fault Circuit Interrupter (AFCI) Circuit Breakers: Comply with UL 1699; 120/240-V, single-pole configuration.
8. Molded-Case Circuit-Breaker (MCCB) Features and Accessories:

    a. Standard frame sizes, trip ratings, and number of poles.
    b. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor materials.
    c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
    d. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
    e. Communication Capability: Universal-mounted communication module with functions and features compatible with power monitoring and controls system.
    f. Shunt Trip: 120 -V trip coil energized from separate circuit, set to trip at 75 percent of rated voltage.
    g. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage with field-adjustable 0.1- to 0.6-second time delay.
    h. Auxiliary Contacts: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
    i. Alarm Switch: Single-pole, normally open contact that actuates only when circuit breaker trips.
    j. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
    k. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function with other upstream or downstream devices.
    l. Multipole units enclosed in a single housing or factory assembled to operate as a single unit.
    m. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in on or off position.
    n. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.

C. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

1. Fuses, and Spare-Fuse Cabinet: Comply with requirements specified in Section 262813 "Fuses."

2. Fused Switch Features and Accessories: Standard ampere ratings and number of poles.
3. Auxiliary Contacts: Two normally open and normally closed contact(s) that operate with switch handle operation.

2.5. ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Receive, inspect, handle, and store panelboards according to NECA 407 NEMA PB 1.1.

B. Examine panelboards before installation. Reject panelboards that are damaged or rusted or have been subjected to water saturation.

C. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Install panelboards and accessories according to NECA 407, NEMA PB 1.1.

B. Equipment Mounting: Install panelboards on concrete bases, 4-inch (100-mm) nominal thickness. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete".

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
2. For panelboards, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to panelboards.
5. Attach panelboard to the vertical finished or structural surface behind the panelboard.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.

D. Comply with mounting and anchoring requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

E. Mount top of trim 90 inches (2286 mm) above finished floor unless otherwise indicated.

F. Mount panelboard cabinet plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.

G. Install overcurrent protective devices and controllers not already factory installed.

1. Set field-adjustable, circuit-breaker trip ranges.

H. Install filler plates in unused spaces.

I. Stub four 1-inch (27-GRC) empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch (27-GRC) empty conduits into raised floor space or below slab not on grade.

J. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.

K. Comply with NECA 1.

3.4. IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with Section 260553 "Identification for Electrical Systems."

B. Create a directory to indicate installed circuit loads after balancing panelboard loads; incorporate building's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.

C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

D. Device Nameplates: Label each branch circuit device in distribution panelboards with a nameplate complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.5. FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:

   a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
   b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.
   c. Instruments and Equipment:

      1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

D. Panelboards will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6. ADJUSTING

A. Adjust moving parts and operable component to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as indicated.

C. Circuit changes made during load balancing may negate color-coding of phases and circuits.

D. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes.

1. Measure as directed during period of normal system loading.
2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed. Avoid disrupting critical 24-hour services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.
4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.

3.7. PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION 262416

THIS PAGE LEFT INTENTIONALLY BLANK

Section 262726
Wiring Devices

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. This Section includes the following:

1. Receptacles, receptacles with integral GFCI, and associated device plates.
2. Twist-locking receptacles.
3. Receptacles with integral surge suppression units.
4. Wall-box motion sensors.
5. Wall-switch and exterior occupancy sensors.
6. Communications outlets.
7. Cord and plug sets.

B. Related Sections include the following:

1. Section 271500 "Communications Horizontal Cabling" for workstation outlets.

1.3. DEFINITIONS

A. EMI: Electromagnetic interference.

B. GFCI: Ground-fault circuit interrupter.

C. Pigtail: Short lead used to connect a device to a branch-circuit conductor.

D. RFI: Radio-frequency interference.

E. UTP: Unshielded twisted pair.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.

D. Samples: One for each type of device and wall plate specified, in each color specified.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For wiring devices to include in all manufacturers' packing label warnings and instruction manuals that include labeling conditions.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Source Limitations: Obtain each type of wiring device and associated wall plate through one source from a single manufacturer. Insofar as they are available, obtain all wiring devices and associated wall plates from a single manufacturer and one source.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner, and marked for intended use.

D. Comply with NFPA 70.

1.6. COORDINATION

A. Receptacles for City of NY-Furnished Equipment: Match plug configurations.

1. Cord and Plug Sets: Match equipment requirements.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Manufacturers:

1. Wattstopper (Le Grand).
2. Cooper Wiring Devices; a division of Cooper Industries, Inc. (Cooper).
3. Hubbell Incorporated; Wiring Device-Kellems (Hubbell).
4. Leviton Mfg. Company Inc. (Leviton).
5. Pass & Seymour/Legrand; Wiring Devices & Accessories (Pass & Seymour).
6. Or Approved Equal.

2.2. STRAIGHT BLADE RECEPTACLES

A. Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

a. Cooper; 5351 (single), 5352 (duplex).
b. Hubbell; HBL5351 (single), CR5352 (duplex).
c. Leviton; 5891 (single), 5352 (duplex).
d. Pass & Seymour; 5381 (single), 5352 (duplex).
e. Or Approved Equal.

2.3. GFCI RECEPTACLES

A. General Description: Straight blade, feed-through type. Comply with NEMA WD 1, NEMA WD 6, UL 498, and UL 943, Class A, and include indicator light that is lighted when device is tripped.

B. Duplex GFCI Convenience Receptacles, 125 V, 20 A:

8. Products: Subject to compliance with requirements, provide one of the following:

a. Cooper; GF20.
b. Pass & Seymour; 2084.
c. Leviton
d. Or Approved Equal

2.4. HAZARDOUS (CLASSIFIED) LOCATION RECEPTACLES

A. Available Wiring Devices for Hazardous (Classified) Locations: Comply with NEMA FB 11 and UL 1010.

1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

a. Cooper Crouse-Hinds.
b. EGS/Appleton Electric.
c. Killark; a division of Hubbell Inc.
d. Or Approved Equal

2.5. TWIST-LOCKING RECEPTACLES

A. Single Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration L5-20R, and UL 498.

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. Cooper; L520R.
   b. Hubbell; HBL2310.
   c. Leviton; 2310.
   d. Pass & Seymour; L520-R.
   e. Or Approved Equal

2.6. CORD AND PLUG SETS

A. Description: Match voltage and current ratings and number of conductors to requirements of equipment being connected.

1. Cord: Rubber-insulated, stranded-copper conductors, with Type SOW-A jacket; with green-insulated grounding conductor and equipment-rating ampacity plus a minimum of 30 percent.
2. Plug: Nylon body and integral cable-clamping jaws. Match cord and receptacle type for connection.

2.7. SNAP SWITCHES

A. Comply with NEMA WD 1 and UL 20.

B. Switches, 120/277 V, 20 A:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. Cooper; 2221 (single pole), 2222 (two pole), 2223 (three way), 2224 (four way).
   b. Hubbell; CS1221 (single pole), CS1222 (two pole), CS1223 (three way), CS1224 (four way).
   c. Leviton; 1221-2 (single pole), 1222-2 (two pole), 1223-2 (three way), 1224-2 (four way).
   d. Pass & Seymour; 20AC1 (single pole), 20AC2 (two pole), 20AC3 (three way), 20AC4 (four way).
   e. Or Approved Equal

C. Pilot Light Switches, 20 A:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. Cooper; 2221PL for 120 V and 277 V.
   b. Hubbell; HPL1221PL for 120 V and 277 V.
   c. Leviton; 1221-PLR for 120 V, 1221-7PLR for 277 V.
   d. Pass & Seymour; PS20AC1-PLR for 120 V.
   e. Or Approved Equal

2. Description: Single pole, with neon-lighted handle, illuminated when switch is "ON."

D. Key-Operated Switches, 120/277 V, 20 A:

1. Products: Subject to compliance with requirements, provide one of the following:

   a. Cooper; 2221L.
   b. Hubbell; HBL1221L.
   c. Leviton; 1221-2L.
   d. Pass & Seymour; PS20AC1-L.
   e. Or Approved Equal

2. Description: Single pole, with factory-supplied key in lieu of switch handle.

E. Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A; for use with mechanically held lighting contactors.

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. Cooper; 1995.
   b. Hubbell; HBL1557.
   c. Leviton; 1257.
   d. Pass & Seymour; 1251.
   e. Or Approved Equal

2.8. OCCUPANCY SENSORS

A. Wall-Switch Sensors:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. Cooper; 6111 for 120 V, 6117 for 277 V.
   b. Hubbell; WS1277.
   c. Leviton; ODS 10-ID.
   d. Pass & Seymour; WS3000.
   e. Philips Lighting Controls.
   f. Or Approved Equal

2. Description: Passive-infrared type, 120/277 V, adjustable time delay up to 30 minutes, 180-degree field of view, with a minimum coverage area of 900 sq. ft. (84 sq. m).

B. Wall-Switch Sensors:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

a. Hubbell; AT120 for 120 V, AT277 for 277 V.
b. Leviton; ODS 15-ID.
c. Philips Lighting Control LRS 2215
d. Or Approved Equal

2. Description: Adaptive-technology type, 120/277 V, adjustable time delay up to 20 minutes, 180-degree field of view, with a minimum coverage area of 900 sq. ft. (84 sq. m).

C. Long-Range Wall-Switch Sensors:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Hubbell; ATP1600WRP.
b. Leviton; ODWWV-IRW.
c. Pass & Seymour; WA1001.
d. Watt Stopper (The); CX-100.
e. Philips Lighting Control LRM 500.
f. Or Approved Equal

2. Description: Passive-infrared type, 120/277 V, adjustable time delay up to 30 minutes, 110-degree field of view, with a minimum coverage area of 1200 sq. ft. (111 sq. m).

D. Long-Range Wall-Switch Sensors:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Hubbell; ATD1600WRP.
b. Leviton; ODW12-MRW.
c. Watt Stopper (The); DT-200.
d. Philips Lighting Controls.
e. Or Approved Equal

2. Description: Dual technology, with both passive-infrared- and ultrasonic-type sensing, 120/277 V, adjustable time delay up to 30 minutes, 110-degree field of view, and a minimum coverage area of 1200 sq. ft. (111 sq. m).

E. Wide-Range Wall-Switch Sensors:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

a. Hubbell; ATP120HBRP.
b. Leviton; ODWHB-IRW.
c. Pass & Seymour; HS1001.
d. Watt Stopper (The); CX-100-3.
e. Philips Lighting Controls.
f. Or Approved Equal

2. Description: Passive-infrared type, 120/277 V, adjustable time delay up to 30 minutes, 150-degree field of view, with a minimum coverage area of 1200 sq. ft. (111 sq. m).

2.9. COMMUNICATIONS OUTLETS

A. Telephone Outlet:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. Cooper; 3560-6.
   b. Leviton; 40649.
   c. Siemon.
   d. Or Approved Equal

4. Description: Single RJ-45 jack for terminating 100-ohm, balanced, four-pair UTP; TIA/EIA-568-B.1; complying with Category 5e. Comply with UL 1863.

B. Combination TV and Telephone Outlet:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. Cooper; 3562.
   b. Leviton; 40595.
   c. Siemon.
   d. Or Approved Equal

2. Description: Single RJ-45 jack for 100-ohm, balanced, four-pair UTP; TIA/EIA-568-B.1; complying with Category 5e; and one Type F coaxial cable connector.

2.10. WALL PLATES

A. Single and combination types to match corresponding wiring devices.

1. Plate-Securing Screws: Metal with head color to match plate finish.
2. Material for Finished Spaces: 0.035-inch- (1-mm-) thick, satin-finished stainless steel finish.
3. Material for Unfinished Spaces: Galvanized steel.
4. Material for Damp Locations: Cast aluminum with spring-loaded lift cover, and listed and labeled for use in "wet locations."

B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with type 3R weather-resistant, die-cast aluminum with lockable cover.

2.11. FINISHES

A. Color: Wiring device catalog numbers in Section Text do not designate device color.

1. Wiring Devices Connected to Normal Power System: As selected by Commissioner, unless otherwise indicated or required by NFPA 70 or device listing.
2. Wiring Devices Connected to Emergency Power System: Red.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Comply with NECA 1, including the mounting heights listed in that standard, unless otherwise noted.

B. Coordination with Other Trades:

1. Take steps to insure that devices and their boxes are protected. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of the boxes.
2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
4. Install wiring devices after all wall preparation, including painting, is complete.

C. Conductors:

1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.
2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.
3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.

D. Device Installation:

1. Replace all devices that have been in temporary use during construction or that show signs that they were installed before building finishing operations were complete.
2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
4. Connect devices to branch circuits using pigtails that are not less than 6 inches (152 mm) in length.
5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, 2/3 to 3/4 of the way around terminal screw.

6. Use a torque screwdriver when a torque is recommended or required by the manufacturer.
7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
8. Tighten unused terminal screws on the device.
9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.

E. Receptacle Orientation:

1. Install ground pin of vertically mounted receptacles down, and on horizontally mounted receptacles to the right.

F. Device Plates: Do not use oversized or extra-deep plates. Restore wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

G. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.

3.3. IDENTIFICATION

A. Comply with Section 260553 "Identification for Electrical Systems."

1. Receptacles: Identify panelboard and circuit number from which served. Use hot, stamped or engraved machine printing with black-filled lettering on face of plate, and durable wire markers or tags inside outlet boxes.

3.4. FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

1. Test Instruments: Use instruments that comply with UL 1436.
2. Test Instrument for Convenience Receptacles: Digital wiring analyzer with digital readout or illuminated LED indicators of measurement.

B. Tests for Convenience Receptacles:

1. Line Voltage: Acceptable range is 105 to 132 V.
2. Ground Impedance: Values of up to 2 ohms are acceptable.
3. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
4. Using the test plug, verify that the device and its outlet box are securely mounted.
5. The tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

SECTION 262813
Fuses

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. Section Includes:

1. Cartridge fuses rated 600-V ac and less for use in control circuits enclosed switches panelboards switchboards enclosed controllers and motor-control centers.
2. Plug fuses rated 125-V ac and less for use in plug-fuse-type enclosed switches fuseholders and panelboards.
3. Plug-fuse adapters for use in Edison-base, plug-fuse sockets.
4. Spare-fuse cabinets.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated. Include construction details, material, dimensions, descriptions of individual components, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:

1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.
   a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
   b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.
2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
3. Current-limitation curves for fuses with current-limiting characteristics.

4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.
5. Coordination charts and tables and related data.
6. Fuse sizes for elevator feeders and elevator disconnect switches.

C. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions, include the following:

1. Ambient temperature adjustment information.
2. Current-limitation curves for fuses with current-limiting characteristics.
3. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse.
4. Coordination charts and tables and related data.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Source Limitations: Obtain fuses, for use within a specific product or circuit, from single source from single manufacturer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NEMA FU 1 for cartridge fuses.

E. Comply with NFPA 70.

F. Comply with UL 248-11 for plug fuses.

1.5. PROJECT CONDITIONS

A. For fuses installed outdoors or in unusual environmental conditions, revise this article to indicate minimum and maximum ambient temperatures and expected humidity range.

B. Where ambient temperature to which fuses are directly exposed is less than 40 deg F (5 deg C) or more than 100 deg F (38 deg C) , apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.6. COORDINATION

A. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper Bussmann, Inc.
2. Edison Fuse, Inc.
3. Ferraz Shawmut, Inc.
4. Littelfuse, Inc.
5. Or Approved Equal

2.2. CARTRIDGE FUSES

A. Characteristics: NEMA FU 1, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.

2.3. PLUG FUSES

A. Characteristics: UL 248-11, nonrenewable plug fuses; 125-V ac.

2.4. PLUG-FUSE ADAPTERS

A. Characteristics: Adapters for using Type S, rejection-base plug fuses in Edison-base fuseholders or sockets; ampere ratings matching fuse ratings; irremovable once installed.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.

B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.

C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.

D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. FUSE APPLICATIONS

A. Cartridge Fuses:

1. Service Entrance: Class L, time delay Class RK1, time delay Class J, time delay.
2. Feeders: Class L, time delay, Class RK1, time delay Class RK5, time delay Class J, time delay.
3. Motor Branch Circuits: Class RK1 Class RK5, time delay.
4. Other Branch Circuits: Class RK1, time delay Class RK5, time delay Class J, time delay.
5. Control Circuits: Class CC, time delay.

B. Plug Fuses:

1. Motor Branch Circuits: Edison-base type, dual Type S, dual-element time delay.
2. Other Branch Circuits: Edison-base type, dual-element time delay Type S, dual-element time delay.

3.4. INSTALLATION

A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.

B. Install plug-fuse adapters in Edison-base fuseholders and sockets. Ensure that adapters are irremovable once installed.

C. Install spare-fuse cabinet(s).

3.5. IDENTIFICATION

A. Install labels complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems" and indicating fuse replacement information on inside door of each fused switch and adjacent to each fuse block, socket, and holder.

END OF SECTION 262813

SECTION 262816
Enclosed Switches and Circuit Breakers

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. Section Includes:

1. Fusible switches.
2. Nonfusible switches.
3. Receptacle switches.
4. Shunt trip switches.
5. Molded-case circuit breakers (MCCBs).
6. Molded-case switches.
7. Enclosures.

1.3. DEFINITIONS

A. NC: Normally closed.

B. NO: Normally open.

C. SPDT: Single pole, double throw.

1.4. PERFORMANCE REQUIREMENTS

A. Seismic Performance: Enclosed switches and circuit breakers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

1. Enclosure types and details for types other than NEMA 250, Type 1.
2. Current and voltage ratings.
3. Short-circuit current ratings (interrupting and withstand, as appropriate).
4. Include evidence of NRTL listing for series rating of installed devices.
5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.
6. Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device.

C. Shop Drawings: For enclosed switches and circuit breakers. Include plans, elevations, sections, details, and attachments to other work.

1. Wiring Diagrams: For power, signal, and control wiring.

D. Qualification Data: For qualified testing agency.

E. Seismic Qualification Certificates: For enclosed switches and circuit breakers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

F. Field quality-control reports.

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

G. Manufacturer's field service report.

H. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions, include the following:

1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.

2. Time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device.

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Testing Agency Qualifications: Member company of NETA or an NRTL.

C. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories, within same product category, from single source from single manufacturer.

D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Comply with NFPA 70.

1.7. PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Not less than minus 22 deg F (minus 30 deg C) and not exceeding 104 deg F (40 deg C).
2. Altitude: Not exceeding 6600 feet (2010 m).

B. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by the City of New York unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Notify Commissioner no fewer than seven days in advance of proposed interruption of electric service.
2. Indicate method of providing temporary electric service.
3. Do not proceed with interruption of electric service without Commissioner's written permission.
4. Comply with NFPA 70E.

1.8. COORDINATION

A. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

PART 2 - PRODUCTS

2.1. FUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. Or Approved Equal

B. Type GD, General Duty, Single Throw, 240-V ac, 800 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with cartridge fuse interiors to accommodate indicated fuses, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Single Throw, 240 V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Type HD, Heavy Duty, Six Pole, Single Throw, 240 -V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

E. Type HD, Heavy Duty, Double Throw, 240-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate indicated fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

F. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
4. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
5. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
6. Hookstick Handle: Allows use of a hookstick to operate the handle.
7. Lugs: Mechanical type, suitable for number, size, and conductor material.
8. Service-Rated Switches: Labeled for use as service equipment.
9. Accessory Control Power Voltage: Remote mounted and powered; 24-V ac.

2.2. NONFUSIBLE SWITCHES (FOLLOW DDC PRODUCT REQUIREMENTS)

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. Or Approved Equal.

B. Type GD, General Duty, Single Throw, 600 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Single Throw, 240-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Type HD, Heavy Duty, Six Pole, Single Throw, 240-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

E. Type HD, Heavy Duty, Double Throw, 240-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

F. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
4. Auxiliary Contact Kit: Two NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
5. Hookstick Handle: Allows use of a hookstick to operate the handle.
6. Lugs: Mechanical type, suitable for number, size, and conductor material.
7. Accessory Control Power Voltage: Remote mounted and powered; 24-V ac.

2.3. MOLDED-CASE CIRCUIT BREAKERS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.

3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. Or Approved Equal

B. General Requirements: Comply with UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents.

C. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.

D. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.

E. Electronic Trip Circuit Breakers: Field-replaceable rating plug, rms sensing, with the following field-adjustable settings:

1. Instantaneous trip.
2. Long- and short-time pickup levels.
3. Long- and short-time time adjustments.
4. Ground-fault pickup level, time delay, and I^2t response.

F. Current-Limiting Circuit Breakers: Frame sizes 400 A and smaller, and let-through ratings less than NEMA FU 1, RK-5.

G. Integrally Fused Circuit Breakers: Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.

H. Ground-Fault, Circuit-Interrupter (GFCI) Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).

I. Ground-Fault, Equipment-Protection (GFEP) Circuit Breakers: With Class B ground-fault protection (30-mA trip).

J. Features and Accessories:

1. Standard frame sizes, trip ratings, and number of poles.
2. Lugs: Mechanical type, suitable for number, size, trip ratings, and conductor material.
3. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge lighting circuits.
4. Ground-Fault Protection: Comply with UL 1053; integrally mounted, self-powered type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.
5. Communication Capability: Circuit-breaker-mounted communication module with functions and features compatible with power monitoring and control system, specified in electrical specification sections.
6. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.

7. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
8. Auxiliary Contacts: Two SPDT switches with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
9. Alarm Switch: One NO contact that operates only when circuit breaker has tripped.
10. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
11. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
12. Electrical Operator: Provide remote control for on, off, and reset operations.
13. Accessory Control Power Voltage: Integrally mounted, self-powered.

2.4. ENCLOSURES

A. Enclosed Switches and Circuit Breakers: NEMA AB 1, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.

1. Indoor, Dry and Clean Locations: NEMA 250, Type 1
2. Outdoor Locations: NEMA 250, Type 3R.
3. Kitchen, Wash-Down Areas: NEMA 250, Type 4X.
4. Other Wet or Damp, Indoor Locations: NEMA 250, Type 4.
5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12.
6. Hazardous Areas Indicated on Drawings: NEMA 250, Type 7.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.

B. Comply with mounting and anchoring requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

D. Install fuses in fusible devices.

E. Comply with NECA 1.

3.4. IDENTIFICATION

A. Comply with requirements in Section 260553 "Identification for Electrical Systems."

1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.5. FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:

    a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Remove front panels so joints and connections are accessible to portable scanner.
    b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each enclosed switch and circuit breaker 11 months after date of Substantial Completion.
    c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

D. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies enclosed switches and circuit breakers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6. ADJUSTING

A. Adjust moving parts and operable components to function smoothly, and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Section 260573 "Overcurrent Protective Device Coordination Study."

END OF SECTION 262816

PAGE LEFT INTENTIONALLY BLANK

SECTION 262913
Enclosed Controllers

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. Section includes the following enclosed controllers rated 600 V and less:

1. Full-voltage manual.
2. Full-voltage magnetic.
3. Reduced-voltage magnetic.
4. Reduced-voltage solid state.
5. Multispeed.

B. Related Section:

1. Section 262923 "Variable-Frequency Motor Controllers" for general-purpose, ac, adjustable-frequency, pulse-width-modulated controllers for use on variable torque loads in ranges up to 200 hp.

1.3. DEFINITIONS

A. CPT: Control power transformer.

B. MCCB: Molded-case circuit breaker.

C. MCP: Motor circuit protector.

D. N.C.: Normally closed.

E. N.O.: Normally open.

F. OCPD: Overcurrent protective device.

G. SCR: Silicon-controlled rectifier.

1.4. PERFORMANCE REQUIREMENTS

A. Seismic Performance: Enclosed controllers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of enclosed controller. Include manufacturer's technical data on features, performance, electrical characteristics, ratings, and enclosure types and finishes.

C. Shop Drawings: For each enclosed controller. Include dimensioned plans, elevations, sections, details, and required clearances and service spaces around controller enclosures.

1. Show tabulations of the following:

a. Each installed unit's type and details.
b. Factory-installed devices.
c. Nameplate legends.
d. Short-circuit current rating of integrated unit.
e. Listed and labeled for integrated short-circuit current (withstand) rating of OCPDs in combination controllers by an NRTL acceptable to the Commissioner.
f. Features, characteristics, ratings, and factory settings of individual OCPDs in combination controllers.

2. Wiring Diagrams: For power, signal, and control wiring.

D. Qualification Data: For qualified testing agency.

E. Seismic Qualification Certificates: For enclosed controllers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

F. Field quality-control reports.

G. Operation and Maintenance Data: For enclosed controllers to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions, include the following:

1. Routine maintenance requirements for enclosed controllers and installed components.
2. Manufacturer's written instructions for testing and adjusting circuit breaker and MCP trip settings.
3. Manufacturer's written instructions for setting field-adjustable overload relays.
4. Manufacturer's written instructions for testing, adjusting, and reprogramming reduced-voltage solid-state controllers.

H. Load-Current and Overload-Relay Heater List: Compile after motors have been installed, and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.

I. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed, and arrange to demonstrate that switch settings for motor running overload protection suit actual motors to be protected.

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Testing Agency Qualifications: Member company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NFPA 70.

E. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

1.7. DELIVERY, STORAGE, AND HANDLING

A. Store enclosed controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

B. If stored in areas subject to weather, cover enclosed controllers to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install temporary electric heating, with at least 250 W per controller.

1.8. PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Not less than minus 22 deg F (minus 30 deg C) and not exceeding 104 deg F (40 deg C).
2. Altitude: Not exceeding 6600 feet (2010 m).

1.9. COORDINATION

A. Coordinate layout and installation of enclosed controllers with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in concrete specification sections.

C. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

PART 2 - PRODUCTS

2.1. FULL-VOLTAGE CONTROLLERS

A. General Requirements for Full-Voltage Controllers: Comply with NEMA ICS 2, general purpose, Class A.

B. Motor-Starting Switches: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off or on.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
    b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
    c. Rockwell Automation, Inc.; Allen-Bradley brand.
    d. Siemens Energy & Automation, Inc.
    e. Square D; a brand of Schneider Electric.
    f. Or Approved Equal.

2. Configuration: Two speed.
3. Surface mounting.
4. Red pilot light.
5. Additional Nameplates: HIGH and LOW for two-speed switches.

C. Magnetic Controllers: Full voltage, across the line, electrically held.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
    b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
    c. Rockwell Automation, Inc.; Allen-Bradley brand.
    d. Siemens Energy & Automation, Inc.
    e. Square D; a brand of Schneider Electric.
    f. Or Approved Equal.

2. Configuration: Reversing.
3. Contactor Coils: Pressure-encapsulated type.

   a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.

4. Power Contacts: Totally enclosed, double-break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
5. Control Circuits: 120 -V ac.

6. Bimetallic Overload Relays:

   a. Inverse-time-current characteristic.
   b. Class 30 tripping characteristic.
   c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
   d. Ambient compensated.
   e. Automatic resetting.

7. N.C./ N.O., isolated overload alarm contact.
8. External overload reset push button.

D. Combination Magnetic Controller: Factory-assembled combination of magnetic controller, OCPD, and disconnecting means.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   c. Rockwell Automation, Inc.; Allen-Bradley brand.
   d. Siemens Energy & Automation, Inc.
   e. Square D; a brand of Schneider Electric.
   f. Or Approved Equal.

2. Fusible Disconnecting Means:

   a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate Class J Class R fuses.
   b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

3. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

4. Nonfusible Disconnecting Means:

   a. NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
   b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
   c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

5. MCP Disconnecting Means:

   a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
   b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
   c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
   d. N.C. /N.O. alarm contact that operates only when MCP has tripped.
   e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

6. MCCB Disconnecting Means:

   a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
   b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
   c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
   d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
   e. N.C./ N.O. alarm contact that operates only when MCCB has tripped.

2.2. MULTISPEED MAGNETIC CONTROLLERS

A. General Requirements for Multispeed Magnetic Controllers: Comply with NEMA ICS 2, general purpose, Class A.

B. Multispeed Magnetic Controllers: Two speed, full voltage, across the line, electrically held.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
   b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
   c. Rockwell Automation, Inc.; Allen-Bradley brand.
   d. Siemens Energy & Automation, Inc.
   e. Square D; a brand of Schneider Electric.
   f. Or Approved Equal

2. Configuration: Nonreversing.
3. Contactor Coils: Pressure-encapsulated type.

   a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.

4. Power Contacts: Totally enclosed, double break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
5. Control Circuits: 120 -V ac.

a. CPT Spare Capacity: 200 VA.

6. Compelling relays shall ensure that motor will start only at low speed.
7. Accelerating timer relays shall ensure properly timed acceleration through speeds lower than that selected.
8. Decelerating timer relays shall ensure automatically timed deceleration through each speed.
9. Antiplugging timer relays shall ensure a time delay when transferring from FORWARD to REVERSE and back.

10. Bimetallic Overload Relays:

a. Inverse-time-current characteristic.
b. Class 30 tripping characteristic.
c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
d. Ambient compensated.
e. Automatic resetting.

11. N.C./ N.O., isolated overload alarm contact.
12. External overload reset push button.

C. Combination Multispeed Magnetic Controller: Factory-assembled combination of reduced-voltage magnetic controller, OCPD, and disconnecting means.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
c. Rockwell Automation, Inc.; Allen-Bradley brand.
d. Siemens Energy & Automation, Inc.
e. Square D; a brand of Schneider Electric.
f. Or Approved Equal

2. Fusible Disconnecting Means:

a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate Class J Class R fuses.
b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

3. Nonfusible Disconnecting Means:

a. NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.

4. MCP Disconnecting Means:

a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
d. N.C. / N.O. alarm contact that operates only when MCP has tripped.
e. Current-limiting module to increase controller short-circuit current (withstand) rating to 100 kA.

5. MCCB Disconnecting Means:

a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.
e. N.C./ N.O. alarm contact that operates only when MCCB has tripped.

2.3. ENCLOSURES

A. Enclosed Controllers: NEMA ICS 6, to comply with environmental conditions at installed location.

1. Dry and Clean Indoor Locations: Type 1.
2. Outdoor Locations: Type 3R .
3. Kitchen Wash-Down Areas: Type 4X , stainless steel.
4. Other Wet or Damp Indoor Locations: Type 4 .
5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.
6. Hazardous Areas Indicated on Drawings: Type 9.

2.4. ACCESSORIES

A. General Requirements for Control Circuit and Pilot Devices: NEMA ICS 5; factory installed in controller enclosure cover unless otherwise indicated.

1. Push Buttons, Pilot Lights, and Selector Switches: Heavy-duty type.

a. Push Buttons: Covered types; maintained as indicated.
b. Pilot Lights: LED types; colors as indicated: push to test.
c. Selector Switches: Rotary type.

2. Elapsed Time Meters: Heavy duty with digital readout in hours; resettable.
3. Meters: Panel type, 2-1/2-inch (64-mm) minimum size with 90- or 120-degree scale and plus or minus two percent accuracy. Where indicated, provide selector switches with an off position.

B. N.C./ N.O. auxiliary contact(s).

C. Control Relays: Auxiliary and adjustable solid-state time-delay relays.

D. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.

E. Breather and drain assemblies, to maintain interior pressure and release condensation in Type 4 enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

F. Space heaters, with N.C. auxiliary contacts, to mitigate condensation in Type 12 enclosures installed outdoors or in unconditioned interior spaces subject to humidity and temperature swings.

G. Sun shields installed on fronts, sides, and tops of enclosures installed outdoors and subject to direct and extended sun exposure.

H. Cover gaskets for Type 1 enclosures.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine areas and surfaces to receive enclosed controllers, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Examine enclosed controllers before installation. Reject enclosed controllers that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Wall-Mounted Controllers: Install enclosed controllers on walls with tops at uniform height unless otherwise indicated, and by bolting units to wall or mounting on lightweight structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Section 260529 "Hangers and Supports for Electrical Systems."

B. Floor-Mounted Controllers: Install enclosed controllers on 4-inch (100-mm) nominal-thickness concrete base. Comply with requirements for concrete base specified in Section 033000 "Cast-in-Place Concrete."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.

C. Seismic Bracing: Comply with requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

D. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

E. Install fuses in each fusible-switch enclosed controller.

F. Install fuses in control circuits if not factory installed. Comply with requirements in Section 262813 "Fuses."

G. Install heaters in thermal overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.

H. Install, connect, and fuse thermal-protector monitoring relays furnished with motor-driven equipment.

3.4. IDENTIFICATION

A. Identify enclosed controllers, components, and control wiring. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
2. Label each enclosure with engraved nameplate.
3. Label each enclosure-mounted control and pilot device.

3.5. CONTROL WIRING INSTALLATION

A. Install wiring between enclosed controllers and remote devices . Comply with requirements in electrical specification sections.

B. Bundle, train, and support wiring in enclosures.

C. Connect selector switches and other automatic-control selection devices where applicable.

1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.
2. Connect selector switches with enclosed-controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.6. FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:

1. Inspect controllers, wiring, components, connections, and equipment installation.
2. Test insulation resistance for each enclosed-controller element, component, connecting motor supply, feeder, and control circuits.
3. Test continuity of each circuit.
4. Verify that voltages at controller locations are within plus or minus 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Commissioner before starting the motor(s).
5. Test each motor for proper phase rotation.
6. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
8. Perform the following infrared (thermographic) scan tests and inspections and prepare reports:

   a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each multi-pole enclosed controller. Remove front panels so joints and connections are accessible to portable scanner.
   b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each multi-pole enclosed controller 11 months after date of Substantial Completion.
   c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

9. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

D. Enclosed controllers will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports including a certified report that identifies enclosed controllers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.7. ADJUSTING

A. Set field-adjustable switches, auxiliary relays, time-delay relays, timers, and overload-relay pickup and trip ranges.

B. Adjust overload-relay heaters or settings if power factor correction capacitors are connected to the load side of the overload relays.

C. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable instantaneous trip elements. Initially adjust to six times the motor nameplate full-load ampere ratings and attempt to start motors several times, allowing for motor cooldown between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Commissioner before increasing settings.

D. Set the taps on reduced-voltage autotransformer controllers at 80 percent.

E. Set field-adjustable switches and program microprocessors for required start and stop sequences in reduced-voltage solid-state controllers.

F. Set field-adjustable circuit-breaker trip ranges.

3.8. PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.

B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.9. INSTRUCTION

A. Instruct building's operating personnel to adjust, operate, and maintain enclosed controllers, and to use and reprogram microprocessor-based, reduced-voltage solid-state controllers.

END OF SECTION 262913

SECTION 262923
Variable Frequency Motor Controllers

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. This Section includes solid-state, PWM, VFCs for speed control of three-phase, squirrel-cage induction motors.

1.3. DEFINITIONS

A. BMS: Building management system.

B. IGBT: Integrated gate bipolar transistor.

C. LAN: Local area network.

D. PID: Control action, proportional plus integral plus derivative.

E. PWM: Pulse-width modulated.

F. VFC: Variable frequency controller.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of VFC. Include dimensions, mounting arrangements, location for conduit entries, shipping and operating weights, and manufacturer's technical data on features, performance, electrical ratings, characteristics, and finishes.

C. Shop Drawings: For each VFC.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings. Include the following:

   a. Each installed unit's type and details.
   b. Nameplate legends.
   c. Short-circuit current rating of integrated unit.
   d. Listed and labeled for series rating of overcurrent protective devices in combination controllers by an NRTL acceptable to the Commissioner.
   e. Features, characteristics, ratings, and factory settings of each motor-control center unit.

2. Wiring Diagrams: Power, signal, and control wiring for VFCs. Provide schematic wiring diagram for each type of VFC.

D. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around VFCs where pipe and ducts are prohibited. Show VFC layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

E. Manufacturer Seismic Qualification Certification: Submit certification that VFCs, accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

F. Qualification Data: For manufacturer.

G. Field quality-control test reports.

H. Operation and Maintenance Data: For VFCs, all installed devices, and components to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions include the following:

1. Routine maintenance requirements for VFCs and all installed components.
2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.

I. Load-Current and Overload-Relay Heater List: Compile after motors have been installed and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.

J. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that dip switch settings for motor running overload protection suit actual motor to be protected.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer Qualifications: A qualified manufacturer. Maintain a service center capable of providing instruction, parts, and emergency maintenance and restores.

C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to the Commissioner.

D. Source Limitations: Obtain VFCs of a single type through one source from a single manufacturer.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to Commissioner, and marked for intended use.

F. Comply with NFPA 70.

G. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, minimum clearances between VFCs, and adjacent surfaces and other items. Comply with indicated maximum dimensions and clearances.

1.6. DELIVERY, STORAGE, AND HANDLING

A. Deliver VFCs in shipping splits of lengths that can be moved past obstructions in delivery path as indicated.

B. Store VFCs indoors in clean, dry space with uniform temperature to prevent condensation. Protect VFCs from exposure to dirt, fumes, water, corrosive substances, and physical damage.

C. If stored in areas subject to weather, cover VFCs to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install electric heating of sufficient wattage to prevent condensation.

1.7. PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation, capable of driving full load without derating, under the following conditions, unless otherwise indicated:

1. Ambient Temperature: 0 to 40 deg C.
2. Humidity: Less than 90 percent (noncondensing).

3. Altitude: Not exceeding 3300 feet (1005 m).

B. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by the City of New York unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify the Commissioner no fewer than two days in advance of proposed interruption of electrical service.
2. Indicate method of providing temporary electrical service.
3. Do not proceed with interruption of electrical service without The Commissioner written permission.

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, including clearances between VFCs, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

1.8. COORDINATION

A. Coordinate layout and installation of VFCs with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-in-Place Concrete."

C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 077100 "Roof Specialties and Accessories."

D. Coordinate features of VFCs, installed units, and accessory devices with pilot devices and control circuits to which they connect.

E. Coordinate features, accessories, and functions of each VFC and each installed unit with ratings and characteristics of supply circuit, motor, required control sequence, and duty cycle of motor and load.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB Power Distribution, Inc.; ABB Control, Inc. Subsidiary.
2. Baldor Electric Company (Graham).
3. Danfoss Inc.; Danfoss Electronic Drives Div.
4. Eaton Corporation; Cutler-Hammer Products.
5. General Electric Company; GE Industrial Systems.
6. Rockwell Automation; Allen-Bradley Co.; Industrial Control Group.
7. Siemens Energy and Automation; Industrial Products Division.
8. Square D.

9. Toshiba International Corporation.
10. Or Approved Equal.

2.2. VARIABLE FREQUENCY CONTROLLERS

A. Description: NEMA ICS 2, IGBT, PWM, VFC; listed and labeled as a complete unit and arranged to provide variable speed of an NEMA MG 1, Design B, 3-phase induction motor by adjusting output voltage and frequency.

1. Provide unit suitable for operation of premium-efficiency motor as defined by NEMA MG 1.

B. Design and Rating: Match load type such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.

C. Output Rating: 3-phase; 6 to 60 Hz, with voltage proportional to frequency throughout voltage range.

D. Unit Operating Requirements:

1. Input ac voltage tolerance of 208 V, plus or minus 5.
2. Input frequency tolerance of 50/60 Hz, plus or minus 6 percent.
3. Minimum Efficiency: 96 percent at 60 Hz, full load.
4. Minimum Displacement Primary-Side Power Factor: 96 percent.
5. Overload Capability: 1.1 times the base load current for 60 seconds; 2.0 times the base load current for 3 seconds.
6. Starting Torque: 100 percent of rated torque or as indicated.
7. Speed Regulation: Plus or minus 1 percent.

E. Isolated control interface to allow controller to follow control signal over an 11:1 speed range.

1. Electrical Signal: 4 to 20 mA at 24 V.
2. Pneumatic Signal: 3 to 15 psig (20 to 104 kPa).

F. Internal Adjustability Capabilities:

1. Minimum Speed: 5 to 25 percent of maximum rpm.
2. Maximum Speed: 80 to 100 percent of maximum rpm.
3. Acceleration: 2 to a minimum of 22 seconds.
4. Deceleration: 2 to a minimum of 22 seconds.
5. Current Limit: 50 to a minimum of 110 percent of maximum rating.

G. Self-Protection and Reliability Features:

1. Input transient protection by means of surge suppressors.
2. Under- and overvoltage trips; inverter overtemperature, overload, and overcurrent trips.
3. Motor Overload Relay: Adjustable and capable of NEMA ICS 2, Class 10 performance.
4. Notch filter to prevent operation of the controller-motor-load combination at a natural frequency of the combination.
5. Instantaneous line-to-line and line-to-ground overcurrent trips.

6. Loss-of-phase protection.
7. Reverse-phase protection.
8. Short-circuit protection.
9. Motor overtemperature fault.

H. Multiple-Motor Capability: Controller suitable for service to multiple motors and having a separate overload relay and protection for each controlled motor. Overload relay shall shut off controller and motors served by it when overload relay is tripped.

I. Automatic Reset/Restart: Attempts three restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction. Bidirectional autospeed search shall be capable of starting into rotating loads spinning in either direction and returning motor to set speed in proper direction, without damage to controller, motor, or load.

J. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped.

K. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.

L. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

M. Status Lights: Door-mounted LED indicators shall indicate the following conditions:

1. Power on.
2. Run.
3. Overvoltage.
4. Line fault.
5. Overcurrent.
6. External fault.

N. Panel-Mounted Operator Station: Start-stop and auto-manual selector switches with manual speed control potentiometer and elapsed time meter.

O. Indicating Devices: Meters or digital readout devices and selector switch, mounted flush in controller door and connected to indicate the following controller parameters:

1. Output frequency (Hz).
2. Motor speed (rpm).
3. Motor status (running, stop, fault).
4. Motor current (amperes).
5. Motor torque (percent).
6. Fault or alarming status (code).
7. PID feedback signal (percent).
8. DC-link voltage (VDC).
9. Set-point frequency (Hz).
10. Motor output voltage (V).

P. Control Signal Interface:

1. Electric Input Signal Interface: A minimum of 2 analog inputs (0 to 10 V or 0/4-20 mA) and 6 programmable digital inputs.
2. Pneumatic Input Signal Interface: 3 to 15 psig (20 to 104 kPa).
3. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the BMS or other control systems:

    a. 0 to 10-V dc.
    b. 0-20 or 4-20 mA.
    c. Potentiometer using up/down digital inputs.
    d. Fixed frequencies using digital inputs.
    e. RS485.
    f. Keypad display for local hand operation.

4. Output Signal Interface:

    a. A minimum of 1 analog output signal (0/4-20 mA), which can be programmed to any of the following:

        1) Output frequency (Hz).
        2) Output current (load).
        3) DC-link voltage (VDC).
        4) Motor torque (percent).
        5) Motor speed (rpm).
        6) Set-point frequency (Hz).

5. Remote Indication Interface: A minimum of 2 dry circuit relay outputs (120-V ac, 1 A) for remote indication of the following:

    a. Motor running.
    b. Set-point speed reached.
    c. Fault and warning indication (overtemperature or overcurrent).
    d. PID high- or low-speed limits reached.

Q. Communications: Provide an RS485 interface allowing VFC to be used with an external system within a multidrop LAN configuration. Interface shall allow all parameter settings of VFC to be programmed via BMS control. Provide capability for VFC to retain these settings within the nonvolatile memory.

R. Manual Bypass: Magnetic contactor arranged to safely transfer motor between controller output and bypass controller circuit when motor is at zero speed. Controller-off-bypass selector switch sets mode, and indicator lights give indication of mode selected. Unit shall be capable of stable operation (starting, stopping, and running), with motor completely disconnected from controller (no load).

S. Bypass Controller: NEMA ICS 2, full-voltage, nonreversing enclosed controller with across-the-line starting capability in manual-bypass mode. Provide motor overload protection under both modes of operation with control logic that allows common start-stop capability in either mode.

T. Integral Disconnecting Means: NEMA AB 1, instantaneous-trip circuit breaker.

U. Isolating Switch: Non-load-break switch arranged to isolate VFC and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode.

V. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.

2.3. ENCLOSURES

A. NEMA I indoors, NEMA 3R Outdoors.

2.4. ACCESSORIES

A. Devices shall be factory installed in controller enclosure, unless otherwise indicated.

B. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.

C. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.

D. Control Relays: Auxiliary and adjustable time-delay relays.

E. Standard Displays:

1. Output frequency (Hz).
2. Set-point frequency (Hz).
3. Motor current (amperes).
4. DC-link voltage (VDC).
5. Motor torque (percent).
6. Motor speed (rpm).
7. Motor output voltage (V).

F. Historical Logging Information and Displays:

1. Real-time clock with current time and date.
2. Running log of total power versus time.
3. Total run time.
4. Fault log, maintaining last four faults with time and date stamp for each.

G. Current-Sensing, Phase-Failure Relays for Bypass Controller: Solid-state sensing circuit with isolated output contacts for hard-wired connection; arranged to operate on phase failure, phase reversal, current un balance of from 30 to 40 percent, or loss of supply voltage; with adjustable response delay.

2.5. FACTORY FINISHES

A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested VFCs before shipping.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine areas, surfaces, and substrates to receive VFCs for compliance with requirements, installation tolerances, and other conditions affecting performance.

B. Examine roughing-in for conduit systems to verify actual locations of conduit connections before VFC installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. APPLICATIONS

A. Select features of each VFC to coordinate with ratings and characteristics of supply circuit and motor; required control sequence; and duty cycle of motor, controller, and load.

B. Select horsepower rating of controllers to suit motor controlled.

3.4. INSTALLATION

A. Anchor each VFC assembly to steel-channel sills arranged and sized according to manufacturer's written instructions. Attach by bolting. Level and grout sills flush with mounting surface.

B. Install VFCs on concrete bases.

C. Comply with mounting and anchoring requirements specified in Section 260529 "Hangers and Supports for Electrical Systems."

D. Controller Fuses: Install fuses in each fusible switch. Comply with requirements in Section 262813 "Fuses."

3.5. CONCRETE BASES

A. Coordinate size and location of concrete bases. Verify structural requirements with Commissioner.

B. Concrete base is specified in Section 260500 "Common Work Results for Electrical," and concrete materials and installation requirements are specified in concrete specification sections.

3.6. IDENTIFICATION

A. Identify VFCs, components, and control wiring according to Section 260553 "Identification for Electrical Systems."

B. Operating Instructions: Frame printed operating instructions for VFCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VFC units.

3.7. CONTROL WIRING INSTALLATION

A. Install wiring between VFCs and remote devices according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Bundle, train, and support wiring in enclosures.

C. Connect hand-off-automatic switch and other automatic-control devices where applicable.

1. Connect selector switches to bypass only manual- and automatic-control devices that have no safety functions when switch is in hand position.
2. Connect selector switches with control circuit in both hand and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.8. CONNECTIONS

A. Conduit installation requirements are specified in other electrical specification sections. Drawings indicate general arrangement of conduit, fittings, and specialties.

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

3.9. FIELD QUALITY CONTROL

A. Prepare for acceptance tests as follows:

1. Test insulation resistance for each enclosed controller element, bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to perform the following:

1. Inspect controllers, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
2. Assist in field testing of equipment including pretesting and adjusting of solid-state controllers.
3. Report results in writing.

C. Testing Agency will engage a qualified testing and inspecting agency to perform field tests and inspections and prepare test reports.

D. Perform the following field tests and inspections and prepare test reports:

1. Perform each electrical test and visual and mechanical inspection, except optional tests, stated in NETA ATS. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3.10. ADJUSTING

A. Set field-adjustable switches and circuit-breaker trip ranges.

3.11. INSTRUCTION

A. Engage a factory-authorized service representative to instruct building's operating personnel to adjust, operate, and maintain variable frequency controllers.

END OF SECTION 262923

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 263213
Engine-Generators

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawing, (2) the Specification, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SCOPE OF WORK

Provide a natural gas-powered engine-generator set of the latest commercial type and design.

1.3 MATERIALS

A. The Supplier shall furnish:

1. A 500 KW Standby rated natural gas engine-generator set along with accessories, per this Specification.
2. A NEMA 1 Automatic Transfer Switch per Specification included.
3. Labor to test the generator with resistive load banks upon completion of installation.
4. Owner instruction services.

1.4 MANUFACTURER

The generator set shall be a factory package of one manufacturer who has been regularly engaged in the design and production of generator sets for a minimum of 10 years. To qualify as a manufacturer, the supplier must manufacture the engine, the generator, or both items.

1.6 SUPPLIER

The completed engine-generator set shall be supplied by the Manufacturer's authorized distributor only.

1.7 POWER RATING

Power rating of the engine-generator set shall be based on operation at rated rpm when equipped with all necessary operating accessories, such as air cleaners, oil pump, jacket water pump, governor, alternating current generator, and exciter regulator. Radiator fan shall be included as necessary operating accessory.

A prototype test to the demands of NFPA 110, Level 1 and an endurance test of at least 1,000 hours at 100% of the Standby rating shall have been conducted for the engine-generator set being bid.

Package will be EPA certified for emergency power applications with air/fuel ratio controls built into the control panel.

1.8 SUBMITTAL DATA

A. Refer to DDC General Conditions for submittal requirements.

B. Make and model of engine-generator.

C. Makes and models of major auxiliary equipment, including automatic transfer switch, vibration isolators, and radiator.

D. Manufacturer-produced dimension drawings of the complete engine-generator set clearly showing entrance points for each of the interconnections required.

E. Combustion air requirements.

F. Location and descriptions of the supplier's parts and service facilities within a 50 mile radius of the job site, including parts inventory and number of qualified engine-generator set service personnel.

G. Actual electrical diagrams, including schematic diagrams and interconnection wiring diagrams for all equipment to be supplied.

H. Manufacturer warranty statements.

I. Engine altitude deration information.

J. Service agreements for the routine maintenance or total maintenance and repair of the engine-generator set shall be offered for a period of no less than 2 years.

K. Source quality-control test reports.

1. Certified summary of prototype-unit test report.
2. Certified Test Reports: For components and accessories that are equivalent, but not identical, to those tested on prototype unit.
3. Certified Summary of Performance Tests: Certify compliance with specified requirement to meet performance criteria for sensitive loads.
4. Report of factory test on units to be shipped for this Project, showing evidence of compliance with specified requirements.
5. Report of sound generation.
6. Report of exhaust emissions showing compliance.
7. Certified Torsional Vibration Compatibility: Comply with NFPA 110.

L. Operation and Maintenance Data: For packaged engine generators to include in emergency,

operation, and maintenance manuals. In addition to items specified in DDC General Conditions, include the following:

1. List of tools and replacement items recommended to be stored at Project for ready access. Include part and drawing numbers, current prices and source of supply.

PART 2 - PRODUCTS

2.1 GENERAL

A. References and Standards

The generator set covered by these specifications shall be designed, tested, rated, assembled and installed in strict accordance with all applicable standards below:

1. ISO8528-5
2. BS5514
3. SAE J1349
4. ISO3046-1
5. DIN6271
6. UL2200

Designed to allow for installed compliance to NFPA 70, NFPA99 and NFPA 110

2.2 ENGINE

A. The engine shall be spark ignited, a minimum 10-cylinder, water-cooled, Vee type, four-stroke cycle. The engine shall not use turbocharging.

The engine shall be equipped with fuel, lube oil, intake air filters, lube oil cooler, service meter, gear-driven water pump, instruments, water temperature gauge, and lubricating oil pressure gauge.

The engine speed will be optimized to maintain a BMEP (brake mean effective pressure) less than 122.3 psi, so as to minimize engine wear.

The engine will run at 1,800 rpm during periodic exercising; an internal exerciser will provide an option to test at reduced speed (rpm) so as to minimize unnecessary noise.

B. Governor: Engine governor shall be Electronic type which shall control the frequency within 3% of rated frequency from no load to full load for droop operation or isochronous frequency regulation when supplying electronic or other non-linear loads. The frequency of any constant load shall remain within a stead-state band width of ±0.25% of rated frequency.

C. Mounting: The engine-generator set shall be mounted on a structural base supplied by the manufacturer.

D. Protective Devices: Safety shutoffs for high water temperature, low oil pressure, electrical over-speed, and engine over-crank shall be provided.

F. Engine shall be provided with vibration isolation.

2.3 GENERATOR

A. Rating: The generator shall be rated for standby electrical service as follows: 500 kW/625 kVA, at 0.8 pf, 120/208 volts, 3-phase, 60 Hz, 1,800 rpm.

B. The generator shall accept 100% rated load in a single step within 10 seconds.

C. Type: The generator shall be three-phase, single-bearing, synchronous type, wet wound, tropicalized, and built to NEMA standards. The process for winding, insertion and varnish is machine precision wound and machine finished.
The exciter field will be brushless type. Class H insulation shall be used on the stator and rotor, and both shall be further protected with an asphalt modified epoxy on all end coils. The rating will be at a generator temperature rise not to exceed 125° C at 40° C ambient so as to provide an extended life. The generator shall also include a resettable thermal protector and fuse for exciter/regulator protection against extended low power factor loads and faults. The generator rotor shall be dynamically balanced within 0.0005" peak-to-peak amplitude displacements at both ends of shaft and shall sustain 25% over-speed.

D. Alternator shall be 12 lead reconnectable windings.

E. Regulator: A digital automatic volts-per-Hz type, solid-state exciter/regulator, manufactured by the generator manufacturer, shall be included and shock mounted inside the generator control panel enclosure. Voltage regulation shall be ±0.25% from no load to full-rated load. Readily accessible voltage droop, voltage level, and voltage gain controls shall be included in the module. Voltage level adjustment shall be a minimum of ±10%.

The module shall include the following protective features:

1. Current limit circuits shall restrain the exciter field current while allowing full forcing voltage to be applied to obtain rapid response during transient conditions or service overloading on the generator.

2. A time-delay circuit shall sense the current limit operation and cut off all field current to the generator after 10 seconds.

2.4 COOLING SYSTEM

A. Radiator: An engine-mounted radiator with Puller-type fan shall be provided to maintain safe operation at 110°F ambient temperature. Total airflow restriction to and from the radiator shall not exceed 0.5" H_2O (0.12 KPA). The radiator shall have two core sections to service the engine jacket

water and aftercooler circuits. Both cores are to be enclosed in a single housing. The aftercooler core shall be designed for 130°F maximum water temperature.

B. Cooling System Treatment: The engine cooling system shall be pre-treated by the engine supplier for the inhibition of internal corrosion. A solution of 50% ethylene glycol shall be added.

2.5 FUEL SYSTEM

The engine/generator shall be capable of operation on low pressure natural gas. A normally closed 12 VDC gas valve and secondary pressure regulator will be factory installed. A braided flexible fuel connector will be furnished for installation between the gas valve and the gas piping.

2.6 EXHAUST SILENCER

Critical grade silencer or greater if required to achieve acoustic rating in section 2.2 E must be enclosed within the unit in a separate discharge box with thermal grade wrapping.

2.7 STARTING MOTOR

The engine shall be equipped with an electric starting system with positive engagement drive and of sufficient capacity to crank the engine at a speed which will start the engine under operating conditions. The starting pinion will disengage automatically when the engine starts.

2.8 AUTOMATIC CONTROLS

Fully automatic generator set start-stop controls in the generator control panel shall be provided. Controls shall provide shutdown for low oil pressure, high water temperature, low coolant level, over-speed, over-crank, over-voltage and one auxiliary contact for activating accessory items. Controls shall include cranking cycle without lockout and manual reset feature.

The same panel will provide voltage regulation.

2.9 JACKET WATER HEATER

An engine-mounted thermal circulation water heater incorporating an adjustable thermostatic switch shall be furnished to maintain engine jacket water to 90°F (32.2°C).

2.10 BATTERY AND BATTERY CHARGER

A. A lead/acid storage battery set of the heavy-duty diesel starting type shall be provided. Battery voltage shall be compatible with the starting system. A battery rack constructed in conformance with the NEC requirements and necessary cables and clamps shall be provided.

B. A current-limiting, float-equalize charger shall be installed inside the generator enclosure to automatically recharge batteries. The charger shall float at 2.17 volts per cell and equalize at 2.33 volts per cell. It should include overload protection, silicon diode full wave rectifiers, voltage surge

suppressors, DC ammeter, and fused AC output, and battery malfunctions alarm relay. AC input voltage shall be 120 volts, single phase. Amperage output shall be no less than 10 amperes.

2.11 MAIN LINE CIRCUIT BREAKER

A. A main line circuit breaker carrying the UL mark shall be factory installed. The circuit breaker shall meet standards established by UL, NEMA, and the NEC. The breaker shall be rated per the manufacturer's recommendations.

B. The trip unit for each pole shall have elements providing inverse time delay during overload conditions and instantaneous magnetic tripping for short circuit protection.

C. Generator/exciter field circuit breakers do not meet the above electrical standards and are unacceptable for line protection.

2.12 GENERATOR CONTROL PANEL

A. Control panel shall be obtained from same manufacturer as generator set and shall include factory warranty and manufacturer's parts and service support.
Control panel will operate in -40 to +70 degrees C.

B. Generator-mounted Control Panel: Designed and built by the system manufacturer and incorporating 100% solid-state circuitry, sealed dust-tight, watertight modular components and instrumentation. The panel shall be shock mounted to the generator.
It shall comply with IEC, IEC 144, IP22, NEMA 1 for external environmental resistance and IP44/NEMA 12 resistance for internal sealed modules. The panel shall include the following equipment:

1. General AC Output Metering Devices:
AC voltmeter 3-1/2" 2%
AC ammeter 3-1/2" 2%
Dial Frequency Meter 3-1/2" 2%
Voltmeter-Ammeter Phase selector switch, 4 Position

2. Engine Monitoring Devices:
Water temperature gauge
Running time meter
Oil pressure gauge

3. Start/Stop Controls:
1 start-stop switch, cycle cranking with cooldown timer, auto start-stop, manual start, off, and reset positions.
1 voltage adjust rheostat
1 alarm horn with silence switch. Horn must be 100 dB.
1 panel light and on/off switch for same
1 alarm module with five red flashing lights to annunciate shutdowns for over-speed, low oil pressure, high water temperature, and over-crank
Two communication ports, Modbus supported

All input signals from sensors will use 4-20 mA input signal.
Load imbalance thermal protection shall be provided.

C. Voltage regulator shall be internal to control panel in order to protect from environmental damage.

D. Convenience receptacles will be provided for the easy connection of auxiliary heaters.

2.13 AUTOMATIC LOAD TRANSFER SWITCH

A. See Section 263600.

PART 3 – EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine areas, equipment bases, and conditions, with Installer present, for compliance with requirements for installation and other conditions affecting packaged engine-generator performance.

B. Examine roughing-in of piping systems and electrical connections. Verify actual locations of connections before packaged engine-generator installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Comply with packaged engine-generator manufacturers' written installation and alignment instructions and with NFPA 110.

B. Install packaged engine generator to provide access, without removing connections or accessories, for periodic maintenance.

C. Install packaged engine generator with restrained spring isolators having a minimum deflection of 1 inch (25 mm) on 4-inch- (100-mm-) high concrete base. Secure sets to anchor bolts installed in concrete bases. Concrete base construction is specified in Section 260548"Vibration and Seismic Controls for Electrical Systems."

D. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted.

3.4. CONNECTIONS

A. Piping installation requirements are specified in HVAC specification sections. Drawings indicate general arrangement of piping and specialties.

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5. IDENTIFICATION

A. Identify system components according to Section 230553 "Identification for HVAC Piping and Equipment" and Section 260553 "Identification for Electrical Systems."

3.6. FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Tests and Inspections:

1. Perform tests recommended by manufacturer and each electrical test and visual and mechanical inspection (except those indicated to be optional) for "AC Generators and for Emergency Systems" specified in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. NFPA 110 Acceptance Tests: Perform tests required by NFPA 110 that are additional to those specified here including, but not limited to, single-step full-load pickup test.
3. Battery Tests: Equalize charging of battery cells according to manufacturer's written instructions. Record individual cell voltages.
    a. Measure charging voltage and voltages between available battery terminals for full-charging and float-charging conditions. Check electrolyte level and specific gravity under both conditions.
    b. Test for contact integrity of all connectors. Perform an integrity load test and a capacity load test for the battery.
    c. Verify acceptance of charge for each element of the battery after discharge.
    d. Verify that measurements are within manufacturer's specifications.
4. Battery-Charger Tests: Verify specified rates of charge for both equalizing and float-charging conditions.
5. System Integrity Tests: Methodically verify proper installation, connection, and integrity of each element of engine-generator system before and during system operation. Check for air, exhaust, and fluid leaks.
6. Exhaust-System Back-Pressure Test: Use a manometer with a scale exceeding 40-inch wg (120 kPa). Connect to exhaust line close to engine exhaust manifold. Verify that back pressure at full-rated load is within manufacturer's written allowable limits for the engine.
7. Exhaust Emissions Test.
8. Voltage and Frequency Transient Stability Tests: Use recording oscilloscope to measure voltage and frequency transients for 50 and 100 percent step-load increases and decreases and verify that performance is as specified.
9. Harmonic-Content Tests: Measure harmonic content of output voltage under 25 percent and at 100 percent of rated linear load. Verify that harmonic content is within specified limits.
10. Noise Level Tests: Measure A-weighted level of noise emanating from generator-set installation, including engine exhaust and cooling-air intake and discharge, at four locations and compare measured levels with required values.

C. Coordinate tests with tests for transfer switches and run them concurrently.

D. Test instruments shall have been calibrated within the last 12 months, traceable to standards of NIST, and adequate for making positive observation of test results. Make calibration records available for examination on request.

E. Leak Test: After installation, charge system and test for leaks. Restore leaks and retest until no leaks exist.

F. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

G. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

H. Remove and replace malfunctioning units and retest as specified above.

I. Retest: Correct deficiencies identified by tests and observations and retest until specified requirements are met.

J. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation resistances, time delays, and other values and observations. Attach a label or tag to each tested component indicating satisfactory completion of tests.

K. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each power wiring termination and each bus connection. Remove all access panels so terminations and connections are accessible to portable scanner.

1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan 11 months after date of Substantial Completion.
2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare a certified report that identifies terminations and connections checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.7. INSTRUCTION

A. Engage a factory-authorized service representative to instruct building's operating personnel to adjust, operate, and maintain packaged engine generators.

END OF SECTION 263213

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 263600
Transfer Switches

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. This Section includes transfer switches rated 600 V and less, including the following:

1. Automatic transfer switches.
2. Remote annunciation systems.

B. Related Sections include the following:

1. Section 213113 "Electric-Drive, Centrifugal Fire Pumps" for automatic transfer switches for fire pumps.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated. Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.

C. Shop Drawings: Dimensioned plans, elevations, sections, and details showing minimum clearances, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified.

D. Manufacturer Seismic Qualification Certification: Submit certification that transfer switches accessories, and components will withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems." Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

E. Qualification Data: For manufacturer.

F. Field quality-control test reports.

G. Operation and Maintenance Data: For each type of product to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions include the following:

1. Features and operating sequences, both automatic and manual.
2. List of all factory settings of relays; provide relay-setting and calibration instructions, including software, where applicable.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer Qualifications: Maintain a service center capable of providing instruction, parts, and emergency maintenance restores within a response period of less than eight hours from time of notification.

C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated and that is acceptable to the Commissioner.

D. Source Limitations: Obtain automatic transfer switches and bypass/isolation switches through one source from a single manufacturer.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner, and marked for intended use.

F. Comply with NEMA ICS 1.

G. Comply with NFPA 70.

H. Comply with NFPA 99.

I. Comply with NFPA 110.

J. Comply with UL 1008 unless requirements of these Specifications are stricter.

1.5. PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by the City of New York unless permitted under the following conditions and then only after arranging to provide temporary electrical service:

1. Notify the Commissioner no fewer than two days in advance of proposed interruption of electrical service.
2. Do not proceed with interruption of electrical service without Commissioner's written permission.

1.6. COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in concrete specification sections.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Contactor Transfer Switches:
   a. Caterpillar; Engine Div.
   b. Emerson; ASCO Power Technologies, LP.
   c. Generac Power Systems, Inc.
   d. GE Zenith Controls.
   e. Kohler Power Systems; Generator Division.
   f. Onan/Cummins Power Generation; Industrial Business Group.
   g. Russelectric, Inc.
   h. Or Approved Equal.

2.2. GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.

B. Indicate required ratings on Drawings.

1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination shall exceed indicated fault-current value at installation location.

C. Solid-State Controls: Repetitive accuracy of all settings shall be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.

D. Resistance to Damage by Voltage Transients: Components shall meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components shall meet or exceed voltage-impulse withstand test of NEMA ICS 1.

E. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.

F. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.

1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
2. Switch Action: Double throw; mechanically held in both directions.
3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, shall have separate arcing contacts.

G. Neutral Switching. Where four-pole switches are indicated, provide neutral pole switched simultaneously with phase poles.

H. Neutral Terminal: Solid and fully rated, unless otherwise indicated.

I. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral shall be double the nominal rating of circuit in which switch is installed.

J. Heater: Equip switches exposed to outdoor temperatures and humidity, and other units indicated, with an internal heater. Provide thermostat within enclosure to control heater.

K. Battery Charger: For generator starting batteries.

1. Float type rated 2 A.
2. Ammeter to display charging current.
3. Fused ac inputs and dc outputs.

L. Annunciation, Control, and Programming Interface Components: Devices at transfer switches for communicating with remote programming devices, annunciators, or annunciator and control panels shall have communication capability matched with remote device.

M. Factory Wiring: Train and bundle factory wiring and label, consistent with Shop Drawings, either by color-code or by numbered or lettered wire and cable tape markers at terminations. Color-coding and wire and cable tape markers are specified in Section 260553 "Identification for Electrical Systems."

1. Designated Terminals: Pressure type, suitable for types and sizes of field wiring indicated.
2. Power-Terminal Arrangement and Field-Wiring Space: Suitable for top, side, or bottom entrance of feeder conductors as indicated.
3. Control Wiring: Equipped with lugs suitable for connection to terminal strips.

N. Enclosures: General-purpose NEMA 250, Type 1, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

2.3. AUTOMATIC TRANSFER SWITCHES

A. Comply with Level 1 equipment according to NFPA 110.

B. Switching Arrangement: Double-throw type, incapable of pauses or intermediate position stops during normal functioning, unless otherwise indicated.

C. Manual Switch Operation: Under load, with door closed and with either or both sources energized. Transfer time is same as for electrical operation. Control circuit automatically disconnects from electrical operator during manual operation.

D. Manual Switch Operation: Unloaded. Control circuit automatically disconnects from electrical operator during manual operation.

E. Signal-Before-Transfer Contacts: A set of normally open/normally closed dry contacts operates in advance of retransfer to normal source. Interval is adjustable from 1 to 30 seconds.

F. Digital Communication Interface: Matched to capability of remote annunciator or annunciator and control panel.

G. In-Phase Monitor: Factory-wired, internal relay controls transfer so it occurs only when the two sources are synchronized in phase. Relay compares phase relationship and frequency difference between normal and emergency sources and initiates transfer when both sources are within 15 electrical degrees, and only if transfer can be completed within 60 electrical degrees. Transfer is initiated only if both sources are within 2 Hz of nominal frequency and 70 percent or more of nominal voltage.

H. Motor Disconnect and Timing Relay: Controls designate starters so they disconnect motors before transfer and reconnect them selectively at an adjustable time interval after transfer. Control connection to motor starters is through wiring external to automatic transfer switch. Time delay for reconnecting individual motor loads is adjustable between 1 and 60 seconds, and settings are as indicated. Relay contacts handling motor-control circuit inrush and seal currents are rated for actual currents to be encountered.

I. Programmed Neutral Switch Position: Switch operator has a programmed neutral position arranged to provide a midpoint between the two working switch positions, with an intentional, time-controlled pause at midpoint during transfer. Pause is adjustable from 0.5 to 30 seconds minimum and factory set for 0.5 second, unless otherwise indicated. Time delay occurs for both transfer directions. Pause is disabled unless both sources are live.

J. Automatic Transfer-Switch Features:

1. Undervoltage Sensing for Each Phase of Normal Source: Sense low phase-to-ground voltage on each phase. Pickup voltage shall be adjustable from 85 to 100 percent of nominal, and dropout voltage is adjustable from 75 to 98 percent of pickup value. Factory set for pickup at 90 percent and dropout at 85 percent.
2. Adjustable Time Delay: For override of normal-source voltage sensing to delay transfer and engine start signals. Adjustable from zero to six seconds, and factory set for one second.

3. Voltage/Frequency Lockout Relay: Prevent premature transfer to generator. Pickup voltage shall be adjustable from 85 to 100 percent of nominal. Factory set for pickup at 90 percent. Pickup frequency shall be adjustable from 90 to 100 percent of nominal. Factory set for pickup at 95 percent.
4. Time Delay for Retransfer to Normal Source: Adjustable from 0 to 30 minutes, and factory set for 10 minutes to automatically defeat delay on loss of voltage or sustained undervoltage of emergency source, provided normal supply has been restored.
5. Test Switch: Simulate normal-source failure.
6. Switch-Position Pilot Lights: Indicate source to which load is connected.
7. Source-Available Indicating Lights: Supervise sources via transfer-switch normal- and emergency-source sensing circuits.

    a. Normal Power Supervision: Green light with nameplate engraved "Normal Source Available."
    b. Emergency Power Supervision: Red light with nameplate engraved "Emergency Source Available."

8. Unassigned Auxiliary Contacts: Two normally open, single-pole, double-throw contacts for each switch position, rated 10 A at 240-V ac.
9. Transfer Override Switch: Overrides automatic retransfer control so automatic transfer switch will remain connected to emergency power source regardless of condition of normal source. Pilot light indicates override status.
10. Engine Starting Contacts: One isolated and normally closed, and one isolated and normally open; rated 10 A at 32-V dc minimum.
11. Engine Shutdown Contacts: Instantaneous; shall initiate shutdown sequence at remote engine-generator controls after retransfer of load to normal source.
12. Engine Shutdown Contacts: Time delay adjustable from zero to five minutes, and factory set for five minutes. Contacts shall initiate shutdown at remote engine-generator controls after retransfer of load to normal source.
13. Engine-Generator Exerciser: Solid-state, programmable-time switch starts engine generator and transfers load to it from normal source for a preset time, then retransfers and shuts down engine after a preset cool-down period. Initiates exercise cycle at preset intervals adjustable from 7 to 30 days. Running periods are adjustable from 10 to 30 minutes. Factory settings are for 7-day exercise cycle, 20-minute running period, and 5-minute cool-down period. Exerciser features include the following:

    a. Exerciser Transfer Selector Switch: Permits selection of exercise with and without load transfer.
    b. Push-button programming control with digital display of settings.
    c. Integral battery operation of time switch when normal control power is not available.

2.4. REMOTE ANNUNCIATOR SYSTEM

A. Functional Description: Remote annunciator panel shall annunciate conditions for indicated transfer switches. Annunciation shall include the following:

1. Sources available, as defined by actual pickup and dropout settings of transfer-switch controls.
2. Switch position.
3. Switch in test mode.
4. Failure of communication link.

B. Annunciator Panel: LED-lamp type with audible signal and silencing switch.

1. Indicating Lights: Grouped for each transfer switch monitored.
2. Label each group, indicating transfer switch it monitors, location of switch, and identity of load it serves.
3. Mounting: Flush, modular, steel cabinet, unless otherwise indicated.
4. Lamp Test: Push-to-test or lamp-test switch on front panel.

2.5. SOURCE QUALITY CONTROL

A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Design each fastener and support to carry load indicated by seismic requirements and according to seismic-restraint details. See Section 260548 "Vibration and Seismic Controls for Electrical Systems."

B. Floor-Mounting Switch: Anchor to floor by bolting.

1. Concrete Bases: 4 inches (100 mm) high, reinforced, with chamfered edges. Extend base no more than 4 inches (100 mm) in all directions beyond the maximum dimensions of switch, unless otherwise indicated or unless required for seismic support. Construct concrete bases according to Section 260529 "Hangers and Supports for Electrical Systems."

C. Annunciator Panel Mounting: Flush in wall, unless otherwise indicated.

D. Identify components according to Section 260553 "Identification for Electrical Systems."

E. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

3.3. CONNECTIONS

A. Wiring to Remote Components: Match type and number of cables and conductors to control and communication requirements of transfer switches as recommended by manufacturer. Increase raceway sizes at no additional cost to the City of New York if necessary to accommodate required wiring.

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

C. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4. FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

B. Perform tests and inspections and prepare test reports.

1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
3. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.

    a. Check for electrical continuity of circuits and for short circuits.
    b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
    c. Verify that manual transfer warnings are properly placed.
    d. Perform manual transfer operation.

4. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.

    a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
    b. Simulate loss of phase-to-ground voltage for each phase of normal source.
    c. Verify time-delay settings.
    d. Verify pickup and dropout voltages by data readout or inspection of control settings.
    e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
    f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
    g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

5. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.

    a. Verify grounding connections and locations and ratings of sensors.

C. Testing Agency's Tests and Inspections:

1. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

3. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Include external annunciation and control circuits. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.

   a. Check for electrical continuity of circuits and for short circuits.
   b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
   c. Verify that manual transfer warnings are properly placed.
   d. Perform manual transfer operation.

4. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.

   a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
   b. Simulate loss of phase-to-ground voltage for each phase of normal source.
   c. Verify time-delay settings.
   d. Verify pickup and dropout voltages by data readout or inspection of control settings.
   e. Test bypass/isolation unit functional modes and related automatic transfer-switch operations.
   f. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
   g. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

5. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.

   a. Verify grounding connections and locations and ratings of sensors.

D. Coordinate tests with tests of generator and run them concurrently.

E. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.

F. Remove and replace malfunctioning units and retest as specified above.

G. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.

1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.
2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5. INSTRUCTION

A. Engage a factory-authorized service representative to instruct building's operating personnel to adjust, operate, and maintain transfer switches and related equipment as specified below.

B. Coordinate this training with that for generator equipment.

END OF SECTION 263600

SECTION 264113
Lightning Protection for Structures

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 33 00 "Submittal Procedures."

b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2 SUMMARY

A. Section includes lightning protection for structures and building site components.

1.3 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Shop Drawings: For air terminals and mounting accessories.

1. Layout of the lightning protection system, along with details of the components to be used in the installation.
2. Include indications for use of raceway, data on how concealment requirements will be met, and calculations required by NFPA 780 for bonding of grounded and isolated metal bodies.

C. Qualification Data: For qualified Installer and manufacturer. Include data on listing or certification by UL.

D. Certification, signed by Contractor, that roof adhesive is approved by manufacturer of roofing material.

E. Field quality-control reports.

F. Comply with recommendations in NFPA 780, Annex D, "Inspection and Maintenance of Lightning Protection Systems," for maintenance of the lightning protection system.

G. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features, including the following:

1. Ground rods.
2. Ground loop conductor.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Installer Qualifications: Certified by UL, trained and approved for installation of units required for this Project.

C. System Certificate:

1. UL Master Label.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 780, "Definitions" Article.

1.5 COORDINATION

A. Coordinate installation of lightning protection with installation of other building systems and components, including electrical wiring, supporting structures and building materials, metal bodies requiring bonding to lightning protection components, and building finishes.

B. Coordinate installation of air terminals attached to roof systems with roofing manufacturer and Installer.

C. Flashings of through-roof assemblies shall comply with roofing manufacturers' specifications.

PART 2 - PRODUCTS

2.1 LIGHTNING PROTECTION SYSTEM COMPONENTS

A. Comply with UL 96.

B. Roof-Mounted Air Terminals: NFPA 780, Class I copper unless otherwise indicated.
1. Manufacturers: Subject to compliance with requirements, provide:
   a. Heary Bros. Lightning Protection Co. Inc.
   b. East Coast Lightning Equipment Inc.
   c. Preferred Lightning Protection.
   d. Robbins Lightning, Inc.
   e. Thompson Lightning Protection, Inc.
   f. Approval Equal.

2. Air Terminals More than 24 Inches (600 mm) Long: With brace attached to the terminal at not less than half the height of the terminal.

3. Single-Membrane, Roof-Mounted Air Terminals: Designed specifically for single-membrane roof system materials. Comply with requirements in Division 07 roofing Sections.

C. Main and Bonding Conductors: Copper.

D. Ground Loop Conductor: The same size and type as the main conductor except tinned.

E. Ground Rods: Copper-clad. 3/4 inch (19 mm) in diameter by 10 feet (3 m) long.

F. Heavy-Duty, Stack-Mounted, Lightning Protection Components: Stainless steel.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install lightning protection components and systems according to UL 96A.

B. Install conductors with direct paths from air terminals to ground connections. Avoid sharp bends.

C. Conceal the following conductors:

1. System conductors.
2. Down conductors.
3. Interior conductors.
4. Conductors within normal view of exterior locations at grade within 200 feet (60 m) of building.

D. Cable Connections: Use crimped or bolted connections for all conductor splices and connections between conductors and other components. Use exothermic-welded connections in underground portions of the system.

E. Air Terminals on Single-Ply Membrane Roofing: Comply with roofing membrane and adhesive manufacturer's written instructions.

F. Bond extremities of vertical metal bodies exceeding 60 feet (18 m) in length to lightning protection components.

G. Ground Loop: Install ground-level, potential equalization conductor and extend around the perimeter of structure.

1. Bury ground ring not less than 24 inches (600 mm) from building foundation.
2. Bond ground terminals to the ground loop.
3. Bond grounded building systems to the ground loop conductor within 12 feet (3.6 m) of grade level.

H. Bond lightning protection components with intermediate-level interconnection loop conductors to grounded metal bodies of building at 60-foot (18-m) intervals.

3.3 CORROSION PROTECTION

A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.

B. Use conductors with protective coatings where conditions cause deterioration or corrosion of conductors.

3.4 FIELD QUALITY CONTROL

A. Notify Commissioner at least 48 hours in advance of inspection before concealing lightning protection components.

B. UL Inspection: Meet requirements to obtain a UL Master Label for system.

END OF SECTION 264113

SECTION 265100
Interior Lighting

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. This Section includes the following:

1. Interior lighting fixtures, lamps, and ballasts.
2. Exit signs.
3. Lighting fixture supports.

1.3. DEFINITIONS

A. BF: Ballast factor.

B. CRI: Color-rendering index.

C. CU: Coefficient of utilization.

D. HID: High-intensity discharge.

E. LER: Luminaire efficacy rating.

F. Luminaire: Complete lighting fixture, including ballast housing if provided.

G. RCR: Room cavity ratio.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 013300 "Submittal Procedures" for submittal requirements.

B. Product Data: For each type of lighting fixture, arranged in order of fixture designation. Include data on features, accessories, finishes, and the following:

1. Physical description of lighting fixture including dimensions.
2. Emergency lighting units including battery and charger.
3. Ballast.
4. Energy-efficiency data.
5. Life, output, and energy-efficiency data for lamps.
6. Photometric data, in IESNA format, based on laboratory tests of each lighting fixture type, outfitted with lamps, ballasts, and accessories identical to those indicated for the lighting fixture as applied in this Project.

    a. For indicated fixtures, photometric data shall be certified by a qualified independent testing agency. Photometric data for remaining fixtures shall be certified by the manufacturer.
    b. Photometric data shall be certified by a manufacturer's laboratory with a current accreditation under the National Voluntary Laboratory Accreditation Program (NVLAP) for Energy Efficient Lighting Products.

C. Shop Drawings: Show details of nonstandard or custom lighting fixtures. Indicate dimensions, weights, methods of field assembly, components, features, and accessories.

1. Wiring Diagrams: Power wiring.

D. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Lighting fixtures.
2. Suspended ceiling components.
3. Structural members to which suspension systems for lighting fixtures will be attached.
4. Other items in finished ceiling including the following:

    a. Air outlets and inlets.
    b. Speakers.
    c. Sprinklers.
    d. Smoke and fire detectors.
    e. Occupancy sensors.
    f. Access panels.

5. Perimeter moldings.

E. Samples for Verification: Interior lighting fixtures designated for sample submission in Interior Lighting Fixture Schedule. Each sample shall include the following:

1. Lamps: Specified units installed.
2. Accessories: Cords and plugs.

F. Product Certificates: For each type of ballast for bi-level and dimmer-controlled fixtures, signed by product manufacturer.

G. Qualification Data: For agencies providing photometric data for lighting fixtures.

H. Field quality-control test reports.

I. Operation and Maintenance Data: For lighting equipment and fixtures to include in emergency, operation, and maintenance manuals.

J. Warranties: Special warranties specified in this Section.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions section 01400 "Quality Requirements" for quality assurance requirements.

B. Luminaire Photometric Data Testing Laboratory Qualifications: Provided by manufacturers' laboratories that are accredited under the National Volunteer Laboratory Accreditation Program for Energy Efficient Lighting Products.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner, and marked for intended use.

D. Comply with NFPA 70.

E. FMG Compliance: Lighting fixtures for hazardous locations shall be listed and labeled for indicated class and division of hazard by FMG.

F. Mockups: Provide interior lighting fixtures for room or module mockups, complete with power and control connections.

1. Obtain Commissioner's approval of fixtures for mockups before starting installations.
2. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
3. Approved fixtures in mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6. COORDINATION

A. Coordinate layout and installation of lighting fixtures and suspension system with other construction that penetrates ceilings or is supported by them, including HVAC equipment, fire-suppression system, and partition assemblies.

1.7. WARRANTY

A. Special Warranty for Ballasts: Manufacturer's standard form in which ballast manufacturer agrees to restore or replace ballasts that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Electronic Ballasts: Five years from date of Substantial Completion.
2. Warranty Period for Electromagnetic Ballasts: Three years from date of Substantial Completion.

B. Special Warranty for T5 and T8 Fluorescent Lamps: Manufacturer's standard form, made out to the City of New York and signed by lamp manufacturer agreeing to replace lamps that fail in materials or workmanship, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Warranty Period: Two year(s) from date of Substantial Completion

C. Special Warranty for LED Lamps:

Special Warranty for T5 and T8 Fluorescent Lamps: Manufacturer's standard form, made out to the City of New York and signed by lamp manufacturer agreeing to replace lamps that fail in materials or workmanship, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Warranty Period: Five year(s) to include LED driver and all LED components.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Refer to Electrical Drawings (sheets E1-010, 11, 12) for light fixture schedule.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Holophane
2. Focal Point
3. Cree
4. Vode
5. Ecosense
6. Bega
7. Lumenpulse
8. BK Lighting
9. Hevi Lite
10. USAI
11. Beacon
12. Hubbell
13. Ligman,
14. or approved equal.

2.2. LIGHTING FIXTURES AND COMPONENTS, GENERAL REQUIREMENTS

A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.

B. Incandescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5A.

C. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.

D. HID Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5B.

E. LED Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5A.

F. Metal Parts: Free of burrs and sharp corners and edges.

G. Sheet Metal Components: Steel, unless otherwise indicated. Form and support to prevent warping and sagging.

H. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.

I. Reflecting surfaces shall have minimum reflectance as follows, unless otherwise indicated:

1. White Surfaces: 85 percent.
2. Specular Surfaces: 83 percent.
3. Diffusing Specular Surfaces: 75 percent.
4. Laminated Silver Metallized Film: 90 percent.

J. Plastic Diffusers, Covers, and Globes:

1. Acrylic Lighting Diffusers: 100 percent virgin acrylic plastic. High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

   a. Lens Thickness: At least 0.125 inch (3.175 mm) minimum unless different thickness is indicated.
   b. UV stabilized.

2. Glass: Annealed crystal glass, unless otherwise indicated.

K. Electromagnetic-Interference Filters: Factory installed to suppress conducted electromagnetic-interference as required by MIL-STD-461E. Fabricate lighting fixtures with one filter on each ballast indicated to require a filter.

2.3. BALLASTS FOR LINEAR FLUORESCENT LAMPS

A. Electronic Ballasts: Comply with ANSI C82.11; instant -start type, unless otherwise indicated, and designed for type and quantity of lamps served. Ballasts shall be designed for full light output unless dimmer or bi-level control is indicated.

1. Sound Rating: A .
2. Total Harmonic Distortion Rating: Less than 10 percent.
3. Transient Voltage Protection: IEEE C62.41, Category A or better.
4. Operating Frequency: 42 kHz or higher.
5. Lamp Current Crest Factor: 1.7 or less.
6. BF: 0.85 or higher.
7. Power Factor: 0.98 or higher.
8. Parallel Lamp Circuits: Multiple lamp ballasts shall comply with ANSI C 82.11 and shall be connected to maintain full light output on surviving lamps if one or more lamps fail.

B. Electronic Programmed-Start Ballasts for T5 and T5HO Lamps: Comply with ANSI C82.11 and the following:

1. Lamp end-of-life detection and shutdown circuit for T5 diameter lamps.
2. Automatic lamp starting after lamp replacement.
3. Sound Rating: A.
4. Total Harmonic Distortion Rating: Less than 20 percent.
5. Transient Voltage Protection: IEEE C62.41, Category A or better.
6. Operating Frequency: 20 kHz or higher.
7. Lamp Current Crest Factor: 1.7 or less.
8. BF: 0.95 or higher, unless otherwise indicated.
9. Power Factor: 0.98 or higher.

C. Electromagnetic Ballasts: Comply with ANSI C82.1; energy saving, high-power factor, Class P, and having automatic-reset thermal protection.

1. Ballast Manufacturer Certification: Indicated by label.

D. Single Ballasts for Multiple Lighting Fixtures: Factory-wired with ballast arrangements and bundled extension wiring to suit final installation conditions without modification or rewiring in the field.

E. Ballasts for Low-Temperature Environments:

1. Temperatures 0 Deg F (Minus 17 Deg C) and Higher: Electronic or electromagnetic type rated for 0 deg F (minus 17 deg C) starting and operating temperature with indicated lamp types.
2. Temperatures Minus 20 Deg F (Minus 29 Deg C) and Higher: Electromagnetic type designed for use with indicated lamp types.

F. Ballasts for Low Electromagnetic-Interference Environments: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for consumer equipment.

G. Ballasts for Dimmer-Controlled Lighting Fixtures: Electronic type.

1. Dimming Range: 100 to 5 percent of rated lamp lumens.
2. Ballast Input Watts: Can be reduced to 20 percent of normal.
3. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated.

H. Ballasts for Bi-Level Controlled Lighting Fixtures: Electronic type.

1. Operating Modes: Ballast circuit and leads provide for remote control of the light output of the associated lamp between high- and low-level and off.

   a. High-Level Operation: 100 percent of rated lamp lumens.
   b. Low-Level Operation: 50 percent of rated lamp lumens.

2. Ballast shall provide equal current to each lamp in each operating mode.
3. Compatibility: Certified by manufacturer for use with specific bi-level control system and lamp type indicated.

2.4. BALLASTS FOR COMPACT FLUORESCENT LAMPS

A. Description: Electronic programmed rapid-start type, complying with ANSI C 82.11, designed for type and quantity of lamps indicated. Ballast shall be designed for full light output unless dimmer or bi-level control is indicated:

1. Lamp end-of-life detection and shutdown circuit.
2. Automatic lamp starting after lamp replacement.
3. Sound Rating: A.
4. Total Harmonic Distortion Rating: Less than 20 percent.
5. Transient Voltage Protection: IEEE C62.41, Category A or better.
6. Operating Frequency: 20 kHz or higher.
7. Lamp Current Crest Factor: 1.7 or less.
8. BF: 0.95 or higher, unless otherwise indicated.
9. Power Factor: 0.98 or higher.
10. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.
11. Ballast Case Temperature: 75 deg C, maximum.

B. Ballasts for Dimmer-Controlled Lighting Fixtures: Electronic type.

1. Dimming Range: 100 to 5 percent of rated lamp lumens.
2. Ballast Input Watts: Can be reduced to 20 percent of normal.
3. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated.

2.5. BALLASTS FOR HID LAMPS

A. Electromagnetic Ballast for Metal-Halide Lamps: Comply with ANSI C82.4 and UL 1029. Include the following features, unless otherwise indicated:

1. Ballast Circuit: Constant-wattage autotransformer or regulating high-power-factor type.
2. Minimum Starting Temperature: Minus 22 deg F (Minus 30 deg C) for single-lamp ballasts.
3. Normal Ambient Operating Temperature: 104 deg F (40 deg C).
4. Open-circuit operation that will not reduce average life.
5. Low-Noise Ballasts: Manufacturers' standard epoxy-encapsulated models designed to minimize audible fixture noise.

B. Electronic Ballast for Metal-Halide Lamps: Include the following features unless otherwise indicated:

1. Lamp end-of-life detection and shutdown circuit.
2. Sound Rating: A.
3. Total Harmonic Distortion Rating: Less than 15 percent.
4. Transient Voltage Protection: IEEE C62.41, Category A or better.
5. Lamp Current Crest Factor: 1.5 or less.
6. Power Factor: .90 or higher.
7. Interference: Comply with 47 CFR, Chapter 1, Part 18, Subpart C, for limitations on electromagnetic and radio-frequency interference for nonconsumer equipment.

8. Protection: Class P thermal cutout.
9. Bi-Level Dimming Ballast: Ballast circuit and leads provide for remote control of the light output of the associated fixture between high- and low-level and off.

    a. High-Level Operation: 100 percent of rated lamp lumens.
    b. Low-Level Operation: 50 percent of rated lamp lumens.
    c. Compatibility: Certified by ballast manufacturer for use with specific bi-level control system and lamp type indicated. Certified by lamp manufacturer that ballast operating modes are free from negative effect on lamp life and color-rendering capability.

10. Continuous Dimming Ballast: Dimming range shall be from 100 to 35 percent of rated lamp lumens without flicker.

    a. Ballast Input Watts: Reduced to a maximum of 50 percent of normal at lowest dimming setting.
    b. Compatibility: Certified by manufacturer for use with specific dimming control system and lamp type indicated. Certified by lamp manufacturer that ballast operating modes are free from negative effect on lamp life and color-rendering capability.

C. Auxiliary Instant-On Quartz System: Factory-installed feature automatically switches quartz lamp on when fixture is initially energized and when power outages occur. System automatically turns quartz lamp off when HID lamp reaches approximately 60 percent light output.

2.6. EXIT SIGNS

A. Description: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with NYC Building Code.

B. Internally Lighted Signs:

1. Lamps for AC Operation: Fluorescent, 2 for each fixture, 20,000 hours of rated lamp life.
2. Lamps for AC Operation: LEDs, 70,000 hours minimum rated lamp life.

2.7. FLUORESCENT LAMPS

A. Low-Mercury Lamps: Comply with EPA's toxicity characteristic leaching procedure test; shall yield less than 0.2 mg of mercury per liter when tested according to NEMA LL 1.

B. T8 rapid-start low-mercury lamps, rated 32 W maximum, nominal length of 48 inches (1220 mm), 2800 initial lumens (minimum), CRI 75 (minimum), color temperature 3500 K, and average rated life 20,000 hours, unless otherwise indicated.

C. T8 rapid-start low-mercury lamps, rated 17 W maximum, nominal length of 24 inches (610 mm), 1300 initial lumens (minimum), CRI 75 (minimum), color temperature 3500 K, and average rated life of 20,000 hours, unless otherwise indicated.

D. T5 rapid-start low-mercury lamps, rated 28 W maximum, nominal length of 45.2 inches (1150 mm), 2900 initial lumens (minimum), CRI 85 (minimum), color temperature 3000 K, and average rated life of 20,000 hours, unless otherwise indicated.

E. T5HO rapid-start, high-output low-mercury lamps, rated 54 W maximum, nominal length of 45.2 inches (1150 mm), 5000 initial lumens (minimum), CRI 85 (minimum), color temperature 4100 K, and average rated life of 20,000 hours, unless otherwise indicated.

F. Compact Fluorescent Lamps: 4-Pin, low mercury, CRI 80 (minimum), color temperature 3500 K, average rated life of 10,000 hours at 3 hours operation per start, and suitable for use with dimming ballasts, unless otherwise indicated.

1. 13 W: T4, double or triple tube, rated 900 initial lumens (minimum).
2. 18 W: T4, double or triple tube, rated 1200 initial lumens (minimum).
3. 26 W: T4, double or triple tube, rated 1800 initial lumens (minimum).
4. 32 W: T4, triple tube, rated 2400 initial lumens (minimum).
5. 42 W: T4, triple tube, rated 3200 initial lumens (minimum).
6. 55 W: T4, triple tube, rated 4300 initial lumens (minimum).

2.8. HID LAMPS

A. Metal-Halide Lamps: ANSI C78.1372, with a minimum CRI 65 and color temperature 4000 K.

B. Pulse-Start, Metal-Halide Lamps: Minimum CRI 65, and color temperature 4000 K.

C. Ceramic, Pulse-Start, Metal-Halide Lamps: Minimum CRI 80 and color temperature 4000 K.

2.9. LIGHTING FIXTURE SUPPORT COMPONENTS

A. Comply with Section 260529 "Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.

B. Single-Stem Hangers: 1/2-inch (13-mm) steel tubing with swivel ball fittings and ceiling canopy. Finish same as fixture.

C. Twin-Stem Hangers: Two, 1/2-inch (13-mm) steel tubes with single canopy designed to mount a single fixture. Finish same as fixture.

D. Wires: ASTM A 641/A 641M, Class 3, soft temper, zinc-coated steel, 12 gage (2.68 mm).

E. Wires for Humid Spaces: ASTM A 580/A 580M, Composition 302 or 304, annealed stainless steel, 12 gage (2.68 mm).

F. Rod Hangers: 3/16-inch (5-mm) minimum diameter, cadmium-plated, threaded steel rod.

G. Hook Hangers: Integrated assembly matched to fixture and line voltage and equipped with threaded attachment, cord, and locking-type plug.

2.10. REQUIREMENTS FOR INDIVIDUAL LIGHTING FIXTURES

A. Fixture Type :

1. Voltage: 120-V ac.
2. Mounting: Recessed ceiling Pendant Surface ceiling Surface wall Suspended shall be as per contract documents.
3. Nominal Dimensions: See light fixture schedule.
4. Lamps: See lighting fixture schedules.
5. Ballast Type: Electronic instant start Electromagnetic Low temperature.
6. BF: Insert value.
7. Quantity of Ballasts per Fixture: See light fixture schedule.
8. Ballast Type: Electronic Electromagnetic, compatible with lamp type indicated.
9. Ballast Fuse: Factory installed, slow-blow type rated between 2.65 and 3.0 times the line current.
10. Lens: Describe types, materials, and features not indicated elsewhere.
11. External Finish: As per lighting fixtures schedules.
12. Trim and Hardware: As per lighting fixture schedules.
13. Special Environmental Conditions: As per lighting fixture schedules.
14. Other Features: As per lighting fixture schedules.
15. Minimum CU for typical RCR shall be as follows (typical cavity reflectance are ceiling, 80 percent; wall, 50 percent; and floor, 20 percent): RCR 7 CU.
16. Provide lighting fixtures as needed for mockups.

2.11. LED LUMINAIRES

A. Led Luminaires shall meet the following technical requirements:

1. Minimum Light Output.
2. Zonal Lumen Requirements.
3. Minimum Luminaire Efficacy.
4. Minimum CRI.
5. L70 Lumen Maintenance.
6. Minimum Luminaire Warranty of 5 years (not pro-rated) to include LED driver and all LED Components.

B. Additional Requirements:

1. Color Temperature of 3,000 K – 4,100 K for interior Lighting Schedule on the plans.
2. Luminaire shall be mercury-free, lead free, and RoHS compliant.
3. Luminaire shall comply with FCC 47 CFR part 15 non-consumer RFI/EMI standards.
4. Light output of the LED system shall be measured using the absolute photometry method following IES LM-79 and IES LM-80 requirements and guidelines.
5. Luminaire shall maintain 70% lumen output (L70) for a minimum of 50,000 hours.
6. Driver shall have a rated life of 50,000 hours, minimum.
7. Lumen output shall not depreciate more than 20% after 10,000 hours of use.
8. Driver and LEDs shall be furnished from a single manufacturer to ensure compatibility.

9. Luminaire Color Rendering Index (CRI) shall be a minimum of 80 for interior.

10. LED luminaire shall be thermally designed as to not exceed the maximum junction temperature of the LED for the ambient temperature of the location the luminaire is to be installed. Rated case temperature shall be suitable for operation in the ambient temperatures typically found for the intended installation.

11. LED driver shall have a minimum power factor (pf) of 0.9 and a maximum crest factor (cf) of 1.5 at full input power and across specified voltage range.

12. Luminaire shall operate normally for input voltage fluctuation of plus or minus 10 percent.

13. Luminaire shall have a maximum Total Harmonic Distortion (THD) of 20%at full input power and across specified voltage range.

14. Wiring connections to LED drivers shall utilize polarized quick-disconnects for field maintenance. All connections to luminaires shall be reverse polarity protected and provide high voltage protection in the event connections are reversed or shorted during the installation process.

15. Fuse Protections: All luminaires shall have built-in fuse protection. All power supply outputs shall be either fuse protected or be Polymeric Positive Temperature Coefficient (PTC) protected as per Class 2 UL listing.

16. All luminaires shall be provided with knockouts for conduit connections

17. Provide all of the following data on submittals:
    a. Delivered lumens.
    b. Input watts.
    c. Efficacy.
    d. Color rendering index.

19. LED luminaires used for Emergency Egress Lighting:
    a. The failure of one LED shall not affect the operation of the remaining LEDs.

20. Emergency LED Luminaire Compatibility with Inverters:
    a. Emergency Inverters shall be sine-wave type, or have written confirmation from the luminaire manufacturer that the luminaire will function with a square wave inverter.

21. Dimming:
    a. LED Driver shall be compatible with dimming controls where dimming is indicated on the plans. Dimmable drivers shall use Dimming Constant Current (DCC) or Pulse Width Modulation (PWM) operation.
    b. LED luminaires shall dim to (20%, 15%, 10%, 5% and 0.1%) as specified in the Lighting Schedule on the plans without visible flicker or "popcorn effect". "Popcorn effect" is defined as the luminaire being on a pre-set dimmed level (less than 100%), and going to 100% prior to returning to the pre-set level when power is returned to the luminaire.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Lighting fixtures: Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.

B. Support for Lighting Fixtures in or on Grid-Type Suspended Ceilings: Use grid as a support element.

1. Install a minimum of four ceiling support system rods or wires for each fixture. Locate not more than 6 inches (150 mm) from lighting fixture corners.
2. Support Clips: Fasten to lighting fixtures and to ceiling grid members at or near each fixture corner with clips that are UL listed for the application.
3. Fixtures of Sizes Less Than Ceiling Grid: Install as indicated on reflected ceiling plans or center in acoustical panel, and support fixtures independently with at least two 3/4-inch (20-mm) metal channels spanning and secured to ceiling tees.
4. Install at least one independent support rod or wire from structure to a tab on lighting fixture. Wire or rod shall have breaking strength of the weight of fixture at a safety factor of 3.

C. Suspended Lighting Fixture Support:

1. Pendants and Rods: Where longer than 48 inches (1200 mm), brace to limit swinging.
2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.

D. Adjust aimable lighting fixtures to provide required light intensities.

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3. FIELD QUALITY CONTROL

A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.

B. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

END OF SECTION 265100

SECTION 26 51 13
Architectural Luminaires, Lamps, and Ballasts

PART I – GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

a. Refer to DDC General Conditions and the Addendum to the General Conditions

b. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY:

A. Included in the Work of this Section are materials, and appurtenances required to complete the Work of this Section, as specified herein, as required by job conditions, or as indicated on drawings. The scope of this section includes general requirements for luminaires and their components, coordination, definitions, quality assurances, shop drawings, mockups, samples for a complete job.

1.3 DEFINITIONS:

A. The term "luminaires" refers to lighting fixtures with their lamps and all other components.

1.4 GENERAL REQUIREMENTS:

A. Materials and equipment to be provided for the installation of indoor and outdoor luminaires, lighting equipment, control wiring, and lamps as shown on the drawings and specified herein shall be controlled and securely attached to supports.

B. Refer to drawings for dimension, details, and approximate fixture locations.

1.5 COORDINATION:

A. Luminaire locations as indicated on the electrical drawings are generalized and approximate. Verify locations with Contract Drawings, reflected ceiling plans and other reference data. Adequacy of headroom and non-interference with other equipment, such as ducts, pipes or openings to be provided during installation of fixtures. The location of equipment included in the Work of this Section may be shown on the Contract Drawings in a certain place, actual construction may disclose that the location for the Work does not make its position easily and quickly accessible.

B. Installation of fixtures should be arranged in proper relation to other Work and with finishes so that it shall harmonize in service and appearance and so that there shall be no interference in location or level.

C. Where a catalog number or pictorial description are provided, the written description shall take precedence.

D. Fixtures are is to be flush or concealed, install fixtures to assure that the fixture does not project visually or physically beyond the finished lines of floors, ceilings or walls.

E. Verify ceiling conditions and furnish appropriate mounting details for each luminaire. Mounting details shall be approved by Commissioner.

F. Verify compatibility of supply voltage indicated on electrical drawings with voltage specified for each luminaire prior to release.

1.6 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"

B. Manufacturers: Fixture Manufacturers are listed in Part 2.1 shall be assumed capable of supplying the listed fixtures.

C. Equipment Compatibility:

1. Provide similar luminaires, drivers and other components fabricated by one manufacturer, to simplify maintenance and replacement of equipment.
2. Fixture details shown may be modified by the manufacturer provided all the following conditions have been met:
   a. Fixture performance is equal or improved.
   b. Structural, mechanical, electrical, safety, and maintenance characteristics are equal or improved.

D. Regulatory Agencies:

1. Provide luminaires constructed, wired and installed in compliance with the New York City Building Codes. Luminaires should conform or exceed Underwriters Laboratories (UL) standards.
2. For any category of luminaire tested by any of the following agencies, provide luminaires listed and labeled by an independent Nationally Recognized Testing Laboratory (NRTL) such as UL, ETL, CSA, MET

1.7 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"

1.8 SHOP DRAWINGS:

A. General:

1. For standard catalog items with no modifications, submit catalog cut sheets prepared by the manufacturer which clearly show all elements to be supplied and all corresponding product data (including lamping; driver manufacturer and model number; voltage; accessories or options and any miscellaneous items detailed in the written description of the specification.) If cut sheet shows more than one (1) fixture type, all non-applicable information shall be crossed out.
2. For custom fixtures, modified fixtures or LED fixtures mounted in continuous rows, submit a layout drawing prepared by the manufacturer showing all details of construction, lengths of runs, lamping layout, suspension installation hardware or components, power locations, power supplies, remote drivers, remote transformers, finishes and list of materials. Drawings must be to scale. If scallop shields, wallwash reflectors or baffles are required, drawings shall indicate relative position to wall or adjacent vertical surface.
3. When components are indicated as contractor supplied or specified (i.e. remote transformers, drivers, housings, NEMA enclosures, etc.,) contractor is to provide submittals for such components in conjunction with the fixture submittal.
4. Manufacturer shall provide submittals with fixture installation instruction sheets.

5. Operable luminaire samples and mockups as indicated in Part 2.1.
6. Request for Final Layout: At the same time that shop drawings are submitted, the Commissioner shall request verification of final layouts and control zones for all luminaires. the Commissioner shall also submit templates for labeling of all controls. Labeling templates shall be returned by the Commissioner. If control template information is not available from the Commissioner, the contractor shall furnish blank control station faceplates. The Commissioner shall coordinate the faceplate labeling information. Custom engraved (or labeled) faceplates shall be requested from the manufacturer so that they arrive prior to the final release of the space to the Commissioner and subsequent beginning of the warranty period. Blank faceplates shall be replaced with custom labeled faceplates at no additional cost to the City of New York.
7. Shop drawings shall show all luminaire components, including but not limited to reflectors, louvers, lenses, fuses, junction boxes, and drivers. Shop drawings shall show materials, finishes, metal gauges, overall and detailed dimensions, sizes, electrical and mechanical connections, fasteners, welds, joints, any exposed hardware, and conditions, or provisions for the work of others, and similar information. Indicate complete details of the luminaire, including manufacturer's name and catalogue numbers for, drivers, light shields, switches and type of wiring, and targeting and locking devices for adjustable luminaires. Indicate type and extent of approved inert insulating materials to prevent electrolytic corrosion at junctions of dissimilar metals. Include pertinent mounting details including hung ceiling construction. Standard catalogue cuts shall be supplemented by additional drawings if information or descriptions listed above are not included in the cuts. Photometric documentation and finish samples shall be provided upon request. Samples shall be provided if indicated in Part 2.1. No luminaires will be approved without the previous described submission of data.
8. Submit layouts for continuous luminaires or coves, indicating overall field measurements and proposed lengths, and condition of joints, corners, and ends.

B. Data: Submit independent laboratory photometric data in the directed number of copies and in format as directed by Commissioner. Photometric data shall be submitted for standard, "off-the-shelf" units at the time the manufacturer's cuts are submitted. Photometric testing and reporting shall conform to IESNA procedures.

C. Manufacturer's Catalogue Sheets shall indicate input watts and electrical characteristics, ambient temperature rating, noise level rating, mounting methods and UL or ETL listing for use with required lamp and ballast (if any).

1.9 SAMPLES:

A. After shop drawings, data and any other required submissions have been approved, submit to Commissioner samples of each of the following components:

1. Samples demonstrating the finishes of any custom metal, paint color or finish. Sample size to be a minimum of 4in (100mm) square. Place labels on the back side of finish samples only.
2. Material samples of any transmitting media, such as plastic, glass, perforated metal and the like. Sample size to be a minimum of 12in (305mm) square, to allow adequate space for label.
3. Each LED downlight reflector cone that differs in size or finish, if requested during shop drawing review.
4. Any other luminaires or components requested in the luminaire descriptions or schedule.

B. Submit two (2) samples unless otherwise indicated. If luminaire samples are requested, supply a completely operable luminaire with the specified lamp and a 10ft (3m) cord and plug for standard 120 volt service. For 277 volt luminaires, also supply a completely wired or plug-wired step-up transformer

to convert from 120 to 277 volts, with a 120 volt cord and plug. Provide component parts as specifically requested.

C. Where a sample is submitted or requested, do not fabricate that luminaire type until the sample is approved. Submit and resubmit a sample as required, until samples are approved.

D. The purpose of the sample is to review manufacturing techniques, detailing, lamping, and scale. Minor modifications, if any, shall be considered part of these Specifications.

E. Submit complete and operable sample luminaires for any proposed substitution.

1.10 PRODUCT DELIVERY, STORAGE, AND HANDLING:

A. Luminaires and their component elements shall be delivered to the job site factory-assembled and wired to the greatest extent practical, in accordance with the approved shop drawings, samples, certificates and catalogue cuts, and shall be handled in a careful manner to avoid damage.

B. Exposed finishes shall be protected during manufacture, transport, storage and handling. Delivered materials shall be identical to the approved samples. Materials which become damaged shall be repaired and/or replaced as directed.

C. Luminaires shall be stored under cover, above the ground, in clean, dry areas, and shall be tagged and/or marked as to type and location.

D. Delivered luminaires shall include wiring, drivers, shielding, channels, lenses and other parts and appurtenances necessary for luminaire installation of each luminaire type.

E. Protect luminaires that are to be integrated into, or finally located after completion of exhibit construction work.

1.11 MOCK-UP:

A. As a part of the Work of this Section, when specifically called for in the Luminaire Schedule, temporarily install, connect and adjust a reasonable number of luminaires, unless otherwise stated. Install completely operable luminaires with all lamps, drivers, etc., of each type listed in the Luminaire Schedule where a mock-up is specified, to verify specified requirements. Place the mock-up luminaires where and when directed by Commissioner. Remove and store mock-up luminaires, when approved, as necessary to complete the work.

1. The mock-up installation shall closely conform to the conditions of the actual installation as to: height, distance from ceiling, number and type of lamps, material, color, etc. A written description shall submitted of each proposed mock-up with drawings in order to obtain the Commissioner's approval prior to commencement of each mock-up.

1.12 WARRANTY:

A. System shall carry a full warranty for a minimum of five (5) years..

PART II - PRODUCTS

2.1. MANUFACTURERS

A. Reference Electrical Drawings (sheets E1-010, 11, 12) for fixture schedule.

B. Subject to compliance with requirements, provide products by one of the following:

1. Holophane
2. Focal Point
3. Cree
4. Vode
5. Ecosense
6. Bega
7. Lumenpulse
8. BK Lighting
9. Hevi Lite
10. USAI
11. Beacon
12. Hubbell
13. Ligman,
14. or approved equal.

2.2. GENERAL

A. Provide recessed luminaires that are constructed to be suitable for and compatible with the ceiling, wall, pavement or other materials and construction in which they will be installed.

2.3. MATERIALS AND FABRICATION

A. Provide luminaires completely factory-assembled and wired and equipped with necessary drivers, wiring, shielding, reflectors, channels, lenses, and other parts and appurtenances necessary. Deliver to project site ready for installation and to complete the luminaire installation.

B. Use only completely concealed hardware, unless otherwise noted. Latching of luminaire door frames shall be unobtrusive. Make luminaire free from light leaks by the inherent design of the luminaire body and frame. Bond gaskets, when used, to the luminaire metal.

C. Construct luminaires with the minimum number of joints. Make unexposed joints by approved method such as welding, brazing, screwing or bolting. Soldered joints are not acceptable.

D. Provide metallic cast or extruded parts of luminaires that are close grained, sound, and free from imperfections or discoloration. Provide cast or extruded parts that are rigid, true to pattern, and of ample weight and thickness. Provide cast or extruded parts that are properly fitted, filed, ground, and buffed to provide finished surfaces and joints free of imperfections. Make thickness on cast parts not less than 1/8in (3mm).

E. Provide housings that make electrical components easily accessible and replaceable, without removing the luminaire body from its mounting. Provide luminaires indicated as "continuous" on drawings or specifications with finished end-to-end or wall-to-wall appearance. Maximize lighted length to nearest whole foot (304mm), with equally spaced unlighted portions at each end, not to exceed 6in (152mm) each. Provide continuous louvers and/or lenses into unlighted ends and at corners if specified

F. Wiring:

1. Provide luminaire wiring and associated operating and starting equipment in compliance with UL 1570 and NEC.

2. Make connections of wires to terminals in in a neat and workman-like manner and which are electrically and mechanically secure, with no loose strands protruding.
3. Provide wiring channels and wireways free from projections and rough or sharp edges throughout. At points or edges over which conductors shall pass and may be subject to injury or wear, grind to make a smooth contact surface with the conductors. Install insulated bushings at points of entrances and exit of flexible wiring.

G. All interior fixtures shall be "Damp Location" rated at a minimum, with greater protection as called for in the luminaire schedule. All exterior fixtures shall be "Marine Grade" wet location, equivalent to IP66. All hardware, including bolts imbedded in lighting pole foundations, shall be stainless steel or equivalent marine grade resistant.

2.5 FINISHES:

A. Apply luminaire finishes after fabrication in a manner that assures a durable wear-resistant surfacing. Prior to finishing, hot clean the surfaces by accepted chemical means, and treat them with corrosion inhibiting (phosphating) treatment to assure positive paint-adhesion. Give exposed metal surfaces (brass, bronze, aluminum and others) and finished castings except chromium-plated or stainless-steel parts an even coat of high grade methacrylate lacquer, or transparent epoxy. Anodize exposed aluminum surfaces for corrosion resistance. Make sheet steel luminaire housing, and iron and steel parts which have not received phosphating treatment, or which are to be utilized in exterior applications corrosion resistant by zinc or cadmium plating or hot-dip zinc galvanizing after completion of all forming, welding, or drilling operations.

B. Electroplate parts operated under temperatures injurious to hot-dipped galvanizing.

C. Cadmium plate screws, bolts, nuts and other fastening or latching hardware.

D. Except where otherwise indicated provide luminaires with a final synthetic, high-temperature baked enamel coating of color and finish as specified or directed. Unless otherwise specified, provide white baked enamel "reflective" surfaces, with a minimum reflectance of 86 percent. Unless otherwise specified, provide potentially visible non-reflective surfaces with a matte-black baked enamel finish. Prior to painting give all parts proper etched surface preparation to assure paint adherence and durability.

2.6 TRANSFORMERS FOR LOW-VOLTAGE LUMINAIRES:

A. General:

1. Each transformer controlled by a dimmer shall have a suitable choke to eliminate noise during dimming.
2. Secondary wiring shall be sized so that the total average voltage drop on the transformer secondary side does not exceed 3 percent.

B. Where a remote transformer is required for interior installations, provide a UL listed remote low voltage power supply which meets or exceeds the following requirements, in addition to those of Paragraph A above.

1. Power supply shall contain a toroidal transformer, primary circuit breaker, and thermal protection.
2. Power supply shall be UL listed, suitable for surface or recessed mounting in both walls and ceilings and require zero clearance to combustible materials.

2.7 LAMPS:

A. Solid State Lighting / Light Emitting Diode (LED) Lamps and Luminaires:

1. General:
   a. Unless otherwise specified, all LED luminaires and power/data supplies shall be provided by a single manufacturer to ensure compatibility.
   b. All control components, peripheral devices and control software are to be provided by and shall be the responsibility of a single entity. All components shall perform successfully as a complete system and shall operate as described in Section 26 09 33, Distributed Lighting Control System.
   c. Include all components necessary for a complete installation. Provide all power supplies, synchronizers, data cables, and data terminators for a complete working system.
   d. All LED sources used in the LED luminaire shall be of proven quality from established and reputable LED manufacturers. Acceptable LED lamp manufacturers unless otherwise noted are:
      (i) Cree, Inc.
      (ii) Philips Lighting
      (iii) Nichia Corporation
      (iv) Norlux
      (v) Opto Technology, Inc.
      (vi) Osram Optronic Semiconductors
      (vii) Xacato
      (viii) Bridgelux
      (ix) Citizen Electronics
      (x) Or approved equal
2. Products and Components – Performance
   a. LED luminaires and components shall be UL listed or UL classified.
   b. All LED luminaires shall be subjected to the following JEDEC Reliability Tests for Lead-free Semiconductors: HTOL, RTOL, LTOL, PTMCL, TMSK, Mechanical Shock, Variable Vibration Frequency, SHR, Autoclave.
   c. To ensure luminaire quality, luminaire shall have been tested under accelerated life test conditions including an operating temperature span of 360 degrees F, and cyclic loading up to 60G.
   d. All products included in system shall use Mil-Std 810F, Random Vibration 7.698g as a minimum standard. In installations subject to vibration, luminaire shall be installed with vibration isolation hardware to sufficiently dampen vibrations.
   e. All LED components shall be mercury and lead-free.
   f. LEDs shall comply with ANSI/NEMA/ANSLG C78.377-2008 – Specifications for the Chromaticity of Solid State Lighting Products. Color shall remain stable throughout the life of the lamp. Color shall match approved sample.
   g. LEDs shall comply with IESNA LM-80 – Standards for Lumen Maintenance of LED Lighting Products
   h. White LEDs shall have a rated source life of 50,000 hours under normal operating conditions. LED "rated source life" is defined as the time when a minimum of 70 percent of initial lumen output remains.
   i. Luminaire assembly shall include a method of dissipating heat so as to not degrade life of source, electronic equipment, or lenses. LED luminaire housing shall be designed to transfer heat from the LED board to the outside environment. Luminaire housing shall have no negative impact on life of components.
   j. Manufacturer shall supply in writing a range of permissible operating temperatures in which system will perform optimally.

k. High power LED luminaires shall be thermally protected using one or more of the following thermal management techniques: metal core board, gap pad, and/or internal monitoring firmware
l. LEDs shall be adequately protected from moisture or dust in interior applications.
m. For wet and damp use, the LED-based luminaire itself shall be sealed, rated, and tested for appropriate environmental conditions, not accomplished by using an additional housing or enclosure. Such protection shall have no negative impact on rated life of source or components, or if so, such reductions shall be explicitly brought to the attention of the designer.
n. All hardwired connections to LED luminaires shall be reverse polarity protected and provide high voltage protection in the event connections are reversed or shorted during the installation process.
o. The LED luminaire shall be operated at constant and carefully regulated current levels. LEDs shall not be overdriven beyond their specified nominal voltage and current.
p. Manufacturer shall be able to provide supporting documentation of the product meeting third party regulatory compliance.
q. Manufacturer shall ensure that products undergo and successfully meet appropriate design and manufacturability testing including Design FMEA, Process FMEA, Environmental Engineering Considerations and Laboratory Tests, IEC standards and UL/CE testing.
r. All LED luminaires (100 percent of each lot) shall undergo a minimum twenty-four (24) hour burn-in during manufacturing, prior to shipping.
s. Manufacturer shall provide Luminaire Efficacy (lm/W), total luminous flux (lumens), luminous intensity (candelas) chromaticity coordinates, CCT and CRI. optical performance, polar diagrams, and relevant luminance and illuminance photometric data. Provide data in IES file format in accordance with IES LM-79-2008, based on test results from an independent testing laboratory.
t. Power / data supply shall have the following:
   (i) Supply outputs shall have current limiting protection.
   (ii) Supply shall provide miswiring protection.
   (iii) Supply shall have power factor correction.
   (iv) Supply shall provide connections that are conduit-ready or clamp-style connections in the case of low-voltage wiring.
   (v) Supply shall come with a housing that meets a minimum IP20 rating for dry location installation unless located in a damp or wet location.
   (vi) Supply shall be UL listed for Class 1 or Class 2 wiring

3. LED Control and Communication – Performance
   a. LED luminaires shall be network controllable via digital control.
   b. The LED system shall use integral and differential non-linear control.
   c. Constant data transmission rates shall be employed, resulting in the output being independent of distance of cable between power supply and light source within the specified length.
   d. LED system shall have a selectable means of external control via a data network.
   e. Each LED luminaire and/or node shall have the capability to be set to a unique and individual address. Address shall be selectable through on board switches or by an external hardware or software method.
   f. The LED system shall be scalable, with every LED luminaire/address in the system capable of being controlled by a single, centralized controller.

2.8 REFLECTORS:

A. Aluminum Reflectors:

1. Provide reflectors and reflecting cones or baffles fabricated from aluminum reflector sheet no less than minimum thickness listed below for each application, or in accordance with the current UL standard 1570 for ballast covers, whichever is thicker. Reflector shall be absolutely free of tooling marks including spinning lines, and free of marks or indentation caused by riveting or other assembly techniques. No rivets, springs, or other hardware shall be visible after installation.
   a. Cones 0.0500in (1.27mm)
   b. Wall wash kicker panels 0.0400in (1.01mm)
   c. Reflectors (non-structural) 0.0235in (0.59mm)
   d. Louvers/Baffles 0.0200in (0.50mm)

2. Provide reflectors and baffles of first-quality polished, buffed and anodized finish, "Alzak" process or approved equal, and with specular or semi-specular finish color to be clear, unless specified otherwise. Provide reflector and baffles which produce no apparent brightness nor a lamp image, nor may any part of the lamp be visible from 50° above nadir to 90° above nadir (vertical). That is the reflector shall have a maximum 50° cutoff angle and a minimum 40° shielding angle.
3. Provide other aluminum reflectors where required, and formed and finished as noted on drawings and elsewhere in the specifications. Provide only reflectors free from blemishes, scratches, or indentations which would distort their reflective function and finished by means of the "Alzak" process, or approved equal, unless otherwise noted. No rivets, springs, or other hardware shall be visible after installation.
4. Anodized aluminum reflectors shall have the following characteristics:

Type	Min. Weight of Coating [a] (mg/in^2)	(mg/cm^2)	Min. Total Hemispherical Reflectance [b]	Min. Specular Component [b]	Min Visual Clarity [c]	Min. Diffuseness at 15° [c]
Specular	2	0.31	86	70	90	0.03
Specular (low-iridescent)	5	0.77	85	46	80	0.05
Semi-specular (low-iridescent)	5	0.77	82	10	35	0.40

(a) Anodizing process. Coating of aluminum oxide: Reference ASTM Test Method B-137.
(b) Reference ASTM Test Method E-903-82 (testing utilizing a TR1 or TR2 Total Reflectometer is also acceptable pending issuance of ASTM standard).
(c) Reference ASTM Test Method E-430-78 (1983).

B. Painted Reflectors:

1. Reflectors shall be completely formed before application of primer and enamel color coat or coats.
2. When requested by Commissioner, submit a sufficient quantity of flat steel panels having the identical primer and color coat or coats applied in the same manner as proposed for the specified fixtures.
3. Tests will be required only in case of dispute about reflector characteristics. Tests may be required at any time before or during Contractor's warranty period.
4. Tests:
   a. Painted reflectors shall have an initial reflection factor not less than 86 percent in the visible range of 400-700 nanometers as per ASTM Method E-424-71 as determined by independent laboratory test of fading, tested in the following manner: One half of sample shall be covered

and remaining half shall be exposed to a 150 watt sunlamp placed 1/2in (12.7mm) above reflective surface for 72 hours. Comparison of exposed and unexposed sides shall show no visible fading or deterioration in appearance or reflectance.

b. The percentage of Specular Gloss shall be a minimum of 80 percent as determined by ASTM Method D-532-T, Procedure A.

2.9 LENSES / FACEPLATES / TRIM

A. Where plastic lens is indicated, provide lens of 100 percent virgin acrylic (polymethyl methacrylate), nominal 0.125in (3mm) thick, unless otherwise indicated. Lens is to be strain-free, uniform in appearance, and destaticized.

B. Where clear acrylic lens is indicated, provide lens with a minimum visible light transmittance of 92 percent, unless otherwise indicated.

C. Where prismatic acrylic lens is indicated, lens shall be composed of 3/16in (4.7mm) square non-convex prismatic cones of maximum 0.080in (2mm) depth and aligned 45° to the length and width of the lens panel, unless otherwise specified. Lens shall be a minimum of 7.5 oz. per square foot (2289g/m2). Lens shall have minimum 80 percent visible light transmittance.

D. Where diffuse acrylic lens is indicated, lens shall be diffuse frosted white, high transmission acrylic with a minimum 73 percent visible light transmittance unless otherwise indicated. Provide nominal 0.125in (3mm) thick lens unless otherwise specified.

E. Where acrylic "overlay" is indicated, lens shall be supported by other rigid luminaire members, such as louvers or shelves. Lens shall be white or clear, as specified, with a minimum 79 percent visible light transmission for white lenses, and a minimum 83 percent transmission for clear lenses. Provide 0.040in (1mm) thick lens unless otherwise indicated.

F. Make lenses, louvers, or other light diffusing elements contained in frames removable, but positively held within the frames so that hinging or other motion of the frame will not cause the diffusing element to drop out.

G. For recessed luminaires with trim that is removable or open for access to the interior of the luminaire, and serves as a ceiling trim, provide trim that is positively held to the luminaire body by adjustable means that permit the trim to be drawn up to the ceiling as tight as necessary to ensure complete contact of faceplate with ceiling surrounding the luminaire.

2.10 RATED LOCATION LUMINAIRES

A. General:

1. Provide luminaires designed and manufactured specifically for "rated" (e.g., damp, wet, shower, hazardous) location service. Components, including nuts, bolts, rivets, springs, and similar parts shall be made of materials of effective corrosion resistance, or of materials which have been subjected to finishing treatment which will assure such resistance.
2. Luminaires not otherwise protected with lenses or louvers shall be protected with securely fastened bird screens when used in exterior locations.
3. Provide anodized aluminum for aluminum parts of exterior luminaires that are not specified as requiring a painted finish.
4. All luminaires shall be constructed according to UL procedures, and listed by UL or ETL for the appropriate category.

5. All luminaires or equipment located wholly or partly out of doors shall be considered subject to severe marine type corrosive conditions and shall be suitably manufactured and installed.

B. Damp Location:

1. In addition to the requirements of Paragraph A, above, damp location luminaires shall meet or exceed the following criteria:
   a. Provide metal parts of luminaires, which are specified as requiring painting, for use in outdoor or damp locations, which are painted with suitable weather and moisture resisting qualities.
   b. Provide luminaires for use outdoors, or in areas designated as damp locations, which are suitably and effectively gasketed to prevent access of moisture into electrical components or enclosing diffusers, lenses or globes.
   c. Luminaires shall be UL or ETL listed for damp locations.

C. Wet Location:

1. In addition to the requirements of Paragraph A, above, wet location luminaires shall meet or exceed the following criteria:
   a. Any exposed luminaires shall be UL or ETL rated for wet locations.
   b. Provide luminaires for use outdoors, or in areas designated as wet locations, which are suitably and effectively gasketed to prevent access of moisture into electrical components or enclosing diffusers, lenses or globes.

D. "Bathtub and Shower" Locations:

1. In addition to the requirements of Paragraphs A&B, above, "Bathtub and Shower" location luminaires shall meet or exceed the following criteria:
   a. Luminaire shall be wet location rated.
   b. Luminaire shall be recessed or surface-mounted at or above 8ft (2.43m) above and at least 3ft (0.91m) horizontally from the highest point in the shower (threshold) or the tub (tub rim).
   c. Luminaires used in or near showers, or in similar locations, shall be UL or ETL listed specifically for such use.

E. Hazardous Location:

1. In addition to the requirements of Paragraph A, above, hazardous location luminaires shall meet or exceed the following criteria:
   a. Each luminaire shall be protected against physical damage by a suitable guard or by location.
   b. Each luminaire shall be identified as a complete assembly for the relevant location and shall be clearly marked to indicate the maximum wattage of lamps for which it is intended.
   c. Pendant-mounted luminaires shall be suspended by and supplied through threaded rigid metal conduit stems and threaded joints shall be provided with set-screws or other effective means to prevent loosening. For stems longer than 12in (300mm), permanent and effective bracing against lateral displacement shall be provided at a level no more than 12in (300mm) above the lower end of the stem.
   d. Boxes and fittings used in support of luminaires shall be identified for Class I locations.

2.11 LUMINAIRE DESCRIPTIONS

A. General:

1. Provide luminaires which conform to the above standards and criteria, as indicated on the drawings, and as indicated above and in Part 2.1.
2. Verify mounting conditions and trim for all luminaire types.
3. Verify all voltages, and verify which luminaires require ducted or plenum air supply or return capability or are to be static.
4. Catalogue or series numbers, when shown herein, are intended to aid in establishing general type or category of luminaires. A luminaire shall be provided that meets the complete performance descriptions, as well as information provided by detail drawings. Standard catalogue cuts, when included, are for general assistance. Written luminaire descriptions below, and on electrical drawings, are the primary basis for luminaire specification.
5. All finishes are to be factory applied, including colored flanges and trims.
6. Luminaires shall be constructed and supported to withstand seismic disturbances without damage.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL:

A. Install luminaires complete as indicated, and with equipment, materials, parts, attachments, devices, aligner and filler clips, hardware, hangers, cables, supports, channels, frames and brackets necessary to make a safe, complete, and fully operative installation.
B. Verify and provide luminaires that are appropriate for the ceiling and mounting conditions of the project.
C. Coordinate with other trades as appropriate to properly interface installation of luminaires with other work.
D. Reject and do not install blemished, damaged, or unsatisfactory luminaires. Replace imperfect or unsatisfactory luminaires, if installed, as directed by the Commissioner.
E. Set luminaires, when installed, to be true, and free of light leaks, warps, dents, or other irregularities. No light leaks are permitted at the ceiling line or from any visible part or joint of the luminaires. Install luminaires plumb, square, and level with ceiling and walls, in alignment with adjacent luminaires, and secure in accordance with manufacturers' directions and approved shop drawings. Install all adjacent and continuous luminaires straight and trued, aligned in both plan and elevation. Supply and install alignment rods or joint straps as required to achieve this effect.
F. Provide finish for exposed parts or trims as specified. If not indicated, provide a finish as directed by the Commissioner.
G. Do not install reflector cones, aperture plates, lenses, diffusers, louvers, and decorative elements of luminaires until completion of wet work, plastering, painting and general clean-up in the area of the luminaires.
H. Mount luminaires at heights and locations indicated on the Contract Drawings, or as required by the Commissioner. Mounting heights specified or indicated are to be to the bottom of each luminaire for suspended and ceiling-mounted luminaires, and to the center of each luminaire for wall-mounted luminaires, unless otherwise noted. Obtain approval of the exact mounting for luminaires on the job before installation is commenced and, where applicable, after coordinating with the type, style, and pattern of the ceiling being installed.
I. Conform to the requirements of NFPA 70. Supports shall be suitable for local seismic zone.

J. In Mechanical Equipment Rooms, luminaires shall be hung from ceilings after piping and equipment therein has been installed. Exact locations for such luminaires shall be determined at the job site during the course of the work, in coordination with the mechanical work.

K. Adequately protect the housing of recessed luminaires during installation by internal blocking or framing to prevent distortion of sides, or dislocation of threaded lugs, which, upon completion, shall be in perfect alignment and match the corresponding holes in frames or rims. Holding screws shall be inserted freely without forcing and shall remain easily removable for servicing.

L. Ground non-current-carrying parts of electrical equipment in accordance with UL and NEC provisions.

M. Upon completion of installation of luminaires, and after building circuits have been energized, apply electrical energy to demonstrate capability and compliance with requirements. Where possible, correct malfunctioning units at the site, then re-test to demonstrate compliance. Otherwise, remove and replace with new units, and proceed with re-testing. Dates and times for all field tests shall be established by the Commissioner. Coordinate all test requirements with the Commissioner.

1. For normal and emergency building lighting, upon completion of the installation, conduct an operating test to show that the equipment operates in accordance with the requirements of this and other relevant sections.
2. Test all wiring with an insulation testing instrument, both before and after connection of luminaires and equipment. The minimum resistance shall be 250,000 ohms.

N. Upon completion of the installation, the luminaires and lighting equipment shall be order free from defects in condition and finish. At time of final inspection, all luminaires and equipment shall be clean, fully lamped, and be complete with required lenses or diffusers, reflectors, side panels, louvers, or other components necessary for the function of the luminaires. Any reflectors, lenses, diffusers, side panels or other parts damaged prior to the final inspection shall be replaced by Contractor.

O. Luminaires that are part of the Work of this section shall not be used for work lights during construction, except in Mechanical Equipment rooms. Contractor shall provide adequate portable or temporary lighting

P. Vibration Isolation: Mount and support all luminaires in such a manner to isolate the luminaire from structure-borne vibration, including but not limited to vibration caused by fans, motors, moveable tracks, moveable partitions, portable carts, vehicles, etc.

3.3 ACCESSIBILITY

A. Install equipment such as junction and pull boxes, luminaire housings, transformers, drivers, switches and controls, and other apparatus that shall be reached from time to time for operation and maintenance, to be easily accessible and appropriate for mounting and ceiling conditions.

3.4 SUPPORTS

A. Luminaires shall be securely fastened as per manufacturer's instructions. Provide plaster frames or mounting frames for luminaires that require them. Such frames shall be appropriate for the ceiling construction in which they are installed.

B. Provide necessary hardware with luminaires, such as stems, plates, plaster frames, hangers and similar items, for safe support of the luminaire. Provide plaster frames made of non-ferrous metal, or of steel that has been suitably rustproofed after fabrication, as described above.

C. Provide supports for luminaires that are adequate to support the weight of the luminaires.

D. Provide hanging devices which, if visible from normal viewing angles, exactly match luminaire finishes specified, unless otherwise noted.
E. Where necessary to meet fire resistance requirements provide enclosures housing recessed luminaires that are constructed to provide required fire resistance rating.
F. Provide attachment devices including brackets and cast metal shapes with the requisite rigidity and strength to maintain continuous alignment of installed luminaires. Attach luminaires to ceiling support members, and do not depend upon lathing, plaster or ceiling tile for alignment or support.
G. Provide luminaires mounted in suspended ceilings that are supported by saddle hangers or the bars attached to runners or between crossbars of ceiling systems. Provide mounting splines or other positive means of maintaining alignment and rigidity.
H. Provide supporting members that are surface passivated, and which are primed or paint-dipped to resist corrosion.
I. Provide fastening devices of a positive locking type, which do not require special tools to apply or remove them. Do not use tie wires in place of fastening devices.
J. Attach reflectors to housings by means of safety chains, which shall prevent reflectors from falling. No part of the chain may be visible after installation, when viewed from any angle up to 50 degrees from the vertical.
K. Provide pendant or surface mounted luminaires with required mounting devices and accessories, including hickeys, stud-extensions, ball aligners, canopies, and stems. Uniformly maintain the luminaire heights shown on the Contract Drawings or established in the field. The allowable tolerances in individual luminaire mounting shall not exceed 1/4 inch (7mm) and may not vary more than 1/2 inch (14mm) from the mounting height shown on the drawings. Install luminaires hung in continuous runs absolutely level, and in line with each other.
L. Provide an approved ceiling canopy for each stem, exactly matching specified finishes.
M. Place stems to be vertical and plumb.
N. Recessed and semi-recessed luminaires:

1. Support rods or wires shall be provided with a minimum of four rods or wires per luminaire and located not more than six inches (152mm) from each corner of each luminaire.
2. Do not support luminaires by ceiling acoustical panels.
3. Where luminaires of sizes less than the ceiling grid are indicated to be centered in the acoustical panel, support such luminaires independently or with at least two 3/4 inch (19mm) metal channels spanning and wired to the ceiling tees.

O. Seismic Protection for Lighting Fixtures: Provide fixtures and support suitable to withstand seismic disturbances without damage. Luminaire supports shall be of materials which are suitable for the seismic zone.
P. In addition to the regular fixture support requirements, provide the following seismic protective support features:

1. Recessed individual or continuous row of fixtures shall be provided with fixture support wires attached to the building structural members.
2. Surface mounted individual or continuous rows of fixtures shall be attached to a support suitable for the seismic zone specified. Fixtures attached to underside of a structural slab shall be properly anchored to the slab at each corner of the fixture. Each wall mounted light fixture shall be secured in a manner to hold the unit in place during a seismic disturbance.

3. Pendant supported fixtures shall also be provided with a flexible hanger device at the attachment to the fixture channel to preclude breaking of the support. The motion of swivels or hinged joints shall not cause sharp bends in conductors or damage to insulation.
4. Suspension systems for light fixtures, as installed that are free to swing a minimum of 45 degrees from the vertical in all directions without coming in contact with other parts of the building, and will withstand, without failure, a force of not less than 4 times the weight it is intended to support will be acceptable.

3.5 AIMING AND ADJUSTMENT

A. Provide manpower and tools for final focusing and adjustment, under supervision, of all adjustable luminaires after regular working hours (i.e., after dark in daylighted areas) whenever necessary. All fixtures shall be locked into place so that the aiming is not disturbed during future re-lamping.
B. Preliminary aiming diagrams can be requested during the shop drawing submittals.
C. When extra lenses, louvers or shields are specified, the Contractor shall change accessories until the Commissioner makes a final selection.
D. The Contractor shall note final aiming and locked positions and include that information in the O&M manual.

3.6 CLEANING

A. Immediately prior to occupancy, clean reflector cones, reflectors, aperture plates, lenses, louvers, lamps and decorative elements. As per manufacturer's instructions, destaticize lenses after cleaning, installing them to leave no finger or dirt marks.
B. Upon completion of the luminaire installation and at the time of final inspection, luminaires shall be clean, and free from marks, dust, spotting or other defects. Replace any broken or defective parts prior to final inspection. Replace or make good all defects revealed by final inspection.
C. Protect installed luminaires from damage during the remainder of construction period.

3.7 MANUALS

A. The Contractor shall provide Commissioner with maintenance manual and operational submittals, as called for in DDC General Conditions.

END OF SECTION 26 51 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 27 02 00
Structured Cabling For Voice & Data Systems

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Contractor shall provide materials, labor, equipment and services necessary to furnish, deliver and install all work of this section, as shown on the drawings, as specified herein, and or as required by job conditions.

B. The additional related sections that apply to the work within this section include the following:
   1. Division 8
   2. Division 26
   3. Division 28

C. Make adjustments to the work as may be necessary or requested in order to resolve physical space issues or conflicts preserve aesthetics and clearances and or avoid architectural features, elements, openings, structural members and or the work of other trades.

D. Typical details, where indicated, apply to each and every item of the project where such details are applicable.
   1. Typical details are not repeated in full on the plans, and are diagrammatic only, with the intent that such details shall be incorporated in full, throughout the project as applicable.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC general conditions section 01 33 00 "Submittal Procedures".

B. Special conditions :
   1. Pre-construction
      a. Product data sheets as specified herein.
      b. Original shop drawings as specified herein.
      c. Control systems/ programming submittals as specified herein.
   2. During construction
      a. Pull schedules as specified herein.

b. Progress reports as specified herein.

3. Post construction
   a. Record set as built drawings as specified herein.
   b. Updated pull schedules as specified herein.
   c. Field tests reports as specified herein.

C. Do not commence work, which requires prior review and or approval of a submittal, until receipt of a returned submittal, annotated with appropriate direction and or approval.

1.4 QUALIFICATIONS

A. The Installer shall have a minimum of three years verifiable and demonstrated experience in the installation, operation and maintenance of large-scale and complex voice / data communications systems and related technologies.

B. Contractor shall have successfully completed projects and installations of similar size, scope and complexity.
   1. The installation of all components, software and testing shall be accomplished by contractor/technicians who have been regularly installing systems of the size, scope and complexity of this project for a period of not less than two years and are certified by each manufacturer under this project scope. The contractor shall also be properly trained by the equipment manufacturer on the specific components being installed in their systems under this project scope.
   2. The contractor shall own and maintain tools and equipment necessary for successful installation and testing of the system components included in this scope and has personnel who are adequately trained in the use of such tools and equipment.
   3. The contractor will provide a complete list of all manufacturer certifications applicable to this project.

1.5 SCOPE OF WORK

A. This section covers the installation, control and operation of hardware, cabling, and licenses for all telecommunications cabling systems work for voice and data systems, audio visual systems, security systems, as well as other low voltage trades.

B. This specification contains sections that call out responsibilities for both the low voltage contractor and the general/electrical contractor. Contractor must confirm any/all responsibilities or limitations as defined herein.

C. All functions and requirements identified in these specifications must operate simultaneously and to the fullest extent described. Any item identified in the specification which is omitted from the final equipment list, either unintentionally or intentionally, will be provided to The City of New York at no fee.

D. The City of New York shall have no restriction as to the use and function of these technology systems. In the event that The City of New York uses any portion of the system prior to project completion, such use does not constitute acceptance of that system and the contractor is still required to perform all tasks as outlined in this document.

E. Contractor will provide the following:

1. Furnish all materials in new and unused condition, free from defects, damage or corrosion. All materials shall meet all applicable codes provided a standard has been established for the material in question.
2. It is the sole responsibility of the contractor to ensure that all systems are fabricated, assembled and installed complete, including all normal, customary and required miscellaneous parts, components, hardware, materials, cables, connectors, power supplies, POE injectors, com ports, rack mount kits and any and all other supplies as may be necessary, but not specifically defined, or otherwise identified within these specifications.
3. Prior to procurement, the contractor shall review and verify all product specifications and manufacturer model and part numbers to ensure specified equipment and components meet the functional requirements defined within these specifications.
4. In the event that specified equipment and or components are back-ordered and or otherwise unavailable in time to meet the project schedule, and or have been discontinued between the date of issuance of these specifications and the contractor response date, the contractor shall provide the manufacturer's specified current comparable and functionally equivalent alternate and or replacement model.
5. The contractor shall coordinate and confirm the final locations, colors and finishes of all IT, audio visual and Security devices with the Commissioner and general contractor, including, but not limited to connection plates, inserts and wall panels, touch screens or intercom devices, wall boxes, interconnects, etc.

1.6 CONTRACTOR REQUIREMENTS

A. The contractor shall provide all normal and customary technical, administrative and other support services as required to ensure satisfactory performance and on-schedule delivery of the contracted work.

B. The contractor is required to implement practices and procedures to meet the project's environmental performance goals, sustainable design performance criteria and include achieving the LEED certification as specified in section sustainable design requirements. Substitutions, or other changes to the work proposed by the contractor or their subcontractors, shall not be allowed if such changes compromise the stated LEED requirements.

C. Contractors project resources shall include but are not limited to engineering; cad/drafting; programming; fabrication; installation; certification, instructions; warranty service; procurement, warehouse, delivery and logistics; along with project management and administration.

D. The contractor shall staff the project with sufficient manpower as required to meet and maintain the project schedule and to keep pace with the work of cooperative trades.

E. Designate a qualified foreman. The foreman shall be present in the field at all times during the performance of the work.

F. Provide a supervisory work force sufficient to maintain efficient performance of the contractor's responsibilities.

G. Use only skilled and reliable work force and discontinue the services of anyone employed on this project upon written request by the City of New York, Commissioner, or Engineering Services.

H. Use personnel who are qualified at minimum to perform all of the installation and testing work activities required under the contract.

I. The contractor shall provide a minimum of two qualified technicians, each of whom will have actively participated in the project and have a demonstrated knowledge and understanding of project scope, to conduct and perform all final system testing, calibration and adjustment, demonstration, diagnostic evaluation and or corrective action as required to ensure all equipment, components and systems conform to the project specifications.

J. The contractor shall exercise care and due diligence at all times and shall provide full and active cooperative participation during all phases of the project.

K. The contractor shall furnish all submittals in a timely manner and as otherwise specified herein

L. The contractor shall render and submit original shop drawings, which shall include, but shall not be limited to;

1. Schematic and block diagrams detailing all system equipment placement and type, circuits and wiring, connections and terminations, pin-outs, color codes and cabling id and numbering schemes.
2. Installation and mounting details including, but not limited to all equipment, component and device dimensioned location and installation details.
3. Elevation detail drawings including, but not limited to dimensioned structural mounting, backing and blocking; equipment and mount detail, device and junction boxes, low voltage rings, conduit and cable paths etc.
4. Provide all pertinent electrical, video/data /video and other required low voltage wiring specifications and details for coordination with related work performed by other trades.
5. Provide reflected ceiling plans as required.
6. Wiring riser diagrams, including all closet layout requirements, additional conduit requirements and infrastructure needs
7. Furniture integration detail drawings for coordination with work performed by other trades.
8. Dimensioned shop drawings for all components integrated within any furniture, millwork or other areas in this contract including, but not limited to wall mounted devices, ceiling mounted devices, floor mounted devices, display mounts, table boxes, and equipment racks etc.
9. Rack and equipment enclosure elevation drawings, including rack unit RU configuration, calculated power, thermal loads and management, cable management and ventilation "clear area" details and dimensions.
10. Detailed drawings and specifications for all architectural and aesthetic elements including, but not limited to wall mounted devices, ceiling mounted devices, floor mounted devices, display mounts, table boxes, and equipment racks etc., inclusive of colors and finishes.
    a. Coordinate final locations, colors and finishes with the Commissioner.
11. Complete and accurate record set as built drawings, which shall be provided to the Commissioner upon completion of the work.
12. Drawings provided as a part of this specification shall not be used and or submitted as shop drawings
    a. The contractor shall render and submit original shop drawings and submittals as required.

M. The contractor shall be responsible for the initial and final calibration and adjustment of the systems as specified herein.

N. Voice / Data/ Audio Visual/ Security and all other low voltage cable installation standards shall reflect NEC, ICIA, I-EEE, TIA/EIA and BICSI standards. Manufacturers' instructions shall be used for in-process quality control and final acceptance of the work. The strictest of all requirements shall apply.

O. The contractor shall provide all necessary test equipment and accessories required to conduct and document system performance evaluations, demonstrations and acceptance testing as specified herein.
   1. All test equipment shall be fully functional and shall have valid certificates of calibration as applicable.

P. The contractor shall provide complete and comprehensive narrative and practical hands-on instruction in the proper operation, use, care and maintenance of the specified equipment, components and systems, to the personnel designated by the Commissioner.
   1. Instructing shall be conducted by a suitably qualified instructor
      a. In the event contractor does not have certified and qualified instructors on staff for specific equipment, components and or software, a manufacturer's representative for such instruction will be provided by the contractor, at no additional fee to the City of New York.
   2. All instructing shall take place at the installed systems locations, after acceptance.
   3. The contractor shall provide a minimum of two hours of end-user instructions and one hour of advanced technical instructions for any system included in this specification.
      a. Advanced instructions will include a comprehensive review of system specifications and diagrams and detailed instruction in the modes of operation, routine service and maintenance, diagnostic troubleshooting and reconfiguration of the systems.
   4. The contractor shall provide follow-up instructions within sixty days of the completion of initial instructions, which shall be conducted at the discretion and convenience of the City of New York.
   5. The contractor comply with all applicable governmental regulations and with all federal, state, county, city, and other applicable building codes, ordinances, and regulations and the most recent edition of the following technical standards and design guidelines including the latest amendments and all applicable addenda. See 1.16
      a. ANSI/NECA/BICSI-568 b standard for installing commercial building telecommunications cabling per latest edition.
      b. TIA-606-b, administration standard for commercial telecommunications infrastructure per latest edition.
      c. TIA-607-c, commercial building grounding and bonding requirements for telecommunications per latest edition.
      d. ANSI/NECA/BICSI-568, standard for installing commercial building edition.
      e. BICSI, telecommunications cabling per latest telecommunications distribution methods manual per latest manual

Q. These specifications provide a complete workable telecommunications cabling system including optical fiber, coaxial and unshielded twisted pair cable, and ready for the City of New York's use. These documents address new station cabling, riser cabling and telecommunications room equipment, as well as cable connectivity.
   1. In some locations, there may be requirements for faceplates designed for furniture system modular cut outs. Refer to drawing for exact outlet locations. Confirm with Commissioner in field.
   2. All station cabling shall be category 6/RG 6 coaxial plenum rated cable and must support the following applications: gigabit Ethernet, ATM at 155mbps, T-1 /E-1, ADSL and ISDN.
   3. All twisted pair/category 6 cables - cable must be separated by color for voice services, data services and video services. All cable must be plenum rated and coloring schemes must match existing cable infrastructure or be approved by the Commissioner prior to installation.

4. Installation must provide end-to-end connectivity of the appropriate category of cable and components for utilization of the full bandwidth capability on all pairs or strands.
5. As a part of this contract The City of New York will be constructing new telecommunication/server rooms throughout the building. Rooms will be constructed by the GC as located and sized on the floor plans. Low voltage contractor is responsible to run cable from every station location back to a local closet in the apartment unit. For the common area stations contractor is responsible to run cable from station location back to the local riser closet as shown on electrical drawings, or directly to the main distribution closet MDF / server room.
6. Low voltage contractor to provide and install backbone fiber optic riser cabling. This cabling includes all connectivity between the main MDF location and IDF closets. The low voltage contractor shall furnish, install, terminate and test all tie cables.
7. The low voltage contractor shall furnish, install, terminate and test armored multimode and armored single mode fiber cable to the IDF. All fiber will be terminated onto LC - lucent style connectors. Cables shall route through EMT riser conduit or sleeve provided by the electrical contractor.
8. Furnish and install all workstation jacks, connectors, patch cords for all ports at both ends, terminating devices, faceplates, frame "bezel" and similar components required for a complete installation.
9. Furnish and install all cable supports j-hooks, including mounting and installation hardware required for a complete installation. J-hook support hardware shall not be fastening to movable wall, sheet rock or stubs. All support shall be fastening into above concrete slab at ceiling or ceiling joist.
10. All WAP terminations shall be located on dedicated patch panel in the 2 post rack.
11. Furnish and install all labeling and documentation of all cables, racks, outlets and hardware installed under this contract. The contractor shall ensure that all labeling and numbering is in accordance with the City of New York's in-house standards.
12. Provide all testing, test documentation and warranties at completion of project.
13. Provide all connections to the telecommunications grounding system at multiple bus bars as noted on drawings.
14. Provide all fire-stopping of all rated wall and floor penetrations and openings through rated walls and floors after installation of telecommunications cabling. Approved sealant by the Commissioner and engineer licensed in the State of New York shall be used within barrier wall per drawings
15. Furnish and install all non-specified miscellaneous hardware, including, but not limited to nuts, bolts, re enterable cable ties, spiral wrap, wire rings, supporting hardware and similar components required for a complete cabling system installation.

1.7 PRODUCT DATA SHEETS

A. Product data sheet submittals shall consist of the following
   1. Cover sheet
   2. Date of submittal
   3. Project name and address
   4. Number of submittal
   5. Name and address of the contractor
   6. Table of contents with index
      a. Include page and item numbers of the corresponding specification section and/or drawing number of the contract documents.
   7. Product name and manufacturer
   8. Manufacturers' technical specifications and data sheets of all items specified herein.
      a. Submit only pertinent pages. Do not submit entire product catalogs.

b. Clearly identify the specific product being submitted using appropriate markings and arrows. Only use highlighters or coloring that will appear on reproductions or photocopies.

9. Identify any options and or accessories that are applicable to the project.
10. Confirm and verify all product quantities and manufacturer model and part numbers are current, correct and complete, including required accessories and or options that are require for full and completely working AV systems.
11. Identify the installation location of each piece of equipment, including room number and or room name.
12. Identify special coordination requirements for the product
13. Identify "long lead" procurement requirements for the specified product as may be applicable

B. Preparation and transmittal
1. Each submittal shall be in accordance with the procedures outlined herein.
2. Bind and package each submittal with tabs and table of contents as appropriate
3. Sheet size shall be standard 8-1/2" x 11"
4. Submit all product data sheet submittals for each system, subsystem, or unit of work as one submittal
5. Submit three copies to the Commissioner U.O.N.

1.8 SHOP DRAWINGS

A. The contractor shall render and submit complete original shop drawings as specified within this section.

B. Drawings issued as a part of this specification shall not be submitted as shop drawings.

C. Each shop drawing submittal rendered by the contractor shall consist of the following
1. Title block
2. Project name and address
3. Number of submittal
4. Date of submittal
5. Name and address of the contractor
6. Drawing scale
7. Diagrams showing evidence of compliance with contract documents and coordination with other trades. See section 1.10 pull schedules as a part of shop drawing submittal.
8. Associated wiring diagrams of all equipment, with types and model numbers specified
9. Fully dimensioned housing and mounting drawings, including information on finishes
10. Specific notation of field measurements at accurate scale
11. Identification of specific products and materials used
12. Reference room numbers and or room names on all shop drawings
13. Compliance with specified standards
14. Dimensions at accurate scale

D. Preparation and transmittal
1. Each submittal shall be in accordance with the procedures outlined herein and shall provide adequate space for action marking adjacent to the title block.
2. All sketches and drawings shall be issued by the contractor using the following sheet sizes: a. Sketches sheet size shall be 8-1/2" x 11" b. Drawings: sheet size shall be 24" x 36"
3. Submit all shop drawing submittals for each system, subsystem, or unit of work as one complete submittal.

4. Submit three copies to the Commissioner U.O.N.

1.9 PULL SCHEDULES

A. The pull schedule shall include, but is not limited to:
   1. Cover sheet
   2. Project name and address
   3. Number of pull schedule submittal
   4. Date of pull schedule submittal
   5. Name and address of the contractor
   6. Pull schedule data field
      a. Field 1: room number /location of device
      b. Field 2: sequential cable number
      c. Field 3: voice / data / video/ security cable ID
      d. Field 4: cable type
      e. Field 5: equipment manufacturer and model number
      f. Field 6: equipment serial number
      g. Field 7: jack and or connection label as applicable.
      h. Field 8: rack label as applicable

B. Preparation and transmittal
   1. The pull schedules will be computer-generated and must be submitted to the Commissioner for review.
   2. Submit three copies to the Commissioner.
   3. The pull schedule will be submitted with the shop drawings

1.10 COMMISSIONING

A. Prior to final acceptance of the installation the following testing and documents shall be performed and provided to the Commissioner.
   1. Perform and document a complete system acceptance test.
   2. Provide testing reports indicating all devices tested, pass/fail status, and actions taken to resolve problems on failed tests.
   3. Provide "as built" drawings showing each device and wiring connection in hard copy and in electronic format
   4. Provide a complete set of operating instructions for hardware devices and a complete software user manual.

B. Closeout
   1. The contractor shall submit a complete, updated drawing set and pull schedules accurately reflecting the completed work including all field changes, modifications and or revisions.
   2. The contractor shall individually bind and submit to the Commissioner for review and approval, all record set, as built drawings, updated pull schedules, user guides and manuals, equipment lists with serial numbers, test results and a completed check out list, for each contracted system, prior to issuing closeout documentation to the Commissioner.

C. Acceptance
1. Once the testing has been completed, as-builts and testing documentation shall be delivered to the Commissioner, to satisfy that all work is in accordance with the contract documents, the Commissioner shall notify the contractor in writing of the acceptance of the work performed.

1.11 REPORTING

A. The contractor shall submit weekly progress reports, which shall include, but shall not be limited to;
1. Installation schedule risks, issues, conflicts and or delays.
2. Status of the installation, detailing all remaining tasks and proposed completion dates.
3. Percentage of completion of each activity
4. Gantt chart format showing continuous vertical lines to identify the first working day of each week.
5. Illustration defining how the start of a given activity depends on completion of preceding activities, and how the completion of a given activity may restrain or constrain the start of subsequent activities.
6. Identification of the critical path.
7. Requests for receiving major equipment and material shipments.
8. Requests for subcontractor access to the job site.
9. Requests for utilities and or services disconnection and or connection.
10. Delays and stoppages.
a. Note that delays and or stoppages shall not affect the scheduled completion date, unless approved in writing by the Commissioner.
11. Emergencies and accidents.
12. Losses of material and or property.

B. Preparation and transmittal of progress reports
1. Each item shall include
a. A detailed explanation;
b. A description of the actions to be taken;
c. The party responsible for executing those actions.
2. Progress reports shall be generated and delivered to the Commissioner, three business days prior to the weekly project meeting, for the duration of the project.

1.12 DOCUMENTATION

A. Record set drawings / as-built drawings
1. As mentioned herein this specification the record set, as-built drawings, shall include but may not be limited to equipment and cabling layout and location, schematic and block diagrams, equipment and cable labeling, cable termination points, equipment rack and room layouts and equipment installation details.
2. The as-built drawings shall accurately reflect and include all field changes made during construction and shall completely and accurately reflect the conditions of the installed systems at the time of acceptance.

B. Operation and maintenance manuals
1. These manuals shall utilize a combination of narrative text, graphics and images to describe to the user, how to properly operate and maintain the systems.

a. The user of this manual is presumed to be technically competent, but unfamiliar with the specific systems

2. Manuals shall be tabbed and indexed by room and subsystem.
3. Manuals shall include the frequency and scheduled intervals of all system maintenance requirements.
4. The operation section shall describe all modes of normal operation and the procedures necessary to activate and properly operate each system so as to meet the functional use requirements described within the specifications.
5. The operation section shall include a laminated 8.5 in. X 11 in. "quick reference guide" to the basic operation and use of each installed system.
6. The operation section shall include simplified block diagrams for each system and subsystem, with all input and output circuit cable and terminal block numbers and jack field circuit ID Designations.
   a. A copy of this block diagram drawing shall be laminated and included within each equipment rack or equipment location.
   b. All block diagrams shall reference room numbers and or room names.
7. The maintenance section shall provide a recommended maintenance schedule, with reference to the applicable pages in the manufacturer's maintenance manuals.
8. The maintenance manual shall include completed copies of all manufacturer warranty cards, indexed by component type and room number and or room name.
9. The maintenance section shall include a list of all required "consumable" products required to maintain the normal operation of each system and or subsystem, including, but not limited to filters, batteries and lamps.
10. In the event that adequate and or sufficiently detailed service or maintenance information is not provided by the manufacturer, the contractor shall provide the information necessary to ensure proper care and maintenance.
11. At acceptance testing, the contractor shall provide two final revision copies of the operation and maintenance manuals to the Commissioner.
12. It is expected that user instructions shall be based on the user of these manuals.
13. The contractor shall provide two laminated copies of the record set as built drawings IT drawings for each specified system.
14. Until final record set of as-built drawings are approved and accepted, an up-to-date field set of drawings will be maintained in the site office of the Commissioner.
15. The contractor shall provide bound copies of all product maintenance manuals.
16. Pull schedule as required per this specification.
17. Software documentation as required per this specification.
18. The contractor shall deliver three complete copies of all closeout documentation to the Commissioner, prior to scheduling system demonstration and acceptance testing.

1.13 WARRANTY

A. The contractor shall warrant all work including, but not limited to all equipment, components, hardware, materials, installation and integration work and services, programming and software, against defects in workmanship and or materials for a period of one year, commencing upon the date of acceptance by the Commissioner. Where manufacturer's warranty is longer than one year, the contractor shall offer the extended warranty.

B. Provide a 20 year manufacturer's warranty for the systems operation and performance.

C. In order to maintain certain manufacturers' warranties, specified and covered equipment must be installed, configured, programmed, aligned and or otherwise serviced solely and exclusively by factory authorized technicians and/or factory representatives.

D. All equipment provided by the contractor shall be new and shall meet or exceed all latest and current published specifications issued by the manufacturer

E. The contractor shall provide only the latest model, revision or version of a specified piece of equipment, component and or software, effective at the time of response.

1.14 JOB CONDITIONS

A. Verify all existing conditions. Refer to the Commissioner for coordination and clarification before the response date, of any discrepancies concerning existing conditions, drawings, and specifications.

B. Clarify with the Commissioner, all locations including conduit and cable paths. Where discrepancies occur and instructions have been obtained, abide by the direction and decision of the Commissioner.

C. Contractor is solely responsible to conduct ongoing surveys and inspections of all work areas, throughout the construction process, in order to locate and confirm all penetrations, poke-thru and floor boxes, furniture openings, sleeves, conduit and conduit stubs, bushings, cable trays, blocking and backing, in-wall display mount and conduit termination boxes, AV device boxes, low voltage rings, pull strings, and all other elements associated with this work provided by others that support the this installation.
   1. If during the course of ongoing survey and inspection, the contractor observes a condition which appears to conflict with the project plans and specifications, the contractor shall immediately notify Commissioner of the potential discrepancy.
   2. The project/construction manager shall evaluate the reported condition and provide the contractor with direction as may be required

D. It shall be the contractor's responsibility to cooperate, at all times, and to the fullest extent, with any and all other trades performing work on the premises, in order to avoid delays in the work, lost time, work stoppages, interference and or other inefficiencies.

E. The contractor shall be responsible for meeting all project schedules and milestone dates.

F. Contractor will furnish, install, and terminate all required wire and cable so that all Voice / Data /AV & Security systems will operate as complete and functioning per the design intent.

G. Comply with all requirements regarding the use of cable with respect to spread of fire. Refer to drawings for identification of air plenum and other spaces having special cabling requirements.

H. It is the responsibility of the contractor to provide wiring that is in compliance with all applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions.

I. Comply with all seismic requirements regarding the installation of all hardware, mounts, equipment and or components.

J. It is the responsibility of the contractor to employ installation means and methods that are in compliance with all applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions

K. The contractor shall be solely responsible for the care, custody, safety and protection of all installed and configured systems and non-installed, stored materials, tools and supplies.

1.15 CODES AND STANDARDS

A. All work performed under the this scope / specification shall conform to the all requirements stated herein and to any/all applicable codes and standards as defined by all federal, state and local municipalities having jurisdiction. This is most notably including but not limited to;
   1. Current NEC 2020 Code / National fire protection association
   2. NFPA 70 national electrical code current and applicable sections including, but not limited to article 250 grounding and article 800 communications circuits.
   3. Underwriter's laboratories, Inc.
      a. UL listed
      b. UL approved
   4. Building officials and code administrators /BOCA international, Inc.
   5. In the event that a conflict occurs, the contractor is directed to meet, satisfy, adhere to and or otherwise comply with and conform to the most stringent requirement under the scope of this specification.

1.16 DELIVERY, STORAGE, AND HANDLING

A. Delivery
   1. Deliver materials and equipment in sufficient time to allow for inspection, installation and testing in accordance with the project schedule.
      a. All arrangements for access and unloading at the site shall be coordinated and scheduled with the Commissioner, not less than forty-eight hours prior to the scheduled delivery
   2. Movement, staging and layout of material, either at the time of delivery or subsequently, shall be the sole responsibility of the contractor
   3. The contractor shall be solely responsible for ensuring that all equipment can be successfully delivered to the installation locations including, but not limited to elevator cab size and stairwell dimensions and all door, corridor and turn radius dimensions.
   4. Delivery schedules, which may be affected by environmental conditions, shall be noted in writing to the, not less than twenty-four hours prior to the scheduled delivery.

B. Storage and protection
   1. The contractor shall be solely responsible for the care, custody and safekeeping of all equipment, components, materials, tools and supplies while stored on the job site, including all tools, materials and test equipment, which are, and shall remain the property of the contractor.
   2. The contractor shall take all reasonable and necessary precautions to protect all work from dust, debris and damage during construction.

1.17 CLEAN-UP

A. The contractor shall be responsible for the cleanup and restoration of all areas and work affected by this installation.

B. The contractor shall, on a daily basis, remove all debris created, caused, or resulting from this work, including all cut and removed cables, connectors and all other work- related debris.

C. Prior to acceptance of work, all areas used or entered by the contractor must be cleared of any materials or debris caused directly or indirectly by the contractor, to the satisfaction of the Commissioner.

PART 2 - PRODUCTS

2.1 GENERAL

A. The requirements in the section shall apply to all areas receiving systems, subsystems and or equipment and components as described herein.

B. Provide materials and equipment conforming to the applicable requirements of:
1. Underwriters Laboratories :UL
2. National Electrical Code : NEC
3. American National Standards Institute : ANSI
4. Federal Communications Commission : FCC

C. Contractor shall provide only equipment, components and materials, which are new, free from use and fully covered by all applicable manufacturers' warranties.

D. Contractor will provide the equipment as required by the design intent herein. Only current-model components, equipment and materials shall be provided. Do not provide obsolete or discontinued models.
1. Review all materials and equipment immediately and or installation and inform the Commissioner of any obsolete or discontinued items and or products.
2. Review all equipment lists at time of procurement, confirming product availability and delivery lead time with manufacturers and distributors.

E. In the event that unplanned delays or backorder status of specified products may adversely impact the project schedule, the contractor shall propose equivalent replacements and or upgrades, at no additional fee to the City of New York.

2.2 MANUFACTURERS

A. This structured cabling system is based on the following basis of design with product manufacturers and performance specification as provided below:
1. Category 6 cables: General or approved equal
2. Category 5 cables: General or approved equal
3. Fiber optic cables: General or approved equal

4. Coax cables: General or approved equal
5. Wall/Cover plates: Panduit or approved equal
6. Wall jack in wall/face plate: Panduit or approved equal
7. Patch panels 24 & 48 port: Panduit or approved equal
8. Wire managers and rack accessories: Panduit or approved equal
9. Fire stopping: STI or approved equal
10. Equipment racks and enclosures: Middle Atlantic or approved equal
11. D-rings: Arlington Industries or approved equal
12. J-hooks: Caddy or approved equal

2.3 PRODUCT – STRUCTURED CABLING REQUIREMENTS

A. Contractor will be installing new 2 post equipment racks with new vertical wire managers as indicated on plans and per manufacturer's recommendation., Mounted in these racks will be patch panels for all telecommunications, audio visual , security and other low voltage cable needs.

B. Racks and vertical wire managers shall be Middle Atlantic or approved equal as noted in material listing. . Contractor shall secure all racks directly to floor slab using 5/8" hardware.

C. Mounted in these racks will be all copper patch panels for station cable and tie cable termination. Final configuration of racks, wire managers and patch panels shall be approved prior to installation and must be based on manufacturer's recommendation or industries standards/best practices. Room layouts and rack elevations must be submitted to Commissioner at least three weeks prior to installation.

D. 24-port UTP modular patch panel, high-density, rack mountable. Performance compliant with ANSI/TIA/EIA 568 category 6 for terminating horizontal CAT 6 UTP cabling. Universal wiring scheme T568A/B. Complete with strain relief cable manager in rear.

E. Standard UTP jack - female 8-pin modular connector compliant with category 6 punch down termination. For insertion into standard faceplates. Universal EIA T568A/T568B pinning as required.
   1. Verify and confirm finish and colors of items specified in this section with Commissioner prior to purchase. In some locations, there may be a requirement for faceplates designed for furniture system modular cut outs.

F. Cat 6 modular patch cords & pre-patch. 4-pair UTP 24-AWG stranded. Color blue. PVC. Blue patch cords inside IDF.

G. The contractor shall furnish and install the cable tray system as depicted in telecommunication /server room detail. Recommended elevation of 8' above finished floor is required unless otherwise prohibited.

H. Ladder rack shall be black in color, secured to the building structure, ceilings, walls, and/or the tops of the racks using support plates or other such manufacturers' approved product including threaded rod, uni-strut and expansion anchors.

I. Each telecom rack will be provided with cable radius protectors sized for the ladder rack being installed where appropriate.

J. "J" hooks. Suitable for attachment to beam flanges, "U" channel, purlings, deck plates, smooth or threaded rod. For use as a cable support in ceilings and beneath access floors. Design to be used with cat6 or cat6a cabling is required.

K. Labels, Self-adhesive, self-laminating, with white matte finish printing area, clear plastic shield. Used for cable identification. Labels shall be provided on both ends of all cables or City of New York's standards.

L. All standard faceplates: accommodates 1, 2 or 4 inserts. Attaches to standard NEMA single-gang plastic. Please see TC 400 series drawings for "typical" details and confirm with Commissioner for final configuration requirements.

M. If manufacturer model numbers have changed since the production of this specification the following shall be applicable:
   1. All cable connectors and hardware must meet or exceed the minimum standards as defined by manufactures for a fully functioning telecommunications distribution system.

PART 3 - EXECUTION

3.1 GENERAL

A. Refer to DDC General Conditions for execution requirements.

B. The contractor shall comply with all safety guidelines and regulations established for the project.

C. Contractor will review all related electrical, telecommunications, audio visual, security, millwork and all other drawings for coordination with other trades.

D. Contractor will compare all related electrical, telecommunications, audio visual, security, millwork and other requirements and specifications with these drawings and specifications report any discrepancies to Commissioner,

E. Contractor will field survey and confirm the location and required size of all conduit, in-wall boxes, sleeves, penetrations, raceways, cable paths, cable tray, junction boxes and device boxes provided by others, which are intended for use in their installation of the specified systems.

F. Contractor will prepare all pre-construction submittals as specified herein.

G. Contractor shall provide all equipment required unless otherwise noted. Equipment shall be installed in accordance with the manufacturers' recommendations. This information shall be provided to the Commissioner at the time catalog cuts and shop drawings are submitted for approval.

H. Contractor will complete fabrication, installation, integration, testing, commissioning and certification of all work specified herein. Contractor will perform all settings, adjustments and programming required for a complete and operational system as directed by the Commissioner.

I. Contractor will follow manufacturers' instructions for installing all video/data/voice or other low voltage cabling. Where instructions are unavailable, follow approved industry practices/best practices.

J. Contractor shall maintain a current copy of this specification and related drawings at the job site at all times.

K. Any/all restoration or changes caused by contractor's neglect shall be made at contractor's expense. Protect finished work of other trades from damage or defacement and remedy any damages as required.

3.2 INSTALLATION

A. Installation shall include the delivery, unloading, setting in place, rack-mounting, fastening to or within furniture, millwork, walls, floors, ceilings, counters or other structures where required; installation and interconnection of all wiring of the system components; equipment alignment and adjustments; and all other work whether or not expressly described or defined herein, which is necessary to result in the complete and satisfactory installation of fully operational systems as described within the project plans and specifications herein.

B. Identification for all equipment racks shall bear an identification plate, provided and installed by the contractor, which shall be mounted on the front of each equipment rack.

C. Engraving shall be yellow/gold filled times new roman lettering on a black background or as appropriate to the identification plate material

D. All work shall be performed in accordance with, but not limited to these specifications and drawings and the best practices associated with such work.

E. All work shall be performed in accordance with all of the applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions

F. If, in the opinion of the contractor, an installation practice is desired or required, which is at variance with, and or contrary to these specifications or drawings, a written request for modification shall be made to the Commissioner.
   1. Modifications shall not commence without prior written approval of the Commissioner

G. All equipment shall be firmly secured in place unless requirements of in-use motion and or portability dictate otherwise.

H. Fastenings and support hardware shall be grade 8 or better and shall be sized as required to support their loads with a minimum safety factor of not less than five, and with maximum tolerances as specified by the manufacturer, or whichever is greater.

I. The contractor shall be solely responsible for ensuring that all installation means and methods conform to the applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions.

J. All boxes, plates, panels, equipment and other project elements shall be properly secured and installed plumb, level and square.

K. All wall mounted back boxes shall be provided in coordinated fashion with the schedule of the general contractor and shall be pre-drilled to meet conduit specifications.

L. All cables, regardless of length, shall be marked with wrap- around number or letter cable markers at both ends as specified herein. There shall be no unmarked cables at any place, point or location in any system or subsystem.

M. All inter-rack cabling shall be neatly installed, secured, dressed, and adequately supported. Audio and video cabling shall be separated from each other and from power cabling.

N. Terminal blocks, boards, strips, or connectors shall be furnished for all cables, which interface with racks, cabinets, consoles, or equipment modules.

O. All cables shall be neatly grouped according to signal type and level. In order to reduce crosstalk and other types of signal contamination, separate groups shall be formed for the following cables;
1. Power cables
2. Control cables
3. Video cables
4. Audio cables
5. Voice/data cables
6. Any/all low voltage cables not defined above

P. Maintain minimum twelve-inch separation between all low voltage and telecommunication cables running exposed in ceiling or floor voids and parallel electrical cables/conduits.
1. Avoid electromagnetic interference / EMI and route cables to maintain the following minimum distances:
   a. Twelve inches from high voltage lighting
   b. Thirty-six inches from power lines of 5 KVA or greater
   c. Forty inches from transformers or motors

Q. No cable shall be installed having a bend radius, less than that recommended by the cable manufacturer.

R. Cable and wiring shall be protected at all times during installation.

S. All cable runs shall be continuous, with no factory or field splices.

T. All cabling, wiring and equipment shall have an independent means of support furnished and installed by the contractor.
1. At no time, shall an audiovisual system cable, wire or component be supported on or by sprinkler pipes, HVAC ducts, lighting fixtures, ceiling grid and or tiles and or any other equipment or infrastructure.
2. All installation means and methods shall conform to the applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions
3. Follow room boundaries when pulling cables through ceilings for distribution into walls, conduits, wiring channels, outlets, etc
4. All cable distribution from the communications/technology closets or racks to all work locations except as noted shall be run in the voids above ceilings as shown on drawings. Ceiling support grids and service hangers shall not be used to support cabling.
5. Cable shall be loose bundled into cable supports. Use only approved re-enterable cable ties to secure cables in overhead distribution.

3.3 CABLES AND CONNECTORS

A. All voice /data - audio / video – security and control cables are based on the following acceptable product manufacturers and must have all the appropriate performance specifications and criteria. All other cable types are to be submitted to the Commissioner and the City of New York for consideration and approval;
   1. General
   2. Belden
   3. Westpenn
   4. Creston
   5. Extron
   6. Or approved equal

B. Jacks, faceplates and wall outlets at the user locations, termination blocks and individual lateral cables shall be labeled with at minimum machine generated black uppercase lettering on a permanent adhesive label stock, covered with a permanent water resistant sealer. Labeling stock and/or lettering must be used that provides a high contrast with the color of the terminating equipment, faceplate or cable.

C. If at any time during the job the permanent cable tag becomes illegible or is defaced or removed, immediately replace it with a duplicate pre-printed cable tag.

D. Cable identification system shall be via color coding in accordance with the EIA-606 standards.
   1. Place labels on both ends of the cable at least 4 inches from the point at which the cable is terminated on the connector or terminal block.
   2. Provide permanent, machine generated cable tags. Temporary tags are acceptable only during construction
   3. Cable identification numbers when provided on plans are presented in an abbreviated format. Contractor is required to provide all cables id's and they will at minimum indicate the floor, originating closet/rack id, and the sequential cable number as shown on drawings.

E. All cable installed without conduit shall be plenum rated and shall match the same performance specifications of the manufacturers approved cables for this installation.

F. Cables running in areas exposed to environmental factors such as, but not limited to, UV, chemicals, direct burial, etc. Shall be rated for such exposure and shall match the performance specifications of the manufacturers approved cables for this installation.

G. All cables shall be cut to the length dictated by the cable run. No splices shall be permitted and cable slack shall be as follows .any cable length not defined below must be confirmed by Commissioner.
   1. Provide a minimum of 12-inches of slack at each terminal box or behind each faceplate after jack installation is completed to allow for easy dismounting and extension of outlet covers and wire terminations.
   2. Provide a minimum of 2-feet slack in a loop in UTP at the head of each stub-up or distribution conduit.
   3. Provide a minimum of 12-feet slack in a loop in optical fiber cable at its point of entry to an equipment room.
   4. Provide a minimum of 15-feet slack for each mounted wireless access point outlet.

H. All rack wiring connections and all equipment mounted in drawers or on slides, shall include interconnecting cables with a service loop of sufficient length so as to facilitate access and freedom of movement during installation and servicing.

I. No cable shall be installed with a bend radius less than that recommended by the cable manufacturer.

J. Connector types
   1. Connectors for all signal types are to be submitted to for approval

K. Patch panel assignments
   1. All patch panels shall be wired so that signal "sources" outputs appear on the upper row of a row pair; and all "loads" inputs appear on the lower row of a row pair.

L. Patch panel designation strips
   1. All audio and video patch panel designation strips shall utilize alphanumeric identifications and descriptive information.
      a. The jack position in each horizontal row shall be numbered sequentially from left to right.
      b. The horizontal jack rows shall be lettered sequentially from top to bottom.
      c. The alphanumeric identification of each jack shall be included on the functional block drawings, as well as on reproductions of these drawings, which shall be mounted in an appropriate location near the patch bays.

M. Fire stopping system
   1. Seal all penetrations through fire rated walls, floors and walls created by or made on the behalf of the contractor so that the original fire rating of the floor or wall is maintained as required by article 300-21 of the national electric code.
   2. Contractor shall use only fm approved fire-stopping materials and methods. All materials and methodologies shall be submitted to the project manager prior to utilization.
   3. Install approved penetration sealant material that has passed fire exposure testing in accordance with standard time-temperature curve in the standard, UL, ASTM e 119, and NFPA 251 and the hose stream test in accordance with UL.
   4. Install approved penetration seal materials in accordance with design requirements and manufacturer's instructions. All substitutions must be approved by Commissioner and the City of New York.
   5. Provide removable fire-stopping pillows IPC flame safe seal bags or approved equivalent in an approved fashion in openings greater than 4" diameter, or 4" x 4" square cross section. Provide wire mesh grate over bags as recommended by manufacturer subsequent to installation.
   6. Verify that all penetrating elements and supporting devices have been installed and temporary lines have been removed.
      a. If forms of damming materials are installed, they shall be removed after the designated cure time.

N. System checkout
   1. Before acceptance tests are scheduled, the contractor shall perform comprehensive system tests and checkouts
   2. The contractor shall furnish all required test equipment and shall perform all work necessary to determine and or modify performance of the system to meet the requirements of this specification.
   3. During performance testing, all equipment shall be operated under standard conditions as recommended by the manufacturer

4. Test and certify all audio and video systems for compliance with the performance standards using the test procedures defined later in this specification
5. Maintain documentation of all performance tests for reference by the Commissioner during the system acceptance test.
6. At the conclusion of testing, return all equipment settings to previously calibrated "normal" operating positions.
7. Provide written records of all test results in spreadsheet form.
8. Check and confirm all control functions for proper operation, throughout the entire signal path, from all controlling devices to all controlled devices.
9. Adjust, balance and align all equipment for optimum quality and to meet the Commissioners approval and manufacturer's published specifications.
10. Establish and mark "normal" settings for all level controls and record these settings in the "system operation and maintenance manual".
11. The contractor shall provide test results and settings for all equipment and systems to the Commissioner at least three business days prior to scheduled acceptance testing.
12. The contractor shall notify the Commissioner, in writing, that the work is complete and ready for acceptance testing.
    a. The work shall be considered ready for acceptance testing when the contractor notifies Commissioner, in writing, that the following conditions are met:
        1) The contractor has pre-tested all systems such that all sub- systems, functions, software and equipment are properly installed, set-up, configured, de-bugged and fully operational as specified.
        2) The contractor has supplied the Commissioner with the written test results and documentation as listed above, for all rooms and systems.
        3) The contractor has supplied the Commissioner with manuals, instruction materials and all other required as-built documentation, revised to reflect comments and or revisions arising from the review cycles listed elsewhere within this document.
13. Should the systems not be ready for testing by the Commissioner at the date and time indicated by the contractor, system acceptance testing may be rescheduled at the sole discretion of the Commissioner.

3.4 GROUNDING

A. All grounding shall conform to all applicable national electric code requirements including, but not limited to article 250 see 1.16.

B. The contractor shall be solely responsible for ensuring all work provided under this scope is free of crosstalk, hum, buzz and or other defects or anomalies resulting from improper grounding.

C. A single, primary "system ground" shall be established for each system. All grounding conductors shall connect to this primary system ground.
    1. The system ground shall be provided in the equipment racks and shall consist of a copper bar of sufficient size to accommodate all secondary grounding conductors.

D. Under no condition and in no circumstance, shall the ac neutral conductor, either in the power panel or in a receptacle outlet, be used for a system ground.

E. It shall be the responsibility of the contractor to follow good engineering practice, as outlined above, and to deviate from these practices only when necessary to minimize crosstalk and to maximize signal-to-noise ratios in the audio, video, and control systems.

3.5 CABLE INSTALLATION

A. Special conditions

1. Furnish and install communications cables per the drawings and specifications provided by the Commissioner and per the manufacturer's recommendations.
2. Install each backbone cable as an uninterrupted conductor section from the MDF to its point of termination the IDF closet, as indicated on the drawings, without splices or mechanical couplers between the points of origin and termination.
3. Install each station cable as an uninterrupted conductor section from the IDF closet to the user-end termination point, as indicated on the drawings, without splices or mechanical couplers between the points of origin and termination.
4. Contractor shall support all backbone cables and all primary horizontal cable bundles on open mesh cable tray to be furnished and installed under the telecommunications pathways work. No non-re-enterable tie wraps shall be used to secure cables to the trays.
5. Where horizontal cables exit trays to run to workstation locations, contractor shall furnish and install J-hooks with the appropriate mounting hardware every 5-feet oc maximum for open cable runs. J-hooks shall not be fastened to suspended ceiling support structures, electrical or plumbing piping or any other trade work.
6. Provide all other outlet configurations in accordance with the drawings and manufacturers recommendations.
7. All wall, ceiling, outdoor and indoor cameras shall have a 2 gang back box that is protected from weather, vandalism etc, and prior to security contractor's final connection.
8. Unless otherwise noted, route all intra-building station cables above the finished ceilings, transitioning vertically to wall mounted back boxes and/or surface-mounted wiring channels via conduit stub-ups into the ceiling void or to floor boxes or poke-thru fittings to the floor above, as required.
9. Label each outlet and each cable with an appropriate id number.
10. Do not exceed a pulling tension of 25 lbs. On 4-pair UTP cables.
11. To limit the incidence of micro-bending of the individual fiber strands, use mesh-type, swivel-eye pulling grips for all fiber optic cable pulling. This type of pulling grip is also recommended for all other building cable, as required.
12. Stations/faceplates will be installed in various configurations as noted on the drawings. All cables will be plenum category 6 / RG 6 cable. Station locations are indicated on the plans using a unique triangle designation as defined on the drawing symbol legend. All locations and mounting heights must be confirmed with drawings.
    a. At the station cables will be terminated on individual category 6 modules be secured into a flush wall mounted faceplate whose port opening count matches the quantity of cables at that station. If blank inserts are required their color shall match the color of the face plate.
    b. At the closet all cables shall terminate in a rack mounted patch panel. Cables shall be cut down on rack mounted 24/48 port CAT 6 patch panels. A cut down schedule shall be provided by contractor prior to cable installation and termination.
    c. These CAT 6 cables shall be terminated in a separate CAT 6 patch panel that is dedicated for back of house and operations support staff. BOH coaxial shall be left with 15 feet of slack coiled at rack in main technology room for connectivity to headend system.

d. Printed next to it and will receive one category 6 cable. At the station this cable shall be terminated on a white CAT 6 jack secured into a standard faceplate that is to match other finished wall plates. At the closet these cables will terminate in the IDF on rack mounted 24/48 port category 6 patch panel.

13. Floor box locations are designated on the floor plans using a triangle inside a square with a numerical subscript. This number indicates the quantity of cables to this station. At the station cables will be terminated on individual category 6 modules secured into the frame which in turn will be secured into the floor box.

a. Any unused ports in the mounting frame shall be provided with blank modules whose color matches that of the frame or other plates. Low voltage contractor is responsible for all finish faceplates at floor boxes. At the closet these cables will terminate in the IDF on rack mounted 24/48 port category 6 patch panel.

b. Certain floor box locations are designed for audio visual connectivity and these locations are to have a FSR fl-500p floor box 6" deep.

c. Contractor must take care when installing these FSR floor boxes as the conduit feed must line up appropriately so that cable within the box allows for separation of power and low voltage cabling. Conduits/cables will route through floor slab exiting to ceiling cavity of floor below and into wall cavity conduit running up the wall and through to back of appropriate back box. General contractor/electrical contractor is responsible to identify these locations prior to purchase and installation. Certain floor boxes in conference rooms will feed directly to a wall mounted display while other floor boxes will feed back to a centralized AV closet.

d. All cable shall be terminated on individual category 6 modules secured into a flush wall mount style faceplate whose port count matches the number of cables. Any unused ports in the faceplate shall be provided with blank modules whose color matches the other faceplates.

14. Where appropriate in a cavity within the furniture leg or cubical backing station cables shall exit conduit and be terminated into a surface mounted plate/box. Each cable shall be terminated on individual category 6 modules secured into a flush mount style face plate whose port count matches the number of cables. Any unused ports in the faceplate shall be provided with blank modules whose color matches the faceplate.
    a. At the closet these cables will terminate in the equipment rack mounted 24/48 port category 6 patch panel. A cut down schedule shall be provided prior to cable installation and termination.

15. Where appropriate in a cavity within the furniture leg or cubical backing station cables shall exit conduit and be terminated into a surface mounted plate/box. Each cable shall be terminated on individual Category 6 modules secured into a flush mount style face plate whose port count matches the number of cables. Any unused ports in the faceplate shall be provided with blank modules whose color matches the faceplate.
    a. At the station, prior to termination, 15 feet of slack cable shall be coiled and supported at the WAP location. Cables will be terminated on an individual category 6 plug providing for direct connection into the wireless antenna.
    b. At the closet these cables will terminate in the IDF on a rack mounted 24/48 port category 6 patch panel. A cut down schedule shall be provided prior to cable installation and termination.

16. Security camera cabling stations are designated on the floor plans by a camera icon. Each location shall be provided with a single category 6 data cable.

a. At the station, prior to termination, 15 feet of slack cable shall be coiled and supported at the camera location. Cables will be terminated on an individual category 6 plug providing for direct connection into the camera.
b. All security cables shall originate in the main technology closet. At the closet cable shall terminate on separate rack mounted 24/48 port patch panel dedicated to security devices. A cut down schedule must be provided prior to cable installation and termination.

3.6 IDF CLOSETS

A. All cables, after entry into the equipment rooms must be secured to backboards and dressed into supports. The general contractor/electrical contractor shall attach the cables where required to plywood backboards using velcro-type re-enterable cable ties at spacing of approximately 12 inches. Velcro cable ties shall be secured to backboards using #10 machine screws and metallic washers, or rigid tabs.

B. Support all cables mounted onto patch panels with strain management bars on rear of rack.

C. Route cables from work locations into equipment rooms via overhead distribution. Maintain overhead distribution wherever possible within equipment rooms.

3.7 TEST EQUIPMENT

A. The contractor shall provide all appropriate test equipment as required by Commissioner and the City of New York. Equipment shall be factory calibrated and fully operational for acceptance testing;

B. Test equipment minimum requires are as follows;
1. Metallic cable pair tester: independent technologies, test-all iv or 25, Simon Company multi-test mt-5000 or equivalent
2. 4-pair UTP automated cable tester: tester shall be compliant with ANSI/TIA/EIA-568- provide bi-directional testing and test in excess of category 6 permanent link and channel requirements. Test equipment must be approved by Commissioner prior to use on the job. Agilent Wire scope 350, Micro test Omni scanner, Fluke DSP 4000 or approved equal may be used.

3.8 CABLE TESTING

A. Test all cables installed.

B. Pre-installation inspection.
1. Visually inspect all cables, cable reels and shipping cartons for shipping damage. Return visibly damaged items to the manufacturer.
2. Perform an end-to-end test for continuity, ground fault, shorts and crossed pairs for each cable pair/conductor.

C. Post installation testing
1. Test only completed systems. Partial or statistically sampled testing is not acceptable, except by prior, written approval from the Commissioner..
2. Perform an end-to-end test for continuity, ground fault, shorts and crossed pairs for each cable pair/conductor.

a. Test cable pairs from the work area outlet, through all conductors, patches and cross connects, to the equipment room
b. Test horizontal cable pairs not cross-connected to backbone from their furthest termination point to the work area outlet.
c. Test backbone cable pairs not cross-connected to horizontal cables from their furthest termination point to the equipment room,

3. 4-pair CAT 6 and CAT 6a UTP: in addition to end-to-end tests listed above
   a. Conduct a permanent link test of each cable including: wire map, length, insertion loss, next loss, psnext loss, elfext loss, pselfext loss, propagation delay, and delay skew with injected standard signals, utilizing automated test equipment. Record all results. Test bi-directionally in accordance with ANSI/TIA/EIA-568 and compare results with the performance requirements of ANSI/TIA/EIA-568-b.1 and/or b.2-1 respectively.
   b. Test cabling not cross connected or patched within the closet as a permanent link.
4. Remove all defective cables from cable pathways. Do not abandon cables in place.
5. The Commissioner reserves the right to observe the conduct of any or all portions of the testing process and to conduct, and to require the contractor, using the contractor's equipment and labor, a random re-test of up to five percent of the cable plant to confirm documented test results.
6. Document all test results and corrective procedures and submit to the Commissioner within ten working days of test completion.
7. In addition to the actions specified above, the contractor may be required to be present while the Commissioner conducts performance tests of the transport electronics connected to the cabling system.

END OF SECTION 27 02 00

SECTION 270500
Common Work Results for Communications

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. Section Includes:

1. Communications equipment coordination and installation.
2. Sleeves for pathways and cables.
3. Sleeve seals.
4. Grout.
5. Common communications installation requirements.

B. Related Sections include the following:

1. Section 078413 "Firestops and Smokeseals" for sleeve and firestopping selection and application.
2. Section 079200 "Interior Joint Sealants" for join sealant size, depth, and location.
3. Section 083113 "Access Doors" for locating access panels and doors for communication items that are behind finished surfaces.

1.3. DEFINITIONS

A. EPDM: Ethylene-propylene-diene terpolymer rubber.

B. NBR: Acrylonitrile-butadiene rubber.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.5. COORDINATION

A. Coordinate arrangement, mounting, and support of communications equipment:

1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
3. To allow right of way for piping and conduit installed at required slope.
4. So connecting pathways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

C. Coordinate location of access panels and doors for communications items that are behind finished surfaces or otherwise concealed. Access doors and panels are specified in Section 083113 "Access Doors."

D. Coordinate sleeve selection and application with selection and application of firestopping specified in Section 078413 Firestops and Smokeseals."

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

PART 2 - PRODUCTS

2.1. SLEEVES FOR PATHWAYS AND CABLES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

C. Sleeves for Rectangular Openings: Galvanized sheet steel.

1. Minimum Metal Thickness:

   a. For sleeve cross-section rectangle perimeter less than 50 inches (1270 mm) and no side more than 16 inches (400 mm), thickness shall be 0.052 inch (1.3 mm).
   b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches (1270 mm) and 1 or more sides equal to, or more than, 16 inches (400 mm), thickness shall be 0.138 inch (3.5 mm).

2.2. SLEEVE SEALS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and pathway or cable.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Advance Products & Systems, Inc.

b. Calpico, Inc.
c. Metraflex Co.
d. Pipeline Seal and Insulator, Inc.
e. Or Approved Equal.

2. Sealing Elements: EPDM NBR interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of pathway or cable.
3. Pressure Plates: Plastic or Carbon steel .Include two for each sealing element.
4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.3. GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. COMMON REQUIREMENTS FOR COMMUNICATIONS INSTALLATION

A. Comply with NECA 1.

B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.

C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.

D. Equipment: Install to facilitate service, maintenance, and restoration of components of both communications equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

E. Right of Way: Give to piping systems installed at a required slope.

3.3. SLEEVE INSTALLATION FOR COMMUNICATIONS PENETRATIONS

A. Communications penetrations occur when pathways, cables, wireways, or cable trays penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

E. Cut sleeves to length for mounting flush with both surfaces of walls.

F. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level.

G. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pathway or cable, unless indicated otherwise.

H. Seal space outside of sleeves with grout for penetrations of concrete and masonry

1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.

I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and pathway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079200 "Interior Joint Sealants."

J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pathway and cable penetrations. Install sleeves and seal pathway and cable penetration sleeves with firestop materials. Comply with requirements in Section 078413 "Firestops and Smokeseals."

K. Roof-Penetration Sleeves: Seal penetration of individual pathways and cables with flexible boot-type flashing units applied in coordination with roofing work.

L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch (25-mm) annular clear space between pathway or cable and sleeve for installing mechanical sleeve seals.

3.4. SLEEVE-SEAL INSTALLATION

A. Install to seal exterior wall penetrations.

B. Use type and number of sealing elements recommended by manufacturer for pathway or cable material and size. Position pathway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pathway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

END OF SECTION 270500

SECTION 27 40 00
Audio Visual Communications

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Contractor shall provide materials, labor, equipment and services necessary to furnish, deliver and install all work of this section, as shown on the drawings, as specified herein, and or as required by job conditions.

B. Drawings and all general provisions of the contract, including all general and supplementary conditions will apply to the work within this section.
   1. Division 8
   2. Division 26
   3. Division 28

C. Make adjustments to the work as may be necessary or requested in order to resolve physical space issues or conflicts preserve aesthetics and clearances and or avoid architectural features, elements, openings, structural members and or the work of other trades.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC general conditions section 01 33 00 "Submittal Procedures".

B. Special conditions :
   1. Pre-construction
      a. Product data sheets as specified herein.
      b. Original shop drawings as specified herein.
      c. Control systems/ programming submittals as specified herein.
   2. During construction
      a. Pull schedules as specified herein.
      b. Progress reports as specified herein.
   3. Post construction

a. Record set of as built drawings as specified herein.
b. Updated pull schedules as specified herein.
c. Field tests reports as specified herein.

1.4 QUALIFICATIONS

A. The installer shall have a minimum of three years verifiable and demonstrated experience in the installation, operation and maintenance of large-scale and complex Audio Visual systems and related technologies.

B. Contractor shall have successfully completed projects and installations of similar size, scope and complexity.
1. The installation of all components, software and testing shall be accomplished by contractor/technicians who have been regularly installing systems of the size, scope and complexity of this project for a period of not less than two years and are properly trained by each manufacturer under this project scope. The contractor shall also be certified by the equipment manufacturer on the specific components being installed in their systems under this project scope.
2. The contractor shall own and maintain tools and equipment necessary for successful installation and testing of the system components included in this scope and has personnel who are adequately trained in the use of such tools and equipment.
3. The contractor will provide a complete list of all manufacturer certifications applicable to this project.

1.5 SCOPE OF WORK

A. This section covers the installation, control and operation of hardware, software, cabling and licenses for all audio visual systems work. Also see section 01.

B. This specification contains sections that call out responsibilities for both the audio visual contractor and the general/electrical contractor. Contractor must confirm any/all responsibilities or limitations as defined herein.

C. All functions and requirements identified in these specifications must operate simultaneously and to the fullest extent described. Any item in the specification which is omitted from the final equipment list, either unintentionally or intentionally, will be provided to client with no fee.

D. Client shall have no restriction as to the use and function of these technology systems. In the event that client uses any portion of the system prior to project completion, such use does not constitute acceptance of that system and the contractor is still required to perform all tasks as outlined in this document.

E. Contractor will provide the following:
1. Furnish all materials in new and unused condition, free from defects, damage or corrosion. All materials shall meet all applicable codes provided a standard has been established for the material in question
2. It is the sole responsibility of the contractor to ensure that all systems are fabricated, assembled and installed complete, including all normal, customary and required miscellaneous parts, components, hardware, materials, cables, connectors, power supplies, POE injectors, com ports, rack mount kits

and any and all other supplies as may be necessary, but not specifically defined, or otherwise identified within these specifications.

3. Prior to procurement, the contractor shall review and verify all product specifications and manufacturer model and part numbers to ensure specified equipment and components meet the functional requirements defined within these specifications.
4. In the event that specified equipment and or components are back-ordered and or otherwise unavailable in time to meet the project schedule, and or have been discontinued between the date of issuance of these specifications and the response date, the contractor shall provide the manufacturer's specified current comparable and functionally equivalent alternate and or replacement model.
5. The contractor shall coordinate and confirm the final locations, colors and finishes of all audio visual devices with the Commissioner and general contractor, including, but not limited to connection plates, inserts and flat panels, touch screens or projection screens, wall boxes, interconnects , mounting brackets etc.

1.6 CONTRACTOR REQUIREMENTS

A. The contractor shall provide all normal and customary technical, administrative and other support services as required to ensure satisfactory performance and on-schedule delivery of the contracted work.

B. The contractor is required to implement practices and procedures to meet the project's environmental performance goals, sustainable design performance criteria and include achieving the LEED certification as specified in section sustainable design requirements. Substitutions, or other changes to the work proposed by the contractor or their subcontractors, shall not be allowed if such changes compromise the stated LEED requirements.

C. The contractor shall staff the project with sufficient manpower as required to meet and maintain the project schedule and to keep pace with the work of cooperative trades.

D. Designate a qualified foreman. The foreman shall be present in the field at all times during the performance of the work.

E. Provide a supervisory work force sufficient to maintain efficient performance of the contractor's responsibilities.

F. Use only skilled and reliable work force and discontinue the services of anyone employed on this project upon written request by the Commissioner.

G. Use personnel who are qualified, at minimum to perform all of the installation and testing work activities required.

H. The contractor shall provide a minimum of two qualified technicians, each of whom will have actively participated in the project and have a demonstrated knowledge and understanding of project scope, to conduct and perform all final system testing, calibration and adjustment, demonstration, diagnostic evaluation and or corrective action as required to ensure all equipment, components and systems conform to the project specifications.

I. The contractor shall exercise care and due diligence at all times and shall provide full and active cooperative participation during all phases of the project.

J. The contractor shall furnish all submittals in a timely manner and as otherwise specified herein

K. The contractor shall render and submit original shop drawings, which shall include, but shall not be limited to;
   1. Schematic and block diagrams detailing all system equipment placement and type, circuits and wiring, connections and terminations, pin-outs, color codes and cabling id and numbering schemes.
   2. Installation and mounting details including, but not limited to all equipment, component and device dimensioned location and installation details.
   3. Elevation detail drawings including, but not limited to dimensioned structural mounting, backing and blocking; equipment and mount detail, device and junction boxes, low voltage rings, conduit and cable paths etc.
   4. Provide all pertinent electrical, video/data /video and other required low voltage wiring specifications and details for coordination with related work performed by other trades.
   5. Provide reflected ceiling plans as required.
   6. Wiring riser diagrams, including all closet layout requirements, additional conduit requirements and infrastructure needs
   7. Furniture integration detail drawings for coordination with work performed by other trades.
   8. Dimensioned shop drawings for all components integrated within any furniture, millwork or other areas in this contract including, but not limited to wall mounted devices, ceiling mounted devices, floor mounted devices, display mounts, table boxes, and equipment racks etc.
   9. Rack and equipment enclosure elevation drawings, including rack unit RU configuration, calculated power, thermal loads and management, cable management and ventilation "clear area" details and
   10. Detailed drawings and specifications for all architectural and aesthetic elements including, but not limited to wall mounted devices, ceiling mounted devices, floor mounted devices, display mounts, table boxes, and equipment racks etc., inclusive of colors and finishes.
       a. Coordinate final locations, colors and finishes with the Commissioner.
   11. Complete and accurate record set as built drawings, which shall be provided to the Commissioner upon completion of the work.
   12. Drawings provided as a part of this specification shall not be used and or submitted as shop drawings
       a. The contractor shall render and submit original shop drawings and submittals as required.

L. The contractor shall be responsible for the initial and final calibration and adjustment of the systems as specified herein.

M. Voice / data/ audio visual/ security and all other low voltage cable installation standards shall reflect NEC, ICIA, IEEE, TIA/EIA and BICSI standards. Manufacturers' instructions shall be used for in-process quality control and final acceptance of the work. The strictest of all requirements shall apply.

N. The contractor shall provide all necessary test equipment and accessories required to conduct and document system performance evaluations, demonstrations and acceptance testing as specified herein.
   1. All test equipment shall be fully functional and shall have valid certificates of calibration as applicable.

O. The contractor shall provide complete and comprehensive narrative and practical hands-on instructions in the proper operation, use, care and maintenance of the specified equipment, components and systems, to the personnel designated by the Commissioner.
   1. Instructing shall be conducted by a suitably qualified instructor
      a. In the event contractor does not have certified and qualified instructors on staff for specific equipment, components and or software, a manufacturer's representative for such instruction will be provided by the contractor, at no additional fee to the City of New York.
   2. All instructing shall take place at the installed systems locations, after acceptance.
   3. The contractor shall provide a minimum of two hours of end-user instruction and one hour of advanced technical instruction for any system included in this specification.
      a. Advanced instruction will include a comprehensive review of system specifications and diagrams and detailed instruction in the modes of operation, routine service and maintenance, diagnostic troubleshooting and reconfiguration of the systems.
   4. The contractor shall provide follow-up instruction within sixty days of the completion of initial instructions, which shall be conducted at the discretion and convenience of the Commissioner..
   5. Comply with all applicable governmental regulations and with all federal, state, county, city, and other applicable codes, ordinances, and regulations and the most recent edition of technical standards and design guidelines including the latest amendments and all applicable addenda. See 1.16

1.7 PRODUCT DATA SHEETS

A. Submittals shall consist of the following
   1. Cover sheet
   2. Date of submittal
   3. Project name and address
   4. Number of submittal
   5. Name and address of the contractor
   6. Table of contents with index
   7. Include page and item numbers of the corresponding specification section and/or drawing number of the contract documents.
   8. Product name and manufacturer
   9. Manufacturers' technical specifications and data sheets of all items specified herein.
      a. Submit only pertinent pages. Do not submit entire product catalogs.
      b. Clearly identify the specific product being submitted using appropriate markings and arrows. Only use highlighters or coloring that will appear on reproductions or photocopies.
   10. Identify any options and or accessories that are applicable to the project.
   11. Confirm and verify all product quantities and manufacturer model and part numbers are current, correct and complete, including required accessories and or options that are require for full and completely working AV systems.
   12. Identify the installation location of each piece of equipment, including room number and or room name.
   13. Identify special coordination requirements for the product
   14. Identify "long lead" procurement requirements for the specified product as may be applicable

B. Preparation and transmittal

1. Each submittal shall be in accordance with the procedures outlined herein.
2. Bind and package each submittal with tabs and table of contents as appropriate
3. Sheet size shall be standard 8-1/2" x 11"
4. Submit all product data sheet submittals for each system, subsystem, or unit of work as one submittal
5. Submit three copies to the Commissioner U.O.N.

1.8 SHOP DRAWINGS

A. The contractor shall render and submit complete original shop drawings as specified within this section.

B. Drawings issued as a part of this specification shall not be submitted as shop drawings.

C. Each shop drawing submittal rendered by the contractor shall consist of the following

1. Title block
2. Project name and address
3. Number of submittal
4. Date of submittal
5. Name and address of the contractor
6. Drawing scale
7. Diagrams showing evidence of compliance with contract documents and coordination with other trades. See section 1.10 pull schedules as a part of shop drawing submittal.
8. Associated wiring diagrams of all equipment, with types and model numbers specified
9. Fully dimensioned housing and mounting drawings, including information on finishes
10. Specific notation of field measurements at accurate scale
11. Identification of specific products and materials used
12. Reference room numbers and or room names on all shop drawings
13. Compliance with specified standards
14. Dimensions at accurate scale

D. Preparation and transmittal

1. Each submittal shall be in accordance with the procedures outlined herein and shall provide adequate space for action marking adjacent to the title block.
2. All sketches and drawings shall be issued by the contractor using the following sheet sizes: a. Sketches sheet size shall be 8-1/2" x 11" b. Drawings: sheet size shall be 24" x 36"
3. Submit all shop drawing submittals for each system, subsystem, or unit of work as one complete submittal.
4. Submit three copies to the construction manager U.O.N.

1.9 PULL SCHEDULES

A. The pull schedule shall include, but is not limited to:
1. Cover sheet
2. Project name and address
3. Number of pull schedule submittal

4. Date of pull schedule submittal
5. Name and address of the contractor
6. Pull schedule data field
   a. Field 1: room number /location of device
   b. Field 2: sequential cable number
   c. Field 3: voice / data / video/ security cable id
   d. Field 4: cable type
   e. Field 5: equipment manufacturer and model number
   f. Field 6: equipment serial number
   g. Field 7: jack and or connection label as applicable.
   h. Field 8: rack label as applicable

B. Preparation and transmittal

1. The pull schedules will be computer-generated and must be submitted to the Commissioner for review.
2. Submit three copies to the Commissioner.
3. The pull schedule will be submitted with the shop drawings

1.10 COMMISSIONING

A. Prior to final acceptance of the installation the following testing and documents shall be performed and provided to the Commissioner.
   1. Perform and document a complete system acceptance test.
   2. Provide testing reports indicating all devices tested, pass/fail status, and actions taken to resolve problems on failed tests.
   3. Provide "as built" drawings showing each device and wiring connection in hard copy and in electronic format
   4. Provide a complete set of operating instructions for hardware devices and a complete software user manual.

B. Closeout
   1. The contractor shall submit a complete, updated drawing set and pull schedules accurately reflecting the completed work including all field changes, modifications and or revisions.
   2. The contractor shall individually bind and submit to the Commissioner for review and approval, all record set, as built drawings, updated pull schedules, user guides and manuals, equipment lists with serial numbers, test results and a completed check out list, for each contracted system, prior to issuing closeout documentation to the Commissioner.

C. Acceptance
   1. Once the testing has been completed, as-builts and testing documentation delivered to the Commissioner, to satisfy that all work is in accordance with the contract documents, the Commissioner shall notify the contractor in writing of the acceptance of the work performed.

1.11 REPORTING

A. The contractor shall submit weekly progress reports, which shall include, but shall not be limited to;
   1. Installation schedule risks, issues, conflicts and or delays.
   2. Status of the installation, detailing all remaining tasks and proposed completion dates.
   3. Percentage of completion of each activity
   4. Gantt chart format showing continuous vertical lines to identify the first working day of each week.
   5. Illustration defining how the start of a given activity depends on completion of preceding activities, and how the completion of a given activity may restrain or constrain the start of subsequent activities.
   6. Identification of the critical path.
   7. Requests for receiving major equipment and material shipments.
   8. Requests for subcontractor access to the job site.
   9. Requests for utilities and or services disconnection and or connection.
   10. Delays and stoppages.
      a. Note that delays and or stoppages shall not affect the scheduled completion date, unless approved in writing by the Commissioner.
   11. Emergencies and accidents.
   12. Losses of material and or property.

B. Preparation and transmittal of progress reports
   1. Each item shall include
      a. A detailed explanation;
      b. A description of the actions to be taken;
      c. The party responsible for executing those actions.
   2. Progress reports shall be generated and delivered to the Commissioner, three business days prior to the weekly project meeting, for the duration of the project.

1.12 DOCUMENTATION

A. Record set drawings / as-built drawings
   1. As mentioned herein this specification the record set, as-built drawings, shall include but may not be limited to equipment and cabling layout and location, schematic and block diagrams, equipment and cable labeling, cable termination points, equipment rack and room layouts and equipment installation details.
   2. The as-built drawings shall accurately reflect and include all field changes made during construction and shall completely and accurately reflect the conditions of the installed systems at the time of acceptance.

B. Operation and maintenance manuals
   1. These manuals shall utilize a combination of narrative text, graphics and images to describe to the user, how to properly operate and maintain the systems.
      a. The user of this manual is presumed to be technically competent, but unfamiliar with the specific systems
   2. Manuals shall be tabbed and indexed by room and subsystem.
   3. Manuals shall include the frequency and scheduled intervals of all system maintenance requirements.

4. The operation section shall describe all modes of normal operation and the procedures necessary to activate and properly operate each system so as to meet the functional use requirements described within the specifications.
5. The operation section shall include a laminated 8.5 in. X 11 in. "quick reference guide" to the basic operation and use of each installed system.
6. The operation section shall include simplified block diagrams for each system and subsystem, with all input and output circuit cable and terminal block numbers and jack field circuit ID Designations.
   a. A copy of this block diagram drawing shall be laminated and included within each equipment rack or equipment location.
   b. All block diagrams shall reference room numbers and or room names.
7. The maintenance section shall provide a recommended maintenance schedule, with reference to the applicable pages in the manufacturer's maintenance manuals.
8. The maintenance manual shall include completed copies of all manufacturer warranty cards, indexed by component type and room number and or room name.
9. The maintenance section shall include a list of all required "consumable" products required to maintain the normal operation of each system and or subsystem, including, but not limited to filters, batteries and lamps.
10. In the event that adequate and or sufficiently detailed service or maintenance information is not provided by the manufacturer, the contractor shall provide the information necessary to ensure proper care and maintenance.
11. At acceptance testing, the contractor shall provide two final revision copies of the operation and maintenance manuals to the Commissioner.
12. It is expected that instructions shall be based on the use of these manuals.
13. The contractor shall provide two laminated copies of the record set as built drawings AV drawings for each specified system.
14. Until final record set of as-built drawings are approved and accepted, an up-to-date field set of drawings will be maintained in the site office of the Commissioner.
15. The contractor shall provide bound copies of product data sheets, which shall be sorted in accordance with the specifications section.
16. The contractor shall provide bound copies of all product maintenance manuals.
17. Pull schedule as required per this specification.
18. Software documentation as required per this specification.
19. The contractor shall deliver three complete copies of all closeout documentation to the Commissioner prior to scheduling system demonstration and acceptance testing.

1.13 SOFTWARE SPECIFICATIONS

A. Software shall be defined as any and all programs, routines, symbolic languages and or other data and or instructions which run or operate a computer and or processor included within the contracted systems, and shall include, but is not limited to the control of all equipment listed within this specification and as shown on all related drawings, including, but not limited to all AV equipment, components and devices, lighting and dimming systems, motorized shades and drapes, fire alarm systems, occupancy sensors and partition sensors.

B. The operational capabilities and system functions defined within these project plans and specifications are intended to describe design intent and are provided for reference only. It is the responsibility of the

contractor to ensure that all functional elements of the plans and specifications are successfully implemented as described herein.

1. When applicable contractor provided user-interface graphics, logos, icons, symbols and nomenclature shall be submitted to, and approved by the Commissioner.
2. Demonstration and acceptance testing will be performed upon documented completion of commissioning and certification, at which time, all source code and graphic user interfaces shall be complete, error free and fully functional.
3. The contractor shall meet with the Commissioner to review end-user feedback and or observations made during the initial period of use.
4. The contractor shall make minor modifications to the system programming as may be required to simplify and or enhance the end-user experience.
5. Minor programming modifications shall not include changes which alter the specified design intent and or requirements.

1.14 WARRANTY

A. The contractor shall warrant all work including, but not limited to all equipment, components, hardware, materials, installation and integration work and services, programming and software, against defects in workmanship and or materials for a period of one year, commencing upon the date of acceptance by the City of New York. Where manufacturer's warranty is longer than one year, the contractor shall offer the extended warranty.

B. Provide a manufacturer's warranty for the systems operation and performance. Documented certification of training must be presented to client with the contractor's response.

C. All equipment provided by the contractor shall be new and shall meet or exceed all latest and current published specifications issued by the manufacturer

D. The contractor shall provide only the latest model, revision or version of a specified piece of equipment, component and or software, effective at the time of their response.

1.15 JOB CONDITIONS

A. Verify all existing conditions. Refer to the Commissioner for coordination and clarification of any discrepancies concerning existing conditions, drawings, and specifications.

B. Clarify with the Commissioner, all locations including conduit and cable paths. Where discrepancies occur and instructions have not been obtained, abide by the direction and decision of the Commissioner.

C. Contractor is solely responsible to conduct ongoing surveys and inspections of all work areas, throughout the construction process, in order to locate and confirm all penetrations, poke-thru and floor boxes, furniture openings, sleeves, conduit and conduit stubs, bushings, cable trays, blocking and backing, in-wall display mount and conduit termination boxes, AV device boxes, low voltage rings, pull strings, and all other elements associated with this work provided by others that support the this installation.

1. If during the course of ongoing survey and inspection, the contractor observes a condition which appears to conflict with the project plans and specifications, the contractor shall immediately notify the Commissioner of the potential discrepancy.
2. The Commissioner shall evaluate the reported condition and provide the contractor with direction as may be required

D. It shall be the contractor's responsibility to cooperate, at all times, and to the fullest extent, with any and all other trades performing work on the premises, in order to avoid delays in the work, lost time, work stoppages, interference and or other inefficiencies.

E. The contractor shall be responsible for meeting all project schedules and milestone dates.

F. Contractor will furnish, install, and terminate all required wire and cable to the extent not provided by others so that all AV systems will operate as complete and functioning per the design intent.

G. Comply with all requirements regarding the use of cable with respect to spread of fire. Refer to drawings for identification of air plenum and other spaces having special cabling requirements.

H. It is the responsibility of the contractor to provide wiring that is in compliance with all applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions.

I. Comply with all seismic requirements regarding the installation of all hardware, mounts, equipment and or components.

J. It is the responsibility of the contractor to employ installation means and methods that are in compliance with all applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions.

K. The contractor shall be solely responsible for the care, custody, safety and protection of all installed and configured systems and non-installed, stored materials, tools and supplies.

1.16 CODES AND STANDARDS

A. All work performed under the this scope / specification shall conform to the all requirements stated herein and to any/all applicable codes and standards as defined by all federal, state and local municipalities having jurisdiction. This is most notably including but not limited to;
1. Current NEC 2020 / National fire protection association
2. NFPA 70 national electrical code current and applicable sections including, but not limited to article 250 grounding and article 800 communications circuits.
3. Underwriter's laboratories, Inc.
   a. UL listed
   b. UL approved
4. Building officials and code administrators /BOCA international, Inc.
5. International building code 2012

6. In the event that a conflict occurs, the contractor is directed to meet, satisfy, adhere to and or otherwise comply with and conform to the most stringent requirement under the scope of this specification.

1.17 DELIVERY, STORAGE, AND HANDLING

A. Delivery
   1. Deliver materials and equipment in sufficient time to allow for inspection, installation and testing in accordance with the project schedule.
      a. All arrangements for access and unloading at the site shall be coordinated and scheduled with the Commissioner, not less than forty-eight hours prior to the scheduled delivery
   2. Movement, staging and layout of material, either at the time of delivery or subsequently, shall be the sole responsibility of the contractor.
   3. The contractor shall be solely responsible for ensuring that all equipment can be successfully delivered to the installation locations including, but not limited to elevator cab size and stairwell dimensions and all door, corridor and turn radius dimensions.
   4. Delivery schedules, which may be affected by environmental conditions, shall be noted in writing to the Commissioner, not less than twenty-four hours prior to the scheduled delivery.

B. Storage and protection
   1. The contractor shall be solely responsible for the care, custody and safekeeping of all equipment, components, materials, tools and supplies while stored on the job site, including all tools, materials and test equipment, which are, and shall remain the property of the contractor.
   2. The contractor shall take all reasonable and necessary precautions to protect all work from dust, debris and damage during construction.

1.18 CLEAN-UP

A. The contractor shall be responsible for the cleanup and restore of all areas and work affected by this installation.

B. The contractor shall, on a daily basis, remove all debris created, caused, or resulting from this work, including all cut and removed cables, connectors and all other work- related debris.

C. Prior to acceptance of work, all areas used or entered by the contractor must be cleared of any materials or debris caused directly or indirectly by the contractor, to the satisfaction of the Commissioner.

1.19 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 GENERAL

A. The requirements in the section shall apply to all areas receiving systems, subsystems and or equipment and components as described herein.

B. Provide materials and equipment conforming to the applicable requirements of:
1. Underwriters Laboratories :UL
2. National Electrical Code : NEC
3. American National Standards Institute : ANSI
4. Federal Communications Commission : FCC

C. Contractor shall provide only equipment, components and materials, which are new, free from use and fully covered by all applicable manufacturers' warranties.

D. Contractor will provide the equipment as required by the design intent herein . Only current-model components, equipment and materials shall be provided. Do not provide obsolete or discontinued models.
1. Review all materials and equipment immediately prior to procurement and or installation and inform the Commissioner of any obsolete or discontinued items and or products.
2. Review all equipment lists at time of procurement, confirming product availability and delivery lead time with manufacturers and distributors.

E. In the event that unplanned delays or backorder status of specified products may adversely impact the project schedule, the contractor shall propose equivalent replacements and or upgrades, at no additional fee to the City of New York.

2.2 APPROVED MANUFACTURERS

A. This audio visual system is based on the following product manufacturers and performance specification as provided below:
1. Flat panel displays: Samsung or approved equal
2. Display wall mounts: Chief manufacturing or approved equal
3. Av signal conversion and transport: Extron or approved equal
4. Av signal switching and routing: Extron or approved equal
5. Av control: Extron or approved equal
6. Av equipment racks and enclosures: Middle Atlantic or approved equal
7. Audio digital signal processor : Extron or approved equal
8. Distributed Video/ Amplifiers and distribution: Blonder Tounge or approved equal
9. Projector : NEC or approved equal
10. Projection screen : Draper or approved equal
11. Projector Mount: Extron or approved equal
12. Ceiling Speakers: JBL or approved equal
13. Indoor/Outdoor paging horns : Bogen or approved equal
14. Paging System : Bogen or approved equal

2.3 PRODUCT REQUIREMENTS – AUDIO VISUAL

A. Contractor will install audio & video systems that shall allow users to;
   1. Display video, Standard TV content on wall-mounted large- format flat panel displays in throughout the new building.
   2. Present content from an owner-furnished HDMI connection on pc with direct connection to flat panel display.
   3. Reproduce program audio via display built-in speaker system and over head speakers via audio amplifier
   4. Control conference displays via manufacturer-supplied IR remote control.
   5. Build Blonder Tounge "head-end system" to support all remote TV displays in cafeterias, break rooms, and conference rooms or common areas
   6. Reproduce program audio and tie into house audio system with over head speakers

B. AV equipment racks with new vertical wire managers as indicated on plans, per manufacturer's recommendation, for all AV equipment. Mounted in these racks will be patch panels, audio visual components , other low voltage support equipment

C. Racks and vertical wire managers shall be Middle Atlantic or approved equal part numbers as noted in material listing. This equipment shall be furnished and installed as shown on the floor plans. Contractor shall hardware castor base to the av rack so it can be moved within the server closet.

D. Mounted in these racks will be all copper patch panels for station cable and tie cable termination. Final configuration of racks, wire managers and patch panels shall be approved by the Commissioner prior to installation and must be based on manufacturer's recommendation or industries standards/best practices. Room layouts and rack elevations must be submitted to the Commissioner at least three weeks prior to installation.

PART 3 - EXECUTION

3.1 GENERAL

A. Refer to DDC General Conditions for execution requirements.

B. The contractor shall comply with all safety guidelines and regulations established for the project.

C. Contractor will review all related electrical, telecommunications, audio visual, security, millwork and architectural drawings for coordination with other trades.

D. Contractor will compare all related electrical, telecommunications, audio visual, security, millwork and architectural drawings and specifications with these drawings and specifications, report any discrepancies to the Commissioner,

E. Contractor will field survey and confirm the location and required size of all conduit, in-wall boxes, sleeves, penetrations, raceways, cable paths, cable tray, junction boxes and device boxes provided by others, which are intended for use in their installation of the specified systems.

F. Contractor will prepare all pre-construction submittals as specified herein.

G. Contractor shall provide all equipment required, unless otherwise noted. Equipment shall be installed in accordance with the manufacturers' recommendations. This information shall be provided to the City of New York and the Commissioner at the time catalog cuts and shop drawings are submitted for approval.

H. Contractor will complete fabrication, installation, integration, testing, commissioning and certification of all work specified herein. Contractor will perform all settings, adjustments and programming required for a complete and operational system as directed by Commissioner.

I. Contractor will follow manufacturers' instructions for installing all video/data/voice or other low voltage cabling. Where instructions are unavailable, follow approved industry practices/best practices.

J. Contractor shall maintain a current copy of this specification and related drawings at the job site at all times.

K. Any/all restoration or changes caused by contractor's neglect shall be made at contractor's expense. Protect finished work of other trades from damage or defacement and remedy any damages as required.

3.2 INSTALLATION

A. Installation shall include the delivery, unloading, setting in place, rack-mounting, fastening to or within furniture, millwork, walls, floors, ceilings, counters or other structures where required; installation and interconnection of all wiring of the system components; equipment alignment and adjustments; and all other work whether or not expressly described or defined herein, which is necessary to result in the complete and satisfactory installation of fully operational systems as described within the project plans and specifications herein.

Identification for all equipment racks shall bear an identification plate, provided and installed by the contractor, which shall be mounted on the front of each equipment rack

B. Engraving shall be yellow/gold filled times new roman lettering on a black background or as appropriate to the identification plate material

C. All work shall be performed in accordance with, but not limited to these specifications and drawings and the best practices associated with such work.

D. All work shall be performed in accordance with the applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions.

E. If, in the opinion of the contractor, an installation practice is desired or required, which is at variance with, and or contrary to these specifications or drawings, a written request for modification shall be made to the Commissioner.
   1. Modifications shall not commence without prior written approval of the Commissioner.

F. All equipment shall be firmly secured in place unless requirements of in-use motion and or portability dictate otherwise.

G. Fastenings and support hardware shall be grade 8 or better and shall be sized as required to support their loads with a minimum safety factor of not less as five and with maximum tolerances as specified by the manufacturer or whichever is greater.

H. The contractor shall be solely responsible for ensuring that all installation means and methods conform to the applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions.

I. All boxes, plates, panels, equipment and other project elements shall be properly secured and installed plumb, level and square.

J. All wall mounted back boxes shall be provided in coordinated fashion with the schedule of the general contractor and shall be pre-drilled to meet conduit specifications.

K. With regard to the installation of equipment and cable, thoughtful consideration shall be given not only to operational efficiency, but also to overall aesthetic factors.

L. All cables, regardless of length, shall be marked with wrap- around number or letter cable markers at both ends as specified herein. There shall be no unmarked cables at any place, point or location in any system or subsystem.

M. All inter-rack cabling shall be neatly installed, secured, dressed, and adequately supported. Audio and video cabling shall be separated from each other and from power cabling.

N. Terminal blocks, boards, strips, or connectors shall be furnished for all cables, which interface with racks, cabinets, consoles, or equipment modules.

O. All cables shall be neatly grouped according to signal type and level. In order to reduce crosstalk and other types of signal contamination, separate groups shall be formed for the following cables;
   1. Power cables
   2. Control cables
   3. Video cables
   4. Audio cables
   5. Voice/data cables
   6. Any/all low voltage cables not defined above

P. Maintain minimum twelve-inch separation between all low voltage and telecommunication cables running exposed in ceiling or floor voids and parallel electrical cables/conduits.
   1. Avoid electromagnetic interference, EMI route cables to maintain the following minimum distances:
      a. Twelve inches from high voltage lighting
      b. Thirty-six inches from power lines of 5 KVA or greater
      c. Forty inches from transformers or motors

Q. No cable shall be installed having a bend radius, less than that recommended by the cable manufacturer.

R. Cable and wiring shall be protected at all times during installation.

S. All cable runs shall be continuous, with no factory or field splices.

T. All cabling, wiring and equipment shall have an independent means of support furnished and installed by the contractor.
   1. At no time, shall an audiovisual system cable, wire or component be supported on or by sprinkler pipes, HVAC ducts, lighting fixtures, ceiling grid and or tiles and or any other equipment or infrastructure.
   2. All installation means and methods shall conform to the applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions
   3. Follow room boundaries when pulling cables through ceilings for distribution into walls, conduits, wiring channels, outlets, etc
   4. All cable distribution from the communications/technology closets or racks to all work locations, except as noted, shall be run in the voids above ceilings as shown on drawings. Ceiling support grids and service hangers shall not be used to support cabling.
   5. Cable shall be loose bundled into cable supports. Use only approved re-enterable cable ties to secure cables in overhead distribution.

3.3 CABLES AND CONNECTORS

A. All voice /data - audio / video – security and control cables are based on the following acceptable product manufacturers and must have all the appropriate performance specifications and criteria. All other cable types are to be submitted to the Commissioner and the City of New York for consideration and approval;
   1. General
   2. Belden
   3. West Penn
   4. Creston
   5. Extron
   6. Or approved equal

B. Jacks, faceplates and wall outlets at the user locations, termination blocks and individual lateral cables shall be labeled with at minimum machine generated black uppercase lettering on a permanent adhesive label stock, covered with a permanent water resistant sealer. Labeling stock and/or lettering must be used that provides a high contrast with the color of the terminating equipment, faceplate or cable.

C. If at any time during the job the permanent cable tag becomes illegible or is defaced or removed, immediately replace it with a duplicate pre-printed cable tag.

D. Cable identification system shall be via color coding in accordance with the eia-606 standards.
   1. Place labels on both ends of the cable at least 4 inches from the point at which the cable is terminated on the connector or terminal block.
   2. Provide permanent, machine generated cable tags. Temporary tags are acceptable only during construction. Label each tag with the appropriate cable number as shown on the drawings and as indicated on the cable schedules provided by the Commissioner.
   3. Cable identification numbers when provided on plans are presented in an abbreviated format. Contractor is required to provide all cables id's and they will at minimum indicate the floor, originating closet/rack id, and the sequential cable number as shown on drawings.

E. All cable installed without conduit shall be plenum rated and shall match the same performance specifications of the manufacturers approved cables for this installation.

F. Cables running in areas exposed to environmental factors such as, but not limited to, UV, chemicals, direct burial, etc. Shall be rated for such exposure and shall match the performance specifications of the manufacturers approved cables for this installation.

G. All cables shall be cut to the length dictated by the cable run. No splices shall be permitted and cable slack shall be as follows .any cable length not defined below must be confirmed by Commissioner.
   1. Provide a minimum of 12-inches of slack at each terminal box or behind each faceplate after jack installation is completed to allow for easy dismounting and extension of outlet covers and wire terminations.
   2. Provide a minimum of 2-feet slack in a loop in UTP at the head of each stub-up or distribution conduit.
   3. Provide a minimum of 12-feet slack in a loop in optical fiber cable at its point of entry to an equipment room.
   4. Provide a minimum of 15-feet slack for each mounted wireless access point outlet.

H. All rack wiring connections and all equipment mounted in drawers or on slides, shall include interconnecting cables with a service loop of sufficient length so as to facilitate access and freedom of movement during installation and servicing.

I. No cable shall be installed with a bend radius less than that recommended by the cable manufacturer.

J. Connector types
   1. Connectors for all signal types are to be submitted to Commissioner and the City of New York for approval

K. Patch panel assignments
   1. All patch panels shall be wired so that signal "sources" outputs appear on the upper row of a row pair; and all "loads" inputs appear on the lower row of a row pair.

L. Patch panel designation strips
   1. All audio and video patch panel designation strips shall utilize alphanumeric identifications and descriptive information.
      a. The jack position in each horizontal row shall be numbered sequentially from left to right.
      b. The horizontal jack rows shall be lettered sequentially from top to bottom.
      c. The alphanumeric identification of each jack shall be included on the functional block drawings, as well as on reproductions of these drawings, which shall be mounted in an appropriate location near the patch bays.

M. Fire stopping system
   1. Seal all penetrations through fire rated walls, floors and walls created by or made on the behalf of the contractor so that the original fire rating of the floor or wall is maintained as required by article 300-21 of the national electric code.
   2. Contractor shall use only fm approved fire-stopping materials and methods. All materials and methodologies shall be submitted to the project manager prior to utilization.
   3. Install approved penetration sealant material that has passed fire exposure testing in accordance with standard time-temperature curve in the standard, UL, ASTM e 119, and NFPA 251 and the hose stream test in accordance with UL.

4. Install approved penetration seal materials in accordance with design requirements and manufacturer's instructions. All substitutions must be approved by Commissioner.
5. Provide removable fire-stopping pillows, IPC flame safe seal bags or approved equivalent in an approved fashion in openings greater than 4" diameter, or 4" x 4" square cross section. Provide wire mesh grate over bags as recommended by manufacturer subsequent to installation.
6. Verify that all penetrating elements and supporting devices have been installed and temporary lines have been removed.
    a. If forms of damming materials are installed, they shall be removed after the designated cure time.

N. System checkout
1. Before acceptance tests are scheduled, the contractor shall perform comprehensive system tests and checkouts
2. The contractor shall furnish all required test equipment and shall perform all work necessary to determine and or modify performance of the system to meet the requirements of this specification.
3. During performance testing, all equipment shall be operated under standard conditions as recommended by the manufacturer
4. Test and certify all audio and video systems for compliance with the performance standards using the test procedures defined later in this specification
5. Maintain documentation of all performance tests for reference by the Commissioner during the system acceptance test.
6. At the conclusion of testing, return all equipment settings to previously calibrated "normal" operating positions.
7. Provide written records of all test results in spreadsheet form.
8. Check and confirm all control functions for proper operation, throughout the entire signal path, from all controlling devices to all controlled devices.
9. Adjust, balance and align all equipment for optimum quality and to meet the Commissioners approval and manufacturer's published specifications.
10. Establish and mark "normal" settings for all level controls and record these settings in the "system operation and maintenance manual".
11. The contractor shall provide test results and settings for all equipment and systems to the Commissioner at least three business days prior to scheduled acceptance testing.
12. The contractor shall notify the Commissioner, in writing, that the work is complete and ready for acceptance testing by the Commissioner.
    a. The work shall be considered ready for acceptance testing when the contractor notifies the Commissioner, in writing, that the following conditions are met:
        1) The contractor has pre-tested all systems such that all sub- systems, functions, software and equipment are properly installed, set-up, configured, de-bugged and fully operational as specified.
        2) The contractor has supplied the Commissioner with the written test results and documentation as listed above, for all rooms and systems.
        3) The contractor has supplied the Commissioner with manuals, instruction materials and all other required as-built documentation, revised to reflect comments and or revisions arising from the review cycles listed elsewhere within this document.
13. Should the systems not be ready for testing by the Commissioner and the City of New York at the date and time indicated by the contractor, system acceptance testing may be rescheduled at the sole discretion of the Commissioner.

3.4 GROUNDING

A. All grounding shall conform to all applicable national electric code requirements including, but not limited to article 250. See 1.16

B. The contractor shall be solely responsible for ensuring all work provided under this scope is free of crosstalk, hum, buzz and or other defects or anomalies resulting from improper grounding.

C. A single, primary "system ground" shall be established for each system. All grounding conductors shall connect to this primary system ground.
   1. The system ground shall be provided in the equipment racks and shall consist of a copper bar of sufficient size to accommodate all secondary grounding conductors.

D. Under no condition and in no circumstance, shall the ac neutral conductor, either in the power panel or in a receptacle outlet, be used for a system ground.

E. It shall be the responsibility of the contractor to follow good engineering practice, as outlined above, and to deviate from these practices only when necessary to minimize crosstalk and to maximize signal-to-noise ratios in the audio, video, and control systems.

3.5 CABLE INSTALLATION

A. Special conditions
   1. Furnish and install communications cables per the drawings and specifications provided by the Commissioner and per the manufacturer's recommendations.
   2. Install each backbone cable as an uninterrupted conductor section from the MDF/IDF to its point of termination, as indicated on the drawings, without splices or mechanical couplers between the points of origin and termination.
   3. Contractor shall support any/all cables and all primary horizontal cable bundles on j-hook. to be furnished and installed under the telecommunications pathways work. No non-re-enterable tie wraps shall be used to secure cables to the trays.
   4. Where horizontal cables exit trays to run to workstation locations, contractor shall furnish and install j-hooks with the appropriate mounting hardware every 5-feet of cable, maximum for open cable runs. J-hooks shall not be fastened to suspended ceiling support structures, electrical or plumbing piping or any other trade work.
   5. Provide all other outlet configurations in accordance with the drawings and manufacturers recommendations.
   6. Unless otherwise noted, route all intra-building station cables above the finished ceilings, transitioning vertically to wall mounted back boxes and/or surface-mounted wiring channels via conduit stub-ups into the ceiling void or to floor boxes or poke-thru fittings to the floor above, as required.
   7. Label each outlet and each cable with an appropriate id number.
   8. Do not exceed a pulling tension of 25 lbs. On 4-pair UTP cables.
   9. To limit the incidence of micro-bending of the individual fiber strands, use mesh-type, swivel-eye pulling grips for all fiber optic cable pulling. This type of pulling grip is also recommended for all other building cable, as required.

10. AV faceplates will be installed in various configurations as noted on the drawings. All cables will be plenum category 6 / RG 6 cable. Station locations are indicated on the plans using a unique triangle designation as defined on the drawing symbol legend. All locations and mounting heights must be confirmed with the drawings.
    a. At the face plates cables will be terminated on individual category 6 modules in back of Extron device. If blank inserts are required their color shall match the color of the face plate.
    b. These CAT 6 cables shall be terminated on the other end into the Extron switcher device.

11. Floor box locations are designated on the floor plans using a triangle inside a square with a numerical subscript. This number indicates the quantity of cables to this station. At the station cables will be terminated on individual category 6 modules secured into the frame which in turn will be secured into the floor box.

    a. Any unused ports in the mounting frame shall be provided with blank modules whose color matches that of the frame or other plates. Low voltage contractor is responsible for all finish faceplates at floor boxes. At the closet these cables will terminate in the IDF on rack mounted 24/48 port category 6 patch panels.

    b. Certain floor box locations are designed for audio visual connectivity and these locations are to have a FSR fl-500p floor box 6" deep.

    c. Contractor must take care when installing these FSR floor boxes as the conduit feed must line up appropriately so that cable within the box allows for separation of power and low voltage cabling. Conduits/cables will route through floor slab exiting to ceiling cavity of floor below and into wall cavity conduit running up the wall and through to back of appropriate back box. General contractor/electrical contractor is responsible to identify these locations prior to purchase and installation. This floor box is in the multi-purpose room and will feed directly to a ceiling mounted Extron switch. Additionally this floor box will have CAT 6 feeds back to a centralized MDF closet for hard wire connection under the table.

    d. All cable shall be terminated on individual category 6 modules secured into a flush style faceplate whose port count matches the number of cables. Any unused ports in the faceplate shall be provided with blank modules whose color matches the other faceplates.

3.6 IDF CLOSETS

A. All cables, after entry into the equipment rooms must be secured to backboards and dressed into supports. The low voltage contractor shall attach the cables where required to plywood backboards using Velcro-type re-enterable cable ties at spacing of approximately 12 inches. Velcro cable ties shall be secured to backboards using #10 machine screws and metallic washers, or rigid tabs.

B. At AV rack contractor shall support all cables with strain management bars on rear of rack.

C. Route cables from work locations into equipment rooms via overhead distribution. Maintain overhead distribution wherever possible within equipment rooms.

3.7 TEST EQUIPMENT

A. The contractor shall provide all appropriate test equipment as required by the Commissioner and the City of New York. Equipment shall be factory calibrated and fully operational for acceptance testing;

B. Test equipment minimum requires are as follows;
   1. Metallic cable pair tester: independent technologies, test-all iv or 25, Simon Company multi-test mt-5000 or equivalent
   2. 4-pair UTP automated cable tester: tester shall be compliant with ANSI/TIA/EIA-568- provide bi-directional testing and test in excess of category 6 permanent link and channel requirements. Test equipment must be approved by Commissioner prior to use on the job. Agilent Wire scope 350, Micro test Omni scanner, Fluke DSP 4000 or approved equal my be used.

3.8 CABLE TESTING

A. Test all cables installed under the contract.

B. Pre-installation inspection.
   1. Visually inspect all cables, cable reels and shipping cartons for shipping damage. Return visibly damaged items to the manufacturer.
   2. Perform an end-to-end test for continuity, ground fault, shorts and crossed pairs for each cable pair/conductor.

C. Post installation testing
   1. Test only completed systems. Partial or statistically sampled testing is not acceptable, except by prior, written approval from the Commissioner.
   2. Perform an end-to-end test for continuity, ground fault, shorts and crossed pairs for each cable pair/conductor.
      a. Test cable pairs from the work area outlet, through all conductors, patches and cross connects, to the equipment room
      b. Test horizontal cable pairs not cross-connected to backbone from their furthest termination point to the work area outlet.
      c. Test backbone cable pairs not cross-connected to horizontal cables from their furthest termination point to the equipment room,
   3. 4-pair CAT 6 and CAT 6a UTP: in addition to end-to-end tests listed above
      a. Conduct a permanent link test of each cable including: wire map, length, insertion loss, next loss, psnext loss, elfext loss, pselfext loss, propagation delay, and delay skew with injected standard signals, utilizing automated test equipment. Record all results. Test bi-directionally in accordance with ANSI/TIA/EIA-568 and compare results with the performance requirements of ANSI/TIA/EIA-568-b.1 and/or b.2-1 respectively.
      b. Test cabling not cross connected or patched within the closet as a permanent link.
   4. Remove all defective cables from cable pathways. Do not abandon cables in place.
   5. The Commissioner reserves the right to observe the conduct of any or all portions of the testing process and to conduct, and to require the contractor, using the contractor's equipment and labor, a random re-test of up to five percent of the cable plant to confirm documented test results.
   6. Document all test results and corrective procedures and submit to the Commissioner and the City of New York within ten working days of test completion.

7. In addition to the actions specified above, the contractor may be required to be present while the Commissioner conducts performance tests of the transport electronics connected to the cabling system.

END OF SECTION 27 40 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 28 08 00
COMMISSIONING OF ELECTRONIC SECURITY SYSTEMS

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project: (1) the contract drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. This section includes commissioning process requirements for facility Electronic Security systems, assemblies, and equipment.

B. Related Sections:

1. Refer to DDC General Conditions for commissioning process requirements.

1.3 DESCRIPTION

A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a complete design or installing Sub-Contractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.

B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:

1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing Sub-Contractors.
2. Verify and document proper performance of equipment and systems.
3. Verify that Operation & Maintenance documentation is complete and transferred to City of New York.
4. Verify that proper orientation program has been implemented for the City of New York service personnel.
5. Ensure that provisions are in place for a post occupancy review with O&M staff within 10 months after Substantial Completion.

C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, and verification and performance checkouts.

D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner, Contractor, Sub-Contractors, manufacturers and equipment suppliers.

E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

A. Refer to DDC General Conditions for definitions.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for CxA's role.

B. Refer to DDC General Conditions for specific submittal requirements. In addition, provide the following:

1. Certificates of readiness
2. Certificates of completion of installation, prestart, and startup activities.
3. O&M manuals
4. Field / factory Test reports

1.6 QUALITY ASSURANCE

A. Test Equipment Calibration Requirements: The Contractor will comply with test equipment manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

A. Refer to DDC General Conditions for requirements pertaining to coordination during the commissioning process.

PART II - PRODUCTS

2.1 TEST EQUIPMENT

A. The Contractor shall ensure that the equipment and system perform startup, initial checkout and functional performance testing as outlined in the DDC General Conditions. For example, the Contractor shall ensure the Sub-Contractors provides and installs security system be responsible for all standard testing equipment for the electronic security systems in Division 28. A sufficient quantity of two-way radios shall be provided by the Contractor.

B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.

C. Test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. The Constractor shall ensure that the manufacturer provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.

D. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications.

PART III - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

A. The Contractor shall cause the Sub-Contractor(s) to provide instruction responsibility to the CxA in preparing Installation Check Sheets for all commissioned components, equipment, and systems.

B. Red-lined Drawings:

1. The Contractor shall cause the Sub-Contractor(s) to verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
4. The Contractor will create the as-built drawings.

C. Operation and Maintenance Data:

1. The Contractor shall cause the Sub-Contractor to provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
2. The CxA will review the O&M literature once for conformance to project requirements.
3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.

D. Demonstration and Instruction:

1. The Contractor shall cause the Sub-Contractor to provide demonstration and operator's instruction as required by the contract document.
2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any such event.
3. Agenda for each instruction session shall be submitted to the CxA at least one (1) week prior to the session.
4. The CxA shall be notified at least seventy-two (72) hours in advance of scheduled tests so that testing may be observed by the CxA. A copy of the test record shall be provided to the CxA and Commissioner.

5. Engage a Factory-authorized service representative to demonstrate City of New York service personnel to adjust, operate, and maintain specific equipment.

6. Instruct City of New York service personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.

7. Review and update data in O&M Manuals.

3.2 CONTRACTOR RESPONSIBILITIES FOR SUB-CONTRACTOR PERFORMANCE

A. The Contractor shall cause the Sub-Contractor to have the following instruction responsibilities in performing security system work. The commissioning responsibilities are as follows (all referrences apply to comissioning equipment and system only):

1. Perform commissioning tests as per the written procedures and at the direction of the CxA

2. Attend construction phase controls coordination meetings.

3. Participate in Security systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.

4. Provide information requested by the CxA for final commissioning documentation.

5. Include requirements for submittal data, operation and maintenance data, and instruction in each purchase order or sub-contract written.

6. Prepare preliminary schedule for Security system orientations and inspections, operation and maintenance manual submissions, instruction sessions, equipment start-up and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.

7. Update schedule as required throughout the construction period.

8. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.

9. Perform all verification and functional performance tests in the presence of the CxA as required.

10. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.

11. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA forty five (45) days after submittal acceptance.

12. Coordinate with the CxA to provide seventy-two (72) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.

13. Notify the CxA a minimum of two weeks in advance for start of the testing work.

14. Participate in, and schedule vendors and Sub-Contractors to participate in the operator's orientation sessions.

15. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.

a. Security equipment including but not limited to end devices, panel boards, enclosures, cabinets, power supplies, network interface(s) and all other equipment furnished under this Division.

b. Cameras

c. Identification readers

d. Intrusion sensors

e. Motion sensors and facility perimeter devices

f. Automatic gateway and portal latching devices

g. Logging and recording devices

h. Alarm and logging systems

16. The Contractor shall attend the 10-month warranty walkthrough with the City of New York service personnels and the CxA.

17. The Contractor shall ensure that the equipment suppliers document the performance of their equipment.

18. The Contractor shall ensure that equipment Suppliers perform the following tasks:

a. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York, to keep warranties in force.

b. Assist in equipment testing per agreements.

c. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

19. Refer to DDC General Conditions for additional responsibilities.

3.3 CxA's RESPONSIBILITIES

A. Refer DDC General Conditions for CxA's Responsibilities.

3.4 TESTING PREPARATION

A. Certify in writing to the CxA that Electronic Security systems, subsystems, and equipment have been installed, checked for proper connection and communication, calibrated, started and are operating according to the Contract Documents.

B. Certify in writing to the CxA that Electronic Security systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set-points have been recorded.

C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.

D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

E. Inspect and verify the position of each device and interlock identified on checklists.

F. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 GENERAL TESTING REQUIREMENTS

A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of Electronic Security testing shall include the entire installation, from the incoming power equipment throughout the low voltage system. Testing shall include measuring, but not limited to resistance, voltage, and amperage of system(s) and devices.

C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of automation system controllers and sensors.

D. Prepare detailed testing plans, procedures, and checklists for Electronic Security systems, subsystems, and equipment with guidance from CxA.

E. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under live conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

F. The CxA may direct that set points be altered when simulating conditions is not practical.

G. If tests cannot be completed because of a deficiency outside the scope of the Electronic Security system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

3.6 WORKMANSHIP

A. Provide the work in accordance with DDC General Conditions.

3.7 ELECTRONIC SECURITY SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Prior to performing Preliminary Testing, inspection, and/or final testing procedures, the Contractor shall insure the following:

1. Safe and proper operation of all components, devices or equipment, and the absence of extraneous or interfering signals
2. Proper grounding of devices and equipment
3. Integrity of signal and electrical system ground connections
4. Proper powering of devices and equipment
5. Integrity of all insulation, shield terminations and connections
6. Integrity of soldered connections and absence of solder splatter, solder bridges, debris of any kind

7. Proper dressing of wire and cable with labels matching as-build documents
8. "Wire-checking" of all circuitry, including phase and continuity
9. Preliminary targeting and setup of video camera assemblies
10. Mechanical integrity of all support and positioning provisions, i.e.: as provided for video cameras, monitors and any other equipment
11. Sequencing: If applicable, determine and record the sequence of energizing systems to minimize the risk of damage from improper startup
12. Proper operation of devices and systems in accordance with specified performance requirements
13. System is programmed for alarm reporting of each device and associated with the graphical maps
14. Verify system programming is defined.
15. Verify with Commissioner the provided designations for all devices.

B. Equipment Testing and Acceptance Procedures: Testing requirements are specified in Division 28. Provide submittals, test data, inspector record, and test instrumentation certifications to the CxA.

C. System Testing: Field testing plans and testing requirements are specified in Division 28. Assist the CxA with preparation of testing plans.

D. System Testing: Provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA.

E. The CxA shall determine the sequence of testing and testing procedures for each equipment item and component section to be tested.

F. Perform a Preliminary Inspection and Test to determine the operating status of components and systems prior to Final Acceptance Testing.

G. Testing Security Equipment, Enclosures, and Cabinets
1. Test each equipment enclosure for tamper alarm
2. Test each power supply battery for power loss alarm reporting
3. Test 120VAC power loss alarm
4. Test for communication loss with server reporting

H. Test power stand-by provisions (UPS, battery backup, generator backup)

I. Testing Electronic Access Control Doors
1. Doors with Automatic door operators
   a. Door is locked in secure mode
   b. Door is unlocked by manual command from system workstation in secure mode

c. Door is unlocked by time zone

d. REX does not unlock door

e. Door relocks on time zone

f. Door relocks during day mode on manual command from system workstation.

2. Doors or Gates with card reader

a. Door unlocks by use of the card reader for programmed unlock time and does not alarm when door is opened

b. Door is locked in secure mode

c. Door is unlocked by manual command from system workstation

d. Door is unlocked by time zone

e. Door relocks immediately when door closes after valid passage (does not wait for preprogrammed duration)

f. REX for door does not unlock door

g. REX for gates does not unlock gate

h. Door relocks on time zone

i. Door relocks during day mode on manual command from system workstation

J. Testing Video Surveillance System

1. Live viewing

a. Verify each camera live viewing at the monitoring workstation is in focus

b. Verify each camera live viewing at Central Command Post is in focus

c. During an alarm event verify camera and pre-programmed views associated with alarm event are displayed at the viewing location(s)

d. Verify camera identification match Owner defined description.

2. Recorded Images

a. Verify each camera viewing of recorded images at the monitoring workstation

b. Verify each camera viewing of recorded images at Central Command Post

c. Verify alarm event is recorded as specified in 28 23 00

3.8 OPERATION AND MAINTENANCE MANUALS

A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements.

B. Refer the DDC General Conditions for the Contractor and CxA roles in the Operation and Maintenance Manual contribution, review, and approval process.

3.9 INSTRUCTION OF FACILITY PERSONNEL

A. The Contractor shall have the following instruction responsibilities:

1. Provide the CxA with an instruction plan four weeks before the planned instruction.
2. Provide the service personnel with comprehensive instruction in the understanding of the systems and the operation and maintenance of each major piece of commissioned electrical equipment or system.
3. Instruction shall be recorded by the CxA and start with classroom sessions, if necessary, followed by hands on instruction on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing Sub-Contractor or manufacturer's representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.
6. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference. Instruction shall include:
    a. Use the printed installation, operation and maintenance instruction material included in the O&M manuals.
    b. Include a review of the written O&M instructions emphasizing safe and proper operating requirements, preventative maintenance, special tools needed and spare parts inventory suggestions. The instruction shall include start-up, operation in all modes possible, shut-down, seasonal changeover and any emergency procedures.
    c. Discuss relevant health and safety issues and concerns.
    d. Discuss warranties and guarantees.
    e. Cover common troubleshooting problems and solutions.
    f. Explain information included in the O&M manuals and the location of all plans and manuals in the facility.
    g. Discuss any peculiarities of equipment installation or operation.
7. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance of all pieces of equipment.
8. The Contractor shall fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.
9. Instruction shall occur after functional testing is complete, unless approved otherwise by the Commissioner.

END OF SECTION 28 08 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 28 10 00
Access Control & Video Surveillance

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Contractor shall provide materials, labor, equipment and services necessary to furnish, deliver and install all work of this section, as shown on the drawings, as specified herein, and or as required by job conditions.

B. The additional related sections that apply to the work within this section include the following:
   1. Division 8
   2. Division 26
   3. Division 27

C. Make adjustments to the work as may be necessary or requested in order to resolve physical space issues or conflicts preserve aesthetics and clearances and or avoid architectural features, elements, openings, structural members and or the work of other trades.

D. Typical details, where indicated, apply to each and every item of the project where such details are applicable.
   1. Typical details are not repeated in full on the plans, and are diagrammatic only, with the intent that such details shall be incorporated in full, throughout the project as applicable.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC general conditions section 01 33 00 "Submittal Procedures".

B. Special conditions :
   1. Pre-construction
      a. Product data sheets as specified herein.
      b. Original shop drawings as specified herein.
      c. Control systems/ programming submittals as specified herein.

2. During construction
   a. Pull schedules as specified herein.
   b. Progress reports as specified herein.
3. Post construction
   a. Record set of as built drawings as specified herein.
   b. Updated pull schedules as specified herein.
   c. Field tests reports as specified herein.

1.4 QUALIFICATIONS

A. The installer shall have a minimum of three years verifiable and demonstrated experience in the installation, operation and maintenance of large-scale and complex security systems and related technologies.

B. Contractor shall have successfully completed projects and installations of similar size, scope and complexity.
   1. The installation of all components, software and testing shall be accomplished by contractor/technicians who have been regularly installing systems of the size, scope and complexity of this project for a period of not less than two years and are properly trained by each manufacturer under this project scope. The contractor shall also be certified by the equipment manufacturer on the specific components being installed in their systems under this project scope.
   2. The contractor shall own and maintain tools and equipment necessary for successful installation and testing of the system components included in this scope and have personnel who are adequately trained in the use of such tools and equipment.
   3. The contractor will provide a complete list of all manufacturer certifications applicable to this project.

1.5 SCOPE OF WORK

A. This section covers the installation, control and operation of hardware, software, cabling and licenses for all security/ access control systems work.

B. This specification contains sections that calls out responsibilities for both the security contractor and the general/electrical contractor. Contractor must confirm any/all responsibilities or limitations as defined herein.

C. All functions and requirements identified in these specifications must operate simultaneously and to the fullest extent described. Any item in the specification which is omitted from the final equipment list, either unintentionally or intentionally, will be provided to the City of New York with no fee

D. The City of New York shall have no restriction as to the use and function of these technology systems. In the event that client uses any portion of the system prior to project completion, such use does not constitute acceptance of that system and the contractor is still required to perform all tasks as outlined in this document.

E. Contractor will provide the following:

1. Furnish all materials in new and unused condition, free from defects, damage or corrosion. All materials shall meet all applicable codes provided a standard has been established for the material in question
2. It is the sole responsibility of the contractor to ensure that all systems are fabricated, assembled and installed complete, including all normal, customary and required miscellaneous parts, components, hardware, materials, cables, connectors, power supplies, POE injectors, com ports, rack mount kits and any and all other supplies as may be necessary, but not specifically defined, or otherwise identified within these specifications.
3. Prior to procurement, the contractor shall review and verify all product specifications and manufacturer model and part numbers to ensure specified equipment and components meet the functional requirements defined within these specifications.
4. In the event that specified equipment and or components are back-ordered and or otherwise unavailable in time to meet the project schedule, and or have been discontinued between the date of issuance of these specifications and the response date, the contractor shall provide the manufacturer's specified current comparable and functionally equivalent alternate and or replacement model.
5. The contractor shall coordinate and confirm the final locations, colors and finishes of all security devices with the Commissioner and general contractor, including, but not limited to connection plates, inserts and wall panels, touch screens or intercom devices, wall boxes, interconnects , card readers etc.

1.6 CONTRACTOR REQUIREMENTS

A. The contractor shall provide all normal and customary technical, administrative and other support services as required to ensure satisfactory performance and on-schedule delivery of the contracted work.

B. The contractor is required to implement practices and procedures to meet the project's environmental performance goals, sustainable design performance criteria and include achieving the LEED certification as specified in section sustainable design requirements. Substitutions, or other changes to the work proposed by the contractor or their subcontractors, shall not be allowed if such changes compromise the stated LEED requirements.

C. The contractor shall staff the project with sufficient manpower as required to meet and maintain the project schedule and to keep pace with the work of cooperative trades.

D. Designate a qualified foreman. The foreman shall be present in the field at all times during the performance of the work.

E. Provide a supervisory work force sufficient to maintain efficient performance of the contractor's responsibilities.

F. Use only skilled and reliable work force and discontinue the services of anyone employed on this project upon written request by the City of New York, Commissioner, or Engineering Services.

G. Use personnel who are qualified, at minimum to perform all of the installation and testing work activities required..

H. The contractor shall provide a minimum of two qualified technicians, each of whom will have actively participated in the project and have a demonstrated knowledge and understanding of project scope, to conduct and perform all final system testing, calibration and adjustment, demonstration, diagnostic evaluation and or corrective action as required to ensure all equipment, components and systems conform to the project specifications.

I. The contractor shall exercise care and due diligence at all times and shall provide full and active cooperative participation during all phases of the project.

J. The contractor shall furnish all submittals in a timely manner and as otherwise specified herein

K. The contractor shall render and submit original shop drawings, which shall include, but shall not be limited to;

1. Schematic and block diagrams detailing all system equipment placement and type, circuits and wiring, connections and terminations, pin-outs, color codes and cabling id and numbering schemes.
2. Installation and mounting details including, but not limited to all equipment, component and device dimensioned location and installation details.
3. Elevation detail drawings including, but not limited to dimensioned structural mounting, backing and blocking; equipment and mount detail, device and junction boxes, low voltage rings, conduit and cable paths etc.
4. Provide all pertinent electrical, video/data /video and other required low voltage wiring specifications and details for coordination with related work performed by other trades..
5. Provide reflected ceiling plans as required.
6. Wiring riser diagrams, including all closet layout requirements, additional conduit requirements and infrastructure needs
7. Furniture integration detail drawings for coordination with work performed by other trades..
8. Dimensioned shop drawings for all components integrated within any furniture, millwork or other areas in this contract including, but not limited to wall mounted devices, ceiling mounted devices, floor mounted devices, display mounts, table boxes, and equipment racks etc.
9. Rack and equipment enclosure elevation drawings, including rack unit RU configuration, calculated power, thermal loads and management, cable management and ventilation "clear area" details and.
10. Detailed drawings and specifications for all architectural and aesthetic elements including, but not limited to wall mounted devices, ceiling mounted devices, floor mounted devices, display mounts, table boxes, and equipment racks etc., inclusive of colors and finishes.
    a. Coordinate final locations, colors and finishes with the Commissioner.
11. Complete and accurate record set as built drawings, which shall be provided to the Commissioner upon completion of the work.
12. Drawings provided as a part of this specification shall not be used and or submitted as shop drawings
    a. The contractor shall render and submit original shop drawings and submittals as required.

L. The contractor shall be responsible for the initial and final calibration and adjustment of the systems as specified herein.

M. Voice / data/ audio visual/ security and all other low voltage cable installation standards shall reflect NEC, ICIA, IEEE, TIA/EIA and BICSI standards. Manufacturers' instructions shall be used for in-process quality control and final acceptance of the work. The strictest of all requirements shall apply.

N. The contractor shall provide all necessary test equipment and accessories required to conduct and document system performance evaluations, demonstrations and acceptance testing as specified herein.
   1. All test equipment shall be fully functional and shall have valid certificates of calibration as applicable.

O. The contractor shall provide complete and comprehensive narrative and practical hands-on instructions in the proper operation, use, care and maintenance of the specified equipment, components and systems, to the personnel designated by the Commissioner.
   1. /Instructing shall be conducted by a suitably qualified instructor
      a. In the event contractor does not have certified and qualified instructors on staff for specific equipment, components and or software, a manufacturer's representative for such instruction will be provided by the contractor, at no additional fee to the City of New York.
   2. All instructing shall take place at the installed systems locations, after acceptance.
   3. The contractor shall provide a minimum of two hours of end-user instructions and one hour of advanced technical instructions for any system included in this specification.
      a. Advanced instructions will include a comprehensive review of system specifications and diagrams and detailed instruction in the modes of operation, routine service and maintenance, diagnostic troubleshooting and reconfiguration of the systems.
   4. The contractor shall provide follow-up instructions within sixty days of the completion of initial training, which shall be conducted at the discretion and convenience of the Commissioner.
   5. Comply with all applicable governmental regulations and with all federal, state, county, city, and other applicable codes, ordinances, and regulations and the most recent edition of technical standards and design guidelines including the latest amendments and all applicable addenda. See 1.16

1.7 PRODUCT DATA SHEETS

A. Product data sheet submittals shall consist of the following
   1. Cover sheet
   2. Date of submittal
   3. Project name and address
   4. Number of submittal
   5. Name and address of the contractor
   6. Table of contents with index
      a. Include page and item numbers of the corresponding specification section and/or drawing number of the contract documents.
   7. Product name and manufacturer
   8. Manufacturers' technical specifications and data sheets of all items specified herein.
      a. Submit only pertinent pages. Do not submit entire product catalogs.
      b. Clearly identify the specific product being submitted using appropriate markings and arrows. Contractor should only use highlighters or coloring that will appear on reproductions or photocopies.
   9. Identify any options and or accessories that are applicable to the project.
   10. Confirm and verify all product quantities and manufacturer model and part numbers are current, correct and complete, including required accessories and or options that are require for full and completely working security systems.
   11. Identify the installation location of each piece of equipment, including room number and or room name.

12. Identify special coordination requirements for the product
13. Identify "long lead" procurement requirements for the specified product as may be applicable

B. Preparation and transmittal
1. Each submittal shall be in accordance with the procedures outlined herein.
2. Bind and package each submittal with tabs and table of contents as appropriate
3. Sheet size shall be standard 8-1/2" x 11"
4. Submit all product data sheet submittals for each system, subsystem, or unit of work as one submittal
5. Submit three copies to the Commissioner U.O.N.

1.8 SHOP DRAWINGS

A. The contractor shall render and submit complete original shop drawings as specified within this section.

B. Drawings issued as a part of this specification shall not be submitted as shop drawings.

C. Each shop drawing submittal rendered by the contractor shall consist of the following
1. Title block
2. Project name and address
3. Number of submittal
4. Date of submittal
5. Name and address of the contractor
6. Drawing scale
7. Diagrams showing evidence of compliance with contract documents and coordination with other trades. See section 1.10 pull schedules as a part of shop drawing submittal.
8. Associated wiring diagrams of all equipment, with types and model numbers specified
9. Fully dimensioned housing and mounting drawings, including information on finishes
10. Specific notation of field measurements at accurate scale
11. Identification of specific products and materials used
12. Reference room numbers and or room names on all shop drawings
13. Compliance with specified standards
14. Dimensions at accurate scale

D. Preparation and transmittal
1. Each submittal shall be in accordance with the procedures outlined herein and shall provide adequate space for action marking adjacent to the title block.
2. All sketches and drawings shall be issued by the contractor using the following sheet sizes: a. Sketches sheet size shall be 8-1/2" x 11" b. Drawings: sheet size shall be 24" x 36"
3. Submit all shop drawing submittals for each system, subsystem, or unit of work as one complete submittal.
4. Submit three copies to the Commissioner U.O.N.

1.9 PULL SCHEDULES

A. The pull schedule shall include, but is not limited to:
1. Cover sheet

2. Project name and address
3. Number of pull schedule submittal
4. Date of pull schedule submittal
5. Name and address of the contractor
6. Pull schedule data field
   a. Field 1: room number /location of device
   b. Field 2: sequential cable number
   c. Field 3: voice / data / video/ security cable id
   d. Field 4: cable type
   e. Field 5: equipment manufacturer and model number
   f. Field 6: equipment serial number
   g. Field 7: jack and or connection label as applicable.
   h. Field 8: rack label as applicable

B. Preparation and transmittal
   1. The pull schedules will be computer-generated and must be submitted to the Commissioner for review.
   2. Submit three copies to the Commissioner.
   3. The pull schedule will be submitted with the shop drawings

1.10 COMMISSIONING

A. Prior to final acceptance of the installation the following testing and documents shall be performed and provided to the Commissioner.
   1. Perform and document a complete system acceptance test.
   2. Provide testing reports indicating all devices tested, pass/fail status, and actions taken to resolve problems on failed tests.
   3. Provide "as built" drawings showing each device and wiring connection in hard copy and in electronic format
   4. Provide a complete set of operating instructions for hardware devices and a complete software user manual.

B. Closeout
   1. The contractor shall submit a complete, updated drawing set and pull schedules accurately reflecting the completed work including all field changes, modifications and or revisions.
   2. The contractor shall individually bind and submit to the Commissioner for review and approval, all record set, as built drawings, updated pull schedules, user guides and manuals, equipment lists with serial numbers, test results and a completed check out list, for each contracted system, prior to issuing closeout documentation to the Commissioner.

C. Acceptance
   1. Once the testing has been completed, as-builts and testing documentation delivered to the Commissioner, to satisfy that all work is in accordance with the contract documents, the Commissioner shall notify the contractor in writing of the acceptance of the work performed. The date of this acceptance shall constitute the commencement of the warranty period.

1.11 REPORTING

A. The contractor shall submit weekly progress reports, which shall include, but shall not be limited to;
   1. Installation schedule risks, issues, conflicts and or delays.
   2. Status of the installation, detailing all remaining tasks and proposed completion dates.
   3. Percentage of completion of each activity
   4. Gantt chart format showing continuous vertical lines to identify the first working day of each week.
   5. Illustration defining how the start of a given activity depends on completion of preceding activities, and how the completion of a given activity may restrain or constrain the start of subsequent activities.
   6. Identification of the critical path.
   7. Requests for receiving major equipment and material shipments.
   8. Requests for subcontractor access to the job site.
   9. Requests for utilities and or services disconnection and or connection.
   10. Delays and stoppages.
      a. Note that delays and or stoppages shall not affect the scheduled completion date, unless approved in writing by the Commissioner.
   11. Emergencies and accidents.
   12. Losses of material and or property.

B. Preparation and transmittal of progress reports
   1. Each item shall include
      a. A detailed explanation;
      b. A description of the actions to be taken;
      c. The party responsible for executing those actions.
   2. Progress reports shall be generated and delivered to the Commissioner three business days prior to the weekly project meeting, for the duration of the project.

1.12 DOCUMENTATION

A. Record set drawings / as-built drawings
   1. As mentioned herein this specification the record set, as-built drawings, shall include but may not be limited to equipment and cabling layout and location, schematic and block diagrams, equipment and cable labeling, cable termination points, equipment rack and room layouts and equipment installation details.
   2. The as-built drawings shall accurately reflect and include all field changes made during construction and shall completely and accurately reflect the conditions of the installed systems at the time of acceptance.

B. Operation and maintenance manuals
   1. These manuals shall utilize a combination of narrative text, graphics and images to describe to the user, how to properly operate and maintain the systems.
      a. The user of this manual is presumed to be technically competent, but unfamiliar with the specific systems
   2. Manuals shall be tabbed and indexed by room and subsystem.
   3. Manuals shall include the frequency and scheduled intervals of all system maintenance requirements.

4. The operation section shall describe all modes of normal operation and the procedures necessary to activate and properly operate each system so as to meet the functional use requirements described within the specifications.
5. The operation section shall include a laminated 8.5 in. X 11 in. "quick reference guide" to the basic operation and use of each installed system.
6. The operation section shall include simplified block diagrams for each system and subsystem, with all input and output circuit cable and terminal block numbers and jack field circuit ID Designations.
   a. A copy of this block diagram drawing shall be laminated and included within each equipment rack or equipment location.
   b. All block diagrams shall reference room numbers and or room names.
7. The maintenance section shall provide a recommended maintenance schedule, with reference to the applicable pages in the manufacturer's maintenance manuals.
8. The maintenance manual shall include completed copies of all manufacturer warranty cards, indexed by component type and room number and or room name.
9. The maintenance section shall include a list of all required "consumable" products required to maintain the normal operation of each system and or subsystem, including, but not limited to filters, batteries and lamps.
10. In the event that adequate and or sufficiently detailed service or maintenance information is not provided by the manufacturer, the contractor shall provide the information necessary to ensure proper care and maintenance.
11. At acceptance testing, the contractor shall provide two final revision copies of the operation and maintenance manuals to the Commissioner.
12. It is expected that user instructions shall be based on the use of these manuals.
13. The contractor shall provide two laminated copies of the record set as built drawings SEC drawings for each specified system.
14. Until final record set of as-built drawings are approved and accepted, an up-to-date field set of drawings will be maintained in the site office of the Commissioner.
15. The contractor shall provide bound copies of product data sheets, which shall be sorted in accordance with the specifications section.
16. The contractor shall provide bound copies of all product maintenance manuals.
17. Pull schedule as required per this specification.
18. Software documentation as required per this specification.
19. The contractor shall deliver three complete copies of all closeout documentation to the Commissioner, prior to scheduling system demonstration and acceptance testing.

1.13 SOFTWARE SPECIFICATIONS

A. Software shall be defined as any and all programs, routines, symbolic languages and or other data and or instructions which run or operate a computer and or processor included within the contracted systems, and shall include, but is not limited to the control of all equipment listed within this specification and as shown on all related drawings, including, but not limited to all security equipment, components and devices, lighting and dimming systems, motorized shades and drapes, fire alarm systems, occupancy sensors and partition sensors.

B. The operational capabilities and system functions defined within these project plans and specifications are intended to describe design intent and are provided for reference only. It is the responsibility of the

contractor to ensure that all functional elements of the plans and specifications are successfully implemented as described herein.

1. When applicable contractor provided user-interface graphics, logos, icons, symbols and nomenclature shall be submitted to, and approved by the City of New York.
2. Demonstration and acceptance testing will be performed upon documented completion of commissioning and certification, at which time, all source code and graphic user interfaces shall be complete, error free and fully functional.
3. The contractor shall meet with the City of New York to review end-user feedback and or observations made during the initial period of use.
4. The contractor shall make minor modifications to the system programming as may be required to simplify and or enhance the end-user experience.
5. Minor programming modifications shall not include changes which alter the specified design intent and or requirements.

1.14 WARRANTY

A. The contractor shall warrant all work including, but not limited to all equipment, components, hardware, materials, installation and integration work and services, programming and software, against defects in workmanship and or materials for a period of one year, commencing upon the date of acceptance by the Commissioner. Where manufacturer's warranty is longer than one year, the contractor shall offer the extended warranty.

B. Provide a manufacturer's warranty for the systems operation and performance. Documented certification of training/instructions must be presented to client with the contractor's response.

C. In order to maintain certain manufacturers' warranties, specified and covered equipment must be installed, configured, programmed, aligned and or otherwise serviced solely and exclusively by factory authorized technicians and/or factory representatives.

D. All equipment provided by the contractor shall be new and shall meet or exceed all latest and current published specifications issued by the manufacturer

E. The contractor shall provide only the latest model, revision or version of a specified piece of equipment, component and or software, effective at the time of their response.

1.15 JOB CONDITIONS

A. Verify all existing conditions. Refer to the Commissioner for coordination and clarification of any discrepancies concerning existing conditions, drawings, and specifications.

B. Clarify with the Commissioner, all locations including conduit and cable paths. Where discrepancies occur and instructions have not been obtained, abide by the direction and decision of the Commissioner

C. Contractor is solely responsible to conduct ongoing surveys and inspections of all work areas, throughout the construction process, in order to locate and confirm all penetrations, poke-thru and floor boxes, furniture openings, sleeves, conduit and conduit stubs, bushings, cable trays, blocking and backing, in-wall display

mount and conduit termination boxes, security device boxes, low voltage rings, pull strings, and all other elements associated with this work provided by others that support the this installation.

1. If during the course of ongoing survey and inspection, the contractor observes a condition which appears to conflict with the project plans and specifications, the contractor shall immediately notify the Commissioner of the potential discrepancy.
2. The project/construction manager shall evaluate the reported condition and provide the contractor with direction as may be required

D. It shall be the contractor's responsibility to cooperate, at all times, and to the fullest extent, with any and all other trades performing work on the premises, in order to avoid delays in the work, lost time, work stoppages, interference and or other inefficiencies.

E. The contractor shall be responsible for meeting all project schedules and milestone dates.

F. Contractor will furnish, install, and terminate all required wire and cable to the extent not provided by others so that all SEC systems will operate as complete and functioning per the design intent.

G. Comply with all requirements regarding the use of cable with respect to spread of fire. Refer to drawings for identification of air plenum and other spaces having special cabling requirements.

H. It is the responsibility of the contractor to provide wiring that is in compliance with all applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions

I. Comply with all seismic requirements regarding the installation of all hardware, mounts, equipment and or components.

J. It is the responsibility of the contractor to employ installation means and methods that are in compliance with all applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions

K. The contractor shall be solely responsible for the care, custody, safety and protection of all installed and configured systems and non-installed, stored materials, tools and supplies.

1.16 CODES AND STANDARDS

A. All work performed under the this scope / specification shall conform to the all requirements stated herein and to any/all applicable codes and standards as defined by all federal, state and local municipalities having jurisdiction. This is most notably including but not limited to;

1. Current NEC 2020 / National fire protection association
2. NFPA 70 national electrical code current and applicable sections including, but not limited to article 250 grounding and article 800 communications circuits.
3. Underwriter's laboratories, inc.
   a. UL listed
   b. UL approved
4. Building officials and code administrators /BOCA international, inc.
5. International building code 2012

6. In the event that a conflict occurs, the contractor is directed to meet, satisfy, adhere to and or otherwise comply with and conform to the most stringent requirement under the scope of this specification.

1.17 DELIVERY, STORAGE, AND HANDLING

A. Delivery
   1. Deliver materials and equipment in sufficient time to allow for inspection, installation and testing in accordance with the project schedule.
      a. All arrangements for access and unloading at the site shall be coordinated and scheduled with the Commissioner, not less than forty-eight hours prior to the scheduled delivery
   2. Movement, staging and layout of material, either at the time of delivery or subsequently, shall be the sole responsibility of the contractor
   3. The contractor shall be solely responsible for ensuring that all equipment can be successfully delivered to the installation locations including, but not limited to elevator cab size and stairwell dimensions and all door, corridor and turn radius dimensions.
   4. Delivery schedules, which may be affected by environmental conditions, shall be noted in writing to the Commissioner, not less than twenty-four hours prior to the scheduled delivery.

B. Storage and protection
   1. The contractor shall be solely responsible for the care, custody and safekeeping of all equipment, components, materials, tools and supplies while stored on the job site, including all tools, materials and test equipment, which are, and shall remain the property of the contractor.
   2. The contractor shall take all reasonable and necessary precautions to protect all work from dust, debris and damage during construction.

1.18 CLEAN-UP

A. The contractor shall be responsible for the cleanup and restore of all areas and work affected by this installation.

B. The contractor shall, on a daily basis, remove all debris created, caused, or resulting from this work, including all cut and removed cables, connectors and all other work- related debris.

C. Prior to acceptance of work, all areas used or entered by the contractor must be cleared of any materials or debris caused directly or indirectly by the contractor, to the satisfaction of the Commissioner .

1.19 QUALITY ASSURANCE

Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 GENERAL

A. The requirements in the section shall apply to all areas receiving systems, subsystems and or equipment and components as described herein.

B. Provide materials and equipment conforming to the applicable requirements of:
1. Underwriters Laboratories :UL
2. National Electrical Code : NEC
3. American National Standards Institute : ANSI
4. Federal Communications Commission : FCC

C. Contractor shall provide only equipment, components and materials, which are new, free from use and fully covered by all applicable manufacturers' warranties.

D. Contractor will provide the equipment as required by the design intent herein. Only current-model components, equipment and materials shall be provided. Do not provide obsolete or discontinued models.
1. Review all materials and equipment immediately prior to procurement and or installation and inform the Commissioner of any obsolete or discontinued items and or products.
2. Review all equipment lists, confirming product availability and delivery lead time with manufacturers and distributors.

E. In the event that unplanned delays or backorder status of specified products may adversely impact the project schedule, the contractor shall propose equivalent replacements and or upgrades, at no additional fee to the City of New York.

2.2 APPROVED MANUFACTURERS

A. This security system is based on the following product manufacturers and performance specification as provided below:
1. Access control / System and Software: TYCO / C-Cure or approved equal
2. Intercom : Buttefly MX or approved equal
3. Electric strike manufacturer: See door schedule
4. Electric lock manufacturer: See door schedule
5. Door contact - recessed manufacturer: GE-Sentrol or approved equal
6. Card reader manufacturer: HID multiclass or approved equal
7. Access control composite cable manufacturer: West Penn or approved equal
8. Access control reader cable manufacturer: West Penn part or approved equal
9. Access control door contact cable manufacturer: West Penn or approved equal
10. Access control REX cable manufacturer: West Penn or approved equal
11. Access control lock cable manufacturer: West Penn or approved equal
12. Category 6 cable manufacturer: General or approved equal
13. Device power supply manufacturer: Altronix or approved equal
14. 24 port POE gigabit switch manufacturer: Hewlett-Packard or approved equal
15. Patch panels 24 & 48 port: Panduit or approved equal

16. Wire managers and rack accessories: Middle Atlantic or approved equal

2.3 PRODUCT - ACCESS CONTROL SYSTEM REQUIREMENTS

A. The access control software shall be interfaced to control the new access points, traditional door locks and monitor input points, and relay controlled outputs located throughout the new buildings as documents on the contract drawings and as specified herein.

B. The access control software shall meet the following, minimum design and performance specifications.
1. Software shall enable the City of New York to pre-populate the access control database.
2. Software shall provide and utilize "wizard" style interactive guidance to allow the system administrator or operator to perform standard configuration tasks in a step-by-step process.
3. Software shall include and support digital interfacing between other security systems, as required by design.
4. Software shall support the capture of cardholder images and the creation of photo id badges integrated completely within the software application.
5. Software shall support user-defined data fields, in addition to those required by the system for basic cardholder management.
6. Software shall support user-defined macros to allow system activities and events to trigger pre-configured actions.
7. Software shall allow system operators to monitor operator selected doors in order to perform cardholder verification. With each card transaction, the stored image associated with that card will be immediately displayed on the operator workstation.
8. Software shall support the monitoring of input points at selected areas, as shown on the drawings, to provide alarm or event monitoring of these points and report changes in status for these input points to the operator through a real-time display.
9. Software shall support the control of elevator floor selection, where required by design and as indicated on the drawings, through associated field hardware.
10. Software shall support output control relays at selected areas, as shown on the drawings, to control external devices and interface with other systems.
11. Software shall support alarm and event filtering to allow user-defined exceptions to normal alarm and event displays to system operators.
12. Software shall include graphical maps displayed on selected system workstations to indicate the location of events, alarms, and system field devices on site specific maps. Each graphic or icon will be interactive to allow operator to select associated commands for that device from the directly from the icon.
13. Software shall support precision access to allow each cardholder to be provided access privileges to specific doors in addition to any doors included in their assigned access code.
14. Software shall interface with common radio paging services and email servers to enable system alarms, events, and other notifications to be transmitted to pre-selected pagers and email recipients.
15. Software shall include a custom report designed to allow the creation of user-defined reports. Software shall archive all events in a system event file and retain all of the current events until an archive is performed.

C. The access control software shall be capable of the following functions.
1. Software shall support, and operate on, an unlimited number of computer workstations.

2. Software shall support unlimited system users. Each system user may be defined specific privileges to perform software application functions.
3. Software shall interface with, and support, 255 system control processors /scp.
4. Software shall interface with, and support input points and output relays.
5. Software database shall have the capacity for unlimited card holders.
6. Software shall interface with, and support card readers as indicated on the drawings.
7. Software shall support time zone definitions capable of being associated with access codes or door command functions.
8. Software shall support holiday definitions of variable duration that may be grouped to associate with time zone exceptions on specific dates defined as holidays.
9. The system software must be able to support wifi locks.

D. The access control software shall be : TYCO
1. The chosen access control system is manufactured by Tyco. The system is managed from the 1st floor MDF room for.
2. The access control system shall include but not be limited to data gathering panels on site and in cloud environment, card readers, door position switches, passive infrared devices and user licenses etc.
3. Coordinate all connections to the LAN with low voltage cable installer as well as the Commissioner.
4. Store front locations are to be coordinated directly with the Commissioner. Contractor shall provide appropriate allowance for wired/wireless connectivity to these locations as shown in the sec drawings and architectural elevations.
5. When applicable elevator access control shall be integral to security access, control system and shall be capable of providing full elevator security and control through dedicated controllers without relying on the control-station host pc for elevator control decisions.
6. The access control system as specified shall allow the definition of floor access authorizations at designated by elevator lifts, and assign them to card holders. If a cardholder presents their card at the elevator reader, the system shall activate the elevator floor buttons the cardholder has authorized access
7. System setup shall, through programming, automatically secure and unsecure each floor select button of a car individually by time and day. Each floor select button within a car shall be separately controlled so that some floors may be secure while others remain unsecure
8. Access control panels and support equipment shall be located in centralized technology closet. This will be used to support doors that are centrally wired and all doors requiring centralized connectivity must be coordinated in the field by vendor and according to hardware schedule.

PART 3 - EXECUTION

3.1 GENERAL

A. Refer to DDC General Conditions for execution requirements.

B. The contractor shall comply with all safety guidelines and regulations established for the project.

C. Contractor will review all related electrical, telecommunications, audio visual, security, millwork and architectural drawings for coordination with other trades.

D. Contractor will compare all related electrical, telecommunications, audio visual, security, millwork and architectural drawings and specifications with these drawings and specifications, report any discrepancies to the Commissioner, Contractor will field survey and confirm the location and required size of all conduit, in-wall boxes, sleeves, penetrations, raceways, cable paths, cable tray, junction boxes and device boxes provided by others, which are intended for use in their installation of the specified systems.

E. Contractor will prepare all pre-construction submittals as specified herein.

F. Contractor shall provide all equipment, unless otherwise noted. Equipment shall be installed in accordance with the manufacturers' recommendations. This information shall be provided to the Commissioner at the time catalog cuts and shop drawings are submitted for approval.

G. Contractor will complete fabrication, installation, integration, testing, commissioning and certification of all work specified herein. Contractor will perform all settings, adjustments and programming required for a complete and operational system as directed by the Commissioner.

H. Contractor will follow manufacturers' instructions for installing all video/data/voice or other low voltage cabling. Where instructions are unavailable, follow approved industry practices/best practices.

I. Contractor shall maintain a current copy of this specification and related drawings at the job site at all times.

J. Any/all restoration or changes caused by contractor's neglect shall be made at contractor's expense. Protect finished work of other trades from damage or defacement and remedy any damages as required.

3.2 INSTALLATION

A. Installation shall include the delivery, unloading, setting in place, rack-mounting, fastening to or within furniture, millwork, walls, floors, ceilings, counters or other structures where required; installation and interconnection of all wiring of the system components; equipment alignment and adjustments; and all other work whether or not expressly described or defined herein, which is necessary to result in the complete and satisfactory installation of fully operational systems as described within the project plans and specifications herein.

B. Identification for all equipment racks shall bear an identification plate, provided and installed by the contractor, which shall be mounted on the front of each equipment rack

C. Engraving shall be yellow/gold filled times new roman lettering on a black background or as appropriate to the identification plate material

D. All work shall be performed in accordance with, but not limited to these specifications and drawings and the best practices associated with such work.

E. All work shall be performed in accordance with the applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions

F. If, in the opinion of the contractor, an installation practice is desired or required, which is at variance with, and or contrary to these specifications or drawings, a written request for modification shall be made to the Commissioner.
   1. Modifications shall not commence without prior written approval of the Commissioner.

G. All equipment shall be firmly secured in place unless requirements of in-use motion and or portability dictate otherwise.

H. Fastenings and support hardware shall be grade 8 or better and shall be sized as required to support their loads with a minimum safety factor of no less than five and with maximum tolerances as specified by the manufacturer, or whichever is greater.

I. The contractor shall be solely responsible for ensuring that all installation means and methods conform to the applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions.

J. All boxes, plates, panels, equipment and other project elements shall be properly secured and installed plumb, level and square.

K. All wall mounted back boxes shall be provided in coordinated fashion with the schedule of the general contractor and shall be pre-drilled to meet conduit specifications.

L. With regard to the installation of equipment and cable, thoughtful consideration shall be given not only to operational efficiency, but also to overall aesthetic factors.

M. All cables, regardless of length, shall be marked with wrap- around number or letter cable markers at both ends as specified herein. There shall be no unmarked cables at any place, point or location in any system or subsystem.

N. All inter-rack cabling shall be neatly installed, secured, dressed, and adequately supported. Audio and video cabling shall be separated from each other and from power cabling.

O. Terminal blocks, boards, strips, or connectors shall be furnished for all cables, which interface with racks, cabinets, consoles, or equipment modules.

P. All cables shall be neatly grouped according to signal type and level. In order to reduce crosstalk and other types of signal contamination, separate groups shall be formed for the following cables;
   1. Power cables
   2. Control cables
   3. Video cables
   4. Audio cables
   5. Voice/data cables
   6. Any/all low voltage cables not defined above

Q. Maintain minimum twelve-inch separation between all low voltage and telecommunication cables running exposed in ceiling or floor voids and parallel electrical cables/conduits.
   1. Avoid electromagnetic interference - EMI route cables to maintain the following minimum distances:

a. Twelve inches from high voltage lighting
b. Thirty-six inches from power lines of 5 KVA or greater
c. Forty inches from transformers or motors

R. No cable shall be installed having a bend radius, less than that recommended by the cable manufacturer.

S. Cable and wiring shall be protected at all times during installation.

T. All cable runs shall be continuous, with no factory or field splices.

U. All cabling, wiring and equipment shall have an independent means of support furnished and installed by the contractor.
1. At no time, shall an audiovisual system cable, wire or component be supported on or by sprinkler pipes, HVAC ducts, lighting fixtures, ceiling grid and or tiles and or any other equipment or infrastructure.
2. All installation means and methods shall conform to the applicable manufacturers' recommendations, standards, regulations and requirements stated herein and the DDC general conditions
3. Follow room boundaries when pulling cables through ceilings for distribution into walls, conduits, wiring channels, outlets, etc
4. All cable distribution from the communications/technology closets or racks to all work locations except as noted, shall be run in the voids above ceilings as shown on drawings. Ceiling support grids and service hangers shall not be used to support cabling.
5. Cable shall be loose bundled into cable supports. Use only approved re-enterable cable ties to secure cables in overhead distribution.

3.3 CABLES AND CONNECTORS

A. All voice /data - audio / video – security and control cables are based on the following acceptable product manufacturers and must have all the appropriate performance specifications and criteria. All other cable types are to be submitted to the Commissioner and the City of New York for consideration and approval;
1. General
2. Belden
3. West Penn
4. Creston
5. Extron
6. Or approved equal

B. Jacks, faceplates and wall outlets at the user locations, termination blocks and individual lateral cables shall be labeled with, at minimum machine generated black uppercase lettering on a permanent adhesive label stock, covered with a permanent water resistant sealer. Labeling stock and/or lettering must be used that provides a high contrast with the color of the terminating equipment, faceplate or cable.

C. If at any time during the job the permanent cable tag becomes illegible or is defaced or removed, immediately replace it with a duplicate pre-printed cable tag.

D. Cable identification system shall be via color coding in accordance with the eia-606 standards.

1. Place labels on both ends of the cable at least 4 inches from the point at which the cable is terminated on the connector or terminal block.
2. Provide permanent, machine generated cable tags. Temporary tags are acceptable only during construction. Label each tag with the appropriate cable number as shown on the drawings and as indicated on the cable schedules provided by the Commissioner and the City of New York
3. Cable identification numbers when provided on plans are presented in an abbreviated format. Contractor is required to provide all cables ID's and they will, at minimum indicate the floor, originating closet/rack id, and the sequential cable number as shown on contractors drawings.

E. All cable installed without conduit shall be plenum rated and shall match the same performance specifications of the manufacturers approved cables for this installation.

F. Cables running in areas exposed to environmental factors such as, but not limited to, UV, chemicals, direct burial, etc. Shall be rated for such exposure and shall match the performance specifications of the manufacturers approved cables for this installation.

G. All cables shall be cut to the length dictated by the cable run. No splices shall be permitted and cable slack shall be as follows .any cable length not defined below must be confirmed by the Commissioner.
1. Provide a minimum of 12-inches of slack at each terminal box or behind each faceplate after jack installation is completed to allow for easy dismounting and extension of outlet covers and wire terminations.
2. Provide a minimum of 2-feet slack in a loop in UTP at the head of each stub-up or distribution conduit.
3. Provide a minimum of 12-feet slack in a loop in optical fiber cable at its point of entry to an equipment room.
4. Provide a minimum of 15-feet slack for each mounted wireless access point outlet.

H. All rack wiring connections and all equipment mounted in drawers or on slides, shall include interconnecting cables with a service loop of sufficient length so as to facilitate access and freedom of movement during installation and servicing.

I. No cable shall be installed with a bend radius less than that recommended by the cable manufacturer.

J. Connector types
1. Connectors for all signal types are to be submitted to the Commissioner for approval

K. Patch panel assignments
1. All patch panels shall be wired so that signal "sources" outputs appear on the upper row of a row pair; and all "loads" inputs appear on the lower row of a row pair.

L. Patch panel designation strips
1. All audio and video patch panel designation strips shall utilize alphanumeric identifications and descriptive information.
   a. The jack position in each horizontal row shall be numbered sequentially from left to right.
   b. The horizontal jack rows shall be lettered sequentially from top to bottom.
   c. The alphanumeric identification of each jack shall be included on the functional block drawings, as well as on reproductions of these drawings, which shall be mounted in an appropriate location near the patch bays.

M. Fire stopping system
1. Seal all penetrations through fire rated walls, floors and walls created by or made on the behalf of the contractor so that the original fire rating of the floor or wall is maintained as required by article 300-21 of the national electric code.
2. Contractor shall use only fm approved fire-stopping materials and methods. All materials and methodologies shall be submitted to the project manager prior to utilization.
3. Install approved penetration sealant material that has passed fire exposure testing in accordance with standard time-temperature curve in the standard, UL, ASTM e 119, and NFPA 251 and the hose stream test in accordance with UL.
4. Install approved penetration seal materials in accordance with design requirements and manufacturer's instructions. All substitutions must be approved by the Commissioner.
5. Provide removable fire-stopping pillows IPC flame safe seal bags or approved equivalent, in an approved fashion in openings greater than 4" diameter, or 4" x 4" square cross section. Provide wire mesh grate over bags as recommended by manufacturer subsequent to installation.
6. Verify that all penetrating elements and supporting devices have been installed and temporary lines have been removed.
    a. If forms of damming materials are installed, they shall be removed after the designated cure time.

N. System checkout
1. Before acceptance tests are scheduled, the contractor shall perform comprehensive system tests and checkouts
2. The contractor shall furnish all required test equipment and shall perform all work necessary to determine and or modify performance of the system to meet the requirements of this specification.
3. During performance testing, all equipment shall be operated under standard conditions as recommended by the manufacturer
4. Test and certify all audio and video systems for compliance with the performance standards using the test procedures defined later in this specification
5. Maintain documentation of all performance tests for reference by the Commissioner and the City of New York during the system acceptance test.
6. At the conclusion of testing, return all equipment settings to previously calibrated "normal" operating positions.
7. Provide written records of all test results in spreadsheet form.
8. Check and confirm all control functions for proper operation, throughout the entire signal path, from all controlling devices to all controlled devices.
9. Adjust, balance and align all equipment for optimum quality and to meet the City of New York's approval and manufacturer's published specifications.
10. Establish and mark "normal" settings for all level controls and record these settings in the "system operation and maintenance manual".
11. The contractor shall provide test results and settings for all equipment and systems to the Commissioner at least three business days prior to scheduled acceptance testing.
12. The contractor shall notify the Commissioner, in writing, that the work is complete and ready for acceptance testing by the Commissioner.
    a. The work shall be considered ready for acceptance testing when the contractor notifies Commissioner, in writing, that the following conditions are met:

1) The contractor has pre-tested all systems such that all sub- systems, functions, software and equipment are properly installed, set-up, configured, de-bugged and fully operational as specified.
2) The contractor has supplied the Commissioner with the written test results and documentation as listed above, for all rooms and systems.
3) The contractor has supplied the Commissioner with manuals, instruction materials and all other required as-built documentation, revised to reflect comments and or revisions arising from the review cycles listed elsewhere within this document.

13. Should the systems not be ready for testing by the Commissioner at the date and times indicated by the contractor, system acceptance testing may be rescheduled at the sole discretion of the Commissioner

3.4 GROUNDING

A. All grounding shall conform to all applicable national electric code requirements including, but not limited to article 250. See 1.16

B. The contractor shall be solely responsible for ensuring all work provided under this scope is free of crosstalk, hum, buzz and or other defects or anomalies resulting from improper grounding.

C. A single, primary "system ground" shall be established for each system. All grounding conductors shall connect to this primary system ground.
1. The system ground shall be provided in the equipment racks and shall consist of a copper bar of sufficient size to accommodate all secondary grounding conductors.

D. Under no condition and in no circumstance, shall the ac neutral conductor, either in the power panel or in a receptacle outlet, be used for a system ground.

E. It shall be the responsibility of the contractor to follow good engineering practices, as outlined above, and to deviate from these practices only when necessary to minimize crosstalk and to maximize signal-to-noise ratios in the audio, video, and control systems.

3.5 CABLE INSTALLATION

A. Special conditions
1. Furnish and install communications cables per the drawings and specifications provided by the Commissioner and per the manufacturer's recommendations.
2. Install each station cable as an uninterrupted conductor section from the IDF closet to the user-end termination point, as indicated on the drawings, without splices or mechanical couplers between the points of origin and termination.
3. Where horizontal cables exit trays to run to device locations, contractor shall furnish and install any additional j-hooks with the appropriate mounting hardware every 5-feet of cable maximum for open cable runs. J-hooks shall not be fastened to suspended ceiling support structures, electrical or plumbing piping or any other trade work.
4. Provide all other outlet configurations in accordance with the drawings and manufacturers recommendations.

5. All wall, ceiling, outdoor and indoor cameras shall have a 2 gang back box that is protected from weather, vandalism etc, installed prior to security contractors final connection.
6. Unless otherwise noted, route all intra-building station cables above the finished ceilings, transitioning vertically to wall mounted back boxes and/or surface-mounted wiring channels via conduit stub-ups into the ceiling void or to floor boxes or poke-thru fittings to the floor above, as required.
7. Label each outlet and each cable with an appropriate id number.
8. Do not exceed a pulling tension of 25 lbs. On 4-pair UTP cables.
9. To limit the incidence of micro-bending of the individual fiber strands, use mesh-type, swivel-eye pulling grips for all fiber optic cable pulling. This type of pulling grip is also recommended for all other building cable, as required.
10. Door locations will be installed in various configurations as noted on the drawings. All cables will be plenum rated. Station locations are indicated on the plans using a unique designation as defined on the drawing symbol legend. All locations and mounting heights must be confirmed with the drawings.

3.6 IDF CLOSETS

A. All cables, after entry into the equipment rooms must be secured to backboards and dressed into supports. The general/electrical contractor shall attach the cables where required to plywood backboards using Velcro-type re-enterable cable ties at spacing of approximately 12 inches. Velcro cable ties shall be secured to backboards using #10 machine screws and metallic washers, or rigid tabs.

B. Support all cables mounted onto patch panels with strain management bars on rear of rack.

C. Route cables from work locations into equipment rooms via overhead distribution. Maintain overhead distribution wherever possible within equipment rooms.

3.7 TEST EQUIPMENT

A. The contractor shall provide all appropriate test equipment as. Equipment shall be factory calibrated and fully operational for acceptance testing;

B. Test equipment minimum requires are as follows;
   1. Metallic cable pair tester: independent technologies, test-all iv or 25, Siemon Company multi-test mt-5000 or equivalent
   2. 4-pair UTP automated cable tester: tester shall be compliant with ANSI/TIA/EIA-568 provide bi-directional testing and test in excess of category 6 permanent link and channel requirements. Test equipment must be approved by the Commissioner prior to use on the job. Agilent Wire scope 350, Micro test Omni scanner, Fluke DSP 4000 or approved equal my be used.

3.8 CABLE TESTING

A. Test all cables installed.

B. Pre-installation inspection.

1. Visually inspect all cables, cable reels and shipping cartons for shipping damage. Return visibly damaged items to the manufacturer.
2. Perform an end-to-end test for continuity, ground fault, shorts and crossed pairs for each cable pair/conductor.

C. Post installation testing
1. Test only completed systems. Partial or statistically sampled testing is not acceptable, except by prior, written approval from the Commissioner
2. Perform an end-to-end test for continuity, ground fault, shorts and crossed pairs for each cable pair/conductor including tie cable to fire alarm system.
   a. Test cable pairs from the work area outlet, through all conductors, patches and cross connects, to the equipment room
   b. Test horizontal cable pairs not cross-connected to backbone from their furthest termination point to the work area outlet.
   c. Test backbone cable pairs not cross-connected to horizontal cables from their furthest termination point to the equipment room,
3. Any Required 4-pair CAT 6 and CAT 6a UTP: in addition to end-to-end tests listed above
   a. Conduct a permanent link test of each cable including: wire map, length, insertion loss, next loss, psnext loss, elfext loss, pselfext loss, propagation delay, and delay skew with injected standard signals, utilizing automated test equipment. Record all results. Test bi-directionally in accordance with ANSI/TIA/EIA-568 and compare results with the performance requirements of ANSI/TIA/EIA-568-b.1 and/or b.2-1 respectively.
   b. Test cabling not cross connected or patched within the closet as a permanent link.
4. Remove all defective cables from cable pathways. Do not abandon cables in place.
5. The Commissioner and reserves the right to observe the conduct of any or all portions of the testing process and to conduct, and to require the contractor, using the contractor's equipment and labor, a random re-test of up to five percent of the cable plant to confirm documented test results.
6. Document all test results and corrective procedures and submit to the consultant within ten working days of test completion.
7. In addition to the actions specified above, the contractor may be required to be present while the performance tests of the transport electronics connected to the cabling system.

END OF SECTION 28 10 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 283111
Digital, Addressable Fire-Alarm System

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions.
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2. SUMMARY

A. Section Includes:

1. Fire-alarm control unit.
2. Manual fire-alarm boxes.
3. System smoke detectors.
4. Nonsystem smoke detectors.
5. Heat detectors.
6. Notification appliances.
7. Remote annunciator.
8. Addressable interface device.
9. Digital alarm communicator transmitter.

1.3. DEFINITIONS

A. LED: Light-emitting diode.

B. NICET: National Institute for Certification in Engineering Technologies.

1.4. SYSTEM DESCRIPTION

A. Descriptions in this article are examples only.

B. Noncoded, UL-certified addressable system, with multiplexed signal transmission, dedicated to fire-alarm service only.

C. Noncoded addressable system, with automatic sensitivity control of certain smoke detectors and multiplexed signal transmission, dedicated to fire-alarm service only.

1.5. PERFORMANCE REQUIREMENTS

A. Seismic Performance: Fire-alarm control unit and raceways shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
   1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

1.6. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. General Submittal Requirements:
   1. Shop Drawings shall be prepared by installers with the following qualifications:
      a) Properly trained by manufacturer in fire-alarm system design.
      b) NICET-certified fire-alarm technician.

C. Product Data: For each type of product indicated.

D. Shop Drawings: For fire-alarm system. Include plans, elevations, sections, details, and attachments to other work.
   1. Comply with recommendations in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72.
   2. Include voltage drop calculations for notification appliance circuits.
   3. Include battery-size calculations.
   4. Include performance parameters and installation details for each detector, verifying that each detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
   5. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts, drawn to scale and coordinating installation of duct smoke detectors and access to them. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators. Locate detectors according to manufacturer's written recommendations.
   6. Include voice/alarm signaling-service equipment rack or console layout, grounding schematic, amplifier power calculation, and single-line connection diagram.
   7. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits.

E. Engineering Submittal: For smoke and heat detectors indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the New York State licensed professional engineer responsible for their preparation.
   1. Drawings showing the location of each smoke and heat detector, ratings of each, and installation details as needed to comply with listing conditions of the detector.
   2. Calculations: Calculate requirements for selecting the spacing and sensitivity of detection, complying with NFPA 72.

F. Qualification Data: For qualified Installer.

G. Seismic Qualification Certificates: For fire-alarm control unit, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

H. Field quality-control reports.

I. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions include the following:

1. Comply with the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
2. Provide "Record of Completion Documents" according to NFPA 72 article "Permanent Records" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter.
3. Record copy of site-specific software.
4. Provide "Maintenance, Inspection and Testing Records" according to NFPA 72 article of the same name and include the following:
   a. Frequency of testing of installed components.
   b. Frequency of inspection of installed components.
   c. Requirements and recommendations related to results of maintenance.
   d. Manufacturer's user instruction manuals.
5. Manufacturer's required maintenance related to system warranty requirements.
6. Abbreviated operating instructions for mounting at fire-alarm control unit.
7. Copy of NFPA 25.

1.7. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Installer Qualifications properly trained by manufacturer for installation of units required for this Project.

C. Source Limitations for Fire-Alarm System and Components: Obtain fire-alarm system from single source from single manufacturer. Components shall be compatible with, and operate as, an extension of existing system.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. NFPA Certification: Obtain certification according to NFPA 72 by an NRTL.

F. NFPA Certification: Obtain certification according to NFPA 72 by a UL-listed alarm company.

G. NFPA Certification: Obtain certification according to NFPA 72 in the form of a placard by an FMG-approved alarm company.

H. NFPA Certification: Obtain certification according to NFPA 72.

1.8. PROJECT CONDITIONS

A. Interruption of Existing Fire-Alarm Service: Do not interrupt fire-alarm service to facilities occupied by the City of New York unless permitted under the following conditions and then only after arranging to provide temporary guard service according to requirements indicated:

1. Notify Commissioner no fewer than two days in advance of proposed interruption of fire-alarm service.
2. Do not proceed with interruption of fire-alarm service without Commissioner's written permission.

1.9. SEQUENCING AND SCHEDULING

A. Existing Fire-Alarm Equipment: Maintain existing equipment fully operational until new equipment has been tested and accepted. As new equipment is installed, label it "NOT IN SERVICE" until it is accepted. Remove labels from new equipment when put into service and label existing fire-alarm equipment "NOT IN SERVICE" until removed from the building.

B. Equipment Removal: After acceptance of new fire-alarm system, remove existing disconnected fire-alarm equipment and wiring.

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide:

1. Edwards
2. Faraday; Siemens Building Technologies, Inc.
3. Federal Signal Corporation.
4. Fire Control Instruments, Inc.; a Honeywell company.
5. Gamewell; a Honeywell company.
6. NOTIFIER; a Honeywell company.
7. Siemens Building Technologies, Inc.; Fire Safety Division.
8. Or Approved Equal

2.2. SYSTEMS OPERATIONAL DESCRIPTION

A. Fire-alarm signal initiation shall be by one or more of the following devices and systems:

1. Manual stations.
2. Heat detectors.
3. Carbon Monoxide Detectors.
4. Smoke detectors.
5. Duct smoke detectors.
6. Verified automatic alarm operation of smoke detectors.
7. Automatic sprinkler system water flow and tamper switches.
8. Heat detectors in elevator shaft and pit.

9. Audible Devices (Horn Type).
10. Visual Devices (Strobe lights).

B. Fire-alarm signal shall initiate the following actions:

1. Continuously operate alarm notification appliances.
2. Identify alarm at fire-alarm control unit and remote annunciators.
3. Transmit an alarm signal to the remote alarm receiving station.
4. Unlock electric door locks in designated egress paths.
5. Activate alarm communication system.
6. Switch heating, ventilating, and air-conditioning equipment controls to fire-alarm mode.
7. Close smoke dampers in air ducts of designated air-conditioning duct systems if required.
8. Recall elevators to primary or alternate recall floors.
9. Activate emergency shutoffs for gas and fuel supplies.
10. Record events in the system memory.

C. Supervisory signal initiation shall be by one or more of the following devices and actions:

1. Valve supervisory switch.
2. Low-air-pressure switch of a dry-pipe sprinkler system.
3. Elevator shunt-trip supervision.

D. System trouble signal initiation shall be by one or more of the following devices and actions:

1. Open circuits, shorts, and grounds in designated circuits.
2. Loss of primary power at fire-alarm control unit.
3. Ground or a single break in fire-alarm control unit internal circuits.
4. Abnormal ac voltage at fire-alarm control unit.
5. Break in standby battery circuitry.
6. Failure of battery charging.
7. Abnormal position of any switch at fire-alarm control unit or annunciator.
8. Fire-pump power failure, including a dead-phase or phase-reversal condition.

E. System Trouble and Supervisory Signal Actions: Initiate notification appliance and annunciate at fire-alarm control unit and remote annunciators. Record the event on system printer.

2.3. FIRE-ALARM CONTROL UNIT

A. General Requirements for Fire-Alarm Control Unit:

1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864 and listed and labeled by an NRTL.
2. System software and programs shall be held in flash electrically erasable programmable read-only memory (EEPROM), retaining the information through failure of primary and secondary power supplies.
3. Include a real-time clock for time annotation of events on the event recorder and printer.
4. Addressable initiation devices that communicate device identity and status.
5. Smoke sensors shall additionally communicate sensitivity setting and allow for adjustment of sensitivity at fire-alarm control unit.
6. Temperature sensors shall additionally test for and communicate the sensitivity range of the device.
7. Addressable control circuits for operation of mechanical equipment.

B. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.

1. Some systems have 40-character display unit that may be adequate for small projects.
2. Annunciator and Display: Liquid-crystal type, 3 line(s) of 80 characters, minimum.
3. Keypad: Arranged to permit entry and execution of programming, display, and control commands and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameters.

C. Circuits:

1. Initiating Device, Notification Appliance, and Signaling Line Circuits: NFPA 72, Class A and B.
2. Initiating Device Circuits:
3. Notification Appliance Circuits:
4. Signaling Line Circuits:
5. Install no more than 50 addressable devices on each signaling line circuit.
6. Serial Interfaces: Two RS-232 ports for printers.

D. Stairwell Pressurization: Provide an output signal using an addressable relay to start the stairwell pressurization system. Signal shall remain on until alarm conditions are cleared and fire-alarm system is reset. Signal shall not stop in response to alarm acknowledge or signal silence commands.

1. Pressurization starts when any alarm is received at fire-alarm control unit.
2. Alarm signals from smoke detectors at pressurization air supplies have a higher priority than other alarm signals that start the system.

E. Smoke-Alarm Verification:

1. Initiate audible and visible indication of an "alarm-verification" signal at fire-alarm control unit.
2. Activate an NRTL-listed and -approved "alarm-verification" sequence at fire-alarm control unit and detector.
3. Record events by the system printer.
4. Sound general alarm if the alarm is verified.
5. Cancel fire-alarm control unit indication and system reset if the alarm is not verified.

F. Notification Appliance Circuit: Operation shall sound in a Bell/Horn.

G. Elevator Recall:

1. Smoke detectors at the following locations shall initiate automatic elevator recall. Alarm-initiating devices, except those listed, shall not start elevator recall.
2. Elevator lobby detectors except the lobby detector on the designated floor.
3. Smoke detector in elevator machine room.
4. Smoke detectors in elevator hoistway.
5. Elevator lobby detectors located on the designated recall floors shall be programmed to move the cars to the alternate recall floor.

H. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station.

I. Alarm Signaling Service: Central emergency communication system with redundant preamplifiers, amplifiers, and tone generators provided in a separate cabinet located in the as a special module that is part of fire-alarm control unit.

1. Indicated number of alarm channels for automatic, simultaneous transmission of different announcements to different zones or for manual transmission of announcements by use of the central-control microphone. Amplifiers shall comply with UL 1711 and be listed by an NRTL.
2. Allow the application of and evacuation signal to indicated number of zones and, at same time, allow voice paging to the other zones selectively or in any combination.
3. Programmable tone and message sequence selection.
4. Standard digitally recorded messages for "Evacuation" and "All Clear."
5. Generate tones to be sequenced with audio messages of type recommended by NFPA 72 and that are compatible with tone patterns of notification appliance circuits of fire-alarm control unit.
6. Status Annunciator: Indicate the status of various alarms.
7. Preamplifiers, amplifiers, and tone generators shall automatically transfer to backup units, on primary equipment failure.

J. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory and digital alarm communicator transmitters shall be powered by 24-V dc source.

1. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.

K. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch, emergency generator.

1. Batteries: Sealed lead calcium.

L. Instructions: Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

2.4. MANUAL FIRE-ALARM BOXES

A. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.

1. Single-action mechanism, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
2. Double-action mechanism requiring two actions to initiate an alarm, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
3. Station Reset: Key- or wrench-operated switch.
4. Indoor Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.
5. Weatherproof Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm.

2.5. SYSTEM SMOKE DETECTORS

A. General Requirements for System Smoke Detectors:

1. Comply with UL 268; operating at 24-V dc, nominal.
2. Detectors shall be four wire types.
3. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
4. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
5. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
6. Integral Visual-Indicating Light: LED type indicating detector has operated and power-on status.
7. Remote Control: Unless otherwise indicated, detectors shall be analog-addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by fire-alarm control unit.
8. Rate-of-rise temperature characteristic shall be selectable at fire-alarm control unit for 15 or 20 deg F (8 or 11 deg C) per minute.
9. Fixed-temperature sensing shall be independent of rate-of-rise sensing and shall be settable at fire-alarm control unit to operate at 135 or 155 deg F (57 or 68 deg C).
10. Provide multiple levels of detection sensitivity for each sensor.

B. Ionization Smoke Detector:

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
   a. Primary status.
   b. Device type.
   c. Present average value.
   d. Present sensitivity selected.
   e. Sensor range (normal, dirty, etc.).

C. Duct Smoke Detectors: Photoelectric type complying with UL 268A.

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
   a. Primary status.
   b. Device type.
   c. Present average value.
   d. Present sensitivity selected.
   e. Sensor range (normal, dirty, etc.).
3. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
4. Each sensor shall have multiple levels of detection sensitivity.

5. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
6. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit.

2.6. HEAT DETECTORS

A. General Requirements for Heat Detectors: Comply with UL 521.

B. Heat Detector, Combination Type: Actuated by either a fixed temperature of 135 deg F (57 deg C) or a rate of rise that exceeds 15 deg F (8 deg C) per minute unless otherwise indicated.

1. Mounting: Adapter plate for outlet box mounting.
2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

C. Heat Detector, Fixed-Temperature Type: Actuated by temperature that exceeds a fixed temperature of 190 deg F (88 deg C).

1. Mounting: Adapter plate for outlet box mounting.
2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

D. Continuous Linear Heat-Detector System:

1. Detector Cable: Rated detection temperature 155 deg F (68 deg C). NRTL listed for "regular" service and a standard environment. Cable includes two steel actuator wires twisted together with spring pressure, wrapped with protective tape, and finished with PVC outer sheath. Each actuator wire is insulated with heat-sensitive material that reacts with heat to allow the cable twist pressure to short- circuit wires at the location of elevated temperature.
2. Control Unit: Two-zone or multizone unit as indicated. Provide same system power supply, supervision, and alarm features as specified for fire-alarm control unit.
3. Signals to Fire-Alarm Control Unit: Any type of local system trouble shall be reported to fire-alarm control unit as a composite "trouble" signal. Alarms on each detection zone shall be individually reported to central fire-alarm control unit as separately identified zones.
4. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

2.7. NOTIFICATION APPLIANCES

A. General Requirements for Notification Appliances: Individually addressed, connected to a signaling line circuit, equipped for mounting as indicated and with screw terminals for system connections.

B. Chimes, Low-Level Output: Vibrating type, 75-dBA minimum rated output.

C. Horns: Electric-vibrating-polarized type, 24-V dc; with provision for housing the operating mechanism behind a grille. Comply with UL 464. Horns shall produce a sound-pressure level of 90 DBA, measured 10 feet (3 m) from the horn, using the coded signal prescribed in UL 464 test protocol.

D. Visible Notification Appliances: Xenon strobe lights comply with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch-(25-mm-) high letters on the lens.

1. Rated Light Output:
   a. 177 cd.
   b. 15/30/75/110 cd, selectable in the field.
2. Mounting: Wall mounted unless otherwise indicated.
3. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.
4. Flashing shall be in a temporal pattern, synchronized with other units.
5. Strobe Leads: Factory connected to screw terminals.
6. Mounting Faceplate: Factory finished, red.

E. Tone Notification Appliances:

1. Appliances shall comply with UL 1480 and shall be listed and labeled by an NRTL.
2. High-Range Units: Rated 2 to 15 W.
3. Low-Range Units: Rated 1 to 2 W.
4. Mounting: Flush.
5. Matching Transformers: Tap range matched to acoustical environment of speaker location.

2.8. REMOTE ANNUNCIATOR

A. Description: Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.

1. Mounting: Flush cabinet, NEMA 250, Type 1.

B. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.

2.9. ADDRESSABLE INTERFACE DEVICE

A. Description: Microelectronic monitor module, NRTL listed for use in providing a system address for alarm-initiating devices for wired applications with normally open contacts.

B. Integral Relay: Capable of providing a direct signal to elevator controller to initiate elevator recall.

2.10. DIGITAL ALARM COMMUNICATOR TRANSMITTER

A. Digital alarm communicator transmitter shall be acceptable to the remote central station and shall comply with UL 632 and be listed and labeled by an NRTL.

B. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit and automatically capture one telephone line(s) and dial a preset number for a remote central station. When contact is made with central station(s), signals shall be transmitted. If service on line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the remote alarm receiving station over the remaining line. Transmitter shall automatically report telephone service restoration to the central station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.

C. Local functions and display at the digital alarm communicator transmitter shall include the following:

1. Verification that both telephone lines are available.
2. Programming device.
3. LED display.
4. Manual test report function and manual transmission clear indication.
5. Communications failure with the central station or fire-alarm control unit.

D. Digital data transmission shall include the following:

1. Address of the alarm-initiating device.
2. Address Zone of the supervisory signal.
3. Address Zone of the trouble-initiating device.
4. Loss of ac supply or loss of power.
5. Low battery.
6. Abnormal test signal.
7. Communication bus failure.

E. Secondary Power: Integral rechargeable battery and automatic charger.

F. Self-Test: Conducted automatically every 24 hours with report transmitted to central station.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EQUIPMENT INSTALLATION

A. Comply with NFPA 72 for installation of fire-alarm equipment.

B. Equipment Mounting: Install fire-alarm control unit on concrete base with tops of cabinets not more than 72 inches (1830 mm) above the finished floor. Comply with requirements for concrete base specified in concrete specification sections.

1. Install seismic bracing. Comply with requirements in 260548 Section "Vibration and Seismic Controls for Electrical Systems."
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.

C. Equipment Mounting: Install fire-alarm control unit on finished floor with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.

1. Comply with requirements for seismic-restraint devices specified in 260548 Section "Vibration and Seismic Controls for Electrical Systems."

D. Smoke- or Heat-Detector Spacing:

1. Comply with NFPA 72, "Smoke-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for smoke-detector spacing.
2. Comply with NFPA 72, "Heat-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for heat-detector spacing.
3. Smooth ceiling spacing shall not exceed 30 feet (9 m).
4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Appendix A or Appendix B in NFPA 72.
5. HVAC: Locate detectors not closer than 3 feet (1 m) 5 feet (1.5 m) from air-supply diffuser or return-air opening.
6. Lighting Fixtures: Locate detectors not closer than 12 inches (300 mm) from any part of a lighting fixture.

E. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct.

F. Heat Detectors in Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location.

G. Single-Station Smoke Detectors: Where more than one smoke alarm is installed within a dwelling or suite, they shall be connected so that the operation of any smoke alarm causes the alarm in all smoke alarms to sound.

H. Remote Status and Alarm Indicators: Install near each smoke detector and each sprinkler water-flow switch and valve-tamper switch that is not readily visible from normal viewing position.

I. Audible Alarm-Indicating Devices: Install not less than 6 inches (150 mm) below the ceiling. Install bells and horns on flush-mounted back boxes with the device-operating mechanism concealed behind a grille.

J. Visible Alarm-Indicating Devices: Install adjacent to each alarm bell or alarm horn and at least 6 inches (150 mm) below the ceiling.

K. Device Location-Indicating Lights: Locate in public space near the device they monitor.

L. Fire-Alarm Control Unit: Surface mounted, with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.

M. Annunciator: Install with top of panel not more than 72 inches (1830 mm) above the finished floor.

3.3. CONNECTIONS

A. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in 087100 Section "Door Hardware." Connect hardware and devices to fire-alarm system.

1. Verify that hardware and devices are NRTL listed for use with fire-alarm system in this Section before making connections.

B. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 3 feet (1 m) from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.

1. Alarm-initiating connection to smoke-control system (smoke management) at firefighter smoke-control system panel.
2. Alarm-initiating connection to stairwell and elevator-shaft pressurization systems.
3. Smoke dampers in air ducts of designated air-conditioning duct systems.
4. Alarm-initiating connection to elevator recall system and components.
5. Alarm-initiating connection to activate emergency lighting control.
6. Alarm-initiating connection to activate emergency shutoffs for gas and fuel supplies.
7. Supervisory connections at valve supervisory switches.
8. Supervisory connections at low-air-pressure switch of each dry-pipe sprinkler system.
9. Supervisory connections at elevator shunt trip breaker.
10. Supervisory connections at fire-pump power failure including a dead-phase or phase-reversal condition.
11. Supervisory connections at fire-pump engine control panel.

3.4. IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in 260553 Section "Identification for Electrical Systems."

B. Install framed instructions in a location visible from fire-alarm control unit.

3.5. GROUNDING

A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

3.6. FIELD QUALITY CONTROL

A. Field tests shall be witnessed by NYC Department of Building as required.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

D. Tests and Inspections:

1. Visual Inspection: Conduct visual inspection prior to testing.

2. Inspection shall be based on completed Record Drawings and system documentation that is required by NFPA 72 in its "Completion Documents, Preparation" Table in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter.
3. Comply with "Visual Inspection Frequencies" Table in the "Inspection" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.
4. System Testing: Comply with "Test Methods" Table in the "Testing" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
5. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
6. Test audible appliances for the private operating mode according to manufacturer's written instructions.
7. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.

E. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.

F. Fire-alarm system will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

H. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.

I. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

3.7. INSTRUCTION

A. Instruct operating personnel to adjust, operate, and maintain fire-alarm system.

B. Provide the services of the manufacturer's trained representative for two (2) separate calendar days for a period of hour (4) hours per day to instruct the City of New York's designed personnel on the operation and maintenance of the entire system.

END OF SECTION 283111

SECTION 31 00 00
Earthwork

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the excavation, foundation construction, ground improvement, filling and grading as shown on the Drawings and specified herein including, but not limited to the following:

1. Removal of existing pavements, curbs, utilities, and former foundations, etc., designated for removal; relocation of fence and fence posts when necessary and other structures encountered or left by wreckers, old walls, rubble, etc.

2. All excavation of earth, concrete, construction debris, uncontrolled fill, remnants of foundations, and other materials to the bottom of foundation subgrades, pits and slabs as required and indicated on drawings.

3. Excavation, filling and rough grading of site area at adjacent structures and roadways as required and within the Contract Limit Line.

4. Excavation, filling, grading and compacting to required elevations for the slab and foundation.

5. Excavation, filling, grading and compacting to required elevations for appurtenances and site work.

6. Excavation and trenching for mechanical trades, including but not limited to all plumbing, heating, water, gas, and electric within the buildings as shown or required by the drawings; backfilling same with clean fill as described hereinafter, and thoroughly compacting to "Rough Grading" elevations.

7. Providing additional approved suitable material for filling and rough grading.

8. Legal off-site disposing of surplus excavated materials unsuitable for filling or backfilling. Refer to Section 02 61 13 - Excavation and Handling of Contaminated Materials.

9. Other labor and materials as may be reasonably inferred to be required to make the work under this Section complete.

B. Related Sections

1. Section 02 61 13 - Excavation and Handling of Contaminated Materials

1.3 REFERENCES

A. All work and materials under this section shall conform to the latest revision of the following standard specifications, where not otherwise required by the Contract Documents.

B. The following publications form a part of this Specification to the extent indicated by the specific citations in other paragraphs of this Specification. In case of conflict, the particular requirements of this Specification shall govern, unless indicated otherwise.

1. American Society for Testing and Materials (ASTM) and American Association of State and Highway Transportation Officials (AASHTO) Publications.

2. New York City Building Code, 2014.

3. Geotechnical Engineering Report for DSNY Staten Island District 1&3 Garage Staten Island, New York prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture, and Geology, D.P.C., dated 22 October 2018.

1.4 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Test Reports: Submit the following information for each source of each material submitted for review and comment by the Commissioner:

1. Test reports on borrow material as follows:

a. Particle size analysis in accordance with ASTM D 422 (sieve only).

b. Soil classification in accordance with ASTM D 2487

c. Moisture content in accordance with ASTM D 2216

d. Modified Compaction Curve in accordance with ASTM D 1557.

2. Include data for all samples indicating the exact location and methods of transportation and placement of all materials.

3. Include verification that borrowed material is not contaminated.

4. Submit a 5-lb (minimum) sample of each borrow material proposed for use as general fill, drainage fill and controlled fill.

C. Method Statement: Submit a detailed method statement, drawings, and calculations to be reviewed by the Commissioner. The method statement, drawings, and calculations shall be prepared by a Professional Engineer licensed in the State of New York. The submittals shall include but not limited to the following:

1. Earth excavation procedures.

2. Backfilling and compacting material, equipment, and procedures.

3. Sequences of work for walls, bracing, construction of the first floor, backfill procedure, etc.

D. Catalog Cuts: Submit catalog cuts and manufacturer's literature for compaction equipment, and waterproofing.

E. Certification For Examination of Site and Records: Before proceeding with the Work, submit certification in an acceptable form, signed by the Contractor, stating that careful examination has been made of the site, existing structures, existing adjacent structures, records of utility lines, test boring records, soil samples, subsurface exploration reports by the subsoil exploration consultant, the Drawings, and all other Contract Documents.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Codes and Permits:

1. All work shall comply with the requirements of the 2014 NYC Building Code, requirements of the New York State Department of Labor, requirements of Occupational Safety and Health Administration (OSHA), requirements of New York State Department of Health (NYSDOH), requirements of the New York State Department of Environmental Conservation (NYSDEC), requirements of the New York City Department of Environmental Protection (NYCDEP), requirements of the New York State Department of Transportation (NYSDOT), requirements of New York City Department of Transportation (NYCDOT), and with applicable requirements of all code requirements.

C. Special Inspection:

1. Before commencing work of this Section, meet with Construction Manager, Commissioner, and other concerned entities. Review the excavation and earthwork procedures and responsibilities including testing and inspection procedures and requirements. Notify participants at least three working days before the convening conference. Record discussions and agreements and furnish a copy to each participant.

1.6 PROJECT CONDITIONS

A. The Contractor, by careful examination, shall inform himself as to the nature and location of the work; the confirmation of the ground, the nature of the subsurface conditions; the locations of the groundwater table; the character, quality and quantity of the materials to be encountered; the character of the equipment and facilities needed preliminary to and during the execution of the work; and all other matters which can be in any way affect the work.

B. The Contractor shall be held to have visited the site and to have familiarized himself with the existing conditions of adjoining properties, utilities, and buildings.

C. Borings are available for the Contractor's review. The Commissioner makes no predictions or representations regarding the character or extent of soil, rock, or other subsurface conditions to be encountered during the work. The Contractor shall make his deductions of the subsurface conditions which may affect the methods or expense of construction of the work hereunder. Additional borings and other exploratory operations may be performed by the Contractor, at the Contractor's option and following the Commissioner's approval. No change in the Contract Sum will be authorized for such additional exploration undertaken by the Contractor.

D. Soil samples taken from the borings are available for the Contractor's inspection from the boring inspector.

E. The Contractor shall investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the site of the work. The Contractor shall conform to all New York City and State, and Federal regulations regarding the transportation of materials to and from and at the job site and shall secure in advance such permits as may be required.

F. The Contractor shall locate existing underground utilities in and beyond the areas of work. If utilities are indicated to remain in place, the Contractor shall provide adequate means of support and protection during the work.

1. Should uncharted, or incorrectly charted, piping or other utilities are encountered during excavation, consult utility owner immediately for directions. Cooperate with the City of New York and utility companies in keeping respective services and facilities in operation. Repair damaged utilities to the satisfaction of the utility owner.

2. Do not interrupt existing utilities serving facilities occupied by the City of New York or others, during occupied hours, except when permitted in writing by the Commissioner and then only after acceptable temporary utility services have been provided. Provide a minimum of 48-hour notice to the Commissioner, and receive written notice to proceed before interrupting any utility.

3. Demolish and completely remove from site existing underground utilities indicated to be removed. Coordinate with utility companies for shutoff of services if lines are active.

G. The Contractor shall examine drawings to determine the sequence of operations, and relation to work of other trades. The start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.

1.7 PROTECTION

A. The work shall be executed so that no damage or injury will occur to the existing public and adjacent structures, streets, paving, sewers, gas, water, electric or any other pipes. Should any damage or injury caused by the Contractor, or anyone in Contractor's employ, or by the work under this Contract occur, the Contractor shall, at own expense, repair such damage and shall assume all responsibility for such injury.

B. The above shall also include the protection of all existing utilities (including sewers, water lines, electrical lines and telecommunication lines) to remain in use within and adjacent to the area affected by the work of this project.

C. Monuments, benchmarks and other reference features on streets bounding this project, shall be protected. Should these be disturbed in any manner, replace them at no expense to the City of New York.

1.8 SUBSURFACE STRUCTURES AND UTILITIES

A. The Contractor shall become acquainted with the existence and location of all surface and subsurface structures and utilities within the project area and beneath the surrounding streets. Do not damage any of those that are to remain and shall leave them accessible and make the necessary provision by sheeting, hanging, supporting or other means necessary to obtain this result, subject to the approval of the Commissioner, New York City Department of Buildings and Department of Transportation, and the utility companies involved.

1.9 ERRORS IN DEPTH

A. In the event that any part of the excavation is carried, through error, beyond the depth and the dimensions indicated on the drawings or called for in the specifications, then the Contractor, at his own expense, shall furnish and install gravel, stone, or concrete fill with which to fill to the required level at all locations, subject to approval of the Commissioner.

1.10 DEFINITIONS

A. Wherever the word "excavating", "excavate", "excavation", "carried down", "remove", etc., are used, they shall be taken to include the removal of all existing work, including brickwork, rubble work, former foundation remnants rubbish, earth, as well as rock, boulders, steel grillages and concrete, and all other materials and obstructions encountered; they shall also be taken to include all sheet piling, bracing, pumping, and all operations and items needed for the proper execution of the work. Excavation is considered unclassified.

B. Where the words "finished grades," "finished grade lines," or "future finished grades," appear in these specifications, they shall be taken to mean the finished elevations as indicated on the drawings.

C. Rough grading consists of cutting or filling to the elevation established on the Contract Drawings.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Site soils may be re-used provided they meet the environmental criteria provided in Section 02 61 13 - Excavation and Handling of Contaminated Materials, and the criteria provide in this section.

B. All fill and backfill shall be material classified as controlled fill by the 2014 New York City Building Code. Composition shall consist of angular sands and gravels. Flat structured material such as mica (the main component of "mole" rock) falling into the acceptable gradation or other material affecting the permeability and structural characteristics of sand material shall not be permitted.

C. Controlled Fill: Controlled-fill material shall consist of well-graded sand, gravel, crushed rock, or a mixture of these, or equivalent materials with a maximum of 10 percent passing the #200 sieve, as determined from the percent passing the #4 sieve.

D. Drainage Fill: Clean natural ¾-inch crushed stone (recycled concrete shall not be used as drainage fill) having the following gradations:

Sieve Size	% Passing by Weight
2 inch	100
¼ inch	25 to 60
No. 40	5 to 40
No. 200	0 to 5

E. General Fill: Shall be no more than 20% by weight of stones or masonry debris, containing no stones or other materials greater than 4 inches in any dimension and contain less than 50% by weight materials finer than No. 200 mesh sieve.

F. Fill for utility trenches shall meet the criteria given for structural fill and shall not contain sharp, angular pieces and pieces larger than 2 inches in any dimension.

G. Before bringing any fill to the site, submit the source for approval by the Commissioner, in accordance with Section 1.4 of this specification.

H. All fill materials (structural, granular, and general fill) required shall be free from wood, debris, combustible materials, vegetable matter or any material subject to decay or disintegration. Fill material shall not be contaminated.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION OF PROJECT SITE

A. Notify the Commissioner before the start of work. The notifications are to be in accordance with the Contract drawings.

B. Install all necessary protection equipment, structures such as fences, signs, scaffolding, etc. before the start of work.

C. Remove all existing structures, utilities, pavement in accordance with the Contract Documents.

D. Protect all utility lines, which are not to be abandoned. Contractor shall be responsible for any damage to utilities that may occur.

E. Perform test pits alongside each of the adjacent buildings to determine the extent and depth of the below-grade space and the foundation type.

3.3 PROTECTION AND MONITORING OF ADJACENT STRUCTURES, STREETS AND UTILITIES

A. The work shall be executed so that no damage or injury will occur to the existing public and adjoining or adjacent structures, streets, pavements, sewers, or utilities. Should any damage or injury caused by the Contractor, or anyone in Contractor's employ, or by the work under this Contract occur, the Contractor shall repair such damage and shall assume all responsibility for such injury.

B. The adjacent and surrounding structures, streets, and utilities shall be protected during the work described herein. Excavation work shall be restricted to hours indicated by the Commissioner.

C. The Contractor shall restore, to the satisfaction of Commissioner, by repair or otherwise, the portions of buildings, or their contents, altered by the Contractor in furtherance of his sheeting, and bracing work. Restoration shall be completed to the conditions, which existed before the start of work.

3.4 SITE DRAINAGE, PUMPING, AND DEWATERING

A. The Contractor shall assume the responsibility for site drainage and shall maintain such drainage during the life of this contract in a manner so as not to adversely affect adjacent areas and structures.

B. Provide adequate pumps, or other equipment, appurtenances, power, drains, materials and labor necessary to excavation continuously dry during excavation, foundation construction, and backfilling and at such other times as the progress of the work may demand or as necessary to ensure safety to the structure shall be provided.

C. All pumping both inside and outside the areas of the building shall be performed, continued and maintained as required for the completion of all work, including the work of the mechanical trades, throughout the period of the contract.

D. Manage runoff to limit the impact on construction.

E. The dewatering system or systems shall be installed and operated in such a manner as to avoid the movement of fines or loss of ground from below the bearing level and shall not influence the stability of surrounding areas. The facilities needed to eliminate loss of ground shall be included.

F. Do not use any portion of the building foundation units or any part thereof as a sump for drainage resulting from pumping in any other area. Do not conduct water to privately owned properties.

3.5 GENERAL EXCAVATION

A. The excavation shall be unclassified and shall comprise and include the satisfactory removal and legal disposal of all materials encountered regardless of the nature of the materials and shall be understood to include, boulders, earth, hardpan, miscellaneous fill, foundations, demolition debris from on-site buildings, structures, slabs, walls, utilities, pavements, curbs, piping and debris and shall comply with the environmental requirements in accordance with Section 02 61 13.

B. All excavation shall extend to the depths of the form and size required for the installation of the work as indicated on the drawings.

C. Excavation shall be to required elevations for the bottom of the foundation, cut-and-fill, etc. Excavation shall be made to a depth that will allow installation of the full depth of the raft, sub-base, and as shown on drawings with a 1-inch tolerance. Excavation lines shall provide sufficient clearance for the proper execution of all concrete work including allowances for formwork, shoring, and inspection.

D. A 3-inch-thick concrete mud-slab shall be required on all surfaces that will require horizontal waterproofing. All vertical surfaces to receive "blind-side" waterproofing shall require a flat/rigid substrate.

E. The bottom of excavations shall be leveled off and graded to receive foundations, slabs, pits, trenches, and grade beams.

3.6 EXCAVATION FOR BUILDING SLABS AND STRUCTURAL MEMBERS

A. Subgrades of building slabs and structural members including framed slabs and grade beams shall be approved by the Commissioner before proceeding with their construction. Subgrades resulting from excavation shall be free of unsuitable material (fill, loose rock pieces, organics, debris, etc.) as judged by the Commissioner.

B. Unauthorized Excavation: Excavations performed below the elevations shown or specified, shall be filled and compacted as hereinafter specified, at no additional expense.

C. Authorized Additional Excavation: Where the Commissioner determines that the bearing material encountered is unsuitable, remove the unsuitable bearing material. The removed material shall be replaced with controlled fill or concrete as directed by the Commissioner.

3.7 PROOFROLLING

A. Before backfilling, all excavations should be proofrolled using a minimum 5-ton roller. Any loose areas identified by proofrolling should be removed and replaced with controlled fill in accordance with Section 3.8.

3.8 FILLING, GRADING, AND COMPACTING

A. Filling and backfilling shall not be performed until work has been accepted by the Commissioner. All wood, paper, and other deleterious materials shall be cleaned out from excavations before backfilling.

B. The filling or backfilling within the area of the building shall be done so that there will be no void spaces below floors and bottoms of pits and trenches, unless otherwise noted

C. General: Material for fill and backfill shall be Controlled Fill as herein specified under Part 2 of these specifications. The material may be obtained from borrow sources and shall be free of any contamination.

D. Placing: Place fill in horizontal 12-inch-thick maximum loose layers to produce a uniform thickness of the material. Start placement in the deepest area and progress approximately parallel to the finished grade. Do not place fill where free water is standing, on frozen subsoil or on surfaces that have not been approved.

E. Compacting: Compact each layer of fill with the appropriate equipment listed below in this Article to achieve as a minimum the following percentages of maximum density at optimum moisture when tested in accordance with ASTM D1557:

LOCATION	% MAX. DENSITY
Under Building Slab-on-Grade	95
Under Paved Areas	95
Under Structural Members and Structural Slabs	92
Behind Foundation Walls	95

F. Under Slabs and Utilities - Compact each 12-inch-thick lift of the general fill with a minimum six overlapping passed with a 5-ton vibratory roller compactor in open areas. Use a 1-ton walk behind roller compactor to the extent possible in areas that preclude access by a 5-ton compactor. Use a plate tamper in and around penetrations, small restrictive areas, or any other areas not accessible to the 1-ton roller compactor.

G. Compaction Equipment: Granular fills (sand, gravel, friable earth) shall be compacted with a vibratory plate compactor not less than 0.5 ton in static weight to the extent possible. A jumping jack shall be used in and around penetrations, small restrictive areas, or any other areas not accessible to the roller or heavy plate compactor.

H. Backfilling against Foundation Walls: After completion of foundation walls and removal of forms, clean the excavation of all trash and debris before application of waterproofing and/or vapor barrier and placement of backfill.

I. Backfilling at the Cut-off wall: After completion of the utility line through the penetration at the soil-bentonite cut-off wall, install 4.5-foot-wide anti-seep collars with band clamps to the casing on either side of the cut-off wall. Backfill with a minimum of 1.5 feet of cement-bentonite seal all around the pipe to seal any penetrations through the sheet-piles and the cut-off wall. Backfill and compact the rest of the pit to existing grade with the controlled fill.

J. Do not backfill against foundation or basement walls until completion of supporting floor construction to the top of backfill or first level above the top of backfill, unless adequate temporary shoring is provided.

K. If Contractor elects to backfill against foundation or basement walls before completion of supporting floor slabs, these walls shall be shored. Temporary shoring shall be designed by a professional engineer licensed in the State of New York, retained by the Contractor. Shoring design and calculations shall be submitted to the Commissioner for their review and approval.

L. In placing backfill, take special care to prevent wedge action, eccentric loading or overloading of the structure by equipment used for compacting backfill material, and to prevent damage to waterproofing on walls. Where subsoil drainage systems are installed, place backfill to prevent any damage to the systems. Any damage to waterproofing or drainage systems caused by backfilling or excavation operations shall be corrected or replaced by the Contractor at his expense.

M. Additional backfilling required to bring fill to the finished subgrades shown shall be done by the Contractor only after the concrete walls or piers, against which the backfilling is done, have attained their full design

strength, have been braced, and the written permission to backfill is obtained from the Commissioner. If fill is required on both sides of a wall, it shall be brought up simultaneously and evenly on both sides.

N. Do all filling necessary to bring the ground surfaces to the required levels for floors, pits, and areaways as shown on the drawings.

O. Any surplus materials shall be removed from the site and legally disposed of. Should additional material be required for the placing of backfill, other than material obtained from the site, the Contractor shall obtain, and deliver and place accepted backfill material as required.

3.9 FIELD QUALITY CONTROL

A. The Commissioner shall review all laboratory test results and submitted reports specified in this Section.

B. The Commissioner will interpret the tests, state in each report whether or not the test specimens and results comply with all requirements of the Contract Documents and note any deviations.

C. The Commissioner will identify when and where samples are to be obtained for testing.

D. Collect samples and forward them to a Testing Laboratory. Testing Laboratory will submit the following laboratory test reports to the Commissioner.

1. Laboratory results conducted on each type of borrow and fill material:

   a. Gradation Analysis – ASTM D 422.

   b. Atterberg Limits – ASTM D 4318.

   c. Modified Moisture Density Curve Determination – ASTM D 1557.

2. The Commissioner will review for conformance of materials to be used for fills, based on the gradations given in these specifications.

E. Engineering Inspection:

1. All engineering inspections shall comply with the requirements of the 2014 New York City Building Code.

2. Building Slab Subgrades: The Special Inspector shall inspect subgrades for all building slabs and footing elements. No pavement, slab, or footing shall be constructed unless the subgrade is approved by the Special Inspector.

3. Proofrolling: Proofrolling operations shall be inspected by the Special Inspector.

4. Backfilling and Compaction: The City of New York shall hire a Special Inspector to verify the densities of the fill placed. The Special Inspector shall take field density tests of the fill placed and shall report to the Commissioner. No fill shall be placed without inspection and approval of the Commissioner. The Special Inspector will conduct field tests (in accordance with ASTM D 2922) of the subgrade for every 2,500 sq-ft, but not less than three tests per lift in each area, and a minimum of three tests for every compacted soil lift behind foundation walls.

3.10 CLEAN-UP AND DISPOSAL

A. All excess material including, earth, rock, fill, shall be removed from the site and legally disposed of in accordance with the DDC General Guidelines.

B. All lumber, forms and metalwork shall be removed immediately after completion of local areas. Remove all debris produced by work to this section from the site.

C. Sidewalk and streets adjoining the property shall be broom cleaned and free of debris, rubbish, trash and obstructions of any kind caused by the work of this Section.

D. The removal and disposal shall be in accordance with Section 02 61 13 - Excavation and Handling of Contaminated Materials and Section 31 10 00 – Site Clearing, Removals and Preparation.

3.11 MONITORING EXISTING STRUCTURES

A. Before starting work, the Contractor's Professional Engineer licensed in the state of New York and Land Surveyor licensed in the state of New York shall check and verify governing dimensions and elevations, survey existing conditions, and record any prior settlement or cracking of structures, pavements, and other improvements. Document with photos and videos all adjacent structures prior to the beginning of any construction activities.

B. The monitoring points shall be established by the monitoring company employing a Professional Land Surveyor licensed in the State of New York, and referenced to a fixed off-site benchmark.

C. Monitoring of Excavation Support System: Install reference points at a maximum spacing of 24-ft on-center around the entire perimeter of the excavation to properly monitor the ground movements behind the excavation support system. As the excavation proceeds, install points on the soldier pile to measure potential lateral deflection at about 24-ft on-center. These locations shall be subject to review by the Commissioner.

D. Monitoring of Adjacent Buildings: Install a minimum of 4 reference points on the upper third and the lower third of the adjacent building face abutting the excavation. The monitoring company will also conduct crack monitoring of the adjacent building.

E. Ground Vibrations: The vibration monitoring locations shall be selected by the Commissioner.

1. The seismographs will be provided by, and the monitoring performed by the Testing Agency.

2. Monitoring shall be performed before the start of work to obtain ambient levels, and daily during excavation and foundation construction work.

F. Crack Gauges: Monitoring points shall be installed at cracks observed during the execution of Preconstruction-Conditions Documentation and as required as the work progresses, as determined by the Contractor, and as directed the Commissioner.

G. Frequency and Reporting

1. Vertical and Lateral Displacements - Monitoring shall be performed twice on a weekly basis during any excavation support or foundation work. Readings shall be taken to nearest 0.005 ft. Written

reports summarizing the monitoring results shall be submitted by the Contractor's Professional engineer licensed in the State of New York to the Commissioner for review on a weekly basis. The reports shall be submitted in both electronic copies and hard copies. The reports shall include the raw data points as well as graphs and tables summarizing the monitoring data.

2. Ground Vibrations – The ground vibrations caused by the foundation work, bracing and foundation installation operations shall be monitored continuously with threshold-type seismographs capable of measuring ground movements to 0.02 in/sec. Written reports summarizing the monitoring results shall be submitted by the Contractor's Professional engineer licensed in the State of New York to the Commissioner for review on a weekly basis.

3. Crack Gauges: At a minimum, crack gauges shall be measured on a weekly basis. The frequency of monitoring shall be increased as directed by the Commissioner.

H. Alert levels: Should any of the following magnitudes of movement be detected, the contractor shall immediately take remedial action and advise the Commissioner.

1. Vibration Monitoring: Peak particle velocities

   a. Threshold Level: 0.5 inches per second for all buildings, and other structures.

   b. Limit Level: 2.0 inches per second for all buildings, and other structures.

2. Crack Gauge Monitoring: Cumulative movement in any direction

   a. Threshold Level – 1/16 inch in any direction

   b. Limit Level – 1/8 inch in any direction

3. Survey Monitoring:

   a. Threshold Level:

      i) Vertical or horizontal movement of buildings: 1/4-inch total movement, or 3/16-inch between two consecutive readings.

      ii) Vertical or horizontal movement of SOE Wall: 3/4 inch total movement, or 1/4-inch between two consecutive readings.

   b. Limit Level:

      i) Vertical or horizontal movement of buildings: 3/4-inch total movement, or 3/8-inch between two consecutive readings.

      ii) Horizontal movement of building or other surface structures: 1.5-inch total movement, or 1/2-inch between two consecutive readings.

4. Groundwater Monitoring:

a. Threshold Level – 1-foot increase or decrease in any measurement after pumping has stabilized at any temporary subgrade during excavation

b. Limit Level – 2 feet increase or decrease in any measurement after pumping has stabilized at any temporary subgrade during excavation.

3.12 ACTION ITEMS

A. Any movement or vibration exceeding the criteria outlined in 3.11 above shall be reported immediately to the Commissioner. Work in the immediate area shall be suspended, unless directed otherwise by the Commissioner. Corrective measures to ensure integrity and stability of adjacent structures shall be the responsibility of the Contractor.

B. In the event that a Threshold Level is reached the following shall be required:

1. The Commissioner shall be notified of the exceedance.
2. The exceedance shall be investigated to identify potential correlation to construction activities.
3. Contractor shall meet with the Commissioner and DOB to discuss the need for a response to mitigate the potential for readings exceeding the Threshold Level.
4. Where required, submit a detailed plan of action to mitigate the potential for additional movement or vibration.
5. Install additional instruments as required evaluate the need for any action necessary to prevent reaching the Threshold Level.

C. In the event that a Limit Level is reached the following shall be required:

1. The Commissioner shall be notified of the exceedance.
2. Construction shall be suspended. The exceedance shall be investigated to identify potential correlation to construction activities.
3. Inspect the building (or portions thereof) for potential damage. Inspections shall be made by the Special Inspector for structural stability, the Contractor's Engineer, and the Commissioner.
4. Immediately notify to DOB and the Commissioner in case of damage or unsafe condition.
5. Excavation and foundation construction procedures shall be re-assessed as necessary to maintain vibration levels and movements within acceptable limits.
6. Work stoppage to assess excavation methods and to inspect the buildings identified herein for damage is at the Commissioner's discretion.
7. Develop alternate methods and procedures, subject to the review and approval of the Commissioner.
8. Resume work using the agreed upon alternative method.

9. Notify DOB of events that exceed allowable limits and of corrective measures implemented to maintain acceptable limits.

D. Restore, to the satisfaction of the Commissioner, the portions of buildings, or their contents, altered by the Contractor in furtherance of his sheeting, and bracing work. Restoration shall be completed to the conditions, which existed before the start of work.

END OF SECTION 31 00 00

SECTION 31 10 00
Site Clearing, Removals and Preparation

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. Miscellaneous site clearing including removal of trees, asphalt, concrete, curbs, rails, fences, storage containers, and mobile trailers in preparation for site improvements.
   2. Protection of existing utilities.
   3. Disconnection and capping or removal of identified utilities and in-service unidentified utilities encountered.
   4. Backfilling voids in subgrade created as a result of removals.

B. Related Sections
   1. Section 02 61 13 – Excavation and Handling of Contaminated Materials
   2. Section 31 00 00 – Earthwork
   3. Section 31 25 00 - Soil Erosion and Sediment Control
   4. Section 33 02 00 - Protection of Existing Utilities

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 ENVIRONMENTAL REQUIREMENTS

A. Construct erosion control systems as shown on the plans or as directed by the Commissioner to protect adjacent properties and water resources from erosion and sedimentation.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Verify that construction phasing and clearing limits are clearly tagged, identified and marked.

3.3 PROTECTION

A. Locate and identify existing utilities that are to remain and protect them from damage as indicated on the Contract Drawings.

B. Conduct operations with minimum interference to public or private access ways and facilities. Maintain access and egress at all times and clean or sweep any roadways daily or as required by the 2014 New York City Construction Codes and the New York City Department of Transportation. At such times as deemed necessary by the Commissioner, dust control shall be provided in accordance with specification Section 31 25 00 – Soil Erosion and Sediment Control.

C. Protect benchmarks, property corners and all other survey monuments from damage or displacement. If a marker needs to be removed it shall be referenced by a Land Surveyor registered in the State of New York and replaced, as necessary, by the same at no additional expense to the City of New York.

D. Provide traffic control as required, in accordance with the U.S. Department of Transportation "Manual of Uniform Traffic Control Devices" and New York City Department of Transportation requirements.

3.4 CLEARING AND REMOVAL

A. Clear areas required for access to site and execution of work.

B. Unless otherwise indicated on the Contract Drawings, improvements or obstructions interfering with installation of new construction shall be removed completely. Backfill shall be conducted with suitable on-site fill material or suitable imported material placed and compacted as per Section 31 00 00 - Earthwork.

C. Existing utilities to be removed/abandoned shall be properly disconnected in accordance with the applicable utility. Contractor shall provide the utility two week prior notice, in writing, to the Commissioner before the work is to commence to schedule and coordinate disconnect of utility with other surrounding functions.
   1. Utilities indicated to be removed shall be removed completely including all pipe and structures foundations. Trenches shall be backfilled and compacted in accordance with the specifications or as directed by the Commissioner.
   2. Utilities indicated to be abandoned shall be left in place unless directed otherwise by the Commissioner.

3.5 DISPOSAL OF MATERIALS

A. No burning of any material, debris or trash on site or off site will be allowed.

B. Transport site debris, rubbish and other materials with appropriate vehicles, and legally dispose of off-site to areas approved by the Commissioner.

END OF SECTION 31 10 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 21 16
Sub-Membrane Depressurization System

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Following Documents Apply To All Required Work For The Project: (1) The Contract Drawings, (2) The Specifications, (3) The General Conditions, (4) The Addendum and (5) The Contract [City Of New York Standard Construction Contract].

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

C. The following documents have been prepared for the rehabilitation project and are included with the Contract Documents:

1. 22 June 2018 Phase I Environmental Site Assessment (ESA), prepared by Louis Berger & Associates., P.C. (Louis Berger).
2. 12 October 2018 Phase II Environmental Site Investigation (ESI) Report, prepared by Louis Berger.
3. 09 September 2019 DSNY Landfill Infrastructure Modifications, prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C. (Langan).
4. 22 October 2018 Geotechnical Engineering Report, prepared by Langan.

D. Related Sections:

Sections containing requirements related to this Section include, but are not limited to:

1. Section 01 91 00 – General Commissioning Requirements
2. Section 02 01 02 – Vapor Barrier Installation
3. Section 02 61 13 – Excavation, Handling, Transportation, And Disposal Of Contaminated Materials
4. Section 33 49 10 – Other Utilities
5. Section 31 00 00 – Earthwork
6. Division 22 – Plumbing
7. Division 26 - Electrical

1.2 GENERAL REQUIREMENTS

A. The Contractor is responsible for the proper and complete installation of a hybrid sub-membrane depressurization (SMD) system and the requirement accessories in accordance with the Contract Documents and Design Drawings.

B. The Contractor shall furnish all labor, materials, equipment, and incidentals required to conduct the work of this Section.

C. The Contractor shall accept the site "as-is" and shall be deemed to have reviewed all drawings, reports and documents applicable to this work prior to submitting a bid.

D. Where there is discrepancy between this specification and the other Contract Documents, the most stringent requirements shall be followed by the Contractor.

1.3 SCOPE OF WORK

A. This Section provides requirements for the installation of a SMD system under the footprint of the new building foundation slab, as shown on the Contract Drawings. The SMD system is designed as a hybrid passive system with automated transition to an active system based on field conditions. Once installed, the SMD system must comply with post-installation start-up testing and remain in continuous operation.

B. Provide all labor, materials, equipment, and services to furnish, install, inspect, test, and startup the SMD system in accordance with the New York City Building Codes, this Section, all requirements of the Contract Documents, and as indicated on Design Drawings N-200 through N-203 provided.

C. Failure to comply with these requirements will be considered a failure of materials and workmanship.

D. Section includes furnishing and installation of SMD system consisting of:

1. Geotextile fabric
2. Clean crushed stone layer (air-permeable aggregate)
3. Perforated sub-membrane vapor collection piping
4. Metal riser, vent piping, and associated valves (details provided in other Sections)
5. Methane sensor/transmitters
6. Roof-top wind turbines and active blower systems
7. Exhaust piping
8. Control panel station (details provided in other Sections)
9. Electrical runs and alarm system (details provided in other Sections)

E. Prepare an as-built drawing of the installed components, below the slab, within the building, and at the roof.

F. No work shall be performed under this specification section without oversight by the Commissioner.

G. Worker health and safety monitoring is the responsibility of the Contractor.

1.4 REFERENCE STANDARDS

All work and materials under this Section shall conform to the latest revision of the following standard specifications and project documents, where not otherwise required by the Contract Documents:

A. New York City Building Code, including, but not limited to:

1. 2014 New York City Mechanical Code, Chapter 5, Section MC 512 - Subslab Exhaust Systems.
2. 2014 New York City Plumbing Code, Chapter 7, Section PC 702 - Materials.

B. Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York prepared by New York State Department of Health (NYSDOH), dated October 2006 and subsequent amendments.

1.5 QUALIFICATIONS

A. Vapor Collection Pipe Qualifications:

1. All fittings and connections for the vapor collection pipe shall be made by the same manufacturer.
2. Contractor installing the vapor collection piping below the slab shall have reviewed the Contract Drawings before beginning installation.

B. Blower Assembly Manufacturer Qualifications:

1. The manufacturer providing the blower assemblies specified in this Section must have been regularly engaged in the manufacture of material or equipment similar in type and application to that required for this Project.
2. Obtain all components of blower assembly from a single Manufacturer.
3. All components shall be compatible with volatile organic compounds (VOCs) and landfill gases, particularly methane.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Conform to the manufacturer's requirements to prevent damage to materials.

B. Delivery:

1. Deliver materials to the site only after the Commissioner has reviewed and approved the required submittals.
2. Deliver materials to site in original unbroken packages bearing manufacturer's label showing brand, weight, volume, and batch number.
3. Deliver materials to site properly protected and undamaged. Replace any damaged materials at no cost to the Commissioner/City of New York unless the damaged material can be repaired per the manufacturer's requirements and to the satisfaction of the Commissioner/City of New York and such that the integrity of the SMD system is not compromised.
4. Provide the following documentation for all delivered materials, as applicable:
   a. Manufacturers Identification
   b. Product Identification
   c. Lot Number

C. On-Site Storage and Handling:

1. Store materials at site in strict compliance with manufacturer's instructions.
2. Store in allocated spaces on a level surface.
3. Protect from puncture, dirt, grease, moisture, mud, mechanical abrasions, excessive heat, ultra-violet light, freezing, or other damage.
4. Use handling equipment to load, move, or deploy materials that will not cause any damage to the materials.

1.7 PROJECT CONDITIONS

A. The Department of Sanitation garage rehabilitation project (site) is located at the northwest corner of Muldoon Avenue (private) and West Shore Expressway service road in Staten Island, New York (the Site) and is identified as Block 5900, Lot 500 on the Staten Island Tax Map. The Site occupies an area of approximately 680,000 square feet and is improved with the existing Staten Island District 3 repair garage, recycling area, wastewater treatment facility, and asphalt-paved and gravel-topped parking lots. According to the 29 March 2018 topographical survey prepared by Langan, the grade fronting the Site along Muldoon Avenue slopes down from about el. 23 feet (north) to el. 10 feet (south), and the grade in front of the site along the West Service Road slopes down from about el. 32 feet (northeast) to el. 10 feet (south). All elevations are referenced to the North American Vertical Datum of 1988 (NAVD88).

B. Based on the findings of the 12 October 2018 Phase II ESI prepared by Louis Berger, the Site contains chlorinated VOCs at concentrations for which the NYSDOH Guidance for Soil Vapor Intrusion in the State of New York recommends mitigation as the recommended remedial action. Concentrations of methane were also detected above background concentrations that would be mitigated from intruding into the new building via the remedial action.

C. The City of New York and Commissioner make no predictions or representations regarding the available information. No information derived from the referenced documents will, in any way, relieve the Contractor from the responsibility of making its own evaluations, inspections, and determinations with respect to the vapor barrier installation.

D. The Contractor shall investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the Work Site. The Contractor shall conform to NYSDOT, USEPA, and NYSDEC regulations in regard to the transportation of materials to and from and at the job site.

E. Examine all Contract Documents and drawings to determine the sequence of operations in relation to the work of other trades, if they are present. Start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.9 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.10 SUBMITTALS

A. Coordinate all submittals to comply with the requirements of the Contract Documents, as well as the requirements of this Section.

B. Provide the manufacturer's information, including detailed technical product data sheets, specifications, installation instructions, catalog cuts, material certificates, and/or material samples, as applicable, for the materials specified in Part 2 of this Section. Provide the manufacturer's information to the Commissioner for review at least 14 days before initiating work.

C. Submit Shop Drawings depicting the proposed vapor collection pipe layouts and any proposed changes, including vapor collection pipe locations, riser locations at the foundation slab and through the building,

sleeve locations, etc., for Commissioner review at least 14 days before initiating work.

D. Submit the source type and gradation of the aggregate for approval by the Commissioner at least 14 days before initiating work.

E. Upon completing installation, testing, and startup of the SMD system, provide any and all documents related to the SMD system including, but not limited to, manufacturer's manuals, complete as-built drawings (to scale), and testing reports, when requested by the Commissioner and City of New York and at no additional cost.

PART 2 - PRODUCTS

2.1 SUBSLAB MATERIALS

A. General:

1. Furnish only new materials and equipment that are in first-class condition and supplied directly from the manufacturer.

2. Provide additional installation accessories as necessary for a complete SMD system, ready for use. Ensure accessories are from same manufacturers as products. Furnish all manufacturer recommended accessories.

B. Geotextile: Non-woven, polypropylene geotextile fabric having the following properties:

Property	Test Method	Value (Minimum Average Roll Values)	Units
Grab Tensile Strength	ASTM D 4632	0.40 (90)	kN (lbs)
Grab Tensile Elongation	ASTM D 4632	50	%
Mullen Burst Strength	ASTM D 3786	1205 (175)	kPa (psi)
Trapezoidal Tear Strength	ASTM D 4533	0.18 (40)	kN (lbs)
Puncture Strength	ASTM D 4833	0.2 (55)	kN (lbs)
UV Resistance at 500 hrs.	ASTM D 4355	70	% Strength Retained
Apparent Opening Size	ASTM D 4751	0.25 (60)	mm (US Sieve)
Permittivity	ASTM D 4491	2.0	sec^{-1}
Flow Rate	ASTM D 4491	5907 (145)	$L/min/m^2$ ($gal/min/ft^2$)

C. Pervious Stone Aggregate Layer:

1. Furnish clean, coarse, natural, angular, washed ¾-inch stone aggregate with the following gradation:

Sieve Size	% Passing By Weight
1 ½"	100
1"	90 – 100
½"	0 – 5
#200	< 1

2. Recycled concrete aggregate or a stone that will crush into smaller pieces (e.g. schist) shall not be permitted for installation in the SMD system.

3. Provide materials free from wood, debris, combustible materials, vegetable matter, any material subject to decay or disintegration, brick, concrete, and glass.

D. Perforated Vapor Collection Piping:

1. 4-inch-diameter, double-walled (smooth-interior), corrugated, perforated, high density polyethylene (HDPE) pipe with a minimum pipe stiffness of 35 pounds per square inch (psi) at 5% deflection.

2. Perforations shall be slot-type. There shall be, at a minimum, three equally spaced perforations per groove (i.e. depressed section of the corrugated pipe) of the corrugated pipe. Perforations on alternating grooves shall be off-set.

3. 4-inch-diameter HDPE fittings and couplings, including elbows, cross fittings, and tees, to connect pipe sections shall be snap type. Provide fittings and couplings made by the same manufacturer as the 4-inch-diameter pipe, of the type recommended by the manufacturer for use with the pipe.

4. Use 2-inch-wide tile tape to secure fittings, couplings and connections in place.

5. Polyester filter sleeves shall be provided to wrap around perforated vapor collection piping. Polyester filter sleeves shall have a minimum air permeability of 700 $ft^3/ft^2/min$.

E. Slab Penetration Pipe Sleeve and Seals:

1. Furnish pipe sleeves and modular seals for vent and riser pipe penetrations through the concrete slab.

2. Furnish appropriately sized pipe sleeves for 4-inch-diameter metal riser and vent pipe. Pipe sleeves shall be molded non-metallic, HDPE sleeves with integral hollow, molded water-stop ring 2 inches larger than the outside diameter of the sleeve itself.

3. Seal shall be a modular, mechanical seal consisting of rubber links shaped to continuously fill the annular space between the pipe and the sleeve. Seal pressure plates shall be molded of glass reinforced nylon. Seal hardware shall be mild steel with a 60,000 psi minimum tensile strength and 2-part zinc dichromate coating per ASTM B-633, and have organic coating tested in accordance with ASTM B-117 to pass a 1,500-hour salt spray test, or be 316 stainless steel. Coloration shall be throughout elastomer for positive field inspection. Each link shall have permanent identification of the size and manufacturer's name molded into the pressure plate and sealing element.

4. For any wet, curing sealants which are field-applied on the interior of the building (inside the weatherproofing barrier), the maximum VOC content shall be 250 grams per Liter (g/L). The above criteria do not apply to solid sealant products.

2.2 ABOVE-SLAB MATERIALS

A. Metal Riser and Vent Piping (Details provided in other Sections):

1. Furnish metal riser and vent piping in accordance with the requirements of Division 22- Plumbing in the Contract Documents.
2. Metal riser and vent piping shall be in accordance with New York City Building Code, including but not limited to:
   a. 2014 New York City Mechanical Code, Chapter 5, Section MC 512 – Subslab Exhaust Systems.
   b. 2014 New York City Plumbing Code, Chapter 7, Section PC 702 – Materials.
3. Metal riser piping shall be connected and secured directly to the sub-membrane fitting (i.e., HDPE elbow/tee) at each riser location through the concrete slab.

B. Electrical Connections (Details provided in other Sections):

1. Furnish electrical connections to blower assembly, including blower, control panel, and remote visual alarm.
2. Furnish electrical connections to solenoid valves and control panels
3. Electrical connections shall be in accordance with applicable Contract Documents and Specifications, including but not limited to Division 26 - Electrical.

C. Wind Turbine – Passive Ventilation:

1. Passive ventilation will be provided by a stainless-steel, wind-driven, rotary turbine ventilator consisting of a 12-inch-diameter base and rated for an airflow of 440 cubic feet per minute (cfm) with a 4 mile per hour (mph) wind speed.
2. Wind turbine shall be installed at least 4 feet above the base of the roof, measured from the roof surface to the base of the rotary turbine.

D. Blower Assembly – Active Ventilation:

1. Provide six blower assemblies, including one spare blower assembly, fully constructed by the manufacturer. Each blower assembly shall include a vacuum blower, blower motor, baseplate, electrical control panel, valves, vacuum gauges, air filters, explosion-proof enclosures, flexible hose, and remote visual alarm.
2. Blower assemblies shall be fireproof, spark resistant, and corrosion resistant.
3. Blower assemblies shall be designed and manufactured for outdoor continuous service and shall be all-weather resistant.
4. Blower assemblies (six to be installed plus one spare) shall provide, at continuous operation:
   a. A minimum of 115 cfm flow rate at 35 inches of water column (inches WC) vacuum at each blower installed at risers located between grid lines.
   b. A minimum of 115 cfm flow rate at 35 inches WC vacuum for the spare blower to be provided to the Commissioner and City of New York.
5. Blowers shall be able to remain in continuous operation at a vacuum of up to 80 inches WC.
6. Blowers will require a three-phase, 60 Hz, 230 volt power supply. Power requirements may vary

depending on the blower manufacturer and model selected by the Contractor.

7. Vacuum blowers shall have non-contacting impellers.
8. Blower motors shall be totally enclosed, fan-cooled (TEFC) motors of rugged die cast aluminum construction. Blower motors shall be rated as explosion-proof.
9. Control panel housed in a weather-proof enclosure rated as explosion-proof.
10. Vacuum gauges shall have a range between 0 to 80 inches WC.
11. Sound enclosures shall be weather-proof and rated as explosion proof.
12. The remote visual alarm shall be labeled as follows:

SUB-SLAB VAPOR VENTING SYSTEM ALARM BLOWER MALFUNCTION IF LIT SERVICE BLOWER IMMEDIATELY

E. Exhaust Stack:

1. Furnish 2-inch-diameter metal pipe for exhaust stack connecting to the blower exhaust. Metal piping shall be in accordance with the requirements of Division 22- Plumbing.
2. Furnish appropriate fittings and couplings, including reducer if necessary, to connect exhaust stack to blower assembly, between pipe sections.
3. Furnish compatible metal rain guard or rain cap to be installed at end of exhaust stack. The guard or cap shall be designed to not produce back pressure on the blower.
4. Point of exhaust shall be at least 2 feet above the highest elevation roof line of building.

F. Methane Sensors

1. Methane gas sensors/transmitters shall provide continuous monitoring for methane gas in riser pipes connected to the vapor collection pipe and at indoor locations mounted within the building as shown on the Contract Documents and drawings.
2. Sensors/transmitters shall feature a non-dispersive, infrared (IR) sensor, backlighted graphics display, four-button (magnetic-switch) panel, onboard CPU, and integrated alarm system.
3. Sensors shall be constructed in an explosion proof, stainless steel housing.
4. Power requirements for each sensor will be 12 to 30 volt DC power.

G. Control Panels (Designed by Others – Details Provided in Other Sections)

1. Blowers for active ventilation, sensor/transmitters, and motorized solenoid valves will be powered by a control panel.
2. The control panel will contain the methane sensor transmitters, main power disconnect switch, 24 volt DC power supply, and relays for motorized solenoid valves.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

A. Prior to installation, schedule a meeting at the project site to be attended by all involved parties (i.e., the persons implementing this Section and the Commissioner). The purpose of this meeting is to review materials, applications, and procedures to be followed during installation of the SMD system.

B. Coordinate installation of the SMD system with the installation of other utilities and structural components.

C. Install all components of the SMD system in accordance with all applicable New York City Building Codes, all requirements of the Contract Documents, this Section, as indicated on the Contract Documents design drawings (N-200 through N-203) and as directed by the Commissioner.

3.3 SUBGRADE CONSTRUCTION

A. Subgrade Preparation:

1. Excavate the subgrade to the depth required to install the pervious stone layer below the elevation of the bottom of the floor slab, as shown on the Design Drawings N-200 through N-203.
2. Prepare the subgrade in accordance with Section 026113 – Excavation, Handling, Transportation, and Disposal of Contaminated Materials.
    a. Remove any rocks, stones, sticks, roots, sharp objects, or construction debris of any kind prior to placement of the geotextile fabric.
    b. Do not place geotextile on standing water, ground with excessive moisture, or frozen ground.
    c. The Commissioner shall approve the subgrade prior to initiating work.
3. Place geotextile fabric on the prepared subgrade across the entire footprint of the areas designated for depressurization. Overlap and secure geotextile per the manufacturer's recommendations.

B. Pervious Stone Aggregate Layer:

1. Place a minimum 8-inch-thick layer of the ¾-inch aggregate on top of the geotextile fabric. Install this layer as shown on Design Drawings N-200 through N-203.
2. At locations of perforated vapor collection piping, a minimum 2-inch-layer of the clean, coarse, natural, angular ¾-inch aggregate must overlie the perforated pipe and a minimum 2-inch layer of the aggregate must underlie the perforated pipe. Where the aggregate layer is thicker than 8 inches, the vapor collection pipe shall maintain an elevation of 2 inches below the bottom of the concrete slab, where possible.
3. Maintain the gradation (cleanliness, absence of fines) of the pervious stone layer throughout construction. Replace any stone that is not properly protected or maintained at no additional charge to the project.

C. Perforated Vapor Collection Piping:

1. Place perforated vapor collection piping at locations and in the configuration shown on Design

Drawings N-200 through N-203.

2. Join perforated vapor collection piping sections with compatible, flexible 4-inch-diameter fittings and couplings.
3. Secure all fittings, couplings, and pipe ends to perforated vapor collection piping with two layers of 2-inch-wide tile tape. Duct Tape shall not be used.
4. If not prefabricated, install one layer of polyester filter sleeves/socks to wrap all perforated vapor collection pipe.

3.4 SLAB PENETRATIONS

A. Sleeve and seal all pipe and conduit penetrations (including metal riser and vent pipe, mechanical, electrical, plumbing, etc.) through concrete slab as shown on Design Drawings N-200 through N-203.

B. All penetrations through the concrete slab shall be air tight.

C. Penetrations through the vapor barrier membrane shall be performed in accordance with the vapor barrier manufacturer recommendations and Specification 02 01 02 Vapor Barrier Installation.

3.5 METAL RISER AND VENT PIPING INSTALLATION:

A. As shown on Design Drawings N-200 through N-203, connect metal riser and vent piping to perforated vapor collection pipe system using compatible fittings.

B. Make riser connection to compatible fitting beneath the concrete slab penetration and pipe sleeve so that only the metal riser pipe is penetrating the concrete slab, as shown on the Design Drawings.

C. Route metal riser and vent piping from the slab penetration and pipe sleeve, through the building, to the roof-top wind turbine and mounted blowers, as shown on the MEP Drawings.

D. Install pipe cleanout, vacuum gauges, sampling port, and manual gate valve at an accessible height near the slab riser slab penetration point.

E. Manifold for the passive and active riser pipe shall be in an accessible location. Motorized solenoid installed on the riser piping shall be connected to electrical power and the system control panel as shown on the MEP Drawings.

F. Secure and support metal riser and vent piping as shown on the MEP Drawings.

G. Clearly label metal riser and vent piping in each accessible area, at a minimum of every 10-linear-feet of accessible/visible pipe run. Label the metal riser and vent piping to read:

CAUTION: DO NOT ALTER SUB-SLAB VAPOR VENT PIPE

3.6 INSTALLATION OF WIND TURBINES AND BLOWER ASSEMBLIES

A. Install each wind-driven rotary turbine at the locations shown on the MEP Drawings.

B. Wind turbines shall be installed at least 4 feet above the roof, measured from the roof surface to the base of the turbine.

C. Install each blower assembly on building roof-tops, at locations shown on MEP Drawings.

D. Install each blower assembly as per manufacturer's recommendations.

E. Supply power supply to each blower assembly, including blower, control panel, and remote alarm, in accordance with Division 26 – Electrical.

3.7 HYBRID SYSTEM OPERATION

A. The passive risers will be operational at all times, except when the inline methane sensor detects methane gas concentrations above the set-point. When the methane concentration set-point is triggered, the motorized solenoid valve on the active riser will automatically open and the motorized solenoid valve on the passive riser will close.

B. The methane gas sensor/transmitter units will contain integral display, single alarm set points, and alarm relays to turn the blower and motorized solenoid valve(s) on or off (open or closed). The inline methane sensors will continuously monitor the potential build-up of methane gas inside the riser pipe and indoor methane sensors will be installed to monitor methane concentrations inside of the building. All wiring will be installed in a suitable explosion-proof conduit in accordance with all applicable electrical codes and Division 22 – Electrical.

C. The methane gas mitigation blower(s), sensors/transmitters, and motorized solenoid valves will be powered by a control panel. The control panel will contain methane gas transmitter units, the main power disconnect switch, and relays for the blower(s) and solenoid valve(s). The control panel will be equipped with an auto-dialer for alarm communication.

D. When methane gas concentrations in the manifold piping reaches 20% of the methane lower explosive limit (LEL) (1% methane gas concentration by volume) and stay at or above this level, the solenoid valve on the active riser pipe (after the manifold) will open and the blower will turn on, and the solenoid valve on the passive riser pipe will close. The active blower will remain operational until the inline methane sensor detects methane gas concentrations consistently below 20% LEL over a minimum 24-hour duration.

E. If the methane concentration inside of the building reaches 5% of the LEL (0.25% methane gas concentration by volume), the visual alarm (red warning light) will be turned on to alert facility personnel to vacate the premises. The auto-dialer will call out and notify the necessary parties about the alarm and active ventilation will be turned on. In such an event, a confirmatory methane gas survey of the rooms will be conducted where methane gas was detected at or above 5% of the LEL. Corrective action will be taken, as needed. When indoor methane concentrations return to below set points, the active blower will be shut off and the associated motorized solenoid will close, and passive ventilation will resume.

3.8 EXHAUST STACK:

A. Route exhaust stack as shown on the MEP Drawings. The exhaust stack shall be located above the highest eave of the roof and at minimum 10 feet away from any adjoining or adjacent buildings or heating, ventilation, and air conditioning (HVAC) intakes or supply registers as specified in the New York City Mechanical Code, Chapter 5, Section MC 512 - Subslab Exhaust Systems and the NYSDOH Soil Vapor

Intrusion Guidance, dated October 2006.

B. Secure and support exhaust stack as shown on the MEP Drawings.

C. Place rain guard or cap at the end of the exhaust stack. Point of exhaust shall be at least 2 feet above roof.

D. Clearly label exhaust stack in each accessible area, at a minimum of every 10 linear feet of accessible/visible pipe run. Label the exhaust stack to read:

CAUTION: DO NOT ALTER SUB-SLAB VAPOR VENT PIPE

3.9 SYSTEM TESTING AND STARTUP

A. After installation of the SMD system, re-examine and verify the integrity of all seals and all joints in the vent piping and at the riser penetrations through the concrete slab.

B. Following pipe/fittings assembly, demonstrate all above-slab connections at pipe fittings are leak free by performing a 5 psi minimum air pressure test, or equivalent test approved by the Commissioner or City of New York.

C. Verify motorized solenoid valves are operational and responding to commands from the control panel.

D. Perform any necessary calibrations of the methane sensors. Using a known concentration of methane gas, verify that the methane sensors/transmitters are measuring methane gas and transmitting data/alarms as designed.

E. Confirm the alarm systems are operational, including visual alarms and auto-dialers and perform an alarm test to verify the designated parties are receiving notifications.

F. Conduct an air-flow smoke test of the SMD system, as described in the "Post-mitigation or confirmation testing - Sub-membrane Depressurization (SMD) systems with soil vapor retarder" section of the NYSDOH Soil Vapor Intrusion Guidance, dated October 2006.

G. Verify free, unobstructed operation of the wind turbines.

H. Sample ports will be located at the bottom of each riser pipe and portable pressure gauges which are compatible with the sample ports will be provided (details provided in other sections). The commissioning agent shall perform a reading at each sample port during commissioning to confirm negative pressure.

I. Collect readings from vacuum gauges and active blower exhaust points to verify the blowers are operating with design requirements.

J. All manufacturer operating manuals, shall be maintained on site for review or use in digital or hard copy format.

END OF SECTION 31 21 16

SECTION 31 25 00
Soil Erosion and Sediment Control

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

C. Storm Water Pollution Prevention Plan (SWPPP) prepared by Langan Engineering, Surveying, Landscape Architecture, and Geology, D.P.C.

1.2 SUMMARY

A. Work includes:
   1. Provide all labor, materials, equipment and services to implement all erosion and sediment control practices and procedures as indicated in the Contract Documents.
   2. Inspect and maintain all erosion and sediment control practices weekly, prior to anticipated rainfall events, and after rainfall events. Needed restorations shall be made immediately.

B. Related Sections
   1. Section 31 10 00 – Site Clearing, Removals and Preparation
   2. Section 31 00 00 – Earthwork

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. All calculations and shop drawings shall be signed and sealed by a Professional Engineer licensed in the State of New York and submitted to the Commissioner for review

1.4 ENVIRONMENTAL REQUIREMENTS

A. Protect adjacent properties and water resources from erosion and sediment damage throughout construction in accordance with the Soil Erosion and Sediment Control Plan and NYSDEC standards. The Contractor shall be responsible for administering the Plan.

B. Discharge from dewatering operations shall not be directed to surface waters. Discharge from dewatering operations shall be per DDC General Conditions.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.6 REFERENCES

A. New York State Department of Environmental Conservation (NYSDEC) Standards and Specifications for Erosion and Sediment Control, latest revision.

B. United States Department of Environmental Protection Agency (EPA) Document No. EPA 832/R-92-005, "Storm Water Management for Construction Activities", Chapter 3, latest revision.

C. New York City Building Code, 2014 edition.

1.7 DELIVERY, STORAGE AND HANDLING

A. Store materials in designated areas and as recommended by the manufacturer to protect against the elements, direct exposures, and damage.

B. Furnish erosion control blankets, jute mesh and geotextile fabric in rolls with suitable wrapping to protect against moisture and extended ultraviolet exposure prior to placement.

1.8 WARRANTY

A. Erosion control material shall have a warranty for use and durable condition for project specific installations.

B. Temporary erosion control materials shall carry a minimum eighteen (18) month Manufacturer's warranty from date of substantial completion.

C. Permanent erosion control materials shall carry a minimum three (3) year Manufacturer's warranty from date of substantial completion.

PART 2 - PRODUCTS

2.1 SILT FENCE

A. Silt fence posts: wood, steel, or an approved synthetic material, with a minimum length of three (3) feet. Hardwood posts shall have a minimum cross sectional area of 3.5 square inches. Steel posts shall be standard T and U sections weighing not less than 1.00 pounds per linear foot.

B. Silt fence fabric: Fabric shall meet or exceed the following specifications:

PROPERTY	UNIT	TEST METHOD	MIN. ACCEPTABLE VALUES
Grab Tensile Strength	lbs.	ASTM D4632	110
Elongation at Failure	%	ASTM D4632	20
Puncture Strength	lbs.	ASTM D4833	60
Mullen Burst Strength	PSI	ASTM D 3786	300
Flow Through rate	(gal./min.sf)	ASTM D 4491	25
Equivalent Opening Size		US Std. Sieve ASTM D 4751	40-80
Ultraviolet Radiation Stability	%	ASTM D 4355	70

C. Wire Fence: Minimum 14 gage with a maximum six inch mesh opening.

2.2 STRAW BALE DIKE

A. Hay or straw bales: New straw that shall be either wire bound or nylon string tied.

B. Bale stakes: Rebar, steel pickets, or 2-inch x 2-inch hardwood stakes.

2.3 STABILIZED CONSTRUCTION ENTRANCE

A. Stone aggregate: 1-inch to 4-inch clean stone or reclaimed or recycled concrete.

B. Geotextile: woven or non-woven fabric consisting only of continuous chain polymeric filaments or yarns of polyester. The fabric shall be inert to commonly encountered chemicals, hydro-carbons, mildew, rot resistant, and conform to the fabric properties shown:

PROPERTY	UNIT	TEST METHOD	Light duty(1) Roads Grade Subgrade	Heavy duty(2) Haul Roads Rough Graded
Grab Tensile Strength	lbs.	ASTM D1682	200	220
Elongation at Failure	%	ASTM D1682	50	60
Puncture Strength	lbs.	ASTM D751	40	125
Mullen Burst Strength	PSI	ASTM D3786	190	430
Equivalent Opening Size		US Std. Sieve CW-02215	40-80	40-80
Aggregate Depth	(inches)	-	6	10

(1)light duty roads: Area sites that have been graded to subgrade and where most travel would be single axle vehicles and an occasional multiaxle truck. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

1. Trivera Spunbound 1115
2. Mirafi 100X
3. Typar 3401
4. Or approved equal.

(2)heavy duty roads: Area sites with only rough grading, and where most travel would be multi-axle vehicles. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

1. Trevira Spunbound 1135
2. Mirafi 600X
3. Typar 3801
4. Or approved equal.

2.4 FILTER FABRIC INLET PROTECTION

A. Filter Fabric: Fabric shall be a woven polypropylene geotextile and sewn by a double needle machine using a high strength nylon thread. Fabric shall be manufactured to fit the drainage inlet.

PROPERTY	UNIT	TEST METHOD	MIN. ACCEPTABLE VALUES
Grab Tensile Strength	lbs.	ASTM D4632	110
Grab Elongation	%	ASTM D4632	10-15
Puncture Strength	lbs.	ASTM D4533	900
Trapezoidal Tear	lbs.	ASTM D4533	65-90
Flow Through rate	(gal./min.sf)	ASTM D 4491	66
Equivalent Opening Size	US Sieve	ASTM D 4751	30
Ultraviolet Radiation Stability	%	ASTM D 4355	96
Permittivity	sec-1	ASTM D-4491	0.862

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Review site conditions and Contract Drawings prior to the commencement of demolition, earth moving activities or excavation.

B. The Contractor shall notify the Commissioner prior to the commencement of work. Any proposed deviation from the Contract Drawings must be submitted to the Commissioner in writing 72 hours prior to commencing work.

C. Install erosion and sediment controls for each work area prior to commencement of work within that work area. Comply with NYSDEC standards and specifications.

D. Perform all erosion and sediment controls in accordance with the Contract Drawings.

3.3 SILT FENCE

A. Silt Fence shall be placed as close to disturbed area as possible, but at least 10 feet from the toe of a slope steeper than 3H:1V. The area beyond the fence must be undisturbed or stabilized. The type of silt fence specified for each location on the plan shall not exceed the maximum slope length and maximum fence length requirements shown in the following table:

Slope	Steepness	Slope Length/Fence Length (ft.)		
		Standard	Reinforced	Super
<2%	< 50:1	300/1500	N/A	N/A
2-10%	50:1 to 10:1	125/1000	250/2000	300/2500
10-20%	10:1 to 5:1	100/750	150/1000	200/1000
20-33%	5:1 to 3:1	60/500	80/750	100/1000
33-50%	3:1 to 2:1	40/250	70/350	100/500
>50%	> 2:1	20/125	30/175	50/250

B. Maximum allowable slope length and fence length will not exceed the limits shown in the Design Criteria for the specific type of silt fence used; Maximum allowable ponding depth of 1.5 feet behind the fence. Given that erosion would occur in the form of sheet erosion and there is no concentration of water flowing to the barrier; Soil conditions allow for proper keying of fabric, or other anchorage, to prevent blowouts.

C. Locate silt fence at the toe of slopes and at ground level throughout its length. Drive posts securely at least 16-inches into the ground on the down slope side of the trench. Set post spacing a maximum of ten (10) feet apart. Adjust spacing to place posts at low points along fence line.

D. Fasten support wire fence to upslope side of posts, extending six inches below grade. Attach continuous length of fabric to upslope side of fence posts. Avoid joints, particularly at low points in the fence line. Fasten fabric securely to support posts where joints are necessary and overlap to the next post. Place the fabric in the trench so the bottom folds across the bottom of the trench.

E. Inspect silt fences weekly and after each rainfall event. Remove any sediment deposits found promptly to provide adequate storage volume for the next rain and reduce pressure on the fence. Do not undermine the silt fence during clean out. Replace fabric that is torn, decomposed, or in any way becomes ineffective, immediately without additional expense to the City of New York.

F. In addition to procedure summarized above, refer to installation and service requirements outlined in the Contract Drawings.

3.4 STRAW BALE DIKE

A. Use straw bale dikes subject to the following conditions:

Slope Steepness	Maximum Length (ft.)
2H:1V	25
3H:1V	50
4H:1V	75
5H:1V or flatter	100

B. Do not exceed ¼ acre drainage area for overland flow per 100-feet of straw bale dike with silt fence, with maximum ponding depth of 1.5 feet behind the fence. Given that erosion would occur in the form of sheet erosion and that there is no concentration of water flowing to the barrier.

C. Excavate the area to accommodate placement of straw bales which are to be embedded in the soil a minimum of four inches, and placed so the string or wire is horizontal. Place bales in a row with ends tightly abutting the adjacent bale. Anchor the bales securely by driving two stakes or rebar through each bale to a minimum depth of 1.5 to 2 feet into the ground. Drive the first stake in each bale toward the previously laid bale to force the bales together. Drive stakes flush with the top of the bale.

D. Inspect straw bales weekly and after each rainfall event, restore or replace promptly as needed. Remove accumulations of sediment trapped by straw bale filters regularly. Remove temporary straw bales from the site at the conclusion of construction. Restore the areas where the straw bales were installed to match the surrounding area. Restoration may include, but is not limited to, seeding and establishing the lawn area.

E. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the SWPPP and on the Contract Drawings.

3.5 STABILIZED CONSTRUCTION ENTRANCE

A. Install stabilized construction entrances at any point where traffic will be entering or leaving a construction site to or from a public-right-of–way, street, alley, sidewalk, or parking area.

B. Install and maintain a minimum stone thickness of 6-inches.

C. The stabilized construction entrance width shall be twelve feet minimum but not less than the full width of points of where ingress or egress occurs. The stabilized construction entrance shall be a minimum width of 24-feet if there is only one entrance to the site.

D. The length of the stabilized construction entrance shall be 50-feet minimum.

E. Place geotextile over the entire area to be covered with aggregate.

F. Provide piping of surface water under entrance as required. If piping is impossible, a mountable berm with 5:1 slopes will be permitted.

G. Maintain the entrance in a condition which will prevent tracking of sediment onto public-right-of-way or streets. This may require periodic top dressing with additional aggregate. Remove all sediment spilled, dropped, or washed onto public right-of-way immediately.

H. Clean wheels, when required, to remove sediment prior to entrance onto public right-of-way. Perform washing, when required, on an area stabilized with aggregate, which drains into an approved sediment trapping device. Prevent all sediment from entering storm drains, ditches and watercourses.

I. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the SWPPP and on the Contract Drawings.

3.6 FILTER FABRIC INLET PROTECTION

A. Install inlet protection at all existing, temporary, and new catch basins located within the disturbed work area.

B. Space support stakes evenly around the inlet a maximum of three (3) feet apart. Drive support stakes a minimum of 18-inches below grade. Bridge spans greater than three (3) feet with the use of wire mesh behind the filter fabric for support.

C. Drive support stakes close to the inlet so any overflow drops into the inlet and not on the unprotected soil.

D. Cut filter fabric from a continuous roll to eliminate joints. Overlap joints, if needed, to the next stake. Extend filter fabric a minimum of one (1) foot below grade and backfill. Securely fasten fabric to the support stakes and frame.

E. Do not extend filter fabric more than 1.5 feet above the inlet crest unless reinforced.

F. Install wooden frame completely around the crest of the fabric for overflow stability.

G. Inspect the fabric barrier after each rain event and restore as needed. Remove sediment from the pool area as necessary with care not to undercut or damage the filter fabric.

H. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the SWPPP and on the Contract Drawings.

3.7 EROSION CONTROL BLANKET

A. Place erosion control blankets on any disturbed slopes with grades from 1H:1V to 3H:1V.

B. Excavate and grade the areas to receive the erosion control blanket. Install seed per the manufacturer's recommendation.

C. Roll blankets down or horizontally across the slope. Unroll blanket with the appropriate side against the soil surface.

D. Secure all blankets to the soil surface by placing staples in appropriate locations as shown in the staple pattern guide provided by the manufacturer.

E. Staple the edge of parallel blankets with a four (4) inch overlap.

F. Splice consecutive blankets, if necessary, across the slope and place over end (shingle style) with a three (3) inch overlap.

G. Anchor the blankets as follows:
   1. Anchor the blanket at the top of the slope in a 6-inch deep x 6-inch wide trench with approximately twelve (12) inches of blanket extended beyond the upslope portion of the trench.
   2. Backfill and compact the trench after stapling.
   3. Apply seed to compacted soil and fold the remaining twelve (12) inch portion of the blanket back over seeded and compacted soil.

H. Maintain and inspect the erosion control blankets per the manufacturer's recommendations.

I. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the SWPPP and on the Contract Drawings

3.8 TEMPORARY STOCKPILE

A. Secure PVC sheeting in place with tie downs and/or weights such as sand bags at the end of each workday and during adverse weather conditions.

B. Construct stockpiles so that the height does not exceed fifteen (15) feet. Side slopes shall not be steeper than 2H:1V.

C. Contain all stockpiles with hay bales and silt fence placed continuously around the perimeter.

D. Apply temporary seeding to all stockpiles which will be inactive for twenty (20) days or longer.

E. Maintain stockpiles in accordance with DDC General Conditions and NYCDEP regulations.

F. In addition to procedure summarized above, refer to installation and maintenance requirements outlined in the SWPPP and on the Contract Drawings.

3.9 EROSION CONTROL IMPLEMENTATION

A. Place erosion control systems in accordance with the staging and features outlined in the Contract Drawings.

B. Follow construction phasing in the sediment control plans to limit the surface area of erodible earth material exposed by clearing and grubbing, excavation, borrow and embankment operations.

C. Incorporate all permanent erosion control features into the project at the earliest practical time to minimize the need for temporary controls.

D. Properly construct, stabilize, and maintain all temporary and permanent erosion and sedimentation control measures and related items.
   1. Perform general inspection of sediment and erosion controls at end of each work day, and assure that controls are in good condition before leaving.
   2. Perform detailed inspection of all sediment and erosion controls at least once every seven days and within 24 hours after each rainfall of more than one half (0.5) inch.
   3. Perform any needed maintenance and restorations, and add measures as needed to control erosion and sediments.
   4. Remove accumulated sediments from sediment traps and behind silt fences before they reach 50% of capacity. Dispose of sediments in upland area, stabilized to prevent further erosion or sedimentation.
   5. Maintain written records of all inspections, maintenance and restorations, and submit copies of the written reports to the Commissioner at the end of each month of work.

E. Replace at own expense any control measure that is not functioning properly as directed by the Commissioner.

F. Install inlet protection on all new catch basins immediately upon construction of catch basins.

G. Implement dust control measures during construction. Minimize dust clouds by watering down construction area or other approved methods as required.

H. Secure a tarp over materials in all construction vehicles hauling materials either into or out of the construction area to prevent sediment pollution of public roadways.

I. Design erosion and sediment controls specific to the site in accordance with the NYSDEC Standards, which are more stringent than the EPA Standards.

3.10 NON-STORMWATER DISCHARGE CONTROLS

A. Groundwater encountered within excavations shall be disposed per DDC General Conditions.

B. Cleaning water for construction vehicles and equipment shall be diverted to the temporary and approved erosion and sediment control measures. Chemicals and detergents shall not to be used.

C. Coordinate with the Commissioner to identify areas on-site for construction vehicle transit (i.e. – haul roads, contractor trailers and parking areas, etc.) or equipment staging which shall be monitored and where runoff can be controlled.

D. Water used for dust control measures shall be applied using appropriate quantities and equipment. No chemical additives shall be used.

E. Water main flushings, hydrostatic test water, fire test water, and chlorination test water shall be directed to the control measures on the site. Turbid water is to be detained to allow sufficient sedimentation time (minimum of 24 hours). Chlorinated water is to be detained until the water is de-chlorinated (minimum of 24 hours).

F. Concrete trucks shall be washed out in an area approved of by the Commissioner. Designate wash-out areas with proper signage. Locate a concrete wash-out box near the concrete trucks to prevent concrete residue from being washed off-site. Wash-out containers can be pre-fabricated or constructed on-site out of plywood and plastic sheeting. All runoff from wash-out activities shall be directed to the on-site control measures. Discarded cementitious materials shall be removed and disposed off-site.

G. Building washing or parking lot cleaning water (where no spills or leaks of toxic or hazardous materials have occurred) that may enter the storm drainage system shall not contain chemicals or detergents.

3.11 REMOVALS

A. Maintain erosion and sediment control devices within each work area until final stabilization of that work area.

B. "Final stabilization" shall mean that all soil disturbance activities have ceased and a uniform, perennial vegetative cover with a density of eighty (80) percent over the entire pervious surface has been established; or other equivalent stabilization measures, such as permanent landscape mulches, rock rip-rap or washed/crushed stone have been applied on all disturbed areas that are not covered by permanent structures, concrete or pavement.

C. Remove erosion and sediment control devices in accordance with the DDC General Conditions.

END OF SECTION 31 25 00

SECTION 31 50 00
Excavation Support and Protection

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 GENERAL REQUIREMENTS

A. Provide excavation support in accordance with the requirements of the Contract Documents and the 2014 New York City Building Code.

B. The City of New York retained a Geotechnical Engineer to prepare and obtain New York City Department of Buildings (DOB) Approval for Support of Excavation (SOE) design drawings for the project. The Contractor shall retain a Professional Engineer licensed in the State of New York to replace the Geotechnical Engineer as design applicant in DOB TR-1 forms for the SOE work. The Contractor's licensed Professional Engineer shall prepare signed and sealed SOE design drawings necessary to facilitate the proposed new construction and to properly support all adjacent buildings, structures, sidewalks, streets, yards, and utilities. The Contractor shall not be allowed to commence any SOE work, nor the excavation requiring SOE to be in place, prior to receipt of the DOB approval for his submitted SOE drawings.

1.3 SUMMARY

A. Work of this Section includes all labor, materials, equipment, and services necessary to complete the design and installation of excavation support and protection as shown on the contract documents for the microtunneling entry and receiving pits, and specified herein including, but not limited to the following:

1. Design and installation of sheet piling, soldier piles, and bracing of all excavation sides to prevent any damage to existing structures, street paving, utilities adjacent to new construction and in the vicinity of the new construction.

2. Perform exploratory test pits to determine the locations and conditions of existing adjacent utilities.

3. Protection and monitoring of streets and utilities.

4. Other labor and materials as may be reasonably inferred to be required to make the work under this Section complete.

5. Removal of sheet piling, soldier piles, and bracing, if required.

B. Related Sections

1. Section 31 00 00 – Earthwork

1.4 REFERENCES

A. Latest revision of the following standard specifications, where not otherwise required by the Contract Documents:

1. ASTM A36 Standard Specification for Carbon Structural Steel.
2. ASTM A252 Standard Specification for Welded and Seamless Steel Pile Piles.
3. American Welding Code (AWS) D1.1 Structural Welding Code
4. 2014 New York City Building Code.

B. Geotechnical Engineering Report for DSNY Staten Island District 1&3 Garage Staten Island, New York prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture, and Geology, D.P.C., dated 22 October 2018.

C. "Support of Excavation" Drawings, prepared by Langan, dated 8 August 2019.

D. American Association of State and Highway Transportation Officials (AASHTO) Publications.

1.5 SUBMITTALS PROCEDURE

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Unless otherwise indicated, transmit all submittals to the Commissioner for review and acceptance before proceeding with ordering, fabricating, or any other work of this Section. Submittal review will be of the concept only and shall not in any way diminish or limit the Contractor's responsibility for the performance and quality of the work of this Section and the protection of existing structures.

C. The Contractor's Professional Engineer licensed in the State of New York shall prepare an outline of the Contractor's construction methods and step-by-step procedures together with plans and details of the excavation support system to satisfy the 2014 New York City Building Code requirements and approved drawings. This shall be coordinated with the relevant submittals identified in Section 31 00 00 "Earthwork" and shall be submitted and reviewed by the Commissioner for the concept before submittal of the shop drawings.

D. Plans and Shop Drawings: Support of Excavation (SOE) plans have been prepared for soil. Support of Excavation Drawings provided to date are for filing and have been provided for reference only. The Contractor must prepare and submit plans and shop drawings for all items in this Section. The plans and shop drawings shall be submitted signed and sealed by the Contractor's Professional Engineer licensed in the State of New York. Contractor shall obtain DOB approval of these plans.

1. Excavation Support – Provide calculations, plans, and shop drawings that show the limits and layout of the excavation support system. Provide representative sections for each side of the excavation that include calculations, structural details of the cutoff wall, embedment depth, and bracing elements.

Provide elevations that give the location and identification of all lateral bracing elements. Provide a schedule that gives design load in each brace, proof test load, and lock-off load.

a. Excavation side stabilization plan, details and calculations including but not limited to sheeting, shoring, and bracing.

b. Adjacent structures, street, and utility protection and monitoring plan. Show in a detailed and scaled plan locations of survey control point locations.

c. Submit original manufacturer's certificates for all materials as specified herein.

E. Monitoring of Existing Structures: Submit the monitoring plan specified herein at least two weeks before proceeding with the work. Submit monitoring results as specified herein within two days after completing the monitoring work.

F. Certification For Examination of Site and Records: Before proceeding with the Work, submit certification in an acceptable form, signed by the Contractor, stating that careful examination has been made of the site, existing structures, existing adjacent structures, records of utility lines, test boring records, soil samples, subsurface exploration reports, the Drawings, and all other Contract Documents.

G. Procedures and methods to be used to ensure safety and stability of all adjacent structures, as well as identification of the entity that will sign the DOB TR-forms as the responsible party for the Structural Stability of the adjacent buildings.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Codes and Permits:

1. All work shall comply with the requirements of the 2014 Building Code of the City of New York, requirements of the New York State Department of Labor, requirements of Occupational Safety and Health Administration (OSHA), requirements of New York State Department of Health (NYSDOH), requirements of the New York State Department of Environmental Conservation (NYSDEC), requirements of the New York City Department of Environmental Protection (NYCDEP), requirements of the New York State Department of Transportation (NYSDOT), requirements of New York City Department of Transportation (NYCDOT), requirements and drawings approved by the New York City Transit (NYCT).

2. The Contractor shall procure and pay for all permits and licenses required to complete the work of this Section.

C. Engineering Supervision: For support of excavation, retain the services of a Licensed Professional Engineer licensed in the State of New York who shall design and supervise installation of all work of this Section. The Contractor's Professional Engineer shall sign, seal and submit all relevant New York City Building Department Technical Report forms.

D. Special Engineering Inspection:

1. The Special Inspector, hired by the City of New York, shall be responsible for the inspection for all sheeting, shoring, and bracing work.

2. Before commencing work of this Section, meet with the Construction Manager, the Commissioner, and other concerned entities. Review the sheeting and bracing procedures and responsibilities including testing and inspection procedures and requirements. Notify participants at least three working days before the convening conference. Record discussions and agreements and furnish a copy to each participant.

1.7 PROJECT CONDITIONS

A. The Contractor, by careful examination, shall inform himself as to the nature and location of the work; the confirmation of the ground, the nature of the subsurface conditions; the locations of the groundwater table; the character, quality, and quantity of the materials to be encountered; the character of the equipment and facilities needed preliminary to and during the execution of the work; and all other matters which can in any way affect the work.

B. The Contractor shall be held to have visited the site and to have familiarized himself with the existing conditions of adjoining properties, utilities, and buildings.

C. Borings are available for the Contractor's review. The City of New York makes no predictions or representations regarding the character or extent of soil, or other subsurface conditions to be encountered during the work. The Contractor shall make his own deductions of the subsurface conditions which may affect the methods or cost of construction of the work hereunder. Additional borings and other exploratory operations may be performed by Contractor, at the Contractor's option, and following the Commissioner's approval. No change in the Contract Sum will be authorized for such additional exploration undertaken by the Contractor.

D. The Contractor shall note that obstructions, such as boulders or large pieces of debris, were encountered in the fill material.

E. The Contractor shall investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the site of the work. The Contractor shall conform to all New York City and State, and Federal regulations regarding the transportation of materials to and from and at the job site and shall secure in advance such permits as may be required.

F. The Contractor shall locate existing underground utilities in and beyond the areas of work. If utilities are indicated to remain in place, the Contractor shall provide adequate means of support and protection during the work.

1. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility owner immediately for directions. Cooperate with the City of New York and utility companies in keeping respective services and facilities in operation. Restore damaged utilities to the satisfaction of the utility owner.

2. Do not interrupt existing utilities serving facilities occupied by the City of New York, during occupied hours, except when permitted in writing by the Construction Manager and then only after acceptable temporary utility services have been provided. Provide a minimum of 48-hour notice to the Construction Manager, and receive written notice to proceed before interrupting any utility.

3. Remove or relocate the existing underground utilities indicated to be removed or relocated. Coordinate with utility companies for shutoff of services if lines are active.

G. The Contractor shall examine drawings to determine the sequence of operations, and relation to work of other trades. The start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.

1.8 SUBSURFACE STRUCTURES AND UTILITIES

A. The Contractor shall become acquainted with the existence and location of all surface and subsurface structures and utilities within the project area and beneath the surrounding streets. Contractor shall not damage any of those that are to remain and shall leave them accessible and make the necessary provision by sheeting, hanging, supporting or other means necessary to obtain this result, subject to the approval of the Commisioner, New York City Department of Buildings and Department of Transportation, and the utility companies involved.

1.9 ERRORS IN DEPTH

A. In the event that any part of the excavation is carried, through error, beyond the depth and the dimensions indicated on the drawings or called for in the specifications, then the Contractor, at his own expense, shall furnish and install gravel, stone, or concrete fill with which to fill to the required level at all locations, subject to approval of the Commissioner.

1.10 PROTECTION

A. The work shall be executed so that no damage or injury will occur to the existing public and adjacent structures, streets, paving, sewers, gas, water, electric or any other pipes. Should any damage or injury caused by the Contractor, or anyone in Contractor's employ, or by the work under this Contract occur, the Contractor shall, at own expense, restore such damage and shall assume all responsibility for such injury.

B. The above shall also include the protection of all existing utilities (including sewers, water lines, electrical lines, and telecommunication lines) to remain in use within and adjacent to the area affected by the work of this project.

C. Monuments, benchmarks and other reference features on streets bounding this project, shall be protected. Should these be disturbed in any manner, replace them at no additional expense to the City of New York.

1.11 PRECONSTRUCTION-CONDITIONS DOCUMENTATION

A. The City of New York shall hire an independent third-party consultant to perform a pre-construction conditions documentation of the adjacent structures.

B. The Contractor may perform, if he wishes, his own conditions-verification survey and shall submit any findings that differ from the Commissioner's documentation as specified herein at least 15 days before beginning the work.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Provide suitable sheeting, shoring, bracing, and soil support materials which will withstand loads imposed without movement. Materials shall be kept in serviceable condition at all times. The contractor should refer to the support of excavation drawings for the sizes of the elements.

B. Driven sheet piles and soldier piles shall conform to ASTM A-572 Grade 50.

C. Steel cross struts and wales shall conform to ASTM A-992 Grade 50.

D. Miscellaneous Steel shall conform to ASTM A-572 Grade 50.

E. Plates: Structural steel plates shall conform to ASTM A36 (AASHTO M183) or ASTM A572 Grade 50 (AASHTO M183).

2.2 DELIVERY, STORAGE, AND HANDLING

A. Materials ordered or delivered to the project site, before verification of sheet-pile and soldier-pile length, will be at the Contractor's risk.

B. After pile lengths are verified, the Contractor shall deliver materials to the project site in such quantities and at such times to assure continuity of operations to maintain the project schedule.

C. Materials shall be stored in orderly groups above ground and blocked during storage to minimize possible distortion of members.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

A. Excavation support and bracing shall be constructed in accordance with the 2014 New York City Building Code requirements.

B. Notify the Commissioner before the start of work. The notifications are to be in accordance with the Contract Drawings.

C. Install sheeting, shoring, and bracing to permit excavation to the required foundation subgrade as required to install the slab.

D. Excavation support shall be adequate to resist earth and hydrostatic pressures and lateral pressures due to surcharge loads, to prevent displacement of the adjacent ground; and to prevent loss of support or damage to buildings, utilities, sidewalks, and streets. Lateral loads created from adjacent buildings, cranes and/or street loads shall be included.

E. During the excavation work specified in Section 31 00 00 - Earthwork, if additional locations may require sheeting and bracing based on the Contractor's construction methods and procedures, then provide such additional supports at no additional cost to the City of New York. Such additional supports shall be designed and constructed in accordance with the requirements of this Section, as per the Contract Documents.

F. All the above work shall be carried on in such a manner as not to interfere with the progress of the work under this Contract.

G. Excavation support and bracing may be removed, left in place, or cut as approved and directed by the Commissioner. Any material that affects finished construction shall be removed. Carefully remove materials such that no loss of support occurs beneath areas adjacent to the sheeting. Any material left in place must be removed not less than four-ft below finish grade. Sheeting and bracing material removed from the excavation shall be immediately removed from the site and properly disposed of in accordance with Section 02 61 13 - Excavation and Handling of Contaminated Materials.

3.3 SOIL EXCAVATION SUPPORT

A. Temporary excavation walls shall be provided along the sides of excavations in the soil where the overburden exceeds 4 feet, and any other material not self-supporting as defined by the plans or an alternate design by the Contractor's Professional Engineer licensed in the State of New York.

B. Excavation adjacent to the temporary wall shall not exceed a depth of 2 feet below the point of lateral support to be installed. Lateral support shall be installed and preloaded before continuing excavation.

C. Provide and install all support system components needed to ensure the proper installation of work and to protect adjacent structures, streets, paving, utilities, etc.

D. Sides of the site shall be protected against cave-in and movement of soil at all times.

E. The above work shall be carried out in such a manner as not to interfere with the progress of the work under this Contract. If it is found necessary to change the position of the shoring, bracing, walers, or other items to permit the construction work to proceed, do this work at no extra charge.

F. At the completion of the work, remove all shoring, bracing, rakers and other items and remove same from the project premises when directed by the Commissioner.

G. Where temporary bracing is required to withstand earth pressures, the backfill shall not be placed until after temporary bracing has been installed. If portions of the ground floor must be placed and have reached sufficient strength for the design of any portion of the foundation to withstand their required lateral load, backfilling shall not be placed until this work has been performed and the concrete reaches its necessary strength.

3.4 PROTECTION OF ADJACENT STRUCTURES, STREETS, AND UTILITIES

A. The adjacent and surrounding structures, streets, utilities shall be protected during the work described herein. Excavation work shall be restricted to hours indicated by the Commissioner.

B. The Contractor shall restore, to the satisfaction of the Commsioner, by repair or otherwise, the portions of buildings, or their contents, altered by the Contractor in furtherance of his sheeting, and bracing work. Restoration shall be completed to the conditions, which existed before the start of work.

3.5 MONITORING

A. Before starting work, the Contractor's Professional Engineer licensed in the state of New York and Land Surveyor licensed in the state of New York shall check and verify governing dimensions and elevations,

survey existing conditions, and record any prior settlement or cracking of structures, pavements, and other improvements. Document with photos and videos all adjacent structures prior to the beginning of any construction activities.

B. The monitoring points shall be established by the monitoring company employing a Professional Land Surveyor licensed in the State of New York, and referenced to a fixed off-site benchmark.

C. Monitoring of Excavation Support System: Install reference points at a maximum spacing of 24-ft on-center around the entire perimeter of the excavation to properly monitor the ground movements behind the excavation support system. As the excavation proceeds, install points on the soldier pile to measure potential lateral deflection at about 24-ft on-center. These locations shall be subject to review by the Commissioner.

D. Monitoring of Adjacent Buildings: Install a minimum of 4 reference points on the upper third and the lower third of the adjacent building face abutting the excavation. The monitoring company will also conduct crack monitoring of the adjacent building.

E. Ground Vibrations: The vibration monitoring locations shall be selected by the Commissioner.

1. The seismographs will be provided by, and the monitoring performed by the Testing Agency.

2. Monitoring shall be performed before the start of work to obtain ambient levels, and daily during excavation and foundation construction work.

F. Crack Gauges: Monitoring points shall be installed at cracks observed during the execution of Preconstruction-Conditions Documentation and as required as the work progresses, as determined by the Contractor, and as directed the Commissoner.

G. Frequency and Reporting

1. Vertical and Lateral Displacements - Monitoring shall be performed twice on a weekly basis during any excavation support or foundation work. Readings shall be taken to nearest 0.005 ft. Written reports summarizing the monitoring results shall be submitted by the Contractor's Professional engineer licensed in the State of New York to the Commissioner for review on a weekly basis. The reports shall be submitted in both electronic copies and hard copies. The reports shall include the raw data points as well as graphs and tables summarizing the monitoring data.

2. Ground Vibrations – The ground vibrations caused by the foundation work, bracing and foundation installation operations shall be monitored continuously with threshold-type seismographs capable of measuring ground movements to 0.02 in/sec. Written reports summarizing the monitoring results shall be submitted by the Contractor's Professional engineer licensed in the State of New York to the Commissioner for review on a weekly basis.

3. Crack Guages: At a minimum, crack gauges shall be measured on a weekly basis. The frequency of monitoring shall be increased as directed by the Commissoner.

H. Alert levels: Should any of the following magnitudes of movement be detected, the contractor shall immediately take remedial action and advise the Commissioner.

1. Vibration Monitoring: Peak particle velocities

a. Threshold Level: 0.5 inches per second for all buildings, and other structures.

b. Limit Level: 2.0 inches per second for all buildings, and other structures.

2. Crack Gauge Monitoring: Cumulative movement in any direction

a. Threshold Level – 1/16 inch in any direction

b. Limit Level – 1/8 inch in any direction

3. Survey Monitoring:

a. Threshold Level:

i) Vertical or horizontal movement of buildings: 1/4-inch total movement, or 3/16-inch between two consecutive readings.

ii) Vertical or horizontal movement of SOE Wall: 3/4 inch total movement, or 1/4-inch between two consecutive readings.

b. Limit Level:

i) Vertical or horizontal movement of buildings: 3/4-inch total movement, or 3/8-inch between two consecutive readings.

ii) Horizontal movement of building or other surface structures: 1.5-inch total movement, or 1/2-inch between two consecutive readings.

4. Groundwater Monitoring:

a. Threshold Level – 1-foot increase or decrease in any measurement after pumping has stabilized at any temporary subgrade during excavation

b. Limit Level – 2 feet increase or decrease in any measurement after pumping has stabilized at any temporary subgrade during excavation.

3.6 ACTION ITEMS

A. Any movement or vibration exceeding the criteria outlined in 3.5 above shall be reported immediately to the Commissoner. Work in the immediate area shall be suspended, unless directed otherwise by the Commissoner. Corrective measures to ensure integrity and stability of adjacent structures shall be the responsibility of the Contractor.

B. In the event that a Threshold Level is reached the following shall be required:

1. The Commissoner shall be notified of the exceedance.

2. The exceedance shall be investigated to identify potential correlation to construction activities.

3. Contractor shall meet with the Comissoner and DOB to discuss the need for a response to mitigate the potential for readings exceeding the Threshold Level.

4. Where required, submit a detailed plan of action to mitigate the potential for additional movement or vibration.

5. Install additional instruments as required evaluate the need for any action necessary to prevent reaching the Threshold Level.

C. In the event that a Limit Level is reached the following shall be required:

1. The Commissioner shall be notified of the exceedance.

2. Construction shall be suspended. The exceedance shall be investigated to identify potential correlation to construction activities.

3. Inspect the building (or portions thereof) for potential damage. Inspections shall be made by the Special Inspector for structural stability, the Contractor's Engineer, and the Commissioner.

4. Immediately notify to DOB and the Commissioner in case of damage or unsafe condition.

5. Excavation and foundation construction procedures shall be re-assessed as necessary to maintain vibration levels and movements within acceptable limits.

6. Work stoppage to assess excavation methods and to inspect the buildings identified herein for damage is at the Commissioner's discretion.

7. Develop alternate methods and procedures, subject to the review and approval of the Commissioner.

8. Resume work using the agreed upon alternative method.

9. Notify DOB of events that exceed allowable limits and of corrective measures implemented to maintain acceptable limits.

D. Restore, to the satisfaction of the Commissioner, the portions of buildings, or their contents, altered by the Contractor in furtherance of his sheeting, and bracing work. Restoration shall be completed to the conditions which existed before the start of work.

3.7 FIELD QUALITY CONTROL

A. Concrete: The Contractor shall retain a certified testing agency to take samples of the concrete. A minimum of six grout cylinders per batch shall be taken to determine the compressive strength of the concrete.

B. Excavation Support: The Contractor is responsible for the installation, monitoring, and maintenance of all excavation supports.

3.8 CLEAN-UP

A. All excess material shall be removed from the site and legally disposed of per Section 02 61 13 - Excavation and Handling of Contaminated Materials.

B. All lumber, forms and metal work shall be removed immediately after completion of local areas. The Contractor shall be responsible for removal of all debris produced by work to this section from the site.

C. Sidewalk and streets adjoining the property shall be broom cleaned and free of debris, rubbish, trash and obstructions of any kind caused by the work of this Section.

END OF SECTION 31 50 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 62 19
Timber Piles

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 GENERAL REQUIREMENTS

A. The provisions of the 2014 New York City Building Code Chapter 17 and Chapter 18 relating to pile foundations shall govern the work of this section.

1.3 SUMMARY

A. Work of this Section consists of installing driven timber piles, and includes but is not limited to the following:

1. Furnish and install driven piles having design capacities, and at the locations, shown on the Contract Drawings and as directed.

2. Provide all labor, materials, equipment, and services to install all piles (including index piles).

3. Provide all required survey and layout.

4. Drive piles to the specified bearing stratum and to the required penetration resistance to achieve the specified design loads.

5. Cut and clean all piles to the required levels on the Contract Drawings. Disposal of pile cut-offs.

6. Provide as-built pile location survey and identification plan, provide all data in excel table format.

B. Related Sections:

1. 31 00 00 – Earthwork

2. 31 50 00 – Excavation Support and Protection

C. Related Documents:

1. Install piles having allowable compressive, lateral, and tensile load capacities, and at the locations, shown on the Contract Drawings. The Contract drawings shall be assumed to govern, unless otherwise directed by the Commissioner.

1.4 REFERENCES, STANDARDS, AND REGULATORY REQUIREMENTS

A. All work and materials under this section shall conform to the latest revision of the following standard specifications, where not otherwise required by the Contract Documents:

1. Where there are in existence American Society for Testing and Materials (ASTM) Standards applicable to this work, the recommendations and requirements of the latest version of such Standards shall be considered a minimum for the work described and must be complied with.

2. Where there are in existence American Welding Society (AWS) Standards applicable to this work, the recommendations and requirements of the latest version of such Standards shall be considered a minimum for the work described and must be complied with, the recommendations and requirements of the latest version of such Standards shall be considered a minimum for the work described and must be complied with.

3. Where they are in existence American Wood Preservers Association (AWPA) standards applicable to this work,

   a. AWPA C1 Timber Products - Preservative Treatment by Pressure Processes

   b. AWPA C3 Piles - Preservative Treatment by Pressure Processes

   c. AWPA C18 Pressure Treated Piles and Timber in Marine Construction

   d. AWPCA M4 Standard for the Care of Preservative Treated Wood Products

4. ACI-318 – Building Code Requirements for Structural Concrete (latest edition).

5. ACI-299R – Controlled Low Strength Materials (latest edition).

6. New York City Fire Code (latest edition).

7. 2014 New York City Building Code

B. The Contractor shall procure and pay for all permits and licenses required to complete the work of this Section.

C. Geotechnical Engineering Report for DSNY Staten Island District 1&3 Garage Staten Island, New York prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C., dated 5 March 2019.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. The Contractor shall prepare and submit the following items to the Commissioner for review and approval at least 15 days before the start of said work. All calculations and shop drawings shall be signed and sealed by a Professional Engineer licensed in the State of New York.

1. Driven Piles:

a. Pile manufacturers and or suppliers certificate certifying pile materials conform to the requirements specified herein. For timber piles, include timber type, class, treatment, and preservative.

b. Driving Equipment: Submit for approval, the type, size and configuration of the driving hammer, helmet, and cushion to be used. Acceptance of the pile hammer and driving equipment will not relieve the Contractor's responsibility for properly driving piles, in satisfactory condition, to the driving criteria indicated.

c. Provide installation procedures for the driven piles, including pile installation program giving the amount and character of equipment to be used in the work, schedule for performing the work, and method and sequence of pile driving.

d. Submit proposed final driving criteria to achieve the specified design load (i.e. WEAP analysis or equivalent).

e. Timber piles shall not be spliced.

f. Submit manufacturer's data for all pile installation and support equipment.

g. Submit estimated static pile load capacity using the Case Method and the CAPWAP Method.

h. If the Contractor plans to re-tap the index or production piles to achieve design capacity, then the Contractor must submit equipment data sheets and procedures for re-tapping piles.

2. Pile Identification Plan:

a. Submit plan clearly showing the designation and location of all piles by an identifying system, including the cut-off elevations for all piles. The plan shall include the location of the centerline of each pile group by a coordinate system from an approved reference working point. All detailed records for individual piles shall bear identification corresponding to that shown on this plan. A copy of this plan shall also be available at the site for inspection at all times. Electronic copies shall be provided.

C. As-Built Pile Survey

1. The Contractor shall provide the Commissioner with a survey prepared by a Professional Surveyor, licensed in the State of New York, showing the completed locations of the piles at cut-off elevation

with respect to the proposed locations. The survey shall include elevations of the tops and batters of the piles. Piles that exceed location tolerances shall be highlighted and offset dimensions provided. Any abandoned piles shall be included in the survey. Piles that exceed location tolerances shall be highlighted and offset dimensions provided.

2. After the one-quarter, one-half, three-quarters, and at completion of the pile driving, the Contractor shall submit the survey plan showing all numbered pile locations, including locations of all abandoned piles and their replacements, if any. The Contractor shall provide additional surveys of a pile or pile groups, at no extra cost to the City of New York, if required by the Commissioner.

3. Provide tabulated data in MS-Excel format for each pile driven. Provide deviation relative to Northing and Easting position of each pile relative to intended location per the Contract Drawings. Provide data for inclination in each axis of pile and cut-off elevation for each pile.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Materials and work shall conform to the latest edition of reference standards specified herein.

C. Certifications:

1. Structural steel shall conform to the material acceptance, certification, and inspection required by the 2014 New York City Building Code.

2. Structural timber shall conform to the material acceptance, certification, and inspection required by the 2014 New York City Building Code.

3. Structural concrete shall conform to the material acceptance, certification, and inspection required by the 2014 New York City Building Code.

4. Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedure, and conform to inspection required by the 2014 New York City Building Code.

D. Contractor's Responsibilities:

1. The Contractor performing the work specified herein shall have at least 3 years of experience installing driven piles. The Contractor's Professional Engineer and Professional Land Surveyor shall be licensed in the State of New York.

2. The Contractor shall accurately mark 1-foot intervals on each pile and shall number these marks at 5-foot intervals starting from the pile tip. The upper portion of the pile or a sufficient portion of the leads shall be marked at 1-inch intervals as necessary to determine the final driving resistance.

3. The contractor shall engage the services of a Professional Engineer licensed in the State of New York to provide a WEAP analysis prior to installing index piles.

4. The Contractor shall cooperate with the Commissioner to facilitate the progress of the work.

E. Codes and Permits:

1. Comply with the 2014 New York City Building Code.

2. All labor, materials, equipment and services necessary to make the work comply with such requirements shall be provided without additional cost to the City of New York.

3. The Contractor shall procure and pay for all permits and licenses required to complete the work of this Section.

1.7 SPECIAL INSPECTION AND MATERIALS TESTING

A. The City of New York shall engage, under the requirements of Section 1704.1 of the Building Code, one or more Special Inspection Agencies to observe installation and provide all necessary material testing related to the work of this Section.

B. Observation of driven pile installation, and all necessary materials testing shall be by Special Inspectors meeting the minimum qualifications outlined in RCNY 101-06.

C. The Special Inspector for driven pile installation shall be present on a full-time basis during pile driving. The Special Inspector shall log the installation of each pile and determine when it has attained the required depth and driving resistance as established by Contractor's WEAP analysis and Index Pile Program. This shall not relieve the Contractor's responsibility to provide piles of required capacity outlined in the Contract Documents.

D. The Special Inspector shall prepare and submit daily reports summarizing pile installation and/or material testing activities. The Contractor shall cooperate and assist the Special Inspector(s) in the making of these records.

E. The Contractor shall have the sole responsibility for coordinating his work with the Special Inspector(s) to assure that all tests and inspection procedures required by the NYCBC and Contract Documents are property provided. The Contractor shall cooperate fully with the Special Inspector(s) in the performance of their work.

F. The Special Inspector(s) shall promptly notify the Commissioner of any nonconformances and shall submit all field logs and reports necessary to facilitate any corrective design requirements.

G. The Special Inspector(s) shall provide all necessary certifications of the work in compliance with Building Code requirements.

H. The Special Inspector(s) shall notify the Commissioner promptly of any part of the work of this section not in compliance with the Contract Documents.

1.8 PROJECT CONDITIONS

A. Borings are available for the Contractor's review. The Commissioner makes no predictions or representations regarding the character or extent of soil, or other subsurface conditions to be encountered during the work. The Contractor shall make his own deductions of the subsurface conditions which may

affect the methods or cost of construction of the work hereunder. Additional borings and other exploratory operations may be performed by Contractor, at the Contractor's option, and following the Commissioner's approval. No change in the Contract Sum will be authorized for such additional exploration undertaken by the Contractor.

B. The Contractor, by careful examination, shall inform himself as to the nature and location of the work; the conformation of the ground, the nature of the subsurface conditions; the locations of the groundwater table; the character, quality and quantity of the materials to be encountered; the character of the equipment and facilities needed preliminary to and during the execution of the work; and all other matters which can be in any way effect the work.

C. The Contractor shall be held to have visited the site and to have familiarized himself with the existing conditions of adjoining properties, utilities, and buildings.

D. The Contractor shall investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the site of the work. The Contractor shall conform to all New York City and State, and Federal regulations regarding the transportation of materials to and from and at the job site and shall secure in advance such permits as may be required.

E. The Contractor shall locate existing underground utilities in and beyond the areas of work. If utilities are indicated to remain in place, the Contractor shall provide adequate means of support and protection during the work.

1. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility owner immediately for directions. Cooperate with the City of New York and utility companies in keeping respective services and facilities in operation. Repair damaged utilities to the satisfaction of the utility owner.

2. Do not interrupt existing utilities serving facilities occupied by the City of New York or others, during occupied hours, except when permitted in writing by the Commissioner and then only after acceptable temporary utility services have been provided. Provide a minimum of 48-hour notice to the Commissioner, and receive written notice to proceed before interrupting any utility.

3. Remove or relocate the existing underground utilities indicated to be removed or relocated. Coordinate with utility companies for shutoff of services if lines are active.

F. The Contractor shall examine drawings to determine the sequence of operations, and relation to work of other trades. The start of work will signify acceptance of field conditions and will acknowledge coordination with the Commissioner.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to the project site in such quantities and at such times to assure the continuity of pile driving operations, and to maintain the project schedule. Carefully handle piles by means of rope slings or other means so as not to damage piles; do not use peavies, cant hooks or other sharp tools.

B. Piles shall be stored in orderly groups above ground, sufficiently blocked to minimize bending stresses. Piles exhibiting variations beyond specified limits will be considered distorted and shall not be used in the work.

C. Concentrated loads, which occur during stacking or lifting, shall be kept below the level that would produce permanent deformation or overstress of the material. Damaged piles will be rejected from use in the performance of the work and shall be removed from the site.

PART 2 - PRODUCTS

2.1 MATERIALS FOR DRIVEN PILES

A. The timber materials shall be in accordance with the Contract Documents.

B. Pile Material: The timber pile shall be Class A Southern Pine, Douglas Fir or approved equal, and shall conform with the requirements of ASTM D25. The piles shall have a circular cross-section, a minimum diameter of 8-inch at the tip with uniform taper, and the corresponding butt diameter specified in ASTM D 25.

C. Pile Section Sizes: 14-inch-butt-diameter timber piles with an 8-inch-tip-diameter are recommended to be driven to 40 feet below the bottom of pile caps. The calculated allowable axial capacity of this timber pile is 30 tons.

D. The pile shall be of adequate size and strength to withstand driving stresses to achieve the specified allowable design loads without creating stresses exceeding 1,200 psi.

E. Timber piles shall be in perfect condition free of cracks, voids, decay, marine borer attack, insect attack and Limnoria damage. All knots and rims shall be trimmed or smoothly cut flush with the surface of the pile or swell surrounding the knot. Unsound or cluster knots, splits and shakes are prohibited.

F. Piles shall be straight. The center axis of piles shall not deviate from a straight line more than 1 inch for each 10 feet of length. Short crooks shall not deviate more than 2.5 inches from straightness in any 5 feet. Spiral grain shall not exceed 0.5 of a complete twist in any 20 feet of length.

G. Splicing: All piles shall be driven in one piece. Splicing of the timber piles is not permitted.

H. Treatment: Timber piles shall be pressure-treated either with CCA or ACZA in accordance with AWPA specifications and Timber Pile Design and Construction Manual. The retention of CCA or ACZA preservative shall not be less than 0.8 pounds per cubic foot for Southern Pine or 1.0 pounds per cubic foot for Douglas Fir as specified in AWPA specifications. Tops of the piles after cut-off shall be treated in accordance with AWPA M4. They shall be treated with three coats of the selected preservative and the cut-off shall be made in sound wood.

1. Certification: Upon delivery, but before unloading piles from the truck, the Contractor shall furnish the Commissioner three (3) copies of a certificate of inspection, issued by an approved independent testing laboratory, certifying that the piles were free of decay, were properly peeled and otherwise prepared before treatment, and that the method of treatment, the chemical composition and the

amount of retention of the preservative conform to the requirements of this Section. Material inspection and certifications cost shall be borne by the Contractor.

I. Protective Tip: When necessary, to ease driving through upper fill, the contractor may elect to drive the piles with a protective driving-boot tip such as T-8316 Rival Boot as manufactured by Associated Pile and Fitting Corporation, TP 337 Timber Pile Point by DFP Foundation Products, LLC, Timber Boot by Nucor Skyline, or other approved equal.

2.2 EQUIPMENT FOR DRIVEN PILES

A. General:

1. Furnish pile-driving equipment of a type generally used in standard pile driving practice, operated at the manufacturer's specified rate, to develop the required rated energy per blow to drive and achieve specified capacity.

2. In driving all piles in the work, including index piles, the same make and model of pile hammer shall be used throughout; the operation of hammers with regard to speed, height of fall or stroke, pressure and all other variable factors must be the same; and the methods used in driving piles shall be substantially the same.

B. Hammer:

1. Furnish pile-driving hammers of a size and type able to deliver consistently effective dynamic energy, suitable to the piles to be driven and to the subsurface materials into which they are to be driven.

2. The hammer shall be in first-class operating condition having a minimum energy capable of driving the pile to the required capacity. The valve mechanism shall be serviced and kept in first-class condition so that the length of stroke will be accurately maintained at all times during driving. The capblock material shall have uniform elastic properties during driving, providing superior energy transmission, and shall be replaced if crushed, burned or damaged. Any hammer not operating in accordance with the manufacturer's specifications shall be deemed unsatisfactory by the Commissioner and shall be replaced immediately by the Contractor.

3. The pile cushion shall be 9-inch thick aluminum and micarta, or approved substitute cushion. Scrap timber shall not be used as cushion material.

C. Leads:

1. All piles shall be driven using fixed leads constructed in such a manner as to afford freedom of movement to the hammer, and capable of holding the pile firmly in correct position and alignment as well as in axial alignment with the hammer.

2. Use fixed rigid type pile driver leads that will hold the pile firmly in position and in axial alignment with the hammer to ensure support of the pile during driving. Free-swinging leads will not be permitted. Extend leads to within 2 feet of the elevation at which the pile enters the ground.

3. Leads shall be of sufficient length so that the use of a follower will not be necessary.

4. Suitable anvils or cushions shall be used to prevent undue damage of the pile butts.

D. Pre-Drilling Equipment

1. Pre-drilling equipment and/or spudding shall be adequate to pass the specified pile through all obstructions encountered.

2. Pre-drilling will be required for all piles located within 25 feet of adjacent buildings or other sensitive structures.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PRE-CONSTRUCTION MEETING

A. A pre-construction meeting shall be held and attended the Commissioner, Construction Manager, Contractor, and Special Inspector. The Contractor's proposed and submitted pile installation means and methods shall be presented and discussed at this meeting. The Commissioner will document the meeting and any modifications to the submitted procedures agreed upon. If the waterfront area timber piles are to be installed at a different stage of construction, an additional pre-construction meeting shall be held prior to commencement of construction.

3.3 SITE PREPARATION

A. The Contractor shall perform his work so as not to cause harmful effects to any adjacent structures and utilities. Should damage to adjacent structures and utilities occur, all costs in connection with the repair of such damage and the restoration of damaged construction to its original condition shall be borne by the Contractor.

B. The Contractor shall lay-out the pile locations referencing the pre-approved pile identification plan.

C. The Contractor shall mark out the locations of the installed, sheet piles, tie rods and utilities. These markouts shall be a different color than the planned waterfront pile locations.

D. Pile Length Markings: Mark each pile's length by painting a horizontal line, at 1'-0" intervals. Mark the number of feet from the pile point in 5'-0" intervals. Mark piles at every inch for the last 5 feet of driving.

E. The Contractor shall be prepared to spud or pre-drill through any obstructions in the fill zone to facilitate subsequent pile installation.

3.4 INDEX PILES

A. Prior to the start of production pile installation, install driven index piles in accordance with the amount required in the Contract Documents that are the same in every way as the production piles, or as directed by the Commissioner. A minimum of 2 percent of total piles should be index piles, and they should be located evenly across the building built-over area.

B. Prior to the start of index pile installation, a WEAP Analysis shall be completed and submitted to the Commissioner.

C. The location of the index piles shall be submitted to the Commissioner for review.

D. Driven index piles shall be installed to final resistance. Hammer energy being transferred to the top of the pile shall be continuously recorded during the driving of the pile

E. Index piles shall be installed to the final driving resistance needed to achieve an ultimate pile capacity.

3.5 DRIVEN PILES

A. General

1. Piles shall not be driven in the absence of the Special Inspector.

2. A surveyor shall maintain accurate layouts and levels for all work. Up-to-date reproducible records showing as-built pile locations, tip elevation, cut-off elevation and plumbness shall be maintained.

3. All piles shall be driven by such methods and equipment as not to impair their strength and as to ensure pile shafts retain the initial driving resistance and lateral support of the soil.

4. Continuously drive each pile at the locations indicated, to the required driving criteria and depths established by the driving of index piles.

5. The Contractor shall demonstrate that the hammer energy is being transferred to the top of the pile. The capblock and cushion assembly shall be the same as was used for the index pile driving.

6. The Contractor shall coordinate the work such that pile driving shall be continuous once the pile reaches the bearing stratum; necessary lengths of pipe and splicing shall be considered and coordinated so that this requirement is satisfied. Pile splices in the upper 10 feet shall not be permitted. Contractor shall establish qualification of welders in accordance with the AWS code.

7. Carefully maintain the center of gravity for each group or cluster of piles to conform to the locations shown on the drawings. Where piles are driven out of location, the Commissioner may require that an additional pile or piles be driven at a location and in a manner that he may specify. The unacceptable pile may be left in place or may be pulled, as the Commissioner directs, without additional payment to the Contractor for driving or pulling.

8. Carefully plumb the leads and the pile before driving. Take care during driving to prevent and to correct any tendency of piles to twist or rotate.

9. If, during the driving of any piles, any of the piles previously driven show signs of heaving or lifting, the Contractor shall re-drive such piles to the required load-bearing capacity without additional cost to the City of New York.

10. When handling and driving long piles, take special precautions to ensure against overstress or leading away from a true position when driving. Spud piles may be used to minimize hard driving of long piles through obstructions near the surface.

B. Final Driving Criteria:

1. Continuously drive each pile at the locations indicated to final bearing within the Contract Documents.

2. The penetration resistances in the bearing stratum shall be adjusted by the Special Inspector to account for any penetration resistance measured in the overlying strata.

C. Driving Tolerances: Drive piles within the following maximum tolerances:

1. Location: Within 3 inches from the location indicated for the center of gravity of each single pile or pile group.

2. Plumbness: Within 5 inches in 10 feet (4 percent) from vertical following driving, and a maximum of 1 inch in 10 feet, measured when the pile is being driven and is in the leads above ground.

D. Heaved Piles: Compile recorded instrument observations made during pile driving to determine whether a driven pile has lifted from its original seat during the driving of adjacent piles. If uplift occurs, re-drive the affected piles to a point elevation at least as deep as the original point elevation with a driving resistance at least as great as the original driving resistance.

E. Special Inspection of Driven Piles:

1. Installation of the index and production pile shall be subject to New York City Building Code Special Inspection Section. All inspections shall be performed by a Special Inspector retained by the City of New York.

2. The Special Inspector shall log the driving of each pile and determine when the pile has reached the specified depth and driving resistance.

3. No pile shall be installed without the presence of the Special Inspector.

F. Cutting-Off: After each pile has been driven and accepted, cut the pile off at the required top elevation. Make cut perpendicular to axis of pile. The cut-off ends become the property of the Contractor, who is responsible for their removal and disposal.

3.6 OBSTRUCTIONS

A. If a production pile encounters an obstruction which will damage the pile tip or cause the pile to drift off location, the pile shall be pulled and the obstruction removed by spudding, augering, drilling or other approved methods, and the pile shall be re-driven.

B. Replacement of piles damaged by obstructions shall be the responsibility of the Contractor.

3.7 DAMAGED OR DISPLACED PILES

A. In the event any pile be damaged during installation and not satisfactorily repaired, or be driven out of design position sufficiently to result in a loading in excess of that allowed, or be rejected for any reason, remove or abandon and cut-off the pile.

1. Solidly fill spaces that are left by withdrawn piles that will not be filled by new piles, using cohesionless soil material such as gravel or gravel-sand mixtures. Place and compact throughout the length of the space.

B. Drive an additional pile or piles and make such changes in pile caps or other construction necessary to provide for proper load distribution.

C. The location of any additional or replacement piles or redesign shall be subject to the approval of the Commissioner.

D. Provide and pay for work of any nature (including cost of redesign) required on account of rejected, damaged, or displaced piles.

E. If during the driving of any piles any of the previously driven piles heave or lift, re-drive such heaved or lifted piles to the required load bearing capacity and without additional cost to the City of New York.

F. Drive an additional pile or piles where the centerline deviation exceeds 3 inches and an analytical determination indicates the load on any pile exceeds 110 percent of the design load.

3.8 FIELD QUALITY CONTROL

A. Special Inspection

1. The Special Inspector shall be on-site full-time during pile installation.

2. The Special Inspector shall prepare and submit to the Commissioner for review a report and log of the pile driving.

3. The Special Inspector shall submit full data to the Commissioner for review to facilitate the corrective design requirements. The Commissioner will confirm the piles, as driven in the corrective design, comply with the Design and Code requirements.

4. Upon completion and approval of all pile driving, the Special Inspector shall deliver to the Commissioner original pile driving logs and reports for review.

5. The Special Inspector shall prepare all documents necessary for filing as-built conditions with the Building Department. Besides indicating the location of all piles including the obstructed, damaged, and compensating piles, the report will include percentage out-of-plumb, final blow count, cut-off elevation, and length below cut-off of each pile.

B. Contractor's Responsibility

1. The Contractor shall notify the Commissioner at least 72 hours prior to each day of pile driving to allow the appropriate personnel to be on the site.

2. The Contractor shall prepare and periodically submit to the Commissioner for review partial area surveys to permit pile cap work to proceed and to facilitate the design of corrective measures.

C. Licensed Surveyor: Engage the services of a Licensed Land Surveyor registered in the State of New York and approved by the Commissioner for the performance of the survey work called for herein, as per New York City Building Code. The installed location of each pile shall be established by survey and shown on drawings, in accordance with the provisions of the New York City Building Code.

D. Pile Review and Corrective Measures

1. Review: The Commissioner, upon receiving the as driven pile survey, will perform a complete pile review to determine the true loading on the piles due to pile group eccentricities, including a review of the pile cap design. The pile review will determine if pile corrective measures are required.

2. Design of Corrective Measure: The Commissioner will perform all necessary design and filing to obtain Building Department Approval of all necessary corrective measures required due to pile driving operations as required by New York City Building Code.

3.9 WASTE MANAGEMENT

A. Separate and dispose of waste in accordance with the Project's Waste Management Plan.

END OF SECTION 31 62 19

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 12 16
Asphaltic Paving

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. Provide material, labor, equipment, and services required to install asphaltic concrete paving and related work within the lot lines as shown on Drawings.

B. Related Sections
   1. Section 32 13 15 - Concrete Curbs and Pavement

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Regulatory Requirements
   1. Work of this Section shall comply with the requirements of the 2014 NYC Building Code, the NYC Department of Buildings, the NYC Department of Environmental Protection, and the New York City Department of Transportation.
   2. Requirements for asphaltic concrete, including, but not limited to handling, equipment, transportation etc., not specified herein shall conform to the more stringent of the New York City Department of Highway Standard Specifications, New York State Department of Transportation Standard Specifications, and AASHTO "Standard Specification for Transportation, Materials, Methods of Sampling and Testing".

1.5 REFERENCES

A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

B. Standard Specifications - New York City Department of Transportation Bureau of Highway Operations.

C. Construction Specifications for Asphaltic Concrete and Other Plant-Mix Types - The Asphalt Institute, Fourth Edition.

D. Standard Specifications - Construction and Materials - New York State Department of Transportation.

E. American Society of Testing and Materials (ASTM)

F. American Association of State Highway and Transportation Officials – "Standard Specification for Transportation, Materials, Methods of Sampling and Testing".

1.6 DEFINITIONS

A. Subbase: Either the compacted subgrade or compacted aggregate base that is to receive the base course.

B. Base Course: Asphaltic concrete mixture, usually referred to as plant-mix (described by the term binder mixture by NYCDOT), that is used as a base for the final asphaltic wearing surface when a Portland cement concrete base is not used.

C. Surface Course: Final asphaltic concrete wearing surface, usually referred to as surfacing mix (described by the terms fine or extra fine asphaltic concrete mixture by NYCDOT), placed over plant-mix or Portland cement concrete base.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Asphaltic Concrete:
   1. Do not install asphaltic concrete paving when there is frost on the subbase or base; when the subbase or base is wet; or when the air temperature is 40°F or below.
   2. Materials containing frost will be rejected.

B. Prime coat: Apply prime coat when air temperature is above 50°F and when temperature has not been below 35°F for 12 hours immediately prior to application. Do not apply when subbase is wet.

C. Tack coat: Apply tack coat when air temperature is above 50°F and when temperature has not been below 35°F for 12 hours immediately prior to application. Do not apply unless base is completely dry.

D. Pavement Sealer: Apply sealer under conditions similar to prime and tack coats.

E. Joint Sealer: Apply joint sealer when air and substrate temperatures are above 40°F and rising for 12 hours after application.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Asphaltic Concrete: Materials shall comply with Section 3.01 of NYCDOT Standard Specifications for each item.

B. Prime Coat: Cut-back asphalt type, AASHTO M82, (ASTM D2027) MC-30, MC-70 or MC-250.

C. Tack Coat: Emulsified Asphalt; AASHTO M140 (ASTM D977) or M208 (ASTM D2397); SS-1h, CSS-1 or CSS-1h, Diluted with one part water to one part emulsified asphalt.

D. Pavement Sealer: Polymer modified asphalt emulsion sealer meeting ASTM D2939, D140, D244, and D529; containing no coal tar, and less than 10 grams per liter of volatile organic compounds.
1. Neyra Jennite AE polymer modified asphalt sealer
2. VelveTop PM Polymer Modified Asphalt Sealer
3. SealMaster Polymer-Modified Masterseal Sealer
4. Or approved equal

E. Reflective Cracking Membrane:
1. Woven or Non-woven polypropylene fabric pre-coated with a rubberized adhesive base at least 18" in width used for preventing cracks in substrate emanating through the asphalt topping.
2. Products:
   a. Petrotac by Amoco Fabrics and Fibers Co., with Celotex primer
   b. Polyguard NW 75 by Polyguard Products, Inc., with 650 RC Liquid Adhesive and Mastic to prime surface.
   c. Bituthene S 5300 by W.R. Grace & Co.
   d. Or approved equal

F. Joint Sealer: Cold-applied low modulus pourable two-component sealant comprised of polymeric compounds compatible for both Portland cement concrete and asphaltic concrete surfaces providing a flexible, rubber-like finish. Material shall not become brittle to temperatures as low as -20°F.

2.2 EQUIPMENT

A. Provide proper compaction equipment to properly compact asphaltic concrete pavement.

2.3 MIXES

A. Bituminous material shall come from one source only.

B. Bitumen and aggregate composition shall be plant mixed entirely.

C. Composition:
1. Aggregate:

Percent Passing by Weight of Aggregate

Sieve Size	Surface Course (NYCDOT Extra Fine Surfacing Mix)	Surface Course (NYCDOT Fine Surfacing Mix- NYS Type 7F)	Base Course (NYC Binder-mix – NYSDOT Type 3)	Variation from Job Mix Formula* (Fine and Binder mix only)
1 1/2"	-	-	100	-
1"	-	-	95-100	-
1/2"	100	100	70-90	+6 (bin. mix only)
3/8"	98-100	-	-	-
1/4"	-	90-100	48-74	+7 (bin. mix only)
1/8"	-	45-70	32-62	+7 (+6 for fine)
No. 4	70-90	-	-	-
No. 8	38-65	-	-	-
No. 20	-	15-40	15-39	+7
No. 40	-	8-27	8-27	+7
No. 50	6-25	-	-	-
No. 80	-	4-16	4-16	+4
No. 200	2-8	2-6	2-8	+2

*This is the tolerance from the approved job mix, but may never be out of the accepted range

2. Asphaltic Cement (Bitumen)

Percent Bitumen by Total Weight Job Mix Formula*	Variation from Mix	Soluble in Chloroform
Plant-mix	4.5-6.5	+.4
Fine Surfacing	5.8-7.0	+.4
Extra Fine Surfacing Mix	5.0-8.0	-

D. Penetration grade of the asphaltic cement shall be 85-100.

E. The Contractor has the option to provide either the fine or extra-fine surfacing mix.

2.4 SOURCE QUALITY CONTROL

A. Inspection
1. The Contractor will assign an inspector at the plant to ensure that the mix provided is that of the design mix.
2. Provide the inspector with any required testing apparatus to ensure conformance.
3. Notify the Commissioner 72 hours in advance of each asphaltic concrete placement so that the inspector can cover the work at the plant.

B. Testing:
1. The Testing Laboratory will determine the maximum theoretical density of each mix in accordance with ASTM D2041 and do an extraction and gradation test from samples obtained in the field.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Verify that all grades and/or concrete slabs onto which asphaltic concrete is to be placed are at the required levels prior to placement. Verify that all miscellaneous concrete work has been installed. Notify the Commissioner in writing of conditions that will interfere with the proper completion of this Work. Do not begin work until all improper conditions are remedied. Installation of aggregate subbase is described in Section 31 00 00 - Earthwork.

3.3 PREPARATION

A. Protection:
1. Provide tarpaulins for use during conditions such as such as rain, chilling winds or unavoidable delay to cover and protect paving materials.
2. Protect pavement from debris and damage from equipment and other work.
3. Exercise care in applying bituminous materials to avoid smearing of adjoining concrete surfaces. Clean surfaces of bituminous materials when smearing occurs.

B. Surface Preparation:
1. Remove all lose and foreign materials before proof rolling and application of herbicide and prime coat.

2. Proofroll prepared subbase surface to check for unstable areas and areas requiring additional compaction.
3. Do not begin paving work until deficient subbase areas have been corrected and are ready to receive paving.
4. Subbase shall be dry and free from any standing water.
5. Apply weed control agent in accordance with manufacturer's recommended dosages and application instructions. Apply to compacted, dry subbase prior to application of prime coat.
6. Apply prime coat at rate of 0.20 to 0.50 gal per sq yd over compacted subbase. Apply material to penetrate and seal, but not flood, surface. Cure and dry as long as necessary to attain penetration and to allow for evaporation of volatiles.
7. Asphaltic concrete placed on Portland cement concrete pavements or existing asphaltic concrete pavement:
   a. Any joints (expansion, contraction, construction, etc.) in the base shall be covered with the reflective cracking membrane.
   b. The surface onto which the membrane is placed shall be dry and free of debris. Clean joints over 1/8" wide by pneumatic means and fill with asphaltic joint filler.
   c. Prime surface to receive membrane as specified by the membrane manufacturer. Place the membrane in strict accordance with the manufacturer's instructions. Ends shall be overlapped 4" to 6".
   d. Placement of the surface course shall closely follow membrane laydown. Do not place more membrane than can be overlaid that working day.

3.4 WOOD FORMS

A. Provide temporary wood forms at perimeter of areas to be paved where permanent side supports (i.e., curbs, gutters or edgings) have not been constructed. Forms are to remain in place until surface course has been thoroughly rolled and compacted to require thickness.

B. Form out areas to be depressed, such as high jump pits, etc.

C. Oil wood forms before placing any paving materials against them. Stake forms securely to line and grade, using at least 3 bracing stakes or pins to each ten feet of length, to properly resist pressure and impact of roller without springing form.

D. Forms are to rest firmly upon the thoroughly compacted subbase through their entire length.

E. Clean and re-oil forms each time before reuse.

3.5 PLACEMENT

A. General:
   1. Prior to installation of pavement, verify all miscellaneous concrete items have been installed.
   2. Establish and maintain required lines and elevations.
   3. Place asphaltic concrete mixture on prepared surface, spread and strike-off. Spread mixture at the temperature required by Table 404-1 of the NYSDOT Standard Specification. Place inaccessible and small areas by hand. Place each course to required grade, cross-section, and compacted thickness.

4. Begin rolling when mixture will bear roller weight without excessive displacement. Compact mixture with hot hand tampers or vibrating plate compactors in areas inaccessible to rollers.
5. After final compression, field density shall be not less than 92% of the theoretical maximum density as determined by ASTM D2041.

B. Asphaltic Concrete Base Course - Plant-Mix:
1. Provide plant-mix base unless Portland cement concrete base is shown on Drawings or specified herein.
2. Spread sufficient plant-mix to develop a uniform 4" thickness after rolling and compaction.
3. Sprinkle with clean water and compact with a vibratory 10-ton or greater roller. Smaller weight rollers may be required due to load prohibitions on existing structures. Provide multiple rollers for large areas. In areas where the use of a roller is impracticable, heavy mechanical tampers may be used to consolidate the material. Laydown temperature of mixture shall be adjusted to take into account the longer time of the many multiple passes required by smaller compactors or mechanical tampers to achieve the required density. Refer to NYCDOT Standard Specifications for other requirements.

C. Asphaltic Concrete Surface Course - Surfacing Mix:
1. Prior to placement of surface course, apply tack coat to contact surfaces of previously constructed asphaltic or Portland cement concrete and surfaces abutting or projecting into asphaltic concrete pavement. Distribute at rate of 0.05 to 0.15 gal per sq yd of surface. Allow to dry until at proper condition to receive paving.
2. Place surface course over base only when base is dry and free from standing water.
3. Spread in loose layer and of such depth to result in a uniform course having the thickness of 11/2" after compaction and rolling (1" for surface course over concrete base).
4. Compact the material with approved roller to a smooth even surface and to the levels indicated.
5. Roller shall be a minimum 10-ton tandem type having a rear wheel minimum compression of 225 lbs per lineal inch. Refer to subparagraph B.3 immediately above for other requirements.
6. Motion of roller shall be slow enough to avoid displacement of the surface rolled.
7. Keep roller wheels moistened with water to prevent adhesion of the materials to wheels, but without use of excessive amount. Use of any liquids other than water for this purpose is prohibited.
8. If the operation of laying materials is interrupted, the end of the laid material shall be left unrolled until the work is resumed so that there will be no joints in the topping.
9. If it is necessary to pass the roller over or to permit traffic to pass over such temporary end, thus consolidating it, cut back the material before recommencing laying operations in order to present a fresh clean surface for contact with the newly placed material.
10. Make joints between old and new pavements, or between successive days' work, to ensure continuous bond between adjoining work. Construct joints to have same texture, density and smoothness as other sections of the asphaltic concrete course. Clean contact surfaces and apply tack coat.
11. The use of liquid bitumen or hot smoothing irons in finishing such joints is prohibited.
12. At locations adjacent to curbing and gutters inaccessible to rollers, compression shall be effected with iron tampers weighing not less than 25 lbs, having a maximum bearing area of 48in2.
13. Any surfacing material (ie. sealer, paint, wearing surface, etc.) to be placed on the asphaltic concrete surface shall only be done after the asphaltic concrete has cured and the oils have dissipated. Consult with the product manufacturer for their exact requirements.
14. Where asphaltic concrete abuts concrete walls, existing asphalt pavement or concrete pavements apply asphalt joint sealant. Neatly tape all sides of joints, including vertical surfaces where existing) to prevent damage and smearing of material on surfaces and protect until cured.

3.6 FINISH

A. The rolled finish surface shall be free from porosity, fissures, or blemishes, true to crown and grade; free from depression, waves, bunches, or unevenness so as to allow complete runoff.

B. Should defects in composition compactness or surface finish appear in the completed work, remove defective areas to full depth of the course and replace with thickness and finish specified.

C. With permission of the Commissioner, minor surface defects may be restored with approved sealing compound.

D. Cracking, blistering, running, or deviation from requirements specified above that occur during the guarantee period are considered defects under the warranty conditions of the Contract.

3.7 PATCHING

A. Remove and replace paving areas mixed with foreign materials and defective areas in a manner acceptable to the Commissioner. Cut-out such areas and fill with fresh, hot, asphaltic concrete. Compact by rolling to maximum surface density and smoothness.

3.8 PAVEMENT SEALER APPLICATION

A. Do not apply pavement sealer on pavements covered with other materials, ie. unit pavers, resilient surfacing. Apply on all other pavements.

B. After asphaltic concrete surface course has been tested and approved for allowable tolerances and the surface is hardened to a degree acceptable to the sealer manufacturer (a minimum of 30 days), apply the sealer in accordance with the manufacturer's instructions.

C. Sweep or mechanically clean surfaces thoroughly free of dust, dirt and foreign materials; remove oil and grease spots with household detergent. Flush entire surface with water; remove all remaining water puddles. Apply primer if recommended by the manufacturer.

D. Dampen pavement as recommended by the manufacturer; pour sealer mix in spots or ribbons, then spread evenly with push broom or squeegee. Mechanical applicators may be used, and mix must be periodically agitated for uniformity. Two coats shall be applied, allowing for complete drying, tack free, between coats. Surface shall be uniform, with no holidays or pinholes.

E. Allow sealer to dry about 24 hours minimum depending on weather conditions before opening surface to traffic. Temperature for drying conditions shall not be less than 50°F for 48 hours after application.

F. Apply at a minimum rate per coat of 1.10 gallons of sealer concentrate for every 100 sq ft of surface, or more concentrate if required by the sealer manufacturer. Concentrate shall be mixed with water and clean, dry, silica sand in quantities recommended by the manufacturer. Typical sand content is 5 pounds per gallon of concentrate, and shall meet fineness rating recommended by manufacturer. Maximum water content is 15% of undiluted concentrate volume.

G. Apply Line Markings per manufacturer's recommendations.

3.9 TOLERANCES

A. The thickness of the plant-mix and surface course shall not vary by more than 1/2".

B. The finish elevation for the plant-mix shall not vary from plan grade by more than 1/2", the surface course by more than 1/4".

C. The smoothness tolerance for the plant-mix is 1/4", the surface course 1/8", when measured as described under "Field Quality Control".

3.10 FIELD QUALITY CONTROL

A. Testing and Inspection:
1. The inspector will take samples of the asphaltic concrete to check conformance with the design mix and will verify the in-place density.
2. Pay for any tests such as cores required by the Commissioner when such tests show non-conformance with the Drawings and Specifications.
3. Test finished surface of each asphaltic concrete course for smoothness, using 10-foot straightedge applied parallel with, and at right angles to, centerline of paved area.
4. Check the final surface for depressions by applying water in the presence of the Commissioner. Water should not pond and should flow to all catch basins and trench drains.

B. Survey: Provide a survey showing elevation of finished surface on 25 foot intervals.

3.11 CLEANING

A. After completion of paving operations, clean surfaces of excess or spilled asphalt materials to the satisfaction of Commissioner.

3.12 PROTECTION

A. After final rolling, do not permit vehicular traffic on asphaltic concrete pavement until it has cooled and hardened so as not to be marked and in no case sooner than 6 hours.

B. Provide barricades and warning devices as required to protect pavement and the general public.

C. Cover openings of structures in the area of paving until permanent coverings are placed.

END OF SECTION 32 12 16

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 13 15
Concrete Curbs and Pavement

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. Furnish material, equipment, labor, services required to provide for concrete curbs, pavements and footings. Work includes the installation of formwork, reinforcement, expansion joints and other items listed herein within the site. Provide special formwork or form liners for concrete with smooth finishes. Allow ample time and facility for the Work of other Divisions to be installed.

B. Related Sections
   1. Section 32 12 16 - Asphaltic Paving

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Regulatory Requirements:
   1. Building Code: Work of this Section shall conform to all requirements of the 2014 NYC Building Code and all applicable regulations including safety, health, noise, and anti-pollution regulations. Where more severe requirements than those contained in the 2014 NYC Building Code are given in this Section, the requirements of this Section shall govern.
   2. Industry Standards: The ACI Standards listed under references apply to Work of this Section. Where more severe requirements then those contained in the Standards are given in this Section or the Building Code, requirements of this Section or the Building Code shall govern. The Contractor shall keep a copy of ACI SP-15 - "Field Reference Manual" at the site.

C. Certifications:
   1. Acquire cement and aggregate from same source for all work. If a change in suppliers is required, a new mix submittal must be produced with the new material and submitted for approval.

D. Coordination:
   1. Coordinate this work with the work of other Divisions so that items to be installed are done so correctly and in proper sequence.

1.5 REFERENCES

A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

B. American Society of Testing and Materials (ASTM) standards, latest editions.

C. American Concrete Institute (ACI) standards, latest editions.

D. "Placing Reinforcing Bars - CRSI-WCRSI Recommended Practices", latest edition. Concrete Reinforcing Steel Institute.

1.6 DEFINITIONS

A. Exposed to view:
   1. Situated so that it can be seen from eye level from a public location. A public location is that which is accessible to persons not responsible for operation or maintenance of the building.

1.7 DESIGN REQUIREMENTS

A. Performance Characteristics:
   1. Curbs: Normal weight concrete with a minimum compressive strength of 3500 psi, air entrained, and a maximum water to cement ratio of 0.45.
   2. Exterior slabs on grade (pavements, stairs, etc): Normal weight concrete with a minimum compressive strength of 3500 psi, air entrained, and a maximum water to cement ratio of 0.40.

B. Mix design for concrete with smooth form is to contain a high-range water reducer (super plasticizer).

PART 2 - PRODUCTS

2.1 MATERIALS

A. Rough Formwork: Shall be Commercial Douglas Fir, DFPA: 5/8" thick minimum.

B. Overlaid Plyform Formwork

1. Basis-of-Design Product: Subject to compliance with requirements provide B-Matte Formguard by Simpson Timber Company or comparable product by one of the following:
   a. Dayton Richmond Concrete Accessories
   b. Forest Products Supply Co.,
   c. Or approved equal.

C. Smooth Form Finish Formliner
   1. Basis-of-Design Product: Subject to compliance with requirements provide #340 Smooth Face by Greenstreak or comparable product by one of the following:
      a. Architectural Polymers
      b. Sika
      c. Or approved equal.

D. Release Agent:
   1. Basis-of-Design Product: Subject to compliance with requirements provide VOC compliant material such as those of the Cresset Chemical Company for coating forms or comparable product by one of the following:
      a. W.R. Meadows
      b. TK Products
      c. Or approved equal

E. Form Ties: Wire ties not permitted. Form ties for exposed concrete shall be adjustable, leave no metal closer than 11/2" to the surface, and free of devices which leave holes or depressions larger than 7/8" back of exposed surface.

F. Reinforcing Bars: All reinforcing bars shall be of deformed type of new billet steel conforming to current requirements of ASTM A615 Grade 60. No rail or re-rolled steel will be permitted. All bars shall be epoxy coated in accordance with ASTM A775.

G. Welded Steel Wire Fabric: Wire Fabric shall conform to the requirements of ASTM A185. All wire mesh shall be epoxy coated in accordance with ASTM A884.

H. Supports for Reinforcement: Support for reinforcement supported by ground shall be coated wire bar supports or bar supports made of dielectric material or other acceptable materials or precast concrete block, 4" square minimum, having a compressive strength equal to that of the concrete being placed. Wire bar supports shall be coated with dielectric material for a minimum distance of 2" from the point of contact with the epoxy-coated reinforcing bars.

I. Cement: Shall conform to ASTM C150 Type II and shall be of the non air-entrained type.

J. Admixtures:
   1. The use of admixtures shall comply with the requirements of Section BC 1903.6 of the 2014 NYC Building Code. The final soluble chloride content in concrete, percent by weight of cement, due to the addition of admixtures and other ingredients shall not exceed 0.05 at 28 days.
   2. Air-entraining admixtures shall conform to ASTM C260.
   3. Chemical admixtures shall conform to ASTM C494.
   4. Slag cement: ASTM C989, Grade 100 or 120.

a. Basis-of-Design Product: Subject to compliance with requirements provide GranCem slag cement as manufactured by the St. Lawrence Cement Company or comparable product by one of the following:
   1) Lehigh Cement Company
   2) LafargeHolcim
   3) Or approved equal

5. The amount of cement required by the 2014 NYC Building Code may be reduced by 8% as per the code with the use of slag cement that has been reviewed and approved by the Commissioner.

K. Water: Shall be clean potable water free of injurious foreign matter conforming to the requirements of Section BC 1903.4 of the 2014 New York City Building Code.

L. Aggregate: Aggregate shall conform to ASTM C33, No.57, No.67 or No.8. Maximum size of coarse aggregate shall conform to paragraph 3.3.2 of ACI 318.

M. Curing Compounds:
1. Clear Curing and Sealing Compound (A.I.M. Regulations - VOC Compliant, 350 g/l): Liquid type membrane forming curing compound, clear styrene acrylate type, complying with ASTM C1315, Type I, Class A, 25% solids content minimum. Moisture loss shall be not more than 0.40 Kg/m2 when applied at 300 sq. ft./gal. Manufacturer's certification is required.
2. Curing Compounds:
   a. Basis-of-Design Product: Subject to compliance with requirements provide Super Diamond Clear VOX" by The Euclid Chemical Company or comparable product by one of the following:
      1) Master Builders
      2) W.R. Meadows
      3) Or approved equal

N. Bonding Agent:
1. Epoxy/acrylic resin that will not form a vapor barrier with the concrete with the following properties:
   a. Bond strength of 1800 psi in 2 hours when tested in accordance with ASTM C882.
   b. Flexural strength of 2000 psi in 28 days when tested in accordance with ASTM C78.
   c. Tensile strength of 600 psi in 28 days when tested in accordance with ASTM C496.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. "CR246 Sto Bonding and Anti-corrosion Agent" by Sto Concrete Restoration Division
   b. Sika Corp.
   c. Euclid Chemical
   d. Or approved equal

O. Expansion Joint Filler: Closed-Cell Polyurethane or Closed-Cell Expanded polyethylene Joint Filler - Resilient, compressible, semi-rigid
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. W.R. Meadow's Ceramar
   b. A.C. Horn's Closed Cell Plastic Foam Filler, Code 5401
   c. Sonneborn's Sonoflex F
   d. Or approved equal.

P. Expansion Joint Sealant: Type 1A Sealant

1. For Horizontal Joints: Two-part, self-leveling polyurethane sealant for traffic bearing construction.
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Mameco's Vulkem 255
      2) Pecora's Urexpan NR-200
      3) Bostik's Chem-Calk 550 or Products Research & Chemical's RC-2SL
      4) Or approved equal.
2. For Vertical Joints: Two-part, non-sag polyurethane sealant.
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Mameco's Vulkem 227
      2) Pecora's Dynatrol II
      3) Bostik's Chem-Calk 500 or Products Research & Chemical's RC-2
      4) Or approved equal.

2.2 MIXES

A. General: Concrete for all parts of the Work shall be of the specified quality capable of being placed without excessive segregation and, when hardened, of developing all characteristics required by the Specifications and Drawings.

B. Strength: Strength requirements given in Section 1 of this Specification are based on 28-day compressive strength, unless high early strength is specified, in which case required strengths are based on 7-day compressive strength.

C. Method of Proportioning:
   1. Proportion concrete mix of strength listed in B above in accordance with the requirements of Section BC 1905.2.3 of the 2014 NYC Building Code. The Testing Laboratory and the Commissioner will review the design mix.
   2. Mix designs are specific to material used, concrete producer, and method of placement. Each mix design must be reviewed and accepted by the Commissioner.
   3. Proportion and produce normal weight concrete to have a maximum slump of 4" or less. A tolerance of up to 1" above the indicated maximum shall be allowed for individual batches provided the average for all batches or the most recent 10 batches tested, whichever is fewer, does not exceed the maximum limit. The slump shall be determined by ASTM C143. Concrete containing High Range Water Reducer shall have a slump not exceeding 9", unless otherwise approved by the Commissioner. The concrete shall arrive at the job site at a slump of 2""to 3", be verified by the Commissioner, and the HRWR admixture added to increase the slump to the approved level.

D. Concrete shall be air-entrained with an air content for the grading size of coarse aggregate as follows:
   1. No.8.....71/2%
   2. No.57 or 67.....6%
   3. Tolerance on air content as delivered shall be +1.5%.

2.3 SOURCE QUALITY CONTROL

A. Tests:
   1. The Commissioner will review the proposed materials for compliance with the Specifications prior to construction.
   2. The Testing Laboratory will perform field tests as work progresses as listed in "Field Quality Control".

B. Inspection:
   1. Testing Laboratory:
      a. Concrete work is subject to Quality Control Inspection.
      b. The Commissioner will assign a licensed concrete testing laboratory to perform the required field testing. The Testing Laboratory will review the mix design, perform field testing, and inspect the work as it progresses. The listing of services to be performed by the testing Laboratory are given in Section 1.6 of ACI 301.
      c. The Testing Laboratory must be present when the concrete is being placed. The Commissioner may elect to have the laboratory present at the plant to witness the batching and mixing of the concrete.
   2. Notification
      a. Notify the Commissioner in writing at least forty-eight hours in advance of each concrete placement.
      b. During the placement of the concrete, notify the Commissioner immediately of any delay at the concrete plant or at the job site. Do not mix concrete or add admixtures unless the Commissioner and Testing Agency Technician are present.
   3. Contractors Responsibility for Quality Control
      a. The Commissioner and the Testing Laboratory shall receive the producer's Computer Batch Ticket for each truck.
      b. The tests and inspections, as provided in the Code, do not in any way relieve the Contractor of responsibility to construct the Work in accordance with the Drawings and Specifications and to use safe, standard methods of construction at all times, safeguarding the public, workmen, and structure. The Contractor shall be solely responsible for the physical control of the materials and concrete mixes, and shall see that such mix designs, tests, and controls are in accordance with the Code and Specifications. The Contractor's superintendent shall attest that the work was installed in accordance with the documents.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Prior to placement of concrete, verify that the concrete cover over the reinforcement is that specified on Drawings.

B. Verify that reinforcement and all other embedded items are provided and held securely, positioned accurately, and will not be a detriment to concrete placement.

C. Examine all adjoining work on which this Work is in anyway dependent for proper installation and workmanship. Report to the Commissioner any condition that prevents the performance of this Work.

3.3 PROTECTION

A. Protect concrete members on grade and the subgrade from freezing before and after installation. Provide blankets and other items necessary.

B. Protect adjacent finish materials and previously poured concrete against spatter during concrete placement.

C. Provide and maintain barricades and safeguards around openings, etc. to protect workmen from injury and to comply with the 2014 New York City Building Code and OSHA regulations.

3.4 FORMWORK

A. Provide formwork wherever necessary to confine concrete to the required shapes shown on Drawings. Follow all procedures of Section 2 of ACI 301, ACI 347, and Section BC 1906 of the 2014 NYC Building Code. Formwork, reinforcement, and embedded items shall be clean of all accumulated mortar from previous concreting and other foreign material. Restore or replace any formwork as required.

B. Cover the surfaces of the rough or overlaid plyform formwork (when used) with an approved form release agent that will effectively prevent absorption of moisture, prevent bond with the concrete, and which will not stain the concrete surfaces. Do not apply oil or release agents on formwork for concrete to receive additional concrete (such as at construction joints). Apply at a rate that will help achieve the finish specified below. Follow manufacture's recommendations.

C. Adequately support and substantially brace formwork to hold lines and shape. Securely brace forms against lateral deflection. Formwork shall be tight jointed to prevent leakage of concrete.

D. Place chamfer strips in the corners of forms to produce beveled edges (chamfers) on permanently exposed surfaces.

E. Provide "Rough Form Finish" for surfaces not exposed to view. Use plywood or metal forms coated with a release agent.

F. Provide "Smooth Form Finish" for surfaces exposed to view and the elements. Use dress, square-edged lumber with form liner or overlaid plyform forms with applicable release agent. Do not exceed manufacture's recommendations for number of re-uses for the form liner or overlaid plyform. Arrange the forms or form liner in an orderly and symmetrical fashion, keeping the number of seams to a practical minimum.

G. Remove forms in such a manner as to assure the complete safety of the structure as required by Section BC 1906.5 of the 2014 NYC Building Code. Formwork not supporting the weight of the concrete may be removed as soon as the concrete has hardened sufficiently to resist damage from removal operations and as required by H below.

H. When restoration of surface defects or finishing is required at an early age, remove forms as soon as the concrete has hardened sufficiently to resist damage from removal operations.

3.5 REINFORCEMENT

A. Place reinforcement in accordance with CRSI "Placing Reinforcement Bars", Section 3 of ACI 301, and Section BC 1907.5 of the 2014 NYC Building Code.

B. Unless otherwise permitted, welding of crossing bars (tack welding) for assembly of reinforcement is prohibited.

C. Support and fasten together all reinforcement to prevent displacement by construction loads or placing of concrete.

D. Lifting of bars and welded wire fabric into position during placement of concrete is not permitted.

E. Where the concrete surface will be exposed to the weather in the finished structure, the portions of all accessories within 1/2" of the concrete surface shall be non-corrosive or protected against corrosion.

F. Provide minimum protective cover given in Section BC 1907.7 of the 2014 NYC Building Code if not indicated on Drawings.

G. All splices not shown on the Project Drawings shall be shown on the shop drawings and approved by the Commissioner.

H. All embedment lengths not shown on the Project Drawings shall be shown on the shop drawings and approved by the Commissioner.

3.6 PREPARATION

A. Remove ice, excess water, trash, and rubbish from forms.

B. Remove hardened concrete from inner surfaces of conveying equipment and all formwork, reinforcement, and dowels.

C. Prepare previously placed concrete to be in contact with new concrete in the manner described under "Construction Joints".

D. Prepare existing concrete to be in contact with new concrete by roughening and cleaning the surface and applying a bonding agent. Surface must be free of laitance. Concrete must be placed after agent cures and within 24 hours of applying bonding agent in accordance with the directions of the manufacturer.

E. Do not place concrete on frozen ground.

3.7 JOINTS AND EMBEDDED ITEMS

A. Construction Joints:
   1. Make joints not shown on Drawings at locations that will least impair the strength of the structure and comply with requirements of Section BC 1906.8 of the 2014 NYC Building Code. Such location is subject to the approval of the Commissioner.
   2. Continue reinforcement across joints. Provide longitudinal keys at least 1 1/2" deep in walls and provide other keys as required.

3. Thoroughly clean concrete surface of oil, grease, and other contaminants and remove all laitance prior to placement of adjoining concrete. Roughen surface of the concrete in an approved manner that will expose the aggregate uniformly and will not leave laitance, loosened particles of aggregate, or damaged concrete at the surface. Dampen surface immediately prior to placement.

B. Expansion Joints:
1. Do not extend reinforcement or other embedded metal items bonded to concrete continuously through expansion joint. Provide smooth dowels greased on one end at the joints or insert into pvc sleeve of length greater than the dowel length by .75" minimum.
2. Provide expansion joint filler at the joint of the sizes indicated on the Drawings or specified herein.

C. Embedded items:
1. Place all fence sleeves, shoes, and other embedded items required for the Work of other Divisions or for their support prior to concreting.
2. Provide ample notice and opportunity for items of other Division to be introduced and/or furnished for installation before concrete is placed. Coordinate the Work of the other Divisions so all items are placed in their proper location.
3. Set metal pipe sleeves, sockets, shoes, etc. into concrete to receive fence posts or any other items, all as indicated on details.

3.8 MIXING AND PLACING CONCRETE

A. General:
1. Notify Commissioner at least 48 hours in advance of each concrete placement. Do not place concrete without approval of the Commissioner.
2. Do not allow rainwater to increase mixing water nor damage surface finish.
3. When placing concrete in cold weather (below 40oF), concrete shall have an accelerating admixture added.
4. Production of concrete, including batching and mixing, shall be done in accordance with the requirements of Section 4 of ACI 301 and Section BC 1905.8 of the Building Code.
5. Placement of concrete shall be done in accordance with the requirements of Section 5 of ACI 301 and Sections BC 1905.9 through 1905.13 of the Building Code. All consolidation shall be done by vibration.

B. Mixing:
1. Batch, mix, and transport ready-mixed concrete in accordance with the appropriate sections of ASTM C94 and Section BC 1905.8.2 of the 2014 NYC Building Code. Truck mixers and agitators shall meet the requirements of the Truck Mixers Manufacturer's Bureau or shall comply with Section 8.1.2 of ASTM C94 and shall be NYSDOT approved. All trucks shall have working revolution counters and site gages.
2. Batch and mix other concrete in accordance with subsection 4.3.1 of ACI 301.
3. Use of chemical admixtures must be approved by the Commissioner.
4. Unless otherwise approved by the Commissioner, concrete shall be deposited within 11/2 hours or 300 revolutions of the mixing drum, whichever comes first, after introduction of water to the cement or cement to the aggregate. When the ambient temperature rises above 90oF, the time shall be decreased to 1 hour.
5. Tempering and control of mixing water

a. Mix concrete only in quantities for immediate use. Concrete which has started to set shall not be retempered, but shall be discarded. Water shall not be added at the site.
b. For concrete containing HRWR (Superplasticizer), if loss of slump occurs, HRWR may be redosed at the site as long as a "flash set" has not occurred. Redosage procedures must be discussed and approved by the Commissioner and the admixture manufacturer.

C. Placing: Place concrete in accordance with ACI 304R, ACI 318, and Sections BC 1905.9 and BC 1905.10 of the 2014 NYC Building Code.
1. Consolidate all concrete by vibration so that the concrete is thoroughly worked around the reinforcement, around embedded items and into corners of forms, eliminating all air or stone pocket or weakness. Internal vibrators shall be the largest size and most powerful that can be used in the Work, as described in Table 5.1.5 of ACI 309R, with a minimum frequency of 7000 revolutions per minute and shall be operated by competent workmen. Over-vibrating and use of vibrators to transport concrete within forms is not permitted. Insert and withdraw vibrators at many points, from 18" to 30" apart. At each insertion, the duration shall be sufficient to consolidate the concrete but not sufficient to cause segregation, generally from 5 to 15 sec duration. Keep a spare vibrator on the job site during all concrete placing operations.
2. Cold Weather Concrete Protection: When the mean daily temperature of the atmosphere is less than 40oF during concreting, or within 24 hours thereafter, follow the procedures outlined in ACI 306R to protect the concrete. Temperature of the plastic concrete shall be no lower than 55oF. Heat all forms, reinforcing steel, and surfaces to receive concrete above the freezing point and keep them completely free of frost, snow, and ice.
3. Hot Weather Protection: When the mean daily temperature of the atmosphere is over 90oF during concreting, follow the procedures outlined in ACI 305R to protect the concrete.

3.9 FINISHING OF FORMED SURFACES AND RESTORATION OF SURFACE DEFECTS

A. General:
1. Remove forms as soon as practicable.
2. Restore surface defects, including tie holes and cracks, immediately after form removal. Patches shall be of quality to match the specified finish.
3. Remove oil, grease, compounds, and other contaminants from surfaces and areas to be restored.
4. Provide finishes specified below immediately after form removal.
5. Provide curing and protection.

B. Restoration of Surface Defects:
1. Restore surface defects in accordance with subsection 5.3.6 of ACI 301. At the Commissioner's discretion, repair mortars and coatings shall be employed to rectify defects. Materials shall be as selected by the Commissioner.

C. Tie Holes and Other Restorations:
1. Remove ties, nails, and other form accessories below the concrete surface when the surface is exposed to view and/or the elements. For surfaces not exposed to view or the above mentioned conditions, remove metal to the surface.
2. Undercut surfaces of holes. After cleaning and thoroughly dampening the holes, fill them solid with the patching mortar. The mortar shall match the color of the existing concrete for concrete exposed to view as specified in paragraph B above.

D. Formed Finishes:
1. Rough Form Finish: Provide for concrete not exposed to view.
   a. Restore concrete surface as indicated above.
   b. Chip or rub off fins exceeding 1/4" in height.
2. Smooth Form Finish: Provide for concrete exposed to view. Concrete shall have been placed without the need for patching or removal of fins, etc.
   a. Restore concrete surfaces as indicated above.
   b. Chip or rub off fins completely and grind smooth.
   c. Provide smooth rubbed finish as follows:
      1) Produce on newly hardened concrete no later than the day following form removal.
      2) Wet the surfaces and rub with a No. 16 carborundum brick or other equal abrasive to obtain a smooth, even surface of uniform appearance without applying any cement or other coating.
      3) Obtain the final finish by thoroughly rubbing with a No. 30 carborundum brick. The surface shall be wet for a period of 3 days. The Commissioner shall be the sole judge if the finish is acceptable.

E. Acceptance of Concrete Finish:
1. If the finish produced is not acceptable to the Commissioner, the Contractor shall be responsible for all costs incurred to produce an acceptable finish by whatever means determined by the Commissioner. Remove stains, rust, efflorescence, and other surface deposits to the satisfaction of the Commissioner.

3.10 PAVEMENTS AND SLABS

A. General:
1. Mixing and placing shall be carefully coordinated with finishing. Do not place concrete more rapidly than it can be spread, straight edged, and darbied or bull floated. Provide leveling, floating, troweling, etc. at the correct time interval after pouring to prevent dusting and a non-durable surface as specified in ACI 302.1R. These operations must be performed before bleeding water has an opportunity to collect on the surface.
2. To obtain good surfaces and avoid cold joints, the size of finishing crews shall be planned with due regard for the effects of concrete temperature and atmospheric conditions on the rate of hardening of the concrete.

B. Finishing:
1. Slope pavements uniformly toward drains. If pitch or elevations are not shown on Drawings, provide a minimum of 1/8" per foot.
2. Finish pavement surface to a true smooth plane and texture with a toothed roller or float with a wood float. Score concrete pavement in squares of approximately 5'-0" and/or as shown on Drawings. Each rectangular slab shall have all edges neatly rounded with proper tools and be bounded on all sides by a troweled border about 1" in width.
3. Level ramp, step and driveway surfaces with wood float and follow with a broom finish perpendicular to direction of traffic.

C. Placement:
1. General:
   a. Aggregate base material and preparation is given in Section 31 00 00 - Earthwork.

b. Where pavements to remain are damaged or destroyed as a result of the Work, patch, restore, or replace as required. Color to match existing.
c. Subgrade and/or aggregate base shall be free of frost before concrete placing begins.
d. Control Joints:
   1) Primary Method: Soff-Cut System method, by Soff-Cut International, Corona, CA (800)776-3328. Finisher must have documented successful experience in the use of this method prior to this project. Install cuts within 2 hours after final finish at each saw cut location. Use 1/8 inch thick blade, cutting 11/4 inch into slab.
   2) Optional Method (Where Soff-Cut System Method Equipment is Not Available): Properly time cutting with the set of the concrete. Saw-cut control joints within 12 hours after finishing. Start cutting as soon as the concrete has hardened sufficiently to prevent aggregates being dislodged by the saw. Complete cutting before shrinkage stresses become sufficient to produce cracking. Use 1/4 inch thick blade, cutting 1/4 slab depth.
e. Dampen subgrade or aggregate base immediately prior to placement of concrete.
f. Pour slab to required thickness after installation of reinforcement.

2. Pavements
   a. Provide 4" thick concrete slab unless otherwise indicated.
   b. Provide 6x6-W2.9xW2.9 WWF placed 11/2" from top surface.
3. Driveways
   a. Provide 7" thick concrete slab.
   b. Provide 4x4-W4xW4 placed 2" from top surface.
4. Expansion joints
   a. Provide expansion joints for all exterior concrete pavement, slabs under asphalt, driveways, etc. specified under this Section. Expansion joints shall occur at intervals not to exceed 20' in each direction or as indicated on Drawings.
   b. Provide continuous expansion joints at the following locations: Driveways and other concrete pavements abutting area walls, buildings, retaining or any other walls, check pieces, steps, curbs.
   c. Expansion joint shall be 1/2" wide, full depth minus 1/4" to allow for the poured joint sealer.

3.11 MISCELLANEOUS CONCRETE WORK

A. Provide curbs, footings, walls, ramps, and other miscellaneous concrete work.

3.12 PATCHING AND BONDING TO EXISTING CONCRETE

A. Provide bonding agent whenever new concrete is to be poured against existing concrete, whenever the time between concrete pours is longer than that allowed for proper bond, and wherever bonding agent is indicated on the Drawings to be applied.

B. Remove loose concrete from surface to be bonded with new concrete and clean. Remove rust from reinforcement and structural steel by power chipping and power driven brushes.

C. Apply bonding agent in accordance with manufacturer's specifications. Pour concrete as soon as bonding agent has cured and within 24 hours after placement. If the 24-hour period has elapsed, then the bonding agent must be reapplied.

3.13 CURING AND PROTECTION

A. General:
1. Begin curing concrete immediately after placement and finishing. Protect all freshly deposited concrete from premature drying and excessively hot or cold temperatures and maintain it with minimal moisture loss at a relatively constant temperature for the period of time necessary for the hydration of the cement and proper hardening of the concrete. Detailed procedures are given in ACI 308.
2. Do not apply curing compounds to surfaces receiving additional concrete. Provide only wet curing.

B. Procedure:
1. Concrete surfaces not in contact with forms:
   a. Ponding or continuous non-manual sprinkling.
   b. Absorptive mat or fabric, sand, or other covering kept continuously wet.
   c. Curing compounds conforming to ASTM C1315.
2. Concrete surfaces in contact with forms:
   a. Minimize moisture loss from forms exposed to heating by the sun by keeping forms wet until they are removed.
   b. After form removal, cure with one of the methods listed in 1 above.
3. Continue curing until a total of 7 days has elapsed during which the temperature of the air in contact with concrete has remained above 50oF. Prevent rapid drying during and at the end of the curing period.
4. Remove all curing compounds with cleaners recommended by curing compound manufacturer.

C. Cold Weather Curing:
1. Concrete must be protected from water loss. This shall be accomplished by the application as soon as possible without harm to the concrete surfaces of either (a) exhaust steam, or vapor-resistant paper or polyethylene film, or (b) curing compounds. In all other respects, curing shall conform to applicable provisions of this Section. Concrete temperature shall be maintained between 50oF and 70oF.

D. Hot Weather Curing:
1. During the period June 1 to October 1 or when hot weather conditions require it, maintain continuous water curing for a minimum period of twenty-four hours. Provide for wind breaks, shading, and other necessary provisions.
2. After 24 hours, curing shall be by one of the methods specified under B above. In all other respects, curing shall conform to applicable provisions of this Specification. Upon termination of the specified moist curing, every effort should be made to reduce the rate of drying by avoiding air circulation.

E. Protection from mechanical injury: Protect concrete from mechanical disturbances during curing period as described under "Protection and Cleaning".

3.14 TOLERANCES

A. Construct formwork so that concrete surfaces will conform to the tolerance limits listed in ACI 117.

B. Establish and maintain in an undisturbed condition and until final completion and acceptance of the project sufficient control points and bench marks to be used for reference purposes to check tolerances.

C. Place reinforcing bars in accordance with the tolerances given in Section BC 1907.5.2 of the 2014 NYC Building Code.

D. Move bars as necessary to avoid interference with other reinforcement, conduits, or imbedded items. If bars are moved more than one bar diameter, or enough to exceed the above tolerances, the resulting arrangements are subject to approval by the Commissioner.

E. Place concrete to meet tolerances specified in ACI 117, unless specified otherwise herein.

3.15 FIELD QUALITY CONTROL

A. Tests - Tests to be performed by the Testing Laboratory during construction are as follows:
1. Compliance of materials to Specifications tested from production samples.
2. Determination of the slump of the concrete for each sample taken and whenever consistency of the concrete appears to vary using ASTM C143. The Testing Laboratory will reject any concrete that does meet the slump requirements.
3. Determination of water content of freshly mixed concrete utilizing the procedure of AASHTO TP23. Concrete that does not meet the maximum water to cement ratio or the proportions given in the approved design mix will be immediately rejected regardless of slump.
4. Strength tests: The frequency of conducting strength tests of concrete shall be in accordance with Section BC 1905.6.2 of the 2014 NYC Building Code, with additional cylinders taken for an additional strength test and one cylinder for a 7 day break. Strength tests shall be performed for each 50 cubic yards, or portions thereof, of concrete placed in any one day's concreting. Specimens will be stored at the site in the insulated curing box provided by the Contractor. Each group of specimens is considered one strength test. One cylinder will be broken at 7 days for information. Strength test shall be at 28 days for acceptance. The cylinders for the additional strength test will be utilized for either a strength test or other types of testing only if the 28-day breaks are low or durability of the concrete is in question. If one specimen in a test manifests evidence of improper sampling, molding, or testing, it shall be discarded and the average strength of the remaining cylinders shall be considered the test result. Should all specimens in a test show any of the above defects, the entire test shall be discarded.
5. Determination of air content and unit weight of concrete sample for each strength test in accordance with ASTM C173 or C231 and ASTM C138.
6. Determination of temperature of concrete sample for each strength test.
7. Determination of water soluble chloride content in the concrete, percent by weight of cement, of each sample.

B. Inspection:
1. Refer to "Source Quality Control" for responsibility and procedure.
2. The lab will inspect placement of reinforcement and thickness of members prior to placement.
3. Keep a record of all inspections, the name of the persons making them, and the name of the foreman in charge of formwork at the site. Submit to the Commissioner a copy of the inspection records prior to each concrete placement.
4. Cooperate in the making of all tests by the Laboratory Technician by:
   a. Providing an insulated curing box of sufficient size and strength to contain all specimens made in any four consecutive working days. Furnish an outlet to provide the necessary temperature in the storage box, pending delivery to the Laboratory of the test cylinders.
   b. Providing a buggy for transporting the concrete taken from the mixer (and/or point of placement) to the location of the curing box for testing and the preparation of specimens.

c. Protecting the property of the Laboratory and keeping test specimens free from vibration and other disturbances.
d. Providing a microwave of the size specified in AASHTO TP23 and a portable generator.

C. Evaluation and Acceptance of Concrete:
1. Strength tests on concrete will be evaluated according to Section BC 1905.6.3.3 of the 2014 NYC Building Code by the Commissioner. If the tests fail, the adequacy of the concrete will be checked according to the requirements of Section BC 1905.6.5 of the 2014 NYC Building Code. Concrete exposed to the elements with indications of poor durability will be rejected regardless of strength and will be subject to petrographic examination.
2. Pay for additional expense of labor and materials required at the job for all damages resulting from testing. Remove and replace concrete work that is not of adequate strength or weather resistance and cannot be made to work by remedial methods acceptable to the Commissioner at no cost to the City of New York. The Contractor shall be held responsible for all delays and damages to the work of other Divisions that occur as a result of non-conformance.

3.16 PROTECTION AND CLEANING

A. During the curing period, and thereafter as conditions may require, protect the concrete from damaging mechanical disturbances, particularly excessive load stresses, heavy shock, and excess vibration. Protect all finished concrete surfaces from damage caused by construction equipment, materials or methods, and by rain or running water.

3.17 ACCEPTANCE OF CONCRETE WORK

A. The provisions of Subchapter 1.6 of ACI 301 apply to the acceptance of the concrete work.

B. Concrete work judged inadequate by structural analysis, core test, or results of load test or deemed unacceptable due to appearance or durability concerns shall be restored, reinforced with additional construction if so directed by the Commissioner, or be replaced if so directed by the Commissioner at the Contractor's expense.

END OF SECTION 32 13 15

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 15 43
Crushed Stone Edging

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:
   1. Refer to DDC General Conditions
      a. Section 01 33 00 "Submittal Procedures"
      b. Section 01 74 19 "Construction Waste Management and Disposal"
      c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

   1. Provide all equipment and materials, and do all work necessary for new pavement marking and removal of existing pavement marking, as indicated on the Drawings and as specified. Provide the following systems as shown on Drawings and specified herein including, but not limited to the following:

      a. Crushed stone for borders in landscape.
      b. Metal edging at crushed stone border.

B. Related Sections
   1. Section 31 00 00 – Earthwork

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 REFERENCES

A. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern. All standards shall include the latest additions and amendments as of the date of advertisement for bids.

   1. American Society for Testing and Materials (ASTM):

a) A 36	Structural Steel
b) A 123	Zinc (Hot-Galvanized) Coatings on Products Fabricated from Rolled, Pressed, and Forged Steel Shapes, Plates, Bars, and Strip
c) A 153	Zinc Coating (Hot-Dip) on Iron and Steel Hardware
d) A 386	Zinc Coating (Hot-Dip) on Assembled Steel Products
e) B 308	Aluminum-Alloy 6061-T6 Standard Structural Shapes, Rolled or Extruded
f) D 1557	Moisture-Density Relations of Soils and Soil Aggregate Mixtures Using 10-lb. (4.54-kg) Rammer and 18-in. (475-mm) Drop

1.5 SUBMITTALS

A. Submit for Commissioner's approval a 10 lb. sample of stone aggregate material demonstrating material gradation and color.

B. Submit for Commissioner's approval manufacturer's product data of steel edging and samples of edging material in specified finish. Edging sample shall be a minimum 2 ft. in length and showing interlock for staking; include with edging material one stake.

C. Samples: The following samples shall be submitted:

Material	Sample Size or Quantity
Crushed Stone Aggregate	2 lb.
Soil stabilization fabric	1 sq. ft.
Filter fabric	1 sq. ft.

D. Manufacturer's Product Data: Manufacturer's product data shall be submitted for the following materials:

1. Edging
2. Filter fabric

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.7 DELIVERY AND STORAGE

A. All materials shall be delivered and stored in sealed containers that plainly show the designated name, formula or specification number, batch number, color, date of manufacture, manufacturer's name, and directions, all of which shall be plainly legible at time of use.

PART 2 - PRODUCTS

2.1 AGGREGATE BASE COURSE

A. Aggregate for base course shall be a graded, granular, non-frost susceptible, free-draining material, consisting of either durable stone and coarse sand or of blast furnace slag, practically free from loam and clay, and which can be readily compacted to form a stable foundation

1. Material shall conform to Section M1.03.0 Type b, of the MHD Specifications, with less than 8% by weight passing No. 200 sieve.

2.2 CRUSHED STONE BED

A. Crushed stone surface shall be decomposed granite or trap rock meeting the following gradation:

Sieve Size	% Passing by Weight
¾ in.	100
No. 4	50-80
No. 50	8-24
No. 200	3-10

2.3 PEASTONE TOP COURSE

A. Stone aggregate shall be an angular, durable dense graded crushed stone meeting the following gradation:

Sieve Size	% Passing by Weight
1-1/2 in.	100
1-1/4 in.	85-100
¾ in.	10-40
½ in.	0-8

B. Pea Stone shall be white in color with color relatively uniform and shall be subject to the approval of the Commissioner.

2.4 STEEL EDGING

A. Basis of Design: Subject to compliance with requirements, provide Ryerson Steel Landscaping Edging, manufactured by Ryerson, an Inland Steel Company, Chicago, IL 60680 or comparable product by one of the following:

1. Border Concepts Edging, "Border King", manufactured by Border Concepts, Inc., P.O. Box 471185, Charlotte, NC 28247
2. Steel Landscape Edging, "Border King", manufactured by PRO-STEEL 5121 Kaltenbrun Road | Fort Worth, Texas 76119
3. Or approved equal

B. Steel edging shall be shop fabricated, 1/4 in. thick x 6 in. deep, galvanized steel, primed and painted flat black. Edging shall be furnished in 20 ft. lengths.

1. Steel edging shall have slotted holes for staking steel edging every 30 in. o.c.
2. Steel stakes shall be 16 in. long, tapered.

2.5 METAL

A. General: Provide products and materials of new stock, free from defects, and of best commercial quality for each intended purpose.

B. Steel Plates, Shapes, and Bars: ASTM A 36.

2.6 METAL FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Galvanizing: Hot-dip galvanize exterior metal fabrications indicated to be galvanized, in compliance with ASTM A 123, ASTM A 153, or ASTM A 386. Provide minimum 1.5 oz./ft.2 zinc coating. Galvanize after fabrication.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GRADING

A. Areas to receive stone dust surfacing will be compacted and brought to subgrade elevation under Section 31 00 00, Earthwork before work of this section is performed. Final fine grading, furnishing and installing aggregate base course, stabilizer, and stone dust surface and compaction of these materials as required to form a firm, uniform, accurate, and unyielding stone dust surface at required elevations and to required lines, shall be done under this Section.

B. Existing subgrade material which will not readily compact as required shall be removed and replaced with satisfactory materials. Additional materials needed to bring subgrade to required line and grade and to replace unsuitable material removed shall be material conforming to this Section.

C. Subgrade of areas to receive stone dust surfacing shall be recompacted as required to bring top 4 in. of material immediately below gravel base to a compaction of at least 90% of maximum density, as determined by ASTM D 1557. Subgrade compaction shall extend for a distance of at least 1 ft. beyond proposed edge of stone dust surface.

D. Excavation required in subgrade shall be completed before fine grading and final compaction of subgrade are performed. Where excavation must be performed in completed subgrade or gravel base, subsequent backfill and compaction shall be performed as directed by the Commissioner as specified in Section 31 00 00, Earthwork. Completed subgrade after filling such areas shall be uniformly and properly graded.

E. Areas being graded or compacted shall be kept shaped and drained during construction. Ruts greater than or equal to 1 in. deep in subgrade, shall be graded out, reshaped as required, and recompacted before placing stone dust surfacing.

F. Materials shall not be stored or stockpiled on subgrade.

G. Disposal of debris and other material excavated and/or stripped under this section, and material unsuitable for or in excess of requirements for completing work of this section shall be disposed of off-site.

3.3 AGGREGATE BASE COURSE

A. Unless otherwise specified, base course for stone dust surfacing and the spreading, grading, and compaction methods employed shall conform to 31 00 00 Earthwork.

B. Compaction of aggregate base shall be to 95% of maximum density as determined by ASTM D 1557. Stone greater than 2 in. shall be excluded from course.

C. Width of base course shall be greater than or equal to the width of stone dust surface, if continuous lateral support is provided during rolling, and shall extend at least 2 x base thickness beyond edge of the course above, if not so supported.

D. Material shall be applied in lifts less than or equal to 3 in. thick, compacted measure. Each lift shall be separately compacted to specified density.

1. Rolling shall begin at sides and progress to center of crowned areas, and shall begin on low side and progress toward high side of sloped areas. Rolling shall continue until material does not creep or wave ahead of roller wheels.

2. Surface irregularities which exceed 1/2 in. as measured by means of a 10 ft. long straightedge, shall be replaced and properly compacted.

E. Subgrade and base course shall be kept clean and uncontaminated. Less select materials shall not be permitted to become mixed with base course. Materials spilled outside stone dust surfacing lines shall be removed and area repaired.

F. Portions of subgrade or of construction above which become contaminated, softened, or dislodged by passing of traffic, or otherwise injured, shall be cleaned, replaced, recompacted, or otherwise repaired to conform to the requirements of this specification before proceeding with next operation.

3.4 CRUSHED STONE BED AND PEASTONE SURFACING

A. Limestone bed and peastone surface shall be done only after excavation and construction work which might injure them have been completed. Damage caused during construction shall be repaired before acceptance.

B. Limestone bed shall be constructed on a compacted aggregate base. Peastone surface shall be constructed on a compacted limestone bed.

C. Stone aggregate shall be spread evenly over the indicated bed or base, rolled with a 3 to 5 ton steel-wheeled roller, and compacted to 95% of maximum density as determined by ASTM D 1557.

D. Water shall be added to stone paving as required to achieve a dense, hard packed surface conforming to the finish grades indicated.

E. Variations in smoothness of finished stone dust surface shall be less than or equal to 1/4 in. when tested with a 10 ft. straightedge, applied both parallel to and at right angles to centerline of stone dust surface

areas. Irregularities exceeding these amounts or which retain water on surface shall be corrected by removing defective work and replacing with new material conforming to this specification.

F. Allow finished surface to dry completely before permitting use.

3.5 EDGING

A. Steel edging shall be installed at locations indicated on the Drawings. Where required, edging shall be cut square and accurately to required length.

1. Steel edging shall be securely staked in required position. Stakes shall be driven every 30 in. o.c. along length of edging.

2. Adjacent lengths of edging shall overlap 8 in.

3. Edging shall be set plumb and vertical at required line and grade. Straights sections shall not be wavy; curved sections shall be smooth and shall have no kinks or sharp bends.

END OF SECTION 32 15 43

SECTION 32 17 23
Pavement Markings

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:
   1. Refer to DDC General Conditions
      a. Section 01 33 00 "Submittal Procedures"
      b. Section 01 74 19 "Construction Waste Management and Disposal"
      c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
      d. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"

1.2 SUMMARY

A. Section includes:

   1. Provide all equipment and materials, and do all work necessary for new pavement marking and removal of existing pavement marking, as indicated on the Drawings and as specified. Provide systems as shown on Drawings and specified herein including, but not limited to the following:

      a. Parking Stall Stripes.
      b. Traffic Arrows, crosswalks, accessible stall access aisles, walkways, symbols, stop bars, words and other markings.
      c. International Symbol of Accessibility.

   2. Proportion International Symbol of Accessibility in accordance with ICC A117.1-2009 Accessible and Usable Buildings or 2010 ADA Standards for Accessible Design:

B. Related Sections
   1. Section 03 30 00 – Cast-In-Place Concrete
   2. Section 31 00 00 – Earthwork
   3. Section 32 12 16 – Asphalt Paving
   4. Section 32 13 15 – Concrete Curbs and Pavement

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 REFERENCES

A. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern. All standards shall include the latest additions and amendments as of the date of advertisement for bids.

1. Federal Specifications (Fed. Spec.):
   TT-P-115E Paint, Traffic, Highway, White, and Yellow
   TT-P-1952 Paint, Traffic And Airfield Marking, Waterborne

2. New York City Accessibility Code (NYCAC)

3. New York City Air Pollution Control Code

1.5 SUBMITTALS

A. Manufacturer's product sheets for each specified product.

B. Certificate stating that the proposed pavement marking paint meets the VOC regulations of the New York City Air Pollution Control Code standards.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.7 DELIVERY AND STORAGE

A. All materials shall be delivered and stored in sealed containers that plainly show the designated name, formula or specification number, batch number, color, date of manufacture, manufacturer's name, and directions, all of which shall be plainly legible at time of use.

1.8 EQUIPMENT

A. All machines, tools and equipment used in the performance of the work shall be approved and maintained in satisfactory operating condition. Equipment operating on roads and runways shall display low speed traffic markings and traffic warning lights.

1.9 TRAFFIC CONTROL

A. Traffic Controls: NOTE: Guidance for traffic control procedures can be obtained from the Manual on Uniform Traffic Control Devices (MUTCD) for Streets and Highways.

B. Place traffic cones along newly painted lines to control traffic and prevent damage to newly painted surfaces. Remove when paint has dried fully.

1.10 WEATHER LIMITATIONS

A. Pavement surface shall be free of snow, ice, or slush. Surface temperature shall be at least 40 degrees F and rising at the beginning of operations, except those involving shot or sand blasting. Operation shall cease during thunderstorms. Operation shall cease during rainfall, except for waterblasting and removal of previously applied chemicals. Waterblasting shall cease where surface water accumulation alters the effectiveness of material removal

PART 2 - PRODUCTS

2.1 MATERIALS

A. Pavement marking materials shall meet Federal, NY State and Local NYC environmental standards.

B. Paint shall be manufactured and formulated from first grade raw materials and shall be free from defects or imperfections that might adversely affect product serviceability.

C. Paints shall comply with the National Organic Compound Emission Standards for Architectural Coatings, Environmental Protection Agency, 40 CFR Part 59.

D. The product shall not contain mercury, lead, hexavalent chromium, or halogenated solvents.

E. Paint and reflective media shall be in sealed containers that plainly show the designated name, formula or specification number, batch number, color, date of manufacture, manufacturer's name, formulation number and directions, all of which shall be plainly legible at time of use.

2.2 PAINT MATERIAL

A. Paint shall conform to Fed. Spec. TT-P-115E, color as selected.

B. The paint shall be homogeneous, easily stirred to smooth consistency, and shall show no hard settlement or other objectionable characteristics during a storage period of 6 months. Paints for parking areas shall conform to FS TT-P-1952, color as indicated. Pavement marking paints shall comply with applicable NY State and NYC laws enacted to ensure compliance with Federal Clean Air Standards. Paint materials shall conform to the restrictions of the local Air Pollution Control District.

2.3 PAINT COLOR

A. Color of paint unless noted otherwise on Contract Drawings, shall be traffic yellow, where shown on Contract Drawings or specified herein, shall match federal color chip No. 33538 commonly referred to as federal highway yellow. Color shall have daylight directional reflectance (without glass beads) of not less than 50% (relative to magnesium oxide) when tested in accordance with Federal Test Method Standard 141, Method 6121.

B. Paint color for blue accessible parking space pavement markings, if shown on Contract Drawings, shall match federal color chip No. 35180. Color shall have daylight directional reflectance (without glass beads) of not less than 52% (relative to magnesium oxide) when tested in accordance with Federal Test Method Standard 141, Method 6121.

C. Paint color for red special-use parking space pavement markings, if shown on Contract Drawings, shall match federal color chip No. 31136. Color shall have daylight directional reflectance (without glass beads) of not less than 52% (relative to magnesium oxide) when tested in accordance with Federal Test Method Standard 141, Method 6121.

D. Paint color for black special-use pavement markings, if shown on Contract Drawings, shall match federal color chip No. 37038. Black paint shall also meet Federal Specification TT-P- 110.

2.4 PRIMER

A. The primer for asphalt concrete pavements shall be a thermosetting adhesive with a solids content of pigment reinforced synthetic rubber and synthetic plastic resin dissolved and/or dispersed in a volatile organic compound. Solids content shall not be less than 10 percent by weight at 70 degrees F and 60 percent relative humidity. A wet film thickness of 0.005 inch plus or minus 0.001 inch, shall dry to a tack-free condition in less than 5 minutes.

2.5 MARKING EQUIPMENT

A. Machines, tools and equipment used in the application of pavement markings shall conform to IDOT Specifications Section 860.60 and shall be approved and maintained in satisfactory operating condition.

2.6 SURFACE PREPARATION EQUIPMENT

A. Sandblasting Equipment: shall include an air compressor, hoses, and nozzles of proper size and capacity as required for cleaning surfaces to be painted. The compressor shall be capable of furnishing not less than 150 cfm of air at a pressure of not less than 90 psi at each nozzle used, and shall be equipped with traps that will maintain the compressed air free of oil and water.

B. Waterblast Equipment: The water pressure shall be specified at 2600 psi at 140 degrees F in order to adequately clean the surfaces to be marked.

C. Marking Removal Equipment: shall be mounted on rubber tires and shall be capable of removing markings from the pavement without damaging the pavement surface or joint sealant. Waterblasting equipment shall be capable of producing an adjustable, pressurized stream of water. Sandblasting equipment shall include an air compressor, hoses, and nozzles. The compressor shall be equipped with traps to maintain the air free of oil and water.

D. Shotblasting Equipment: shall be capable of producing an adjustable depth of removal of marking and pavement. Each unit shall be self-cleaning and self-contained, shall be able to confine dust and debris from the operation, and shall be capable of recycling the abrasive for reuse.

E. Chemical Equipment: shall be capable of application and removal of chemicals from the pavement surface, and shall leave only non-toxic biodegradeable residue

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 SURFACE PREPARATION

A. Surfaces to be marked shall be thoroughly cleaned before application of the pavement marking material. New pavement surfaces shall be allowed to cure for a period of not less than 48 hours before application of marking materials.

B. Dust, dirt, and other granular surface deposits shall be removed by sweeping, blowing with compressed air, rinsing with water, or a combination of these methods, as required. Rubber deposits, surface laitance, existing paint markings, and other coatings adhering to the pavement shall be completely removed using scrapers, wire brushes, sandblasting, approved chemicals, or mechanical abrasion, as directed.

C. Where oil or grease are present on old pavements to be marked, affected areas shall be scrubbed with several applications of trisodium phosphate solution or other approved detergent or degreaser, and rinsed thoroughly after each application. After cleaning, oil- soaked areas shall be sealed with cut shellac to prevent bleeding through the new paint. Pavement surfaces shall be allowed to dry, when water is used for cleaning, prior to striping or marking. Surfaces shall be recleaned, when work has been stopped due to rain.

3.3 PRIMER

A. After surface preparation has been completed the asphalt concrete pavement surface shall be primed. The primer shall be applied with spray equipment. Primer materials shall be allowed to "set-up" prior to applying the thermoplastic composition. The asphalt concrete primer shall be allowed to dry to a tack-free condition, usually occurring in less than 10 minutes. The Portland cement concrete primer shall be allowed to dry in accordance with the thermoplastic manufacturer's recommendations. To shorten the curing time of the epoxy resins an infrared heating device may be used on the concrete primer.

B. Asphalt Concrete Primer: Primer shall be applied to all asphalt concrete pavements at a wet film thickness of 0.005 inch, plus or minus 0.001 inch, (265-400 square feet per gallon).

3.4 APPLICATION OF MARKING MATERIALS

A. Marking materials shall be applied to clean, dry surfaces in accordance with the requirements of IDOT Specifications Section 780. Pavement marking materials shall be applied evenly to the pavement surface to be coated at a rate specified in IDOT Specifications Section 780.

B. Paint: Paint shall be applied pneumatically with approved equipment. Paint shall be applied to clean, dry surfaces, and only when air and pavement temperatures are above 40 degrees F and less than 95 degrees F. Paint temperature shall be maintained within these same limits. New asphalt pavement surfaces and new Portland concrete cement shall be allowed to cure for a period of not less than 30 days before applications of paint. Paint shall be applied pneumatically with approved equipment at rate of coverage specified . The Contractor shall provide guide lines and templates as necessary to control paint application. Special precautions shall be taken in marking numbers, letters, and symbols. Edges of markings shall be sharply outlined.

C. Guidelines and templates shall be employed as necessary to control paint application.

D. Special precautions shall be taken in marking numbers, letters, and symbols. Edges of markings shall be sharply outlined.

E. Maximum drying time requirements of the paint manufacturer shall be enforced to prevent undue softening of bitumen, and pickup, displacement, or discoloration by vehicle tires.

F. If markings require more drying time than stated by the paint manufacturer, painting operations shall be discontinued until cause of the slow drying is determined and corrected.

END OF SECTION 32 17 23

SECTION 32 17 26
Tactile Warning Surfacing

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:
   1. Refer to DDC General Conditions
      a. Section 01 33 00 "Submittal Procedures"
      b. Section 01 74 19 "Construction Waste Management and Disposal"
      c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
      d. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"
      e. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

1.2 SUMMARY

A. Section includes:

   1. Provide all equipment and materials, and do all work necessary to construct the tactile metal warning plates and accessories as indicated on the Drawings and specified herein.

B. Related Sections
   1. Section 03 30 00 – Cast-In-Place Concrete
   2. Section 31 00 00 – Earthwork
   3. Section 32 13 15 – Concrete Curbs and Pavement

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Shop Drawings shall be submitted for all tactile plate materials, including accessories for Commissioner's review.

1.5 REFERENCES

A. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern. All standards shall include the latest additions and amendments as of the date of advertisement for bids.

1. American Society for Testing and Materials (ASTM):

A 48M	Standard Specification for Gray Iron Castings

2. Americans with Disabilities Act (ADA)

28 CFR Part 36	Detectable Warnings On Walking Surfaces,

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Provide Cast Iron Tactile Warning Plates and accessories by a single supplier with a minimum of three (3) years' experience in the supply of Cast Iron Detectable/Tactile Warning Surface Indicator Plates

PART 2 - PRODUCTS

2.1 TACTILE METAL PLATE

A. Basis of Design: Subject to compliance with requirements, provide:

1. Bolted Plate 4984-24B by Neenah Foundry, 2121, Brooks Ave Neenah, WI 54956, 800-558-5075, www.nfco.com

a.	Mounting:	Per Manufacturer's instructions.
b.	Material:	Cast Iron
c.	Finish/Color:	Natural metal finish
d.	Size:	24" x 24"

or comparable product by one of the following:

2. Duralast Detectable Warning Plate 00700571 by EJ Group, 270 Redwing Rd, Ardmore Industrial Air Park, Ardmore, OK 73401, 580-389-5010 www.ejco.com

a.	Mounting:	Per Manufacturer's instructions.
b.	Material:	Cast Iron
c.	Finish/Color:	Natural metal finish
d.	Size:	24" x 24"

3. Irondome Tactile Warning Surface by ADA Solutions, Inc., 323 Andover Street – Suite 3 Wilmington, MA 01887, 1-800-372-0519, www.adatile.com
   a. Mounting: Per Manufacturer's instructions.
   b. Material: Cast Iron
   c. Finish/Color: Natural metal finish
   d. Size: 24" x 24"

4. Or approved equal

B. Fasteners shall be:

1. Corrosion resistant, hex head bolt, 3/8" diameter x 1-3/4" long. Min. two per Detectable/Tactile Warning Surface Indicator plate connection.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Examine paving or other substrates for compliance with manufacturer's requirements for placement and location of embedded items, condition of substrate, and other conditions affecting installation of detectable warning plates.

B. Coordinate with the Commissioner to ensure that the surfaces being prepared and fabricated to receive the plates are constructed correctly and adequately for plate installation. Review manufacturer and contract drawings with the Contractor prior to the construction and refer any and all discrepancies to the Commissioner.

C. The physical characteristics of the concrete shall be consistent with the contract specifications while maintaining a slump range of 3-4 inches to permit solid placement of the Cast Iron Detectable/Tactile Warning Surface Indicator Plates.

D. When preparing to set the plate, ensure that the area to receive the plates has been finished to its final elevation. The concrete shall be poured and finished true and smooth to the required dimensions and slope prior to the plate placement. Vents in the plate allow air and displaced concrete to escape during the installation process.

E. Lift the Detectable/Tactile Warning Surface Indicator plate and gently place into position onto the wet concrete. The plate shall be placed true and square to the curb edge in accordance with the contract drawings. Press into the concrete. The Cast Iron Detectable/Tactile Warning Surface Indicator Plates shall be tamped into the fresh concrete to ensure that the field level of the plate is flush to the adjacent concrete surface.

F. Immediately after placement, the plate elevation is to be checked to adjacent concrete, and the concrete around the perimeter of the tile should be finished. The elevation and slope should be set consistent with contract drawings to permit water drainage to curb as the design dictates. Ensure that the field surface of the plate is flush with the surrounding concrete and back of curb so that no ponding is possible on the plate at the back side of curb, and to eliminate tripping hazards between adjacent finishes.

G. While concrete is workable, create a 1/4" concrete-free recess around the perimeter of the plate. Use a 3/8" radius edging tool to create a finished edge of concrete, then a steel trowel shall be used to finish the concrete around the plate's perimeter, flush to the field level of the plate.

H. Clean the surface of the tile of any concrete that has protruded from the vent holes.

I. During and after the Detectable/Tactile Warning Surface Indicator Plate installation and the concrete curing stage, it is imperative that there is no walking, leaning or external force placed on the plate that may rock the plate causing a void between the underside of Detectable/Tactile Warning Surface Indicator Plate and concrete.

J. Following Detectable/Tactile Warning Surface Indicator Plate placement, review installation tolerances to contract drawings and adjust plate before the concrete sets.

K. Following the concrete curing stage, a soft brass wire brush will clean the residue without damage to the plate surface

3.3 PROTECTION AND MAINTENANCE

A. Protect plates against damage during construction period to comply with Detectable/Tactile Warning Surface Indicator plate manufacturer's specification.

B. Protect plates against damage from rolling loads following installation by covering with plywood or hardwood.

C. Comply with manufacturer's maintenance manual for cleaning and maintaining plate surface. It is recommended to perform annual inspections for safety and plate integrity.

END OF SECTION 32 17 26

SECTION 32 31 19
Decorative Metal Fence and Gate

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract]).

B. LEED General Requirements:
   1. Refer to DDC General Conditions
      a. Section 01 33 00 "Submittal Procedures"
      b. Section 01 74 19 "Construction Waste Management and Disposal"
      c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

   1. Provide all equipment and materials, and do all work necessary to construct the decorative metal site fences, including swing gates at the main gate and minor gates, and posts and connections, as indicated on the Drawings and specified herein including, but not limited to the following:

      a. Decorative metal site fencing around Household Goods area, including swing gates and hinges, posts and connections, and locking mechanisms.
      b. Decorative metal site fencing around generator at existing building, including swing gates and hinges, posts and connections, locking mechanisms, and panel removal system.
      c. Decorative metal site fencing at utility enclosure at new existing building, including swing gates and hinges, posts and connections, locking mechanisms, and panel removal system
      d. Decorative metal site fencing around gas meters at existing building, including, posts and connections, and panel removal system

B. Related Sections
   1. Section 03 30 00 – Cast-In-Place Concrete
   2. Section 31 00 00 – Earthwork

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Shop Drawings shall be submitted for all fence materials, including, gate assembly and related hardware, post and related hardware for Commissioner's review.

B. Samples. A sample will be provided for each panel type selected (additional samples available if needed). Each sample approximately 10" x 10" to be coated with the specified finish warranty (Sample will be in specified color, if available).

C. For installed products indicated shall comply with performance requirements and design criteria, provide analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Welding certificates.

E. Qualification Data: For professional engineer.

1.5 WARRANTY

A. Product Warranty: Standard limited warranty that the swing gate hinge, lock and securing system is free from defects in material and workmanship and, under normal or proper usage, will remain free from such defects for a period of three (3) years from the date of Substantial Completion.

B. Finish Warranty: 20-year warranty TGIC polyester powder coat finish system.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Fence manufacturer shall have at least three years of experience in the manufacture of related metal fencing.

C. Provide complete swing gates system with all components provided by a single manufacturer.

D. Metal Bar Grating Standards. Comply with applicable requirements as listed below.
   1. Non-Heavy Duty Metal Bar Gratings Comply with NAAMM MBG 531, "Metal Bar Grating Manual for Steel, StainlessSteel, and Aluminum Gratings and Stair Treads

E. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.

F. Professional Engineer Qualifications: A professional engineer licensed in the state of NY who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of metal fabrications that are similar to those indicated for this Project in material, design, and extent.

G. Metal Surfaces, General: Provide materials with smooth, flat surfaces, unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

1.7 PERFORMANCE REQUIREMENTS

A. Engineering Services: Metal fence panel and framing, anchoring and supports; swing gates framing, supports anchoring, and locking for main gates at household goods area and minor swing gates; including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

1.8 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of grades and other construction contiguous with metal fence and gate fabrications by field measurements before fabrication and indicate measurements on Shop Drawings.

1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating metal fabrications without field measurements.

   a. Coordinate fence and other contiguous construction to ensure that actual dimensions correspond to established dimensions.

2. Provide allowance for trimming and fitting at site.

1.9 REFERENCES

A. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern. All standards shall include the latest additions and amendments as of the date of advertisement for bids.

1. American Society for Testing and Materials (ASTM):

a. A 36	Standard Specification for Carbon Structural Steel
b. A 500	Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
c. A 53	Pipe, Steel, Black and Hot-Dipped Zinc-Coated Welded and Seamless
d. A 90	Weight of Coating on Zinc-Coated (Galvanized) Iron or Steel Articles
e. A 123	Zinc (Hot-Galvanized) Coatings on Products Fabricated from Rolled, Pressed, and Forged Steel Shapes, Plates, Bars, and Strip
f. A 153	Zinc-Coating (Hot-Dip) on Iron and Steel Hardware
g. A 385	High-Quality Zinc Coatings (Hot-Dip)
h. A 392	Zinc-Coated Steel Chain-Link Fence Fabric

i.	A 569	Steel, Carbon (0.15 Maximum Percent) Hot-Rolled Sheet and Strip, Commercial Quality
j.	B 6	Zinc (Slab Zinc)
k.	D 412	Tests for Rubber Properties in Tension

PART 2 - PRODUCTS

2.1 METAL FENCE PANEL

A. Basis of Design: Subject to compliance with requirements, provide:

1. Orsogril Sterope Standard rectangular design metal panel by BarnettBates Orsogril,, 500 Mills Road, Joliet, IL 60433, (815) 726-5223 www.barnettbates.com

   or comparable product by one of the following:

2. Opus 10 fence panel by Coda Architectural 3651 Sausalito Street, Los Alamitos, CA 90720, (800) 321-4314 www.codaarchitectural.com

3. Orsogril Sterope Grating rectangular design metal panel by MarCo, Marco Specialty Steel, Inc., P.O. Box 750518, Houston, Texas 77275, 713-489-5416 www.marcospecialtysteel.com

B. Metal Fence Panel shall be constructed of:
   1. Steel Bar Stock ASTM A36
   2. Steel Tubing ASTM A500, Grade B
   3. Rectangular Pattern of Nominal 2 7/16" x 5 3/16" Grid opening. 1" x 3/32" (25mm x 2.5mm) main bar on 2 7/16" centers, 3/16" diameter round crossbar at 5 3/16" centers

2.2 METAL FENCE POSTS AND FRAMES

A. Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Bars (Pickets): Hot-rolled, carbon steel complying with ASTM A 29/A 29M, Grade 1010.

C. Tubing: ASTM A 500, cold formed steel tubing.

D. Uncoated Steel Sheet: Hot-rolled steel sheet, ASTM A 1011/A 1011M, Structural Steel, Grade 310.

E. Galvanized-Steel Sheet: ASTM A 653/A 653M, structural quality, Grade 340, with G90 (Z275) coating.

2.3 METAL FENCE, FASTENERS AND HARDWARE

A. General: Unless otherwise indicated, provide Type 316 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633, Class Fe/Zn 5, at exterior walls. Provide stainless-steel fasteners for fastening aluminum. Select fasteners for type, grade, and class required.

B. Anchor Bolts: ASTM F 1554, Grade 36. Provide hot-dip or mechanically deposited, zinc-coated anchor bolts where item being fastened is indicated to be galvanized.

2.4 METAL FENCE, SWING GATES

A. General: Provide complete hardware assemblies and latching assemblies for main and minor swing gate operation including, but not limited to hinge systems, security latch and locking controls, anchoring supports for open and closed positions. Operation of gate opening and closing shall be manually operated without automated controls. Unless otherwise indicated, provide Type 316 stainless-steel components for exterior use.

2.5 METAL FABRICATION

A. Electro-forge welding Infill panels electro-forge welded for complete weld penetration of crossbar.

B. Fabrication per shop drawings All supplied components will be fabricated per detail shop drawings supplied by manufacturer.

C. NAAMM Prior to shipment, all fabricated components will be analyzed and meet standard NAAMM steel fabrication requirements and tolerances.

D. OSHA / BOCA Fabricated components, when installed properly will meet applicable OSHA, and/or BOCA loading requirements.

2.6 METAL FINSHES

A. All supplied components will be finished with:

1. All fabricated product to be 100% sandblasted to white metal for removal of scale, oil and debris to create a minimum 2mil etching for proper adhesion.

2. Electrostatic application of epoxy powder primer with 375f. minimum 15 minute duration heat cure for maximum corrosion protection.

3. Immediate electrostatic application polyester powder color coat while metal temperature is minimum of 300f. and heat cure for minimum 10 minutes at 400f.

    a. This process provides an average of 8-10 mils total coating thickness. Coating to withstand more than 4,000 hours salt spray. (Complete testing results available from manufacturer. See PERFORMANCE REQUIREMENTS 1.7)

B. Metal shall be color: Black

2.7 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

2.8 CONCRETE

A. Concrete shall be air-entrained type, conforming to Section 033000, Cast-In-Place Concrete -, except as modified below:

1. Minimum 28 day compressive strength shall be 2500 psi.
2. Maximum size of aggregate shall be 1-1/2 in

2.9 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch, unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work true to line and level with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) screws or bolts, unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fence fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove welding flux immediately.
   4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag bolts, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

3.3 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

B. Anchor supports for operable partitions securely to and rigidly brace from foundation or structures as indicated.

3.4 INSTALLING GATE HARDWARE

A. General: Install swing gate hardware assemblies, latching assemblies and locking assemblies to comply with requirements of items being supported, swung open, secured open or closed or otherwise noted, including manufacturers' written instructions and requirements indicated on Shop Drawings.

3.5 CLEANING

A. Clean up debris and remove from the site.

3.6 FOUNDATIONS

A. General: Unless otherwise indicated on the Drawings, footing diameter shall be as noted in the drawings. The depth shall be as indicated on the Drawings.

B. Concrete shall be crowned at top to shed water.

C. Post hole footings shall be allowed to cured 72 hours prior to any additional work.

3.7 POSTS

A. Concrete Set Posts: (Corner, End and Pull Posts) Drill holes (after final grading) in firm, undisturbed or compacted soil. Holes shall have a diameter equal to four times the diameter of the post, and depths approximately 6 in. deeper than post bottom. Excavate deeper as required for adequate support in soft and loose soils, and for posts with heavy lateral loads.

1. Set post not less than 35 in. below surface when in firm, undisturbed soil.
2. Place concrete around posts in a continuous pour, tamp for consolidation. Trowel finish tops of footings, and slope or dome to direct water away from posts, except at tennis courts, backstops and walks.
3. Gate posts and hardware: Set keepers, stops, sleeves and other accessories into concrete.

3.8 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. Touch-Up and Repair for Galvanized Surfaces: For damaged and field-welded metal coated surfaces, clean welds, bolted connections and abraded areas:

1. For galvanized surfaces, apply organic zinc repair paint complying with requirements of ASTM A 780, modified to 95 percent zinc in dry film. Galvanizing repair paint shall have 95 percent zinc by weight, ZiRP by Duncan Galvanizing. Thickness of applied galvanizing repair paint shall be not less than coating thickness required by ASTM A 123 or A 153 as applicable. Touch-up of galvanized surfaces with silver paint, brite paint, or aluminum paints is not acceptable.

2. For factory-applied finish coatings, field-touch-up shall be performed by factory approved personnel for warranties to apply. Touch-up shall be such that repair is not visible from a distance of 6 feet. If non factory-approved technicians are used for field touch-up, no warranties shall exist.

3. A touch-up repair kit or touchup instructions shall be provided to the Owner for each type of factory-applied finish.

Site Furnishings

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:
   1. Refer to DDC General Conditions
      a. Section 01 33 00 "Submittal Procedures"
      b. Section 01 74 19 "Construction Waste Management and Disposal"
      c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

   1. Provide all materials and equipment, and do all work necessary to furnish and install the site furnishings, as indicated on the Drawings and as specified. Site furnishings shall include:

      a. Fixed metal bollards
      b. DSNY Standard Litter and Recycling Receptacles
      c. NYCDOT Standard Hoop Bicycle Racks
      d. Site Benches

B. Related Sections

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 REFERENCES

A. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern. All standards shall include the latest additions and amendments as of the date of advertisement for bids.

1. American Society for Testing and Materials (ASTM):

a. A 153	Zinc Coating (Hot-Dip) on Iron and Steel Hardware
b. B221	Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes
c. D 648	(2001) Deflection Temperature of Plastics Under Flexural Load in the Edgewise Position
d. D 2990	(2001) Tensile, Compressive, and Flexural Creep and Creep-Rupture of Plastics

2. American Architectural Manufacturers Association (AAMA)

a. AAMA 603.8	Voluntary Performance Requirements and Test Procedures for Pigmented Organic Coatings on Extruded Aluminum.

1.5 SUBMITTALS

A. Manufacturer's catalogue cuts for each specified product.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 MATERIALS

A. Materials shall be the standard products of a manufacturer regularly engaged in the manufacture of such products. The materials provided shall be of a type with proven satisfactory usage for at least 2 years.

2.2 FASTENERS AND HARDWARE

A. Provide manufacturer's standard materials and accessories as required for assembly of units and as indicated on the assembly drawings. Provide unexposed aluminum, stainless steel or steel plates, angles and supports as required for complete assembly. Separate dissimilar materials to prevent electrolytic action

1. Fasteners and metal components shall be cadmium-plated steel or steel hot-dipped galvanized in accordance with ASTM A 153

2.3 STEEL PIPE BOLLARDS

A. Steel Pipe: ASTM A 53, schedule 40-3/8, Type S (seamless), Grade A for cold-bending.

B. Metal Bollards shall be:
1. 36" visible height, 8" dia. embedded bollard or 60" visible height, 12" dia. embedded bollard as noted on the drawings
2. Fixed Carbon Steel, IBF08040
3. Yellow, powdercoat finish

C. Metal Bollards Cap shall be:
1. 8" dia. or 12" dia. rubber bollard cap
2. Yellow, color to match bollard

2.4 TRASH AND RECEPTACLES

A. Manufacturers: Subject to compliance with requirements, trash receptacles shall be:

1. Trash and Recycling Receptacles shall be DSNY Standard 32 gal. Litter and Recycling Baskets. No exceptions or alternatives will be accepted.
   a. Mounting: Per Manufacturer's instructions.
   b. Finish/Color: DSNY Standard Color and finish.

2.5 BICYCLE RACKS

A. Manufacturers: Subject to compliance with requirements, trash receptacles shall be:

1. Bicycle Racks shall be NYCDOT standard "Large Hoop" bicycle racks. No exceptions or alternatives will be accepted.
   a. Mounting: Per Manufacturer's instructions.
   b. Finish/Color: DSNY Standard Color.

2.6 SITE BENCH

A. Basis of Design: Subject to compliance with requirements, provide:

1. The "Socrates" Bench, manufactured by Landscape Forms, Inc., 431 Lawndale Avenue Kalamazoo, Michigan 49048 (800) 521-2546
   a. Mounting: Per Manufacturer's instructions.
   b. Finish/Color: Grey
   c. Size: 95" length (24"x95"x18")

   or comparable product by one of the following:

2. The "TF5117" Bench, manufactured by Wassau , PO Box 1520 Wausau, WI 54402-1520 (715) 359-3121
   a. Mounting: Per Manufacturer's instructions.
   b. Finish/Color: A26 Charcoal.
   c. Size: 2 units of (18"x48"x18") coupled together to achieve 96" length

3. The "Slab" Bench, manufactured by QCP , 731 Parkridge Avenue | Norco, CA 92860 (866) 703-3434, www.qcp-corp.com
   a. Mounting: Per Manufacturer's instructions.
   b. Finish/Color: French Gray.
   c. Size: 3 units of (18"36"x17") coupled together to achieve 108" length

4. Or approved equal

2.7 MISCELLANEOUS MATERIALS

A. Concrete: Concrete fill for steel bollards and steel stair systems is specified in Section 03 30 00, Cast-In-Place Concrete

B. Inserts: Threaded or wedge type, galvanized ferrous castings; either ASTM A 47 malleable iron, or ASTM A 27 cast steel.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Hohmann and Barnard.
      b. Gateway Erections, Inc.
      c. Richmond Screw Anchor Co.
      d. Or approved equal

C. Anchor Bolts:
   1. Expansion Anchors: Threaded stud type with two independent expansion anchor wedges per Fed. Spec. FF-S-325, Group II, Type 4, Class 1 for concrete expansion anchors. Stud, wedges, washer and nut shall be zinc-plated steel.
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Hilti Fastening Systems, "Kwick Bolt"
         2) Molly Fastener Group, Parabolt"
         3) Red Head, Phillips Anchors, "Wedge Anchors"
         4) Or approved equal

   2. Adhesive Anchor System: Self-contained glass vial containing pre-measured amounts of quartz sand, hardening agent and polyester resin. Studs shall be threaded rod conforming to ASTM A307 with compatible washers and hexagon nuts furnished by the anchor manufacturer.
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Hilti Fastening System, "HVA"
         2) Molly Fastener Group, "Parabond"
         3) Ramset Fastening System, "Chemset"
         4) Or approved equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

A. The Contractor shall verify that finished grades and other operations affecting mounting surfaces have been completed prior to the installation of site furnishings. Site furnishings shall be installed plumb and true, at locations indicated, in accordance with the approved manufacturer's instructions.

3.3 ASSEMBLY AND ERECTION OF COMPONENTS

A. Items shall be shipped knocked-down (KD) ready for site assembly. Packaged components shall be complete including all accessories and hardware. New parts shall be acquired from the manufacturer; substitute parts will not be accepted unless approved by the manufacturer. When the inspection of parts has been completed, the site furnishings shall be assembled and anchored according to manufacturer's instructions or as indicated. When site furnishings are assembled at the site, assembly shall not interfere with other operations or pedestrian and vehicular circulation.

3.4 ANCHORAGE, FASTENINGS AND CONNECTIONS

A. Furnish metal work, mounting bolts or hardware in ample time for securing into concrete or masonry as the work progresses. Provide anchorage where necessary for fastening furniture or furnishings securely in place. Provide, for anchorage not otherwise specified or indicated, slotted inserts, expansion shields, and power-driven fasteners, when approved for concrete; toggle bolts and through bolts for masonry; machine and carriage bolts for steel; through bolts, lag bolts, and screws for wood. Do not use wood plugs in any material. Provide non-ferrous attachments for non-ferrous metal. Make exposed fastenings of compatible materials, generally matching in color and finish the fastenings to which they are applied. Conceal fastenings where practicable.

3.5 TESTING

A. Each site furnishing shall be tested to determine a secure and correct installation. A correct installation shall be according to the manufacturer's recommendations and by the following procedure: The Contractor shall measure the physical dimensions and clearance of each installed site furnishing for compliance with manufacturer's recommendations and as indicated. Site furnishings which do not comply shall be reinstalled. Fasteners and anchors determined to be non-compliant shall be replaced. A written report describing the results of the testing shall be provided.

3.6 STEEL PIPE BOLLARD – INSTALLATION

A. Install steel pipe bollards as indicated on Drawings. Set bollards in concrete. Concrete shall be as specified in Section 03 30 00, Provide temporary bracing to accurately plumb bollards until concrete base has set. Fill pipe with concrete and form a smooth, rounded crown on top to shed water.

3.7 SITE FURNISHINGS - INSTALLATION

A. Examination

1. Examine areas to receive furnishing.
2. Notify Commissioner of conditions that would adversely affect installation or subsequent use.
3. Do not begin installation until unacceptable conditions are corrected.

B. Coordinate installation with installation of the surrounding surface at grade beneath the furnishing.

C. Installation

1. Install furnishing in accordance with manufacturer's instructions at locations indicated on the Drawings.
2. Install level.
3. Anchor securely in place.

D. Adjusting

1. Finish Damage: Repair minor damages to finish in accordance with manufacturer's instructions and as approved by Commissioner.
2. Component Damage: Remove and replace damaged components that cannot be successfully repaired as determined by Commissioner.

E. Cleaning

1. Clean promptly after installation in accordance with manufacturer's instructions.
2. Do not use harsh cleaning materials or methods that could damage finish.

F. Protection

1. Protect installed furnishings to ensure that, except for normal weathering, furnishings will be without damage or deterioration at time of Substantial Completion.

G. Concrete footings for pedestals shall be furnished and installed under Section 033000, Cast-In-Place Concrete.

END OF SECTION 32 33 00

SECTION 32 93 00
Trees, Shrubs, and Groundcovers

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:
   1. Refer to DDC General Conditions
      a. Section 01 33 00 "Submittal Procedures"
      b. Section 01 74 19 "Construction Waste Management and Disposal"
      c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:
   1. Provide all materials and equipment, and do all work required to complete the planting of trees, shrubs, perennial groundcovers, and preparation and placement of planting soil, as indicated on the Drawings and as specified.

      a. Locate, purchase, deliver, and install all specified plants
      b. Maintain proper irrigation of all specified plants
      c. Mulch, fertilize, stake, and prune (if necessary) all specified plants
      d. Maintenance of all specified plants before and during warranty period
      e. Provide a plant material warranty
      f.

   2. The work of this Section also includes providing all equipment and materials and doing all work necessary to supply and place planting soils as indicated on the Contract Documents and as specified. Supplying and placement of planting soils shall include, but not be limited to:

      a. Sampling and testing of topsoil, loam borrow and planting soil.
      b. Supplying, placing, spreading and grading of planting soil.

B. Related Sections
   1. Section 31 00 00 – Earthwork
   2. Section 32 92 00 – Tree, Shrub, & Perennial Installation

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 REFERENCES

A. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirements shall govern. All standards shall include the latest additions and amendments as of the date of advertisement for bids.

1. American National Standards Institute, Inc. (ANSI):

a. ANSI Z60.1	American Standard for Nursery Stock (Sponsor: American Nursery and Landscape Association) most current edition.
b. ANSI A 300	American National Standards for Tree , Shrub and other Woody Plant Care Operations by the Tree Care Industry Association (TCIA) most current edition and parts.

2. American Society for Testing and Materials (ASTM):

a. C136	Sieve Analysis of Fine and Coarse Aggregates
b. D 422	Particle-Size Analysis of Soils
c. E 11	Wire-Cloth Sieves for Testing Purposes
d. F 405	Corrugated Polyethylene (Pe) Tubing and Fittings

3. Interpretation of plant names and descriptions shall reference the following documents. Where the discrepancies occur, the most current document shall prevail.

   a. "Hortus Third", A Concise Dictionary of Plants Cultivated in the United States and Canada, Cornell University, L.H. Bailey Hortorium, MacMillian Publishing Co., New York, NY. ISBN-13: 978-0025054707

   b. "Manual of Woody Landscape Plants: Their Identification, Ornamental Characteristics, Culture, Propagation and Uses, Revised Edition", Michael A. Dirr, Stipes Publishing LLC. 2009. ISBN-13: 9781588748683

   c. New York State Invasive Plant Lists

      1) http://nyis.info/species-information/#Terrestrial%20Plants
      2) http://www.dec.ny.gov/animals/265.html

1.5 DEFINITIONS

A. Finish Grade: Elevation of finished surfaces.

B. Subgrade: Surface or elevation of subgrade soil remaining after completing excavation, or top surface of a fill or backfill immediately beneath planting soil.

C. Topsoil: Soil that is present at the top layer of the existing soil profile at the Project site. This shall be considered the "Base Loam 1" component of Planting Soil mixes.

D. Loam: Soil that contains a combination of particles typically almost equal in parts sand, silt and clay and including organic matter.

E. Loam Borrow: Soil that contains a combination of particles typically almost equal in parts sand, silt and clay and including organic matter obtained from off-site sources.

F. Planting Soil: Unless otherwise indicated throughout this Section, the term "Planting Soil" shall apply to on-site blended soil modified with planting soil components and soil amendments to meet the specific Planting Soil mix recommendations submitted by the testing laboratory.

1.6 SUBMITTALS

A. Samples: The following samples shall be submitted:

Material	Sample Size or Quantity
Mulch (organic)	1 ft.3
Mulch (gravel)	0.25 ft.3
Compost	1 ft.3
Topsoil	1 ft.3
Planting soil	1 ft 3
Tree stake	24 in. length
Tree wrap	24 in. length

B. Manufacturer's Product Data: Manufacturer's product data shall be submitted for the following materials:

1. Aluminum sulfate
2. Antidessicant
3. Fertilizer
4. Fungicide
5. Herbicide
6. Insecticide
7. Compost
8. Mycorrhiza Fungi Inoculant

C. Certificates: Labels from the manufacturer certifying that the product meets the specified requirements shall be submitted for the following materials:

1. Commercial fertilizer
2. Limestone
3. Compost

D. Test Reports: Test reports from an approved testing agency indicating compliance with the specifications shall be submitted for existing topsoil, amended planting soil and any other materials designated by the Commissioner.

1.7 INSPECTION AND TESTING

A. Work will be subject to inspection at all times by the Commissioner. The Commissioner reserves the right to have the Contractor engage an independent testing laboratory in accordance with requirements of Section 01 40 00, Quality Requirements of the DDC General Conditions to analyze and test materials used in the construction of the work. Where directed by the Commissioner, the testing laboratory will make material analyses and will report to the Commissioner whether materials conform to the requirements of this specification.

1. Testing equipment will be provided by and tests performed by the testing laboratory.

1.8 CONTRACTOR'S INSPECTION AND TESTING

A. The Contractor shall engage an independent testing laboratory, experienced in the testing of agricultural soils and acceptable to the Commissioner, to perform the topsoil and planting soil tests and analyses specified herein. All costs associated with testing shall be the Contractor's responsibility.

1. Particle size analysis shall include the following gradient of mineral content:

USDA Designation	Size in mm
Gravel	+ 2 mm
Very coarse sand	1-2 mm
Coarse sand	0.5-1 mm
Medium sand	0.25-0.5 mm
Fine sand	0.1-0.25 mm
Very fine sand	0.05-0.1 mm
Silt	0.002-0.05 mm
Clay	< 0.002 mm

2. Chemical analysis shall include the following:
   a. pH and buffer pH Test results shall include recommendations to meet the required range.
   b. percentage of organic content by oven-dried weight
   c. Nutrient levels by parts per million, including phosphorus, potassium, magnesium, manganese, iron, zinc, and calcium. Nutrient test shall include testing laboratory recommendations for

supplemental additions to the soil, if necessary, based on the requirements for ornamental horticultural plants. Test results shall include recommended rates at which additives are to be applied.

d. Soluble salt by electrical conductivity of a 1:2 soil/water sample:

1.9 SOURCE QUALITY CONTROL

A. Identification of plant names shall be as listed section REFERENCES 1.4.3.

B. Selection of Plant Materials: Submit to the Commissioner the names and locations of nurseries and/or re-wholesalers or distributors proposed as sources of acceptable plant material. Inspect all plant materials to determine that they meet the requirements of this section. Proposed materials shall be flagged at the nurseries by the Contractor prior to viewing by the Commissioner.

1. Schedule with the Commissioner a time for viewing plant material at the nursery and/or re- wholesaler or distributor facilities. Trips shall be efficiently arranged to allow Commissioner to maximize viewing time. A minimum of four weeks shall be allowed for this viewing prior to time that plants are to be transported to the project site.
2. Commissioner may choose to attach a seal to each plant, or representative samples.
3. If requested by the Commissioner, photographs of plant material or representative samples of plants shall be submitted by the Contractor.
4. If re-wholesalers or distributors are proposed as sources of plant material, the Contractor shall supply the Commissioner with names and locations of nurseries from which plants were obtained.
5. Viewing and/or sealing of plant materials by the Commissioner prior to shipping does not preclude the Commissioner's right to reject material for non-conformance to specifications at the site of planting.

C. Plant Photographs: Include color photographs in digital format of each required species and size of plant material as it will be furnished for the Project. Take photographs from an angle depicting true size and condition of the plant to be provided. Include a scale rod or other measuring device in each photograph. Include a minimum of three photographs showing best plant quality and worst plant quality for each species to be furnished. Clearly identify photographs with botanical name, size and source nursery.

1.10 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.

1. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.

C. Pesticide Applicator: NY State licensed, commercial.

1.11 PLANT MATERIAL QUANTITIES

A. In the event of a discrepancy in plant material quantities between the Drawings and the Plant List(s) on the Drawings, the Contractor shall notify the Commissioner.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Transportation of Plant Material: Plants transported to the project in open vehicles shall be covered with tarpaulins or other suitable covers securely fastened to the body of the vehicle to prevent injury to the plants. Closed vehicles shall be adequately ventilated to prevent overheating of the plants. Trees shall not be transported when daytime air temperatures are below 20F or above 75F

1. Plants shall be kept moist, fresh, and protected at all times. Such protection shall encompass the entire period during which the plants are in transit, being handled, or are in temporary storage in a Commissioner approved storage area.

2. Unless otherwise authorized by the Commissioner, notify the Commissioner at least two working days in advance of the anticipated delivery date of any plant material. A legible copy of the bill of lading, showing the quantities, kinds, and sizes of materials included for each shipment shall be furnished to the Commissioner, if requested.

B. Storage: Unless specific authorization is obtained from the Commissioner, unprotected plants shall not remain on the site of work longer than three days prior to being planted.

1. Plants that are not planted immediately shall be protected as follows:
   a. Earth balls shall be kept moist, not be allowed to freeze, and their solidity carefully preserved.
2. Both the duration and method of storage of plant materials shall be subject to the approval of the Commissioner.

C. Handling of Plant Materials: Exercise care in handling plant materials to avoid damage or stress.

1.13 REJECTION OF MATERIALS

A. Evidence of inadequate protection following digging, carelessness while in transit, or improper handling or storage, shall be cause for rejection.

1. Upon arrival at the temporary storage location or the site of the work, plants shall be inspected for proper shipping procedures. Plants with roots dried out, large branches broken, balls of earth broken or loosened, or areas of bark torn shall be subject to rejection by the Commissioner.

B. Rejected plants shall be removed from the area of work and replaced with same species of the required size and quality

1.14 DIGGING/PLANTING SEASONS

A. Spring Digging: Spring digging of plant materials may commence as soon as the ground has thawed and weather conditions make it practicable to dig at the nursery.

1. Deciduous plants shall not be dug after they have leafed out.
2. Broadleaf evergreens and conifers shall not be dug after new growth or candle push is visible.

3. Season sensitive species such as Oaks shall only be dug in Spring season. Contractor shall coordinate the timing of all season sensitive planting with The City of New York and Commissioner.

B. Fall Digging: Fall digging of plant materials may commence after dormancy has begun and shall continue until such time as the ground has frozen or weather conditions make it impractical to work.

C. Planting Seasons: Planting shall only be performed when weather and soil conditions are suitable for planting the material specified, in accordance with locally accepted practice, approval of the Commissioner, and to maintain the Contractor's guarantee.

1.15 PLANT MAINTENANCE

A. The Contractor shall maintain plant material until Substantial Completion and for 2 years following the date of Substantial Completion, per Installer's Guarantee.

1.16 GUARANTEE

A. Plants shall be guaranteed for a period of 2 years from the date of Substantial Completion.

B. Plants shall be healthy, free of pests and disease, and in flourishing condition at the end of the guarantee period. Plants shall be free of trunk damage, dead and dying branches, dead and dying branch tips, and shall bear foliage of normal density, size, and color.

C. Replace dead plants and all plants not in a vigorous, thriving condition, as determined by the Commissioner during and at the end of the guarantee period, without cost to the City of New York, as soon as weather conditions permit and within the specified planting period.

1. Replacements shall closely match adjacent specimens of the same species.
2. Replacements shall be subject to all requirements stated in this Specification.
3. Make all necessary repairs due to plant replacements. Such repairs shall be done at no extra cost to the City of New York.
4. The guarantee of all replacement plants shall extend for an additional one year period from the date of their Acceptance after replacement. In the event that a replacement plant is not acceptable during or at the end of the said extended guarantee period, the City of New York may elect one more replacement or credit for each item.

D. At the end of the guarantee period, the Commissioner will remove staking and guying materials, and tree wrap and ties.

PART 2 - PRODUCTS

2.1 PLANTS

A. Type and size of plants to be planted shall be as shown on the Contract Drawings.

B. Except as otherwise specified, size and grade of plant materials and their root balls shall conform to ANSI Z60.1.

C. Plants shall have outstanding form; symmetrical, heavily branched with an even branch distribution, densely foliated and/or budded, and a strong, straight, distinct leader where this is characteristic of species. Plants shall possess a normal balance for the species between height and spread. The Commissioner will be the final arbiter of acceptability of plant form.

1. Shade Trees: Single-stem trees with straight trunk, well-balanced crown, and intact leader, of height and caliper indicated, complying with ANSI Z60.1 for type of trees required.
2. Small Trees: Branched or pruned naturally according to species and type, with relationship of caliper, height, and branching according to ANSI Z60.1; stem form.
3. Multi-stem Trees: Branched or pruned naturally according to species and type, with relationship of caliper, height, and branching according to ANSI Z60.1; stem form.
4. Deciduous Shrubs: Form and Size: Deciduous shrubs with not less than the minimum number of canes required by and measured according to ANSI Z60.1 for type, shape, and height of shrub.
5. Coniferous Evergreens: Symmetrically shaped coniferous evergreens with form and size conforming to ANSI Z60.1.
6. Broadleaf Evergreens: Form and Size: Normal-quality, well-balanced, broadleaf evergreens, of type, height, spread, and shape required, complying with ANSI Z60.1.
7. Perennials: Size proportional to age and container size with form similar to mature character. Healthy vegetation visible and unpruned or altered, well-rooted and conforms to ANSI Z60 1.

D. Plants shall be healthy and vigorous, free of disease, insect pests and their eggs, and larvae.

E. Plants shall have a well-developed fibrous root system free of root binding or girdling.

F. Plants shall be free of physical damage such as scrapes, broken or split branches, scars, bark abrasions, sunscalds, fresh limb cuts, disfiguring knots, or other defects.

G. Plants shall meet the sizes indicated on the Plant List on the Drawings. Plants larger or smaller than specified may be used only if accepted in writing by the Commissioner.

H. Where a size or caliper range is stated, at least 50% of the material shall be closer in size to the top of the range stated. A tree shall be dimensioned as it stands in the nursery, and shall be calipered at a point six (6") inches above the ground for trees six (6") inches or less in diameter. The stock furnished shall be a fair average of the minimum and maximum sizes specified.

I. Plants shall not be pruned before delivery.

J. All plants shall be labeled. Labels shall be durable and legible, stating the correct plant name and size in weather-resistant ink or embossed process. Labels shall be securely attached to all plants prior to delivery to the site, being careful not to restrict growth.

K. Nursery Dug Plant Material:

1. Unless otherwise permitted by the Commissioner, plants shall be nursery grown.

2. Plants shall be grown for at least two years under climatic conditions similar to those in the locality of the Project.
3. Nursery grown plants shall be dug in the current planting season. No heeled in plants or plants from cold storage that were dug in the previous season shall be accepted.
4. Ball diameters shall be not less than the following:

Tree Caliper	Minimum Root Ball Diameter
From 2-1/2" to under 3"	30"
From 3" to under 3-1/2"	36"
From 3-1/2" to under 4"	42"
From 4" to under 4-1/2"	46"
From 4-1/2" to under 5"	52"
From 5" to under 6"	60"

L. Container grown plants shall be well rooted and established in the container in which they were grown. They shall have grown in the container for a sufficient length of time for the root system to hold the planting medium when taken from the container, but not long enough to become root bound. Container grown plants exceeding the sizes indicated in ANSI Z60.1 shall have containers which are not less than 75% of the ball sizes for comparable B&B plant material. Each container plant shall be inspected and circling roots loosened or pruned as needed.

M. Canes or Trunk(s) and Branches:

1. Very well formed and sturdy with distinct leader and no crotches that may interfere with growth of leader. Trees with included bark in crotches shall be avoided.
2. Branching well-spaced and uniformly distributed both vertically and around the circumference to form a well-balanced plant.
3. Pruning scars clean cut leaving little or no protrusion from the trunk or branch.
4. Graft union completely healed.
5. No mechanical or pest damage.
6. No extreme succulence.
7. Evidence of adequate twig growth in the past 2-4 years, and well-formed buds.

N. Foliage:
1. Densely supplied with healthy, vigorous leaves of normal size, shape, color and texture (except shrubs moved bare-root or deciduous shrubs when dormant).
2. No chlorosis.
3. No more than 5% of total foliage affected by pest or mechanical damage.

O. Root System:

1. Sturdily established and evenly distributed.
2. Container grown plants shall be well developed and hold the soil ball together when removed from the container.
3. Container grown plants shall not be excessively root bound (except if deliberately grown root bound to produce a dwarf plant).

P. Care and Shipping:

1. Confirm with the Commissioner that adequate water supply is available onsite prior to shipping plant material. If conditions do not allow the use of New York City water sources, the Contractor must obtain its own source of water.

2. Transport plant material in closed vehicles or in open vehicles with the entire load properly covered for protection from drying winds, heat, freezing or other exposure that may be harmful. Water plant material during shipment as necessary to avoid excessive stress due to drying and desiccation. Plant material may be rejected if not properly shipped.

3. Shipping shall be scheduled to minimize on site storage of plants. Stock shall not be shipped until the planting preparations have been completed. The Contractor is responsible for the guarding and safe keeping of all plant material prior to installation.

4. Plants shall be clearly identified with legible and durable labels stating correct Latin name for each species. Reference the Scientific Name used on plant list for current nomenclature expected to be delivered – synonyms are not acceptable to use on the plant labels. Labels should be securely attached to individual plants or to bundles of like species and size.

5. During shipment, plants shall not be bent, stacked or bound in a manner that damages the plant in any way, or destroys its natural shape. Plants may be cut back to aid in shipment and installation as long as sufficient growing surface to meet industry standards is left intact.

6. Document deliveries of plant material upon receipt to the job site. Record information by species, and submit immediately to the Commissioner, who will cross check all deliveries, and accept or reject materials.

7. If delays beyond the Contractor's control occur after plant delivery, as a change order, plants shall be kept watered, and protected from sun, wind and mechanical damage.

8. Handle plants at all times in accordance with best horticultural practices. Do not remove container-grown stock from containers until immediately before planting time.

9. All tubers, rootstocks and bare root material shall be fully dormant or in early stages of growth upon delivery to the site, and shall be kept in coolers for the short duration before installation. Materials that have started to rot due to staging times will be rejected.

10. Store all materials in pre-approved temporary nursery areas that offer structural shade protection and irrigation support (all to be provided by the Contractor).

2.2 PLANTING SOIL

A. Existing Topsoil
1. Existing topsoil from on-site source(s) may be used for planting soil, to the extent available, if it meets the requirements of this Section for planting soil, or if approved by the Commissioner.

B. Planting Soil
1. Planting soil shall be composed of a natural, fertile, friable soil typical of cultivated topsoils of the locality, suitable for the germination of seeds and support of vegetative growth, with additives, if required, to achieve particle distribution and organic content specifications. Topsoil shall be taken from a well-drained, arable site, free of subsoil, large stones, earth clods, sticks, stumps, clay lumps, roots, other objectionable, extraneous matter or debris nor contain toxic substances. Planting soil shall have a pH value between 6.0 and 6.8 and organic matter content of 5 to 10% of total dry weight.
2. Planting soil shall have the following mechanical analysis (see paragraph 1.8 for particle sizes):

a. Approximate Particle Distribution

Gravel	Less than 10%
Coarse to medium sand	50 – 65%
Fine to very fine sand	15 – 25%
Silt	10– 20%
Clay	15 – 25%

3. Minimum planting soil nutrient levels shall be: Nitrogen @ 5% average of organic matter, Phosphorus @ .02 to .05% average of total soil content, Potassium @ 1.2% average of total soil content.
4. The Contractor shall provide the Commissioner with planting soil test results, as specified in Paragraph 1.8, before the start of planting operations. If planting soil does not fall within the required particle distribution, organic content, or pH range, it shall be adjusted to meet the specifications through the addition of sand, compost, limestone, or aluminum sulfate to bring it within the specified limits.

2.3 COMPOST

A. Compost shall be derived from organic wastes such as food and agricultural residues, animal manures, mixed solid waste and biosolids (treated sewage sludge) that meet all New York State Department of Environmental Conservation requirements. The product shall be well composted, free of viable weed seeds and contain material of a generally humus nature capable of sustaining growth of vegetation, with no materials toxic to plant growth.

1. Compost shall have the following properties:

Parameters	Range
pH	5.5 – 8.0
Moisture Content	35% - 55%
Soluble Salts	4.0 mmhos (dS)
C:N Ratio	15 – 30:1
Particle Size	< 1"
Organic Matter Content	> 50%

Bulk Density	1000 lbs / cy
Foreign Matter	< 1 % dry weight

2. Compost generator shall also provide minimum available nitrogen and other macro and micro nutrients to determine fertilizer requirements.
3. Guidelines for quantity of compost required to achieve suitable soil organic content in soil mixes for ornamental horticultural planting shall be as recommended by the compost manufacturer based on soil test results.

2.4 LIMESTONE

A. Limestone shall be an approved agricultural limestone containing no less than 50% of total carbonates, and 25% total magnesium with a neutralizing value of at least 100%. The material shall be ground to such a fineness that 40% will pass through a No. 100 U.S.

B. Standard Sieve, and 98% will pass through a No. 20 U.S. Standard Sieve. The lime shall be uniform in composition, dry and free flowing, and shall be delivered to the site in the original unopened containers, each bearing the manufacturer's guaranteed analysis. Any lime which becomes caked or otherwise damaged making it unsuitable for use, will be rejected.

2.5 ALUMINUM SULFATE

A. Aluminum sulfate shall be unadulterated and shall be delivered in containers with the name of the material and manufacturer and net weight of contents.

2.6 WATER

A. Water shall be suitable for irrigation and shall be free from ingredients harmful to plant life. Refer to Sec. 2.1P.1

2.7 MYCORRHIZAL FUNGI INOCULANT

A. Mycorrhizal inoculant should be used for planting trees, woody shrubs, and woody groundcovers only; it is not needed for herbaceous material.

B. Mycorrhizal fungi inoculant shall be applied by means of a three ounce (3 oz.) premeasured dry formulation packet, such as Mycor Tree Saver Transplant, as manufactured ply Plant Health Care, Inc., Pittsburgh, PA; Rhizanova Tree Transplant, as manufactured by Becker Underwood, Inc., Ames IA; DIEHARD, as manufactured by Horticultural Alliance and distributed through Atlantic Irrigation, White Plains, NY; or approved equal.

C. Mycorrhizal fungi inoculant shall contain Vesicular-Arbuscular fungi, including: *Entrephosphora columbiana, Glomus clarum, Glomus etunicatum*, and *Glomus* sp.; seventeen million-five hundred thousand (17,500,000) live spores of Ectomycorrhizal fungi, including: *Pisolithus tinctorius; biostimulants* including

Yucca schidigera extract; soluble sea kelp extract derived from *Ascophylum nodosum*; humic acids; and acrylamide copolymer gel as a water absorbent medium.

D. Inoculant shall be added after the trees have been placed in their hole. Three (3) packets of each 2-1/2" to 3" caliper tree and four (4) opackets for each 3-1/2" to 4" caliper tree shall be added to the top size to eight inches (6-8") of backfill soil added to each pit and thoroughly mixed to distribute the inoculant. The opened packets shall be given to the Engineer at the end of each day. Mycorrhizal inoculant is a date material and must be used before it expires.

E. The material shall be applied according to the following chart:

Size of Rootball or Container	Ounces per Plant
1 gallon	1 oz.
3 gallon	3 oz.
5 gallon	3 oz.
10 gallon	6 oz.
24"	9 oz.
30"	9 oz.
36"	12 oz.
42"	12 oz.

2.8 WATER RETENTIVE ADDITIVE

A. Water retentive additives shall be a granular polyacrylamide polymer of a potassium base and not a sodium base that slowly releases water into the root zone such as Terra Sorb, as manufactured by Plant Health Care, Inc., Pittsburgh, PA; Soil Moist, JRM Chemical, Inc., Cleveland, OH; Stockosorb 660 manufactured by Evonik Corporation, P.O. Box 34628 Richmond, VA. or, an approved equal. The water retention additive shall be applied at the time of planting during a dry planting season as defined by the Department of Parks and Recreation. Each tree shall receive three ounces (3 oz.) or an amount specified by the product instructions. When planting shrubs, perennials or annuals, apply as per product instructions.

2.9 FERTILIZER

A. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:

1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing agency. Manufacturer's literature shall be submitted for approval.

B. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water- insoluble nitrogen, phosphorus, and potassium in the following composition:

1. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing agency.

C. Fertilizer shall be delivered in manufacturer's standard container printed with manufacturer's name, material weight, and guaranteed analysis.

D. Fertilizers with N-P-K analysis other than that stated above may be used provided that the application rate per square foot of nitrogen, phosphorus, and potassium is equal to that specified

2.10 SUPERPHOSPHATE

A. Superphosphate shall be composed of finely ground phosphate rock as commonly used for agricultural purposes, and containing not less than 20% available phosphoric acid. The superphosphate shall be delivered to the site in the original unopened containers, each bearing the manufacturer's guaranteed analysis. Any superphosphate which becomes caked or otherwise damaged making it unsuitable for use, will be rejected.

2.11 MULCH

A. Woody Plant Beds and Tree Saucers: Mulch for beds shall be a 100% fine-shredded pine or hardwood bark, of uniform size and free from rot, leaves, twigs, debris, stones, and material harmful to plant growth. Bark shall have been shredded and stockpiled no less than six months and no more than two years before use. Mulch shall be free of bark chunks larger than 3 in. and material thicker than ¼ inch. The pH factor should range from 5.8 to 6.2.

B. Mulch applications shall not cover or suffocate woody plant crowns or trunk root flares. Mulch application shall be parallel to finished grade and no deeper than 4" in depth.

C. Herbaceous Plants and Flower Beds: Mulch for beds shall be finely processed leaf mulch or leaf mold.

1. Ground leaf material collected from select municipal leaf collection programs.
2. Contains no debris, wood, non-leaf materials, and be largely free of seeds.
3. Leaves shall be process through a grinder twice to reach optimum particle size.
4. Contains no chemical adjuvants or other non-organic products.

2.12 GUYING AND STAKING MATERIALS

A. Staking:

1. Steel Pipe for Tree Staking: 2 in. diameter steel pipe of lengths indicated on the Drawings.

2. Paint dark brown color, approved by the Commissioner.

B. Strapping for Guying and Staking: Arbortie, manufactured by DeepRoot Green Infrastructure, LLC, 530 Washington Street, San Francisco, CA, HORTtie and HORTstrap, manufactured by HORT Industries Ltd. 10771 Tumbull Weed Ct., Bennett, CO., Tree-Mate-O manufactured by Safeguard Nursery Products LLC, 100 Galvan Way, New Albany, IN., or approved equivalent.

C. Burlap shall be a natural fabric. No nylon burlap shall be permitted.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION OF SUBGRADE

A. Examine subgrade and rough grading before planting. Alert Commissioner to unacceptable rough grading or subgrade conditions.

3.3 PREPARATION OF SUBGRADE

A. Subgrade shall be brought to true and uniform grade and shall be cleared of stones greater than 2 in., sticks, and other extraneous material.

3.4 DECOMPACTION OF PLANTING AREAS

A. After subgrade levels have been reached and immediately prior to placing planting soils, the entire subgrade area shall be loosened to a minimum depth of 6 inches. Care shall be exercised to minimize damage to existing tree roots that may be in the area. Contractor shall obtain Commissioner approval for the equipment method used to loosen subgrade prior to starting work.

B. Any subgrade areas which have become heavily compacted (defined as exceeding 86% - 88% compaction ASTM C698 Standard Proctor) including, but not limited to, temporary parking areas, material stockpile areas, temporary roadways, construction areas, areas shown on the plans, or areas identified by Commissioner shall be deep-scarified. Immediately prior to placing soils, compacted areas shall be loosened to the depth required to overcome the excessive compaction using a ripper blade, the teeth of a backhoe or other suitable equipment. Frequency of compaction tests shall be one per 200 square feet.

C. Using a wide-track bulldozer size D-5 or smaller, compact the scarified subgrade to 86% - 88% compaction ASTM D698 Standard Proctor. Contractor shall provide shovel dug test pits to the full depth of the mitigation, where located per the direction of the Commissioner, in order for the Commissioner to review whether the work has been done as required. Backfill the pits after the review(s).

D. Confirm that the subgrade is at the proper elevation and that no further earthwork is required to bring the subgrade to proper elevations. Provide a written report to Commissioner indicating that subgrade has been placed to the required elevations, has been decompacted according to the Contract Documents and is ready for inspection at least 3 days prior to placing planting soil. Perform no work of placing and spreading planting mixes until elevations have been confirmed and written report has been accepted by the Commissioner.

E. After the soils have been loosened and inspected, topsoil may be spread by using a wide track bulldozer size D-5 or smaller or may be dumped and spread with bucket of a backhoe from the edge of the loosened area. No rubber-tired equipment or heavy equipment except for small bulldozer shall pass over the subsoils (subgrade) after they have been loosened. If Contractor plans to utilize such areas for any use of heavy equipment, this should be carried out prior to beginning the process of loosening soils or filling in that area, or it shall be rescarified to meet this specification requirement.

3.5 SOIL DRAINAGE/DETRIMENTAL SOILS

A. Test drainage of five planting pits in each of the different general planting areas of the project as directed by the Commissioner. Pits shall be filled with water twice in succession. The time at which water is put into the pit for a second filling shall be noted. Commissioner shall then be notified of the time it takes for pit to drain completely. Planting operations shall not proceed until Commissioner has reviewed test drainage results.

B. The Contractor shall notify the Commissioner in writing of all soil or drainage conditions that are considered detrimental to growth of plant material. Submit proposal and cost estimate for correction of the conditions for Commissioner's approval before starting work.

3.6 LAYOUT OF PLANTING AREAS

A. Individual plant locations and outlines of shrub and ground cover areas to be planted shall be staked by the Contractor for approval by the Commissioner prior to planting.

B. Digging shall not begin until locations are approved by the Commissioner.

C. Location of trees shall be staked using color coded stakes. A different stake color shall be used for each tree species.

3.7 SPREADING OF PLANTING SOIL AND PLANT BED PREPARATION

A. Planting soil shall be spread in lifts not greater than 12 inches and compacted to a density between 82% and 86% Standard Proctor Maximum Dry Density in accordance with ASTM D698. The surface area of each lift, including the subgrade after it has been compressed by a backhoe, shall be scarified by raking prior to placing the next lift. No soil shall be placed around tree trunk, root flares or top of root balls of new plants.

B. Place and spread planting medium to a depth greater than required such that after settlement, finished grade shall conform to the lines, grades and elevations shown on the Drawings. Ensure proper drainage in an uninterrupted pattern free of hollows and pockets.

C. Remove stiff clods, lumps, brush, roots, stumps, litter and other foreign material and stones over 1 inch diameter and legally dispose of off-site.

3.8 PLANT PIT EXCAVATION

A. Planting pits for trees and shrubs shall be excavated to the depth and dimensions indicated on the Drawings.

B. Excavation shall not begin until locations are approved by the Commissioner.

3.9 PLANTING TREES AND SHRUBS

A. Tree, shrub, perennial and groundcover beds shall be excavated to the depth and widths indicated on the Drawings. If the planting pit for any tree is dug too deep, soil shall be added to bring it to correct level, and the soil shall be thoroughly tamped. Walls of plant pits shall be dug so that they are sloped as shown on the Drawings, and scarified. Do not excavate compacted subgrades of adjacent pavement or structures.

B. Plants shall be set as indicated on Drawings. Plants shall be set so that the root flare is at, or slightly above, finished grade. Plants located in poorly drained soils shall be set 2 to 4 inches above finished grade, gradually sloping between the top of the root ball and the surrounding finished grade.

C. Plants shall be turned to the desired orientation when required by Commissioner.

D. Containerized plants shall be removed from container taking care not to damage roots. In the event of excessive root binding, care must be taken to tease and loosen roots to ensure proper growth after planting.

E. The side of the root ball shall be scarified to prevent root-bound condition before positioning in planting pit.

F. Plants shall be positioned in center of planting pits, set plumb, and rigidly braced in position until all planting soil has been tamped solidly around the balls.

G. Pits shall be backfilled with planting soil. Soil shall be worked carefully into voids and pockets, with watering tamping lightly every 6 in.

1. At this time, ropes or strings on top of balls shall be cut and shall be pulled back. Burlap or cloth wrapping shall be removed from the top 2/3 of the ball. Non-biodegradable ball wrapping and support wire shall be totally removed from ball and planting pit.
2. When pit is two-thirds full, plants shall be watered thoroughly, and water left to soak in before proceeding.
3. Wire baskets shall be completely cut away from sides of root ball, and removed from pit. Bottom of basket may remain.
4. Remove nursery plant identification tags.

H. Backfilling and tamping shall then be finished and a saucer formed around plant pits as indicated on the Drawings.

I. Saucer shall be filled with water and water left to soak in. Saucer shall then be filled with water again.

3.10 PLANTING GROUND COVERS AND PERENNIAL PLANTS

A. Set out and space plants as indicated on the Drawings.

B. Planting: Check root ball after removing plant from its container. Encircling roots shall be gently loosened from the tight mat of root-bound plants. If roots are very dense at bottom of pot, slice off the bottom 1". If roots are seriously disturbed when planting, cut back some foliage just above leaf nodes to reduce the water stress that will occur. Plant at the same soil level as the plant was in its container.

C. Set container-grown stock plumb and in center of planting pit or trench with root flare 1 inch (25 mm) above adjacent finish grades.

1. Use planting soil specified for backfill.
2. Carefully remove root ball from container without damaging root ball or plant.
3. Backfill around root ball eliminating voids and air pockets, and water thoroughly taking care to not cover plant crowns with wet soil.
4. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.11 PRUNING

A. Any tree or shrub pruning that is necessary shall be done to preserve the natural character of the plant, and shall be done under the direct supervision of The City of New York and Commissioner. Pruning shall be done after delivery of plants and after plants have been inspected and approved by the Landscape Commissioner. Pruning procedures shall be reviewed with Commissioner before proceeding.

B. Pruning shall be done with clean, sharp tools. Cuts shall be made just outside the branch collar. No tree paint shall be used.

C. Dead wood, suckers, and broken, weak, interfering and badly bruised branches shall be removed.

3.12 MAINTENANCE OF PLANTING

A. Maintenance shall begin immediately after each plant is planted and shall continue until Substantial Completion and for 2 years following the date of Substantial Completion, per Installer's Guarantee.

B. Maintenance shall consist of pruning, watering, cultivating, weeding, mulching, fertilizing, removal of dead material, repairing and replacing of tree stakes, tightening and repairing of guys, resetting plants to proper grades and upright position, and furnishing and applying such sprays as are necessary to keep plantings free of insects and disease, and in a healthy growing condition. Watering and weeding shall be conducted on a weekly basis and shall take into consideration on-site conditions and seasonal weather events.

C. Planting areas shall be kept free of weeds, grass, and other undesired vegetative growth.

3.13 WATERING

A. Trees: At the time of planting, the soil around each tree shall be thoroughly saturated. Trees will acquire at least twenty gallons (20 gal.) of water. Soil shall be firmed at six to eight inches (6-8") intervals and thoroughly settled with water. Water shall not be applied in a manner which damages plants, staking materials, erodes soil, or damages plant saucers.

B. Shrubs, Container and Plug Perennials: At time of planting, all container plants must be thoroughly watered before removing from containers. After planting, spot watering shall ensure that the soil around each shrub and perennial plant shall be thoroughly saturated. Care must be taken not to wash soil away, exposing the top portion of the root mass.

C. Water shall be free from oil, have a pH not less than 6.0 nor greater than 8.9 and shall be free from impurities injurious to vegetation. Unless otherwise directed, water may be drawn from mains owned by or supplying water to the City of New York.

3.14 WEED CONTROL

A. All chemical herbicide applications shall be performed by landscape professionals with a valid New York State herbicide applicator's license.

B. Stockpiled Soils - Weeds shall not be permitted to grow and self-seed on stockpiled soils. Weed control for stockpiled topsoil shall be a non-selective weed killer for control of grassy and broadleaf weeds; weed control shall have short half-life residence time, allowing planting operations to occur within 7 days of soil installation without effect on installed plantings.
   1. Glyphosate-only herbicide shall be used including Gly-4 Plus, Ranger Pro, Roundup Pro Max or approved equal. Herbicides shall not contain additional additives such as Imazapyr or Triclopyr Ester. commonly found in Roundup Max Control or Extended Life 365.
   2. If schedules significantly delay installation of stockpiled soils, application of herbicide will commence after one week of first weed emergence ensuring that a majority of the exposed weed seedbank is treated in one application. Reemergence of weeds shall require additional herbicide applications, taking in account of expected soil installation and planting schedules.

C. Planted Areas and Meadows – Landscaped areas including meadows shall be monitored for weeds on a weekly basis under the Contractor's landscape guarantee of twelve months. Weed control for landscaped and meadow areas shall be primarily manual removal by-hand. In the event of large scale weed establishment or the presence of woody or invasive weeds as defined by Sec. 1.4.4, spot treatments of a Glyphosate-only herbicide, as defined by Sec. 3.14.B.1 shall be permitted.

D. Natural Area Invasive Weed Removal – The Northeast site boundary shall be surveyed and monitored for invasive woody and herbaceous plant species as defined by Sec. 1.4.4. All invasive plant species shall be removed, without damage to native shrubs, trees, and herbaceous plant material.
   1. Invasive Woody Species – Invasive trees and shrubs with a trunk caliper of 0.50" or greater shall be manually removed by saw, weed wrench, or lopping shears leaving 4" of trunk growth with cut marks to be spot treated/dabbed with an herbicide formulated for woody species including Triclopyr (Garlon 3A/Vastlan, Garlon 4, or other brush killers with Triclopyr), Glyphosate (Roundup), or approved equal

2. Invasive herbaceous material including shall be mowed weekly and treated with Glyphosate-only herbicide as defined by Sec. 3.14.B.1.

END OF SECTION 32 93 00

SECTION 33 02 00
Protection of Existing Utilities

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. Identification and field markout of all on-site utility lines to remain in operation during construction.
   2. Identification and field markout of all on-site utility lines to be removed and/or abandoned.
   3. Submission of procedures to be used to ensure the safety of the utility.
   4. Restoration from any damage during construction operations.

B. Related Sections
   1. Section 31 00 00 - Earthwork
   2. Section 31 10 00 Site Clearing, Removals and Preparation

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions, Section 01 40 00 "Quality Requirements".

1.5 REGULATORY REQUIREMENTS

A. Notify affected utility companies before starting work and comply with their requirements.

B. Contractor shall contact the "Call Before You Dig" service for an official utility mark out prior to excavation.

1.6 PROJECT RECORD DOCUMENTS

A. Accurately record actual locations of capped utilities and utility lines encountered during construction.

PART 2 - PRODUCTS

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 IDENTIFICATION

A. Locate all existing utilities which are to remain in service during construction as shown on the contract drawings.

B. Any conditions found to differ from what is shown on the contract drawings shall be immediately brought to the attention of the Commissioner.

3.3 PROTECTION

A. Flag, barricade or suitably protect existing utilities during construction operations and equipment movement.

3.4 LATERAL DISCONNECTION

A. Where a utility line is to be disconnected from portions to remain following construction, the lateral pipes shall be cut and suitably plugged/capped in accordance with the contract documents and NYC DEP regulations.

3.5 RESTORATIONS

A. Any damage to existing, operational utilities by the Contractor during the on-going construction operation shall be immediately restored to operational standards at the contractor's expense.

END OF SECTION 33 02 00

SECTION 33 10 00
Water Utilities

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. Construction of the water systems. This shall include, but not be limited to the following: pipe and fittings for site water line including domestic water line and fire water line, valves, flexible connections, fire hydrants and hydrant fenders. Set lines, elevations, and grades for water distribution system work for duration of work including careful observation of benchmarks, property corners, monuments, or other reference points.
   2. This section does not include work within the building footprint.

B. Related Sections
   1. Section 31 00 00 - Earthwork
   2. Section 32 12 16 - Asphaltic Paving
   3. Section 32 13 15 - Concrete Curbs and Paving
   4. Section 33 02 00 - Protection of Existing Utilities

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. The Contractor must provide the following submittals to the Commissioner for approval prior to purchase of materials:
   1. Material Certificates
   2. Product Warranty
   3. Product Data
   4. Manufacturer's Certificate

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions, Section 01 40 00 "Quality Requirements".

B. Perform work in accordance with NYCDEP, utility company and NYCDOB requirements.

C. Valves: Manufacturer's name and pressure rating must be marked on valve body.

1.5 TESTING AGENCY

A. Retain an independent testing agency to perform material testing as required. The Contractor shall provide any necessary assistance to the testing agency and provide the testing agency with the intended construction schedule at least one week prior to the start of construction.

1.6 CONTRACTOR RESPONSIBILITIES

A. Contractor is responsible for coordinating the work of this trade with other trades on-site.

B. Identify and describe unexpected variations to subsoil conditions and the discovery of uncharted utilities.

1.7 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle materials as recommended by the manufacturer to protect from damage.

1.8 PERMITS AND APPROVALS

A. Contractor shall prepare and obtain all required permits prior to construction unless otherwise directed by the Commissioner. Copies of all permits shall be supplied to the Commissioner prior to the commencement of work authorized by the permit.

B. Connections with existing facilities shall be performed in accordance with the requirements of NYCDOB and NYCDEP. The Contractor shall be required to comply with all such requirements, including securing all permits, and payment of all permit and/or connection fees.

1.9 PROJECT RECORD DOCUMENTS

A. Refer to the DDC General Conditions for project record drawings requirements
   1. Record drawings for work of this section shall include, but shall not be limited to, an as-built survey of all new water, sewer, electric and gas service lines.

1.10 REFERENCE STANDARDS

A. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by governing codes or regulations, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

B. The latest edition, as of the date of the executed construction contract, of referenced standards listed below applies to this contract.

1. New York City Department of Environmental Protection Bureau of Water and Sewer Rules, Standard Details, and Specifications.
2. American Society for Testing Materials (ASTM), American National Standards Institute (ANSI), and American Water Works Association (AWWA)
3. ANSI/ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.
4. ANSI/ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
5. ASTM B88 - Seamless Copper Water Tube.
6. ANSI/AWS A5.8 - Brazing Filler Metal.
7. ANSI/AWWA C104 - Cement Mortar Lining for Ductile Iron Pipe and Fittings for Water.
8. ANSI/AWWA C105 - Polyethylene Encasement for Ductile Iron Piping for Water and Other Liquids.
9. ANSI/AWWA C111- Rubber-Gasket Joints for Ductile Iron and Grey Iron Pressure Pipe and Fittings.
10. ANSI/AWWA C151 - Ductile Iron Pipe, Centrifugally Cast in Metal Molds or Sand Lined Molds, for Water or Other Liquids
11. ANSI/AWWA C500 - Gate Valves, 3 through 48 inches NPS, for Water and Sewage Systems.
12. ANSI/AWWA C502 - Dry Barrel Fire Hydrants.
13. ANSI/AWWA C504 - Rubber Seated Butterfly Valves.
14. ANSI/AWWA C508 - Swing Check Valves for Waterworks Service, 2 inches through 24 inches NPS.
15. ANSI/AWWA C509 - Resilient Seated Gate Valves 3 inches through 12 inches NPS, for Water and Sewage Systems.
16. ANSI/AWWA C600 - Installation of Ductile Iron Water Mains and Appurtenances.
17. ANSI/AWWA C606 - Grooved and Shouldered Type Joints.
18. UL 246 - Hydrants for Fire - Protection Service.

PART 2 - PRODUCTS

2.1 MATERIALS

A. As required by NYC DEP for water main and building service work.

2.2 GEOTEXTILES AND GEOGRID MATERIALS

A. As required by NYC DEP for water main and building service work.

2.3 WATER PIPE MATERIALS AND ACCESSORIES

A. Ductile Iron Pipe: Cement-Lined, ANSI A21.10 (AWWA C-151) Class 56 for pipe 6 inch diameter and larger; Class 52 for smaller than 6 inch diameter:

1. Fittings: Ductile iron, standard thickness.
2. Joints: AWWA C151, mechanical joints.
3. Cement mortar lining: AWWA C-104.
4. Retainer glands: Ductile Iron, 350 psi pressure rating.

B. Gate Valves – 3 inches (75 mm) and over
1. Manually operated, inside non-rising stem, ductile iron body/bonnet/seal plate, non-packing, bronze seated, double disc, seating wedge mechanism gate valve; model and manufacturer as approved by the NYCDEP Bureau of Water and Sewer and Commissioner.

C. Meter: Meter shall be per plumbing plans and specifications. Meter make and model shall be filed and approved by the NYCDEP Cross Connection Unit and Commissioner.

D. Backflow Prevention Device: Backflow prevention device shall be per plumbing plans and specifications. Backflow prevention device make and model shall be filed and approved by the NYCDEP Cross Connection Unit and Commissioner.

E. Hydrant
1. Hydrant: As approved by NYCDEP Bureau of Water and Commissioner.
2. Hydrant Extensions: Fabricate in multiples of 6 inches with rod and coupling to increase barrel length.
3. Hose and Streamer Connection: Match sizes with NYC Fire Department, two hose nozzles, and one pumper nozzle
4. Finish: Primer and two coats of enamel or special coating in color permitted by NYCDEP and NYC Fire Department.
5. Hydrant Drain and Fenders: As shown on contract drawings in accordance with requirements of NYCDEP.

2.4 CONCRETE MATERIALS

A. Concrete for Thrust Blocks: Place thrust blocking consisting of 3,000 psi concrete to provide sufficient bearing area to transmit unbalanced thrust from bends, tees, caps, or plugs to undisturbed soil without loading undisturbed soil in excess of 2,500 lbs/sq. ft. when water main pressure is 100 psi.

2.5 SUBSTITUTIONS

A. All products shall be as approved by NYC DEP and the Commissioner. No substitutions will be accepted without prior approval by NYC DEP and the Commissioner.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Obtain NYCDEP permit to perform the work.

B. Contact NYCDEP for field inspection.

C. Verify existing conditions.

D. Verify building service connection points with plans.

E. Verify that existing water main size, location, and invert are as indicated on the drawings.

3.3 PREPARATION

A. Cut pipe ends square, ream pipe and tube ends to full pipe diameter, remove burrs.

B. Remove scale and dirt on inside and outside before assembly.

C. Prepare pipe connections to equipment with flanges or unions.

D. Hydrants removed from site shall remain property of the City of New York, with relocation or disposal at the Commissioner's discretion.

3.4 CLEANING

A. After the system has been cleaned, the Contractor shall thoroughly inspect the system and all restorations shown to be necessary shall be promptly made by the Contractor.

B. All Work of cleaning and repair as specified herein shall be performed at the Contractor's expense and to the complete satisfaction of Commissioner.

C. Disinfection of Water Piping System
   1. Sterilize distribution system with a solution of not less than 50 parts per million of chlorine with water prior to domestic operation. Thoroughly flush lines before introduction of chlorinating materials and after the contact period of at least 24 hours. De-chlorinate water prior to flushing into storm sewer system.
   2. Open and close valves in lines being sterilized several times during contact period. System shall be flushed with clean water until residual chlorine content is less than 1.0 part per million.
   3. After sterilization, test water for bacterium in accordance with AWWA specifications. Do not place distribution system in service until approval is obtained from New York City Department of Environmental Protection.

3.5 BEDDING

A. Excavate pipe trench in accordance with Section 31 00 00 "Earthwork".

B. Form and place concrete for pipe thrust restraints at any change of pipe direction.

C. Place bedding material at trench bottom.

D. Backfill around sides and to top of pipe with cover fill, tamp in place and compact in accordance with Construction Documents.

3.6 INSTALLATION - PIPE

A. Maintain separation of water main from sanitary and storm sewer piping in accordance with NYCDEP, New York state, and New York City code. Unless otherwise approved, water mains shall be separated from sanitary sewer pipes a minimum distance of 10 feet horizontal or 18 inches vertical.

B. Install ductile iron piping and fittings to ANSI/AWWA C600.

C. Route pipe in straight line.

D. Install pipe to allow for expansion and contraction without stressing pipe or joints.

E. Install access fittings to permit disinfection of water system performed under this section.

F. Slope water pipe and position drains at low points.

G. Form and place concrete for thrust restraints at each elbow or change of direction of pipe main.

H. Coordinate with NYCDEP for new wet tap to existing main.

I. Establish elevations of buried piping to ensure not less than 4-ft of cover over the top of pipe under proposed grading. Locations where shallow cover cannot be avoided must be brought to the attention of the Commissioner for review.

J. Backfill trench in accordance with Construction Documents.

K. Connections with Existing Pipelines: Where connections are made between new work and existing piping, make connection using suitable fittings for conditions encountered. Make each on-site wet tap connection under conditions which least interfere with operation of existing pipeline. NYCDEP will provide wet tap to their main.

3.7 INSTALLATION – VALVES

A. Install gate valves as indicated on Drawings, supported on concrete pads with the valve stem vertical. Install valve boxes in a manner that will not transmit loads, stress, or shock to valve body. Center valve box over operating nut of valve vertical and plumb. Securely fit valve box together leaving cover flush with finished grade Form and place cast in place concrete base pad, with provision for storm sewer pipe end sections, or place precast reinforced concrete pad at the location and elevation specified on the plans.

3.8 INTERFACE WITH EXISTING FACILITIES

A. Construct water service lines to within 5 feet of the building entry point.

3.9 CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY

A. Construction within the public right-of-way shall conform to all requirements of NYCDOB, NYCDEP, and NYCDOT.

3.10 FIELD QUALITY CONTROL

A. Water line installation and testing shall be certified to the NYCDOB by a plumber licensed in the State of New York. The Contractor shall cooperate with the Commissioner as required to facilitate testing and inspection of the work.

B. Test water distribution system installed below grade and outside the building in accordance with NYCDEP and NYCDOB and the following procedures:
   1. All pipework shall be tested at a hydrostatic pressure equal to 150 psi. The pipe work shall maintain said pressure for not less than two hours.
   2. Furnish, install, and operate the necessary connections, pumps, meters, and gauges. Leakage shall not exceed that permitted by AWWA Specifications C600 64 for mechanical joint and push on joint pipe. Prior to running any field test, a meter shall be tested, sealed, and approved by NYCDEP and NYCDOB at Contractor's expense.
   3. Locate and restore any leaks. Repeat testing until process results are satisfactory and in compliance with this section.
   4. Furnish a copy of the results of the meter test and the hydrostatic pressure test to the Commissioner upon completion of water distribution system backfilling operations

C. Contractor shall call for NYCDEP inspection of all waterline work and shall be responsible for obtaining all NYCDEP signoffs, including but not limited to tap release letters and meter release letters.

D. All waterline work, including but not limited to meters, taps, and backflow prevention device shall be constructed in accordance with the latest version of RCNY Title 15 Chapter 20 Rules Governing and Restricting the Use and Supply of Water.

3.11 INSPECTION AND TESTING

A. Final Inspection: Upon completion of the Work and before backfill is placed and final acceptance by the Commissioner, the entire drainage system shall be subject to a final inspection in the presence of the Commissioner. The Work shall not be considered as complete until all requirements for line, grade, cleanliness, and workmanship have been completed to the satisfaction of the Commissioner.

END OF SECTION 33 10 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 31 00
Sanitary Sewer System

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. Sanitary sewerage piping, fittings, accessories and bedding.

B. Related Sections
   1. Section 31 00 00 – Earthwork
   2. Section 33 02 00 – Protection of Existing Utilities
   3. Section 33 49 00 – Storm and Sanitary Structures

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Coordination:
   1. Coordinate the Work with the building sanitary sewer connection point shown by the plumbing plans, and connection to the on-site sewer system.

1.5 REFERENCES

A. ASTM A746-03 – Ductile Iron Gravity Sewer Pipe

B. ANSI/AWWA C111/A21.11 – Rubber Gasket Joints for Ductile-Iron Pressure Pipe and Fittings

C. ASTM D1785-15 – Standard Specification for Poly(Vinyl Chloride) Plastic Pipe, Schedules 40, 80, and 120

1.6 PROJECT RECORD DOCUMENTS

A. Refer to the DDC General Conditions for project record drawing requirements.

B. Accurately record actual locations of pipe runs, connections, outlet structures, headwalls, and invert elevations.

C. Identify and describe unexpected variations to subsoil conditions and the discovery of uncharted utilities.

1.7 PERMITS AND APPROVALS

A. Obtain street opening permit, and all permits and inspections for the sanitary sewer system construction as required by New York City Department of Environmental Protection (NYCDEP), New York State Department of Environmental Conservation (NYSDEC), and New York State Department of Transportation (NYSDOT).

PART 2 - PRODUCTS

2.1 SEWER PIPE MATERIALS

A. Ductile Iron Sanitary Sewer

1. Class 56 type, inside nominal diameter of as specified on plans, bell and spigot end.
2. All piping shall be in accordance with the 2014 New York City Building Code.

B. Polyvinyl Chloride (PVC) Sanitary Sewer

1. All PVC Sanitary pipe shall meet the requirements of AWWA C900.
2. Nominal outside diameters and wall thicknesses of PVC pipe shall conform to the requirements of AWWA C900. Integral bell joint pipe shall be furnished in 4", 6", 8", 10", and 12" sizes, in Class 200(DR14). Pipe shall be furnished in lengths of 20 feet.
3. Pipe shall incorporate a formed bell complete with a single rubber gasket conforming to ASTM F477. Joints shall be designed to meet the zero leakage test requirements of ASTM D 3139.
4. Pipe shall be homogenous throughout and free from voids, cracks, inclusions and other defects, and shall be as uniform as commercially practicable in color, density and other physical characteristics.
5. Every pipe shall pass the AWWA C900 hydrostatic proof test requirements of 4 times the pressure class for 5 seconds.

2.2 PIPE ACCESSORIES

A. Fittings: Same material as pipe molded or formed to suit pipe size and end design, in required tee, bends, elbows, cleanouts, reducers, traps and other configurations required.

B. PVC Fittings and couplings shall conform to the requirements of the PVC pipe for classification and size. Rubber gaskets for elastomeric joints shall conform to ANSI/ASTM F477. Lubricant for the joints shall be furnished by the pipe manufacturer. The rubber gaskets shall be factory installed in the bell of the pipe,

fittings, and couplings. The plain end of the pipe shall be marked by the manufacturer to show the depth of penetration into the bell or coupling.

2.3 CLEANOUTS

A. Lid and Frame: Heavy Duty cast iron construction, H20 rated.

B. Shaft Construction: Cast Iron shaft of internal diameter as specified on plans with 4,000 psi concrete collar for cleanouts located in paved areas.

C. Base Pad: Cast in place concrete, 4,000 psi leveled top surface to receive cast iron shaft sections, sleeved to receive sanitary sewer pipe sections.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Hand trim excavations to required elevations.

B. Remove large stones or other hard matter, which could damage pipe or impede consistent backfilling or compaction.

3.3 BEDDING

A. Excavate pipe trench in accordance with Section 31 00 00 – Earthwork for work in this Section.

B. Place and compact bedding material at trench bottom. Hand trim bedding for accurate placement of pipe to elevations indicated.

C. Maintain moisture content of bedding material between 1% below and 3% above optimum during compaction.

3.4 INSTALLATION - PIPE

A. Install pipe, fittings, and accessories in accordance with ANSI/ASTM or AWWA requirements or manufacturer's instructions. Seal joints shall be watertight.

B. Lay pipe to slope gradients noted on Construction Drawings.

C. Lay pipe beginning at low point of system, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream.

D. Refer to Section 31 00 00 for trenching requirements. Do not displace or damage pipe when compacting.

E. Refer to Section 33 49 00 for manhole requirements.

F. Connect to building sanitary sewer outlet within New York City public sewer systems.

G. Pipe shall be installed in accordance with AWWA C605.

3.5 INSTALLATION - CLEANOUTS

A. Form bottom of excavation clean and smooth to correct elevation.

B. Form and place cast in place concrete base pad, with provision for sanitary sewer pipe end sections.

C. Mount lid and frame level in grout, to finished grade elevation indicated on plan.

3.6 INTERFACE WITH EXISTING FACILITIES

A. Requirements: Make all required connections of the proposed drainage facilities into existing facilities, where and as shown on the Drawings in accordance with the New York City Department of Environmental Protection.

B. Compliance with NYC Requirements: Connections made into existing facilities shall be performed in accordance with the requirements of the New York City Department of Buildings (NYCDOB), New York City Department of Environmental Protection (NYCDEP), and New York City Department of Transportation (NYCDOT). The Contractor will be required to comply with all such requirements, including securing of all required permits, and expenses thereof. The expense of making the connections in accordance with all such requirements shall be included in the Contract Sum.

3.7 CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY

A. Construction within the public right-of-way shall conform to all requirements of the New York City Department of Environmental Protection (NYCDEP), New York City Department of Transportation (NYCDOT), and New York State Department of Transportation (NYSDOT).

3.8 MODIFICATIONS OF EXISTING STRUCTURES

A. General: Alter, reconstruct, or convert existing structures where and as shown on the Drawings, or as approved by the Commissioner. In general, alterations shall be performed with the same type of material used in the original construction unless otherwise indicated on the Drawings or approved by the Commissioner.

B. Damage to Existing Installations: Exercise extreme care during such alteration, reconstruction or conversions so as not to damage any portions of the structure or pipe shown to remain. Any such damage shall be repaired by the Contractor at his own expense and to the satisfaction of the Commissioner.

3.9 LATERALS

A. General: Make all required lateral connections from the building to the on-site sewer system as shown on the Drawings or approved by the Commissioner. Work shall include making the connections into the on-site system, furnishing and installing all lateral pipe from the on-site sanitary sewer system to points located five (5) feet outside of the proposed building lines and properly sealing the ends with watertight plugs.

B. Coordinate trades and the exact location and elevation of the utility point of entry into the building. For laterals not immediately connected to building utility, stake and mark end of lateral as per Section 31 00 00 - Earthwork.

3.10 FIELD QUALITY CONTROL

A. Backfill placement and quantity control will be performed in accordance with Section 31 00 00 "Earthwork".

B. If tests indicate work does not meet specified requirements, remove work, replace and retest at no additional expense to the City of New York.

C. Inspection and Testing - Cooperate with the Commissioner to facilitate testing and inspection of the work. Clean and "Lamp" the lines in the presence of the Commissioner before final acceptance of the work. Infiltration and Exfiltration Testing shall be determined by the Commissioner and shall meet New York City Department of Building and New York City Department of Environmental Protection standards.

D. The complete sanitary sewer system, including all mains, lateral sewers and manholes shall be tested for both infiltration and exfiltration. Provide all materials equipment and services as necessary to perform the tests as described herein except as noted.

E. Infiltration Testing - The ends of any service sewers shall be securely plugged and the sewer main plugged at the manhole at the low end. The uppermost manhole shall be filled with water to a level of 4 feet above the top of the sewer or 4 feet above the groundwater level. The water shall stand for 2 hours to allow the sewer system to reach its maximum absorption. Subsequently, the uppermost manhole shall be refilled to the original 4 feet height.

1. Rate of infiltration shall be determined by means of V-notch weirs or other approved measuring devices in an approved manner and at such times and locations as may be directed by the Commissioner. The maximum leakage limit shall be 100 gallons per inch of diameter, per day, per mile.

2. For shorter stretches, less than 500 feet in length, rate of 100 percent in total excess of the above figures may be permitted, providing the total infiltration is in excess of the maximum allowable, the leaking joints shall be re-laid if necessary, or other remedial construction shall be performed by and at the expense of the Contractor. The section of sewer shall then be re-tested after restorations are completed to determine compliance with the specifications.

F. Low Pressure Air Exfiltration Testing - The sewer mains or laterals shall be tested for leakage by the use of low-pressure air as specified hereinafter and as approved by the Commissioner. Provide test plugs, air compressor, and installers properly instructed by the manufacturer for conducting the test. The test length shall not exceed one (1) interval of pipe between two (2) manholes. Take all necessary precautions to prevent blowouts.

1. After the pipe has been backfilled and cleaned, pneumatic plugs shall be placed in the line at each manhole and inflated to 25 psi. Low-pressure air shall be introduced into this sealed line until the internal air pressure reaches 4 psi greater than the average back pressure of any groundwater that may be over the pipe. At least two (2) minutes shall be allowed for the air pressure to stabilize.

2. After the stabilization period (3.5 psi minimum pressure in the pipe), the portion of line being tested shall be acceptable if the time required in minutes for the pressure to decrease from 3.5 to 3.0 psi (greater than the average back pressure of any groundwater that may be over the pipe) is not less than the time indicated in the following table:

Pipe Size (in.)	Time (Min.)
4	2.5
6	4
8	5
10	6.5
12	7.5
15	9.5

G. Correction of Defective Work - If leakage exceeds the specified amount, the Contractor shall at their own expense make the necessary restorations or replacements required to permanently reduce the leakage to within the specified limit and the tests shall be repeated until the leakage requirement is met.

1. Any defects found in the system are to be restored at the expense of the Contractor so to conform strictly to the Specifications and to the satisfaction of the Commissioner. All restorations shown necessary by the tests are to be made, broken or cracked pipe replaced, all deposits removed, and sanitary sewer left true to line and grade and entirely clean, free from lumps of cement, protruding gaskets, bulkheads, etc., and ready for use before final acceptance by the Commissioner.

H. Pipe to Manhole Connections - Connections of pipe to manholes shall be water tight. Connections of polyvinyl chloride sewer pipe to the manholes shall be made using a flexible compression gasket that meets or exceeds ASTM C-478, ASTM C 923 and ASTM F 2510.

END OF SECTION 33 31 00

SECTION 33 40 00
Storm Drainage Utilities

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. Site storm sewerage drainage piping, fittings and accessories, and bedding.
   2. Catch basins, area drains, paved area drainage and site surface drainage.
   3. Building storm drainage lateral construction.

B. Related Sections
   1. Section 31 00 00 – Earthwork
   2. Section 33 49 00 – Storm and Sanitary Structures

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.5 REFERENCES

A. 2014 New York City Building Code.

B. NYCDEP Bureau of Water and Sewer Rules and Specifications, latest revision.

C. ANSI/ASTM C14 Concrete Sewer, Storm Drain, and Culvert Pipe.

D. ANSI/ASTM C76 Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.

E. ANSI/ASTM C443 Joints for Circular Concrete Sewer and Culvert Pipe, Using Rubber Gaskets.

F. ASTM C507 Reinforced Concrete Elliptical Culvert, Storm Drain and Sewer Pipe.

G. ASTM D1248 - Polyethylene Plastics Molding and Extrusion Materials

H. ASTM C478 – Precast Reinforced Concrete Manhole Sections

I. ASTM D3350 - Polyethylene Plastics Pipe and Fittings Materials

J. ASTM D3212 – Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals

K. ASTM A536 – Ductile Iron Castings

L. ANSI C150 – Ductile Iron Pipe (DIP) Class 56, Ceramic Epoxy lined Tyton Joints

M. ANSI C151 – Ductile Iron Pipe, Centrifugally Cast in Metal Molds or Sand-Lined Molds, for water or other liquids.

N. AASHTO M294 and M252 – Corrugated polyethylene pipe, smooth interior

1.6 DEFINITIONS

A. Bedding: Fill placed under, beside and around pipe, prior to subsequent backfill operations.

1.7 PROJECT RECORD DOCUMENTS

A. Accurately record actual locations of pipe runs, connections, catch basins, and invert elevations.

B. Identify and describe unexpected variations to subsoil conditions and the discovery of uncharted utilities.

1.8 COORDINATION

A. Coordinate the Work with the roof drain connection locations from the buildings.

PART 2 - PRODUCTS

2.1 SEWER PIPE MATERIALS AND ACCESSORIES

A. Ductile Iron Pipe: Comply with requirements of AWWA C104 Cement Mortar Lining, AWWA C110 Ductile Iron Fittings, AWWA C111 Joints and Fittings, AWWA C150 Thickness, AWWA C151 Ductile Iron Pipe. All buried Ductile Iron Pipe (DIP) shall be mechanical joint unless otherwise shown on the drawings, specified herein, or directed by the Commissioner. Mechanical Joint DIP and fittings shall be minimum Class 52, unless otherwise specified.

B. High-Density Polyethylene Pipe: Comply with requirements of ASTM D1248, Type III, Category 4, grade P33, Class C or ASTM D3350 Cell Classification 324420C. All High Density Polyethylene (HDPE) pipe shall be N-12 Sure Lock pipe, watertight, and manufactured by ADS or approved equal and shall have NYCDOB MEA Approval. HDPE pipe is permitted in lieu of RCP for pipes sizes 30 inches and smaller, except for underground detention basins, where 36-inch and 60-inch diameter HDPE shall be used.

C. Reinforced Concrete Pipe: Comply with requirements of ASTM C 76 installed with flexible plastic (Bitumen) gaskets at all joints. Gaskets shall comply with ASTM C443, and shall be installed in strict accordance with pipe manufacturer's recommendations. For all pipe installations with cover less than two (2) feet, Class IV RCP shall be used.

2.2 CATCH BASINS AND AREA DRAINS

A. Precast Catch Basins: 4,000 psi concrete reinforce for H20-16 loading in accordance with ASTM C478 of size, shape and depth as indicated on the Drawings.

B. Base Pad: Cast-in-place or precast reinforced concrete pad.

C. Lid and Frame: Shall be ADA compliant, H-20 rated, and be fitted with vandal resistant bolts.
   1. Basis of Design: Subject to compliance with requirements, provide IronSmith 'ADA' 9031DR-24, 24" Square, 1/4" Slots, Gray Cast Iron, Raw Natural Finish, H20 rated or comparable product by one of the following:
      a. Iron Age: 'Regular Joe', 24" Square, Gray Cast Iron, Raw Natural Finish, H20 rated
      b. Urban Accessories: 'Standard ADA', 24" Square, 1/4" openings, Manufacturer's Frame, Ductile Cast Iron with Baked on Oil Finish, H20 rated
      c. Or approved equal

D. Hood: Standard cast iron hood and hook.
   1. Basis of Design: Subject to compliance with requirements, provide Campbell Foundry Cast Iron Trap or comparable product by one of the following:
      a. General Foundries Inc., USF 5500 Hood
      b. Neenah Foundry, R 3711
      c. Or approved equal.

E. Steps: Per details shown on plans or approved equal.

2.3 TRENCH DRAIN

A. Basis of Design: Subject to compliance with requirements, provide Zurn Drains, Model Z812 or comparable product by one of the following:
   1. Josam
   2. NDS
   3. Or approved equal.

B. Grate: Shall be ADA compliant, H-20 rated, and be fitted with vandal resistant bolts.
   1. Basis of Design: Subject to compliance with requirements, provide IronSmith 'ADA' 9032, 11-1/2" Custom Width, 1/4" Slots, Gray Cast Iron, Raw Natural Finish, H20 rated or comparable product by one of the following:

a. Iron Age 'Regular Joe', 1/4" Slots, Gray Cast Iron, Raw Natural Finish, H20 rated
b. Urban Accessories: 'Jamison', 1/4" Slots, Manufacturer's Frame, Ductile Cast Iron with Baked on Oil Finish, H20 rated
c. Or approved equal

2.4 CLEAN OUTS

A. Lid and Frame: H20 rated, cast iron construction
   1. Basis of Design: Subject to compliance with requirements, provide Neenah Foundry, or comparable product by one of the following:
      a. General Foundries Inc.
      b. Campbell Foundry
      c. Or approved equal.

B. Shaft Construction: HDPE shaft of internal diameter as specified on the plans.

C. Concrete Collar: Cast-in-place concrete, 3,000-psi level top surface.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Verify the trench cut and excavation base to be hard, smooth, and dry.

B. Verify excavation location, dimensions and elevation with contract drawings.

3.3 PREPARATION

A. Set all lines, elevations, and grades for utility work and maintain for the duration of work. Provide careful maintenance of bench marks, property corners, monuments, or other reference points.

B. Protect and maintain in operating condition, existing utilities encountered during utility installation. Restore any damage to surface or subsurface improvements shown on the drawings.

C. Coordinate structure placement with inlet and outlet pipe or duct sleeve locations and inverts required by other sections.

D. Coordinate all building sewer connection locations and elevations with civil and plumbing plans. Comply with 2014 New York City Construction Codes.

E. Hand trim excavations to required elevations and thoroughly compact as per DDC General Conditions.

F. Install dewatering systems that will be required to construct the proposed utilities to the design elevations and using the methods described herein. Water pumped out of excavations shall be disposed of per NYCDEP and

DDC General Conditions, and will not be discharged directly to the City's storm drainage system without prior approval of NYCDEP.

G. Remove large stones or other hard matter which may damage piping or impede consistent backfilling or compaction.

H. Subgrade areas identified by the Commissioner as unsuitable shall be excavated to suitable material or a maximum of two additional feet, backfill with bedding material and compact as specified in Section 31 00 00 "Earthwork".

3.4 BEDDING

A. Excavate pipe trench in accordance with Section 31 00 00 "Earthwork" for work of this section.

B. Place and compact bedding material at trench bottom. Hand trim bedding for accurate placement of pipe to elevations indicated.

C. Maintain moisture content of bedding material between 1% below and 3% above the optimum.

3.5 INSTALLATION – PIPE

A. Place pipe on minimum 6 inch deep bed of compacted bedding aggregate.

B. Install pipe, fittings, and accessories in accordance with ASTM C12, ASTM D2321, manufacturer's instructions and/or state or local requirements. Seal joints to be watertight.

C. Lay pipe to slope gradients noted on civil drawings; with maximum variation from true slope of 1/8 inch in 10 feet.

D. Place and compact bedding aggregate at sides and to the springline of the pipe as per Section 31 00 00.

E. All sewer pipe joints installed within ground water or partially submerged within ground water shall be installed with water tight joints.

F. Pipe joints shall not be installed within the leachate collection stone trench.

G. Refer to Section 31 00 00 "Earthwork" for trenching and backfill requirements. Do not displace or damage pipe when compacting.

H. Refer to Section 33 49 00 "Storm and Sanitary Structures" for manhole requirements.

3.6 INSTALLATION - CATCH BASINS & AREA DRAINS

A. Form bottom of excavation clean and smooth and to correct elevation. Place minimum of 6" compacted bedding aggregate.

B. Form and place cast-in-place concrete base pad, with provision for storm sewer pipe end sections, or place precast reinforced concrete pad at the location and elevation specified on the plans.

C. Level top surface of base pad to receive concrete shaft sections, sleeved to receive storm sewer pipe sections.

D. Establish elevations and pipe inverts for inlets and outlets as indicated.

E. Mount lid and frame level in grout, secured to top cone section to elevation indicated.

F. Outlet structures shall be constructed in accordance with the section and elevations shown on the Contract Drawings.

3.7 INSTALLATION – CLEANOUTS

A. Form bottom of excavation clean and smooth to correct elevation.

B. Form and place cast-in-place concrete collar, with provision for storm pipe end sections.

C. Mount lid and frame level in grout to elevation indicated on plans.

3.8 FIELD QUALITY CONTROL

A. Clean the entire drainage system of all debris and obstructions. This shall include, but not be limited to, removal of all formwork from structures, concrete and mortar droppings, construction debris and dirt. Thoroughly flush the system clean and furnish all necessary hose, pumps, pipe and other equipment that may be required for this purpose. Do not flush debris into existing storm drains or streams; remove all debris from the system. Perform all removals and disposal in accordance with the DDC General Conditions.

B. After the system has been cleaned, thoroughly inspect the system. Promptly make restorations as necessary.

C. Perform all work of cleaning and restore as specified herein at own expense and to the complete satisfaction of the Commissioner.

D. It shall be the Contractor's responsibility to comply with all regulations of the New York City Department of Environmental Protection (NYCDEP), New York City Department of Buildings (NYCDOB), and New York City Department of Transportation (NYCDOT).

E. The inline check valve shall be tested for verification of the manufacturer's hydraulic testing, backpressure, and cracking pressure limits.

3.9 FINAL INSPECTION

A. Upon completion of the Work and before backfill is placed and final acceptance by the Commissioner, the drainage system shall be subject to a final inspection in the presence of the Commissioner. The Work shall not be considered as complete until all requirements for line, grade, cleanliness, and workmanship have been completed to the satisfaction of the Commissioner.

END OF SECTION 33 40 00

SECTION 33 49 00
Storm and Sanitary Structures

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

C. New York City Department of Environmental Protection (NYCDEP) Specifications.

D. Geotechnical Report prepared by Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C., dated October 22, 2018.

1.2 SUMMARY

A. Work includes:
   1. Monolithic concrete manholes with masonry transition to lid frame, covers, anchorage and accessories.
   2. Modular precast concrete manhole sections with tongue and groove joints with masonry transition to lid frame, covers, anchorage and accessories.

B. Related Sections
   1. Section 33 31 00 – Sanitary Sewer System
   2. Section 33 40 00 – Storm Drainage Utilities

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. The Contractor must provide the following submittals to the Commissioner for approval prior to the purchase of materials:
   1. Shop Drawings: Indicate manholes locations, elevations, invert elevations, piping, sizes and elevations of penetrations.
   2. Product Data: Provide manhole covers, component construction, features, configuration, and dimensions.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.5 REFERENCES

A. ANSI/ASTM C55 Concrete Building Brick.

I. ASTM D4101 - Standard Specification for Copolymer steps construction

J. ASTM D4097 - Standard Specification for Contact- Molded Glass - Fiber- Reinforced Thermoset Resin Corrosion - Resistant

K. International Masonry Industry All Weather Council (IMIAC): Recommended Practices and Guide Specification for Cold Weather Masonry Construction.

L. New York City Department of Environmental Protection (NYCDEP) Specifications and applicable 2014 New York City Building Code Requirements.

PART 2 - PRODUCTS

2.1 MANHOLE

A. Manhole Sections: Reinforced precast concrete.

1. 4,000 psi concrete reinforced for H20-16 loading or greater in accordance with ASTM C478 with self-sealing butyl gaskets in accordance with ASTM C923.

2. Construct manholes of precast concrete sections as required by Drawings to size, shape, and depth indicated.

B. Manhole Sections: Reinforced cast-in-place concrete.

1. Cast-in-place Manholes shall be constructed of 4,000 psi concrete reinforced for H20-16 loading or greater.
2. Forms shall be accurately made of steel sheets and shapes of sufficient strength to form dense watertight walls to true dimensions.
3. Concrete shall be deposited in evenly distributed layers of about 18 inches, with each layer vibrated to bond it to the preceding layer.

C. Mortar and Grout

1. Masonry cement used for laying up dimension masonry shall conform to the requirements of ASTM C91.
2. Grouting material for use in grouting anchor bolts, flanges, dowels and other miscellaneous items in concrete shall be a non-metallic, non-shrink grout which when mixed with water, will harden rapidly to produce a permanent anchoring bond. It shall be free of any corrosion promoting agents.

D. Reinforcement: Grade 60 deformed steel rebars with galvanized finish. Reinforcing shall conform to the latest revised edition of the AISC code.

E. Bitumastic Coating: The entire exterior surface of all manholes shall be coated with two (2) coats of an approved bitumastic material to produce a dry film thickness of 0.07 inches (7 mils) per coat.

F. Clear Inside Dimensions: 48 inch diameter or as indicated on plans.

G. Design Depth: As indicated on plans.

H. Clear Lid Opening: 24 inches diameter minimum.

I. Pipe Entry: Provide openings as indicated

J. Main and Lateral Pipes: Neatly cut off main and lateral pipes flush with inside of manhole or inlet where they enter structure walls, and point up irregularities and rough edges with non-shrink grout.

K. Inverts: Shape inverts for smooth flow across structure floor as shown on Drawings. Use concrete and mortar to obtain proper grade and contour and finish surface with fine textured wood float. Provide benches in all sanitary sewer manholes.

2.2 MANHOLE CASTINGS

A. Lid and Frame: Per details shown on plans or as approved by the Commissioner.

B. Manhole Steps: Cast iron or as approved by the Commissioner.

C. Base Pad: Precast reinforced concrete or cast-in-place concrete with leveled top surface.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Verify items provided by other sections of work are properly sized and located.

B. Verify that built in items are in proper location, and ready for roughing into Work.

C. Verify excavation for manholes is to the correct depth and that the bottom is hard and smooth.

3.3 PREPARATION

A. Set all lines, elevations, and grades for utility and drainage system work and maintain for the duration of work. Provide careful maintenance of bench marks, property corners, monuments, or other reference points.

B. Protect and maintain in operating condition, existing utilities encountered during utility installation. Restore any damage to surface or subsurface improvements shown on the drawings.

C. Verify location, size, elevation, and other pertinent data required to make connections with existing sewer systems indicated on the Contract Drawings.

D. Coordinate structure placement with inlet and outlet pipe or duct sleeve locations and inverts required on the Contract Documents.

E. Coordinate all building utility connection locations and elevations with architectural, structural, and plumbing drawings.

F. Install dewatering systems that will be required to construct the proposed utilities to the design elevations and using the methods described herein. Water pumped out of excavations shall be disposed of on-site for sedimentation removal, and will not be discharged directly to the City's storm drainage system.

G. Subgrade areas identified by the Commissioner as not being capable of supporting the proposed structure shall be excavated to suitable material or a maximum of two additional feet, backfill with bedding material and compact as specified.

3.4 INSTALLATION OF PRE-CAST MANHOLE SECTIONS

A. Place granular base pad, trowel top surface level for placement of manhole barrel base section. Place manhole base plumb and level to correct elevation.

1. Cast in place bases: After completion of excavation, setting of reinforcing steel and placing inlet and outlet pipes, but prior to placing concrete for invert slab, set concrete blocks on granular base pad to support first manhole barrel section which shall be lowered into excavation, grooved end first. Align and adjust to proper grade prior to placing invert slab, which shall be poured immediately after setting of first manhole barrel section.

B. Prior to setting subsequent manhole barrel sections, apply primer to tongue and groove ends and allow to set in accordance with manufacturer recommendations. Place gasket on tongue end. Lower next section into position, and remove excess material form interior of structure. Add additional primer on exterior of joint, if necessary, for completely watertight joint.

C. Castings belonging to reset/converted structures shall be salvaged and reused, if possible.

D. Set cover frames and covers securely to correct line and grade elevations.

E. Grout base of shaft sections to achieve slope to exit piping. Trowel smooth. Contour as required.

F. Coordinate with other sections of work to provide correct size, shape, and location.

3.5 MASONRY CONSTRUCTION

A. Maintain masonry courses to a uniform dimension. Form vertical and horizontal joints of uniform thickness.

B. Lay masonry units in running bond.

C. Form flush mortar joints.

D. Lay masonry units in full bed of mortar, with full head joints, uniformly jointed with other work.

E. Install joint reinforcement 16 inches on center.

F. Place joint reinforcement in first and second horizontal joints above base pad and below lid frame opening.

G. Set cover frames and covers securely to correct line and grade elevations.

H. Grout base of shaft sections to achieve slope to exit piping. Trowel smooth. Contour as required.

I. Coordinate with other sections of work to provide correct size, shape, and location.

END OF SECTION 33 49 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 49 10
Other Utilities

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

C. National Grid Specifications, Blue Book, 2015 Edition

D. The National Electric Code, Latest Edition

E. New York City Fire Department Standard Details and Specifications, Latest Edition

1.2 SUMMARY

A. Work includes:
   1. Furnish labor, materials, services, equipment, and other necessary items required to excavate, install and backfill the piping, conduit, duct banks and manhole/pull box structures related to the on-site primary and secondary electrical service, site lighting, and telephone/data in accordance with the Contract Documents.

B. Related Sections
   1. Section 33 02 00 - Protection of Existing Utilities
   2. Section 31 00 00 – Earthwork

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 COORDINATION

A. All work in this Section shall be coordinated with the Commissioner and electric and telephone/data utility companies and shall comply with all requirements, details, regulations, etc. of said companies. The Contractor shall coordinate with each utility to define where his limit of work exists.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 CONDUIT, FITTINGS AND CABLE

A. Electric and Telephone/Data: Refer to Division 26 and 27 of the Technical Specifications and the Contract Drawings.

2.2 STRUCTURES

A. Manholes, pull boxes and junction boxes shall comply with all requirements, specifications, details, and recommendations of the governing utility company and as indicated on the Contract Drawings.

2.3 BEDDING AND BACKFILL

A. Refer to Section 31 00 00 – "Earthwork"

2.4 CONCRETE ENCASEMENT

A. Concrete for encasement of electric duct banks shall be 3,500 psi concrete.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Verify existing conditions.

B. Verify building service connection points with architectural plans.

3.3 BEDDING

A. Excavate all utility trenches and place bedding in accordance with Specification Section 31 00 00 "Earthwork".

3.4 PREPARATION

A. Conduit:

1. Remove scale and dirt, on inside and outside of conduit, prior to assembly.
2. Prepare conduit in accordance with manufacturer's recommendations.

3.5 INSTALLATION

A. Conduit:
1. Maintain minimum conduit separation in accordance with state and/or local code.
2. Establish elevations of conduit in accordance with Section 31 00 00 – "Earthwork" and the Contract Drawings.
3. Place forms for concrete encased duct banks. Install conduit to conserve space and to allow for expansion and contraction without stressing conduit or joints. Pour concrete and vibrate to ensure there are no voids.
4. Backfill trench in accordance with Section 31 00 00 – "Earthwork".

B. Structures:
1. Install manholes, handholes, junction boxes and/or pullboxes in accordance with Construction Drawings.

C. Service Connections:
1. Construct service lines to within 5 feet of the exterior building wall at the building entry point unless otherwise indicated on the Contract Drawings. Cap and stake ends of conduits.
2. Connections with existing facilities shall be performed in accordance with the requirements of the specific utility company. The Contractor shall be required to comply with all such requirements, including securing all permits, and payment of all permit and/or connection fees related to this section.
3. Any product, which is damaged or disturbed through any cause prior to acceptance of the Work, shall be restored, realigned, or replaced as directed by the Commissioner, at no expense to the City of New York.

END OF SECTION 33 49 10

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 335213.13

Fiberglass Double Containment Piping

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. Related Sections:

1. Section 22 15 13.10 "Motor Fuel Dispensing System."
2. Section 22 15 13.20 "Fluid Dispensing System."
3. Section 33 56 14 "Underground Storage Tanks."
4. Section 26 32 13 "Engine Generators."

C. Governing Standards:

1. ASTM D-2992 - Standard Practice for Obtaining Hydrostatic or Pressure Design Basis for "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe and Fittings.
2. ASTM D-2996 - Standard specification to Filament-Wound "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe.
3. ASTM D-2310 - Standard Classification for Machine-Made "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe.
4. NFPA 30 - Flammable and Combustible Liquids Code.
5. NFPA 30A - Code for Motor Fuel Dispensing Facilities and Repair Garages.
6. NFPA 31 - Installation of Oil-Burning Equipment.
7. UL 971 - Underwriters Laboratories (UL) Nonmetallic Underground Piping for Flammable Liquids.

1.2 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Submit the following Shop Drawings and other data for approval:

1. Catalog data consisting of specifications, illustrations and a parts schedule that identifies the materials to be used for various piping components and accessories. The illustrations shall be in sufficient detail to serve as a guide for assembly and disassembly.
2. Fully dimensioned layout of pipe, fittings, couplings, sleeves, expansion provisions, anchors, harnessing, valves, and equipment. Label pipe size, type and materials on drawing and include schedule. Piping layout drawings shall indicate information on pipe supports, location, support type, hanger rod size, insert type and the load in pounds.

3. Cross sections showing elevations of pipe, fittings, sleeves, couplings, supports, anchors, harnessing, valves, and equipment.
4. Locations where pipe and valve identification signs will be placed.
5. Other piping appurtenances.
6. Certificates: Submit certificate of compliance with referenced standards.

C. When special designs or fittings are required, show the work in large detail and completely describe and dimension the special or fitting.

D. Submit expansion/contraction analysis.

E. Provide field assembly instructions.

F. Submit copies of the system installation, operation and maintenance manual prior to delivery.

G. Submit copies of all quality control testing documentation, and written warranty to the commissioner at time of documentation completion.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Manufacturer shall have a minimum of 3 years experience in producing similar equipment.

C. Installer shall be a licensed NYC installer having a minimum of 3 years experience in installing similar equipment.

D. Installer must have completed, if applicable, manufacturer's instruction courses on installation of piping.

E. The pipe and fittings shall be free from defects including delimitations, indentations, pinholes, foreign inclusions, bubbles, resin-starved areas which, due to their nature degree or extent, detrimentally affect the strength and serviceability of pipe or fittings. The pipe and fittings shall be as uniform as commercially practicable in color, opacity, density, and other physical proper- ties.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Use every precaution to prevent damage to the equipment during transportation and delivery to the site.

1. Do not allow equipment to be dropped, bumped, dragged, pushed, rolled or moved in any way which will cause damage.
2. If, in the process of transportation or handling, any equipment is damaged, replace or repair such equipment or accessories. Make all required repairs.

B. Provide temporary storage on site prior to installation in a dry, enclosed area, off the ground and away from all possible contact with water, ice or snow. Materials shall be protected from extreme heat and direct sunlight.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ameron International.
2. National Oilwell Varco
3. Conley Composites
4. Or approved equal

2.2 GENERAL REQUIREMENTS

A. Both the pipe and fittings shall be from the same manufacturer, to ensure both material and dimensions compatibility.

B. Double containment piping shall be manufactured as an integral unit. The primary pipe shall be chemically inert, non-permeable, fiberglass reinforced epoxy resin which is inherently resistant to deterioration due to water and microbial attack. The primary pipe shall be covered with a porous layer to provide a small interstitial space to facilitate rapid leak detection. A secondary containment layer, comprised of the same material as the primary, shall be wound over the primary and porous layers.

C. All double containment pipe components shall be listed with Underwriters Laboratories (UL) for use as nonmetallic underground piping for petroleum products, alcohols, and alcohol- gasoline mixtures. All pipe, fittings, and adhesives must demonstrate performance which meets or surpasses testing specified in UL subject 971 for all fluids.

2.3 PERFORMANCE REQUIREMENTS

A. Pipe, fittings and adhesives shall be suitable for continuous operations at the pressures listed below at a sustained temperature of 150°F:

1. 2-inch nominal pipe size:

   a. Primary piping: 250 psi.
   b. Secondary piping: 40 psi.

2. 4-inch nominal pipe size:

   a. Primary piping: 125 psi.
   b. Secondary piping: 40 psi.

2.4 PHYSICAL AND MECHANICAL PROPERTY REQUIREMENTS

A. Primary pipe shall conform to ASTM D2310 standard classification RTRP-11CX and ASTM D2996 specification RTRP 11CF1-5430. Secondary piping shall be classified as RTRP-11AX.

B. Double containment pipe shall have the following characteristics:

1. Longitudinal Tensile Strength: 32,500 psi.
2. Circumferential Tensile Strength: 65,000 psi.
3. Longitudinal Tensile Modulus: 2,800,000 psi.
4. Circumferential Tensile Modulus: 4,000,000 psi.
5. Longitudinal Compressive Strength: 2,800 psi.
6. Longitudinal Compressive Modulus: 2,800,000 psi.
7. Long-Term Hydrostatic Design Basis (Static): 21,000 psi.
8. Maximum Linear Thermal Expansion: 9,000,000 in/in/°F.
9. Stiffness factor at 5 percent deflection:

   a. 2 inch nominal pipe size: 45 lb-in^3/in^2. b.
   b. 4 inch nominal pipe size: 55 lb-in^3/in^2.

2.5 MATERIALS

A. Primary Carrier Pipe:

1. All primary filament-wound pipe shall contain a resin-rich inner liner with a minimum thickness of 0.015 inches. The liner resin system shall be a chemically resistant epoxy resin that has been demonstrated to be satisfactory for use with diesel fuel including biodiesel blends up to 20 percent (B20) and unleaded gasoline including ethanol blends up to 85 percent (E85).
2. The resins, reinforcements, colorants, and other materials when combined as a composite laminate structure shall meet the performance requirements of this specification. Glass fiber reinforcement shall be Type E glass with an epoxy-compatible finish. Glass fiber content shall not be less than 60 percent by weight of the reinforced structural wall.

B. Interstitial Layer: The interstitial layer between the primary and secondary containment layers shall be of uniform thickness with the ability to allow fluid flow throughout, meeting UL criteria. This layer shall also prevent relative movement of the primary and secondary pipe walls.

C. Secondary Containment Pipe: Construction of the secondary containment pipe and materials used shall be identical to the reinforced portion of the primary pipe, exhibiting similar physical properties.

2.6 DIMENSIONS AND TOLERANCES

A. Primary pipe shall be manufactured to steel pipe outside diameters. Pipe outside diameter tolerances shall not exceed ±1 percent. Secondary piping shall fit into fittings supplied by manufacturer.

B. The total wall thickness of pipe shall not at any point be greater than 120 percent or less than 87 ½ percent of the nominal thickness.

C. All fittings shall have face-to-face dimensions and laying lengths as specified in the manufacturer's literature.

2.7 SYSTEM JOINING AND ASSEMBLY

A. Primary pipe and fittings shall be joined by means of a matching taper adhesive joint.

Adhesives used for joining components shall be compatible with all intended fluids. The adhesive system shall be used in accordance with the manufacturer's recommendations.

B. Secondary containment pipe joints shall be made with bolted clamshell halves bonded together with adhesive. Clamshell halves shall be fabricated from the identical material to primary fittings and shall be listed by Underwriter's Laboratories (UL).

C. The following adapters and crossovers shall be provided as required:

1. Bell x NPT threaded female.
2. Bell x NPT threaded male.
3. Spigot x NPT threaded female.
4. Spigot x NPT threaded male.

D. Flanges shall be two-piece (van Stone) type with raised grooves on the sealing face. Fiberglass-reinforced stub ends shall be adhesive bonded to the pipe or fitting.

2.8 MARKING

A. Each component shall be marked to show the following:

1. Underwriter's Laboratories listing mark.
2. Manufacturer's name.
3. Maximum pressure rating.

B. Identify all piping in accordance with Section 23 05 53 "Identification for HVAC Piping and Equipment".

2.9 FACTORY TESTING

A. Fittings shall be hydrostatically tested according to UL specification by the manufacturer to rated pressure prior to shipment for signs of leakage or porosity.

B. All primary and secondary piping shall be proof tested at or above field test conditions.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. All equipment shall be installed in strict accordance with the most recent manufacturer's guide- lines and NFPA code

B. Field cutting and tapering primary pipe: Pipes shall be held securely during all cutting and tapering. When using a pipe vise, wrap pipe with a protective material approved by the pipe manufacturer and take care not to damage or over-deflect pipe when tightening the vise. A fine- blade hacksaw, radial cut-

off saw or circular saw with abrasive wheel shall be used to cut pipe in the field. Ends shall be cut square to within 3/16 inch. Contractor shall use a taper maker approved by the piping manufacturer to taper primary pipe.

C. Joint Preparation: All pipe tapers must be clean, dry and warm for proper bond. Avoid contamination from fingerprints, petroleum fumes, mist, and condensation. Clean contaminated joints by sanding with emery cloth. Dry wet or moist tapers with a blow dryer or heat gun taking special care not to overheat or burn the pipe. During cold weather tapers, fittings, and adhesives shall be heated to between 50 and 100 degrees Fahrenheit. Only adhesives approved by the piping manufacturer shall be used.

D. Double containment piping shall be supported from hangers and supports as needed.

E. Piping shall be installed in accordance with the manufacturer's instructions especially regarding linear expansion due to temperature differentials. Contractor shall consider the linear expansion of the pipelines when installing them and provisions shall be made to compensate for such changes in length.

F. Piping runs shown on contract drawings depict essentially straight runs of piping. Offsets, bends, expansion loops shall be provided to accommodate the necessary expansion/contraction needed in accordance with manufacturer's instructions. The contractor shall prepare expansion/contraction analysis which identifies differential expansion, pipe stresses and thrust loads on fixed supports. Expansion/contraction analysis shall include sketches demonstrating that pipe deflection will not cause interference between pipe and any other object.

G. Piping shall slope back toward tanks. Annular space shall be allowed to drain into tank containment collar for leak detection.

H. Fittings and piping shall be joined together per manufacturer's recommendations and as specified herein

I. Buried pipe: For all buried fiberglass double containment piping provide a trench width equal to the pipe diameter plus six inches on each side and allowing for at least four inches between multiple lines. Trench bottom shall slope evenly towards sumps or tanks with a minimum pitch of 1/8 inch per foot. Trench bottom shall be free of hard or sharp objects. Pipes shall be protected from impact during backfilling and abrasion during operation by surrounding with a minimum of four inches of pea gravel. For piping buried underneath four inches or more of reinforced concrete, a minimum of four inches of pea gravel shall be provided between the top of the pipe and reinforced concrete. For piping buried underneath two inches or more of asphalt pavement, a minimum of eight inches of pea gravel shall be provided between the top of the pipe and asphalt pavement. For piping buried beneath unpaved ground surfaces, a minimum of eighteen inches of pea gravel shall be provided between the top of the pipe and the unpaved surface.

3.3 FIELD TESTING

A. Field testing shall be done by pneumatic means and shall be done where complete adherence to the manufacturer's installation instructions and use of manufacturer's testing equipment are observed.

B. Plan field tests carefully and carry them out with all due precautions. Pressurizing equipment should be suited to the size of the system and the pressure required and shall be operated by qualified and experienced personnel only. Pressure sources shall be capable of approaching test pressure gradually. Use gauges with a full-scale reading of no more than twice the test pressure. Use reliable gauges calibrated against a dead weight tester zeroed for atmospheric pressure. Should gauge reading fail to remain stable, a soap solution shall be used to locate leakage.

C. Manufacturer's Services: The Contractor shall retain the services of the supplier to supervise and/or perform testing and start-up of all system components. As part of these services, the supplier shall

include for those equipment items not manufactured by him, the services of an authorized manufacturer's representative to check the equipment installation and place the equipment in operation. The manufacturer's representative shall be thoroughly knowledgeable about the installation, operation and maintenance of the equipment.

SECTION 335213.16

Stainless Steel Double Containment Piping

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. Related Sections:

1. Section 22 15 13.10 "Motor Fuel Dispensing System."
2. Section 22 15 13.20 "Fluid Dispensing System."
3. Section 33 56 14 "Underground Storage Tanks."
4. Section 26 32 13 "Hangers and Supports."

C. Governing Standards:

1. ASME B31.3 – Standards for Pressure Piping.
2. FDNY Rules.
3. NFPA 30 – Flammable and Combustible Liquids Code.
4. NFPA 30A – Code for Motor Fuel Dispensing Facilities and Repair Garages.
5. NFPA 31 – Installation of Oil-Burning Equipment.
6. NYC Fire Code.
7. NYC Mechanical Code.
8. UFC – Uniform Fire Code.

1.2 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Submit the following Shop Drawings and other data for approval.

1. Catalog data consisting of specifications, illustrations and a parts schedule that identifies the materials to be used for various piping components and accessories. The illustrations shall be in sufficient detail to serve as a guide for assembly and disassembly.
2. Fully dimensioned layout of pipe, fittings, couplings, sleeves, expansion provisions, anchors, harnessing, valves, and equipment. Label pipe size, type and materials on drawing and include schedule. Piping layout drawings shall indicate information on pipe supports, location, support type, hanger rod size, insert type and the load in pounds.
3. Cross sections showing elevations of pipe, fittings, sleeves, couplings, supports, anchors, harnessing, valves, and equipment.
4. Locations where pipe and valve identification signs will be placed.
5. Other piping appurtenances.

6. Certificates: Submit certificate of compliance with referenced standards.

C. When special designs or fittings are required, show the work in large detail and completely describe and dimension the special or fitting.

D. Submit expansion/contraction analysis.

E. Provide field assembly instructions.

F. Submit copies of the system installation, operation and maintenance manual prior to delivery.

G. Submit copies of all quality control testing documentation, and written warranty to the commissioner at time of documentation completion.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Manufacturer shall have a minimum of 3 years experience in producing similar equipment.

C. Installer shall be a licensed NYC installer having a minimum of 3 years experience in installing similar equipment.

D. Installer must have completed, if applicable, manufacturer's instruction courses on installation of piping.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Use every precaution to prevent damage to the equipment during transportation and delivery to the site.

1. Do not allow equipment to be dropped, bumped, dragged, pushed, rolled or moved in any way which will cause damage.
2. If, in the process of transportation or handling, any equipment is damaged, replace or repair such equipment or accessories. Make all required repairs.

B. Provide temporary storage on site prior to installation in a dry, enclosed area, off the ground and away from all possible contact with water, ice or snow. Materials shall be protected from extreme heat and direct sunlight.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ipex.
2. Uponor

3. Zurn Industries
4. Or approved equal

2.2 GENERAL REQUIREMENTS

A. Both the pipe and fittings shall be from the same manufacturer, to ensure both material and dimensions compatibility.

B. All double containment pipe components shall be listed with Underwriters Laboratories (UL) for use with petroleum products, alcohols, and alcohol-gasoline mixtures.

C. Each contained pipe system shall consist of Schedule 40 T304L Stainless Steel primary piping system supported within a Schedule 10 T304L Stainless Steel secondary containment housing. Each system shall be provided with suitable drains and vents and be designed to provide complete drainage of both the primary and secondary containment piping. Interstitial supporting devices shall be made from Polypropylene clips and shall be provided within the secondary containment pipe, and shall be designed to allow continuous drainage in the annular space to the drain point. Drain fittings shall be designed to allow a valve attachment to be made so that the secondary containment compartment may be readily drained and manually checked for leaks.

2.3 MATERIALS

A. Piping:
1. The primary pipe and fittings shall be manufactured from Schedule 40 Type 304L stainless steel materials as listed by ASTM and ANSI.
2. The secondary containment pipe and fittings shall be Schedule 10 Type 304L stainless steel.
3. All listed primary pipe and containments shall be Schedule 40 materials. Pipe shall have Schedule 40 steel pipe thickness according to ANSI. All listed pressure fittings shall be Schedule 40 according to ANSI. All other unlisted components that are intended for use as pressure retaining components shall have sufficient thickness and reinforcement so as to be able to maintain the same pressure ratings as the equivalent Schedule 40 steel pipe.
4. Interstitial supporting devices used to center and support the primary piping within the secondary containment piping shall be manufactured from Polypropylene clips, according to ASTM and ANSI.
5. All listed secondary containment pipe and fittings shall be Schedule 10 thickness. Containment fittings shall have carrier components pre-assembled, supported and tested. Carrier fittings shall be pre-beveled ready for field welding. Containment fittings shall have spigot ends to allow for a closure coupling to be installed after primary system is pressure tested. All other unlisted components that are intended for use as pressure retaining components shall have sufficient thickness and reinforcement so as to be able to maintain the same pressure ratings as the equivalent Schedule 10 Type 304L stainless steel pipe and fittings.

2.4 FACTORY TESTING

A. All fittings shall be pre-assembled and pre-tested by the manufacturer.

B. All primary and secondary piping shall be proof tested at or above field test conditions.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. All equipment shall be installed in strict accordance with the most recent manufacturer's guide- lines and NFPA code.

B. Double containment piping shall be supported as described in Section "Hangers and Supports."

C. Double containment piping shall be installed in accordance with the manufacturer's instructions especially regarding linear expansion due to temperature differentials. Contractor shall consider the linear expansion of the pipelines when installing them and provisions shall be made to com- pensate for such changes in length.

D. Piping runs shown on contract drawings depict essentially straight runs of piping. Offsets, bends, expansion loops shall be provided to accommodate the necessary expansion/contraction needed in accordance with manufacturer's instructions. The contractor shall prepare expansion/contraction analysis which identifies differential expansion, pipe stresses and thrust loads on fixed supports. Expansion/contraction analysis shall include sketches demonstrating that pipe deflection will not cause interference between pipe and any other object.

E. Piping shall slope back toward tanks or sumps. Annular space shall be allowed to drain into tank containment collar or sumps for leak detection.

F. Fittings and piping shall be joined together per manufacturer's recommendations and as specified herein.

G. All primary piping welds shall be made using gas arc welding (GAW, TIG or MIG) techniques according to ASME B31.3. All welding shall be performed by a certified pipe welder and shall be subject to 100% visual inspection prior to testing.

H. Secondary containment joints shall be slip style closure couplings using (GAW) techniques according to ASME B31.3. The splitting and re-welding of fittings shall not be permitted. Flanges, unions, couplings or other methods of disassembly shall be provided at connections to equipment, dissimilar piping and at other locations suitable for inspection or dismantling of a system.

I. All contractor personnel that will prepare gas welded stainless steel field welds shall be qualified to do so according to the requirements of the ASME Boiler and Pressure Vessel Code, by sufficient experience, or by some other agreed to method.

J. All contractor personnel that will prepare stainless steel joints shall be qualified for such welding practices according to the welding qualification procedures described in ASME B31.3, Chapter VII for welding of metal piping.

3.3 FIELD TESTING

A. Field testing shall be done by pneumatic means and shall be done where complete adherence to the manufacturer's installation instructions and use of manufacturer's testing equipment are observed.

B. Upon completion of installation, the primary piping system shall be pressure tested at 150% of the system design pressure for a period of one hour. Additionally, the system may be tested during the installation at intervals to be determined by the manufacturer. Both the preliminary and final tests shall be done in strict accordance with recommendations of the manufacturer including the sequence of duration of such tests.

C. Upon completion of the installation, the secondary containment piping system shall be pneumatically tested at a minimum duration of 2½ hours. The external joints should be soaped and visually inspected for leaks. Both the preliminary and final tests shall be done in strict accordance with the recommendations of the manufacturer, including the sequence and duration of such test.

D. Following installation of the system, the primary piping system shall be flushed clean. The contractor shall check the operation of all valves, leak detection devices and appurtenances.

E. The annular space shall be purged of moisture containing air by replacing the volume of air with clean, dry nitrogen.

F. Plan field tests carefully and carry them out with all due precautions. Pressurizing equipment should be suited to the size of the system and the pressure required and shall be operated by qualified and experienced personnel only. Pressure sources shall be capable of approaching test pressure gradually. Use gauges with a full-scale reading of no more than twice the test pressure. Use reliable gauges calibrated against a dead weight tester zeroed for atmospheric pressure. Should gauge reading fail to remain stable, a soap solution shall be used to locate leakage.

G. Manufacturer's Services: The Contractor shall retain the services of the supplier to supervise and/or perform testing and start-up of all system components. As part of these services, the supplier shall include for those equipment items not manufactured by him, the services of an authorized manufacturer's representative to check the equipment installation and place the equipment in operation. The manufacturer's representative shall be thoroughly knowledgeable about the installation, operation and maintenance of the equipment.

SECTION 335614
Underground Storage Tanks

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Work Included:

1. Underground storage tanks (UST) shall be provided to store diesel fuel, unleaded gasoline, and fuel ethanol (E85) for the fuel dispensing system supplying fuel to department vehicles and trucks as well as motor oil, hydraulic oil, and waste oil for the fluid dispensing system supplying the maintenance bay.
2. Contractor shall furnish and install NYC approved tanks, anchor straps, risers, pump containment sumps, backfill, and all required trim for a complete and operational system. Contractor shall provide materials specified or implied as being necessary to complete work, unless specifically noted otherwise.

B. Related Sections:

1.	Section 22 15 13.10	"Motor Fuel Dispensing System."
2.	Section 22 15 13.20	"Fluid Dispensing System."
3.	Section 26 31 13	"Engine Generators."
4.	Section 33 52 13.13	"Fiberglass Double Containment Piping."
5.	Section 33 52 13.16	"Stainless Steel Double Containment Piping."

C. Governing Standards:

1.	ASTM Specification D4021	- Glass Fiber Reinforced Polyester Underground Petroleum Storage Tanks.
2.	NFPA 30	- Flammable and Combustible Liquids Code
3.	NFPA 30A	- Code for Motor Fuel Dispensing Facilities and Repair Garages
4.	NFPA 31	- Installation of Oil-Burning Equipment
5.	UFC	- Unified Fire Code
6.	UL 1316	- Underwriters Laboratories (UL) Glass Fiber Reinforced Plastic Underground Storage Tanks for Petroleum Products.
7.	UL 2080	- Underwriters Laboratories (UL) Standard for Fire Resistant Tanks for Flammable and Combustible Liquids

1.2 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Submit shop drawings and accessory cut sheets for approval. The UST design drawings shall show principal dimensions, size, type and locations of all connections and fittings and locations of all options/ accessories. Design drawings shall also include UST catalog cuts, and vendor cuts for associated accessory items and subassemblies.

C. Submit copies of the system installation, operation and maintenance manual prior to UST delivery.

D. Submit copies of all quality control testing documentation, installation inspection documentation, and written warranty to the Commissioner at time of documentation completion.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."
B. Manufacturer shall have a minimum of 3 years experience in producing similar equipment.
C. Installer shall be a licensed NYC tank installer having a minimum of 3 years experience in installing similar equipment and shall show evidence of at least 5 installations in satisfactory operation.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Use every precaution to prevent damage to the equipment during transportation and delivery to the site.

1. Do not allow equipment to be dropped, bumped, dragged, pushed, rolled or moved in any way which will cause damage.
2. If, in the process of transportation or handling, any equipment is damaged, replace or repair such equipment or accessories. Make all required repairs.

B. Handling of UST shall be moved by lifting lug only – chains or cables shall not be wrapped around tank.

C. Provide temporary storage of UST on site prior to installation in a dry, enclosed area, off the ground and away from all possible contact with water, ice or snow. Materials shall be protected from extreme heat and direct sunlight.

D. Damage to materials during storage shall be prevented primarily by minimizing the amount of time they are stored at the job-site before being incorporated into the work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Underground Storage Tanks:

a. Xerxes.
b. Containment Solutions.
c. Fibrelite

d. Or approved equal

2. Leak and Inventory Control System:

a. Veeder-Root
b. Varec
c. Franklin Fueling System
d. Or approved equal

3. Accessories:

a. Xerxes.
b. Containment Solutions
c. Fibrelite
d. Or approved equal

2.2 UNDERGROUND STORAGE TANKS

A. General:

1. Provide ten (10) NYC approved double wall underground storage tanks, as shown and specified herein. Tanks storage volume shall as shown in Contract Drawings and shall be engineered for underground storage of flammable and combustible liquids.
2. Tanks shall be approved for listing by Underwriters Laboratories (UL). Tanks shall comply with UFC and NYC standards.
3. The tanks, including all accessories, shall be installed in strict accordance with the manufacturer's recommendations and applicable fire and environmental codes.
4. Tanks shall be manufactured with either glass-fiber reinforced resin or glass-fiber reinforced polyester.
5. All tanks shall be compatible with E85 and B20 fuels.
6. Tank shall be capable of being buried in ground with seven (7) feet of overburden over the top of the tank, the hole fully flooded and a safety factor of 5:1 against general buckling.
7. Tank shall withstand surface H-20 axle loads.
8. Tanks shall support accessory equipment such as drop tubes, submersible pumps, heating coils, stick ports etc.
9. Tanks shall have an interstitial space between the primary and secondary walls to allow for the free flow and containment of leaked product from the primary tank. The tank shall accommodate a leak detector through a dedicated monitoring fitting.
10. Interstitial space shall be dry to prevent possible product contamination. Hydrostatic monitoring of interstitial space is not acceptable.
11. Tanks shall include 22" manways as shown on contract drawings, complete with UL- listed gaskets, bolts and cover.
12. Tanks shall have an integral 42" containment collar encircling each manway.
13. Tanks shall be enclosed in vaults as shown in contract drawings. Space between tanks and vaults shall be filled with backfill per manufacturer's recommendations.

B. Accessories:

1. Anchor Straps:

a. Straps shall be FRP anchor straps as supplied by tank manufacturer.
b. Number and location of straps shall be as specified by tank manufacturer.

2. Collar Riser:

a. A 42" containment collar riser shall be installed to house submersible pumps, leak detectors, heating coils, and other equipment specified in Sections 22 15 13.10 "Motor Fuel Dispensing System" and "Fluid Dispensing System."
b. Risers shall be of water tight design.
c. Risers shall be cut to length per manufacturer's installation instructions.

3. Gauge Plates shall be installed under each service fitting and manway opening and be supplied by tank manufacturer.
4. NPT Threaded Fittings:

a. All standard threaded fittings shall be half-couplings and shall be 4" or 6" diameter. Reducers shall be used to connect to smaller diameter pipes.
b. NPT fittings shall withstand a minimum of 150 foot-pounds of torque and 1000 foot-pounds of bending, both with a 2:1 safety factor.

5. Spill Containment Fill Box Assembly:

a. Spill containment fill box assemblies (SCFBA) shall be provided as shown on contract drawings. SCFBAs shall be constructed of 304 stainless steel, capable of withstanding a 150 psi line test, have no less than fifteen (15) gallons capacity for containment of product spilled during the coupling and uncoupling of the fill hose. Each SCFBA shall include an automatic drain, test plug assembly, lockable cap, bronze fill adapter, and a No. 20-mesh brass screen.
b. A tank/product identification tag shall be provided with each spill containment fill box assembly. At a minimum, each identification tag shall include product type, actual tank capacity in US gallons, and tank number (i.e. Tank #1, Tank #2, etc.). Identification tag shall be securely attached to the inside of the fill box (spot tack welding of the tag is not acceptable).

2.3 LEAK AND INVENTORY CONTROL SYSTEM

A. Provide a complete monitoring system with combined inventory control for at least ten (10) tanks, interstitial leak sensing, sump leakage detection, and emergency generator applications.

1. Monitoring Console:

a. Shall be wall-mounted as shown in contract drawings.
b. Shall be equipped to communicate with fuel management system.
c. The console shall be equipped with an auxiliary contact for remote signaling. The auxiliary contact shall relay all alarm conditions as a single grouped "trouble" alarm signal. Contacts shall be SPDT, Rated at a minimum of 5A at 120 VAC.
d. Shall include the following alarm conditions:

1). Fuel tank low level.

2). Leak at fuel tank (interstitial probe).
3). Leak at fuel tank containment collar.
4). Oil tank low level.
5). Leak at oil tank (interstitial probe).
6). Leak at oil tank containment collar.
7). Leak at dispenser sump.
8). Waste oil tank high level.
9). Leak at waste oil tank.
10). Leak at waste oil tank containment collar.
11). Generator day tank low level.
12). Leak at generator day tank.
13). Leak at pump set transition sump.
14). Leak at fluid pump transition sump.
15). Leak at fluid transition sump.

e. The unit shall include the following options:

1). Integrated report printer with built-in take-up spool for hard copy documentation of inventory, leak detection and alarm information.
2). Internal modem for direct data transmission over phone lines, hard wired.
3). 4-relay module, programmable to alarm limits and capable of actuating external alarm devices.

2. Sensors:

a. At a minimum, the following sensors shall be provided. Additional sensors shall be furnished per manufacturer's recommendations.

1). Fuel tank level.
2). Fuel tank interstitial leak sensor.
3). Fuel tank containment collar leak sensor.
4). Oil tank level.
5). Oil tank interstitial leak sensor.
6). Oil tank containment collar leak sensor.
7). Waste oil tank level sensor.
8). Waste oil tank interstitial leak sensor.
9). Waste oil tank containment collar leak sensor.
10). Dispenser sump leak sensor.
11). Containment sump leak sensor.

b. System shall be tied to the emergency generator level and leak detection sensors per Section "Packaged Engine Generator System."

3. Overfill Alarm and Acknowledgement Device:

a. Each tank shall be equipped with an overfill alarm. Alarm shall be connected to an alarm relay in the system monitoring panel. System monitoring panel shall activate alarm when fuel tank level reaches a preset level to warn of a potential tank bulk delivery overfill. Alarm trigger

level shall be settable from the system monitoring panel. Alarm device shall include both audible and visual alarms. Audible alarm shall be adjustable to have duration of 0 to 60 seconds and a noise level of 78 to 103 dB (at 10 feet).

b. Each overfill alarm shall include an acknowledgement device allowing delivery personnel to shut off audible alarm. Visible alarm shall remain illuminated until system monitoring panel prints an inventory increase report.

c. Overfill alarms and acknowledgement devices shall be located near fill port locations and by each waste oil disposal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions or execution requirements.

3.2 INSTALLATION

A. All equipment shall be installed in strict accordance with the most recent manufacturer's guidelines, and NFPA codes.

3.3 TESTING

A. Tanks shall be tested according to manufacturer's guidelines at time of installation.
B. Contractor shall individually test tanks for leakage prior to installation.
C. Tanks shall be tested to 20-psi and witnessed by FDNY
D. Manufacturer's Services: The Contractor shall retain the services of the supplier to supervise and/or perform checkout and start-up of all system components. As part of these services, the supplier shall include for those equipment items not manufactured by him, the services of an authorized manufacturer's representative to check the equipment installation and place the equipment in operation. The manufacturer's representative shall be thoroughly knowledgeable about the installation, operation and maintenance of the equipment.
E. A factory instructed representative shall be present at the first tank filing.

END OF SECTION 335614

SECTION 43 41 16
Petroleum Bulk Storage (PBS) Tank Systems

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. This section includes all labor, material, and equipment required for providing/installing underground PBS Tank Systems as indicated on Contract Drawings or as directed by the Commissioner.

B. Related Sections
   1. Section 43 41 17 - Petroleum Bulk Storage (PBS) Product Piping
   2. Section 43 41 18 - Petroleum Bulk Storage (PBS) Instrumentation

1.3 APPLICABLE STANDARDS

A. Work performed under this section shall comply with following standards and all other applicable Federal, State and local standards, including revisions, to the date of contract.
   1. ASME American Society of Mechanical Engineers
   2. NFPA National Fire Protection Association
   3. UL Underwriters' Laboratories
   4. NEC National Electrical Code
   5. NYCEC The New York City Electrical Code
   6. ANSI American National Standards Institute
   7. IEEE Institute of Electrical and Electronic Engineers
   8. The Board of Standards and Appeals NYC
   9. The Building Code NYC
   10. The Fire Code NYC
   11. New York City Fire Law Handbook
   12. AWS: American Welding Society

Phone: 718 999-2541

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

A. Contractor Shop Drawings submittals shall include, but not be limited to, following:
1. Manufacturer's descriptive, technical literature and catalog cuts, including installation instructions.
2. Piping layout drawing.
3. Tanks and appurtenances.
4. Catalog cuts, as appropriate.
5. Any deviations from Contract Drawings because of physical interferences, substitutions, or field verifications shall be clearly indicated on shop drawings.

B. Submit the following closure documents as applicable at project completion. Contractor shall not receive final payment until all close out documents are submitted.
1. PBS Applications
2. NYCDOB completion letter
3. FDNY BFP A-111 letter of completion
4. FDNY BFP Storage Use Permit, if required
5. NYCBEC (Bureau of Electrical Control) Certificate of Electrical Completion
6. As-Built Drawings

1.7 GENERAL TESTING AND RESPONSIBILITY

A. Installation of tanks and equipment for the petroleum storage systems shall be performed by Contractor who shall be a New York City Licensed Installer for storage tank systems. Contractor shall have minimum of three (3) years of proven experience in installation of petroleum storage tank systems.

B. Purchase petroleum storage systems components from manufacturer approved by the Commissioner and FDNY BFP. Manufacturer shall maintain a service depot within proximity of the site with parts and service personnel available for servicing of parts at any time. The Commissioner reserves the right to check the contractor's instruments or to furnish its own instruments.

C. Whenever these Specifications make mention of items/details not indicated on Contract Drawings, or where items/details are indicated on Contract Drawings and not mentioned in these Specifications, items/details will be deemed included in systems.

1.8 ALTERATIONS TO ACCOMMODATE EQUIPMENT

A. Contract Drawings indicate typical installation based on certain type of equipment, and are not to be construed as representing layout for any other type. Any alterations which are necessary to adequately and satisfactorily accommodate the equipment to be installed under this Contract shall be made by Contractor at his own expense, in accordance with the Contract and Specifications and subject to approval by the Commissioner.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 NEW UNDERGROUND FUEL STORAGE TANKS (USTS)

A. Provide and install new USTs as shown on Contract Drawings and per manufacturer's recommendations. Tanks shall be New York City approved double wall fiberglass underground storage tanks. Basis of Design Product: as manufactured by Containment Solutions or a comparable product as manufactured by:
   1. Modern Welding Company, Inc.
   2. Highland Tank & Manufacturing Company, Inc.
   3. or approved equal

B. Tanks shall be double wall fiberglass in conformance with UL and API codes and standards and so labeled.

C. Tanks shall be secured to a concrete hold down slab as per manufacturer's recommendations.

D. Contractor shall provide and install deflector plates centered under all tank openings.

E. Product Storage:

1. Diesel tanks shall be compatible with and capable of storing diesel fuel containing up to 20% biodiesel (B20).
2. Gasoline tank shall be compatible with and capable of storing gasoline-ethanol blends with up to 15% ethanol content (E15).

2.2 SHALLOW BURIAL SPILL CONTAINMENT FILL MANHOLES

A. Spill containment fill manhole assemblies shall be furnished and installed where indicated on Contract Drawings. Each spill containment manhole shall be FDNY BFP approved, for shallow burial.

B. All fill caps shall have sign that labels type of product stored in tank. Signs to be per API color-coding for the product stored in the tank.

C. Below grade spill containment fill box shall be constructed of 300 grade stainless-steel, capable of a 150 psi line test, with a capacity of 15 gallons. Each spill containment box shall be provided with an automatic drain, test plug assembly, watertight and lockable cap, bronze adapter, No. 20-mesh brass screen, and grounding rod.

D. Each spill containment manhole shall have cover permanently marked according to tank contents and painted to conform with the American Petroleum Institute Color and Symbol Code.

2.3 FUEL DISPENSERS

A. Each fuel dispenser shall consist of a single fuel dispensing system. Each fuel dispenser shall come equipped with cc option, 10-1 wheel pulser, and solenoid., and shall include but not be limited to following:

1. Register: Non-computer, mechanical type register with power reset interlock that is displayed on both front and back, reading in gallons up to 999.9

2. Totalizer: Non-resettable totalizer that is displayed on front, reading in gallons up to 999,999.9 and rolls over

3. Pump: Gear-type pumping unit with built-in air eliminator. Pump shall be driven by 3/4 hp, 115/230 volt, 60 Hz AC motor

4. Meter: Three piston, positive displacement-type meter, tested and calibrated for accuracy at any speed or pressure

5. Product hose: 3/4 inch by 10 foot long hose

6. Diesel Nozzle, Basis of Design: OPW model 7HB-0100 or a comparable product by one of the following manufacturers:
    1) Fill-Rite
    2) Catlow
    3) or approved equal

7. Gasoline Nozzle

a. Basis of Design: OPW model 7HB-0400 or a comparable product by one of the following manufacturers :
   1) Fill-Rite
   2) Catlow
   3) or approved equal

8. Cabinet: All stainless steel

9. Filter, Basis of Design: Cim-Tek Standard flow, 400-HS10 Hydro-sorb or a comparable product by one of the following manufacturers:
   1) Petroclear
   2) Aeromotive Inc
   3) or approved equal

10. Brand panel: Brand panel shall read type of fuel being dispensed

11. Fuel islands: Size as indicated on Contract Drawings: Steel island form
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Formex Permanent Steel Forms
      2) OPW
      3) Burtco Metal Systems
      4) or approved equal

B. Basis of Design Product (dispenser): Gasboy 9100 Series, Gasboy 9153KTW1M for dual hosed dispensers and Gasboy 9153K for single hosed dispensers, or comparable products by one of the following manufacturers:
   1) Wayne Fueling Systems
   2) Gilbarco Veeder-Root
   3) or approved equal

2.4 EMERGENCY SHUTOFF SWITCH

A. Emergency pump shut-off switches shall be installed for each pump as shown on Contract Drawings. Switches shall be of a type that must be reset manually. Basis of Design: Eaton Catalog No. 10250T5B62-S108 as manufactured by Eaton Corporation or comparable product by one of the following manufacturers:
   1. Federal Signal
   2. Pilla Electrical
   3. or approved equal.

2.5 TANK SYSTEM IDENTIFICATION

A. Mount permanent stencils, labels, or plates on tanks, fill ports and equipment. Include following information:

   1. Manufacturer's statement that tank conforms with Bulk Storage Regulation 6 NYCRR Part 614
   2. Standard of design by which tank was manufactured
   3. List of products and additives which may be permanently stored in tank

4. Year tank was manufactured
5. Unique identification number
6. Dimensions, design, working capacity and tank model number
7. Name of tank manufacturer
8. Date of installation
9. C of A Label for each dispenser, fill box and leak detection/inventory control system

2.6 SIGNS

A. Supply and install all signs required by New York City Fire Code including:
   1. "Caution: When Alarm Sounds, Tank Filled To Capacity. Do Not Overfill" adjacent to overfill alarm.
   2. "No Smoking While Refueling" adjacent to, or on, fuel dispensing island.
   3. "Shut Off Engine While Refueling" adjacent to, or on, fuel dispensing island.
   4. "Emergency Shut-Off Switch" adjacent to fuel dispensing shut-off switch.

2.7 THREADS

A. Threads for threaded fittings shall be American Standard Taper Pipe Thread, in accordance with ANSI B-2.1.

2.8 FITTINGS

A. All product fittings shall be heavy duty steel threaded flanges (NPT) or raised-face-slip-on weld flanges (RFSO).

B. Threaded cast iron fittings shall comply with ANSI B-16.4

C. Steel welded fittings shall be of same weight as piping in which used and comply with ANSI B-16.9 and ASTM A-234

D. Threaded malleable iron fittings shall be banded type ANSI B-16.3 for standard weight, and ANSI B-16.9 for extra heavy weight

2.9 TESTING REQUIREMENTS

A. Hydrostatically test tanks at 20 psi, in accordance with New York City requirements

B. Test tank and piping after erection of piping but prior to final connection

C. The Commissioner reserves right to approve all tests

D. Repair any leaks or defects detected during testing and retesting

E. All tests and retests shall be conducted in presence of The Commissioner

F. The Commissioner may require tests when installation, or any part thereof, is complete. Contractor shall furnish all necessary labor and equipment for testing. If installation fails test, Contractor shall take all necessary corrective actions and retest to satisfaction of the Commissioner.

2.10 OPERATION AND MAINTENANCE (O&M) MANUALS

A. Contractor shall provide three (3) O&M manuals in 3 ring vinyl binders incorporating all manufacturer's information describing operations and maintenance schedules for the system installed. O&M manuals shall include wiring diagrams, detailed equipment list and spare parts required.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

A. Maintain site in a neat and workmanlike manner. Remove debris, dirt, rubbish, etc. from site at end of each day.

B. Contractor is responsible for verifying all dimensions in field and for insuring that interferences do not exist between Contractor's work and that of surrounding work.

C. Initiate a safety program to prevent injury to residents, employees and visitors. Do not block streets, exits, or onsite traffic routes that are scheduled to remain in use during the work.

D. Provide and maintain any structures or lighting and take all measures required by law for protection of public and facility employees.

E. Perform contract work so that no injury or damage will occur to public, structures and property including streets, paving, monitoring wells, recovery wells, sewers, water, electric or any other pipes, mains, conduits. Should any damage or injury be caused by Contractor or anyone in his employ, or by improper or defective workmanship under this contract, Contractor shall repair such damage and assume all responsibility for such injury without cost to the City of New York.

F. At excavations, provide barriers on same day that excavation is made and check barrier integrity daily so that protection is provided at all times.

3.3 INSTALLATION

A. Equipment installed by Contractor shall be in accordance with manufacturer's instructions and applicable codes and regulations including but not limited to 6 NYCRR Parts 612-614, Environmental Conservation Law (ECL) Article 17 Title 10, and EPA 40 CFR Part 280.

3.4 TESTING

A. Shop Tests: Shop testing of tanks shall conform to testing methods and procedures established in referenced standards. Where leaks are detected, tank must be repaired as recommended by standards.

B. Field Tests: Field testing shall conform to requirements of manufacturer, FDNY BFP, equipment manufacturer, and Contract Drawings.

END OF SECTION 43 41 16

SECTION 43 41 17
Petroleum Bulk Storage (PBS) Product Piping

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. This Section specifies requirements for procurement and furnishing of all labor, material and equipment required to install all piping, valves, fittings and appurtenances for installation of systems indicated on Contract Drawings or as directed by the Commissioner.

B. Related Sections
   1. Section 43 41 16 "Petroleum Bulk Storage (PBS) Tank Systems"
   2. Section 43 41 18 "Petroleum Bulk Storage (PBS) Instrumentation"

1.3 APPLICABLE STANDARDS

A. The following publications form a part of this Specification to extent referenced. Publications shall be latest published version:
   1. American Society for Testing and Materials (ASTM) A 53 Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless.
   2. ASTM D 2996 Standard Specification for Filament-Wound "Fiberglass" Glass-Fiber-Reinforced Thermosetting-Resin) Pipe.
   3. Piping and accessories shall comply with ANSI, ASME, AWWA, ISA, and all other applicable federal, state, and municipal codes including revisions to date of Contract.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

A. Submit manufacturer's specifications, installation instructions, and pipe test results.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 UNDERGROUND PIPING AND FITTINGS

A. All buried piping, unless otherwise specified, shall be double-walled pipe with black steel primary carrier pipe surrounded by a fiberglass outer containment pipe. Piping shall be capable of handling fluid for which it is intended and shall be UL-listed and approved for use in New York City by FDNY BFP. In addition, piping shall be capable of handling 100% methanol and B5 to B20 biodiesel.

B. All secondary containment piping shall be fiberglass secondary containment system. All fiberglass piping and fitting joints shall be bonded. Basis of Design: Red Thread IIA as manufactured by NOV Fiberglass Systems or a comparable product by one of the following:
   a. Dualoy 3000 LCX as manufactured by NOV Fiberglass Systems
   b. Dualoy 3000L as manufactured by NOV Fiberglass Systems
   c. Or approved equal.

C. Outer containment piping shall be non-permeable pipe designed to retain any leakage and to channel such leakage as appropriate to a location equipped with a continuous automatically monitored leak detection

system. Piping shall provide 100% containment of primary piping, including flexible connectors. Leak detection system shall be as specified in 43 41 18 on Instrumentation and Control.

D. Aboveground vent piping shall be galvanized steel.

2.2 FILL PIPE

A. Furnish and install submerged drop tube in fill line of each storage tank as indicated on Contract Drawings. Basis of Design of drop tube: Universal valve model 39-0508 or a comparable product by one of the following manufacturers:
1. Franklin Fueling
2. OPW
3. Morrison Bros.
4. Or approved equal

2.3 ABOVEGROUND PIPING

A. All aboveground pipe, unless otherwise specified, shall be hot-dipped full weight black steel pipe, ASTM A 53, Grade B welded. Vent riser piping shall be standard weight, Schedule 40, hot-dipped galvanized steel pipe, ASTM A 53, Grade B welded.

B. Each length of pipe shall be stamped with trademark of its manufacturer.

C. Pipe to be installed shall be free of flaws, blisters, cracks, and all other imperfections or defects which would impair its quality. All pipe shall be tested by manufacturer under standard test pressure.

D. All pipe threads shall be NPT standard, accurately and cleanly cut, and perfect in every aspect.

E. Nipples shall be of same material and weight as pipes installed. Use of running nipples will not be permitted.

F. Pipe sleeves shall be standard weight galvanized steel pipe, provided as required.

2.4 ABOVEGROUND PIPE FITTINGS

A. All fittings and connections shall be screw-type except where indicated on Contract Drawings, or specified herein.

B. All fittings, unless otherwise specified, shall be malleable iron, Class 150, with working pressure of 300 psi at 150 degrees Fahrenheit.

C. Manufacturers: Subject to compliance with requirements, provide valve products by one of the following:
1. Stockham Valves and Fittings
2. Wieland Kessler
3. American Cast Iron Pipe Company
4. Or approved equal.

D. Unions shall have bronze to bronze seats and shall be furnished and installed adjacent to, and on, the downstream side of each threaded-end valve and as shown on Contract Drawings, or as directed by the Commissioner.

E. Flanged connections may be used where indicated on the Contract Drawings and where necessary with approval of the Commissioner.

2.5 VALVES

A. Furnish and install check valve with shear groove in suction line beneath fuel dispensers to prevent suction line from draining.

B. Furnish and install emergency shear valve in product line beneath DEF dispensers.

C. Furnish and install overfill valve in fill line entering storage tanks. Fill line overfill valve shall be set to close when liquid level in tank reaches 90% of the tank capacity.

2.6 VENT CAPS

A. Install vent caps with 2" thread-on connections at end of each vent riser. Vent caps shall be all metal construction, contain flame-retardant 40 mesh bronze screen and conform to NFPA 30. Vent caps shall prevent water and contaminants from entering tank and shall assure easy runoff from precipitation.

B. Vent caps shall assure even pressure in tank during filling and pumping operations.
   1. Diesel vent caps shall be up-flow vent caps:
      a. Model 45-20 as manufactured by Universal Valve
      b. Model 354-0200 AV as manufactured by Morrison Bros. Co.
      c. Model 23-0033 as manufactured by OPW
      d. or approved equal
   2. Gasoline tank vent caps shall be pressure/vacuum vent cap:
      a. Model 46CS-2080 as manufactured by Universal Valve
      b. Model 723V-2230 as manufactured by OPW
      c. Model 748A-0100 AV as manufactured by Morrison Bros. Co.
      d. or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING INSTALLATION

A. All underground piping shall be installed in pea gravel, in accordance with Manufacturer's recommendations, applicable codes, and as shown on Contract Drawings.

B. Slope all suction and return lines towards tank sump at minimum of 1 inch per 8 foot of pipe, or as approved by the Commissioner.. Flexible connectors acceptable to the FDNY BFP shall be provided in suction, discharge, vent and fill piping.

C. Provide each tank with separate vent pipe not less than 2 inches diameter, terminated outdoors in non-hazardous location, well braced in position, at least 10 feet from nearest building opening, and provided with vent covers as indicated. Except as approved by the Commissioner. to permit vapor recovery, vent pipes shall not be obstructed by devices that reduce its capacity thus causing excessive back pressure. Vent pipes shall be run from tank to at least 15 feet above adjacent ground level.

D. All pipes and valves, except where otherwise indicated, shall be arranged so as to be easily accessible for maintenance and restorations, and no change in the general arrangement indicated on Contract Drawings will be allowed unless approved by the Commissioner.. Where lengths of pipe are finally assembled, fittings shall be in correct alignment without forcing them into position.

E. All pipes shall be accurately cut. Deformed or damaged pipe shall in no case be used. All bends shall be made with standard elbows and fittings. All threads shall be cleaned thoroughly and covered with suitable joint compound before joints are made. Every piece of pipe, valve and fitting which is part of pipe work shall be cleaned thoroughly before and, whenever possible, after installation.

F. All aboveground piping shall be installed true to line and grade and be supported by suitable supports, spaced not more than 8 feet on centers. All such supports, anchors, clamps or other devices shall be of standard design, simple in installation, and of an approved manufacturer.

G. Hangers, brackets, supports, anchors, clamps and other devices shall be hot-dip galvanized after fabrication and before assembly and installation. They shall be installed to make entire aboveground pipe system self-supporting and rigid. Defective or inaccurately constructed hangers, brackets, supports, clamps, and other hardware shall not be used. Machine bolts, 5/8 inch in diameter and of proper length shall be used throughout for securing hangers, brackets, clamps, and supports for pipes larger than 3 inches, and ½-inch diameter bolts for pipes 3 inches and smaller.

H. Where expansion bolts are required for securing supports and hangers, holes in masonry shall be drilled to exact size of bolts or sleeves. No packing shall be used. Expansion bolts shall be an approved type, diameter and length.

I. All flanged and mechanical coupling connections shall be made with bolts and nuts of length and diameter required for particular flange size as determined by American National Standard Institute.

J. Proper allowance for expansion and contraction shall be made. Wherever required pipe lengths are to exact dimensions, and where lengths of pipe are finally assembled, flanges and fittings shall be in correct alignment without forcing into position.

K. Gate valve stems shall be vertical where possible and in no case below horizontal position.

L. Pipe to be installed shall be free of flaws, blisters, cracks and all other imperfections or defects which would impair its quality. All pipe shall be tested by manufacturer under standard test pressure.

3.3 CUTTING OF MASONRY

A. Where necessary for proper installation of piping, cut away or break through concrete or brick masonry and, after installation, replace and refinish masonry to satisfaction of the Commissioner..

3.4 CUTTING OF GRADE BEAMS

A. Where necessary for proper installation of piping, core drill through grade beams for necessary piping penetrations. All piping passing through grade beams shall be provided with sleeves of suitable size schedule 40 Galvanized steel piping. All penetrations shall be restored to satisfaction of the Commissioner.

3.5 TESTING

A. Test piping systems in this Specification as indicated on Contract Drawings and as required by applicable codes, equipment manufacturers, and regulations. Perform each test in presence of the Commissioner. Provide water, air and all labor, equipment and accessories to perform tests at no additional cost to the City of New York.

B. Replace defective pipes and fittings at Contractor's expense with sound material. All joints examined during tests and found to be leaking, shall be caulked or otherwise made satisfactory in the opinion of the Commissioner. Tests shall continue until a passing test is achieved.

C. All test gauges shall be certified for accuracy. All instruments other than test instruments shall be disconnected during testing to prevent damage.

END OF SECTION 43 41 17

SECTION 43 41 18
Petroleum Bulk Storage (PBS) Instrumentation and Control

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Work includes:
   1. This Section specifies requirements for instrumentation and control equipment to be used for Petroleum Bulk Storage (PBS) system operation, control, and monitoring.
   2. All instrumentation and control equipment shall be furnished and installed in system, completed, tested, and placed in operation as indicated on Contract Drawings, as specified herein, or as directed by the Commissioner.

B. Related Sections
   1. Section 43 41 16 - Petroleum Bulk Storage (PBS) Tank Systems
   2. Section 43 41 17 - Petroleum Bulk Storage (PBS) Product Piping

1.3 APPLICABLE STANDARDS

A. All instrumentation and control equipment shall comply with following standards and all other applicable federal, state, and New York City Building Codes including revisions to date of Contract:
   1. ANSI American National Standards Institute
   2. ASTM American Society of Testing Materials
   3. ASME American Society of Mechanical Engineers
   4. NEC National Electric Code
   5. ISA Instrumentation Society of America

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

A. Shop Drawings: Shop drawing submittals shall include, but not be limited to the following:
   1. Wiring and schematic diagrams and any other details required to demonstrate that system has been coordinated and will function properly as a unit.
   2. Equipment list, including size, input/output types, expected range of operation, utility requirements, and materials of construction. A List of Materials also shall be included and keyed to drawings. List of Materials shall provide sufficient information to determine compliance with Contract Drawings and Specifications.
   3. Drawings showing proposed layout and anchorage of equipment and appurtenances, and equipment relationship to other parts of work, including clearances for maintenance and operation.
   4. Manufacturers' descriptive and technical literature, including catalog cuts.
   5. Legends for name plates.
   6. Control panel and enclosure drawings providing arrangements, dimensions, cabinet door swing radii and terminations for all panels.
   7. Equipment certifications and test reports.

B. Spare Parts Data: Within 30 days of Shop Drawings approval, furnish spare parts data for each different item of material and equipment specified. Data shall include a complete list of parts and supplies, with current unit prices and a source of supply. A list of all special tools required for installation, maintenance or restoration of equipment shall be provided. Furnish those spare parts and special tools recommended by manufacturers. Provide 12-month supply of any expendable items and frequently replaced parts as identified by manufacturer.

C. Provide Operating and Maintenance (O&M) instructions for each different type of control, instrument and system, as directed by the Commissioner.
   1. Furnish to the Commissioner 3 complete copies of operating instructions outlining procedures required for equipment and system start-up, operation and shut-down. Instructions shall include manufacturer's

name, model number, service manual, parts list and brief description of all equipment and their basic operating features.

2. Furnish to the Commissioner 3 complete copies of maintenance instructions listing routine maintenance procedures, possible breakdown and repairs, and troubleshooting guide.

D. Performance Test Reports: Upon completion and testing of installed system, submit test reports in booklet form showing all field tests performed to adjust each component and all field tests performed to prove compliance with specified performance criteria. Each test report shall indicate final position of controls.

1.7 MANUFACTURER'S SERVICES

A. Provide services of manufacturer's representative experienced in installation, adjustment, and operation of specified instruments and controls. Representative shall supervise installation, adjustment and testing of equipment.

1.8 FIELD INSTRUCTION

A. Provide field instruction course for designated operating staff for a total of the City of New York's 24 hours of normal working time (for each shift). Complete instruction prior to system's final acceptance by The City of New York. Instruction shall cover all items contained in operating and maintenance manuals.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 GENERAL

A. General instrumentation requirements are identified on Contract Drawings. All instruments and control equipment shall conform with the following general provisions.

B. All equipment in a system shall be compatible in function and appearance. Provisions shall be made, where necessary, for signal dampening to suppress noise and spurious electrical signals in order to provide desired degree of performance.

C. All instrument supports and interconnecting wiring and conduit shall be as recommended by manufacturer and approved by the Commissioner.

D. Identifying tag number for each instrument shall be permanently etched or embossed onto a durable tag which shall be fastened to the device housing with stainless steel rivets or self-tapping, stainless-steel screws of appropriate size. Where neither of the above fastening can be accomplished, tag number nameplates shall be permanently attached to device by a circlet of stainless-steel wire.

E. All instruments and devices furnished under this Section requiring electrical power shall be suitable for operation on a 120 Volt ±10%, 60 Hertz ±2 Hertz supply.

F. All instruments shall return to accurate measurement upon restoration of power after a power failure.

G. Unless otherwise noted, all instruments in contact with a process stream shall be furnished with diaphragm seals.

H. Instruments shall be guaranteed to maintain the characteristics listed herein, under conditions listed and shall meet following specifications, except where otherwise noted:
   1. Accuracy ±1% of span
   2. Repeatability: ±0.1% of span
   3. Dead Band: ±1% of span (where applicable) in accordance with ISA Standard S50.1
   4. All signal generators and transmitters shall be capable of operating at a load of 600 ohm in accordance with ISA Standard S50.1, higher when specified. Signals shall be output isolated
   5. All electronic instruments shall be solid-state and capable of operating throughout temperature range of 10 degrees Fahrenheit to 110 degree Fahrenheit, unless otherwise specified
   6. Temperature effect on calibration shall be equal or less than 1% over a temperature change of 100 degrees Fahrenheit

I. Ranges and scales shall be per Contract Drawings or approved by the Commissioner.

J. Where separate measuring elements and transmitters are required, they shall be fully matched and any special cables or equipment required must be supplied for installation.

K. Contractor shall be responsible for matching of electrical characteristics of instruments and shall supply transmitters with ample signal output capacity. Additional signal generators or repeaters shall be avoided if possible, but must be supplied if necessary.

L. Furnish all equipment, unless otherwise specified, in manufacturer's standard enclosure for service, indicated by equipment location.

M. Include all miscellaneous necessary work required to complete installation, including but not limited to bolts, nuts, studs, gaskets, pipe tapping, holes through walls, and restoration.

N. Electrical control conductors shall be No. 14 AWG or larger. Use conductors larger than No. 14, where herein specified or where indicated on Contract Drawings.

O. Size of conductors and other current-carrying parts of switches and control equipment shall be ample for rating of devices to which they are connected for service, without undue heating. In no case shall current density exceed 1,000 amperes per square inch of cross-section. At contacts, current density shall not exceed 150 amperes per square inch.

2.2 LEAK DETECTION/INVENTORY CONTROL SYSTEM

A. Furnish and install leak detection/inventory control system which shall include all parts, equipment and software necessary for a complete system. Leak detection/inventory control system shall include, but not be limited to following:

1. One (1) monitoring system controller
2. One (1) magnetostrictive technology type, inventory control and in-tank leak testing probe assembly per tank (3 total)
3. One (1) annular space discriminating liquid sensing probe for interstitial space of each UST (3 total)
4. Two (2) discriminating liquid sensing probe per dispenser pan (12 total)
5. One (1) discriminating liquid sensing probe per tank piping sump (6 total)
6. One (1) discriminating liquid sensing probe per tank fill port (3 total)
7. One (1) overfill alarm
8. One (1) overfill alarm acknowledgment switch
9. One (1) stick gauge calibrated in inches

B. Basis for Design Product: Veeder Root System components as listed in 2.2C through 2.2Hor a comparable product from the following manufacturers:
   1. Franklin Fueling Systems
   2. Pneumercator
   3. or approved equal

C. Controller shall be capable of performing in-tank leak detection functions and external leak detection functions. Controller shall be completely compatible with all probes, sensors, and dispensers. Controller shall have LCD light groups identifying inventory, system status, setup, and diagnostics. Controller shall be supplied with an integral printer. Controller shall include all software and interface modules required for probes, sensors, dispensers, alarms, and other input/output devices required for a complete system. Controller shall be model TLS-450 Plus, manufactured by Veeder-Root.

D. Inventory control and in-tank testing probe assemblies shall be magnetostrictive technology type. In-tank probe shall be capable of measuring product level in tank in inches, and detecting presence of water in tank. Probe shall be capable of performing 0.1 gallon per hour volumetric tank tightness testing and 0.2 gallon per hour automatic tank gauging in tank system. Probe shall meet NEC, NFPA, and UL requirements for hazardous locations. Probe electronics shall be capable of operating from -20 Celsius to +50 Celsius. In-tank probe assembly shall include 4-inch floats and 4-inch sealed riser cap and ring. Each probe shall be completely compatible with fluid stored in tank. Probe shall be MAG Plus Probe with 4-inch Float Kit, Model No. 847391, as manufactured by Veeder-Root. Probe assembly shall also include Magnetostrictive Probe Installation Kit, Model No. 849600 or approved equal, and Riser Cap and Ring Kit, Model No. 312020-952, manufactured by Veeder-Root. Controller shall be equipped with Four-Input Probe Interface Module, Model No. 329356-002 as manufactured by Veeder-Root.

E. Annular space liquid sensing probe shall be capable of detecting and differentiating between liquid hydrocarbons and other liquids in interstitial space between tank walls. Probe shall meet NEC, NFPA and UL requirements for hazardous locations. Probe electronics shall be capable of operating from -20 Celsius to + 70 Celsius. Annular space (or dike) sensor shall be series 7943 Discriminating Interstitial Sensor, as manufactured by Veeder-Root. Controller shall be equipped with Eight-Input Type A Sensor Interface Module, Model No. 329956-001 as manufactured by Veeder-Root.

F. The dispenser pan sensing probes shall be capable of detecting and differentiating between liquid hydrocarbons and other liquids in dispenser pan. Probe shall meet NEC, NFPA, and UL requirements for hazardous locations, and shall be capable of withstanding the harsh environment and wide temperature ranges possible in intended location. Dispenser pan sensor shall be Series 7943 Solid-State Discriminating Containment Sump Sensor, Model No. 794380-320, as manufactured by Veeder-Root. Controller shall be

equipped with Six-Input Type B Sensor Interface Module, Model No. 329950-001 manufactured by Veeder-Root.

G. The piping containment sump probes and tank fill port probes shall be capable of detecting and differentiating between liquid hydrocarbons and other liquids in the sumps. Probes shall meet NEC, NFPA, and UL requirements for hazardous locations, and shall be capable of withstanding the harsh environment and wide temperature ranges possible in intended location. Sensor shall be Series 7943 Solid-State Discriminating Containment Sump Sensor, Model No. 794380-320, as manufactured by Veeder-Root Controller shall be equipped with Six-Input Type B Sensor Interface Module, Model No. 329950-001, manufactured by Veeder-Root.

H. Overfill alarms shall be audible horn and flashing light type. Overfill alarms shall be supplied with one alarm acknowledgment switch. Alarm electronics shall be capable of operating from -40 degrees Fahrenheit to +150 degrees Fahrenheit. Alarm and acknowledgment switch shall be Series 7900 Overfill Alarm and Alarm Acknowledgment Switch, Models No. 790091-001 or approved equal and 790095-001, manufactured by Veeder-Root. Controller shall be equipped with Four-Relay Output Interface Module, Model No. 329359-001 manufactured by Veeder-Root.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

A. Installation of all equipment shall be in accordance with the NYC Fire Code and the NYC Electrical Code. All electrical work in Class 1 areas shall conform to New York City Electrical Code. Furnish and install all required conduit sealing fittings, explosion-proof accessories, and NEMA Type 7 enclosures where indicated on Contract Drawings, or where required by Code.

B. Install instrumentation and control equipment as indicated on Contract Drawings. All power and control wiring and connections not specifically indicated on Contract Drawings, but required for proper operation of equipment shall be made by Contractor in accordance with these Specifications and New York City Electrical Code. Install all electrical control and instrumentation equipment installed in Class 1 hazardous locations in NEMA Type 7 enclosures. Conduits and wireways leading to and from these areas shall be provided with sealing fittings. All non-conducting metal parts of switches and control shall be rust-proofed by galvanizing, cadmium plating, baked enamel or by use of a non-corroding metal. Springs, wherever used, shall be a phosphor bronze. Contacts shall close fully at a line voltage of 10% below normal.

C. Provide all necessary labor and equipment to print out tank calibration chart at completion of calibration process. Shall submit a minimum of three (3) charts to the Commissioner.

3.3 TESTING

A. General: All equipment (hardware and software) shall be factory and field tested to demonstrate that it provides specified functions. Submit factory and on site test procedures for approved prior to starting actual tests. On site testing shall include checking of cables, testing of system subassemblies and checking of connections for each component and for entire instrumentation and control system. Notify the City in writing when ready to start onsite system testing. The Commissioner will authorize start of testing on mutually-agreed starting date.

B. Shop Testing: All activating devices, instruments, and assemblies furnished under this item shall be set up in shop of manufacturer and tested over the full range of the equipment. Equipment shall satisfactorily perform all functions within requirements of specifications.

C. Field Testing: All instruments and systems shall be tested to ensure conformance with Specifications.
   1. Control systems shall receive dynamic loop tests that conform to intent of ANSI: MC4.1 (ISA-S26). Control systems and equipment shall include provisions for such testing.
   2. Input signals for equipment control shall be simulated for at least 5 signal values from 0 to 100 percent signal, with corresponding equipment response manually recorded, and adjustments made as required. Output signals from equipment shall be read for at least 5 signal values from 0 to 100 percent of meaningful process values, and adjustments shall be made as required.
   3. All instruments used for control functions shall be tested with final elements in circuit in addition to simulated control methods. Adjust instruments and/or final elements to obtain best working conditions for dynamic system.

END OF SECTION 43 41 18

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 481400
Solar Energy Electrical Power Generation System

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. DESCRIPTION

A. This section specifies the furnishing, installation, connection, testing, and commissioning of solar energy electrical power generation systems.

B. The requirements of this Section apply to all sections of Division 48 related to solar energy electrical power generation systems.

1.3. RELATED WORK

A. Section 13 05 41, Seismic Restraint Requirements for Non-Structural Components: Requirement for seismic restraint for nonstructural components.

B. Section 26 05 11, Requirements for Electrical Installations: Requirements that apply to all sections of Division 26.

C. Section 26 05 19, Low-Voltage Electrical Power Conductors and Cables: Requirements for low-voltage conductors.

D. Section 26 05 26, Grounding and Bonding for Electrical Systems: Requirements for personnel safety and requirements for providing a low impedance path for possible ground fault currents.

E. Section 26 05 33, Raceways and Boxes for Electrical Systems: Requirements for boxes, conduits, and raceways.

F. Section 26 08 00, Commissioning of Electrical Systems: Requirements for commissioning the electrical system, subsystems, and equipment.

G. Section 26 29 16, Enclosed Switches and Circuit Breakers: Requirements for enclosed disconnect switches.

1.4. DEFINITIONS

A. Unless otherwise specified or indicated, electrical and electronics terminology used in these specifications, and on the drawings, shall be as defined in IEEE 100 CD.

B. Unless otherwise specified or indicated, solar energy conversion and solar photovoltaic energy system terminology used in these specifications, and on the drawings, shall be as defined in ASTM E772.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Installer Qualifications:

1. The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope, size and type to the required work. In addition, the contractor or subcontractor performing the work must be approved by the New York State Energy Research and Development Authority (NYSERDA).

C. Manufacturer Qualifications:

1. The manufacturer providing the material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.

D. Supports and racking for solar photovoltaic system designs shall be prepared under the seal of a licensed Professional Structural Engineer (PE) retained by Contractor. Where applicable, such as roof top installations, the engineer shall also provide adequate review and structural analysis of the existing structure that will be supporting the proposed solar photovoltaic system. Among the documents that shall be submitted by the engineer are environmental loading analyses (including wind, snow, hail, and where applicable, seismic) and the rack and substrate's ability to withstand these environmental forces. In the instance where the rack is installed on the ground, adequate information shall be presented to demonstrate the earth's ability to support the proposed design.

E. The system shall have anti-islanding capability such that it is incapable of exporting power to the utility distribution system in the absence of utility power.

F. Warranties: The solar energy electrical generating system shall be subject to the terms of FAR Clause 52.246-21, except that the warranty period shall be as noted for the items below:

1. Solar photovoltaic modules and inverter: 10 year manufacturer's warranty against defects in materials and workmanship.
2. Power output: 25 year manufacturer's power output warranty, with the first 10 years at 90% minimum rated power output and the balance of the 25 years at 80% minimum rated power output.

1.6. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Where proposed system shall be a Net Meter project, prepare appropriate applications and submittals to the Commissioner. In all cases, the serving electric utility may have a requirement for further electrical studies, which may include or not be limited to power factor analysis, short circuit protection studies, grid wiring adequacy, or capacities of upstream equipment. If such requirements exist and are required by the serving electric utility, these requirements shall be fulfilled by the Contractor. Provide written documentation confirming the utility's approval of the interconnection of the solar energy electrical power generation system with the utility system.

C. Submittals shall comply with the following requirements:

1. Shop Drawings:

a. Submit sufficient information to demonstrate compliance with drawings and specifications.
b. Include electrical ratings, dimensions, mounting details, materials, required clearances, terminations, weight, wiring and connection diagrams, accessories, and nameplate data.

c. Include shop drawings for foundations and other support structures.

2. Product Data:

a. Include detailed information for components of the solar energy electrical generation system.

1) Wiring.
2) Inverter.
3) Photovoltaic modules.
4) Rack and support assemblies.
5) Instrumentation.
6) Switchgear.
7) DC and AC disconnects.
8) Combiner boxes.

b. Certification from the manufacturer that the system has been seismically tested to International Building Code requirements. Certification shall be based upon simulated seismic forces on a shake table or by analytical methods, but not by experience data or other methods.

3. Manuals:

a. Submit, simultaneously with the shop drawings, complete maintenance and operating manuals including technical data sheets, wiring diagrams, and information for ordering replacement parts.

1) Safety precautions.
2) Operator restart.
3) Startup, shutdown, and post-shutdown procedures.
4) Normal operations.
5) Emergency operations.
6) Environmental conditions.
7) Preventive maintenance plan and schedule.
8) Troubleshooting guides and diagnostic techniques.
9) Wiring and control diagrams.
10) Maintenance and repair procedures.
11) Removal and replacement instructions.
12) Spare parts and supply list.
13) Parts identification.
14) Testing equipment and special tool information.
15) Warranty information.
16) Testing and performance data.
17) Contractor information.

b. If changes have been made to the maintenance and operating manuals originally submitted, then submit updated maintenance and operating manuals two weeks prior to the final inspection.

4. Certifications: Two weeks prior to final inspection, submit the following.

a. Certification by the manufacturers of all major items of the solar energy electric generation system that the system conforms to the requirements of the drawings and specifications, and that they have jointly coordinated and properly integrated their equipment and controls to provide a complete and functional installation.

b. Certification by the Contractor that the solar energy electric generation system has been properly installed, adjusted, tested, commissioned, and warrantied. Contractor shall make all necessary field measurements and investigations to ensure that the equipment and assemblies meet contract requirements.

5. Estimated Annual Power Output: Submit calculated annual power output for each of the proposed solar photovoltaic systems. Provide independent calculations for each fixed, single-axis tracking, or double-axis tracking system.

D. If equipment submitted differs in arrangement from that shown on the drawings, provide drawings that show the rearrangement of all associated systems. Approval will be given only if all features of the equipment and associated systems, including accessibility, are equivalent to that required by the contract and acceptable to the Commissioner.

E. Submittals and shop drawings for independent but related items shall be furnished together and complete in a group. Coordinate and properly integrate materials and equipment in each group. Final review and approval will be made only by groups.

F. Apply for the NYSERDA NY-Sun rebate under PON 2112 (Residential & Nonresidential) at the start of construction. Application shall be filed on behalf of the City of New York - Department of Citywide Administrative Services (DCAS) so that DCAS shall receive rebate directly from NYSERDA. Submit all paperwork to NYSERDA on DCAS behalf through to completion of rebate receipt.

1.7. APPLICABLE PUBLICATIONS

A. Publications listed below (including amendments, addenda, revisions, supplements and errata) form a part of this specification to the extent referenced. Publications are referenced in the text by the basic designation only.

B. American Society for Testing and Materials (ASTM):

1. E772-15 Standard Terminology of Solar Energy Conversion
2. E1038-15 Standard Test Method for Determining Resistance of Photovoltaic Modules to Hail by Impact with Propelled Ice Balls

C. Institute of Electrical and Electronics Engineers (IEEE):

2. IFC-15 International Fire Code

E. National Electrical Manufacturer's Association (NEMA):
1. 250-14 Enclosures for Electrical Equipment (1,000 Volts Maximum)

F. National Fire Protection Association (NFPA):
1. 70-17 National Electrical Code (NEC)

G. Underwriters Laboratories (UL):
1. 6-07 Electrical Rigid Metal Conduit – Steel
2. 94-13 Tests for Flammability of Plastic Materials for Parts in Devices and Appliances; Ed 6
3. 797-07 Electrical Metallic Tubing – Steel
4. 969-17 Standard for Marking and Labeling Systems
5. 1242-14 Standard for Electrical Intermediate Metal Conduit – Steel
6. 1703-02 Standard for Flat-Plate Photovoltaic Modules and Panels
7. 1741-10 Standard for Inverters, Converters, Controllers and Interconnection System Equipment for use with Distributed Energy Resources

PART 2 - PRODUCTS

2.1. MANUFACTURERS

A. Basis of Design: Subject to compliance with requirements, provide SunPower photovoltaic panels or comparable product by one of the following:

1. LG
2. Solaria Power
3. Longi

4. Or approved equal

2.2. GENERAL

A. Provide materials to fabricate functioning photovoltaic system in accordance with ASTM, IEEE, NEMA, NFPA, and UL, as specified in this section, and as shown on the drawings.

B. Factory-prefabricated solar equipment packages which include photovoltaic modules, batteries or other energy storage, inverters, and controls and which meet the requirements of this section are acceptable.

2.3. GROUNDING

A. All applicable components of the solar energy electrical power generating system must be grounded per latest NEC requirements.

B. DC Ground-Fault Protector:

1. Shall be listed per UL 1703.
2. Shall comply with requirements of the NEC.

2.4. PHOTOVOLTAIC ARRAY CIRCUIT COMBINER BOX

A. Shall be listed to UL 1741.

B. Shall include internal overcurrent protection devices with dead front.

C. Shall be contained in non-conductive NEMA Type 4X enclosure.

D. Up to 48 volts DC: Shall use UL-listed DC breakers that meet NEC requirements for overcurrent protection.

E. Up to 600 volts DC, paralleling system: Shall use fuses instead of breakers.

F. Ground and pole-mounted arrays shall have a separate combiner box mounted to the pole itself.

G. Where applicable, combiner box shall be a disconnecting combiner box.

2.5. SWITCH/DISCONNECTING MEANS

A. Shall be UL-listed, in accordance with the NEC, as shown on the drawings, and as specified.

B. Utility External Disconnect Switch (UEDS): Refer to Commissioner, as several states do not require UEDS for small solar photovoltaic systems if the inverter provides the same function per NEC. Coordinate requirements with serving electric utility.

2.6. WIRING SPECIALTIES

A. Direct Current Conductors:

1. If Exposed: Shall be USE-2, UF (inadequate at 60°C [140°F]), or SE, 90°C [194°F] wet-location rated.
2. If in Conduit: Shall be RHW-2, THWN-2, or XHHW-2 90°C [194°F], wet-location rated.

B. Conduits and Raceways:

1. Shall use steel conduit listed per UL 6, UL 1242, UL 797 (as appropriate), except for tracking modules. Weathertight EMT installations shall be allowed for DC wiring in weather-protected areas.

2. Shall use expansion joints on long conduit runs.
3. Shall not be installed on photovoltaic modules.

C. Enclosures subject to weather shall be rated NEMA 3R or better.

D. Cable Assemblies and Junction Boxes:

1. Shall be UL-listed.
2. Shall be rated to 5VA flammability per UL 94.

E. Prohibited Wiring Materials: Those which are not UL-listed, or listed materials used in environments outside those covered in their listing.

2.7. DC-AC INVERTER

A. Shall be listed to UL 1741.

B. Shall comply with IEEE 519 and IEEE 1547.

C. Shall be listed per FCC Part 15 Class A.1.

D. Shall have stand-alone, utility-interactive, or combined capabilities.

E. Shall include maximum power point tracking (MPPT) features.

F. Shall include anti-islanding protection if paralleling arrangement is required.

2.8. SOLAR PHOTOVOLTAIC (PV) MODULES

A. Minimum Performance Parameters as per IBC 1509.7.4, IRC M2302.3, UL 1703.

B. Photovoltaic Panel Types:

1. Monocrystalline (1,900): Listed to UL 1703.

C. Module and System Identification

1. Module or Panel:

   a. Listed to UL 969 for weather resistance.
   b. Listed to UL 1703 for marking contents and format.

2. Main Service Disconnect: per NEC.
3. Identification Content and Format: per NEC.
4. Identification for DC Conduit, Raceways, Enclosures, Cable Assemblies, and Junction Boxes: IFC 605.
5. Identification for Inverter: per NEC.

D. Bypass diodes shall be built into each PV module either between each cell or each string of cells.

E. Other Components: per UL 1703.

F. Hail Protection: Compliant with testing procedure per ASTM E-1038.

G. Lightning Protection: Shall ground according to manufacturer instructions per UL 1703.

H. Access, Pathways, and Smoke Ventilation: Per IFC 605.3, access and spacing requirements must be observed in order to: ensure access to the roof, provide pathways to specific areas of the roof, provide for

smoke ventilation opportunities area, and, where applicable, provide emergency access egress from the roof.

I. Fire Classification:

1. IBC 1505.8 for building-integrated photovoltaic and solar shingles.
2. IBC 1509.7.2: Although not technically enforceable, every effort shall be made to ensure the solar photovoltaic module is not combustible.

2.9. COLLECTOR SUPPORTS

A. Wind Resistance Requirement:

1. For rack-mounted: per IBC 1509.7.1.
2. For building-integrated photovoltaic and solar shingles: IBC 1507.17.3.

B. Mechanical Load Requirement: per UL 1703.

C. Ground and Pole Mount:

1. Foundations shall be engineered by a licensed Professional Structural Engineer (PE) retained by Contractor.
2. Where possible, combiner boxes shall be mounted directly to the pole itself.

2.10. INSTRUMENTATION

A. Meters: If applicable and system is grid-connected, use net smart meter provided by the serving electric utility.

B. Sensors:

1. Temperature sensor shall be a component in the MPPT control system.
2. May install additional data acquisition sensors to measure irradiance, wind speed, and ambient and PV module temperatures. Any additional sensors shall require a conduit separate from the current conductor conduit.

C. Data logger/Monitoring System: Shall be a packaged system capable of string-level monitoring or in the case of micro-inverters, capable of monitoring and logging an individual module's information.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Install the solar photovoltaic system in accordance with the NEC, this section, and the printed instructions of the manufacturer.

B. Prior to system start-up, ensure no copper wire remains exposed with the exception of grounding wire as allowed in certain circumstances per manufacturer's instructions.

C. In seismic areas, systems shall be adequately anchored and braced per details on structural contract documents to withstand seismic forces at the locations where installed.

D. Wiring Installation: Workers shall be made aware that photovoltaic modules will be live and generating electricity when there is any ambient light source and shall take appropriate precautions. Utilize on-site measurements in conjunction with engineering designs to accurately cut wires and layout before making permanent connections. Locate wires out of the way of windows, doors, openings, and other hazards. Ensure wires are free of snags and sharp edges that have the potential to compromise the wire insulation. All cabling shall be mechanically fastened. If the system is roof-mounted it shall have direct current ground fault protection according to NEC. Ensure breakers in combiner box are in the off position (or fuses removed) during combiner box wiring.

E. Instrumentation: Install instruments as recommended by the manufacturer. Locate control panels inside a room accessible only to qualified persons.

F. Building-Integrated Photovoltaic Installations: Building-integrated photovoltaic modules/shingles shall be installed in accordance with the manufacturer's installation instructions.

G. Rack-Mounted Photovoltaic Installations: Rack-mounted photovoltaic modules shall be installed in accordance with the manufacturer's installation instructions.

H. Ground and Pole-Mounted Photovoltaic Installations: If structure is used as equipment grounding conductor, ensure compliance with NEC. Wiring shall not be readily accessible.

I. Provide safety signage per NEC.

3.3. FIELD QUALITY CONTROL

A. Field Inspection: Perform in accordance with manufacturer's recommendations. Prior to initial operation, inspect the solar energy electrical power generation system for conformance to drawings, specifications, and NEC. In addition, include the following:

1. Visual Inspection and Tests:

    a. Compare equipment nameplate data with specifications and approved shop drawings.
    b. Inspect physical, electrical, and mechanical condition.
    c. Verify required area clearances.
    d. Verifying tightness of accessible bolted electrical connections by calibrated torque-wrench method, or performing thermographic survey after energization.
    e. Verify the correct operation of all sensing devices, alarms, and indicating devices.
    f. Verify that all cable entries from top of junction boxes are sealed per junction box rating.
    g. Verify all connections and integrity of printed circuit boards in all applicable junction boxes.

B. Tests: Provide equipment and apparatus required for performing tests. Correct defects disclosed by the tests and repeat tests. Conduct tests in the presence of the Commissioner.

1. Module String Voltage Test: Prior to connecting wiring to the combiner box, use a digital multi-meter to ensure each series string's polarity is correct.
2. Operational Tests: Perform tests in accordance with the manufacturer's written recommendations. Tests for stand-alone systems shall be performed per IEEE 1526.

3.4. FOLLOW-UP VERIFICATION

A. Upon completion of acceptance checks, settings, and tests, the Contractor shall show by demonstration in service that the solar photovoltaic electrical power generation system is in good operating condition and properly performing the intended function.

3.5. COMMISSIONING

A. Comply with the requirements of Section 01 91 00, General Commissioning Requirements.

B. If the system is grid-tied, the Contractor shall coordinate with the serving electric utility to establish an interconnection agreement.

C. Connect the solar photovoltaic electrical power generation system to the serving electric utility grid only after receiving prior approval from the utility company.

D. Only qualified personnel shall connect the solar photovoltaic electrical power generation system to the serving electric utility grid.

3.6. INSTRUCTION

A. A complete set of operating instructions for the solar photovoltaic electrical power generation system shall be laminated or mounted under acrylic glass and installed in a frame near the equipment.

B. Furnish the services of a factory-trained technician for one, 4-hour training period for instructing personnel in the maintenance and operation of the solar photovoltaic electrical power generation system, on the date requested by the Commissioner.
