SCHEDULE E

Separation of Trades

NOT USED FOR SINGLE CONTRACTS

SCHEDULE F

Submittals Schedule

(Reference: Section 01 3300 Article 1.5 (C) of the General Conditions)

The Schedule set forth below lists all submittal requirements for the Contract. In the event of any conflict between the Specifications and this Schedule F, Schedule F shall take precedence; provided, however, in the event of an omission from Schedule F (i.e., Schedule F omits either a reference to or information concerning a submittal requirement which is set forth in the Specifications), such omission from Schedule F shall have no effect and the Contractor's submittal obligation, as set forth in the Specifications, shall remain in full force and effect.

TABLE OF CONTENTS

CONTRACT NO. 1 - GENERAL CONSTRUCTION WORK

DIVISION 1 - GENERAL REQUIREMENTS

01 32 34	Building Information Modeling (BIM) Protocol
01 43 39	Façade Mockup Testing & Samples
01 80 00	Building Enclosure Contractor Performance Requirements

DIVISION 2 - EXISTING CONDITIONS

02 01 01	Petroleum Bulk Storage Tank Removal
02 01 02	Vapor Barrier Installation
02 41 19	Selective Demolition and Alteration Work
02 61 13	Excavation, Handling, Transportation and Disposal of Contaminated Materials
02 80 13	Incidental Asbestos Abatement

DIVISION 3 - CONCRETE

03 30 00	Cast-in-Place Concrete
03 33 00	Architectural Cast-in-Place Concrete
03 45 00	Architectural Pre-Cast Concrete

DIVISION 4 - MASONRY

04 20 00	Unit Masonry
04 90 00	Masonry Restoration and Cleaning

DIVISION 5 - METALS

05 12 00	Structural Steel
05 21 00	Steel Joist Framing
05 31 00	Steel Decking
05 40 00	Cold Formed Metal Framing
05 50 00	Miscellaneous Metals
05 51 00	Steel Pan Stairs
05 70 00	Ornamental Metals
05 71 13	Ornamental Metal Stairs

DIVISION 6 - WOOD, PLASTICS AND COMPOSITES

06 20 00	Carpentry
06 40 23	Architectural Woodwork

DIVISION 7 - THERMAL AND MOISTURE PROTECTION

07 00 01	Rainscreen System
07 13 26	Sheet Membrane Waterproofing
07 18 16	Vehicular Traffic Coatings
07 20 00	Thermoplastic Membrane Roofing
07 21 00	Thermal Insulation
07 21 29	Spray-Applied Thermal Insulation
07 27 01	Weather Resistive Barriers
07 42 14	Metal Panels
07 46 46	Fiber-Cement Panels
07 52 16	Modified Bituminous Membrane Roofing
07 62 01	Façade Sheet Metal Flashings
07 71 00	Roof Specialties and Accessories
07 81 00	Sprayed Fire Resistive Materials
07 81 23	Intumescent Fireproofing
07 84 13	Firestops and Smokeseals
07 92 00	Interior Joint Sealants
07 92 01	Exterior Joint Sealants
07 95 00	Expansion Control

DIVISION 8 - OPENINGS

08 11 13	Steel Doors and Frames
08 31 13	Access Doors
08 33 23	Overhead Coiling Doors
08 33 24	Roll-Up Doors
08 40 01	Glazed Storefronts and Curtain Wall System
08 45 19	Polycarbonate Wall System
08 49 00	Fire Rated Glass and Framing System
08 63 01	Aluminum-Framed Skylight System
08 71 00	Door Hardware
08 71 01	Door Hardware Schedule
08 80 00	Exterior Glazing
08 80 10	Interior Glass and Glazing
08 90 00	Louvers

DIVISION 9 - FINISHES

09 29 00	Gypsum Drywall
09 30 00	Tiling
09 51 13	Acoustical Panel Ceilings
09 51 33	Metal Ceilings
09 65 00	Resilient Tile Flooring
09 90 00	Painting and Finishing

DIVISION 10 - SPECIALTIES

10 14 00	Signage
10 21 13	Toilet Compartments
10 21 16	Shower Compartments
10 26 00	Corner Guards
10 28 13	Toilet Accessories
10 44 16	Fire Extinguisher Cabinets
10 51 13	Metal Lockers
10 75 00	Flagpoles

DIVISION 11 - EQUIPMENT

11 11 36	Vehicle Charging Equipment
11 24 00	Suspended Maintenance and Fall Protection
11 91 01	Wooden Pallets

DIVISION 12 - FURNISHINGS

12 48 23	Entrance Floor Grids

DIVISION 14 - CONVEYING SYSTEMS

14 24 00	Hydraulic Elevators
14 60 50	Single Girder Crane

DIVISION 21 - FIRE SUPPRESSION

21 05 00	Common Work Results for Fire Suppression
21 05 13	Common Motor Requirements for Fire Suppression Equipment
21 05 48	Vibration and Seismic Controls for Fire Suppression Piping and Equipment
21 08 00	Commissioning of Fire Suppression System
21 11 00	Facility Fire-Suppression Water-Service Piping
21 12 00	Fire-Suppression Standpipes
21 13 13	Wet Pipe Sprinkler Systems
21 31 13	Electric-Drive, Centrifugal Sprinkler Booster Pumps
21 39 00	Controllers for Sprinkler Booster Pump Drivers

DIVISION 22 - PLUMBING

22 05 00	Common Results for Plumbing
22 05 16	Expansion Fittings and Loops for Plumbing Piping
22 05 19	Meters and Gages for Plumbing Piping
22 05 23	General Duty Valves for Plumbing Piping
22 05 29	Hangers and Supports for Plumbing Piping and Equipment
22 05 33	Heat Tracing for Plumbing Piping
22 05 53	Identification for Plumbing Piping and Equipment
22 07 00	Plumbing Insulation
22 08 00	Commissioning of Plumbing

22 11 13	Facility Water Distribution Piping
22 11 14	Facility Natural Gas Piping
22 11 16	Domestic Water Piping
22 11 19	Domestic Water Piping Specialties
22 13 16	Sanitary Waste and Vent Piping
22 14 13	Facility Storm Drainage Piping
22 14 23	Storm Drainage Piping Specialties
22 15 13	Compressed Air Equipment
22 15 13.10	Motor Fuel Dispensing System
22 15 13.20	Fluid Dispensing System
22 15 13.30	General-Service Compressed-Air Piping
22 35 00	Domestic Water Heat Exchanger
22 40 00	Plumbing Fixtures

DIVISION 23 – HEATING, VENTILATING AND AIR CONDITIONING (HVAC)

23 05 00	Common Work Results for HVAC
23 05 13	Common Motor Requirements for HVAC Equipment
23 05 16	Expansion Fittings and Loops for HVAC Piping
23 05 19	Meters and Gauges for HVAC Piping
23 05 23	General-Duty Valves for HVAC Piping
23 05 29	Hangers and Supports for HVAC Piping and Equipment
23 05 48	Vibration and Seismic Controls for HVAC Piping and Equipment
23 05 49	HVAC Seismic Specification
23 05 53	Identification for HVAC Piping and Equipment
23 05 93	Testing for HVAC
23 05 94	Balancing for HVAC
23 07 00	Piping Insulation
23 07 01	Ductwork Insulation
23 08 00	Commissioning of HVAC Systems
23 09 00	Instrumentation and Control for HVAC
23 09 93	Sequence of Operations
23 12 17	Vehicle Exhaust System
23 21 13	Hydronic Piping
23 21 16	Hydronic Piping Specialties
23 21 23	Hydronic Pumps
23 23 00	Refrigerant Piping
23 25 00	HVAC Water Treatment
23 31 13	Metal Ducts
23 33 00	Air Duct Accessories
23 33 01	Dampers
23 34 16	Centrifugal HVAC Fans
23 34 33	Air Curtains
23 37 13	Diffusers, Registers and Grilles
23 51 00	HVAC Breeching, Chimneys and Stack
23 52 33	Condensing Boilers
23 56 00	Solar Hot Water System
23 57 00	Heat Exchangers for HVAC

23 72 00	Heating and Ventilating / Rooftop Units w/ Energy Recovery Equipment
23 81 26	Split System Air Conditioners
23 81 29	Variable Refrigerant Flow HVAC Systems
23 82 33	Radiators
23 82 39	Unit Heaters

DIVISION 26 - ELECTRICAL

26 05 00	Common Work Results for Electrical
26 05 19	Low Voltage Electrical Power Conductors and Cables
26 05 26	Grounding and Bonding for Electrical Systems
26 05 29	Hangers and Supports for Electrical Systems
26 05 33	Raceway and Boxes for Electrical Systems
26 05 43	Underground Ducts and Raceways for Electrical Systems
26 05 48	Vibration and Seismic Controls for Electrical Systems
26 05 53	Identification for Electrical Systems
26 05 73	Overcurrent Protective Device Coordination Study
26 08 00	Commissioning of Electrical
26 09 23	Lighting Control Devices
26 09 33	Distributed Lighting Control System
26 22 00	Low Voltage Transformers
26 24 13	Switchboards
26 24 14	Electronic Sub-Metering System
26 24 16	Panelboards
26 27 26	Wiring Devices
26 28 13	Fuses
26 28 16	Enclosed Switches and Circuit Breakers
26 29 13	Enclosed Controllers
26 29 23	Variable Frequency Motor Controllers
26 32 13	Engine Generators
26 36 00	Transfer Switches
26 41 13	Lightning Protection for Structures
26 51 00	Interior Lighting
26 51 13	Architectural, Luminaires, Lamps, and Ballasts

DIVISION 27 - COMMUNICATIONS

27 02 00	Structured Cabling for Voice & Data Systems
27 05 00	Common Work Results for Communications
27 40 00	Audio Visual Communications

DIVISION 28 - ELECTRONIC SAFETY AND SECURITY

28 08 00	Commissioning of Electronic Security Systems
28 10 00	Access Control & Video Surveillance
28 31 11	Digital, Addressable Fire-Alarm System

DIVISION 31 - EARTHWORK

31 00 00	Earthwork
31 10 00	Site Clearing, Removals, and Preparation
31 21 16	Sub-Membrane Depressurization System
31 25 00	Soil Erosion and Sediment Control
31 50 00	Excavation Support and Protection
31 62 19	Timber Piles

DIVISION 32 - EXTERIOR IMPROVEMENTS

32 12 16	Asphaltic Paving
32 13 15	Concrete Curbs and Pavement
32 15 43	Crushed Stone Edging
32 17 23	Pavement Markings.
32 17 26	Tactile Warning Surfacing
32 31 19	Decorative Metal Fence and Gate
32 33 00	Site Furnishings
32 93 00	Trees, Shrubs, and Groundcovers

DIVISION 33 - UTILITIES

33 02 00	Protection of Existing Utilities
33 10 00	Water Utilities
33 31 00	Sanitary Sewer System
33 40 00	Storm Drainage Utilities
33 49 00	Storm and Sanitary Structures
33 49 10	Other Utilities
33 52 13.13	Fiberglass Double Containment Piping
33 52 13.16	Stainless Steel Double Containment Piping
33 56 14	Underground Storage Tanks

DIVISION 43 - PROCESS GAS AND LIQUID HANDLING, PURIFICATION, AND STORAGE EQUIPMENT

43 41 16	Petroleum Bulk Storage (PBS) Tank Systems
43 41 17	Petroleum Bulk Storage (PBS) Product Piping
43 41 18	Petroleum Bulk Storage (PBS) Instrumentation and Control

DIVISION 48 - ELECTRICAL POWER GENERATION

48 14 00	Solar Energy Electrical Power Generation System

CONTRACT # 1

GENERAL CONSTRUCTION WORK

SECTION 01 32 34
Building Information Modeling (BIM) Protocol

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. The Project shall utilize 3D Modeling for the coordination of all Architectural Structural Steel, Mechanical, Plumbing, Fire Protection, Electrical, Low Voltage Systems and Exterior Envelope. The 3D coordination shall be based on a coordinated design.

B. This specification covers the intended scope for using BIM for construction purposes. The Contractor will develop a coordinated clash-free Model including Structure, Architecture and complete MEP services. The Construction Model will be used to generate all Shop Drawings that are directly referencing the Model. The coordinated Construction Model will be used to generate points for automated layout stations which ensure that the installation is accurate and verified. The scope also includes the production of a dimensionally accurate As-Built Model including embedded Facilities Management data.

C. The Contractor agrees to participate in the use of digital/computer based three dimensional models and other related functionality, generally referred to as Building Information Modeling (such models and functionality are referred to herein as BIM) as Commissioner may determine to be beneficial for use in facilitating coordination, sequencing, scheduling and production of as- built depictions of the Project and performance of the Work and as hereafter provided.

D. Contractor agrees that neither the BIM nor the use of the BIM is in lieu of nor intended to relieve the Contractor of its responsibilities under the contract. It is expressly understood and agreed that, notwithstanding the requirement for submittals in connection with the BIM, traditional shop drawings and other submissions shall be required of the Contractor as per the Contract Documents.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 CONTRACTOR SCOPE OF WORK

A. The Contractor will be provided a Design Intent Model consisting of Site Plan, Architecture, Structure and MEP trades in LOD 400.

B. The Contractor will be provided the final design model as a base to detach and create their own Construction Model. The Contractor will work collaboratively with the Commissioner to ensure all field conditions are accurately documented in the Construction Model and ensure that they are using the most up to date documents for construction phase coordination.

C. The Contractor may not rely on the accuracy of the Design Intent Model. The Design Intent Model can be used for reference only and all dimensions must be retrieved from the hard copy Drawings and verified by the Contractor.

D. The Contractor's Construction Model shall be coordinated with the Design Intent Drawings. Any conflicts with the Models that need to be resolved prior to fabrication and construction shall be reported in the form of a Request for Information (RFI). Clash reports may also be issued by the Contractor as background information for RFI's and submittals.

E. The Contractor shall include required clearances for maintenance and other access, code clearances and other required clearances. In addition, all modeling to include proposed underground / utilities associated with the project scope to the extent of the property line of the site, in all directions.

F. Clash detection and analysis: Perform clash detection to identify and highlight spatial conflicts within and between the various trades and the building. This can be performed using Navisworks or equivalent application using subcontractor Construction Models, tracking file versions used in each clash analysis.

G. Work collaboratively with subcontractors to recommend potential solutions to conflicts.

H. Indicate where conflict resolution requires modification of design requirements by the Commissioner.

I. Update final design model to include an As-built Models in Revit that includes complete structure, architecture Models to LOD 400. MEP equipment and accessories that require FM attribute will be modeled to LOD 400. The Models will be populated with Facilities data using parameters provided by the Commissioner. Any ducts and pipes generated using CAD based authoring software will be linked in as reference to the Revit Model.

J. The Contractor shall provide the Commissioner with all the necessary access to review the documents and interface with Contractor's team. Coordination meetings as per the coordination schedule shall occur between the Commissioner to ensure the correct development of the Construction Model.

K. The Contractor will insert relevant building element data as listed below in the As-Built Model. The data may also be provided to the Commissioner as a separate spreadsheet. The Commissioner to determine the Building Element Data as well as attributes for all MEP assets:

1) Asset name
2) Room name

3) Room number
4) Manufacturer
5) Model Number
6) Serial Number
7) Installation Date
8) Bar Code (if any)
9) Submittal Number
10) Link to O&M
11) System Served

L. Utilize the Construction Model to generate layout points for automated layout stations so the installation can be laid out and verified to ensure proper positioning per the coordinated Construction Model.

M. Allow real time access to the Construction Model by the Commissioner.

1. BIM applications will be provided by the Commissioner to the Contractor to be utilized for all BIM model submission and deliverables.
   a. Autodesk Revit 2019
   b. Bentley MicroStation
   c. AllPlan Nemetschek
   d. Or approved equal
2. Construction Model files for Coordination.
3. During the coordination phase weekly publish all clash reports and current versions of all Coordination Models, with clash views, in .nwd format to the collaboration website.

2.2 CONSTRUCTION MODEL BIM COORDINATOR

A. The Contractor shall identify an individual assigned to be the Construction Model BIM Coordinator. This individual shall have the appropriate level of relevant BIM experience required for the project complexity and acquisition delivery strategy. In general, responsibilities should include the following:

1. Overall responsibility for the Construction Model creation and information developed during construction.
2. Coordinates software and establishes protocol software for Construction Team for efficient delivery of project.
3. Acts as the main point of contact for BIM and related issues between the Contractor's Team, subcontractors, the Commissioner, the City of New York, and others as required.
4. Ensures that all personnel have the necessary hardware and software installed and accessible for project use.
5. Coordinates construction sequencing and scheduling activities, and assures they are integrated with the Construction BIM.
6. Facilitates use of composite trade models, provided by subcontractors, in construction coordination/clash detection meetings and provides detection reports by the identification and resolution of all hard and soft collisions.
7. Communicates with the Commissioner, coordinates the data extraction sets required by the construction trades and ensures that these requests are met.
8. Coordinates with the Commissioner to facilitate that design changes in the field have been documented and are updated in the Construction Model in a timely manner. Provides design team with hard copies of changes made in the field for future reference in confirming the as-built model.

9. Prior to approval and installation, works with their lead Fabrication Modelers to integrate 3D fabrication models with the Construction Model to ensure compliance with design intent.

2.3 CONSTRUCTION PHASE BIM PLAN

A. The Contractor shall develop a Construction Phase BIM Plan: Within 21 calendar days of Notice to Proceed, the Contractor shall submit, for Commissioner's Representatives review and approval, a Construction BIM Plan. The BIM Plan shall include at the minimum:
   1. General Requirements of Subcontractors
   2. Model Partitioning
   3. Common Coordinate System and Units
   4. File Naming and Versioning
   5. List of Construction Models to be developed
   6. Plan for achieving an LOD-400 in the Construction Models
   7. Organization Responsible for Each Construction Model
   8. Software and Version to be Used to Develop Each Construction Model
   9. Any Required Object Enablers
   10. Name and Contact Information for Each Organization's BIM Coordinator
   11. Coordination /Clash Detection Process
   12. Coordination /Clash Detection Schedule
   13. Clashes to be Run (e.g.: HVAC vs. Structure)
   14. Any Other Applications of the Construction Models (e.g.: 4D)
   15. Plan for achieving an LOD-400 As-Built Models and asset data
   16. Methodology for preparing the As-Built BIM Deliverables to the City of New York

2.4 ACCEPTABLE CONSTRUCTION MODELING FORMATS

A. All software proposed for model authoring and coordination shall be submitted for approval by the Commissioner.
B. All Software used shall be Version 2019 or above unless otherwise approved by the Commissioner.
C. The following software, or similar, is acceptable for authoring and coordination:
   1. Authoring
      a) Architecture:
         i. Autodesk Revit 2019
         ii. Bentley MicroStation
         iii. AllPlan Nemetschek
         iv. Or Approved Equal
      b) Structure:
         i. Autodesk Revit 2019
         ii. Tekla Structures
         iii. Bentley MicroStation
         iv. Or Approved Equal
      c) MEP Discipline Model:
         i. Autodesk Revit 2019
         ii. Trade 3D CAD
         iii. Bentley MicroStation
         iv. Or Approved Equal

2. Coordination
   a) Coordination Model:
      i. Autodesk Navisworks 2019
      ii. Bentley Navigator
      iii. BIM 360 Glue
      iv. Or Approved Equal

   b) As-Built Model:
      i. Autodesk Revit 2019
      ii. AutoCAD MEP
      iii. Bentley Navigator
      iv. Or Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 BIM KICKOFF MEETING

A. The Commissioner shall schedule and conduct a BIM Kickoff Meeting. BIM Modeling work by the Contractor and its subcontractors shall not commence prior to the BIM Kickoff Meeting. The Meeting shall review BIM requirements, standards and responsibilities.

B. Attendees: Participants in the BIM Kickoff Meeting shall be familiar with the project and shall be authorized to conclude matters relating to the BIM work. At a minimum include representatives of the following parties or their designated representatives:
   1. Commissioner
   2. Construction Manager
   3. Construction Manager's BIM Coordinator
   4. Contractor's Project Manager
   5. Contractor's BIM Coordinator
   6. BIM Coordinators of all subcontractors producing Construction BIMs
   7. Project Coordinators of all subcontractors producing Construction BIMs

C. Agenda: Subjects for discussion shall include items significant to the effective use of BIM coordination techniques and correct production of Construction BIM, including but not limited to the following:
   1. BIM expectations and project goals
   2. Coordination process
   3. Review of BIM Plan, including Model contents and standards
   4. Requirement to deliver equipment data in electronic format
   5. Final BIM deliverables by the Contractor.

D. Reporting: The Commissioner shall distribute minutes of the meeting to each party present and to other concerned parties.

3.3 TRADE COORDINATION

A. The Contractor is required to utilize 3D Fabrication Modeling Software for all shop drawings and submittals (only submittals that will develop shop drawings are required to utilize 3D modeling). The Contractor is required to fully integrate the various BIM/3D shop drawings and submittals into Construction Model; perform full clash detection on the results of the integration. The Commissioner will not be responsible for integrating shop drawings or submittals into Design Intent Model nor the Construction Model.

B. Each Subcontractor is required to have access to the BIM software. The software is required to compile the multiple model drawings, and for the subcontractor to run their own clash detection analysis. It is also required that the coordination representative for each trade shall be equipped with a laptop and a associated license with which to attend coordination meetings. This subcontractor coordination representative shall be authorized and prepared to make live, real-time changes to the "Shop Model" in these coordination meetings, in order to review the finalized, signed off coordinated models prior to and during the fabrication/installation process.

C. Each Trade is required to review the clash detection report generated by the BIM Coordinator prior to each coordination meeting and attend each meeting prepared to address the unresolved clashes in a constructive manner.

D. Each Trade is required to collaborate with each other trades through e-mail, telephone, and in person, to resolve basic clashes outside of the Coordination meetings. Contractor to coordinate with Commissioner daily/weekly Coordination meetings are held to address work. At these meetings the resolution will be collectively agreed upon. This trade will adjust its respective model and repost it with enough time for other subcontractors to review prior to the upcoming meeting. All the remaining trades are responsible to update and post the changes agreed upon at the coordination meeting within 1 week or as directed by Commissioner.

E. The Commissioner shall review the progress of the Construction Model by the Contractor on a weekly basis to help assure that the Construction Model is maintained current throughout construction. Updates to the construction model shall include all RFI's, Change Orders, Bulletins, Commissioner's field staff reports, approved submittals, and other field reports. The Contractor shall retain responsibility for inspection and measurement.

F. The Commissioner will participate in 2D/3D-based submittal reviews and coordination work sessions. The Commissioner will work collaboratively with the Contractor who will turn over an As-Built Model for all building systems at construction completion which incorporates any contract design changes that impact the original design intent model and field conditions.

G. Approved programs will be used for model management. All clash reports and Coordination Models will be uploaded to the collaboration website.

H. There will be no compensation for improperly coordinated or uncoordinated installations; such work will be removed and replaced at the Contractor's expense.

3.4 CONTRACTOR SUBMISSION AND DELIVERABLES

A. It is the Contractor's responsibility to provide real time access to the Construction Model to Commissioner.

B. At the end of construction, the following deliverables shall be provided to the City
   1. All Discipline/Trade As-built models in editable format.
   2. Composite summary format.
   3. Facility asset data provided either in the model as element parameters or provided as a separate spreadsheet
   4. Final As-Built PDF for each floor and each trade with proper annotations
   5. Final As-Built DWG for each floor and each trade with proper annotations
   6. Final Civil 2D/3D Model and PDF depicting all Utilities

C. The Contractor is required to submit 3 copies of hard drives containing all the above deliverables.

END OF SECTION 01 32 34

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 43 39
Facade Mockup Testing and Samples

PART I – GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements

1. Refer to DDC General Conditions

a. Section 01 33 00 – Submittal Procedures.

b. Section 01 74 19 – Construction Waste Management and Disposal.

c. Section 01 81 13.04 – Sustainable Design Requirements for LEED v4 Buildings.

1.2 SUMMARY:

A. This Section includes descriptions of mockups and product Samples for the Building Facade Assemblies for the Project.

B. Mockups

1. Provide mockups as shown on Drawing EN1-004 for review.

2. Construct mockups at locations agreed to by the Commissioner. Mockups shall be representative of the finished work as required to simulate final conditions for the specific reviews listed herein.

a. Include supporting structure as required for each mockup.

3. Provide testing as specified for each mockup.

4. Replace unsatisfactory work as directed by the Commissioner, at no additional cost to the City of New York.

5. When directed by the Commissioner, demolish and remove full-size mockups.

C. Samples

1. Provide Samples as indicated in the Samples Matrix and described herein for review.

D. The work in this Section incorporates the work of the following Sections. Requirements specified in this Section are in addition to those in the following Sections:

1. Section 03 45 00 – Architectural Pre-Cast Concrete.

2. Section 07 00 01 – Rainscreen System.
3. Section 07 20 00 – Thermoplastic Membrane Roofing.
4. Section 07 42 14 – Metal Panels.
5. Section 07 62 01 – Facade Sheet Metal Flashings.
6. Section 08 40 01 – Glazed Storefronts and Curtain Wall System.
7. Section 08 63 01 – Aluminum-Framed Skylight System.
8. Section 08 80 00 – Exterior Glazing.
9. Section 08 90 00 – Louvers.

E. Reference Documents

1. Building Enclosure System Matrix: Refer to Drawing EN1-003.
2. Exterior Glass Type Matrix: Refer to Drawing EN1-003.
3. Samples Matrix: Refer to Drawing EN1-003.
4. New Building Facade Mockup: Refer to Drawing EN1-004.

1.3 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.4 SUBMITTALS:

A. Mockups

1. Provide Shop Drawings, supporting calculations, and product data sheets as required for review and approval.
   a. Shop Drawings shall include all termination details including connections to the mockup chamber.
2. Proceed with fabrication of mockups only after acceptance of all applicable submittals.

B. Photographs for Documentation of Mockups

1. Take a minimum of three (3) photographs at each location and at intervals as required by the Commissioner.
2. Submit digital color images of mockup before, during, and after pre-construction testing.

C. Samples

1. Provide product data as required for review and approval.

2. Proceed with fabrication of Samples only after acceptance of all applicable submittals.

D. Testing Submittals

1. Provide documentation, including Shop Drawings, calculations, and product data sheets as required by the Independent Testing and Inspection Agency for approval, confirming that the pre-construction mockup specimens meet all testing requirements.

2. Submit a mockup testing program developed specifically for the Project's test specimen and requirements for review and approval.

3. Resubmit Shop Drawings to both the Independent Testing and Inspection Agency as well as the Commissioner with changes made to Work following testing to successfully complete mockup testing.

4. Contractor shall hire an Independent Testing and Inspection Agency that shall submit in-situ mockup test reports including, but not limited to, the following information:

a. Nature and objectives of the test, measurement, or chemical analysis.

b. Credentials of the organization undertaking the test including their accreditation for such testing, measurement, or analysis.

c. Dates, weather, and witnesses present.

d. Details of the samples, the method used, and the limits of accuracy.

e. A factual account of the results.

f. Observing mockup installation and dismantling.

g. Any variations to the details outlined in the mockup Shop Drawings.

h. Any change to the method statement submitted with the Shop Drawings.

i. Extent of air and water penetration into the system.

1) In the event of non-compliant air or water leakage, report what repairs were made to the system to make compliant.

j. Information gathered from the structural performance and robustness tests.

k. Evidence of damage or displacement revealed during the mockup testing or dismantling.

1.5 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Mockup Meetings

1. Prior to the start of construction of each mockup assembly at the test facility, and at the Commissioner's direction, meet to review methods and sequence of each mockup construction. Meeting shall include

all agenda requests made by the Commissioner. Attendees shall include the subcontractors for the portion of the Work related to each mockup, the Independent Testing and Inspection Agency, and any others whose work on the Project requires coordination with this work. Include in this meeting individuals supervising both the work of the mockups as well as the construction of the final Work on the Project.

C. Testing

1. Conduct tests of each specified mockup under the direction of an Independent Testing and Inspection Agency in the presence of the Contractor, Commissioner, Installer, and component manufacturers, and fabricators for each specified system to be mocked up and tested. Proceed with testing only after approval of the test program and procedures.

2. Contractor shall not pre-test mockups without prior approval from the Commissioner. If approval is granted, perform pre-testing only in the presence of the Commissioner.

3. Perform necessary corrections to the Work in the presence of the Commissioner.

D. Qualifications

1. Performance Mockup Testing Agency Qualifications

a. Testing laboratories shall be specifically qualified, and AAMA accredited, to conduct laboratory performance tests required by these Specifications and acceptable to the Commissioner.

1.6 IN-SITU PERFORMANCE MOCKUP TESTING AT THE PROJECT SITE:

A. Performance mockup construction and testing shall be constructed on the Project site with materials that will be incorporated into the final construction of the Project. Fabricators shall provide documentation that its equipment to be used on the Project site are capable of providing all required tests specified. An Independent Testing and Inspection Agency representative must be present to inspect construction and to observe testing procedures.

1. Schedule

a. Contractor shall provide detailed schedules for all mockups including expected dates of fabrication, erection, glazing, sealing, and testing a minimum of thirty (30) days prior to start of mockup fabrication, to permit the Commissioner to coordinate their monitoring and observation thereof.

b. Contractor shall allow for no less than three (3) mockup reviews at mutually predetermined points in the assembly of the mockup for the Commissioner to comprehensively review and evaluate materials, fabrication, workmanship, and assemblies. Complete mockup Engineering, construction, and testing (as applicable) in a timely manner to ensure there are no delays in completion of the Work for the Project.

2. Review, Evaluation, and Response

a. Conversations during mockup review evaluations are not final decisions unless specifically noted otherwise. After each on-site review, Contractor will distribute meeting minutes of

discussions held during the mockup evaluations and will distribute the same for record. Meeting minutes will provide direction for issues resolved on site and provide next steps or action items and responsibilities for work to be completed. Responses and direction for issues left unresolved on site will be addressed in writing by the Commissioner within fifteen (15) calendar days after meeting minutes noted above are issued.

b. For issues requiring replacement of mock-up components, the Contractor will, within seven (7) days of receipt of the Commissioner's response, provide a schedule indicating when the re-assembled mockup will be complete and ready for review and re-evaluation.

c. Fully document final decisions made during mock-up review on the Record Shop Drawings for each pre-construction mockup as required in the Submittals article of this Section. Any deviations indicated on the fabrication Shop Drawings from decisions made during mockup review shall be grounds for rejection of the same.

PART II – PRODUCTS

2.1 VISUAL EVALUATION MOCKUPS:

A. Provide and install mockups to the extent indicated and as required for evaluation. All required mockup submittals shall have been reviewed and received final approval from the Commissioner prior to construction of the mockups.

B. Use mockups as a standard for judging visual acceptability of the profiles, finishes, and workmanship of the Work for the Project. Replace unsatisfactory work as directed.

2.2 IN-SITU PERFORMANCE TESTING MOCKUPS:

A. Provide and install mockups to the extent indicated and as required for testing and evaluation by the Commissioner. All required mockup submittals shall be reviewed and receive final approval from the Commissioner prior to construction of the mockups.

B. Use testing mockups as a standard for judging visual, workmanship, and performance acceptability of work for the Project including the operation, maintenance, and replacement strategies for individual elements. Replace unsatisfactory work as directed.

C. Provide same personnel to construct the mockups and perform and supervise the actual work.

D. Fabricate components and construct assemblies as approved during submittal review to meet the Project's performance requirements.

1. Do not use special measures or techniques that are not representative of those used in the building.

2. Include all detailing, insulation, panels, back pans, access restraint fittings, externally fixed items, any penetrations, all connections to main structure, and all miscellaneous framing, flashings, and metal trim components with approved finishes all identical to the assembly proposed for the building and approved during Shop Drawing review.

E. Provide extra materials as may be required to replace any which fail during tests.

2.3 SAMPLES:

A. General

1. Provide material Samples of any component added to or modified on the pre-construction mockups as required to meet the specified performance requirements during laboratory testing and/or as required to meet the Project's Engineering intent as agreed upon during the review and evaluation period of pre-construction mockups.

2. Provide Samples in the types, quantities, and sizes specified in the Samples Matrix.

B. Glass

1. Provide Samples specified including all coatings, frit patterns, and interlayers from manufacturers able to meet the Project's Engineering intent and performance requirements.

2. Provide a range of Samples if variation in the color, material quality, or in tolerances can be expected in the products provided for the Project. Provide Samples showing the range of variables including primary and secondary sealant colors, spacer bar finishes, and ceramic frit colors.

3. Submit with Glass Samples the following measurements of the Samples in compliance with the Glazing requirements:

   a. Flatness, including bow and warp, roll ripple.

   b. Color.

C. Panels

1. Provide Samples specified including all coatings and finishes from manufacturers able to meet the Project's Engineering intent and performance requirements.

2. Provide a range of Samples if the color, material quality, or variation in tolerances can be expected in the products provided for the Project.

3. For Panel types where Samples are specified, provide three (3) additional Samples including an area of 10% with Panel finish removed and repaired according to the manufacturer's recommendations.

D. Framing

1. Provide Samples specified including all coatings, finishes, gaskets, hardware, and fasteners from manufacturers able to meet the Project's Engineering intent and performance requirements.

2. Provide a range of Samples if variation in the color, material quality, or in tolerances can be expected in the products provided for the Project.

3. For framing types where Samples are specified, provide three (3) additional Samples including an area of 10% with frame finish removed and repaired according to the manufacturer's recommendations.

4. Provide framing Samples for review concurrently with adjacent Panel Samples for that system.

PART III – EXECUTION

3.1 EXECUTION REQUIREMENTS:

A. Refer to DDC General Conditions for execution requirements.

3.2 WEATHER PERFORMANCE TESTING PROGRAM:

A. Perform testing in the following order and evaluate against the requirements outlined in the Specification Section for each system shown on the Mockup Drawings included in each mockup:

1. Static pressure air infiltration.
2. Static pressure water infiltration.
3. Dynamic pressure water infiltration.

B. If the mockup fails one portion of the test and corrective work is required, retest the mockup through all of the prior test steps unless Commissioner deems unnecessary.

END OF SECTION 01 43 39

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 01 80 00
Building Enclosure Contractor Performance Requirements

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements

a. Refer to DDC General Conditions.

1) Section 01 33 00 – Submittal Procedures.

2) Section 01 74 19 – Construction Waste Management and Disposal.

3) Section 01 81 13.04 – Sustainable Design Requirements for LEED v4 Buildings.

b. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the Project's Existing Building scope only.

1.2 SUMMARY:

A. This Section describes the required Contractor performance for the building enclosure systems portion of the Project that are in addition to those listed in the Related Sections below. These requirements include portions of the Contract which require Engineering Services as well as prescriptive work.

B. Section Includes

1. Responsibilities

a. Engineer Work using performance requirements and design criteria indicated for each Referenced System.

1) This Section, together with the Related Sections and Architectural Drawings, define the scope and provide an indicative solution for the Work, including but not limited to:

a) Mandatory geometry of the building enclosure systems.
b) Performance parameters.
c) Minimum acceptable standards and the required regime for verification of engineering, fabrication, and installation processes.
d) Acceptable products.
e) Required fabrication and installation techniques.

2) The Contractor is responsible for executing the design based on the detailing and parameters set forth in the Drawings and Specifications and for the procurement,

fabrication, installation and verification of the Work Contractor shall provide all items required for proper completion of the Work.

3) It is the Contractor's responsibility to guaranty their Work, and to ensure that all materials and work meet the requirements of this Project.

b. Ensure that all people engaged in Engineering, fabrication, and installation of the Work are properly instructed, proficient, and experienced; where applicable they shall be approved by the manufacturer.

c. Coordinate Engineering, site, and trade interfaces of the Work with adjacent trades. All interfaces shall meet the requirements of the Contract Documents. Contractor for this Section is responsible for coordinating Engineering of interfaces between the Work of adjacent trades, including but not limited to the following:

1) Below-grade waterproofing systems.

2) Existing building enclosure systems.

3) External finishes and paving.

4) Internal finishes.

5) Structural elements and framing.

6) Mechanical services.

7) Electrical services.

8) Fire detection and extinguishing systems.

9) Security systems.

10) Lighting and electrical systems.

11) Lightning protection.

12) Gutters / drainage systems.

13) Miscellaneous metals.

d. Provide submittals as required in this Section and the Referenced Systems in accordance with the requirements of the DDC General Conditions.

e. Undertake pre-construction mockups as specified in Section 01 43 39 – Facade Mockup Testing and Samples.

f. Operate under a quality management system to achieve the quality assurance requirements for each Related Section. This shall include but not be limited to:

1) Manage all sequences and procedures for safety precautions and programs associated with the Work.

2) Materials and products procured prior to review and approval of the submittal are subject to rejection.

g. Attend meetings as required.

h. Survey condition and position of receiving structure, surfaces, and interfaces prior to installation and report any discrepancies or deficiencies.

i. Manage protection and cleaning as required by the DDC General Conditions.

j. Provide warranties as specified within each specification section for building enclosure systems and products.

2. Engineering Services Additional Requirements

a. For Work requiring Engineering Services, employ a Professional Engineer licensed in the State of New York who is specifically experienced in projects with systems similar to those referenced in this Section in material, design, and extent, to provide Engineering services, and to prepare, stamp and certify the Work.

1) Contractor's engineer shall provide evidence of its Engineering methodology, analysis, including all assumptions.

2) The same engineer shall prepare and stamp mockup Drawings and calculations as well as submittal Drawings and calculations for that portion of the Work.

3) Attend submittal review workshops and meetings as required.

3. Coordinate the work of this Section with the work of other Sections in these Specifications, including but not limited to:

a. Refer to DDC General Conditions.

b. Section 07 00 01 – Rainscreen System.

c. Section 07 20 00 – Thermoplastic Membrane Roofing.

d. Section 07 27 01 – Weather Resistive Barriers.

e. Section 07 42 14 – Metal Panels.

f. Section 07 62 01 – Facade Sheet Metal Flashings.

g. Section 07 92 01 – Exterior Joint Sealants.

h. Section 08 40 01 – Glazed Storefronts and Curtain Wall System.

i. Section 08 63 01 – Aluminum-Framed Skylight System.

j. Section 08 80 00 – Exterior Glazing.

4. Reference Documents

a. Building Enclosure System Matrix: Refer to Drawing EN1-003.

b. Exterior Glass Type Matrix: Refer to Drawing EN1-003.

1.3 DEFINITIONS:

A. Referenced System: Building enclosure system as specified by the Building Enclosure System Matrix.

B. The work described in this Section is referred to in this Section as the "Work."

C. The term Engineering Services, used in this Specification Section, signifies that the Contractor will provide signed and sealed, fully engineered Shop Drawings for the enclosure systems in entirety for confirmation of compliance with the performance and aesthetic criteria.

1.4 REFERENCE STANDARDS AND REGULATIONS:

A. Refer to DDC General Conditions.

B. The Contractor's Engineering, materials and workmanship shall comply with 2014 New York City Building Code. Comply with all appropriate national and local government regulations and obtain all necessary approvals from the statutory authorities. Where their recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Documents shall take precedence.

C. Comply with applicable provisions and recommendations of the standards listed below. Where standards conflict or conflict with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted, the latest editions of the standards shall apply:

1. American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE)

   a. ASHRAE 90.1 – Energy Standards for Buildings Except Low-Rise Residential Buildings.

   b. ASHRAE Fundamentals Handbook.

2. ASTM International (ASTM)

   a. ASTM A123 – Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

   b. ASTM A153 – Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

3. American Welding Society (AWS)

   a. AWS D1.1/D1.1M – Structural Welding Code – Steel.

   b. AWS D1.2/D1.2M – Structural Welding Code – Aluminum.

   c. AWS D1.3/D1.3M – Structural Welding Code – Sheet Steel.

   d. AWS D1.6/D1.6M – Structural Welding Code – Stainless Steel.

4. National Fenestration Rating Council (NFRC)

a. NFRC 100 – Procedure for Determining Fenestration Product U-Factors.

b. NFRC 200 – Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.

1.5 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.6 SUBMITTALS:

A. System Submittals

1. Submittals are to comply with requirements of this Section in addition to the specific requirements outlined in each associated building enclosure system Section.

2. System Drawings

a. Submit typical details for each proposed building enclosure system in the Work.

3. System Calculations: Where calculation submittals are required for the Work, provide the following proposal calculation submittals:

a. Provide preliminary structural calculations to support the submitted proposal Drawings.

b. Provide preliminary thermal calculations to support the submitted proposal Drawings.

4. System and Component Manufacturers

a. Provide project experience demonstrating capability of and capacity for manufacturing the proposed Work for the following:

1) Glass Panels.

2) Cladding materials.

3) Complete systems.

5. Building Information Modeling (BIM)

a. Show capabilities and Project plan on how BIM will be implemented as required by the City of New York.

6. Organization Chart

7. Material Samples, as specified.

8. Quality control plan.

9. Sample warranties.

B. Calculations

1. Provide calculations concurrently with relevant system Shop Drawings.

   a. Calculations shall be readable, comprehensively tabulated, and cross referenced. Maintain a calculation issue register listing the full set of calculations provided for the Project, dates of submission, and revision numbers.

   b. Perform calculations in accordance with the appropriate recognized standards, 2014 New York City Building Code and 2016 New York City Energy Conservation Code, codes of practice, and procedures, using diagrams and extracts from Drawings to explain what is being analyzed. Clearly state basic data used and all assumptions made. The engineer responsible for the calculations must be a Professional Engineer licensed in the state of New York, and have past experience performing similar calculations on successful projects. The contractor must check that the calculations match the intended construction..

2. For computer analyses, present the following information:

   a. A clear statement of the method of analysis.

   b. Program used and version number.

   c. Nature of the program, e.g., finite element, finite difference, flow, standard compliance, etc.

   d. Where used, a clear statement of whether analysis is linear or non-linear, static or dynamic.

   e. Input data including material properties, boundary conditions, loads, and program settings.

   f. All assumptions made and used.

   g. Output data.

   h. A clear statement of the method of interpretation of the results.

   i. Interpretation of the results.

3. Structural calculations shall include the following:

   a. All load cases, load factors, and combinations of load cases including dead loads, imposed loads, live loads, wind loads, thermal loads, snow and ice loads including the effects of ice buildup on elements, rain loads, impact loads, blast loads, seismic loads, and barrier loads as appropriate.

      1) Include the calculation of all loads assumed to apply to the Work using the required referenced codes and standards specified.

   b. Description or diagram of load paths to explain the structural system, which sets out the detailed structural calculations to follow. Calculations for all major elements of the system including stiffeners, connections, and fasteners used to join elements.

   c. Details of assumptions for stress limits for factored or unfactored loads as appropriate for different materials including references to 2014 New York City Building Code and 2016 New York City Energy Conservation Code giving such values.

d. Component utilization.

e. An assessment of overall stability and resistance to buckling and / or progressive collapse.

f. Deflection values and diagrams.

g. Thermal movements and stresses.

h. Tables of reactions.

i. Calculations for structural members, connections, accessories, and temporary components required for transportation and erection.

j. Calculations for all nominal, minimum, and maximum joint widths and movements allowing for all load combinations, building movements, fabrication, and erection tolerances.

1) Thermal movement calculations based on surface temperatures of materials due to both solar heat gain and night-time-sky heat loss.

2) Calculations for brackets and fasteners incorporating movement allowance anticipating the most onerous position for the application of loads.

k. Where finite element or difference analysis models are used, identification of restraint types, property types, axis systems, and applied loads. Checks are also required to demonstrate that global reactions are in accordance with the loading assumptions.

4. Thermal Calculations

a. General

1) Carry out heat transfer calculations in accordance with 2014 New York City Building Code and 2016 New York City Energy Conservation Code requirements and standards referenced by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

2) Where the 2014 New York City Building Code and 2016 New York City Energy Conservation Code do not reference specific standards to be followed, use ASHRAE 90.1 including its appendices as a standard.

a) For fenestration products, use NFRC standards and approved software unless otherwise noted. Where NFRC approved software is not suitable for providing analysis for complex elements, the Contractor may, subject to Commissioner's approval, use an alternative software program. This software program must be capable of modeling to the same level of detail and with the same methodology and inputs as the NFRC-approved programs. Provide sample, comparative results to NFRC-approved software to demonstrate compliance.

3) Contractor shall assess heat transfer through complex assemblies not explicitly defined by 2014 New York City Building Code and 2016 New York City Energy Conservation Code via two-dimensional or three-dimensional numerical analysis. Three-dimensional analysis is required for locations where significant thermal bridging occurs.

4) Develop heat transfer models so the specified boundary conditions are applied realistically. This requirement supersedes requirements provided by 2014 New York City Building Code and 2016 New York City Energy Conservation Code based standards. The Contractor shall:

a) Where the Work does not define the innermost or outermost surface, model additional construction layers to provide a surface to apply the appropriate boundary conditions.

b) Extend models to a plane of symmetry for application of adiabatic boundary conditions.

b. U-Value Calculations

1) Summarize as thermal transmittance (U-value) for the center of Panels, edge effects, and frame effects of each relevant system type. Calculate overall U-values for each relevant system type as a weighted average of constituent areas.

2) Where not specified by 2014 New York City Building Code and 2016 New York City Energy Conservation Code, determine U-value calculations according to ASHRAE 90.1 Appendix A film coefficients and NFRC 100 boundary temperatures.

a) Determine fenestration systems according to NFRC 100 boundary conditions.

3) Provide calculations to the extent that 95% (by area) of the Work is determined.

4) Include in calculations all thermal bridging elements including those that are discontinuous, such as fasteners and brackets.

c. Solar Heat Gain Coefficient (SHGC) Calculations

1) Summarize for all fenestration products the SHGC for the center of the Panels, edge effects, and frame effects of each relevant system type. Calculate overall SHGC for each relevant system type as a weighted average of constituent areas.

2) Where not specified by 2014 New York City Building Code and 2016 New York City Energy Conservation Code, determine SHGC calculations according to NFRC 200 standards.

3) Provide calculations to the extent that 95% (by area) of the Work is determined.

d. Visible Light Transmittance (VLT) Calculations

1) Summarize for all fenestration products as the VLT for the overall system, including effects of the center of Panels and framing of each relevant system type. Calculate overall VLT for each relevant system type as a weighted average of constituent areas.

2) Where not specified by 2014 New York City Building Code and 2016 New York City Energy Conservation Code, determine VLT calculations according to NFRC 200 standards.

3) Provide calculations to the extent that 95% (by area) of the Work is determined.

e. Condensation Resistance Calculations

1) Contractor to demonstrate by calculation that the Work resists condensation under the specified environmental conditions. Calculations must demonstrate the interior surface temperature (relative to the defined vapor barrier line) remains higher than the dewpoint temperature.

2) Determine calculations via heat transfer analysis to determine system section temperatures. The calculation methodology shall follow NFRC standards with the exception of the following conditions and where other clauses in this Section apply:

a) Boundary conditions for calculations shall be according to the internal and external temperatures and film coefficients specified in the corresponding system Section.
b) Use realistic model boundary conditions.

3) Present calculation results so the dewpoint temperature can be clearly seen with respect to the simulated section temperatures and vapor barrier line.

C. Shop Drawings

1. Refer to DDC General Conditions for Shop Drawing submittal requirements.

2. Submit Shop Drawings based on compliant solutions, calculations, Samples, and other supporting evidence.

a. For Work, include plans, erection plans, elevations, sections, full-size details, and attachments to other work. Submit details for all typical and non-typical conditions.

1) Submit Drawing list with detailed description of the Drawings included on the individual sheets.

2) Drawings shall illustrate the complete system including but not limited to supporting elements, fasteners and fixings, allowance for movements and tolerances, and the continuity of weatherproofing elements and insulation. Show sequencing, shape, and layering of all elements.

a) Show all weatherproofing elements including air and weather seals, membranes including vapor retarders waterproofing membranes and roofing membranes, drainage routes, and ventilation. Waterproofing elements shall have all terminations, tie-ins to walls roofs and below-grade systems, laps, corners, intersections of horizontal and vertical surfaces, and penetrations through the system.
b) Submit Drawings showing the location, elevation, and spacing of all penetrations through waterproofing systems.
c) Provide Drawings demonstrating how drainage will be accommodated, and standing water prevented, in wet zones of the Work.

3) Identify materials to be incorporated in the work, dimensions, thickness of each material and system, and relationships to adjacent construction. Show integration with all adjacent building enclosure systems.

4) Indicate welds by standard AWS symbols, distinguishing between shop and field welds. Show size, length, and type of each weld.

5) Indicate type, size, and length of bolts, distinguishing between shop- and field-installed bolts. Identify conventional and high-strength bolted connections.

6) Provide axonometric Drawings of special conditions and of areas requested by the Commissioner to clarify the Engineering.

7) Provide details for cuts, connections, splices, camber, holes, welds, bolts, surface preparation and finish, and other pertinent information. Indicate clearly components which will be fabricated or assembled on site.

8) Clearly identify all changes in resubmissions.

9) Date and identify each Shop Drawing issue and identify each Shop Drawing sheet by the same drawing number / name throughout the duration of the Project.

b. Approval of Shop Drawings is for size and arrangement of principal and auxiliary members, and conformance of connections. Approval does not relieve the Contractor's responsibility for dimensions, fabrications, and correct fitting of system components.

c. Manufacturer's standard data sheets and details or photocopies of the construction documents are not acceptable for Shop Drawings.

3. Coordination Drawings

a. Refer to DDC General Conditions for Coordination Drawing submittal requirements.

b. Prepare Coordination Drawings at the interfaces between different systems.

c. Prepare Coordination Drawings where careful coordination is needed for installation of products and materials fabricated by separate entities.

d. Prepare Coordination Drawings where limited space availability necessitates maximum utilization of space for efficient installation of different components.

e. Show the relationship of components shown on separate Shop Drawings.

f. Indicate required installation sequences.

g. Comply with requirements in building enclosure system Specifications.

4. Submit Drawings in no more than two batches per system. Provide supporting calculations and data sheets for initial system submissions.

5. Where prefabricated Panel systems are utilized for the Project, provide as part of the Drawing set a schedule for all Panels and glazing types:

a. Panel types including finishes for each type.

b. Glazing types including buildups and performance data for each type.

6. Produce and submit digital Building Information Model for coordination of trades as required by the City of New York.

D. Testing Reports

1. As required and specified in in building enclosure system Specifications.

E. Product Data

1. Manufacturer's technical and installation literature for all materials specified or proposed for use on the Project. Properly label and reference to the appropriate Related Section.

2. For each type of product indicated, include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

3. Provide documentation from the different material and system manufacturers showing that all materials are compatible with all other materials with which they come into contact at the Project, or recommendations to provide separation between non-compatible materials.

4. Provide test reports showing that the materials and systems meet the performance criteria established by these Specifications.

F. Samples.

G. Quality Control Plan

1. Project specific, demonstrating how quality management will be implemented from Award to Final Completion.

H. Submit the following informational submittals in time to allow for review by the Commissioner and for resubmittals, if needed, without delaying the work. Informational submittals include product data, calculations, graphical information, and physical samples that do not require Commissioner's responsive action.

I. Qualification Data

1. Provide documentation from the different material and system manufacturers that the Contractor is instructed by the manufacturer to install the specified materials and systems.

2. Provide project experience demonstrating the capability and capacity to complete the Work for each of the following:

a. Fabricators and manufacturers for the following:

1) Framing systems.

2) Cladding Panels.

3) Glass Panels.

4) Weatherproofing products.

5) Finishing products.

b. Independent Testing and Inspection Agencies.

J. Welding Certificates

1. Welding Qualifications: Where required by Work, qualify procedures and personnel according to the following:

a. AWS D1.1/D1.1M – Structural Welding Code – Steel.

b. AWS D1.2/D1.2M – Structural Welding Code – Aluminum.

c. AWS D1.3/D1.3M – Structural Welding Code – Sheet Steel.

d. AWS D1.6/D1.6M – Structural Welding Code – Stainless Steel.

K. Welding procedure Specifications and test reports including, but not limited to the following:

1. Qualification Test Reports

a. For each class of weld to be incorporated into the Work.

2. Mill Test Reports

a. Signed by manufacturers approving that the following products comply with the following:

1) Structural steel including chemical and physical properties.

2) Bolts, nuts, and washers including mechanical properties and chemical analysis.

3) Tension-control, high-strength bolt-nut-washer assemblies.

3. Galvanizing

a. Two copies of and the original coating applicator's notarized Certificate of Compliance that the hot-dip galvanized coating meets or exceeds the specified requirements of ASTM A123 or ASTM A153 as applicable.

L. Product Test Reports

1. Indicating compliance with performance requirements. All reports must be current (less than 4 yrs old and not expired).

M. Product Data

1. Include Material Safety Data Sheets (SDS) for each material where appropriate.

N. Field Quality Control Reports

1. Provide field reports from manufacturer's representatives for all materials and systems noting work that does not meet their installation and/or warranty requirements with recommendations for corrective action.

O. Maintenance Manual

1. For the Work, specify the interval and regime required to maintain each component, material, assembly, and system, in order for the Work to meet the design life performance requirement. Identify the following materials and components that are:

   a. Maintainable. Under normal service conditions, these items will meet the service life of the cladding (without loss of performance below that specified in this Section) with routine service and maintenance. Provide comprehensive recommendations for the servicing and maintenance of these items.

   b. Non-Maintainable. Under normal service conditions, these items will meet the service life of the cladding (without loss of performance below that specified) but are inaccessible for servicing and maintenance.

   c. Replaceable. Under normal service conditions, these items cannot meet the specified service life. Engineer these elements to be replaceable and provide details of the method of replacement.

P. As-Built Drawings

1. Provide Drawings meeting the requirements of Shop Drawings that show the as-built condition.

2. Include a finalized Building Information Model.

Q. Completion of Work

1. Upon substantial completion of Work, submit written certification that the Manufacturer's representative has supervised the work of this Section and that materials they observed are installed in accordance with the manufacturers' requirements.

R. Warranties

1. Submit all Project specific documentation.

1.7 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Comply with applicable provisions of the following specifications:

1. AISC 303 – Code of Standard Practice for Steel Buildings and Bridges.

2. AISI S202 – Code of Standard Practice for Cold-Formed Steel Structural Framing.

3. The Aluminum Association Specification for Aluminum Structures. Chapters M and N.

C. Qualifications

1. Field Testing Agency: Engage an independent third-party qualified Testing and Inspection Agency to perform field tests.

a. Field water testing shall be performed by an AAMA accredited agency.

D. Product Options

1. Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

2. Do not revise intended aesthetic effects, as judged solely by Commissioner, except with Commissioner's approval. If revisions are proposed, submit comprehensive explanatory data for Commissioner's review.

3. Certification of Materials: Prior to commencement of fabrication, obtain certification from the manufacturer of each material that the material is of the correct grade, strength, size, finish, etc., and that all applied coatings, finishes, and the like have been applied to the relevant standards specified herein. Provide copies of all such certification to the Commissioner for inspection.

E. Availability of Shop Drawings: Provide a copy of all applicable Drawings, including Shop Drawings, and Specifications at the site during all referenced system work.

F. Notification: Notify the Commissioner in writing at least 72 hrs prior to the initial installation of the Work.

G. Inspections: Provide site access to the authorized representative(s) including inspectors, the Commissioner, and manufacturers' for inspection of the Work.

1. The fabricator's engineer will organize and direct the test and inspection program. All inspection and test reports shall be submitted to the Contractor and Commissioner. The Contractor shall be responsible for understanding the test and inspection program and notifying the Testing Agency and the Special Inspector when work is ready for tests and/or inspections. The Contractor will provide access to the Special Inspector and the Commissioner. Inspections and tests of the Program of Structural Tests and Inspections will not relieve the Contractor of responsibility for supervision, testing, and inspection for quality control of the work.

2. The Contractor will provide testing and inspection reports to the Commissioner. Upon substantial completion of the construction, the independent Special Inspector will make a final report on the satisfactory completion of the Program for Structural Tests and Inspections to the Commissioner.

1.8 PROJECT CONDITIONS:

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit installation according to manufacturer's written instruction and warranty requirements, and in compliance with the specific requirements of Work.

1.9 COORDINATION AND SEQUENCING:

A. Fully coordinate construction and installation sequences with all adjacent trades.

B. Provide as specified for referenced system and in DDC General Conditions.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 FABRICATION:

A. General

1. As required by the Submittal Section, the Contractor shall prepare general arrangement, component, and assembly Drawings and method statements and submit them for Commissioner's review.

2. Fabricate the Work in accordance with the Contract Documents, Drawings and method statements, and manufacturer's requirements modified as necessary, to meet the requirements of the Contract Documents. The Contractor's fabrication team shall be involved with the product Engineering development.

3. Select fabrication methods used to achieve the specified performance. Base methods used on the use of suitable equipment and experienced operators.

4. Carry out assembly of components to the extent possible in a factory environment.

5. Contractor shall check components for compliance with Drawings and method statements that have been reviewed by the Commissioner, prior to assembly in accordance with their quality procedures.

6. Do not modify the reviewed Drawings and method statements without the written consent of the Commissioner. All changes shall be recorded on a master set of documents and shall be included in the Operations and Maintenance Manual as a record of the as-built work.

3.3 INSPECTION:

A. Operate an inspection system to verify that all materials, workmanship, and completed work conform to the performance criteria and minimum requirements. This includes, but is not limited to, a system for identifying the inspection status at all stages of manufacture and testing.

3.4 MARKING OF PREFABRICATED COMPONENTS:

A. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings to identify strong points for lifting, permit assembly or installation in a particular sequence; or where interlocks occur; or where confusion could arise among components critically different from one another. Marks shall be concealed when installed or made in such a way as not to affect the performance of the work upon removal.

3.5 EXAMINATION:

A. Verify all site conditions and dimensions by field measurements for compliance with requirements for installation tolerances and other conditions affecting performance of the work prior to ordering materials or

starting work. Do this in consideration of the special conditions associated with the alteration of existing construction and reconstruction. Notify the Commissioner of any discrepancies between Drawings and field conditions, and of any elements that require restoration. The Commissioner will determine what modifications or additional restoration are necessary.

B. Verify that site conditions are ready to receive Work.

C. Beginning work indicates Contractor's acceptance of Project conditions.

3.6 DELIVERY, STORAGE, AND HANDLING:

A. General

1. Contractor shall provide a method statement detailing proposed methods of storage and handling, including transportation. Statement will clearly demonstrate that all possible steps have been taken to minimize the risk of damage to materials and fabricated components. The method statement shall include:

   a. Details of manufacturer's requirements for the correct storage of materials and components, in the factory and on site prior to installation, and protection at all times.

   b. Details of temporary support arrangements for the assemblies, both on and off site.

   c. Details of lifting arrangements.

   d. Transportation arrangements.

2. Undertake inspection in line with the agreed quality procedures for elements and components prior to their use. Record all damage and remedial procedures agreed upon with the Commissioner, prior to incorporation into the work.

B. Delivery

1. Do not deliver materials to the Project site before the time of installation.

C. Storage

1. Store materials in original, undamaged packaging with manufacturer's labels and seals intact, unless the manufacturer requires packaging be removed during storage. Clearly label materials with the manufacturer's brand name, batch number, and expiration date, where appropriate.

2. Store all materials according to manufacturer's recommendations, in a dry, enclosed area, off the ground and blocked, and away from all possible contact with water, ice, or snow.

3. Protect and store materials, assembled units, elements of framing and all components of the permanent work in such a manner according to manufacturer's written instructions to prevent damage, distortion, uneven weathering, or degradation. Separate all materials on site from surface of ground. Members bent or buckled from handling or storing are liable to rejection. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

4. Supply bolts, nuts, and washers in grit-free containers and stored in watertight premises. Reject burred, damaged, corroded, or otherwise unserviceable bolts.

5. Clearly label all elements and components for identification and traceability.

6. Store materials in a neat and safe manner so as not to exceed the allowable live load of the storage area.

7. Store materials, including liquids such as adhesives, thinners, and primers, in areas away from sparks, open flames, and excessive heat, and in a dry condition.

D. Handling

1. Handle materials carefully in order to avoid damage or breakage.

2. Do not expose materials to detrimental conditions or physical damage. Store materials out of the weather in clean and dry areas. Do not allow materials to become wet or soiled or covered with ice or snow. Remove materials exposed to detrimental conditions from the job site and do not incorporate into the Work. If incorporated into the Work, remove and replace, up to and including the time of substantial completion, at no additional cost to the City of New York .

3. Do not open packages or containers until all preparatory work is complete and installation is to begin immediately.

3.7 TRIAL INSTALLATION:

A. Provide for review, initial installation of Work noted in the referenced system for installation quality, fit, and finish.

B. Notify Commissioner of the proposed area for trial installation a minimum of two (2) weeks prior to the start of trial installation.

C. Approved trial installation mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

D. Approval of trial installation does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.

3.8 INSTALLATION:

A. Do not install damaged materials or components.

3.9 QUALITY CONTROL PROCEDURES:

A. Implement a clear system to track information flow and to check that work is being engineered and installed to the most up-to-date revisions of Specifications, Drawings, and Coordination Drawings.

B. Documented procedures shall cover but are not necessarily limited to the following:

1. Names of the Quality Manager and team.

2. Quality assessment.

3. List of Engineering development Drawings required and the rate at which they will be produced.
4. Inspection and test procedures to be adopted in checking the Work.
5. Stages at which checklists will be used and Samples of those checklists.
6. Statements on work procedures on the correct use of materials and components, both off site and on site.
7. List of product information with latest revisions.
8. Trade Subcontractors appointed by the Contractor that are involved in the work.
9. Contractor's quality systems and details of their checklists.
10. Engineering, procurement, material checking, fabrication, storage, handling, transport, and protection requirements.
11. Procedure for checking compliance with the Contract Documents and with accepted good practice.
12. Procedure for registering and reporting non-compliance.
13. Procedure for ensuring that non-compliance does not recur.
14. Calibration records of measuring equipment.
15. Certification that the Work is considered complete by the Contractor and is ready for Commissioner's inspection.
16. Checklist register to ensure that all items have been inspected by the Contractor and non-compliance discharged.
17. Protection of work in progress and work completed, including primary brackets, seals, and fire stops.

C. During fabrication, checklists shall include inspection requirements for all components, seals, and finishes that cannot be inspected at later stages in manufacture, assembly, or erection of components.

D. During installation, checklists shall include such items as survey spot checks of primary brackets, condition of components and assemblies, finishes, joint cleaning, backer rod and sealant installation, membrane installation, and fire stopping.

E. Inform the Commissioner in writing on a daily basis of any conditions detrimental to the installation of the Work. State the specific location of each condition.

F. Completed quality checklists shall accompany the components at all stages of production up to the final erection on site and be available for inspection at any stage.

G. Detailed method statements referenced in this Contract Document are required before the work commences.

H. Contractor must provide all coordination, reviews, and manufacturer involvement to qualify the installation for the manufacturer's warranty.

3.10 REPLACEMENT:

A. Restore or replace components out of tolerance and/or exhibiting scratches, stains, or other defects at no additional cost to the City of New York.

1. Restoration is subject to review to evaluate the intended performance and aesthetic effects, as judged solely by Commissioner. Replacement is required where restoration does not meet the aesthetic intent.

2. Remove and replace brittle materials that are broken, chipped, cracked, or abraded or that are damaged from natural causes, accidents, and vandalism, during construction period.

3.11 CLEANING AND PROTECTION:

A. Protect all components of the Work from detrimental weather and damage until construction operations are completed and acceptable to the Commissioner.

B. Work which cannot, for reasons acceptable to Commissioner, be covered with complete construction system before onset of weather detrimental to the Work shall be completely covered and protected so as to deflect water and weather from the installation without damaging adjacent work.

C. Protect finishes from damage immediately after installation. Do not apply markers to exposed surfaces and remove nonpermanent labels immediately after installation.

D. Protect finishes from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with the Work, remove substances immediately as recommended in writing by the manufacturer.

E. Do not store construction or waste material or equipment on installed waterproofing or roofing membranes without protection and approval from the manufacturer.

F. Examine finished surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by the manufacturer.

G. Wash all external surfaces as recommended by manufacturer in each area of Project not more than four (4) days before date scheduled for inspections that establish date of Substantial Completion. Wash Work as recommended in writing by the finish manufacturer. Thoroughly clean surfaces free of oil, grease, and other foreign matter.

3.12 CLEAN UP:

A. Upon completion of the Work, Contractor shall remove all equipment, material, and debris from the work and storage areas, and leave those areas in an undamaged and acceptable condition.

SECTION 02 01 01
Petroleum Bulk Storage Tank Removal

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

C. The following documents have been prepared for the rehabilitation project and are included with the Contract Documents:

1. 22 June 2018 Phase I Environmental Site Assessment (ESA), prepared by Louis Berger & Associates., P.C. (Louis Berger)
2. 12 October 2018 Phase II Environmental Site Investigation (ESI) Report, prepared by Louis Berger
3. 09 December 2019 DSNY Landfill Infrastructure Modifications, prepared by Langan
4. 22 October 2018 Geotechnical Engineering Report, prepared by Langan

D. Related Sections

Sections containing requirements related to this Section include, but are not limited to:

1. Section 02 61 13 – Excavation, Handling, Transportation, and Disposal of Contaminated Materials
2. Section 31 00 00 - Earthwork
3. Section 31 50 00 – Excavation Support and Protection

1.2 GENERAL REQUIREMENTS

A. The Contractor shall furnish all labor and materials, equipment and incidentals required for the proper decommissioning, removal, and closure of on-site petroleum bulk storage tanks and associated piping. If

identified, removal and off-site disposal of petroleum-contaminated soil and concrete should follow Specification 02 61 13 – Excavation, Handling, Transportation, and Disposal of Contaminated Materials.

B. Contractor shall be responsible for excavation of any contaminated soil or liquids as directed by the Commissioner and City of New York and for loading, transportation and disposal of petroleum-impacted materials and of impacted concrete that may be encountered during the tank removal. Contractor's work shall include all labor and equipment required to complete this scope and shall be inclusive of any waste classification sampling and disposal facility coordination for removal and disposal of soil, liquids and concrete. Any excavation must be supported to accommodate tank removal, excavation of soil and fluids, as necessary.

C. If needed, Contractor shall provide all equipment, labor and material required to backfill and compact the underground storage tank (UST) excavation subsequent to UST removal to replace the tank system void.

D. Contractor is responsible for health and safety of their employees and subcontractors that are required to complete the scope of work. The Contractor must implement any required health and safety measures and provide trained personnel in accordance with 29 CFR 1910.120(e) and 29 CFR 1919.146(g) for completion of work specified herein.

1.3 SCOPE OF WORK

A. The general scope of work will include cleaning, inerting, excavation, removal, waste characterization, transportation and disposal of the tanks, tank enclosures, tank system piping that may be encountered, and any product, water, sludge or other materials (including concrete, sand) contained in the tanks.

B. The Contractor shall obtain all necessary permits, provide proper notification to all city and state agencies, at a minimum per Title 6 of the New York Codes, Rules, and Regulations (6 NYCRR) Part 613-1.9, and utility companies; and furnish all labor, materials, equipment and incidentals required for the proper decontamination, decommissioning, and removal of the tanks and associated electrical, structural, process piping and product equipment. This includes, but is not limited to, concrete, anchor straps, manways, pumps, remote fill lines, supply and return lines, vent lines, remote fill ports, etc.

C. The Contractor also shall be responsible for providing tank closure documentation (i.e., manifests, bills of lading, New York City Fire Department [FDNY] Affidavit for proper tank closure) to the City of New York in accordance with existing New York State Department of Environmental Conservation (NYSDEC) guidance and regulatory policy. Copies of FDNY certifications shall be provided to the City of New York and Commissioner. The Commissioner will be responsible for any change in registration status and closure reporting as required by NYSDEC, including submission of the NYSDEC Petroleum Bulk Storage (PBS) Registration/Renewal form documenting the updated status of the tanks. The City of New York will be responsible for any fees required for change in NYSDEC PBS registration status. Other than the PBS permitting noted above, the Contractor is responsible for all permits and associated costs.

D. Any asbestos-containing material (ACM) present on the tank piping shall be removed and disposed prior to tank and piping removal in accordance with 15 RCNY Chapter 1.

E. The Contractor shall be responsible for the excavation, segregation, stockpiling, transportation, and disposal of all materials (soil, sludge, debris, concrete, etc.) within and including any enclosures, the tank contents, piping, and for pumping, testing, and disposal of free phase product and water removed from the excavation (if applicable).

F. The Contractor shall be responsible for continuously monitoring the work area. This includes, but is not limited to, monitoring for the presence of flammable, toxic, or oxygen deficient atmospheres prior to and during removal of the tank system.

G. The Contractor shall be responsible for demolition, removal and disposal of concrete associated with tank enclosures, retaining walls, bottom pads, and anchor straps, and any underlying contaminated material, as directed by the Commissioner. Any petroleum-contaminated concrete removed from the excavation shall not be disposed of at a recycling facility or other facility permitted to accept clean concrete or construction debris. All petroleum-contaminated concrete must be handled and disposed as petroleum-impacted material.

H. The Contractor shall conduct all required testing for disposal classification of any contaminated materials including, but not limited to, oil, sludge, water or water containing oil or separate phase product, rock, concrete or concrete products, brick, and other ancillary tank system related materials such as piping, conduit, wiring, tank fill facilities, and monitoring devices, to be removed from the Site.

I. All post-excavation endpoint soil samples will be collected by the Commissioner. The Contractor shall assist the Commissioner with collection of post-excavation endpoint soil samples from the excavation bottom and sidewalls of the excavation.

J. The Contractor shall be responsible for any necessary support of excavation required to stabilize the sidewalls of the excavation and other structures, utilities, etc. adjacent to the work area. This shall be done accordance with New York City Building Code, OSHA regulations, and the Contract Documents. All permits required to conduct such work will be the responsibility of the Contractor to obtain and any costs incurred to install such shall be the responsibility of the Contractor.

K. The Contractor shall prepare all necessary plans, obtain all necessary permits, and provide all necessary plans, notifications and submittals to New York City (i.e. FDNY, NYCDOB), State of New York (i.e. NYSDEC PBS) and City of New York and Commissioner before, during, and after performance of the removal work.

L. No work shall be performed under this Contract without the direct, on-site supervision of the Commissioner.

M. All work shall be performed in accordance with the Contract Documents.

1.4 REGULATORY COMPLIANCE

A. The Contractor shall comply with NYCDEP regulations for discharges to the sewer system, United States Environmental Protection Agency (USEPA), NYSDEC, and State Department of Transportation regulations for shipping of regulated substances to off-site disposal facilities, and meet all regulatory requirements imposed by the Treatment, Storage and Disposal Facility. If the Contractor ships materials for disposal through other states, they shall also comply with the regulations and guidance of other states. Regulations pertaining to the

transport and disposal of regulated substances/materials and tank system removal procedures include, but are not limited to the following:

1. USEPA Regulation 40 CFR Part 280, Underground Storage Tanks: Technical Requirements Final Rule and Office of Emergency and Remedial Response, Standard Safety Guides, PB92-983414.
2. New York City Fire Department, FP Directive 3-73 Division of Fire Protection, NYCAC Title 27, New York City Fire Prevention Code, Chapter 4 et seq., and Rule 21-02 of the City of New York.
3. NYS Uniform Fire Prevention and Building Code (UFPBC) 1164.5.
4. NYS Department of Environmental Conservation (DEC)-Subdivision 6 NYCRR Part 613.9 (b) (DEC's Petroleum Bulk Storage – PBS Regulation.
5. 6 NYCRR Part 360, Solid Waste Management Facilities, September 5, 2017.
6. 6 NYCRR Part 364, Waste Transporter Permits, September 5, 2017.
7. 6 NYCRR Part 371, Identification and List of Hazardous Waste, July 1, 1986.
8. NYSDEC Commissioner's Policy #51 (CP-51) Soil Cleanup Guidance, October 1, 2010.
9. NYSDEC Program Policy DER-10 / Technical Guidance for Site Investigation and Remediation, 3 May 2010.
10. NYSDEC Subpart 375-6: Remedial Program Soil Cleanup Objectives, 11 December 2006.
11. Rule 21-02 of the City of New York.
12. New York City Building Code.
13. 29 CFR 1910 – Federal Occupational Safety and Health Administration (OSHA) standards.
14. NIOSH Occupational Safety and Health Guidance manual for Hazardous Waste Site Activities.
15. 29 CFR 1926 – Safety and Health Regulations for Construction.
16. Resource Conservation and Recovery Act, 40 CFR Parts 260-265, Safe Entry and Cleaning of Petroleum Storage Tanks.
17. National Fire Prevention Association, Volume 30, "Flammable and Combustible Liquids Code.", Revised 2015
18. National Fire Prevention Association, Volume 327, "Cleaning or Safeguarding Small Tanks and Containers without Entry."
19. US Department of Transportation (US DOT) 49 CFR Section 172.500 et seq.

20. American Petroleum Institute, API-2015A, "A Guide for Controlling the Lead Hazard Associated with Tank Entry and Cleaning."
21. American Petroleum Institute, API-2217A, "Guidelines for Work in Inert Confined Spaces in the Petroleum Industry."
22. American Petroleum Institute, API-2015, "Requirements for Safe Entry and Cleaning of Petroleum Storage Tanks."
23. American Petroleum Institute, API-2016, "Guidelines and Procedures for Entering and Cleaning Petroleum Storage Tanks."
24. American Petroleum Institute, API-1604, "Closure of Underground Petroleum Storage Tanks."
25. American National Standard Institute, ANSI 22882, "Standard Practice for Respiratory Protection."
26. American Society of Testing Materials, ASTM D 5088 (1990), Decontamination of Field Equipment Used at Non-radioactive Waste Sites.
27. National Institute for Occupational Safety and Health, NIOSH, "Working in Confined Space."
28. New York City Department of Transportation Requirements.

B. Any transporter of contaminated/hazardous materials shall be licensed at a minimum in New York State.

C. Comply with Occupational Safety and Health Administration (OSHA) Standards and Regulations contained in Title 29 CFR Part 1910.120 "Hazardous Waste Operations and Emergency Response."

D. The provisions of the New York City Building Code relating to Site earthwork and backfill shall govern the work of this section.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.6 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7 SUBMITTALS

A. The Contractor shall provide the required submittals to Commissioner during the specific phases of the project as described below.

1. Pre-Mobilization Submittals – The following shall be provided to Commissioner for review no later than seven calendar days prior to the start of any field activities.

   a. Proof of the completion of health and safety training in accordance with 29 CFR 1910.120(e) and 29 CFR 1919.146(g) as specified in Part 3.2.
   b. Copies of permits or licenses for the Contractor's selected disposal facility or reclaimer. A letter of commitment and detailed listing of the disposal facility's or reclaimer's required analytical testing for proper manifesting and disposal shall also be provided.
   c. Copies of all permits required for UST removal.
   d. A detailed project schedule.
   e. Details for relocation of existing utilities away from work, if necessary.
   f. Confirmation that all Site utilities in the work area have been identified and work shall be performed in a manner to protect these utilities from damage. Confirmation that all Site utilities directly associated with the work, including, but not limited to, electrical, steam, product supply and return lines, or other utility lines within the proposed work area have been identified, marked, locked, and tagged out.
   g. A Excavated Material Disposal Plan which includes the following information:

      i. The name and address of the company(ies)/ facility(ies) that shall accept the contaminated materials and liquids, including free product, remaining contents of the tanks, and all free product and contaminated water collected during tank and pipe cleaning, and from the excavation following tank removal.
      ii. The name and address of the licensed tank disposal facility that shall accept the tanks and piping.
      iii. Copies of permits or licenses for the Contractor's selected disposal facility.
      iv. Written confirmation shall be submitted from each of the disposal or recycling facilities indicating that they shall accept the tank and piping, and remaining product or sludge, and other excavated materials to be removed as part of this work.
      v. A copy of certification that the Contractor removing the underground storage tank is certified for the work by the FDNY.

   h. All pertinent information relating to the transport of materials specified herein. For transporters to be considered, the following information, at a minimum, shall be submitted:

      i. Name, telephone number, address, and contact name for all transporters.
      ii. USEPA identification number and license expirations date, where applicable.
      iii. Proof of permit, license or authorization to transport waste in all affected states.

   i. Obtain and submit all applicable NYSDEC, USEPA, and NYSDOT permits required for the transport and disposal of all excavated materials resulting from the performance of the work. The licenses and permits that may apply include, but are not limited to, NYSDEC Part 364 permits and hazardous waste transporter permits issued under 6 NYCRR Part 372.3.

j. Information on each USEPA and state-approved off-site disposal facility that is proposed to receive contaminated materials and hazardous wastes, if applicable, 14 calendar days prior to the disposal of any waste stream. For each proposed facility, the following information shall be submitted:

i. Name, address, and location of the facility, including the name, address, telephone number, and fax number and the contact person at the facility.
ii. The USEPA identification number, as applicable
iii. The amounts and types of contaminated material and/or hazardous wastes that shall be accepted at the facility on a daily basis.
iv. Facility testing requirements and acceptance criteria.
v. The USEPA region, state regulatory agency, and the local regulatory agency for which permits are required.
vi. Copies of valid, current, operating permits for the facility from the applicable regulatory agencies.
vii. Relevant audit packages and insurance certificates

k. Submit a site-specific Environmental, Health, and Safety Plan.

B. Post-UST Removal Submittals – The following shall be submitted 21 calendar days after completion of field work.

1. Copy of Tank Removal Affidavit signed by a FDNY-licensed New York City Tank Contractor and verification that such affidavit has been provided to the FDNY

2. Certification from the disposal facility that the tank has been properly disposed and all scrap steel has been property disposed or recycled.

3. Copies of fully executed (i.e., signed by transporter and accepting disposal facility) waste disposal documentation including manifests and bill of lading for all product, sludge, water, soil and debris transported from the site.

1.8 QUALIFICATIONS

A. The Contractor shall be approved by the Commissioner and City of New York, and shall be a FDNY-licensed tank Contractor. The Contractor shall be any person or persons, corporation, or proprietorship deemed competent and experienced to perform work involving the closures of UST, and the hauling, disposal, transportation, or abatement of hazardous and non-hazardous materials. For the purposes of this contract, the Contractor shall possess the following:

1. A valid "Part 364" permit for waste transport and disposal of petroleum-impacted material

2. Facilities to handle, dispose, and/or abate hazardous or non-hazardous material

3. FDNY licensing for tank closure, OSHA certification for confined space entry, and accordingly trained personnel

4. Labor and materials to immediately execute work under this contract

5. Experience directly related to work under this contract
6. A comprehensive understanding of all the regulations and requirements governing this contract
7. Any item pertinent to work described in this contract
8. When it is necessary for the Contractor to utilize the services of a subcontractor to perform work, the Contractor shall be responsible for supplying the identification and contact information of the subcontractor.
9. The subcontractor's personnel shall possess valid 40-hour OSHA HAZWOPER certifications, per 29 CFR 1910.120(e).

1.9 PROJECT CONDITIONS

A. The Department of Sanitation garage rehabilitation project (site) is located at the northwest corner of Muldoon Avenue (private) and West Shore Expressway service road in Staten Island, New York (the Site) and is identified as Block 5900, Lot 500 on the Staten Island Tax Map. The Site occupies an area of approximately 680,000 square feet and is improved with the existing Staten Island District 3 repair garage, recycling area, wastewater treatment facility, and asphalt-paved and gravel-topped parking lots. According to the 29 March 2018 topographical survey prepared by Langan, the grade fronting the Site along Muldoon Avenue slopes down from about el. 23 feet (north) to el. 10 feet (south), and the grade in front of the site along the West Service Road slopes down from about el. 32 feet (northeast) to el. 10 feet (south). All elevations are referenced to the North American Vertical Datum of 1988 (NAVD88).

B. Based on the findings of the 22 June 2018 Phase I ESA prepared by Louis Berger, the Site contains nine active underground storage tanks (USTs) and two active aboveground storage tanks (ASTs), which are used for waste oil, hydraulic oil, motor oil, No. 2 fuel oil, and biodiesel. The Contractor is responsible for removal of product and sludge from the tanks, inerting the tanks to allow for removal and dismantling, removal of the tanks and all associated piping, and loading, transportation and disposal of the tanks, piping, and tank contents for proper disposal – including any sampling required for disposal of the tank contents. Contractor must also include removal of any concrete or other vaulted structures that may enclose or support the tanks.

C. The City of New York and Commissioner make no predictions or representations regarding the character or extent of soil, obstructions or other subsurface conditions to be encountered during the Work. The Contractor shall make their own deductions of the subsurface conditions that may affect the methods or cost of construction of the Work hereunder, and they agree that they will make no claims for damages or compensations, except as are provided under the agreement, should they find conditions during the progress of the Work different from those as calculated and/or anticipated by them. Other exploratory operations may be performed by the Contractor, at the Contractor's option and following the City of New York's approval. No change in the Contract Sum will be authorized for such additional exploration undertaken by the Contractor.

D. The Contractor, by careful examination, shall inform themselves as to the nature and location of the Work; the conformation of the ground and the nature of the subsurface conditions; the locations of the groundwater table; the character, quality and quantity of the materials to be encountered; the character of the equipment and

facilities needed preliminary to and during the execution of the Work; and all other matters which can in any way affect the Work.

E. The Contractor shall investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the Work Site. The Contractor shall conform to NYSDOT, USEPA, and NYSDEC regulations in regard to the transportation of materials to and from and at the job Site.

F. Existing Utilities: Locate existing underground utilities in and beyond the areas of work. If utilities are indicated to remain in place, provide adequate means of support and protection during the Work.

1. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility owner immediately for directions. Cooperate with City of New York and utility companies in keeping respective services and facilities in operation. Restore damaged utilities to satisfaction of utility owner.

2. Coordinate with utility companies for shutoff of services prior to the removal of any on-site utilities.

G. Examine drawings to determine the sequence of operations in relation to the work of other trades, if they are present. Start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.

1.10 NOTIFICATION

A. Refer to DDC General Conditions Section 01 73 00 "Execution" subsection 3.5 "Examination" for details on utility notification and mark-out.

B. The Contractor shall notify all utilities prior to the work, and arrange for mark-outs of underground utilities, as needed.

C. The Contractor shall notify any city or state agencies as required (i.e., FDNY, NYSDEC PBS) prior to initiation of UST system removal.

1.11 PROTECTION

A. Refer to DDC Standard General Conditions Section 01 35 26 "Safety Requirements Procedures" subsection 3.2 "Protection of Personnel"

B. All Contractor personnel shall wear personal protective equipment and protective clothing consistent with the levels of protection required for this Work as specified by OSHA and the Contractor's Environmental Health, and Safety Plan [HASP].

C. The Contractor shall maintain safe sidewall slopes. Excavations shall meet all applicable New York City Department of Building Codes and OSHA requirements, including 29 CFR 1926.

D. Monuments, bench marks and other reference features on streets bounding this project, shall be protected. Should these be disturbed in any manner, the Contractor shall have them replaced at their own expense.

E. In order to prevent damage, injury or loss, the Contractor's actions shall include, but not be limited to, the following:

1. Storing apparatus, materials, supplies, and equipment in an orderly and safe manner that shall not unduly interfere with the progress of the work.

2. Providing suitable storage facilities for all materials.

3. Placing upon the work or any part thereof only such loads as are consistent with the safety of that portion of the work.

4. Handling of all refuse, rubbish, scrap materials, and debris caused by on-site operations. The Site work shall be conducted in a safe, orderly fashion and maintain a work-man-like appearance at all times.

F. The Contractor shall not enter or occupy other areas with people, tools, materials or equipment, except on areas approved by the Commissioner, after written consent is obtained from the proper parties.

G. Dust, dirt, odor and vapor control shall be implemented at the direction of the Commissioner. The Contractor shall respond immediately to nuisance odors or dust, as directed by the Commissioner.

1.12 ALLOWANCE AND PAYMENT

A. An allowance for the Contractor has been established for this work, to be utilized when ordered and authorized in writing by the Commissioner.

B. The Contractor will be paid on a time and materials (T&M) basis under this allowance. Labor will be paid based on the Contractor's Certified Payrolls, all other expenses will be paid on an invoice basis. A markup of 12% for overhead and 10% for profit will be allowed, except that no markup will be allowed on Payroll Taxes or on the premium portion of overtime pay or on sales and personal property taxes.

PART 2 - PRODUCTS

2.1 MATERIALS

A. All reused soil must meet the requirements specified in Section 026113 – Excavation, Handling, Transportation, and Disposal of Contaminated Materials.

B. The product(s)/materials listed below shall be submitted to the Commissioner for approval.

1. The use of imported recycled concrete aggregate or crushed stone as general fill shall be permitted provided it meets the requirements of NYSDEC DER-10 Section 5.4(e)5, Section 31 00 00 Earthwork and NYCDEP Specification Section 40.06 Environmental Requirements.

2. The use of imported soil as general fill shall be permitted provided it meets the requirements of Part 2.1-B(1).

3. Excavated petroleum-impacted soil that may be derived from the tank removal excavation or the concrete enclosure shall not be re-used on-site. Excavation, transport, and disposal are addressed in in Section 02 61 13 – Excavation, Handling, Transportation, and Disposal of Contaminated Materials.

4. Management of any soil excavated in conjunction with tank removal must be conducted in accordance with the requirements of Section 02 61 13 – Excavation, Handling, Transportation, and Disposal of Contaminated Materials and Section 31 00 00 – Earthwork.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements

3.2 GENERAL REQUIREMENTS

A. Disposal of tanks, lines, sludge, residual liquids and contaminated soils shall be in accordance with the requirements of this specification and shall be the responsibility of the Contractor.

B. Prior to removal of the UST, all liquids and accumulated sludge shall be removed from the tanks, to the extent possible, in accordance with the National Fire Protection Association Flammable and Combustible Liquids Code (NFPA-30) and any other applicable requirements.

C. Prior to removal from its location, all liquids will be removed, the tank interior will be inerted and void of flammable or explosive vapors, and any lines, wires or pipes will be disconnected from the tank and plugged. The basic procedures for meeting these requirements are defined in the NYSDEC Petroleum Bulk Storage regulatory programs.

D. The Contractor shall continuously test the tank atmosphere and the excavation area for percent oxygen and combustible gas during the tank excavation and removal operations.

3.3 SAFETY

A. Personnel working inside and in the general vicinity of the tanks shall be trained and thoroughly familiar with the safety precautions, procedures and equipment required for controlling the potential hazards associated with this work. Personnel shall use proper protection and safety equipment during work in and around the tanks.

B. Completion of an initial 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) training program (or its equivalent) as detailed in OSHA's 29 CFR 1910.120(e) is required for all employees who will perform activities associated with UST removal. Annual 8-hour refresher training is also required.

C. Training in accordance with OSHA's 29 CFR 1910.146(g) is required for all employees who will enter a confined space.

D. The Contractor shall maintain safe sidewall slopes or shall provide adequate shoring. The excavation shoring shall comply with New York City Department of Building Codes, including Subchapter 19.

E. Cutting of steel by thermal methods shall at all times, occur in a non-explosive environment. During such work, explosive atmospheres in the tank, piping and of the surrounding atmosphere shall be continuously monitored. The Contractor shall note that residual pockets of fuel or residues may exist in some of the pipelines and the Contractor shall exercise care to prevent harm to employees or the public resulting from the potential explosive nature of the contained materials. Provide and maintain an adequate supply of fire extinguishers and other required safety equipment in close proximity to all demolition activity.

F. All soil and tank removal operations shall be conducted in a manner as required to prevent the spread of dust per observation by the Commissioner. If deemed necessary by the Commissioner, the Contractor shall provide dust control with a water truck or other means approved by the Commissioner.

G. The Commissioner shall conduct ambient air monitoring in the work zone in the immediate vicinity of the excavation area for fugitive dust emissions and organic vapors. If these readings are unacceptable, the Contractor shall institute measures to minimize dust and/or organic vapors. The measures utilized are subject to the approval of the Commissioner.

3.4 PREPARATION

A. The Contractor shall perform all necessary Site preparation, restoration, security and control including but not limited to temporary fencing, backfilling and shoring as necessary to protect structures, workers and public.

B. The Contractor shall inspect the condition of the tanks, and remote fill, if present, to the extent required for safe work performance.

C. Assure that electrical power to the tanks and their ancillary equipment has been deactivated and the actual wiring properly dismantled at the circuit breaker.

D. The Contractor shall remove the audible and visible overfill alarm system, and dismantle the UST leak detection systems, if present.

3.5 CLEANING AND REMOVAL OF UST SYSTEM

A. The Contractor shall disconnect associated product, vapor recovery and vent lines and drain the remaining liquid inside the product lines into the tanks. The Contractor shall proceed with caution to ensure no product is spilled during this process.

B. The Contractor shall pump all residual waste from the tank via a temporary closed system into USDOT approved drums, containers or vacuum truck. If drums or containers are used, seal the drums or containers, identify contents and store the containers on pallets underlain by 12 mil plastic sheeting.

1. Drums or containers shall be labeled as follows:

   a. Specific work site (e.g. Muldoon Avenue (private) and West Shore Expressway service road in Staten Island, New York)
   b. FMS Project ID No. S136-367
   c. Drum (container) number (in increasing sequence as filled)
   d. Contents (e.g. rinse water from tank cleaning)
   e. Date filled

2. The Contractor shall maintain a written inventory of drums and containers.

C. The Contractor shall clean and vent all associated product, vapor recovery and vent lines before disconnecting from the tank.

D. The Contractor shall clean the inside of the tanks in accordance with API-2015 using high-pressure water rinse. The Contractor shall pump rinse water via a temporary closed system into USDOT approved drums, containers or vacuum truck. If drums or containers are used, seal the drums or containers, identify contents and store the containers on pallets underlain by 12 mil plastic sheeting. Drums or containers shall be labeled as described in Article 3.05 B.

E. The Contractor shall purge the tank of all flammable vapors and oxygen by displacement with inert gas using one of the following methods:

1. Displacement with bottled, inert gas (e.g. carbon dioxide)

2. Displacement with dry ice (minimum 15 lbs. per 1,000 gallon tank volume). The dry ice shall be crushed and distributed evenly over the greatest possible area to ensure rapid sublimation. All available tank openings shall be open to the atmosphere during this procedure to ensure rapid dissipation of the dry ice.

F. To evaluate the effectiveness of the dry ice procedure, the Contractor shall use an explosimeter to determine if the resultant vapor mixture within the tank(s) exceeds ten percent of the Lower Explosive Limit (LEL). Readings shall be taken throughout the tank's depth wherever access is possible. If the vapors within the

tanks exceed ten percent of the LEL, the displacement procedure shall be repeated followed by a recheck of the LEL until the vapors are less than 10 percent of the LEL.

G. The Contractor shall remove the tank and all piping, including, but not limited to, supply piping, return piping, petrometer, heat piping, remote fill piping, vent piping and the vent riser, from the excavation.

H. The Contractor shall remove any tank foundations or tie down slabs, cradles, retaining walls, etc., if present and transport and dispose off-site at an approved facility.

I. The Contractor shall make provisions for leaving the excavation open until the Commissioner deems the work complete.

3.6 CLEANING AND PREPARATION FOR DISPOSAL

A. The Contractor shall use an approved biodegradable cleaning solution, suitable for removal of petroleum, to clean all residual material and soil from the interior and exterior surfaces of the piping. (Note that solutions containing chlorinated solvents or volatile organic compounds are not acceptable. The Contractor shall submit applicable Safety Data Sheets (SDS) to the Commissioner and obtain approval for the cleaning solution in advance.).

B. Cleaning shall be done in an area specifically set up by the Contractor for that purpose, curbed, and lined with an impermeable membrane, to contain the used cleaning solution, including any overspray, and any contaminated debris removed during the cleaning process. All cleaning related materials and operations, and disposal of used cleaning solution and associated contaminated debris, shall be provided and performed by the Contractor at no additional cost to the City of New York.

C. The integrity of the tank and piping shall be inspected for signs of corrosion, cracks, structural damage, staining or any other evidence of leakage. Tank inspection shall be documented in writing and by photographs, with particular emphasis on any evidence of corrosion, cracks, structural damage, or leakage.

D. Tank may be reduced in size, if necessary, for removal and disposal. If tanks are not cut into pieces, they shall be perforated or in some other manner rendered unusable.

E. The tank API identification numbers shall be removed from tank surfaces by the Contractor.

F. The tank shall be properly labeled in accordance with NYSDOT regulations. The Contractor shall permanently and legibly label both sides of the exterior shell of the tank with letters in orange spray paint not less than 2 inches high as follows:

TANK HAS CONTAINED (LIST TANK CONTENTS)

NOT VAPOR FREE, DO NOT ENTER

DATE OF REMOVAL (month, day, and year)

G. The tank shall be removed from the Site as promptly as possible after cleaning, rendering inoperable, dismantling and labeling procedures are completed. Tanks shall not be stored on-site after they are removed.

3.7 TANK AND WASTE DISPOSAL

A. The fluid wastes generated and collected as a result of the tank emptying, tank cleaning, and limited dewatering, as necessary, shall be sampled and classified by the Contractor in accordance with the approved disposal facilities' requirements. The Contractor shall provide the Commissioner with a copy of the analytical results, the facility information required in the Submittal section, prior to transporting to the approved disposal facility. Any petroleum-impacted soil that may be generated during the tank excavation shall be sampled and classified by the Commissioner in accordance with the approved disposal facilities' requirements. Waste characterization requirements for non-hazardous contaminated and hazardous materials are addressed in Section 02 61 13 – Excavation, Handling, Transportation, and Disposal of Contaminated Materials, Article 1.6-3.

B. Once classified and accepted by the approved facility in accordance with the facility permit, the Contractor shall provide the Commissioner with a copy of any required hazardous or non-hazardous waste manifests, if applicable. The Contractor shall obtain all permits necessary to conform to these regulations. The Contractor shall identify, in writing, the facility at which this material shall be disposed.

C. The Contractor shall be responsible for loading the removed tank, transporting and disposing of the tanks at an approved and permitted disposal facility.

D. The Contractor shall provide the Commissioner with all waste disposal documentation, including permits, manifests and bills of lading for soil, liquids, and the tanks.

E. The Contractor is responsible for registering and/or deregistering the tank with the NYSDEC Petroleum Bulk Storage (PBS) unit.

F. The Contractor shall be responsible for the collection and analysis of all samples of tank contents, for waste characterization as required by the disposal facility. All lab testing conducted for this project shall be performed by an NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory. The Contractor shall provide to the Commissioner in the Procedural Plan, the testing requirements of the disposal facility(ies) it intends to use.

G. All transport vehicles shall be inspected, prior to leaving the Site, by the Contractor to ensure that no material adheres to the wheels, undercarriage, tailgates, covers or other areas of transport vehicles. All vehicles shall be cleaned by washing tires, undercarriage, and any other contaminated parts prior to leaving the Site using a high-pressure water and/or steam spray. Contractor shall collect all wash water for treatment and disposal as required.

H. The Contractor shall transport and deliver material only to the approved disposal facilities. Disposal facilities must be reviewed and approved by the Commissioner prior to transporting waste off-site.

I. The Contractor shall be responsible for appropriate measurement of unit quantity of material removed from the Site. The Contractor shall coordinate vehicle inspection and recording of quantities leaving the Site. The Contractor shall keep an accurate record (log) of the contaminated material transported off-site and fill imported to the Site, and maintain a file of all facility-signed (completed) manifests for all materials leaving the Site and documentation for all fill entering the Site. These quantities shall be compared to recorded quantities received at the disposal facilities. The Contractor shall immediately resolve any discrepancies that occur and determine the probable cause for the discrepancy. Daily logs shall be submitted to the Commissioner daily. Manifests and fill documentation shall be submitted to the Commissioner when received.

J. The Contractor shall be solely responsible for any and all actions necessary to remedy situations involving material spilled in transit or disposed of at an incorrect location.

K. The Contractor shall have access to back-up vehicles and equipment to ensure that there is no downtime in connection with soil transport operations.

L. The disposal containers shall be ISO type, dump trailers, or approved equal, constructed of sufficient metal, have watertight bodies and sealed tailgates equipped with positive locking devices and provisions for control of free liquids. No liquid shall leak from any part of the loaded container or trailer. The Contractor shall furnish and install a metal or tarpaulin cover on each container immediately after the container is full. The cover shall be secured in an approved manner and shall remain in place until the container has reached the disposal facility.

M. The Contractor shall be responsible for transportation safety. All vehicles shall be properly maintained, driven properly, follow all rules and regulations, observe all speed limits, etc. The on-site speed limit shall be five miles per hour. All vehicles shall be inspected before every trip as part of Contractor's preventive maintenance program. The Contractor shall inspect each vehicle to ensure that all doors, covers, etc. are secure and that no material can spill or otherwise be released or leak. Each vehicle shall bear, at a minimum, the name and phone number of the Contractor plainly visible on both cab doors. Each vehicle shall be uniquely numbered in lettering at least four inches high and shall be placarded in accordance with USEPA and NYSDOT requirements. Likewise, each trailer or container shall be so labeled on both sides and the tailgate if possible.

N. The Contractor shall submit a copy of the completed manifest and scale tickets for each container to document the proper transportation of disposed material to an approved permitted facility by permitted vehicles within thirty calendar-days of the completion of field operations. No payments shall be made until copies have been furnished.

O. All trucks leaving the Site containing solid material for off-site disposal will be covered with tight-fitting covers, and will be checked to ensure that the cargo is not leaking. Excavated soil supersaturated with water will be dried, dewatered or mixed with a drying compound (e.g. quick lime) prior to loading into a transport vehicle for off-site disposal.

3.8 DECONTAMINATION OF EQUIPMENT AND MATERIALS

A. All decontamination procedures for equipment and materials shall conform to the requirements of applicable USEPA and NYSDEC regulations, as appropriate.

B. All recoverable equipment and materials which have been in contact with excavated soil shall be decontaminated prior to removal from the Site. As used herein "recoverable" shall mean all items which are non-absorptive in nature and which can be successfully decontaminated. All items for which decontamination is difficult or uncertain shall be considered non-recoverable, as determined by the Commissioner.

C. Decontamination shall be completed within a specifically prepared Decontamination Area, preferably adjacent to the contaminated stockpile. A minimum 12 mil plastic, non-porous barrier membrane of appropriate size shall be laid down under items being decontaminated. The side boundaries of the Decontamination Area shall be bermed to catch and hold rinse fluids and protect adjacent grade area. This barrier membrane and the rinse fluids shall be considered non-recoverable.

D. Recoverable Contractor-owned equipment and materials shall be decontaminated with pressurized steam. Do not utilize any detergent agents. Decontamination liquids shall be collected and pumped into USDOT containers/drums and disposed of properly.

E. Deposit non-liquid non-recoverable materials into USDOT containers as directed by the Commissioner and dispose off-site properly.

F. Mark and placard drummed decontamination materials and place in the contaminated stockpile area. The decontamination waste shall be sampled and classified by the Contractor in accordance with the approved disposal facilities' requirements. Once classified and accepted by the approved facility, the Contractor shall provide the Commissioner with a photocopy of any required manifests.

3.9 GENERAL BACKFILL

A. Upon approval by the Commissioner, excavations shall be backfilled promptly with controlled fill per NYCDEP Specification Section 40.06 - Backfilling.

B. Controlled, imported fill and in-kind surface cover replacement (i.e., concrete, asphalt, etc.) shall be used to backfill the excavation to pre-excavation grade.

C. Contractor backfill shall be performed in accordance with the contract documents and as detailed in NYCDEP Specification Section 40.06 - Backfilling.

END OF SECTION 02 01 01

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 02 01 02
Vapor Barrier Installation

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project: (1) The Contract Drawings, (2) The Specifications, (3) The General Conditions, (4) The Addendum And (5) The Contract [City Of New York Standard Construction Contract].

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions
2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

C. The following documents have been prepared for the rehabilitation project and are included with the Contract Documents:

1. 22 June 2018 Phase I Environmental Site Assessment (ESA), prepared by Louis Berger & Associates., P.C. (Louis Berger)
2. 12 October 2018 Phase II Environmental Site Investigation (ESI) Report, prepared by Louis Berger
3. 09 December 2019 DSNY Landfill Infrastructure Modifications, prepared by Langan
4. 22 October 2018 Geotechnical Engineering Report, prepared by Langan

D. Related Sections

Sections containing requirements related to this Section include, but are not limited to:

1. Section 31 00 00 – Earthwork
2. Section 312116 – Submembrane Depressurization System

1.2 GENERAL REQUIREMENTS

A. The Contractor is responsible for the proper and complete installation of a continuous vapor barrier membrane under the concrete slab and along the vertical subgrade walls in accordance with the Contract Documents.

B. The selected Contractor shall furnish all labor, materials, equipment, and incidentals required to conduct the work of this Section.

C. Where there is discrepancy between this specification and the other Contract Documents, the most stringent requirements shall be followed by the Contractor.

1.3 SCOPE OF WORK

A. Install a vapor barrier membrane under the concrete slab and along the vertical subgrade walls as indicated, specified and required by the Contract Documents.

B. The vapor barrier membrane is not acceptable as a replacement product for waterproofing. If both waterproofing and vapor proofing products are used, the Contractor shall ensure that the products are compatible and follows manufacturer's recommendation and guidance for sealing the products together at intersections.

C. The vapor barrier membrane shall be applied to create a continuous vapor tight barrier beneath enclosed sections of the basement, with durable seals to every grade beam, pile cap and penetration to ensure a single impermeable membrane.

D. The vapor barrier membrane shall be applied horizontally and vertically to all subsurface pits and sumps forming a barrier on all sides and bottoms of pits and sumps in accordance with the Manufacturer's specifications.

E. Perform and certify results of inspections and tests as specified.

F. Installation of accessories, including sealers, flashings, fasteners, tapes, reglets, liquid membranes and similar accessories.

G. The Contractor shall furnish all labor, materials, equipment, and incidentals required to conduct the work of this Section.

H. No work shall be performed under this specification section without oversight by the Commissioner.

I. Worker health and safety monitoring is the responsibility of the Contractor.

1.4 REGULATORY REQUIREMENTS AND REFERENCE STANDARDS

A. ASTM D412 – Tensile Strength Properties of Rubber and Elastomers-Tension

B. ASTM D413 – Standard Test Methods for Rubber Property-Adhesion to Flexible Substrate

C. ASTM D543 – Standard Practices for Evaluating the Resistance of Plastics to Chemical Reagents

D. ASTM D751 – Standard Test Methods for Coated Fabrics

E. ASTM D903 – Standard Test Method for Peel or Stripping of Adhesive Bonds

F. ASTM 3767 – Standard Practice for Rubber – Measurements of Dimensions

G. ASTM C836 – Standard Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course

H. ASTM D1434 – Standard Test Method for Determining Gas Permeability Characteristics of Plastic Film and Sheeting

I. ASTM E96 – Standard Test Methods for Water Vapor Transmission of Materials

J. ASTM E154 – Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover

K. ASTM E1643 – Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs

L. ASTM D1693 – Standard Test Method for Environmental Stress-Cracking of Ethylene Plastics

M. ASTM E1745 – Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs

N. ASTM D1970 – Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used

as Steep Roofing Underlayment for Ice Dam Protection

O. ASTM D4068 – Standard Specification for Chlorinated Polyethylene (CPE) Sheeting for Concealed Water-Containment Membrane

P. ASTM D4833 – Index Puncture Resistance of Geotextiles, Geomembranes and Related Products Section

1. American Concrete Institute (ACI), ACI 302.1R-96 Addendum Vapor Retarder Location

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Manufacturer Qualifications:

1. The manufacturer providing the material or equipment specified in this Section must have been regularly engaged in the manufacture of material or equipment similar in type to that required for this project.

2. Obtain gas vapor barrier system and auxiliary components from a single Manufacturer.

C. Materials: For each type of material required for the work of this Section, provide primary materials which are the products of one manufacturer.

D. Installer Qualification: Engage an experienced installer, who is certified in writing by the vapor barrier system Manufacturer, to install specified gas vapor barrier system. A smoke test will be performed by the installer to ensure there are no breaks or holes in the vapor barrier.

E. Field Quality Control: The installation of the vapor barrier membrane and smoke test will be inspected by a qualified Professional Engineer licensed in the State of New York.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site as specified by Manufacturer and in original unbroken packages bearing Manufacturer's label showing brand, type, weight, volume, batch number, date of manufacture, shelf life, and directions for storing and mixing with other components.

B. Store materials at the site in strict compliance with Manufacturer's instructions. Store in a clean, dry, protected location and within the temperature range required by Manufacturer. Protect stored materials from direct sunlight. Do not allow materials to freeze in containers.

C. Remove and replace material that cannot be applied within its stated shelf life at no cost to the City of New York.

D. Protect materials during handling and installation to prevent damage. Replace any damaged materials at no cost to the City of New York unless the damaged material can be repaired in accordance with the Manufacturer's requirements such that vapor protection is not compromised.

1.7 PROJECT CONDITIONS

A. The Department of Sanitation garage rehabilitation project (site) is located at the northwest corner of Muldoon Avenue (private) and West Shore Expressway service road in Staten Island, New York (the Site) and is identified as Block 5900, Lot 500 on the Staten Island Tax Map. The Site occupies an area of approximately 680,000 square feet and is improved with the existing Staten Island District 3 repair garage, recycling area,

wastewater treatment facility, and asphalt-paved and gravel-topped parking lots. According to the 29 March 2018 topographical survey prepared by Langan, the grade fronting the Site along Muldoon Avenue slopes down from about el. 23 feet (north) to el. 10 feet (south), and the grade in front of the site along the West Service Road slopes down from about el. 32 feet (northeast) to el. 10 feet (south). All elevations are referenced to the North American Vertical Datum of 1988 (NAVD88).

B. Based on the findings of the 22 June 2018 Phase I ESA prepared by Louis Berger, the Site contains chlorinated volatile organic compounds (VOCs) at concentrations which the New York State Department of Health (NYDOH) Guidance for Soil Vapor Intrusion in the State of New York, recommends mitigation as the recommended action. Concentrations of methane were also detected above background concentrations that would be mitigated from intruding into the new building.

C. The City of New York and Commissioner make no predictions or representations regarding the available information. No information derived from the referenced documents will, in any way, relieve the Contractor from the responsibility of making its own evaluations, inspections, and determinations with respect to the vapor barrier installation.

D. The Contractor shall investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the Work Site. The Contractor shall conform to NYSDOT, USEPA, and NYSDEC regulations in regard to the transportation of materials to and from and at the job Site.

E. Examine drawings to determine the sequence of operations in relation to the work of other trades, if they are present. Start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.

1.8 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.9 SUBMITTALS

A. Product Data: The Contractor shall submit to the Commissioner the Manufacturer's printed instructions for evaluating and preparing the substrate. Submit Manufacturer's product data for each gas vapor barrier system component, including technical data and tested physical and performance properties. Indicate and interpret test results for compliance of vapor barrier system with requirements indicated, as applicable.

B. Shop Drawings: Submit Shop Drawings showing locations and extent of vapor barrier system, including details for overlaps, penetrations, and other termination conditions.

C. Samples: Submit representative samples of all vapor barrier system components for approval. System components may include, but are not limited to:

1. Vapor barrier membrane
2. Top protective layer/protection materials
3. Base fabric
4. Other auxiliary materials as required for the vapor barrier system, such as seam sealers, reinforcing strips, mastics, sheet flashing, geotextiles, etc.

D. Certifications:

1. Submit Manufacturer's Certification of Compliance indicating that materials delivered and used in the work are in strict compliance with specified requirements of this Section.

2. Submit certificates signed by Manufacturer certifying that the Installer complies with requirements under the Quality Assurance Article 1.5.

E. Submit Manufacturer's and Installer's Warranties as required in Article 1.10 of this Section.

F. Submit Manufacturer's Resume of Professional Engineer, licensed to practice in the State of New York, to perform milestone inspections, and certify proper installation of vapor barrier system.

G. Documentation of successful Quality Control testing completion as required by the Manufacturer's specifications and in Article 3.4 of this Section.

H. Report on Contractor's Professional Engineer's inspection and approval of the work of this Section. The Professional Engineer shall provide a certification, signed and sealed, stating that all work was performed in accordance with the requirements of this Section, the manufacturer's specifications, and the Contract Drawings. The certification shall explicitly state that the Professional Engineer supervised inspections of tests which demonstrated installation of a gas-tight barrier for preventing intrusion of vapors into the entire building.

1.10 WARRANTIES

A. Submit a warranty, signed by the Manufacturer of the vapor barrier system and auxiliary components, agreeing to replace/repair defective materials including all work required to correct leakage of vapors within warranty period. The warranty period is twenty years after date of "Substantial Completion."

B. Submit a separate guarantee, signed by the Installer of the vapor barrier system, agreeing to replace/repair defective materials and workmanship, including leakage of vapor within guaranty period. The Installer's guaranty period is one year after date of "Substantial Completion." The Installer shall comply with the Contract Documents, including this Section, the manufacturer's specifications and the Drawings, for installation requirements.

PART 2 – PRODUCTS

2.1 MATERIALS

A. General: Provide complete vapor barrier system. Ensure auxiliary components and installation accessories are approved for use with the vapor barrier system by the Manufacturer.

B. Vapor Barrier Membrane: A minimum thickness of 20 mils, or minimum thickness required by Manufacturer, whichever is greater, is required. Typical gas vapor barrier physical properties:

PROPERTIES	TEST METHOD	VALUE
Soil Burial	ASTM D4068	Passed
Methane Permeability	ASTM D1434	Passed

PROPERTIES	TEST METHOD	VALUE
Oil Resistance Test	ASTM D543	Passed
Heat Aging	ASTM D4068	Passed
Environmental Stress Cracking	ASTM D1693	Passed
Water Vapor Permeability	ASTM E96	0.21 to 0.24 perms
Water Vapor Transmission	ASTM E96	0.026 to 0.10 grains/h-ft^2
Hydrostatic Head Resistance	ASTM D751	26 to 60 p.s.i
Elongation without reinforcement	ASTM D412	1,332% to 4,140%
Elongation with reinforcement (e.g., base fabric, protection course)	ASTM D412	45% to 100%
Tensile Strength without reinforcement	ASTM D412	32 to 58 p.s.i.
Tensile Strength with reinforcement (e.g., base fabric, protection course)	ASTM D412	196 to 662 p.s.i.

C. Auxiliary and Installation Materials: All auxiliary and installation materials must be approved for use with the vapor barrier membrane by the Manufacturer.

D. Manufacturers/Systems:

1. Drago Wrap Vapor Intrusion Barrier as manufactured by Stego Industries, LLC
2. Stego Wrap 20-mil Vapor Barrier as manufactured by Stego Industries, LLC
3. Preprufe Gas Mitigation System (GMS) Membrane as manufactured by GCP Applied Technologies.
4. Or approved equal.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

A. Pre-installation Meeting: Arrange for and convene a pre-installation meeting prior to the start of work of this Section to review installation procedures, protection, and coordination with other work. Attendance of parties directly affecting work of this Section, including the Commissioner, Contractor, and Contractor's Installer shall be required.

B. Furnish all labor and materials, equipment and incidentals required for the proper and complete installation of the vapor barrier membrane.

C. Examine conditions of substrates and other conditions under which this work is to be performed and notify the Commissioner, in writing, of circumstances detrimental to the proper completion of the work. Do not proceed with work until unsatisfactory conditions are corrected.

D. All work shall be performed in accordance with the Contract Documents and manufacturer's specifications.

3.3 SAFETY

A. Health and Safety Plan (HASP)

1. Develop a site-specific HASP to protect their employees.
2. HASP shall address the methods to be utilized for personal protection during the installation of the vapor barrier membrane.
3. The HASP shall contain the name and certification of Contractor's Health and Safety Officer.
4. The HASP shall address the presently known conditions identified in the Contract Documents, drawings, or previous reports provided by the City of New York.
5. The HASP shall be compliant with OSHA requirements.
6. Trade-specific health and safety requirements should be developed by the Contractor based on the anticipated contact with contaminated soil. Training, medical surveillance, and exposure monitoring requirements should be addressed.
7. The HASP shall contain specific methods of providing protection for the site workers and the general public to prevent all personnel from coming into contact with contaminated materials.
8. Personnel handling hazardous materials shall be trained and certified according to Occupational Health and Safety Administration Regulations Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements contained in 29 CFR 1910.120.
9. All Subcontractors to the Contractor shall be required to implement the Contractor's HASP. The Contractor shall submit to the Commissioner a letter from the Subcontractor indicating knowledge of the HASP requirements prior to the start of the Subcontractor's work.
10. The Contractor's HASP shall be bound by any and all other pertinent and relevant sections of the Contract Documents including, but not limited to, those included in Article 1.2 General Requirements.

B. Personnel working inside and in the general vicinity of the work shall be trained and thoroughly familiar with the safety precautions, procedures and equipment required for controlling the potential hazards. Personnel shall use proper protection and safety equipment during work.

C. The Contractor shall be responsible for the safety of their workers and Subcontractors, their operation, and for any damage that may result from the Contractor's work. They shall erect and properly maintain at all times, as required by the conditions and progress of the work, proper safeguards for the protection of workers and the public and shall post danger warnings as required by law or otherwise required by the Contract Documents against hazards created by the Contractor's operation. The Contractor shall furnish, install and remove after completion of the work, all signs, lights, barricades, fencing and other equipment as may be necessary for the safe execution of the work.

D. Prior to ending operations on any working day or at any time the Contractor is not on-site, the Contractor shall secure all areas of work in a safe manner in accordance with all regulatory agencies and to the satisfaction of

the Commissioner. This shall include, but not be limited to, ensuring that adequate erosion control measures (hay bales, silt fencing, etc.) are in-place, ensuring stockpiles are on and covered by plastic sheeting, and ensuring that the site is secure.

E. Provide and maintain an adequate supply of fire extinguishers and other required safety equipment in close proximity to all activity.

3.4 INSTALLATION

A. Soil substrates below the vapor and methane mitigation layer shall be well compacted to produce an even, solid substrate. Remove loose aggregate or sharp protrusions. Concrete substrates shall be smooth or broom finished and monolithic. Remove standing water prior to membrane applications.

B. Installation shall be in accordance with manufacturer's instructions and ASTM E1643, including but not limited to, the following:

1. Base Layer:

   a. Roll out base layer on subgrade as specified by the Manufacturer. Apply succeeding sheets by overlapping the previous sheet a minimum of 6 inches, or as specified by the Manufacturer, whichever is greater. Lay base layer tight at all inside corners.

   b. Minimize the use of nails to secure the base layer to the subgrade. Remove all nails before applying membrane, if possible. Nails that cannot be removed from the subgrade are to be patched as specified by the Manufacturer.

   c. Secure seams between the overlapped sheets as specified by the Manufacturer. Visually verify no gaps in seams. Repair any gaps in seams prior to application of vapor barrier membrane, as specified by the Manufacturer.

2. Vapor Barrier Membrane:

   a. Apply vapor barrier membrane according to Manufacturer's recommendations to obtain a seamless membrane that is free of entrapped gases.

   b. Apply vapor barrier membrane to prepared wall terminations, penetrations, and to the base layer.

   c. Apply vapor barrier membrane to achieve a minimum 20 mil thickness, or as specified by the Manufacturer, whichever is greater.

   d. Do not penetrate membrane. Keep membrane free of dirt, debris, and traffic until a protective cover is in place. It is the responsibility of the Contractor to ensure that the membrane and the protection system are not penetrated.

   e. After membrane has been checked and approved by the Contractor's Professional Engineer for proper thickness and flaws, install protection material pursuant to Manufacturer's instructions. All testing or inspection is to be performed prior to placing protection course.

   f. Schedule work such that membrane will not be left exposed to weather for longer than that recommended by the Manufacturer.

3. Sealing at Terminations:
   a. Terminations should extend a minimum of 6 inches or as specified by Manufacturer, whichever is greater, onto termination surface. If job-specific conditions prevent a 6-inch termination, contact the vapor barrier membrane designer and Manufacturer for recommendations.
   b. Reinforce and seal at all terminations in accordance with the Manufacturer's details and specifications.
4. Sealing around Penetrations:
   a. Clean all penetrations. Sand all metal penetrations with emery cloth.
   b. Reinforce and seal at all penetrations in accordance with the Manufacturer's details and specifications.
   c. After placement of appropriate reinforcements and sealing agents, place cable tie around the finished penetration, 2 inches above the base of penetration or as specified by the Manufacturer guidance. Cable tie should be snug but not overly tight so as to slice into the finished seal.
5. Protection Course Top Installation:
   a. Install protection course as recommended by the Manufacturer before starting subsequent construction operations.
   b. Overlap seams as recommended by the Manufacturer.
   c. Secure protection course seams as recommended by the Manufacturer.
6. Concrete Placement:
   a. Place concrete within 30 days. Inspect membrane and repair any damage.

3.5 FIELD QUALITY CONTROL

A. General:
   1. Installers are to check their own work for coverage, thickness, and all around good workmanship before calling for inspections by the Commissioner.
   2. When thickness or integrity is in question, the membrane should be tested in the proper manner as described below. However, over-sampling defeats the intent of inspections. Inspectors should always use visual and tactile measurement to guide them. Areas suspected of being too thin to the touch should be measured with the gauges to determine the exact thickness.

B. Smoke Test: Vapor barriers shall be Smoke Tested in accordance with the following protocol:
   1. The vapor membrane shall be visually inspected. Any apparent deficiencies and/or installation problems shall be corrected prior to Smoke Testing.
   2. Smoke Testing of the vapor barrier system to be conducted by Installer and observed by the Commissioner.
   3. The date, time, testing reference area, temperature, wind speed/direction, and cloud cover shall be recorded on the Smoke Testing Record. The ambient air temperature at the time of testing should be in excess of 45° Fahrenheit and the wind speed at ground level should be 15 miles per hour (mph) or less since visual identification of leaks becomes more difficult with increasing wind speed.

4. Delineate a Smoke Testing area of 2,000 to 5,000 square feet (maximum). Assemble and situate Smoke Testing system to inject smoke beneath membrane. Only inert, non-toxic smoke is to be utilized for membrane Smoke Test.
5. Designate testing control areas by cutting openings in an "X" pattern (minimum 4 inch by 4 inch) in the membrane at selected locations. Mark testing control areas for identification prior to conducting the Smoke Test.
6. Activate smoke generator / blower system (nominal 150 – 950 cubic feet per minute [cfm]). Apply sufficient pressure as to ensure that smoke will permeate the designated testing area. For verification, ensure that smoke is leaking through testing control areas.
7. Pump smoke beneath the membrane for a minimum 1 to 2 minutes. Observe for leaks in the membrane. Reduce pressure / flow rate if excessive lifting of the membrane occurs.
8. Thoroughly inspect entire membrane surface within area delineated for testing. Use marking device as approved by the Manufacturer to mark any leak locations. Mark leak locations on floor plan and corresponding testing reference area.
9. Repair leak locations in accordance with the Manufacturer's recommendations and specifications.
10. Repeat steps as necessary to confirm integrity of the membrane.
11. Readings shall be recorded on the Smoke Testing Log by the Contractor's Professional Engineer. Once the membrane has passed the Smoke Test inspection, the successful completion shall be documented and signed off by the Contractor's Professional Engineer and approved by the Commissioner.

3.6 PROTECTION AND CLEANING

A. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by Manufacturer of affected construction.

B. The vapor barrier system shall be protected in accordance with Manufacturer's recommendations to prevent disturbance, damage, or deterioration by work of other trades or environmental conditions. Protect vapor barrier system from damage during installation of reinforcing steel and utilities and during placement of concrete slab or granular materials. Sharp angular backfill materials shall not be placed immediately against the vapor barrier membrane.

C. Commissioner shall visually inspect the condition of the vapor barrier membrane immediately prior to placing the overlying protective layer or below-grade wall backfill. All damage to the installed vapor barrier membrane shall be repaired at the Contractor's expense prior to placement of concrete or backfill.

D. Ensure there is no moisture entrapment by vapor barrier membrane due to rainfall or ground water intrusion. If moisture entrapment is present Contractor shall implement procedures for removal of moisture and to prevent re-occurrence. Contractor's Professional Engineer's approval of drying procedures shall be required prior to implementation.

E. Protect vapor barrier system from damage until covered by finish wall, floor, etc.

F. Immediately repair damaged vapor barrier membrane and components of vapor barrier system in accordance with Manufacturer's instructions. Contractor's Professional Engineer's approval of repair procedures shall be required prior to implementation.

END OF SECTION 02 01 02

SECTION 02 61 13
Excavation, Handling, Transportation, and Disposal of Contaminated Materials

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

C. The following documents have been prepared for the rehabilitation project and are included with the Contract Documents:
   1. 22 June 2018 Phase I Environmental Site Assessment (ESA), prepared by Louis Berger & Associates., P.C. (Louis Berger)
   2. 12 October 2018 Phase II Environmental Site Investigation (ESI) Report, prepared by Louis Berger
   3. 20 December 2018 DSNY Landfill Infrastructure Modifications, prepared by Langan
   4. 5 March 2019 (Revised) Geotechnical Engineering Report, prepared by Langan

D. Related Sections

   Sections containing requirements related to this Section include, but are not limited to:
   1. Section 31 00 00 Earthwork
   2. Section 31 10 00 Site Clearing, Removals and Preparation
   3. Section 31 25 00 Soil Erosion and Sediment Control
   4. Section 31 50 00 Excavation Support and Protection

1.2 SUMMARY

A. The Department of Sanitation garage rehabilitation project (site) is located at the northwest corner of Muldoon Avenue (private) and West Shore Expressway service road in Staten Island, New York (the Site) and is identified as Block 5900, Lot 500 on the Staten Island Tax Map. The Site occupies an area of approximately 680,000 square feet and is improved with the existing Staten Island District 3 repair garage, recycling area, wastewater treatment facility, and asphalt-paved and gravel-topped parking lots. According to the 29 March 2018 topographical survey prepared by Langan, the grade fronting the Site along Muldoon Avenue slopes down from about el. 23 feet (north) to el. 10 feet (south), and the grade in front of the site along the West Service Road slopes down from about el. 32 feet (northeast) to el. 10 feet (south). All elevations are referenced to the North American Vertical Datum of 1988 (NAVD88).

B. The Contractor shall furnish all labor, materials, equipment, and incidentals required to conduct the work of this Section, including but not limited to the following:
   1. Excavation, segregation, stockpiling, loading, transporting, handling and off-site disposal of all

excavated non-hazardous and hazardous contaminated soil and groundwater, as well as petroleum underground storage tanks. Contaminated material is hereby defined as material regulated as solid waste under Title 6 of the New York Codes, Rules, and Regulations (NYCRR) Part 360 or soil exceeding the 6 NYCRR Part 375-6.8(b) Restricted Use Commercial Soil Cleanup Objectives (SCOs), whichever is more stringent.

2. Vehicle and equipment decontamination.
3. Handling and off-site disposal of dewatering and waste fluids.
4. Implementation of dust, vapor and odor control measures for the duration of the work.
5. Coordination with and obtaining of approvals from licensed or permitted soil disposal or recycling facilities and payment for all permits required to perform the work.
6. Supplemental sampling and analytical testing - Relevant reports prepared for the project are summarized in Article 1.4. The data provided can be used by the selected Contractor to assist in securing disposal facility commitments. The Contractor may have to obtain additional soil quality data, which shall be at its own expense. Use of these data by the Contractor in no way makes The City of New York or Commissioner responsible for any aspect of soil and fill characterization, delineation, handling, transport and/or disposal.
7. Recordkeeping and submittal of manifests and scale tickets for each soil disposal container/truck to document the proper transportation of excavated contaminated and hazardous materials.
8. The Contractor shall furnish all labor and materials, equipment and incidentals required for proper decontamination, removal and closure of the known underground storage tanks (UST) and any additional USTs, if encountered.

C. All work shall be performed in accordance with (1) the Contract Documents for the project and (2) all specifications, documents, and plans referenced in this Section. Where there is discrepancy between this specification, the other Contract Documents, and applicable regulations, the most stringent requirements shall be followed by the Contractor.

1.3 PROJECT CONDITIONS

A. No guarantee is expressed or implied for the information given in the referenced documents. No information derived from such documents will, in any way, relieve Contractor from the responsibility of making its own evaluations, inspections, and determinations with respect to the conditions and excavation and material handling requirements at the Site.

B. The Contractor, by careful examination, shall inform themselves as to the nature and location of the work; the conformation of the ground, the nature of the surface and subsurface conditions; the locations of the groundwater table; the character, quality and quantity of the materials to be encountered; the character of the equipment and facilities needed preliminary to and during the execution of the work; and all other matters which can in any way affect the work.

C. The Contractor shall investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the Site of the work. The Contractor shall secure in advance permits that may be required for the transportation of materials to and from and at the Site and at a minimum, conform to Title 6 of the New York Codes Rules and Regulations (6 NYCRR) Part 360 Solid Waste Management Facilities.

D. The Contractor shall locate existing underground utilities in and beyond the areas of work, and will provide adequate means of support and protection during the work.

E. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation; the Contractor shall consult the utility owner immediately for directions, cooperate with the Commissioner and utility companies in keeping respective services and facilities in operation, and restore damaged utilities to the satisfaction of the utility owner.

F. The Contractor shall examine drawings to determine sequence of operations, and relation to work of other trades. Start of work shall signify acceptance of field conditions and shall acknowledge coordination with other trades.

1.4 QUALIFICATIONS

A. The Contractor shall be or have access to a tank contractor licensed by the New York Fire Department (FDNY). The Contractor shall be any person or persons, corporation, or proprietorship deemed competent and experienced to perform work involving the remediation of petroleum spills, including closures of underground storage tanks (USTs), and hauling, disposal, transportation, or abatement of hazardous and non-hazardous materials. For the purposes of this contract, the Contractor shall possess the following:

1. Access to a valid 6 NYCRR Part 364 permit for transport and disposal of oil/petroleum waste, hazardous and non-hazardous contaminated soil, and other waste streams as defined by 6 NYCRR Part 364 (Replacement effective 4 November 2017 applies to any transporter of fill material and C&D debris)
2. Access to facilities to handle, transport, characterize and dispose, and/or abate hazardous or non-hazardous material
3. Access to documented, certified personnel for tank closure, spill responses, hazardous waste operations, and confined space entry
4. Licensed FDNY inspector who can provide an affidavit of UST closure upon completion
5. Labor and materials to immediately execute work under this contract
6. Experience directly related to work under this contract
7. An adequate understanding of all the regulations and requirements governing this contract
8. Any item pertinent to work described in this contract

B. The Contractor shall perform their work and supervise their employees in accordance with all applicable federal, state, and city rules and regulations. All persons who manage, perform, or provide support for construction projects shall conduct operations in compliance with the requirements identified in The City of New York Department of Design and Construction Safety Requirements, dated February 2019. The Contractor shall prepare and adhere to requirements of the Site Safety Plan and Safety Program that addresses known and reasonably anticipated contaminants at the Site.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

A. Pre-Construction Submittals – The Contractor shall submit to the Commissioner the following for review a minimum 2 weeks prior to start of the work.

1. Confirmation of the Contractor's and any subcontractor's applicable qualifications, licenses, permits, and items listed in Article 1.4 of this Section

2. A detailed project schedule showing sequence and critical path of all environmental and earthwork operations

3. For fill and soil disposal, the Contractor shall submit the following information:

   a. A Material Handling Plan that includes:

      i) The name, address, permit number, telephone number, and transporter permits of the company(ies)/facility(ies) that shall transport and accept the contaminated and hazardous materials and liquids

      ii) A description of the analytical and non-analytical requirements and sampling frequency requirements of proposed disposal facilities

      iii) A map and summary that describes the area to be excavated in accordance with the specifications, divided into distinct vertical and horizontal grids/areas (if needed) - For each grid/area, the Plan shall identify the characterization data associated with the volume of soil or fill represented.

   b. A Field Sampling Plan that includes:

      i) A scaled map of the Site showing the proposed excavation limits and proposed new sampling locations, if characterization data is not sufficient to meet disposal facility requirements. The map shall also show an identification number for each sampling location and sampling depth intervals. A description of the sampling methodology, sampling equipment, decontamination procedures, and field quality and laboratory assurance and quality control (QA/QC) procedures to be implemented during the sampling event shall be included in the Plan.

      ii) Name and address of analytical laboratory(ies) and copy of ELAP certification to be used by the Contractor

      iii) Listing of all analyses to be performed, by sample identification number

      iv) Description of QA/QC samples required by the disposal facility(ies)

   c. Approval letters shall be issued by the disposal facility on disposal facility letterhead prior to transporting the material off the Site. The letter shall reference the analytical waste characterization data (by sample ID and report number), relevant depths or elevations, and the total volume of material being accepted in accordance with the approval.

   d. Copies of valid, current, operating permits or licenses for the facility from the applicable regulatory agencies - This includes information on each USEPA and/or State approved off-site disposal facility that is proposed to receive contaminated materials and hazardous wastes (as required).

   e. Procedure for addressing additional waste characterization (sampling, etc.) if required, and for excavating, stockpiling, loading and off-site transport

4. For import of backfill, the Contractor shall submit the following information prior to importation of backfill:

   a. The name and address of the company(ies)/facility(ies) that shall supply the import material - Any permits associated with the material or beneficial use of the material shall be submitted.

   b. Each borrow fill facility or company shall issue a letter stating that the import fill is native or virgin material that has not been comingled with any other material. They shall also state in the letter that the material was not sourced from or stored at any environmentally impacted/contaminated properties. The letter shall be issued prior to transporting the material on to the Site. The letter shall reference any characterization data (by sample ID and report number). Maps shall be provided by the Contractor that show the location of the clean fill facility, location of the stockpile at the facility and location of the sample(s) collected from the stockpile.

   c. The Contractor shall provide ELAP-certified laboratory analytical data for samples collected of the proposed import material by an environmental professional using standard sample collection practice. Samples shall be collected at a frequency in accordance with 6 NYCRR Part 360 Table 1: Minimum Analysis Frequency for Fill Material. Sample results shall be submitted to the Commissioner for review and approval prior to importing material to the Site. Once sampled, the stockpile must remain isolated and dedicated to import to this project and may not be comingled with any other material.

5. All pertinent information relating to the transport of non-hazardous and hazardous contaminated materials. The information submitted shall include, but not be limited to:

   a. The name and address of the company(ies) that shall transport the contaminated materials and liquids

   b. All local, state and federal permits required for the transport of excavated materials resulting from the performance of the work - The licenses and permits that apply include, but is not limited to: 6 NYCRR Part 364 permits, hazardous waste transporter permits issued under 6 NYCRR Part 372.3 (if applicable), vehicle and hauling permits.

   c. USEPA and/or New York State identification number and license expirations date (as required)

   d. Proof of permit, license or authorization to transport waste, as required by 6 NYCRR Part 360 (New York State)

6. The Contractor shall submit a Site-specific Site Safety Plan to the Commissioner prior to the Contractor's mobilization to the Site. The Site Safety Plan shall at a minimum adhere to the requirements specified in Article 3.3 and federal, state and local regulations and guidance documents.

B. On-Going Submittals – The Contractor shall submit the following to the Commissioner promptly after completion of each task:

1. All manifests, bills of lading, weight tickets and analytical data for all hazardous and non-hazardous contaminated material exported from the Site

2. All manifests, bills of lading, weight tickets and analytical data for any borrow fill material imported to the Site

3. Confirmation that: a) all utilities, including but not limited to, electrical, steam, product supply and return lines, or other utility lines in the work area have been identified, marked, locked, and tagged out, and b) work shall be performed in a manner to protect these utilities from damage.

C. Dewatering Submittals– The Contractor shall submit the following promptly after completion of each task:

1. The Contractor shall retain the services of a Professional Engineer, licensed in the State of New York with a minimum of three (3) years of experience, if a dewatering system is required for construction. The Contractor shall submit a dewatering plan prepared by a Professional Engineer licensed in the State of New York to the Commissioner and to the appropriate regulatory agency (NYCDEP or NYSDEC). The design plan must be reviewed and approved by the Commissioner at least 30 calendar days before the scheduled start date for dewatering.

2. The Contractor shall submit all regulatory permits obtained for the construction dewatering, including but not limited to:

   a. NYCDEP Discharge Permit (if applicable), including a completed Wastewater Quality Control Application, Letter of Approval from the Inspection & Permitting Section, Industrial Pollution Prevention (IPP) Program, Division of Pollution Control and Monitoring, Bureau of Wastewater Treatment (BWT), Letter of Approval from the Division of Connection and Permitting, Bureau of Water & Sewer Operations (BWSO), and NYC DEP Bureau of Customer Service Permit;

   b. NYSDEC State Pollutant Discharge Elimination System (SPDES) Discharge Permit (if applicable) for dewatering effluent or stormwater discharges from construction activities; and

   c. NYSDEC Water Withdrawal Permit (if applicable).

3. The Contractor shall provide to the Commissioner the following additional documentation:

   a. The name, address and telephone number of the contact for the Contractor's proposed chemical laboratory, as well as the laboratory's regulatory approval certifications.

   b. The name, address and telephone number of the contact for the Contractor's proposed independent Environmental Consultant.

D. UST Submittals – The Contractor shall submit the following information:

1. A copy of the tank removal affidavit signed by a FDNY-licensed tank contractor
2. The name and address of the licensed tank disposal or recycling facility that shall accept the tanks and piping should they be encountered
3. Verification that a tank removal affidavit signed by a licensed New York City Tank Contractor has been provided to the NYC Bureau of Fire Protection - A copy shall be provided to the Commissioner.
4. All documentation required for the preparation of a written report by the Commissioner
5. Certification from disposal facility that all excavated materials, including scrap steel, demolition debris, waste oil, tank cleaning supplies, etc., have been properly disposed of or recycled
6. Copies of completed and disposal facility signed waste bills of lading and manifest forms

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. The Contractor shall comply with all the federal, state, and local laws, ordinances, codes, rules and regulations applicable to the work specified herein. The Contractor shall meet NYSDEC spill cleanup requirements, USEPA and State Department of Transportation regulations for shipping of regulated substances to off-site disposal facilities, and meet all regulatory requirements imposed by the treatment, storage and disposal

facility. Regulations pertaining to the excavation, transport and disposal of USTs and their contents and regulated substances/materials include, but are not limited to the following:

1. USEPA Regulation 40 CFR Part 280, Underground Storage Tanks: Technical Requirements Final Rule and Office of Emergency and Remedial Response, Standard Safety Guides, PB92-983414.
2. USEPA 40 CFR 136 (41 FR 52779).
3. USEPA 40 CFR 262 and 761.
4. Resource Conservation and Recovery Act (RCRA).
5. 29 CFR 1910 – Federal Occupational Safety and Health Administration (OSHA) standards.
6. 29 CFR 1926 – Federal Construction Standards.
7. Resource Conservation and Recovery Act, 40 CFR Parts 260-265, Safe Entry and Cleaning of Petroleum Storage Tanks.

35. NYCDEP, Limitations for Effluent to Sanitary or Combined Sewers.
36. NYCDEP, Dewatering Sampling and Testing Requirements.
37. New York City Fire Department, FP Directive 3-73 Division of Fire Protection, NYCAC Title 27, New York City Fire Prevention Code, Chapter 4 et seq., and Rule 21-02 of the City of New York.

C. Any transporter of non-hazardous and hazardous contaminated soils/materials shall be licensed in the state in which handling and transportation shall take place in accordance with all applicable regulations, including but not limited to 6 NYCRR Part 364 for transport and disposal of solid waste. Effective November 4, 2017, 6 NYCRR Part 364 Waste Transporters applied to any transporter of fill material and construction and demolition (C&D) debris.

D. Contractor shall comply with Occupational Safety and Health Administration (OSHA) Standards and Regulations contained in Title 29 CFR Part 1910.120 "Hazardous Waste Operations and Emergency Response."

E. American Society for Testing and Materials (ASTM) -latest edition:

1. D422 – Method for Particle Size Analysis of Soils

7. D4318 – Test for Plastic Limit, Liquid Limit, and Plasticity Index of Soils

F. American Association of State Highway and Transportation Officials (AASHTO)- latest edition

1. T88 Mechanical Analysis of Soils

G. New York City 2014 Building Code
1. The provisions of the New York City 2014 Building Code relating to earthwork and backfill shall govern the work of this section.

1.8 NOTIFICATION

A. Refer to DDC General Conditions Section 01 73 00 "Execution" subsection 3.5 "Examination" for details on utility notification and mark-out.

B. The Contractor shall notify the Commissioner at least 2 weeks prior to excavation activity, UST closure activities, transport of material off-site for disposal, and import of material to the Site.

C. In accordance with 6 NYCRR Part 360 (effective November 4, 2017), if material is transported off-site for beneficial use at a site in New York State, Contractor shall notify NYSDEC at least five days in advance of movement of solid waste.

1.9 PROTECTION

A. Refer also to DDC Standard General Conditions Section 01 35 26 "Safety Requirements Procedures" subsection 3.2 "Protection of Personnel"

B. To prevent damage, injury or loss, the Contractor's actions shall include, but not be limited to, the following:

1. Storing apparatus, materials, supplies, and equipment in an orderly and safe manner that shall not unduly interfere with the progress of the work.

2. Providing suitable storage facilities for all materials.

3. Placing upon the work or any part thereof only such loads as are consistent with the safety of that portion of the work.

4. Handling of all refuse, rubbish, scrap materials, and debris caused by on-Site operations. The Site work shall be conducted in a safe, orderly fashion and maintain a work-man-like appearance at all times.

C. The Contractor shall furnish signs, lights, barricades, fencing, and other equipment as may be necessary for the safe execution of the work and remove these after completion of the work.

D. The Contractor shall not enter or occupy other areas with people, tools, materials or equipment, except on areas approved by the Commissioner, after written consent is obtained from the proper parties.

E. The Contractor shall assume full responsibility for the preservation of all public and private property. If any direct or indirect damage is done by or on account of any act, omission, neglect or misconduct in the execution of the work by the Contractor, it shall be restored promptly by the Contractor, at his expense, to a condition equal to that existing before the damage was done. The Contractor may take photographs to document damage which existed prior to work.

1.10 ALLOWANCE AND PAYMENT

A. An allowance for the Contractor has been established for this work, to be utilized when ordered and authorized in writing by the Commissioner.

B. The Contractor will be paid on a time and materials (T&M) basis under this allowance. Labor will be paid based on the Contractor's Certified Payrolls, all other expenses will be paid on an invoice basis. A markup of

12% for overhead and 10% for profit will be allowed, except that no markup will be allowed on Payroll Taxes or on the premium portion of overtime pay or on sales and personal property taxes.

PART 2 – PRODUCTS

2.1 MATERIALS

A. The Contractor must provide containers as specified in the United State Department of Transportation (USDOT) regulations.

B. The Contractor must provide polyethylene sheeting, which is to be placed under (20 mil. thickness minimum) and over (10 mil. thickness minimum) soil piles.

C. The Contractor must assure that the waste transporter's appropriate choice of vehicles and operating practices are fitted to prevent spillage or leakage of contaminated material during transportation.

D. The Contractor must provide, install, and maintain any temporary stockpiling or loading facilities on site as required until completion of material handling activities. The location and design of any such facilities must be included in the Material Handling Plan.

E. All proposed reuse of on-site fill or imported borrow fill must be reviewed by the Commissioner prior to use/import.

F. Suitable borrow fill material shall be free of organic, unsatisfactory soils and other deleterious material and shall have a maximum particle size no greater than 4 inches. Borrow fill shall contain no industrial byproducts (e.g., ash, coal, slag).

G. Excavated material may be reused on Site , per the 6 NYCRR Part 360.13(c) exemption for on-site reuse, provided it: 1) meets the 6 NYCRR Part 375-6.8(b) Restricted Use Commercial Soil Cleanup Objectives 2) is not visibly contaminated (stained or odorous) or exhibiting photoionization detector [PID] readings, 3) is not a hazardous waste, 4) meets the appropriate criteria in the Contract Documents, 5) is acceptable to the Commissioner, and 6) is in accordance with New York State solid waste regulations, including 6 NYCRR Part 360.

H. Imported materials shall meet the requirements set forth in Article 3.8 of this Section.

I. Suitable borrow fill material proposed for import shall also meet the requirements set forth in Section 31 00 00 Earthwork.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXECUTION

A. The Contractor shall accept the Site "as-is" and shall be deemed to have inspected the Site and reviewed all drawings, reports and documents applicable to this work.

B. The Contractor is responsible for the characterization, management and disposal of soil and liquids during excavation, grading, and foundation construction work. The Contractor is responsible for establishment of a

waste disposal grid or area system, laying out and surveying a grid system prior to excavation, tracking soils removed from each grid, manifesting soil removed from the Site, and arranging transport and disposal of waste. The Contractor shall maintain area or grid demarcations throughout the excavation process to allow excavated soil/material to be accurately tracked. The Contractor shall maintain visible demarcation of the grids or areas. The proposed grid system requires review by the Commissioner prior to implementation. If waste characterization sampling is required by the selected disposal facility, it is the responsibility of the Contractor. At the Commissioner's request, the Contractor shall sign manifests on behalf of the City of New York for any waste leaving the Site.

C. The Contractor shall furnish all labor and materials, equipment and incidentals required for the proper excavation, stockpiling, transportation, reuse, and disposal of soil. The Contractor shall also furnish all labor and materials, equipment and incidentals required for proper decontamination, removal, and closure of known USTs, as well as associated piping and accessories.

D. The Contractor shall be responsible for any necessary sloping, shoring and sheeting or support of excavation required to stabilize the sidewalls of the excavation and other structures, utilities, etc. adjacent to the work area. This shall be done in accordance with the Contract Documents.

E. Disposal of tanks, lines, sludge, residual liquids, hazardous and non-hazardous soils, and petroleum-impacted soils, if encountered, shall be the responsibility of the Contractor. All work shall be in accordance with the requirements of this Section and the Contract Documents.

F. The Contractor shall prepare all necessary plans, obtain all necessary permits, and provide all necessary plans, notifications and submittals to the Commissioner, City of New York and the State of New York (as necessary) before, during, and after performance of the site work.

G. Excavation operations shall be conducted in a manner as required to prevent the spread of dust, odor, and vapor. If deemed necessary by the Commissioner, the Contractor shall provide dust, vapor and odor control with water, foam or other means acceptable to the Commissioner. Contractor shall prevent the detection of dust, odor, or vapor at the perimeter of the Site by controlling work methods or applying appropriate mitigation methods.

H. All work shall be performed in accordance with the Contract Documents.

I. The Contractor shall be responsible for establishing and following procedures for spill prevention and control.

J. All excavation and other intrusive work shall be observed and documented by the Commissioner. The Commissioner shall be allowed time and safe means to observe and screen excavated soils. The Commissioner will document soil management practices in relation to this specification and advise on any observed discrepancies. Noted discrepancies shall be immediately remedied by the Contractor.

3.3 SAFETY

A. Scope of Work

It is the Contractor's responsibility to stage and conduct the Contractor's work in a safe manner. The Contractor must implement a Health and Safety Plan (HASP) for contaminated/hazardous soil intrusive activities as set forth in OSHA Standards 1910.120 and 1926.650-652. The Contractor must ensure that all workers have at a minimum hazard awareness training. The Contractor must segregate contaminated work area in secured exclusion zones. These zones must limit access to Contractor personnel specifically trained to enter the work area. The exclusion zone must be set up to secure the area from the public and untrained personnel. The project health and safety program will apply to all construction personnel including persons entering the work area. In addition, the Contractor must protect the public from on-site hazards, including

subsurface contaminants associated with on-site activities. The HASP must be signed off by a Certified Industrial Hygienist and reviewed and approved by OEGS.

Work must include, but not be limited to:

1. Implementation of a baseline medical program.
2. Providing safety equipment and protective clothing for site personnel, including maintenance of equipment on a daily basis; replacement of disposable equipment as required; decontamination of clothing, equipment and personnel; and providing all other health and safety measures.
3. Providing, installing, operating and maintaining on-site emergency medical first aid equipment as specified in this section for which payment is not provided under other pay items in this Contract.
4. Providing, installing, operating, maintaining and decommissioning all equipment and personnel decontamination facilities specified within this section, including, but not limited to, the decontamination pad, decontamination water supply, decontamination water collection equipment and all other items and services required for the implementation of the health and safety requirements for which pay items are not provided elsewhere in this Contract.
5. Provide the minimum health and safety requirements for excavation activities within the limits of this Contract.
6. Implement and enforce a HASP: The HASP as presented in these specifications is dynamic with provisions for change to reflect new information, new practices or procedures, changing site environmental conditions or other situations which may affect site workers and the public. The HASP will also address measures for community protection, accident prevention, personnel protection, emergency response/contingency planning, air monitoring, odor control and hazardous chemicals expected on site. Providing a Confined Space Entry Program as defined in the Occupational Safety and Health Act, Confined Space Entry Standard, 29 CFR 1910.146.

B. Environmental Consulting Services

1. The Contractor must retain an independent Environmental Consultant to obtain all permits and perform all field screening, air monitoring, community air monitoring, soil and water sampling, and health and safety services.
2. If conditions within the exclusion zone are deemed hazardous, then the Contractor and its independent Environmental Consultant must ensure that all personnel working within identified exclusion zones and/or involved (direct contact) with the handling, storage or transport of hazardous and contaminated materials must have completed a minimum of forty (40) hours of Health and Safety Training on Hazardous Waste Sites in accordance with 29 CFR 1910.120(e). The training program must be conducted by a qualified safety instructor. If conditions in the exclusion zone are deemed to be non-hazardous, the independent Environmental Consultant must provide site specific training.
3. The Contractor must ensure that on-site management and supervisors directly responsible for or who supervise employees engaged in hazardous waste operations must receive the training specified in above and at least eight (8) additional hours of specialized training on managing such operations at the time of job assignment.

C. Submittals

1. The Contractor must submit a written HASP, as specified herein, to OEGS for review and approval. The written HASP must be submitted, within thirty (30) calendar days after the availability of analytical results of the soil and groundwater testing. The Contractor must make all necessary revisions required by OEGS and resubmit the HASP to OEGS for acceptance. Start-up work for the project will not be permitted until written acceptance has been issued by OEGS.
2. Daily safety logs must be maintained by the Contractor and must be submitted to the Commissioner either on request or on completion of the work. Training logs must be maintained by the Contractor and submitted to the Commissioner either on request or on completion of the work. Daily logs on air monitoring during excavation activities must be prepared and maintained by the Contractor and submitted to the Commissioner either on request or upon completion of the work.
3. A closeout report must be submitted by the Contractor to the Commissioner upon completion of the work within the defined exclusion zones. This report must summarize the daily safety and monitoring logs and provides an overview of the Contractor's performance regarding environmental and safety issues. The report must carefully document all areas where contamination has been found including pictures, addresses of locations, and potential sources.
4. Medical Surveillance Examinations: The Contractor must submit to the Commissioner the name, office address and telephone number of the medical consultant utilized. Evidence of baseline medical examinations together with the evidence of the ability to wear National Institute for Occupational Safety and Health (NIOSH) approved respirators (as specified in American National Standards Institute (ANSI) Z88.6) must be provided to the Commissioner for all construction personnel who are to enter the exclusion zones.
5. Accident Reports: All accidents, spills, or other health and safety incidents must be reported to the Commissioner.

D. Health and Safety Plan

The HASP must comply with OSHA regulations 29 CFR 1910.120/1926.65. This document must at a minimum contain the following:

1. Description of work to be performed
2. Site description
3. Key personnel
4. Worker training procedures
5. Work practices and segregation of work area
6. Hazardous substance evaluation
7. Hazard assessment
8. Personal and community air monitoring procedures and action levels
9. Personal protective equipment
10. Decontamination procedures
11. Safety rules
12. Emergency procedures

13. Spill prevention and control, as well as spill reporting procedures
14. Dust control, vapor/odor suppression procedures
15. Identification of the nearest hospital and route
16. Confined space procedures
17. Excavation safety procedures

3.4 PREPARATION

A. The Contractor shall perform all necessary site preparation, utility clearance, security and control, temporary fencing, flagging and marking of structures to be protected, and backfilling and shoring as necessary to protect structures, workers, the public, and the environment.

3.5 EXCAVATION, STOCKPILING, AND EROSION CONTROL

A. Different soil types shall be handled and stockpiled separately. Hazardous waste (if encountered), visibly contaminated (stained or odorous) soil (if encountered), and soil exhibiting photoionization detector (PID) readings (if encountered) shall be directly loaded for off-site disposal. If direct-loading is not practicable, the hazardous waste, visibly contaminated (stained or odorous) soil, and soil exhibiting PID readings above background shall be segregated and stockpiled on plastic sheeting at least 20-mil-thick (or 2 layers of 10 mil) and covered securely by minimum of 10 mil polyethylene sheeting to protect against cross-contamination, airborne dust, leaching or runoff of contaminants into the subsurface, groundwater, or stormwater. The sheeting shall be weighted or secured by appropriate means and the seams sealed, as approved by the DDC to prevent tearing or removal by wind or weather. Grade surrounding surface to provide for positive drainage away from pile. Each stockpile must not exceed 500 cubic yards. The Contractor shall assist the Commissioner in screening excavated soil/material during excavation and prior to loading or stockpiling, per the Commissioner's discretion.

B. Reusable soil and fill shall be segregated and stockpiled separately from unusable fill, concrete and other debris. All stockpiles shall be securely kept covered with 6-mil-thick plastic sheeting, which shall be anchored firmly in place by weights, stakes, or both. The Contractor shall maintain the plastic sheeting to prevent any dust generation, wind erosion, and surface water runoff from the stockpiles. Stockpiled soil and/or fill may be uncovered when soil is being added or removed.

C. The Contractor shall locate stockpiled material, especially contaminated material, in areas away from the Site surface drainage features and a minimum of 100 feet away from any water bodies or wetlands and a minimum of 800 feet away from sensitive receptors. The Contractor shall plan construction to control surface drainage from stockpiles, staging and other work areas and prevent erosion and sedimentation. The Contractor will provide the appropriate equipment to contain all runoff associated with stockpiled material. All runoff from excavated soil/material, unless visibly contaminated, will be controlled and allowed to drain back into the open excavation. Visibly contaminated runoff (i.e., sheen, free product) shall be collected and containerized, and handled and disposed of in accordance with Article 3.9 of this Section.

D. The amount of stockpiled soil uncovered and exposed at any one time shall be minimized.

E. The Contractor shall install and maintain silt fence around the perimeter of the work area, as necessary, to control erosion and in accordance with Section 31 25 00 (Soil Erosion and Sediment Control).

F. The Contractor must segregate in stockpiles any soil encountered that appears to contain unknown contaminants (based on visual, odor, or other observation), or that varies substantially from the material originally identified, and the Commissioner must be promptly notified.

G. If dewatering of any water including surface and stormwater runoff and groundwater seeping into the excavation is deemed necessary, it shall be handled in accordance with Article 3.9.

H. The Contractor shall inspect Site entrances and exits daily for evidence of off-site sediment tracking. The existing conditions of the adjacent city streets shall be maintained free of sediment and site material. If necessary, Contractor shall clean adjacent streets within 100 feet of the Site entrance/exit as directed by the Commissioner.

3.6 EXCAVATED MATERIAL DISPOSAL

A. The Contractor shall develop, layout, mark-out, and maintain a disposal grid. The Contractor will use grid references on all disposal documentation referenced in this Article.

B. The Contractor shall provide the Commissioner with all waste disposal documentation, including acceptance letters, permits, analytical data, manifests and bills of lading for soil, fill, and liquids.

C. The Contractor shall be responsible for the collection and analysis of all soil, fill, and liquid samples for soil or fill reuse purposes and as required by the disposal or recycling facility. All lab testing conducted for this project shall be performed by an ELAP-certified laboratory that is also certified by the state at which the disposal facility is located and shall be collected at a frequency specified by the selected disposal facility.

D. The Contractor must only use the transporter(s) identified in the approved Material Handling Plan for the performance of work. A revised Material Handling Plan or an addendum to the original approved Material Handling Plan must be submitted to OEGS for review and approval at no additional cost to the City of New York for any use of substitute or additional transporters.

E. All transport vehicles shall be inspected, prior to leaving the Site, by the Contractor to ensure that no material adheres to the wheels, undercarriage, tailgates, covers or other areas of transport vehicles. As required, vehicles shall be cleaned by washing tires, undercarriage, and any other contaminated parts prior to leaving the Site using a high-pressure water and/or steam spray. Contractor shall collect all wash water for treatment and disposal as required.

F. The Contractor shall transport and deliver material only to the approved disposal facilities. Only NYSDEC Part 364-permitted trucks shall be used to transport excavated material off-site. Approval letters from the disposal facilities must be provided to the Commissioner prior to transporting any material off-site. The letter must reference the site address, laboratory report numbers and sample identifications that are the basis of the facility's approval.

G. The Contractor shall be responsible for appropriate measurement of unit quantity of material removed from the Site. The Contractor shall coordinate vehicle inspection and recording of quantities leaving the Site. The Contractor shall keep an accurate record (log) of the contaminated material transported off-site, borrow fill imported to the Site, and on-site soil to be reused, and maintain a file of all facility-signed (completed) manifests and weigh slips for all materials leaving the Site and documentation for all borrow fill entering the Site. These quantities shall be compared to recorded quantities received at the disposal facilities. The Contractor shall immediately resolve any discrepancies that occur and determine the probable cause for the discrepancy. Logs shall be submitted to the Commissioner daily. Manifests and borrow fill documentation shall be submitted to the Commissioner when received.

H. The Contractor shall be solely responsible for any and all actions necessary to remedy situations involving material spilled in transit. The Contractor shall be solely responsible for and all costs associated with the refusal of the disposal facility to accept waste loads that, for whatever reason, does not meet the facility's acceptance criteria. The Contractor shall be solely responsible for remedying any situation involving material disposal at an incorrect facility; involving, but not limited to, excavation/handling at the disposal facility, endpoint sampling, and engineering fees.

I. The Contractor shall have access to back-up vehicles and equipment to ensure that there is no downtime in connection with soil transport operations.

J. The disposal containers shall be ISO type, dump trailers, or approved equal, constructed of sufficient metal, have watertight bodies and sealed tailgates equipped with positive locking devices and provisions for control of free liquids. No liquid shall leak from any part of the loaded container or trailer. The Contractor shall furnish and install a metal or tarpaulin cover on each container immediately after the container is full. The cover shall be secured in an approved manner and shall remain in place until the container has reached the disposal facility.

K. The Contractor shall be responsible for transportation safety. All vehicles shall be properly maintained, driven properly, follow all rules and regulations, observe all speed limits, etc. The on-Site speed limit shall be five miles per hour. All vehicles shall be inspected before every trip as part of Contractor's preventive maintenance program. The Contractor shall inspect each vehicle to ensure that all doors, covers, etc. are secure and that no material can spill or otherwise be released or leak. Each vehicle shall bear, at a minimum, the name and phone number of the Contractor plainly visible on both cab doors. Each vehicle shall be uniquely numbered in lettering at least four inches high and shall be placarded in New York State DOT requirements (or other applicable transportation requirements). Likewise, each trailer or container shall be so labeled on both sides and the tailgate if possible.

L. The Contractor shall submit to the Commissioner a copy of the completed manifest and associated scale tickets for each load of excavated material/waste transported off-site to document the proper transportation of disposed material to an approved permitted facility by permitted vehicles within four (4) business days following shipment, and within three (3) business days after notification of receipt of the facility. Any manifest discrepancies must be reported immediately to the Commissioner and be resolved by the Contractor to the satisfaction of the Commissioner. No payments shall be made until copies have been provided to the Commissioner.

M. All trucks leaving the Site containing solid material for off-site disposal shall be covered with tight-fitting covers, and will be checked to ensure that the cargo is not leaking. Excavated soil supersaturated with water will be dried, dewatered or mixed with a drying compound (e.g. quick lime) prior to loading into a transport vehicle for off-site disposal.

3.7 IMPORT OF MATERIAL FROM OFF-SITE SOURCES

A. Imported soil and fill material shall meet geotechnical requirements defined in Section 31 00 00 Earthwork, and comply with the requirements of 6 NYCRR Part 360.

B. Imported soil for use as backfill will be obtained from a Part 360 permitted facility and meet the General Fill criteria shown in Part 360 Table 2 (i.e., the lower of Part 375.6.8(b) Restricted Use Residential and Protection of Groundwater SCOs).

C. Soil and fill material proposed for import as backfill shall not contain any C&D debris (including, but not limited to, concrete, brick, asphalt, wood), combustible materials, stumps, roots, and other organic matter

subject to decay or disintegration, as well as ash, petroleum, and other oils, exhibit any observable indicators of contamination (i.e., petroleum-staining and odors), or have been in contact with a spill of petroleum, hazardous waste or industrial waste. Material from industrial sites, spill sites, environmental remediation sites, or other potentially contaminated sites shall not be imported to the site.

D. The Contractor shall retain a qualified environmental professional (QEP) to screen the soil and fill material proposed for import for visual, olfactory, and instrumental (PID) evidence of contamination. Proposed soil for import will be sampled according to Part 360 Table 1: Minimum Analysis Frequency for Fill Material, prior to transport from the source facility.

E. Clean recycled concrete aggregate (RCA) and recycled clean stone will not require analytical sampling if it is from a registered or permitted NYS facility and has less than 10% by weight passing through a No. 80 sieve.

F. Clean stone will not require analytical sampling if it is from a virgin quarry and has less than 10% by weight passing through a No. 80 sieve.

G. No material shall be imported to the Site until the Contractor has submitted the required fill documentation to the Commissioner and the Commissioner has completed their review of the proposed import material.

3.8 WATER MANAGEMENT

A. The Contractor must be solely responsible for the proper disposal or discharge of all contaminated water generated at the Site. The Contractor will have the option of treating water on-site for discharge to the sewer system or removing contaminated water for off-site disposal. The Contractor must be responsible to choose a method compatible to the construction work and will be compensated on a per day basis regardless of method employed. The Contractor will be compensated for only those days where the system is in full operation.

B. The Contractor must retain a dewatering/water treatment Specialist (hereinafter the "Specialist") and laboratory to conduct any testing that may be required for disposal of impacted water.

C. The dewatering/water treatment Specialist is responsible to obtain all permits; perform all water sampling, testing; and provide ancillary services related to dewatering and water treatment. The Specialist must at a minimum provide documentation to OEGS demonstrating the minimum requirements as set forth below:

1. The Specialist must demonstrate that it has, at a minimum, three (3) years' experience in the design of dewatering plans. The Specialist should demonstrate expertise dealing with issues associated with contaminated water. During that three (3) year period, the Specialist must demonstrate that it provided dewatering and water treatment systems as a routine part of its daily operations.
2. The Specialist must be experienced in work of this nature, size, and complexity and must have previous experience in working with the NYCDEC.
3. The Specialist must furnish a project listing identifying the location, nature of services provided, owner, owner's contact, contact's telephone number, project duration and value for at least five (5) projects within the last three (3) years of a similar nature, size, and complexity to this one.
4. If conditions within the exclusion zone are deemed hazardous, then the Contractor and its independent Environmental Consultant must ensure that all personnel working within identified exclusion zones and/or involved (direct contact) with the handling, storage or transport of hazardous and contaminated material must have completed a minimum of forty (40) hours of Health and Safety Training on Hazardous Waste Sites in accordance with 29 CFR 1910.120(e). The training program must be conducted by a qualified safety instructor. If conditions in the exclusion zone are deemed to be non-hazardous, the Specialist will be responsible to provide site-specific training to its employees and other affected personnel.

5. The Contractor must ensure that on-site management and supervisors directly responsible for or who supervise employees engaged in hazardous waste operations must receive the training specified in above and at least eight (8) additional hours of specialized training on managing such operations at the time of job assignment.
6. The Contractor must document all operations associated with the handling, sampling and disposal of contaminated water, and ensure that they are in compliance with applicable Federal, State and Local statutes and regulations.
7. The Contractor must supply all labor, equipment, transport, plant, material, treatment, and other incidentals required to conduct the specified work of this section.
8. If water will be disposed of into the sewer system, the Contractor must ensure the Specialist treats the water to comply with the New York City Department of Environmental Protection (NYCDEP) Sewer Effluent Limit concentrations prior to discharge. The Contractor is responsible for providing settling or filtering tanks and any other apparatus required by NYCDEP. Alternatively, the Contractor can provide a plan for transport and disposal at an off-site waste disposal facility.
9. Within forty-five (45) calendar days after award of Contract, the Contractor must submit to OEGS for review and approval, a Water Handling Plan (WHP). The WHP must be approved by OEGS prior to the Contractor's commencement of work. The Contractor must maintain a complete, up to date copy of the WHP on the job site at all times.

D. For each disposal method the Contractor proposes to utilize (disposal to sewer or off-site disposal), the WHP must include the information required below, as appropriate.

1. On-site treatment and discharge into New York City sewers.

a) Regulations: The Contractor must comply with all applicable regulations. This includes but may not be limited to Title 15-New NYCDEP Sewer Use Regulations.

b) Permits: The Contractor is solely responsible to obtain all necessary and appropriate permits and approvals, and will be responsible for performing all and any system pilot tests required for permit approval, including but not neccessarily limited to:

(i) Industrial waste approval for the New York City sewer system.

(ii) Groundwater discharge permit for the New York City sewer system (NYCDEP Division of Sewer Regulation and Control), if discharge to sewer exceeds 10,000 gallons per day.

(iii) Compliance with NYCDEC State Pollutant Discharge Elimination System (SPDES) Permit Number GP-0-10-001, General Permit for Stormwater Discharges.

(iv) Wastewater quality control application, NYCDEP.

c) The WHP for this portion of the work must include the following at a minimum:

(i) Identification and design of Contractor's proposed treatment to assure that the water meets the NYCDEP sewer use guidelines prior to discharge to the sewer, including identification of all materials, procedures, settling or filtering tanks, filters and other appurtenances proposed for treatment and disposal of contaminated water.

(ii) The name, address and telephone number of the contact for the Contractor's proposed chemical laboratory, as well as the laboratory's New York State approval certifications.

(iii) The name, address and telephone number of the contact for the Contractor's proposed

independent Environmental Consultant.

(iv) Copies of all submitted permit applications and approved permits the Contractor has received.

d) The Contractor must supply all settling or filtering tanks, pumps, filters, treatment devices and other appurtenances for treatment, temporary storage and disposal of contaminated water. All equipment must be suitable for the work described herein.

e) Execution

(i) The Contractor is solely responsible for disposal of all water.

(ii) The Contractor is solely responsible for any treatment required to assure that water discharged into the sewer is in compliance with the above-described permits.

(iii) The Contractor is solely responsible for the quality of the water disposed of into the sewers.

(iv) The Contractor is responsible for sampling and testing of water for the NYCDEP Sewer Effluent Limit concentrations. The quality of the data is the Contractor's responsibility.

(v) The Contractor will be responsible to maintain the discharge rate to the sewer such that all permit requirements are met, the capacity of the sewer is not exceeded and no surcharging occurs downstream due to the Contractor's actions.

(vi) The Contractor will be responsible for disposal or recycling of treatment media. The Contractor must provide the Commissioner with all relevant documentation concerning the disposal of treatment media, including manifests, bills of lading, certificates of recycling or destruction and other applicable documentation.

2. Off-Site Disposal

a) The following must be submitted to the Commissioner prior to initiating any off-site disposal:

(i) Name and waste transporter permit number

(ii) Address

(iii) Name of responsible contact for the waste transporter

(iv) Any and all necessary permit authorizations for each type of waste transported

(v) Previous experience in performing the type of work specified herein

b) General information for each proposed treatment/disposal facility and at least one backup treatment/disposal facility

(i) Facility name and USEPA identification number

(ii) Facility location

(iii) Name of responsible contact for the facility

(iv) Telephone number for contact

(v) Unit of measure utilized at facility for costing purposes

c) A listing of all permits, licenses, letters of approval and other authorizations to operate, which are currently held and valid for the proposed facility as they pertain to receipt and management of the wastes derived from this Contract.

d) A listing of all permits, licenses, letters of approval and other authorizations to operate which have been applied for by the proposed facility but not yet granted or issued. Provide dates of application(s) submitted. Planned submittals must also be noted.

e) The Contractor must specify and describe the disposal/containment unit(s) that the proposed facility will use to manage the waste and provide dates of construction and beginning of use, if applicable. Drawings may be provided. The Contractor must identify the capacity available in the units and the capacity reserved for the subject waste.

f) The Contractor must provide the date of the proposed facility's last compliance inspection.

g) A list of all active (unresolved) compliance orders, agreements, enforcement notices or notices of violations issued to the proposed facility must be submitted. The source and nature of the cause of violation must be stated, if known. If groundwater contamination is noted, details of the facility's groundwater monitoring program must be provided.

h) Description of all sampling and field/laboratory analyses that will be needed to obtain disposal facility approval.

i) All vessels for temporary storage and transport to an off-site disposal facility must be as required in DOT regulations.

j) Execution

(i) The Contractor must organize and maintain the required material shipment records/manifests. The Contractor must include all bills of lading, certificates of destruction, recycling or treatment and other applicable documents.

(ii) The Contractor must coordinate the schedule for truck arrival and material deliveries at the Site to meet the approved project schedule. The schedule must be compatible with the availability of equipment and personnel for material handling at the Site.

(iii) The Contractor must inspect all vehicles leaving the project site to ensure that contaminated liquids are not spilling and are contained for transport.

(iv) The Contractor must obtain letters of commitment from the waste haulers and the treatment, disposal or recovery facility to haul and accept shipment. The letter must indicate agreement to handle and accept the specified estimated quantities and types of material during the time period specified in the project schedule and any time extension as deemed as necessary.

(v) The Contractor must verify the volume of each shipment of water from the site.

(vi) The Contractor is responsible for sampling and testing of water for off-site disposal. The quality of the data is the Contractor's responsibility.

(vii) The Contractor is responsible for any additional analyses required by the disposal facility, and for the acceptance of the water at an approved disposal facility.

(viii) The Contractor must not deliver waste to any facility other than the disposal facility(ies) listed on the shipping manifest.

(ix) The Contractor must coordinate manifesting, placarding of shipments, and vehicle decontamination. All quantities must also be measured and recorded upon arrival at the disposal facility(ies). If any deviation between the two records occurs, the matter is to be reported immediately to the Commissioner and must be resolved by the Contractor to the satisfaction of the Commissioner.

(x) The Contractor will be responsible for any and all actions necessary to remedy situations involving material spilled in transit or mud and dust tracked off-site. This cleanup must be accomplished at the Contractor's expense.

(xi) The Contractor will be responsible for inspecting the access routes for road conditions, overhead clearance and weight restrictions.

(xii) The Contractor must only use the transporter(s) and disposal facility(ies) identified in the WHP for the performance of work. Only a transporter with a current Part 364 Waste Transporter Permit from NYCDEC may transport this material. Any use of substitute or additional transporters or facility(ies) must have previous written approval from the Commissioner and OEGS at no additional cost to the City of New York.

(xiii) The Contractor must develop, document, and implement a policy for accident prevention.

(xiv) The Contractor must not combine waste materials from other projects with material from this project.

(xv) The Contractor must obtain for the Commissioner or City of New York a hazardous waste generator identification number and will sign the manifest as the generator, if necessary.

(xvi) No material must be transported until approved by the Commissioner. (x

(xvii) The Contractor will be responsible for acceptance of the material at an approved disposal facility, for ensuring that the facility is properly permitted to accept the stated material, and that the facility provides the stated storage and/or disposal services.

(xviii) The City of New York reserves the right to contact and visit the disposal facility and regulatory agencies to verify the agreement to accept the stated material and to verify any other information provided. This does not in any way relieve the Contractor of the Contractor's responsibilities under this Contract.

(xix) In the event that the identified and approved facility ceases to accept the stated materials or the facility ceases operations, it is the Contractor's responsibility to locate an alternate approved and permitted facility(ies) for accepting materials. The Contractor is responsible for making the necessary arrangements to utilize the facility(ies), and the alternate facility(ies) must be approved in writing by the Commissioner in the same manner and with the same requirements as for the original facility(ies). This must be done with no extra cost or delay to the City of New York.

(xx) The Contractor must design and construct a portable decontamination station to be used to decontaminate equipment and vehicles exiting the exclusion zone.

3.9 DECONTAMINATION OF EQUIPMENT AND MATERIALS

A. All decontamination procedures for equipment and materials shall conform to the requirements of applicable USEPA and NYSDEC regulations, as appropriate.

B. All recoverable equipment and materials that have been in contact with excavated soil shall be decontaminated prior to removal from the Site. As used herein "recoverable" shall mean all items which are non-absorptive in nature and which can be successfully decontaminated. All items for which decontamination is difficult or uncertain shall be considered non-recoverable, as determined by the Commissioner.

C. The Contractor must design and construct a portable decontamination station to be used to decontaminate equipment and vehicles that have been used to handle contaminated soil.

D. The Contractor shall use an approved biodegradable cleaning solution, suitable for removal of petroleum, to clean all residual material and soil from the interior and exterior surfaces of the recoverable equipment. Solutions containing chlorinated solvents or volatile organic compounds are not acceptable. The Contractor shall submit applicable safety data sheets (SDS) to the Commissioner and obtain approval for the cleaning solution in advance.

E. Cleaning shall be done in an area specifically set up by the Contractor for that purpose, preferably adjacent to the contaminated soil/fill stockpile. The decontamination areas shall be curbed, and lined with an impermeable membrane, to contain the used cleaning solution, including any overspray, and any contaminated debris removed during the cleaning process. All cleaning related materials and operations, and disposal of used cleaning solution and associated contaminated debris, shall be provided and performed by the Contractor at no additional cost to the City of New York.

F. Properly dispose of decontamination fluids in drums or through treatment systems.

G. Mark and placard containerized decontamination materials and place in the contaminated stockpile area. The waste shall be sampled and classified by the Contractor in accordance with the approved disposal facilities' requirements. Once classified and accepted by the approved facility, the Contractor shall provide the Commissioner with a photocopy of any required manifests.

END OF SECTION 02 61 13

SECTION 028013 – GENERAL CONTRACTOR WORK
NOVEMBER 2017 VERSION

ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

1.01 SCOPE FOR ASBESTOS ABATEMENT WORK

A. The "General Conditions" apply to the work of this Section.

B. The asbestos abatement contractor shall remove asbestos containing materials as needed to perform the other work of this Contract when discovered during work. When required, the asbestos abatement contractor shall replace the ACM with non-asbestos containing materials. An allowance of **$30,000.00** for the **General Contractor** is herein established for this incidental work when so ordered and authorized by the Commissioner.

C. All work shall be done in accordance with the applicable provisions of the rules and regulations of the asbestos control program as promulgated by Title 15 Chapter I of RCNY and New York State Department of Labor Industrial Code Rule 56 cited as 12 NYCRR Part 56, whichever is more stringent as per latest amendments to these laws and as modified herein by these specifications.

D. All disposal of asbestos contaminated material shall be per Local Law 70/85.

E. The asbestos abatement contractor's attention is directed to the fact that certain methods of asbestos abatement are protected by patents. To date, patents have been issued with respect to "negative pressure enclosure" or "negative-air" or "reduced pressure" and "glove bag".

F. The asbestos abatement contractor shall be solely responsible for and shall hold the Department of Design and Construction and the City harmless from any and all damages, losses and expenses resulting from any infringement by the asbestos abatement contractor of any patent, including but not limited to the patents described above, used by the asbestos abatement contractor during performance of this agreement.

G. "Asbestos" shall mean any hydrated mineral silicate separable into commercially usable fibers, including but not limited to chrysotile (serpentine), amosite (cumingtonite-grunerite), crocidolite (riebeckite), tremolite, anthrophyllite and actinolite.

H. Prior to starting, the asbestos abatement contractor must notify the Commissioner of the Department of Design and Construction if he/she anticipates any difficulty in performing the Work as required by these Specifications. The asbestos

abatement contractor is responsible to prepare and submit all filings, notifications, etc. required by all City, State and Federal regulatory agencies having jurisdiction.

The asbestos abatement contractor is responsible for submitting the Asbestos Project Notification Form (ACP-7 Form) to the Department of Environmental Protection, Asbestos Control Program, as per Title 15, Chapter I of RCNY and to the NYSDOL as per Industrial Code Rule 56.

The asbestos abatement contractor is responsible for preparing and submitting Asbestos Variance Application (ACP-9). If a Variance is required, the asbestos abatement contractor is responsible to retain a NYSDOL Asbestos Project Designer, as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required variance.

The general contractor is responsible for preparing and submitting an Asbestos Abatement Permit and/or Work Place Safety Plans (WPSP) that may be required for the completion of the Contract or incidental work. If such plans are required, the general contractor is responsible for retaining a registered design professional as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required plans.

The asbestos abatement contractor is responsible for the submission of all required documents to the NYCDEP to acquire the appropriate Asbestos Project Conditional Closeout (ACP-20) and/or Asbestos Project Completion Forms (ACP-21) on a timely basis for the completion of the incidental work encountered under this contract.

The asbestos abatement contractor will be required to attend an on-site job meeting with the Construction Project Manager prior to the start of work to examine conditions and plan the sequence of operations, etc.

The asbestos abatement contractor shall have a NYSDOL/NYCDEP Asbestos Supervisor onsite to oversee the work and conduct a final visual inspection as required by both Title 15, Chapter 1 of the RCNY and NYSDOL Industrial Code Rule 56.

I. All work shall be done during regular working hours unless the asbestos abatement contractor requests authorization to work in other then regular working hours and such authorization is granted by the Commissioner. (Regular work hours are those hours during which any given facility, in which work is to be done, is customarily open and functioning, normally between the hours of 8:00 A.M. and 4:00 P.M. Monday - Friday.) If such work schedule is authorized by the Commissioner, the work shall be done at no additional cost to the City.

J. The Commissioner may order that work be done in other than regular working hours as herein by defined and this order may require the asbestos abatement

contractor to pay premium or overtime wages to complete the work. If the Commissioner orders work in other than regular working hours, the asbestos abatement contractor shall multiply the unit price for that portion of the work requiring premium wages by 1.50 when computing payment in accordance with Paragraph 1.09. All requests for premium payment must be supported by certified payroll sheets and field sheets approved by the Construction Project Manager.

1.02 QUALIFICATIONS OF ASBESTOS ABATEMENT CONTRACTOR

A. Requirements: The asbestos abatement contractor must be approved through the Department's Request for Subcontractor Approval, administered by the Agency Chief Contracting Office (ACCO), Vendor Integrity Unit. The asbestos abatement contractor must demonstrate compliance with the special experience requirements set forth in subparagraphs (1) through (6) below. Such documentation shall include without limitation, all required licenses, certificates, and documentation.

1. The asbestos abatement contractor must, whether an individual, corporation, partnership, joint venture or other legal entity, demonstrate for the three-year period prior to the work that it has been licensed by the New York State Department of Labor (NYSDOL), as an "Asbestos Abatement Contractor". The asbestos abatement contractor shall submit copies of the asbestos abatement contractors NYSDOL License for the past three years

2. The asbestos abatement contractor must, for the three-year period prior to the work, have been in the business of providing asbestos abatement services as a routine part of its daily operations.

3. The asbestos abatement contractor proposing to do asbestos abatement work must be thoroughly experienced in such work and must submit a list of five (5) asbestos abatement projects of similar size and complexity. The aggregate cost of these projects must be at least $1,000,000 in each of the three years.

4. For each project submitted to meet the experience requirements set forth above, the asbestos abatement contractor must submit the following information for the project; name and location of the project; name title and telephone number and email address of the owner or the owner's representative who is familiar with the asbestos abatement contractor's work; brief description of the scope of work completed as a prime or sub-asbestos abatement contractor; amount of contract or subcontract and the date of completion.

5. The asbestos abatement contractor must demonstrate that it has the financial resources, certified supervisory personnel and equipment

necessary to carry out the work and to comply with the required performance schedule, taking into consideration other business commitments. The asbestos abatement contractor must submit such documentation as may be required by the Department of Design and Construction to demonstrate that it has the requisite capacity to perform the required services of this contract. The Department may also conduct an inspection of the asbestos abatement contractor's facility to verify if the contractor has equipment and staffing to perform the work.

6. The asbestos abatement contractor must submit a copy of their Corporate Health and Safety Plan for review and acceptance. A Job Hazard Analysis (JHA) for the specific work conducted must be included.

B. Throughout the specifications, reference is made to codes and standards which establish qualities and types of workmanship and materials, and which establish methods for testing and reporting on the pertinent characteristics thereof. Provide materials or workmanship that meet or exceed the specifically named codes or standards where required by these specifications.

C. Site Investigation: Asbestos abatement contractor shall inspect all the specifications and related drawings and will investigate and confirm the site conditions affecting the work, including, but not limited to (1) through (5) below. The asbestos abatement contractor will attend a walkthrough site inspection with the department's Project Manager and the Third-Party Air Monitor prior to the work. Such walkthrough will be scheduled at the Department's convenience.

1. Physical considerations and conditions of both the material and structure. These considerations include any obstacles or obstructions encountered in accessing or removing the material.

2. Handling, storage, transportation and disposal of the material.

3. Availability of qualified and skilled labor.

4. Availability of utilities.

5. Exact quantities of all materials to be disturbed and/or removed

1.03 ASBESTOS ABATEMENT CONTRACTOR RESPONSIBILITIES

The asbestos abatement contractor will visit the subject location within one (1) working day of notification to ascertain actual work required. If the project is identified as being "urgent", then work shall commence no later than 48 hours from the time of notification. In this event, the asbestos abatement contractor shall immediately notify when applicable EPA NESHAPS Coordinator, NYSDOL Asbestos Control Bureau and NYCDEP

Asbestos Control Program of start of the work and file the necessary Asbestos Notifications and any applicable Variance Applications with the regulatory agencies cited above.

If the project is not classified as "urgent" the asbestos abatement contractor shall notify the EPA NESHAPS Coordinator, NYSDOL and NYCDEP by submitting the requisite asbestos project notification forms, postmarked 10 days before activity begins if 260 linear feet or more and/or 160 square feet or more of asbestos containing material will be disturbed.

The following information must be included in the notification:

A. Name and address of building City or operator;

B. Project description:

1. Size - square feet, number of linear feet, etc;

2. Age - date of construction and renovations (if known);

3. Use - i.e., office, school, industrial, etc.

4. Scope - repair, demolition, cleaning, etc.

C. Amount of asbestos involved in work and an explanation of techniques used to determine the amount;

D. Building location/address, including Block and Lot numbers;

E. Work schedule including the starting and completion dates;

F. Abatement methods to be employed;

G. Procedures for removal of asbestos-containing material;

H. Name, title and authority of governmental representative sponsoring project.

1.04 WORK INCLUDED IN UNIT PRICE

The asbestos abatement contractor will be paid a basic unit price of **$25.00** per square feet for the removal and disposal of asbestos containing material and replacement of the same with non-asbestos containing materials.

Unit price shall include all costs necessary to do the work of this Contract, including but not limited to: labor, materials, equipment, utilities, disposal, insurance, overhead and profit.

1.05 AIR MONITORING – ASBESTOS ABATEMENT CONTRACTOR

A. "Air Sampling" shall mean the process of measuring the fiber content of a known volume of air collected during a specific period. The procedure utilized for asbestos follows the N1OSH Standard Analytical Method 7400 or the provisional transmission electron microscopy methods developed by the USEPA and/or National Institute of Standard and Technology which are utilized for lower detectability and specific fiber identification.

B. Air monitoring of asbestos abatement contractor's personnel will be performed in conformance with OSHA requirements, (All costs associated with this work are deemed included in the unit price.).

C. Qualifications of Testing Laboratory:

The industrial hygiene laboratory shall be a current proficient participant in the American Industrial Hygiene Association (AIHA) PAT Program. The laboratory identification number shall be submitted and approved by the City. The laboratory shall be accredited by the AIHA and New York State Department of Health Environmental Laboratory Approval Program (ELAP).

Note: Work area air testing and analysis before, during and upon completion of work (clearance testing) will be performed by a Third Party Air Monitor under separate Contract with the City.

1.06 THIRD PARTY MONITORING AND LABORATORY

A. The NYCDDC, at its own expense, will employ the services of an independent Third-Party Air Monitoring Firm and Laboratory. The Third-Party Air Monitor will perform air sampling activities and project monitoring at the Work Site.

B. The Laboratory will perform analysis of air samples utilizing Phase Contrast Microscopy (PCM) and/or Transmission Electron Microscopy (TEM).

C. The Third-Party Air Monitoring Firm and the designated Project Monitor shall always have access to all areas of the asbestos removal project and shall continuously inspect and monitor the performance of the asbestos abatement contractor to verify that said performance complies with this Specification. The Third-Party Air Monitor shall be on site throughout the entire abatement operation.

D. The NYCDDC will be responsible for costs incurred with the Third-Party Air Monitoring Firm and laboratory work. Any subsequent additional testing required due to limits exceeded during initial testing shall be paid for by the asbestos abatement contractor.

1.07 PAYMENT REQUEST DOCUMENTATION

B. The following information shall be included for each payment request:

1. Description of work performed.
2. Linear footage and pipe sizes involved.
3. Square footage for boiler & breaching insulation removed.
4. Square footage of non pipe and boiler areas removed, patched, enclosed, sealed, or painted.
5. Square footage of encapsulation, sealing, patching, and painting involved.
6. Total cost associated with compliance with the assigned task.
7. Architectural, Electrical, HVAC, Plumbing, etc. work incidental to the Asbestos Abatement Work.
8. A certified copy (in form 4312-39) to the Comptroller or Financial Officer of the New York City to the effect that the financial statement is true.
9. A signed copy (in form 6506q-6) of certificate of compliance with non-discriminatory provisions of the Contract.
10. Attach a copy of valid workmen compensation insurance.
11. Valid asbestos insurance per occurrence.
12. General liability insurance when required.

C. Each payment request shall include a grand total for all work completed that billing period, the landfill waste manifests and a copy of waste transporter permit. The Department of Design and Construction will inspect the work performed, review the cost and approve or disapprove requests for payment.

D. EXPOSURE LOG: With this final payment, the asbestos abatement contractor shall submit a listing of the names and social security numbers of all employees actively engaged in the abatement work of this Contract. This list shall include a summary showing each part of the abatement work in which the employee was engaged and the dates thereof.

1.08 QUANTITY CALCULATIONS

In order to determine the square footage involved for the various pipe sizes of pipe insulation that might be encountered, the following table is to be used.

PIPE INSULATION SIZE O.D.	PIPE SIZE O.D.	SQUARE FOOTAGE PER LINEAR FOOT
2-1/2"	1/2"	0.65
2-3/4"	3/4"	0.72
3"	1"	0.79
3-1/4"	1-1/4"	0.85
3-1/2"	1-1/2"	0.92
4"	2"	1.05
4-1/2"	2-1/2"	1.18
5"	3"	1.31
6"	3-1/4"	1.57
7"	3-1/2"	1.83
8"	4"	2.09
9"	5"	2.36
10"	6"	2.62
12"	8"	3.14
14"	10"	3.67
16"	12"	4.19
18"	14"	4.71

1.09 METHOD OF PAYMENT

Payment shall be made in accordance with Items A through R below. Payment shall be calculated based on the actual quantity of the item performed by the asbestos abatement contractor, times the unit price specified below. Credits may apply to certain times, as specified below.

A. **REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING PIPE INSULATION:** Actual linear footage, multiplied by the square footage factor listed for the respective pipe size in Section 1.08, multiplied by the unit price in Section 1.04.

EXAMPLE: 100 lin.ft. of 1/2" pipe and 100 lin.ft. of 6" pipe, including elbows, tees. Flanges, etc.

100 X 0.65 = 65 sq.ft. 65 x unit price = Payment

100 X 2.62 = 262 sq.ft. 262 x unit price = Payment

B. **REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER INSULATION:** (all types including Silicate Block and including the removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.

EXAMPLE: Item B. removal and replacement of 1000 S.F. of boiler insulation (incl. Silicate block)

1000 S.F. X (1.5) X the Unit Price = Payment

C. **REMOVAL, DISPOSAL AND REPLACEMENT OF TANK INSULATION:** (all types including removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.

D. **REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER UPTAKE, & BREACHING INSULATION:** (all types including stiffening angles and wire lath) Payment shall be made at 2.0 times the unit price per square foot.

E. **REMOVAL, DISPOSAL AND REPLACEMENT OF DUCT INSULATION:** Payment shall be made at 1.0 times the unit price per square foot.

F. **REMOVAL, DISPOSAL AND REPLACEMENT OF SOFT ASBESTOS CONTAINING MATERIAL:** (Including sprayed-on fire proofing and sound proofing) Payment shall be made at 1.0 times the unit price per square foot of surface area. Area of irregular surfaces must be calculated and confirmed with DDC representative.

G. **ACOUSTIC PLASTER REPAIR AND/OR ENCAPSULATION:** Payment shall be made at 0.5 times the unit price per square foot.

H. **PATCHING OR REPAIR** of items listed in A through F will be paid at 0.33 times the unit price per square foot.

I. **REMOVAL, DISPOSAL AND REPLACEMENT OF WATERPROOFING ASBESTOS CONTAINING MATERIAL:** (including friable and non-friable waterproofing material from interior and exterior walls, floors, foundations, penetrations, louvers, vents and openings other than windows, doors and skylights) **Payment** shall be made at 0.5 times the unit price per square foot.

J. **REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING ELECTRICAL WIRING INSULATION:** (including friable and non-friable wiring insulation) Payment shall be made at 0.33 times the unit price per square foot.

K. **PAINTING:** Payment shall be made at 0.05 times the unit price per square foot.

L. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING PLASTER:** from ceilings and walls, including any wire lath and disposal as asbestos containing waste. Payment shall be made at 0.80 times the unit price per square foot.

M. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING FLOOR TILES, CEILING TILES, TRANSITE PANELS:** (including any adhesive, glue, mastic and/or underlayment) and disposal as asbestos containing waste. Payment shall be made at 0.40 times the unit price per square foot. If multiple

layers are discovered, each additional layer shall be paid at 0.20 times the unit price per square foot.

N. **ADDITIONAL CLEAN UP/HOUSEKEEPING OF WORK AREA:** (excluding pre-cleaning of work area required by regulations) HEPA vacuuming and wet cleaning of asbestos contaminated surface. Payment shall be made at 0.20 times the unit price per square foot. When GLOVE BAG is employed to remove ACM, cost of HEPA vacuuming and wet cleaning of floor area up to 3 feet on each side of glove-bag shall be included in unit price and no extra payment will be made.

O. **REMOVAL, DISPOSAL OF ASBESTOS-CONTAINING ROOFING MATERIAL:** including mastic, flashing and sealant compound and provide temporary asbestos-free roof covering consisting of one layer of rolled roofing paper sealed with asphaltic roofing compound. Payment shall be made at 0.8 times the unit price per square foot. Credit at a rate of 0.33 times the unit price will be taken for each square foot of temporary roof covering which the asbestos abatement contractor is directed not to install.

P. **PICK-UP AND DISPOSAL OF GROSS DEBRIS:** (excluding any waste generated from abatement under Item A-R) at a rate of $150 per cubic yard for asbestos contaminated waste and $75 per cubic yard for non-asbestos contaminated waste. This cost includes all labor and material cost associated with work.

Q. **REMOVAL OF ASBESTOS-CONTAINING BRICK, BLOCK, MORTAR, CEMENT OR CONCRETE:** along with all surfacing materials including wire lath and/or other supporting structures and disposal as ACM waste. Payment shall be made at a rate of $25.00 per cubic foot of material removed.

R. **REMOVAL AND DISPOSAL OF ASBESTOS CONTAINING WINDOW/DOOR CAULKING:** including friable and non-friable caulking, weather-stripping, glazing, sealants or other waterproofing materials applied to windows, doors, skylights, etc. Payment shall be made at the rate of $400.00 per opening regardless of size or configuration. This cost includes labor, consumable materials, set-up/breakdown, removal and disposal, as required.

Note 1: CREDIT: For items listed in A through F, a credit at a rate of 0.33 times the unit price, times the respective multiplier (for each item) will be taken for each square foot of insulation which the asbestos abatement contractor is not directed to reapply.

Note 2: MINIMUM PAYMENT: The minimum payment per call at any individual job sites or various job sites during the same day will be eight hundred dollars ($800.00).

Note 3: All payments shall be made as described in paragraph 1.09 herein.

Note 4: WORKING HIGHER THAN 12 FEET ABOVE FLOOR LEVEL OR WORK REQUIRING COMPLEX SCAFFOLDING OR CONSTRUCTION WORK

PLATFORMS: Provisions are made in this Contract to compensate the asbestos abatement contractor for work performed in locations that are difficult to access due to work at elevations that are significantly higher than the normal work level. The unit price for these items will be paid at 1.20 times the unit price described in Paragraphs 1.09, A through R for those portions of the work that are more than twelve (12) feet above the grade for that would be judged as the normal working level.

1.10 GUARANTEE

A. Work performed in compliance with each task shall be guaranteed for a period of one year from the date the completed work is accepted by the Department of Design and Construction.

B. The Commissioner of The Department of Design and Construction will notify the asbestos abatement contractor in writing regarding defects in work under the guarantee.

1.11 OCCUPANCY OF SITE NOT EXCLUSIVE

Attention is specifically drawn to the fact that contractors, performing the work of other Contracts, may be brought upon any of the work sites of this Contract. Therefore, the asbestos abatement contractor shall not have exclusive rights to any site of his work and shall fully cooperate and coordinate his work with the work of other contractors who may be brought upon any site of the work of this Contract. This paragraph applies to those areas outside the regulated Work Area as defined by Title 15, Chapter I of RCNY.

1.12 SUBMITTALS

A. Pre-Construction Submittals:

1. Attend a pre-construction meeting scheduled by the City of New York Department of Design and Construction. This meeting shall also be attended by a designated representative of the City of New York third party air monitoring firm, facility manager and the Construction Project Manager. At this meeting, the asbestos abatement contractor shall present three copies of the following items:
   a. asbestos abatement contractor's scope of work, work plan and schedule.
   b. Asbestos project notifications, approved variances and plans to Government Agencies.
   c. Copies of Permits, clearance and licenses if required.
   d. Schedules: the asbestos abatement contractor shall provide to the Construction Project Manager a copy of the following schedules for

approval. Once approved, schedules shall be maintained and updated as received. asbestos abatement contractor shall post a copy of all schedules at the site:

(1) A construction schedule stating critical dates of the project including, but not limited to, mobilization, Work Area preparation, demolition, gross removal, fine cleaning, encapsulation, inspections, clearance monitoring, and phase of refinishing and final inspections. The schedule shall be updated biweekly, at a minimum.

(2) A schedule of staffing stating number of workers per shift per activity, name and number of supervisor(s) per shift, shifts per day, and total days to be worked.

(3) Submit all changes in schedule or staffing to the Construction Project Manager prior to implementation.

e. Written description of emergency procedures to be followed in case of injury or fire. This section must include evacuation procedures, source of medical assistance (name and telephone number to nearest hospital) and procedures to be used for access by medical personnel (examples: first aid squad and physician). NOTE: Necessary Emergency Procedures Shall Take Priority Over All Other Requirements of These Specifications.

f. Safety Data Sheets (SDS) for encapsulants, sealants, firestopping foam, cleaners/disinfectants, spray adhesive and any and all potentially hazardous materials that may be employed on the project. No work involving the will be allowed to proceed until SDS are reviewed.

g. Worker Training and Medical Surveillance: The asbestos abatement contractor shall submit a list of the persons who will be employed by him /her to perform the removal work. Present evidence that workers have received proper training required by the regulations and the medical examinations required by OSHA 29 CFR 1926.1101.

h. Logs: Specimen copies of daily progress log, visitor's log, and disposal log.

(1) The asbestos abatement contractor shall provide a permanently bound log book of minimum 8-1/2" x 11" size at the entrance to the Worker and Waste Decontamination enclosure system as hereinafter specified. Log book shall

contain on title page the project name, name, address and phone number of the asbestos abatement contractor; name, address and phone number of asbestos abatement contractor and City's third-party air monitoring firm; emergency numbers including, but not limited to local Fire/Rescue Department. Log book shall contain a list of personnel approved for entry into the Work Area.

(2) All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted. Any significant events occurring during the abatement project shall be entered the log. Upon completion of the job, the asbestos abatement contractor shall submit the logbook containing a day-to-day record of personnel log entries countersigned by the Construction Project Manager every day.

i. Worker's Acknowledgments: Submit statements signed by each employee that the employee has received training in the proper handling of ACM, understands the health implications and risks involved; and understands the use and limitations of the respiratory equipment to be used.

B. During Construction Submittals:

1. Security and safety logs showing names of person entering workspace, date and time of entry and exit, record of any accident, emergency evacuation, and any other safety and/or health incident.

2. Progress logs showing the number of workers, supervisors, hours of work and tasks completed shall be submitted daily to the Construction Project Manager.

3. Floor plans indicating asbestos abatement contractor's current work progress shall be submitted for review by the Construction Project Manager.

4. All asbestos abatement contractors' air monitoring and inspection results.

C. Project Closeout Submittals:

Upon completion of the project and as a condition of acceptance, the asbestos abatement contractor shall present two copies of the following items, bound and indexed:

1. Lien Waivers from asbestos abatement contractor, sub-asbestos abatement contractors and Suppliers,

2. Daily OSHA air monitoring results,

3. All Waste Manifests (Asbestos and Construction Debris), seals and disposal logs,

4. Field Sign-In/Sign-Out Logs for every shift,

5. Copies of all Building Department Forms and Permits,

6. A Letter of Compliance stating that all the work on this project was performed in accordance with the Specifications and all applicable Federal, State and Local regulations,

7. All Warranties as stated in the Specifications,

    a. Fully executed disposal certificates and transportation manifest.

8. Project Record: The asbestos abatement contractor shall maintain a project record for all small and large asbestos projects. During the project, the project record shall always be kept on site. Upon completion of the project, the project record shall be maintained by the building owner. The project record shall be submitted to DDC as part of the close out documents. The project record shall consist of:

    a. Copies of licenses of all asbestos abatement contractors involved in the project;

    b. Copies of NYCDEP and NYSDOL supervisor and handler certificates for all workers engaged in the project;

    c. Copies of all project notifications and reports filed with NYCDEP, NYSDOL and USEPA for the project, with any amendments or variances;

    d. Copies of all asbestos abatement permits, including associated approved plans and work place safety plan;

    e. A copy of the air sampling log and all air sampling results;

    f. A copy of the abatement asbestos abatement contractor's daily log book;

g. Copies of all asbestos waste manifests;

h. A copy of all Project Monitor's Reports (ACP-15).

i. A copy of each ATR-1 Form completed for the asbestos project (if required).

j. A copy of each Asbestos Project Conditional Closeout Report (ACP-20) if required.

k. A copy of the Asbestos Project Completion Form (ACP-21).

1.13 PROTECTION OF FURNITURE AND EQUIPMENT

Cover all furniture and equipment that cannot be removed from Work Areas. Movable furniture and equipment will be removed from Work Areas by the asbestos abatement contractor prior to start of work. At the conclusion of the work (after final air testing), the asbestos abatement contractor will remove all plastic covering on walls, floors, furniture, equipment and reinstall furniture and equipment. He shall remove and store all sheaths, curtains and drapes, and reinstall same following final clean up.

1.14 UTILITIES

A. General:

All temporary facilities shall be subject to the approval of the Commissioner. Prior to starting work at any site, locations and/or sketches (if required) of temporary facilities must be submitted to the Construction Project Manager for the required approval.

B. Water:

The Department of Design and Construction will furnish all water needed for construction, at no cost to the asbestos abatement contractor in buildings under their jurisdiction. However, it is the responsibility of the asbestos abatement contractor to ensure that hot water is provided for showering in the decontamination unit. The asbestos abatement contractor shall furnish, install and maintain any needed equipment to meet these requirements at his own expense.

C. Electricity:

The Department of Design and Construction will furnish all electricity needed for construction, at no cost to the asbestos abatement contractor in a building, under their jurisdiction. The asbestos abatement contractor is responsible for routing the electric power to the abatement Work Area.

All temporary lighting and temporary electrical service for Work Area shall be in weatherproof enclosures and be ground fault protected.

D. In leased spaces, arrangements for water supplies and electricity must be made with the landlord. However, all such arrangements must be made through and are subject to approval of the Department of Design and Construction. Utilities will be provided at no cost to the asbestos abatement contractor. However, it is the asbestos abatement contractor's (or the general contractor's) responsibility to furnish and install a suitable distribution system to the Work Area. This system will be provided at no cost to the City.

1.15 FEES

The asbestos abatement contractor shall be responsible for any and all fees or charges imposed by Local, State or Federal Law, Rule and Regulation applicable to the work specified herein, including fees or charges which may be imposed subsequent to the date of the Bid opening.

END OF SECTION

SECTION 03 30 00
Cast-In-Place Concrete

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

C. Refer to other Divisions of these Specifications to determine the type and extent of work therein affecting the work of this trade, whether or not such work is specifically mentioned in this Section.

1.2 SUMMARY

A. Except for that specifically excluded below, furnish and combine materials for all the work indicated on the Drawings or herein specified to be of plain or reinforced concrete, its installation with forms and reinforcement, its curing and finishing. Shop drawings, tools, ways, apparatus, and equipment necessary for concrete production, installation, and finish are included. The work under this Section includes but is not limited to the following:

   1. Footings, pile caps, and piers.
   2. Foundation walls.
   3. Slabs-on-grade.
   4. Slabs on metal deck.
   5. Furnishing and installing joint fillers, dams, and similar items required in conjunction with the concrete work.
   6. Installing items furnished by other trades and required to be built into the concrete work.
   7. Grouting column base plates.
   8. Furnishing and installing dowels for masonry walls.
   9. Installing embedded steel anchorages provided by others for the attachment of structural steel.
   10. Metal pan stair fill, housekeeping pads, and curbs for equipment.
   11. Dustproofing interior concrete slabs.
   12. All other items of concrete and related work shown on the Drawings, specified herein, or needed to make the work of this Section complete.

B. The following are excluded from the work specified in this Section:

1. Furnishing of certain metal inserts and other embedded items, installed under this Section, but supplied by other trades, including but not limited to stone masonry anchors.

2. Inserts and pipe sleeves for mechanical trades to be furnished and installed by mechanical contractors.

C. Specification Sections that directly relate to the work of this Section include, but are not limited to, the following:

1. Section 05 12 00 – Structural Steel.

2. Section 05 31 00 – Steel Decking

D. Notify all other trades responsible for installing inserts, sleeves, etc., when ready for such installation and for final checking immediately before concrete is placed. Cooperate with such trades to obtain proper installation. Leave openings in walls for pipe, ducts, etc., for mechanical and electrical work as shown on Drawings or required by layout of systems.

1.3 REFERENCED STANDARDS

A. Follow the guidelines contained in the latest editions of the following codes, specifications, and standards, including references contained in each document, except where more stringent requirements are shown or specified.

B. American Association of State Highway and Transportation Officials (AASHTO)

1. AASHTO T260 – Methods of Sampling and Testing for Total Chloride Ion in Concrete and Concrete Raw Materials.

C. American Concrete Institute (ACI)

1. ACI 211.1 – Recommended Practice for Selecting Proportions for Normal Weight Concrete.

2. ACI 214 – Recommendation for Evaluation of Compression Test Results of Field Concrete.

3. ACI 301 – Standard Specification for Structural Concrete.

4. ACI 304 – Recommended Practice for Measuring, Mixing and Placing Concrete.

5. ACI 305 – Recommended Practice for Hot Weather Concreting.

6. ACI 306 – Recommended Practice for Cold Weather Concreting.

7. ACI 306.1 – Standard Specification for Cold Weather Concreting

8. ACI 308 – Recommended Practice for Curing Concrete.

9. ACI 309 – Recommended Practice for Consolidation of Concrete.

10. ACI 311 – Recommended Practice for Concrete Inspection.

11. ACI 315 – Manual of Standard Practice for Detailing Reinforced Concrete Structures.

12. ACI 318 – Building Code Requirements for Reinforced Concrete.
13. ACI 347 – Guide to Formwork for Concrete.
14. ACI 613 – Recommended Practice for Selecting Proportions for Concrete.

D. ASTM International (ASTM)

1. ASTM C31 – Standard Practice for Making and Curing Concrete Test Specimens in the Field.
2. ASTM C33 – Standard Specification for Concrete Aggregates.
3. ASTM C39 – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.
4. ASTM C94 – Standard Specification for Ready-Mixed Concrete.
5. ASTM C143 – Standard Test Method for Slump of Hydraulic-Cement Concrete.
6. ASTM C150 – Standard Specification for Portland Cement.
7. ASTM C173 – Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.
8. ASTM C192 – Standard Practice for Making and Curing Concrete Test Specimens in the Laboratory.
9. ASTM C231 – Standard Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.
10. ASTM C260 – Standard Specification for Air-Entraining Admixtures for Concrete.
11. ASTM C309 – Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.
12. ASTM C494 – Standard Specification for Chemical Admixtures of Concrete.
13. ASTM C595 – Standard Specification for Blended Hydraulic Cement.
14. ASTM E329 – Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection.

E. National Ready Mixed Concrete Association (NRMCA)

1. NRMCA Check List for Certification of Ready Mixed Concrete Production Facilities.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"

1.5 SUBMITTALS

A. General

1. All submissions shall be in accordance with the submission schedule, which shall be developed and agreed between the Commissioner and Contractor at the commencement of the Project.

2. Submittals shall be made in compliance with the DDC General Conditions

B. Submit the following action submittals for review and approval:

1. Concrete mix design for each type of concrete. The Contractor shall warrant by the submission of the design mixes that such mixes are totally representative of the concrete that he intends to supply to meet the requirements of the Contract Documents. Submit new design mixes for review and approval when any change in materials is required or needed. Include the following information for each concrete mix design:

   a. Method used to determine the proposed mix design (per ACI 301, Article 3.9).

   b. Compressive strength at seven and twenty-eight days: Submit strength test records, mix design materials, conditions, and proportions for concrete used for record of tests, standard deviation calculation, and determination of required average compressive strength.

   c. Gradation of fine and coarse aggregates: Testing data confirming proposed coarse aggregate meets ASTM C33 class designation. Include ASTM test results for aggregates subject to freeze-thaw environment.

   d. Proportions of all ingredients including all admixtures to be added either at the time of batching or at the job site.

   e. Water-to-cement ratio.

   f. Slump tested in accordance with ASTM C143.

   g. Air content of freshly mixed concrete by the pressure method, ASTM C231, or the volumetric method, ASTM C173.

   h. Unit weight of concrete ASTM C138.

   i. Mill test reports of fly ash chemical and physical analysis and certification of compliance with ASTM C618, Class C or F, if used.

   j. Manufacturer's Spec Data Sheets of each concrete admixture, including brand name, manufacturer, and dosage rate range.

   k. Mass-Concrete Submittals

      1) Mass-concrete provisions shall apply to all concrete that is equal to or greater than 3 ft in its least dimension.

      2) Thermal Control Plan: The Contractor shall submit to the Commissioner along with each mix design its proposed plan for complying with the specified temperature restrictions. The plan shall include:

         a) Complete descriptions of the concrete, curing blankets, integral cooling (if used), anticipated ambient conditions, methods for pre-cooling the concrete, and placement measures to be used.
         b) Heat of hydration analysis for the proposed concrete using adiabatic or semi-adiabatic heat signature (AHS) tests on 6 in. x 12 in. concrete cylinders or large (4 x 4 x 4 ft) heavily insulated blocks.

c) Simulation studies indicating the rate and extent of concrete temperature, maturity and strength developed under the anticipated weather conditions, mix design, placing procedures, placing temperature and curing methods to be used. A description of the software and hardware the Contractor proposes to use for the simulation studies shall be submitted for review by the Commissioner prior to submission of the thermal control plan.

3) Anticipated temperatures at the specified monitoring locations. Submit computations for the batch temperature, including the assumed temperature increase due to mixing, delivery, and placement, and the measured temperatures of the aggregate, water, cement, and pozzolans. The quantity of ice to be batched as mix water shall be listed.

4) Submit a report and plot the laboratory-measured initial and final set of the mass-concrete mix in accordance with ASTM C403.

5) Description and manufacturer product sheets for thermocouples and dataloggers proposed for use to monitor temperatures in the mass concrete placements.

6) Furnish continuous mass-concrete temperature records, including at least 72 hrs of data after the removal of thermal protection.

7) Submit a sketch of the proposed placement sequence, limits, and volumes.

2. Shop drawings for reinforcement detailing, fabricating, bending, and placing concrete reinforcement. Comply with ACI 315 – Manual of Standard Practice for Detailing Reinforced Concrete Structures showing bar schedules, stirrup spacing, bent bar diagrams, and arrangement of concrete reinforcement. Include special reinforcing required for openings through concrete structures.

3. Product Data for materials and items, including reinforcement and forming accessories, admixtures, patching compounds, curing compounds, and others if requested by the Commissioner.

4. Proposed methods for curing cast-in-place concrete

5. Submit hot and cold-water concrete mix procedure.

C. Submit the following informational submittals for record:

1. Health and Safety Data Sheets for each concrete admixture.

2. Proposed Schedule of Concrete Placement. Contractor shall keep a permanent log of the dates and times of concrete placement and where on the Project the concrete was cast. This log shall be made available to the Commissioner for inspection, upon request.

3. Qualifications of Concrete Foreman showing experience with this type of concrete installation.

4. Tickets for each batch of concrete delivered to the jobsite containing the following information:

a. The compressive strength of the concrete being delivered.

b. The volume of concrete in the delivery truck.

c. The time the concrete was batched (i.e., the time that water was discharged into the delivery truck to mix with the cement and aggregates).

d. List of admixtures.

e. Slump of concrete as placed.

f. Volume of water added to the delivery truck after initial batching.

g. Location where the concrete is being placed (i.e., foundation walls along grid Line A, between Grids 1 and 4).

D. Submit welding certificates for all welders.

E. Formwork Shop Drawings: Prepared by or under the supervision of a qualified professional engineer, detailing fabrication, assembly, and support of formwork.

1. Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and reshoring installation and removal.

F. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials.
2. Admixtures.
3. Form materials and form-release agents.
4. Steel reinforcement and accessories.
5. Fiber reinforcement.
6. Waterstops.
7. Curing compounds.
8. Floor and slab treatments.
9. Bonding agents.
10. Adhesives.
11. Vapor retarders.
12. Semirigid joint filler.
13. Joint-filler strips.
14. Repair materials.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements"

B. Foreman's Qualifications: Concrete work shall be done under the supervision of an experienced concrete foreman having foreman experience with "cast-in-place" concrete, similar to that used on this Project.

C. The Contractor shall perform all work in strict accordance with all applicable laws and regulations of the 2014 New York City Building Code. All such requirements shall take precedence over the requirements of the Specifications except in cases where the requirements of the Specifications are more exacting or stringent.

D. Testing of materials and inspections of installed work shall be completed throughout the duration of the Project, as directed by the Commissioner. Contractor shall provide free and safe access to material stockpiles and facilities for inspectors.

1. Retesting of rejected materials or reinspection of deficient work, shall be done at the Contractor's expense.

E. The Contractor is responsible for correction of concrete work that does not conform to the specified requirements, including strength, mix proportions, air void system, tolerances, and finishes. Correct deficient concrete as directed by the Commissioner.

F. All finishing crewmembers shall be ACI Certified Concrete Flatwork Technicians and Finishers. The supervisor shall be an ACI Certified Flatwork Technician and shall have input to the crew's placement and finishing procedures regarding the application of ACI Standards for quality flatwork. The ACI Standards that shall be observed are contained in the ACI – Concrete Craftsman Series.

G. The Commissioner will reject cast-in-place concrete that exhibits the following defects:

1. Bulging: Concrete surfaces that bulge due to insufficiently secured formwork, undersized ties, or flat bar clamps.

2. Wavy Concrete: Concrete surfaces that exhibit waves along plywood joints due to moisture migration into unsealed cuts of plywood sheets causing swellings.

3. Spalling: Concrete spalling due to shale, alkali reactivity, rusting steel too close to the surface, carbonation, improper removal of formwork, expansion of cast-in steel during the welding process, or other reasons.

4. Cracking and Crazing: Concrete cracking and crazing due to lack of control joints or high water-to-cement ratio above 0.50.

5. Air holes: Air holes resulting from improper vibration and excessive heights of individual layers of pours between vibration. Air holes due to spreading of concrete with vibrators rather than moving buckets or hoses.

6. Honeycombing: Concrete honeycombing including loss of fines from leaking formwork or other causes.

7. Discoloration: Concrete discoloration caused by any reason, including inconsistent concrete mix, different sources of cement and aggregates, temperature variation between individual pour and curing phases, improper and inconsistent use of vibrators, variation of time span of concrete in formwork, form oils, and migration of plasticizer into concrete from exposed sealant beads on formwork and around cast-in items such as electrical outlet boxes.

8. Visible Pour Joints: Visible pour joints in concrete resulting from leaking formwork due to lack of gaskets and insufficient overlap with old concrete preventing proper tightening of formwork. Placement of concrete layers in excessive heights and spreading concrete with vibrator.

9. Debris in Concrete: Concrete that includes debris, whether caused by insufficient cleaning of formwork or lack of cleanout and access doors at base of formwork.

H. The Contractor shall schedule a Concrete Preconstruction Meeting at least thirty days prior to placement of any concrete. Attendance at the meeting shall include the Ready Mix Supplier, Concrete Pumping Subcontractor, Field Testing Laboratory, and the Commissioner. The agenda of the meeting shall be prepared by the Contractor and shall include, but not be limited, to the following:

1. Review of concrete mix designs.

2. Field testing and quality control.

3. Concrete placing sequence and schedule.

4. Formwork, shoring, reshoring, and stripping.

5. Placing, jointing, and finishing procedures.

6. Curing and protection procedures.

I. Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from one source, and obtain admixtures through one source from a single manufacturer.

J. Welding: Qualify procedures and personnel according to AWS D1.4 – Structural Welding Code – Reinforcing Steel.

K. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301 – Specification for Structural Concrete, Sections 1 through 5 and Section 7, "Lightweight Concrete."

2. ACI 117 – Specifications for Tolerances for Concrete Construction and Materials.

L. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.

M. Mockups: Cast concrete slab-on-grade panels to demonstrate typical joints, surface finish, texture, tolerances, and standard of workmanship.

1. Build panel approximately 200 sq ft for slab-on-grade in the location indicated or, if not indicated, as directed by Commissioner.

2. Approved panels may become part of the completed Work if undisturbed at time of Substantial Completion.

N. Conduct a pre-installation conference at Project site to comply with requirements in DDC General Conditions

1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

a. Contractor's superintendent.

b. Independent testing agency responsible for concrete design mixtures.

c. Ready-mix concrete manufacturer.

d. Concrete subcontractor.

2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction contraction and isolation joints, and joint-filler strips, semirigid joint fillers, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, floor and slab flatness and levelness measurement, and concrete protection.

O. Form TR3: Technical Report Concrete Design Mix: The contractor shall be responsible for, and bear all costs associated with the filing and securing of approvals, if any, for Form TR3: Technical Report Concrete Design Mix, including, but not limited to, engaging the services of a New York City licensed Concrete Testing Lab for the review and approval of concrete design mix, testing, signatures and professional seals, etc., compliant with NYC Department of Buildings requirements, for each concrete design mix.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage. Avoid damaging coatings on steel reinforcement.

B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.

2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:

a. B-B (Concrete Form), Class 1 or better; mill oiled and edge sealed.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 in., minimum.

D. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

E. Form-Release Agent: Commercially formulated form-release agent with a maximum of 350 g/L volatile organic compounds (VOC) that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

F. Form Ties: Factory-fabricated, removable or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

1. Furnish units that will leave no corrodible metal closer than 1 in. to the plane of exposed concrete surface.

2. Furnish ties that, when removed, will leave holes no larger than 1 in. in diameter in concrete surface.

3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.2 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A615/A615M, Grade 60, deformed.

B. Deformed-Steel Welded Wire Reinforcement: ASTM A497, flat sheet.

2.3 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A615/A615M, Grade 60, plain-steel bars, cut bars true to length with ends square and free of burrs.

B. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI Manual of Standard Practice, of greater compressive strength than concrete and as follows:

1. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.

2.4 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:

1. Portland Cement: ASTM C150, Type II. Supplement with the following:

a. Fly Ash: ASTM C618, Class F.

b. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120.

B. Normal-Weight Aggregates: ASTM C33, Class 1S coarse aggregate or better, graded. Provide aggregates from a single source with documented service record data of at least 10 yrs' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials.

1. Maximum Coarse-Aggregate Size: 3/4 in. nominal.

2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

C. Lightweight Aggregate: ASTM C330, 3/4-in. nominal maximum aggregate size.

D. Water: ASTM C94/C94M and potable.

2.5 ADMIXTURES

A. General Admixture Requirements

1. Concrete supplier and Contractor shall use manufacturer's product identified in this Section or submit alternate manufacturer product for approval by Commissioner.

2. All admixtures used in the concrete shall be produced by a single manufacturer.

3. Concrete supplier and Contractor shall certify compatibility of all ingredients in each mix design. Use admixtures in strict accordance with manufacturer's recommendations.

4. Concrete supplier and Contractor shall account for admixture volume in the concrete mix proportions in accordance with admixture manufacturer's recommendations.

5. Do not use calcium chloride or admixtures containing more than 0.1% chloride ions.

B. Air-Entraining Admixture: ASTM C260, certified by manufacturer to be compatible with other required admixtures.

1. Manufacturers: Subject to compliance with requirements, provide one of following:

a. Air-Mix or Perma-Air, Euclid Chemical Co.

b. Darex AEA or Daravair, W.R. Grace & Co.

c. MB-VR or Micro-Air, BASF Construction Chemicals.

d. Sika AER, Sika Corp.

e. Or approved equal

C. Water-Reducing Admixture: ASTM C494, Type A.

1. Manufacturers: Subject to compliance with requirements, provide one of following:

a. Eucon WR-75, Euclid Chemical Co.

b. WRDA, W.R. Grace & Co.

c. Pozzolith Normal or Polyheed, BASF Construction Chemicals

d. Plastocrete 161, Sika Corp.

e. Or approved equal

2.6 WATERSTOPS

A. Self-Expanding Rubber Strip Waterstops: Manufactured rectangular or trapezoidal strip, bentonite-free hydrophilic polymer modified chloroprene rubber, for adhesive bonding to concrete, 3/8 by 3/4 in.

1. Manufacturers: Subject to compliance with requirements, provide one of following:

a. Deneef Construction Chemicals; Swellseal

b. Greenstreak; Hydrotite

c. Sika Corp.

d. Or approved equal

2.7 CURING MATERIALS

A. Absorptive Cover: AASHTO M182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz per square yard when dry.

B. Moisture-Retaining Cover: ASTM C171, polyethylene film or white burlap-polyethylene sheet.

C. Water: Potable.

D. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C309, Type 1, Class B, dissipating.

1. Manufacturers: Subject to compliance with requirements, provide one of following:

a. Anti-Hydro International, Inc.; AH Curing Compound #2 DR WB.

b. Euclid Chemical Company (The); Kurez DR VOX.

c. W.R. Meadows

d. Or approved equal

2.8 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

1. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.

B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:

1. Fly Ash: 25%.

2. Combined Fly Ash and Pozzolan: 25%.

3. Ground Granulated Blast-Furnace Slag: 50%.

4. Combined Fly Ash or Pozzolan and Ground Granulated Blast-Furnace Slag: 50% portland cement minimum, with fly ash or pozzolan not exceeding 25%.

C. Limit water-soluble, chloride-ion content in hardened concrete to 0.06% by weight of cement.

D. Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing high-range water-reducing or plasticizing admixture in concrete, as required, for placement and workability.

2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

3. Use corrosion-inhibiting admixture in concrete mixtures where indicated.

2.9 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Footings/Pile Caps/Grade Beams/Structural Slabs at Grade: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 5,000 psi at twenty-eight days.

2. Maximum Water-Cementitious Materials Ratio: Less than 0.45.

3. Slump Limit: 8 in. for concrete with verified slump of 2 to 4 in. before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 in.

4. Air Content: 6%, plus or minus 1.5% at point of delivery.

B. Foundation Walls: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 5,000 psi at twenty-eight days.

2. Maximum Water-Cementitious Materials Ratio: Less than 0.45.

3. Slump Limit: 8 in. for concrete with verified slump of 2 to 4 in. before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 in.

4. Air Content: 6%, plus or minus 1.5% at point of delivery.

C. Slabs-on-Grade: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 4,000 psi at twenty-eight days.

2. Minimum Cementitious Materials Content: 470 lb per cubic yard.

3. Slump Limit: 5 in., plus or minus 1 in.

4. Air Content: 6%, plus or minus 1.5% at point of delivery for 3/4 in. nominal maximum aggregate size. Do not hard trowel air-entrained concrete. Use float finish only.

5. Air Content – Trowel Finish: Do not allow air content of troweled finished floors to exceed 3%.

D. Suspended Slabs: Proportion structural lightweight concrete mixture as follows:

1. Minimum Compressive Strength: 4,000 psi at twenty-eight days.

2. Calculated Equilibrium Unit Weight: 115 lb per cubic foot, plus or minus 3 lb per cubic foot as determined by ASTM C567.

3. Slump Limit: 5 in., plus or minus 1 in.

4. Air Content: 6%, plus or minus 1.5% at point of delivery for nominal maximum aggregate size greater than 3/8 in. Do not hard trowel air-entrained concrete. Use float finish only.

5. Air Content – Trowel Finish: Do not allow air content of troweled finished floors to exceed 3%.

2.10 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI Manual of Standard Practice.

2.11 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M, and furnish batch ticket information.

1. When air temperature is between 85°F and 90°F, reduce mixing and delivery time from 90 min. to 75 min.; when air temperature is above 90°F, reduce mixing and delivery time to 60 min.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

A. Coordinate the installation of joint materials, floor drains, and other related materials with placement of forms and reinforcing steel.

B. Cast-in-Place Concrete Contractor shall coordinate with Structural Precast Concrete Fabricator's reviewed and approved shop drawings for placement of dowels connecting cast-in-place concrete elements to structural precast concrete elements. Contractor shall use templates, provided by Precast Fabricator, for placing dowels within specified tolerances.

3.3 FORMWORK

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.

B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.

C. Limit concrete surface irregularities, designated by ACI 347R as abrupt or gradual, as follows:

1. Class A, 1/8 in. for smooth-formed finished surfaces.

2. Class B, 1/4 in. for rough-formed finished surfaces.

D. Construct forms tight enough to prevent loss of concrete mortar.

E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

1. Install keyways, reglets, recesses, and the like, for easy removal.

2. Do not use rust-stained steel form-facing material.

F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.

G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

H. Chamfer exterior corners and edges of permanently exposed concrete.

I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.4 EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC Code of Standard Practice for Steel Buildings and Bridges.

3.5 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 F for 24 hrs after placing concrete, if concrete is hard enough to not be damaged by form-removal operations and curing and protection operations are maintained.

1. Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved at least 70% of its twenty-eight day design compressive strength.

2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Commissioner.

3.6 STEEL REINFORCEMENT

A. General: Comply with CRSI Manual of Standard Practice for placing reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

E. Install welded wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

3.7 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Commissioner.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.

2. Form keyed joints as indicated. Embed keys at least 1-1/2 inc. into concrete.

3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.

4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.

5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.

3.8 WATERSTOPS

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.

3.9 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.

B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Commissioner.

C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

1. Do not add water to concrete after adding high-range water-reducing admixtures to mixture.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.

2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.

3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 in. into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.

2. Maintain reinforcement in position on chairs during concrete placement.

3. Screed slab surfaces with a straightedge and strike off to correct elevations.

4. Slope surfaces uniformly to drains where required.

5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

F. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 40°F for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.

2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.

3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

G. Hot-Weather Placement: Comply with ACI 301 and as follows:

1. Maintain concrete temperature below 90°F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.

2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.10 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view, to receive a rubbed finish, to be covered with a coating or covering material applied directly to concrete.

C. Rubbed Finish: Apply the following to smooth-formed finished as-cast concrete where indicated:

1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces, unless otherwise indicated.

3.11 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 in. in one direction.

1. Apply scratch finish to surfaces indicated and to receive concrete floor toppings to receive mortar setting beds for bonded cementitious floor finishes.

C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.

1. Apply float finish to surfaces indicated to receive trowel finish and to be covered with fluid-applied or sheet waterproofing, built-up or membrane roofing, or sand-bed terrazzo.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to surfaces indicated exposed to view or to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system.

2. Finish surfaces to the following tolerances, according to ASTM E1155, for a randomly trafficked floor surface:

   a. Specified overall values of flatness, F(F) 25; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 17; and of levelness, F(L) 15.

E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces indicated where ceramic or quarry tile is to be installed by either thickset or thin-set method. While concrete is still plastic, slightly scarify surface with a fine broom.

1. Comply with flatness and levelness tolerances for trowel finished floor surfaces.

F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, and ramps, and elsewhere as indicated.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Commissioner before application.

3.12 MISCELLANEOUS CONCRETE ITEMS

A. Filling In: Fill in holes and openings left in concrete structures, unless otherwise indicated, after work of other trades is in place. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.

D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel-finish concrete surfaces.

3.13 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.

B. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.

C. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

D. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

a. Water.

b. Continuous water-fog spray.

c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-in. lap over adjacent absorptive covers.

2. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

a. Do not use curing compound for concrete surfaces to receive floor coverings unless using a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.

3.14 JOINT FILLING

A. Prepare, clean, and install joint filler according to manufacturer's written instructions.

1. Defer joint filling until concrete has aged at least one month. Do not fill joints until construction traffic has permanently ceased.

B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.

C. Install semirigid joint filler full depth in saw-cut joints and at least 2 in. deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.15 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Commissioner. Remove and replace concrete that cannot be repaired and patched to Commissioner's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two-and-one-half parts fine aggregate passing a No. 16 sieve, using only enough water for handling and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 in. in any dimension in solid concrete, but not less than 1 in. in depth. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.

2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar will match surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.

3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Commissioner.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 in. wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.

2. After concrete has cured at least fourteen days, correct high areas by grinding.

3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.

4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.

5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 in. to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.

6. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-in. clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.

7. Repair random cracks and single holes 1 in. or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hrs.

E. Perform structural repairs of concrete, subject to Commissioner's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Commissioner's approval.

3.16 QUALITY CONTROL

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Testing and Inspecting: The City of New York will engage a special inspector and qualified testing and inspecting agency to perform field tests and inspections per the New York City Building Code and prepare test reports.

C. Inspections: Special Inspector to comply with all requirements of the Concrete Cast-in-Place, Concrete Test Cylinders, and Concrete Mix Design Special Inspections per the New York City Building Code, including, but not limited to:

1. Steel reinforcement placement.
2. Verification of use of required design mixture.
3. Concrete placement, including conveying and depositing.
4. Curing procedures and maintenance of curing temperature.

D. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each 100 cu yd or fraction thereof of each concrete mixture placed each day.
   a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
2. Slump: ASTM C143/C143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C231, pressure method, for normal-weight concrete; ASTM C173/C173M, volumetric method, for structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is 40°F and below and when 80°F and above, and one test for each composite sample.
5. Unit Weight: ASTM C567, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
6. Corrosion Inhibitor
   a. Test plastic concrete for presence of corrosion inhibitor using the Hach Nitrite Test by the Hach Co., Loveland, CO. Test each concrete sample used for concrete compression test cylinders at the rate of one test for each 50 cu yd, or fraction thereof, of each mix design placed in any one day.
   b. Core and test hardened concrete for corrosion inhibitor content at the rate of one core per 15,000 sq ft of slab. Testing of hardened concrete shall be performed following the procedures documented in State of North Carolina Test Procedure #C 20.0, "Determination of Calcium Nitrite in Concrete."
7. Compression Test Specimens: ASTM C31/C31M.
   a. Cast and laboratory cure two sets of two standard cylinder specimens for each composite sample.

b. Cast and field cure two sets of two standard cylinder specimens for each composite sample.

8. Compressive-Strength Tests: ASTM C39/C39M; test one set of two laboratory-cured specimens at seven days and one set of two specimens at twenty-eight days.

   a. Test one set of two field-cured specimens at seven days and one set of two specimens at twenty-eight days.

   b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

9. When strength of field-cured cylinders is less than 85% of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.

10. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.

11. Test results shall be reported in writing to Commissioner, concrete manufacturer, and Contractor within 48 hrs of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at twenty-eight days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both seventh- and twenty-eight day tests.

12. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Commissioner but will not be used as sole basis for approval or rejection of concrete.

13. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Commissioner. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Commissioner.

14. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

15. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Document

16. Measure floor and slab flatness and levelness according to ASTM E1155 within 24 hours of finishing.

END OF SECTION 03 30 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 45 00
Architectural Pre-Cast Concrete

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 74 19 "Construction Waste Management and Disposal"
c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Pre-cast concrete panels with exposed architectural concrete finishes,

2. Provide anchorages, reinforcing bars, welded wire steel fabric, ties, supports and anchorages required for reinforcement of pre-cast concrete units.

3. Provide all structural steel inserts, lifting hooks, anchor units, plates, dowels, etc., cast in to precast concrete members required for handling and for the connections of pre-cast members, and all loose structural steel anchor units, angles, plates, etc., required to connect pre-cast units to the structural framework of the building.

4. Provide all structural steel anchor units, HSS outriggers, angles, plates, bearing pads, shims, bolting, welding, grouting, dry packing and all other materials and accessories necessary for the setting, connection and accurate placement of the pre-cast concrete units to structures. These shall include all components detailed in structural drawings beyond the primary beam or columns to ensure compatability of panel with supports. Furnish complete layout details for the installation of the above.

5. Cast in to the pre-cast units all inserts, anchors, blocking, sleeves, and housing for the attachment of electrical and plumbing equipment and other façade components and assemblies to the pre-cast concrete as indicated in architectural drawings.

6. Provide thermal break material at all gravity and bearing connections. Coordinate position of thermal breaks with architectural thermal envelope as indicated in architectural drawings.

7. Check all lines, levels, planes and pitches required for accurate placement of work of this Section.

8. Protect, repair, patch and clean all pre-cast concrete work of this Section, as required.

9. Provide full time supervision of the erection and installation of pre-cast concrete work.

10. Furnish all mock-up work, samples, design mixes and laboratory tests required in connection with work under this Section.

11. Prepare the engineering design calculations for all architectural pre-cast concrete members and connections, and prepare required shop, erection and setting drawings and details for work under this Section. Structural steel support components indicated in structural drawings beyond the structural beams and columns shall be incorporated into the precast engineering design calculations and adjusted as necessary for final assembly.

12. Waterproof additive at panels that are at or extend below grade.

B. Related Sections

1. Cast-in-Place Concrete - Section 03 30 00.

2. Structural Steel Framing - Section 05 12 00.

3. Cold Formed Metal Framing - Section 05 40 00.

4. Rainscreen System - Section 07 00 01.

5. Thermal Insulation - Section 07 21 00.

6. Exterior Joint Sealants - Section 07 92 01.

7. Signage - Section 10 14 00, for custom graphic relief formwork.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Installer Qualifications:

1. The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years, have successfully completed in a timely fashion at least three (3) projects similar in size and type to the required work. In addition, the contractor or subcontractor must be licensed or approved by the manufacturer.

2. Manufacturer Qualifications: The manufacturer providing the material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.

C. Testing of Joints: Joints should be tested for water penetration during construction: water is injected behind the outer seal at a rate of no more than 1 or 2 litres per minute while visually confirming both drainage from associated weep hole and the lack of penetration into the building.

1.4 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. Shop Drawings: Prepare shop drawings, details and schedules as required to fully illustrate details of work and to meet job conditions. Provide separate shop drawings for mock-up work. The shop drawings shall include, but are not limited to, the following:

1. Location of each identified pre-cast concrete unit in the completed structure. Show all openings and all dimensions. Show relationship to structural framing members. Show concrete types, strengths and finishes.

2. Show reinforcing details, including grade, type and size of reinforcing bars, welded wire fabric.

3. Details of Connections: Show joints, bearings, connection devices, length and types of welds, all related embedded items and grouting and dry packing.

4. Show jointing clearances and clearances between the units.

5. Show full size typical details of joints between units, showing methods of sealant installation, coordinated with sealant contractor.

6. Provide shop drawings for all sealant conditions.

7. Prepare shop drawings in accordance with "Manual of Standard Practice for Detailing Reinforced Concrete Structures" (ACI-315), except where in conflict with local building regulations. Scale of details shall be adequate to fully and clearly illustrate work.

8. Submit complete design calculations for all pre-cast members and connections. Indicate all design loads, including live loads, wind loads, seismic loads, and dead loads and including all stresses during shipment and erection and due to loads from construction procedures. Design calculations shall be done by Pre-Cast Concrete Contractor's Professional Engineer, licensed to practice in the State of New York. Calculations shall be submitted a minimum of four (4) weeks prior to scheduled start of fabrication. Design calculations shall be based on the design requirements specified herein.

   a. Panels and connections shall be designed for their gravity loads.
   b. Panels and connections shall be designed for lateral wind load pressures as follows:
      1). Typical Panels: As per New York City Building Code.
   c. Connections of panels to structural supporting members shall be made so as to not induce eccentric or torsional forces in the supporting members.

C. Samples: Submit the following samples:

1. Cement and aggregates for architectural pre-cast concrete.

2. Submit two (2) 24" square by 1-1/2" thick samples of each type of surface required (formed or unformed) showing finishes proposed for all exposed pre-cast concrete work, using the proposed concrete mix and cast against the same form material to be actually used in the construction, finished as specified. Resubmit samples until satisfactory to the Commissioner. Small size samples must be accepted by the Commissioner prior to making of full size sample or starting fabrication.

3. Prior to production fabrication of pre-cast concrete units, provide a full size sample of each shape and type of the required pre-cast concrete units at manufacturer's plant for the Commissioner's review. Notify the Commissioner when full size sample is ready for inspection. Do not start production fabrication of pre-cast concrete units until the full size sample has received the Commissioner's written

acceptance. Form materials are subject to rejection if forms used do not provide finish specified. Accepted full size sample shall be set up for display at the pre-cast plant, be adequately protected from damage, and shall serve as the standard of acceptance for similar pre-cast concrete units installed in the work, which shall be equal to and correspond in all respects to the approved full size sample. Approved full size sample may be incorporated in the work, provided it is still in acceptable condition.

4. Commissioner's approval of small size and full size pre-cast concrete samples will be for color, texture, appearance and general condition only. Compliance with all other requirements of the Contract Documents is the exclusive responsibility of the Contractor.

5. Sample of patching methods and instructions / description of procedure.

D. Mock-Up: Prior to the approval for fabrication of any pre-cast work, but after the approval of the full size samples, including 2 corner conditions, display a mock-up of the panel at the fabricator's plant. Provide precast panel and all wall components as indicated on the architectural drawings for incorporation into the exterior visual mockup.

1. See drawing set for scope and extents of aesthetic mockup requirements.

E. Submit Name of Manufacturer and/or Supplier for the following:

1. Cements, each type.
2. Aggregate, each type.
3. Reinforcing bars and pre-stressing tendons.
4. Welded steel wire fabric.
5. Concrete.
6. Welding electrodes.
7. Studs.
8. Inserts and anchors.
9. Non-shrink grout.
10. Neoprene pads.
11. Form release agent.

F. Certificates: Submit the following:

1. Mill certificates for all cement, identifying by lot material, of each grind and shipment.
2. Mill certificates for all reinforcing bars and welded steel wire fabric.
3. Mill certificates of all structural steel plates, shapes and members.

4. Notarized certificates of compliance of anchors, bolts, shear studs, welding electrodes, concrete inserts, neoprene pads, shop paint, field paint and non-shrink grout.

5. Certification of welders for welding reinforcement, shop and field connections.

6. Certification that pre-cast concrete panels, required to have fire resistive rating where so indicated on drawings, are equivalent to UL listed fire rated pre-cast concrete panels.

G. The pre-cast concrete manufacturing plant and manufacturer shall be certified by the Pre-Cast/Prestressed Concrete Institute Plant Certification Program, Certification shall be for Group A, Architectural Products.

1. Fabricator shall comply with PCI recommended methods for patching.

H. The pre-cast units will not spall or show evidence of visible warping, cracking or staining resulting from materials or workmanship by this trade for a period of one (1) year effective (insert date of substantial completion). Units showing such defects will be replaced and made good together with any work of other trades damaged during removal of defective precast units, at no expense to the City of New York.

1.5 REGULATIONS AND REFERENCE STANDARDS

A. All work shall be done according to the following codes and reference standards unless specifically shown or specified otherwise in Contract Documents:

1. 2014 New York City Building Code.

2. ACI 318: "Building Code Requirements for Reinforced Concrete."

3. ACI 315: "Manual of Standard Practice for Detailed Reinforced Concrete Structures."

4. ACI 306: "Cold Weather Concreting."

5. ACI 305: "Hot Weather Concreting."

6. ACI 211.1: "Recommended Practice for Selecting Proportions for Normal and Heavyweight Concrete."

7. ACI 304-73: Recommended Practice for Measuring, Mixing, Transporting and Placing Concrete."

8. ACI 347: "Recommended Practice for Concrete Formwork."

9. PCI MNL-117: "Manual for Quality Control for Plants and Production of Architectural Pre-Cast Concrete Products."

10. PCI Design Handbook, Pre-Cast and Pre-Stressed Concrete.

11. AISC Manual of Steel Construction, Latest Edition.

12. AWS D1.1 - Rev. 2: "Structural Welding Code."

13. AWS D12.1: "Reinforcing Steel Welding Code."

14. Applicable ASTM Specification.

15. Industrial Fasteners Institute, Handbook for Fastener Standards.

B. The Contractor shall have available at all times for reference the above regulations, standards, etc., editions noted (or the latest edition, if edition is not noted).

C. Where reference is made to Specifications of American Society for Testing Materials (ASTM) or other specific standards, furnish material and/or work in strict accordance with referenced standard, subject to any qualifications herein.

D. In the event of discrepancies between various regulations and standards referred to above, most stringent requirements govern.

1.6 TESTS AND INSPECTIONS

A. Plant and Field Tests and Inspection (by Contractor's Independent Testing Laboratory)

1. Testing Laboratory: Plant and field tests and inspection will be conducted by Contractor's Independent Testing Laboratory and/or field inspector engaged and paid by the Contractor.

2. Plant Tests and Inspections by Contractor's Independent Testing Laboratory shall be in accordance with PCI, MNL-117, Sections 2.1.1 and 2.1.3.

3. Field Tests and Inspection by Contractor's Independent Testing Laboratory shall include, but not be limited to:

   a. Erection methods.
   b. Connections in accordance with approved shop drawings.
   c. Welding of connections.
   d. Compliance with erection tolerances.
   e. Compliance of all members with sizes, types and finishes.
   f. Checking leveling and grouting.
   g. Inspection of bearing pads.
   h. Field tests for concrete strength, if required.
   i. Checking and cleaning of joint edges prior to erection of units and width of joints between erected units.

1.7 REJECTIONS

A. Defective Work

1. Precast concrete units which do not conform to the specified requirements, including dimensional tolerances, strength, and finishes, shall be replaced with pre-cast concrete units that meet the requirements of this Section. The Contractor shall also be responsible for the cost of corrections to any other work affected by or resulting from corrections to the pre-cast concrete work.

2. Defective pre-cast concrete units and materials may be rejected at any time, whether in place or not. Promptly remove and replace rejected pre-cast concrete units and materials at no additional cost to the City of New York.

B. Dimensional Tolerances: Units having any dimension smaller or greater than required, and outside the specified tolerance limits, will be considered deficient and shall be rejected if the appearance or function of

the unit is adversely affected, or if the larger dimensions interfere with other construction. Repair, or remove and replace, rejected units as required to meet the construction conditions.

C. Strength Deficiencies

1. When there is evidence that the strength of a pre-cast concrete unit does not meet specification requirements, the Testing Laboratory, upon direction from the Commissioner, and with the City of New York's written approval, shall take cores drilled from hardened concrete or perform non-destructive strength tests to determine compressive strength.

2. Determination of compressive strength by drilled cores shall comply with ASTM C 42 and as follows:

   a. Take at least three (3) representative cores from pre-cast units of suspect strength, from locations directed by the Commissioner.
   b. Test cores in a saturated surface dry condition per ACI 318 if the concrete will be wet during the use of the completed structure.
   c. Test cores in an air dry condition per ACI 318 if the concrete will be dry at all times during use of the completed structure.
   d. Strength of concrete for each series of cores will be considered satisfactory if their average compressive strength is at least eighty-five (85) percent of the twenty-eight (28) day design compressive strength.
   e. Test results will be made in writing on the same day that tests are made, with copies to the Commissioner. Include in test reports the project identification name and number, date, name of pre-cast concrete manufacturer, name of concrete testing service, identification letter, number, and type of member or members represented by core tests, nominal maximum size aggregate, design compressive strength, compression breaking strength and type of break (corrected for length diameter ratio), direction of applied load to core with respect to horizontal plane of concrete as placed, and moistened condition of core at time of testing.

3. Patching: Where core test results are satisfactory and pre-cast units are acceptable for use in the work, fill core holes solid with patching mortar, and finish to match adjacent concrete surfaces.

D. Finishes: Architectural pre-cast concrete units whose finish has any of the following defects will be rejected. Repair the following finish defects if permitted by the Commissioner, or remove and replace rejected units as required to meet the requirements of this Section.

1. Does not match previously approved samples as to uniformity of color or texture.

2. Has chipped, ragged, irregular or broken corners or edges.

3. Joints, false joints, drips or notches are not properly located or aligned.

4. Has damaged surfaces, notches or other surface defects.

5. Excessive air pits and voids evident on the exposed surfaces.

6. Adjacent flat and return surfaces with more than a slight difference in exposure.

7. Casting lines evident from different placements.

8. Visible form joints or irregular surfaces.

9. Rust staining on panel surfaces.
10. Blotching or acid stains evident on panel surfaces.
11. Foreign material embedded in the facing mix.
12. Cracks visible after wetting.
13. Visible repairs.
14. Reinforcement shadow lines.

1.8 ENGINEERING CRITERIA

A. The Contractor shall be responsible for providing design calculations for all architectural pre-cast concrete work, including connections, reinforcement and installation of the architectural pre-cast concrete units. All information to be submitted for review and approval by the Commissioner. The Contractor shall also be responsible for the locating and placing of all items required for connections to all other work.

B. Engineering design of pre-cast members and connections to superstructure shall be done by a Professional Engineer, licensed in the State of New York, with experience in pre-cast concrete design.

1. Structural Criteria: Design architectural pre-cast concrete units to:

   a. Panels and connections shall be designed for their gravity loads with bearing locations to be located as indicated in architectural elevation support diagrams.
   b. Panels and connections shall be designed for lateral wind load pressures as follows:
      1). Typical Panels: 30 pounds per square foot pressure or suction per New York City Building Code Simplified Design Procedure II components and cladding pressures.
   c. Structural beams and columns have been designed for maximum 13" eccentricity of the precast façade panel gravity loads, based on the centerline of a 7" wide panel to centerline of structural beam or column width. Design and reinforcing of panels and connections of panels to structural supporting members shall be made so as to not induce additional eccentric or torsional forces in the supporting members.
   d. Panel and support design shall include redundancy in lateral tie anchorages to compensate for incomplete bearing or failure of a single gravity bearing location within each panel so as to avoid panel collapse. Inelastic behavior of lateral ties and the remaining gravity bearing and the redudancy need not be considered a serviceability limit state.
   e. Allow for expansion and/or contraction, without harmful affect to the units, connections, joint seals, or adjoining construction due to a temperature range of 0 degrees F to 120 degrees referenced to 70 degrees F.

2. Connections: Design all connections for the effect of shrinkage forces, temperature changes, and deflection of the supporting or adjacent structures. Connections shown on the Contract Drawings do not relieve the manufacturer of the responsibility for the design and performance of connections.

3. Reinforcing: Conform to requirements of ACI 318-11 and New York City Building Code. Reinforce all bearing areas against diagonal tension, splitting, rupture and flexure. Place extra ties, stirrups and reinforcing bars at support points. Allow no bearing pressure in edges of unreinforced section.

4. Corners: Exterior corners of pre-cast panels shall return at the corner of each unit as indicated on the drawings. No mitered joints at exterior corner shall be allowed.

5. Lifting Devices: All inserts to be used for lifting or handling shall be on non-exposed surfaces.

PART II - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Subject to compliance with requirements, provide High Concrete Group LLC; Architectural precast concrete or comparable by one of the following:
1. BPDL
2. Universal Concrete
3. Or approved equal

2.2 FORMWORK

A. Provide forms that are non-reactive with concrete and will produce the required finish surfaces.

B. Accurately construct forms mortar-tight and of sufficient strength to withstand all pressures due to concrete placing operations, temperature changes, and when prestressed, pretensioning and detensioning operations. Maintain formwork to provide complete pre-cast concrete units of shapes, lines, and dimensions indicated, within the specified fabrication tolerances.

C. Unless forms for plant manufactured prestressed concrete units are stripped prior to detensioning, design forms so that stresses are not included in pre-cast units due to deformation of concrete under pre-stress or to movement during detensioning.

D. Refer to section 2.7 herein for further information.

2.3 REINFORCEMENT STEEL AND ACCESSORIES

A. Reinforcing Bars: ASTM A615, Grade 60.

B. Welded Wire Steel Fabric: ASTM A185, cold drawn wire. Supply in flattened sheets or mats. Tie wires for pre-cast work: #16 monel metal.

C. Steel Wire: ASTM A82, plain, cold drawn, steel.

D. Reinforcing Bar Accessories: Type to suit the condition; non-corrosive.

E. For concrete surfaces exposed to view, where legs of supports are in contact with forms, provide supports with legs that are plastic protected (CRSI, Class 1) or stainless steel protected (CRSI, Class 2).

2.4 CONCRETE MATERIALS

A. Portland Cement: ASTM C 150, Type I or Type III.

1. Charcoal precast mix for exterior façade:

a. Base Mix: Match with available local raw materials PCI Plate 548

b. Water Cement Ratio: 0.42 Max
c. Entrained Air: 5.0% + or - 1.5%
d. Required Compressive Strength: 5,000 psi
e. Concrete Finish: Acid Etch - Life
f. Aesthetic Note: Select concrete aggregates to provide moderate light refraction effect when exposed by means of concrete surface finishing process.

2. Interior backup wall is standard concrete grey.

3. Use only one brand and type of cement throughout the project, consistent in color / finish unless otherwise acceptable to the Commissioner.

4. Use white Portland cement for facing concrete mix to match Commissioner's control sample.

5. Standard "gray" Portland cement may be used for non-exposed backup concrete.

B. Coarse Aggregate for Facing Mixes: ASTM C 33; stone aggregate that is hard, durable, carefully selected and graded; free of material causing staining or reacting with cement.

1. Use aggregate from same source as those used in Commissioner's control sample.

C. Fine Aggregate for Facing Mixes: ASTM C 33.

D. Water: Drinkable, free from foreign materials in amounts harmful to concrete and embedded steel.

E. Air-Entraining Admixture: ASTM C 260.

F. Waterproof Additive:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Krystol
b. Xypex
c. Aquafin
d. Or approved equal

G. Non-Metallic, Shrinkage-Resistant Grout: Pre-mixed, non-metallic, non-corrosive, non-staining product containing selected silica sands, Portland cement, shrinkage compensating agents, plasticizing and water reducing agents, complying with CRD-C62.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Euco N.S.; Euclid Chemical Co.
b. Masterflow 713; Master Builders
c. Five Star Grout; U.S. Grout Corp.
d. Or approved equal.

2.5 MISCELLANEOUS MATERIALS

A. Steel Hardware Units

1. Steel Plates: Structural quality, hot rolled carbon steel complying with ASTM A 36, or ASTM A 283, Grade C.

2. Structural Size Steel Shapes: ASTM A 36 except HSS

3. Bar Size Steel Shapes, Steel Bar Flats, and Steel Bar Rounds: ASTM A 36 or ASTM A 306, Grade 65.

4. HSS: ASTM A 500, Grade B.

5. Threaded Rods: Shall be coil rods made of high tensile grade steel. The rated ultimate capacity for 3/4" rods to be thirty-six thousand (36,000) lbs., for 1" rods seventy-five thousand (75,000) lbs. Dayton Sure-Grip and Shore Co., or equal.

6. Anchor Bolts: ASTM A 307, low carbon steel bolts, regular hexagon nuts and carbon steel washers.

7. Finish of Steel Hardware Units and Fasteners: Hot dip galvanized steel complying with ASTM A 123 or A 153 as applicable.

B. Weldments: To conform with the requirements of the AISC "Specification for the Design, Fabrication and Erection of Structural Steel for Building."

C. Shear Connectors:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Nelson Stud Welding
b. KSM Products
c. JVI Inc.
d. Or approved equal

D. Plastic Shims: 80,000 psi

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Korolath
b. Vers-a-Shim
c. Paragon Products
d. Or approved equal

E. Flashing Reglet: Twenty-eight (28) gauge (0.014") stainless steel, Type 302/304; type profile and conditions as shown on drawings.

F. Touch-Up Galvanizing Compound:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ZRC Chemical Co.; ZRC Cold Galvanizing Compound
b. Brite Products; Brite Zinc
c. Duncan Galvanizing Corp.; ZiRP
d. Or approved equal.

2.6 QUALITY AND PROPORTIONING (MIX DESIGN)

A. Concrete Compressive Strength: Five thousand (5,000) psi minimum, at twenty-eight (28) days.

B. Concrete Weight: All pre-cast concrete shall be normal weight concrete having an air-dry weight of one hundred fifty (150) lbs. maximum per cubic feet of concrete.

C. Concrete Slumps: The Contractor must be capable of producing concrete of satisfactory quality and strength, that will produce the specified finishes, free of voids, honeycombing, or excessive air bubbles. Execution of this contract signifies that the Contractor accepts full responsibility for the production of concrete of satisfactory quality, strength and finishes.

D. Air-Entrained Concrete: All architectural pre-cast concrete shall be air entrained, using the specified air-entraining admixture as per manufacturer's written instructions, to provide entrained air, by volume, in the cured concrete of between three (3) percent and six (6) percent.

E. Proportioning and Tests for Proportioning

1. Responsibility: The Contractor shall be responsible for making and paying for all concrete design mixes and tests to determine the suitability of ingredients and the proportion of specified ingredients for the concrete type and strength, of the specified air entrainment, that will be fully workable for all placing conditions and that will produce finishes acceptable to the Commissioner.

2. Ingredients Tests: Prior to making design mixes, the Contractor's Testing Laboratory shall conduct the following tests in accordance with the procedures referred to in the Reference Standards to assure conformance with the Project Specifications.

   a. Cement: Specific gravity of cement.
   b. Aggregates: Sieve analysis, specific gravity, soundness, percentage of voids, absorption, and moisture content of fine and coarse aggregate. Dry rodded weight of coarse aggregate. Fineness modulus of fine aggregate.

3. Concrete Design Mixes

   a. Design Mixes: The Contractor's Independent Testing Laboratory shall recommend the design mixes to be used for the project for the type and strength of concrete that will produce concrete of specified strengths and finishes. Design mixes shall indicate water-cement ratio, water content, admixture content, cement content, aggregate content, aggregate gradations, slump, air content and strength. Design mixes and related tests shall be in accordance with the procedures referred to in the Reference Standards.
   b. Trial Mixes: For the type and strength of normal weight concrete, made four (4) trial mixes, using varying water-cement ratios.
   c. Strength of Trial Mixes: Per ACI Standards.

4. Additional Tests: Contractor, at no expense to the City of New York, shall have the Contractor's Testing Laboratory conduct additional tests on concrete ingredients and make new design mixes whenever the character or source of ingredients is changed or if the placed concrete fails to meet specified strengths.

2.7 FABRICATION

A. Reference Standards: Fabricate pre-cast concrete units so as to comply with the manufacturing and testing procedures and quality control recommendations of Pre-Cast Concrete Institute's MNL-116 and MNL-117 "Manuals for Quality Control for Production of Pre-Cast Pre-Stressed Concrete Products and of Architectural Pre-Cast Products," except as modified herein.

B. Concrete: Store, measure, mix and deliver concrete in accordance with PCI MNL-117, ASTM C 94, and as herein specified.

C. Formwork

1. Reference Standards: Formwork shall conform to ACI 347-68 "Recommended Practice for Concrete Formwork," and to requirements specified herein.

2. Molds: Cast pre-cast concrete units in one-piece seamless rigid molds for exposed faces, except where two-piece molds are permitted. Molds shall be made of smooth fiberglass, or other suitable material acceptable to the Commissioner, conforming to shape, profile, lines and dimensions indicated, so as to obtain a smooth finish matching Commissioner's samples and approved pre-cast concrete unit full size samples. Prevent deformation of molds and maintain surfaces of molds free of irregularities, dents, sags, or damage of any kind. The forms or molds must be designed to withstand vibration and lateral forces, and must be accurate in details, with sharp corners and arrises so as to assure finished units satisfactory to the Commissioner and matching approved samples. There shall be no visible joints or seam lines in the molds or in the finished concrete surface, unless joint or lines are required by Commissioner's drawings.

3. Holes and Embedded Items: Contractor shall provide all holes and openings (both cast-in and drilled) required for his work and for work of other trades. All holes and openings shall be cast in. Contractor shall furnish and install all embedded items required for work of other trades furnished by other subcontractors. Accurately locate and position embedded items and secure to formwork. See drawings, including drawings of other subcontractors, for extent and location of holes, openings, drips and embedded items. Show all holes, openings, drips and embedded items on shop drawings. Coordinate with other subcontractors.

4. Built-In Anchorages: Accurately position built-in anchorage devices and secure to formwork. Locate anchorages where they do not affect the position of main reinforcement or the placing of concrete.

5. Form Release Coating: Before each casting, coat surfaces of thoroughly cleaned forms with a bond breaking compound before reinforcement is placed. Provide commercial formulation form coating compounds that will not bond with, stain, or adversely affect concrete surfaces, and will not impair subsequent treatments or sealing (with sealant) of concrete surfaces requiring bond or adhesion. Apply in compliance with manufacturer's instructions.

   a. Where sealant bond is affected by form release coating, coating must be thoroughly removed by abrading surface (i.e. grinding, sandblasting, etc.) to ensure no loss of adhesion of sealant.

D. Exposed Unformed Surfaces: All panels exposed to exterior on two (2) sides shall be floated and/or troweled on the unformed surface in a manner which will enable finishing to match the formed surface. Floating and/or troweling shall be consistently performed on all unformed surfaces. All unformed surfaces shall be oriented as indicated on the drawings.

E. Reinforcement

1. Reference Standards: Reinforcement shall conform to ACI 318 "Building Code Requirements for Reinforced Concrete" and to ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete Structures" and to requirements specified below.

2. Clean reinforcement of loose rust and mill scale, earth and other materials which reduce or destroy bond with concrete.

3. Reinforcement Cover: Place reinforcement to obtain the minimum coverage for concrete protection, which shall be 1-1/2" from face exposed to weather and one (1) inch from face not exposed to weather unless otherwise indicated on drawings.

4. Positioning and Securing Reinforcement: Accurately position support and secure reinforcement against displacement by formwork, construction, or concrete placement operations.

5. Welding: Perform all welding in accordance with AWS D1.1 - Rev. 2 and AWS D12.1. All welders shall be properly certified by AWS. Care shall be exercised during welding to minimize effect of welding heat. Welds shall be designed to prevent a tearing at end of weld which could cause a progressive failure. Detailed welding procedure covering all specified welds on erection and shop drawings may be requested for review and comment by the Commissioner.

F. Place concrete in a continuous operation to prevent the formation of seams or planes of weakness in pre-cast units, complying with requirements of ACI 304. Thoroughly consolidate placed concrete in each pre-cast unit by internal and external vibration without dislocation or damage to reinforcement and built in items. Internal vibration, if necessary, shall not touch reinforcement.

G. Identification: Provide permanent markings in pre-cast units to identify pick-up points and orientation in the structure, complying with the markings indicated on the final shop drawings. Imprint the date of casting on each pre-cast unit where it will not show in the finished structure.

H. Curing: Cure in accordance with applicable reference standards.

I. Fabricate precast architectural concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished panel complies with PCI MNL 117 product tolerances as well as position tolerances for cast-in items.

J. Fabricate units straight, smooth, and true to size and shape, with exposed edges and corners precise and square unless otherwise indicated.

1. Pre-cast units that are warped, cracked, broken, spalled, stained, or otherwise defective will not be acceptable.

K. Finish of Formed Surfaces

1. For Architectural Pre-Cast Concrete Units: All exposed formed surfaces and exposed troweled surfaces of architectural pre-cast concrete units shall have smooth "as-cast" finish. Where exposed aggregate finish is noted, conform to:

a. Light acid etched finish, producing a "matte" surface to match approved samples.

b. It is the intent of these specifications that no patching of architectural pre-cast concrete will be required. In the event remedial action is required, it shall consist of patching with approved patching mortar and then texturing. No patching shall be done without the Commissioner's written approval.

L. Finish of Unformed Unexposed Surfaces: All unformed surfaces of pre-cast concrete shall be consolidated, brought to a proper level with a straight edge, floated and then given the following finish:

1. Uniform Float Finish: Typically for all surfaces not exposed to view.

M. Quality Control: Pre-cast unit manufacturer shall institute quality control procedures for the manufacture, inspection and testing of pre-cast units in compliance with recommendations of PCI MNL-117. Furnish the Commissioner with copies of test reports and/or certifications for materials and quality control testing of pre-cast units.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Deliver anchorage items which are to be embedded in other construction before start of such work. Provide setting diagrams, templates, instructions and directions as required for installation.

B. Do not install pre-cast units until concrete has attained its design strength.

C. In handling and lifting, use only lifting inserts provided.

D. Place no pre-cast concrete units or material in the work that is damaged.

E. Install pre-cast concrete units plumb, level, square and true, without exceeding the recommended erection and location tolerances of PCI, MNL-117, unless more stringent requirements are specified herein. Provide temporary supports and bracing as required to maintain position, stability and alignment as members are being permanently connected.

F. Anchor units in final position by bolting, welding, grouting, or as otherwise shown on drawings. Remove temporary shims, wedges, and spacers as soon as possible after anchoring is completed. Make adjustments as required to maintain accurate face joint dimensions.

1. At bolted connections use lock washer, "Slotlok" system welding or other approved means to prevent loosening of nuts.

2. At welded connections apply galvanizing touch-up compound specified herein.

G. Welding: Perform all welding in compliance with AWS D1.0 and D12.1, including qualifications of welders.

H. Protect units from damage by field welding or cutting operations during erection and provide non-combustible shields as required.

3.3 ERECTION TOLERANCES

A. Install precast architectural concrete units level, plumb, square, true, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 117, Appendix I.

3.4 TESTING

A. Joints should be tested for water penetration during construction: water is injected behind the outer seal at a rate of no more than 1 or 2 litres per minute while visually confirming both drainage from associated weep hole and the lack of penetration into the building.

END OF SECTION 03 45 00

SECTION 04 20 00
Unit Masonry

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Concrete block interior partitions.

2. Glazed thin brick at interior.

3. Glazed brick at exterior.

4. Ground face concrete masonry units.

5. Metal joint reinforcing, anchors, ties, weeps, closures and related accessories for masonry.

6. Control and expansion joints in masonry, filled with joint fillers.

7. Thru-wall flashing.

8. Mortar net.

9. Chases, recesses, pockets and openings in masonry as required for installation of work.

10. Building in of items \ into masonry, including access doors, door frames, anchors, sleeves and inserts, and other similar items to be embedded in masonry.

11. Grouting in of metal items built into masonry work.

12. Protection, pointing and cleaning of masonry.

B. Related Sections

1. Firestops and Smokeseals - Section 07 84 13.

2. Interior Joint Sealants - Section 07 92 00.

3. Exterior Joint Sealants - Section 07 92 01.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Shop Drawings: Submit for:

1. Anchoring details.
2. Control and expansion joint locations and details.
3. Special brick shapes, including large scale shop drawings showing configuration and dimensions.
4. Flashing at typical lintels indicating relationship of flashing to lintel hangers.

B. Samples (Submit the following):

1. Each type of face brick in sufficient number and color (not less than 5) to show full range of color, texture and shade. Submit certification that brick meets ASTM standards specified herein.
    a. Submit samples of all special shapes required showing color and finish range and sizes.
2. Joint reinforcing, each type, width and proposed location (labeled).
3. Anchors, each type, width and proposed location (labeled).
4. Joint filler, each type.
5. Flashing, including splice sample, 12" long.
6. Mortar color, 12" long cured sample.

C. Manufacturer's Literature: Submit technical and installation information for:

1. Mortar materials, each material and mortar type.
2. Certification of mortar mix.
3. Concrete block, joint reinforcing, anchors, ties and joint filler; submit manufacturer's technical and descriptive literature.
4. Block manufacturer shall submit certifications of compliance with ASTM C 90, C 331 and UL 618 prior to any job site delivery. Field sample of concrete block may be tested by an Independent Testing Laboratory according to the requirements of ASTM C 140.

D. Construction Procedures: Submit proposed procedures and materials for cleaning masonry work; including certification that cleaner will not adversely affect gaskets, sealants, etc.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Work of this Section shall conform to the requirements of the following:

1. 2011 "Building Code Requirements for Masonry Structures," (TMS 402-11/ACI 530-11/ASCE 5-11).
2. 2011 "Specification for Masonry Structures," (TMS 602-11/ACI 530.1-11/ASCE 6-11).
3. New York City Building Code.

1.6 DELIVERY, STORAGE AND HANDLING

A. Store masonry units and mortar materials on raised platforms and under ventilated and waterproof cover.

B. Masonry Units: Pack, deliver and store to prevent breakage, cracking, chipping, spalling or other damage. Store, protect and ventilate units at project site.

C. Aggregate: Store with provisions for good drainage.

D. Reinforcement and Anchors: Store and protect so that when placed, joint reinforcement and anchors will be free of soil, dirt, ice, loose rust, scale, or other coatings which would destroy or reduce bond with mortar and will not be disfigured or bent out of shape.

PART II - PRODUCTS

2.1 MATERIALS

A. Standard Concrete Block

1. Portland cement, ASTM C 150, Type 1, low alkali (less than 0.6%), single source for entire project.
2. Aggregates, ASTM C 331, lightweight expanded shale, clay or slate aggregates, manufactured by the rotary kiln process.
    a. Subject to compliance with requirements, products that may be incorporated into the Work include the following:
        1). Northeast Solite Corporation; Solite
        2). Norlite LLC; Norlite
        3). Buildex Incorporated; Haydite
        4). Or approved equal.
3. Concrete Masonry Units: Load bearing lightweight aggregate concrete masonry units conforming to the requirements of ASTM C 90, Type 1.
    a. Block behind face brick and for fire-rated walls shall be 75% solid units.
    b. All other block may be hollow units.
4. The producer of the concrete masonry units shall furnish certification from an independent testing laboratory confirming that all 8" or larger masonry units meet all of the UL 618 requirements for two (2)

hours or better (as required), referencing full scale fire test reports (ASTM E 119). All 4" and 6" units shall conform to "National Bureau of Standards" and "National Research Council" full scale fire tests.

5. Sizes and Shapes: Nominal face size 8" x 16" by thickness as indicated on drawings, with stretcher units, jamb units, header units, square corner units (at ends and corners of exposed or painted work), sash units (at control joints within masonry wall), lintel units and other special shapes and sizes required to complete the work.

6. Finish: For exposed block surfaces, in addition to ASTM requirements, block shall have uniformly dense, flat, fine grain texture, with no cracks, chips, spalls, or other defects which would impair appearance. For concealed CMU, surfaces shall be free from deleterious materials that would stain plaster or corrode metal.

7. Curing: All concrete block shall be steam cured, and air dried for not less than thirty (30) days before delivery.

8. Density of concrete block shall not exceed one hundred and five (105) lbs. per cubic foot.

9. Shrinkage: Shrinkage of concrete blocks shall not exceed 0.065% when tested in accordance with ASTM C 426-99.

10. Water Content

    a. At the time of delivery to the job site, concrete masonry units shall have a value, in weight of contained water, of not more than thirty (30) percent of the fully saturated content for the unit tested.
    b. Ship all units from the factory, and store at the job site, with all necessary protection to prevent increase of water content from rain and other sources.

B. Ground Face Concrete Masonry Unit

1. Provide concrete masonry units (CMU) manufactured with 100% recyclable postconsumer glass supplementary cementitious material (SCM). Units shall meet or exceed ASTM C 90, ASTM C 129 and ASTM C 1634.

    a. Exterior: See Finish Schedule.
    b. Interior: See Finish Schedule. Thin faced ACMU, attached with Tab System on back-up CMU.

2. Basis of Design: Subject to compliance with requirements, provide Kingston Block & Masonry Supply; Pozzotive CMU or comparable product by one of the following:

    a. Westbrook Concrete
    b. Echelon Masonry
    c. Or approved equal

3. Comply with requirements above except block shall be normal weight with density no greater than 125 pcf.

C. Brick

1. Glazed Thin Brick (Interior): See Finish Schedule; attached with Tab System on back-up CMU.

a. Thin Veneer Brick: ASTM C 1088, Grade SW, Type FBX

2. Glazed Brick (Exterior): See Finish Schedule.

a. Body: ASTM C 216, Grade SW, Type FBX.
b. Glazing: ASTM C 126
c. Size: 3-5/8" x 2-1/4" x 7-58" unless otherwise noted.
d. Provide all special molded shapes as indicated on the drawings.
e. For sills, caps and similar applications resulting in exposure of brick surfaces which otherwise would be concealed from view, provide uncored units with all exposed surfaces finished.

3. Basis of Design: Subject to compliance with requirements, provide Belden; products as indicated on Finish Schedule or comparable product by one of the following:
a. Elgin Butler
b. Glen-Gery
c. Or approved equal

D. Tab System: Provide heavy duty metal masonry support panel for interior mechanical support of thin veneer on CMU or metal frame construction; steel with G90 galvanized coating.

1. Product: Subject to compliance with requirements, provide one of the following:

a. Tabs Wall Systems LLC; Tabs II Thin Brick Wall System Panel
b. Glen-Gery; Thin Tech
c. Brick It; Designer Metal Grid System
d. Or approved equal.

E. Joint Reinforcing for Masonry Walls

1. Non-Seismic Construction: For anchoring face brick to CMU back-up, provide welded "ladder" design, of 3/16" dia. gauge steel rods with adjustable 3/16" wire rectangular pintle anchors fastened to reinforcement 16" o.c. Provide special formed prefabricated pieces at corners and intersections of walls or partitions. Anchors to extend at least 2" into face of brick. Show anchor locations on approved shop drawings.

a. Reinforcing assembly shall have hot dip galvanized steel finish conforming to ASTM A 153 with zinc coating of 1.5 oz. of zinc per sq. ft. after fabrication.
b. Basis of Design: Subject to compliance with requirements, provide Hohmann & Barnard; Ladder Type 270 with Lox All Adjustable Anchor or comparable product by one of the following:
1). Heckmann Building Products
2). Wire-Bond
3). Or approved equal

2. For block walls forming part of exterior wall construction, provide super heavy duty reinforcing fabricated of 3/16" dia. side and cross rods, truss or ladder design, ties, spaced every block course. Provide prefabricated pieces at corners and intersections of walls or partitions.

a. Reinforcing assembly shall be hot dip galvanized steel finish conforming to ASTM A 153 with zinc coating of 1.5 oz. of zinc per sq. ft., after fabrication.

3. For interior block walls and partitions, provide standard reinforcing fabricated of 9 ga. side and cross rods, truss or ladder design, no ties, spaced every other block course. Provide prefabricated pieces at corners and intersections of walls or partitions. Reinforcing shall be mill galvanized conforming to ASTM A 641, Class B-1, applied after fabrication.

4. Wire used in assemblies noted above shall be cold drawn steel wire conforming to ASTM A 82.

F. Anchors and Ties

1. For anchoring brick to cold formed metal framing, provide hot dip galvanized anchors. Ensure brick tie length matches or exceeds exterior insulation depth so that insulation does not need to be cut out at pintle locations.

   a. Product: Subject to compliance with requirements, provide one of the following:Heckmann Building Products;
      1). Heckmann Building Products; Wing-Nut Pos-I-Tie with self-drilling screw for steel studs zinc barrel and thermal wing-nut, and Seismic Wire Pintle Tie hot-dip galvanized steel.
      2). Hohman & Barnard; X-Seal Veneer Anchor hot-dip galvanized steel anchors with X-Seal Tape and Model 187 Seismiclip with 9 ga. wire.
      3). Wire-Bond
      4). Or approved equal

2. Wire Mesh: Galvanized sixteen (16) gauge steel wire, 1/4" square mesh, width 1/2" less than wall thickness, by length to suit condition.

3. For anchoring masonry to structural steel, provide hot-dip galvanized steel anchors. Galvanizing shall conform to ASTM A 153, with zinc coating of 1.5 oz. of zinc per sq. ft.

   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1). Hohmann & Barnard
      2). Heckmann Building Products
      3). Wire-Bond
      4). Or approved equal

4. For anchoring CMU interior partitions to underside of steel beams, provide hot dip galvanized steel partition top anchors.

   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1). Heckmann Building Products; No. 419 and No. 421
      2). Hohmann & Barnard; No. PTA 420
      3). Wire-Bond; PTA #4301
      4). Or approved equal

5. For anchoring CMU interior partitions to underside of structural deck, see structural drawings.

G. Reinforcing Bars and Rods: ASTM A 615, Grade 60. See Drawings for size.

H. Control and Expansion Joint Fillers

1. Vertical Installation Within Concrete Masonry Wall: Extruded high grade neoprene rubber, cross shape, for use with concrete masonry sash units, which shall provide a force fit in the grooves of the sash block and shall have 1/2" diameter tubular ends (compressed 25% when installed in 3/8" wide joint).

   a. Provide the following sizes:
      1). 2-5/8" wide control joint fillers for 4" block walls.
      2). 4-5/8" wide for 6" block walls.
      3). 6-5/8" wide for 8" block walls.
   b. Provide backer rod and sealant joint over joint filler as per drawings and Section 07 92 00, Interior Joint Sealants and Section 07 92 01 Exterior Joint Sealants.

2. Isolation Joint Filler at Abutting Construction and at Intersecting CMU Walls: Compressible and resilient closed cell neoprene gasket with pressure sensitive adhesive backing, thickness 30% greater than thickness of joint. Recess joint filler and install backer rod and sealant as per drawings and Section 07 92 00, Interior Joint Sealants.

3. Within Face Brick: Provide filler rod and sealant installed by Section 07 92 01 Exterior Joint Sealants. Filler depth shall be 2 times joint width.

   a. Compressible filler between top of brick and bottom of shelf angle or steel lintel shall be "Soft Joint Sealant" made by Polytite, or equal by BASF Construction Chemicals - Building Systems, Construction Foam Products, a division of Nomaco, Inc. or approved equal.

4. Within Expansion Joint at Face Brick: Manufacturer's standard preformed, pre-compressed, open-cell polyurethane foam sealant impregnated with a water based, non-drying polymer modified acrylic water repellent. Provide "Seismic Colorseal" installed to twenty-five 25 percent compression, as manufactured by Emseal or equal by Schul International Co., Inc., Watson Bowman Acme Corp. or approved equal.

   a. Properties: Permanently elastic, mildew resistant, non-migratory, non-staining, and compatible with joint substrates and other joint sealants. Density: 8.4 to 9.1 lb./cu. ft..

I. Neoprene Joint Filler: Provide closed cell neoprene, Type NN-1, conforming to ASTM D 1056, Grade 1, high performance, as manufactured by Williams Products Inc., or equal made by D. S. Brown, Norton, or approved equal.

2.2 MORTAR MATERIALS

A. Portland Cement: ASTM C 150, Type 1, standard color, one source.

B. Hydrated Lime: ASTM C 207, Type S.

C. Aggregate for Mortar: Clean, washed, buff colored sand, graded per ASTM C 144.

D. Aggregate for Grout: ASTM C 404.

E. Water: Clean, fresh and suitable for drinking.

2.3 MORTAR MIX

A. Exterior Face Brick Construction: Mortar mixes shall meet ASTM C 270, Type N, cement/lime mortar. Colors of mortars shall use coloring agent made by Davis Colors, Lehigh Cement or approved equal. Color of mortar to meet with Commissioner's approval. The Contractor may use pre-packaged colored mortar equal to "Color Mortar Blend" by Glen-Gery or equal by Davis Colors, Lehigh Cement or approved equal.

1. Mortar Color(s): See Finish Schedule.

2. Color of mortar must meet with Commissioner's approved sample and mock-up panel.

B. Interior Masonry Construction: Provide Portland cement/lime mortar conforming to ASTM C 270, Type N; for load bearing conditions, mortar shall conform to ASTM C 270, Type M.

C. Reinforced Concrete Block: Provide Portland cement/lime mortar conforming to ASTM C 270, Type S.

D. Grout for Unit Masonry: Comply with ASTM C 476 for grout for use in construction of unit masonry. Use grout of consistency (fine or coarse) at time of placement which will completely fill all spaces intended to receive grout. Grout shall have a minimum compressive strength of 3000 psi when tested in accordance with ASTM C 1019.

E. Mixing

1. General: Add cement just before mixing and mix dry. Use sufficient amount of water as necessary to produce workable mix. Mix in small batches to make plastic mass.

2. Mixing: Machine mix all mortars in approved type mixer with device to accurately and uniformly control water. Add hydrated lime dry. Mix dry materials not less than two (2) minutes. Add water, then mix not less than three (3) minutes, not to exceed five (5) minutes. Mix only amount of mortar that can be used before initial set. Do not use mortar which has reached its initial set or two (2) hours after initial mixing, whichever comes earlier. Mortar may not be re-tempered. Clean mixer for each batch, whenever mortar type is changed, and at end of each day's work.

3. Acceleration or other admixtures not permitted.

4. Mortar shall have a flow after suction of not less than seventy-five (75) percent of that immediately after mixing as determined by ASTM C 91.

F. Admixtures

1. No air-entraining admixtures or cementitious materials containing air-entraining admixtures shall be used in the mortar.

2. No antifreeze compounds or other substances shall be used in the mortar to lower the freezing point.

3. Calcium chloride or admixtures containing calcium chloride shall not be used in mortar.

2.4 WEEP HOLES

A. Provide clear plastic weep holes 3/8" wide and 1-1/2" high by four (4) inches long.

1. Basis of Design: Subject to compliance with requirements, provide Hohmann & Barnard; No. 342 or comparable product by one of the following:

    a. Advanced Building Products
    b. Heckmann Building Products
    c. Wire-Bond
    d. Or approved equal.

2.5 THRU-WALL FLASHING

A. Provide sheet membrane flashing as part of exterior wall membrane system. Provide sealants and tapes as recommended by the manufacturer. Provide preformed corner sections "end dams" with system when flashing is discontinuous.

1. Provide flashing for surface adhered applications at sheathed areas with 26 ga. stainless steel termination bar.

2. Wall flashing shall have 26 ga. stainless steel drip edge adhered to edge of flashing, drip edge shall be set in sealant as specified in Section 07 92 01 Exterior Joint Sealants.

2.6 MORTAR NET

A. Provide 10" high HDPE open mesh mortar net of width to fit masonry cavity shown on drawings.

1. Basis of Design: Subject to compliance with requirements, provide Hohmann & Barnard or comparable by one of the following:

    a. Advanced Building Products
    b. Heckmann Building Products
    c. Or approved equal

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. General

1. Do not wet concrete block units.

2. Build single wythe walls to the actual thickness of the masonry units, using units of nominal thickness shown.

3. Build chases and recesses as shown or required for the work of other trades.

4. Leave openings for equipment to be installed before completion of masonry work. After installation of equipment, complete masonry work to match work immediately adjacent to the opening.

5. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint widths and to properly locate openings, movement type joints, returns and off-sets. Avoid the use of less than half size units at corners, jambs and wherever possible.

6. Lay up walls plumb and true with courses level, accurately spaced and coordinated with other work.

7. Pattern Bond: Lay exposed masonry patterns as noted on drawings. If not shown, provide running bond. Lay concealed concrete block with all units in a wythe bonded by lapping not less than two (2) inches. Bond and interlock each course of each wythe at corners. Do not use units of less than four (4) inches horizontal face dimensions at corners or jambs.

8. Where possible, masonry walls and partitions shall be built after all overhead ducts, pipes and conduits are in place and tested. Masonry shall be neatly built around the items above. Walls and partitions shall be plumb, true to line and free from defects such as open cells, voids, dry joints and other similar defects. In rooms and spaces scheduled to have concrete block finish, all such surfaces, including upper wall surfaces up to termination of structural ceiling in spaces without suspended ceilings, shall be made suitable for paint application. Cutting of openings in walls and partitions in place shall be done only with the approval of the Commissioner.

B. Mortar Bedding and Jointing

1. All joints between bricks shall be completely filled with mortar. Bed joints shall be beveled per BMI recommendations, with the brick then shoved in place. At cavity wall construction, care shall be taken that no excess mortar goes into masonry cavity. Head joints shall be completely filled with mortar and shall be formed by applying a full coat of mortar to the entire end or the entire side, as the case requires, and then shoving the mortar covered end and/or side of the brick tightly against the bricks previously laid; the practice of "slushing" by throwing mortar into the head joints will not be permitted. All brick shall be laid without disturbing the brick previously laid. Brick shall be laid within a minute or so after the mortar is placed. Dry or butt joints will not be permitted. Grouting shall be done only as necessary. Do not slush head joints.

2. After brick placement, mortar squeezed out of bed joints shall be cut off before tooling.

3. Lay concrete masonry units with full mortar coverage on horizontal and vertical face shells. Bed webs in mortar in starting course on exterior walls and in all courses of piers, columns and pilasters, where solid CMU is used and where adjacent to cells or cavities to be reinforced or filled with concrete or grout.

    a. To ensure alignment of brick and block coursing, adjust block back-up by cutting block to ensure alignment of coursing or use adjustable anchorage.

4. Lay masonry walls with 3/8" joints unless otherwise shown on drawings.

5. Tool exposed joints slightly concave. Concealed joints shall be struck flush.

6. Remove masonry units disturbed after laying; clean and reset in fresh mortar. Do not pound corners at jambs to fit stretcher units which have been set in position. If adjustments are required, remove units, clean off mortar and reset in fresh mortar.

C. Stopping and Resuming Work: Rake back 1/2 brick length in each course; do not tool. Clean exposed surfaces of set masonry, wet units lightly (if required) and remove loose masonry units and mortar prior to laying fresh masonry.

D. Built-In Work

1. As the work progresses, build in items located within masonry construction. Fill in solidly with masonry around built-in items.

2. Mortar in door frames, access doors, louvers and other metal items embedded or built into masonry work solidly with mortar as the masonry units are laid up.

3. Grout under lintels, bearing plates, and steel bearing on masonry with solid bed grout.

4. Sleeves, pipes, ducts and all other items which pass through masonry walls shall be caulked with interior grade sealant meeting requirements of Section 07 92 00 Interior Joint Sealants, so as to be air tight and prevent air leakage. Refer to Section 07 84 13 Firestops and Smokeseals for packing of voids in rated masonry walls.

5. Fill vertical cells of masonry units solid with grout which have anchoring, reinforcing rods, supporting or hanging devices embedded in the cell, including stone anchors and window or curtain wall anchors.

6. Fill vertical cells of masonry units solid with mortar on each side of door frames to sixteen (16) inches beyond.

7. Unless otherwise noted, fill vertical cells of masonry units solid with grout which are below steel bearing plates, steel beams, and ends of lintels, to eight (8) inches beyond bearing and from floor to bearing.

8. Place wire mesh in horizontal joint below masonry unit cells to be filled with mortar, to prevent mortar from dropping into unfilled cells below.

9. Masonry indicated as being reinforced shall have all voids filled solid with grout. Grout shall be consolidated in place by vibration or other methods which ensure complete filling of cells. When the least clear dimension of the grouted cell is less than two (2) inches, the maximum height of grout pour shall not exceed twelve (12) inches. When the least clear dimension is two (2) inches or more, maximum height of grout pour shall not exceed forty-eight (48) inches. When grouting is stopped for one (1) hour or longer, the grout pour shall be stopped 1-1/2" below the top of a masonry unit. Vertical bar reinforcing shall be accurately placed and held in position while being grouted and shall be in place before grouting starts. All such reinforcing shall have a minimum clear cover of 5/8". Lap all bars a minimum of forty (40) bar diameters and provide steel spacer ties (not to exceed 192 bar diameter) to secure and position all vertical steel and prevent displacement during grouting. Provide continuous horizontal reinforcement embedded in mortar joints every second course.

E. Cutting and Patching

1. All exposed masonry which requires cutting or fitting shall be cut accurately to size with motorized carborundum or diamond saw, producing cut edges.

2. Do not saw cut any masonry openings in face brick construction without Commissioner's approval and after a procedure has been reviewed and approved.

3. Holes made in exposed masonry units for attachment of handrail brackets and similar items shall be neatly drilled to proper size.

4. All masonry which requires patching in exposed work, if approved by the Commissioner, shall be patched neatly with mortar to match appearance of masonry as closely as possible and to the Commissioner's satisfaction. Rake back joints and use pointing mortar to match as required.

F. Solid Wall Construction

1. Fill the vertical longitudinal joint between wythes solidly with mortar by parging the in-place wythe and shoving units into the parging.

2. Tie wythes with continuous horizontal reinforcement embedded in mortar joints sixteen (16) inches o.c. vertically.

G. Cavity Walls

1. All exterior masonry walls, unless otherwise indicated, shall be cavity walls of thickness indicated.

2. Two wythes of masonry cavity walls shall be securely tied together by horizontal joint reinforcement and ties anchored to reinforcement, as herein specified, spaced every other block course.

   a. Where cavity back-up is concrete use ties specified herein spaced sixteen (16) inches o.c. both directions.

3. Cavity between facing and backing wythe shall be kept clean and clear of all mortar droppings, and no mortar ledges shall project into the cavity. Temporary wood strips, cut to width of cavity and fitted with lift-up wires, shall be laid on the joint reinforcement and carefully lifted out before placement of the next layer of reinforcement. Any projecting mortar shall be spread over the back of the outer wythe immediately following the setting of the masonry unit.

   a. Mortar net shall be installed at the bottom of each cavity over the flashing to protect weep holes.

4. At cavity and solid walls adjacent to window openings fill block solid with mortar where window anchors are to be located.

5. Concrete block back-up at cavity wall construction shall be anchored to slab at top with dovetail anchors spaced sixteen (16) inches o.c.

6. Anchor CMU back-up with anchors as specified herein.

7. Refer to Section 07 21 00, "Thermal Insulation," for material and installation of cavity wall insulation.

H. Interior Block Partitions

1. Build to full height unless otherwise shown on drawings. At non-rated partitions, fill void between CMU and structural deck with continuous neoprene filler conforming to the requirements of Article 2.1 herein. At fire rated partitions, fill void with fire stop material meeting the requirements of Section 07 84 13, Firestops and Smokeseals. Fasten to structure at top of partition using steel angles as specified herein.

2. Provide continuous horizontal joint reinforcing every other block course, except as otherwise noted. Fully embed longitudinal side rods in mortar for their entire length with a minimum cover of 5/8". Lap reinforcement a minimum of six (6) inches at ends of units.

3. Provide continuity at corners and wall intersections by use of prefabricated "L" and "T" sections. Cut and bend units as directed by manufacturer for continuity at returns, offsets, column fireproofing, pipe enclosures and other special conditions.

4. Corners

   a. Provide interlocking masonry unit bond in each course at corners.
   b. Provide continuity at corners with prefabricated "L" reinforcement units, in addition to masonry bonding.

5. Intersecting and Abutting Walls

   a. Unless vertical control joints are shown as part of structural frame, provide interlocking masonry bond. Provide starters and special shapes as shown on the drawings to bond these walls.
   b. In addition to masonry bonding, provide horizontal reinforcement using prefabricated "T" units at interior partitions.

I. Ties and Anchors for Masonry Construction

1. Provide ties and anchors as shown or specified, but not less than one metal tie, spaced not to exceed sixteen (16) inches o.c. horizontally and/or vertically. Provide additional ties within 1'-0" of all openings and adjacent to expansion joints and spaced not more than 16" apart around perimeter of openings.

2. Anchoring Masonry to Structure: Provide an open space not less than 1/2" in width between masonry and structural member, unless otherwise shown. Keep open space free of mortar or other rigid materials.

3. Attach brick veneer to cold formed metal framing by anchoring brick to studs using specified anchors penetrating through sheathing and through flange of stud. Prior to application of anchors cover sheathing and vapor barrier with tape specified herein. Space anchors 8" o.c. at each stud; provide stainless steel screw anchors for attaching anchor to studs.

J. Control and Expansion Joints: Provide expansion, control and isolation joints in masonry as shown. Build in related items as the masonry work progresses.

1. CMU Control Joint Spacing: If location of control joints is not shown, place vertical joints spaced not to exceed 20'-0" o.c. In addition, locate joints at points of natural weakness in the masonry work, including the following:

   a. At structural column or joint between bay.
   b. Above control joints in the supporting structure.
   c. Above major openings at end of lintels upward and below at ends of sills downward. Place at one side of jamb for openings not less than 7'-0" wide and at both sides for openings over 6'-0" wide.
   d. At reduction of wall thickness.

e. Where masonry abuts supporting structure.
f. If additional joints are required, indicate them on approved shop drawings.

2. Brick Veneer Expansion Joint Spacing: Vertical expansion joints in brick veneer construction shall be located maximum 20'-0" o.c. unless otherwise noted in addition to expansion joints located within 2'-0" of each corner of the building.

K. Lintels: For concrete block walls, use specially formed U-shaped concrete block lintel units with reinforcing bars in accordance with the following table, filled with grout.

Number and Size of Reinforcing Bars Required at Concrete Block Lintels		
Maximum Clearance Span	Wall Width	Rebar No. - Size
2'-0" to 6'-0" 6'-0" to 8'-0"	6"	2 - #3 2 - #4
2'-0" to 6'-0" 6'-0" to 8'-0"	8"	2 - #3 2 - #4
2'-0" to 6'-0" 6'-0" to 8'-0"	12"	3 - #3 3- #4

3.3 FLASHING/WEEP HOLES

A. General: Install embedded flashing and weep holes in masonry at relieving angles, shelf angles, lintels, ledges, other obstructions to the downward flow of water in the wall, and where indicated. Space weeps 16" o.c. unless otherwise shown on drawings. Weeps shall occur immediately above the flashing.

B. Prepare masonry surfaces so that they are smooth and free from projections that could puncture flashing.

C. Flashing shall be placed, generally, at bottoms of cavity wall construction, over all wall openings, window jambs, at sills of window, and in other locations where indicated on the drawings. Flashing shall overlap a minimum of 6". At bottoms of cavity walls, the flashing shall be built extending from the exterior face of the brick, up and into the mortar joint 2" at the inner wythe of the CMU back-up; at sheathed areas attached with pressure bar. At concrete spandrel beams and columns the flashing shall be installed with a termination bar. Extreme care shall be exercised in placing the masonry materials not to damage the flashing. Flashing damaged during the masonry erection shall be repaired or replaced by the Contractor at no additional cost to the City of New York. Discontinuous flashing shall terminate with an end dam in a head joint, rising at least 1".

D. When spanning an air space, flashing shall be supported with a mortar wash, insulation or treated wood blocking.

E. Where flashing is penetrated by anchors, patch flashings at penetration using adhesive and mastic recommended by the manufacturer to ensure watertight seal.

F. Install flashing in accordance with manufacturer's instructions, using adhesive, primer, thinner, cleaner and mastic as recommended by flashing manufacturer.

1. Flashing shall overlap adjacent piece of flashing a minimum of 6".

G. Provide drip edge when flashing extends beyond face of brick.

3.4 CLEANING, PROTECTION, ADJUSTMENT

A. Protection: The Contractor shall take adequate precautions for the protection of all surfaces against mortar spatter and shall immediately remove any such spatter should it inadvertently occur, leaving no stain or discoloration.

1. Excess mortar shall be wiped off the masonry surfaces as the work progresses.

2. Wood coverings shall be placed over all such masonry surfaces as are likely to be damaged during the progress of the entire project.

3. Protective measures shall be performed in a manner satisfactory to the Commissioner.

4. Damaged masonry units shall be replaced to satisfaction of the Commissioner.

B. Cleaning of Masonry: Upon completion, all exposed masonry shall be thoroughly cleaned following recommendations of the BIA Technical Note No. 20. Before applying any cleaning agent to the entire wall, it shall be applied to a sample wall area of approximately 4' x 4' in a location approved by the Commissioner. No further cleaning work may proceed until the sample area has been approved by the Commissioner, after which time the same cleaning materials and method shall be used on the remaining wall area. If stiff brushes and water do not suffice, the surface shall be thoroughly saturated with clear water and then scrubbed with a solution of an approved detergent masonry cleaner, equal to "Vana Trol" made by ProSoCo Inc. or equal made by Diedrich, EaCo Chem, Inc. or approved equal, mixed as per manufacturer's directions, followed immediately by a thorough rinsing with clear water. All lintels and other corrodible parts shall be thoroughly protected during cleaning.

1. Unless otherwise required by cleaning agent manufacturer use only low pressure device (30 to 50 psi) for application of cleaning agent and water rinsing.

C. Pointing: Point any defective joint with mortar identical with that specified for that joint.

END OF SECTION 04 20 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 04 90 00
Masonry Restoration and Cleaning

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to the Addendum to the General Conditions

1.2 SUMMARY

A. Section includes:

1. Cleaning down existing face brick walls.
2. Repointing existing face brick walls.
3. Replacing existing damaged face brick.

B. Related Sections

1. Unit Masonry - Section 04 20 00.
2. Interior Joint Sealants - Section 07 92 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Field-Constructed Mock-Ups: Prior to start of general masonry and stone restoration, prepare the following sample panels on the building where directed by Commissioner. Obtain Commissioner's acceptance of visual qualities before proceeding with the work. Retain acceptable panels in undisturbed condition, suitably marked, during construction as a standard for judging completed work.

1. Cleaning: Demonstrate materials and methods to be used for cleaning each type of masonry surface and condition on sample panels of approximately 25 sq. ft. in area.

   a. Test adjacent non-masonry materials for possible reaction with cleaning materials.
   b. Allow waiting period not less than seven (7) calendar days, after completion of sample cleaning to permit study of sample panels for negative reactions.

2. Repointing: Prepare two (2) separate sample areas of approximately 3' high by 6' wide for each type of repointing required, one for demonstrating methods and quality of workmanship expected in removal of mortar from joints and the other for demonstrating quality of materials and workmanship expected in pointing mortar joints.

1.4 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. Product Data: Submit manufacturers' technical data for each product indicated including recommendations for their application and use. Include test reports and certifications substantiating that products comply with requirements.

C. Restoration Program: Submit written program for each phase of restoration process including protection of surrounding materials on building and site during operations. Describe in detail materials, methods and equipment to be used for each phase of restoration work.

1.5 DELIVERY, STORAGE AND HANDLING

A. Carefully pack, handle, and ship masonry units and accessories strapped together in suitable packs or pallets or in heavy cartons. Unload and handle to prevent chipping and breakage.

B. Protect masonry restoration materials during storage and construction from wetting by rain, snow or ground water, and from staining or intermixture with earth or other types of materials.

C. Protect grout, mortar and other materials from deterioration by moisture and temperature. Store in a dry location or in waterproof containers. Keep containers tightly closed and away from open flames. Protect liquid components from freezing. Comply with manufacturer's recommendations for minimum and maximum temperature requirements for storage.

1.6 PROJECT CONDITIONS

A. Clean masonry surfaces only when air temperatures are 40 deg. F. and above and will remain so until masonry has dried out, but for not less than seven (7) days after completion of cleaning.

B. Do not repoint mortar joints or repair masonry unless air temperatures are between 40 deg. F. and 80 deg. F. and will remain so for at least forty-eight (48) hours after completion of work.

C. Prevent grout or mortar used in repointing and repair work from staining face of surrounding masonry and other surfaces. Immediately remove grout and mortar in contact with exposed masonry and other surfaces.

D. Protect sills, ledges and projections from mortar droppings.

1.7 SEQUENCING/SCHEDULING

A. Perform masonry restoration work in the following sequence:

1. Repair existing masonry including replacing existing masonry with new masonry materials.
2. Rake-out existing mortar from joints indicated to be repointed.
3. Repoint existing mortar joints of masonry indicated to be restored.
4. Clean existing masonry surfaces.

PART II - PRODUCTS

2.1 MASONRY MATERIALS

A. Provide face brick conforming to the requirements of Section 04 20 00, Unit Masonry.

B. For mortar materials, conform to the requirements of Section 04 20 00, Unit Masonry.

2.2 CLEANING MATERIALS AND EQUIPMENT

A. Water for Cleaning: Clean, potable, free of oils, acids, alkalis, salts, and organic matter.

B. Alkaline Prewash Cleaner: Manufacturer's standard alkaline cleaner for prewash applications only which are followed by acidic cleaner of type indicated for afterwash.

1. Manufacturers: Subject to compliance with requirements, provide:

a. ProSoCo, Inc.; Sure Klean 766 Prewash
b. Diedrich Chemicals
c. Cathedral Stone Products
d. Or approved equal

C. Acidic Cleaner: Manufacturer's standard strength acidic masonry restoration cleaner composed of hydrofluoric acid blended with other acids including trace of phosphoric acid and combined with special wetting systems and inhibitors.

1. Basis of Design Product: Subject to compliance with requirements, provide Diedrich Chemicals; Diedrich 101 Masonry Restorer or comparable product by one of the following:
   a. ProSoCo, Inc.
   b. Cathedral Stone Products.
   c. Or approved equal

D. Liquid Strippable Masking Agent: Manufacturer's standard liquid, film forming, strippable masking material for protecting glass, metal and polished stone surfaces from damaging effect of acidic and alkaline masonry cleaners.

1. Basis of Design Product: Subject to compliance with requirements, provide Diedrich Chemicals; Diedrich Acid Guard or comparable product by one of the following:
   a. ProSoCo, Inc.
   b. Cathedral Stone Products.
   c. Or approved equal

E. Spray Equipment: Provide equipment for controlled spray application of water and chemical cleaners, at rates required by the manufacturer, measured at spray tip, and for volume.

1. For spray application of chemical cleaners provide low-pressure tank or chemical pump suitable for chemical cleaner indicated, equipped with cone-shaped spray-tip.

2. For spray application of water provide fan-shaped spray-tip which disperses water at angle of not less than 15 degrees.

2.3 MORTAR MIXES

A. Measuring and Mixing: Measure cementitious and aggregate material in a dry condition by volume or equivalent weight. Do not measure by shovel, use known measure. Mix materials in a clean mechanical batch mixer.

1. Mixing Pointing Mortar: Thoroughly mix cementitious and aggregate materials together before adding any water. Then mix again adding only enough water to produce a damp, unworkable mix which will retain its form when pressed into a ball. Maintain mortar in this dampened condition for 1-to-2 hours. Add remaining water in small portions until mortar of desired consistency is reached. Use mortar within thirty (30) minutes of final mixing; do not retemper or use partially hardened material.

B. Colored Mortar: Produce mortar of color required by use of selected coloring agent.

C. Do not use admixtures of any kind in mortar, other than colorant.

D. Mortar Proportions

1. Pointing Mortar for Brick: One part white Portland cement, 2 parts lime and 6 parts colored mortar aggregate. Add colored mortar pigment to product mortar colors required to match.

2. Rebuilding Mortar: Comply with ASTM C 270, Proportion Specification, Type N, with cementitious material content limited to Portland cement-lime and coloring agent.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PROTECTION

A. General: Comply with recommendations of manufacturers of chemical cleaners for protecting building surfaces against damage from exposure to their products.

B. Protect persons, motor vehicles, surrounding surfaces of building whose masonry surfaces are being restored, building site, and surrounding buildings from injury resulting from masonry restoration work.

1. Prevent chemical cleaning solutions from coming into contact with pedestrians, motor vehicles, landscaping, buildings and other surfaces which could be injured by such contact.

2. Do not clean masonry during winds of sufficient force to spread cleaning solutions to unprotected surfaces.

3. Dispose of run-off from cleaning operations by legal means and in manner which prevents soil erosion, undermining of paving and foundations, damage to landscaping, and water penetration into building interiors.

4. Erect temporary protection covers over pedestrian walkways and at points of entrance and exit for persons and vehicles which must remain in operation during course of masonry restoration work.

C. Protect glass, unpainted metal trim and polished stone from contact with acidic chemical cleaners by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape. Apply masking agent to comply with manufacturer's recommendations. Do not apply liquid masking agent to painted or porous surfaces.

3.3 CLEANING EXISTING MASONRY, GENERAL

A. Proceed with cleaning in an orderly manner; work from top to bottom of each scaffold width and from one end of each elevation to the other.

B. Use only those cleaning methods indicated for each masonry material and location.

C. Perform each cleaning method indicated in a manner which results in uniform coverage of all surfaces, including corners, moldings, interstices and which produces an even effect without streaking or damage to masonry surfaces.

D. Rinse off chemical residue and soil by working upwards from bottom to top of each treated area at each stage or scaffold setting.

E. Water Application Methods: Prior to chemical cleaning, apply water application to mock-ups by spray at various pressures to determine if masonry surfaces can be cleaned adequately and to the Commissioner's satisfaction in this manner. If water applications prove ineffective, proceed with chemical cleaners.

F. Chemical Cleaner Application Methods: Apply chemical cleaners to masonry surfaces to comply with chemical manufacturer's recommendations. Do not allow chemicals to remain on surface for periods longer than that indicated or recommended by manufacturer.

1. For hard to remove dirt or grime, apply pre-wash cleaner prior to application of chemical cleaner; follow manufacturer's instructions.

3.4 BRICK REMOVAL AND REBUILDING

A. Brick Removal

1. Carefully remove by hand any brick which are damaged, spalled or deteriorated. Cut out full units from joint to joint and in manner to permit replacement with full size units.

2. Support and protect masonry indicated to remain which surrounds removal area.

3. Salvage as many whole, undamaged bricks as possible.

4. Remove mortar, loose particles and soil from salvaged brick by cleaning with brushes and water. Store brick for reuse.

5. Clean remaining brick at edges of removal areas by removing mortar, dust, and loose debris in preparation for rebuilding.

B. Brick Rebuilding

1. Install new or salvaged brick to replace removed brick. Fit replacement units into bonding and coursing pattern of existing brick. If cutting is required use motor driven saw designed to cut masonry with clean, sharp unchipped edges.

2. Lay replacement brick with completely filled bed, head and collar joints. Butter ends with sufficient mortar to fill head joints and shove into place. Wet clay brick which have ASTM C 67 initial rates of absorption (suction) of more than 30 grams per 30 sq. in. per minute. Use wetting methods which ensure that units are nearly saturated but surface dry when laid. Maintain joint width for replacement units to match existing.

3. Tool exposed mortar joints in repaired areas to match joints of surrounding existing brickwork.

3.5 REPOINTING EXISTING MASONRY

A. Joint Raking

1. Rake out mortar from joints to depths equal to 2-1/2 times their widths but not less than 1/2" nor less than that required to expose sound, unweathered mortar.

2. Remove mortar from masonry surfaces within raked-out joints to provide reveals with square backs and to expose masonry for contact with pointing mortar. Brush, vacuum or flush joints to remove dirt and loose debris.

3. Do not spall edges of masonry units or widen joints. Replace any masonry units which become damaged.

   a. Cut out old mortar by hand with chisel and mallet.
   b. Power operated rotary hand saws and grinders will be permitted but only on specific written approval of Commissioner based on submission by Contractor of a satisfactory quality control program and demonstrated ability of operators to use tools without damage to masonry. Quality control program shall include provisions for supervising performance and preventing damage due to worker fatigue.

B. Joint Pointing

1. Rinse masonry joint surfaces with water to remove any dust and mortar particles. Time application of rinsing so that, at time of pointing, excess water has evaporated or run off, and joint surfaces are damp but free of standing water.

2. Apply first layer of pointing mortar to areas where existing mortar was removed to depths greater than surrounding areas. Apply in layers not greater than 3/8" until a uniform depth is formed. Compact each layer thoroughly and allow to become thumbprint-hard before applying next layer.

3. After joints have been filled to a uniform depth, place remaining pointing mortar in three (3) layers with each of first and second layers filling approximately 2/5 of joint depth and third layer the remaining 1/5. Fully compact each layer and allow to become thumbprint hard before applying next layer. Where existing bricks have rounded edges recess final layer slightly from face. Take care not to spread mortar over edges onto exposed masonry surfaces, or to featheredge mortar.

4. When mortar is thumbprint hard, tool joints to match original appearance of joints, unless otherwise indicated. Remove excess mortar from edge of joint by brushing.

5. Cure mortar by maintaining in a damp condition for not less than seventy-two (72) hours.

6. Where repointing work precedes cleaning of existing masonry allow mortar to harden not less than thirty (30) days before beginning cleaning work.

END OF SECTION 04 90 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 12 00
Structural Steel

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"

   b. Section 01 74 19 "Construction Waste Management and Disposal"

   c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

C. Refer to other Divisions of these specifications to determine the type and extent of work therein affecting the work of this trade, whether or not such work is specifically mentioned in this Section.

1.2 SUMMARY

A. The Work includes labor, materials, equipment, and services required for completion of Work under this Section as shown on Drawings and as specified here.

B. This Section includes the following:

1. Structural steel.
2. Steel deck support angles.
3. Column base plate leveling nuts and/or shim packs.
4. Field Installed headed shear studs.
5. Grout.
6. Hot-dip galvanizing of steel material.
7. Shop priming and or painting of steel material.

C. Related Sections include the following:

1. DDC General Conditions for independent testing agency procedures and administrative requirements.
2. DDC General Conditions for general submittal procedures.
3. Division 5 Section "Steel Decking" for field installation of shear connectors.

4. Division 5 Section "Miscellaneous Metals" for steel lintels or shelf angles not attached to structural-steel frame, miscellaneous steel fabrications, and other metal items not defined as structural steel.

5. Division 9 "Painting and Finishing" and Division 7 Section "Intumescent Fireproofing" for surface preparation and priming requirements.

D. Work furnished under this Section and installed under other Sections:

1. Division 3 Section "Cast-in-Place Concrete" and "Architectural Cast-in-Place Concrete": Installation of structural shapes, bolts, angles, plates, and inserts embedded in new concrete.

1.3 DEFINITIONS

A. Structural Steel: Elements of structural-steel frame, as classified by AISC Code of Standard Practice for Steel Buildings and Bridges, that support design loads.

B. Special Inspector: Personnel performing testing and inspection as specified and as required by the 2014 New York City Building Code.

C. Contractor's Engineer: Professional Structural Engineer licensed in the State of New York, responsible for the structural design of connections.

1.4 PERFORMANCE REQUIREMENTS

A. Detailing: Detail structural members, connections, accessories, and temporary components required for transportation and erection.

1. Refer to Architectural details for miscellaneous items, tolerances, and provisions to be made for the attachment of other materials.

2. Where indicated as requiring coordination, refer to approved mechanical shop drawings for exact location and dimensions of supports for mechanical equipment and penetrations.

B. Connections: Detail all connections to withstand loads indicated and comply with concepts, prescriptions, and restrictions indicated.

1. Where appropriate, select and complete connections using schematic details indicated and AISC Manual of Steel Construction, Load and Resistance Factor Design.

2. Engineering Responsibility: Fabricator's responsibilities include using a Professional Engineer Licensed in the State of New York to prepare structural analysis data for structural-steel connections.

C. Construction: Type 2, simple framing

1.5 SUBMITTAL PROCEDURES

Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.6 SUBMITTALS

A. International Code Council Evaluation Service Reports. For each type of product indicated where product other than that specified in Construction Documents is proposed for use. Use shall be subject to Commissioner's approval.

1. Expansion anchors.

2. Adhesive anchors.

B. Product Data: For each type of product indicated including but not limited to the following:

1. Expansion anchors.

2. Adhesive anchors.

3. Welding filler metals and fluxes.

4. Galvanizing repair paint.

C. Shop Drawings: Show fabrication of structural-steel components.

1. Before submitting Shop Drawings to the Commissioner, precheck the shop drawings for conformity of details to the Contract Documents and as coordinated with other work. Include signature of Contractor's representative indicating that the drawings have been prechecked. The Contractor is wholly responsible for the conformity of dimensions and details of the shop drawings with the Contract Documents.

2. Submit Job Standard Connection details and calculations before detail drawings. Submit connection information in tabular form with:

a. Weld sizes.

b. Sizes and material of connecting elements.

c. Number, size, and type of bolt.

d. Material; minimum thickness of supporting member part.

e. Material and minimum thickness of supported member part.

3. Submit erection plans before or with detail drawings.

4. Resubmitted Drawings

a. Clearly and individually identify changes in resubmitted shop drawings whether the change results from a review comment or not.

b. Date and identify each shop drawing issue.

c. Identify each shop drawing by the same drawing number throughout the duration of the Project.

5. Include on detail drawings:

   a. Details and dimensions of all pieces.

   b. Steel material designation.

   c. Surface preparation and finish.

   d. Details of cuts, connections, splices, camber, holes, welds, bolts and other pertinent data.

   e. Identification marks cross-referenced to erection plans.

6. Include embedment drawings.

7. Prepare details avoiding interference of steel connections, gussets, and bracing elements with architectural details, shaft openings, and wall openings.

8. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld.

9. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.

10. For structural-steel connections indicated to comply with design loads, include structural analysis data signed and sealed by the Fabricator's Engineer responsible for their preparation. The Fabricator's Engineer designing connections shall be a Professional Engineer licensed in the State of New York.

11. Approval of the Shop Drawings is for size and arrangement of principal and auxiliary members and conformance of connections. Approval does not relieve the Contractor's responsibility for dimensions, fabrications, and correct fitting of structural members.

D. Connection Design

1. Immediately upon submission of Job Standard Connection details and/or erection drawings, submit an affidavit from the Fabricator's Engineer, whose registration number shall appear on the affidavit, stating the following: "All connections and details required to resist the loads and reactions shown on the Contract Drawings and as specified, excepting those completely designed and detailed on the Contract Documents will be designed by me personally or by qualified personnel under my direct supervision."

2. At the completion of the work, the same Fabricator's Engineer shall submit an affidavit stating: "All connections and details required to resist the loads and reactions shown on the Contract Drawings and as specified, excepting those completely designed and detailed on the Contract Documents have been designed by me personally or by qualified personnel under my direct supervision."

E. Forces imposed on base building structure by temporary attachments for bracing of cranes, hoists, or any other equipment imposing loads on the structure during construction. Provide drawings and calculations of temporary bracing stamped and signed by a Professional Engineer licensed in the State of New York.

F. Welding Procedure Specifications including Qualification Test Reports for welds qualified by test, for each class of weld to be incorporated in the work

G. Welding certificates.

H. Qualification Data: For Installer, Fabricator, Fabricator's Engineer, Fabricator's quality control agency if separate from fabricator.

I. Mill Test Reports: Signed by manufacturers certifying that the following products comply with requirements:

1. Structural steel including chemical and physical properties.
2. Bolts, nuts, and washers including mechanical properties and chemical analysis.
3. Tension-control, high-strength bolt-nut-washer assemblies.
4. Shear stud connectors.
5. Shop primers.
6. Nonshrink grout.

J. Source quality-control test reports.

K. Galvanizing: Submit an original and two copies of the coating applicator's notarized Certificate of Compliance that the hot-dip galvanized coating meets or exceeds the specified requirements of ASTM A123 or ASTM A153 as applicable.

L. Fabrication and Erection Errors: Notify Commissioner of fabrication or erection errors requiring field work. Before performing corrective work, submit for review and approval description of field work.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CSE.

C. Fabricator Qualifications: A qualified fabricator who participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category BU.

D. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint Endorsement SPE or SSPC-QP 3 – Standard Procedure for Evaluating Qualifications of Shop Painting Applicators.

E. Galvanizing Applicators: Company specializing in hot-dip galvanizing after fabrications and following the procedures of the Quality Assurance Manual of the American Galvanizers Association.

F. Welding: Qualify procedures and personnel according to AWS D1.1 – Structural Welding Code – Steel.

G. Comply with applicable provisions of the following specifications and documents as amended herein:

1. AISC Code of Standard Practice for Steel Buildings and Bridges, 2016 Edition.
2. AISC Seismic Provisions for Structural Steel Buildings and Supplement No. 2.

3. AISC Load and Resistance Factor Design Specification for Structural Steel Buildings.

4. AISC Specification for the Design of Steel Hollow Structural Sections.

5. AISC Specification for Load and Resistance Factor Design of Single-Angle Members.

6. RCSC Specification for Structural Joints Using ASTM A325 or A490 Bolts, 2000 Edition.

7. AWS Structural Welding Code – Steel.

8. SSPC Society for Protective Coatings: Steel Structures Painting Manual, Vol. 2.

9. GA Inspection of Products Hot-Dip Galvanized After Fabrication.

H. Mockups: Build mockups of architecturally exposed structural steel to set quality standards for fabrication and installation.

1. Coordinate finish painting requirements with Division 9 painting Sections.

2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

I. The City of New York shall employ a Special Inspector to oversee and administer, and an independent Testing Agency(s) to perform, a Program of Structural Tests and Inspections for compliance with Chapter 17 of the 2014 New York City Building Code.

1. The Special Inspector will organize and direct the test and inspection program. All inspection and test reports shall be submitted to the Contractor and the Commissioner. The Contractor shall be responsible for understanding the test and inspection program and notifying the Testing Agency and the Special Inspector when work is ready for tests and/or inspections. The Contractor will provide access to the Testing Agency and Special Inspector. Inspections and tests of the Program of Structural Tests and Inspections will not relieve the Contractor of responsibility for supervision, testing, and inspection for quality control of the work.

2. Provide testing and inspection reports to the New York City Department of Buildings when requested by the New York City Department of Buildings. Upon completion of the construction, the Special Inspector will make a final report on the satisfactory completion of the Program for Structural Tests and Inspection to the New York City Department of Buildings and to the Commissioner.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Store fasteners in a protected place. Clean and relubricate bolts and nuts that become dry or rusty before use.

2. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

3. Load and store galvanized articles in accordance with accepted industry standards.

1.9 COORDINATION

A. Furnish anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

1.10 PREINSTALLATION CONFERENCES

A. Hold one conference at least thirty (30) days before the start of Shop Drawings and one at least thirty (30) days before start of erection.

B. Pre Shop Drawing Conference

1. Agenda to cover but not be limited to the following:

   a. Connection calculations.

   b. Procedures for review of submissions.

   c. Detailing procedures and preferences.

   d. Connection details.

   e. Welding procedures.

   f. Submission procedures.

   g. Requests for information (RFI) procedures.

   h. Fabrication procedures and preferences.

   i. Specification and design drawing requirements.

2. Pre shop drawing conference attendees include but are not limited to:

   a. Contractor.

   b. Contractor's Superintendent.

   c. Contractor's Assistant Superintendent or equivalent responsible for the structural steel.

   d. Fabricator's representative.

   e. Professional Engineer licensed in the State of New York performing connection calculations.

   f. Commissioner.

C. Pre-erection Conference: Conduct conference at Project site to comply with requirements in DDC General Conditions.

1. Agenda to cover but not be limited to the following:

a. Anchor bolt conditions.

b. Welding procedures and welder qualifications.

c. Bolting procedures.

d. Methods, equipment, and sequencing of erection.

e. Inspection.

f. Metal deck and stud installation.

g. Corrective measures in field.

2. Pre-erection conference attendees include but are not limited to:

a. Contractor.

b. Contractor's Superintendent.

c. Contractors steel assistant superintendent or equivalent.

d. Fabricator's representative.

e. Metal deck erectors representative (if different from steel erector).

f. Commissioner.

g. Inspection and Testing Agency

D. Contractor to record, type, and distribute minutes of meeting to all attendees.

E. Notify attendees at least ten (10) days before the scheduled date of the conference.

PART 2 - PRODUCTS

2.1 MATERIALS

A. W-Shapes: ASTM A992/A992M.

B. Rolled Sections in ASTM A 6 Groups 3, 4, and 5: Supply with Charpy V-notch testing in accordance with ASTM A6 Supplementary Requirement S5. Conduct impact tests in accordance with ASTM A673 Frequency (P) Piece Testing. Meet minimum average impact value of 20 ft-lbs. Absorbed energy at +70°F.

C. Channels and Angles: ASTM A36/A36M.

D. Plate and Bar: ASTM A36/A36M.

E. Cold-Formed Hollow Structural Sections: ASTM A 500, Grade B or C, structural tubing.

F. Welding Electrodes for All Complete Joint Penetration Welds: Shall be rated as providing minimum Charpy V-Notch toughness of 20 ft-lbs at 0°F.

G. Other Welding Electrodes: Comply with AWS requirements.

2.2 BOLTS, CONNECTORS, AND ANCHORS

A. High-Strength Bolts, Nuts, and Washers: ASTM A325, Type 1, heavy hex steel structural bolts; ASTM A563 heavy hex carbon-steel nuts; and ASTM F36 hardened carbon-steel washers; all with plain finish.

B. High-Strength Bolts, Nuts, and Washers: ASTM A490, Type 1, heavy hex steel structural bolts; ASTM A563 heavy hex carbon-steel nuts; and ASTM F436 hardened carbon-steel washers; all with plain finish.

C. Zinc-Coated High-Strength Bolts, Nuts, and Washers: ASTM A 325, Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH heavy-hex carbon-steel nuts; and ASTM F 436, Type 1, hardened carbon-steel washers.

1. Finish: Hot-dip zinc coating.

D. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F1852, Type 1, heavy hex, round head steel structural bolts with splined ends; ASTM A563 heavy hex carbon-steel nuts; and ASTM F436 hardened carbon-steel washers.

1. Finish: Plain.

E. Shop Installed Shear Connectors: ASTM A108, Grades 1015 through 1020, headed-stud type, cold-finished carbon steel; AWS D1.1, Type B.

F. Unheaded Anchor Rods: ASTM F1554, Grade 55, weldable.

1. Configuration: Straight.

2. Nuts: ASTM A563 heavy hex carbon steel.

3. Plate Washers: ASTM A36/A36M carbon steel.

4. Washers: ASTM F436 hardened carbon steel.

5. Finish: Plain.

G. Threaded Rods: A 572/A 572M, Grade 50.

1. Nuts: ASTM A 563 heavy hex carbon steel.

2. Washers: ASTM F 436 hardened, carbon steel.

3. Finish: Plain.

2.3 EXPANSION ANCHORS

A. Products: Subject to compliance with requirements, provide one of the following:

1. Hilti Kwik Bolt TZ.

2. Kelken Construction Systems
3. Allfastners
4. Or approved equal

2.4 ADHESIVE ANCHORS

A. Products: Subject to compliance with requirements, provide one of the following:

1. Hilti HY RE 500 System.
2. Kelken Construction Systems
3. Allfastners
4. Or approved equal

B. Rods: ASTM A36 or ASTM A307 Carbon Steel.

C. Nuts and Washers: Match rod material.

2.5 PRIMER

A. Primer: SSPC-Paint 25 BCS, Type II, zinc oxide, raw linseed oil, and alkyd.

B. Galvanizing Repair Paint: SSPC-Paint 20.

1. ZRC Cold Galvanizing Compound.
2. Brite Zinc by Brite Products.
3. Duncan Glavanizing Corp.
4. Or approved equal

2.6 GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-min. working time.

2.7 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC Code of Standard Practice for Steel Buildings and Bridges and AISC Load and Resistance Factor Design Specification for Structural Steel Buildings.

1. Camber structural-steel members where indicated.
2. Identify high-strength structural steel according to ASTM A6/A6M and maintain markings until structural steel has been erected.

3. Mark and match-mark materials for field assembly.

4. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1.

C. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 3 – Power Tool Cleaning.

F. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1 and manufacturer's written instructions.

G. Holes: Provide holes required for securing other work to structural steel and for passage of other work through steel framing members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.

2. Base-Plate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.

3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.8 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC Specification for Structural Joints Using ASTM A325 or A490 Bolts for type of bolt and type of joint specified.

1. Joint Type: Simple Framing: Snug tightened.

2. Joint Type: Moment Connection, Braced Frame: Slip Critical.

3. Do not reuse high-strength bolts.

B. Weld Connections: Comply with AWS D1.1 for welding procedure specifications, tolerances, appearance, and quality of welds and for methods used in correcting welding work.

1. Where backing or runoff tabs are removed, back gouge, and grind steel smooth, and reweld as required to establish specified profile.

2. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances of AISC Code of Standard Practice for Steel Buildings and Bridges for mill material.

2.9 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 in.
2. Surfaces to be field welded.
3. Surfaces to be high-strength bolted with slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials.
5. Galvanized surfaces.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. SSPC-SP 6/NACE No. 3 – Commercial Blast Cleaning.

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a dry film thickness of not less than 1.5 mils. Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to inaccessible surfaces after assembly or erection. Change color of second coat to distinguish it from first.

D. Painting: Apply a 1-coat, non-asphaltic primer complying with SSPC-PS Guide 7.00 – Painting System Guide 7.00: Guide for Selecting One-Coat Shop Painting Systems, to provide a dry film thickness of not less than 1.5 mils.

2.10 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A123/A123M.

1. Fabricate structural steel in accordance with Class 1 guidelines as described in AGA Recommended Details for Galvanized Structures.
2. Fill all vent holes and grind smooth after fabricating.
3. Fabricate in accordance with the applicable portions of ASTM A143, ASTM A384, and ASTM A385. Avoid fabrication techniques that could cause distortion and embrittlement of the steel.
4. The Fabricator shall consult with the Commissioner and hot-dip galvanizer regarding potential problems or potential handling problems during the galvanizing process that may require modification of design before fabrication begins.
5. Coordination between Fabricator and Galvanizer:

a. Review approved Shop Drawings.

b. Location of holes and lifting lugs for galvanizing.

c. Avoiding using unsuitable marking paints, grease, oil paint, and other deleterious material.

d. Removal of welding slag, splatter, anti-splatter compounds and burrs prior to delivery for galvanizing.

e. Removal of surface contaminants and coating that would not be removable by the normal chemical cleaning process in the galvanizing operation.

6. Galvanize lintels and shelf angles attached to structural-steel frame and located in exterior walls.

2.11 SOURCE QUALITY CONTROL

A. Engage an independent testing and inspecting agency to perform shop tests and inspections and prepare test reports.

1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.

B. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.

C. Bolted Connections: Shop-bolted connections will be tested and inspected according to RCSC's Specification for Structural Joints Using ASTM A325 or A490 Bolts.

D. Welded Connections: In addition to visual inspection, shop-welded connections will be tested and inspected according to AWS D1.1 and the following inspection procedures, at testing agency's option and as indicated on Drawings:

1. Liquid Penetrant Inspection: ASTM E165.

2. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.

3. Ultrasonic Inspection: ASTM E164.

4. Radiographic Inspection: ASTM E94.

E. In addition to visual inspection, shop-welded shear connectors will be tested and inspected according to requirements in AWS D1.1 for stud welding and as follows:

1. Bend tests will be performed if visual inspections reveal either a less-than- continuous 360° flash or welding repairs to any shear connector.

2. Tests will be conducted on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Verify elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedments, with steel erector present, for compliance with requirements.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place, unless otherwise indicated.

1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.4 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC Code of Standard Practice for Steel Buildings and Bridges and Load and Resistance Factor Design Specification for Structural Steel Buildings.

B. Base and Bearing Plates: Coordinate this portion of the Work with the grouting work specified under Section 03 30 00 – Cast-in-Place Concrete. Clean concrete- and masonry-bearing surfaces of bond-reducing materials, and roughen surfaces prior to setting base and bearing plates. Clean bottom surface of base and bearing plates.

1. Set base and bearing plates for structural members on wedges, shims, or setting nuts as required.

2. Weld plate washers to top of base plate.

3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of base or bearing plate before packing with grout.

4. Promptly pack grout solidly between bearing surfaces and base or bearing plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.]

C. Maintain erection tolerances of structural steel within AISC Code of Standard Practice for Steel Buildings and Bridges.

D. Align and adjust various members forming part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.

2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.

F. Remove erection bolts on welded, architecturally exposed structural steel; fill holes with plug welds; and grind smooth at exposed surfaces.

G. Do not use thermal cutting during erection unless approved by Commissioner. Finish thermally cut sections within smoothness limits in AWS D1.1.

H. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

I. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

3.5 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC Specification for Structural Joints Using ASTM A325 or A490 Bolts for type of bolt and type of joint specified.

1. Joint Type: Simple Framing: Snug tightened.

2. Joint Type: Moment Connection, Braced Frame: Slip Critical.

3. Do not reuse high strength bolts.

B. Weld Connections: Comply with AWS D1.1 for welding procedure specifications, tolerances, appearance, and quality of welds and for methods used in correcting welding work.

1. Comply with AISC Code of Standard Practice for Steel Buildings and Bridge and Specification for Structural Steel Buildings – Allowable Stress Design and Plastic Design, Load and Resistance Factor Design Specification for Structural Steel Buildings for bearing, adequacy of temporary connections, alignment, and removal of paint on surfaces adjacent to field welds.

2. Where backing or runoff tabs are removed, gouge, and grind steel smooth, and reweld as necessary to meet specified profile.

3. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances of AISC Code of Standard Practice for Steel Buildings and Bridges for mill material.

3.6 FIELD QUALITY CONTROL

A. Special Inspection and Testing Agency: engage a qualified independent testing and inspecting agency to inspect field welds and high-strength bolted connections.

B. Bolted Connections: Shop-bolted connections will be tested and inspected according to RCSC Specification for Structural Joints Using ASTM A325 or A490 Bolts.

C. Welded Connections: Field welds will be visually inspected according to AWS D1.1.

1. In addition to visual inspection, field welds will be tested according to AWS D1.1 and the following inspection procedures, at testing agency's option and as specified on Drawings:

   a. Liquid Penetrant Inspection: ASTM E165.

   b. Magnetic Particle Inspection: ASTM E709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.

   c. Ultrasonic Inspection: ASTM E164.

   d. Radiographic Inspection: ASTM E94.

D. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.

3.7 REPAIRS AND PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A780 and manufacturer's written instructions.

B. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists and accessories, bearing plates, and abutting structural steel.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

2. Apply a compatible primer of same type as shop primer used on adjacent surfaces.

C. Touchup Painting: Cleaning and touchup painting are specified in Division 9 Painting Sections.

3.8 CLEANING

A. Remove and dispose of away from the site: Erection bolts, erection attachments, temporary lifting lugs, safety barrier supports, and any other auxiliary or temporary steel components that interfere with other work.

END OF SECTION 05 12 00

SECTION 05 21 00
Steel Joist Framing

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:
   1. Refer to DDC General Conditions
      a. Section 01 33 00 "Submittal Procedures"
      b. Section 01 74 19 "Construction Waste Management and Disposal"
      c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section Includes:

1. K-series steel joists.
2. KCS-type K-series steel joists.
3. K-series steel joist substitutes.
4. LH- and DLH-series long-span steel joists.
5. CJ-series composite steel joists.
6. Joist girders.
7. Joist accessories.

B. Related Requirements

1. Section 03 30 00 – Cast-in-Place Concrete for installing bearing plates in concrete.
2. Section 04 20 00 – Unit Masonry for installing bearing plates in unit masonry.
3. Section 05 12 00 – Structural Steel for field-welded shear connectors.

1.3 DEFINITIONS

A. SJI's "Specifications": Steel Joist Institute Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders.

B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support nonuniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.5 SUBMITTALS

A. Product Data: For each type of joist, accessory, and product.

B. Shop Drawings

1. Include layout, designation, number, type, location, and spacing of joists.
2. Include joining and anchorage details; bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
3. Indicate locations and details of bearing plates to be embedded in other construction.

C. Qualification Data: For manufacturer and Professional Engineer Licensed in the State of New York.

D. Welding certificates.

E. Manufacturer certificates.

F. Mill Certificates: For each type of bolt.

G. Comprehensive engineering analysis of special joists signed and sealed by the qualified Professional Engineer licensed in the State of New York responsible for its preparation.

H. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications."

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

C. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M – Structural Welding Code – Steel.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle joists as recommended in SJI's "Specifications".

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated.

1. Use ASD; data are given at service-load level

2. Design special joists to withstand design loads with live-load deflections no greater than the following:

a. Roof Joists: Vertical deflection of 1/360 of the span.

2.2 LONG-SPAN STEEL JOISTS

A. Manufacture steel joists according to Standard Specification for Longspan Steel Joists, LH-Series and Deep Longspan Steel Joists, DLH-Series in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements as indicated.

B. Provide holes in chord members for connecting and securing other construction to joists.

C. Camber long-span steel joists according to SJI's "Specifications." or as indicated.

D. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 in. per 12 in.

2.3 PRIMERS

A. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

B. Primer: Provide shop primer that complies with Section 09 90 00 "Painting and Finishing".

2.4 JOIST ACCESSORIES

A. Bridging: Provide bridging anchors and number of rows of horizontal or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.

B. Fabricate steel bearing plates from ASTM A36/A36M steel with integral anchorages of sizes and thicknesses indicated.

C. Steel bearing plates with integral anchorages are specified in Section 05 50 00 – Metal Fabrications.

D. Furnish ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within 1/2 in. of finished wall surface unless otherwise indicated.

1. Finish: Plain, uncoated.

E. High-Strength Bolts, Nuts, and Washers: ASTM A325, Type 1, heavy hex steel structural bolts; ASTM A563 heavy hex carbon-steel nuts; and ASTM F436 hardened carbon-steel washers.

1. Finish: Plain.

F. Welding Electrodes: Comply with AWS standards.

G. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

2.5 CLEANING AND SHOP PAINTING

A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by power-tool cleaning, SSPC-SP 3.

B. Do not prime paint joists and accessories to receive sprayed fire-resistive materials.

C. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil thick.

D. Shop priming of joists and joist accessories is specified in Section 09 90 00 "Painting and Finishing".

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Do not install joists until supporting construction is in place and secured.

B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written instructions, and requirements in this Section.

1. Before installation, splice joists delivered to Project site in more than one piece.

2. Space, adjust, and align joists accurately in location before permanently fastening.

3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.

4. Delay rigidly connecting bottom-chord extensions to columns or supports until dead loads are applied.

C. Field weld joists to supporting steel bearing plates and framework. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

D. Bolt joists to supporting steel framework using high-strength structural bolts. Comply with RCSC Specification for Structural Joints Using ASTM A325 or ASTM A490 Bolts for high-strength structural bolt installation and tightening requirements.

E. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: engage a qualified testing agency to perform tests and inspections.

B. Visually inspect field welds according to AWS D1.1/D1.1M.

1. In addition to visual inspection, test field welds according to AWS D1.1/D1.1M and the following procedures, at testing agency's option:

   a. Liquid Penetrant Inspection: ASTM E165/E165M.

   b. Magnetic Particle Inspection: ASTM E709.

   c. Ultrasonic Testing: ASTM E164.

   d. Radiographic Testing: ASTM E94.

C. Visually inspect bolted connections.

D. Prepare test and inspection reports.

3.5 PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

B. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists, bearing plates, abutting structural steel, and accessories. Refer to Section 09 90 00 "Painting and Finishing".

1. Clean and prepare surfaces by power-tool cleaning according to SSPC-SP 3.

2. Apply a compatible primer of same type as primer used on adjacent surfaces.

END OF SECTION 05 21 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 05 31 00
Steel Decking

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to DDC General Conditions and the Addendum to the General Conditions
   2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section Includes:

   1. Roof deck.

   2. Composite floor deck.

B. Related Requirements

   1. Section 03 30 00 – Cast-in-Place Concrete for normal-weight and lightweight structural concrete fill over steel deck.

   2. Section 05 12 00 – "Structural Steel" for shop- and field-welded shear connectors.

   3. Section 05 50 00 – "Miscellaneous Metals" for framing deck openings with miscellaneous steel shapes.

   4. Section 09 90 00 – "Painting and Finishing" for repair painting of primed deck and finish painting of deck.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.4 SUBMITTALS

A. Product Data: For each type of deck, accessory, and product indicated.

B. Shop Drawings

   1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

C. Welding certificates.

D. Product Certificates: or each type of steel deck.

E. Product Test Reports: For tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

1. Power-actuated mechanical fasteners.

2. Acoustical roof deck.

F. Evaluation Reports: For steel deck, from ICC-ES.

G. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

C. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3/D1.3M – Structural Welding Code - Sheet Steel.

D. FM Global Listing: Provide steel roof deck evaluated by FM Global and listed in its "Approval Guide, Building Materials" for Class 1 fire rating and Class 1-90 windstorm ratings.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

1. Protect and ventilate acoustical cellular roof deck with factory-installed insulation to maintain insulation free of moisture.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI North American Specification for the Design of Cold-Formed Steel Structural Members.

B. Fire-Resistance Ratings: Comply with ASTM E119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL Fire Resistance Directory or from the listings of another qualified testing agency.

2.2 ROOF DECK

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Steel Deck

a. Canam Steel Corp.

b. Epic Metals Corporation

c. Nucor Corp: Vulcraft Division

d. Or approved equal

B. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with SDI Specifications and Commentary for Steel Roof Deck, in SDI Publication No. 31, and with the following:

1. Aluminum-Zinc-Alloy-Coated Steel Sheet: ASTM A792/A792M, Structural Steel (SS), Grade 50 (230) minimum, AZ50 (AZ150) aluminum-zinc-alloy coating.

2. Deck Profile: As indicated on the contract drawings.

3. Profile Depth: As indicated on the contract drawings.

4. Design Uncoated-Steel Thickness: As indicated on the contract drawings.

5. Span Condition: Double span.

6. Side Laps: Interlocking seam.

2.3 COMPOSITE FLOOR DECK

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Steel Deck

a. Canam Steel Corp.

b. Epic Metals Corporation.

c. Nucor Corp: Vulcraft Division.

d. Or approved equal

B. Composite Floor Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with"SDI Specifications and Commentary for Composite Steel Floor Deck, in SDI Publication No. 31, with the minimum section properties indicated, and with the following:

1. Profile Depth: As indicated on the contract drawings.

2. Design Uncoated-Steel Thickness: As indicated on the contract drawings.

3. Span Condition: Double span.

2.4 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 40,000 psi, not less than 0.0359-in. design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 40,000 psi, of same material and finish as deck, and of thickness and profile recommended by SDI Publication No. 31 for overhang and slab depth.

G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.

H. Galvanizing Repair Paint: ASTM A780/A780M.

I. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.

B. Install temporary shoring before placing deck panels if required to meet deflection limitations.

C. Locate deck bundles to prevent overloading of supporting members.

D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of scheduled Work and final conditions.

H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

3.4 ROOF-DECK INSTALLATION

A. Fasten roof-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 in. long, and as follows:

1. Weld Diameter: As indicated on the contract drawings.

2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space welds as indicated on the contract drawings.

3. Weld Washers: Install weld washers at each weld location.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 18 in., and as follows:

1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 in., with end joints as follows:

1. End Joints: Lapped 2 in.

D. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld to substrate to provide a complete deck installation.

1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

E. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.

3.5 FLOOR-DECK INSTALLATION

A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:

1. Weld Diameter: 5/8 in., nominal.

2. Weld Spacing: Weld edge ribs of panels at each support. Space additional welds an average of 12 in. apart, but not more than 18 in. apart.

3. Weld Spacing: Space and locate welds as indicated on the contract drawings.

4. Weld Washers: Install weld washers at each weld location.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of one-half of the span or 36 in., and as follows:

1. Mechanically fasten with self-drilling, No. 10 diameter or larger, carbon-steel screws.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 in. with end joints as follows:

1. End Joints: Butted.

D. Pour Stops and Girder Fillers: Weld steel sheet pour stops and girder fillers to supporting structure according to SDI recommendations unless otherwise indicated.

E. Floor-Deck Closures: Weld steel sheet column closures, cell closures, and Z-closures to deck, according to SDI recommendations, to provide tight-fitting closures at open ends of ribs and sides of deck.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Field welds will be subject to inspection.

C. Prepare test and inspection reports.

D. Remove and replace work that does not comply with specified requirements.

E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.7 PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A780/A780M and manufacturer's written instructions.

B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation, and apply repair paint. Refer to Section 09 90 00 – "Painting and Finishing".

1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.

   Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Section 09 90 00 – "Painting and Finishing".

END OF SECTION 05 31 00

SECTION 05 40 00
Cold Formed Metal Framing

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. "C" shaped steel studs for exterior non-load bearing wall frame construction.

2. "C" shaped steel joists.

3. Anchors and accessories.

4. Gypsum sheathing.

5. Field inspection.

B. Related Sections

1. Unit Masonry - Section 04 20 00.

2. Structural Steel - Section 05 12 00.

3. Thermal Insulation - Section 07 21 00.

4. Weather Resistive Barriers - Section 07 27 01.

5. Gypsum Drywall - Section 09 29 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Component Engineering: Compute structural properties of studs in accordance with AISI "North American Specification for the Design of Cold Formed Steel Structural Members."

C. Fire-Rated Assemblies: Where framing units are indicated to be components of fire-resistance rated assemblies, provide cold-formed metal framing identical to that of assemblies tested for fire resistance per ASTM E 119. Products used in the assembly shall carry a classification label from an approved testing and inspection agency.

D. Qualifications

1. Manufacturer's Qualifications: Minimum three years' experience in producing products of the type specified.

2. Installer's Qualifications: Minimum three years' experience in installation of the type of product specified.

3. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M "Structural Welding Code - Steel" and AWS DL3 "Structural Welding Code – Sheet Steel."

E. Pre-Installation Meeting

1. Convene meeting at project site within one week of scheduled start of installation with representatives of the following in attendance: City of New York, Commissioner, Contractor and installer.

2. Review substrate conditions, requirements of related work, installation instructions, storage and handling procedures, and protection measures.

3. Keep minutes of meeting, including responsibilities of various parties and deviations from specifications and installation instructions. Distribute minutes to attendees within 72 hours.

F. Comply with the following standards:

1. American Iron and Steel Institute (AISI):

a. "North American Specification for the Design of Cold-Formed Steel Structural Members," latest edition.
b. "Standard for Cold-Formed Steel Framing General Provisions."

2. American Welding Society (AWS):

a. Structural Welding Code (D1.1).
b. Specifications for Welding Sheet Steel in Structures (E1.3).

3. ASTM:

a. ASTM A 653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coted (Galvannealed) by the Hot-Dip Process.
b. ASTM A 780 - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
c. ASTM A 924 - Standard Requirements for Sheet Steel, Metallic-Coated by the Hot-Dipped Process.

d. ASTM C 955 - Standard Specification for Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks), and Bracing or Bridging for Screw Application of Gypsum Panel Products and Metal Plaster Bases.
e. ASTM A 1003 - Standard Specification for Steel Sheet, Carbon, Metallic- and Non-Metallic-Coated for Cold-Formed Framing Members.
f. ASTM C 1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories.
g. ASTM C 1513 - Standard Specification for Steel Tapping Screws for Cold-Formed Steel Framing Connections.

G. Vertical and Lateral Fire Propagation Test Characteristics: The exterior wall assembly is required to comply with NFPA 285 "Standard Method of Test for the Evaluation of Flammability Characteristics of Exterior Nonload-bearing Wall Assemblies Containing Combustible Components." The base wall, stud cavity insulation, wall sheathing, air barrier, continuous wall rigid insulation and exterior cladding are components that are required to be to be evaluated as part of this specific assembly test.

H. The Contractor will provide signed and sealed fully engineered shop drawings for the enclosure systems in their entirety for confirmation of compliance with the performance and aesthetic criteria.

1.4 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. Product Data: For information only, submit manufacturer's product information and installation instructions for each item of cold-formed framing and accessories.

C. Shop Drawings

1. Submit shop drawings for components and installations not fully dimensioned or detailed in manufacturer's product data. Include placing drawings for framing members showing size and gauge designations, number, type, location and spacing. Indicate supplemental bracing, splices, window and door headers accessories and details as may be required for proper installation.

2. If the Contractor elects to prefabricate framing members into panels for erection, he shall submit shop drawings of such panels at suitable scale showing all dimensions, components, and methods of fastening and support.

D. For fasteners, submit product data sheet and samples.

E. Engineering Data

1. Submit Engineering Data drawings to the Commissioner for review. The Contractor is responsible for the structural engineering and supports for the cold-formed metal frame and must show his proposed system and how the Performance Criteria noted below is accommodated on these drawings.

2. These drawings must show all load conditions and engineering calculations relative to connections, fastening devices and anchorage, as well as size and gauge of members. Calculations and drawings must be prepared by a Structural Engineer licensed in the State of New York and shall be signed and sealed by this Engineer.

F. Quality Assurance Submittals: Submit the following:

1. Qualifications: Proof of manufacturer, installer, and welder qualifications.

2. Structural engineering services calculations.

3. Certificates

a. Submit mill certificates signed by framing member/accessory manufacturer certifying compliance with material requirements.
b. Welder certificates.

4. Manufacturer's installation instructions for framing members and framing accessories.

1.5 PERFORMANCE CRITERIA

A. Cold-formed metal framing system shall be engineered, fabricated, and installed to withstand a 30 psf suction and pressure load with a maximum deflection of L/360 with metal panels.

B. Engineer system to accommodate vertical deflection of structural building frame, live loading, seasonal and day/night temperature ranges and construction tolerances.

PART II - PRODUCTS

2.1 MANUFACTURER

A. Basis of Design: Subject to compliance with requirements, provide Marino Ware cold-formed metal framing or comparable product by one of the following manufacturers:
1. Dale/Incor
2. Superior Steel Studs
3. ClarkDietrich Building Systems
4. Super Stud Building Products
5. Or approved equal

2.2 METAL FRAMING: GENERAL

A. System Components: With each type of metal framing required, provide manufacturer's standard steel runners, (tracks), blocking, lintels, clip angles, shoes, reinforcements, fasteners and accessories, as recommended by manufacturer for the applications indicated, as needed to provide a complete metal framing system.

2.3 MATERIALS

A. Steel Sheet for Studs and Tracks: ASTM A 1003 Structural Grade, Type H, metallic coated, of grade and coating weight as follows:

1. Grade: As required by structural performance.

2. Coating: G90 galvanized coating.

B. Steel Sheet for Clips: ASTM A 653, structural steel, zinc coated, of grade and coating as follows:

1. Grade: As required by structural performance.

2. Coating G90 galvanized coating.

2.4 FRAMING MEMBERS

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges; thickness and grade as required by structural performance.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths compatible with studs, un-punched, with un-stiffened flanges; thickness and grade as required by structural performance.

2.5 FRAMING ACCESSORIES

A. Stamp manufacturer's name on each accessory item.

B. Provide screws with accessories designated for screw attachment.

C. Connector Devices

1. Vertical Deflection Clips: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. The Steel Network Inc.; VertiClip
   b. ClarkDietrich Building Systems; FastClip
   c. Scafco; ESC
   d. Or approved equal.

2. Rigid Clip Angles: Size as required by structural engineering calculations. Rigid attachment to structure and stud web. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. The Steel Network Inc.; StiffClip
   b. ClarkDietrich Building Systems; EasyClip
   c. Scafco; Secure Clip
   d. Or approved equal.

D. Bridging

1. Cold Rolled Channel: 1-1/2" by 1/2" by 56 mil thick.

   a. Bridging Clip: Provide attachment through stud punch-out clamping onto stud web and wrapping around bridging channel. Provide holes for screw attachment to stud web and channel. Subject to compliance with requirements, products that may be incorporated into the Work include the following:
      1). The Steel Network Inc.; BridgeClip
      2). ClarkDietrich Building Systems; FastBridge
      3). Scafco; Secure Bridge Clip
      4). Or approved equal.

2. Flat Strap: Width and thickness as required by structural engineering calculations. Rigid attachment to stud flange.

3. Solid Bridging: Channel shaped bridging with lipped flanges and integral formed clips. Screw attachment to stud. 33 mils minimum thickness, size as required by structural engineering calculations.

4. Bridging and accessories shall be hot dip zinc coated per ASTM A 153.

E. Header for Window and Door Openings: Provide system complete with all accessories including clips and accessories; finish and gauge to match studs.

2.6 FASTENERS

A. Screws: Corrosion resistant coated, self-drilling, pan or hex washer head. Provide screw type and size as required by structural engineering calculations.

B. Anchor Bolts and Studs: ASTM A 307, Grade A, carbon steel, with hex-head carbon steel nuts and flat steel washers. Hot-dip zinc coated in accordance with ASTM A 153. Provide bolt or stud type and size as required by structural engineering calculations.

C. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

D. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times design load, as determined by testing per ASTM E 1190 conducted by a qualified independent testing agency.

2.7 GALVANIZING TOUCH-UP

A. For touching up damaged galvanized surfaces after erection. Apply to a dry film thickness of 1.5 to 3.0 mils.

1. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. Z.R.C. Worldwide; Silver Galv
   b. Brite Products; Brite Zinc

c. Duncan Galvanizing Corp.; ZiRP
d. Or approved equal.

2.8 GYPSUM SHEATHING AND RELATED ACCESSORIES

A. Gypsum Sheathing: 5/8" thick meeting ASTM C 1177, Type X. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

1. Georgia Pacific; Dens-Glass Fireguard, Type X
2. U.S. Gypsum Co.; Securock Glass-Mat Sheathing
3. National Gypsum Co.; Gold Bond EXP Extended Exposure Sheathing
4. Or approved equal.

B. Fasteners: 1-1/4" Type S-12 screws with corrosion-resistant finish.

C. Joint Treatment: Provide a one-part high performance sealant conforming to ASTM C 920, Type S, Grade NS, Class 25 meeting with the approval of the air/vapor barrier manufacturer for compatibility; see Section 07 27 01 Weather Resistive Barriers for description. Apply a 3/8" bead of sealant to the joint and trowel flat. Apply enough of the same material to each fastener to cover completely when trowelled flat.

2.9 FABRICATION

A. Framing components may be prefabricated into panels prior to erection. Fabricate panels plumb, square, true to line and braced against racking with joints welded. Perform lifting of prefabricated panels in a manner to prevent damage or distortion in any members in the assembly.

B. Fastenings: Attach similar components by welding. Attach dissimilar components by welding, bolting or screw fasteners, as standard with manufacturer.

C. Wire tying of framing components is not permitted.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION: GENERAL

A. Methods of construction shall be piece by piece.

B. Connections shall be accomplished with self-drilling screws or welding so that the connection meets or exceeds the design loads required at that connection.

C. Studs shall be installed seated squarely (within 1/16") against the web portion of the top and bottom tracks. Tracks shall rest on a continuous, uniform bearing surface.

D. Cutting of steel framing members may be accomplished with a saw or shear. Torch cutting of loaded members is not permitted. Cutting of loaded members is not permitted unless under supervision of the Commissioner.

E. Temporary bracing shall be provided and left in place until work is permanently stabilized.

F. Bridging shall be of size and type shown on the approved shop drawings and as called for in the engineering calculations.

G. Install headers in all openings that are larger than the stud spacing in that wall. Form headers as shown on the drawings.

H. Insulation meeting the requirements of Section 07 21 00, Thermal Insulation, shall be placed in all jamb and header type conditions that will be inaccessible after their installation into the wall.

I. Provide jack studs to support each end of headers. These studs shall be securely connected to the header, must seat squarely in the lower track of the wall, and be properly attached to it.

J. If a header is low in the wall, the less than full-height studs (cripples) that occur over the header shall be engineered to carry all imposed loads.

K. Wall track shall not be used support any load unless specifically engineered for that purpose.

L. All axially loaded members shall be aligned vertically, to allow for full transfer of the loads down to the foundation. Vertical alignment shall be maintained at floor/wall intersections or alternate provisions for load transfer may be made.

M. Holes that are field cut into steel framing members shall be within the limitation of the product and its engineering. Provide reinforcement where holes are cut through load bearing members in accordance with manufacturer's recommendations and as approved by the Commissioner.

N. Touch up all steel bared by welding using touch-up coating specified herein.

O. Studs shall be spaced to suit the engineering requirements and limitations of collateral facing materials.

P. Care should be taken to allow for additional studs at intersections, corners, doors, windows, control joints, etc., and as called for in the shop drawings or engineering calculations.

Q. Install supplementary framing, blocking, and bracing in metal framing system wherever walls or partitions are indicated to support fixtures, equipment, services, casework, heavy trim and furnishings, and similar work requiring attachment to the wall or partition. Where type of supplementary support is not otherwise indicated, comply with stud manufacturer's recommendations and industry standards in each case, considering weight or loading resulting from item supported.

R. Provide for structure movement, expansion shall be allowed where indicated and necessary by engineering and 2014 New York City Building Code requirements.

S. Frame both sides of expansion and control joints with separate studs; do not bridge the joint with components of stud system.

T. Install horizontal bridging in stud system, spaced (vertical distance) at not more than 48 inches on center. Fasten at each intersection.

U. Splicing of axially loaded members or floor joists shall not be permitted.

V. Wire tying of members is not permitted.

3.3 INSTALLATION OF GYPSUM SHEATHING

A. Fasten sheathing to exterior of each stud with specified fasteners spaced 3/8" from ends and edges and approx. 8" o.c. at each stud. Install fasteners in accordance with manufacturer's recommendations using 2500-RPM maximum screw gun. Sheathing board shall be installed horizontally. Apply sealant between joints and trowel flush; and apply sealant around sheathing perimeter and at interface with other materials. Cover fastener heads with sealant and trowel flush.

END OF SECTION 05 40 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 50 00
Miscellaneous Metals

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Rough hardware.

2. Vertical steel ladders and ship's ladders, including platform located outside of 2nd floor egress door at boiler room.

3. Steel pipe handrails and railings not part of steel pan stair assemblies.

4. Roof freestanding (non-penetrating) guardrail system.

5. Light steel framing and supports, not included as part of work of other trades.

6. Structural steel door frames at service doors.

7. Steel bollards.

8. Miscellaneous steel trim.

9. Steel grating and frames.

10. Countertop supports.

11. Sleeves in concrete walls and slabs.

12. Steel framing, bracing, supports, anchors, bolts, shims, fastenings, and all other supplementary parts indicated on drawings or as required to complete each item of work of this Section.

13. Prime painting, touch-up painting, galvanizing and separation of dissimilar metals for work of this Section.

14. Cutting, fitting, drilling and tapping work of this Section to accommodate work of other Sections and of concrete, masonry or other materials as required for attaching and installing work of this Section.

B. Related Sections

1. Structural Steel - Section 05 12 00.
2. Carpentry - Section 06 20 00.
3. Painting and Finishing - Section 09 90 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Shop Assembly: Pre-assemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for re-assembly and coordinated installation.

C. Reference Standards: The work is subject to requirements of applicable portions of the following standards:

1. AISC "Manual of Steel Construction"
2. AWS D1.1 "Structural Welding Code"
3. SSPC SP-3 "Surface Preparation Specification No. 3, Power Tool Cleaning"
4. SSPC PA-1 "Painting Application Specification"
5. "Handbook on Bolt, Nut and Rivet Standards," Industrial Fasteners Institute.

D. Steel Materials: For steel to be hot dip-galvanized, provide steel chemically suitable for metal coatings complying with the following requirements: carbon below 0.25 percent, silicon below 0.24 percent, phosphorous below 0.05 percent, and manganese below 1.35 percent. Notify galvanizer if steel does not comply with these requirements to determine suitability for processing.

E. Engage the services of a galvanizer who has demonstrated a minimum of three (3) years' experience in the successful performance of the processes. The Commissioner has the right to inspect and approve or reject the galvanizer/galvanizing facility.

F. The galvanizer/galvanizing facility must have an ongoing Quality Control/Quality Assurance program which has been in effect for a minimum of three years and shall provide the Commissioner with process and final inspection documentation. The galvanizer/galvanizing facility must have an on-premise testing facility capable of measuring the chemical and metallurgical composition of the galvanizing bath and pickling tanks.

G. Inspection and testing of hot-dip galvanized coating shall be done under the guidelines provided in the American Hot-Dip Galvanizers Association (AGA) publication "Inspection of Products Hot-Dip Galvanized After Fabrication."

1.4 PERFORMANCE STANDARDS

A. Railings shall be designed to resist loads per 2014 New York City Building Code.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

A. Manufacturer's Literature: Submit manufacturer's specifications, load tables, dimension diagrams, anchor details and installation instructions for products to be used in the fabrication of miscellaneous metal work, including paint products.

B. Shop Drawings: Shop drawings for the fabrication and erection of all assemblies of miscellaneous iron work which are not completely shown by manufacturer's data sheets. Include plans and elevations at not less than 1" to 1'-0" scale and include details of sections and connections at not less than 3" to 1'-0" scale. Show anchorage and accessory items.

C. Engineering Data

1. Before any ladders or railings are fabricated, submit engineering data drawings to the Commissioner for review indicating how performance standards specified here shall be met. The Contractor is responsible for the structural design and supports for these systems and must show his proposed systems on these drawings.

2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of members.

3. Contractor to engage a Structural Engineer licensed in the State of New York to prepare calculations and drawings. Calculations and drawings shall be signed and sealed by this Engineer.

D. Welding shall be indicated on shop drawings using AWS symbols and showing length, size and spacing (if not continuous). Auxiliary views shall be shown to clarify all welding. Notes such as 1/4" weld, weld and tack weld are not acceptable.

E. Certification: For items to be hot-dip galvanized, identify each item galvanized and to show compliance of application. The Certificate shall be signed by the galvanizer and shall contain a detailed description of the material processed and the ASTM standard used for the coating and, the weight of the coating. In addition, and as attachment to Certification, submit reports of testing and inspections indicating compliance with the provisions of this Section.

PART II – PRODUCTS

2.1 MATERIALS

A. Metals

1. Metal Surfaces, General: For fabrication of miscellaneous metal work which will be exposed to view, use only materials which are smooth and free of surface blemishes including pitting, seam marks, roller marks, rolled trade names and roughness.

2. Steel Plates, Shapes and Bars: ASTM A 36.

3. Steel Tubing: Cold formed, ASTM A 500; or hot rolled, ASTM A 501.

4. Structural Steel Sheet: Hot rolled, ASTM A 570; or cold rolled, ASTM A 611, Class 1; of grade required for design loading.

5. Galvanized Structural Steel Sheet: ASTM A 924, of grade required for design loading. Coating designation G90.

6. Steel Pipe: ASTM A 53, type and grade as selected by fabricator and as required for design loading; black finish unless galvanizing is indicated; standard weight (Schedule 40), unless otherwise indicated.

7. Gray Iron Castings: ASTM A 48, Class 30, unless another class is indicated or required by structural loads.

8. Malleable Iron Castings: ASTM A 47, grade as selected by fabricator.

9. Brackets, Flanges and Anchors: Cast or formed metal of the same type material and finish as supported rails, unless otherwise indicated.

10. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron, ASTM A 47, or cast steel, ASTM A 27. Provide bolts, washers and shims as required, hot-dip galvanized, ASTM A 153.

B. Grout: Non-shrink, non-metallic grout conforming to the requirements of Section 03 30 00, Cast-in-Place Concrete.

C. Fasteners

1. General: Provide zinc-coated fasteners for exterior use or where built into exterior walls. Select fasteners for the type, grade and class required.

2. Bolts and Nuts: Regular hexagon head type, ASTM A 307, Grade A.

3. Anchor Bolts: ASTM F 1554, Grade 36.

4. Lag Bolts: ASME B18.2.1.

5. Machine Screws: ASME B18.6.3.

6. Plain Washers: Round, carbon steel, ASME B18.22.1.

7. Masonry Anchorage Devices: Expansion shields, FS FF-S-325.

8. Toggle Bolts: Tumble-wing type, FS FF-B-588, type, class and style as required.

9. Lock Washers: Helical spring type carbon steel, ASME B18.21.1.

D. Shop Paint:

1. Shop prime all non-galvanized miscellaneous metal items

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Series 88 Azeron Primer by Tnemec
b. ICI Devoe "Rust Guard" quick dry alkyd shop coat No. 41403
c. "Interlac 393" by International Protection Coatings
d. Or approved equal

3. If steel is to receive high performance coating as noted in Section 09 90 00, Painting and Finishing, shop prime using primer noted in Section 09 90 00, Painting and Finishing.

E. Bituminous Paint: Cold applied asphalt emulsion complying with ASTM D 1187.

F. Galvanizing Repair Coating: For touching up damaged galvanized surfaces after erection. Apply to a dry film thickness of 1.5 to 3.0 mils.

1. Manufactures: Subject to compliance with requirements, provide products by one of the following:

a. Z.R.C. Worldwide; Silver Galv
b. Brite Products; Brite Zinc
c. Duncan Galvanizing Corp.; ZiRP
d. Or approved equal

2.2 PRIME PAINTING

A. Scope: All ferrous metal (except galvanized steel) shall be cleaned and shop painted with one coat of specified ferrous metal primer. No shop prime paint required on galvanized steel or aluminum work.

B. Cleaning: Conform to Steel Structures Painting Council Surface Preparation Specification SP 3 (latest edition) "Power Tool Cleaning" for cleaning of ferrous metals which are to receive shop prime coat.

1. Steel to get high performance coating as noted in Section 09 90 00, Painting and Finishing shall be cleaned as per SSPC SP.6 "Commercial Blast Cleaning."

C. Application

1. Apply shop prime coat immediately after cleaning metal. Apply paint in dry weather or under cover. Metal surfaces shall be free from frost or moisture when painted. Paint all metal surfaces including edges, joints, holes, corners, etc.

2. Paint surfaces which will be concealed after shop assembly prior to such assembly. Apply paint in accordance with approved paint manufacturer's printed instructions, and the use of any thinners, adulterants or admixtures shall be only as stated in said instructions.

3. Paint shall uniformly and completely cover the metal surfaces, 2.0 mils minimum dry film thickness. No work shall be shipped until the shop prime coat thereon has dried.

D. Touch-Up: In the shop, after assembly and in the field, after installation of work of this Section, touch-up damaged or abraded portions of shop prime paint with specified ferrous metal primer.

E. Apply one shop coat to fabricated metal items, except apply two (2) coats of paint to surfaces inaccessible after assembly or erection. Change color of second coat to distinguish it from the first.

2.3 GALVANIZING

A. Scope: All ferrous metal exposed to the weather, and all ferrous metals indicated on drawings or in specifications to be galvanized, shall be cleaned and then hot-dipped galvanized after fabrication.

B. Avoid fabrication techniques that could cause distortion or embrittlement of steel items to be hot-dip galvanized. Fabricator shall consult with hot-dip galvanizer regarding potential warpage problems or handling problems during the galvanizing process that may require adjustment of fabrication techniques or design before finalizing shop drawings and beginning of fabrication.

C. Cleaning: Thoroughly clean metal surfaces of all mill scale, rust, dirt, grease, oil, moisture and other contaminants prior to galvanizing.

D. Application: Hot-dip galvanizing shall conform to the following:

1. ASTM A 143: Safeguarding Against Embrittlement of Hot-Dip Galvanized Structural Steel.

2. ASTM A 123: Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

3. ASTM A 153: Galvanized Coating on Iron and Steel Hardware - Table 1.

4. ASTM A 384: Practice for Safeguarding Against Warpage and Distortion During Hot-Dip Galvanizing of Steel Assemblies.

5. ASTM A 385: Practice for Providing High Quality Zinc Coatings.

6. ASTM A 924: Galvanized Coating on Steel Sheets.

7. Minimum weight of galvanized coating shall be two (2) oz. per square foot of surface.

E. Fabricate joints which will be exposed to weather in a manner to exclude water or provide weep holes where water may accumulate.

F. All galvanized materials must be inspected for compliance with these specifications and marked with a stamp indicating the name of the galvanizer, the weight of the coating, and the appropriate ASTM number.

G. To minimize surface imperfection (e.g. flux inclusions), material to be galvanized shall be dipped into a solution of Zinc Ammonium Chloride (pre-flux) immediately prior to galvanizing. The type of galvanizing process utilizing a flux blanket overlaying the molten zinc will not be permitted.

H. After galvanizing all materials not exposed to view must be chromated by dipping material in a 0.2% chromic acid solution.

I. Galvanized surfaces, where exposed to view, must have a smooth, level surface finish. Where this does not occur, piece shall be rejected and replaced to the acceptance of the Commissioner.

2.4 PROTECTIVE COATINGS

A. Whenever dissimilar metals will be in contact, separate contact surfaces by coating each contact surface prior to assembly or installation with one coat of specified bituminous paint, which shall be in addition to the specified shop prime paint. Mask off those surfaces not required to receive protective coating.

2.5 WORKMANSHIP

A. General

1. Miscellaneous metal work shall be fabricated by an experienced fabricator or manufacturer and installed by an experienced tradesman.

2. Materials, methods of fabrication, fitting, assembly, bracing, supporting, fastening, operating devices, and erection shall be in accordance with drawings and specifications, approved shop drawings, and best practices of the industry, using new and clean materials as specified, having structural properties sufficient to safely sustain or withstand stresses and strains to which materials and assembled work will be subjected.

3. All work shall be accurately and neatly fabricated, assembled and erected.

B. Shop Assembly: Insofar as practicable, fitting and assembly of work shall be done in shop. Shop assemble work in largest practical sizes to minimize field work. Ensure that the shop-fabricated miscellaneous metal items will properly fit the field condition. In the event that shop-fabricated miscellaneous metal items do not fit the field condition, the item shall be returned to the shop for correction.

C. Cutting: Cut metal by sawing, shearing, or blanking. Flame cutting will be permitted only if cut edges are ground back to clean, smooth edges. Make cuts accurate, clean, sharp and free of burrs, without deforming adjacent surfaces or metals.

D. Holes: Drill or cleanly punch holes; do not burn.

E. Connections: Make connections with tight joints, capable of developing full strength of member, flush unless indicated otherwise, formed to exclude water where exposed to weather. Locate joints where least conspicuous. Unless indicated otherwise, weld or bolt shop connections; bolt or screw field connections. Provide expansion and contraction joints to allow for thermal movement of metal at locations and by methods approved by the Commissioner.

1. Welding

a. Shall be in accordance with AWS D1.1 and shall be done with electrodes and/or methods recommended by the manufacturer of the metals being welded.
b. Welds shall be continuous, except where spot welding is specifically permitted. Welds exposed to view shall be ground flush and dressed smooth with and to match finish of adjoining surfaces; undercut metal edges where welds are required to be flush.
c. All welds on or behind surfaces which will be exposed to view shall be done so as to prevent distortion of finished surface. Remove weld spatter and welding oxides from all welded surfaces.

2. Bolts and Screws: Make threaded connections tight with threads entirely concealed. Use lock nuts. Bolts and screw heads exposed to view shall be flat and countersunk. Cut off projecting ends of exposed bolts and screws flush with nuts or adjacent metal.

F. Operating Mechanism: Operating devices (i.e. pivots, hinges, etc.) mechanism and hardware used in connection with this work shall be fabricated, assembled, installed and adjusted after installation so that they will operate smoothly, freely, noiselessly and without excessive friction.

G. Built-In Work: Furnish anchor bolts, inserts, plates and any other anchorage devices, and all other items specified under this Section to be built into concrete, masonry or work of other trades, with necessary templates and instructions, and in ample time to facilitate proper placing and installation.

H. Supplementary Parts: Provide as necessary to complete each item of work, even though such supplementary parts are not shown or specified.

I. Coordination: Accurately cut, fit, drill and tap work of this Section to accommodate and fit work of other trades. Furnish or obtain, as applicable, templates and drawings to or from applicable trades for proper coordination of this work.

J. Exposed Work

1. In addition to requirements specified herein and shown on drawings, all surfaces exposed to view shall be clean and free from dirt, stains, grease, scratches, distortions, waves, dents, buckles, tool marks, burrs, and other defects which mar appearance of finished work.

2. Metal work exposed to view shall be straight and true to line or curve, smooth arrises and angles as sharp as practicable, miters formed in true alignment, profiles accurately intersecting, and with joints carefully matched to produce continuity of line and design.

3. Exposed fastenings, where permitted, shall be of the same material, color and finish as the metal to which applied, unless otherwise indicated, and shall be of the smallest practicable size.

K. Preparation for Hot-Dip Galvanizing: Fabricator shall correctly prepare assemblies for galvanizing in consultation with galvanizer and in accordance with applicable Reference Standards and applicable AGA publications for the "Design of Products to be Hot-Dip galvanized After Fabrication." Preparation shall include but not be limited to the following:

1. Remove welding flux.

2. Drill appropriate vent holes and provide for drainage in inconspicuous locations of hollow sections and semi-enclosed elements. After galvanizing, plug vent holes with shaped lead and grind smooth.

2.6 MISCELLANEOUS METALS ITEMS

A. Rough Hardware

1. Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels and other miscellaneous steel and iron shapes as required for framing and supporting woodwork, and for anchoring or securing woodwork to concrete or other structures. Straight bolts and other stock rough hardware items are specified in Section 06 20 00, Carpentry.

2. Fabricate items to sizes, shapes and dimensions required. Furnish malleable iron washers for heads and nuts which bear on wood connections; elsewhere, furnish steel washers.

B. Ladders

1. Vertical steel ladders shall be eighteen (18) inches wide with 3/4" diameter non-slip steel rungs spaced twelve (12) inches o.c. Stringers shall be 3/8" thick by 2-1/2" wide steel bars; rungs welded to bars. Attach ladders to walls six (6) inches from top and bottom and maximum thirty-six (36) inches o.c. from these points. At the roof, gooseneck the rails back to the structure to provide secure ladder access.

2. Provide sloping ladders (ship's ladders) where noted. Fabricate open type construction with structural steel channel or steel plate stringers, pipe handrails, and open steel grating treads. Provide all necessary brackets and fittings for installation.

3. Ladders shall be fabricated to support a live load of one hundred (100) lbs. per square foot and a concentrated load of three hundred (300) lbs. per rung; loads not to act simultaneously.

C. Steel Pipe Handrails

1. Provide Schedule 40 steel pipe of size shown on Drawings. Fittings shall be flush type, malleable of cast iron. Brackets shall be malleable iron, design as selected by the Commissioner.

2. Construction: Form direction changes in rails using solid bar stock or elbows. Connections shall be shop welded and ground smooth and flush, except where field connections and expansion joints are required. Field connections may be welded, internal sleeve and plug weld, or internal sleeve and set screw.

3. Secure handrails to walls with wall brackets. Provide brackets of malleable iron castings, with not more than three (3) inches clearance from inside face of handrail to wall surface. Neatly drill wall plate portion of the bracket into concrete or masonry to receive bolts for concealed anchorage. For installation at drywall, Drywall trades shall provide plate to receive wall plate portion of bracket and anchor or bolt wall plate through drywall to supporting steel plate. Locate brackets at not more than 5'-0" o.c. unless otherwise shown.

4. Provide wall return fittings of cast iron, flush type, with the same projection as that specified for wall brackets.

5. Longitudinal members shall be parallel with each other and with floor surface or shape of stair to a tolerance of 1/8" in 10'-0" linear feet. Center line of members within each run of railing shall be in the plane.

6. For steel pipe posts where indicated, anchor posts in concrete by means of pipe sleeves set and anchored into concrete. Provide sleeves of galvanized steel pipe, not less than six (6) inches long and having an inside diameter not less than 1/2" greater than outside diameter of the inserted pipe. Provide steel plate closure secure to bottom of sleeve and of width and length not less than one (1) inch greater than outside diameter of sleeve. After posts have been inserted into sleeves, fill annular space between post and sleeve solid with non-shrink, non-ferrous grout. Cover anchorage joint with a round steel flange welded to post. Posts shall be set plumb within 1/8" vertical tolerance.

7. Steel pipe handrails shall be capable of resisting a two hundred (200) lb. force applied to rail from any direction and a uniformly distributed load of fifty (50) lbs. per linear foot applied downward or horizontally, loads not to act simultaneously.

D. Roof Freestanding Guardrail System

1. Kee Safety, Inc.; Simplified Safety

2. Accufit; Edge Fall Protection

3. Fireguard; Flexible Lifetime System

4. Or approved equal.

E. Miscellaneous Light Steel Framing

1. Light steel framing, bracing, supports, framing, clip angles, shelf angles, plates, etc., shall be of such shapes and sizes as indicated on the drawings and details or as required to suit the condition and shall be provided with all necessary supports and reinforcing such as hangers, braces, struts, clip angles, anchors, bolts, nuts, welds, etc., as required to properly support and rigidly fasten and anchor same in place and to steel, concrete, masonry and all other connecting and adjoining work.

2. All light steel framing steel shall be furnished and erected in accordance with the applicable requirements of the "Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings" by the American Institute of Steel Construction and as specified herein.

F. Structural Steel Door Frames

1. Fabricate steel door frames of structural shapes and bars, fully welded, uniform, square and true. Plug weld built-up members, continuously weld exposed joints; grind exposed welds smooth. Provide 5/8" x 1-1/2" steel bar stops. Secure removable stops to frame with countersunk machine screws, uniformly spaced at not more than ten (10) inches o.c.

2. Provide necessary reinforcements and drill and tap as required for finish hardware.

3. Provide steel strap anchors for securing door frames into adjoining concrete or masonry, using 1/8" x 2" straps of the length required for a minimum eight (8) inch embedment. Weld anchors to frame

jambs no more than twelve (12) inches from both bottom and head of frame and space anchors not more than thirty (30) inches apart.

4. Extend bottom of frames to floor elevation and secure to concrete with steel angle clips welded to frames, anchored with expansion shields and bolts.

G. Steel Bollards: Provide six (6) inches O.D. extra strong (Schedule 80) steel pipe, concrete filled, with base of steel plate for mounting to anchor bolts in concrete foundation. Rabbet top of steel pipe and insert 1/4" steel plate cap, flush with top of pipe. Weld top of cap to pipe and grind smooth and flush.

H. Miscellaneous Steel Trim: Provide shapes and sizes for profiles shown. Except as otherwise indicated, fabricate units from structural steel shapes and plates and steel bars, with continuously welded joints and smooth exposed edges. Use concealed field splices wherever possible. Provide cutouts, fittings and anchorages as required for coordination of assembly and installation with other work.

I. Steel Gratings and Frames

1. Provide hot dipped galvanized steel gratings complying with FS RR-G-661 with rectangular cross bars welded to bearing bars. Bars to have plain wearing surface.

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. McNichols
   b. Reliance
   c. Borden
   d. Irving Subway Grating
   e. Or approved equal

3. Hinged Section: Provide hinged sections in areaway gratings where required by the drawings. Each hinged section up to 4'-0" wide shall be provided with two (2) five knuckle, fast pin, regular weight, plain bearing, wrought bronze butt hinges. Each hinged section over 4'-0" wide shall be provided with three (3) butt hinges. Hinged sections shall have provisions for padlocking on the underside.

4. Furnish grating frames, with corners mitered, welded and ground smooth, and with welded-on straps for secure anchorage into concrete. Frames and anchors to be galvanized.

5. Structural Performance: Provide gratings capable of withstanding the following structural loads without exceeding the allowable design working stress of the materials involved, including anchors and connections:

   a. Floors: Capable of withstanding a uniform load of 250 lbf/sq. ft. or a concentrated load of 3000 lbf, whichever produces the greater stress.
   b. Walkways and Elevated Platforms Other Than Exits: Capable of withstanding a uniform load of 60 lbf/sq. ft. Limit deflection to L/360 or 1/4", whichever is less.
   c. Walkways and Elevated Platforms Used as Exits: Capable of withstanding a uniform of 100 lbf/sq. ft. or a concentrated load of 300 lbf on an area of 4 sq. in., whichever produces the greater stress. Limit deflection to L/360 or 1/4", whichever is less.
   d. Sidewalks and Vehicular Driveways: Capable of withstanding a uniform load of 250 lfb/sq. ft. or a concentrated load of 8000 lbf, whichever produces the greater stress.

J. Countertop Supports: Steel framing as indicated or required to support countertops. Conceal framing under countertops and within wall behind countertops. Provide supports to withstand a concentrated load of not less than three hundred (300) lbs. applied at any point with a deflection not to exceed L/240 for the length of the countertop.

K. Masonry Support Steel: Provide galvanized steel, relieving angles, plates, accessories and other steel shapes for masonry support steel.

1. Fabricate masonry support steel to allow final adjustment with the closest tolerances possible. Relieving angles which require cutting to fit masonry flashing shall be straightened without deflections.

2. Coordinate masonry support system with concrete work for locations of wedge inserts.

3. Install to meet requirements of building masonry work, face brick coursing and stone placement. Coordinate final adjustments with masonry work as work progresses.

L. Sleeves in Concrete Walls and Slabs

1. Sleeves through concrete walls shall be of Schedule 40 steel pipe with i.d. two (2) inches larger than o.d. of pipe or conduit (including insulation, if any) to be accommodated. Sleeves shall project one-half (1/2) inch on each side of finished wall. Provide rectangular one-quarter (1/4) inch steel plate collar at center, continuously welded to the perimeter of the sleeve, and six (6) inches wider than the o.d.

2. Slots in slabs shall be 12 gauge steel sheet, galvanized, of dimensions indicated, with strap anchors welded in place not more than twelve (12) inches on centers.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing miscellaneous metal fabrications to in-place construction; including threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws, and other connectors as required.

B. Cutting, Fitting and Placement: Perform cutting, drilling and fitting required for installation of miscellaneous metal fabrications. Set work accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items which are to be built into concrete, masonry, or similar construction.

C. Fitting Connections: Fit exposed connections accurately together to form tight hairline joints. Weld connections which are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Grind exposed joints smooth and touch up shop paint coat. Do not weld, cut or abrade the

surfaces of exterior units which have been hot dip galvanized after fabrication, and are intended for bolted or screwed field connections.

D. Field Welding: Comply with AWS D1.1 for procedures of manual shielded metal-arc welding, appearance, and quality of welds made, and methods used in correcting welding work.

E. Touch-Up Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

F. Field Touch-Up of Galvanized Surfaces: Touch-up shop applied galvanized coatings damaged during handling and installation. Use galvanizing repair coating specified herein for galvanized surfaces.

END OF SECTION 05 50 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 51 00
Steel Pan Stairs

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions
   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 74 19 "Construction Waste Management and Disposal"
   c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings

1.2 SUMMARY

A. Section includes:

1. Steel pan stairs, including all clips, hangers, inserts, braces and other supports.

2. Steel pipe hand rails, guard rails and intermediate rails for steel stairs, including supports, brackets, and anchors.

B. Related Sections

1. Cast-in-Place Concrete - Section 03 30 00.

2. Structural Steel - Section 05 12 00.

3. Miscellaneous Metals - Section 05 50 00.

4. Gypsum Drywall - Section 09 29 00.

5. Painting and Finishing - Section 09 90 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Qualification of Welders: Use only certified welders and the shielded arc process for all welding performed in connection with the work of this Section. Protect adjacent surfaces when field welding to prevent damage or stain. Welders and welding operators must be qualified by tests as provided by AWS.

C. Codes and Standards: In addition to complying with DDC General Conditions, comply with:

1. "Specifications for Design, Fabrication and Erection of Structural Steel for Buildings" of the American Institute of Steel Construction.

2. "Code for Welding in Building Construction" of the American Welding Society.

3. "Metal Stairs Manual" of the National Association of Architectural Metal Manufacturers.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Shop Drawings

1. Before any steel stairs are fabricated, submit shop drawings to the Commissioner for approval.

2. Show all locations, markings, quantities, materials, sizes and shapes, and indicate all methods of connecting, anchoring, fastening, bracing, for the stair construction, support and attachment to the work of other trades.

B. Engineering Data

1. Before any metal pan stairs are fabricated, submit engineering data drawings to the Commissioner for review. The Contractor is responsible for the structural design and supports for the stair system and must show his proposed system on these drawings.

2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of stair members.

3. Contractor to engage a Structural Engineer licensed in the State of New York to prepare calculations and drawings. Calculations and drawings shall be signed and sealed by this Engineer.

C. Submit the following listed samples and other samples as may be requested by the Commissioner, to show the quality standards:

1. Railing bracket.

2. Exposed weld.

3. Exposed bolted connection.

4. Bent pipe railing.

D. Samples shall be submitted cleaned and shop primed and shall represent standards to which all respective materials used in the Project shall meet.

1.6 PERFORMANCE STANDARDS

A. Stairs and railings shall be constructed to conform to the following performance standards, unless greater required by 2014 New York City Building Code:

1. Stairs and platforms shall support a live load of one hundred (100) psf and a concentrated live load of three hundred (300) lbs. and shall have a live load deflection limited to 1/360 of the span. Loads shall not apply simultaneously.

2. Railings shall withstand a two hundred (200) lb. force applied to rail from any direction, and a uniformly distributed load of 50 lbs./lin. ft. applied downward or horizontally, loads not to act simultaneously.

PART II - PRODUCTS

2.1 MATERIALS

A. Structural Steel: ASTM A 36.

B. Steel Sheets: ASTM A 245, Grade C, minimum ten (10) gauge for platforms, twelve (12) gauge minimum for treads and risers.

C. Steel Pipe: ASTM A 53, Type E., Grade A, and ASTM A 501. Use standard malleable iron fittings for steel pipe.

D. Malleable Iron Castings: ASTM A 47, Grade 35018.

E. Bolts and Nuts: ASTM A 307, Grade A bolts.

F. Machine Screws: ASME B 18.6.3.

G. Expansion Bolts: "Cinch" type, galvanized, of approved manufacture.

H. Threaded End Hanger Rods: Minimum 3/4" diameter, ASTM A 36.

I. Shop Paint:

1. Shop prime all stairs and railings

2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Series 88 Azeron Primer made by Tnemec
   b. ICI Devoe "Rust Guard" quick dry alkyd shop coat No. 41403
   c. "Interlac 393" by International Protection Coatings
   d. Or approved equal

J. Bituminous Paint: Cold applied asphalt emulsion complying with ASTM D1187.

K. Concrete Fill and Reinforcing Materials

1. Concrete Materials and Properties: Comply with requirements in Section 03 30 00, Cast-in-Place Concrete, for normal-weight, ready-mixed concrete with a minimum 28-day compressive strength of 3000 psi.

2. Nonslip-Aggregate Finish: Factory-packaged abrasive aggregate made from fused, aluminum-oxide grits or crushed emery; rustproof and nonglazing; unaffected by freezing, moisture, or cleaning materials.

3. Welded Wire Fabric: ASTM A 185, 6 by 6 inches – W1.4 by W1.4, unless otherwise indicated.

2.2 FABRICATION

A. General

1. Steel pan stair work shall be fabricated by an experienced manufacturer in accordance with approved shop drawings and best practices of the industry, using new and clean materials as specified, having structural properties sufficient to safely sustain or withstand strains and stresses to which material will be subjected.

2. Fabricate shop assemblies in largest practical sizes to minimize field work. All exposed surfaces shall be clean and free from all dirt, stains, grease marks, scratches, waves, dents, buckles, tool marks, rattles, and other objectionable defects which mar appearance or use of finished work.

3. Cutting: Cut materials by sawing, shearing, or blanking. Flame cutting will be permitted when ground back to clean edges. Cuts shall be made accurately, clean, sharp and free of burrs, without deforming adjacent metals.

4. Connections: Make connections with tight joints, capable of developing full strength of the members, flush. Locate joints where least conspicuous. Use concealed fasteners where possible. Weld or rivet shop connections; bolt, screw or weld field connections.

   a. Welding: Welds shall be continuous, except where spot welding is specifically permitted. Welding shall conform to the Standard Code of the American Welding Society. Exposed welds are required to be ground flush.

   b. Bolts and Screws: Make threaded connections tight with threads entirely concealed. Use lock nuts, or upset thread ends. Exposed bolts and screw head shall be flat and countersunk, unless otherwise indicated on drawings. Remove projecting ends of bolts and screws. Punch or drill holes; do not burn.

B. Stairs and Platforms

1. Provide stringers, risers, sub-treads and platforms matching profiles as shown. Form tread pan and riser in a continuous piece to receive the finished tread; tread shall be a minimum of twelve (12) gauge. Weld risers and treads to carrier angles which shall be welded to the structural steel stringers. Fasten countersunk bolts or stud welded clips through mesh for cement fill. Provide welded-on clips for the support of gypsum drywall soffits. Steel pan risers shall be closed in the bottom part and open in the top.

2. On intermediate platforms, provide metal bases formed of stringers. Miter and weld and grind smooth internal and external corners of metal bases. Form platform runs of minimum ten (10) gauge steel.

3. Countersink bolt heads and screws on finished surfaces or cut off flush with such surfaces.

4. Properly fit and securely fasten together all parts making exposed joints close fitting. Cut, drill, punch and tap as required for installation.

5. Make joints as strong and rigid as adjoining sections. Weld continuously along entire line of contact except where spot welding is indicated.

6. Separate dissimilar metals in or adjacent to work of this Section with a coat of bituminous paint on each surface prior to installation.

7. Closure and Filler Plates: Where indicated on drawings or as required, at least twelve (12) gauge sheet steel, securely fastened to top and bottom of stringer and adjacent wall, by welding or screws.

8. Struts, Hangers, Platform Headers and Subframing

   a. Provide supports as detailed and required, including all struts, clip angles, angles or hangers which are required and necessary for support of stair construction.
   b. Supports shall be of size suitable for the support load, as required. Struts, angles and hangers shall be supported by and directly connected to the structural framing. Struts and hangers, with their connections, shall be concealed.
   c. Provide other inserts, anchors and/or other subframing as may be required to complete the stair construction and properly support it on the structural framing.

C. Handrails, Railings, Posts and Brackets

1. Provide steel pipe of size shown on drawings, Schedule 40. Use heavier weight pipes and/or reinforce pipes internally as required to meet performance standards given in paragraph 1.7 herein. Fittings shall be flush type, malleable or cast iron. Wall brackets shall be steel design as detailed.

2. Handrail, post and railing spacing shall meet 2014 New York City Building Code requirements.

3. All handrails shall be stainless steel; see Section 05 70 00, Ornamental Metals.

4. Construction: Form direction changes in rails using solid bar stock or elbows. Connections shall be shop welded, except where expansion joints are required. Field connections shall be welded for continuity. All exposed welds shall be ground smooth and flush.

   a. If elbows are not available for angles shown, bends shall maintain full diameter of pipe, use mandrel, no kinks, ripples, flats are acceptable.

5. Fabricate steel tubing with wall thickness of 0.120".

6. Anchor posts to steel with steel flanges, angle type or floor type as required by conditions, welded to posts and bolted to the steel supporting members.

7. Secure handrails to walls with wall brackets. Provide brackets as shown on drawings. For installation in drywall, furnish steel plate as specified in Section 09 29 00, Gypsum Drywall, to receive wall plate portion of bracket and anchor or bolt wall plate through drywall to supporting steel plate. Locate brackets at not more than 5'-0" o.c. unless otherwise shown.

8. Anchor rail ends into adjacent walls with steel flanges welded to rail ends and anchored into the wall construction as described above.

2.3 SHOP PAINTING

A. Scope: All ferrous metal shall be cleaned, and shop painted with one coat of specified ferrous metal primer.

B. Cleaning: Conform to Steel Structures Painting Council Surface Preparation Specification SP 3 (latest edition) "Power Tool Cleaning" for cleaning of ferrous metals which are to receive shop prime coat.

C. Application

1. Apply shop prime coat immediately after cleaning metal. Apply paint in dry weather or under cover. Metal surfaces shall be free from frost or moisture when painted. Paint all metal surfaces including edges, joints, holes, corners, etc. Paint to match bar stock.

2. Paint surfaces which will be concealed after shop assembly prior to such assembly. Apply paint in accordance with approved paint manufacturer's printed instructions, and the use of any thinners, adulterants or admixtures shall be only as stated in said instructions.

3. Paint shall uniformly and completely cover the metal surfaces, 2.0 mils minimum dry film thickness. No work shall be shipped until the shop prime coat thereon has dried.

D. Touch-Up: In the shop, after assembly and in the field, after installation of work of this Section, touch-up damaged or abraded portions of shop prime paint with specified ferrous metal primer.

E. Apply one shop coat to fabricated metal items, except apply two (2) coats of paint to surfaces inaccessible after assembly or erection. Change color of second coat to distinguish it from the first.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Work in the field shall comply with the same requirements as specified for shop work above.

B. Except where otherwise shown or specified for a particular item of work or for built-in work, fasten metal work to solid masonry with expansion bolts. Fastenings to wood plugs in masonry will not be accepted. Drill holes to the exact diameter of the bolts using a rotary drill for concrete and a percussion drill for other masonry. Thread screws full length to the head of the screw.

C. Provide connecting members needed for properly securing the work to masonry, drywall and structural framing, including bolts, machine screws, rods, hangers, inserts, sleeves, plates, anchors, expansion bolts, washers and other items as required. Furnish built-in items to drywall trades as required for proper anchorage.

D. Leave work exposed to view, including stair soffits, clean, smooth and neatly finished. Exposed welds shall be dressed smooth.

E. Attach wall railings to the wall construction using bolts and anchors that meet performance standards.

F. Posts shall be set plumb within 1/8" vertical tolerance. Longitudinal members shall be parallel with each other and with floor surface or slope of stair to a tolerance of 1/8" in ten (10) linear feet. Center lines of members within each run of railing shall lie in the same vertical plane. Field joints of connecting sections shall be hairline.

3.3 TOUCH-UP PAINTING

A. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop coat, and paint exposed areas with same material used for shop painting. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

END OF SECTION 05 51 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 70 00
Ornamental Metals

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

    1. Section 01 33 00 "Submittal Procedures"
    2. Section 01 74 19 "Construction Waste Management and Disposal"
    3. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Stainless steel handrails.
2. Stainless steel base.
3. Aluminum transition strips.
4. Perforated metal cabinet doors.

B. Related Sections

1. Miscellaneous Metals - Section 05 50 00.
2. Plumbing Fixtures - Section 22 40 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Work of this Section shall be fabricated and installed by an experienced fabricator or manufacturer who has been engaged in work of equivalent scope and fabrication standards for at least three (3) years. Materials, methods of fabrication, fitting, assembly, bracing, supporting, fastening, operating devices, and erection shall be in accordance with drawings, specifications, and approved shop drawings, and be of highest quality practices of the industry, using new and clean materials as specified, having structural properties sufficient to safely sustain or withstand stresses and strains to which materials and assembled work will be subjected. All work shall be accurately and neatly fabricated, assembled, and erected.

C. Shop Assembly: Insofar as practicable, fitting and assembly of work shall be done in shop. Work that cannot be permanently shop assembled, shall be completely assembled, marked and disassembled in shop

before shipment to ensure proper assembly in field. Shop assemble work in largest practical sizes to minimize field work. Ensure that the shop fabricated items will properly fit the field condition. In the event that shop fabricated items do not fit the field condition, the item shall be returned to the shop for correction.

D. Mock-Up: Build mock-up of feature stair railing assembly.

1. See drawing set for scope and extents of mockup requirements.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Shop Drawings: Submit for all items of work of this Section, as enumerated under paragraph 1.3A, showing locations, layouts, materials, thicknesses, finishes, dimensions, construction, relation to adjoining construction, erection details, profiles, jointing and all other details to fully illustrate the work of this Section.

B. Samples: Submit fabricated samples (of sufficient size to fully show construction, materials and finishes) of all items of work as enumerated under paragraph 1.3A herein.

C. Product Data: Submit manufacturer's, fabricator's and finisher's specifications and installation instructions for products used in ornamental metal work, including finishing materials and methods.

D. Samples for Verification: For each type of exposed finish required, prepared on 6-inch square samples of metal of same thickness and material indicated for the Work or profile of Work.

E. Contractor's Licensed Engineer Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified Professional Engineer licensed in the State of New York responsible for their preparation.

F. Coordination Drawings: For decorative formed metal elements that house items specified in other Sections. Show dimensions of housed items, including locations of housing penetrations and attachments and necessary clearances.

1.6 COORDINATION

A. Coordinate installation of anchorages for decorative formed metal items. Furnish setting drawings, templates and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts and items with integral anchors, that are to be embedded in concrete to masonry. Deliver such items to Project site in time for installation.

B. Coordinate installation of decorative formed metal with adjacent construction to ensure that wall assemblies, flashings, trim and joint sealants, are protected against damage from the effects of weather, age, corrosion and other causes.

1.7 PERFORMANCE STANDARDS FOR RAILINGS AND GUARDRAILS

A. Railing and guardrail assemblies shall be designed and installed to resist the simultaneous application of a lateral force of 50 PLF and a vertical load of 100 PLF, both applied to the top of the railing. The railing shall resist a total lateral force and total vertical load of at least 200 lbs. each.

B. Submit calculations and drawings signed and sealed by a Professional Engineer licensed in the State of New York indicating that railing system can meet these performance criteria.

PART II - PRODUCTS

2.1 MATERIALS

A. Provide materials which have been selected for their surface flatness, smoothness and freedom from surface blemishes where exposed to view in the finished unit. Surfaces exposed to view that exhibit pitting, seam marks, roller marks, oil-canning, stains, discolorations, or other imperfections on the finished units will not be acceptable.

B. Stainless Steel: Comply with the following standards for the forms and types of stainless steel for the required items of work.

1. Pipe: ASTM A 312, Grade TP 304 (interior) and Type 316L (exterior).
2. Sheet, Strip, Flat Bar and Plate: ASTM A 666, Type 304 (interior) and Type 316L (exterior).
3. Tubing: ASTM A 554, Grade MT 304 (interior) and Type 316L (exterior).
4. Castings: ASTM A 743A, Grade CF 8 or CF 20.
5. Bars and Shapes: ASTM A 276, Type 304 (interior) and Type 316L (exterior).
6. Rods at level 2 shall be solid bar, up to 42" A.F.F.

C. Welding Electrodes and Filler Metal: Type and alloy of filler metal and electrodes as recommended by producer of the metal to be welded, and as required for color match, strength and compatibility in the fabricated items.

D. Fasteners: Furnish basic metal and alloy, matching finished color and texture as the metal being fastened, unless otherwise indicated. Provide Phillips square drive screws for exposed fasteners, unless otherwise indicated.

E. Anchors and Inserts: Either furnish inserts to be set in concrete or masonry work, or provide other anchoring devices as required for the installation of ornamental metal items. Provide toothed steel or lead shield expansion bolt devices for drilled-in-place anchors. Provide galvanized or cadmium-coated anchors and inserts for exterior installations.

1. Provide units with exposed surfaces matching the texture and finish of the metal item anchored.

F. Bituminous Paint: SSPC-Paint 12 (cold-applied asphalt mastic).

G. Cast-in-Place and Preinstalled Anchors: Anchors fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete.

H. Sealants, Interior: Nonsag, paintable, nonstaining, latex sealant complying with ASTM C834; of type and grade required to seal joints in decorative formed metal; and as recommended in writing by decorative formed metal manufacturer.

I. Filler Metal and Electrodes: Provide type and alloy of filler metal and electrodes as recommended by produced of metal to be welded or brazed and as necessary for strength, corrosion resistance, and compatibility in fabricated items

1. Use filler metals that will match the color of metal being joined and will not cause discoloration.

2.2 FABRICATION

A. Cutting: Cut metal by sawing, shearing or blanking. Flame cutting will be permitted only if cut edges are ground back to clean, smooth edges. Make cuts accurate, clean, sharp, square and free of burrs, without deforming adjacent surfaces or metals.

B. Holes: Drill or cleanly punch holes (do not burn), so that holes will be accurate, clean, neat and sharp without deforming adjacent surfaces or metals.

C. Connections

1. Make connections with tight joints, capable of developing full strength of member, flush unless indicated otherwise, formed to exclude water where exposed to water. Locate joints where indicated on drawings. Provide connections to allow for thermal movement of metal at locations and by methods approved by the Commissioner. For work exposed to view, use concealed fasteners (unless welded or other connections indicated) with joints accurately fitted, flush and rigidly secured with hairline contacts.

2. Welding: Welding shall be in accordance with recommendations of the American Welding Society and shall be done with electrodes and/or methods recommended by the manufacturers of the metals being welded. Welds shall be continuous, except where spot welding is specifically permitted. Welds exposed to view shall be ground flush and dressed smooth with and to match finish of adjoining surfaces so that joint will not be visible; undercut metal edges where welds are required to be ground flush and dressed smooth. All welds on or behind surfaces which will be exposed to view shall be done so that finished surface will be free of imperfections such as pits, runs, splatter, cracks, warping, dimpling, depressions or other forms of distortion or discoloration. Remove weld splatter and welding oxides from all welded surfaces.

3. Bolts and Screws: Make threaded connections tight with threads entirely concealed. Use lock nuts. Bolts and screw heads, where shown to be exposed to view, shall be flat and countersunk. Cut off projecting ends of exposed bolts and screws flush with nuts of adjacent metal.

D. Operating Mechanism: Operating devices, mechanism and hardware used in connection with this work shall be fabricated, assembled, installed and adjusted after installation so that they will operate smoothly, freely, noiselessly and without excessive friction.

E. Built-In Work: Furnish anchor bolts, inserts, plates and any other anchorage devices, and all other items for ornamental metal work to be built into concrete, masonry, or work of other trades, with necessary templates and instructions, and in ample time to facilitate proper placing and installation.

F. Supplementary Parts: Provide as necessary to complete each item of work, even though such supplementary parts are not shown or specified.

G. Coordination: Accurately cut, fit, drill and tap work of this Section to accommodate and fit work of other trades. Furnish or obtain, as applicable, templates and drawings to or from applicable trades for proper coordination of this work.

H. Exposed Work: In addition to requirements specified herein or shown on drawings, all surfaces exposed to view shall be clean, and free from dirt, stains, grease, scratches, distortions, waves, dents, buckles, tool marks, burrs and other defects which mar appearance of finished work. Ornamental metal work exposed to view shall be straight and true to line or curve, smooth arrises and angles as sharp as practicable, miters formed in true alignment, profiles accurately intersecting, and with joints carefully matched to produce continuity of line and design. Exposed fastenings, where permitted, shall be of the same material, color and finish as the metal to which applied, unless otherwise indicated, and shall be of the smallest practicable size.

I. Materials used shall be of such strength, thickness and alloy that they are capable of meeting all standards and descriptions specified herein and as detailed on drawings.

J. Bending: Bend sheet metal to the required shape. Bent items shall be free of grain separation, oil canning or other distortion.

1. Square Bends: Back-cut sheets to attach maximum square bend possible, with maximum radius of 1/16 in.

2. Knife Edge Bends: Back-cut and back bevel sheets to attain sharpest bend possible, with maximum radius of 1/32 in.

2.3 SHOP FINISHING

A. General

1. Comply with NAAMM "Metal Finishes Manual" for finish designations and application recommendations, except as otherwise indicated.

2. Provide colors or color matches as indicated on selected samples.

3. Protect mechanical finishes on exposed surfaces from damage by application of strippable temporary protective covering prior to shipment.

4. Corrosion Protection: Coat concealed surfaces which will be in contact with concrete, masonry, wood or dissimilar metals, in exterior work and work to be built into exterior and below grade walls and decks, with a heavy coat of bituminous paint. Do not extend coating onto exposed surfaces.

B. Stainless Steel

1. Remove or blend tool and die marks and stretch lines into finish.

2. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.

3. Bright, Directional Polish: No. 4 finish.

4. When polishing is complete, passivate and rinse surfaces. Remove foreign matter and leave surface chemically dry.

2.4 PROTECTION

A. Provide necessary protection to all exposed surfaces of ornamental metal work, so as to prevent damage, staining, discoloration, abrasion, etc., to these surfaces from time of shipment from factory to substantial completion of work of this project. Protection shall be provided by wrappings, strippable coatings, or other means. After installation, remove protective paper or strippable coating and clean exposed surfaces, and then provide additional temporary protection to protect ornamental metal work from damage during subsequent construction activities.

2.5 STEEL FRAMING, BRACING, SUPPORTS AND REINFORCEMENTS

A. Steel framing, plate reinforcing, supplementary steel framing or reinforcing, bracket assemblies, and the like required for the support, framing, reinforcing, bracing, etc., of work of this Section shall be of such sizes and shapes as indicated on the drawings, or as required to suit the conditions, and shall be provided with all necessary supports and accessory items such as inserts, hangers, braces, struts, clip angles, anchors, bolts, nuts, welds, etc., as required to properly and rigidly fasten, anchor or attach work of this Section in place and to the concrete, masonry and other connecting and adjoining work.

2.6 ORNAMENTAL HANDRAILS AND RAILINGS

A. Welded Connections: Fabricate handrails and railings for connecting members by welding. Cope components at perpendicular and skew connections to provide close fit, or use fittings designed for this purpose. Weld connections continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove flux immediately.

4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.

5. Form changes in direction of railing members by radius bends.

6. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain profile of member throughout entire bend without buckling, twisting, or otherwise deforming exposed surfaces of handrail and railing components.

7. Provide wall returns at ends of wall-mounted handrails, close ends of returns.

8. Close exposed ends of handrail and railing members with prefabricated end fittings.

9. Brackets, Flanges, Fittings, and Anchors: Provide brackets, flanges, miscellaneous fittings, and anchors to interconnect handrail and railing members to other work, unless otherwise indicated.

   a. Furnish inserts and other anchorage devices for connecting handrails and railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by handrails and railings. Coordinate anchorage devices with supporting structure.
   b. For railing posts set in concrete, provide preset sleeves of steel, not less than 6 inches long and inside dimensions not less than 1/2 inch greater than outside dimensions of post, with steel plate forming bottom closure.

2.7 ALUMINUM TRANSITION STRIPS

A. Floor Transitions: Provide satin anodized aluminum transitions strips.

1. Basis of Design - MAT to PCT: Subject to compliance with requirements, provide Schluter Systems, L.P.; Schluter Reno-Ramp or comparable product by one of the following manufacturers:
   a. Blanke Corp.
   b. Ceramic Tool Co. Inc.
   c. Or approved equal

2. Basis of Design - SC to RF: Subject to compliance with requirements, provide Schluter Systems, L.P.; Schluter Jolly or comparable product by one of the following manufacturers:
   a. Blanke Corp.
   b. Ceramic Tool Co. Inc.
   c. Or approved equal

3. Basis of Design - SC to PCT: Subject to compliance with requirements, provide Schluter Systems, L.P.; Schluter Reno-U or comparable product by one of the following manufacturers:
   a. Blanke Corp.
   b. Ceramic Tool Co. Inc.
   c. Or approved equal

4. Basis of Design - RF to PCT: Subject to compliance with requirements, provide Schluter Systems, L.P.; Schluter Reno-U or comparable product by one of the following manufacturers:
   a. Blanke Corp.
   b. Ceramic Tool Co. Inc.
   c. Or approved equal

5. Basis of Design - PCT to PCT: Subject to compliance with requirements, provide Schluter Systems, L.P.; Schluter Deco or comparable product by one of the following manufacturers:
   a. Blanke Corp.
   b. Ceramic Tool Co. Inc.
   c. Or approved equal

2.8 PERFORATED METAL CABINET DOORS (MTL-01)

A. Basis of Design: Subject to compliance with requirements, provide McNichols; perforated aluminum alloy 3003-H14 or comparable product by one of the following manufacturers:
   1. Ametco Manufacturing Corporation
   2. Ferguson Perforating
   3. Or approved equal

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. General: Install work of this Section square, plumb, straight, true to line or radius, accurately fitted and located, with flush, tight hairline joints (except as otherwise indicated or to allow for thermal movement), with provisions for other trades, with provisions to allow for thermal movement, with provisions to exclude water where exposed to weather, and with attachment devices as required for secure and rigid installation. Ensure that shop fabricated ornamental metal items will properly fit the field condition. In cases where the shop fabricated ornamental metal items do not fit the field condition, the item shall be returned to the shop for correction.

B. Attachments

   1. Unless otherwise indicated, work to be built into concrete or masonry shall be anchored with shop welded on galvanized steel strap anchors; work to be attached to concrete or masonry shall be anchored by bolts into embedded inserts or expansion shields; work attached to structural steel shall be anchored by welds or bolts; work attached to metals other than structural steel shall be anchored by bolts or screws. Power actuated fasteners not permitted unless approved by the Commissioner. Provide all supplementary parts necessary to complete each item of work of this Section.

   2. All attachment devices shall be of type, size and spacing to suit condition and as approved by the Commissioner. Provide shims, slotted holes, or other means necessary for leveling, plumbing and other required adjustments. Attachment devices for work exposed to view shall be concealed, unless indicated otherwise. Where bolts or screws are permitted in work exposed to view, they shall be oval head and counter sunk, unless otherwise noted, with projecting end cut off flush with nuts, or adjacent material, and shall match adjacent surfaces.

   3. Do all necessary drilling, tapping, cutting or other preparations of surrounding construction in the field accurately, neatly and as necessary for the attachment and support of work of this Section, but obtain Commissioner's approval prior to such preparation to work of others.

C. Tolerances: All work of this Section shall be plumb, square, level, true to radius and correctly aligned within the following limitations:

   1. Offset from true horizontal, vertical and design location shall not exceed 1/16" per ten (10) feet of length for any component, not cumulative.

2. Maximum offset from true alignment between abutting components shall not exceed 1/32".

D. Do not cut or abrade finishes which cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units at Contractor's option.

E. Install concealed gaskets and joint fillers as the work progresses, so as to make the work soundproof or lightproof as required.

F. Restore protective coverings which have been damaged during shipment or installation of the work. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at the same location.

G. Retain protective coverings intact and remove simultaneously from similarly finished items to preclude non-uniform oxidation and discoloration.

H. Field Welding: Comply with AWS Code for the procedures of manual shielded metal-arc welding, the appearance and quality of welds made, and the methods used in correcting welding work.

END OF SECTION 05 70 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 71 13
Ornamental Metal Stairs

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 74 19 "Construction Waste Management and Disposal"
   c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Steel stairs with precast concrete treads.

2. Steel powder coated guardrails and handrails.

B. Related Sections

1. Miscellaneous Metals - Section 05 50 00.

2. Painting and Finishing - Section 09 90 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Qualification of Welders: Use only certified welders and the shielded arc process for all welding performed in connection with the work of this Section. Protect adjacent surfaces when field welding to prevent damage or stain. Welders and welding operators must be qualified by tests as provided by AWS.

C. Codes and Standards: In addition to complying with all pertinent codes and regulations, comply with:

1. "Specifications for Design, Fabrication and Erection of Structural Steel for Buildings" of the American Institute of Steel Construction.

2. "Code for Welding in Building Construction" of the American Welding Society.

3. "Metal Stairs Manual" of the National Association of Architectural Metal Manufacturers.

D. Conflicting Requirements: In the event of conflict between pertinent codes and regulations and the requirements of the referenced standards of these specifications, the provisions of the more stringent shall govern.

E. Field Measurements: If construction process permits, take field measurements prior to preparation of shop drawings and fabrication, where possible. Do not delay job progress. Allow for trimming and fitting wherever taking field measurements before fabrication might delay work.

F. Tolerances: Allow for construction tolerances as required.

G. Coordination: Coordinate this work with the work of all other trades interfacing with metal pan stairs, such as structural openings, sprinklers and standpipes, and other trades as required.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. Shop Drawings

1. Before any steel stairs are fabricated, submit shop drawings to the Commissioner for approval.

2. Show all locations, markings, quantities, materials, sizes and shapes, and indicate all methods of connecting, anchoring, fastening, bracing, for the stair construction, support and attachment to the work of other trades.

C. Engineering Data

1. Before any steel stairs are fabricated, submit engineering data drawings to the Commissioner for review. The Contractor is responsible for the structural design and supports for the stair system and must show his proposed system on these drawings.

2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of stair members. Calculations and drawings must be prepared by a Structural Engineer licensed in the State of New York and shall be signed and sealed by this Engineer.

1.5 SUBMITTALS

A. Submit the following listed samples and other samples as may be requested by the Commissioner, to show the quality standards:

1. Exposed weld.

2. Exposed bolted connection.

3. Tread and stringer connection.

4. Precast tread.

5. Handrail with railing bracket.

B. Samples shall be submitted cleaned and shop primed and shall represent standards to which all respective materials used in the Project shall meet.

1.6 PERFORMANCE STANDARDS

A. Stairs shall be constructed to conform to the following performance standards:

1. Stairs and platforms shall support a live load of one hundred (100) psf and a concentrated live load of three hundred (300) lbs. and shall have a live load deflection limited to 1/360 of the span. Loads shall not apply simultaneously.

2. Railings shall withstand a two hundred (200) lb. force applied to rail from any direction, and a uniformly distributed load of 50 lbs./lin. ft. applied downward or horizontally, loads not to act simultaneously.

1.7 PRODUCT HANDLING

A. Protection: Use all means necessary to protect steel stair before, during, and after installation, and to protect the installed work and materials of all other trades.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Commissioner and at no additional cost to the City of New York.

PART II - PRODUCTS

2.1 MATERIALS

A. Steel and Iron: Comply with the following standards for the forms and types of steel for the required items of work.

1. Steel Plates, Shapes and Bars: ASTM A 36.

2. Steel Tubing: Cold formed, ASTM A 500; or hot rolled, ASTM A 501.

3. Structural Steel Sheet: Hot rolled, ASTM A 570; or cold rolled, ASTM A 611, Class 1; of grade required for design loading.

4. Galvanized Structural Steel Sheet: ASTM A 924, of grade required for design loading. Coating designation G90.

5. Steel Pipe: ASTM A 53, type and grade as selected by fabricator and as required for design loading; black finish unless galvanizing is indicated; standard weight (Schedule 40), unless otherwise indicated.

6. Gray Iron Castings: ASTM A 48, Class 30, unless another class is indicated or required by structural loads.

7. Malleable Iron Castings: ASTM A 47, grade as selected by fabricator.

8. Brackets, Flanges and Anchors: Cast or formed metal of the same type material and finish as supported rails, unless otherwise indicated.

9. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron, ASTM A 47, or cast steel, ASTM A 27. Provide bolts, washers and shims as required, hot-dip galvanized, ASTM A 153.

   a. Inserts shall be forwarded to the precast manufacturer in order to be cast into the precast elements.

10. Bolts and nuts for stair assembly shall be high strength bolts, ASTM A 325 SC, with hardened washers.

B. All steel shall be hot dip galvanized per Section 05 50 00 Miscellaneous Metals.

C. Bituminous Paint: Cold-applied asphalt mastic, ASTM D 1187.

D. Precast Concrete Treads: 5000 psi, color selected by Commissioner.

2.2 FABRICATION

A. General

1. Steel stair work shall be fabricated by an experienced manufacturer in accordance with approved shop drawings and best practices of the industry, using new and clean materials as specified, having structural properties sufficient to safely sustain or withstand strains and stresses to which material will be subjected.

2. Fabricate shop assemblies in largest practical sizes to minimize field work. All exposed surfaces shall be clean and free from all dirt, stains, grease marks, scratches, waves, dents, buckles, tool marks, rattles, and other objectionable defects which mar appearance or use of finished work.

3. Cutting: Cut materials by sawing, shearing, or blanking. Flame cutting will be permitted when ground back to clean edges. Cuts shall be made accurately, clean, sharp and free of burrs, without deforming adjacent metals.

4. Connections: Make connections with tight joints, capable of developing full strength of the members, flush. Locate joints where least conspicuous. Use concealed fasteners where possible. Weld or rivet shop connections; bolt, screw or weld field connections.

   a. Welding: Welds shall be continuous, except where spot welding is specifically permitted. Welding shall conform to the Standard Code of the American Welding Society. Exposed welds are required to be ground flush.
   b. Bolts and Screws: Make threaded connections tight with threads entirely concealed. Use lock nuts, or upset thread ends. Exposed bolts and screw head shall be flat and countersunk, unless otherwise indicated on drawings. Remove projecting ends of bolts and screws. Punch or drill holes; do not burn.

B. Stairs and Platforms

1. Provide stringers and supports for risers, treads and platforms matching profiles as shown. Form tread support in a continuous piece to receive the finished tread. Weld carrier angles to the structural steel stringers.

2. On intermediate platforms, provide metal bases formed of stringers. Miter and weld and grind smooth internal and external corners of metal bases. Form platform runs of minimum ten (10) gauge steel.

3. Properly fit and securely fasten together all parts making exposed joints close fitting. Cut, drill, punch and tap as required for installation.

4. Make joints as strong and rigid as adjoining sections. Weld continuously along entire line of contact except where spot welding is indicated.

5. Give ferrous metal surfaces a shop coat of primer. Before painting, thoroughly clean surfaces with wire brushes or other proper and effective means of removing loose scale, filings or other objectionable materials.

6. Remove grease prior to painting. Separate dissimilar metals in or adjacent to work of this Section with a coat of bituminous paint on each surface prior to installation.

7. Struts, Hangers, Platform Headers and Subframing

   a. Provide supports as detailed and required, including all struts, clip angles, angles or hangers which are required and necessary for support of stair construction.
   b. Supports shall be of size suitable for the support load, as required. Struts, angles and hangers shall be supported by and directly connected to the structural framing. Struts and hangers, with their connections, shall be concealed.
   c. Provide other inserts, anchors and/or other subframing as may be required to complete the stair construction and properly support it on the structural framing.

8. All surfaces of steel stringers, guardrails, brackets, connections, inserts, supports, etc. shall be shop primed to receive paint as specified in Section 09 90 00 Painting and Finishing.

2.3 SHOP FINISHING

A. Steel support shop primed per Section 05 50 00 Miscellaneous Metals and finish paint per Section 09 90 00 Painting and Finishing.

B. Stair Handrails/Railings and Guardrails

1. Powder-Coat Finish: Prepare, treat, and coat nongalvanized ferrous metal to comply with resin manufacturer's written instructions and as follows:

   a. Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
   b. Treat prepared metal with iron-phosphate pretreatment, rinse, and seal surfaces.
   c. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils (0.04 mm).
   d. Color: Color selected by Commissioner.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Work in the field shall comply with the same requirements as specified for shop work above.

B. Except where otherwise shown or specified for a particular item of work or for built-in work, fasten metal work to solid masonry with expansion bolts. Fastenings to wood plugs in masonry will not be accepted.

Drill holes to the exact diameter of the bolts using a rotary drill for concrete and a percussion drill for other masonry. Thread screws full length to the head of the screw.

C. Provide connecting members needed for properly securing the work to masonry, drywall and structural framing, including bolts, machine screws, rods, hangers, inserts, sleeves, plates, anchors, expansion bolts, washers and other items as required. Furnish built-in items to drywall trades as required for proper anchorage.

D. Leave work exposed to view, including stair soffits, clean, smooth and neatly finished. All exposed welds shall be dressed smooth.

E. Include supplementary parts necessary to complete each item even though such work is not definitively shown or specified.

F. Coordinate and schedule the work of this Section with the work of other trades. Furnish anchors, sockets, fastenings and other miscellaneous items to be embedded in concrete or masonry, or required for securing metal work to other construction so as not to delay job progress.

G. Attach wall railings to the wall construction, using appropriate bolts and anchors to meet performance standards.

H. Install work plumb and true to the exact lines and levels, in the correct location and in proper relation to adjoining work.

I. Touch up marred and abraded shop paint of exposed surfaces after erection in the field.

J. Posts shall be set plumb within 1/8" vertical tolerance. Longitudinal members shall be parallel with each other and with floor surface or slope of stair to a tolerance of 1/8" in ten (10) linear feet. Center lines of members within each run of railing shall lie in the same vertical plane. Field joints of connecting sections shall be hairline.

3.3 TOUCH-UP PAINTING

A. Immediately after erection, clean field welds, bolted connections, and abraded areas of shop coat, and paint exposed areas with same material used for shop painting. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

END OF SECTION 05 71 13

SECTION 06 20 00
Carpentry

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Blocking and miscellaneous wood.

2. Plywood backing panels for telephone and electrical closets.

3. Rough hardware.

4. Installation only of finish hardware.

5. Installation only of doors and hollow metal frames.

B. Related Sections

1. Unit Masonry - Section 04 20 00.

2. Architectural Woodwork - Section 06 40 23.

3. Thermal Insulation - Section 07 21 00.

4. Steel Doors and Frames - Section 08 11 13.

5. Door Hardware - Section 08 71 00.

6. Interior Glass and Glazing - Section 08 80 10.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Lumber Standard: Comply with PS 20.

C. Plywood Standard: Comply with PS 1 and American Plywood Assoc. (APA).

D. Shop fabricate carpentry work to the extent feasible and where shop fabrication will result in better workmanship than feasible for on-site fabrication.

E. Grade Marks: Identify lumber and plywood by official grade mark.

1. Lumber: Grade stamp to contain symbol of grading agency certified by Board of Review, American Lumber Standards Committee, mill number or name, grade of lumber, species grouping or combination designation, rules under which graded where applicable, and condition of seasoning at time of manufacture.

a. S-Dry: Maximum nineteen (19) percent moisture content as per ASTM D 2016.
b. MC-15 or KD: Maximum of fifteen (15) percent moisture content.

F. Installation of doors, frames and hardware shall conform to the minimum standards of "Installation Guides for Doors and Hardware" of the Door and Hardware Institute.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Pressure Treatment: Include certification by treating plant stating chemicals and process used, net amount of salts retained and conformance with applicable standards.

B. Fire-Retardant Treatment: Include certification by treating plant that treatment material complies with 2014 New York City Building Code and that treatment will not bleed through finished surfaces.

1.6 PRODUCT HANDLING

A. Deliver carpentry materials to the site ready to use with each piece of lumber clearly marked as to grade, type and mill, and place in an area protected from the elements.

B. Deliver rough hardware in sealed kegs and/or other containers which shall bear labels as to type and kind.

C. Pile lumber for rough usage, when delivered to the site in stacks to ensure drainage and with a minimum clearance of six (6) inches above grade. Cover stacks with tarpaulins or other watertight coverings. Store grounds and similar small sized lumber inside the building as soon as possible after delivery.

D. Do not store seasoned lumber in wet or damp portions of the building.

E. Protect fire retardant treated materials against high humidity and moisture during storage and erection.

F. Remove delivered materials which do not conform to specified grading rules or are otherwise not suitable for installation from the job site and replace with acceptable materials.

G. All items specified in Section 08 71 00, Door Hardware, shall be received, accounted for, stored and applied under this Section.

H. Hardware shall be sorted and stored in space assigned by Contractor and shall be kept at all times under lock and key. The safety and preservation of all items delivered will be the responsibility of the Contractor.

1.7 JOB CONDITIONS

A. Installer must examine the substrates and supporting structure and the conditions under which the carpentry work is to be installed and notify the Contractor in writing of conditions detrimental to the work. Do not proceed with the installation until unsatisfactory conditions have been corrected in a manner acceptable to the Installer and the Commissioner.

B. Coordination: Fit carpentry work to other work; scribe and cope as required for accurate fit. Correlate location of furring, nailers, blocking, grounds and similar supports to allow proper attachment of other work.

PART II - PRODUCTS

2.1 WOOD MATERIAL

A. General

1. All wood shall be sound, flat, straight, well seasoned, thoroughly dry and free from all defects. Warped or twisted wood shall not be used.

2. For miscellaneous wood blocking, grounds, furring as required, use Utility Grade Coastal Douglas Fir or Southern Pine, free from knots, shakes, rot or other defects, straight, square edges and straight grain, air seasoned with maximum moisture content of nineteen (19) percent. Wood shall be S4S, S-Dry, complying with PS-20.

3. Plywood and rough carpentry for telephone and electrical closets, provide 3/4" thick C-D EXT-APA plywood, fire retardant treated as specified herein.

B. Wood Treatment

1. All interior wood material specified herein shall be fire retardant treated to comply with the AWPA standard U1 to achieve a flame spread rating of not more than 25 (UL Class "FR-S") when tested in accordance with UL Test 723 or ASTM E 84. The fire retardant chemicals used to treat the lumber must comply with FR-1 of AWPA Standard P49 and be free of halogens, sulfates and ammonium phosphate.

   a. After treatment, kiln dry to a moisture content of fifteen (15) percent; if wood is to be painted or finished, kiln dry to a moisture content of twelve (12) percent. Treatment shall be equal to "Dricon" made by Arch Wood Protection Inc., Koppers, Hoover or approved equal. Provide UL approved identification on treated materials.

2. For exterior blocking, roofing and sheet metal, pressure treat wood with copper azole, Type B (CA-B); ammoniacal copper quat (ACQ) or similar preservative product that contains no arsenic or chromium. Preservative shall comply with AWPA Standard U1, (.25 lbs./cubic foot of chemical in wood).

   a. After treatment, kiln dry to a maximum moisture content of fifteen (15) percent. Treatment shall be equal to "Wolmanized Natural Select" made by Arch Wood Protection Inc., Koppers, Hoover or approved equal.

3. Treated wood which is cut or otherwise damaged shall be further treated in accordance with the AWPA Standard M-4.

2.2 HARDWARE

A. Rough Hardware for Treated Woods and Exterior Use: Hot-dipped galvanized or Type 304 stainless steel.

B. Nails: Common steel wire, untreated for interior work as per ASTM F 1667.

C. Bolts: Standard mild steel, square head machine bolts with square nuts and malleable iron or steel plate washers or carriage bolts with square nuts and cut washers conforming to the following:

1. Bolts: ASTM A 307, Grade A.

2. Nuts: ASTM A 563.

3. Lag Screws and Bolts: ASME B 18.2.1.

D. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies and equal to 4 times the load imposed when installed in concrete as determined by testing per ASTM E 488 conducted by a qualified independent testing and inspecting agency.

1. Material: Carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5.

2. Material for Treated Woods and Exterior Use: Stainless steel with bolts and nuts complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2.

E. Wood Screws: ASME B 18.6.1.

F. Concrete and Masonry Anchors: Standard expansion-shield self-drilling type concrete anchors where so shown or noted on the drawings, or where approved by the Commissioner.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF FINISH HARDWARE

A. Hardware shall be carefully fitted and securely attached, in accordance with these specifications and the instructions of the various manufacturers.

B. Unless otherwise noted, mount hardware units at heights established in Section 08 11 13, Steel Doors and Frames.

C. Install each hardware item in compliance with the manufacturer's instructions and recommendations. Wherever cutting and fitting is required to install hardware onto or into surfaces which are later to be painted or finished in another way, install each item completely and then remove and store in a secure place

during the finish application. After completion of the finishes, re-install each item. Do not install surface-mounted items until finishes have been completed on the substrate.

D. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

E. Drill and countersink units which are not factory prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.

F. Cut and fit threshold and floor covers to profile of door frames, with mitered corners and hair-line joints. Join units with concealed welds or concealed mechanical joints. Cut smooth openings for spindles, bolts and similar items, if any.

G. All keys used shall be construction keys which are to be tagged with fiber discs as approved, clearly labeled with identifying inscriptions and then neatly arranged in a temporary cabinet. All construction keys shall be returned to the City of New York.

H. Adjusting and Cleaning

1. Adjust and check each operating item of hardware and each door, to ensure proper operation and function of every unit. Lubricate moving parts with type lubrication recommended by manufacturer (graphite type if no other recommended). Replace units which cannot be adjusted and lubricated to operate freely and smoothly as intended for the application made.

2. Final Adjustment: Wherever hardware installation is made more than one month prior to substantial completion or occupancy of a space or area, return to the work during the week prior to substantial completion or occupancy, and make a final check and adjustment of all hardware items in such space or area. Clean and re-lubricate operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.

3.3 INSTALLATION OF DOORS AND FRAMES

A. Preparation

1. Remove welded-in shipping spreaders installed at factory..

2. Prior to installation and with installation spreaders in place, adjust and securely brace standard steel door frames for squareness, alignment, twist, and plumb to the following tolerances:

   a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
   b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
   c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
   d. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.

3. Drill and tap doors and frames to receive non-templated mortised and surface-mounted door hardware.

B. Installation

1. General: Provide doors and frames of sizes, thicknesses, and designs indicated. Install steel doors and frames plumb, rigid, properly aligned, and securely fastened in place.

2. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.

   a. Install frames in accordance with ANSI 250.11, Recommended Erection Instructions for Steel Frames, unless more stringent requirements are specified herein.
   b. At fire-protection-rated openings, install frames according to NFPA 80.
   c. Where frames are fabricated in sections due to shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
   d. Install frames with removable glazing stops located on secure side of opening.
   e. Frames set in masonry walls shall have door silencers installed in frames before grouting.
   f. Remove temporary braces necessary for installation only after frames have been properly set and secured.
   g. Check plumb, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.

3. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor and secure with post-installed expansion anchors.

   a. Floor anchors may be set with powder-actuated fasteners instead of post-installed expansion anchors if so indicated and approved on Shop Drawings.

4. Metal-Stud Partitions: Solidly pack mineral-fiber insulation behind frames conforming to the requirements of Section 07 21 00, "Thermal Insulation."

5. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar; refer to Section 04 20 00 "Unit Masonry" for installation of frames in masonry walls.

6. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above, unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.

7. Installation Tolerances: Adjust steel door frames for squareness, alignment, twist, and plumb to the tolerance given in HMMA 841 of ANSI/NAAMM, current edition.

8. Steel Doors: Fit hollow metal doors accurately in frames to the tolerances given in HMMA 841 of ANSI/NAAMM, current edition.

   a. Fire-Rated Doors: Install doors with clearances according to NFPA 80.

9. Glazing: Comply with installation requirements in Section 08 80 10 "Interior Glass and Glazing" and with standard steel door and frame manufacturer's written instructions.

   a. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c., and not more than 2 inches o.c. from each corner.

C. Adjustments: Check and readjust operating finish hardware items just prior to final inspection. Leave work in complete and proper operating condition.

3.4 BLOCKING AND MISCELLANEOUS WOOD

A. General

1. Erect rough carpentry true to line, levels and dimensions required; squared, aligned, plumbed, and securely fastened in place.

2. Shim where required to true up furring, blocking and the like. Use wood or metal shims only.

3. Do all cutting, fitting, drilling and tapping of other work as required to secure work in place and to perform the work included herein. Do all the cutting and fitting of carpentry work, for the work of other trades as required.

B. Blocking and Miscellaneous Wood

1. Furnish and install all wood grounds, furring, blocking, curbs, bucks, nailers, etc., that may be necessary and required in connection with the carpentry and with the work described for any other trades and including required carpentry for electrical fixtures. All blocking and nailers shall be continuous wherever required, whether or not so indicated.

2. Blocking shall be as required for the proper installation of the finished work and for items in mechanical sections as required. Blocking, edgings, stops, nailing strips, etc., shall be continuous, unless distinctly noted otherwise. Provide blocking as required to install all equipment. Provide blocking and nailers where shown or required to fasten interior sheet metal work.

3. Fastening for wood grounds, furring and blocking shall be of metal and of type and spacing as best suited to conditions. Hardened steel nails, expansion screws, toggle bolts, self-clinching nails, metal plugs, inserts or similar fastenings shall be used, of suitable type and size to draw the members into place and securely hold same.

C. Rough Lumber for Roofing and Sheet Metal

1. Furnish and install all wood nailing strips and wood blocking required in connection with respective types of roofing, fans, flashings, and sheet metal work, using preservative treated wood as herein before specified.

2. Wood blocking shall be of sizes and shapes as indicated on the drawings and/or designed for the reception of curb flashings for roof ventilators and similar items.

3. All nailing strips and blocking shall be carried out in accordance with the printed installation instructions, and/or recommendations of the accepted manufacturer of the roofing materials, and in coordination and cooperation with the sheet metal work trades.

4. All blocking and nailing strips shall be firmly secured in place using counter bored bolt and nut fastenings or secured by any other proposed flush surfaced fastenings.

5. Wood nailing strips or blocking required to be embedded in concrete work shall be furnished in time due for placing, prior to start of concrete operations. Locations and spacings of nailing strips or blocking shall be performed in coordination with the concrete trades, as required for respective installations.

3.5 TELEPHONE AND ELECTRICAL EQUIPMENT MOUNTING BOARDS

A. Furnish and install 3/4" thick plywood panels to the walls of the telephone and electrical equipment rooms in accordance with ConEdison requirements.

B. Secure to wall using proper devices for substrates encountered, spaced twelve (12) inches o.c., maximum around the edges, 1-1/2" from corners, and in three (3) rows of three (3) each in the field. Recess fastening devices flush with the plywood surface. Adjacent panels shall be butted with 1/16" space between without lapping.

3.6 ROUGH HARDWARE

A. Securely fasten rough carpentry together. Nail, spike, lag screw or bolt as required by conditions encountered in the field and the Contract Documents.

B. Provide rough or framing hardware, such as nails, screws, bolts, anchors, hangers, clips, inserts, miscellaneous fastenings, and similar items of the best quality and of the proper size and kind to adequately secure the work together and in place, in a rigid and substantial manner.

C. Secure rough carpentry to masonry with countersunk bolts in expansion sleeves or other acceptable manner, with fastenings not more than sixteen (16) inches apart. Secure woodwork to hollow masonry with toggle bolts spaced not more than sixteen (16) inches apart.

D. Countersink bolts in nailers and other rough woodwork and include washers and nuts. Cut bolts off flush with surfaces and peen as may be required to receive finished work.

E. Inserts to secure wood nailers to concrete shall be malleable iron threaded inserts with 3/8" diameter bolts of length to allow for countersinking. Locate at end of each nailer and at intervals not exceeding thirty (30) inches o.c.

F. Furnish to the mason for building into the work or attaching the work which is to be built in, anchors, bolts, wall plates bolted to masonry, corrugated wall plugs, nailing blocks, etc., which are required for the proper fastening and installation for the work or other items as called for in this Section.

G. Detailed instructions with sketches of necessary requirements, shall be given to the masonry trade showing the location and other details of such nailing devices.

END OF SECTION 06 20 00

SECTION 06 40 23
Architectural Woodwork

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Wood millwork and counters with plastic laminate finish.

2. Metal mesh cabinet doors and associated hardware and framing.

3. Hardware for architectural woodwork.

4. Shelving.

5. Benches.

6. Solid surfacing fabrications, including countertops, cabinet doors and wall panels.

7. Wood framing and rough lumber as required for work of this Section.

8. Wood grounds, blocking, nailers, furring as required for work of this Section.

9. All rough hardware and fastenings for work of this Section.

10. Drilling concrete and masonry, drilling and/or tapping metal work, as required, for the installation of work of this Section.

11. Back painting as specified herein.

12. Shop finish of work of this Section, except items indicated herein to be shop primed only.

B. Related Sections

1. Ornamental Metals - Section 05 70 00.

2. Carpentry - Section 06 20 00.

3. Interior Joint Sealants - Section 07 92 00, for caulking between architectural woodwork and any wall, floor, or ceiling joints.

4. Interior Glass and Glazing - Section 08 80 10.

5. Painting and Finishing - Section 09 90 00, for field finishing of architectural woodwork.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. The quality standards of the Architectural Woodwork Institute, "Architectural Woodwork Standards" (AWS), 1st Edition, dated October 1, 2009, shall apply to all workmanship, including materials and installation, for architectural woodwork, and by reference are made a part of this specification. All work shall conform to "Premium" grade requirements of the AWS unless otherwise modified herein.

C. Employ only tradesmen experienced in the fabrication and installation of architectural woodwork.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Shop Drawings

1. Submit shop drawings of all woodwork specified and indicated on the drawings. Shop drawings shall indicate room plans and elevations at 3/4" equals 1'-0" scale and typical construction details at 3" equals 1'-0" scale. Shop drawings shall indicate all materials, thicknesses and finishes.

2. Shop drawings shall show all finish hardware, anchors, fastenings and accessories.

3. Shop drawings shall show all jointing, joint treatment and butt jointing in plastic laminate.

4. Shop drawings for cabinet work must show centerline height and horizontal location of all required internal wall blocking.

5. Where architectural woodwork deviates from AWI standards noted herein, shop drawings must identify these deviations.

B. Samples: Submit samples of each of the following items:

1. Plastic laminate, twelve (12) inches square, including a section of outside corner.

2. Metal finish cabinet door, twelve (12) inches square, with corner construction including a hinge and door pull.

3. Solid surface cabinet door, twelve (12) inches square, with corner construction including a hinge and door pull.

4. Each type and finish of solid surface base, eight (8) inches long, finish as specified.

5. Cabinet hardware.

1.6 QUALIFICATIONS

A. The work of this Section shall be provided by a firm having a minimum of three (3) years' experience on projects of similar size and quality to that specified and shown.

1.7 DELIVERY, STORAGE AND HANDLING

A. All materials and work of this Section shall be protected from damage from time of shipment from shop to substantial completion of work. Cover, ventilate, and protect work of this Section from damage caused by weather, moisture, heat, staining, dirt, abrasions, any other causes which may adversely affect appearance or use, or which may cause deterioration of finish, warping, distortion, twisting, opening of joints and seams, delamination, loosening, etc., of work of this Section.

B. Keep all finish carpentry, millwork, and cabinet work under cover both in transit and at the premises. Do not deliver any finish carpentry, millwork or cabinet work before it is required for installation. Protect such work to avoid damage in transit, during erection and after erection until acceptance of the building; use all such methods to provide the proper protection.

C. Deliver finish carpentry, millwork, and cabinet work in a dry stable condition; protect same against injury and dampness. Do not store or install finish carpentry, millwork or cabinet work until after the concrete, masonry and plaster work are thoroughly dry.

1.8 JOB CONDITIONS

A. Humidity Controls: The ambient relative humidity at the site, including both the storage and the installation areas, shall be maintained between 25% and 55% prior to delivery and through the life of the installation.

B. Determine equilibrium moisture content and maintain required temperature and relative humidity as required for a tolerance of plus or minus one (1) percent of the specified optimum moisture content until woodwork receives specified finishes. Refer to "Guide to Wood Species Selection," AWI, for method of determining equilibrium moisture content values.

C. Areas to receive architectural woodwork must be fully enclosed with windows and/or curtain wall installed and glazed, exterior doors in place, HVAC systems operational, and temporary openings closed. Any plaster, wet grinding and concrete work shall be fully dry.

D. Architectural woodwork shall be allowed to come to equilibrium on site for 7 days prior to installation.

PART II - PRODUCTS

2.1 BASIC REQUIREMENTS

A. Wood Moisture Content: Provide kiln-dried (KD) lumber with an average moisture content range of nine (9) to twelve (12) percent for exterior work and six (6) to eleven (11) percent for interior work.

B. Compatibility of Grain and Color: Commissioner reserves the right to select materials for best compatibility between visually related members and veneers.

C. Machine and sand woodwork to comply with requirements of Standards for specified grade.

D. Fabricate woodwork to dimensions, profiles and details shown. Rout or groove back of flat trim members, kerf backs of other wide flat members except plywood or veneered members.

E. Miter joints by joining, splining and gluing to comply with requirements for the specified grade.

F. Inspect each piece of lumber and plywood or each unit of woodwork after drying; do not use twisted, warped, bowed or otherwise damaged or defective wood.

2.2 GENERAL - MATERIALS

A. Softwood lumber shall conform to the requirements of the latest edition of American Lumber Standards Simplified Practice Recommendation R-16. Grades shall conform to the grading rules of the Architectural Woodwork Institute and shall bear the labels and certificates from the AWI certification program indicating that woodwork complies with requirements of grades specified, and a mark of mill identification.

B. Framing and Rough Lumber: No. 1 KD grade Southern Pine or Dense Construction grade Douglas Fir, having extreme fiber in bending stress of at least 1700 psi, surfaced four sides (S4S). Provide fire retardant treatment meeting requirements of Section 06 20 00, Carpentry.

C. Grounds, Blocking, Nailers, Furring: Southern Pine, Douglas Fir or Sitka Spruce, grade to suit particular purpose and to be straight, square edged, straight grained, surfaced four sides (S4S), and which will retain nails and screws without splitting. Provide fire retardant treatment.

D. Lumber: AWS Section 3 with the following requirements:

1. Hardwood for Opaque Finish: Any hardwood which, when finished, will not show any grain, imperfection or other surface defects when used with the opaque finish specified.

E. Plywood: AWS Section 4; veneer core, particleboard or plywood core unless otherwise specified, and with the following requirements:

1. Hardwood: Premium Grade, face veneers as shown or specified.

2. Particleboard: Premium Grade, fire retardant for wall paneling only. In addition, particleboard and MDF shall be certified to the following EPP CPA 3-08 formaldehyde emission limits:

   a. Particleboard meets 0.18 ppm.
   b. MDF meets 0.21 ppm.

3. Edges: Banded with hardwood in accordance with Premium Grade Standards.

4. Provide marine grade plywood or moisture resistant MDF under countertop surfaces, and MDF for the cabinet bases for normal use/wear areas.

2.3 PLASTIC LAMINATE

A. Face Sheets: NEMA Publication LD3, Grade GP50, Type I, 0.05" thick.

1. Basis of Design: Subject to compliance with requirements, provide Abet Laminati; Color, Pattern and Finish as indicated on Finish Schedule, or comparable product by one of the following:

   a. Wilsonart
   b. Nevamar
   c. Or approved equal

B. Backing Sheets: Non-decorative, high-pressure plastic laminate, NEMA LD3, Grade BK20, 0.02" thick.

C. Edges: Finish with plastic laminate to match face and applied before face sheets are applied, unless otherwise shown or specified.

D. Through-Color Plastic Laminate: NEMA Publication LD3, Solid Color Laminates.

1. Basis of Design: Subject to compliance with requirements, provide Formica; ColorCore2 Laminate or comparable product by one of the following:
   a. Wilsonart
   b. Nevamar
   c. Or approved equal

2. Color, Pattern and Finish: See Finish Schedule.

2.4 METAL

A. Steel

1. Structural Steel Shapes and Plates: ASTM A 36.

2. Hot-Rolled Carbon Steel Sheets: Commercial quality, ASTM A 569, may be used for concealed parts only.

B. Primer for Unexposed Metal: Zinc chromate primer.

C. Metal Mesh Cabinet Doors: See Finish Schedule and Section 05 70 00, Ornamental Metals.

2.5 MISCELLANEOUS PRODUCTS

A. Fasteners

1. Wood Screws: FS FF-S-111, type, size, material and finish as required for the condition of use.

2. Nails: FS FF-N-105, type, size, material and finish as required for the condition of use.

3. Anchors: Type, size, material and finish as required for the condition of use.

4. Staples: Upholstery type staples of sufficient strength to hold fabric taut in place without sagging.

B. Adhesives

1. For Laminating Plastic Laminate Surfaces: Urea resin, Type II, as recommended by fabricator.
2. For All Other Uses: Polyvinyl acetate resin emulsion or other type as recommended by the fabricator.

2.6 CABINETS WITH PLASTIC LAMINATE FINISH

A. General

1. Fabricate all cabinetry and millwork to the "Premium Grade" standards of the AWS, Section 10.
2. Face construction of cabinets shall be "Flush Overlay."
3. Provide 3/4" thick doors, drawer fronts and fixed panels (including thickness of plastic) except where required to be thicker by Standards; and provide flush units.
4. Provide dust panels of 1/4" thick plywood or tempered hardboard above compartments and drawers, except where located directly below countertops.
5. Exposed Edges: Plastic laminate matching exposed panel surfaces. Ease exposed edge of overlap sheet.

B. Plastic Laminate

1. Plastic Laminate for Horizontal Surfaces: 0.050" thick, general purpose type (high pressure).
2. Plastic Laminate for External Vertical Surfaces: 0.028" thick, general purpose type (high pressure).
3. Plastic Laminate for Post Forming: 0.042" thick, post forming (high pressure).
4. Plastic Laminate for Cabinet Linings: 0.020" thick, cabinet liner (high pressure).
5. Plastic Laminate for Concealed Panel Backing: 0.020" thick, backer type (high pressure).
6. Plastic Laminate Colors and Patterns: As scheduled.

C. Shop Assembly: All work shall be shop assembled. Work that is too large for entrance into the use area shall be fabricated in attachable sections with provisions for reconnection in the using space.

D. Material Thicknesses: See drawings for general material thicknesses. Minimum thickness of solid lumber for web frames, trim, bases, etc., shall be 3/4". Minimum thickness of plywood and particleboard shall be 3/4".

E. Sizes: See drawings for woodwork sizes required. The manufacturer shall check field dimensions and verify all openings and actual field conditions prior to fabrication of work.

F. Manufacturer is responsible for rigidity and structural stability.

2.7 HARDWARE

A. Architectural Woodwork Hardware: Provide millwork hardware as selected by Commissioner, and as follows:

1. Basis of Design Hinge for Solid Surface Cabinet Doors: Subject to compliance with requirements, provide: Blum Clip Top Blumotion 110 degrees, Finish as indicated on Finish Schedule, or comparable product by one of the following:

   a. Sugatsune
   b. Salice
   c. Or approved equal

2. Basis of Design Slides for Solid Surface Cabinet Drawer Fronts: Subject to compliance with requirements, provide: KV 8400 Full extension box or file drawer slide, or comparable product by one of the following:

   a. Blum
   b. Sugatsune
   c. Or approved equal

3. Basis of Design Hinge for Metal Cabinet Doors: Subject to compliance with requirements, provide: Blum Clip Top Blumotion 95 Degrees thick door hinges, or comparable product by one of the following:

   a. Sugatsune
   b. Salice
   c. Or approved equal

4. Provide cam locks at all cabinet doors, but no cabinet interior latches. All doors shall be free to open when unlocked.

5. Basis of Design for Door Pulls for SSM and PL Cabinet Doors: Subject to compliance with requirements, provide: Mockett DP54C Series

   a. Sugatsune
   b. Colonial Bronze
   c. Or approved equal

6. Finish: Angled Bar Drawer Pull: 6-3/4" long, satin stainless steel.

7. Basis of Deisn for Door Pulls for MTL Cabinet Doors: Subject to compliance with requirements, provide: Mockett DP3 Series

   a. Sugatsune
   b. Colonial Bronze
   c. Or approved equal

8. Finish: Tab Drawer and Door Pull - 1-1/2" profile - 4" long tab style, color to be satin chrome.

2.8 SOLID SURFACING FABRICATIONS

A. Provide products as indicated on Finish Legend.

1. SSM-01: 1/2" thick, used as wall cladding and cabinet doors.
2. SSM-02: 1/2" thick, used as counstertops.
3. Basis of Design: Subject to compliance with requirements, provide DuPont; Corian or comparable product by one of the following:
   a. Samsung Chemical
   b. Wilsonart Contract
   c. Or approved equal

B. Rout and finish component edges to a smooth, uniform finish. Rout cutouts, then sand edges and smooth. Reject defective or inaccurate work.

C. All seams shall be fused.

D. Wall Cladding Applications: Fused seams, locations as indicated on architectural drawings; substrate to be cement backer board.

E. Cabinet Door Applications: All edges to be eased, build up edges per architectural drawings; faces of cabinet doors to be one panel (no seams).

F. Comply with manufacturer's installation and finishing guidelines.

2.9 FABRICATION - GENERAL

A. Provide lumber framing for architectural woodwork, complete with all bracing and fastening devices as required for a rigid installation, and as required to sustain the imposed loads.

B. Fabricate architectural woodwork to dimensions, profiles, and details indicated.

C. Fabricate units in largest practicable sections. Assemble in the shop for trial fit, disassemble for shipment and reassemble with concealed fasteners. Where necessary for fitting at site, provide for scribing, trimming and fitting.

D. Maintain relative humidity and temperature during fabrication, storage and finishing operations matching that of the areas of installation.

E. Details indicate the required type and quality of construction. Modifications to conform to manufacturer's standards will be considered provided that they comply with the Contract Documents and maintain the profiles shown.

F. Reinforcing shown is minimum. Provide additional reinforcing as required to ensure a rigid assembly. Exposed surfaces shall be free from dents, tool marks, warpage, buckle, glue and open joints, or other defects affecting serviceability or appearance. Accurately fit all joints, corners and miters. Conceal all fasteners. Make threaded connections up tight so that threads are entirely concealed.

G. Factory finish all items where possible. Defer final touch-up, cleaning and polishing until after delivery and installation.

H. Comply with AWI, Premium Grade, for sanding, filling countersunk fasteners, back priming and similar preparations for the finishing of architectural woodwork, as applicable to each unit of work.

I. Prepare all countersunk wood screw attachments for wood plugs. Wood plugs shall match surrounding species and grain direction; putty filling is not acceptable.

2.10 FABRICATION - SPECIFIC ITEMS

A. Millwork

1. Include all preparations for mechanical, electrical, telephone and plumbing work required.
2. Provide cabinet hardware for millwork as shown.
3. Provide dust panels in body webs and between drawer units.
4. Hollow core doors will not be permitted unless specified by Commissioner.
5. Provide drawers with slides as specified. Drawers shall not rest on web body frames.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 FRAMING

A. Use specified framing lumber, sizes and spacing as indicated on drawings and as required to support loads.

B. Framing shall be cut square on bearings, closely fitted, accurately set to required lines and levels, rigidly secured in place at bearings and connection with nails, lag screws and/or bolts as required by conditions.

3.3 GROUNDS, BLOCKING, NAILERS AND FURRING

A. Provide all wood grounds, blocking, nailers, furring, and the like for work of this Section, where shown and where required, dressed to size indicated or required to suit the condition. Install grounds, blocking, nailers, furring, etc., rigidly, in proper alignment, trued with a long straight edge.

3.4 ROUGH HARDWARE

A. Provide all rough hardware, such as nails, screws, bolts, anchors, hangers, clips and similar items. Hardware shall be of the proper size and kind to adequately secure the work together and in place, in a rigid and substantial manner. Use galvanized hardware at exterior walls, and at other locations where subject to moisture or where water will be present.

B. Secure wood to concrete and to solid masonry with countersunk bolts in expansion sleeves or other approved manner, to steel with countersunk bolts, to hollow masonry and to drywall with heavy duty countersunk toggle bolts. Space fastenings not more than sixteen (16) inches apart. Hardened cut nails, power-driven fastenings, or other suitable devices may be used where approved by the Commissioner.

C. Connections and fastenings shall be made in such manner as will compensate for swelling and shrinkage and shall permit the work to remain permanently in place without any splitting or opening of joints.

3.5 INSTALLATION OF CABINET FINISH HARDWARE

A. All items of finish hardware furnished under this Section shall be carefully fitted and secured in place as part of the work of this Section. Ensure operation without forcing.

B. After preliminary fitting of hardware, the Contractor shall remove trim for painting and finishing work; after which he shall reinstall the hardware in a permanent manner.

C. Upon completion of the work, before substantial completion of the building, the Contractor shall, in the presence of the Commissioner, show that all hardware is in satisfactory working order; fit all keys in their respective locks and, upon acceptance of the work, shall tag and deliver all keys to the Commissioner and the City of New York.

3.6 GENERAL INSTALLATION

A. Wall anchorage and general installation procedures for cabinetry work shall conform to AWS Section 10, Article entitled "Execution," Sub-Article 6.1, with all related sub-paragraphs.

B. Install the work plumb, level, true and straight with no distortions. Shim as required using concealed shims. Install to a tolerance of 1/8" in 8'-0" for plumb and level (including countertops), and with 1/16" maximum offset in flush adjoining surfaces, 1/8" maximum offset in revealed adjoining surfaces.

C. Scribe and cut work to fit adjoining work; refinish cut surfaces or repair damaged finish at cuts.

D. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure to grounds, stripping and blocking with countersunk, concealed fasteners and blind nailing as required for a complete installation.

3.7 CABINET WORK AND MILLWORK

A. General

1. Materials and workmanship shall conform to the Quality Standards of the Architectural Woodwork Institute specified herein and to the drawings.

2. Fabricate all cabinet work and millwork completely in the shop, in complete and/or as large units as practical, leaving only fitting, assembly, installation and a minimum of fabrication and finishing to be done at the building. Assembled work shall be rigidly secured and permanently fastened together with concealed fasteners.

3. Afford the Commissioner every facility for inspection of work at shop or mill at such times as the Commissioner may select.

4. As far as practicable, use concealed fastenings for joining and assembling the work. Where this is impossible, the means of securing shall be placed in inconspicuous places and methods of joining and assembling submitted for Commissioner's approval prior to fabrication.

5. Mill all finish wood accurately to detail, with clean cut moldings, profiles and lines, machined, sanded smooth, housed, jointed, blocked, put together in the best manner, with provision for swelling and shrinkage, and to ensure the work remaining in place without warping, splitting or opening of joints.

6. Cut trim to dimensions and profiles shown, from solid stock.

7. Make all trim and the like in single lengths wherever possible; joints mitered, glued and splined. Continuous members shall have tight flush joints, doweled or splined and glued.

8. Make all joints hairline tight, fitted accurately and joined with hardwood splines or dowels, glued together, or by other method approved by the Commissioner. Use screws, not nails, for fastenings.

9. Gluing shall, where practicable, be by the hot plate press method and glued surfaces shall be in close contact throughout. Glue stains on finished work will not be permitted.

10. Cover surface fastenings, where permitted, with matching wood plugs or wood putty. Finish exposed edges of plywood with matching solid stock. Lock miter external corners; tongue and groove internal corners to allow for contraction and expansion.

11. Machine sand with grain, finish with hand sanding, leave exposed surfaces free from machine or tool marks that will show through the finish.

12. Work which adjoins drywall, concrete, or other finish shall be fitted and scribed in a careful manner and ample allowance shall be given for cutting and scribing.

13. Erect work true to lines, levels and dimensions, square, aligned and plumb, securely and rigidly fastened in place.

B. Cabinet Work: Provide all items of cabinet work indicated on drawings and as herein specified.

1. Tops, sides, backs, bottoms, dividers, shelves, fronts, doors and drawer fronts shall be of plywood or MDF core, with the specified plastic laminate as indicated on drawings.

2. Drawer sides and backs shall be 3/4" thick MDF with plastic laminate finish. Drawer bottom shall be 3/4" thick MDF with plastic laminate finish. Color varies by location.

3. Cabinet doors and drawers shall be flush mounted.

4. Adjustable shelves in cabinets shall have metal grommets spaced 2" o.c.

5. Fixed shelves shall be dadoed into side supports and glued.

6. Shelves shall be 3/4" thick for spans up to 30"; for spans in excess of 30" to 48" shelves shall be 1" thick.

7. All cabinets shall have closed top, sides, bottom, and back to match face work. Cabinets to fit accurately into indicated locations; scribe moldings permitted only where indicated.

8. Countertops, counters, counter fronts, shelves, etc., indicated on drawings to have plastic laminate, shall have plastic laminate shop applied to 3/4" thick MDF core, with plastic laminate backing sheet on underside or back of countertops, counters and shelves. Plastic laminate shall be pressure laminated to

core with laminate at external corners. Provide concealed wood framing to support plastic laminate counters, securely fastened to wall and to underside of counters.

C. Countertops shall be installed to support a minimum concentrated live load of 150 lbs. acting downward at mid span at outer edge of counter without causing deformation and damage.

3.8 PAINTING AND FINISHING

A. General: All painting and finishing work of this Section shall be shop applied, unless otherwise noted, as specified below. All painting and finishing shall match approved samples. Field finish painting, where specified below, shall be as specified in Section 09 90 00, Painting and Finishing.

B. Back-Painting: All work of this Section in contact with concrete or masonry or other moisture areas and all concealed surfaces of cabinet and millwork, shall be back-painted with one (1) coat of oil based paint prior to installation, shop applied where practicable.

C. Field Touch-Up: Provide field touch-up including the filling and touch-up of exposed job-made nail or screw holes, refinishing of raw surfaces resulting from job fitting, repair of job inflicted scratches and mars, and final cleaning up of the finished surfaces.

END OF section 06 40 23

SECTION 07 00 01
Rainscreen System

PART I – GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements

1. Refer to DDC General Conditions.

   a. Section 01 33 00 – Submittal Procedures.

   b. Section 01 74 19 – Construction Waste Management and Disposal.

   c. Section 01 81 13.04 – Sustainable Design Requirements for LEED v4 Buildings.

1.2 SUMMARY:

A. Refer to Building Enclosure System Matrix for a description of the systems included in this Section as well as the requirements listed there.

B. For all Work described, provide the following components and their subcomponents of work:

1. Framing systems (as applicable) which may include:

   a. Fabricated steel framing.

   b. Backup support precast concrete panels.

2. Weather resistive barriers, back pans, and insulation.

3. Sealants and gaskets.

4. Cladding panels which may include:

   a. Formed metal panels.

   b. Precast concrete cladding panels.

   c. Louvers panels.

5. Fixings and fastenings.

6. Flashings.

7. Finishes, coatings, and surface treatments.

8. Anchors and inserts used to attach to building structure.

   a. Supply anchors and/or inserts to be cast or fabricated into/onto the building structure by others.

9. Penetrations for other services.

10. Pre-construction mockups, Samples, and testing.

11. Field testing.

C. This Section requires Engineering Services.

D. The work in this Section incorporates the work of the following Sections. Requirements specified in this Section are in addition to those in the following Sections:

1. Section 03 45 00 – Architectural Pre-Cast Concrete.

2. Section 07 27 01 – Weather Resistive Barriers.

3. Section 07 42 14 – Metal Panels.

4. Section 07 62 01 – Facade Sheet Metal Flashings.

5. Section 07 92 01 – Exterior Joint Sealants.

E. The following Sections describe systems that are adjacent to that of this Section, and will require coordinated interfaces:

1. Section 02 01 02 – Vapor Barrier Installation.

2. Section 03 45 00 – Architectural Pre-Cast Concrete.

3. Section 04 20 00 – Unit Masonry.

4. Section 05 40 00 – Cold-Formed Metal Framing.

5. Section 05 50 00 – Miscellaneous Metals.

6. Section 07 20 00 – Thermoplastic Membrane Roofing.

7. Section 07 95 00 – Expansion Control.

8. Section 08 11 13 – Steel Doors and Frames.

9. Section 08 33 23 – Overhead Coiling Doors.

10. Section 08 33 24 – Roll-Up Doors

11. Section 08 40 01 – Glazed Storefronts and Curtain Wall System.

12. Section 08 90 00 – Louvers.

13. Reference Documents

a. Building Enclosure System Matrix: Refer to Drawing EN1-003.

b. Samples Matrix: Refer to Drawing EN1-003.

1.3 REFERENCE STANDARDS AND REGULATIONS:

A. Refer to DDC General Conditions.

B. The Contractor's design, materials, and workmanship shall comply with 2014 New York City Building Code and 2016 New York City Energy Conservation Code. Where their recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Documents shall take precedence.

C. Comply with applicable provisions and recommendations of the standards listed below. Where standards conflict with each other or conflict with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted, the latest editions of the standards shall apply:

1. American Architectural Manufacturers Association (AAMA)

a. AAMA CW-DG-1 – Aluminum Curtain Wall Design Guide Manual.

b. AAMA CW-10 – Care and Handling of Architectural Aluminum from Shop to Site.

c. AAMA TIR-A9 with amendments – Metal Curtain Wall Fasteners.

d. AAMA 501.1 – Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors Using Dynamic Pressure.

e. AAMA 501.2 – Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems.

f. AAMA 501.4 – Recommended Static Test Method for Evaluating Curtain Wall and Storefront Systems Subjected to Seismic and Wind Induced Interstory Drifts.

g. AAMA 501.5 – Test Method for Thermal Cycling of Exterior Walls.

h. AAMA 503 – Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls and Sloped Glazing Systems.

i. AAMA 508 – Voluntary Test Method and Specification for Pressure Equalized Rain Screen Wall Cladding Systems.

j. AAMA 611 – Voluntary Specification for Anodized Architectural Aluminum.

k. AAMA 2605 – Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.

2. Aluminum Association (AA)

a. AA Aluminum Standards and Data.

b. AA ADM-1 – The Aluminum Design Manual.

3. American Institute of Steel Construction (AISC)
   a. AISC Steel Construction Manual.
4. American Iron and Steel Institute (AISI)
   a. AISI North American Specification for the Design of Cold-Formed Steel Structural Members.
5. American Society of Civil Engineers (ASCE)
   a. ASCE 7 – Minimum Design Loads for Buildings and Other Structures.
6. American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE)
   a. ASHRAE 90.1 – Energy Standards for Buildings Except Low-Rise Residential Buildings.
   b. ASHRAE Fundamentals Handbook.
7. ASTM International (ASTM)
   a. ASTM A1008/A1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
   b. ASTM A1011/A1011M – Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
   c. ASTM A108 – Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.
   d. ASTM A123/A123M – Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   e. ASTM A153/A153M – Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
   f. ASTM A240/A240M – Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   g. ASTM A307 – Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
   h. ASTM A325 – Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
   i. ASTM A370 – Standard Test Methods and Definitions for Mechanical Testing of Steel Products.
   j. ASTM A380 – Standard Practice for Cleaning, Descaling, and Passivation of Stainless Steel Parts, Equipment, and Systems.
   k. ASTM A47/A47M – Standard Specification for Ferritic Malleable Iron Castings.

l. ASTM A500 – Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

m. ASTM A568 – Standard Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.

n. ASTM A572/A572M – Standard Specification for High-Strength Low-Alloy ColumbiumVanadium Structural Steel.

o. ASTM A653/A653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

p. ASTM A780/A780M – Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

q. ASTM A923 – Standard Test Methods for Detecting Detrimental Intermetallic Phase in Duplex Austenitic/Ferritic Stainless Steels.

r. ASTM A967 – Standard Specification for Chemical Passivation Treatments for Stainless Steel Parts.

s. ASTM A992 – Standard Specification for Structural Steel Shapes.

t. ASTM A1046 – Standard Specification for Steel Sheet, Zinc-Aluminum-Magnesium Alloy-Coated by the Hot-Dip Process.

u. ASTM B209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

v. ASTM B221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

w. ASTM B308/B308M – Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles.

x. ASTM B429/B429M – Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.

y. ASTM B449 – Standard Specification for Chromates on Aluminum.

z. ASTM C272 – Standard Test Method for Water Absorption of Core Materials for Sandwich Constructions.

aa. ASTM C509 – Standard Specification for Elastomeric Cellular Preformed Gasket and Sealing Material.

bb. ASTM C518 – Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Low Meter Apparatus.

cc. ASTM C612 – Standard Specification for Mineral Fiber Block and Board Thermal Insulation.

dd. ASTM C1087 – Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems.

ee. ASTM C1115 – Standard Specification for Dense Elastomeric Silicone Rubber Gaskets and Accessories.

ff. ASTM C1193 – Standard Guide for Use of Joint Sealants.

gg. ASTM C1401 – Standard Guide for Structural Sealant Glazing.

hh. ASTM C1513 – Standard Specification for Steel Tapping Screws for Cold-Formed Steel Framing Connections.

ii. ASTM D523 – Standard Test Method for Specular Gloss.

jj. ASTM D635 – Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position.

kk. ASTM D1400 – Standard Test Method for Nondestructive Measurement of Dry Film Thickness of Nonconductive Coatings Applied to a Nonferrous Metal Base.

ll. ASTM D1929 – Standard Test Method for Determining Ignition Temperature of Plastics.

mm. ASTM D2244 – Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.

nn. ASTM D3363 – Standard Test Method for Film Hardness by Pencil Test.

oo. ASTM D4214 – Standard Test Methods for Evaluating the Degree of Chalking of Exterior Paint Films.

pp. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Building Materials.

qq. ASTM E90 – Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

rr. ASTM E136 – Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C.

ss. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

tt. ASTM E331 – Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

uu. ASTM E413 – Classification for Rating Sound Insulation.

vv. ASTM E488 – Standard Test Methods for Strength of Anchors in Concrete Elements.

ww. ASTM E754 – Standard Test Method for Pullout Resistance of Ties and Anchors Embedded in Masonry Mortar Joints.

xx. ASTM E783 – Standard Test Method for Field Measurement of Air Leakage through Installed Exterior Windows and Doors.

yy. ASTM E1105 – Standard Test Method for Field Determination of Water Penetration of Installed Exterior Windows, Skylights, Doors, and Curtain Walls, by Uniform or Cyclic Static Air Pressure Difference.

zz. ASTM E1332 – Standard Classification for Rating Outdoor-Indoor Sound Attenuation.

aaa. ASTM E2357 – Standard Test Method for Determining Air Leakage of Air Barrier Assemblies.

8. American Welding Society (AWS)

   a. AWS A5.10 – Specification for Bare Aluminum and Aluminum-Alloy Welding Electrodes and Rods.

   b. AWS D1.1 – Structural Welding Code – Steel.

   c. AWS D1.2 – Structural Welding Code – Aluminum.

   d. AWS D1.3 – Structural Welding Code – Sheet Steel.

   e. AWS D1.6 – Structural Welding Code – Stainless Steel.

9. International Organization for Standards (ISO)

   a. ISO 2815, Paints and Varnishes – Buchholz Indentation Test.

   b. ISO 3231, Paints and Varnishes – Determination of Resistance to Humid Atmospheres Containing Sulfur Dioxide.

10. National Association of Architectural Metal Manufacturers / National Ornamental & Miscellaneous Metals Association (NAAMM/NOMMA)

    a. NAAMM/NOMMA 500-06 – Metal Finishes Manual for Architectural and Metal Products.

11. National Fire Protection Association (NFPA)

    a. NFPA 259 – Standard Test Method for Potential Heat of Building Materials.

    b. NFPA 268 – Standard Test Method for Determining Ignitability of Exterior Wall Assemblies Using a Radiant Heat Energy Source.

    c. NFPA 285 – Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.

12. Society for Protective Coatings (SSPC)

    a. SSPC-Paint 42 – Epoxy Polyamide/Polyamidoamine Primer, Performance-Based.

    b. SSPC-PS Guide 12 – Guide to Zinc-Rich Systems.

    c. SSPC-PS 28.01 – Two-Coat Zinc-Rich Polyurethane Primer / Aliphatic Polyurea Topcoat System, Performance-Based.

d. SSPC-PS 28.02 – Three-Coat Moisture-Cured Polyurethane Coating System, Performance-Based.

1.4 PERFORMANCE REQUIREMENTS:

A. General Prescriptive Requirements

1. For all elements outside of the weather resistive barrier plane, use materials suitable for external conditions that will not deteriorate as a result of weathering:

   a. Elements shall resist deleterious effects of water, cleaning agents, temperature variations expected from the anticipated temperature ranges, gaseous pollutants (including ozone), and weak acids deriving from gaseous pollutants dissolved in water and ultraviolet (UV) radiation exposure during installation and in service.

   b. Include separators to prevent bimetallic corrosion.

   c. Use suitable grade of stainless steel for all fasteners outside or through the weather resistive barrier.

      1) Seal all fasteners that penetrate through weather resistive barrier with material chemically compatible with fastener and adjacent materials.

   d. Use suitable grade of stainless steel or aluminum for all brackets outside the weather resistive barrier.

   e. Do not use different metals for significant structural connections that occur outboard of the weather resistive barrier plane unless:

      1) The connection can incorporate dielectric separators.

      2) The connection can be fully inspected after installation is complete using the Project's maintenance access system.

2. Use materials in the Work chemically compatible with their adjacent materials.

   a. Where flexible or sheet vapor control materials are connected together or to other systems, lap and continuously seal with chemically compatible materials and mechanically restrain.

3. Where insulation must be locally reduced in thickness, provide high-performance insulation to match the overall performance of the surrounding insulation.

4. Site-applied sealant is not acceptable as part of the primary weather sealing system unless shown on the Architectural Drawings or noted within this Section.

5. Engineer the air / weather resistive barrier to resist the maximum design wind load.

6. All external areas of the Work shall be accessible for maintenance and repair.

   a. Adjust loads imposed on the Work as necessary for the type and orientation of maintenance equipment anticipated. The Work shall sustain safely, and without damage, access and specified maintenance loads.

b. All gaskets, where possible, shall be accessible for inspection / replacement.

B. General Performance

1. Comply with performance requirements specified.

2. Work shall:

a. Withstand and accommodate the stresses and movements induced by the specified cambers, estimated deflections, relative deflections, and the long-term movements associated with the settlement of the foundations, or any other movements of the structure, changes in temperature, moisture content, and chemical changes.

b. Include suitable allowances for the specified construction tolerances.

c. Withstand the specified deleterious and degrading effects of radiation from the sun, weathering, atmospheric pollution, vermin, fungi, and other growths for the service life without maintenance in excess of routine cleaning and minor repairs.

d. Have a resistance to combustion and fire spread appropriate to each part.

e. Prevent casual and unlawful entry into the building.

f. Cleaning and maintenance of the Work shall be carried out easily, without interfering with building function.

g. Panels, structural silicone assemblies, and decorative capping pieces shall remain securely held and gaskets shall not be displaced.

3. Failure includes inability of the Work to meet the performance requirements set forth in this Section in addition to the following:

a. Noise or vibration created by wind, and thermal and structural movements.

b. Staining of adjacent components or wetting of interior building components. Water penetration into the system (beyond the exterior rainscreen layer) is acceptable only if all of the following conditions are satisfied; any other water penetration is considered water leakage and is unacceptable:

1) Water is immediately contained and drained to exterior.

2) There is no wetting of a surface that could be damaged by moisture or that would be visible to building occupants.

3) There is no staining or other damage to completed building or its furnishings.

4) This definition of water leakage takes precedence over other definitions that may appear in referenced documents.

C. Detailed Engineering Requirements

1. The Work adopts a rainscreen system, complete with cladding Panels and supporting framing; insulation; weather resistive, air, and vapor barriers.

2. This system shall be:

   a. Engineered to allow Panels to be shop-fabricated and field-installed.

   b. Engineered to incorporate bracket assemblies as required to support the attached Panels and resist the full loads applied to the system. Pressure equalized to the air and weather resistive barrier plane of the system. Incorporate a drainage system behind the rainscreen Panels that drains to the exterior. This system shall:

      1) Allow complete drainage of water to outside.

      2) Eliminate standing water on or around Panels.

      3) Allow ventilation behind the rainscreen Panels.

      4) Prevent water infiltration at weeps.

   c. Incorporate a continuous thermal, water and weather resistive barriers.

      1) All interfaces with adjacent systems shall accommodate the integration of the transitional waterproofing, air and weather resistive barrier into the equivalent plane of the system. This transition shall consist of a membrane and shall not rely on sealant alone. This integration shall provide for a continuous thermal, water, air and weather barrier system from the glazing system to that of adjacent building enclosure systems.

   d. Provide accommodation for the most onerous movement when all tolerances are accounted for.

   e. Incorporate thermal isolation devices / thermal breaks to minimize thermal bridging.

   f. Allow for Panel replacement from the outside of the building.

   g. Sealed with joint sealants between cladding Panels where indicated, with Panel joint reveals; allow sufficiently deep edge profile to accommodate sealant joint.

D. Structural Performance

1. The Work shall transmit the design loads as specified below to the building structure via the points of attachment as engineered and built, with an adequate margin of safety appropriate to each material and product as required by 2014 New York City Building Code and the listed Reference Standards.

2. As required by 2014 New York City Building Code, consider the various load cases and combinations of load cases acting on structural elements.

   a. Permanent deformation or damage to any components of the Work, adjacent elements, or supporting structure is not accepted under any of the above load cases and combinations of load cases, excluding blast and impact loads.

b. Consider buckling and overall structural system stability in the engineering of all elements. Engineer framing members and systems not to buckle under the design load cases and their combinations.

c. Consider wind reinforced vibrations in the engineering of the Work. The Work shall not resonate at or under the design load conditions.

d. Consider the effects of ice accumulation, including the impact on gravity and wind loads, in the engineering of the Work. Derive load combinations and methodology of developing Atmospheric Ice Loads from the latest edition of ASCE-7.

3. Coordinate all loads imposed on the building structure with the Commissioner. See Structural Drawings for structural movements and limiting loading at interface to structure.

4. Coordinate and verify access and maintenance loads with the maintenance equipment manufacturer and Commissioner. Loads shall not be less than the following and shall be applied to any external or internal surface of the Work subject to access for maintenance purposes:

a. A vertical uniformly distributed load of 12.5 psf, and a concentrated load of 250 lbf acting on a 6 in. diameter contact area applied to any gutters, copings, or flat and near-flat surfaces with horizontal projections greater than 6 in.

b. A 115 lbf load applied horizontally through a 6 in. diameter contact area on any vertical or near-vertical building enclosure surface required to support a ladder.

c. 600 lbf in any direction at building maintenance equipment restraint points.

d. Where maintenance and safety ropes will be draped over elements of the Work, engineer those elements to support, without damage, a point load of 675 lbf or the anchorage load limits provided, applied over the length of contact of the cladding.

E. Movement Performance

1. The Work shall accommodate the movements as per 2014 New York City Building Code and as developed by the building structure without any reduction in performance below the minimum levels required herein. These include the following:

a. Movements due to design gravity and live loads.

b. Movements under repeated cycles of the design wind loads.

c. Movements due to seismic loads.

d. Changes in dimension and shape arising from specified building movements, including settlement, shrinkage, elastic shortening, floor beam deflections, creep, wind sway, twisting and racking, and thermal and moisture movement. These include movements due to any joint in the supporting structure or building frame.

2. Coordinate all building movement assumptions with the Commissioner and the Project Structural Engineer.

3. Applicable Testing Requirements

   a. Interstory Drift Performance

      1) The Work shall demonstrate compatibility with the building structure interstory drifts when tested to the procedures outlined in AAMA 501.4 at the design displacement, and for not less than ten (10) full cycles.

F. Deflection Performance

1. Provide Work that accommodates the dimensional construction tolerances of building structure and other adjacent constructions.

2. Under design loads and their combinations, the deflections of elements shall be less than following:

   a. Normal to the face of the wall plane:

      1) Elements Supporting Plaster, Masonry, or Brittle Items: Less than span/500.

      2) Non-Glass Supporting Elements: Less than Span/175.

   b. Parallel to the face of the wall plane, limited to the lesser amount of either:

      1) That which reduces edge clearance between framing members and Panel or other fixed components to less than 1/8 in.

   c. Engineer cantilevered elements to deflect less than 2L/175, where L represents the length of the cantilevered element.

3. The Work shall accommodate thermal deflections and movements resulting from the following maximum change (range) in ambient and surface temperatures. Changes in dimension resulting from changes in temperature in any of its parts, its supporting framework, and brackets shall not result in any reduction in the specified performance.

4. Base engineering calculation on surface temperatures of materials due to both solar heat gain and night-time-sky heat loss. As per AAMA 501.5, all system components shall noiselessly withstand thermal movements and shall not buckle, distort, crack, cause failure of glass and/or joint seals, or develop undue stresses on the finished surfaces, materials, fixing assemblies, or building structure.

   a. Engineer Work to meet these requirements under the following conditions:

      1) Total Temperature Range: 120°F, ambient; 180°F, material surfaces.

      2) Test Interior Ambient Air Temperature: 70°F.

5. The Work shall accommodate deflections and/or movements resulting from moisture without any reduction in the specified performance. This includes:

   a. Changes in moisture content of Work components, including those due to wetting from rain.

   b. Expansion of absorbed or retained moisture due to freezing.

6. The Contractor shall avoid, in their engineering and detailing, introducing locked-in stresses that may be detrimental to the performance of the Work during the service life.

   a. Stresses include, but are not limited to, those that can develop in an individual Panel, if the various fasteners and connections that secure that Panel in position are so rigid that they do not allow for thermal or other movement in that Panel.

7. Applicable Testing Requirements

   a. Uniform Load Structural Deflection Performance

      1) The Work shall demonstrate compliance with the deflection criteria listed in this Section when tested according to ASTM E330.

   b. Uniform Ultimate Load Structural Deflection Performance

      1) The Work shall not show evidence of material failures, structural distress, or permanent deformation exceeding 0.2% of span when tested according to ASTM E330 at 150% of the peak design load (positive or negative).

G. Weatherproofing Performance

1. The Work, including all weatherproof joints between it and other elements of Work, shall prevent leakage of water into the interior of the building from the weathering line of the assembly, under the action of wind pressure, kinetic energy, gravity, surface tension, or capillary action as per Code. It shall also prevent water entering into those parts of the Work that would be adversely affected by the presence of water.

   a. All weatherproof joints within the Work shall maintain their watertightness under the loads and movements specified herein.

   b. Incorporate weathering principles within the Work and interfacing with adjacent elements of Work compatible with the weathering principles adopted by the adjacent elements.

   c. Detailing and waterproofing must ensure that water from ponding or reservoirs is directed away from the Work such that water will not build up a pressure head or impose forces onto the building enclosure seals and components.

   d. Detailing must ensure that water collected within elements of the Work is positively drained to the outside of the Work.

2. Incorporate elements and details in the Work to provide for a continuous weather resistive barrier system.

   a. Engineer elements exterior of the weather resistive barrier plane so they are suitable for exterior conditions and experience weathering without any loss in performance as specified.

      1) No element of the Work shall be encapsulated between two weather resistive barrier planes.

b. Air and vapor control elements shall maintain their performance and properties for the expected service life of the system.

c. Where air and vapor control elements will be exposed to interior conditions during construction, select suitable materials to ensure the elements are not easily damaged during installation of the Work or adjacent constructions.

1) Easily damaged materials include but are not limited to foil facing attached to other products, including insulation.

3. Applicable Testing Requirements

a. Static Pressure Water Infiltration

1) The Work shall demonstrate compliance with the weatherproofing performance criteria when tested according to ASTM E331 at a minimum static air pressure differential of 20% of the peak positive wind-load design pressure, but not less than 15 psf.

2) No evidence of water infiltration inboard of the weathering line or weather resistive barrier plane when tested.

b. Dynamic Pressure Water Infiltration

1) The Work shall demonstrate compliance with the weatherproofing performance criteria when tested according to AAMA 501.1 at a minimum static air pressure differential of 20% of the peak positive wind-load design pressure, but not less than 15 psf.

2) No evidence of water infiltration inboard of the weathering line or weather resistive barrier plane when tested.

H. Energy Performance

1. Work and components shall have certified energy performance ratings as determined by the standards referenced by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

2. Incorporate thermal breaks in the Work.

3. The design environmental conditions are:

a. Exterior extreme annual dry bulb temperature and coincident wind speed:

1) Maximum Dry Bulb: 95.6°F at 6 mph.

2) Minimum Dry Bulb: 2.3°F at 6 mph.

b. Interior design dry bulb temperature, relative humidity (RH), and interior air film coefficient:

1) 70°F ± 2°F at 25% to 60% RH and 0.7 Btu/hr - sq ft - °F

4. Thermal Transmittance (U-Factor)

a. U-factor of the Work shall not be more than specified in the Building Enclosure System Matrix, accounting for all frame effects.

5. Condensation Resistance

a. Provide systems whose internal condensation and drainage systems will prevent uncontrolled condensation inboard of the weather resistive barrier plane, under the most onerous environmental conditions specified in this Section.

1) Exterior: Dry bulb 13°F at 17 mph.

2) Interior: Dry bulb 72°F at 25% RH and 0.7 Btu/hr - sq ft - °F.

6. Static Pressure Air Infiltration

a. Maximum air leakage through the Work areas of the Project shall be the lesser of the requirements determined according to 2014 New York City Building Code and 2016 New York City Energy Conservation Code or the following:

1) For non-operable portions of the Work, the maximum air infiltration rate shall be one half of that as required and determined according to the standards referenced by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

7. Applicable Testing Requirements

a. Static Pressure Air Infiltration

1) The Work shall be capable of demonstrating compliance with the air infiltration criteria listed in this Section when tested according to ASTM E2357 and to the pressure differential referenced by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

I. Fire Performance

1. The Work shall comply with relevant fire resistance, smoke sealing, and firestopping recommendations stated in the 2014 New York City Building Code and 2016 New York City Energy Conservation Code, but not less than the following.

a. ASTM E84: Flame Spread Index must be less than 25, Smoke Developed Index must be less than 450.

b. ASTM D1929: Self ignition temperature of 650°F or greater.

c. ASTM D635: Requires a CC1 classification.

d. Tested and comply with NFPA 285 acceptance criteria.

2. Component materials shall not give off toxic fumes.

J. Lightning Protection and Grounding Performance

1. Coordinate as necessary with the Trade responsible for the lightning protection and grounding systems as required by 2014 New York City Building Code for the building and agree on appropriate connection points with it for review by the Commissioner.

    a. No external tapes or visible connections will be accepted.

    b. Provide electrically continuous vertical and horizontal metallic framework elements and supporting structures of the Work for the purposes of lightning protection and grounding. Provide bonding of the framework to the rest of the lightning protection and grounding system. Ensure all non-conductive thermal breaks are electrically continuous.

K. Infestation

1. Design materials used in the Work against attack or infestation by micro-organisms, fungi, insects, or other vermin.

1.5 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.6 SUBMITTALS:

A. Shop Drawings

B. Calculations

1. Provide structural calculations as required.

2. Provide thermal calculations as required to describe:

    a. U-value performance of Work.

    b. Condensation resistance of all elements of Work where requested by the Commissioner.

C. Product Data

1. Metal Panels.

2. Sealant, including structural sealant.

3. Gaskets.

4. Supporting framing.

5. Anchorage used to attach to supporting structure.

6. Insulation.

D. LEED submittals.

E. Samples.

F. Quality control plan.

G. Welding certificates.

H. Product Test Reports

1. Indicating compliance with performance requirements.

I. Quality Control Reports

1. Fabricator reports.

2. Field reports.

J. Completion of Work: Upon completion of installation of the Work, submit written certification that the manufacturer's representative has supervised the work of this Section and that all materials are correctly installed.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Installer Qualifications: The Contractor must be licensed or approved by the manufacturer.

1.8 WARRANTY:

A. Unless stated otherwise in these Specifications, Warranty shall state that the Work is free from defects in materials and workmanship and weathertight for a period of 1 yr from the date of Substantial Completion. Contractor shall agree to promptly repair or replace defective materials and workmanship to "like new condition," including such exploratory work, required to determine the cause, during the Guarantee period, at no additional cost to the City of New York

B. In addition to Contractor's Guarantee, the paint finish manufacturer shall guarantee the finish for a period of 20 yrs from the date of Substantial Completion of the Work against defects, including full labor and material.

C. In addition to Contractor's Guarantee, the framing manufacturer shall guarantee the framing system for a period of 10 yrs from the date of Substantial Completion against defects, including full labor and material costs. Contractor shall include with his proposal, copy of warranty from proposed framing manufacturer.

D. The Contractor shall be responsible for repairing damage to the building and furnishings occasioned by defective materials or workmanship or damage as part of repairs to the Work.

1.9 PROJECT CONDITIONS:

A. Adjacent Trade Shop Drawing Review and Field Measurements: Verify actual locations of structural supports for Work by review of supporting structure Shop Drawings or field measurements before fabrication and indicate measurements on Shop Drawings.

PART II – PRODUCTS

2.1 MATERIALS:

A. Aluminum Components

1. Manufacturer's recommended alloy and temper, meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

   a. Sheet and Plate: ASTM B209.

   b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.

   c. Extruded Structural Pipe and Tubes: ASTM B429.

   d. Structural Profiles: ASTM B308/B308M.

B. Steel Components

1. Manufacturer's recommended alloy and temper, meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

   a. Structural Shapes, Plates, and Bars: ASTM A36/A36M/A572.

   b. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.

   c. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.

   d. Galvanized Sheet: ASTM A653/A653M.

C. Stainless Steel

1. Alloy and temper recommended by manufacturer and meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

   a. Plate, Sheet and Strip: ASTM A240/A240M.

2. With a Pitting Resistance Equivalence Number (PREN) greater than 24.5 calculated using the formula 'PREN = %Cr + 3.3 x %Mo + 16 x %N' based on the minimum compositions for Chromium, Molybdenum, and Nitrogen given in ASTM A240 or equivalent.

3. In areas where stainless steel may be used in proximity to a water feature, sea spray, or salts, the alloy chosen will not corrode or exhibit any surface pitting in its installed condition, or require regular maintenance to prevent corrosion.

   a. Non-austenitic alloys including the following shall be used:

      1) Duplex stainless steel Type 2205 (UNS S32205).

      2) 317L.

2.2 FINISHES:

A. Refer to Building Enclosure System Matrix for finish selection for each system.

B. Aluminum Components

1. Anodized Finish

a. Carry out anodizing under conditions of acceptable good practice for architectural applications. Hold the processing conditions constant for the period required for completion of the Work. Keep records of these conditions and make available for inspection in the event of a dispute as to the quality of the finished anodic coating.

b. Clear Anodic Finish: AA-M12C22A41, Class I, 0.71 mil or thicker, as complying with AAMA 611.

c. Color Anodic Finish: AA-M12C22A42/A44, Class I, 0.71 mil or thicker, as complying with AAMA 611.

1) Color: Refer to Building Enclosure System Matrix.

2. High-Performance Organic Finish

a. Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70% PVDF resin by weight in color coat and clear topcoat.

b. Prepare, pretreat, and apply coating to exposed metal surfaces complying with coating and resin manufacturers' written instructions.

c. Color and Gloss: Refer to Building Enclosure System Matrix.

d. Manufacturers: Subject to compliance with requirements provide products by one of the following:

1) PPG Industries Inc., Duranar XL Extrusion Coating.

2) Akzo Nobel Coatings Inc., Trinar Ultra TEC/TMC.

3) The Valspar Corporation, Fluropon Premiere.

4) Or approved equal.

3. Powdercoat Finish

a. Shop-applied Superior Performance powder coating finish for architectural aluminum extrusions complying with AAMA 2605.

b. Prepare, pretreat, and apply coating to exposed metal surfaces complying with coating and resin manufacturers' written instructions.

c. Color and Gloss: Refer to Building Enclosure System Matrix.

1) One-coat dry system with 70% fluoropolymer resin, meeting performance requirements of AAMA 2605 and the following:

2) Dry Film Thickness, ASTM D1400: Not less than thickness applied to tested specimens meeting specified performance requirements, and as recommended by manufacturer for application.

3) Specular Gloss, ASTM D523 at 60°: To be selected by the Commissioner.

4) Dry Film Hardness, ASTM D3363: Pass.

5) Sulphur Dioxide, ISO 3231 (Kesternich): Pass – no blistering, loss of gloss, or discoloration.

d. Manufacturers: Subject to compliance with requirements provide products by one of the following:

1) Akzo Nobel Coatings Inc., Interpon D3000 Series Fluoromax Powder Coating.

2) PPG Industries Inc., Duranar Powder Coatings.

3) The Jotun Group, Jotun Durasol.

4) Or approved equal.

4. Concealed Components

a. Provide either High-Performance Organic Finish, Powdercoat Finish, or Clear Anodic Finish.

C. Steel Components

1. Zinc coated by hot-dip process according to ASTM A123/A123M, ASTM A653/A653M or ASTM A153/A153M, after fabrication as applicable.

a. Galvanized sheet shall have a minimum coating designation of G90 according to ASTM A653/A653M.

b. Formed steel components shall have a minimum coating designation of ZM90 according to ASTM A1046/A1046M.

c. Following pickling operations, hold steel at more than 212°F to ensure a uniform temperature, either prior to or after fluxing.

2. Exposed Components

a. Framing system shall include the manufacturer's standard coating and finish system.

b. Where other components are exposed provide a high-performance organic or Powdercoat finish meeting the requirements specified for aluminum components and in accordance with the finish manufacturer's procedures.

3. Concealed Components

a. Utilize a zinc-rich, corrosion-resistant primer, complying with SSPC-PS Guide applied immediately after surface preparation and pretreatment.

b. Select surface preparation methods according to recommendations in SSPC-PS and prepare surfaces according to applicable SSPC standard.

D. Stainless Steel Components

1. Exposed Components

   a. Surface Preparation

      1) Remove tool and die marks and stretch lines, or blend into finish.

   b. Polished Finishes

      1) Grind and polish surfaces to produce uniform finish, free of cross scratches.

      2) Run grain of directional finishes with long dimension of each piece.

      3) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

   c. Finish: Refer to Building Enclosure System Matrix.

E. General

1. Choose finishes such that touch-up finishes match factory finish.

2. Discoloration, fading, chalking, excessive non-uniformity, pitting, cracking, peeling, corrosion, or crazing of finish is not allowed.

3. The terms below used in conjunction with finish Guarantee are defined as follows:

   a. "Excessive Fading": Means a change in appearance that is perceptible and objectionable as determined by the Commissioner when viewed visually in comparison with the original color range standards.

   b. "Excessive Non-Uniformity": Means non-uniform fading during the Guarantee period to the extent that adjacent parts have a color difference greater than the original acceptable color range.

   c. "Will Not Pit or Otherwise Corrode": Means no pitting or other type of corrosion of finish discernible from a distance of 10 ft, resulting from the natural elements in the atmosphere at the Project site.

   d. Deterioration includes, but is not limited to, the following:

      1) Color fading more than 5 Hunter units when tested according to ASTM D2244.

      2) Chalking in excess of a No. 8 rating when tested according to ASTM D4214.

      3) Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2.3 FRAMING:

A. Framing members shall comply with the profiles and angles shown in the Architectural Drawings and comply with the performance requirements set forth in these Specifications.

B. Provide thermally broken framing members at metal panel systems.

2.4 BRACKETS, FASTENERS, AND ANCHORAGE:

A. Fasteners

1. Fastener engineering shall be no less than the most stringent standards as required by 2014 New York City Building Code and its reference standards, or the following requirements:

   a. Fastener engineering for aluminum components as per the Aluminum Association Aluminum Design Manual (AA-ADM1).

      1) Allowable loads for fasteners shall be the lesser of the fastener manufacturers' requirements or per AAMA TIR-A9 with the most recent amendments.

   b. Fasteners Used in Cold-Formed Steel Framing Backup Construction

      1) Fastener selection and sizing shall be in accordance with the AISI Cold-Formed Steel Design Manual and ASTM C1513.

   c. Fasteners Used in Cast-in-Place Concrete and Concrete Masonry Unit (CMU) Backup Construction

      1) Fastener selection and sizing shall be based on applicable ICC-ES Evaluation Reports and testing according to ASTM E488 and ASTM E754 (for CMU construction) with the same backup wall construction used on the Project.

      2) Post installed anchors shall be subject to Special Inspections as required by 2014 New York City Building Code.

   d. When utilizing a fastener not included in any of the above references, available standards, or design guides, use a minimum factor of safety of 4 for permissible load design of anchoring assemblies.

2. Fastener engineering shall account for any reduction in safe working loads due to their spacing, edge distance, embedment, location in areas of tension, or proximity to cast-in inserts/existing fasteners, or thickness of shims. Fastener engineering shall also consider condition, thickness, and material properties of substrate. Adhesive anchoring systems shall not be used for fasteners supporting loads in tension.

3. Unless shown in the Architectural Drawings, no exposed fasteners shall be visible.

   a. Where exposed fasteners are shown and required, use countersunk security heads.

4. All exterior fasteners or fasteners in wet areas shall be of a suitable grade of stainless steel. Weather coatings for corrosion resistance may only be used with the Commissioner's approval.

5. All exterior fasteners that penetrate a self-sealing weatherproofing system shall be selected and coordinated with the weatherproofing system manufacturer to ensure self-sealing occurs. Set all fasteners penetrating the weatherproofing system in sealant.

6. Where post drilled or site-drilled fasteners are used for connections to the external structural steel frame, do not compromise the integrity of the steel corrosion protection system.

7. Highlight the general requirement for torqueing of bolts in the Shop Drawings and clearly state tightening torque values.

8. Contractor shall provide for Commissioner's review, documentation demonstrating that the use of all fasteners installed has been reviewed and approved by the fastener manufacturer and shall, prior to installation, submit manufacturer's written certification that details proposed by the Contractor are appropriate for their intended use.

B. Brackets and Anchorage

1. Engineer brackets and anchorage to allow for adjustments by 1 in. in small increments in and out, up and down, and side to side in the position of the Work supports relative to other constructions to accommodate the full variations in the underlying construction and fabrication tolerances.

2. Shimming required to accommodate local variations in construction tolerances only. State the maximum allowable shim dimension in the Shop Drawings.

3. Concrete and masonry inserts shall be hot-dip galvanized cast-iron, malleable-iron, or steel inserts as required by ASTM A123/A123M or ASTM A153/A153M.

C. General

1. Engineer all brackets and fasteners so there is no risk of loosening due to the effects of vibrations, or to the cyclic effects of load, deflections, and thermal movements.

2. Engineer brackets for site-drilled fasteners to allow for the possibility of reinforcement or other obstructions being encountered and the fixing position being moved as a result.

3. Do not cut reinforcement or other obstructions without the approval of the Commissioner.

2.5 FLASHING:

A. Refer to Section 07 62 01 – Facade Sheet Metal Flashings for performance requirements.

2.6 GASKETS:

A. General

1. Do not install gaskets/dry weather seals in a pre-stretched condition.

2. Gaskets shall be accessible for inspection/replacement.

3. Select gaskets and seals used to achieve the required weather and airtightness in accordance with referenced standards to fully accommodate the range of dimensional tolerances associated with fabrication and installation of the Work. Form with materials capable of maintaining their elastic qualities, dimensions, and resistance to physical and chemical attack sufficient to maintain the full performance during the design life. Gaskets shall be free from contact and migration stain and shall be compatible with all substrate, Sealant, and finishes which they may contact.

4. Gaskets shall maintain their performance and properties for the expected service life of the product.

5. Gaskets shall be free of mold flash.

B. Extruded rubber gaskets shall comply with ASTM C509.

1. Dense compression gaskets shall be molded or extruded of profile and hardness required to maintain watertight seal, made from silicone complying with ASTM C1115.

a. Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

2. Soft compression gaskets shall be extruded or molded, closed-cell, integral-skinned silicone gaskets complying with ASTM C509, Type II, black; of profile and hardness required to maintain watertight seal.

2.7 SEALANTS:

A. Refer to Section 07 92 01 – Exterior Joint Sealants for performance requirements.

2.8 INSULATION:

A. Overall insulation thickness as shown in the Drawings and as needed to meet 2016 New York City Energy Conservation Code requirements.

B. Semi-Rigid Insulation: Unfaced, Mineral-Wool Board Insulation.

1. Manufacturers: Subject to compliance with requirements provide products by one of the following:

a. Rockwool, Inc.

b. Thermafiber, Inc.

c. Johns Manville.

d. Or approved equal.

C. Provide product with the following properties:

1. Complying with ASTM C612; with maximum flame-spread and smoke-developed indexes of 15 and 0, respectively, per ASTM E84.

2. Passing ASTM E136 for combustion characteristics.

3. Nominal density of 6 lb per cubic foot. Type II, with a minimum thermal resistivity of 4.2°F x h x sq ft/Btu x in. at 75°F.

4. Recycled Content: Postconsumer recycled content plus one-half of pre-consumer recycled content not less than 10%.

5. Fiber Color: Darkened, where indicated.

D. Insulation Fasteners

1. Design fasteners to fully restrain insulation against all design loads.

2. Provide fastener materials suitable for the environmental conditions the insulation will be exposed to.

3. Spindle-type anchors plate welded to projecting spindle and capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.

4. Anchor adhesive demonstrating capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.

E. Thermal insulation shall be inert, durable, not water soluble, rot and vermin proof, CFC and HCFC free, shall be inorganic and not support mold, fungal, or bacteria growth, and shall provide the specified performance for the service life of the Work. Make due allowance for the reduced performance of insulation due to the effects of moisture and aging.

F. Thermal insulation shall be sufficiently robust and cohesive to allow for removal and replacement in service without loss of material or performance. It shall not be injurious to human health when properly installed, when in service, and when removed or replaced.

2.9 METAL WALL PANELS:

A. Metal Wall Panels are to be incorporated into the Work. Refer to Building Enclosure System Matrix for Metal Wall Panel types and Section 07 42 14 – Metal Panels for performance requirements.

2.10 METAL PANEL COMPONENTS:

A. Panels shall not have any visible fasteners, telegraphing, or fastening on the Panel faces or any other compromise of a neat and flat appearance unless specified as exposed fastener assemblies per the Building Enclosure Matrix. Include stiffeners as required to limit panel deflections.

B. Stiffener Ribs, Reinforcements and Brackets: Manufacturer's recommended components with non-staining, nonferrous shims for aligning system components. Select materials to ensure compatibility with Metal Panels. Stiffeners shall be structurally fastened or restrained at the ends and secured to the rear face of the Panel with silicone of sufficient size and strength to maintain Panel flatness.

1. Size: As recommended by SMACNA's Architectural Sheet Metal Manual or metal plate Panel manufacturer for application, but not less than thickness of metal being secured.

C. Reinforcing Frame: Extruded aluminum mechanically fastened to perimeter of Panel with fasteners number and spacing sufficient to provide adequate reinforcement of the Panel. Manufacturer's recommended components with non-staining, nonferrous shims for aligning system components. Materials selected to ensure compatibility with Panels.

1. Provide Panel return edge of sufficient size to allow for Sealant joint installation where sealant joints are indicated for use.

2.11 EXTERIOR LOUVER PANELS:

A. Exterior Louver Panels are to be incorporated into the Work. Refer to Building Enclosure System Matrix for Exterior Louver Panel types and Section 08 90 00 – Louvers for performance requirements.

2.12 EXTERIOR ARCHITECTURAL PRE-CAST CONCRETE PANELS:

A. Refer to Section 03 45 00 – Architectural Pre-Cast Concrete..

2.13 WEATHER RESISTIVE BARRIER:

A. Refer to Section 07 27 01 – Weather Resistive Barriers..

2.14 ACCESSORY MATERIALS:

A. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30 mil thickness per coat.

B. Separating / Isolating Materials

1. The Contractor shall select, provide, and install each material so it is, and will remain, compatible with other materials around it within its range of influence. Contractor shall ensure adequate measures are taken to prevent bimetallic corrosion between dissimilar metals. Where different metallic materials are used, fit separators to eliminate the risk of corrosion.

2. Butyl Tape: Preformed butyl-based elastomeric tape with 100% solids content. Non-staining, with or without spacer rod (as approved by Commissioner), with release paper backing. Provide where shown on the Drawings.

3. Aluminum or Foil Faced Tape: Provide where shown on the Drawings and with various widths as required.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 FABRICATION:

A. General

1. Fabricate and finish assembly and accessories at the factory to the greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements.

2. Profiles shall be sharp, straight, and free of defects or deformations.

3. Fabricate all formed or extruded shapes prior to finishing.

4. Accurately form joints without lipping or offsets in visible surfaces unless engineered otherwise. Rigidly secure other joints to prevent all but engineered movement, unless engineered otherwise.

5. Accurately fitted joints with ends coped or mitered.

B. Cutting

1. Grind, cut, and shape metals using tools which will not contaminate them with particles which could stain or corrode them.

2. Steel Components

   a. Minimize use of arc cutting and acetylene gas cutting as much as feasible. If required, Contractor shall submit full welding procedures to demonstrate hardness remains within the required limits.

   b. Mild steel cut or shaped by either flame cutting or plasma cutting shall be to procedures agreed by the Commissioner. Procedures shall demonstrate that the surface hardness is less than 270 Hv 10. Require random inspection of the steel to ensure the hardness level is not exceeded. Alternatively, surface dress all cut edges to remove hardened material.

   c. All punched holes shall be undersized by 40 mil and be reamed to the finished size.

C. Welding

1. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

2. Weld metals in accordance with relevant standards using methods to avoid distortion. Show type, size, and spacing of welds on Drawings for Commissioner's review prior to fabrication.

3. Fully bond welds throughout their length without holes, inclusions, cracks, or porosity so that long-term performance is not compromised and the welds are strong enough for the engineered requirements.

4. Grind all welds smooth and flush with adjoining surfaces where visible or impinging on other work.

5. Do not site weld except where approved by the Commissioner.

6. Finish completed welded construction to prevent corrosion. Clean all welds as necessary to ensure the durability of the connections.

7. All radius edges used in changes of section shall be no less than the thickest member being welded.

8. All welding procedures and welding procedure specifications shall limit the hardness in the weld, parent metal, or heat-affected zone to less than 270 Hv 10.

D. Pressing and Folding

1. Fold and form aluminum sheets over dies or mandrels with the minimum radii recommended by the Aluminum Association in such publications as Aluminum Design Manual. Make trial bends on scrap material of the alloy, temper, and thickness being used to ensure that it is not cracked, torn, unevenly stretched, or separated at grain membranes.

E. Sealants and Adhesives

1. Prepare surfaces that will contact sealants and/or adhesives according to the manufacturer's written instructions to ensure compatibility and adhesion.

2. Preparation includes, but is not limited to, cleaning and priming surfaces.

F. Gaskets

1. Gaskets jointed by bonding with adhesive are not accepted as a substitute for molded frame gaskets. In the event that adhesive bonded joints are required, notify the Commissioner for review before such work is carried out.

2. All gasket frames should be normally manufactured to a small but predetermined oversize tolerance, to ensure that when seated into position, the lineal lengths and corners of the gaskets are in slight compression.

3. Install gaskets in accordance with the manufacturer's recommendations and utilizing the correct tools.

G. Fabrication Tolerances

1. Metal cutting tolerances for framework:

a. ± 1/16 in. on length of vertical members.

b. ± 1/32 in. on length of horizontal members.

c. ± 1/64 in. on the length and width of spandrel Panels, back pans, and aluminum sheets.

d. ± 1/32 in. on length of diagonal of spandrel Panels, back pans, and aluminum sheets and not more than ± 1/16 in. difference in the length between the two diagonals.

3.3 INSTALLATION:

A. Comply with all requirements and product manufacturer's recommended guidelines.

B. Do not install damaged components.

C. Fit joints to produce joints free of burrs and distortion.

D. Rigidly secure all non-moving elements.

E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration, and to prevent impeding movement of moving joints.

F. Metal Protection

1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.

2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

3.4 INSTALLATION TOLERANCES:

A. Install Work to comply with the following maximum tolerances:

1. Plumb: 1/8 in. in 10 ft; non-cumulative.

2. Level: 1/8 in. in 20 ft; non-cumulative.

3. Alignment: End-to-end or edge-to-edge offset of adjoining consecutive element to 1/16 in.

4. Location and Plane: Limit variation from plane to 1/8 in. in 12 ft; 1/2 in. over total length.

5. Diagonal Measurements: Limit difference between diagonal measurements to 1/8 in.

B. Inspect substrate for erection tolerances and other conditions that would adversely affect installation of Panels.

1. Confirm that wall substrate is within tolerances acceptable to system manufacturer.

3.5 FIELD QUALITY CONTROL:

A. Test and inspect representative areas of the Work as installation proceeds to determine compliance of installed assemblies with specified requirements.

B. Testing shall be performed by a qualified Independent Testing and Inspection Agency.

1. The Independent Testing and Inspection Agency shall prepare and submit an inspection and test report.

C. Work is considered defective if it does not pass tests and inspections.

1. There shall be no evidence of water penetration as per the weatherproofing requirements specified.

a. No increase in the allowable rate of air infiltration or increase in the volume of water leakage, nor any decrease in the specified test pressures will be permitted in the evaluation of field testing. This requirement is more restrictive than AAMA standards.

2. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.

3. For each failure condition discovered, make remedial and corrective action approved by the Commissioner. All failures shall be considered systemic failures requiring corrective work at all similar conditions and locations. Remedial measures shall maintain standards of quality and durability and are subject to approval by the Commissioner.

4. Additional testing and inspecting shall be at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Field Testing Support

1. Refer to DDC General Requirements Section 019115 Building Enclosure Commissioning Requirements and the Project building enclosure commissioning plan.

2. An Independent Testing Agency shall perform field testing of the Work and prepare test reports. Testing will include those performed to ASTM E1105, ASTM E2357, AAMA 501.2 standards. The Contractor shall assist the Independent Testing and Inspection Agency with testing, including providing safe access, water, power, constructing interior test chambers, etc.

a. Provide two days of support for field air and water infiltration testing at multiple locations selected by the Commissioner.

b. If failures occur, provide additional test assistance as needed to obtain Commissioner's approval at no additional cost.

3. Testing Services: Testing and inspecting of representative areas to determine compliance of installed system with specified requirements shall take place as follows and in successive stages as indicated by the City of New York. The City of New York will perform some of this testing during the early stages of Work installation. Complete all related installation work, in areas selected by the Commissioner, as needed to allow air and water testing to be performed during the early stages of the work (including installation of glazing, framing, gaskets, etc.). Do not proceed with the installation of the next area until test results for previously completed areas show compliance with requirements.

   a. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified under Static Pressure Air Infiltration Article, but not more than 0.09 cfm per square foot of fixed wall area when tested according to ASTM E783 at a minimum static-air-pressure differential of 6.24 lbf per square foot.

   b. Water Penetration: Areas shall be tested according to ASTM E1105 at minimum cyclic static-air-pressure difference (Method B) equal to the pressure specified under Static Pressure Water Infiltration Article and shall not evidence water penetration.

   c. Water Spray Test: After the installation of minimum area of 75-ft-by-2-story Work has been completed but before installation of interior finishes has begun, a two-bay area of system designated by Commissioner shall be tested according to AAMA 501.2 and shall not evidence water penetration.

END OF SECTION 07 00 01

SECTION 07 13 26
Sheet Membrane Waterproofing

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Sheet membrane waterproofing for underslab conditions.

2. Sheet membrane waterproofing for foundation wall surfaces.

3. Sheet membrane waterproofing for blindside of foundation wall surfaces.

B. Related Sections

1. Cast-in-Place Concrete - Section 03 30 00.

2. Earthwork - Section 31 00 00.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Shop Drawings: Typical installation details, showing details at flashings, at terminations, at joints, at intersection of horizontal and vertical surfaces, and at penetrations in membrane system.

B. Samples - Submit

1. Membrane, 6" x 6" samples of each membrane.

2. 6" x 6" sample of flashing.

3. 6" x 6" sample of drainage board.

C. Manufacturer's Literature: Submit manufacturer's technical, safety data sheets, and installation literature for all materials of this Section. Submit Independent Test data indicating that membrane meets properties specified herein.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Preinstallation Conference: Approximately 2 weeks prior to scheduled commencement of waterproofing installation, meet at Project site with Waterproofing Installer; preparer of substrate to receive waterproofing; installers of other work in and around waterproofing that must precede, follow, or penetrate waterproofing (including Mechanical and Electrical Installers as applicable); Commissioner; City of New York; and waterproofing manufacturer's representative to review materials, procedures, schedules, and other requirements and conditions related to installing waterproofing.

C. Manufacturer's Representative/Contractor's Certification

1. Representative of the waterproofing material manufacturer shall be required to provide field instructions and supervision for the installation of the waterproofing systems at the start of the work of this Section.

2. The manufacturer's representative shall be required to make sure that the workmen for waterproofing systems on the site of the Project are fully instructed and trained in the handling and application of all the materials and shall see that all the materials are correctly installed.

3. Upon completion of the Installation, submit to the Commissioner written certification that the representative of the manufacturer of the waterproofing material has supervised the work of this Section and that all materials were correctly installed.

1.6 JOB CONDITIONS

A. No application of waterproofing shall commence or proceed during inclement weather, or the threat of imminent precipitation.

B. All surfaces to receive the system shall be thoroughly dry and free of dew or frost.

C. Materials shall be stored until time of mixing at temperatures above 60 deg. F. to maintain a consistency suitable for mixing. Do no work below 40 deg. F.

D. Prior to and during application, all dirt and dust shall be removed from surfaces either by vacuuming, sweeping, blowing with compressed air, or similar methods.

E. Surfaces not designated to receive the system shall be properly masked or otherwise protected against accidental spillage or application of the material to those areas.

1.7 STORAGE OF MATERIALS

A. All materials shall be stored in their original tightly sealed containers or unopened packages; shall be clearly labeled with the manufacturer's name, brand name and number, and batch number of the material with expiration date where appropriate.

B. Materials shall be stored in a neat and safe manner so as not to exceed the allowable live load of the storage area.

C. Material shall be stored out of the weather in a clean, dry area.

1.8 PROTECTION

A. Against Loads: Protect work of this Section against concentrated loads and any other loads or equipment that would damage the materials or work.

B. Against Traffic: Do not permit traffic on horizontally installed work of this Section, except for workmen doing the work, during the installation, and after the installation until membrane systems are covered with protective boards or with the specified finishing materials.

C. Against Damage: Protect vertically installed work of this section from damage by reinforcing and placement.

1. Take and maintain necessary preventive measures to protect work of this Section from damage until Project is accepted.

2. Rejection of Damaged Work

a. Damaged materials or work will be rejected.
b. Rejected materials or work must be immediately removed and replaced with new materials.

1.9 FIELD QUALITY CONTROL

A. Construction Traffic:

1. Limit construction traffic over completed membrane.

2. General Contractor shall provide 1/2 in. plywood protection layer, where construction traffic is unavoidable.

B. Inform Commissioner in writing on a daily basis of any of the following events. State specific location of each occurrence.

1. Buckling to the waterproofing and other deformations as a result of ground water events.

2. Leakage through the finished waterproofing installation.

3. Damage by other trades.

C. Provide Manufacturer's Representative's report (prior to backfill) stating that the waterproofing has been inspected and is acceptable and eligible for manufacturer's warranty.

1.10 WARRANTY

A. The manufacturer of the waterproofing system executed under this Section warrants the waterproofing system to be watertight and free from defects in materials and workmanship for a period of ten (10) years from date of Substantial Completion, and that he, at his own expense, repair and/or replace all other work

which may be damaged as a result of such defective work, and which becomes defective during the warranty period.

B. Contractor's Two-Year Workmanship Warranty: Provide a written Warranty for all work of this Section, stating that if, within two years after the Date of Substantial Completion of the Work, any of the work is found to be defective or not in accordance with the Contract Documents, the Contractor shall correct it promptly after receipt of a written notice from the City of New York to do so.

PART II - PRODUCTS

2.1 WATERPROOFING MEMBRANE

A. Waterproofing Membrane for Accessible Foundation Walls

1. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. GCP Applied Technologies; Bituthene 4000 sheet waterproofing membrane, 60 mils thick and Bituthene Liquid Membrane 60 mils thick, for flashing.
   b. Carlisle Coatings & Waterproofing; CCW MiraDri sheet waterproofing membrane, 60 mils thick, and CCW LiquiSeal V Liquid Membrane.
   c. WR Meadows; MEL-ROL sheet waterproofing 60 mils thick and BEM 60 mils thick, for flashing with MEL-ROL Sheet Membrane accessory products - MEL-PRIME NE or MEL-PRIME WB, BEM, POINTING MASTIC.
   d. Or approved equal.

B. Waterproofing Membrane at Underslab Conditions

1. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. GCP Applied Technologies; Preprufe 300R Plus System
   b. Carlisle Coatings & Waterproofing; CCW MiraPly H with SeamLock Technology
   c. WR Meadows; PRECON composite sheet membrane with Plasmatic Matrix
   d. Or approved equal.

C. Waterproofing Membrane at Blind Side Waterproofing Conditions

1. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. GCP Technologies; Preprufe 160R Plus System
   b. Carlisle Coatings & Waterproofing; CCW MiraPly V with SeamLock Technology
   c. WR Meadwos; PRECON composite sheet membrane with Plasmatic Matrix
   d. Or approved equal.

D. HDPE membrane shall have a protective layer to protect the membrane from the weather and U.V. for up to 56 days before casting concrete against it.

E. Latex/water-based primer specifically formulated to provide adhesion of waterproofing membranes.

1. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

    a. GCP Technologies; Bituthene 4000 Conditioner
    b. Carlisle Coatings & Waterproofing; CCW 702 LV Adhesive
    c. WR Meadows; MEL-PRIME NE/Solvent based or MEL-PRIME WB/water based used as adhesive for MEL-ROL sheet waterproofing
    d. Or approved equal.

F. Bituthene Elastomeric Mastic: Rubberized asphalt base mastic.

G. Waterproofing Tape: Double sided synthetic adhesive tape.

H. Protection Board

1. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

    a. GCP Technologies; 1/4" thick semi-rigid protection board, Bituthene Asphaltic Hardboard
    b. Carlisle Coatings & Waterproofing; CCW Protection Board HS
    c. WR Meadows; WR Meadows 1/4" PC-3
    d. Or approved equal.

I. Two-component 100% solids trowel grade asphalt modified urethane.

1. Subject to compliance with requirements, products that may be incorporated into the Work include the following:

    a. GCP Technologies; Bituthene Liquid Membrane
    b. Carlisle Coatings & Waterproofing; CCW LiquiSeal V
    c. WR Meadows; MEL-ROL Liquid Membrane
    d. Or approved equal.

J. Drainage Board/Composite: Prefabricated dimpled polystyrene drainage core with a non-woven filter fabric on one side and a polymer film on the reverse side

1. Vertical Applications: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

    a. GCP Technologies; Hydroduct 220
    b. Carlisle Coatings & Waterproofing; CCW MiraDrain 6000
    c. WR Meadows; MEL-DRAIN 5035
    d. Or approved equal.

2. Horizontal Applications: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

    a. GCP Technologies; Hydroduct 660
    b. Carlisle Coatings & Waterproofing; CCW MiraDrain 9000
    c. WR Meadows; MEL-DRAIN 9055

d. Or approved equal.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSPECTION

A. Examine the areas and conditions where membrane waterproofing is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work. Starting of work implies acceptance of substrate.

3.3 PREPARATION OF SURFACES TO RECEIVE WATERPROOFING

A. Conform to the requirements of specified manufacturer.

B. Earth or crushed stone substrates shall be compacted to produce an even, sound substrate. Loose aggregate, sharp protrusions and standing water shall be removed.

3.4 INSTALLATION

A. General: Conform to recommendations and published specifications of the manufacturer, including environmental requirements and preparation requirements to receive waterproofing.

B. Foundation Walls (Accessible Walls)

1. General: The membrane, when in place must withstand a minimum static ground water pressure in accordance with ASTM D5385

2. Priming: Application of primer shall be limited to what can be covered with waterproofing membrane in a given work day. Primed areas not covered by membrane during the work day will be reprimed. Apply primer by spray, roller or brush at a rate of 250 - 350 sq. ft. per gallon. Roller shall be natural material such as lamb's wool, having a nap of approximately one inch. Primer shall be applied to a clean, dry, frost-free and dust-free surface. Sufficient primer must be used on the day surface to condition it to a dust-free state suitable for the application of waterproofing membranes.

   a. Surface conditioner should not be applied below 25 deg. F. on vertical surfaces. Allow primer to dry 30 minutes. Conditioner is considered dry when the substrate returns to its original color.
   b. Re-prime areas that become dusty or dirty prior to membrane installation.

3. Membrane Installation: Apply waterproofing membrane vertically in sections of 8' in length or less. On higher walls apply two or more sections with the upper overlapping the lower by a least 2-1/2". Press all membrane in place with heavy hand pressure or rollers during application.

4. Sealing Edges: Waterproofing membrane shall be applied over the edge of the slab or over the top of the foundation or parapet wall. If the membranes are terminated on the vertical surface, a reglet or counter flashing may be used or the membrane may be terminated directly on the vertical surface by

pressing very firmly to the wall. Press edges with a metal or hardwood tool such as a hammer or knife handle. Apply a troweled bead of mastic to all vertical and horizontal terminations. Liquid membrane can be used as an alternative method at the Contractor's option.

5. Sealing Seams: All edges and end seams must be overlapped at least 2-1/2". Apply succeeding sheets with a minimum 2-1/2" overlap and stagger end laps. Roll or press the entire membrane firmly and completely as soon as possible. Patch misaligned or inadequately lapped seams with membrane. Slit any fish mouths, overlap the flaps, and repair with a patch of membrane and press or roll in place. The edges of the patch shall be sealed with a troweling of mastic. Laps within 12" of all corners shall be sealed with a troweling of mastic.

6. Corner Forming: Outside corners must be free of sharp edges. Inside corners shall receive a fillet formed with liquid membrane, latex modified cement mortar mixed with cement mortar or epoxy mortar. Do not use fiber or wood cants. One of two methods may be used for treating corners at the Contractor's option:

   a. Apply liquid membrane 6" in each direction from the corner and form a fillet with a minimum 3/4" face.
   b. Install an 11" minimum strip of waterproofing membrane centered on the corner. Install membrane over the treated inside and outside corners.

7. Over waterproofing, apply drainage composite board by adhering board to cured membrane using tape or adhesive per manufacturer's recommendations; lap all edges 4" and conform to the following:

   a. Install drainage layer directly over the membrane. Start at the low points on the wall and shingle all laps to the flow of water.
   b. Splice drainage panels together by butting longitudinal edges of adjacent sheets and peeling back fabric to expose the cores of the panels. Install precut "lock strips" consisting of 4 dimple x 5 dimple sections of the drainage panel centered on the joint between the panels and spaced every 10 dimples along the length of the joint. Snap dimples of "lock strip" to dimples of each panel and reattach fabric over the panel joint.
   c. Cut the core of the drainage panels around penetrations, and cut an 'X' in the filter fabric and tape the fabric to the sides of the penetration.
   d. Cover all terminal edges of the drainage composite with an integral fabric flap by tucking the fabric around the edge of the core and adhering the fabric to the bottom of the core.

3.5 INSTALLATION OF WATERPROOFING FOR BLINDSIDE WALLS AND BELOW GRADE UNDERSLAB WATERPROOFING

A. General: Install adhesive coated HDPE composite sheet according to waterproofing manufacturer's written instructions.

1. Install drainage layer directly over the membrane. Start at the low points on the wall and shingle all laps to the flow of water.

2. Splice drainage panels together by butting longitudinal edges of adjacent sheets and peeling back fabric to expose the cores of the panels. Install precut "lock strips" consisting of 4 dimple x 5 dimple sections of the drainage panel centered on the joint between the panels and spaced every 10 dimples

along the length of the joint. Snap dimples of "lock strip" to dimples of each panel and reattach fabric over the panel joint.

3. Cut the core of the drainage panels around penetrations, and cut an "X" in the filter fabric and tape the fabric to the sides of the penetration.

4. Cover all terminal edges of the drainage composite with an integral fabric flap by tucking the fabric around the edge of the core and adhering the fabric to the bottom of the core.

B. Preparation

1. Surfaces to receive blind side membranes must be smooth and sound, with no gaps or voids in excess of 1/2 in. Earth and stone substrates must be compacted to produce an even, solid substrate. If required by membrane manufacturer, provide an additional layer of underlayment protection board over sharp or angular stone substrates. Surfaces to receive waterproofing shall be thoroughly dry and free of moisture.

2. General: Comply with manufacturer's instructions for preparing surface including joint or crack treatment.

3. Apply primer to substrate surfaces at rate recommended by manufacturer of primary waterproofing materials. Prime only area that will be covered by waterproofing membrane in same working day. Re-prime areas not covered by waterproofing membrane within 24 hours.

C. Wall Applications

1. Refer to manufacturer's literature for complete installation instructions but not limited to the following:

   a. Apply drainage composite to a point 6" below grade line. Fasten drainage composite to the adjacent buildings foundation wall or soil retention system.
   b. Peel back bottom flap of filter fabric and place core behind discharge pipe. Wrap loose filter fabric over and around discharge pipe. Tuck excess filter fabric behind pipe. Fold excess filter fabric at top termination down between drainage board/composite and membrane.
   c. Apply membrane with the HDPE film facing the soil retention system or adjacent foundation. Remove the release liner and fasten membrane to drainage board/composite with large head nails or staples. All nail heads or staples must be covered with overlapping sheets of membrane.
   d. Apply succeeding sheets by overlapping the previous sheet 3 inches along the uncoated edge of the membrane.
   e. Overlap the ends of the membrane 3 inches. Apply waterproofing tape centered over the end lap and roll firmly. Remove release liner.
   f. Seal all transition, penetrations, tie down bracing and other conditions with initial membrane layer plus manufacturer's recommended accessory materials, prior to application of the full membrane.
   g. Concrete must be poured within 30 days of membrane application. Protect membrane until concrete pour.
   h. If membrane ties into a vertical membrane, leave an additional 12" flap of Preprufe membrane to tie into waterproof membrane.

D. Underslab Applications

1. Apply horizontal drainage composite board as recommended by manufacturer over the compacted sub-grade.

2. Apply the membrane over the drainage composite board with the HDPE side facing the drainage composite board and the treated white coating surface facing the concrete to be poured. The membrane may be installed at any convenient length. Apply succeeding sheets by overlapping previous sheets 3" along the self-adhesive edge of the membrane. Remove the silicone coated release liner covering the membrane and roll the side lap to ensure a tight seal.

3.6 SEAM REINFORCEMENT FOR HDPE COMPOSITE SHEETS ONLY

A. Provide a 6 in. strip of modified bituminous sheet membrane centered behind all laps.

B. At locations where a salvage edge is not present and at end laps, lap sheets 6 in., apply a 1/8 in. thick by 6 in. wide application of liquid membrane between sheets, to provide a 6 in. wide seal.

C.. Integration of old onto new pre-applied sheet membrane.

1. Integration of Sheet Membrane onto Sheet Membrane that has been installed in excess of 30 days prior

   a. Lap sheets 12 in., apply a 1/8 in. thick by 12 in. wide application of fluid membrane between sheets, to provide a 12 in. wide seal at this location.
   b. Install waterproofing tape centered at edge of lap and roll firmly into place with an approved roller.
   c. Install additional waterproofing tape to cover white film that has been installed over 30 days prior.

2. Repair of pre-applied sheet membrane

   a. Scratch on white coating exposing underlying black surface of Sheet Membrane. Install waterproofing tape at areas where the white coating of the membrane is damaged, including boot scuff marks and abrasions by rebar.
   b. Damage or Puncture of Sheet Membrane: Install patch of short membrane set in liquid membrane. Patch must extend 3 in. in every direction around extent of damaged area. Install waterproofing tape centered over the edge of the patch. If the damaged area does not have 5 in. of sound material around it, inject liquid membrane into puncture until liquid membrane backs out, and proceed with patch as space allows.

3.7 CLEAN-UP

A. Upon completion of the waterproofing system, the Contractor shall remove all equipment, material and debris from the work and storage area, and leave those areas in an undamaged and acceptable condition.

END OF SECTION 07 13 26

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 18 16
Vehicular Traffic Coatings

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
c. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"
d. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

1.2 SUMMARY

A. Section includes vehicular traffic coating at wash bays, repair bays, and repair rooms directly adjacent to repair bay.

B. Related Sections

1. Cast-in-Place Concrete - Section 03 30 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Submit manufacturer's product literature and installation instructions.

B. Samples: Submit samples of specified traffic deck coating system. Samples shall be construed as examples of finished color and texture of traffic deck coating system only.

1.6 DELIVERY, STORAGE AND HANDLING

A. Storage and Handling: Recommended material storage temperature is 75 deg. F. Do not store for long periods in direct sunlight.

1.7 JOB CONDITIONS

A. Environmental Conditions

1. Do not proceed with application of materials when deck temperature is less than 40 deg. F.

2. Do not apply materials unless surface to receive coating is clean and dry, or if precipitation is imminent.

B. Protection

1. Keep products away from heat, sparks, and flames. Do not allow use of spark producing equipment during application and until vapors are gone. Post "No Smoking" signs.

2. The overspray and/or solvents from coatings can carry considerable distances and care should be taken to do the following:

   a. Post warning signs a minimum of 100 feet from the work area.
   b. Cover all intake vents near the work area.
   c. Set up wind breaks when needed.
   d. Minimize or exclude all personnel not directly involved with the coating application.
   e. Have CO_2 or other dry chemical fire extinguishers available at the job site.
   f. Provide adequate ventilation.

3. After completion of application, do not allow traffic on coated surfaces for a period of at least 48 hours at 75 deg. F. and 50% R.H., or until completely cured.

1.8 WARRANTY

A. Provide manufacturer's standard warranty with available options and flashing endorsement, signed by Applicator and authorized representative of manufacturer, and warranting decking materials against failures resulting from normal exposure for a period of five (5) years.

PART II - PRODUCTS

2.1 MATERIALS

A. Basis of Design: Subject to compliance with requirements, provide Sika; Sikadur Epoxy Broadcast Overlay System or comparable product by one of the following:

1. Mameco International, Inc.
2. Neogard, a Division of Hempel (USA), Inc.
3. Or approved equal

B. Description - Epoxy Binder and Broadcast Aggregate Overlay System (2 Coat Application): 2-component, moisture-tolerant, 100% solids epoxy resin consisting of primer, binder, aggregate and sealer to create a traffic-bearing, skid-resistant, seamless and protective coating system. Provide broadcast-applied aggregate overlay finish on new concrete surfaces cured for a minimum of 28 days by applying an epoxy binder to the

prepared surface and broadcasting clean, dry aggregate to full saturation. Prepared floor surface shall be sound and made free of foreign contamination, deleterious materials and laitance prior to epoxy binder application. Apply two coats of epoxy binder and broadcast aggregate to achieve the minimum coverage of each material recommended by the manufacturer. Broom or vacuum excess aggregate after binder has cured. Apply materials in strict accordance with the manufacturer's instructions.

C. Primer: Manufacturer's standard factory-formulated primer recommended for substrate and conditions indicated.

D. Base/Binder Coats: Manufacturer's standard liquid epoxy elastomer.

1. Basis of Design: Subject to compliance with requirements, provide Sika; Sikadur 22 Lo-Mod binder coat or comparable product by one of the following:

a. Mameco International, Inc.
b. Neogard
c. Or approved equal

E. Aggregate: Uniformly graded washed #8 or #9 silica sand, flint rock, or basalt of particle sizes, shape, and minimum hardness recommended in writing by traffic coating manufacturer.

F. Component Coat Thicknesses and Composition: As recommended by manufacturer for substrate and service conditions indicated, but not less than the following (measured excluding aggregate):

1. Average total system coating 40 dry mil thickness assembly, as follows:

a. Primer: 200-250 sq. ft./gal.
b. Base Coat: 32 sq. ft./gal. (50 mils).
c. Broadcast Aggregate: 2 lb./sq. ft. to excess.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine substrates, for compliance with requirements and for other conditions affecting performance of traffic coatings.

1. For the record, prepare written report, listing conditions detrimental to performance.

2. Verify compatibility with and suitability of substrates.

3. Begin coating application only after minimum concrete curing and drying period recommended by traffic coating manufacturer has passed, after unsatisfactory conditions have been corrected, and after surfaces are dry.

4. Verify that substrates are visibly dry and free of moisture. Test for moisture by method recommended in writing by manufacturer.

5. Application of coating indicates acceptance of surfaces and conditions.

3.3 PREPARATION

A. Clean and prepare substrates according to manufacturer's written recommendations to produce clean, dust-free, dry substrate for traffic coating application.

B. Mask adjoining surfaces not receiving traffic coatings, deck drains, and other deck substrate penetrations to prevent spillage, leaking, and migration of coatings.

C. Concrete Substrates: Mechanically abrade concrete surfaces to a uniform profile according to ASTM D 4259. Do not acid etch.

1. Remove grease, oil, paints, and other penetrating contaminants from concrete.

2. Remove concrete fins, ridges, and other projections.

3. Remove laitance, glaze, efflorescence, curing compounds, concrete hardeners, form-release agents, and other incompatible materials that might affect coating adhesion.

4. Remove remaining loose materials to provide a sound surface, and clean surfaces according to ASTM D 4258.

3.4 TERMINATIONS AND PENETRATIONS

A. Prepare vertical and horizontal surfaces at terminations and penetrations through traffic coatings and at expansion joints, drains, and sleeves according to ASTM C 1127 and manufacturer's written recommendations.

B. Provide sealant cants at penetrations and at reinforced and nonreinforced deck-to-wall butt joints.

C. Terminate edges of deck-to-deck expansion joints with preparatory base-coat strip.

D. Install sheet flashings at deck-to-wall expansion and dynamic joints, and bond to deck and wall substrates according to manufacturer's written recommendations.

3.5 JOINT AND CRACK TREATMENT

A. Prepare, treat, rout and fill joints and cracks in substrates according to ASTM C 1127 and traffic coating manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D 4258.

1. Comply with recommendations in ASTM C 1193 for joint sealant installation.

3.6 TRAFFIC COATING APPLICATION

A. Apply traffic coating material according to ASTM C 1127 and manufacturer's written recommendations.

1. Start traffic coating application in presence of manufacturer's technical representative.
2. Verify that wet film thickness of each component coat complies with requirements every 100 sq. ft.
3. Apply traffic coatings to prepared wall terminations and vertical surfaces to height indicated and omit aggregate on vertical surfaces.

B. Apply traffic paint for striping and other markings with mechanical equipment to produce uniform straight edges. Apply at manufacturer's recommended rates for a 15-mil minimum wet film thickness.

3.7 CURING AND PROTECTING

A. Cure traffic coatings according to manufacturer's written recommendations. Prevent contamination and damage during application and curing stages.

B. Protect traffic coatings from damage and wear during remainder of contruction period.

END OF SECTION 07 18 16

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 20 00
Thermoplastic Membrane Roofing

PART I – GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements

1. Refer to DDC General Conditions.

a. Section 01 33 00 – Submittal Procedures.

b. Section 01 81 13.04 – Sustainable Design Requirements for LEED v4 Buildings.

c. Section 01 81 13.13 – Volatile Organic Compound Limits for Adhesives, Sealants, Paints, and Coatings for LEED Buildings.

1.2 SUMMARY:

A. Refer to Building Enclosure System Matrix for a description of the systems included in this Section as well as the requirements listed there.

B. For all Work described, provide the following components and their subcomponents of work including, but not limited to:

1. Install new single-ply thermoplastic roofing system as shown on the Drawings and specified herein, including the following components:

a. Fully adhered 60 mil reinforced Polyvinyl Chloride (PVC) membrane.

b. Fully adhered cover board.

c. Rigid polyisocyanurate tapered insulation.

d. Self-adhering vapor retarder.

e. Mechanically fastened cover board on corrugated metal deck.

f. Flashing membrane and accessories at all penetrations, walls, parapets, curbs, and other features on the roof deck for the PVC membrane roofing system.

g. Electric Field Vector Mapping (EFVM) testing of completed waterproofing system.

h. Sealants.

2. Install new single-ply thermoplastic Protected Roof Membrane Assembly (PRMA)as shown on the Drawings and specified herein, including the following components:

   a. Overburden.

   b. Filter fabric.

   c. Drainage layer.

   d. Protection layer.

   e. Rigid extruded polystyrene foam insulation.

   f. Root barrier.

   g. Fully adhered 60 mil reinforced PVC membrane.

   h. Flashing membrane and accessories at all penetrations, walls, parapets, curbs, and other features on the roof deck for the PVC membrane roofing system.

   i. Sealants.

C. This Section requires Engineering Services.

D. The work in this Section incorporates the work of the following Sections. Requirements specified in this Section are in addition to those in the following Sections:

   1. Section 06 10 00 – Rough Carpentry.

   2. Section 07 27 01 – Weather Resistive Barriers.

   3. Section 07 62 01 – Facade Sheet Metal Flashings.

   4. Section 07 71 00 – Roof Specialties and Accessories

   5. Section 07 92 01 – Exterior Joint Sealants.

   6. Section 07 95 00 – Expansion Control.

   7. Section 22 14 23 – Storm Drainage Piping Specialties.

E. The following Sections describe systems that are adjacent to that of this Section, and will require coordinated interfaces:

   1. Section 07 00 01 – Rainscreen System.

   2. Section 08 40 01 – Glazed Storefronts and Curtain Wall System.

   3. Section 08 63 01 – Aluminum-Framed Skylight System.

1.3 REFERENCE DOCUMENTS

A. Building Enclosure System Matrix: Refer to Drawing EN1-003.

1.4 **DEFINITIONS:**

A. Referenced System: Building enclosure system as specified by the Building Enclosure System Matrix.

B. The term "Panels" is used to describe the infill panels of the system.

1.5 **REFERENCE STANDARDS AND REGULATIONS:**

A. Refer to DDC General Conditions.

B. The Contractor's engineering, materials, and workmanship shall comply with 2014 New York City Building Code and 2016 New York City Energy Conservation Code. Where their recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Documents shall take precedence.

C. Comply with applicable provisions and recommendations of the standards listed below. Where standards conflict or conflict with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted, the latest editions of the standards shall apply:

1. American National Standards Institute (ANSI).

   a. ANSI/FM 4474 – American National Standard for Evaluating the Simulated Wind Uplift Resistance of Roof Assemblies Using Static Positive and/or Negative Differential Pressures.

2. ASTM International (ASTM)

   a. ASTM C209 – Standard Test Methods for Cellulosic Fiber Insulating Board

   b. ASTM C1153 – Standard Practice for Location of Wet Insulation in Roofing Systems Using Infrared Imaging.

   c. ASTM C1289 – Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board

   d. ASTM D1621 – Standard Test Method for Compressive Properties Of Rigid Cellular Plastics

   e. ASTM E108 – Standard Test Methods for Fire Tests of Roof Coverings.

3. National Roofing Contractors Association (NRCA)

   a. NRCA Roofing and Waterproofing Manual.

4. Sheet Metal and Air Conditioning Contractor's National Association (SMACNA)

   a. SMACNA Architectural Sheet Metal Manual.

5. Underwriters Laboratories Inc. (UL)

   a. UL 580 – Standard for Tests for Uplift Resistance of Roof Assemblies.

   b. UL 790 – Standard Test Methods for Fire Tests of Roof Covering.

1.6 PERFORMANCE REQUIREMENTS:

A. General Prescriptive Requirements

1. Provide fully adhered PVC roofing system as shown on the Drawings and as specified herein.

2. Use materials in the Work chemically compatible with their adjacent materials.

3. Site-applied Sealant is not acceptable as part of the primary weather sealing system unless shown on the Architectural Drawings or noted within this Section.

B. General Performance

1. Install PVC roofing system according to the intended use, appropriate standards, as specified herein, and per the manufacturer's recommendations.

2. Provide protection, separation layers, and/or compatible products where required by the manufacturer to prevent damage or chemical incompatibility of the membrane.

C. Durability Performance

1. PVC roofing membrane shall withstand degrading effects of radiation from the sun, weathering, atmospheric pollution, vermin, fungi, and other growths for the required service life without maintenance. Cover all surfaces and protect to prevent damage to the membrane.

2. Provide tapered insulation as specified herein and per approved tapered insulation Shop Drawing to adequately drain water to roof drains and to prevent excess water accumulation on the roofing membrane.

3. Provide temporary protection to protect the membrane from damage during construction, installation of surrounding flashings, and cladding components. Permanent walkway pads shall be provided for protection of the roofing membrane during service.

4. Failure includes inability of Work to meet the performance requirements set forth in this and all referenced systems, in addition to the following:

   a. Wrinkles in the roofing membrane and flashings.

   b. Gaps in the welded seams of the roofing membrane and flashings.

   c. Loss of adhesion in the roofing membrane and flashings.

   d. Improperly installed mechanical fasteners.

   e. Non-asphalt-resistant PVC membrane contact with asphalt-based materials.

D. Structural Performance

1. The Work shall transmit the design loads as specified below to the building structure via the points of attachment as engineered and built, with an adequate margin of safety appropriate to each material and product as required by 2014 New York City Building Code and the listed Reference Standards.

a. New Roofing system shall meet or exceed the following uplift pressures:

1) Field of Roof: 58 psf.

2) Perimeters of Roof: 96 psf.

3) Corners of Roof: 144 psf.

2. As required by 2014 New York City Building Code, the various load cases and combinations of load cases acting on structural elements shall be considered.

a. No permanent deformation or damage to any components of the Work, adjacent elements, or supporting structure shall be accepted under any of the above load cases and combinations of load cases, excluding blast and impact loads.

1.7 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.8 SUBMITTALS:

A. Shop Drawings

1. Provide a tapered insulation Shop Drawing showing the proposed layout of the tapered insulation and crickets at the main roof level and any other roof area with a flat roof deck. The engineering Drawings show the locations of drains and obstructions based on available drawings produced by others, which may or may not be entirely accurate; the tapered insulation Shop Drawing shall be based on field measurements of all drains and obstructions. Shop Drawings shall include all existing roof penetrations, dunnage, bulkheads, skylights, roof access doors, and any other roof features.

2. Provide roof plan Drawings showing proposed layout of all roofing components from the roof deck to roofing membrane, indicating their respective attachment methods per the manufacturer's instructions that meet the 2014 New York City Building Code required wind uplift pressures.

a. Indicate all fastener locations and spacing on Drawings.

b. Provide adhesive application rates for adhered layers.

B. Product data.

C. Samples

1. Provide Samples for all products used for the Work. Provide a minimum of a 6 in. x 6 in. Sample. Provide a 6 in. long sample where products are less than 6 in. in one dimension.

D. Quality Control Plan

1. Work Sequence Plan: Provide a comprehensive work sequence plan showing areas where work will be performed by trades involved in each area and the time required to complete each area. Do not commence work until Commissioner's written approval of work plan is received. Indicate water testing and EFVM testing in the work sequence plan. The plan shall include the following as a minimum:

a. Notify Commissioner in writing at least 72 hrs prior to the initial installation of the roofing system.

b. Inspect conditions and materials to ensure conformity to the Contract requirements.

c. Inspect substrate conditions and coordinate with Contractor to ensure proper substrate preparation in conformance with manufacturer's requirements and Contract requirements.

d. Inspect work in progress to ensure the work is in compliance with approved procedures.

e. Inspect all completed and any corrected work for compliance with the Contract Documents and membrane manufacturer's recommendations.

E. Product Test Reports

1. Indicating compliance with performance requirements as required and specified herein.

F. Quality Control Reports

1. Manufacturer site visit reports.

2. Field reports by Contractor and/or other third-party inspectors.

3. Results of substrate adhesion tests to confirm that roofing membrane is adhered in accordance with the manufacturer's requirements. Tests shall be conducted by the Contractor, at minimum, shall comply with the roofing system manufacturer's recommendations for testing.

4. Results of continuous probe tests of all heat-welded seams in the roofing membrane and flashings to confirm that all seams are welded watertight and in accordance with the manufacturer's requirements or as specified herein, whichever is more stringent. Provide a roof plan Drawing showing all roof membrane and flashings seams and indicating all locations tested.

5. Results and physical Samples of all destructive tests on seams in the finished sheet. Submit physical Samples of all test cuts to the Commissioner, clearly labeled by date, time of day, roof location, and roof level/area, and any unique conditions. Submittal shall include any failed tests, a description of any adjustments made, and results of the follow-up test.

6. Written report of all EFVM testing performed on the roof.

G. Manufacturer's Certification: Written certification (in time to prevent delay of the Contract Work) by the manufacturers of the roofing materials that the materials supplied to the Contractor for this Project comply with all requirements of the Reference Standards, and that all materials are suitable for uses specified herein.

1. Manufacturer's Letters

a. Letter from proposed roofing manufacturer stating that substrates and conditions are acceptable for the purpose of providing specified warranty, and that the proposed system is eligible for the specified warranty or the warranty selected by the City of New York.

b. Letter from proposed roofing manufacturer confirming that the proposed roofing system materials are compatible with adjacent materials, and that all materials are suitable for their intended purpose.

c. Letter from proposed roofing manufacturer confirming that the proposed new roofing system and attachment will provide a Class A fire rating and meet the wind uplift requirements for the Project.

d. Letter of certification from roofing system manufacturers stating that the specified/approved EFVM system is compatible with the roofing products and will not affect the roofing system performance.

e. Letters from the manufacturer shall be on letterhead and signed by an officer of the company, not by a local sales representative.

H. Maintenance Data: For roofing system to include in maintenance manuals.

I. Provide closeout submittals as specified in DDC General Conditions.

1.9 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Field Inspection Services: Commissioner shall arrange with the Manufacturer to have the services of a competent manufacturer's field representative at the Project site. The manufacturer's field representative shall review the substrate conditions, instruct work crews in the proper mixing and application procedures, and provide written recommendations to the Commissioner regarding special conditions related to the work. At a minimum, the manufacturer's technical representative shall provide the following inspections of the membrane:

1. Project start inspection at the beginning of each phase of the Project to review special detailing conditions and substrate preparation.

2. Periodic in-progress inspections throughout the Project to evaluate membrane and flashing application.

3. Final punch-list inspection at the completion of each phase of the Project prior to installation of surfacing or overburden materials.

4. Warranty inspection to confirm completion of all punch-list items, membrane and flashing installation, and general quality of the roofing work.

5. The manufacturer's field representative shall provide the Contractor, and Commissioner with written reports outlining observations and required corrections from each site visit.

C. Single Source: Obtain materials through one source from a single manufacturer for the Contract Work. Products from alternate manufacturers shall be approved in writing by the primary manufacturer.

D. Probe Testing: Conduct continuous probe tests of all heat-welded seams in the roofing membrane and flashings to confirm that all seams are welded watertight and in accordance with the manufacturer's

B. Provide as specified in DDC General Conditions.

1.12 **WARRANTY:**

A. Unless stated otherwise in these Specifications, Warranty shall state that the Work is free from defects in materials and workmanship and weathertight for a period of 2 yrs from the date of Substantial Completion of the Work.Contractor shall agree to promptly restore or replace defective materials and workmanship to "like new condition," including such exploratory work, required to determine the cause, during the Warranty period, at no additional cost to the City of New York.

B. Manufacturer's Warranty: Provide 20-yr manufacturer's roofing warranty under provisions of this Section from Substantial Completion. This roofing warranty provides for cost of labor and materials for loss of watertightness, limited to amounts necessary to effect restoration necessitated by either defective material or defects in related installation workmanship, with no dollar limitation ("NDL"). The warranty shall also include all layers of the roofing system when they are supplied or approved by membrane manufacturer and installed in accordance with manufacturer's general installation guidelines.

C. The Contractor shall be responsible for damage to the building and furnishings occasioned by defective materials or workmanship or damage as part of restoration to the Work.

PART II - PRODUCTS

2.1 **MANUFACTURERS:**

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Sika Corporation – Sarnafil.
2. Fibertite Roofing Membranes.
3. Johns Manville.
4. Or approved equal.

2.2 **ROOFING SYSTEM:**

A. Roofing System: Thermoplastic membrane with polyester reinforcing fabric and lacquer coating. Provide all necessary roofing system accessories, including flashing materials, primers, cleaners, sealants, and termination materials, for a complete roofing system and application including, but not limited to, the following:

B. Roofing Membrane

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Sarnafil G476-15 SA – 60 mil.
   b. Fibertite-XT membrane – 60 mil.
   c. Johns Manville PVC FB – 60 mil.
   d. Or approved equal.

C. Membrane Flashing: Provide wall, curb, parapet flashings per manufacturer's requirements and as required by the Contract Documents:

1. Flashing Membrane Type 1

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Sarnafil Sarnaclad: A PVC-coated heat-weldable sheet metal capable of being formed into a variety of shapes and profiles. 24 gauge, G90 galvanized metal sheet with a 20 mil unsupported Sarnafil membrane laminated on one side.

2) Fibertite Fiberclad metal.

3) Johns Manville PVC Coated Metal.

4) Or approved equal.

2. Flashing Membrane Type 2

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Sarnafil G410 Flashing Membrane.

2) Fibertite Flashing Membrane.

3) Johns Manville PVC Detail Membrane.

4) Or approved equal.

3. Flashing Membrane Type 3

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Sarnafil G459 Flashing Membrane: 60 mil thick, white-colored, fiberglass reinforced membrane adhered to asphalt, other contaminated surfaces, or approved substrates using Sarnacol adhesive. The tan side of the membrane must be the side exposed to the contamination.

2) Fibertite FB Membrane.

3) Johns Manville PVC Detail Strip.

4) Or approved equal.

D. Vapor Retarder

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) 32 mil thick self-adhesive vapor barrier; Sarnavap SA by Sika Corporation.

2) Fibertite Vaportite.

3) Johns Manville Vapor Barrier SA.

4) Or approved equal.

E. Miscellaneous Flashings: Provide miscellaneous flashings as required by the Contract Documents.

1. Detail Membrane

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Sarnafil Detail Membrane.

2) Fibertite Flashing Membrane.

3) Johns Manville PVC Detail Strip.

4) Or approved equal.

2. T-Joint Covers

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following

1) Sarnafil Sarnacircles.

2) Fibertite T-Joint Covers

3) Johns Manville PVC T-Joint Patch.

4) Or approved equal.

3. Preformed Corners

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Sarnacorners: 60 mil thick prefabricated inside and outside corner injection molded PVC patches; heat-welded to roofing membrane and flashings.

2) Fibertite FTR Premolded Flashings.

3) Johns Manville PVC Universal Corners.

4) Or approved equal.

4. Pipe Seal

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Sarnastack Universal: 60 mil thick prefabricated PVC injection molded stack/pipe flashing boot; size as required to flash penetration; heat-welded to roofing membrane.

2) Fibertite FTR Premolded Flashings.

3) Johns Manville PVC Split Pipe Boot.

4) Or approved equal.

5. Cover Strip

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Sarnafil S327 Coverstrip: 9 in. wide precut flashing made from Sarnafil S327 polyester reinforced membrane. Use as coverstrip over Sarnabars.

2) Fibertite Flashing Membrane.

3) Johns Manville Flashing Membrane.

4) Or approved equal.

6. Primer: As recommended in writing by the manufacturer for the substrates and Project conditions.

F. Insulation and Cover Board Materials

1. Rigid Insulation at Conventional Roof Assembly: Rigid polyisocyanurate insulation boards with integrally laminated heavy, durable, and dimensionally stable coated polymer bonded inorganic all-glass fiber mat facer, square edge, maximum board thickness of 2 in. for flat and tapered installation, providing the total thickness shown on the Drawings.

a. Insulation shall meet ASTM C1289, Type II, Class 2, Grade 3.

b. Minimum compressive strength, ASTM D1621, 20 psi.

c. Maximum water absorption by volume per ASTM C209, < 1.5%.

d. Insulation shall have an LTTR value of 5.7°F ft^2 h/Btu/in. of thickness in accordance with ASTM C1289.

2. Rigid Insulation at PRMA Roof Assembly: Extruded polystyrene foam insulation boards, square edge, maximum board thickness of 2 in., providing the total thickness shown on the Drawings:

a. Insulation shall meet ASTM C578, Type VI or VII.

b. Minimum compressive strength, ASTM D1621, 60 psi.

c. Maximum water absorption by volume per ASTM C272, 0.3%.

d. Insulation shall have an R value of 5.0°F ft2 h/Btu/in. of thickness when tested at 75°F mean temperature in accordance with ASTM C518.

3. Cover Board: Enhanced fiberglass mats front and back that are bonded to a high-density gypsum core:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) DensDeck Prime by Georgia-Pacific; 1/2 in. thick; 900 psi compressive strength.

2) USG Corporation Securock.

3) JM DensDeck Prime Roof Board.

4) Or approved equal.

4. Fasteners: Provide as required by manufacturer's requirements to meet the Code-required wind uplift pressures.

G. Accessories

1. Termination Bar

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Sarnabar-S, 1 in. wide, 14 ga stainless steel bar. Where termination bar is to receive a sealant bead, the termination bar is to have a bent leg to receive sealant. PVC Cord: Sarnacord, 4 mm round PVC cord (red).

2) Fibertite FTR Termination Bar.

3) Johns Manville Termination.

4) Or approved equal.

2. Separator Tape

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Aluminum tape as recommended by the manufacturer.

3. Rooftop Walkway Pads

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Sarnapad by Sarnafil, adhered and heat-welded to the roof membrane as specified by manufacturer.

2) Fibertite FTR Tuff Track Walkway and Protection Pads.

3) Johns Manville PVC Walkpad.

4) Or approved equal.

4. Metal Hose Clamp (Draw Band): Stainless steel worm drive type.

5. Primers, Cleaners, and Sealants: Provide where shown on the Drawings and as required by Manufacturer.

H. Metal Roof Copings

1. Refer to Section 07 62 01 – Facade Sheet Metal Flashings.

I. Drainage Composite (for PRMA roof assemblies)

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Sarnafil Drainage Mat.

b. Paradrain by Siplast.

c. Hydroduct Drainage Composite by GCP Applied Technologies Inc

d. Or approved equal.

J. Filter Fabric (for PRMA roof assemblies)

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Systemfilter by American Hydrotech, Inc.

b. Needle-punched, non-woven, 100% polypropylene fabric allowing high-capacity drainage flow, white color, 140 N-series by TenCate Mirafi.

c. Sopranature Filter Fabric by Soprema.

d. Or approved equal.

K. Root Barrier: High-density polyethylene (HDPE) membrane, min. 30 mil. thickness, with heat welded and taped seams (for PRMA roof assemblies)

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. 30 mil thick polyethyelene Naturetec Root Barrier, by Soprema, with heat-welded seams.

b. Root Stop HD by American Hydrotech, Inc.

c. HDPE Protection/Barrier Courses-40, by Tremco Inc.

d. Naturetec Root Barrier, by Soprema, Inc.

e. Or approved equal.

2.3 OVERBURDEN

A. Refer to Section 07 62 01 – Facade Sheet Metal Flashings..

2.4 ELECTRONIC LEAK DETECTION EQUIPMENT

A. Components specified herein are based on the system by International Leak Detection. Manufacturer's products and specifications are generally referred to for identification; products of other manufacturer meeting the requirements itemized below may be submitted for review.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. International Leak Detection, Inc. LLC.
2. Detec Systems, Ltd.
3. Infra-red Analyzers, Inc.
4. Or approved equal.

C. Unless approved by the Commissioner, obtain Electronic Leak Detection materials from the same manufacturer.

D. Tape: Small strips of tape or self-adhering membrane compatible with the waterproofing system membrane and Electronic Leak Detection system.

E. Manufacturer's recommended accessories and components to install the Electronic Leak Detection system.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS:

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION:

A. The Contractor is to examine substrate conditions and other conditions under which this work is to be performed and notify the Contractor, in writing, of circumstances detrimental to the proper completion of the work. Do not proceed with work until unsatisfactory conditions are corrected to permit proper installation of the work. Starting of work means acceptance of substrate.

B. Verify that surfaces and site conditions are ready to receive Work. All substrates to receive the roofing membrane and flashings must be smooth, clean, and have no sharp edges, ridges, or points, and shall be free of loose, spalled, or weak material.

C. Verify all site conditions and dimensions by field measurements prior to ordering materials or starting work. Do this in consideration of the special conditions associated with the alteration of existing construction. Notify the Commissioner of any discrepancies between Drawings and field conditions, and of any elements that require restoration. The Commissioner will determine what modifications or additional restorations are necessary.

3.3 DELIVERY, STORAGE, AND HANDLING:

A. Store elastomeric materials, adhesives, solvents, and sealants in their original containers and maintain at a temperature between 60°F and 80°F.

B. Store solvent-bearing solutions, resins, additives, inhibitors, and adhesives in accordance with the MSDS and/or local fire authority. After partial use of materials, replace lids promptly and tightly to prevent contamination. Store rolled goods on ends only. Discard rolls which have been flattened, creased, or otherwise damaged. Place rolls on pallets on clean rigid floors. Unroll sheet membranes and flashings and allow them to flatten out before application.

C. Handle all materials to avoid damage. Handle all materials in such a manner as to preclude damage and contamination with moisture or foreign matter. Keep away from open fire, flame, or any ignition source. Vapors may form explosive mixtures with air. Avoid skin and eye contact with this material. Avoid breathing fumes. Do not eat, drink, or smoke in the application area. Workers shall wear long sleeve shirts, long pants and work boots. Workers shall wear butyl rubber or nitrile gloves when mixing or applying this product. Safety glasses with side shields shall be used for eye protection. Use local exhaust ventilation to maintain worker exposure below TLV as listed on MSDS for respective products. If the airborne concentration poses a health hazard, becomes irritating, or exceeds recommended limits, use a NIOSH approved respirator in accordance with OSHA Respirator Protection requirements. The specific type of respirator will depend on the airborne concentration. A filtering face piece or dust mask is not acceptable for use with this product if TLV filtering levels have been exceeded.

D. Damaged Material: Any materials that are found to be damaged or stored in any manner other than stated above will be rejected, removed, and replaced at the subcontractor's expense.

E. Do not dilute primers, solvents, cements, adhesives, coatings, or sealants. Keep containers closed except when removing materials from them. Do not allow asphalt-based products, petroleum extracts, oil in any form, or other contaminants to contact the membrane materials or their components.

1. Remove plastic sheet wrapping from cover board once it is delivered to the Project site.

3.4 SUBSTRATE PREPARATION:

A. The roof deck construction must be structurally sound to provide support for the new roof system. The Contractor shall load materials on the rooftop so as to eliminate risk of deck overload due to concentrated weight. The Contractor shall ensure that the roof deck is secured to the structural framing according to Code in such a manner as to resist all anticipated wind loads in that location.

B. Verify that the work of adjacent systems meet the following conditions:

1. Roof drains and scuppers have been installed properly.

2. Roof curbs, nailers, equipment supports, vents, and other roof penetrations are properly secured and prepared to receive new roofing materials.

3. All surfaces are smooth and free of dirt, debris, and incompatible materials.

4. All roof surfaces are free of water, ice, and snow.

C. Prepare all substrate surfaces scheduled to receive roofing and flashing in accordance with the roofing system manufacturer's recommendations and requirements and as provided in this Section.

D. Continually remove all dust and debris from surfaces scheduled to receive any sheet membrane by sweeping and blowing with compressed air and/or vacuuming.

3.5 GENERAL WORKMANSHIP FOR ROOFING:

A. Comply with the manufacturer's recommendations or these Specifications, whichever is more stringent.

B. Do not apply any roofing materials until exposed surface of the existing deck is clean, smooth, and dry. Do not work in rain, snow, winds gusting over 30 mph, temperatures below 40°F, or in presence of any water. Comply with applicable recommendations by manufacturers of all materials for workmanship and handling, except as modified in this Section.

C. Only perform as much roofing installation on any day in which the complete roofing system can be installed in that day. Use of the vapor barrier as temporary roofing is not allowed. If any water is allowed to enter under the newly completed roofing, remove and replace the affected area and all materials exposed to water at the Contractor's expense.

D. Provide temporary cutoffs at the end of each day, between the roof and the roof deck, around all exposed edges, and any incomplete flashing areas. Such seals shall prevent moisture penetration into the building, under the existing roof system, or under the new membrane. Remove the cutoffs completely before proceeding with subsequent work.

E. Do not allow wrappers and packaging materials to be included in the roofing system.

F. Components of roofing system may be toxic and flammable. Heed all manufacturer's cautions and warnings in regard to their use. Take proper precautions to avoid fire hazards and exposure of roofing personnel or building occupants to hazardous fumes.

3.6 VAPOR RETARDER INSTALLATION:

A. Provide smooth transitions and eliminate loose materials and sharp protrusions. Clean cover board surface with a broom and compressed air or vacuum. Remove dust and debris.

B. Primer Application: Substrate must be clean, dry, and free of dust, grease, or other contaminants. Apply primer and membrane in accordance with manufacturer's written instructions. Vapor barrier must be installed on the same day as the primer application.

1. Do not install when it is raining, snowing, or on wet/humid surfaces. Install primer at temperatures 40°F and above.

C. Install self-adhering vapor retarder over the primed roof deck, immediately rolling the membrane with 100 lb to 150 lb rollers, in accordance with the manufacturer's installation instructions. Hand rollers are required for terminations on vertical surfaces. Take all necessary precautions to avoid punctures, tears, or fishmouths in the vapor retarder.

D. Apply vapor retarder from low to high points, in a shingle fashion, so that laps shed water. Lap all edges of the vapor retarder 3 in. minimum and all ends 6 in. minimum.

E. Apply manufacturer's recommended trowel grade adhesive to seal around penetrations, T-joints, or step-offs. Use a hand roller or seam roller to mate the entire seam together. Do not apply trowel grade adhesive where it may come in contact with the PVC roofing membrane or flashings.

3.7 INSTALLATION OF INSULATION AND COVER BOARD:

A. Install all insulation to achieve secure attachment to the deck. Do not use pieces of insulation smaller than 18 in. in length or width. Provide insulation and cover board layers in a staggered row pattern, minimum 6 in. stagger between layers and between new insulation and existing insulation; place boards tightly together.

B. Arrange insulation board staggers at the end of each day's work to provide continuity of staggered joints between adjacent work areas.

C. Insulation and cover board shall be neatly but loosely fit together, with no gaps larger than 1/8 in. Fill any gaps larger than 1/8 in. with fiberglass batt insulation.

D. Provide crickets behind all obstructions to flow toward drains.

E. At roof drains, taper insulation to prevent ponding and reduce total insulation thickness per the approved tapered insulation roof plan Shop Drawings for each roof area at the clamping ring. Trim edges and miter corners as necessary to provide smooth surfaces.

F. Mechanical Attachment

1. Mechanically fasten insulation boards to deck at metal deck locations.

2. Mechanically fasten boards to the deck with approved fasteners and plates according to the board manufacturer's and roof manufacturer's recommendations for fastening rates and patterns, and install to resist Code-prescribed wind uplift pressures. Quantity and location of the fasteners and plates shall cause boards to rest evenly on the roof deck/substrate so there are no significant and avoidable air spaces between the boards and substrate.

3. Fasteners must be tight enough so plates do not turn, but not so tight as to deform them.

4. Install fasteners consistently in accordance with fastener manufacturer's recommendations. Fasteners to have minimum penetration into structural deck as recommended by the fastener manufacturer and Sika Corporation.

5. Use fastener tools with a depth locator and torque-limiting attachment as recommended or supplied by fastener manufacturer to ensure proper installation.

G. Fully Adhered Attachment

1. Fully adhere all layers at concrete or composite deck locations.

2. Fully adhere all insulation layers and cover board using the specified adhesives and ribbon spacing to meet project uplift requirements.

3. Place weighted materials (adhesive cans, membrane rolls, etc., weighing minimum 15 lbs) immediately after setting the insulation boards and cover board in the adhesive to help spread adhesive and for

maximum contact. Leave weighted materials in place for 15 min. or until boards are firmly set, but no less than for 5 min.

H. Do not damage insulation or cover board by dropping materials or by placing materials too heavy to be supported by the insulation. Any damaged insulation must be replaced at no additional cost to the City of New York.

I. EFVM Materials Installation

1. Install EFVM materials as required by the manufacturer.

2. Install EFVM connector plates and connector wires in two opposite corners of roof areas according to the manufacturer's written instructions.

3. Install EFVM grounding screen over roofing insulation and over connector plates. Grounding screen to cover entire roof areas. Lap edges of grounding screen 2 in. minimum and tape with duct tape or aluminum tape 5 ft o.c. Terminate grounding screen 1 in. from drain bowl perimeters.

4. Connector plate cable must extend above roofing membrane.

3.8 PVC MEMBRANE INSTALLATION:

A. General

1. Construct PVC membrane and flashing systems in accordance with the manufacturer's current printed specifications, except as modified in this Section. Arrange work so that materials are not exposed to moisture of any kind at any time. Temporarily seal all edges of sheets not completed to the existing roof daily.

2. Workmen and all others who walk on the new membrane shall wear clean, soft-soled shoes so as not to damage materials. Equipment shall have no sharp edges and be clean and free of any asphaltic or coal-tar products.

3. Use the maximum size of all sheet materials to reduce the number of joints in the system. Schedule work to minimize construction traffic over installed materials. Sheets cut along one side shall have the cut edge installed as the underside sheet at all seams.

B. Membrane Placement

1. Place membrane panel, starting at the low point of the roof, unroll, and allow to relax for a minimum of 30 min. before attaching or splicing. Position sheet so each preceding sheet is lapped a minimum of 3 in. and so water runs across or parallel to all seams. Do not lap seams against the flow of water.

2. Position laps so water runs across or parallel to all seams. Do not make seams that "buck" water.

3. Place additional rolls of membrane to provide sufficient overlaps for seaming of membranes; see standard lap splice details for robotic and hand welding.

4. Sheets cut along one side shall have the cut edge installed as the underside sheet at all seams.

C. Seam Construction

1. Using a clean white cotton rag dampened with membrane cleaner as recommended by the Manufacturer, thoroughly clean an area on both sheets at least 6 in. wide. Do not allow dust or debris to contaminate cleaned membrane prior to welding. Membrane left exposed for more than 12 hrs must be re-cleaned prior to welding.

2. Splice the laps with hot-air welding according to the manufacturer's recommendations, using manufacturer-approved electric hot-air welding devices to provide continuous watertight seals. All welds must be constructed by skilled mechanics trained in the welding procedure by the manufacturer.

3. Horizontal Field Splices: All field splices on the horizontal surface (including flashing) shall be completed using an automatic heat welder that has been engineered for hot-air welding of thermoplastic membranes. Seams made with the automatic welder must be a minimum of 3 in. wide. Construct 4 in. wide seams when hand welding.

   a. Adjust air intake, temperature, and speed of the machine to provide proper seam strength.

   b. Provide an ample power supply to all heat-welding equipment. Provide a generator dedicated to the heat-welding equipment.

   c. When weather conditions vary, make adjustments to the welding machine. Conduct test welds on spare material prior to beginning the finished product sheet.

4. Vertical Field Splices: Use handheld welders only on vertical welds or where an automatic welder is not practical or cannot be used. Seams made with handheld welders must be minimum 4 in. wide. Use silicone hand rollers to ensure proper mating of surfaces as heat-welding proceeds.

5. T-Joints (Three-Way Overlaps): Extend head lap under the field seam so T-joint patch only step downs over one thickness of membrane. When welding a T-joint, chamfer top edge of the second membrane layer to create a smooth transition for the top membrane layer to conform to for positive welding. Chamfer the edge of the membrane using a handheld chamfer tool supplied by the manufacturer. Provide T-joint patches at all T-joints.

6. Plan the installation and seam construction to avoid any cut edges with scrim exposed. In the event that a cut edge with scrim cannot be avoided, ensure that the edge is clean and dry; clean with membrane cleaner as recommended by the waterproofing membrane manufacturer to remove any contamination, and seal the cut edge with manufacturer's recommended sealant.

3.9 PVC FLASHING INSTALLATION:

A. Install all flashings concurrently with the roof membrane as the Project progresses. Temporary flashings are not allowed without prior written approval of the Commissioner and the manufacturer. Approval shall only be for specific locations on specific dates. If any water is allowed to enter under the newly completed roofing, remove and replace the affected area at the Contractor's expense. Adhere or mechanically fasten flashing, as required on the Drawings and per the manufacturer's instruction, to compatible, dry, smooth, and solvent-resistant surfaces. Use caution to ensure adhesive fumes are not drawn into the building.

B. Construct the PVC flashing system similar to, and with the same requirements as, the PVC roofing system. Proceed with flashings as the roofing membrane is completed to ensure positive waterproof protection at all projections from the roof.

C. Adhered Membrane Flashings

1. Apply specified adhesive over the properly installed and prepared flashing substrate according to the Manufacturer's instructions. Apply adhesive in smooth, even coats with no gaps, globs or similar inconsistencies. Only an area which can be completely covered in the same day's operations shall be flashed. Press the bonded sheet firmly in place with a hand roller.

2. Do not apply adhesive in seam areas that will be welded. Apply all panels of membrane in the same manner, overlapping the panel edges as required by welding techniques.

3. Consistently adhere all flashing membranes to substrates. Cut and hot-air weld all interior and exterior corners and miters into place. No bitumen shall contact the Sarnafil membrane.

4. Provide additional securement for all adhered flashings that exceed 30 in. in height. Consult Sika Corporation Technical Department for securement methods.

5. Install steel attachment bars and related accessories per the manufacturer's instruction with approved fasteners into the structural deck at the base of parapets, walls, and curbs. Steel attachment bars may be required by the manufacturer at the base of all tapered edge strips and at transitions, peaks, and valleys according to the manufacturer's details. Coordinate all fasteners with the approved Shop Drawings and requirements for Code-prescribed wind uplift pressures.

6. Terminate flashings as shown on the Drawings and per the manufacturers instruction.

7. Flash penetrations with the manufacturer's premolded pipe flashings. Do not cut or patch premolded pipe flashings to assist in their installation. Verify that the premolded flashings will provide the specified flashing height.

8. Construct field-fabricated flashings where manufacturer's premolded pipe flashings are not available in the correct geometry or do not provide specified flashing height. Pitch pockets are not acceptable.

9. Seal top edge of pipe flashing with sealant and stainless steel hose clamp and around penetrations and where shown on the Drawings and per the manufacturers instruction.

10. Install termination bars at top edges of flashing . Position bars per manufacturer's requirements and secure to substrate with specified fasteners at 6 in. o.c. Allow 1/4 in. gap at bar ends for expansion. Seal across the top of the termination bar with a fillet sealant bead.

11. Provide custom fabricated wood blocking and plywood flashing enclosures for multiple pipe and conduit penetrations in close proximity of each other that cannot be flashed with premolded flashings or membrane flashings.

3.10 ROOF DRAINS:

A. Do not flash drains until all grout and setting material around drains is cured and dry as recommended by the membrane manufacturer.

1. Do not allow waterproofing materials, packaging, or other debris to block or clog drains during or after the application of waterproofing materials.

2. Clean and roughen all drain surfaces to receive waterproofing membrane using a grinder to provide a suitable substrate. Remove any debris from grinding.

B. Install tapered edge strips around the drains set in adhesive to create a sump around the drains. Adhere roofing cover board and membrane to extend to drain.

C. Solidly coat drain bowl flange with sealant. Install a 36 in. square piece of PVC flashing over the drain. Use asphalt-resistant membrane where drain components contain any asphalt residue. Fasten clamping ring in a solid bed of sealant on top of the PVC and trim the PVC flush with inside edge of clamping ring. Lap outer edge of flashing sheet onto deck sheet a minimum of 6 in. and heat weld.

D. Position the membrane and cut a hole for the roof drain allowing 1/2 in. to 3/4 in. of membrane inside the clamping ring. Make round holes in the membrane to align with clamping bolts (a paper punch may be used). Do not cut the membrane back to the bolt holes.

E. Install water cut-off mastic on the clamping ring seat flange below the membrane.

F. Install the roof drain clamping ring and all clamping bolts. Tighten the clamping bolts to achieve constant compression.

G. Lay 8 in. wide strip of HDPE protection sheet over the roofing membrane under the perimeter "footprint" of the drain cover so that the protection sheet extends at least 4 in. beyond the flange. Install a heavy application of Sealant at each corner of the drain cover, on the underside of the flange. Set drain cover into position onto the protection sheet and press down on the four corners for complete adhesion.

3.11 MEMBRANE RESTORATIONS:

A. Restore membrane punctures with like material. Patch must extend a minimum of 2 in. beyond the boundary of the affected area in all directions. Round all corners of the patch. A pinhole will require a minimum 4 in. x 4 in. patch.

B. Clean newly installed membrane as described above for standard seaming details.

C. When patching a membrane that has been in place for some time or that has been subjected to dirt or contamination, it is necessary to remove accumulated field dirt. Proper membrane preparation is made by scrubbing the membrane with a scrub brush and warm soapy water, and then rinsing with clear water and drying with clean cotton cloths. For membrane with a significant accumulation of dirt, cleaning with acetone and a clean cotton cloth may be required.

D. Heat-weld the patch as described above for standard seaming details.

3.12 WALKWAY PAD INSTALLATION:

A. Install walkway pads in locations shown on the Drawings. Lay out walkway pads with the smooth surface is face down. Space each pad a minimum of 1 in. and a maximum of 3 in. to allow for drainage. Provide spaces at regular intervals within the range specified above, and at all valleys including edges of crickets.

B. Heat-weld the entire perimeter of the pad continuously watertight to the membrane, following standard procedures for cleaning and heat-welding seams described above.

C. Follow standard procedures for inspecting/testing head-welded seams of walkway pads as described above.

3.13 TEMPORARY CUT OFF:

A. Installer shall ensure that moisture does not damage any completed section of the new waterproofing system. Complete flashings, terminations, and temporary closures as required to provide a watertight condition at the end of each day. All temporary closures shall be made as recommended or required by membrane manufacturer.

3.14 PROTECTION LAYER INSTALLATION AT PRMA ROOF:

A. Install the protection layer to lay flat. Cut to fit all penetrations, curbs, and perimeters. Do not adhere protection layer to waterproofing membrane.

3.15 DRAINAGE LAYER INSTALLATION AT PRMA ROOF:

A. Install drainage layer directly over the waterproofing membrane, below the rigid insulation. Abut longitudinal edges of adjacent sheets and adhere geotextile fabric overlap edge to adjacent drainage layer with approved adhesive.

B. Neatly trim drainage composite to fit closely around all drains. Panels shall lay flat at drain perimeter to ensure that water will flow freely from panels into drain openings. Cut the core around penetrations, and cut an "x" in the filter fabric and tape the fabric to the sides of the penetration.

C. Cover all terminal edges of the drainage panels with an integral fabric flap by tucking the fabric around the edge of the core and adhering the fabric to the bottom of the core.

D. Proceed with installation of insulation, and paving materials promptly; do not leave drainage composite exposed to direct sunlight for more than one week. Provide temporary ballast to prevent drainage board from becoming displaced.

3.16 INSULATION INSTALLATION AT PRMA ROOF:

A. Install insulation in accordance with manufacturer instructions within 48 hrs of water test completion. Insulation shall be installed in a minimum of two layers with the thickest layer on the bottom. Staggered joints in both directions a minimum of 6 in.

B. Cut and fit to within 3/4 in. of all projections, perimeter walls, and penetrations. Insulation is to be loose laid, with tightly butted joints not greater than 1/8 in.

C. After insulation installation is complete and immediately before installation of wearing course, install the root barrier and drainage layer. Monitor surface temperature of the root barrier and drainage layer with infrared thermography during solar exposure to verify the temperature is maintained below maximum service temperature for extruded polystyrene insulation, as recommended by insulation manufacturer.

3.17 FILTER FABRIC INSTALLATION AT PRMA ROOF:

A. Install the filter fabric layer to lay flat. Cut to fit all penetrations, curbs, and perimeters. Do not adhere filter fabric to insulation or other materials.

B. Lap all adjacent sheets a minimum of 6 in.

3.18 EFVM TESTING:

A. Test the entire membrane installation in the current Work area using EFVM testing.

1. Coordinate with adjacent trades and the EFVM manufacturer for performing EFVM testing.

2. Wet the entire membrane test area with water prior to the start of each test and maintain wet for the required duration of testing.

3. If a breach is detected, the Contractor shall patch per the manufacturer's guidelines and as approved by the Commissioner, and retest the roofing membrane. The Contractor is responsible for all costs incurred for patches/reinstallation/retesting of the waterproofing membrane.

B. After the test is successfully completed, review with the Commissioner if they would like the system to remain in place permanently. Provide permanent securement and leads for future if it is determined that the system is to remain in place for future use.

3.19 FIELD QUALITY CONTROL:

A. Inform the Commissioner in writing on a daily basis of any of the following events. State specific locations of each occurrence.

1. Damage by other trades.

2. Debonded areas of membrane.

3. Leakage through the finished roofing membrane or flashings.

B. Provide site access to authorized representative(s) including inspectors, Commissioner, and Manufacturers' for inspection of the waterproofing membrane.

1. Conduct destructive tests of seams in the finished sheet daily at the beginning of the day and every time there is an interruption in the welding process (i.e., power failure, welder shutdown, job conditions change, and after morning or lunch break). Test cuts shall include both seams constructed with the automatic welder and seams constructed by hand. Submit physical samples of all test cuts to the Commissioner, clearly labeled by date, time of day, location on roof and roof level/area, and any unique conditions. Submittal shall include any failed tests and a description of any adjustments made and the results of the follow-up test.

C. Destructive Seam Testing

1. Weld Tests: Cut out and patch seam weld test daily as specified herein and as requested by the Commissioner.

2. Make test cuts 1 in. wide and longer than the width of the seam.

3. Allow Samples to cool for about 30 min., peel the Sample apart and examine the weld. The membrane should delaminate from the reinforcement. Machine welds shall be 1-1/2 in. wide, hand welds 2 in. wide.

4. Patch test-cut areas with membrane overlay with rounded corners and 2 in. hand-welded seam.

D. Probe Testing

1. Test all welds for watertightness and conformity with the specifications by running a metal "pick" aggressively along all joints after the weld has cooled. Have the inspection performed by mechanics who are present during the full roofing system installation and are trained in the procedure by the manufacturer, and again by a manufacturer's technical representative. Reweld any openings or discontinuities on a daily basis. If openings in seams are found in areas that have been exposed to inclement weather since their installation, make a test cut in the membrane to check for moisture in the insulation, replace any damp insulation, and patch the membrane.

E. Adhesion Testing: Perform adhesion tests are specified in this Section.

F. Infared Imaging Testing: Perform testing, including invasive openings for verification, to locate wet insulation per ASTM C1153.

1. Contractor to repair all probes.

3.20 CLEANING AND PROTECTION:

A. Coordinate with other trades to avoid traffic over completed work areas. Arrange work sequence to avoid use of newly constructed roofing for storage, walking, and equipment movement. Move equipment and ground storage areas as work progresses to avoid abuse of the roofing system, as permitted by the City of New York. Notify the Commissioner immediately and in writing if anyone abuses or damages the roofing system or flashing components, and make necessary restoration at no additional cost to the City of New York.

B. Protect surfaces with smooth, 5/8 in., clean plywood runways over a layer of protection layer, as a minimum, where access is absolutely required, and ensure full protection of new roofing surfaces against mechanical damage.

C. Against Loads: Protect work of this Section against concentrated loads and any other loads or equipment that would damage the materials or work.

D. Against Traffic: Do not permit traffic on horizontally installed work of this Section, except for workmen doing the work, during and after the installation.

E. Take and maintain necessary preventative measures to protect work of this Section from damage until Project is accepted.

F. Upon completion of the roofing system and flashings (including all associated Work), institute appropriate procedures for surveillance and protection of roofing during remainder of construction period. Protect all areas where membrane has been installed.

G. Promptly remove primer or membrane system from adjacent surfaces and leave Work area in broom clean condition.

H. Promptly remove from the site all materials or incomplete roofing exposed to moisture and/or any work rejected by the Commissioner.

I. Workmen and all others that walk on the membrane shall wear clean soft-soled shoes so as not to damage materials. Equipment shall have no sharp edges and shall be clean and free of any materials that are harmful to the waterproofing materials.

END OF SECTION 07 20 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 07 21 00
Thermal Insulation

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Foundation and underslab insulation.

2. Exterior wall semi-rigid insulation.

3. Miscellaneous blanket insulation.

4. Closed cell spray foam insulation.

5. Attachment devices.

B. Related Sections

1. Thermoplastic Membrane Roofing - Section 07 20 00.

2. Firestops and Smokeseals - Section 07 84 13.

3. Glazed Storefronts Curtain Wall System - Section 08 40 01.

4. Gypsum Drywall - Section 09 29 00, for acoustical insulation.

5. Earthwork - Section 31 00 00.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Submit product data for each type of product indicated.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for insulation products.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

C. Vertical and Lateral Fire Propagation Test Characteristics: The exterior wall assembly is required to comply with NFPA 285 "Standard Method of Test for the Evaluation of Flammability Characteristics of Exterior Nonload-bearing Wall Assemblies Containing Combustible Components." The base wall, stud cavity insulation, wall sheathing, air barrier, continuous wall rigid insulation and exterior cladding are components that are required to be to be evaluated as part of this specific assembly test.

1.6 DELIVERY, STORAGE AND HANDLING

A. Store materials under cover in a dry and clean location, off the ground. Remove materials which are damaged or otherwise not suitable for installation and replace with acceptable materials.

B. Take every precaution to prevent the insulation from becoming wet, cover with tarps or other weather/watertight sheet goods.

PART II - PRODUCTS

2.1 FOUNDATION WALL AND UNDERSLAB INSULATION

A. Provide extruded polystyrene board insulation conforming to ASTM C 578, Type IV, with a maximum flame spread and smoke developed indices of 75 and 450 respectively. Insulation shall have an aged R value of not less than 5/inch; shall be 2" thick unless otherwise noted on the drawings.

1. Basis of Design: Subject to compliance with requirements, provide Dow Chemical Co.; Styrofoam or comparable product by one of the following:
2.
   a. Owens Corning
   b. PACTIV Building Products
   c. Or approved equal

2.2 SEMI-RIGID INSULATION

A. Provide mineral wool fiberboard insulation conforming to ASTM C 612, Type IVB with a maximum flame spread and smoke developed indices of 0.

1. Boards shall be 16" wide x 96" long; boards shall be 6" thick unless otherwise noted on the drawings.
2. Insulation shall have an aged R value of not less than 4.3/inch.

3. Basis of Design: Subject to compliance with requirements, provide Roxul; CavityRock DD or comparable product by one of the following:
   a. Thermafiber
   b. Auralex
   c. Or approved equal

2.3 MINERAL-WOOL BLANKET INSULATION

A. Basis of Design Manufacturers: Subject to compliance with requirements, provide Fibrex Insulations Inc. or comparable product by one of the following:

1. Owens Corning.
2. Roxul Inc.
3. Thermafiber.
4. Or approved equal

B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 70 percent.

C. Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

1. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

2.4 SPRAY INSULATION

A. Closed Cell Spray Foam Insulation

1. Basis of Design: Subject to compliance with requirements, provide Henry Permax RT 2045-2.0 or comparable product by one of the following:

   a. Dow Chemical Co. Styrofoam Spray Polyurethane Foam
   b. Demilec LLC Heatlok SOY 200
   c. BASF Corp. Walltite
   d. NCFI InsulStar
   e. Or approved equal

2. Material

   a. Insulation: ASTM C 1029, Type II polyurethane with zero ODP.
   b. Density (ASTM D 1622): 2.1 lbs/cu. ft.

3. Accessories

   a. Primer: As required by insulation manufacturer.
   b. Overcoat: As required by 2014 New York City Building Code and manufacturer.

2.5 ACCESSORIES

A. Clips for Securing Insulation to Encountered Surfaces: Spindle anchor and washer type consisting of perforated metal plates with spindle welded to center and snap on washers. Spindle and washers shall receive a corrosion-resistant electro-zinc plating. Adhesives for securing clips in place shall be recommended by the approved clip manufacturer.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Miracle Adhesives Corp.
   b. Stic-Klip Mfg. Co., Inc.
   c. Midwest Fasteners
   d. Or approved equal

B. Adhesive for Bonding Insulation: The type recommended by the insulation manufacturer, and complying with fire-resistance requirements.

1. Contractor shall ensure that all submitted products that will interface are both chemically and adhesion compatible.

C. Protection Board: Premolded, semi-rigid asphalt/fiber composition board, 1/4" thick, formed under heat and pressure, standard sizes.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION, GENERAL

A. Clean substrates of substances that are harmful to insulation including removing projections capable of puncturing vapor retarders, or that interfere with insulation attachment.

B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time. Maintain dryness by providing temporary protection (tarp, etc.) over insulation and other materials that are intended to be covered by the building envelope, but must remain open for a period of time during construction

C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.3 INSTALLATION OF BELOW-GRADE INSULATION

A. On vertical surfaces, set insulation units using manufacturer's recommended adhesive according to manufacturer's written instructions.

1. If not otherwise indicated, extend insulation a minimum of 48" below exterior grade line.

B. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.

1. If not otherwise indicated, extend insulation a minimum of 48" in from exterior walls.

3.4 INSTALLATION OF BLANKET INSULATION FOR FRAMED CONSTRUCTION

A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

B. Blanket Insulation: Install in cavities formed by framing members according to the following requirements:

1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.

2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.

3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.

4. For metal-framed wall cavities where cavity heights exceed 96", support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.

3.5 INSTALLATION OF BOARD INSULATION FOR CONCRETE SUBSTRATES

A. Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:

1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application indicated.

2. Apply insulation standoffs to each spindle to create cavity width indicated between concrete substrate and insulation.

3. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation below indicated thickness.

4. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.

3.6 INSTALLATION OF SPRAY FOAM INSULATION

A. Apply self-supported, spray-applied insulation according to manufacturer's written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is

completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied, make it flush with face of studs by using method recommended by insulation manufacturer.

END OF SECTION 07 21 00

SECTION 07 21 29
Spray-Applied Thermal Insulation

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
c. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"
d. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

1.2 SUMMARY

A. Section includes spray-applied glass fiber insulation.

B. Related Sections

1. Thermal Insulation - Section 07 21 00, for closed cell spray foam insulation.

2. Firestops and Smokeseals - Section 07 84 13.

3. Gypsum Drywall - Section 09 29 00, for acoustical insulation.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include plans or schedules, or both, indicating the following:

1. Extent of thickness, color, and texture.

2. Treatment of spray-applied thermal insulation after application.

C. Samples: For each exposed product of each color and texture specified, in manufacturer's standard dimensions.

D. Product Test Reports: For each product, for tests performed by a qualified testing agency.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, to set quality standards for materials and execution, to set quality standards for fabrication and installation and for preconstruction testing.

1. Build mockup of typical exposed thermal insulation as indicated on Drawings.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless the Commissioner specifically approves such deviations in writing.

C. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

D. Vertical and Lateral Fire Propagation Test Characteristics: The exterior wall assembly is required to comply with NFPA 285 "Standard Method of Test for the Evaluation of Flammability Characteristics of Exterior Nonload-bearing Wall Assemblies Containing Combustible Components." The base wall, stud cavity insulation, wall sheathing, air barrier, continuous wall rigid insulation and exterior cladding are components that are required to be to be evaluated as part of this specific assembly test.

PART II - PRODUCTS

2.1 SPRAY-APPLIED GLASS FIBER INSULATION

A. Self-Supported, Spray-Applied Glass Fiber Insulation: Type 902 bio-soluble white fiberglass conforming to CAN/ULC S102-10 and ASTM E136 and sprayed using manufacturer's liquid water-based bonding adhesive. Does not contain asbestos, crystalline silica, or combustible fibers.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Monoglass Inc.; Sonoglass Spray-On Insulation or comparable product by one of the following:

2.

a. K-13 International Cellulose
b. Thermacoustic
c. Or approved equal

3. Properties:

a. Fire Resistance: Maximum flame-spread and smoke-developed indexes of zero and zero, respectively, in accordance with ASTM E84. Noncombustible in accordance with ASTM E136.
b. Thermal Conductivity: 4.00/inch R-value in accordance with ASTM C518.
c. Noise Reduction Coefficient (NRC): 0.95 at 2 inches in accordance with ASTM C423 and ISO 354.
d. Bond Strength: Minimum 43-lbf/sq. ft. cohesive and adhesive strength based on field testing in accordance with ASTM E736.
e. Dry Density: 2.2 lb/cu. ft. in accordance with ASTM D1622/D1622M.
f. Air Erosion: Maximum weight loss of 0.0 oz./sq. ft. in 24 hours in accordance with ASTM E859.

g. Fungus and Bacterial Resistance: No growth in accordance with MIL STD810F.

2.2 ACCESSORIES

A. Substrate Primers: For spray-applied insulation, use manufacturer-approved, spray-applied, stain-blocking primers.

B. Spray-Applied Insulation Adhesive: Manufacturer's standard water-based, spray-applied adhesive for mixing with fibers at point of discharge during spray application of thermal insulation and for final topcoat of sprayed thermal insulation.

C. Spray-Applied Insulation Paint Coating: See Section 099000 "Painting and Finishing."

D. Spray-Applied Insulation Sealer: Spray-applied, water-soluble, liquid-copoly emulsion.
1. Basis-of-Design Product: Subject to compliance with requirements, provide Monoglass Inc.; InsulSeal or comparable product by one of the following:

   a. K-13 International Cellulose
   b. Thermacoustic
   c. Or approved equal

2. Tint Color: As selected by Commissioner.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Comply with manufacturer's written instructions applicable to substrate conditions.

B. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment or impair adhesive bonding. Verify surface bonding and compatibility.

C. Coordinate application with Work of other trades, including ductwork, piping, and equipment.

3.3 APPLICATION

A. Mix and apply thermal insulation in compliance with insulation manufacturer's written instructions.
B. Extend insulation to envelop entire area to be insulated as indicated on Drawings.
C. Apply insulation as required to achieve R-value.
D. Board-tamp sprayed insulation surfaces and spray apply manufacturer's pre-tinted adhesive to seal tamped insulation surface in accordance with manufacturer's written instructions.
E. Paint-coated, tamped insulation surfaces in accordance with Section 099000 "Painting and Finishing."

END OF SECTION 07 21 29

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 27 01
Weather Resistive Barriers

PART I – GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements

1. Refer to DDC General Conditions and the Addendum to the General Conditions.

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the Project's Existing Building scope only.

1.2 DEFINITIONS:

A. Referenced System: Building enclosure system as specified by the Building Enclosure System Matrix.

B. Impermeable: A material with a water vapor transmission rate of less than or equal to 0.1 US perms.

C. Semi-Permeable: A material with a water vapor transmission rate of more than 0.1 US perm but less than or equal to 10 US perm.

D. Permeable: A material with a water vapor transmission rate of more than 10 US perm.

1.3 SUMMARY:

A. This Section includes the weather resistive barrier (WRB) components for the associated building enclosure systems described in the Building Enclosure System Matrix.

B. For all systems described, supply and install the following components and their subcomponents of the work required to provide a complete system, including but not limited to the following:

1. Install new WRB including the following components which comprise the Waterproofing System:

a. Self-adhering rubberized asphalt sheet membrane air, vapor, and weather barrier.

b. Self-adhering sheet membrane that serves as an air and weather barrier but is vapor permeable.

c. Sealants, liquid membrane, and accessories at all penetrations, walls, wall openings, flashing terminations, and other locations as shown on the Drawings.

d. Membrane pan flashings and window and door openings where shown on the Drawings.

e. Membrane flashing, sealants, and separators as shown on the Drawings to construct expansion joints in the weatherproofing systems.

C. This Section incorporates the use of Sealants. Requirements specified in this Section are in addition to those in the following Section:

1. Section 07 92 01 – Exterior Joint Sealants.

D. The following Sections describe systems and materials that incorporate Weather Resistive Barriers, and will require coordinated interfaces:

1. Section 07 00 01 – Rainscreen System.

2. Section 07 20 00 – Thermoplastic Membrane Roofing.

3. Section 07 62 01 – Facade Sheet Metal Flashings.

4. Section 07 95 00 – Expansion Control.

5. Section 08 40 01 – Glazed Storefronts and Curtain Wall System.

E. Reference Documents

1. Building Enclosure System Matrix: Refer to Drawing EN1-003.

1.4 REFERENCE STANDARDS AND REGULATIONS:

A. Refer to DDC General Conditions.

B. The Contractor's Engineering, materials, and workmanship shall comply with 2014 New York City Building Code. Where the 2014 New York City Building Code recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Documents shall take precedence.

C. The Contractor's Engineering, materials, and workmanship shall comply with 2014 New York City Fire Code.

D. Comply with applicable provisions and recommendations of the following standards. Where standards conflict with each other or conflict with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted, the latest editions of the standards shall apply:

1. ASTM International (ASTM)

a. ASTM B209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

b. ASTM B221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

c. ASTM C1513 – Standard Specification for Steel Tapping Screws for Cold-Formed Steel Framing Connections.

d. ASTM D412 – Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers – Tension.

e. ASTM D570 – Standard Test Method for Water Absorption of Plastics.

f. ASTM D4258 – Standard Practice for Surface Cleaning Concrete for Coating.

g. ASTM D4263 – Standard Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.

h. ASTM D6135 – Standard Practice for Application of Self-Adhering Modified Bituminous Waterproofing.

i. ASTM E96 – Standard Test Methods for Water Vapor Transmission of Materials.

j. ASTM E154 – Standard Test Methods for Water Vapor Retarders Used in Contact with Earth under Concrete Slabs, on Walls, or as Ground Cover.

k. ASTM E283 – Standard Test Method for Determining Rate of Air Leakage through Exterior Windows, Curtain Walls, and Doors under Specified Pressure Differences Across the Specimen.

l. ASTM E488 – Standard Test Methods for Strengths of Anchors in Concrete Elements.

m. ASTM E754 – Standard Test Method for Pullout Resistance of Ties and Anchors Embedded in Masonry Mortar Joints.

n. ASTM E783 – Standard Test Method for Field Measurement of Air Leakage through Installed Exterior Windows and Doors.

o. ASTM E1186 – Standard Practices for Air Leakage Site Detection in Building Envelopes and Air Barrier Systems.

p. ASTM E2178 – Standard Test Method for Air Permeance of Building Materials.

q. ASTM E2357 – Standard Test Method for Determining Air Leakage of Air Barrier Assemblies.

2. Society for Protective Coatings (SSPC)

a. SSPC-SP3 – Power Tool Cleaning.

1.5 PERFORMANCE REQUIREMENTS:

A. General Prescriptive Requirements

1. Provide WRB where indicated and under the following conditions:

a. At opaque separations of outdoor environment from the indoor environment of the building.

2. Site-applied Sealant is not acceptable as part of the primary Waterproofing System unless shown on the Architectural Drawings or noted within this Section.

3. All horizontal flashings, or any surface intended to drain moisture, shall be sloped to the exterior 1/8 in. per foot minimum, and 1/4 in. per foot where space allows.

B. General Performance

1. Install WRB according to the intended use, appropriate standards, as specified herein, and per the manufacturer's recommendations.

2. A qualified Contractor shall install the specified Waterproofing System. The system shall:

   a. Include suitable allowances for the specified construction tolerances.

   b. Withstand the specified deleterious and degrading effects of radiation from the sun, weathering, atmospheric pollution, vermin, fungi and other growths for the required service life without maintenance in excess of routine cleaning and minor repairs.

   c. Be compatible with all materials with which it comes in contact.

   d. Not stain adjacent surfaces.

C. Durability Performance

1. Protect WRB from radiation from the sun and exposure to inclement weather conditions both in-progress and in the completed construction. Cover and protect all surfaces to prevent damage to the membrane until the final Flashing or Panel components are installed.

2. Provide high-temperature resistant WRB membranes where installed directly beneath sheet metal flashings exposed to the sun.

3. Failure includes inability of the WRB to meet the performance requirements set forth in this and all Referenced Systems, in addition to the following:

   a. Ingress of air into the interior building environment, or exfiltration of interior air, through an air barrier beyond that specified for the Referenced System.

   b. Ingress of water vapor into the interior building environment through a vapor retarder beyond that specified for the permeability of that material.

   c. Degradation of WRB from radiation exposure from the sun.

   d. Melting of WRB from exposure to high temperatures.

D. Structural Performance

1. Engineer Waterproofing System to resist the maximum design loads of the associated system.

2. Securely attach all WRB to the structure.

3. Engineer Waterproofing System to accommodate the structural, thermal, and moisture movements developed by the associated system .

4. Fire Performance

   a. The WRB shall:

      1) Have a resistance to combustion and fire spread appropriate to each part and assembly.

a) Ensure assembly compliance with NFPA requirements, and other applicable provisions, when installed in the specified wall assemblies.

2) Not give off toxic fumes in excess of NFPA standards and code requirements.

5. Weatherproofing Performance

a. WRB shall perform as a continuous vapor-impermeable or vapor-permeable air barrier, as indicated, and as a liquid-water drainage plane flashed to discharge condensation or water to the exterior. Air barrier assemblies shall accommodate substrate movement and maintain continuity at substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

1) Coordinate sheet metal flashings to protect the building, membrane terminations and transitions, and other conditions as shown on the Drawings against water infiltration.

2) Waterproofing System installations shall not rely on sealants or gaskets for primary waterproofing performance. No exposed sealant products are permitted except where shown on the Drawings.

6. Volatile Organic Content (VOC) Performance

a. Provide low-VOC products where required by the City of New York to reduce odor and as required to comply with the VOC content limits determined by the City of New York.

1.6 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.7 SUBMITTALS:

A. Shop Drawings.

B. Product data.

C. Samples

1. Provide Samples for all products used in the Referenced System. Provide minimum of one 6 in. x 6 in. Sample for all WRBs.

2. All other Samples shall be 6 in. long or as specified.

D. Quality Control Plan

1. Provide as required and specified in the DDC General Conditions

2. Work Sequence Plan: Provide a comprehensive work sequence plan showing areas where work will be performed by trades involved in each area and time required to complete each area, including plans to avoid exposure of the WRB for longer than the WRB manufacturer's specified limit. Do not commence work until receiving Commissioner's written approval of the work plan. Indicate water

testing of exterior cladding or components in the sequence plan. The plan shall include the following as a minimum:

a. Notify the Commissioner in writing at least 72 hrs prior to the initial installation of the waterproofing membrane.

b. Inspect conditions and materials to ensure conformity to the Contract requirements.

c. Inspect substrate conditions and coordinate with Main / General Contractor to ensure proper substrate preparation in conformance to the manufacturer's requirements and Contract requirements.

d. Inspect work in progress to ensure that the work is in compliance with approved procedures.

e. Inspect all completed and any corrected work for compliance with the Contract Documents and the membrane manufacturer's recommendations.

3. Results of moisture content tests on the substrates to confirm that the concrete moisture content is in accordance with the waterproofing manufacturer's requirements. Tests shall be conducted by a qualified testing agency and, at minimum, comply with the Waterproofing System manufacturer's recommendations for testing.

E. Product Test Reports

1. Indicating compliance with performance requirements as required and specified herein.

F. Quality Control Reports

1. Manufacturer site visit reports.

2. Field reports by Contractor and/or other third-party inspectors.

3. Protection Plan: Written procedures and plans for providing temporary protection of areas that will be exposed to weather, traffic, etc., prior to the installation of the complete Waterproofing System.

4. Results of adhesion tests on the concrete substrate to confirm that the WRB is adhered in accordance with the manufacturer's requirements. Tests shall be conducted by a qualified Independent Testing Agency and, at minimum, shall comply with the Waterproofing System manufacturer's recommendations for testing.

G. Manufacturer's Certification: Written certification (in time to prevent delay of the installation of the Referenced System) from the WRB material manufacturer that the materials supplied to the Contractor for this Project comply with all requirements of the referenced standards, and that all materials are suitable for the uses specified herein.

H. Maintenance Data: For WRB to include in maintenance manuals.

I. Mockups: Provide mockups of all typical and atypical details, including window perimeter flashing, relieving angles, base of wall, parapet transitions, building corners, expansion joints, integration with other building enclosure systems, and seals at masonry ties. Mockups may be installed as part of a complete assembly for the Referenced System; allow Commissioner and/or other parties to review installation of the

underlying waterproofing components prior to covering with the proposed cladding or other building enclosure components.

1.8 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Installer Qualifications: The contractor or subcontractor must be licensed or approved by the manufacturer.

C. Field Inspection Services: Arrange with the manufacturer to have the services of a competent manufacturer's field representative at the Project site. The manufacturer's field representative shall review the substrate conditions, instruct work crews in the proper application procedures, and provide written recommendations to the Commissioner regarding special conditions related to the work. At a minimum, the manufacturer's technical representative shall provide the following inspections of the membrane:

1. Project start inspection at the beginning of each phase of the Project to review special detailing conditions and substrate preparation.

2. Periodic in-progress inspections throughout the Project to evaluate WRB application.

3. Final punch-list inspection at the completion of each phase of the Project prior to installation of surfacing or overburden materials.

4. Warranty inspection confirming completion of all punch-list items, surfacing, and cladding application.

5. The manufacturer's field representative shall provide the Contractor, and Commissioner with written reports outlining observations and required corrections from each site visit.

D. Single Source: Obtain materials through one source from a single manufacturer for the Waterproofing System. Products from alternate manufacturers shall be approved in writing by the primary manufacturer.

E. Moisture Content: Evaluate moisture content of cementitious substrate materials. Applicator shall determine substrate moisture content throughout the work and record with daily inspection reports or other form of reporting acceptable to the City of New York and membrane manufacturer. Concrete substrates shall have a maximum moisture content of 4% by weight in the upper 3/4 in. of the concrete substrate or otherwise as required by the manufacturer.

F. Conduct adhesion tests of the specified membrane to all substrate(s) at the beginning of the membrane installation and at a rate of one test per 2,000 sq ft. Submit test results to the Commissioner and the WRB manufacturer, and notify both parties immediately of any test result that fails to meet the manufacturer's specified values. Do not proceed with Waterproofing System until all deficiencies have been corrected. Perform the following tests:

1. Tab Pull Test: Cut the membrane to form a 2 in. wide and 4 in. long tab, peel the membrane with a duckbill clamp or similar tool and a force gauge, and qualitatively evaluate the membrane adhesion, assessing if it is aggressively bonded to the substrate.

2. Cross Cut Test: Cut the membrane two times in the shape of an "X." Each cut shall be 12 in. long. Peel the membrane with a duckbill clamp or similar tool and a force gauge, and qualitatively evaluate the membrane adhesion, assessing if it is aggressively bonded to the substrate.

a. Adequate surface preparation will be indicated by tensile bond strength of WRB to substrate, greater than or equal to the manufacturer's listed adhesion strength.

b. In the event the bond strengths are less than that required by the manufacturer, additional substrate preparation may be required. Repeat testing to verify suitability of substrate preparation.

3. Adequate adhesion shall be demonstrated if the membrane fails cohesively or tears the facer off sheathing.

a. The Contractor is responsible for repairing any areas of the WRB where tests are conducted to provide continuous full-thickness coverage of the WRB. Seal all membrane patches that contain reverse laps along the edges of the patch with a compatible liquid membrane seal.

b. The Commissioner shall provide final approval whether acceptable adhesion strength has been achieved.

G. Pre-Installation Conference

1. Provide as required and specified in the DDC General Conditions.

2. Include in conference, a review of membrane adhesion testing procedures and requirements.

1.9 PROJECT CONDITIONS:

A. Do not apply the WRB during or with the threat of inclement weather. Proceed with installation only when existing and forecasted weather conditions permit Waterproofing Systems to be installed according to manufacturer's written instructions and warranty requirements:

1. Do not install if wind is gusting more than 15 mph, or interferes with proper installation.

2. Application of Waterproofing System may proceed while air temperature is between 40°F and 85°F, providing the substrate is a minimum of 5°F above the dewpoint.

B. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed the same day.

C. Where required by the Commissioner, Contractor shall implement odor control and elimination measures prior to and during application of the waterproofing materials. Implement odor control measures at no additional cost to the City of New York.

D. Ensure that substrate materials are dry and free of contaminants. Do not commence with application unless substrate conditions are suitable. Contractor shall demonstrate that substrate conditions are suitable for the application of the materials.

E. The Contractor shall include with its proposal odor control and elimination measures as relevant to the Project and specific areas where work takes place.

1. If required by the Commissioner, Contractor shall implement odor control and elimination measures prior to and during the application of the waterproofing materials. Control/elimination measures shall

be field tested at off-hours and typically consists of one (1) or a combination of the following measures:

a. Seal air intakes with activated carbon filters. Install filters in accordance with requirements and recommendations of the filter manufacturer. Seal filters at joints and against building exterior walls to prevent leakage of unfiltered air.

b. Seal doorways, windows, and skylights with duct tape and polyethylene sheeting to prevent leakage of air into the building.

c. Erect and use moveable enclosure(s) sized to accommodate work area(s) and stationary enclosure for resin mixing station. Enclosure shall be field constructed or pre-manufactured of fire-retardant materials in compliance with 2014 New York City Building Code and 2016 New York City Energy Conservation Code. Provide equipment enclosure(s) with mechanical air intake/exhaust openings and Odor Control Air Cleaners, as required to clean enclosed air volume and to prevent odor migration outside the enclosure. Seal exhaust opening with activated carbon filter.

1.10 COORDINATION AND SEQUENCING:

A. Fully coordinate construction and installation sequences with adjacent trades.

B. Provide as specified in the DDC General Conditions.

1.11 WARRANTY:

A. Unless stated otherwise in these Specifications, Guarantee shall state that the Waterproofing System free from defects in materials and workmanship and weathertight for a period of 2 yrs from the date of Substantial Completion. Contractor shall agree to promptly repair or replace defective materials and workmanship to "like new condition," including such exploratory work, required to determine the cause, during the Guarantee period, at no additional cost to the City of New York.

B. Manufacturer's Warranty: Provide 5-yr manufacturer's membrane warranty under provisions of this Section from date of Substantial Completion. This waterproofing warranty includes providing replacement material at no cost to the City of New York to replace defective materials within the warranty period.

C. The Contractor shall be responsible for repairing damage to the building and furnishings caused by defective materials or workmanship or damage as part of repairs to the Waterproofing System.

PART II – PRODUCTS

2.1 WEATHER-RESISTIVE BARRIER:

A. Manufacturers: Subject to compliance with requirements documented herein provide products by one of the following:

1. GCP Applied Technologies.

2. Henry Company.

3. Carlisle.

4. Or approved equal.

B. Products: From an approved manufacturer including all accessories which may include: flashing materials, primers, cleaners, sealants, and termination materials, for a complete Waterproofing System and application including, but not limited to, the following:

1. Weather-Resistive Barrier

   a. GCP Applied Technologies Perm-A-Barrier Wall Membrane.

   b. Henry Company Blueskin SA.

   c. Carlisle CCW-705.

   d. Or approved equal.

2. Permeable Weather-Resistive Barrier

   a. GCP Technologies Perm-A-Barrier VPS.

   b. Henry Company Blueskin VP160.

   c. Carlisle Fire Resist 705VP.

   d. Or approved equal.

3. Weather-Resistive Barrier Flashing for Membrane Transitions

   a. GCP Applied Technologies Perm-A-Barrier Wall Flashing, for membrane transitions.

   b. Henry Company Blueskin TWF.

   c. Carlisle CCW-705 Air and Vapor Barrier Strips.

   d. Or approved equal.

4. High-Temperature Weather-Resistive Barrier

   a. Provide membrane transitions if incompatible with adjacent substrates and products and directly behind exterior-exposed sheet metal.

      1) GCP Applied Technologies Ice and Water Shield HT.

      2) Henry Company Blueskin PE200 HT.

      3) Carlisle CCW-705 HT.

      4) Or approved equal.

   b. Provide high-temperature membrane flashing transitions to materials compatible with butyl-based membrane and incompatible with asphalt-based membranes.

5. Aluminum-Faced Weather-Resistive Barrier

a. Perm-A-Barrier Aluminum Wall Membrane.

b. Henry Company Metal Clad.

c. Carlisle Fire Resist 705FR-A.

d. Or approved equal.

6. Weather-Resistive Barrier Primer: As recommended by manufacturer for job specific substrates and environmental conditions at time of installation, submit for approval. All WRB membrane installation to receive primer unless the manufacturer states in writing that primer will adversely affect the WRB's adhesion or long-term performance.

7. Sealant for Sealing Penetrations, Terminations, Patches, Etc.

a. GCP Applied Technologies Bituthene Liquid Membrane, Two-Component, Asphalt-Modified Urethane.

b. Henry Company HE925 BES Sealant.

c. Dow Corning 758.

d. Or approved equal.

8. Rubberized Asphalt Mastic for Temporary Membrane Terminal Seals: Bituthene Mastic.

9. Separation Sheet: Aluminum Tape, to separate dissimilar membrane materials. Locations and detailing for all transitions to be reviewed by Commissioner.

10. Transition Flashing: Provide where required to provide weather barrier continuity to fenestration and other cladding systems or components:

a. Pre-formed silicone sheet membrane; provide compatible sealant for adhesion as required by membrane manufacturer.

11. Sealants: Refer to requirements in Section 07 92 01 – Exterior Joint Sealants.

2.2 VAPOR PERMEABLE AIR BARRIER:

A. Products are subject to compliance with requirements documented herein. Manufacturers offering products that may be incorporated into the waterproofing system include the following:

1. VaproShield.

2. Cosella Dorken Delta.

3. Carlisle.

4. Or approved equal.

B. Vapor Permeable Air Barrier: Mechanically attached water-resistive, vapor permeable air barrier sheet that meets the requirements of ASTM E1677 and ICC-ES AC38.

1. Vaproshield RevealShield.
2. Cosella Dorken Fassade S.
3. Carlisle CCW 705 RS.
4. Or approved equal.

C. Air Barrier Flashing: Mechanically attached, black UV stable transition and flashing membrane 6-1/2 in. or 11-3/4 in. wide.

1. Vaproshield RevealFlashing.
2. Cosella Dorken Fassade S.
3. Carlisle BRT-801 Flashing Tape.
4. Or approved equal.

D. Air Barrier Batten: Black vinyl extrusion with pre-formed fastener and moisture drainage channels configured to create a ventilated airspace between wall cladding and air barrier.

E. Fasteners for Air Barrier: Fasteners as required by manufacturer.

F. Bugle headed screws, #6, #7, or #8 as required for air barrier. Screws to be stainless steel.

G. Flashing and Penetration Tapes: UV-resistant black, 35 mil thick, 4 in. wide penetration seam tape.

1. Vaproshield VaproTape.
2. Cosella Dorken Delta Fassade Flashing.
3. Carlisle BRT-801 Flashing Tape.
4. Or approved equal.

H. Refer to requirements in Section 07 92 01 – Exterior Joint Sealants for Sealants.

2.3 ACCESSORIES:

A. Termination Bar: 1/8 in. x 1 in., prepunched aluminum conforming to ASTM B209/B221 or stainless steel bar conforming to ASTM A240/240M.

B. Fasteners for Termination Bars and Flashing Integration: Noncorrosive fasteners as recommended by system Manufacturer for applications involved.

1. Fasteners shall maintain recommended edge distances and spacing so as not to adversely affect or damage the substrate. Fastener design shall also consider condition, thickness, and material properties of substrate.
2. All exterior fasteners or fasteners in wet areas shall be of a suitable grade of stainless steel. Weather coatings for corrosion resistance may only be used with the Commissioner's approval.

3. All exterior fasteners that penetrate a self-sealing weatherproofing system shall be selected and coordinated with the weatherproofing system manufacturer to ensure self-sealing occurs. Fastener connections penetrating the weatherproofing system shall also be set in sealant.

4. Fasteners Used in Cast-in-Place Concrete and Concrete Masonry Unit (CMU) Backup Construction

   a. Fastener selection and sizing shall be based on applicable ICC-ES Evaluation Reports.

   b. Fastener selection and sizing shall be based on testing according to ASTM E488 and ASTM E754 (for CMU construction) with the same backup wall construction used on the Project.

5. When utilizing a fastener not included in any of the above references, available standards, or design guides, use a minimum factor of safety of 4 for permissible load Engineering of anchoring assemblies.

6. Fasteners Used in Cold-Formed Steel Framing Backup Construction

   a. Fastener selection and sizing shall be in accordance with the AISI Cold-Formed Steel Design Manual and ASTM C1513.

7. Contractor shall provide for Commissioner's review, documentation demonstrating that the use of all fasteners installed has been reviewed and approved by the fastener manufacturer and shall, prior to installation, submit manufacturer's written certification that details proposed by the Contractor are appropriate for their intended use.

C. Solvent-Based Cleaner for Tools and Membrane Tie-Ins: As required by the membrane manufacturer.

PART III – EXECUTION

3.1 EXECUTION REQUIREMENTS:

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION:

A. The Contractor is to examine substrate conditions and other conditions under which this work is to be performed and notify the Commissioner, in writing, of circumstances detrimental to the proper completion of the work. Do not proceed with work until unsatisfactory conditions are corrected to permit proper installation of the work. Starting of work means acceptance of Project and substrate conditions.

B. Verify that surfaces and site conditions are ready to receive Waterproofing System. All substrates to receive the waterproofing membrane must be smooth, clean, and have no sharp edges, ridges, or points, and shall be free of loose, spalled, or weak material.

3.3 DELIVERY, STORAGE, AND HANDLING:

A. Store elastomeric materials, adhesives, solvents, and sealants in their original containers and maintain at a temperature between 60°F and 80°F or as required by the manufacturer.

B. Store solvent-bearing solutions, resins, additives, inhibitors, and adhesives in accordance with the SDS and the 2014 New York City Fire Code . After partial use of materials, replace lids promptly and tightly to prevent contamination. Store rolled goods on ends only and protect against ultraviolet (UV) exposure. Discard rolls which have been flattened, creased, or otherwise damaged. Place rolls on pallets on clean rigid floors. Unroll felts and allow them to flatten out before application.

C. Handle all materials to avoid damage. Handle all materials in such a manner as to preclude damage and contamination with moisture or foreign matter. Keep away from open fire, flame, or any ignition source. Vapors may form explosive mixtures with air. Avoid skin and eye contact with this material. Avoid breathing fumes. Do not eat, drink, or smoke in the application area. Workers shall wear long sleeve shirts, long pants and work boots. Workers shall wear butyl rubber or nitrile gloves when mixing or applying this product. Use safety glasses with side shields for eye protection. Use local exhaust ventilation to maintain worker exposure below TLV as listed on SDS for respective products. If the airborne concentration poses a health hazard, becomes irritating, or exceeds recommended limits, use a NIOSH approved respirator in accordance with OSHA Respirator Protection requirements. The specific type of respirator will depend on the airborne concentration. A filtering face piece or dust mask is not acceptable for use with this product if TLV filtering levels have been exceeded.

D. Damaged Material: Any materials found damaged or stored in any manner other than stated above will be rejected, removed, and replaced at the Contractor's expense.

E. Do not dilute primers, solvents, cements, adhesives, coatings, or sealants. Keep containers closed except when removing materials from them. Do not allow petroleum extracts or oil in any form to contact the membrane materials or their components.

3.4 SUBSTRATE PREPARATION:

A. Prepare all substrate surfaces scheduled to receive waterproofing and flashing in accordance with the Waterproofing System manufacturer's recommendations and requirements and as provided in this Section.

B. Continually remove all dust and debris from all concrete surfaces by sweeping and blowing with compressed air and/or vacuuming.

C. Concrete

1. New and existing concrete shall be free of oil, grease, curing compounds, loose particles, moss, algae growth, laitance, friable matter, dirt, bituminous products, and previous waterproofing materials.

2. The substrate shall be sound and all spalls, voids, and blow holes on vertical or horizontal surfaces must be repaired prior to placement of the primer coat. Ensure all uneven areas are leveled using cementitious or other suitable materials . Repair in accordance with the Commissioner's requirements and as approved by the membrane manufacturer.

3. Concrete surfaces with a steel float finish must be sandblasted or equivalent prior to the application of the Waterproofing System. The amplitude of any voids, cleaning, or scarification procedures must not exceed 1/4 in.

4. Mark deficiencies in the concrete substrates that adversely affect waterproofing installation for correction by the Contractor. Notify the Commissioner in writing of the deficiencies. Cracks in the

concrete not considered a defect or detrimental to the structure shall be addressed during the waterproofing installation as directed in this Section.

5. Extent and location of thin surface patching requires approval of the Commissioner and membrane manufacturer prior to the application of any system component.

6. Repair all concrete substrate cracks in accordance with the waterproofing manufacturer's instructions prior to the installation of the waterproofing membrane.

7. For concrete materials with a compressive strength of less than 3,500 psi, contact waterproofing manufacturer's technical department for substrate preparation requirements.

D. Steel Metal

1. Clean and prepare metal surfaces to near white metal in accordance with SSPC-SP3 (power tool clean) or as required by membrane manufacturer. Extend preparation a minimum of 3 in. beyond the termination of the membrane flashing materials. Notch steel surfaces to provide a rust-stop.

2. In addition to cleaning, abrade all metal surfaces to provide a rough open surface. A wire brush finish is not acceptable.

3. Wipe prepared metal surface with Methyl Ethyl Ketone (MEK) or other acceptable solvent cleaner prior to application of primer.

E. Wood/Plywood

1. Plywood shall be identified with American Plywood Association (APA) grade trademarks and shall meet the requirements of product standard PS1.

F. Masonry

1. All masonry joints to be filled and tooled flush to provide an even substrate.

G. Other Flashing Surfaces

1. Remove all contaminants as required by membrane manufacturer. Perform surface preparation by means approved by the Commissioner.

3.5 GENERAL WORKMANSHIP FOR WATERPROOFING:

A. Stir all liquid components before each use to thoroughly combine components as recommended by the manufacturer.

1. Apply liquids in a smooth, even coating without globs.

2. Use pump cans to dispense cleaning fluids.

3.6 SHEET MEMBRANE AND FLASHING INSTALLATION:

A. Prime all surfaces to receive waterproofing membrane. Allow primer to dry until it is slightly tacky.

B. Apply waterproofing membrane in compliance with manufacturer's printed instructions, unless modified by this Section. Do not lap membrane directly onto thermoplastic roofing membrane or other non-compatible material; separate two membranes with a strip of stainless steel sheet metal where required.

1. Begin application of sheets at bottom of wall and work up the surface; install the waterproofing membrane horizontally over the backup. Install successive courses in shingle fashion, lapping the upper course over the lower course 4 in. minimum. Reverse laps are not permitted unless approved by the Commissioner at each specific location. Lap vertical joints at end laps 6 in. minimum and stagger end laps 24 in. minimum.

2. Roll out sheets on primed surfaces and align. Reroll one-half of the sheet in its long direction and cut through release paper, taking care not to cut the membrane.

3. Roll the membrane onto primed surfaces, pulling release paper in front of the roll such that once release paper is removed, membrane is immediately set onto the surface. Place sheets without fishmouths or wrinkles. Do not stretch the membrane.

4. If fishmouths and wrinkles appear, cut out and flatten the affected area and cover with membrane extending at least 6 in. beyond the cut on all sides. Examine all seams in membrane thoroughly for fishmouths and wrinkles, and repair as above. Seal all edges of membrane patches with liquid membrane.

5. Immediately after applying the membrane sheet, hand press into contact with the surface, and roll the entire membrane towards lap seams with a handheld neoprene roller. Remove air pockets and patch as required by manufacturer Create a uniform and complete bond.

6. Seal all exposed perimeter edges at temporary tie-ins with specified mastic each day and remove mastic before applying additional membrane. Do not apply membrane over any mastic sealing materials.

7. Re-prime areas that become dirty and debris covered during the course of the work, or if primed area is exposed for more than seven days prior to installing membrane.

8. Where liquid membrane is used to seal a membrane edge, the liquid membrane must fully cover the edge such that the edge is not visible through the liquid membrane.

9. Only where the Commissioner has specifically approved a reverse lap in the membrane, install a continuous termination bar across the top edge of the reverse lapped membrane. Fully seal the termination bar with liquid membrane tooled to a fillet profile.

C. Provide liquid membrane cants where substrate changes direction (e.g., inside corners).

D. Mix liquid membrane from the manufacturer's standard size packages only. "Batch mixing" of small quantities of liquid membrane is not allowed.

E. Connect and seal exterior wall membrane air barrier continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials, as shown on the Drawings.

F. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply membrane transition strip as shown on the Drawings so that a minimum of 3 in. of coverage is achieved over each substrate; provide maximum coverage possible for fenestration system surfaces less than 3 in.

G. Do not cover membrane waterproofing and flashings until they have been tested and inspected by the third party testing agency.

H. Correct deficiencies in or remove sheet membrane and flashings that does not comply with requirements; repair substrates and reapply air barrier components.

3.7 FIELD QUALITY CONTROL:

A. Inform the Commissioner in writing on a daily basis of any of the following events. State specific locations of each occurrence.

1. Damage by other trades.
2. Debonded areas of membrane.
3. Fishmouths or other deficiencies in the membrane.
4. Leakage through the finished waterproofing membrane.

B. Provide site access to the authorized representative(s) including inspectors, Commissioner, and manufacturers' for inspection of the waterproofing membrane.

C. Inspections: Arrange for the manufacturer's representative and Commissioner to inspect the substrate prior to installation and to review the completed work, during all phases of installation, and as required to assure conformance with Manufacturer's specifications and the Contract Documents. Manufacturer to perform adhesion tests and provide results in a field report with recommendations to repair areas that fail adhesion test. Sheet membrane materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections will include the following:

1. Continuity of air barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Continuous structural support of air barrier system has been provided.
3. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
4. Site conditions for application temperature and dryness of substrates have been maintained.
5. Maximum exposure time of materials to UV deterioration has not been exceeded.
6. Surfaces have been primed, if applicable.
7. Laps in sheet materials comply with the minimum requirements and have been shingled in the correct direction (or mastic applied on exposed edges), with no fishmouths.
8. Termination mastic has been applied on cut edges.

9. Sheet membrane has been firmly adhered to substrate.

10. Compatible materials have been used.

11. Transitions at changes in direction and structural support at gaps have been provided.

12. Connections between assemblies (membrane and sealants) comply with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.

13. All penetrations have been sealed.

D. Provide the Commissioner with the manufacturer's field report (prior to installation of the insulation and cladding) stating that the waterproofing has been inspected and is acceptable. Do not cover the membrane until the manufacturer inspects and accepts, in writing, the sheet membrane installation, and states it is fully eligible for the manufacturer's warranty, without exceptions, unless agreed to in writing by the City of New York.

3.8 CLEANING AND PROTECTION:

A. Refer to requirements in the DDC General Conditions.

B. Coordinate with other trades to avoid traffic over completed work areas. Arrange work sequence to avoid use of newly constructed waterproofing and flashing for storage, walking, and equipment movement. Move equipment and ground storage areas as work progresses to avoid abuse of waterproofing, as permitted by the City of New York. Notify the Commissioner immediately and in writing if anyone abuses or damages waterproofing or flashing components, and make necessary restoration with no additional cost to the City of New York.

C. Against Loads: Protect work of this Section against concentrated loads and any other loads or equipment that would damage the materials or work.

D. Against Traffic: Do not permit traffic on horizontally installed work of this Section, except for workmen doing the work, during and after the installation.

E. Take and maintain necessary preventative measures to protect work of this Section from damage until Project has reached substantial completion.

F. Upon completion of waterproofing and flashings (including all associated components), institute appropriate procedures for surveillance and protection of waterproofing during remainder of construction period. Protect all areas where membrane has been installed.

G. Promptly remove primer or membrane system from adjacent surfaces and leave Waterproofing System area in broom clean condition.

H. Promptly remove from the site all materials or incomplete waterproofing exposed to moisture and/or any work rejected by the Commissioner.

END OF SECTION 07 27 00

SECTION 07 42 14
Metal Panels

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements

1. Refer to DDC General Conditions.

a. Section 01 33 00 – Submittal Procedures.

b. Section 01 74 19 – Construction Waste Management and Disposal.

c. Section 01 81 13.01 – Sustainable Design Requirements for LEED v4 Buildings.

d. Section 01 81 19 – Indoor Air Quality Requirements for LEED Buildings.

1.2 SUMMARY:

A. This Section includes the Metal Panel components for the associated building enclosure systems described in the Building Enclosure System Matrix. For a description of where Panels are required as well as additional requirements, refer to the Related Sections.

1. For all Panels described, supply and install all components and their subcomponents of the work required to provide a complete system, including but not limited to the following:

a. Panels.

b. Finishes, coatings, and surface treatments.

B. This Section incorporates the use of Sealants. Requirements specified in this Section are in addition to those in the following Section:

1. Section 07 92 01 – Exterior Joint Sealants.

C. The following Sections describe systems that incorporate Metal Panels, and will require coordinated interfaces:

1. Section 05 40 00 – Cold Formed Metal Framing.

2. Section 05 50 00 – Miscellaneous Metals.

3. Section 07 00 01 – Rainscreen System.

4. Section 07 95 00 – Expansion Control.

5. Section 08 40 01 – Glazed Storefronts and Curtain Wall System.

D. Reference Documents

1. Building Enclosure System Matrix: Refer to Drawing EN1-003.

2. Samples Matrix: Refer to Drawing EN1-003.

1.3 DEFINITIONS:

A. Referenced System: Building enclosure system as specified by the Building Enclosure System Matrix.

B. Metal Panel Assembly: Metal Panels, attachment system components, miscellaneous metal framing, and accessories necessary for a complete Metal Panel cladding system.

1.4 REFERENCE STANDARDS AND REGULATIONS:

A. Refer to DDC General Conditions.

B. The Contractor's Engineering, materials, and workmanship shall comply with 2014 New York City Building Code. Where their recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Documents shall take precedence.

C. Comply with applicable provisions and recommendations of the standards listed below. Where standards conflict or conflict with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted the latest editions of the standards shall apply:

1. American Architectural Manufacturers Association (AAMA)

a. AAMA 611 – Voluntary Specification for Anodized Architectural Aluminum.

b. AAMA 620 – Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Aluminum Substrates.

c. AAMA 621 – Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) and Zinc-Aluminum Coated Steel Substrates.

d. AAMA 2605 – Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.

2. Aluminum Association (AA)

a. AA Aluminum Standards and Data.

b. AA ADM-1 Aluminum Design Manual.

3. ASTM International (ASTM)

a. ASTM B209/B209M – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

b. ASTM B221/B221M – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

c. ASTM B308/B308M – Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles.

d. ASTM B429/B429M – Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.

e. ASTM B449 – Standard Specification for Chromates on Aluminum.

f. ASTM D523 – Standard Test Method for Specular Gloss.

g. ASTM D1400 – Standard Test Method for Nondestructive Measurement of Dry Film Thickness of Nonconductive Coatings Applied to a Nonferrous Metal Base.

h. ASTM D1781 – Standard Test Method for Climbing Drum Peel for Adhesives.

i. ASTM D2244 – Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.

j. ASTM D3363 – Standard Test Method for Film Hardness by Pencil Test.

k. ASTM D4214 – Standard Test Methods for Evaluating the Degree of Chalking of Exterior Paint Films.

l. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Building Materials.

m. ASTM E119 – Standard Test Methods for Fire Tests of Building Construction and Materials.

n. ASTM E329 – Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection.

4. National Association of Architectural Metal Manufacturers / National Ornamental & Miscellaneous Metals Association (NAAMM/NOMMA)

   a. NAAMM/NOMMA 500-06 – Metal Finishes Manual for Architectural and Metal Products.

5. National Fire Protection Association (NFPA)

   a. NFPA 259 – Standard Test Method for Potential Heat of Building Materials.

   b. NFPA 268 – Standard Test Method for Determining Ignitability of Exterior Wall Assemblies Using a Radiant Heat Energy Source.

   c. NFPA 285 – Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.

6. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA)

   a. SMACNA Architectural Sheet Metal Manual.

1.5 PERFORMANCE REQUIREMENTS:

A. General Prescriptive Requirements

1. Metal Panel Assembly shall meet the performance requirements specified for the Referenced System.
   a. Provide Panels where indicated in the Drawings.
   b. Panels shall not have any visible fasteners, telegraphing, or fastening on the Panel faces or any other compromise of a neat and flat appearance.

B. General Performance

1. Comply with performance requirements specified, and as validated by Pre-Construction Mockup testing as described in Section 01 43 39 – Facade Mockup Testing and Samples.
2. Engineer Panels, including comprehensive engineering according to the intended use, appropriate standards, and per the manufacturer's recommendations.
3. All Panels used shall be Engineered by a qualified Professional Engineer licensed in the State of New York.
4. Failure includes inability of the Panels to meet the performance requirements set forth in this and as required for adjacent systems including:
   a. Structural failure including, rupturing, cracking, buckling, or puncturing.
   b. Deterioration of metals and other materials beyond normal weathering.
   c. Structural failure of components resulting from forces within specified limits.
   d. Thermal stresses transferring to/from the Panels to the building structure.
   e. Excessive deflections.
   f. Excessive oil canning.
   g. Noise or vibration created by wind, and thermal and structural movements.
   h. Loosening or weakening of fasteners, attachments, and other components.
   i. Failure of touch-up finish to match factory finish.
   j. Staining of adjacent components or wetting of interior building components.
   k. Discoloration, fading, chalking, excessive non-uniformity, pitting, cracking, peeling, corrosion, or crazing of finish.
      1) Color fading more than 5 Hunter units when tested according to ASTM D2244.
      2) Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
      3) Cracking, checking, peeling, or failure of paint to adhere to bare metal.

1. Failure to fulfill other specified performance requirements.

C. Durability Performance

1. Panels shall withstand the specified deleterious and degrading effects defined by the Referenced System.

2. Materials used in the Panels shall resist attack or infestation by plants, micro-organisms, fungi, insects, or other vermin.

3. Bond Integrity

a. When tested for bond integrity, in accordance with ASTM D1781 (simulating resistance to panel delamination), no adhesive failure of the bond a) between the core and the skin or b) cohesive failure of the core itself below the following values:

1) Peel Strength: 22.5 in lbs per inch as manufactured.

2) Peel Strength: 22.5 in lbs per inch after twenty-one (21) days soaking in water at 70°F.

D. Structural Performance

1. Metal Panel assembly shall transmit and resist loads and its combinations as defined by the Referenced System, to the supporting framing of that system.

E. Movement Performance

1. Panels shall accommodate the movements specified and developed by the Referenced System without any reduction in the performance below the minimum levels required herein.

a. Maximum Center of Panel Deflection: Span/90.

F. Fire Performance

1. Panels shall meet the performance requirements specified for the Referenced System.

G. Lightning Protection Performance

1. Panels shall meet the performance requirements specified for the Referenced System.

1.6 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.7 SUBMITTALS:

A. Shop Drawings.

B. Calculations

1. Provide structural calculations.

C. Testing reports.

D. Product data.

E. LEED Submittals.

F. Samples

1. Provide Samples as indicated in the Samples Matrix for the Referenced System.

G. Quality Control Plan

1. For Metal Panel products, submit manufacturer's guidelines highlighting the verification of acceptable manufacturing tolerances and defects.

2. Provide certification from Metal Panel producer/fabricator that the Metal Panel producer/fabricator has reviewed the details and thicknesses and finds same suitable for the purpose intended in accordance with its published literature and in accordance with these Specifications. This includes, but is not limited to, a written analysis of stress due to wind load, environmental conditions, and thermal factors anticipated at the completed Project.

H. Product Test Reports

1. Provide confirmation from Metal Panel producer/fabricator and where applicable from gasket and sealant manufacturer that gaskets and sealants that contact Metal Panels are chemically and otherwise compatible.

I. Quality control reports.

J. Provide closeout submittals as specified.

1.8 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

C. Source Limitations

1. Obtain each type of Panel type from single source from single manufacturer.

1.9 WARRANTY:

A. Refer below and to the requirements for Referenced System.

B. Unless stated otherwise in these Specifications, Warranty shall state that the Panels are, free from defects in materials and workmanship for a period of 2 yrs from the date of substantial completion. Contractor shall agree to promptly repair or replace defective materials and workmanship to "like new condition," including such exploratory work, required to determine the cause, during the Warranty period, at no additional cost to the City of New York.

C. In addition to Contractor's Guarantee, the paint finish manufacturer shall guarantee the finish for a period of 20 yrs from the date of Substantial Completion.

D. The Contractor shall be responsible for repairing damage to the building and furnishings occasioned by defective materials or workmanship or damage as part of repairs to the Panels.

1.10 PROJECT CONDITIONS

A. Adjacent Trade Shop Drawing Review and Field Measurements: Verify actual locations of structural supports for Contract Work by review of supporting structure Shop Drawings or field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 MATERIALS:

A. Aluminum Components

1. Manufacturer's recommended alloy and temper, meeting the requirements and standards listed herein for type of use and finish in accordance with:

a. Sheet and Plate: ASTM B209.

2.2 METAL PANELS:

A. Formed Metal Panels

1. Factory-formed Panels fabricated from single sheets of metal formed into profile for installation method indicated. Include required attachment system components, Panel stiffeners, and accessories.

2. Products: Subject to compliance with requirements, available products that may be incorporated into the Panels include, but are not limited to, the following:

a. Corrugated Metal panel (MP-01, MP-01A, MP-02, and MP-02A)

1) Morin Corporation, a Kingspan Company; Integrity S-16.

2) ATAS International, Inc.; CorraLock.

3) Berridge Manufacturing Co.; H-16.

4) Or approved equal.

b. Ribbed Metal Panel Rainscreen (MP-03)

1) QC Facades; Quadroline.

2) ATAS International, Inc.; Metafor.

3) Metal Sales Mfr Corp; Empire Series.

4) Or approved equal.

c. Exterior Corrugated Metal Panel (MP-04)

1) Morin Corporation, a Kingspan Company; Exposed MR-36 solid.

2) ATAS International, Inc.

3) Berridge Manufacturing Co.; H-16.

4) Or approved equal.

B. Metal-Faced Composite Panels

1. Factory formed and assembled, metal-faced composite Panels fabricated from two metal facings bonded, using no glues or adhesives, to solid, extruded thermoplastic core; formed into profile for installation method indicated. The core material shall be free of voids and/or air spaces and not contain foamed insulation material. Product laminated sheet by sheet in a batch process; use of glues or adhesives between materials is not acceptable.

2. Products: Subject to compliance with requirements, available products that may be incorporated into the work include, but are not limited to, the following:

a. Flat Composite Metal Panel (MP-06, MP-07, and MP-08)

1) ALPOLIC, Division of Mitsubishi Chemical America, Inc.; ALPOLIC/fr,.

2) Alcan Composites USA Inc.; Alucobond Plus.

3) Alcoa Inc.; Reynobond FR.

4) Or approved equal.

3. Face Sheet Material

a. Aluminum, minimum 0.020 in. thick.

4. Panel Thickness: As required to meet the performance requirements.

2.3 FINISHES:

A. General

1. Comply with requirements in Referenced System.

2. Finish: Refer to Building Enclosure System Matrix.

3. Comply with NAAMM/NOMMA 500-06 – Metal Finishes Manual for Architectural and Metal Products for recommendations for applying and designating finishes.

4. Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

5. Choose finishes so touch-up finishes match factory finish.

6. Discoloration, fading, chalking, excessive non-uniformity, pitting, cracking, peeling, corrosion, or crazing of finish is not allowed.

7. The terms below used in conjunction with finish Guarantee are defined as follows:

   a. "Excessive Fading": Means a change in appearance that is perceptible and objectionable as determined by the Commissioner when viewed visually in comparison with the original color range standards.

   b. "Excessive Non-Uniformity": Means non-uniform fading during the Guarantee period to the extent that adjacent parts have a color difference greater than the original acceptable color range.

   c. "Will Not Pit or Otherwise Corrode": Means no pitting or other type of corrosion of finish discernible from a distance of 10 ft, resulting from the natural elements in the atmosphere at the Project site.

PART 3 - EXECUTION

3.1 EXECUTION:

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION:

A. Examine roughing-in for components and systems penetrating Panels to verify actual locations of penetrations relative to seam locations of Panels before Panel installation.

3.3 DELIVERY, STORAGE, AND HANDLING:

A. Deliver components, sheets, Panels, and other manufactured items to prevent damage or deformation. Package Panels for protection during transportation and handling.

B. Unload, store, and erect Panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Store Panels vertically, covered with suitable weathertight and ventilated covering. Store Panels to ensure dryness, with positive slope for drainage of water.

D. Do not store Panels in contact with other materials that might cause staining, denting, or other surface damage. Do not allow storage space to exceed 120°F.

E. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

F. Retain strippable protective covering on Panel for period of Panel installation.

3.4 FABRICATION:

A. General

   1. Refer to requirements of the Referenced System.

2. Fabricate and finish Metal Panel assembly and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements.

3. Follow manufacturer's recommendations for Panel fabrication.

B. Tooling

1. Tooling shall not contain elements made of materials that may react with the Panel materials.

C. Assembly

1. Fabricate components that, when assembled, have the following characteristics:

a. Grind, cut, and shape metals using tools which will not contaminate them with particles which could stain or corrode them.

b. Accurately formed joints without lipping or offsets in visible surfaces unless Engineered otherwise. Rigidly secure other joints to prevent all but engineered movement, unless shown otherwise.

c. Profiles are sharp, straight, and free of defects or deformations.

d. Accurately fitted joints with ends coped or mitered.

e. Means to drain water passing joints.

f. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.

D. Cutting, Drilling, and Milling

1. Minimize use of arc cutting and acetylene gas cutting as much as feasible. If required, Contractor shall submit procedures to demonstrate material hardness remain within the required limits.

E. Pressing and Folding

1. Perform pressing and folding of Metal Panels according to manufacturers' recommendations.

F. Fabrication Tolerances

1. Dimensional Tolerances for Metal Panels

a. Length and Width: ± 0.032 in. up to 48 in.; ± 0.064 in. more than 48 in.

b. Diagonal: ± 0.1875 in.

c. Panel Bow: Not more than 0.2% of Panel width or length up to 0.0625 in. maximum.

d. Thickness: ± 0.008 in.

e. Squareness: 0.125 in. maximum difference between diagonal measurements.

f. Camber: 0.032 in.

G. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

3.5 INSTALLATION:

A. Provide complete installation.

B. Comply with manufacturer's recommended installation guidelines.

C. Do not install damaged components.

D. Rigidly secure non-moving joints. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration.

3.6 ERECTION TOLERANCES:

A. Install Panels to comply with the following maximum tolerances specified in the referenced system.

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
c. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

1.2 SUMMARY

A. Section includes:

1. Fiber-cement wall panels and trim; rainscreen panel system.
2. Trim and accessories required for complete installation.
3. Sealant in conjunction with fiber-cement wall panel work.

B. Related Sections

1. Cold-Formed Metal Framing - Section 05 40 00.
2. Rainscreen System - Section 07 00 01.
3. Weather Resistive Barriers - Section 07 27 01.
4. Sheet Metal Flashings - Section 07 62 01.
5. Exterior Joint Sealants - Section 07 92 01.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

C. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockups for siding including accessories.

   a. Size: See Drawings.
   b. Show exposure, shadow detail with trim piece, and corner lapping.

2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.4 PERFORMANCE CRITERIA

A. Comply with 2014 New York City Building Code.

B. Wind Load: The fiber cement panel systems including all rivet layouts, clips, rails and girts shall be installed to meet the positive and negative wind load requirements as set forth in the 2014 New York City Building Code, structural exterior cladding pressures, and ASCE/ SEI 7, whichever is the greatest.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

A. Manufacturer's Data: Submit standard detail drawings and installation instructions for fiber cement siding. Include manufacturer's certification or other data substantiating that the materials and finishes comply with the requirements. Indicate by copy of transmittal that the Installer has received a copy of the installation instructions.

B. Samples: Submit twelve (12) inch long by full width samples of each type of fiber cement cladding, complete with factory-applied finish.

C. Shop Drawings: Submit shop drawings showing the fiber cement cladding, and the details of forming, jointing (gaskets), internal supports, anchorages, trim, flashing, and accessories. Show details of weatherproofing at edges, terminations, and penetrations of the fiber cement cladding work. Show small scale layout and elevations of entire work.

D. Engineering Data: Submit engineering and test data and tables showing performance characteristics of the panels for loads and deflections.

E. Submit signed and sealed calculations and shop drawings by a Professional Engineer licensed in the State of New York.

1.7 WARRANTY

A. Provide manufacturer's standard 30-year warranty for cementitious siding.

PART II - PRODUCTS

2.1 MANUFACTURERS

A. Fiber-Cement Panels

1. Panel Thickness: As indicated on the drawings.
2. Color: See Finish Schedule.
3. Panel Size: As indicated on the drawings.
4. Basis of Design: Subject to compliance with requirements, provide Cembrit; Cembrit Solid or comparable product by one of the following:
   1). Swisspearl
   2). Nichicha
   3). Or approved equal

B. Fasteners: Stainless steel as shown on drawings.

C. Soffit Vents: Provide continuous, mill finished aluminum, hat-shaped vents, with stamped louvers; 2" wide and not less than 96" long.

2.2 MATERIALS

A. Panel Material (Description): High-strength fiber-cement panel featuring polypropylene reinforcement strips inserted into the matrix for maximum strength.

1. Matrix manufactured using Portland cement and water and further reinforced with cellulose and textile fibers.
2. Panel Profile: As indicated on Drawings.
3. Finish: See Finish Schedule.

B. Panel Physical Dimensions and Characteristics:

1. Thickness: 12 mm.
2. Panel Lengths: As determined by manufacturer for structural integrity, desired aesthetic qualities, and most efficient application.
3. Panel Size: As indicated on Drawings.

C. 2-piece extruded aluminum anchor clips attached over thermal isolator pads.

D. Purlins and Girts: Formed from extuded aluminum, painted black, and engineered by panel manufacturer to meet required structural criteria and shapes as shown on drawings.

E. Trim Material: Furnish necessary trim in conjunction with the cement panel wall system, including feature strips, top, bottom, corner, end units, etc. All exposed members finished to match panels..

F. Sealant: One part polysulfide or polyurethane conforming to Fed. Spec. TT-S-00230-C, approved by panel manufacturer.

G. Fasteners: Fasteners shall be stainless steel, in conjunction with EPDM washers. All fasteners shall be concealed. Fastening/clip system to be manfacturer's standard concealed fastening system.

H. Contractor to provide all necessary angles, Unistrut, compression structure, attachments, etc., for the panels.

I. Contractor to provide accessible mounting system for panels as noted on drawings.

J. Rainscreen Systems: See Section 07 00 01, Rainscreen System.

2.3 ACCESSORIES

A. Flashing: Provide stainless steel flashing where indicated complying with Section 07 62 01, Sheet Metal Flashings.

B. Fasteners: Stainless steel (Type 304) self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners, designed to withstand design loads. Provide exposed fasteners with neoprene gaskets and heads matching color of wall panels by means of plastic caps or factory-applied coating.

1. Blind Fasteners for Wall Panels: High-strength stainless steel rivets, with powder coated head, neoprene gaskets, and self-adhesive foam tape.

C. Sub-Framing: Formed from extruded aluminum in shapes and profiles as required and indicated, and engineered to meet required structural criteria and performance as indicated.

1. All framing behind open joints shall be painted black.

2. All clip devices used to secure sub-frame to metal studs shall be of Type 304 stainless steel.

D. Trim Material: Furnish necessary trim in conjunction with the cement panel wall system, including feature strips, top, bottom, corners, end units, insect screens, etc. All exposed members finished to match panels.

1. Provide painted 3/16" aluminum angle trim at cement board edges to curtain wall (perforated and non-perforated) with concealed fasteners. Perforated angle trim shall be used at base rain screen cavities for ventilation. Painted finish for aluminum angle trim shall be 3-coat metallic thermo-cured, PVDF system.

E. Sealant: One-part sealants complying with Section 07 92 01, Exterior Joint Sealants and approved by panel manufacturer.

F. Vapor Barrier: Refer to Section 07 27 01, Weather Resistive Barriers.

2.4 FABRICATION

A. Comply with dimensions, profile limitations, and fabrication details shown and specified.

B. Fabricate components of the system at factory, ready for field assembly, including all cutting of panel and apertures according to drawings.

C. Fabricate components and assemble units to comply with manufacturer's published performance requirements.

D. Factory-apply specified finishes in conformance with manufacturer's standards, and according to coating manufacturer's instructions.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. General: Comply with panel manufacturer's instructions for assembly and installation.

B. Anchor component parts of the preformed cement panel system securely in place, providing for necessary thermal and structural movement. Drill holes in structural steel members as required for anchorage in accordance with approved shop drawings.

C. Deflection Limitations: L/360.

D. Vertical structure carrying ceiling panels shall be 4'-0" o.c. at exterior and 5'-0" o.c. at interior.

3.3 CLEANING AND PROTECTION

A. Clean exposed surfaces of cladding work promptly after completion of installation. Comply with recommendations of the panel manufacturer.

B. Protection: Ensure that the work will be without damage or deterioration at the time of Substantial Completion.

END OF SECTION 07 46 46

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 52 16
Modified Bituminous Membrane Roofing

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

B. Environmentally Preferable Purchase (EPP) General Requirements:
   1. Refer to the Addendum to the General Conditions

1.2 SUMMARY

A. Section Includes:

   1. Styrene-butadiene-styrene (SBS)-modified bituminous membrane roofing.
   2. Substrate board.
   3. Vapor retarder.
   4. Roof insulation.
   5. Cover board.

B. Section includes the installation of sound-absorbing insulation strips in ribs of roof deck. Sound-absorbing insulation strips are furnished under Section 053100 "Steel Decking."

C. Related Sections:

   1. Section 062000 "Carpentry"
   2. Section 072100 "Thermal Insulation"
   3. Section 076201 "Façade Sheet Metal Flashings"
   4. Section 077100 "Roof Specialties and Accessories"
   5. Section 079201 "Exterior Joint Sealants"

1.3 SCOPE OF WORK

A. The general scope of work will include a new roofing system to be installed for the existing garage building only. Work shall occur where the proposed new elevator bulkhead requires cutting and removing a portion of the existing roof and installation/patching of new infill. Continued warranty of existing roof shall be maintained.

1.4 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D 1079 and glossary of NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to Work of this Section.

1.5 PREINSTALLATION MEETINGS

A. Preliminary Roofing Conference: Before starting roof construction, conduct conference at District SI-3 Garage, 1000 West Service Road, Staten Island, New York 10314.

1. Meet with the Commissioner, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review deck substrate requirements for conditions and finishes, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review temporary protection requirements for roofing system during and after installation.
8. Review roof observation and repair procedures after roofing installation.

B. Preinstallation Roofing Conference: Conduct conference at District SI-3 Garage, 1000 West Service Road, Staten Island, New York 10314.

1. Meet with the Commissioner, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review temporary protection requirements for roofing system during and after installation.
8. Review roof observation and repair procedures after roofing installation.

1.6 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7 SUBMITTALS

A. Product Data: For each type of product.

1. For insulation and roof system component fasteners, include copy of FM Approvals' RoofNav listing.

B. Shop Drawings: Include plans, sections, details, and attachments to other work, including the following:

1. Layout and thickness of insulation.
2. Base flashings and membrane terminations.
3. Flashing details at penetrations.
4. Tapered insulation, including slopes.
5. Roof plan showing orientation of steel roof deck and orientation of roof membrane, fastening spacings, and patterns for mechanically fastened roofing system.
6. Crickets, saddles, and tapered edge strips, including slopes.
7. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.
8. Tie-in with adjoining air barrier.

C. Samples for Verification: For the following products:

1. Cap Sheet: Bright White
2. Flashing Sheet

D. Wind Uplift Resistance Submittal: For roofing system indicating compliance with wind uplift performance requirements.

E. Qualification Data: For Installer.

F. Manufacturer Certificates:

1. Performance Requirement Certificate: Signed by roof membrane manufacturer certifying that roofing system complies with requirements specified in "Performance Requirements" Article.

a. Submit evidence of complying with performance requirements.

2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.

G. Product Test Reports: For roof membrane and insulation, tests performed by a qualified testing agency, indicating compliance with specified requirements.

H. Evaluation Reports: For components of membrane roofing system, from ICC-ES.

I. Field Test Reports:

1. Concrete internal relative humidity test reports.
2. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.

J. Field quality-control reports.

K. Sample Warranties: For manufacturer's special warranties.

L. Maintenance Data: For roofing system to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Manufacturer Qualifications: A qualified manufacturer that is UL-listed for roofing system identical to that used for this Project.

C. Installer Qualifications: The contractor or subcontractor performing the work for this section must be a company regularly engaged in performing roofing projects with its own workforce and have successfully completed in a timely fashion at least three (3) roofing projects similar in scope, size and type to the required work within the last three (3) consecutive years prior to the bid opening. At least one of those projects must have been performed within the last twelve (12) months. The three (3) qualifying projects must have utilized the Siplast Paradiene roof system, been installed by the contractor's or subcontractor's company utilizing its own workforce and must have qualified for, and have been issued, the warranty provided by Siplast. In addition, the contractor or subcontractor must be a certified or authorized installer for the Siplast Paradiene roof system specified herein and shall submit proof of same.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer.

1. Protect stored liquid material from direct sunlight.
2. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources.

1. Store in a dry location.
2. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.10 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.11 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.

1. Special warranty includes roof membrane, base flashings, roof insulation, fasteners, cover boards, vapor retarder, substrate board and other components of roofing system.
2. Warranty Period: 20 years of Roof Membrane/System Guarantee from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing system and flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings shall remain watertight.

1. Accelerated Weathering: Roof membrane shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
2. Impact Resistance: Roof membrane shall resist impact damage when tested according to ASTM D 3746/D 3746M, ASTM D 4272/D 4272M, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.

C. Wind Uplift Resistance: Design roofing system to resist the wind uplift pressures when tested according to FM Approvals 4474, UL 580, or UL 1897.

D. ENERGY STAR Listing: Roofing system shall be listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low slope roof products.

E. Energy Performance: Roofing system shall have initial Solar Reflectance not less than 0.70 in accordance with ASTM C1549 and Thermal Emittance not less than 0.75 in accordance with ASTM C1371.

F. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency.

1. Identify products with appropriate markings of applicable testing agency.

G. Fire-Resistance Ratings: Comply with fire-resistance-rated assembly designs indicated.

1. Identify products with appropriate markings of applicable testing agency.

2.2 MANUFACTURERS

A. Source Limitations: Obtain components for roofing system from:

1. Siplast, 1000 Rochelle Blvd., Irving, TX 75062-3940. No Substitutions.

2.3 BASE SHEET MATERIALS

A. SBS-Modified Bitumen Fiberglass Mat Base Sheet: ASTM D 6163/D 6163M, Type II, Grade S, SBS-modified asphalt sheet, reinforced with fiberglass fabric, smooth surfaced, suitable for cold adhesive or hot asphalt application method.

B. Product: Paradiene 20 by Siplast. No Substitutions.

2.4 STYRENE-BUTADIENE-STYRENE (SBS) MODIFIED BITUMINOUS CAP SHEET

A. Granule-Surfaced Roofing Cap Sheet: ASTM D 6163/D 6163M, Type II, Grade G, SBS-modified asphalt sheet, reinforced with fiberglass fabric, suitable for cold adhesive or hot asphalt application method.
1. Granule Color: Bright White

B. Product: Paradiene 30 FR BW by Siplast. No Substitutions.

2.5 BASE FLASHING SHEET MATERIALS

A. Backer Sheet: ASTM D 6163/D 6163M, Type I or II, Grade S, SBS-modified asphalt sheet, reinforced with glass fibers smooth surfaced, suitable for application method specified.

B. Granule-Surfaced Flashing Sheet: ASTM D 6163/D 6163M, Type II, Grade G, SBS-modified asphalt sheet, reinforced with glass fibers granule surfaced, suitable for application method specified, and as follows:
1. Product: Paradiene 40 FR BW by Siplast. No Substitutions.
2. Granule Color: Bright White

C. Glass-Fiber Fabric: Woven glass-fiber cloth, treated with asphalt, complying with ASTM D 1668/D 1668M, Type I.

D. Liquid Flashing System: Parapro 123 Flashing by Siplast. No Substitutions.

2.6 AUXILIARY ROOFING MATERIALS

A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.

1. Adhesives and Sealants: Comply with VOC limits of NYC Building Code.

2. Bituminous Roof Coatings: Maximum concentration of VOC 300 g/L.

B. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.

C. Roof Vents: As recommended by roof membrane manufacturer.

1. Size: Not less than 4-inch diameter.

D. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel bars, approximately 1 by 1/8 inch thick; with anchors.

E. Cold-Applied Asphalt Adhesive: PA-311M Adhesive by Siplast. At all locations receiving Parapro 123 flashing, Siplast SFT Adhesive must be used. No Substitutions.

F. Asphalt Roofing Cement: PA-828 by Siplast. No Substitutions.

G. Mastic Sealant: Polyisobutylene, plain or modified bitumen; nonhardening, nonmigrating, nonskinning, and nondrying.

H. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing components to substrate; tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.

I. Miscellaneous Accessories: Provide those recommended by roofing system manufacturer.

2.7 SUBSTRATE BOARDS

A. Substrate Board: ASTM C 1177/C 1177M, glass-mat, water-resistant gypsum substrate or ASTM C 1278/C 1278M, fiber-reinforced gypsum board.
1. Product: Dens Deck Prime - Thickness: Type X, 5/8 inch.
2. Surface finish: Factory primed.
3. USG
4. Continental Building Products
5. Or approved equal

B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening substrate board to roof deck.

2.8 VAPOR RETARDER

A. Self-Adhering-Sheet Vapor Retarder: ASTM D 5147 self-adhesive modified bitumen base ply, 102-mil total thickness; coated with a self-adhesive bitumen layer.

B. Product: Paradiene 20 SA by Siplast. No Substitutions.

2.9 ROOF INSULATION

A. General: Preformed roof insulation boards, manufactured by roof membrane manufacturer.

B. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 2, Grade 3, felt or glass-fiber mat facer on both major surfaces, tapered where/as required for positive pitch to drain.
   1. Compressive Strength: 25 psi.
   2. Size: 48 by 96 inches.
   3. Thickness:
      a. Base Layer: 2.6 inches minimum.
      b. Upper Layer: 2.6 inches minimum.

C. Sheathing Panel: Dens Deck Prime – Thickness: 5/8 inches.

2.10 INSULATION ACCESSORIES

A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.

B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.

C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer as follows:
   1. Modified asphaltic, asbestos-free, cold-applied adhesive.

D. Insulation Cant Strips: ASTM C 728, perlite insulation board.

E. Wood Nailer Strips: Comply with requirements in Section 062000 "Carpentry."

F. Tapered Edge Strips: ASTM C 728, perlite insulation board.

G. Cover Board: ASTM C 1289, Type II, Class 4, Grade 1, 1/2-inch-polyisocyanurate, having a minimum compressive strength of 80 psi.

2.11 ASPHALT MATERIALS

A. Asphalt Primer: PA-917 LS by Siplast. No Substitutions.

2.12 PROTECTIVE WALKWAY PADS

A. Product: Paratread by Siplast. No Substitutions.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
2. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
4. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch out of plane relative to adjoining deck.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions.

1. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction.

1. Remove roof-drain plugs when no work is taking place or when rain is forecast.

C. Perform fastener-pullout tests according to roof system manufacturer's recommendations.

1. Submit test result within 24 hours of performing tests.

a. Include manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.

D. Install sound absorbing insulation strips in ribs of acoustical roof decks according to acoustical roof deck manufacturer's written instructions.

3.4 ROOFING INSTALLATION, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions, FM Approvals' RoofNav assembly requirements meeting field wind uplift rating of 60 psf, perimeter wind uplift rating of 105 psf, corner wind uplift rating of 165 psf, and FM Global Property Loss Prevention Data Sheet 1-29.

B. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast.

1. Remove and discard temporary seals before beginning work on adjoining roofing.

C. Substrate-Joint Penetrations: Prevent roofing asphalt and adhesives from penetrating substrate joints, entering building, or damaging roofing system components or adjacent building construction.

3.5 SUBSTRATE BOARD INSTALLATION

A. Install substrate board with long joints in continuous straight lines, with end joints staggered not less than 24 inches in adjacent rows.

1. At steel roof decks, install substrate board at right angle to flutes of deck.

a. Locate end joints over crests of steel roof deck.

2. Tightly butt substrate boards together.
3. Cut substrate board to fit tight around penetrations and projections, and to fit tight to intersecting sloping roof decks.
4. Fasten substrate board to top flanges of steel deck to resist uplift pressure at corners, perimeter, and field of roof according to roofing system manufacturers' written instructions.

3.6 VAPOR RETARDER INSTALLATION

A. Self-Adhering-Sheet Vapor Retarder: Prime substrate if required by manufacturer. Install self-adhering-sheet vapor retarder over area to receive vapor retarder, side and end lapping each sheet a minimum of 3-1/2 and 6 inches, respectively.

1. Extend vertically up parapet walls and projections to a minimum height equal to height of the insulation and cover board.
2. Seal laps by rolling.

B. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into roofing system.

3.7 INSULATION INSTALLATION

A. Coordinate installing roofing system components, so insulation is not exposed to precipitation or left exposed at the end of the workday.

B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.

C. Nailer Strips: Mechanically fasten 4-inch nominal-width, wood nailer strips of same thickness as insulation perpendicular to sloped roof deck at the following spacing:

1. 16 feet apart for roof slopes greater than 1 inch per 12 inches (1:12) but less than 3 inches per 12 inches (3:12).

D. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing system with vertical surfaces or angle changes greater than 45 deg F.

E. Installation Over Metal Decking:

1. Install base layer of insulation with joints staggered not less than 24 inches in adjacent rows and with long joints continuous at right angle to flutes of decking.

a. Locate end joints over crests of decking.
b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
c. Make joints between adjacent insulation boards not more than 1/4 inch in width.
d. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus 24 inches.

1) Trim insulation, so that water flow is unrestricted.

e. Fill gaps exceeding 1/4 inch with insulation.
f. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
g. Mechanically attach base layer of insulation and substrate board using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.

1) Fasten insulation according to requirements in FM Approvals' RoofNav for specified Windstorm Resistance Classification.
2) Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.

2. Install upper layers of insulation and tapered insulation, with joints of each layer offset not less than 12 inches from previous layer of insulation.

a. Staggered end joints within each layer not less than 24 inches in adjacent rows.
b. Install with long joints continuous and with end joints staggered not less than 12 inches in adjacent rows.
c. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
d. Make joints between adjacent insulation boards not more than 1/4 inch in width.
e. At internal roof drains, slope insulation to create a square drain sump, with each side equal to the diameter of the drain bowl plus 24 inches.
f. Trim insulation, so that water flow is unrestricted.
g. Fill gaps exceeding 1/4 inch with insulation.

h. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.
i. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
   1) Set each layer of insulation in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

3.8 INSTALLATION OF COVER BOARDS

A. Install cover boards over insulation with long joints in continuous straight lines, with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches in each direction.

1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
2. At internal roof drains, conform to slope of drain sump.

   a. Trim cover board, so that water flow is unrestricted.

3. Cut and fit cover board tight to nailers, projections, and penetrations.
4. Adhere cover board to substrate using adhesive according to FM Approvals' RoofNav assembly requirements and FM Global Property Loss Prevention Data Sheet 1-29 for specified Windstorm Resistance Classification, as follows:
   a. Set cover board in a uniform coverage of full-spread insulation adhesive, firmly pressing and maintaining insulation in place.

B. Install sheathing paper over cover board and immediately beneath roof membrane.

3.9 ROOFING MEMBRANE INSTALLATION, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."

B. Start installation of roofing in presence of roofing system manufacturer's technical personnel.

C. Where roof slope exceeds 1/2 inch per 12 inches, install roofing membrane sheets parallel with slope.

1. Backnail roofing sheets to substrate according to roofing system manufacturer's written instructions.

D. Coordinate installation of roofing system so insulation and other components of the roofing system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.

1. Provide tie-offs at end of each day's work to cover exposed roofing sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt, with joints and edges sealed.
2. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system.

3. Remove and discard temporary seals before beginning work on adjoining roofing.

3.10 BASE SHEET INSTALLATION

A. Before installing, unroll base sheet, cut into workable lengths, and allow to lie flat for a time period recommended by manufacturer for the ambient temperature.

B. Loosely lay one course of sheathing paper, lapping edges and ends a minimum of 2 inches and 6 inches, respectively.

C. Installation of SBS-Modified Bitumen Polyester and Fiberglass-Mat Base Sheet:

1. Install base sheet according to roofing manufacturer's written instructions, starting at low point of roofing system.
2. Extend roofing sheets over and terminate above cants.
3. Install base sheet in a shingle fashion.
4. Adhere to substrate in a uniform coating of cold-applied adhesive.
5. Install base sheet without wrinkles, rears, and free from air pockets.
6. Laps: Accurately align roofing sheets, without stretching, and maintain uniform side and end laps.
    a. Lap side laps as recommended by roof membrane manufacturer but not less than 3 inches.
    b. Stagger end laps not less than 18 inches.
    c. Completely bond and seal laps, leaving no voids.
    d. Roll laps with a 20-pound roller.
7. Repair tears and voids in laps and lapped seams not completely sealed.
8. Apply pressure to the body of the base sheet according to manufacturer's instructions, to remove air pockets and to result in complete adhesion of base sheet to substrate.

3.11 INSTALLATION OF INTERPLY SHEETS

A. Install two ply sheets, starting at low point of roofing.

1. Align ply sheets without stretching.
2. Shingle side laps of ply sheets uniformly to achieve required number of plies throughout thickness of roofing membrane.
    a. Shingle in direction to shed water.
3. Extend ply sheets over and terminate above cants.

3.12 SBS-MODIFIED BITUMINOUS CAP SHEET INSTALLATION

A. Before installing, unroll cap sheet, cut into workable lengths, and allow to lie flat for a time period recommended by manufacturer for the ambient temperature at which cap sheet will be installed.

B. Install modified bituminous roofing cap sheet according to roofing manufacturer's written instructions, starting at low point of roofing system.

1. Extend cap sheet over and terminate above cants.
2. Install cap sheet in a shingle fashion.
3. Install cap sheet as follows:
   a. Adhere to substrate in cold-applied adhesive.
4. Install cap sheet without wrinkles or tears, and free from air pockets.
5. Install cap sheet, so side and end laps shed water.

C. Laps: Accurately align roofing sheets, without stretching, and maintain uniform side and end laps.

1. Lap side laps as recommended by roof membrane manufacturer but not less than 3 inches.
2. Stagger end laps not less than 18 inches.
3. Completely bond and seal laps, leaving no voids.
4. Roll laps with a 20-pound roller.
5. Repair tears and voids in laps and lapped seams not completely sealed.

D. Apply pressure to the body of the cap sheet according to manufacturer's instructions, to remove air pockets and to result in complete adhesion of base sheet to substrate.

3.13 FLASHING AND STRIPPING INSTALLATION

A. Install base flashing over cant strips and other sloped and vertical surfaces, at roof edges, and at penetrations through roof, and secure to substrates according to roofing system manufacturer's written instructions and as follows:

1. Prime substrates with asphalt primer as required by roofing system manufacturer.
2. Backer Sheet Application:
   a. Mechanically fasten backer sheet to walls or parapets.
   b. Adhere backer sheet over roofing membrane at cants in cold-applied adhesive.
   c. Seal all laps.
3. Backer Sheet Application:
   a. Adhere backer sheet to substrate in cold-applied adhesive.
   b. Seal all laps.
4. Flashing Sheet Application: Adhere flashing sheet to substrate in cold-applied adhesive at rate required by roofing system manufacturer.

B. Extend base flashing up walls or parapets a minimum of 8 inches above roofing membrane and 4 inches onto field of roofing membrane.

C. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.

D. Install liquid flashing system according to manufacturer's recommendations.

1. Extend liquid flashing not less than 3 inches in all directions from edges of item being flashed.
2. Embed granules, matching color of roof membrane, into wet compound.

E. Install roofing cap-sheet stripping where metal flanges and edgings are set on roofing according to roofing system manufacturer's written instructions.

F. Roof Drains: Set 30-by-30-inch-4-pound lead flashing in bed of asphaltic adhesive on completed roofing membrane.

1. Cover lead flashing with roofing cap-sheet stripping and extend a minimum of 6 inches beyond edge of metal flashing onto field of roofing membrane.
2. Clamp roofing membrane, metal flashing, and stripping into roof-drain clamping ring.
3. Install stripping according to roofing system manufacturer's written instructions.

3.14 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to inspect substrate conditions, surface preparation, roof membrane application, flashings, protection, and drainage components, and to furnish reports to the Commissioner.

B. Perform the following tests:

1. Flood Testing: Flood test each roofing area for leaks, according to recommendations in ASTM D 5957, after completing roofing and flashing but before overlying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.

a. Perform tests before overlying construction is placed.
b. Flood to an average depth of 2-1/2 inches with a minimum depth of 1 inch and not exceeding a depth of 4 inches. Maintain 2 inches of clearance from top of base flashing.
c. Flood each area for 24 hours.
d. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.

1) Cost of retesting is the responsibility of the Contractor.

e. Testing agency shall prepare survey report indicating locations of initial leaks, if any, and final survey report.

2. Testing agency shall prepare survey report indicating locations of initial discontinuities, if any.

C. Test Cuts: Remove test specimens to evaluate problems observed during quality-assurance inspections of roofing membrane as follows:

1. Determine approximate quantities of components within roofing membrane according to ASTM D 3617/D 3617M.

2. Examine test specimens for interply voids according to ASTM D 3617/D 3617M and to comply with criteria established in Appendix 3 of ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
3. Repair areas where test cuts were made according to roofing system manufacturer's written instructions.

D. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of the Commissioner, and to prepare inspection report.

1. Notify the Commissioner and the City of New York 48 hours in advance of date and time of inspection.

E. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

F. Roofing system will be considered defective if it does not pass tests and inspections.

1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.15 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period.
1. When remaining construction does not affect or endanger roofing, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to the Commissioner and the City of New York.

B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 52 16

SECTION 07 62 01
Facade Sheet Metal Flashings

PART I - GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements

1. Refer to DDC General Conditions and the Addendum to the General Conditions.

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the Project's Existing Building scope only.

1.2 SUMMARY:

A. This Section includes the Sheet Metal Flashing (Metal Flashing) components for the associated building enclosure systems described in the Building Enclosure System Matrix. For a description of where Metal Flashings are required as well as additional requirements, refer to the Related Sections.

B. For all systems described, supply and install the following components and their subcomponents of the work required to provide a complete system, including but not limited to the following:

1. Install new Metal Flashings including the following components which comprise the Waterproofing System:

a. Sheet Metal Flashings at horizontal surfaces, transitions, and all locations shown on the Drawings. Provide cleats, hook strips, skirt flashings, and associated accessories as shown on the Drawings.

b. Sheet metal pan flashings and window and door openings where shown on the Drawings.

c. Membrane flashing, sealants, and separators as shown on the Drawings to construct Sheet Metal Flashing expansion joints.

d. Sealants, liquid membrane, and accessories at all penetrations, walls, wall openings, flashing terminations, and other locations as shown on the Drawings.

e. Ethylene-propylene diene monomer (EPDM) sheet membrane flashings. Provide uncured EPDM where shown on the Drawings.

2. This Section incorporates the use of Sealants. Requirements specified in this Section are in addition to those in the following Section:

a. Section 07 92 01 – Exterior Joint Sealants.

C. The following Sections describe systems and materials that incorporate Sheet Metal Flashings, and will require coordinated interfaces:

1. Section 07 00 01 – Rainscreen System.
2. Section 07 20 00 – Thermoplastic Membrane Roofing.
3. Section 07 27 01 – Weather Resistive Barriers.
4. Section 07 95 00 – Expansion Control.
5. Section 08 40 01 – Glazed Storefronts and Curtain Wall System.
6. Section 08 63 01 – Aluminum-Framed Skylight System.

D. Reference Documents

1. Building Enclosure System Matrix: Refer to Drawing EN1-003.

1.3 DEFINITIONS:

A. Referenced System: Building enclosure system as specified by the Building Enclosure System Matrix.

B. Waterproofing system is defined as the adjacent building enclosure system that the Metal Flashings will be integrated into.

1.4 REFERENCE STANDARDS AND REGULATIONS:

A. The Contractor's Engineering, materials, and workmanship shall comply with 2014 New York City Building Code. Where the 2014 New York City Building Code recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Documents shall take precedence.

B. Comply with applicable provisions and recommendations of the following standards. Where standards conflict or conflict with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted, the latest editions of the standards shall apply:

1. American Iron and Steel Institute (AISI)
   a. AISI Cold-Formed Steel Design Manual.
2. ASTM International (ASTM)
   a. ASTM A240/A240M – Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
   b. ASTM B32 – Standard Specification for Solder Metal.
   c. ASTM C1513 – Standard Specification for Steel Tapping Screws for Cold-Formed Steel Framing Connections.
   d. ASTM D4637 – Standard Specification for EPDM Sheet Used in Singly-Ply Roof Membrane.

e. ASTM E488 – Standard Test Methods for Strength of Anchors in Concrete Elements.

f. ASTM E754 – Standard Test Method for Pullout Resistance of Ties and Anchors Embedded in Masonry Mortar Joints.

3. National Roofing Contractors Association (NRCA)

a. NRCA Roofing and Waterproofing Manual.

4. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA)

a. SMACNA Architectural Sheet Metal Manual.

5. Single Ply Roofing Industry (SPRI)

a. ANSI/SPRI ES-1 – Wind Design Standard for Edge Systems Used with Low Slope Roof Systems.

6. Society for Protective Coatings (SSPC)

a. SSPC-SP3 – Power Tool Cleaning.

7. Revere Copper Products, Inc.

a. Copper and Common Sense.

1.5 PERFORMANCE REQUIREMENTS:

A. General Prescriptive Requirements

1. Provide Metal Flashings where indicated.

2. Site-applied Sealant is not acceptable as part of the primary Waterproofing System unless shown on the Architectural Drawings or noted within this Section.

3. All horizontal flashings, or any surface intended to drain moisture, shall be sloped to the exterior 1/4 in. per foot minimum.

4. Do not penetrate flashings unless shown on the Architectural Drawings or noted within this Section.

5. Provide upturned end dams that are riveted and fully soldered at all terminations where water would otherwise be able to flow into the wall cavity or similar areas that would result in damage.

B. General Performance

1. Install Metal Flashings according to the intended use, appropriate standards, as specified herein, and per the flashing manufacturer's recommendations.

2. A qualified Contractor shall install the specified Metal Flashing System. The system shall:

a. Include suitable allowances for the specified construction tolerances.

b. Withstand the specified deleterious and degrading effects of radiation from the sun, weathering, atmospheric pollution, vermin, fungi and other growths for the required service life without maintenance in excess of routine cleaning and minor repairs.

c. Be compatible with all materials with which it comes in contact.

d. Not stain adjacent surfaces.

C. Durability Performance

1. Horizontal Metal Flashing surfaces shall be sloped to drain water and prevent water accumulation.

2. Metal Flashings shall be separated from dissimilar metals to prevent galvanic reaction, corrosion, and/or staining.

3. Metal Flashings shall be free of excessive scratching, staining, or other aesthetic issues.

a. "Oil-canning" of exposed sheet metal surfaces is not acceptable.

4. Failure includes inability of Metal Flashings to meet the performance requirements set forth in this and all Referenced Systems, in addition to the following:

a. Ingress of water into the interior building environment through any Metal Flashing components.

b. Cracking or separation of soldered Flashing connections.

c. Corrosion and staining.

D. Structural Performance

1. Engineer Metal Flashings to resist the maximum design loads relevant to the associated system.

2. Securely attach all Metal Flashings to the structure, without noticeable deformation.

3. Engineer Metal Flashings to accommodate the structural, thermal, and moisture movements developed by the associated system and adjacent systems.

a. Provide expansion joints in Metal Flashings to allow thermal expansion without compromising water infiltration resistance performance, as specified herein and where shown on the Drawings.

E. Fire Performance

1. The Metal Flashings shall:

a. Have a resistance to combustion and fire spread appropriate to each part and assembly.

1) Ensure assembly compliance with NFPA requirements, and other applicable provisions.

b. Not give off toxic fumes.

2. Weatherproofing Performance

a. Waterproofing System, including Metal Flashings and all associated materials, shall perform as a liquid-water drainage plane that will discharge condensation or incident rainwater to the exterior. Assemblies shall accommodate substrate movement and maintain continuity at substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

3. Volatile Organic Content (VOC) Performance

a. Provide low-VOC products where required in DDC General Conditions to reduce odor and as required to comply with the VOC content limits.

1.6 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions.

1.7 SUBMITTALS:

A. Shop Drawings.

B. Product data.

C. LEED submittals.

D. Samples

1. Provide minimum 12 in. long Samples of all Metal Flashings, showing the exact profiles used for the Project.

a. Include one prefabricated section used beneath fenestration products which includes an upturned end dam, soldered joint, and expansion joint.

b. Include one lock seamed and soldered transverse joint in through-wall flashing cut in half so that the interior of the solder joint is visible.

c. Include one lock seamed and soldered coping sheet metal cap transverse joint cut in half so that the interior of the solder joint is visible.

2. All other Samples shall be 6 in. long or as specified.

E. Quality Control Plan

1. Provide as required and specified in Related Sections.

2. Work Sequence Plan: Provide a comprehensive work sequence plan showing areas where work will be performed by trades involved in each area and time required to complete each area. Do not commence work until receiving Commissioner's written approval of the work plan. Indicate water testing of exterior cladding or components (see Related Sections) in the sequence plan. The plan shall include the following as a minimum:

a. Notify the Commissioner in writing at least 72 hrs prior to the initial installation of the waterproofing membrane and Sheet Metal Flashings.

b. Inspect conditions and materials to ensure conformity to the Contract requirements.

c. Inspect substrate conditions and coordinate with Contractor to ensure proper substrate preparation in conformance to the manufacturer's requirements and Contract requirements.

d. Inspect work in progress to ensure that the work is in compliance with approved procedures.

e. Inspect all completed and any corrected work for compliance with the Contract Documents and the membrane manufacturer's recommendations.

F. Mockups: Provide mockups of all typical and atypical details, including window perimeter flashing, relieving angles, base of wall, parapet transitions, building corners, expansion joints, integration with other building enclosure systems, and seals at masonry ties. Mockups may be installed as part of a complete assembly for the Referenced System; allow Commissioner to review installation of the underlying waterproofing components prior to covering with the proposed cladding or other building enclosure components.

G. Product Test Reports

1. Indicating compliance with performance requirements as required and specified for adjacent systems and in the DDC General Conditions..

H. Quality Control Reports

1. Manufacturer site visit reports.

2. Field reports by Contractor and/or other third-party inspectors.

3. Protection Plan: Written procedures and plans for providing temporary protection of areas that will be exposed to weather, traffic, etc., prior to the installation of the complete Waterproofing System.

I. Maintenance Data: For Metal Flashings to include in maintenance manuals.

J. Provide closeout submittals as specified.

1.8 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Field Inspection Services: The Commissioner may inspect at the following points of the project the installation of the Metal Flashing System:

1. Project start inspection at the beginning of each phase of the Project to review special detailing conditions and substrate preparation.

2. Periodic in-progress inspections throughout the Project to evaluate Metal Flashing application.

3. Final punch-list inspection at the completion of each phase of the Project prior to installation of surfacing or overburden materials.

4. Warranty inspection confirming completion of all punch-list items, surfacing, and cladding application.

5. The manufacturer's field representative shall provide the Contractor, and the City of New York with written reports outlining observations and required corrections from each site visit.

C. Single Source: Obtain materials through one source from a single manufacturer for the Metal Flashing System to provide consistency in materials, unless otherwise approved by the Commissioner.

D. Pre-Installation Conference

1. Provide as required and specified for adjacent systems and in the DDC General Conditions.

1.9 PROJECT CONDITIONS:

A. Ensure that substrate materials are dry and free of contaminants. Do not commence with application unless substrate conditions are suitable. Contractor shall demonstrate that substrate conditions are suitable for the application of the materials.

1.10 COORDINATION AND SEQUENCING:

A. Fully coordinate construction and installation sequences with adjacent trades.

B. Provide as specified for adjacent systems and in DDC General Conditions.

1.11 WARRANTY:

A. Unless stated otherwise in these Specifications, Guarantee shall state that the Metal Flashing is free from defects in materials and workmanship and weathertight for a period of 2 yrs from the date of Substantial Completion. Contractor shall agree to promptly repair or replace defective materials and workmanship to "like new condition," including such exploratory work, required to determine the cause, during the Guarantee period, at no additional cost to the City of New York.

B. The Contractor shall be responsible for repairing damage to the building and furnishings caused by defective materials or workmanship or damage as part of repairs to the Waterproofing System.

PART II - PRODUCTS

2.1 SHEET METAL FLASHINGS AND ROOF COPINGS:

A. Manufacturer's recommended alloy, temper, and gauge meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

1. Stainless Steel

a. Type 316 conforming with ASTM A240/A240M.

b. 24 ga minimum thickness.

1) 22 ga minimum for hook strips and 20 ga for cleats, where shown on the Drawings.

c. Type 2D finish.

d. Make connections with stainless steel rivets and solder as specified below.

e. Provide geometry as indicated in drawings.

B. Provide solder complying with ASTM B32, Class 50A or 50B, bar form, 50% block tin and 50% pig lead.

1. Use an approved brand of soldering flux.

2. After soldering, immediately remove all traces of acid or flux with an appropriate neutralizer followed by repeated washing and scrubbing.

C. Fasteners

1. Rivets for Metal Flashing Connections: Solid 3/16 in. dia. flat head solid copper rivets of proper length for the material being fastened. Blind or "pop" rivets are prohibited.

D. Release Tape: 0.006 in. thick polyethylene, adhesive-backed on one side, width as required.

E. Strip Flashing for Expansion Joints: 0.060 in. thick uncured EPDM, use manufacturer's recommended primers, adhesives, sealants, and solvent cleaners.

F. Sealant, for Use in Expansion Joint Construction: Lap sealant to match EPDM membrane manufacturer.

1. Refer to requirements in Section 07 92 01 – Exterior Joint Sealants for Sealants.

2.2 ACCESSORIES:

A. Fasteners

1. Fastener engineering shall account for any reduction in safe working loads due to their spacing, edge distance, embedment, location in areas of tension, or proximity to cast-in inserts/existing fasteners, or thickness of shims. Fastener engineering shall also consider condition, thickness, and material properties of substrate. Adhesive anchoring systems shall not be used for fasteners supporting loads in tension.

2. All exterior fasteners or fasteners in wet areas shall be of a suitable grade of stainless steel. Weather coatings for corrosion resistance may only be used with the Commissioner's approval.

3. All exterior fasteners that penetrate a self-sealing weatherproofing system shall be selected and coordinated with the weatherproofing system manufacturer to ensure self-sealing occurs.

4. Fasteners Used in Cast-in-Place Concrete and Concrete Masonry Unit (CMU) Backup Construction

a. Fastener selection and sizing shall be based on applicable ICC-ES Evaluation Reports

b. Fastener selection and sizing shall be based on testing according to ASTM E488 and ASTM E754 (for CMU construction) with the same backup wall construction used on the Project.

c. Post installed anchors shall be subject to Special Inspections as required by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

5. When utilizing a fastener not included in any of the above references, available standards, or design guides, use a minimum factor of safety of 4 for permissible load design of anchoring assemblies.

6. Fasteners Used in Cold-Formed Steel Framing Backup Construction

   a. Fastener selection and sizing shall be in accordance with the AISI Cold-Formed Steel Design Manual and ASTM C1513.

7. Contractor shall provide for Commissioner's review, documentation demonstrating that the use of all fasteners installed has been reviewed and approved by the fastener manufacturer and shall, prior to installation, submit manufacturer's written certification that details proposed by the Contractor are appropriate for their intended use.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS:

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION:

A. The Contractor is to examine substrate conditions and other conditions under which this work is to be performed and notify the Commissioner, in writing, of circumstances detrimental to the proper completion of the work. Do not proceed with work until unsatisfactory conditions are corrected to permit proper installation of the work. Starting of work means acceptance of Project conditions.

3.3 DELIVERY, STORAGE, AND HANDLING:

A. Store elastomeric materials, adhesives, solvents, and sealants in their original containers and maintain at a temperature between 60°F and 80°F or as required by the manufacturer.

B. Handle all materials to avoid damage. Handle all materials in such a manner as to preclude damage and contamination with moisture or foreign matter. Keep away from open fire, flame, or any ignition source.

C. Damaged Material: Any materials found damaged or stored in any manner other than stated above will be rejected, removed, and replaced at the Contractor's expense.

3.4 STRIP FLASHING SUBSTRATE PREPARATION:

A. Prepare all substrate surfaces scheduled to receive strip Flashing in accordance with the manufacturer's recommendations and requirements and as provided in this Section.

B. Continually remove all dust and debris from all concrete surfaces by sweeping and blowing with compressed air and/or vacuuming.

C. Clean and prepare metal surfaces to near white metal in accordance with SSPC-SP3 (power tool clean) or as required by membrane manufacturer. Extend preparation a minimum of 3 in. beyond the termination of the membrane flashing materials. Notch steel surfaces to provide a rust-stop.

D. In addition to cleaning, abrade all metal surfaces to provide a rough open surface. A wire brush finish is not acceptable.

E. Wipe prepared metal surface with Methyl Ethyl Ketone (MEK) or other acceptable solvent cleaner prior to application of primer.

3.5 STRIP FLASHING INSTALLATION:

A. Prime all surfaces to receive strip Flashing membrane. Allow primer to dry until it is slightly tacky.

B. Correct deficiencies in or remove strip Flashing membrane and Flashings that do not comply with requirements; repair substrates and reapply components.

3.6 GENERAL METAL INSTALLATION:

A. Except as specified in this Section, comply with all recommendations of the current edition of the referenced standards. Completed metal shall be straight, flat, and without buckles, dents, scratches, or other blemishes.

B. Form sheet metal on a bending brake. Perform shaping, trimming, and hand seaming in the shop as far as practicable, with the proper sheet-metal working tools. Make the angle of the bends and the folds for interlocking the metal with full regard for expansion and contraction, to avoid buckling or other deformation in service. All lines shall be straight and crisp, except where thickness of metal dictates radius bend, and all exposed edges shall be hemmed 1/2 in. minimum.

C. Soldering: Mechanically clean all metal to be soldered with stainless-steel brushes or by other acceptable means, apply flux, and pre-tin. Do not use carbon steel brushes or steel wool. Perform all soldering slowly with well-heated heavy (3 lbs per pair) coppers (irons) with properly tinned clean blunt tips. Do not use torches or irons with integral torches for soldering. Apply enough heat to sweat the solder completely through the full width of the seam. Close clinch lock seams gently with a block of wood and mallet, then flux and show at least one-full inch of continuous and evenly-flowed solder. Do all soldering in flat position. All sloped and vertical seams shall be laced and soldered a second time. Perform all soldering in shop to the extent practical. Clean all joints after soldering. Clean joints by wetting the area with water and scrubbing with a soft bristle brush. Neutralize any harmful flux residue by washing the area with a 5% neutralizing solution. Wash area with water before neutralizing. The neutralizing solution can be made by adding 3/4 cup baking soda to 1 gal of water. Rinse the neutralizing solution with running water and wipe dry.

D. Lay out Metal Flashing to minimize transverse joints. Detail transverse joints in all flashing pieces to provide a watertight connection, and allow for expansion/contraction of the metal as shown on the Drawings. Provide prefabricated corner pieces with joints locked, riveted, and soldered watertight. Space rivets at 1 in. o.c. in staggered pattern, unless otherwise indicated. Unless shown otherwise on the Drawings, provide expansion joints at 20 ft o.c. maximum and within 3 ft away from all changes in flashing direction (each side), and from all terminations of flashing.

1. Apply EPDM strip flashing at expansion joints in through-wall flashing. Follow manufacturer's written recommendations for EPDM installation, as modified below.

   a. Apply 1 in. wide release tape over all joints and edges of the flashing to be covered by adhered EPDM sheet and where shown on the Drawings.

   b. Cut and position EPDM sheets in place and allow sheets to relax 1/2 hr after unrolling before removing backer. Inspect sheet for any discontinuities or deficiencies; do not use defective sheets.

   c. Clean and prime all metal surfaces scheduled to receive EPDM with clean, lint-free rags and allow primer to dry. Re-prime areas not covered by adhered EPDM within 12 hrs.

d. Once the primer is dry, lay sheets into it promptly. Adhere sheets 3 in. minimum to the underlying metal on each side of the release tape. Do not move or reposition sheets. Immediately roll entire sheet into firm contact with the substrate using a smooth metal roller. Form sheets tightly into bends in flashing without stretching or cutting rubber sheet.

e. Cover the expansion joints with hemmed-edge metal cover plates bent over the flashings as shown in the Drawings.

E. Where flashing terminates or is discontinuous, pan up ends of flashing. Fully solder end dams watertight prior to installation.

F. Provide 1/4 in. per foot minimum slope on all horizontal surfaces to prevent ponding, unless otherwise indicated.

G. Provide metal skirt flashing, as shown in the Drawings, to cover the waterproofing base flashing. At transverse joints, lock the adjacent skirt flashings together using a 1/2 in. flat seam. Form a hem on the bottom edges of the skirt to form a smooth surface, and at the top to hook into the flashing receiver.

H. Provide metal receiver strips (blind nailers) at vertical terminations and as where shown on the Contract Drawings. Provide a solid bed of sealant in joints, behind and within receiver metal.

I. Exposed fasteners are prohibited.

J. Do not penetrate the horizontal portion of any flashing with fasteners.

3.7 FIELD QUALITY CONTROL:

A. Inform the Commissioner in writing on a daily basis of any of the following events. State specific locations of each occurrence.

1. Damage by other trades.

2. "Oil-canning," separated, or cracked solder joints in Metal Flashings.

B. Provide site access to inspectors, Commissioner, and manufacturers for inspection of the Metal Flashing.

C. Inspections: Arrange for the Commissioner to inspect the Metal Flashings prior to installation of subsequent materials and to review the completed work, during all phases of installation, and as required to assure conformance with the Contract Documents.

3.8 CLEANING AND PROTECTION:

A. Refer to requirements in the DDC General Conditions and for systems that incorporate Facade Sheet Metal Flashing.

B. Coordinate with other trades to avoid traffic over completed work areas. Move equipment and ground storage areas as work progresses to avoid abuse of Metal Flashing, as permitted by the Commissioner. Notify the Commissioner immediately and in writing if anyone abuses or damages Metal Flashing components, and make necessary restoration at no additional cost to the City of New York.

C. Against Loads: Protect work of this Section against concentrated loads and any other loads or equipment that would damage the materials or work.

D. Take and maintain necessary preventative measures to protect work of this Section from damage until Project reaches substantial completion.

END OF SECTION 07 62 01

SECTION 07 71 00
Roof Specialties and Accessories

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 74 19 "Construction Waste Management and Disposal"
   c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
   d. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"

1.2 SUMMARY

A. Section includes:

1. Roof expansion joints.
2. Aluminum copings.
3. Roof smoke vents.
4. Prefabricated roof curbs.

B. Related Sections

1. Carpentry - Section 06 20 00.
2. Thermoplastic Membrane Roofing - Section 07 20 00.
3. Sheet Metal Flashing - Section 07 62 00.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART II - PRODUCTS

2.1 ROOF EXPANSION JOINTS

A. Provide neoprene and metal insulated expansion joint assemblies made of 1/16" stainless steel flanges and insulated with 1/2" thick foam insulation. Provide pre-fabricated units for corners and intersections and provide manufacturer's standard splicing strips and adhesives for installation and splicing of units.

B. Basis of Design: Subject to compliance with requirements, provide Johns Manville; Expand-O-Flash or comparable product by one of the following:

1). Construction Specialties
2). Nystrom
3). E-Z Flash
4). Or approved equal

2.2 SMOKE VENTS

A. Provide shop primed galvanized steel heat and smoke vent units of sizes shown on drawings, with 1" rigid insulation at curbs and door, standard lifting mechanism and automatic heat and smoke sensitive release devices. Provide manufacturer's standard hardware including hold-open device, hinges, latch and operating handles for inside and outside operation.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1). Bilco
2). Babcock-Davis
3). Milcor
4). Or approved equal

2.3 PRE-FABRICATED ROOF CURBS

A. Provide manufacturer's standard shop fabricated units made of 14 ga. zinc coated steel factory primed with rust inhibitive primer, and insulated with 1-1/2" thick fiberglass board.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1). Pate
2). Louvers & Dampers, Inc.
3). Industrial Louvers, Inc.
4). Or approved equal.

C. Reinforce units over 8'-0" long and units requiring reinforcement due to heavy loads by forming units of double-walled box-type construction with stiffeners of heavy gauge with flanges as required to provide sufficient rigidity and strength to withstand max. lateral forces in addition to super imposed vertical loads.

D. Sloping Roof Decks: For deck slopes of 1" per ft. and more, fabricate curb units (except expansion joint curbs) to form a level top edge. Where slope is less than 1" per ft., and curb is used to support equipment with moving parts, or supports vertical elements such as gravity ventilators which are intended to be plumb, provide tapered wood nailers (treated wood) at top of curb units to form a level top edge.

E. Provide treated wood nailer, not less than 1-5/8" thick and of the width shown, but not less than the width of the curb wall assembly. Anchor nailer securely to the top of the metal frame unit. Refer to Section 06 20 00, Carpentry, for pressure-treatment required for wood nailers.

F. Provide 22 ga. galvanized steel curb liners; where required extend curb liners through deck construction to coordinate with work below.

G. Provide 18 ga. galvanized steel cap flashing to cover a min. of 3" over roof flashing.

H. Where curb units are shown to support shop fabricated items of equipment, do not proceed with fabrication of curb units until size or dimensions have been checked for coordination with equipment.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. General: Comply with manufacturer's instructions and recommendations. Coordinate with installation of roof deck and other substrates to receive accessory units, and with roof insulation, roofing and flashing; as required to ensure that each element of the work performs properly, and that combined elements are waterproof and weathertight. Anchor units securely to supporting structural substrates, adequate to withstand lateral and thermal stresses as well as inward and outward loading pressures.

B. Isolation: Where metal surfaces of units are to be installed in contact with non-compatible metal or corrosive substrates, including wood, apply bituminous coating on concealed metal surfaces, or provide other permanent separation.

C. Cap Flashing: Where cap flashing is required as component of accessory, install to provide adequate waterproof overlap with roofing or roof flashing (as counter flashing). Seal with thick bead of mastic sealant, except where overlap is indicated to be left open for ventilation.

D. Operational Units: Test operational units with operable components. Clean and lubricate joints and hardware. Adjust for proper operation.

E. Roof Expansion Joint:

1. Provide uniform profile throughout the length of the installation, and do not stretch the elastic sheet.

2. Nail metal flanges to curbs and cant strips securely as recommended by the manufacturer for waterproof construction.

3. Anchor edges of expansion joint units in the manner indicated, complying with manufacturer's instructions. Provide not less than 4" embedment in bituminous membranes, with hot bitumen or with roofing cement. Cover with composition stripping as specified for the membrane work.

END OF SECTION 07 71 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 81 00
Sprayed Fire-Resistive Materials

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
c. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"
d. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

1.2 SUMMARY

A. Section includes:

1. Spray-on fireproofing for structural steel and metal decking.
2. Seal coat over fireproofing in special areas.
3. Preparation of surfaces.
4. Field quality control.

B. Related Sections

1. Structural Steel - Section 05 12 00.
2. Steel Decking - Section 05 31 00.
3. Firestops and Smokeseals - Section 07 84 13.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Product Data: For each fire-resistive product specified.

B. Shop Drawings: Submit structural framing plans indicating the following:

1. Locations and types of surface preparations required before applying sprayed fire-resistive material.

2. Extent of sprayed fire-resistive material for each construction and fire-resistance rating, including the following:

   a. Applicable fire-resistive design designations of a qualified testing and inspecting agency acceptable to New York City Building Department.
   b. Minimum thicknesses needed to achieve required fire-resistance ratings of structural components and assemblies.

3. Identify restrained and unrestrained assemblies on shop drawings, show required thickness of fireproofing for each assembly.

C. Product Certificates: Signed by manufacturer of sprayed fire-resistive material certifying that the products furnished comply with requirements.

D. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.

E. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience.

F. If primer is to be used steel and/or metal deck, submit certifications by supplier of primer that primer is compatible with materials, and will not impair the required performance of the installed fireproofing. Such certification shall be accompanied by evidence that the primer was successfully used in conjunction with the fireproofing material in a UL test applicable to the construction. Submit his certification prior to application of primer.

1. Coordinate with Section 05 12 00 – Structural Steel and 05 31 00 – Metal Decking, and Structural Drawings prior to application of primer.

G. Product Test Reports: Indicate that physical properties of proposed sprayed fire-resistive materials comply with specified requirements based on comprehensive testing of current product formulations by a qualified testing and inspecting agency according to requirements specified in "Quality Assurance" Article.

H. Code Compliance: Proposed product must comply with 2014 New York City Building Code and be approved by New York City Building Department.

I. Letter from manufacturer stating that the UL Design selected for the project are not load restricted.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Installer Qualifications: Engage an experienced installer.

C. Submit data indicating that products containing no detectable asbestos as determined according to the method specified in 40 CFR, Part 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."

D. Mockups: After processing of initial submittals and before delivery and installation of fireproofing materials, prepare a sample installation of fireproofing work, approximately 100 sq. ft. in area; providing an example of each type required, applied on each different substrate, to produce each different rating as required and reasonably representative of entire sprayed on fireproofing work, for joint approval by representative of fire resistant material manufacturer and the Commissioner. Work in other areas shall not

proceed until mock-up has been completed. Mock-up work which remains in compliance with requirements and is in undamaged and acceptable condition may be retained as final work in place.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to Project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer; date of manufacture; shelf life, if applicable; and fire-resistance ratings applicable to Project.

B. Use materials with limited shelf life within period indicated. Remove from Project site and discard materials whose shelf life has expired.

C. Store materials inside, under cover, aboveground, so they are kept dry until ready for use. Remove from Project site and discard materials that have deteriorated.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not apply sprayed fire-resistive material when ambient or substrate temperatures are 40 deg F. or lower, unless temporary protection and heat is provided to maintain temperatures at or above this level for 24 hours before, during, and for 24 hours after product application.

B. Ventilation: Ventilate building spaces during and after application of sprayed fire-resistive material to achieve a minimum of four air changes per hour. Use natural means or, where this is inadequate, forced-air circulation until fire-resistive material dries thoroughly.

1.8 SEQUENCING

A. Sequence and coordinate application of sprayed fire-resistive materials with other related work specified in other Sections to comply with the following requirements:

1. Provide temporary enclosures for interior applications to prevent deterioration of fire-resistive material due to exposure to unfavorable environmental conditions.

2. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.

3. Do not apply fire-resistive material to metal roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying of fire-resistive material. Fireproofing shall be considered dry when the moisture content is 6% or less.

4. Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.

5. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.

6. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, tested, and corrections have been made to defective applications.

7. Protect permanently exposed walls, floor or special surfaces.

1.9 GUARANTEE

A. Guarantee: Submit a written warranty, executed by Contractor and cosigned by Installer, agreeing to repair or replace sprayed fire-resistive materials that fail within the specified warranty period.

1. Failures include, but are not limited to, cracking, flaking, eroding in excess of specified requirements; peeling; and delaminating of sprayed fire-resistive materials from substrates due to defective materials and workmanship within the specified warranty period.

B. Guarantee Period: One (1) year from date of Substantial Completion.

PART II - PRODUCTS

2.1 CONCEALED SPRAYED FIRE-RESISTIVE MATERIALS

A. General: For concealed applications of sprayed fire-resistive materials, provide manufacturer's standard products complying with requirements indicated in this Article for material composition and physical properties representative of installed products.

B. UL design listings must state that the loading was determined by Allowable Stress Design Method or Load and Resistance Factor Design Method. UL design listings requiring a load restriction factor will not be allowed.

C. Material Composition: As follows:

1. Cementitious sprayed fire-resistive material consisting of factory-mixed, dry formulation of gypsum or Portland cement binders and lightweight mineral or synthetic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application.

D. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property listed as follows:

1. Dry Density: 15 lb./cu. ft. for average and individual densities regardless of density indicated in referenced fire-resistive design, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Appendix A, "Alternate Method for Density Determination."

2. Thickness: Provide minimum average thickness required for fire-resistive design shown on approved submittals.

a. Fireproofing shall be of thicknesses and density to meet the requirements of the 2014 New York City Building Code.

3. Bond Strength: 430 lbf/sq. ft. per ASTM E 736.

4. Compressive Strength: 5.21 lbf/sq. in. as determined in the laboratory per ASTM E 761. Minimum thickness of sprayed fire-resistive material tested shall be 0.75 inch and minimum dry density shall be as specified, but not less than 15 lb./cu. ft.

5. Corrosion Resistance: No evidence of corrosion per ASTM E 937.

6. Deflection: No cracking, spalling, delamination, or the like per ASTM E 759.

7. Effect of Impact on Bonding: No cracking, spalling, delamination, or the like per ASTM E 760.

8. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of sprayed fire-resistive material is 0.75 inch, maximum dry density is 15 lb./cu. ft., test specimens are not prepurged by mechanically induced air velocities, and tests are terminated after 24 hours.

9. Fire-Test-Response Characteristics: Provide sprayed fire-resistive materials with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to New York City Building Department.

   a. Flame Spread: 10 or less.
   b. Smoke Developed: 0.

10. Fungal Resistance: No observed growth on specimens per ASTM G 21.

E. Cementitious Sprayed Fire-Resistive Material: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

1. GCP Applied Technologies; Monokote Type MK-10HB

2. Isolatek International Corp., Cafco Products; Cafco 300HS

3. Southwest Fireproofing Products Co.; Type 5MD

4. Carboline Company, A Subsidiary of RPM International; Pyrolite 15

5. Or approved equal.

2.2 SPRAYED FIRE-RESISTIVE MATERIALS FOR EXPOSED FIREPROOFING

A. General: For exposed applications of sprayed fire-resistive materials, provide manufacturer's standard products complying with requirements indicated for material composition and for minimum physical properties of each product listed, measured by standard test methods referenced with each property.

B. UL design listings must state that the loading was determined by Allowable Stress Design Method or Load and Resistance Factor Design Method. UL design listings requiring a load restriction factor will not be allowed.

C. Cementitious Sprayed Fire-Resistive Material: Factory-mixed, dry, cement aggregate formulation, chloride-free formulation of Portland cement binders, additives, and inorganic aggregates, mixed with water at Project site to form a slurry or mortar for conveyance and application, complying with the following requirements:

1. Dry Density: Values for average and individual densities as required for fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Appendix A, "Alternate Method for Density Determination," but with an average density of not less than 22 lb./cu. ft.

2. Bond Strength: 425 psf minimum per ASTM E 736.

3. Compressive Strength: 10,000 psf. per ASTM E 761.

4. Corrosion Resistance: No evidence of corrosion per ASTM E 937.

5. Deflection: No cracking, spalling, delamination, or the like per ASTM E 759.

6. Effect of Impact on Bonding: No cracking, spalling, delamination, or the like per ASTM E 760.

7. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. per ASTM E 859.

8. Combustion Characteristics: Passes ASTM E 136.

9. Fire-Test-Response Characteristics: Provide sprayed fire-resistive materials with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to New York City Building Department.

   a. Flame Spread: 10 or less.
   b. Smoke Developed: 0.

10. Fungal Resistance: No observed growth on specimens per ASTM G 21.

11. For exterior applications of sprayed fire-resistive material, provide manufacturer's formulation approved for surfaces exposed to the exterior.

D. Cement-Aggregate Cementitious Sprayed Fire-Resistive Material: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

1. Carboline Co., Fireproofing Products Div.; Pyrocrete 239

2. GCP Applied Technologies; Monokote Type Z106HY

3. Promat Firetemp; F4

4. Isolatek International Corp., Cafco Products; Cafco 400

5. Or approved equal.

2.3 AUXILIARY FIRE-RESISTIVE MATERIALS

A. General: Provide auxiliary fire-resistive materials that are compatible with sprayed fire-resistive materials and substrates and are approved by UL or another testing and inspecting agency acceptable to New York City Building Department for use in fire-resistive designs indicated.

B. Adhesive for Bonding Fire-Resistive Material: Product approved by manufacturer of sprayed fire-resistive material, used where required by manufacturer to ensure proper bond.

C. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required to comply with fire-resistive designs indicated and fire-resistive product manufacturer's written recommendations. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive sprayed fire-resistive material.

D. Sealer for Sprayed Fire-Resistive Material in Elevator Shafts and Open Area Plenums: Transparent-drying, water-dispersible protective coating compatible with sprayed fire-resistive material and recommended by sprayed fire-resistive material manufacturer.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Clean substrates of substances that could impair bond of fire-resistive material, including oil, grease, rolling compounds, incompatible primers, and loose mill scale.

B. For exposed applications, repair substrates to remove any surface imperfections that could affect uniformity of texture and thickness in finished surface of sprayed fire-resistive material. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

C. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application. Provide temporary enclosure as required to confine spraying operations, protect the environment, and ensure maintenance of adequate ambient conditions for temperature and ventilation.

3.3 INSTALLATION

A. Comply with fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to convey and spray on fire-resistive material, as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.

B. Install metal lath, as required, to comply with fire-resistance ratings and fire-resistive material manufacturer's written recommendations for conditions of exposure and intended use. Securely attach lath to substrate in position required for support and reinforcement of fire-resistive material. Use anchorage devices of type recommended in writing by fire-resistive material manufacturer. Attach lathing accessories where indicated or required for secure attachment to substrate.

C. Coat substrates with adhesive before applying fire-resistive material where required to achieve fire-resistance rating or as recommended in writing by fire-resistive material manufacturer for material and application indicated.

D. Extend fire-resistive material in full thickness over entire area of each substrate to be protected.

E. Spray apply fire-resistive materials to maximum extent possible. Following the spraying operation in each area, complete the coverage by method recommended by the manufacturer.

F. Where sealers are used, apply products that are tinted to differentiate them from the sprayed fire-resistive material over which they are applied. Apply sealers at rated recommended by sprayed fire-resistive material manufacturer to maintain fire-resistance ratings.

G. Maintain ambient conditions during installation and for cure period following installation, as recommended by manufacturer. Provide ventilation and avoid excessive rate of drying.

H. Fireproofing to the underside of roof deck assemblies shall be done only after roofing application is complete, all roof mounted mechanical equipment is in place, and the roof is watertight.

I. No fireproofing shall be applied prior to completion of concrete work on steel decking.

J. Installation Sequence of Fireproofing

1. All patching and repairing of sprayed fireproofing, due to cutting trades or testing and inspection, shall be performed under this Section.

K. Provisions shall be made for ventilation to properly dry the fireproofing after application. In enclosed areas lacking natural ventilation, air circulation and ventilation must be provided.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: City of New York will engage a special inspecting agency to perform field tests and inspections and to prepare test reports.

1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.

B. Testing and inspecting of completed applications of sprayed fire-resistive material will take place in successive stages, in areas of extent and using methods as follows. Do not proceed with application of fire-resistive material for the next area until test results for previously completed applications of fire-resistive material show compliance with requirements.

1. For each 1000-sq. ft. area, or partial area, on each floor, testing and inspecting agency will evaluate the following characteristics. Tested values must equal or exceed values indicated and values required for approved fire-resistance design.

a. Thickness for Floors, Roofs, and Walls: From the average of 10 measurements from a 144-sq. in. sample area, with sample width of not less than 6 inches per ASTM E 605.

b. Thickness for Structural Frame Members: From a sample of 25 percent of structural members per floor, taking 9 measurements at a single cross section for structural frame beams or girders, 7 measurements of a single cross section for joists and trusses, and 12 measurements of a single cross section for columns per ASTM E 605.

2. For each 10,000 sq. ft. area, or partial area, on each floor, testing and inspection agency will evaluate the following characteristics. Tested values must equal or exceed values indicated and values required for approved fire resistance design.

a. Bond Strength for Floors, Roofs, Walls, and Structural Framing Members: Cohesion and adhesion at frequency and from sample size indicated for determining thickness of each type of construction, per ASTM E 736.

3. Density for Floors, Roofs, Walls, and Structural Frame Members: At frequency and from sample size indicated for determining thickness of each type of construction, per ASTM E 605 or AWCI Technical Manual 12-A, Appendix A, "Alternate Method for Density Determination."

4. When testing discovers applications of fire-resistive material not in compliance with requirements, testing and inspecting agency will perform additional random testing to determine extent of noncompliance.

C. Remove and replace applications of fire-resistive material where test results indicate that they do not comply with specified requirements for cohesion and adhesion or for density, or both.

D. Apply additional fire-resistive material per manufacturer's written instructions where test results indicate that thickness does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

END OF SECTION 07 81 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 81 23
Intumescent Fireproofing

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
c. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"
d. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

1.2 SUMMARY

A. Section includes intumescent fireproofing for interior applications.

B. Related Sections

1. Structural Steel - Section 05 12 00.

2. Painting and Finishing - Section 09 90 00.

1.3 REFERENCES

A. ASTM Test Standards

1. ASTM D 2240 – Durometer Hardness (Shore D Only).

2. ASTM D 2794 – Impact Resistance.

3. ASTM D 4060 – Abrasion Resistance.

4. ASTM D 4541 – Bond Strength.

5. ASTM E 84 – Surface Burning Characteristics of Building Materials.

6. ASTM E 119 – Fire Tests of Building Construction and Materials.

B. The Society of Protective Coatings (SSPC):

1. SSPC SP-6: Commercial Blast Cleaning Standard.

C. Underwriters' Laboratories Inc. (UL):

1. Fire Resistive Directory, Volume 1; Current edition. Classification identified as Mastic and Intumescent Coatings (CDWZ)

2. UL 263 - Fire Test of Building Construction and Material

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Submit product data including manufacturer's technical information indicating product performance characteristics, performance and limitation criteria for each product specified herein.

B. Submit evidence indicating that manufacturer of the intumescent fireproofing coating has reviewed and approved shop primer to be used by the structural steel fabricator; refer to Section 05 12 00, "Structural Steel," for primer description.

C. Submit evidence indication that manufacturer of the intumescent fireproofing coating has reviewed and approved proposed topcoat.

D. Fire Test Evidence: Submit published third party design listings for fire resistance ratings and product thickness. Include evidence that the fire testing was sponsored by the manufacturer and that the material tested was produced at the manufacturers facility under the supervision of third party certification personnel.

E. Installation Instructions: Submit manufacturer's written installation instructions.

F. Shop Drawings: Submit plan, section, elevation and perspective drawings as necessary to depict system configuration, design considerations and application procedures.

G. Selection Samples: For each finish product specified, submit samples representing manufacturer's range of available materials, finishes and shapes.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Material Manufacturer: Company specializing in manufacturing products listed in this Section.

C. Fire Protection Factory Manufacturer: Company specializing in manufacturing the work of this Section with a minimum of three years' documented experience.

D. Fire Protection Installer: Company specializing in installing the work of this Section with a minimum of three years' documented experience.

E. Product

1. All products listed in this Section must be manufactured under the appropriate follow-up service with each container bearing the certified label (mark).

2. Intumescent fireproofing shall be a complete system consisting of compatible primer, intumescent fireproofing coating, adhesive, edge sealant and decorative topcoat.

F. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship.

1. Before proceeding with the work, the installer will apply the primer, intumescent fireproofing, and decorative top coat to a representative substrate section of 10 square feet in size. Areas will be designated by the Commissioner.

2. Materials must be applied in accordance with the project requirements for fire rating thickness, finish texture and color.

3. The application must be witnessed by the Commissioner and is subject to their approval. Once agreed upon in writing, it serves as a guide for the finished work.

4. Do not proceed with remaining work until workmanship, color, and sheen are approved by Commissioner.

5. Refinish mock-up area as required to produce acceptable work.

1.7 DELIVERY, STORAGE AND HANDLING

A. Delivery: Deliver materials in manufacturer's original, sealed, undamaged container with identification label intact. Packaged materials must bear the appropriate labels, seals and designated certification mark for fire resistive ratings.

B. Storage: Store materials in strict accordance with manufacturer's documented instructions.

C. Documentation: All batch number, product identification and quantities shall be recorded on appropriate QC documents. A copy of the transport document and manufacturers conformance certificate shall be attached to the material delivery QC form.

1.8 PROJECT CONDITIONS

A. Project Environmental Requirements: Substrate and air temperature shall be in accordance with the manufacturer's requirements.

1. Protect work area from windblown dust and rain. Protect adjacent areas from over spray of fireproofing material.

2. Provide ventilation in areas to receive work of this Section during application and minimum 24 hours after application.

B. Temperature and Humidity Requirements: Maintain air temperature and relative humidity in areas where products will be applied for a time period before during and after application as recommended by manufacturer.

1. Do not install intumescent fire protection system when temperature of substrate and/or surrounding ambient air temperature is below 41 degrees F. Temporary protection and heat shall be maintained at this minimum temperature for 24 hours before, during and 24 hours after material application.

2. Steel substrate temperature shall be a minimum of 5 deg F. above the dew point of the surrounding air for a period of 24 hours prior and during the application of the material.

3. If necessary for job schedule, the Contractor shall provide enclosures and heat to maintain proper temperatures and humidity levels in the application areas.

4. The relative humidity of the application area shall not exceed a maximum of 85 percent for 24 hours prior, during and 24 hours after the application of the material.

1.9 WARRANTY

A. Provide to City of New York an executed copy of the manufacturer's standard limited warranty against manufacturing defect, outlining its terms, conditions, and exclusions from coverage.

1. Duration: Minimum two years.

PART II - PRODUCTS

2.1 INTUMESCENT FIREPROOFING COATING FOR INTERIOR APPLICATIONS

A. Manufactures: Subject to compliance with requirements, provide products by one of the following:
1. International Paint; Interchar 1120
2. Carboline; Thermo-Lag-Series
3. Albi Mfg. Co.; Albi Clad TF
4. Isolatek International; Cafco Spray Film WB-5 for columns only; and WB-3 for beams, joists and girders
5. Promat Firestop; Promapaint P-3
6. Or approved equal

B. Description: A single pack, chlorine-free, water borne intumescent coating site applied over shop applied prime coat (see Section 05 10 00 Structural Steel). Coating must meet the following minimum physical requirements:

PROPERTY	TEST METHOD	VALUE
Dry Applied Density	N/A	85 PCF
Hardness	ASTM D 2440	60
Compressive Strength	ASTM D 695	500 psi
Bond Strength	ASTM D 4541	145 psi
Abrasion Resistance	ASTM D 4060	0.16 g loss @1000 cycles
Flame Spread	ASTM E 84	Class A
Smoke Developed	ASTM E 84	Class A

1. Application: Site-applied coatings.

C. Fireproofing Performance: Provide intumescent fireproofing, tested by independent testing agency in accordance with ASTM E 119/UL 263, and acceptable to the City of New York:

1. Listed by UL and bearing the UL label.

D. Structural Steel Fire Resistance Rating

1. Fire Resistance Rating: 2 hours for primary structure.

E. Accessory Materials: Manufacturer's recommended adhesive and edge sealant.

F. Shop Primer Coating: Refer to Section 05 12 00, "Structural Steel."

G. Decorative Topcoat: As recommended by the intumescent fireproofing material manufacturer and applied in accordance with the topcoat manufacturer's documented instructions, custom colors as selected by the Commissioner.

1. Provide aliphatic urethane finish coat.

2. Basis of Design: Subject to compliance with requirements, provide: Sherwin Williams; Acrolon 318 HS or comparable product by one of the following:

1). Carboline
2). Tnemec
3). Or approved equal.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. All surfaces to receive the fire protection material must be clean, dry and free of oil, grease, loose mill scale, loose shop primer, dirt, dust or other foreign substances which would impair bond of the fire protection material to the substrate.

B. Do not commence installation of the fire protection system until the contractor, installer and fire protection manufacturer's representative have examined the surfaces to receive the fire protection and determined the surfaces are acceptable to receive the fire protection material. Commencement of installation is acceptance of substrate.

C. Verify that substrate and workspace temperature and humidity conditions are in accordance with requirements of this Section.

D. Verify that all clip hangers, piping, ducts, equipment or other items which would interfere with the installation of the factory-manufactured architectural fire protection system are not positioned or installed until installation is complete.

3.3 PREPARATION

A. Provide masking, drop cloths or other suitable coverings to prevent overspray onto surfaces not intended to be affected by Work in this Section.

B. Clean substrate free of dust, dirt, grease or other foreign substances that would impair with the bond of the intumescent fireproofing protection adhesive material.

C. Grind smooth all weld spatter and defects prior to commencement of fire protection installation and touch-up shop primer in the field using same paint as shop primer.

3.4 APPLICATION (FIELD APPLIED)

A. Equipment and installation procedures must conform to the manufacturer's installation instructions. The intumescent fireproofing protection material shall be applied at the required dry film thickness to achieve fire resistance rating specified herein.

B. Install fire protection material only to primed surfaces and in accordance with manufacturer's installation instructions. Refer to Section 05 12 00 Structural Steel for steel shop primer.

C. Final texture and finish of the intumescent fireproofing must be completed prior to the application of the decorative top coat and in accordance with the Commissioner's approval and approved mock-up samples. Finish shall be level 4 (high end architectural – spray applied, back rolled and sanded smooth).

D. Apply decorative top coat in accordance with the manufacturer's application instructions. Final color, gloss and finish will be determined and approved by the Commissioner. See Finish Schedule.

3.5 FIELD QUALITY CONTROL

A. The City of New York shall retain the services of an independent testing laboratory to inspect and verify the installation of the intumescent fireproofing material in accordance with the provisions of AWCI Technical Manual 12-B, Standard Practice for the Testing and Inspection of Field Applied Thin-Film Intumescent Fire-Resistive Materials; an Annotated Guide.

B. The fire protection material inspection must be performed prior to the application of the decorative top coat.

C. All test results must be made available to all parties at the completion of each pre-designated area and approved prior to the application of top-coat.

D. Intumescent fireproofing not in compliance with the specification requirements must be corrected prior to the application of the decorative top coat.

END OF SECTION 07 81 23

SECTION 07 84 13
Firestops and Smokeseals

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Penetrations through fire-resistance-rated floor and roof construction including both empty openings and openings containing cables, pipes, ducts, conduits, and other penetrating items.

2. Penetrations through fire-resistance-rated walls and partitions including both empty openings and openings containing cables, pipes, ducts, conduits, and other penetrating items.

3. Penetrations through smoke barriers and construction enclosing compartmentalized areas involving both empty openings and openings containing penetrating items.

4. Sealant joints in fire-resistance-rated construction.

5. Penetrations at each floor level in shafts and/or stairwells.

6. Construction joints, including those between top of fire rated walls and underside of floors above; and those between exterior curtain walls and the outer perimeter edge of floor assemblies.

B. Related Sections

1. Cast-in-Place Concrete - Section 03 30 00.

2. Unit Masonry - Section 04 20 00.

3. Interior Joint Sealants - Section 07 92 00.

4. Gypsum Drywall - Section 09 29 00.

1.3 REFERENCES

A. ASTM E 814 "Standard Method of Fire Tests of Through-Penetration Firestops."

B. UL 1479, UBC 7-5 (Both are same as A. above).

F. ASTM E 1399 "Test For Dynamic Movement Conditions."

G. ASTM E 1966 (Same as E. above).

H. ASTM G 21 "Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi."

I. Test Requirements: ASTM E 2307, "Standard Test Method for Determining Fire Resistance of Perimeter Fire Barrier Systems Using Intermediate-Scale, Multi-story Test Apparatus."

J. Inspection Requirements: ASTM E 2174, "Standard Practice for On-site Inspection of Installed Firestops."

K. Published Through-Penetration Systems by recognized independent testing agencies.

1. UL Fire Resistance Directory, Volume II of current year.
2. Warnock Hersey Certification Listings, current year.
3. Omega Point Laboratories, current year.

L. International Firestop Council Guidelines for Evaluating Firestop Systems Engineering Judgments.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Submit manufacturer's product literature for each type of firestop material to be installed. Literature shall indicate product characteristics, typical uses, performance, limitation criteria, test data and indication that products comply with specified requirements.

B. Submit shop drawings detailing materials, installation methods, and relationships to adjoining construction for each firestop system, and each kind of construction condition penetrated and kind of penetrating item. Include firestop design designation of qualified testing and inspection agency evidencing compliance with requirements for each condition indicated.

1. Submit documentation, including illustrations, for proposed UL listed (or equal) firestop and smokeseal assembly required for the Project.

C. Material Safety Data Sheets: Submit MSDS for each firestop product.

D. Qualification Data: For Installer.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. General: Provide firestopping systems that are produced and installed to resist the spread of fire and the passage of smoke and other gases.

C. Installation Responsibility: Assign installation of through-penetration firestop systems and fire-resistive joint systems in Project to a single sole source firestop specialty contractor.

D. Firestopping materials shall conform to Flame (F) and Temperature (T) ratings as required by 2014 New York City Building Code and as tested by nationally accepted test agencies per ASTM E 814 or UL 1479. The F-rating must be a minimum of one (1) hour, but not less than the fire resistance rating of the assembly being penetrated. T-rating, when required by 2014 New York City Building Code, shall be based on measurement of the temperature rise on the penetrating item(s). The fire test shall be conducted with a minimum positive pressure differential of 0.01 inches of water column.

1. Penetrations in Horizontal Assemblies: Provide firestopping with ratings determined in accordance with UL 1479 or ASTM E 814.

   a. F-Rating: Minimum of 1-hour rating, but not less than the fire-resistance rating of the floor construction being penetrated.
   b. T-Rating: When penetrant is located outside of a wall cavity, minimum of 1-hour rating, but not less than the fire-resistance rating of the floor construction being penetrated.
   c. W-Rating: Class 1 rating in accordance with water leakage test per UL 1479.

2. Penetrations in Smoke Barriers: Provide firestopping with ratings determined in accordance with UL 1479 or ASTM E 814.

   a. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at both ambient and elevated temperatures.

E. Firestopping products shall be asbestos free and free of any PCBs.

F. Do not use any product containing solvents.

G. Do not use firestop products which after curing, dissolve in water.

H. Do not use firestop products that contain ceramic fibers.

I. Installer Qualifications: A firm that has been approved by FM Approval according to FM Approval 4991, "Approval Standard for Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."

J. Mock-Up: Prepare job site mock-ups of each typical Firestop System proposed for use in the project. Approved mock-ups will be left in place as part of the finished project and will constitute the quality standard for the remaining work.

K. For firestopping exposed to view, traffic, moisture, and physical damage, provide products that do not deteriorate when exposed to these conditions.

1. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems.

2. For floor penetrations with annular spaces exceeding 4 inches or more in width and exposed to possible loading and traffic, provide firestop systems capable of supporting the floor loads involved either by installing floor plates or alternative means.

3. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.

L. Mold Resistance: Provide penetration firestopping with mold and mildew resistance rating of less than or equal to 1 as determined by ASTM G 21.

M. Firestopping Materials are either "cast-in-place" (integral with concrete placement) or "post-installed." Provide cast-in-place firestop devices prior to concrete placement.

N. Firestop systems do not reestablish the structural integrity of load bearing partitions or assemblies, or support live loads and traffic. Installer shall consult the Commissioner prior to penetrating any load bearing assembly.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in manufacturer's original unopened containers with manufacturer's name, product identification, lot numbers, UL or Warnock Hersey labels, and mixing and installation instructions, as applicable.

B. Store materials in the original, unopened containers or packages, and under conditions recommended by manufacturer.

C. All firestop materials shall be installed prior to expiration of shelf life.

1.8 PROJECT CONDITIONS

A. Do not use materials that contain solvents, show sign of damage or are beyond their shelf life.

B. During installation, provide masking and drop cloths as needed to prevent firestopping products from contaminating any adjacent surfaces.

C. Conform to ventilation requirements if required by manufacturer's installation instructions or Material Safety Data Sheet.

D. Weather Conditions: Do not proceed with installation of firestop products when temperatures are in excess or below the manufacturer's recommendations.

E. Schedule installation of firestop products after completion of penetrating item installation but prior to covering or concealing of openings.

1.9 SEQUENCING AND SCHEDULING

A. Pre-Installation Conference: Convene a pre-installation conference to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.

B. Install all firestop systems after voids and joints are prepared sufficiently to accept the applicable firestop system.

C. Do not cover firestop systems until they have been properly inspected and accepted by the inspecting agency.

PART II - PRODUCTS

2.1 MANUFACTURERS

A. Manufactures: Subject to compliance with requirements, provide products of one of the following:
1. Tremco
2. Bio-Fireshield
3. 3M
4. Specified Technologies Inc.
5. U.S. Gypsum Co.
6. Nelson
7. Hilti, Inc.
8. Grace Flame Safe
9. Or approved equal

2.2 FIRESTOPPING, GENERAL

A. Compatibility: Provide firestopping composed of components that are compatible with each other, the substrates forming openings, and the items, if any, penetrating the firestopping under conditions of service and application, as demonstrated by firestopping manufacturer based on testing and field experience.

B. Accessories: Provide components for each firestopping system that are needed to install fill materials. Use only components specified by the firestopping manufacturer and approved by the qualified testing and inspecting agency for the designated fire-resistance-rated systems. Accessories include but are not limited to the following items:

1. Permanent forming/damming/backing materials including the following:

   a. Semirefractory fiber (mineral wool) insulation.
   b. Sealants used in combination with other forming/damming materials to prevent leakage of fill materials in liquid state.
   c. Fire-rated form board.
   d. Joint fillers for joint sealants.

2. Temporary forming materials.

3. Substrate primers.

4. Collars.

5. Steel sleeves.

C. Applications: Provide firestopping systems composed of materials specified in this Section that comply with system performance and other requirements.

D. Smokeseals at top of partitions shall be flexible to allow for partition deflection.

E. Polypropylene Sleeves (PP): For cast-in device options.

2.3 FILL MATERIALS FOR THROUGH-PENETRATION FIRESTOP SYSTEMS

A. Endothermic, Latex Compound Sealant: Single-component, endothermic, latex formulation.

B. Intumescent, Latex Sealant: Single-component, Intumescent, latex formulation.

C. Intumescent Putty: Non-hardening, dielectric, water-resistant putty containing no solvents, inorganic fibers, or silicone compounds.

D. Intumescent Wrap Strips: Single-component, elastomeric sheet with aluminum or polyethelene foil on one side.

E. Job-Mixed Vinyl Compound: Prepackaged vinyl-based powder product for mixing with water at Project site to produce a paintable compound, passing ASTM E 136, with flame-spread and smoke-developed ratings of zero per ASTM E 84.

F. Mortar: Prepackaged dry mix composed of a blend of inorganic binders, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a non-shrinking, homogeneous mortar.

G. Pillows/Bags: Re-usable, heat-expanding pillows/bags composed of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents and fire-retardant additives.

H. Silicone Foam: Two-component, silicone-based liquid elastomer that, when mixed, expands and cures in place to produce a flexible, non-shrinking foam.

I. Silicone Sealant: Moisture-curing, single-component, silicone-based, neutral-curing elastomeric sealant of grade indicated below:

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces and non-sag formulation for openings in vertical and other surfaces requiring a non-slumping/gunnable sealant, unless firestop system limits use to non-sag grade for both opening conditions.

J. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic or polyprolyene sleeve lined with an intumescent strip, an extended rectangular flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

K. Fire Rated Cable Management Devices: Factory-assembled round metallic sleeve device for use with cable penetrations, containing an integrated smoke seal fabric membrane that can be opened and closed for re-penetration.

L. Drop-In Firestop Devices: Factory-assembled devices for use with combustible or noncombustible penetrants in cored holes within concrete floors. Device shall consist of galvanized steel sleeve lined with an intumescent strip, an extended rectangular flange attached to one end of the sleeve for fastening to concrete floor, and neoprene gasket.

M. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

N. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized-steel sheet.

O. Blocks/Plugs: Intumescent flexible block/plug suitable for reuse in re-penetration of openings. Blocks shall allow up to 12" of unreinforced annular space.

P. Tub Box Kit: Cast-in place pre-formed plastic tub box kit with three support legs for use with drain piping assembly associated with bathtub installations.

2.4 FIRE-RESISTIVE ELASTOMERIC JOINT SEALANTS

A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing, elastomeric sealant of base polymer indicated that complies with ASTM C 920 requirements, including those referenced for Type, Grade, Class, and Uses, and requirements specified in this Section applicable to fire-resistive joint sealants.

1. Sealant Colors: Color of exposed joint sealants as selected by the Commissioner.

B. Single-Component, Neutral-Curing Silicone Sealant: Type S; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, G, A, and (as applicable to joint substrates indicated) O.

1. Additional Movement Capability: Provide sealant with the capability to withstand 33 percent movement in both extension and compression for a total of 66 percent movement.

C. Multi-Component, Non-Sag, Urethane Sealant: Type M; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, A, and (as applicable to joint substrates indicated) O.

1. Additional Movement Capability: Provide sealant with the capability to withstand 40 percent movement in extension and 25 percent in compression for a total of 65 percent movement in joint width existing at time of installation, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, and remain in compliance with other requirements of ASTM C 920 for uses indicated.

D. Single-Component, Non-Sag, Urethane Sealant: Type S; Grade NS; Class 25; and Uses NT, M, A, and (as applicable to joint substrates indicated) O.

2.5 MINERAL FIBER/CERAMIC WOOL NON-COMBUSTIBLE INSULATION (FIRE SAFING)

A. Provide min. 4 pcf safing insulation to suit conditions and to comply with fire resistance and firestop manufacturer's requirements.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Thermafiber Safing Mineral Wool Insulation by Thermafiber, Inc. (an Owens Corning company)

2. Roxul Safe Fire Safing Insulation by Rockwool

3. Mineral Wool Safing by Johns Manville

4. Or approved equal

C. Material shall be classified non-combustible when tested per ASTM E 136.

2.6 MIXING

A. For those products requiring mixing prior to application, comply with firestopping manufacturer's directions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other procedures needed to produce firestopping products of uniform quality with optimum performance characteristics for application indicated.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Surface Cleaning: Clean out openings and joints immediately prior to installing firestopping to comply with recommendations of firestopping manufacturer and the following requirements:

1. Remove all foreign materials from surfaces of opening and joint substrates and from penetrating items that could interfere with adhesion of firestopping.

2. Clean opening and joint substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with firestopping. Remove loose particles remaining from cleaning operation.

3. Remove laitance and form release agents from concrete.

B. Priming: Prime substrates where recommended by firestopping manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed upon completion of work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestopping materials. Remove tape as soon as it is possible to do so without disturbing seal of firestopping with substrates.

3.3 CONDITIONS REQUIRING FIRESTOPPING

A. Building Exterior Perimeters

1. Where exterior facing construction is continuous past a structural floor, and a space (i.e. construction joint) would otherwise remain open between the inner face of the wall construction and the outer perimeter edge of the structural floor, provide firestopping to equal the fire resistance of the floor assembly.

   a. If mineral wool is part of firestop system, the mineral wool must be completely covered by appropriate thickness of UL or Warnock Hersey listed firestop sealant or spray.
   b. Refer to Article 3.6 herein for description of fire safing insulation.

2. Firestopping shall be provided whether or not there are any clips, angles, plates, or other members bridging or interconnecting the facing and floor systems, and whether or not such items are continuous.

3. Where an exterior wall passes a perimeter structural member, such as a girder, beam, or spandrel, and the finish on the interior wall face does not continue up to close with the underside of the structural floor above, thus interrupting the fire-resistive integrity of the wall system, and a space would otherwise remain open between the interior face of the wall and the structural member, provide firestopping to continuously fill such open space.

B. Interior Walls and Partitions

1. Construction joints between top of fire rated walls and underside of floors above, shall be firestopped.

2. Firestop system installed shall have been tested by either UL or Omega Point, including exposure to hose stream test and including for use with steel fluted deck floor assemblies.

3. Firestop system used shall allow for deflection of floor above.

C. Penetrations

1. Penetrations include conduit, cable, wire, pipe, duct, or other elements which pass through one or both outer surfaces of a fire rated floor, wall, or partition.

2. Except for floors on grade, where a penetration occurs through a structural floor or roof and a space would otherwise remain open between the surfaces of the penetration and the edge of the adjoining structural floor or roof, provide firestopping to fill such spaces in accordance with ASTM E 814.

3. These requirements for penetrations shall apply whether or not sleeves have been provided, and whether or not penetrations are to be equipped with escutcheons or other trim. If penetrations are sleeved, firestop annular space, if any, between sleeve and wall of opening.

D. Provide firestopping to fill miscellaneous voids and openings in fire rated construction in a manner essentially the same as specified herein before.

3.4 INSTALLING THROUGH PENETRATION FIRESTOPS

A. General: Comply with the through penetrations firestop manufacturer's installation instructions and drawings pertaining to products and applications indicated.

B. Install forming/damming materials and other accessories of types required to support fill materials during their application and in the position needed to produce the cross sectional shapes and depths required to achieve fire ratings of designated through-penetration firestop systems. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.

C. Install fill materials for through penetration firestop systems by proven techniques to produce the following results:

1. Completely fill voids and cavities formed by openings, forming materials, accessories, and penetrating items.

2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.

3. For fill materials that will remain exposed after completing work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.5 INSTALLING FIRE RESISTIVE JOINT SEALANTS

A. General: Comply with ASTM C 1193, and with the sealant manufacturer's installation instructions and drawings pertaining to products and applications indicated.

B. Install joint fillers to provide support of sealants during application and at position required to produce the cross sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability and develop fire resistance rating required.

C. Install sealants by proven techniques that result in sealants directly contacting and fully wetting joint substrates, completely filling recesses provided for each joint configuration, and providing uniform, cross sectional shapes and depths relative to joint width that optimum sealant movement capability. Install sealants at the same time joint fillers are installed.

D. Tool no sag sealants immediately after sealant application and prior to the time skinning or curing begins. Form smooth, uniform beads of configuration indicated or required to produce fire resistance rating, as well as to eliminate air pockets, and to ensure contact and adhesion of sealants with sides of joint. Remove excess sealant from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

3.6 INSTALLING FIRESAFING INSULATION

A. Install fire safing insulation utilizing welded or screw applied galvanized steel impaling pins and retaining clips; space clips or pins 24" o.c. maximum.

B. Completely fill voids in areas where safing insulation is required. At spandrel conditions/floor edges, depth of insulation top to bottom shall be at least four (4) inches.

C. Cover top of all safing insulation with firestop sealant or spray.

3.7 FIELD QUALITY CONTROL

A. Special inspecting agency retained by the City of New York will examine completed firestopping to determine, in general, if it is being installed in compliance with requirements.

B. Inspecting agency will report observations promptly and in writing to Contractor, City of New York and Commissioner.

C. Do not proceed to enclose firestopping with other construction until reports of examinations are issued.

D. Where deficiencies are found, Contractor must repair or replace firestopping so that it complies with requirements.

END OF SECTION 07 84 13

SECTION 07 92 00
Interior Joint Sealants

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Interior wall joints not specified to be sealed in other Sections of work, including caulking to fill between architectural woodwork and any wall, floor and/or ceiling imperfections.

2. Control and expansion joints in walls.

3. Joints at wall penetrations.

4. Joints between items of equipment and other construction.

5. All other joints required to be sealed to provide a positive barrier against penetration of air. All sealants must be chemically and adhesion compatible with adjacent materials, especially weather resistive barriers (of any type).

B. Related sections

1. Firestops and Smokeseals - Section 07 84 13.

2. Gypsum Drywall - Section 09 29 00.

3. Ceramic Tiling - Section 09 30 13.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Qualification of Installers: Use only personnel who are experienced in the techniques of sealant work, and who are completely familiar with the published recommendations of the sealant manufacturer.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Shop Drawings: Submit shop drawings showing all joint conditions, indicating relation of adjacent materials, all sealant materials (sealant, bond breakers, backing, primers, etc.), and method of installation.

1. Submit joint sizing calculations certifying that movement capability of sealant is not being exceeded.

B. Samples: Submit the following:

1. Color samples of sealants, submit physical samples (not color chart).

2. Sealant bond breaker and joint backing.

C. Product Data: Submit manufacturer's technical information and installation instructions for:

1. Sealant materials, indicating that material meets standards specified herein.

2. Backing rods.

1.6 ENVIRONMENTAL CONDITIONS

A. Temperature: Install all work of this Section when air temperature is above forty (40) degrees F. and below eighty (80) degrees F., unless manufacturer submits written instructions permitting sealant use outside of this temperature range.

B. Moisture: Do not apply work of this Section on surfaces which are wet, damp, or have frost.

1.7 DELIVERY, STORAGE AND HANDLING

A. Storage: Store sealant materials and equipment under conditions recommended by their manufacturer.

1. Do not use materials stored for a period of time exceeding the maximum recommended shelf life of the material.

2. Material shall be stored in unopened containers with manufacturers' name, batch number and date when shelf life expires.

1.8 WARRANTY

A. Provide a written, notarized warranty from the manufacturer stating that the applied sealants shall show no material failure for a period of ten (10) years.

B. Contractor to provide a written, notarized, guarantee stating that the applied sealants shall show no failure due to improper installation for a period of two (2) years.

C. Guarantee shall be in a form acceptable to the City of New York.

D. Include in guarantee provision, agreement to repair and/or replace, at Contractor's expense, sealant defects which develop during guarantee period, because of faulty labor and/or materials.

PART II - PRODUCTS

2.1 SEALANT MATERIALS

A. Interior Sealant: Provide a one (1) part acrylic based sealant conforming to ASTM C 834.

1. Basis of Design: Subject to compliance with requirements, provide Pecora; AC-20+ Silicone or comparable product by one of the following:
   a. Tremco
   b. Sherwin Williams
   c. Or approved equal

B. Colors: Colors as selected by Commissioner from manufacturer's standard selection. Contractor to provide Commissioner with physical samples for color selection.

2.2 MISCELLANEOUS MATERIALS

A. Back-Up Materials: Provide back-up materials and preformed joint fillers, non-staining, non-absorbent, compatible with sealant and primer, and of a resilient nature, twenty-five (25) percent wider than joint width. Materials impregnated with oil, bitumen or similar materials shall not be used. Provide back-up materials only as recommended by sealant manufacturer in writing.

B. Provide bond breakers, where required, of polyethylene tape as recommended by manufacturer of sealant.

C. Provide primers recommended by the sealant manufacturer for each material to receive sealant. Note that each exterior joint must be primed prior to sealing.

D. Provide solvent, cleaning agents and other accessory materials as recommended by the sealant manufacturer.

E. Materials shall be used per manufacturer's printed instructions.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Sealant Installation Standard: Comply with instructions and recommendations of the manufacturer and in accordance with ASTM C 1193 for use of joint sealants as applicable to materials, applications and conditions required by this Project where more stringent installation requirements are specified herein, such requirements shall apply.

B. Supervision: The Contractor shall submit to the Commissioner written certification from the sealant manufacturer that the applicators have been instructed in the proper application of their materials. The Contractor shall use only skilled and experienced workmen for installation of sealant.

C. Apply sealant under pressure with a hand or power actuated gun or other appropriate means. Gun shall have nozzle of proper size and provide sufficient pressure to completely fill joints as detailed. Neatly point or tool joint to provide the contour as indicated on the drawings.

D. Preparation and Application

1. Thoroughly clean all joints, removing all foreign matter such as dust, oil, grease, water, surface dirt and frost. Sealant must be applied to the base surface. Previously applied film must be entirely removed.

2. Stone, masonry and concrete surfaces to receive sealant shall be cleaned where necessary by grinding, water blast cleaning, mechanical abrading, or combination of these methods as required to provide a clean, sound base surface for sealant adhesion.

   a. Do not use any acid or other material which might stain surfaces.
   b. Remove laitance by grinding or mechanical abrading.
   c. Remove loose particles present or resulting from grinding, abrading, or blast cleaning by blowing out joints with compressed air, oil and water free, or vacuuming joints prior to application of primer or sealant.

3. Clean non-porous surfaces such as metal and glass chemically. Remove protective coatings on metallic surfaces by solvent that leaves no residue and is compatible with sealant. Use solvent and wipe dry with clean, dry lint free paper towels. Do not allow solvent to air dry without wiping. Clean joint areas protected with masking tape or strippable films as above after removal of tape film.

4. Do not seal joints until they are in compliance with drawings, or meet with the control section standard.

5. Joint Size and Sealant Size: Joints to receive sealant shall be at least 1/4" wide. In joint 1/4" to 3/8" wide, sealant shall be 1/4" deep. In joints wider than 3/8" and up to 1" wide, sealant depth shall be one half the joint width. For joints wider than 1", sealant depth shall be as recommended by the sealant manufacturer. Depth of joint is defined as distance from outside face of joint to closest point of the filler.

6. Primer: Thoroughly clean joints and apply primer to all surfaces that will receive sealant. Apply primer on clean, dry surfaces, and prior to installation of joint backing. Completely wet both inner faces of the joint with primer. Mask adjacent surfaces of joint with non-staining masking tape prior to priming. Apply primer with clean brush and only when temperature is above 45 deg. F.

7. Joint Backing: In joints where depth of joint exceeds required depth of sealant, install joint backing (after primer is dry) in joints to provide backing and proper joint shape for sealant. Proper shape for sealant is a very slight "hourglass" shape, with back and front face having slight concave curvature. Use special blunt T-shaped tool or roller to install joint backing to the proper and uniform depth required for the sealant. Joint backing shall be installed with approximately twenty-five (25) percent

compressions. Do not stretch, twist, braid, puncture, or tear joint backing. Butt joint backing at intersections.

8. Bond Breaker: Install bond breaker smoothly over joint backing so that sealant adheres only to the sides of the joint and not backing.

9. Sealant Application: Apply sealant in accordance with the manufacturer's application manual and manufacturer's instructions, using hand guns or pressure equipment, on clean, dry, properly prepared substrates, completely filling joints to eliminate air pockets and voids. Mask adjacent surfaces of joint with non-staining masking tape. Force sealant into joint in front of the tip of the "caulking gun" (not pulled after it) and force sealant against sides to make uniform contact with sides of joint and to prevent entrapped air or pulling of sealant off of sides. Fill sealant space solid with sealant.

10. Tooling: Tool exposed joints to form smooth and uniform beds, with slightly concave surface conforming to joint configuration per Figure 4A in ASTM C 1193. Finished joints shall be straight, uniform, smooth and neatly finished. Remove masking tape immediately after tooling of sealant and before sealant face starts to "skin" over. Neatly remove any excess sealant from adjacent surfaces of joint, leaving the work in a neat, clean condition.

END OF SECTION 07 92 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 92 01
Exterior Joint Sealants

PART I - GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements

1. Refer to DDC General Conditions and the Addendum to the General Conditoins.

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the Project's Existing Building scope only.

1.2 SUMMARY:

A. This Section includes the Sealant components for the associated building enclosure and glazing systems described in the Building Enclosure System Matrix and Exterior Glass Type Matrix. For a description of where Sealants are required, refer to the Drawings

B. This Section requires Engineering Services.

C. The following Sections describe systems and materials that incorporate Sealants, and will require coordinated interfaces:

1. Section 03 45 00 – Architectural Precast Concrete.

2. Section 07 00 01 – Rainscreen System.

3. Section 07 20 00 – Thermoplastic Membrane Roofing.

4. Section 07 27 01 - Weather Resistive Barriers.

5. Section 07 62 01 – Facade Sheet Metal Flashings.

6. Section 07 95 00 – Expansion Control.

7. Section 08 40 01 – Glazed Storefronts and Curtain Wall System.

8. Section 08 63 01 – Aluminum-Framed Skylight System.

9. Section 08 80 00 – Exterior Glazing.

D. Reference Documents

1. Building Enclosure System Matrix: Refer to Drawing EN1-003.

2. Exterior Glass Type Matrix: Refer to Drawing EN1-003.

1.3 DEFINITIONS:

A. Referenced System: Building Enclosure System as specified by the Building Enclosure System Matrix.

1.4 REFERENCE STANDARDS AND REGULATIONS:

A. Refer to DDC General Conditions.

B. The Contractor's Engineering, materials, and workmanship shall comply with 2014 New York City Building Code. Where the 2014 New York City Building Code recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Documents shall take precedence.

C. Comply with applicable provisions and recommendations of the standards listed below. Where standards conflict or conflict with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted the latest editions of the standards shall apply:

1. ASTM International (ASTM)

   a. ASTM C794 – Standard Test Method for Adhesion-in-Peel of Elastomeric Joint Sealants.

   b. ASTM C920 – Standard Specification for Elastomeric Joint Sealants.

   c. ASTM C1021 – Standard Practice for Laboratories Engaged in Testing of Building Sealants.

   d. ASTM C1087 – Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems.

   e. ASTM C1193 – Standard Guide for Use of Joint Sealants.

   f. ASTM C1247 – Standard Test Method for Durability of Sealants Exposed to Continuous Immersion in Liquids.

   g. ASTM C1248 – Standard Test Method for Staining of Porous Substrate by Joint Sealants.

   h. ASTM C1281 – Standard Specification for Preformed Tape Sealants for Glazing Applications.

   i. ASTM C1330 – Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid-Applied Sealants.

   j. ASTM C1401 – Standard Guide for Structural Sealant Glazing.

   k. ASTM C1521 – Standard Practice for Evaluating Adhesion of Installed Weatherproofing Sealant Joints.

2. Code of Federal Regulations (CFR)

   a. 40 CFR Part 59, Subpart D – National Volatile Organic Compound Emission Standards for Architectural Coatings.

1.5 PERFORMANCE REQUIREMENTS:

A. General Prescriptive Requirements

1. Provide Sealants where indicated on the Drawings for each Referenced System and incorporated material.

B. General Performance

1. Comprehensively engineer Sealants according to the intended use, appropriate standards, and per the Sealant manufacturer's recommendations.

   a. All structural Sealants used shall be engineered by a qualified Professional Engineer licensed in the State of New York.

2. Liquid-Applied Joint Sealants

   a. Comply with ASTM C920 and other requirements indicated for each liquid-applied joint Sealant specified, including those referencing ASTM C920 classifications for type, grade, class, and uses related to exposure and joint substrates.

   b. Suitability for Immersion in Liquids: Where Sealants are indicated for use in joints that will be continuously immersed in liquids, provide products that have been tested according to ASTM C1247. Liquid used for testing Sealants is to be representative of Project conditions, unless otherwise indicated.

3. VOC Content of Interior Sealants: Comply with the following limits for VOC content of Sealants and Sealant primers used inside the weatherproofing system when calculated according to 40 CFR Part 59, Subpart D (EPA Method 24):

   a. Architectural Sealants: 250 g/L.

   b. Sealant Primers for Nonporous Substrates: 250 g/L.

   c. Sealant Primers for Porous Substrates: 775 g/L.

C. Durability Performance

1. Use Sealant products that withstand the specified deleterious and degrading effects of radiation from the sun, weathering, atmospheric pollution, vermin, fungi, and other growths for the required service life, without maintenance in excess of routine cleaning and minor repairs.

2. Failure includes inability of the Sealant to meet the performance requirements set forth in this Section and in the manufacturer's literature, in addition to the following:

   a. Adhesive or cohesive failure of Sealants.

   b. Crazing on surface of Sealant.

   c. Non-structural Sealant hardening beyond Shore A Durometer 50 or softening below Durometer 20.

D. Compatibility Performance

1. Provide joint Sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint Sealant manufacturer, based on testing and field experience.

2. Suitability for Glazing: Comply with Sealant and glass manufacturers' written instructions for selecting glazing Sealants suitable for applications indicated and for conditions existing at time of installation.

3. Stain-Test-Response Characteristics: Where Sealants are specified to be non-staining to porous substrates, provide products tested according to ASTM C1248 and that have not stained porous joint substrates indicated for Project.

1.6 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions Section 01 33 00 – Submittal Procedures.

1.7 SUBMITTALS:

A. Testing reports.

B. Product Data

1. Sealant product data for each Sealant used.

C. LEED Submittals

1. Provide as required and specified in the DDC General Conditions.

D. Samples

1. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured Sealants showing full range of colors available for each product exposed to view.

2. Samples for Verification: For each kind and color of joint Sealant required, provide three Samples with joint Sealants in 1/2 in. wide joints formed between two 6 in. long strips of material matching the appearance of exposed surfaces adjacent to joint Sealants.

3. Provide two tubes of each type of sealant used on the Project to the Commissioner.

E. Testing Reports

1. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified Independent Testing and Inspection Agency, indicating that Sealants comply with requirements.

2. Pre-Construction Compatibility and Adhesion Test Reports: From Sealant manufacturer, indicating the following:

a. Materials forming joint substrates and joint Sealant backings have been tested for compatibility and adhesion with joint Sealants.

b. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.

3. Pre-Construction Field-Adhesion Test Reports: Indicate which Sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in Pre-Construction Compatibility and Adhesion Testing.

F. Certificates

1. Provide certification that structural Sealant manufacturer has reviewed the details, joint dimensions, and adjacent finishes to which Sealants will be bonded and finds same suitable for the purpose intended in accordance with its published literature and with these Specifications. This includes but is not limited to a written analysis of stress due to loads and environmental conditions.

2. Sealant, Waterproofing, and Restoration Institute (SWRI) Validation Certificate: For each Sealant specified to be validated by SWRI's Sealant Validation Program.

G. Completion of Work: Upon completion of installation of the Glazing, submit written certification that the manufacturer's representative has supervised the work of this Section and that all materials are correctly installed.

1.8 WARRANTY:

A. Special Manufacturer's Warranty: Manufacturer's standard form in which joint Sealant manufacturer agrees to furnish joint Sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: 5 yrs from date of Substantial Completion.

B. Special Manufacturer's Warranty on Structural Silicone: Written warranty made out to City of New York and signed by the Structural Silicone manufacturer agreeing to promptly furnish replacement structural silicone due to defects in silicone materials, or application of structural silicone in the fabrication, and/or installation of other components. Upon notification of such deterioration within the warranty period, promptly furnish replacement structural silicone, including labor for installation, for failed structural joints units at no additional cost to the City of New York.

1. Warranty Period: 20 yrs from date of Substantial Completion.

1.9 PROJECT CONDITIONS:

A. Do not proceed with installation of joint Sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint Sealant manufacturer or are below 40°F.

2. When joint substrates are wet.

3. Where joint widths are less than those permitted by joint Sealant manufacturer for applications indicated. Notify Commissioner of condition.

4. Where contaminants capable of interfering with adhesion have not been removed from joint substrates.

1.10 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Installer Qualifications: Properly trained by the sealant manufacturer for installation of Sealants and systems required for this Project.

C. Source Limitations: Obtain each kind of joint Sealant from single source from single manufacturer.

D. Testing Agency Qualifications: An Independent Testing and Inspection Agency qualified according to ASTM C1021 to conduct the testing indicated.

1. Test according to SWRI's Sealant Validation Program for compliance with requirements specified by ASTM C920 for adhesion and cohesion under cyclic movement, adhesion-in-peel, and indentation hardness.

E. Product Testing: Test joint Sealants using an Independent Testing and Inspection Agency.

F. Pre-Construction Compatibility and Adhesion Testing

1. Test results confirming compatibility and adhesion are mandatory for all concealed and exposed Sealant materials in contact with all adjacent materials including but not limited to glazing, other Sealants, flashings, metal framing, shims prior to mockup, and testing constructions.

2. Submit to joint Sealant manufacturers, for testing indicated below, Samples of materials that will contact or affect joint Sealants.

a. Use ASTM C1087 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint Sealants to joint substrates.

b. Submit not fewer than eight (8), but no less than requested by the Sealant manufacturer, pieces of each kind of material, including joint substrates, shims, joint Sealant backings, secondary seals, and miscellaneous materials.

c. Schedule sufficient time for testing and analyzing results to prevent delaying the Referenced Systems.

d. For materials failing tests, obtain joint Sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.

e. With Commissioner's approval, testing will not be required if joint Sealant manufacturers submit joint preparation data based on previous testing, not older than twenty-four (24) months, of Sealant products for adhesion to, and compatibility with, joint substrates and other materials matching those submitted.

G. Pre-Construction Field-Adhesion Testing: Before installing Sealants, field test their adhesion to Project joint substrates as follows:

1. Locate test joints where indicated on Project or, if not indicated, as directed by Commissioner.
2. Provide testing for prefabricated components that incorporate Sealants prior to Project fabrication.
3. Conduct field tests for each combination of utilized substrate type and Sealant type.
4. Notify Commissioner seven (7) days in advance of dates and times when test joints will be erected.
5. Arrange for tests to take place with joint Sealant manufacturer's technical representative present.
6. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in ASTM C1193, Tail Procedure, in ASTM C1521.
   a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
7. Report whether Sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For Sealants that fail adhesively, retest until satisfactory adhesion is obtained.
8. Evaluation of Pre-Construction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use Sealants that fail to adhere to joint substrates during testing.

PART II - PRODUCTS

2.1 SILICONE JOINT SEALANTS:

A. Single-component sealants shall be non-sag, neutral-curing silicone complying with ASTM C920, Grade NS, for Use NT. Type S or M Class shall be selected based upon specific use in each Referenced System and the movement requirements of the locations where Sealants will be applied.

B. Products

1. Weather Sealant for Cementitious Substrates
   a. Dow Corning 790 Silicone Building Sealant.
   b. GE SCS90000 Silpruf NB Sealant.
   c. Sikasil WS-295.
   d. Or approved equal.
2. Weather Sealants for Metal Substrates
   a. Dow Corning 795 Silicone Building Sealant.
   b. GE SCS2000 SilPruf Sealant.
   c. Sikasil WS-295.

d. Or approved equal.

3. Structural Sealant

a. Dow Corning 983 Structural Glazing Sealant.

b. GE SSG4600 UltraGlaze.

c. Sikasil SG-20.

d. Or approved equal.

4. Sealant Used Adjacent to Weather Resistive Barrier:

a. Dow Corning 758 Weather Barrier Sealant.

b. GCP Applied Technologies Bituthene Liquid Membrane, Two-Component, Asphalt-Modified Urethane.

c. HE 925 BES Sealant.

d. Or approved equal.

5. High-Temperature Sealant

a. Dow Corning 736 Heat Resistant Sealant.

b. Sikasil GP HT

c. Trempro 644 HT

d. Or approved equal.

6. Other Sealants: Subject to compliance with requirements and Commissioner's approval.

C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Dow Corning Corporation.

2. GE Advanced Materials.

3. Sika Corporation.

4. Or approved equal.

D. Colors of Exposed Joint Sealants

1. As selected by Commissioner from manufacturer's full range.

E. Structural Silicone Joints

1. Comply with the following standards:

a. ASTM C1087.

b. ASTM C1401.

2. Able to withstand tensile and shear stresses imposed by structural system without failing adhesively or cohesively. When tested for pre-construction adhesion and compatibility, cohesive failure of Sealant shall occur before adhesive failure.

a. Adhesive failure occurs when Sealant pulls away from substrate cleanly, leaving no Sealant material behind.

b. Cohesive failure occurs when Sealant breaks or tears within itself but does not separate from each substrate because Sealant-to-substrate bond strength exceeds Sealant's internal strength.

3. Structural Sealant Joint Design

a. Engineered to produce tensile, shear, or compressive stress of less than the manufacturer's recommendations.

2.2 PREFORMED JOINT SEALANTS:

A. Preformed Silicone Joint Sealants: Manufacturer's standard Sealant consisting of pre-cured low-modulus silicone extrusion, in sizes to fit joint widths indicated, combined with a neutral-curing silicone Sealant for bonding extrusions to substrates.

B. Products

1. Dow Corning 123 Silicone Seal

2. GE Ultraspan 1100.

3. Tremco Proglaze ETA.

4. Or approved equal.

C. Manufacturers may include the following:

1. Dow Corning Corporation.

2. GE Advanced Materials.

3. Tremco Inc.

4. Or approved equal.

2.3 JOINT SEALANT BACKING:

A. General: Provide Sealant backings of material that are non-staining; compatible with joint substrates, Sealants, primers, and other joint fillers; and are approved for applications indicated by Sealant manufacturer based on field experience and laboratory testing.

B. Cylindrical Sealant Backings: ASTM C1330, Type C (closed-cell material with a surface skin), as approved in writing by joint Sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by Sealant manufacturer for preventing Sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.4 MISCELLANEOUS MATERIALS:

A. Primer: Material recommended by joint Sealant manufacturer where required for adhesion of Sealant to joint substrates indicated, as determined from preconstruction joint Sealant-substrate tests and field tests. All Sealants to receive primer unless the manufacturer states in writing that use of primer will adversely affect the Sealant's adhesion or long-term performance.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of Sealants and Sealant-backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of Sealants to joint substrates.

C. Masking Tape: Non-staining, nonabsorbent material compatible with joint Sealants and surfaces adjacent to joints.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS:

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION:

A. Examine joints indicated to receive joint Sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint Sealant performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION:

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint Sealants to comply with joint Sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint Sealant, including dust, paints (except for permanent, protective coatings tested and approved for Sealant adhesion and compatibility by Sealant manufacturer), old joint Sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost. Sealant must be installed to the bare substrate.

2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint Sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include, but are not limited to the following:

a. Concrete.

b. Masonry.

c. Unglazed surfaces of ceramic tile.

d. Exterior insulation and finish systems.

3. Remove laitance and form-release agents from concrete.

4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint Sealants. Nonporous joint substrates include but are not limited to the following:

a. Metal.

b. Glass.

c. Porcelain enamel.

d. Glazed surfaces of ceramic tile.

B. Joint Priming: Prime joint substrates where recommended by joint Sealant manufacturer or as indicated/required by pre-construction joint-Sealant-substrate tests. Apply primer to comply with joint Sealant manufacturer's written instructions. Confine primers to areas of joint Sealant bond; do not allow spillage or migration onto adjoining surfaces.

1. Use only one coat of primer. Do not apply primer in a thick layer.

2. Apply primer to clean, dry substrates at ambient temperatures above 50°F.

3. Pour primer into a clean container for use and apply primer with a clean brush. Do not pour more than a 10 min. supply into container to prevent deterioration. Replace cap on primer immediately after use.

4. Remove from site any primer that is discolored, contains a precipitate, or has thickened.

5. Do not apply primer to Sealant backings. Remove and replace all Sealant backings exposed to primer.

C. Masking Tape: Use masking tape at all Sealant joints to prevent contact of Sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove Sealant smears and to create a clean Sealant joint edge. Remove tape immediately after tooling, without disturbing joint seal.

3.4 INSTALLATION OF JOINT SEALANTS:

A. General: Comply with joint Sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint Sealants as applicable to materials, applications, and conditions indicated.

C. Install Sealant backings of kind indicated to support Sealants during application and prevent three-sided adhesion, and at position required to produce cross-sectional shapes and depths of installed Sealants relative to joint widths that allow optimum Sealant movement capability.

1. Do not leave gaps between ends of Sealant backings.
2. Do not stretch, twist, puncture, or tear Sealant backings.
3. Do not cut Sealant backings lengthwise.
4. Install one unit of backer rod sized according to the Project Specifications at each Sealant joint. Change backer rod sizes as frequently as required by the variation in the joint width. Do not twist rods together, fold over, or stack backer rods to fit small rods into a wider opening. Provide a full range of rod sizes at the site of all Sealant work.
5. Remove absorbent Sealant backings that have become wet before Sealant application and replace with dry materials.
6. Do not touch with fingers or otherwise contaminate the substrate surfaces while inserting the Sealant backings.
7. Do not rupture the skin of the backer rod during installation. Remove any backer rod containing punctures and solvent-clean the surfaces again.
8. Replace any backer rod not sealed over by end of each day and solvent-clean surfaces again.

D. Install bond-breaker tape to prevent three-sided adhesion behind Sealants where Sealant backings are not used between Sealants and backs of joints.

E. Install Sealants using proven techniques complying with the following and at the same time backings are installed:

1. Place Sealants so they directly contact and fully wet joint substrates. When installing Sealant, push Sealant ahead of caulking gun nozzle. Do not drag nozzle across joint when installing Sealant.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum Sealant movement capability.
4. For weather Sealants, construct Sealant with a width-to-depth ratio of 2:1, with maximum thickness of 1/2 in. and minimum thickness of 1/4 in.
5. At fillet (triangular) joints, extend sealant at least 3/8 in. onto the surface beyond and parallel to the bond breaker (tape or backer rod) and 5/8 in. onto the surface perpendicular to the bond breaker, unless otherwise detailed or required by the Sealant manufacturer.
6. At dual-stage joints, provide a 1/2 in. deep drainage cavity between the exterior face of the secondary joint and the back-up material of the primary joint.
7. Keep sealants a minimum of 1/2 in. from asphalt-based membranes unless otherwise noted.

8. Inspect each cartridge or container of Sealant before use and verify that the production date is within six months of the date of application. Remove all Sealant more than six months old from the site.

9. Mask exposed surfaces along joint before applying Sealant.

10. Recheck correct backer rod and bond breaker tape positioning before applying Sealant.

11. Seal joints within 10 hrs of primer application.

12. Within 5 min. of Sealant application and before skin develops on Sealant, dry tool the joint surface with a concave tool to ensure intimate contact with substrate and to eliminate air bubbles. Do not use any liquid for tooling. Provide a smooth, uniform, finished surface.

13. Remove masking tape within 10 min. of tooling liquid Sealant. Avoid contaminating adjacent surfaces with excess Sealant. Remove all traces of smears and droppings on metal or glass surfaces promptly, using a solvent recommended by the Sealant manufacturer and that will not damage or discolor the building surfaces. Remove smears and droppings on porous surfaces by mechanical means after the initial cure of the Sealant.

14. Coordinate work to prevent contamination of fresh Sealant by dust or other debris.

F. Tooling of Non-Sag Sealants: Immediately after Sealant application and before skinning or curing begins, tool Sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of Sealant with sides of joint.

1. Remove excess Sealant from surfaces adjacent to joints.

2. Provide concave joint profile per Fig. 8A in ASTM C1193, unless otherwise indicated.

3. Provide flush joint profile where indicated per Fig. 8B in ASTM C1193.

4. Provide recessed joint configuration of recess depth and at locations indicated per Fig. 8C in ASTM C1193.

   a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

G. Installation of Preformed Silicone-Sealant System

1. Apply masking tape to each side of joint, outside of area to be covered by Sealant system.

2. Apply silicone sealant to each side of joint to produce a bead of size complying with preformed silicone Sealant system manufacturer's written instructions and covering a bonding area of not less than 3/8 in. Hold edge of Sealant bead 1/4 in. inside masking tape.

3. Within 10 min. of Sealant application, press silicone extrusion into Sealant to wet extrusion and substrate. Use a roller to apply consistent pressure and ensure uniform contact between Sealant and both extrusion and substrate.

4. Complete installation of Sealant system in horizontal joints before installing in vertical joints. Lap vertical joints over horizontal joints. At ends of joints, cut silicone extrusion with a razor knife.

5. Tool the edge of Sealant that oozes out beyond the edge of the silicone extrusion during rolling to create a fillet profile.

3.5 FIELD QUALITY CONTROL

A. Field-Adhesion Testing: Field test joint Sealant adhesion to joint substrates as follows:

1. Extent of Testing: Test completed and cured Sealant joints as follows:

   a. Perform five (5) tests for the first 500 ft of joint length for each kind of Sealant and joint substrate.

   b. Perform one (1) test for each 1,000 ft of joint length thereafter or one (1) test per each floor per elevation.

2. Test Method: Test joint Sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in ASTM C1193, Tail Procedure, in ASTM C1521.

   a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

3. Inspect tested joints and report on the following:

   a. Whether Sealant-filled joint cavities and are free of voids.

   b. Whether Sealant dimensions and configurations comply with specified requirements.

   c. Whether Sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes Sealant manufacturer's field-adhesion hand-pull test criteria.

4. Record test results in a field-adhesion-test log. Include dates when Sealants were installed, names of persons who installed Sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, Sealant fill, Sealant configuration, and Sealant dimensions.

5. Repair Sealants pulled from test area by applying new Sealants following same procedures used originally to seal joints. Ensure that original Sealant surfaces are clean and that new Sealant contacts original Sealant.

B. Evaluation of Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove Sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove Sealants comply with indicated requirements. For every failure, perform two additional tests.

3.6 CLEANING:

A. Clean off excess Sealant or Sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by:

1. Joint Sealant manufacturers.

2. Manufacturers' of products adjacent to joints.

3.7 PROTECTION:

A. Protect joint Sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so Sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint Sealants immediately so installations with repaired areas are indistinguishable from original work.

SECTION 07 95 00
Expansion Control

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Wall expansion joint cover assemblies.

2. Fire rated expansion joint cover assemblies where required.

B. Related Sections

1. Selective Demolition and Alteration Work - Section 02 41 19.

2. Cast-in-Place Concrete - Section 03 30 00.

3. Architectural Pre-Cast Concrete - Section 03 45 00.

4. Unit Masonry - Section 04 20 00.

5. Thermoplastic Membrane Roofing - Section 07 20 00.

6. Metal Panels - Section 07 42 14.

7. Roof Specialties and Accessories - Section 07 71 00, for roof expansion joint cover assemblies.

8. Painting and Finishing - Section 09 90 00.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Submit product data for each type of expansion joint cover assembly specified, including manufacturer's product specifications, installation instructions, details of construction relative to materials, dimensions of individual components, profiles, and finishes.

B. Submit shop drawings showing fabrication and installation of expansion joint cover assemblies, including plans, elevations, sections, details of components, joints, splices, and attachments to other units of work.

C. Submit samples for verification purposes in full size units of each type of expansion joint cover assembly indicated; within sets for each finish, color, texture, and pattern specified, showing full range of variations expected in these characteristics. Install elastomeric material for joints, samples to verify color selected.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART II - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire Test Response Characteristics: Where indicated, provide expansion joint cover assemblies identical to those assemblies whose fire resistance has been determined per ANSI/UL 263, NFPA 251, U.B.C. 43-1, or ASTM E 119, including hose stream test of vertical wall assemblies, by a testing and inspecting agency acceptable to the Building Department.

1. Fire Resistance Ratings: As shown on drawings.

B. Joint covers shall permit unrestrained movement of joint without disengagement of cover.

2.2 MANUFACTURER

A. Basis of Design: Subject to compliance with requirements, provide Balco; Profiles and details as shown on drawings or comparable product by one of the following:
   1). Watson Bowman Acme
   2). Construction Specialties
   3). MM Systems
   4). Or approved equal

B. Provide cut sheets for each type and location being used for aesthetic approval.

1. Black elastomeric seal at concrete.

2. Aluminum metal cover at corrugated metal. Color to match.

3. Standard metal cover at roof joint.

2.3 MATERIALS

A. Aluminum: ASTM B 221, alloy 6063-T5 for extrusions; ASTM B 209, alloy 6061-T6, sheet and plate; aluminum to have the following finishes:

1. Exterior surfaces not subject to pedestrian traffic shall have a fluoropolymer finish conforming to NAAMM 605.2; two (2) colors shall be required, one (1) color to match metal siding and the other color to match adjacent concrete surfaces.

2. Interior surfaces not subject to pedestrian traffic shall be shop primed with rust inhibitive primer, minimum 2 mils thick, ready to receive field painted finish.

B. Stainless Steel: ASTM A 666, Type 304, No. 4 finish.

C. Protect metal surfaces to be placed in contact with cementitious materials with a protective coating.

D. Extruded Preformed Seals: Single or multi-cellular elastomeric profiles as classified under ASTM D 2000, designed with or without continuous, longitudinal, internal baffles. Formed to fit compatible frames, in color, as selected by Commissioner from manufacturer's standard colors.

E. Fire Barriers: Designed for indicated or required dynamic structural movement without material degradation or fatigue when tested according to ASTM E-1399. Tested in maximum joint width condition with a field splice as a component of an expansion joint cover per ANSI/UL 263, NFPA 251, U.B.C. 43-1, or ASTM E 119, including hose stream test of vertical wall assemblies by a nationally recognized testing and inspecting agency acceptable to NYC Building Department.

F. Accessories: Manufacturer's standard anchors, fasteners, set screws, spacers, flexible moisture barrier and filler materials, drain tubes, lubricants, adhesive, and other accessories compatible with material in contact, as indicated or required for complete installations.

2.4 EXPANSION JOINT COVER ASSEMBLIES

A. General: Provide expansion joint cover assemblies of design, basic profile, materials, and operation indicated on drawings. Provide units comparable to those indicated or required to accommodate joint size, variations in adjacent surfaces, and dynamic structural movement without material degradation or fatigue when tested according to ASTM E 1399. Furnish units in longest practical lengths to minimize number of end joints. Provide hairline mitered corners where joint changes direction or abuts other materials. Include closure materials and transition pieces, tee-joints, corners, transition pieces, curbs, cross-connections, and other accessories as required to provide continuous joint cover assemblies.

1. Special conditions shall be shop fabricated.

2. Fabricate components in largest practical lengths to minimize field splicing.

B. Moisture Barrier: Provide manufacturer's continuous, standard, flexible vinyl moisture barrier under covers at locations indicated.

C. Fire Rated Joint Covers: Provide expansion joint cover assemblies with manufacturer's continuous, standard, flexible fire barrier seals under covers at locations indicated to provide fire-resistive rating not less than the rating of adjacent construction.

D. All transitions between vertical and horizontal joints shall be factory fabricated.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Manufacturer's Instructions: In addition to requirements of these specifications, comply with manufacturer's instructions and recommendations for phases of Work, including preparing substrate, applying materials, and protecting installed units.

B. Coordinate and furnish anchorages, setting drawings, templates, and instructions for installation of expansion joint cover assemblies to be embedded in or anchored to concrete or to have recesses formed into edges of concrete slab for later placement and grouting-in of frames.

C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary to secure expansion joint cover assemblies to in-place construction, including threaded fasteners with drilled-in expansion shields for masonry and concrete where anchoring members are not embedded in concrete. Provide fasteners of metal, type, and size to suit type of construction indicated and provide for secure attachment of expansion joint cover assemblies.

3.3 INSTALLATION

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting into new and existing construction as required to install expansion joint covers. Install joint cover assemblies in true alignment and proper relationship to expansion joints and adjoining finished surfaces measured from established lines and levels. Allow adequate free movement of thermal expansion and contraction of metal to avoid buckling. Set floor covers at elevations to be flush. Locate wall, ceiling, roof, and soffit covers in continuous contact with adjacent surfaces. Securely attach in place with required accessories. Locate anchors at interval recommended by manufacturer, but not less than 3" from each end and not more than 24" o.c.

1. Where cutting into existing construction, conform to the requirements of Section 02 41 19, Selective Demolition and Alteration Work.

B. Continuity: Maintain continuity of expansion joint cover assemblies with a minimum number of end joints and align metal members mechanically using splice joints. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of metal to avoid buckling of frames. Adhere flexible filler materials (if any) to frames with adhesive or pressure sensitive tape as recommended by manufacturer.

C. Extruded Preformed Seals: Install seals complying with manufacturer's instructions and with minimum number of end joints. For straight sections provide preformed seals in continual lengths. Vulcanize or heat-weld field splice joints in preformed seal material to provide watertight joints using procedures recommended by manufacturer. Apply adhesive, epoxy, or lubricant adhesive approved by manufacturer to both frame interfaces before installing preformed seal. Seal transitions according to manufacturer's instructions.

D. Elastomeric Sealant Joint Assemblies: Seal end joints within continuous runs and joints at transitions according to manufacturer's directions to provide a watertight installation.

E. Fire Barriers: Install fire barriers, including transitions and end joints, according to manufacturer's instructions so that fire-rated construction is continuous.

END OF SECTION 07 95 00

SECTION 08 11 13
Steel Doors and Frames

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Interior and exterior hollow metal doors and frames for fire rated and unrated door openings.

2. Interior hollow metal vision panels.

3. Preparation of metal doors and frames to receive finish hardware, including reinforcements, drilling and tapping, as necessary.

4. Preparation of hollow metal doors to receive glazing where required.

5. Steel louvers for hollow metal doors.

6. Furnishing anchors for building into masonry and drywall as well as precast panels and structural steel.

7. Factory prime painting of work of this Section.

B. Related Sections

1. Unit Masonry - Section 04 20 00.

2. Carpentry - Section 06 20 00, for installation of doors and frames.

3. Door Hardware - Section 08 71 00.

4. Exterior Glazing - Section 08 80 00.

5. Interior Glass and Glazing - Section 08 80 10.

6. Gypsum Drywall - Section 09 29 00.

7. Painting and Finishing - Section 09 90 00.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Product Data: Include construction details, material descriptions, core descriptions, label compliance, compliance with standards referenced herein, sound and fire-resistance ratings, and finishes for each type of door and frame specified.

B. Shop Drawings: Show fabrication and installation of doors and frames. Include details of each frame type, elevations of door design types, conditions at openings, details of construction, reinforcement for surface applied hardware, dimensions of profiles and hardware preparation, location and installation requirements of door and frame hardware and reinforcements, and details of joints and connections. Show anchorage and accessories.

C. Door Schedule: Submit schedule of doors and frames using same reference numbers for details and openings as those on Drawings.

1. Coordinate glazing frames and stops with glass and glazing requirements.

D. Oversize Construction Certification: For door assemblies required to be fire rated and exceeding limitations of labeled assemblies, submit UL certification that each door and frame assembly has been constructed to comply with design, materials, and construction equivalent to requirements for labeled construction.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Manufacturer Qualifications: A firm experienced in manufacturing custom steel doors and frames similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Testing Agency Qualifications: An independent agency qualified according to ASTM E 329, Standard Specification for Agencies Engaged in Construction Inspection, Testing, or Special Inspection, for testing indicated.

D. Source Limitations: Obtain custom steel doors and frames through one source from a single manufacturer.

E. Fire-Rated Door and Frame Assemblies: Assemblies complying with NFPA 80, Standard for Fire Doors and Other Opening Protectives, that are listed and labeled by UL, for fire-protection ratings indicated.

1. Test Pressure: Test according to NFPA 252, Standard Methods of Fire Tests of Door Assemblies, or UL 10C, Standard for Positive Pressure Fire Tests of Door Assemblies. After 5 minutes into the test, the neutral pressure level in furnace shall be established at 40" or less above the sill.

2. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide UL certification that doors comply with standard construction requirements for tested and labeled fire-protection-rated door assemblies except for size.

3. Temperature-Rise Rating: At exit enclosures, provide doors that have a temperature-rise rating as required by 2014 New York City Building Code in 30 minutes of fire exposure.

F. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80, Standard for Fire Doors and Other Opening Protectives, that are listed and labeled, by a testing and inspecting agency acceptable to the Commissioner, for fire-protection ratings indicated, based on testing according to NFPA 257, Standard on Fire Test for Window and Glass Block Assemblies, or UL 9, Standard for Fire Tests of Window Assemblies. Label each individual glazed lite.

G. Smoke-Control Door Assemblies: Comply with NFPA 105, Standard for Smoke Door Assemblies and Other Opening Protectives, or UL 1784, Standard for Air Leakage Tests of Door Assemblies and Other Opening Protectives.

H. Thermally Rated Door Assemblies: Provide door assemblies with U-factor of not more than 0.50 deg Btu/F x h x sq. ft. when tested according to ASTM C 518.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver doors and frames palleted, wrapped, or crated to provide protection during transit and Project site storage. Do not use nonvented plastic.

B. Store doors and frames under cover at building site. Conform to the requirements of ANSI/SDI A250.11, Recommended Erection Instructions for Steel Frames, for site storage unless more stringent requirements are noted herein. Place units on minimum 4-inch high wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber. If wrappers on doors become wet, remove cartons immediately. Provide minimum 1/4-inch spaces between stacked doors to permit air circulation.

PART II - PRODUCTS

2.1 FABRICATION - GENERAL

A. Fabricate hollow metal units to be rigid, neat in appearance and free from defects, warp or buckle. Accurately form metal to required sizes and profiles. Weld exposed joints continuously, grind, dress, and make smooth, flush and invisible. Metallic filler to conceal manufacturing defects is not acceptable.

B. Unless otherwise indicated, provide countersunk flat Phillips or Jackson heads for exposed screws and bolts.

C. Prepare hollow metal units to receive finish hardware, including cutouts, reinforcing, drilling and tapping in accordance with Finish Hardware Schedule and templates provided by hardware suppliers. Comply with applicable requirements of ANSI A115 "Specifications for Door and Frame Preparation for Hardware."

D. Locate finish hardware as shown on final shop drawings in accordance with locations noted herein.

2.2 MANUFACTURERS

A. Subject to compliance with requirements, provide products by one of the following:

1. Steelcraft

2. Curries

3. Ceco Door Products

4. Or approved equal.

2.3 FRAMES

A. Materials

1. Frames for exterior openings shall be made of commercial grade cold-rolled steel conforming to ASTM A 1008, Standard Specification For Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy With Improved Formability, Solution Hardened, And Bake Hardenable, Type B not less than 14 ga., and shall have a hot dipped galvannealed coating conforming to ASTM A 924, Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process, and A 653, Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process, with A-60 coating. The zinc-alloy coating shall be a dull matte surface treated for paint adhesion.

2. Frames for interior openings shall be either commercial grade cold-rolled steel conforming to ASTM A 1008, Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy With Improved Formability, Solution Hardened, And Bake Hardenable, Type B or commercial grade hot-rolled steel conforming to ASTM A 1011, Commercial Steel, Type B. Metal thickness shall be not less than sixteen (16) ga. for frames in openings 4'-0" or less in width; not less than fourteen (14) ga. for frames in openings over 4'-0" in width.

B. Design and Construction

1. All frames shall be welded units with integral trim, of the sizes and shapes shown on approved shop drawings. Unless otherwise noted, knock-down frames will not be accepted.

2. All finished work shall be strong and rigid, neat in appearance, square, true and free of defects, warp or buckle. Molded members shall be clean cut, straight and of uniform profile throughout their lengths.

3. Jamb depths, trim, profile and backbends shall be as shown on drawings.

   a. Frames at drywall partitions shall be formed with double return backbends to prevent cutting into drywall surface.

4. Welded frames shall have corners mitered and reinforced and faces of welded frames shall be continuously back welded full depth and width of frame conforming to NAAMM Standard HMMA-820; face joints shall be hairline.

5. Minimum depth of stops shall be 5/8".

6. Frames for multiple or special openings shall have mullion and/or rail members which are closed tubular shapes having no visible seams or joints. All joints between faces of abutting members shall be securely welded and finished smooth.

   a. Mullions shall have 16 ga. internal steel stiffeners welded not less than 4" o.c.

7. Hardware Reinforcements

   a. Frames shall be mortised, reinforced, drilled and tapped at the factory for fully-templated mortised hardware only, in accordance with approved hardware schedule and templates provided by the hardware supplier. Where surface-mounted hardware is to be applied, frames shall have reinforcing plates.
   b. Minimum thickness of hardware reinforcing plates shall be as follows:
      1). Hinge and pivot reinforcements - seven (7) ga., 1-1/4" x 10" minimum size.
      2). Strike reinforcements - twelve (12) gauge
      3). Flush bolt reinforcements - twelve (12) gauge
      4). Closer reinforcements - twelve (12) gauge
      5). Reinforcements for surface mounted hardware - twelve (12) gauge.

8. Floor Anchors

   a. Provide adjustable floor anchors, providing not less than two (2) inch height adjustment.
   b. Minimum thickness of floor anchors shall be fourteen (14) gauge.

9. Jamb Anchors

   a. Frames for installation in masonry walls shall be provided with adjustable jamb anchors of the wire type. Anchors shall be not less than 0.156" diameter steel wire. The number of anchors provided on each jamb shall be as follows:
      1). Frames up to 7'-6" height - three (3) anchors.
      2). Frames 7'-6" to 8'-0" height - four (4) anchors.
      3). Frames over 8'-0" height - one (1) anchor for each 2'-0" or fraction thereof in height.
   b. Frames for installation in stud partitions shall be provided with steel anchors of suitable design, not less than eighteen (18) gauge thickness, securely welded inside each jamb as follows:
      1). Frames up to 7'-6" height - four (4) anchors.
      2). Frames 7'-6" to 8'-0" height - five (5) anchors.
      3). Frames over 8'-0" height - five (5) anchors plus one additional for each 2'-0" or fraction thereof over 8'-0".

10. Anchors in exterior frames and in masonry walls shall be hot dip galvanized per ASTM A 153.

11. Frames for installation in masonry wall openings more than 4'-0" in width shall have an angle or channel stiffener factory welded into the head. Such stiffeners shall be not less than twelve (12) gauge steel and not longer than the opening width and shall not be used as lintels or load bearing members.

12. Dust cover boxes (or mortar guards) of not thinner than twenty-six (26) gauge steel shall be provided at all hardware mortises on frames to be set in masonry or plaster partitions.

13. Ceiling Struts: Minimum 3/8" thick x 2" wide steel.

14. All frames shall be provided with a steel spreader temporarily attached to the feet of both jambs to serve as a brace during shipping and handling.

15. Loose glazing stops shall be of cold rolled steel, not less than twenty (20) gauge thickness, butted at corner joints and secured to the frame with countersunk cadmium-or zinc-plated screws. Interior frames may be provided with snap-on glazing stops.

16. Except on weatherstripped frames, drill stops to receive three (3) silencers on strike jambs of single door frames and two (2) silencers on heads of double-door frames.

C. Finish: After fabrication, all tool marks and surface imperfections shall be removed, and exposed faces of all welded joints shall be dressed smooth. Frames shall then be chemically treated to ensure maximum paint adhesion and shall be coated on all surfaces with one coat of rust-inhibitive baked-on alkyd primer standard with the manufacturer which is fully cured before shipment to a dry film thickness of 2.0 mils.

1. Frames set in masonry walls shall be grouted in as described in Section 04 20 00, "Unit Masonry." These frames shall have surfaces in contact with grout shop coated with epoxy coating, spray applied at 4 to 6 mils, passing NFPA 101, Class A for smoke and flame spread, tested per ASTM E 84.

2. Basis of Design: Subject to compliance with requirements, provide Tnemec; Series 27 FC Typoxy or comparable product by one of the following:
   a. PPG
   b. Benjamin Moore
   c. Sherwin Williams
   d. Or approved equal

2.4 HOLLOW METAL DOORS

A. Materials: Doors shall be made of commercial quality, level, cold rolled steel conforming to ASTM A 1008/A, Commercial Steel, Type B and free of scale, pitting or other surface defects. Face sheets for interior doors shall be not less than eighteen (18) gauge. Face sheets for exterior doors shall be not less than sixteen (16) gauge and shall have a hot dipped galvannealed coating conforming to ASTM A 924 and A 653, A-60 coating. The zinc alloy coating shall be a dull matte surface treated for paint adhesion.

B. Design and Construction

1. All doors shall be of the types and sizes shown on the approved shop drawings and shall be fully welded seamless construction with no visible seams or joints on their faces or vertical edges. Minimum door thickness shall be 1-3/4".

2. All doors shall be strong, rigid and neat in appearance, free from warpage or buckles. Corner bends shall be true and straight and of minimum radius for the gauge of metal used.

3. Face sheets shall be stiffened by continuous vertical formed steel sections spanning the full thickness of the interior space between door faces. These stiffeners shall be not less than twenty two (22) gauge spaced not more than six (6) inches apart and securely attached to face sheets by spot welds not more than five (5) inches o.c. Spaces between stiffeners shall be sound deadened and thermal insulated the full height of the door with an inorganic non-combustible batt type material.

4. Door faces shall be joined at their vertical edges by a continuous weld extending the full height of the door. All such welds shall be ground, filled and dressed smooth to make them invisible and provide a smooth flush surface.

5. Top and bottom edges of all doors shall be closed with a continuous recessed steel channel not less than fourteen (14) gauge, extending the full width of the door and spot welded to both faces. Exterior doors shall have an additional flush closing channel at their top edges and, where required for attachment of weatherstripping, a flush closure also at their bottom edges. Openings shall be provided in the bottom closure of exterior doors to permit the escape of entrapped moisture.

6. Edge profiles shall be provided on both vertical edges of doors as follows:

   a. Single-Acting Swing Doors: Beveled 1/8" in two (2) inches.
   b. Double-Acting Swing Doors: Rounded on 2-1/8" radius.
   c. No square edge doors permitted.

7. Hardware Reinforcements

   a. Doors shall be mortised, reinforced, drilled and tapped at the factory for fully templated hardware only in accord with the approved hardware schedule and templates provided by the hardware supplier. Where surface-mounted hardware (or hardware, the interrelation of which is to be adjusted upon installation - such as top and bottom pivots, floor closers, etc.) is to be applied, doors shall have reinforcing plates.
   b. Minimum gauges for hardware reinforcing plates shall be as follows:
      1). Hinge and pivot reinforcement - seven (7) gauge.
      2). Reinforcement for lock face, flush bolts, concealed holders, concealed or surface mounted closers - twelve (12) gauge.
      3). Reinforcements for all other surface mounted hardware - sixteen (16) gauge.

8. Glass Moldings and Stops

   a. Where specified or scheduled, doors shall be provided with hollow metal moldings to secure glazing in accordance with glass opening sizes shown on drawings.
   b. Fixed moldings shall be securely welded to the door on the security side.
   c. Loose stops shall be not less than twenty (20) gauge steel, with mitered corner joints, secured to the framed opening by cadmium or zinc-coated countersunk screws spaced eight (8) inches o.c. Snap-on attachments will not be permitted. Stops shall be flush with face of door.

9. Louvers shall be sixteen (16) gauge sheet steel, stationary type, closely spaced inverted "V" blade design, flush with face sheets of door, integral with and welded to door. Fifty (50) percent free area, unless indicated otherwise on drawings.

C. Finish: After fabrication, all tool marks and surface imperfections shall be dressed, filled and sanded as required to make all faces and vertical edges smooth, level and free of all irregularities. Doors shall then be chemically treated to ensure maximum paint adhesion and shall be coated, on all exposed surfaces, with manufacturer's standard rust-inhibitive alkyd primer as specified for frames which shall be fully cured before shipment.

D. Flatness: Doors shall maintain a flatness tolerance of 1/16" maximum, in any direction, including in a diagonal direction.

2.5 LABELED DOORS AND FRAMES

A. Labeled doors and frames shall be provided for those openings requiring fire protection ratings as scheduled on drawings. Such doors and frames shall be labeled by Underwriters' Laboratories or other nationally recognized agency having a factory inspection service.

B. If any door or frame specified by the Commissioner to be fire-rated cannot qualify for appropriate labeling because of its design, size, hardware or any other reason, the Commissioner shall be so advised before fabricating work on that item is started.

2.6 HARDWARE LOCATIONS

A. The location of hardware on doors and frames shall be as noted in "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames" of the Door Hardware Institute unless otherwise required by 2014 New York City Building Code.

2.7 CLEARANCES

A. Fabricate doors and frames to meet edge clearances as follows:

1. Jambs and Head: 1/8" plus or minus 1/16".
2. Meeting Edges, Pairs of Doors: 1/8" plus or minus 1/16".
3. Bottom: 3/8" at threshold; 3/4" if no threshold.

B. Fire rated doors shall have clearances as required by NFPA 80.

2.8 MANUFACTURING TOLERANCES

A. Manufacturing tolerance shall be maintained within the limits given in HMMA 841 of ANSI/NAAMM, current edition.

2.9 PREPARATION FOR FINISH HARDWARE

A. Prepare door and frames to receive hardware:

1. Hardware supplier shall furnish hollow metal manufacturer approved hardware schedule, hardware templates, and samples of physical hardware where necessary to ensure correct fitting and installation.
2. Preparation includes sinkages and cut-outs for mortise and concealed hardware.

B. Provide reinforcements for both concealed and surface applied hardware:

1. Drill and tap mortise reinforcements at factory, using templates.
2. Install reinforcements with concealed connections designed to develop full strength of reinforcements.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Refer to Section 06 20 00, Carpentry, for installation procedures for all work of this Section.

END OF SECTION 08 11 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 31 13
Access Doors

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Frameless recessed panel access doors at drywall ceilings and walls.

2. Framed flush panel access doors at masonry and tile walls.

3. Provide access doors and frames for access from occupied spaces to the following, where indicated or required.

   a. All shutoff or balancing valves.
   b. Fire dampers, as required.
   c. Points of duct access.
   d. Pull boxes.
   e. Controls of mechanical and electrical items.
   f. Masonry shafts for pipes and conduits, as required.
   g. Pipe spaces, if required.
   h. Inlets of fans.
   i. Fusible link and splitter damper at filter bank.
   j. Automatic damper and motor.
   k. Equipment not otherwise accessible.

B. Related Sections

1. Unit Masonry - Section 04 20 00.

2. Gypsum Drywall - Section 09 29 00.

3. Ceramic Tiling - Section 09 30 13.

4. General Duty Valves for Plumbing - Section 22 05 23.

5. General Duty Valves for HVAC - Section 23 05 23.

6. Air Duct Accessories - Section 23 33 00, for HVAC duct access doors.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. For actual installation of the work of this Section, use only personnel who are thoroughly familiar with the manufacturer's recommended methods of installation and experienced in the skills required.

C. Fire-Resistance Ratings: Wherever a fire-resistance classification is shown, or for construction where access doors are installed, provide required access door assembly with panel door, frame, hinge and latch from manufacturers listed in Underwriters' Laboratories, Inc. "Classified Building Materials Index" for the rating shown.

1. Provide UL label on each access panel.

2. Provide flush, key operated cylinder lock.

D. Size Variations: Obtain Commissioner's acceptance of manufacturer's standard size units which may vary slightly from sizes shown or scheduled.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. Before any materials of this Section are delivered to the job site, submit complete manufacturer's literature to the Commissioner. Submit plans and schedules showing size and location of each and every access door for Commissioner's acceptance prior to installation.

PART II - PRODUCTS

2.1 MATERIALS AND FABRICATION

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Milcor Inc
2. Nystrom Inc.
3. Karp Associates, Inc.
4. Or approved equal

B. Assembly shall be an integral unit complete with all parts and ready for installation.

C. Fabricate units of continuous welded steel construction. Grind welds smooth and flush with adjacent surfaces. Provide attachment devices and fasteners of the type required to secure access panels to the types of supports shown.

D. Frames for Masonry and Tile Wall Only (Flush Panel Units): Fabricate frame from sixteen (16) gauge steel. Provide frame with exposed flange not less than one (1) inch wide around perimeter of frame for exposed masonry and tile finishes.

1. For installation in masonry construction, provide frames with adjustable metal masonry anchors.

E. Frameless Units for Drywall Surfaces (Recessed Panel Units): Provide access doors without exposed frames for drywall adhered to recessed panel.

F. Panels: Fabricate from fourteen (14) gauge steel, with concealed spring hinges set to open to 175 degrees. Provide removable pin type hinges of the quantity required to support the access panel sizes used in the work. Finish with manufacturer's factory applied baked enamel prime coat applied over phosphate protective coating on steel.

G. Locking Devices

1. For non-rated access doors, provide flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.

2. For fire rated doors, provide locks as described in paragraph 1.3, C. herein.

H. Inserts and Anchorage: Furnish inserts and anchoring devices which must be built into masonry for the installation of access panels. Provide setting drawings, templates, instructions, and directions for installation of anchorage devices.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 COORDINATION

A. Coordinate all work with the mechanical trades to ensure proper locations and in a timely manner to permit orderly progress of the total work.

B. Set frames accurately in position and securely attach to supports with face panels plumb or level in relation to adjacent finish surfaces.

C. Adjust hardware and panels after installation for proper operation.

SECTION 08 33 23
Overhead Coiling Doors

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Coiling insulated service doors.

2. 45 minute rated interior overhead doors between garage and repair bay.

3. Hardware and accessories.

4. Motor operation.

B. Related Sections

1. Door Hardware - Section 08 71 00.

2. Painting and Finishing - Section 09 90 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Provide each overhead coiling door as a complete unit produced by one manufacturer, including hardware, accessories, mounting and installation components.

C. Provide each type of overhead coiling door by one manufacturer for entire project.

D. Wind Loading: Design and reinforce exterior overhead coiling doors to withstand a thirty (30) lb. per square foot wind loading pressure, unless otherwise indicated.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Submit manufacturer's product data, roughing-in diagrams, and installation instructions for each type and size of overhead coiling door. Include operating instructions and maintenance information.

B. Shop Drawings: Submit shop drawings for components and installations that are not fully dimensioned or detailed on manufacturer's product data sheets.

C. Samples: Submit six (6) inches square samples of each required finish. Prepare samples on metal of same gauge and alloy to be used in work. Where normal color and texture variations are to be expected, include two (2) or more units in each sample showing limits of such variation.

PART II - PRODUCTS

2.1 MANUFACTURER

Basis of Design: Subject to compliance with requirements, provide McKeon Door Company; power-operated Climateguard, IS3000 Series, Model IS3018-ADF-G (Heavy Duty / High Cycle) overhead coiling insulated service doors or comparable product by one of the following:

1). Overhead Door Corp.
2). Cornell Iron Works Inc.
3). Or approved equal

2.2 MATERIALS

A. Curtain: Shall be assembled of interlocking galvanized steel slats. Slats shall have a combination of endlocks and widlocks locking each end of all alternate slats to act as a wearing surface, maintain slat alignment and retain the curtain in the guides under wind pressure. Curtain shall be formed of 18 gauge front and back panel slats. The void of the curtain slats shall be filled with foamed-in-place polyurethane insulation and the front and back panel slats must have a positive interlock. Slats with snap-in back panels are not acceptable.

1. Slats: Cross section not less than 3" high by 1" deep.

2. Minimum R value for slat shall be 8.0 as calculated using the ASHRAE Handbook of Fundamentals.

B. Bottom Bar: Two (2) angles, each not less than 2" x 2" x 3/16". per DSNY Guidelines.

1. Bottom 6" strip of door should be painted OSHA safety orange, per DSNY Guidelines.

2. Bottom bars should be equipped with weather stripping and extends to the guides.

C. Guides: Each guide assembly shall be fabricated of a minimum 4" x 4" steel support angle, a 2 1/2" x 4" inner guide angle and a 4" x 4" outer guide angle. Guides shall be designed with integral windbars in order to engage and retain the curtain under heavy wind pressures. Provide neoprene weather seals extending the full height of both guides.

D. Mounting Brackets: Fabricated of hot rolled 3/16" steel plate minimum, brackets shall be provided to house ends of the counterbalance barrel assembly.

E. Hood: Shall be provided to entirely enclose curtain and counterbalance barrel assembly. Hood shall be fabricated 22 gauge galvanized steel and designed to match brackets. Top and bottom shall be bent and reinforced for stiffness. Provide internal neoprene air baffle to minimize air infiltration at the head.

F. Counterbalance Assembly: Coiling insulated service door shall be counterbalanced by means of adjustable steel helical torsion springs attached to shaft enclosed in pipe with required mounting blocks or rings for attachment of curtain. Grease sealed bearings or self-lubricating graphite bearings shall be attached to the spring barrel which shall be fabricated of hot formed structural quality carbon steel seamless pipe.

G. Electric Motor Operator: Coiling insulated service door shall be provided with a direct drive power unit. The operator shall not utilize any drive chains between the door's inner shaft and the motor operator, the drive shaft of the door shall run directly into the gearbox of the operator without the use of any drive chains or drive sprockets. High efficiency helical gearing running in an oil bath shall be furnished together with a rectifier-operated brake completely housed to protect against damage, dust, and moisture. An efficient overload protection device, which will break the power circuit and protect against damage to the motor windings shall be integral with the unit. The motor operator shall be designed to operate the door at an average speed of 6" per second. Operator is to be NEMA type 1 enclosure.

1. Motor: Shall be intermediate duty, thermally protected, ball bearing type with a class A or better insulation. Horsepower of motor is to be 3/4hp minimum or of manufacturer's recommended size, whichever is greater.

2. Starter: Shall be size "0" magnetic reversing starter, across the line type with mechanical and electrical interlocks, with 10 amp continuous rating and 24 volt control circuit.

3. Reducer: Heliacal gear type, 75% efficiency minimum.

4. Brake: Magnetically activated, integral within the operator's housing.

5. Control Station: Provide surface mount push button control station marked open, close and stop.

H. Obstruction Sensing Device: The coiling insulated service door shall be designed with an obstruction sensing safety edge. In the event that the safety edge meets an obstruction during the normal closing operation, the coiling insulated service door shall stop, reverse and return to the open position.

I. Finish: After completion of fabrication, clean all metal surfaces to remove dirt and chemically treat to provide for paint adhesion. Curtain assembly is to receive a prime coat finish of .2 mils of epoxy primer and .8 mils of polyester paint in manufacturer's standard gray finish.

J. Vision Panels: Approximately 10" by 1-5/8" openings spaced approximately 2" apart and beginning 12" from end guides; in rows of slats at height indicated on Drawings; installed with insulated vision panel glazing.

K. Door Finish

1. Baked-Enamel or Powder-Coated Finish: Color as indicated on drawings, or if not indicated, as selected by Commissioner from manufacturer's full range.
2. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.
3. Interior and exterior faces of curtain slats within 12 inches of floor to be painted OSHA Orange.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install door assemblies at locations shown in perfect alignment and elevation, plumb, level, straight and true.

B. Adjust door installation to provide uniform clearances and smooth non-binding operation.

C. Install wiring in accordance with the 2014 New York City Building Code and the National Electrical Code Standard. Materials shall be UL listed.

END OF SECTION 08 33 23

SECTION 08 33 24
Roll-Up Doors

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes rubber rapid roll-up door assembly.

B. Related Sections

1. Door Hardware - Section 08 71 00.

2. Painting and Finishing - Section 09 90 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Shop Drawings

1. Indicate each type of door arrangement of hardware, required clearances, electrical characteristics including voltages, size of motors, auxiliary controls and wiring diagrams.

2. Indicate assembly details and dimensions of fabrication, required clearances and electrical connections.

B. Samples: Submit six (6) inches square samples of each required finish. Prepare samples on metal of same gauge and alloy to be used in work. Where normal color and texture variations are to be expected, include two (2) or more units in each sample showing limits of such variation.

PART II - PRODUCTS

2.1 ROLL-UP DOOR ASSEMBLY

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Rubber roll-up door assembly shall be Model HDXL Door System by TNR Industrial Doors
   2. Applied Handling - PerforMax MaxPower
   3. PerforMax Global
   4. Rytec
   5. Or approved equal

B. Rolling door shall have a guide and curtain lock retention system to provide a near airtight seal and knock-away feature for easy reassembly upon impact. After accidental impact, door must be capable of reset from ground level without the use of ladders, tools or lift equipment.

2.2 MATERIALS

A. Curtain

   1. Two (2) layers of Styrene Butadiene Rubber (SBR) each 1/8" thick, 70 durometer; sandwiched with 1-ply, 110 lbs. polyester cord center. Material shall provide normal resiliency and flexibility at temperatures ranging from -40° F to +180°F.

   2. Retention System: Provide molded curtain locks that are mechanically attached to the vertical edges of the curtain material. This retention system maintains and holds the curtain in guides under extreme windload conditions. Continuous glued SBR windlock or molded-in place Teflon windlock designs will not be accepted.

   3. Color: Black

B. Guides

   1. Side Curtain Retention: Guides shall be one-piece extruded aluminum to form a slot of sufficient depth to allow the retention system to move freely in the guides at all times. Aluminum members shall be of sufficient thickness and rigidity to maintain the retention system within the guides during normal operation while enabling the retention system to release during impacts.

   2. Steel guides (bolted or spring-loaded) will not be accepted.

   3. Side Frame: Provide mounting steel channel assembly for installation directly onto concrete or steel door framing.

C. Bottom Rail

   1. Bottom bar shall extend the full width of the curtain, sufficient to maintain the bottom edge of the curtain parallel to the door threshold at all times. The bottom bar shall be constructed of two steel angles bolted together and shall have a knock-away section to reduce risk of damage during accidental impacts.

2. Knock-away bottom bar shall be able be reset without the need to open side frames. Single angle design will not be accepted.

D. Roll-Up Door System

1. Curtain shall be rolled on a barrel of sufficient size to carry the door load with a deflection of not more than .03" per foot of opening width and shall be evenly balanced by 50,000 cycle oil-tempered, helical outboard torsion springs. Both the drive barrel shafts shall be constructed of minimum 2 1/2" C1018 cold rolled steel shafts.

2. Idler barrel shall be constructed of 6 5/8" O.D. round H.S.S. structural tubing with a minimum wall thickness of .188" and supported by 1 1/2" C1018 Cold Rolled steel shafts at either end. Idler must be guide mounted, not end bracket mounted, for proper tracking of curtain into guides.

3. End brackets are constructed of 1/2" hot-rolled steel plate c/w sealed, heavy-duty, self-aligning bearings with cast iron housings to support the drive barrel. Bearings shall be load-rated at 11023 lbs. dynamic and 6614 lbs. static.

4. Welded truss shall brace endplates together at the top and bottom with 2"x4"x.188" HSS and 2"x1"x.125" HSS diagonal bracing.

E. Reversing Edge: Door shall be equipped with reversing sensing edge to stop and reverse door to manufacturer's standard. A 1/8" thick EPDM rubber loop shall wrap the reversing edge. Both the reversing edge and rubber loop must be replaceable without removing the bottom bar from the curtain.

F. Accessories: Radio controls, motion sensors, loop detectors, pull cords, traffic lights etc. as selected by the Commissioner.

G. Construction

1. Doors: Constructed of steel, aluminum and SBR rubber/woven curtain.

2. Structural elements: Assembled by welding or by mechanical fasteners.

H. Operation of Door: Doors shall be equipped for operation by:

1. Electric operator

2. Manual chain hoist

I. Manual Operation

1. Provide emergency manual chain hoist to allow manual door operation.

2. Chain hoist shall be of sufficient capacity to operate a door at a maximum pull requirement of 20 to 30 lbs. The static load on the hand chain to hold the door in any position must not exceed 11 lbs.

J. Electrical Operation

1. Electric door operators shall be CSA/UL approved, heavy-duty gearhead type c/w pre-wired, number coded control cabinet as required, to manufacturer's standard. Panel enclosure to NEMA-4 rating.

2. Motor shall be T.E.F.C., high-starting torque, flange and foot mount, hoist-type, operating through a parallel helical gear reducer mechanism. The gear reducer shall be mounted on a heavy-duty base of 5/16" steel.

3. Motor and sprocketing shall be of capacity to open door at maximum speeds of up to 12" per second, depending on door size to manufacturer's standard, rated for X-HP power, "X" Voltage, "X"- phase, "X" Hz.

4. Operator shall be equipped with rotary screw-type limit switches to control open and close door positions as well as an electro mechanical brake system to stop and hold door in any position to manufacturer's standards.

5. Operator shall be equipped with built-in manual emergency chain hoist. Built-in electrical interlock shall prevent motor operation during use of manual chain hoist.

K. Control Panel: Panel enclosure shall be NEMA-4. Wiring shall be completed by manufacturer and shall be UL listed. Drive system shall be controlled by programmable logic controller (PLC). Control panel shall have adjustable closing timer, three push buttons for open, close and stop functions and a cycle counter.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install doors in accordance with manufacturer's printed instructions.

B. Install electrical motors, controller units, push-button stations and other electrical equipment required for door operation.

C. Upon completion of the door and electrical installation, make necessary adjustments to the door to ensure smooth operation.

END OF SECTION 08 33 24

SECTION 08 40 01
Glazed Storefronts and Curtain Wall System

PART I - GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements

1. Refer to DDC General Conditions.

   a. Section 01 33 00 – Submittal Procedures.

   b. Section 01 81 13.04 – Sustainable Design Requirements for LEED v4 Buildings.

1.2 SUMMARY:

A. Refer to Building Enclosure System Matrix for a description of the systems included in this Section as well as the requirements listed there.

B. For all Work described, supply and install the following components and their subcomponents of the work required to provide a complete system, including but not limited to the following:

1. Glass and glazing.
2. Framing systems which may include aluminum framing with steel stiffeners.
3. Back pans and insulation.
4. Sealants and gaskets.
5. Fixings and fastenings.
6. Flashings.
7. Finishes, coatings, and surface treatments.
8. Extruded aluminum trim.
9. Anchors and inserts used to attach to building structure.

   a. Supply any anchors and/or inserts to be cast or fabricated into/onto the building structure by others.

   b. Survey anchor locations prior to concrete placement.

10. Perimeter firesafing and smoke seal at interfaces with slab.

11. Penetrations for other services.

12. Pre-construction mockups, Samples, and testing.

13. Field testing.

C. This Section requires Engineering Services.

D. The work in this Section incorporates the work of the following Sections. Requirements specified in this Section are in addition to those in the following Sections:

1. Section 07 27 01 – Weather Resistive Barriers.

2. Section 07 42 14 – Metal Panels.

3. Section 07 62 01 – Facade Sheet Metal Flashings.

4. Section 07 84 13 – Firestops and Smokeseals.

5. Section 07 92 01 – Exterior Joint Sealants.

6. Section 08 71 00 – Door Hardware.

7. Section 08 71 01 – Door Hardware Schedule.

8. Section 08 80 00 – Exterior Glazing.

E. The following Sections describe systems that are adjacent to that of this Section, and will require coordinated interfaces:

1. Section 02 01 02 – Vapor Barrier Installation.

2. Section 03 30 00 – Cast-in-Place Concrete.

3. Section 03 45 00 – Architectural Precast Concrete.

4. Section 04 20 00 – Unit Masonry.

5. Section 05 12 00 – Structural Steel.

6. Section 05 40 00 – Cold-Formed Metal Framing.

7. Section 05 50 00 – Miscellaneous Metals.

8. Section 07 00 01 – Rainscreen System.

9. Section 07 13 26 – Sheet Membrane Waterproofing.

10. Section 07 20 00 – Thermoplastic Membrane Roofing System.

11. Section 07 95 00 – Expansion Control.

F. Reference Documents

1. Building Enclosure System Matrix: Refer to Drawing EN1-003.

2. Samples Matrix: Refer to Drawing EN1-003.

3. Exterior Glass Type Matrix: Refer to Drawing EN1-003.

1.3 REFERENCE STANDARDS AND REGULATIONS:

A. Refer to DDC General Conditions.

B. The Contractor's engineering, materials, and workmanship shall comply with 2014 New York City Building Code and 2016 New York City Energy Conservation Code. Where their recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Document shall take precedence.

C. Comply with the applicable provisions and recommendations of the standards listed below. Where standards conflict with each other or with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted, the latest editions of the standards shall apply:

1. American Architectural Manufacturers Association (AAMA)

   a. AAMA CW-DG-1 – Aluminum Curtain Wall Design Guide Manual.

   b. AAMA CW-10 – Care and Handling of Architectural Aluminum from Shop to Site.

   c. AAMA IPCB – Standard Practice for the Installation of Windows and Doors in Commercial Buildings.

   d. AAMA MCW-1 – Metal Curtain Wall Manual.

   e. AAMA TIR-A9 with amendments – Design Guide for Metal Cladding Fasteners.

   f. AAMA VOL-1 – Windows and Doors.

   g. AAMA WSG – Window and Door Selection Guide.

   h. AAMA 101 – Voluntary Specifications for Aluminum, Vinyl (PVC), and Wood Windows and Glass Doors.

   i. AAMA 501.1 – Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors Using Dynamic Pressure.

   j. AAMA 501.2 – Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems.

   k. AAMA 501.4 – Recommended Static Test Method for Evaluating Curtain Wall and Storefront Systems Subjected to Seismic and Wind Induced Interstory Drifts.

   l. AAMA 501.5 – Test Method for Thermal Cycling of Exterior Walls.

   m. AAMA 501.6 – Recommended Dynamic Test Method for Determining Seismic Drift Causing Glass Fallout from a Wall System.

n. AAMA 501.7 – Recommended Static Test Method for Evaluating Windows, Window Wall, Curtain Wall and Storefront Systems Subjected to Vertical Inter-Story Movements.

o. AAMA 502 – Voluntary Specification for Field Testing of Newly Installed Fenestration Products.

p. AAMA 503 – Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls, and Sloped Glazing Systems.

q. AAMA 513 – Standard Laboratory Test Method for Determination of Forces and Motions Required to Activate Operable Parts of CW and AW Class Operable Windows, Sliding Glass Doors and Terrace Doors in Accessible Spaces.

r. AAMA 611 – Voluntary Specification for Anodized Architectural Aluminum.

s. AAMA 910 – Voluntary "Life Cycle" Specifications and Test Methods for Architectural Grade Windows and Sliding Glass Doors.

t. AAMA 2605 – Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.

2. Aluminum Association (AA)

a. AA Aluminum Standards and Data.

b. AA ADM-1 – Aluminum Design Manual.

3. American Institute of Steel Construction (AISC)

a. AISC Steel Construction Manual.

b. AISC 303 – Code of Standard Practice for Steel Buildings and Bridges.

4. American Society of Civil Engineers (ASCE)

a. ASCE 7 – Minimum Design Loads for Buildings and Other Structures.

5. American National Standards Institute (ANSI)

a. ANSI/ICC A117.1 – Accessible and Usable Buildings and Facilities.

b. ANSI Z97.1 – Safety Glazing Materials Used in Buildings – Safety Performance Specifications and Methods of Test.

6. American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE)

a. ASHRAE 90.1 – Energy Standards for Buildings Except Low-Rise Residential Buildings.

b. ASHRAE Fundamentals Handbook.

7. ASTM International (ASTM)

a. ASTM A36/A36M – Standard Specification for Carbon Structural Steel.

b. ASTM A108 – Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.

c. ASTM A123/A123M – Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

d. ASTM A153/A153M – Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

e. ASTM A240/A240M – Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

f. ASTM A276 – Standard Specification for Stainless Steel Bars and Shapes.

g. ASTM A307 – Standard Specification for Carbon Steel Bolts and Studs, and Threaded Rod 60,000 PSI Tensile Strength.

h. ASTM A325 – Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.

i. ASTM A370 – Standard Test Methods and Definitions for Mechanical Testing of Steel Products.

j. ASTM A380 – Standard Practice for Cleaning, Descaling, and Passivation of Stainless Steel Parts, Equipment, and Systems.

k. ASTM A500 – Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

l. ASTM A572/A572M – Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.

m. ASTM A582 – Specification for Free-Machining Stainless and Heat-Resisting Steel Bars.

n. ASTM A653/A653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

o. ASTM A780/A780M – Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

p. ASTM A923 – Standard Test Methods for Detecting Detrimental Intermetallic Phase in Duplex Austenitic/Ferritic Stainless Steels.

q. ASTM A967 – Standard Specification for Chemical Passivation Treatments for Stainless Steel Parts.

r. ASTM A992 – Standard Specification for Structural Steel Shapes.

s. ASTM A1008/A1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.

t. ASTM A1011/A1011M – Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

u. ASTM B26/B26M – Standard Specification for Aluminum-Alloy Sand Castings.

v. ASTM B85/B85M – Standard Specification for Aluminum-Alloy Die Castings.

w. ASTM B108/B108M – Standard Specification for Aluminum-Alloy Permanent Mold Castings.

x. ASTM B117 – Standard Practice for Operating Salt Spray (Fog) Apparatus.

y. ASTM B209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

z. ASTM B221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

aa. ASTM B308/B308M – Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles.

bb. ASTM B429/B429M – Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.

cc. ASTM B449 – Standard Specification for Chromates on Aluminum.

dd. ASTM B912 – Standard Specification for Passivation of Stainless Steels Using Electropolishing.

ee. ASTM C509 – Standard Specification for Elastomeric Cellular Preformed Gasket and Sealing Material.

ff. ASTM C612 – Standard Specification for Mineral Fiber Block and Board Thermal Insulation.

gg. ASTM C864 – Standard Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers.

hh. ASTM C1087 – Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems.

ii. ASTM C1115 – Standard Specification for Dense Elastomeric Silicone Rubber Gaskets and Accessories.

jj. ASTM C1193 – Standard Guide for Use of Joint Sealants.

kk. ASTM C1401 – Standard Guide for Structural Sealant Glazing.

ll. ASTM D523 – Standard Test Method for Specular Gloss.

mm. ASTM D1400 – Standard Test Method for Nondestructive Measurement of Dry Film Thickness of Nonconductive Coatings Applied to a Nonferrous Metal Base.

nn. ASTM D2244 – Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.

oo. ASTM D3363 – Standard Test Method for Film Hardness by Pencil Test.

pp. ASTM D4214 – Standard Test Methods for Evaluating the Degree of Chalking of Exterior Paint Films.

qq. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Building Materials.

rr. ASTM E90 – Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

ss. ASTM E136 – Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C.

tt. ASTM E283 – Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

uu. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

vv. ASTM E331 – Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

ww. ASTM E413 – Classification for Rating Sound Insulation.

xx. ASTM E488 – Standard Test Methods for Strength of Anchors in Concrete Elements.

yy. ASTM E754 – Standard Test Method for Pullout Resistance of Ties and Anchors Embedded in Masonry Mortar Joints.

zz. ASTM E783 – Standard Test Method for Field Measurement of Air Leakage Through Installed Exterior Windows and Doors.

aaa. ASTM E1332 – Standard Classification for Rating Outdoor-Indoor Sound Attenuation.

bbb. ASTM F593 – Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.

ccc. ASTM F594 – Standard Specification for Stainless Steel Nuts.

ddd. ASTM F3125 – Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions.

8. American Welding Society (AWS)

a. AWS A5.10 – Specification for Bare Aluminum and Aluminum-Alloy Welding Electrodes and Rods.

b. AWS D1.1 – Structural Welding Code – Steel.

c. AWS D1.2 – Structural Welding Code – Aluminum.

d. AWS D1.3 – Structural Welding Code – Sheet Steel.

e. AWS D1.6 – Structural Welding Code – Stainless Steel.

9. Code of Federal Regulations (CFR)

a. 16 CFR Part 12 – Safety Standard for Architectural Glazing Materials.

10. Glass Association of North America (GANA)

a. GANA Glazing Manual.

11. International Organization for Standards (ISO)

a. ISO 2815 – Paints and Varnishes – Buchholz Indentation Test.

b. ISO 3231 – Paints and Varnishes – Determination of Resistance to Humid Atmospheres Containing Sulfur Dioxide.

12. National Association of Architectural Metal Manufacturers / National Ornamental & Miscellaneous Metals Association (NAAMM/NOMMA)

a. NAAMM/NOMMA 500-06 – Metal Finishes Manual for Architectural and Metal Products.

13. National Fenestration Rating Council (NFRC)

a. NFRC 100 – Procedure for Determining Fenestration Product U-Factors.

b. NFRC 200 – Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.

c. NFRC 400 – Procedure for Determining Product Air Leakage.

14. National Fire Protection Association (NFPA)

a. NFPA 259 – Standard Test Method for Potential Heat of Building Materials.

b. NFPA 268 – Standard Test Method for Determining Ignitibility of Exterior Wall Assemblies Using a Radiant Heat Energy Source.

c. NFPA 285 – Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.

15. Society for Protective Coatings (SSPC)

a. SSPC-Paint 42 – Epoxy Polyamide/Polyamidoamine Primer, Performance-Based.

b. SSPC-PS Guide 12 – Guide to Zinc-Rich Systems.

c. SSPC-PS 28.01 – Two-Coat Zinc-Rich Polyurethane Primer / Aliphatic Polyurea Topcoat System, Performance-Based.

d. SSPC-PS 28.02 – Three-Coat Moisture-Cured Polyurethane Coating System, Performance-Based.

16. Safety Glazing Certification Council (SGCC).

17. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA).

a. SMACNA Architectural Sheet Metal Manual.

1.4 PERFORMANCE REQUIREMENTS:

A. General Prescriptive Requirements

1. For all elements outside of the vapor barrier plane, use materials suitable for external conditions that will not deteriorate as a result of weathering:

a. Elements shall resist the deleterious effects of water, cleaning agents, temperature variations expected from the specified temperature ranges, gaseous pollutants (including ozone), weak acids deriving from gaseous pollutants dissolved in water, and ultraviolet (UV) radiation exposure during installation and in service.

b. Include separators to prevent bimetallic corrosion.

c. Use suitable grade of stainless steel for all fasteners outside of or through the vapor barrier.

1) Seal all fasteners that penetrate through air or vapor barrier with material chemically compatible with the fastener and adjacent materials.

d. Use suitable grade of stainless steel or aluminum for all brackets outside the vapor barrier.

e. Do not use different metals for significant structural connections that occur outboard of the vapor barrier plane unless:

1) The connection can incorporate dielectric separators.

2) The connection can be fully inspected after installation is complete using the Project's maintenance access system.

2. Use materials in the Work chemically compatible with adjacent materials.

a. Where flexible or sheet vapor control materials are connected together or to other systems, lap and continuously seal with chemically compatible materials and mechanically restrain.

3. Where insulation must be locally reduced in thickness, provide high-performance insulation to match the overall performance of the surrounding insulation.

4. Site-applied Sealant is not acceptable as part of the primary Waterproofing System unless shown on the Architectural Drawings or noted within this Section.

5. Engineer the air / vapor barrier system to resist the maximum design wind load.

6. Do not use Glazing to provide lateral support to framing members.

7. Provide laminated Glass where indicated and under the following conditions:

   a. Vertical Glazing with unsupported edges.

8. All external areas of the Work shall be accessible for maintenance and repair.

   a. Adjust loads imposed on the Work as necessary for the type and orientation of maintenance equipment anticipated. The Work shall sustain safely, and without damage, access and specified maintenance loads.

   b. All gaskets, shall be accessible for inspection / replacement.

B. General Performance

1. Comply with performance requirements specified herein, and as validated by pre-construction mockup testing as described in Section 01 43 39 – Facade Mockup Testing and Samples.

2. Work shall:

   a. Withstand and accommodate the stresses and movements induced by the specified cambers, estimated deflections, relative deflections, and the long-term movements associated with settlement of the foundations, or any other movements of the structure, changes in temperature, moisture content, and chemical changes.

   b. Include suitable allowances for the specified construction tolerances.

   c. Withstand the specified deleterious and degrading effects of radiation from the sun, weathering, atmospheric pollution, vermin, fungi, and other growths for the required service life without maintenance in excess of routine cleaning and minor repairs.

   d. Have resistance to combustion and fire spread appropriate to each part.

   e. Prevent casual and unlawful entry into the building.

   f. Cleaning and maintenance of the Work shall be carried out easily, without interfering the function of the building.

   g. Panels, Glazing beads, structural silicone assemblies, and decorative capping pieces shall remain securely held and gaskets shall not be displaced.

3. Failure includes the inability of the Work to meet the performance requirements set forth in this Section, in addition to the following:

   a. Noise or vibration created by wind, and thermal and structural movements.

   b. Secondary Glass damage and/or damage due to falling components of the Work.

   c. Staining of adjacent components or wetting of interior building components.

C. Detailed Engineering Principles

1. This system shall be:

a. Engineered as a manufacturer's standard, fully framed, and factory installed aluminum curtain wall system.

1) Mechanically restrained glazing and panels shall have the pressure cap separated from the face of the glazing by gaskets. Mechanically attach decorative pressure cap covers to pressure caps.

b. Pressure equalized to the back of the glazing pocket.

c. Incorporate a secondary drainage system behind the weathering seals that drains to the outside via a baffled weep path. This system shall:

1) Allow complete drainage of water from rebates to outside.

2) Prevent standing water on or around the edge of insulated glazed units, panes, and Panels.

3) Allow ventilation of the edges of the glazed units.

d. Incorporate a continuous internal air seal and vapor barrier that shall also act as second line of defense against water ingress.

1) All interfaces with adjacent systems shall accommodate the integration of the transitional waterproofing, air and vapor barrier into the Glazing pocket of the framing system. This integration shall provide for a continuous air and vapor system from the Glazing system to that of adjacent systems. Machine manufacturer's standard extrusions as required to make a continuous seal.

e. Provide the following when all tolerances are accommodated and the most onerous combination of movements occur (including wind sway):

1) Sufficient edge cover on all Glazed units and Panels to maintain weathering and structural performance around their perimeter.

2) Clearance to edges of all Glass panes or Panels of at least 1/8 in. everywhere around their perimeter.

f. Incorporate thermal isolation devices / thermal breaks to minimize thermal bridging.

g. Capable of being re-glazed from outside of the building.

h. Sealed with gaskets at joints between horizontal and vertical framing members.

D. Structural Performance

1. The Work shall transmit the design loads as specified below to the building structure via the points of attachment as engineered and built, with an adequate margin of safety appropriate to each material and product as required by 2014 New York City Building Code and the listed Reference Standards.

2. As required by 2014 New York City Building Code, the various load cases and combinations of load cases acting on structural elements shall be considered.

a. No permanent deformation or damage to any components of the Work, adjacent elements, or supporting structure shall be accepted under any of the above load cases and combinations of load cases, excluding blast and impact loads.

b. Where steel stiffeners are used, they shall be engineered for deflection control only. Aluminum framing shall be engineered for the full strength requirements of the system.

c. Consider buckling and overall structural system stability in the engineering of all elements. Engineer framing members and systems not to buckle under the design load cases and their combinations.

3. Coordinate all loads imposed on the building structure with the Commissioner.

4. Coordinate and verify access and maintenance loads with the maintenance equipment manufacturer / City of New York. Loads shall not be less than 2014 New York City Building Code or the following, whichever is greater and shall be applied to any external or internal surface of the Work which is subject to access for maintenance purposes:

a. A vertical uniformly distributed load of 12.5 lbf per square foot, and a concentrated load of 250 lbf acting on a 6 in. diameter contact area applied to any gutters, copings, or flat and near-flat surfaces with horizontal projections greater than 6 in.

b. A 115 lbf load applied horizontally through a 6 in. diameter contact area on any vertical or near-vertical building enclosure surface required to support a ladder.

c. 600 lbf in any direction at building maintenance equipment restraint points.

d. Where maintenance and safety ropes will be draped over elements of the Work, engineer those elements to support, without damage, a point load of 675 lbf or the anchorage load limits provided, applied over the length of contact of the cladding.

E. Movement Performance

1. The Work shall accommodate movements developed by the building structure without any reduction in the performance below the minimum levels required herein. This includes but is not limited to:

a. Movements due to design gravity and live loads.

b. Movements under repeated cycles of the design wind loads.

c. Movements due to seismic loads.

d. Changes in dimension and shape arising from specified building movements, including settlement, shrinkage, elastic shortening, floor beam deflections, creep, wind sway, twisting and racking, and thermal and moisture movement. These include, but are not limited to, movements due to any joint in the supporting structure or building frame.

2. Coordinate all building movement assumptions with the Commissioner and as per the Structural Drawings.

3. Applicable Testing Requirements

a. Interstory Drift Performance

1) The Work shall demonstrate compatibility with the building structure interstory drifts when tested to the procedures outlined in AAMA 501.4 at the design displacement, and for not less than ten (10) full cycles.

b. Interstory Deflection Performance

1) The Work shall demonstrate compatibility with the building structure vertical live load deflections when tested to the procedures outlined in AAMA 501.7 at the design displacement, and for not less than ten (10) full cycles.

F. Deflection Performance

1. Provide Work that accommodates the dimensional construction tolerances of building structure and other adjacent constructions.

2. Under design loads and their combinations, deflections of elements shall be less than either the requirements of 2014 New York City Building Code or as follows, whichever is lesser:

a. Normal to the face of the wall plane:

1) Elements Supporting Insulated Glazing: Less than L/175 for spans less than or equal to 13 ft-6 in., or less than L/240 +1/4 in. for spans larger than 13 ft-6 in. whereby L is the length of the supported edge of the glazing.

2) Elements Supporting Plaster, Masonry, or Brittle Items: Less than span/500.

3) Non-Glass Supporting Elements: Less than Span/175.

b. Parallel to the face of the wall plane, limited to the lesser amount of either:

1) That which reduces glazing bite to less than 75% of the design dimension.

2) That which reduces edge clearance between framing members and glazing or other fixed components to less than 25% of the design dimension or 1/8 in., whichever is greater.

c. Engineer cantilevered elements to deflect less than 2L/175, where L represents the length of the cantilevered element.

d. Engineer operable units and adjacent framing to accommodate in-service deflections with a minimum of 1/16 in. clearance between fixed and operable portions of the framing.

3. The Work shall accommodate thermal deflections and movements resulting from the following maximum change (range) in ambient and surface temperatures. Changes in dimension resulting from changes in temperature in any of its parts, its supporting framework, and brackets shall not result in any reduction in the specified performance.

4. Base engineering calculation on surface temperatures of materials due to both solar heat gain and night-time-sky heat loss. As per AAMA 501.5, all system components shall noiselessly withstand

thermal movements and shall not buckle, distort, crack, cause failure of glass and/or joint seals, or develop undue stresses on the finished surfaces, materials, fixing assemblies, or building structure.

a. Engineer Work to meet these requirements under the following conditions:

1) Total temperature range: 120°F, ambient; 180°F, material surfaces.

2) Test interior ambient air temperature: 70°F.

5. The Work shall accommodate deflections and/or movements resulting from moisture without any reduction in the specified performance. This includes, but is not limited to:

a. Changes in moisture content of Work components, including those due to wetting from rain.

b. Expansion of absorbed or retained moisture due to freezing.

6. The Contractor shall avoid in its engineering and detailing introducing locked-in stresses that may be detrimental to the performance of the Work during the service life.

a. Stresses include, but are not limited to, those that can develop in an individual Panel if the various fasteners and connections securing it in position are so rigid that they do not allow for thermal or other movement in that Panel.

7. Applicable Testing Requirements

a. Uniform Load Structural Deflection Performance

1) The Work shall demonstrate compliance with the deflection criteria listed in this Section when tested according to ASTM E330.

b. Uniform Ultimate Load Structural Deflection Performance

1) The Work shall not show evidence of material failures, structural distress, or permanent deformation exceeding 0.2% of span when tested according to ASTM E330 at 150% of the peak design load (positive or negative).

G. Weatherproofing Performance

1. The Work, including all joints between it and other elements of Work, shall prevent leakage of water into the interior of the building from the weathering line of the assembly, under the action of wind pressure, kinetic energy, gravity, surface tension, or capillary action. It shall also prevent water entering into those parts of the Work that would be adversely affected by the presence of water.

a. All joints within the Work shall maintain their watertightness under the loads and movements specified herein.

b. The weathering principles incorporated within the Work and interfacing with adjacent elements of Work shall be compatible with the weathering principles adopted by the adjacent elements.

c. Detailing and waterproofing must ensure that water from ponding or reservoirs is directed away from the Work such that water will not build up a pressure head or impose forces onto the building enclosure seals and components.

d. Detailing must ensure that water collected within Work elements is positively drained to the outside of the Work.

1) The drainage of water along edge seals of insulated glazed units is not permitted unless written confirmation is provided by the unit manufacturer stating that the design life, required service life, and warranty of the unit is unaffected.

2. Incorporate elements and details in the Work to provide a continuous vapor barrier system.

a. Engineer elements to the exterior of the vapor barrier plane so they are suitable for exterior conditions and experience weathering without any loss in performance as specified.

1) No element of the Work shall be encapsulated between two vapor barrier planes.

b. Vapor control elements shall maintain their performance and properties for the expected service life of the system.

c. Where vapor control elements will be exposed to the interior conditions during construction, select suitable materials to ensure elements are not easily damaged during the installation of the Work or adjacent constructions.

1) Easily damaged materials include, but are not limited to, foil facing attached to other products, including insulation.

3. Applicable Testing Requirements

a. Static Pressure Water Infiltration

1) The Work shall demonstrate compliance with the weatherproofing performance criteria when tested according to ASTM E331 at a minimum static air pressure differential of 20% of the peak positive wind load design pressure, but not less than 15 psf.

2) No evidence of water infiltration inboard of the weathering line plane when tested.

b. Dynamic Pressure Water Infiltration

1) The Work shall demonstrate compliance with the weatherproofing performance criteria when tested according to AAMA 501.1 at a minimum static air pressure differential of 20% of the peak positive wind-load design pressure, but not less than 15 psf.

2) No evidence of water infiltration inboard of the weathering line plane when tested.

H. Energy Performance

1. Work and components shall have certified energy performance ratings as determined by the standards referenced by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

2. Incorporate thermal breaks in the Work.

3. The design environmental conditions are:

a. Exterior extreme annual dry bulb temperature and coincident wind speed:

1) Maximum Dry Bulb: 95.6°F at 6 mph.

2) Minimum Dry Bulb: 2.3°F at 6 mph.

b. Interior design dry bulb temperature, relative humidity (RH), and interior air film coefficient:

1) 72°F ± 2°F at 25% to 50% RH and 0.7 Btu/hr - sq ft - °F.

4. Thermal Transmittance (U-Factor)

a. U-factor of the Work shall not be more than specified for each building enclosure system as specified in the Building Enclosure System Matrix.

b. Refer to and coordinate values with the final Glass and Glazing assembly specified in Exterior Glass Type Matrix.

5. Solar Heat Gain Coefficient (SHGC)

a. SHGC of the Work shall not be more than specified for each building enclosure system as specified in the Building Enclosure System Matrix, accounting for all frame effects.

b. Refer to and coordinate values with the final Glass and Glazing assembly specified in Exterior Glass Type Matrix.

6. Visible Light Transmittance (VLT)

a. VLT of the Work shall not be more than specified for each building enclosure system as specified in the Building Enclosure System Matrix, accounting for all frame effects.

b. Refer to and coordinate values with the final Glass and Glazing assembly specified in Exterior Glass Type Matrix.

7. Condensation Resistance

a. Provide systems whose internal condensation and drainage systems will prevent uncontrolled condensation inboard of the vapor barrier plane, under the most onerous environmental conditions specified in this Section.

1) Exterior: Dry bulb 13°F at 17 mph.

2) Interior

a) Dry bulb 72°F at 25% RH and 0.7 Btu/hr - sq ft - °F.

8. Static Pressure Air Infiltration

a. Maximum air leakage through the Work areas of the Project shall be the lesser of the requirements determined according to 2014 New York City Building Code and 2016 New York City Energy Conservation Code or the following:

1) For non-operable portions of the Work, the maximum air infiltration rate shall be one half of that as required and determined according to the standards referenced by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

9. Applicable Testing Requirements

a. Static Pressure Air Infiltration

1) The Work shall demonstrate compliance with the air infiltration criteria listed in this Section when tested according to ASTM E283 and to the pressure differential referenced by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

a) Integrated operable units shall individually from the rest of the system demonstrate compliance with the air infiltration criteria listed in this Section.

I. Fire Performance

1. The Work shall comply with the relevant fire resistance, smoke sealing, and fire stopping recommendations as stated in the 2014 New York City Building Code and 2016 New York City Energy Conservation Code, but not less than the following:

a. ASTM E84: Flame Spread Index must be less than 25, Smoke Developed Index must be less than 450.

b. ASTM D1929: Self-ignition temperature of 650°F or greater.

c. ASTM D635: Requires a CC1 classification.

d. Tested and comply with NFPA 285 acceptance criteria

2. Component materials shall not give off toxic fumes.

J. Lightning Protection and Grounding Performance

1. The Contractor shall coordinate as necessary with the Contractor responsible for the lightning protection and grounding systems as required by 2014 New York City Building Code for the building and shall agree on appropriate connection points with them for review by the Commissioner.

a. No external tapes or visible connections will be accepted.

b. Provide electrically continuous vertical and horizontal metallic framework elements and supporting structures of the building enclosure for the purposes of lightning protection and grounding. Provide bonding of the framework to the rest of the lightning protection and grounding system. Ensure all non-conductive thermal breaks are electrically continuous.

K. Acoustic Performance

1. The Work shall be engineered so as to form a continuous enclosure which achieves the acoustical rating specified. The acoustical rating shall apply to the entire system including all components including, but not limited to, the following:

    a. Glazing.

    b. Framing.

    c. Operable components.

2. The Contractor shall engineer, provide and install any and all upgrades to the framing members so as to achieve the acoustical rating specified. This may include, but is not limited to insulation in framing members, mass damping vinyl (Sound Seal B20 or equal), damping sheets, and supplemental steel or other material to increase the mass of framing. Any such framing upgrades shall be continuous along the entire length and perimeter of the framing and shall be directly adhered to the frame.

3. The Work shall produce no audible whistling, creaking, rattling, or noise otherwise related to movement when subject to design loading conditions. Such noises shall be limited to a maximum of 20 dBa

4. Work shall have sound insulation conforming to specified criteria. Criteria accounts for all framing effects as well as for interfaces with other systems.

5. Sound Transmission Class (STC)

    a. Work shall have a STC of not less than specified in the Building Enclosure System Matrix as determined by ASTM E413.

L. Applicable Testing Requirements

    a. Work shall have an OITC of not less than specified in the Building Enclosure System Matrix and as determined by ASTM E1332.

M. Infestation

1. Engineer materials used in the Work against attack or infestation by micro-organisms, fungi, insects, or other vermin.

N. Operable Unit Performance

1. Operable units shall be glazed into the glazing pocket of Work and shall not compromise the waterproofing, acoustical or thermal performance of the Work.

2. Operable units meeting at a minimum the performance requirements of Class AW operable units as defined by AAMA 101. Where other requirements in this Section conflict with the Class "AW" requirement, the more onerous of the conflicting requirements shall govern.

3. Operable units shall incorporate removable insect screens.

4. Engineer operable units such that all operating parts function normally under specified design loads and do not require excessive force to operate.

a. Excessive force shall be the lesser of the requirements determined by 2014 New York City Building Code or AAMA 101.

5. Applicable Testing Requirements

a. Operating Force

1) The Work shall demonstrate compliance with the operating force requirements specified via testing according to AAMA 513.

b. Life Cycle Testing

1) The Work shall demonstrate compliance with life cycle testing according to the requirements of AAMA 101 when tested to AAMA 910.

O. Door Performance

1. Doors shall be glazed into the Glazing pocket of Work and shall not compromise the waterproofing, acoustical or thermal performance of the Work.

2. Door sill shall accommodate the termination of the adjacent waterproofing system on a vertical surface within the threshold of the Door system.

3. Engineer operable units such that all operating parts function normally under specified design loads and do not require excessive force to operate.

a. Excessive force shall be the lesser of the requirements determined by Code or AAMA 101.

4. Applicable Testing Requirements

a. Operating Force

1) The Work shall demonstrate compliance with the operating force requirements specified via testing according to AAMA 513.

b. Life Cycle Testing

1) The Work shall demonstrate compliance with life cycle testing according to the requirements of AAMA 101 when tested to AAMA 910.

P. Entrance Door Unit Hardware Performance

1. Refer to Section 08 71 00 – Door Hardware and Section 08 71 01 – Door Hardware Schedule for performance requirements.

1.5 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions.

B. Shop Drawings.

C. Calculations

1. Provide structural calculations as required.
2. Provide thermal calculations as required to describe:
    a. U-value, SHGC, and VLT performance of Work.
    b. Condensation resistance of all elements of Work.

D. Testing Reports
1. Weather Test Certificate
    a. Present certificates of weathering performance test results of a completed installation, utilizing a similar system, under similar loads and of similar size and geometry to the Project, demonstrating that performance requirements of Work can be met.

E. Product data.

F. Samples.

G. Quality control plan.

H. Welding certificates.

I. Energy Performance Certificates
1. For Work provide labeled and certified performance from the manufacturer according to the requirements of 2014 New York City Building Code and 2016 New York City Energy Conservation Code and by reference ASHRAE 90.1.
    a. U-value performance shall be certified and labeled per NFRC 100 requirements.
    b. SHGC performance shall be certified and labeled per NFRC 200 requirements.
    c. Static pressure air infiltration performance shall be certified and labeled per NFRC 400 requirements.
2. Indicate whether certification is based on actual test of assembled components or on calculation.
    a. Provide fenestration products with NFRC certified performance values.

J. Product Test Reports
1. Indicating compliance with performance requirements.

K. Quality Control Reports
1. Fabricator reports.
2. Field reports.

L. Completion of Work: Upon completion of installation of the Work, submit written certification that the manufacturer's representative has supervised the work of this Section and that all materials are correctly installed.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Installer Qualifications: The Contractor must be licensed or approved by the manufacturer.

1.7 WARRANTY:

A. Unless stated otherwise in these Specifications, Warranty shall state that the Work is free from defects in materials and workmanship and weathertight for a period of 1 yr from the date of Substantial Completion. Contractor shall agree to promptly repair or replace defective materials and workmanship to "like new condition," including such exploratory work, required to determine the cause, during the Guarantee period, at no additional cost to the City of New York.

B. In addition to Contractor's Guarantee, the paint finish manufacturer shall guarantee the finish for a period of 20 yrs from the date of substantial completion of the Work against defects, including full labor and material.

C. The Contractor shall be responsible for repairing damage to the building and furnishings occasioned by defective materials or workmanship or damage as part of repairs to the Work.

1.8 PROJECT CONDITIONS:

A. Adjacent Trade Shop Drawing Review and Field Measurements: Verify actual locations of structural supports for Work by review of supporting structure Shop Drawings or field measurements before fabrication and indicate measurements on Shop Drawings.

PART II – PRODUCTS

2.1 MANUFACTURERS:

A. Manufacturers are subject to compliance with requirements documented herein.

1. Oldcastle BuildingEnvelope.
2. Wausau Window and Wall Systems.
3. YKK.
4. Or approved equal.

B. Products

1. Subject to compliance with requirements, provide product by one of the following:
   a. Oldcastle BuildingEnvelope Reliance HTC Curtain Wall.
   b. Wausau Window and Wall Systems HP Wall.

c. YKK YCW 750XT.

d. Or approved equal.

2.2 MATERIALS:

A. Aluminum Components

1. Manufacturer's recommended alloy and temper, meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

a. Sheet and Plate: ASTM B209.

b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.

c. Extruded Structural Pipe and Tubes: ASTM B429.

d. Structural Profiles: ASTM B308/B308M.

e. Welding Rods and Bare Electrodes: AWS A5.10 / A5.10M.

B. Steel Components

1. Manufacturer's recommended alloy and temper, meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

a. Structural Shapes, Plates, and Bars: ASTM A36/A36M/A572.

b. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.

c. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.

d. Galvanized Sheet: ASTM A653/A653M.

C. Stainless Steel

1. Manufacturer's recommended alloy and temper, meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

a. Plate, Sheet and Strip: ASTM A240/A240M.

2. With a Pitting Resistance Equivalence Number (PREN) greater than 24.5 calculated using the formula 'PREN = %Cr + 3.3 x %Mo + 16 x %N' based on the minimum compositions for Chromium, Molybdenum, and Nitrogen given in ASTM A240 or equivalent.

3. In areas where stainless steel may be used in proximity to sea spray or salts, the alloy chosen will not corrode or exhibit any surface pitting in its installed condition, or require regular maintenance to prevent corrosion.

a. Use non-austenitic alloys including the following:

1) Duplex stainless steel Type 2205 (UNS S32205).

2) 317L stainless steel (UNS S31703).

2.3 FINISHES:

A. Refer to Building Enclosure System Matrix for finish selection for each system.

B. Aluminum Components

1. Anodized Finish

a. Carry out anodizing under conditions of acceptable good practice for architectural applications. Hold processing conditions constant for the period required for completion of the Work. Keep records of these conditions and make available for inspection in the event of a dispute as to the quality of the finished anodic coating.

b. Clear Anodic Finish: AA-M12C22A41, Class I, 0.71 mil or thicker, as complying with AAMA 611.

c. Color Anodic Finish: AA-M12C22A42/A44, Class I, 0.71 mil or thicker, as complying with AAMA 611.

1) Color: Refer to Building Enclosure System Matrix.

2. High-Performance Organic Finish

a. Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70% PVDF resin by weight in color coat and clear topcoat.

b. Prepare, pretreat, and apply coating to exposed metal surfaces complying with coating and resin manufacturers' written instructions.

c. Color and Gloss: Refer to Building Enclosure System Matrix.

d. Manufacturers are subject to compliance with requirements, provide products by one of the following:

1) PPG Industries Inc., Duranar XL Extrusion Coating

2) Akzo Nobel Coatings Inc., Trinar Ultra TEC/TMC

3) The Valspar Corporation, Fluropon Premiere

4) Or approved equal.

3. Powdercoat Finish

a. Shop-applied Superior Performance powder coating finish for architectural aluminum extrusions complying with AAMA 2605.

b. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

c. Color and Gloss: Refer to Building Enclosure System Matrix.

1) One-coat dry system with 70% fluoropolymer resin, meeting performance requirements of AAMA 2605 and the following:

a) Dry Film Thickness, ASTM D1400: Not less than thickness applied to tested specimens meeting specified performance requirements, and as recommended by manufacturer for application.

b) Specular Gloss, ASTM D523 at 60°: To be coordinated with the Commissioner.

c) Dry Film Hardness, ASTM D3363: Pass.

d) Sulphur Dioxide, ISO 3231 (Kesternich): Pass; no blistering, loss of gloss, or discoloration.

d. Manufacturers: Subject to compliance with requirements provide products by one of the following:

1) Akzo Nobel Coatings Inc., Interpon D3000 Series Fluoromax Powder Coating.

2) PPG Industries Inc., Duranar Powder Coatings.

3) The Jotun Group, Jotun Durasol.

4) Or approved equal.

4. Concealed Components

a. Provide either High-Performance Organic Finish, Powdercoat Finish, or Clear Anodic Finish.

C. Steel Components

1. Zinc coated by hot-dip process according to ASTM A123/A123M, ASTM A653/A653M or ASTM A153/A153M, after fabrication as applicable.

a. Galvanized sheet shall have a minimum coating designation of G90 according to ASTM A653/A653M.

b. Following pickling operations, hold steel at more than 212°F to ensure a uniform temperature, either prior to, or after fluxing.

2. Exposed Components

a. Provide a High-Performance Organic or Powdercoat Finish meeting the requirements specified for Aluminum Components and in accordance with the finish manufacturer's procedures.

3. Concealed Components

a. Use a zinc-rich, corrosion-resistant primer, complying with SSPC-PS Guide applied immediately after surface preparation and pretreatment.

b. Select surface preparation methods according to recommendations in SSPC-PS and prepare surfaces according to applicable SSPC standard.

D. Stainless Steel Components

1. Surface Preparation

a. Remove tool and die marks and stretch lines, or blend into finish.

2. Polished Finishes

a. Grind and polish surfaces to produce uniform finish, free of cross scratches.

b. Run grain of directional finishes with long dimension of each piece.

c. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

3. Finish: Refer to Building Enclosure System Matrix.

E. General

1. Choose finishes such that touch-up finishes match factory finish.

2. Discoloration, fading, chalking, excessive non-uniformity, pitting, cracking, peeling, corrosion, or crazing of finish is not allowed.

3. The terms below used in conjunction with finish Guarantee are defined as follows:

a. "Excessive Fading": Means a change in appearance that is perceptible and objectionable as determined by the Commissioner when viewed visually in comparison with the original color range standards.

b. "Excessive Non-Uniformity": Means non-uniform fading during the Guarantee period to the extent that adjacent parts have a color difference greater than the original acceptable color range.

c. "Will Not Pit or Otherwise Corrode": Means no pitting or other type of corrosion of finish discernible from a distance of 10 ft, resulting from the natural elements in the atmosphere at the Project site.

4. Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D2244.

b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.

c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2.4 FRAMING:

A. Framing members shall comply with the profiles and angles shown in the Architectural Drawings and comply with the performance requirements set forth in these Specifications.

B. Aluminum Framing shall follow the recommendations of the following:

1. AA – Aluminum Design Manual, Aluminum Standards and Data

2. AAMA – Aluminum Curtain Wall Design Guide Manual, Care and Handling of Architectural Aluminum from Shop to Site.

C. Framing shall incorporate profiles to accommodate waterproofing integration at interfaces with adjacent building enclosure systems.

2.5 BRACKETS, FASTENERS AND ANCHORAGE:

A. Fasteners

1. Fastener engineering shall be no less than the most stringent standards as required by 2014 New York City Building Code and its reference standards, or the following requirements:

a. Fastener engineering for aluminum components shall be as per the Aluminum Association Aluminum Design Manual (AA-ADM1).

1) Allowable loads for fasteners shall be the lesser of the fastener manufacturers' requirements or per AAMA TIR-A9 with the most recent amendments.

b. Steel and stainless steel bolts:

1) Carbon Steel Bolts, Studs, and Threaded Rod 60,000 psi Tensile Strength: ASTM A307.

2) Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength: ASTM A3125.

3) Stainless Steel Bolts, Hex Cap Screws, and Studs: ASTM F593.

4) Stainless Steel Nuts: ASTM F594.

c. Fasteners Used in Cast-in-Place Concrete and Concrete Masonry Unit (CMU) Backup Construction

1) Fastener selection and sizing shall be based on applicable ICC-ES Evaluation Reports.

2) Fastener selection and sizing shall be based on testing according to ASTM E488 and ASTM E754 (for CMU construction) with the same backup wall construction used on the Project.

3) Post installed anchors shall be subject to Special Inspections as required by 2014 New York City Building Code.

d. When utilizing a fastener that is not included in any of the above references, available standards or design guides, use a minimum factor of safety of 4 for permissible load engineering of anchoring assemblies.

2. Fastener engineering shall account for any reduction in safe working loads due to their spacing, location in areas of tension, near edges, or proximity to cast in inserts/existing fasteners, or thickness of shims. Fastener engineering shall also consider condition, thickness, and material properties of substrate. Adhesive anchoring systems shall not be used for fasteners supporting loads in tension.

3. Unless shown in the Architectural Drawings, no visible exposed fasteners.

a. Where exposed fasteners are shown and required, use countersunk security heads.

4. All exterior fasteners or fasteners in wet areas shall be of a suitable grade of stainless steel. Use weather coatings for corrosion resistance only with Commissioner's approval.

5. Select and coordinate with the weatherproofing system manufacturer all exterior fasteners required to penetrate a self-sealing weatherproofing system to ensure self-sealing occurs.

6. Where post drilled or site-drilled fasteners are used for connections to the external structural steel frame, do not compromise integrity of the steel corrosion protection system.

7. Highlight the general requirement for torqueing of bolts in the Shop Drawings and clearly state tightening torque values.

8. The Contractor shall provide for Commissioner's review, documentation demonstrating that the use of all installed fasteners have been reviewed and approved by the fastener manufacturer and shall, prior to installation, submit manufacturer's written certification that details proposed by the Contractor are appropriate for their intended use.

B. Brackets and Anchorage

1. Engineer brackets and anchorage to allow for adjustments by 1 in. in small increments in and out, up and down, and side to side in the position of the Work supports relative to other constructions, to accommodate the full variations in the underlying construction and fabrication tolerances.

2. Shimming required to accommodate local variations in construction tolerances only. State the maximum allowable shim dimension in the Shop Drawings.

3. Concrete and masonry inserts shall be hot-dip galvanized cast-iron, malleable-iron, or steel inserts as required by ASTM A123/A123M or ASTM A153/A153M.

C. General

1. Engineer all brackets and fasteners so there is no risk of loosening due to the effects of vibrations, or to the cyclic effects of load, deflections, and thermal movements.

2. Engineer brackets for site-drilled fasteners to allow for the possibility of reinforcement or other obstructions being encountered and the fixing position being moved as a result thereof.

3. Do not cut reinforcement or other obstructions without the approval of the Commissioner.

2.6 FLASHING:

A. Refer to Section 07 62 01 – Facade Sheet Metal Flashings for performance requirements.

B. Provide corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials constructed with one of the following waterproof materials:

1. Stainless steel, ASTM A240/A240M of thickness recommended by manufacturer.

2. One of the following membrane materials:

a. Silicone sheet.

C. Flashings shall maintain their performance and properties for the expected service life of the Contract Work.

D. Flashings shall have the necessary mechanical properties to withstand installation and specified design loads.

E. Flashings and smoke barriers visible externally or internally shall be aluminum sheet with finish to match Work.

2.7 WEATHER RESISTIVE BARRIER:

A. Refer to Section 07 27 01 – Weather Resistive Barriers for performance requirements.

2.8 GASKETS:

A. General

1. Do not install gaskets/dry weather seals in a pre-stretched condition.

2. Gaskets shall be accessible for inspection/replacement.

3. Select gaskets and seals used to achieve the required weather and airtightness in accordance with ASTM C716 to fully accommodate the range of dimensional tolerances associated with fabrication and installation of the Work. Form with materials capable of maintaining their elastic qualities, dimensions, and resistance to physical and chemical attack sufficient to maintain the full performance during the design life. Gaskets shall be free from contact and migration stain and shall be compatible with all substrate, sealant and finishes with which they are likely to come in contact.

4. Gaskets shall maintain their performance and properties for the expected service life of the product.

5. Gaskets shall be free of mold flash.

B. Extruded rubber gaskets shall comply with ASTM C509.

1. Dense compression gaskets shall be molded or extruded, of profile and hardness required to maintain watertight seal, made from silicone complying with ASTM C1115.

a. Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

2. Soft compression gaskets shall be extruded or molded, closed-cell, integral-skinned silicone gaskets complying with ASTM C509, Type II, black; of profile and hardness required to maintain watertight seal.

2.9 GLAZING:

A. Refer to Building Enclosure System Matrix for glazing types and Section 08 80 00 – Exterior Glazing for performance requirements.

2.10 PANELS:

A. Refer to Building Enclosure System Matrix for Panel types and Section 07 42 14 – Metal Panels for performance requirements.

2.11 SEALANTS:

A. Refer to Section 07 92 01 – Exterior Joint Sealants for performance requirements.

2.12 PERIMETER FIRESAFING AND SMOKE SEALANTS:

A. Refer to Section 07 84 13 – Firestops and Smokeseals for performance requirements.

2.13 SEMI-RIGID INSULATION:

A. Unfaced, Mineral-Wool Board Insulation

1. Manufacturers: Subject to compliance with requirements provide products by one of the following:

a. Rockwool, Inc.

b. Thermafiber, Inc.

c. Johns Manville.

d. Or approved equal.

B. Basis of Design Product: Rockwool, Inc. Cavityrock with the following properties:

1. Complying with ASTM C612; with maximum flame-spread and smoke-developed indexes of fifteen (15) and zero (0), respectively, per ASTM E84.

2. Shall pass ASTM E136 for combustion characteristics.

3. Nominal density of 6 lb per cubic foot, Type II, with a minimum thermal resistivity of 4.2°F x h x sq ft/Btu x in. at 75°F.

4. Recycled Content: Postconsumer recycled content plus one-half of pre-consumer recycled content not less than 10%.

5. Fiber Color: Darkened, where indicated.

C. Insulation Fasteners

1. Engineer fasteners to fully restrain insulation against all design loads.
2. Provide fastener materials suitable for the environmental conditions the insulation will be exposed to.
3. Adhesively attached, spindle-type anchors utilizing plate welded to projecting spindle and capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
4. Anchor adhesive shall demonstrate capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.

D. Thermal insulation shall be inert, durable, not water soluble, rot and vermin proof, CFC and HCFC free, shall be inorganic and not support mold fungal or bacteria growth and shall provide the specified performance for the service life of the Work. Account for the reduced performance of insulation due to the effects of moisture and aging.

E. Thermal insulation shall be sufficiently robust and cohesive to allow removal and replacement in service without loss of material or performance. It shall not be injurious to human health properly installed, in service, or during removal and replacement.

2.14 OPERABLE UNITS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Oldcastle BuildingEnvelope.
2. Wausau Window and Wall Systems.
3. YKK AP Inc.
4. Or approved equal.

B. Products: Subject to compliance with requirements, provide products buy one of the following:

1. Oldcastle BuildingEnvelope Zero Sightline 30P.
2. Wausau Invent.
3. YKK YOW 350 XT.
4. Or approved equal.

2.15 DOORS:

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:

1. Oldcastle BuildingEnvelope.
2. Wausau Window and Wall Systems.
3. YKK AP America Inc.Or approved equal.

B. Products: Subject to compliance with requirements provide products by one of the following:

1. Oldcastle BuildingEnvelope AD-375 Thermal Entrance Door.
2. Wausaw Window and Wall Systems Therml=Block Entrance Door.
3. YKK AP Series 35XT MegaTherm® Entrance. Or approved equal.

C. Outswing Door.

1. Include required framing hardware to mount into glazing pocket of surrounding Work framing.
2. Coordinate door hardware with the Commissioner.
3. Incorporate thermally broken, ADA compliant and integrally gasketed threshold.
4. Incorporate door hardware into Work. Refer to Section 08 71 00 – Door Hardware and Section 08 71 01 Door Hardware Schedule for detailed requirements.

2.16 BIRD DETERRENTS:

A. Provide bird deterrents on all horizontal or near-horizontal surfaces. The Contractor shall provide details and product data of the bird deterrent in accordance with the submittal requirements as well as Section 05 12 00 – Structural Steel and Section 05 50 00 – Miscellaneous Metals.

2.17 ACCESSORY MATERIALS:

A. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30 mil thickness per coat.

B. Galvanizing Repair Paint: ASTM A780.

C. Shims: Load-bearing, high-density multimonomer plastic, non-leaching.

D. Separating / Isolating Materials

1. The Contractor shall select, provide, and install each material so it is, and will remain, compatible with other materials around it within its range of influence. Contractor shall ensure adequate measures are taken to prevent bimetallic corrosion between dissimilar metals. Where different metallic materials are used, fit separators to eliminate the risk of corrosion.

E. Weep Baffles: PVC-coated reticulated foam, 30 to 40 ppi.

F. Butyl Tape: Preformed butyl-based elastomeric tape with 100% solids content. Nonstaining, with or without spacer rod (as approved by Commissioner), with release paper backing.

G. Aluminum or Foil-Faced Tape: Provide where shown on the Drawings and with various widths as required.

PART III – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 FABRICATION:

A. General

1. Profiles shall be sharp, straight, and free of defects or deformations.

2. Fabricate all formed or extruded shapes prior to finishing.

3. Accurately form joints without lipping or offsets in visible surfaces unless engineered otherwise. Rigidly secure other joints to prevent all but designed movement, unless engineered otherwise.

4. Accurately fitted joints with ends coped or mitered.

B. Cutting

1. Grind, cut, and shape metals using tools which will not contaminate them with particles which could stain or corrode them.

2. Steel Components

a. Minimize use of arc cutting and acetylene gas cutting as much as feasible. If required, Contractor shall submit full welding procedures to demonstrate hardness remains within the required limits.

b. Mild steel cut or shaped by either flame cutting or Plasma cutting shall be to procedures agreed by the Commissioner. Procedures shall demonstrate that the surface hardness is less than 270 Hv 10. Require random inspection of the steel to ensure hardness level is not exceeded. Alternatively, surface dress all cut edges to remove hardened material.

c. All punched holes shall be undersized by 40 mil and be reamed to the finished size.

C. Welding

1. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

2. Weld metals in accordance with the relevant standards using methods to avoid distortion. The type, size and spacing of welds shall be shown on Drawings for Commissioner's review, prior to fabrication.

3. Fully bond welds throughout their length without holes, inclusions, cracks, or porosity so as not to compromise the long-term performance and the welds are strong enough for the engineered requirements.

4. Grind all welds smooth and flush with the adjoining surfaces where visible or impinging on other work.

5. Do not site weld except where approved by the Commissioner.

6. Finish completed welded construction to prevent corrosion. Clean all welds as necessary to ensure the durability of the connections.

7. All radius edges used in changes of section shall be typically two times the maximum wall thickness.

8. All welding procedures and welding procedure specifications shall limit the hardness in the weld, parent metal, or heat-affected zone to less than 270 Hv 10.

D. Pressing and Folding

1. Fold and form aluminum sheets over dies or mandrels with the minimum radii recommended by the Aluminum Association in publications as Aluminum Design Manual. Make trial bends on scrap material of the alloy, temper, and thickness being used to ensure that it is not cracked, torn, unevenly stretched, or separated at grain membranes.

2. Perform pressing and folding of Metal Panels according to manufacturers' recommendations.

E. Sealants and Adhesives

1. Prepare surfaces that will contact Sealants and/or adhesives according to the manufacturer's written instructions to ensure compatibility and adhesion.

2. Preparation includes, but is not limited to, cleaning and priming surfaces.

F. Gaskets

1. Gaskets jointed by bonding with adhesive are not accepted as a substitute for molded frame gaskets. In the event that forming adhesive bonded joints are required, bring to the Commissioner's attention for review before proceeding with work.

2. All gasket frames should be normally manufactured to a small but predetermined oversize tolerance, to ensure that when seated into position, the lineal lengths and corners of the gaskets are in slight compression.

3. Install gaskets in accordance with the manufacturer's recommendations and utilizing the correct tools.

G. Fabrication Tolerances

1. Metal cutting tolerances for framework shall be:

a. ± 1/16 in. on length of vertical members.

b. ± 1/32 in. on length of horizontal members.

c. ± 1/64 in. on the length and width of spandrel panels, back pans, and aluminum sheets.

d. ± 1/32 in. on length of diagonal of spandrel panels, back pans, and aluminum sheets, and not more than ± 1/16 in, difference in the length between the two diagonals.

e. Space individual framing members no more than plus or minus 1/8 in. from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.3 INSTALLATION:

A. Comply with all requirements and product manufacturer's recommended guidelines.

B. Do not install damaged components.

C. Fit joints to produce joints free of burrs and distortion.

D. Rigidly secure all non-moving elements.

E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.

F. Metal Protection

1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.

2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

G. Set continuous sill members and flashing in full sealant bed to produce watertight installation.

H. Operable Units and Doors

1. Install operable units level and plumb, securely anchored, and without distortion.

2. Adjust weather-stripping contact and hardware movement to produce proper operation.

3.4 ADJUSTMENTS:

A. Adjust Doors and entrance Door hardware to produce smooth operation and tight fit at contact points and gaskets.

1. Adjust Door operators, controls, and hardware for smooth and safe operation and for weathertight closure; comply with requirements in Section 08 71 00 – Door Hardware and Section 08 71 01 – Door Hardware Schedule.

B. Lubricate operating hardware and other moving parts as recommended by manufacturer.

C. Readjust Door operators and controls after repeated operation of completed installation equivalent to three days' use by normal traffic (100 to 300 cycles). Lubricate hardware, operating equipment, and other moving parts.

D. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.5 INSTALLATION TOLERANCES:

A. Install Work to comply with the following maximum tolerances:

1. Plumb: 1/8 in. in 10 ft; non-cumulative.

2. Level: 1/8 in. in 20 ft; non-cumulative.

3. Alignment: End-to-end or edge-to-edge offset of adjoining consecutive element to 1/16 in.

4. Location and Plane: Limit variation from plane to 1/8 in. in 12 ft; 1/2 in. over total length.

5. Diagonal Measurements: Limit difference between diagonal measurements to 1/8 in.

3.6 FIELD QUALITY CONTROL:

A. Test and inspect representative areas of the Work as installation proceeds to determine compliance of installed assemblies with specified requirements.

B. Testing shall be performed by a qualified Independent Testing and Inspection Agency.

1. The Independent Testing and Inspection Agency shall prepare and submit an inspection and test report.

C. Work is considered defective if it does not pass tests and inspections.

1. There shall be no evidence of water penetration as per the weatherproofing requirements specified.

   a. No increase in the allowable rate of air infiltration or increase in the volume of water leakage, nor any decrease in the specified test pressures will be permitted in the evaluation of field testing. This requirement is more restrictive than AAMA standards.

2. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.

3. For each failure condition discovered, make remedial and corrective action approved by the Commissioner. All failures shall be considered systemic failures requiring corrective work at all similar conditions and locations. Remedial measures shall maintain standards of quality and durability and are subject to approval by the Commissioner.

4. Additional testing and inspecting shall be at Contractor's expense, and will be performed to determine compliance of replaced or additional work with specified requirements.

D. Water Nozzle Spray Test

1. After completing Work installation and before interior finish installation begins, carry hose testing on 10% of the Work as designated by Commissioner for water penetration according to AAMA 501.2 requirements.

2. Minimum area of test area shall be 120 sq ft.

3. Provide a minimum of two (2) weeks' notice to all parties to allow them to attend all hose testing.

4. Repair or remove and replace Work not meeting requirements or damaged by testing; replace to conform to specified requirements.

   a. For every leak located on the Work, hose test an additional 5% of the tested area.

E. Field Testing Support

1. An Independent Testing Agency shall perform field testing of the Work and prepare test reports. Testing will include those performed to ASTM E1105, ASTM E283, AAMA 501.2, and AAMA 502 standards. The Contractor shall assist the independent Testing and Inspection Agency with testing, including providing safe access, water, power, constructing interior test chambers, etc.

   a. Assume four (4) days of field air and water infiltration testing at multiple locations selected by the Commissioner.

   b. If failures occur, provide additional test assistance as needed to obtain Commissioner's approval at no additional cost.

2. Testing Services: Testing and inspecting of representative areas to determine compliance of installed system with specified requirements shall take place as follows and in successive stages as indicated by the Commissioner. The Commissioner will perform some of this testing during the early stages of Work installation. Complete all related installation work, in areas selected by the Commissioner, as needed to allow air and water testing to be performed during the early stages of the work (including installation of glazing, framing, gaskets, etc.). Do not proceed with the installation of the next area until test results for previously completed areas show compliance with requirements.

   a. Air Infiltration: Areas shall be tested for air leakage of 1.5 times the rate specified under Static Pressure Air Infiltration Article, but not more than 0.09 cfm per square foot of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure differential of 6.24 lbf per square foot.

   b. Water Penetration: Areas shall be tested according to ASTM E1105 at minimum uniform static-air-pressure difference (Procedure A) equal to the pressure specified under Static Pressure Water Infiltration Article and shall not evidence water penetration.

   c. Water Spray Test: After the installation of minimum area of 75-ft-by-2-story Work has been completed but before installation of interior finishes has begun, a two-bay area of system designated by Commissioner shall be tested according to AAMA 501.2 and shall not evidence water penetration.

   d. Occasionally test Glazing pockets (and other horizontal cavities that may collect water) by temporarily plugging weep holes and filling with water in accordance with AAMA 511. After minimum of 15 min., inspect for water leakage or drop in water level. Correct deficiencies and retest until successful tests are achieved. Remove weep holes plugs and drain system at conclusion of test. Perform tests at start of the work and periodically throughout the construction process (minimum once every two weeks).

END OF SECTION 08 40 01

Department of Design and Construction

SECTION 08 45 19
Polycarbonate Wall System

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 74 19 "Construction Waste Management and Disposal"
c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. The engineering, manufacture and installation of an aluminum and polycarbonate insulating translucent system. A complete assembly of extruded cellular UV resistant polycarbonate glazing panels incorporated into a complete aluminum framing system, tested and warranted by the manufacturer.

2. All anchors, brackets, and hardware attachments necessary to complete the specified structural assembly, when included within project scope.

3. Weatherability and water-tightness performance requirements.

4. All flashings and sealants up to adjoining work are also required as part of the system and shall be included, unless specifically noted as being supplied by others.

5. Experienced labor with supervision to complete the entire system installation.

B. Related Sections

1. Structural Steel - Section 05 12 00.

2. Interior Joint Sealants - Section 07 92 00.

3. Exterior Joint Sealants - Section 07 92 01.

4. Signage - Section 10 14 00.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Shop Drawings

1. Shop drawings shall include plans, elevations, sections and details of the system. Flashings, sealants and anchorage details shall be clearly indicated.
2. Note gauges of brake metals, finishes of frames and hardware. Also note dimensions (if known) of the work to be performed by other trades.
3. Label fastening devices as to type and spacing.

B. Product Data: Submit proposed manufacturer's catalog cuts and specifications to clearly illustrate and describe the submitted system.

C. Samples

1. Each aluminum frame section, 6" long.
2. Samples of aluminum illustrating the specified finish.
3. Glazing gaskets, 6" long, each type.
4. Samples of glazing, each minimum 6" x 6", in specified color.

D. Engineering Data

1. Submit Engineering Data drawings to the Commissioner for review. The Contractor must show his proposed system and how the Performance Criteria noted in this section is accommodated on these drawings.
2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of members. Calculations and drawings must be prepared by a Professional Structural Engineer licensed in the State of New York and shall be signed and sealed by this Engineer.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Manufacturer Qualifications: A firm experienced in manufacturing polycarbonate wall systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Erection shall be by an installer experienced in erection of systems of the type specified.

1.6 WARRANTY

A. Provide warranty from window system for 5 years from the date of Substantial Completion.

PART II - PRODUCTS

2.1 POLYCARBONATE WALL SYSTEM

Basis of Design: Subjec to complinace with requirements, provide Series 3440, interlocking translucent polycarbonate wall system by EXTECH/Exterior Technologies, Inc. or comparable product by one fo the following:

1). Wasco
2). Gallina USA
3). Or approved equal

2.2 MATERIALS

A. The aluminum members of the framing system shall conform to the following:

1. The extrusions shall be 6063-T5, 6005-T5 or 6105-T5 alloy and temper. All sections shall be formed true to detail and free from defects impairing appearance, strength, or durability.

2. The rabbet depth at the edges of the framing shall (at an absolute minimum) be based on 1/8" minimum engagement plus 1/8" for cutting tolerance plus .005 x that glazing dimension (in inches) which affects that rabbet. For example, a 100" long glazing will require a minimum of 1/8" + 1/8" + (.005 x 100) = 1.475". Under no circumstances, even in the coldest possible weather, should panel engagement be less than 1/8".

3. Gasketing shall be elastomeric, incorporating a low friction coating on the surfaces that contact the glazing. Gasketing shall be tested for chemical compatibility with the glazing, and test reports evidencing same shall be presented to the Commissioner.

4. Fasteners, where exposed, shall be stainless steel, 300 Series, with stainless backed neoprene washers. Where not exposed, they may be stainless or zinc-plated steel in accordance with ASTM A 165 or A 164.

5. Exposed surfaces of the aluminum-framing members shall be finished as follows:

   a. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

6. Aluminum and/or galvanized steel flashings and other brake metal components shall be minimum 0.040" thick (if aluminum) or 24 ga. thick (if steel) (thicker where so specified on the drawings). The finish on this metal shall match as closely as possible that which is on the extruded aluminum framing members.

7. Attachment of glazing sheets to the transverse structural elements (i.e. purlins or girts) or to structural members parallel to the translucent panels shall be achieved by means of:

   a. Two-piece sliding clips, consisting of an aluminum base portion and a stainless steel upper portion which constrains the polycarbonate sheets. The base shall be designed so as to hold the polycarbonate panels safely above the substrate as well as above the heads of the fasteners which

attach it to the substrate. In addition, this base will incorporate elastomeric cushions on which the panels can rest and/or move.

OR

b. Three-piece articulated clips, each consisting of an aluminum base portion, an aluminum secondary portion and a sliding stainless steel upper portion. The latter shall hook constrain the polycarbonate sheets. This articulated clip assembly will be hinged to compensate for misaligned substrate members and will also allow for widthwise-incremental movement of the polycarbonate panels. Rotational freedom of the secondary portion allows the clip assembly to be functional even if the assembly was installed in a skewed fashion (up to 5 degrees of misalignment). Further, the base portion will hold the polycarbonate panels safely above the substrate and above the heads of the fasteners which hold the clip assembly. The clip secondary portions will incorporate low friction elastomeric cushions on which the panels can rest and/or move.

B. The polycarbonate glazing panels for the system shall conform to the following:

1. Appearance:

a. The extruded panels shall be uniform in color with an integral extruded multi-cell core. The panel's exterior skins shall be interconnected and spaced apart by supporting continuous ribs, perpendicular to the skins.
b. Panels shall consist of a polycarbonate resin with permanent, co-extruded, ultraviolet protective layers on the exterior sides of the panels. This protective layer shall be co-extruded by the manufacturer during the original extrusion of the panel. Post-applied coating or films of dissimilar materials are unacceptable.
c. The panels shall be formed using resin which contains small glass beads. These beads provide diffusion of the light as it passes through the panels.
d. Panel thickness shall be a minimum 1-9/16".
e. Panel weight shall be nominally 0.71 lbs. per sq. ft.
f. Panel Width and Height: See Drawings.
g. Panels shall be designed and formed with interlocking sides so that multiple panel installlations can be achieved without the need to introduce independent mullion framing members.

2. Translucent Panel System

a. Panel shall be extruded in one single length. Transverse connections are not acceptable.
b. Perimeter framing and mullions are to be dry glazed profiles, using no welding or adhesives.
c. Perimeter framing members, exclusive of cover caps, shall incorporate an integral structural polyurethane thermal break.
d. Concealed fasteners are to be used for all aluminum framing. In system construction, the use of adhesives, plastic welding, or sealants is not allowed.
e. Free thermal movement of the panels shall be allowed to occur without compromising the weathertightness of the completed system.

3. Air Infiltration: Per ASTM D 283 at a test pressure of 6.24 PSF, maximum air infiltration shall be 0.003 CFM/sq. ft. of glazing area.

4. Water Penetration: There shall be no water penetration when tested vertically per ASTM E 331 at test pressure of 20 PSF.

5. System shall require no scheduled re-coating to maintain its weathering or structural performance or for UV protection.

6. Thermal Performance

   a. Insulation Value ("U-Value"): 0.37 BTU/hr. – sq. ft. degree F.
   b. Light Transmission: Varies with color selected.

7. Flammability: The system shall incorporate approved light-transmitting panels, with a CC1 fire rating classification as tested per ASTM D 635 or equivalent.

8. Loading

   a. The panel system shall be capable of meeting the design load for this project based on relevant code requirements and laboratory testing per ASTM E 330 shall evidence this fact.
   b. The interior cells of the cellular polycarbonate sheets shall be blown clean prior to being sealed. The top and bottom of each sheet shall be sealed with an air permeable filter tape.
   c. The open end of each panel shall rest on a continuous metal setting fin which is designed to allow atmospheric air to reach the air permeable tape at the bottoms of the panels.

9. Glazing shall be installed in accordance with panel and system manufacturer's guidelines.

10. Color of Panels: Translucent Ian.

C. Fasteners

1. Bolts, anchors and other fastening devices shall be as required for the strength of the connections and shall be suitable for conditions encountered. Washers shall be of the same metals as fasteners.

2. Fasteners exposed to the weather shall be 300 Series stainless steel and shall utilize stainless steel washers with neoprene seals.

3. Concealed fasteners shall be stainless steel or zinc plated steel as per ASTM A 165.

2.3 WORKMANSHIP

A. Carefully and accurately engineer, fabricate and assemble work with proper provision for thermal contraction and expansion. Work shall conform to profiles and sections noted on the shop drawings. Work shall be assembled with joints in a neat and finished manner.

B. Fasteners: Of a strength and spacing sufficient to meet the testing requirements and to resist the specified load requirements or 2014 New York City Building Code requirements.

C. Protect contact points between unprotected dissimilar metals (except stainless steel) using continuous separators of FRP or PVC tape (or approved equal).

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install components in strict accordance with manufacturer's instructions and approved shop drawings. Use proper fasteners and hardware for material attachments as specified.

B. Use methods of attachment to structure which include provisions for thermal movement.

END OF SECTION 08 45 19

SECTION 08 49 00
Fire Rated Glass and Framing Systems

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes fire rated glass and framing systems for interior fire rated glass partitions.

B. Related Sections

1. Miscellaneous Metals - Section 05 50 00,
2. Firestops and Smokeseals - Section 07 84 13.
3. Interior Joint Sealants - Section 07 92 00.
4. Door Hardware - Section 08 71 00.

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM E119: Methods for Fire Tests of Building Construction and Materials.
2. ASTM E152: Methods for Fire Tests of Door Assemblies.
3. ASTM E163: Methods for Fire Tests of Window Assemblies.

B. National Fire Protection Association (NFPA):

1. NFPA 80: Fire Doors and Windows.
2. NFPA 251: Fire Tests of Building Construction & Materials
3. NFPA 252: Fire Tests of Door Assemblies
4. NFPA 257: Fire Test of Window Assemblies

C. Underwriters Laboratories, Inc. (UL):

1. UL 9: Fire Tests of Window Assemblies
2. UL 10 B: Fire Tests of Door Assemblies

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Submit latest edition of manufacturer's product data providing product descriptions, technical data and installation guidelines.

B. Shop Drawings: Include plans, elevations and details of product showing component dimensions; framed opening requirements, dimensions, tolerances, and attachment to structure.

C. Samples: Submit in the form of 12-inch square samples for glass and of 12-inch long samples for framing and sealants. Install sealant samples between two strips of material representative in color of the adjoining framing system.

D. Glazing Schedule: Use same designations indicated on drawings for glazed openings in preparing a schedule listing glass types and thicknesses for each size opening and location.

E. Provide signed and sealed calculations and shop drawings by a Professional Engineer licensed in the State of New York demonstrating that partitions comply with lateral load and deflection criteria.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. The contractor or subcontractor performing the work of this Section must, within the last three (3) consecutive years, have successfully completed in a timely fashion at least three (3) projects similar in scope, size and type to the required work. In addition, the contractor or subcontractor must be licensed or approved by the manufacturer.

C. Fire-Rated Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to the Commissioner, for fire ratings indicated, based on testing according to NFPA 252 and 257.

D. Certification - Fire-Rated Assemblies: Signed by manufacturers of glass and glazing products certifying that products furnished comply with requirements.

1. An approved independent testing laboratory equal to UL shall conduct fire test.

E. Listings and Labels - Fire Rated Assemblies: Under current follow-up service by an approved independent agency maintaining a current listing or certification. Label assemblies in accordance with limits of manufacturer's listing.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store and handle under provisions specified by manufacturer.

B. Deliver materials to specified destination in manufacturer or distributor's packaging undamaged, complete with installation guidelines.

C. Store off ground, under cover, protected from weather and construction activities.

1.8 WARRANTY

A. Provide manufacturer's limited three year warranty.

PART II - PRODUCTS

2.1 MANUFACTURERS

Basis of Design: Subject to compliance with requirements, provide Pilkington (NSG Group) Pyrostop 60-101, 7/8" thick with TGP Fireframes Aluminum Series, and Fireframes Designer Series fire rated steel door or comparable product by one of the following:

1). Safti First (O'Keefe's Inc.) Superlite II-XL 60 with GPX Architectural Series Framing and door
2). Vetrotech Saint-Gobain SGC Contraflam 60-N2 with Aluflam Curtain Wall CW-EI120 and door
3). Or approved equal

2.2 PERFORMANCE REQUIREMENTS

A. System Description: Steel fire-rated glazed wall system, dual aluminum cover cap format.

B. Duration of Fire Rating - System: Capable of providing a fire rating for 60 minutes unless noted otherwise.

C. Provide enclosure systems for elevators designed and tested by manufacturer to withstand a lateral loading (air pressure) of 10 lbs. per sq. ft. for the maximum wall height required, and with deflection limited to L/240 of partition height.

2.3 MATERIALS - GLASS

A. Fire Rated Glazing: Composed of multiple sheets of high visible light transmission glass laminated with an intumescent interlayer.

B. Impact Safety Resistance: ANSI Z97.1 and CPSC 16CFR1201 (Cat. I and II).

C. Fire Rating: 60 minutes.

D. Glazing Type: Manufacturer's standard IGU for interior glazing application with fire rating indicated.

E. Thickness: 7/8" unless otherwise noted.

F. Glazing Accessories: Manufacturer's standard compression gaskets, spacers, setting blocks and other accessories necessary for a complete installation.

2.4 MATERIALS - ALUMINUM FRAMING

A. Aluminum Framing System: Manufacturer's 60-minute interior framing system specified.

1. Steel Frame: Steel framing members made of two halves, nom. 1.9" wide with a nom. minimum depth of 1.38" with lengths cut according to glazing size.

2. Aluminum Trim: Supplied with the steel framing members. Nom. 2" wide with a nom. depth of 1.54" with lengths cut according to glazing size.

3. Stainless Steel Standoffs: Supplied with the steel framing members. Nom 5/16" diameter with a nom. minimum depth of 1-1/8" with depth adjusted to match glazing panel thickness.

4. Stainless Steel Moment and Connecting Braces: Supplied with the steel framing members. Nom. 3/8" thick with a nom. minimum depth of 1-1/8" with depth adjusted to match glazing panel thickness.

5. Framing Member Fasteners: Supplied with the steel framing members. Screws are M6 x16mm Button Head Socket Cap Screws for frame assembly and #6 x 1" Pan Head Sheet Metal Screws for door installation.

6. Glazing Gasket: Supplied with the steel framing members. Nom. ¾" by 3/16" black applied to the steel framing members to cushion and seal the glazing material when installed.

B. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

1. Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221 (ASTM B 221M).

C. Steel Reinforcement: With manufacturer's standard corrosion-resistant primer complying with SSPC-PS Guide No. 12.00 applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.

1. Structural Shapes, Plates, and Bars: ASTM A 36/A 36M.

2. Cold-Rolled Sheet and Strip: ASTM A 611.

3. Hot-Rolled Sheet and Strip: ASTM A 570/A 570M.

D. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Where fasteners are subject to loosening or turn out from thermal and structural movements, wind loads, or vibration, use self-locking devices.

2. Reinforce members as required to receive fastener threads.

2.5 MATERIALS - STEEL FRAMES AND DOORS

A. Steel Framing System for 60 minute rated doors.

1. Frame: Steel profiled formed tubing.

2. Fasteners: As recommended by manufacturer.

3. Glazing Accessories: As recommended by manufacturer

4. Glazing Gaskets, Compounds and Tapes: As recommended by manufacturer

B. Coordinate hardware with cylinder specified in Section 08 71 00 Door Hardware.

2.6 ACCESSORIES

A. Fasteners: Use fasteners fabricated from Type 304 or Type 316 stainless steel.

B. Glazing Gaskets for interior applications: ASTM C 864 (extruded EPDM rubber that provides for silicone adhesion) or ASTM C1115 Standard Specification for Dense Elastomeric Silicone Rubber Gaskets and Accessories (extruded silicone).

C. Intumescent Tape: As supplied by frame manufacturer.

D. Setting Blocks: ¼" Calcium silicate.

E. Perimeter Anchors: Steel.

F. Flashings: As recommended by manufacturer; same material and finish as cover caps.

G. Silicone Sealant: One-Part Low Modulus, neutral cure High Movement-Capable Sealant: Type S; Grade NS; Class 25 with additional movement capability of 100 percent in extension and 50 percent in compression (total 150 percent); Use (Exposure) NT; Uses (Substrates) M, G, A, and O as applicable. (Use-O joint substrates include: Metal factory-coated with a high-performance coating; galvanized steel; ceramic tile.)

1. Manufacturers: Subject to compliance with requirements, provide products by one fo the following:
   a. Dow Corning 790, 795 - Dow Corning Corp.
   b. Momentive
   c. Tremco
   d. Or approved equal

H. Intumescent Caulk: Single component, latex-based, intumescent caulk designed to stop passage of fire, smoke, and fumes through fire-rated separations; permanently flexible after cure; will not support mold growth; flame spread/smoke developed 10/10.

2.7 SLAG-WOOL-FIBER/ROCK-WOOL-FIBER INSULATION

A. Manufacturers: Subject to compliance with requirements, provide products by one fo the following:
   1. Fibrex Insulations Inc
   2. Owens Corning
   3. Thermafiber
   4. Rockwool
   5. Or approved equal

B. Unfaced, Slag-Wool-Fiber/Rock-Wool-Fiber Board Insulation: ASTM C 612, maximum flame-spread and smoke-developed indexes of 15 and 0, respectively; passing ASTM E 136 for combustion characteristics; and of the following nominal density and thermal resistivity:

   1. Nominal density of 4 lb/cu. ft. (64 kg/cu. m), Types IA and IB, thermal resistivity of 4 deg F x h x sq. ft./Btu x in. at 75 deg F (27.7 K x m/W at 24 deg C).

   2. Fiber Color: Regular color, unless otherwise indicated.

2.8 FABRICATION

A. Obtain reviewed shop drawings prior to fabrication.

B. Fabrication Dimensions: Fabricate fire-rated assembly to field dimensions.

C. Field glaze door and frame assemblies.

2.9 FINISHES

A. Finish after fabrication.

B. Interior Steel and Aluminum Finishes:

   1. Powder-Coat Finish: Polyester Super Durable powder coating which meets AAMA 2604 for chalking and fading. Apply manufacturer's standard powder coating finish system applied to factory-assembled frames before shipping, complying with manufacturer's recommendations for surface preparation including pretreatment, application, and minimum dry film thickness.

   2. Color and Gloss: See Finish Schedule.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install systems by a specialty subcontractor with appropriate experience qualifications; and in strict accordance with the approved shop drawings. Employ experienced mechanics familiar with this type of specialized work.

B. Install fire safing/firestopping at edges of system.

C. Install glazing in strict accordance with respective glazing material manufacturer's specifications. Field cutting or tampering is not permissible.

3.3 PROTECTION AND CLEANING

A. Protect glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove them immediately as recommended by glass manufacturer.

C. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged in any way, including natural causes, accidents, and vandalism, during construction period.

D. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended by glass manufacturer.

END OF SECTION 08 49 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 63 01
Aluminum-Framed Skylight System

PART I – GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the addendum, (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements

1. Refer to DDC General Conditions.

a. Section 01 33 00 – Submittal Procedures.

b. Section 01 81 13.04 – Sustainable Requirements for LEED v4 Buildings.

1.2 SUMMARY:

A. Refer to Building Enclosure System Matrix for a description of the systems included in this Section as well as the requirements listed there.

B. For all Work described, supply and install the following components and their subcomponents of the work required to provide a complete system, including but not limited to the following:

1. Glass and glazing.
2. Framing systems (as applicable) which may include:

a. Extruded aluminum framing with steel stiffeners.

b. Integral closures and trim.

3. Perimeter insulation.
4. Sealants and gaskets.
5. Fixings and fastenings.
6. Flashings.
7. Finishes, coatings, and surface treatments.
8. Anchors and inserts used to attach to building structure.

a. Supply anchors and/or inserts to be cast or fabricated into/onto the building structure by others.

9. Samples, and testing.
10. Field testing.

C. This Section requires Engineering Services.

D. The work in this Section incorporates the work of the following Sections. Requirements specified in this Section are in addition to those in the following Sections:

1. Section 07 92 01 – Exterior Joint Sealants.

2. Section 08 80 00 – Exterior Glazing.

E. The following Sections describe systems that are adjacent to that of this Section, and will require coordinated interfaces:

1. Section 07 20 00 – Thermoplastic Membrane Roofing.

F. Reference Documents

1. Building Enclosure System Matrix: Refer to Drawing EN1-003.

2. Exterior Glass Type Matrix: Refer to Drawing EN1-003.

1.3 DEFINITIONS:

A. The work described in this Section is referred to as the "Work."

1.4 REFERENCE STANDARDS AND REGULATIONS:

A. Refer to DDC General Conditions

B. The Contractor's engineering, materials, and workmanship shall comply 2014 New York City Building Code and 2016 New York City Energy Conservation Code. Where their recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Documents shall take precedence.

C. Comply with the applicable provisions and recommendations of the standards listed below. Where standards conflict with each other or conflict with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted, the latest editions of the standards shall apply:

1. American Architectural Manufacturers Association (AAMA)

a. AAMA CW-DG-1 – Aluminum Curtain Wall Design Guide Manual.

b. AAMA CW-10 – Care and Handling of Architectural Aluminum from Shop to Site.

c. AAMA MCW-1 – Metal Curtain Wall Manual.

d. AAMA TIA-A7 – Sloped Glazing Guidelines.

e. AAMA TIR-A9 with amendments – Design Guide for Metal Cladding Fasteners.

f. AAMA 501.1 – Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors Using Dynamic Pressure.

g. AAMA 501.2 – Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems.

h. AAMA 501.5 – Test Method for Thermal Cycling of Exterior Walls.

i. AAMA 501.6 – Recommended Dynamic Test Method for Determining Seismic Drift Causing Glass Fallout from a Wall System.

j. AAMA 503 – Voluntary Specification for Field Testing of Newly Installed Storefronts, Curtain Walls, and Sloped Glazing Systems.

k. AAMA 611 – Voluntary Specification for Anodized Architectural Aluminum.

l. AAMA 2605 – Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels.

2. Aluminum Association (AA)

a. AA Aluminum Standards and Data.

b. AA-ADM1 – The Aluminum Design Manual.

3. American Institute of Steel Construction (AISC)

a. AISC Steel Construction Manual.

4. American Society of Civil Engineers (ASCE)

a. ASCE 7 – Minimum Design Loads for Buildings and Other Structures.

5. American National Standards Institute (ANSI)

a. ANSI Z97.1 – Safety Glazing Materials Used in Buildings – Safety Performance Specifications and Methods of Test.

6. American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE)

a. ASHRAE 90.1 – Energy Standards for Buildings Except Low-Rise Residential Buildings.

b. ASHRAE Fundamentals Handbook.

7. ASTM International (ASTM)

a. ASTM A36/A36M – Standard Specification for Carbon Structural Steel.

b. ASTM A108 – Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.

c. ASTM A123/A123M – Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

d. ASTM A153/A153M – Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

e. ASTM A240/A240M – Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.

f. ASTM A276 – Standard Specification for Stainless Steel Bars and Shapes.

g. ASTM A307 – Standard Specification for Carbon Steel Bolts and Studs, and Threaded Rod 60 000 PSI Tensile Strength.

h. ASTM A325 – Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.

i. ASTM A370 – Standard Test Methods and Definitions for Mechanical Testing of Steel Products.

j. ASTM A380 – Standard Practice for Cleaning, Descaling, and Passivation of Stainless Steel Parts, Equipment, and Systems.

k. ASTM A572/A572M – Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.

l. ASTM A582 – Specification for Free-Machining Stainless and Heat-Resisting Steel Bars.

m. ASTM A653/A653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

n. ASTM A780/A780M – Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

o. ASTM A923 – Standard Test Methods for Detecting Detrimental Intermetallic Phase in Duplex Austenitic/Ferritic Stainless Steels.

p. ASTM A967 – Standard Specification for Chemical Passivation Treatments for Stainless Steel Parts.

q. ASTM A1008/A1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.

r. ASTM A1011/A1011M – Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

s. ASTM B209 – Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

t. ASTM B221 – Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

u. ASTM B308/B308M – Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles.

v. ASTM B429/B429M – Standard Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.

w. ASTM B449 – Standard Specification for Chromates on Aluminum.

x. ASTM B912 – Standard Specification for Passivation of Stainless Steels Using Electropolishing.

y. ASTM C509 – Standard Specification for Elastomeric Cellular Preformed Gasket and Sealing Material.

z. ASTM C612 – Standard Specification for Mineral Fiber Block and Board Thermal Insulation.

aa. ASTM C864 – Standard Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers.

bb. ASTM C1087 – Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems.

cc. ASTM C1115 – Standard Specification for Dense Elastomeric Silicone Rubber Gaskets and Accessories.

dd. ASTM C1193 – Standard Guide for Use of Joint Sealants.

ee. ASTM C1401, Rev. A – Standard Guide for Structural Sealant Glazing.

ff. ASTM D2244 – Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.

gg. ASTM D3363 – Standard Test Method for Film Hardness by Pencil Test.

hh. ASTM D4214 – Standard Test Methods for Evaluating the Degree of Chalking of Exterior Paint Films.

ii. ASTM D6100 – Standard Specification for Extruded, Compression Molded and Injection Molded Polyoxymethylene Shapes (POM).

jj. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Building Materials.

kk. ASTM E136 – Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750°C.

ll. ASTM E283 – Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

mm. ASTM E330 – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

nn. ASTM E331 – Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.

oo. ASTM E413 – Classification for Rating Sound Insulation.

pp. ASTM E488 – Standard Test Methods for Strength of Anchors in Concrete Elements.

qq. ASTM E754 – Standard Test Method for Pullout Resistance of Ties and Anchors Embedded in Masonry Mortar Joints.

rr. ASTM E1332 – Standard Classification for Rating Outdoor-Indoor Sound Attenuation.

ss. ASTM F593 – Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.

tt. ASTM F594 – Standard Specification for Stainless Steel Nuts.

uu. ASTM F3125 – Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions.

8. American Welding Society (AWS)

   a. AWS A5.10 – Specification for Bare Aluminum and Aluminum-Alloy Welding Electrodes and Rods.

   b. AWS D1.1 – Structural Welding Code – Steel.

   c. AWS D1.2 – Structural Welding Code – Aluminum.

   d. AWS D1.3 – Structural Welding Code – Sheet Steel.

   e. AWS D1.6 – Structural Welding Code – Stainless Steel.

9. Code of Federal Regulations (CFR)

   a. 16 CFR Part 12 – Safety Standard for Architectural Glazing Materials.

10. Glass Association of North America (GANA)

    a. GANA Glazing Manual.

11. International Organization for Standards (ISO)

    a. ISO 2815 – Paints and Varnishes – Buchholz Indentation Test.

    b. ISO 3231 – Paints and Varnishes – Determination of Resistance to Humid Atmospheres Containing Sulfur Dioxide.

12. National Association of Architectural Metal Manufacturers / National Ornamental & Miscellaneous Metals Association (NAAMM/NOMMA)

    a. NAAMM/NOMMA 500-06 – Metal Finishes Manual for Architectural and Metal Products.

13. National Fenestration Rating Council (NFRC)

    a. NFRC 100 – Procedure for Determining Fenestration Product U-Factors.

    b. NFRC 200 – Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.

c. NFRC 400 – Procedure for Determining Product Air Leakage.

14. National Fire Protection Association (NFPA)

a. NFPA 285 – Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components.

b. NFPA 268 – Standard Test Method for Determining Ignitibility of Exterior Wall Assemblies Using a Radiant Heat Energy Source.

15. Society for Protective Coatings (SSPC)

a. SSPC-Paint 42 – Epoxy Polyamide/Polyamidoamine Primer, Performance-Based.

b. SSPC-PS Guide 12 – Guide to Zinc-Rich Systems.

c. SSPC-PS 28.01 – Two-Coat Zinc-Rich Polyurethane Primer / Aliphatic Polyurea Topcoat System, Performance-Based.

d. SSPC-PS 28.02 – Three-Coat Moisture-Cured Polyurethane Coating System, Performance-Based.

16. Safety Glazing Certification Council (SGCC).

1.5 PERFORMANCE REQUIREMENTS:

A. General Prescriptive Requirements

1. For all elements outside of the vapor barrier plane, use materials suitable for external conditions that will not deteriorate as a result of weathering:

a. Elements shall resist the deleterious effects of water, cleaning agents, temperature variations expected from the specified temperature ranges, gaseous pollutants (including ozone), weak acids deriving from gaseous pollutants dissolved in water, and ultraviolet (UV) radiation exposure during installation and in service.

b. Include separators to prevent bimetallic corrosion.

c. Use suitable grade of stainless steel for all fasteners outside or through the vapor barrier.

1) Seal all fasteners that penetrate through air or vapor barrier with material chemically compatible with the fastener and adjacent materials.

d. Use suitable grade of stainless steel or aluminum for all brackets outside the vapor barrier.

e. Do not use different metals for significant structural connections that occur outboard of the vapor barrier plane unless:

1) The connection can incorporate dielectric separators.

2) The connection can be fully inspected after installation is complete using the Project's maintenance access system.

2. Use materials in the Work chemically compatible with adjacent materials.

   a. Where flexible or sheet vapor control materials are connected together or to other systems, lap and continuously seal with chemically compatible materials and mechanically restrain.

3. Where insulation must be locally reduced in thickness, provide high-performance insulation to match the overall performance of the surrounding insulation.

4. Site-applied Sealant is not acceptable as part of the primary Waterproofing System unless shown on the Architectural Drawings or noted within this Section.

5. Engineer the air / vapor barrier system to resist the maximum design wind load.

6. Do not use Glazing to provide lateral support to framing members.

7. Provide laminated Glass where indicated and under the following conditions:

   a. Horizontal Glazing.

   b. Sloped Glazing greater than 15° from vertical.

8. All external areas of the Work shall be accessible for maintenance and repair.

   a. Adjust loads imposed on the Work as necessary for the type and orientation of maintenance equipment anticipated. The Work shall sustain safely, and without damage, access and specified maintenance loads.

   b. All gaskets, where possible, shall be accessible for inspection / replacement.

B. General Performance

1. Comply with performance requirements specified herein, and as validated by pre-construction mockup testing as described in Section 01 43 39 – Facade Mockup Testing and Samples.

2. Work shall:

   a. Withstand and accommodate the stresses and movements induced by the specified cambers, estimated deflections, relative deflections, and the long-term movements associated with settlement of the foundations, or any other movements of the structure, changes in temperature, moisture content, and chemical changes.

   b. Include suitable allowances for the specified construction tolerances.

   c. Withstand the specified deleterious and degrading effects of radiation from the sun, weathering, atmospheric pollution, vermin, fungi, and other growths for the required service life without maintenance in excess of routine cleaning and minor repairs.

   d. Have resistance to combustion and fire spread appropriate to each part.

   e. Prevent casual and unlawful entry into the building.

f. Cleaning and maintenance of the Work shall be carried out easily, without interfering the function of the building.

g. Panels, Glazing beads, structural silicone assemblies, and decorative capping pieces shall remain securely held and gaskets shall not be displaced.

3. Failure includes the inability of the Work to meet the performance requirements set forth in this Section in addition to the following:

a. Noise or vibration created by wind, and thermal and structural movements.

b. Secondary Glass damage and/or damage due to falling components of the Work.

c. Staining of adjacent components or wetting of interior building components.

d. Loosening or weakening of fasteners, attachments, and other components.

C. Detailed Engineering Principles

1. The Work adopts a fully framed and mechanically pressure capped and structurally glazed standard aluminum-framed skylight system.

2. This system shall be:

a. Engineered as dry glazed and factory installed onto an off the shelf skylight system.

1) Mechanically restrained glazing and panels will have pressure cap separated from the face of the glazing by gaskets. Mechanically attach decorative pressure cap covers to pressure caps.

b. Pressure equalized to the back of the glazing pocket.

c. Incorporate a secondary drainage system behind the weathering seals that drains to the outside via a baffled weep path. This system shall:

1) Allow complete drainage of water from rebates to outside.

2) Prevent standing water on or around the edge of insulated glazed units, panes, and Panels.

3) Allow ventilation of the edges of the glazed units.

4) Framing members shall drain water from one member to another without the reliance on sealant joints to maintain watertightness. Framing members shall be notched and lapped to allow for the complete drainage of water to the exterior.

5) Framing members shall have condensation gutters as a portion of the extrusion. Condensation gutters shall drain water from one member to another without reliance on sealant joints to maintain watertightness. Framing members shall be notched and lapped to allow for the complete drainage of water to the exterior.

d. Locate weep holes to positively drain condensation to exterior of the skylight as required to meet performance requirements documented herein.

e. Incorporate a continuous internal air seal and vapor barrier that shall also act as second line of defense against water ingress.

1) All interfaces with adjacent systems shall accommodate the integration of the transitional waterproofing, air and vapor barrier into the Glazing pocket of the framing system. This integration shall provide for a continuous air and vapor system from the Glazing system to that of adjacent systems.

f. Provide the following when all tolerances are accommodated and the most onerous combination of movements occur (including wind sway):

1) Sufficient edge cover on all Glazed units and Panels to maintain weathering and structural performance around their perimeter.

2) Clearance to edges of all Glass panes or Panels of at least 1/8 in. everywhere around their perimeter.

g. Incorporate thermal isolation devices / thermal breaks wherever possible to minimize thermal bridging.

h. Capable of being re-glazed from outside of the building.

i. Sealed with gaskets and sealant at joints between horizontal and vertical framing members. Incorporate an interconnected condensation gutter system that drains to the outside via a baffled weep path.

j. Provide continuous sill pan with closure flashing with fully soldered or welded joints and corners.

D. Structural Performance

1. The Work shall transmit the design loads as specified below to the building structure via the points of attachment as engineered and built, with an adequate margin of safety appropriate to each material and product as required by 2014 New York City Building Code and the listed Reference Standards.

2. As required by 2014 New York City Building Code, the various load cases and combinations of load cases acting on structural elements shall be considered.

a. No permanent deformation or damage to any components of the Work, adjacent elements, or supporting structure shall be accepted under any of the above load cases and combinations of load cases, excluding blast and impact loads.

b. Where steel stiffeners are used, they shall be engineered for deflection control only. Aluminum framing shall be engineered for the full strength requirements of the system.

c. Consider buckling and overall structural system stability in the engineering of all elements. Engineer framing members and systems not to buckle under the design load cases and their combinations.

d. Consider wind reinforced vibrations in the engineering of the Work. The Work shall not resonate at or under the design load conditions.

e. Consider the effects of ice accumulation, including the impact on gravity and wind loads, in the engineering of the Work. Derive load combinations and methodology of developing Atmospheric Ice Loads from the latest edition of ASCE-7.

3. Coordinate all loads imposed on the building structure with the Commissioner.

4. Coordinate and verify access and maintenance loads with the maintenance equipment manufacturer and the Commissioner. Loads shall not be less than 2014 New York City Building Code or the following, whichever is greater and shall be applied to any external or internal surface of the Work which is subject to access for maintenance purposes:

a. A vertical uniformly distributed load of 12.5 lbf per square foot, and a concentrated load of 250 lbf acting on a 6 in. diameter contact area applied to any gutters, copings, or flat and near-flat surfaces with horizontal projections greater than 6 in.

b. A 115 lbf load applied horizontally through a 6 in. diameter contact area on any vertical or near-vertical building enclosure surface required to support a ladder.

c. 600 lbf in any direction at building maintenance equipment restraint points.

d. Where maintenance and safety ropes will be draped over elements of the Work, engineer those elements to support, without damage, a point load of 675 lbf or the anchorage load limits provided, applied over the length of contact of the cladding.

E. Movement Performance

1. The Work shall accommodate movements developed by the building structure without any reduction in the performance below the minimum levels required herein. This includes but is not limited to:

a. Movements due to design gravity and live loads.

b. Movements under repeated cycles of the design wind loads.

c. Movements due to seismic loads.

d. Movements due to snow loads.

e. Changes in dimension and shape arising from specified building movements, including settlement, shrinkage, elastic shortening, floor beam deflections, creep, wind sway, twisting and racking, and thermal and moisture movement. These include, but are not limited to, movements due to any joint in the supporting structure or building frame.

2. Coordinate all building movement assumptions with the Commissioner and as per the Structural Drawings.

F. Deflection Performance

1. Provide Work that accommodates the dimensional construction tolerances of building structure and other adjacent constructions.

2. Under design loads and their combinations, deflections of elements shall be less than either the requirements of 2014 New York City Building Code or as follows, whichever is lesser:

   a. Normal to the face of the Work plane:

      1) Elements Supporting Insulated Glazing: Less than L/175 but no greater than 1/8 in. whereby L is the length of the supported edge of the glazing.

      2) Elements Supporting Plaster, Masonry, or Brittle Items: Less than span/500.

      3) Non-Glass Spandrel Elements: Span/175.

      4) For spans 20 ft or greater, the maximum allowable deflection shall not exceed L/240 but no greater than 1/8 in.

      5) Deflections shall be limited to not allow the ponding of water.

   b. Parallel to the face of the wall plane, limited to the lesser amount of either:

      1) That which reduces glazing bite to less than 75% of the design dimension.

      2) That which reduces edge clearance between framing members and glazing or other fixed components to less than 25% of the design dimension or 1/8 in., whichever is greater.

   c. Engineer cantilevered elements to deflect less than 2L/175, where L represents the length of the cantilevered element.

3. The Work shall accommodate thermal deflections and movements resulting from the following maximum change (range) in ambient and surface temperatures. Changes in dimension resulting from changes in temperature in any of its parts, its supporting framework, and brackets shall not result in any reduction in the specified performance.

4. Base engineering calculation on surface temperatures of materials due to both solar heat gain and night-time-sky heat loss. As per AAMA 501.5, all system components shall noiselessly withstand thermal movements and shall not buckle, distort, crack, cause failure of glass and/or joint seals, or develop undue stresses on the finished surfaces, materials, fixing assemblies, or building structure.

   a. Engineer Work to meet these requirements under the following conditions:

      1) Total Temperature Range: 120°F, ambient; 180°F, material surfaces.

      2) Test Interior Ambient Air Temperature: 75°F.

5. The Work shall accommodate deflections and/or movements resulting from moisture without any reduction in the specified performance. This includes, but is not limited to:

   a. Changes in moisture content of Work components, including those due to wetting from rain.

   b. Expansion of absorbed or retained moisture due to freezing.

6. The Contractor shall avoid in its engineering and detailing introducing locked-in stresses that may be detrimental to the performance of the Work during the service life.

   a. Stresses include, but are not limited to, those that can develop in an individual Panel if the various fasteners and connections securing it in position are so rigid that they do not allow for thermal or other movement in that Panel.

7. Applicable Testing Requirements

   a. Uniform Load Structural Deflection Performance

      1) The Work shall demonstrate compliance with the deflection criteria listed in this Section when tested according to ASTM E330.

   b. Uniform Ultimate Load Structural Deflection Performance

      1) The Work shall not show evidence of material failures, structural distress, or permanent deformation exceeding 0.2% of span when tested according to ASTM E330 at 150% of the peak design load (positive or negative).

G. Weatherproofing Performance

1. The Work, including all joints between it and other elements of Work, shall prevent leakage of water into the interior of the building from the weathering line of the assembly, under the action of wind pressure, kinetic energy, gravity, surface tension, or capillary action. It shall also prevent water entering into those parts of the Work that would be adversely affected by the presence of water.

   a. All joints within the Work shall maintain their watertightness under the loads and movements specified herein.

   b. The weathering principles incorporated within the Work and interfacing with adjacent elements of Work shall be compatible with the weathering principles adopted by the adjacent elements.

   c. Detailing and waterproofing must ensure that water from ponding or reservoirs is directed away from the Work such that water will not build up a pressure head or impose forces onto the building enclosure seals and components.

   d. Detailing must ensure that water collected within Work elements is positively drained to the outside of the Work.

      1) The drainage of water along edge seals of insulated glazed units is not permitted unless written confirmation is provided by the unit manufacturer stating that the design life, required service life, and warranty of the unit is unaffected.

2. Incorporate elements and details in the Work to provide a continuous vapor barrier system.

   a. Engineer elements to the exterior of the vapor barrier plane so they are suitable for exterior conditions and experience weathering without any loss in performance as specified.

      1) No element of the Work shall be encapsulated between two vapor barrier planes.

b. Vapor control elements shall maintain their performance and properties for the expected service life of the system.

c. Where vapor control elements will be exposed to the interior conditions during construction, select suitable materials to ensure elements are not easily damaged during the installation of the Work or adjacent constructions.

1) Easily damaged materials include, but are not limited to, foil facing attached to other products, including insulation.

3. Applicable Testing Requirements

a. Static Pressure Water Infiltration

1) Work shall demonstrate compliance with the weatherproofing performance criteria when tested according to ASTM E331 at a minimum static air pressure differential of 20% of the peak positive wind load design pressure, but not less than 15 psf.

2) No evidence of water infiltration inboard of the weathering line plane when tested.

b. Dynamic Pressure Water Infiltration

1) The Work shall demonstrate compliance with the weatherproofing performance criteria when tested according to AAMA 501.1 at a minimum static air pressure differential of 20% of the peak positive wind-load design pressure, but not less than 15 psf.

2) No evidence of water infiltration inboard of the weathering line plane when tested.

c. Primary and Condensation Gutter Continuity Testing

1) Work shall demonstrate that the condensation gutters provide a continuous path for water to drain from any high point of the system to the exterior without any evidence of water inboard of the weathering line of the system with the exception of each respective gutter.

H. Energy Performance

1. Work and components shall have certified energy performance ratings as determined by the standards referenced by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

2. Incorporate thermal breaks wherever possible in the Work.

3. The design environmental conditions are:

a. Exterior extreme annual heating and cooling design dry bulb temperature and coincident wind speed:

1) Maximum Dry Bulb: 98.9°F at 6 mph.

2) Minimum Dry Bulb: 5°F at 10 mph.

b. Interior design dry bulb temperature, relative humidity (RH), and interior air film coefficient:

1) 75°F at 50% RH and 0.7 Btu/hr - sq ft - °F.

4. Thermal Transmittance (U-Factor)

a. U-factor of the Work shall not be more than specified in the Building Enclosure System Matrix, accounting for all frame effects.

b. Refer to and coordinate values with the final Glass and Glazing assembly specified in Exterior Glass Type Matrix.

5. Solar Heat Gain Coefficient (SHGC)

a. SHGC of the Work shall not be more than specified for each building enclosure system as specified in the Building Enclosure System Matrix, accounting for all frame effects.

b. Refer to and coordinate values with the final Glass and Glazing assembly specified in Exterior Glass Type Matrix.

6. Visible Light Transmittance (VLT)

a. VLT of the Work shall not be more than specified for each building enclosure system as specified in the Building Enclosure System Matrix accounting for all frame effects.

b. Refer to and coordinate values with the final Glass and Glazing assembly specified in Exterior Glass Type Matrix.

7. Condensation Resistance

a. Provide systems whose internal condensation and drainage systems will prevent uncontrolled condensation inboard of the vapor barrier plane, under the most onerous environmental conditions specified in this Section.

8. Static Pressure Air Infiltration

a. Maximum air leakage through the Work areas of the Project shall be the lesser of the requirements determined according to 2014 New York City Building Code and 2016 New York City Energy Conservation Code or the following:

1) For non-operable portions of the Work, the maximum air infiltration rate shall be one half of that as required and determined according to the standards referenced by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

9. Applicable Testing Requirements

a. Static Pressure Air Infiltration

1) The Work shall demonstrate compliance with the air infiltration criteria listed in this Section when tested according to ASTM E283 and to the pressure differential referenced by 2014 New York City Building Code and 2016 New York Energy Conservation Code.

I. Fire Performance

1. The Work shall comply with the relevant fire resistance, smoke sealing, and fire stopping recommendations as stated in the 2014 New York City Building Code and 2016 New York City Energy Conservation Code, but not less than the following:

   a. ASTM E84: Flame Spread Index must be less than 25, Smoke Developed Index must be less than 450.

   b. ASTM D1929: Self-ignition temperature of 650°F or greater.

   c. ASTM D635: Requires a CC1 classification

   d. Tested and comply with NFPA 285 acceptance criteria.

2. Component materials shall not give off toxic fumes.

J. Lightning Protection and Grounding Performance

1. Coordinate as necessary with the trade responsible for the lightning protection and grounding systems as required by 2014 New York City Building Code for the building and shall agree on appropriate connection points with them for review by the Commissioner.

   a. No external tapes or visible connections will be accepted.

   b. Provide electrically continuous vertical and horizontal metallic framework elements and supporting structures of the building enclosure for the purposes of lightning protection and grounding. Provide bonding of the framework to the rest of the lightning protection and grounding system. Ensure all non-conductive thermal breaks are electrically continuous.

K. Infestation

1. Engineer materials used in the Work against attack or infestation by micro-organisms, fungi, insects, or other vermin.

1.6 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions.

1.7 SUBMITTALS:

A. Shop Drawings

B. Calculations

1. Provide structural calculations. Include calculation of all loads and their combinations.

2. Provide thermal calculations as required to describe:

   a. U-value, SHGC, and VLT performance of Work.

   b. Condensation resistance of all elements of Work.

C. Testing Reports

1. Weather Test Certificate

a. Present certificates of weathering performance test results of a completed installation, utilizing a similar system, under similar loads and of similar size and geometry to the Project, demonstrating that performance requirements of Work can be met.

D. Product Data

E. Samples

1. Refer to Samples Matrix.

F. Quality Control Plan

G. Welding Certificates

H. Energy Performance Certificates

1. For Work, provide labeled and certified performance from the manufacturer according to the requirements of 2014 New York City Building Code and 2016 New York City Energy Conservation Code and by reference ASHRAE 90.1.

a. U-value performance shall be certified and labeled per NFRC 100 requirements.

b. SHGC performance shall be certified and labeled per NFRC 200 requirements.

c. Static pressure air infiltration performance shall be certified and labeled per NFRC 400 requirements.

2. Indicate whether certification is based on actual test of assembled components or on calculation.

a. Provide fenestration products with NFRC certified performance values.

I. Product Test Reports

1. Indicating compliance with performance requirements.

J. Quality Control Reports

1. Fabricator reports.

2. Field reports.

K. Completion of Work: Upon completion of installation of the Work, submit written certification that the manufacturer's representative has supervised the work of this Section and that all materials are correctly installed.

1.8 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. General for Installers:

1. The Contractor must be licensed or approved by the manufacturer.

1.9 WARRANTY:

A. Warranty shall state that the Work is free from defects in materials and workmanship and weathertight for a period of 1 yr from the date of Substantial Completion. Contractor shall agree to promptly repair or replace defective materials and workmanship to "like new condition," including such exploratory work, required to determine the cause, during the Guarantee period, at no additional cost to the City of New York.

B. In addition to Contractor's Warranty, the paint finish manufacturer shall guarantee the finish for a period of 20 yrs from the date of substantial completion of the Work against defects, including full labor and material.

C. The Contractor shall be responsible for repairing damage to the building and furnishings occasioned by defective materials or workmanship or damage as part of repairs to the Work.

1.10 PROJECT CONDITIONS:

A. Adjacent Trade Shop Drawing Review and Field Measurements: Verify actual locations of structural supports for Work by review of supporting structure Shop Drawings or field measurements before fabrication and indicate measurements on Shop Drawings.

PART II – PRODUCTS

2.1 MANUFACTURERS:

A. Manufacturers: Subject to compliance with requirements provide products by one of the following:

1. Acurlite Structural Skylights, Inc.
2. Velux Skylight.
3. Super Sky Products Enterprises, LLC.
4. Or approved equal

B. Products

1. Subject to compliance with requirements, provide products by one of the following:
   a. Acurlite Structural Skylights; Single Pitch Skylight and Round.
   b. Velux Longlight.
   c. Super Sky Glass System Skylight.
   d. Or approved equal.

2.2 MATERIALS:

A. Aluminum Components

1. Manufacturer's recommended alloy and temper meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

   a. Sheet and Plate: ASTM B209.

   b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.

   c. Extruded Structural Pipe and Tubes: ASTM B429.

   d. Structural Profiles: ASTM B308/B308M.

   e. Welding Rods and Bare Electrodes: AWS A5.10 / A5.10M.

B. Steel Components

1. Manufacturer's recommended alloy and temper meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

   a. Structural Shapes, Plates, and Bars: ASTM A36/A36M/A572.

   b. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.

   c. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.

   d. Galvanized Sheet: ASTM A653/A653M.

C. Stainless Steel

1. Manufacturer's recommended alloy and temper meeting the requirements and standards listed herein for type of use and finish indicated in accordance with:

   a. Plate, Sheet and Strip: ASTM A240/A240M.

2. With a Pitting Resistance Equivalence Number (PREN) greater than 24.5 calculated using the formula 'PREN = %Cr + 3.3 x %Mo + 16 x %N' based on the minimum compositions for Chromium, Molybdenum, and Nitrogen given in ASTM A240 or equivalent.

3. In areas where stainless steel may be used in proximity to a water feature, sea spray, or salts, the alloy chosen will not corrode or exhibit any surface pitting in its installed condition, or require regular maintenance to prevent corrosion.

   a. Use non-austenitic alloys including the following:

      1) Duplex stainless steel Type 2205 (UNS S32205).

      2) 317L.

2.3 FINISHES:

A. Refer to Building Enclosure System Matrix for finish selection for each system.

B. Aluminum Components

1. Anodized Finish

   a. Carry out anodizing under conditions of acceptable good practice for architectural applications. Hold processing conditions constant for the period required for completion of the Work. Keep records of these conditions and make available for inspection in the event of a dispute as to the quality of the finished anodic coating.

   b. Clear Anodic Finish: AA-M12C22A41, Class I, 0.71 mil or thicker, as complying with AAMA 611.

   c. Color Anodic Finish: AA-M12C22A42/A44, Class I, 0.71 mil or thicker, as complying with AAMA 611.

      1) Color: Refer to Building Enclosure System Matrix.

2. High-Performance Organic Finish

   a. Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70% PVDF resin by weight in color coat and clear topcoat.

   b. Prepare, pretreat, and apply coating to exposed metal surfaces complying with coating and resin manufacturers' written instructions.

   c. Color and Gloss: Refer to Building Enclosure System Matrix.

   d. Manufacturers are subject to compliance with requirements documented herein. Manufacturers offering products that may be incorporated into the Work include the following:

      1) PPG Industries Inc., Duranar XL Extrusion Coating.

      2) Akzo Nobel Coatings Inc., Trinar Ultra TEC/TMC.

      3) The Valspar Corporation, Fluropon Premiere.

      4) Or approved equal.

3. Powdercoat Finish

   a. Shop-applied Superior Performance powder coating finish for architectural aluminum extrusions complying with AAMA 2605.

   b. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

   c. Color and Gloss: Refer to Building Enclosure System Matrix.

      1) One-coat dry system with 70% fluoropolymer resin, meeting performance requirements of AAMA 2605 and the following:

         a) Dry Film Thickness, ASTM D1400: Not less than thickness applied to tested specimens meeting specified performance requirements, and as recommended by manufacturer for application.

b) Specular Gloss, ASTM D523 at 60°: To be coordinated with the Commissioner.
c) Dry Film Hardness, ASTM D3363: Pass.
d) Sulphur Dioxide, ISO 3231 (Kesternich): Pass; no blistering, loss of gloss, or discoloration.

d. Manufacturers are subject to compliance with requirements documented herein.

1) Akzo Nobel Coatings Inc., Interpon D3000 Series Fluoromax Powder Coating.

2) PPG Industries Inc., Duranar Powder Coatings.

3) The Jotun Group, Jotun Durasol.

4) Or approved equal.

4. Concealed Components

a. Provide either High-Performance Organic Finish, Powdercoat Finish, or Clear Anodic Finish.

C. Steel Components

1. Zinc coated by hot-dip process according to ASTM A123/A123M, ASTM A653/A653M or ASTM A153/A153M, after fabrication as applicable.

a. Galvanized sheet shall have a minimum coating designation of G90 according to ASTM A653/A653M.

b. Following pickling operations, hold steel at more than 212°F to ensure a uniform temperature, either prior to, or after fluxing.

2. Exposed Components

a. Provide a High-Performance Organic or Powdercoat Finish meeting the requirements specified for Aluminum Components and in accordance with the finish manufacturer's procedures.

3. Concealed Components

a. Use a zinc-rich, corrosion-resistant primer, complying with SSPC-PS Guide applied immediately after surface preparation and pretreatment.

b. Select surface preparation methods according to recommendations in SSPC-PS and prepare surfaces according to applicable SSPC standard.

D. Stainless Steel Components

1. Exposed Components

a. Surface Preparation

1) Remove tool and die marks and stretch lines, or blend into finish.

2) Polished Finishes

a) Grind and polish surfaces to produce uniform finish, free of cross scratches.
b) Run grain of directional finishes with long dimension of each piece.
c) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

3) Finish: Refer to Building Enclosure System Matrix.

E. General

1. Choose finishes such that touch-up finishes match factory finish.

2. Discoloration, fading, chalking, excessive non-uniformity, pitting, cracking, peeling, corrosion, or crazing of finish is not allowed.

3. The terms below used in conjunction with finish Warranty are defined as follows:

a. "Excessive Fading": Means a change in appearance that is perceptible and objectionable as determined by the Commissioner when viewed visually in comparison with the original color range standards.

b. "Excessive Non-Uniformity": Means non-uniform fading during the Warranty period to the extent that adjacent parts have a color difference greater than the original acceptable color range.

c. "Will Not Pit or Otherwise Corrode": Means no pitting or other type of corrosion of finish discernible from a distance of 10 ft, resulting from the natural elements in the atmosphere at the Project site.

4. Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D2244.

b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.

c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2.4 FRAMING:

A. Framing members shall comply with the profiles and angles shown in the Architectural Drawings and comply with the performance requirements set forth in these Specifications.

B. Aluminum Framing shall follow the recommendations of the following:

1. AA – Aluminum Design Manual, Aluminum Standards and Data

2. AAMA – Aluminum Curtain Wall Design Guide Manual, Care and Handling of Architectural Aluminum from Shop to Site.

C. Framing shall incorporate profiles to accommodate waterproofing integration at interfaces with adjacent building enclosure systems.

2.5 BRACKETS, FASTENERS AND ANCHORAGE:

A. Fasteners

1. Fastener engineering shall be no less than the most stringent standards as required by 2014 New York City Building Code and its reference standards, or the following requirements:

   a. Fastener engineering for aluminum components shall be as per the Aluminum Association Aluminum Design Manual (AA-ADM1).

      1) Allowable loads for fasteners shall be the lesser of the fastener manufacturers' requirements or per AAMA TIR-A9 with the most recent amendments.

   b. Steel and Stainless Steel Bolts

      1) Carbon Steel Bolts, Studs, and Threaded Rod 60,000 psi Tensile Strength: ASTM A307.

      2) Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength: ASTM A3125.

      3) Stainless Steel Bolts, Hex Cap Screws, and Studs: ASTM F593.

      4) Stainless Steel Nuts: ASTM F594.

   c. When utilizing a fastener that is not included in any of the above references, available standards or design guides, use a minimum factor of safety of 4 for permissible load engineering of anchoring assemblies.

2. Fastener engineering shall account for any reduction in safe working loads due to their spacing, location in areas of tension, near edges, or proximity to cast in inserts/existing fasteners, or thickness of shims. Fastener engineering shall also consider condition, thickness, and material properties of substrate. Adhesive anchoring systems shall not be used for fasteners supporting loads in tension.

3. Unless shown in the Architectural Drawings, no visible exposed fasteners.

   a. Where exposed fasteners are shown and required, use countersunk security heads.

4. All exterior fasteners or fasteners in wet areas shall be of a suitable grade of stainless steel. Use weather coatings for corrosion resistance only with Commissioner's approval.

5. Select and coordinate with the weatherproofing system manufacturer all exterior fasteners required to penetrate a self-sealing weatherproofing system to ensure self-sealing occurs.

6. Where post drilled or site-drilled fasteners are used for connections to the external structural steel frame, do not compromise integrity of the steel corrosion protection system.

7. Highlight the general requirement for torqueing of bolts in the Shop Drawings and clearly state tightening torque values.

8. The Contractor shall provide for the Commissioner's review, documentation demonstrating that the use of all installed fasteners have been reviewed and approved by the fastener manufacturer and shall,

prior to installation, submit manufacturer's written certification that details proposed by the Contractor are appropriate for their intended use.

B. Brackets and Anchorage

1. Engineer brackets and anchorage to allow for adjustments by 1 in. in small increments in and out, up and down, and side to side in the position of the Work supports relative to other constructions, to accommodate the full variations in the underlying construction and fabrication tolerances.

2. Shimming required to accommodate local variations in construction tolerances only. State the maximum allowable shim dimension in the Shop Drawings.

3. Concrete and masonry inserts shall be hot-dip galvanized cast-iron, malleable-iron, or steel inserts as required by ASTM A123/A123M or ASTM A153/A153M.

C. General

1. Engineer all brackets and fasteners so there is no risk of loosening due to the effects of vibrations or due to the cyclic effects of load, deflections, and thermal movements.

2. Engineer brackets for site-drilled fasteners to allow for the possibility of reinforcement or other obstructions being encountered and the fixing position being moved as a result thereof.

3. Do not cut reinforcement or other obstructions without the approval of the Commissioner.

2.6 FLASHING:

A. Refer to Section 07 62 01 – Facade Sheet Metal Flashings for performance requirements.

B. Provide corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials constructed with one of the following waterproof materials:

1. Stainless steel, ASTM A240/A240M of manufacturer's recommended thickness.

2. One of the following membrane materials:

a. Silicone sheet.

C. Flashings shall maintain their performance and properties for the expected service life of the Contract Work.

D. Flashings shall have the necessary mechanical properties to withstand installation and specified design loads.

E. Flashings and smoke barriers visible externally or internally shall be aluminum sheet with finish to match Work.

2.7 WEATHER RESISTIVE BARRIER:

A. Refer to Section 07 27 01 – Weather Resistive Barriers for performance requirements.

2.8 GASKETS:

A. General

1. Do not install gaskets/dry weather seals in a pre-stretched condition.

2. Gaskets shall be accessible for inspection/replacement.

3. Select gaskets and seals used to achieve the required weather and airtightness in accordance with ASTM C716 to fully accommodate the range of dimensional tolerances associated with fabrication and installation of the Work. Form with materials capable of maintaining their elastic qualities, dimensions, and resistance to physical and chemical attack sufficient to maintain the full performance during the design life. Gaskets shall be free from contact and migration stain and shall be compatible with all substrate, Sealant and finishes with which they may come in contact.

4. Gaskets shall maintain their performance and properties for the expected service life of the product.

5. Gaskets shall be free of mold flash.

B. Extruded rubber gaskets shall comply with ASTM C509.

1. Dense compression gaskets shall be molded or extruded, of profile and hardness required to maintain watertight seal, made from silicone complying with ASTM C1115.

   a. Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

2. Soft compression gaskets shall be extruded or molded, closed-cell, integral-skinned silicone gaskets complying with ASTM C509, Type II, black; of profile and hardness required to maintain watertight seal.

2.9 GLAZING:

A. Refer to Building Enclosure System Matrix for glazing types and Section 08 80 00 – Exterior Glazing for performance requirements.

2.10 SEALANTS:

A. Refer to Section 07 92 01 – Exterior Joint Sealants for performance requirements.

2.11 SEMI-RIGID INSULATION:

A. Unfaced, Mineral-Wool Board Insulation

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Rockwool, Inc.

   b. Thermafiber, Inc.

   c. Johns Manville.

d. Or approved equal.

B. Product Properties

1. Complying with ASTM C612; with maximum flame-spread and smoke-developed indexes of fifteen (15) and zero (0), respectively, per ASTM E84.

2. Shall pass ASTM E136 for combustion characteristics.

3. Nominal density of 6 lb per cubic foot, Type II, with a minimum thermal resistivity of 4.2°F x h x sq ft/Btu x in. at 75°F.

4. Recycled Content: Postconsumer recycled content plus one-half of pre-consumer recycled content not less than 10%.

C. Insulation Fasteners

1. Engineer fasteners to fully restrain insulation against all design loads.

2. Provide fastener materials suitable for the environmental conditions the insulation will be exposed to.

3. Adhesively attached, spindle-type anchors utilizing plate welded to projecting spindle and capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.

4. Anchor adhesive shall demonstrate capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.

D. Thermal insulation shall be inert, durable, not water soluble, rot and vermin proof, CFC and HCFC free, shall be inorganic and not support mold fungal or bacteria growth and shall provide the specified performance for the service life of the Work. Make due allowance for the reduced performance of insulation due to the effects of moisture and aging.

E. Thermal insulation shall be sufficiently robust and cohesive to allow removal and replacement in service without loss of material or performance. It shall not be injurious to human health properly installed, in service, or during removal and replacement.

2.12 ACCESSORY MATERIALS:

A. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30 mil thickness per coat.

B. Galvanizing Repair Paint: ASTM A780.

C. Shims: Load-bearing, high-density multimonomer plastic, non-leaching.

D. Separating / Isolating Materials

1. The Contractor shall select, provide, and install each material so it is, and will remain, compatible with other materials around it within its range of influence. Contractor shall ensure adequate measures are taken to prevent bimetallic corrosion between dissimilar metals. Where different metallic materials are used, fit separators to eliminate the risk of corrosion.

E. Weep Baffles: PVC-coated reticulated foam, 30 to 40 ppi.

F. Butyl Tape: Preformed butyl-based elastomeric tape with 100% solids content. Nonstaining, with or without spacer rod (as approved by Commissioner), with release paper backing.

PART III – EXECUTION

3.1 REQUIREMENTS:

A. Refer to DDC General Conditions for execution requirements.

3.2 FABRICATION:

A. General

1. Profiles shall be sharp, straight, and free of defects or deformations.
2. Fabricate all formed or extruded shapes prior to finishing.
3. Accurately form joints without lipping or offsets in visible surfaces unless engineered otherwise. Rigidly secure other joints to prevent all but designed movement, unless engineered otherwise.
4. Accurately fitted joints with ends coped or mitered.

B. Cutting

1. Grind, cut, and shape metals using tools which will not contaminate them with particles which could stain or corrode them.
2. Steel Components
   a. Minimize use of arc cutting and acetylene gas cutting as much as feasible. If required, Contractor shall submit full welding procedures to demonstrate hardness remains within the required limits.
   b. Mild steel cut or shaped by either flame cutting or Plasma cutting shall be to procedures agreed by the Commissioner. Procedures shall demonstrate that the surface hardness is less than 270 Hv 10. Require random inspection of the steel to ensure hardness level is not exceeded. Alternatively, surface dress all cut edges to remove hardened material.
   c. All punched holes shall be undersized by 40 mil and be reamed to the finished size.

C. Welding

1. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
2. Weld metals in accordance with the relevant standards using methods to avoid distortion. Show the type, size and spacing of welds on Drawings for Commissioner's review, prior to fabrication.
3. Fully bond welds throughout their length without holes, inclusions, cracks, or porosity so as not to compromise the long-term performance and welds are strong enough for the design requirements.

4. Grind all welds smooth and flush with the adjoining surfaces where visible or impinging on other work.

5. Do not site weld except where approved by the Commissioner.

6. Finish completed welded construction to prevent corrosion. Clean all welds as necessary to ensure the durability of the connections.

7. All radius edges used in changes of section shall be typically two times the maximum wall thickness.

8. All welding procedures and welding procedure specifications shall limit the hardness in the weld, parent metal, or heat-affected zone to less than 270 Hv 10.

D. Pressing and Folding

1. Fold and form aluminum sheets over dies or mandrels with the minimum radii recommended by the Aluminum Association in publications as Aluminum Design Manual. Make trial bends on scrap material of the alloy, temper, and thickness being used to ensure that it is not cracked, torn, unevenly stretched, or separated at grain membranes.

E. Sealants and Adhesives

1. Prepare surfaces that will contact Sealants and/or adhesives according to the manufacturer's written instructions to ensure compatibility and adhesion.

2. Preparation includes, but is not limited to, cleaning and priming surfaces.

F. Gaskets

1. Gaskets jointed by bonding with adhesive are not accepted as a substitute for molded frame gaskets. If adhesive-bonded joints are required, bring to the Commissioner's attention for review before proceeding with work.

2. All gasket frames should be normally manufactured to a small but predetermined oversize tolerance, to ensure that when seated into position, the lineal lengths and corners of the gaskets are in slight compression.

3. Install gaskets in accordance with the manufacturer's recommendations and utilizing the correct tools.

G. Fabrication Tolerances

1. Metal cutting tolerances for framework shall be:

a. ± 1/16 in. on length of vertical members.

b. ± 1/32 in. on length of horizontal members.

c. ± 1/64 in. on the length and width of spandrel panels, back pans, and aluminum sheets.

d. ± 1/32 in. on length of diagonal of spandrel panels, back pans, and aluminum sheets, and not more than ± 1/16 in. in difference in the length between the two diagonals.

e. Space individual framing members no more than plus or minus 1/8 in. from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

2. Structural Steel Fabrication Tolerances

a. Fabricate structural steel in accordance with AISC 303-16 – Code of Standard Practice for Steel Buildings and Bridges, architecturally exposed structural steel requirements Category AESS 1, with the exception that fabrication tolerances shall be one-quarter (1/4) of standard fabrication tolerances.

3.3 INSTALLATION:

A. Comply with requirements and product manufacturer's recommended guidelines.

B. Do not install damaged components.

C. Fit joints to produce joints free of burrs and distortion.

D. Rigidly secure all non-moving elements.

E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.

F. Metal Protection

1. Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape or installing nonconductive spacers as recommended by manufacturer for this purpose.

2. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

G. Set continuous perimeter members and flashing in full sealant bed to produce watertight installation.

3.4 INSTALLATION TOLERANCES:

A. Install Work to comply with the following maximum tolerances:

1. Plumb: 1/8 in. in 10 ft; non-cumulative.

2. Level: 1/8 in. in 20 ft; non-cumulative.

3. Alignment: End-to-end or edge-to-edge offset of adjoining consecutive element to 1/16 in.

a. Where surfaces abut in line and at corners and where surfaces are separated by less than 3 in., limit offset from true alignment to less than 1/32 in.

4. Location and Plane: Limit variation from plane to 1/8 in. in 10 ft; 1/4 in. over total length.

5. Diagonal Measurements: Limit difference between diagonal measurements to 1/8 in.

3.5 FIELD QUALITY CONTROL:

A. Test and inspect representative areas of the Work as installation proceeds to determine compliance of installed assemblies with specified requirements.

B. Testing shall be performed by a qualified Independent Testing and Inspection Agency.

1. The Independent Testing and Inspection Agency shall prepare and submit an inspection and test report.

C. Work is considered defective if it does not pass tests and inspections.

1. There shall be no evidence of water penetration as per the weatherproofing requirements specified.

a. No increase in the allowable rate of air infiltration or increase in the volume of water leakage, nor any decrease in the specified test pressures will be permitted in the evaluation of field testing. This requirement is more restrictive than AAMA standards.

2. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.

3. For each failure condition discovered, make remedial and corrective action approved by the City of New York. All failures shall be considered systemic failures requiring corrective work at all similar conditions and locations. Remedial measures shall maintain standards of quality and durability and are subject to approval by the Commissioner.

4. Additional testing and inspecting shall be at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Gutter Continuity Testing

1. Prior to glazing Glass or Panels into framing, but after all frame gaskets and seals are installed and cured, test the condensation gutter system.

2. To test system, pour water at the high point of each drainage channel of the system and observe that the water drains out of the baffled weep path of the system to the exterior. Test all drainage channels such that every drainage channel connection is determined to be leak free.

3. There shall be no evidence of water penetration as per the weatherproofing requirements specified with the exception of water in each respective drainage channel.

4. Provide a minimum of two (2) weeks' notice to all parties to allow them to attend all hose testing.

E. Water Nozzle Spray Test

1. After completing Work installation and before interior finish installation begins, carry hose testing on 100% of the Work as designated by Commissioner for water penetration according to AAMA 501.2 requirements.

2. Minimum area of test area shall be 50 sq ft.

3. Provide a minimum of two (2) weeks' notice to all parties to allow them to attend all hose testing.

4. Repair or remove and replace Work not meeting requirements or damaged by testing; replace to conform to specified requirements.

F. Field Testing Support

1. The City of New York will engage an Independent Testing Agency to perform field testing of the Work and prepare test reports. Testing will include those performed to ASTM E1105, ASTM E283, AAMA 501.2, and AAMA 502 standards. The Contractor shall assist the independent Testing and Inspection Agency with testing, including providing safe access, water, power, constructing interior test chambers, etc.

   a. Assume two (2) days of field air and water infiltration testing at multiple locations selected by the Commissioner.

   b. If failures occur, provide additional test assistance as needed to obtain Commissioner's approval at no additional cost.

2. Testing Services: Testing and inspecting of representative areas to determine compliance of installed system with specified requirements shall take place as follows and in successive stages as indicated by the Commissioner. The Commissioner will perform some of this testing during the early stages of Work installation. Complete all related installation work, in areas selected by the Commissioner, as needed to allow air and water testing to be performed during the early stages of the work (including installation of glazing, framing, gaskets, etc.). Do not proceed with the installation of the next area until test results for previously completed areas show compliance with requirements.

   a. Air Infiltration: Areas shall be tested for air leakage of the rate specified under Static Pressure Air Infiltration Article, but not more than 0.06 cfm per square foot of fixed wall area when tested according to ASTM E 783 at a minimum static-air-pressure differential of 6.24 lbf per square foot.

   b. Water Penetration: Areas shall be tested according to ASTM E1105 at minimum uniform static-air-pressure difference (Procedure A) equal to the pressure specified under Static Pressure Water Infiltration Article and shall not evidence water penetration.

   c. Water Spray Test: After the installation of minimum area of 100 sq ft of Work has been completed but before installation of interior finishes has begun, a two-bay area of system designated by Commissioner shall be tested according to AAMA 501.2 and shall not evidence water penetration.

   d. Occasionally test Glazing pockets (and other horizontal cavities that may collect water) by temporarily plugging weep holes and filling with water in accordance with AAMA 511. After minimum of 15 min., inspect for water leakage or drop in water level. Correct deficiencies and retest until successful tests are achieved. Remove weep holes plugs and drain system at conclusion of test. Perform tests at start of the work and periodically throughout the construction process (minimum once every two weeks).

END OF SECTION 08 63 01

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 08 71 00
Door Hardware

PART I - GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:
   a. Refer to DDC General Conditions and the Addendum to the General Conditions
   b. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY:

A. Section includes:

1. Mechanical and electrified door hardware for:
   a. Swinging doors.
   b. Gates.
2. Electronic access control system components, including:
   a. Electronic access control devices.
3. Field verification, preparation and modification of existing doors and frames to receive new door hardware.

B. Exclusions: Unless specifically listed in hardware sets, hardware is not specified in this section for:

1. Windows
2. Cabinets (casework), including locks in cabinets
3. Signage
4. Toilet accessories
5. Overhead doors

C. Related sections:

1. Section 042000 "Unit Masonry" for touchup finishing or refinishing of openings modified by this section.
2. Section 079200 "Interior Joint Sealants" for sealant requirements applicable to threshold installation specified in this section.
3. Section 079201 "Exterior Joint Sealants" for sealant requirements applicable to threshold installation specified in this section.
4. Section 092900 "Gypsum Drywall" for touchup finishing or refinishing of openings modified by this section.

5. Section 093013 "Ceramic Tiling" for touchup finishing or refinishing of openings modified by this section.
6. Section 099000 "Painting and Finishing" for touchup finishing or refinishing of openings modified by this section.
7. Division 26 sections for connections to electrical power system and for low-voltage wiring.
8. Division 28 sections for coordination with other components of electronic access control system.

   a. ANSI/ICC A117.1 Accessible and Usable Buildings and Facilities

D. 2014 NYC Building Code.

1.4 SUBMITTAL PROCEDURES:

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
B. General:

1. Highlight, encircle, or otherwise specifically identify on submittals deviations from Contract Documents, issues of incompatibility or other issues which may detrimentally affect the Work.
   a. Prior to forwarding submittal, comply with procedures for verifying existing door and frame compatibility for new hardware, as specified in PART 3, "EXAMINATION" article, herein.

C. Action Submittals:

1. Product Data: Product data including manufacturers' technical product data for each item of door hardware, installation instructions, maintenance of operating parts and finish, and other information necessary to show compliance with requirements.
2. Riser and Wiring Diagrams: After final approval of hardware schedule, submit details of electrified door hardware, indicating:

   a. Wiring Diagrams: For power, signal, and control wiring and including:

i. Details of interface of electrified door hardware and building safety and security systems.
ii. Schematic diagram of systems that interface with electrified door hardware.
iii. Point-to-point wiring.
iv. Risers.

3. Samples for Verification: Submit production sample or sample installations of each type of exposed hardware unit in finish indicated, and tagged with full description for coordination with schedule.

    a. Samples will be returned to supplier in like-new condition upon acceptance of work. Units that are acceptable to the Commissioner may, after final check of operations, be incorporated into Work, within limitations of key coordination requirements.

4. Door Hardware Schedule: Submit schedule with hardware sets in vertical format as illustrated by Sequence of Format for the Hardware Schedule as published by the Door and Hardware Institute. Indicate complete designations of each item required for each door or opening, include:

    a. Door Index; include door number, heading number, and the Commissioner's hardware set number.
    b. Opening Lock Function Spreadsheet: List locking device and function for each opening.
    c. Type, style, function, size, and finish of each hardware item.
    d. Name and manufacturer of each item.
    e. Fastenings and other pertinent information.
    f. Location of each hardware set cross-referenced to indications on Drawings.
    g. Explanation of all abbreviations, symbols, and codes contained in schedule.
    h. Mounting locations for hardware.
    i. Door and frame sizes and materials.
    j. Name and phone number for local manufacturer's representative for each product.
    k. Operational Description of openings with any electrified hardware (locks, exits, electromagnetic locks, electric strikes, automatic operators, door position switches, magnetic holders or closer/holder units, and access control components). Operational description should include how door will operate on egress, ingress, and fire and smoke alarm connection.

        i. Submittal Sequence: Submit door hardware schedule concurrent with submissions of Product Data, Samples, and Shop Drawings. Coordinate submission of door hardware schedule with scheduling requirements of other work to facilitate fabrication of other work that is critical in Project construction schedule.

5. Key Schedule:

    a. After Keying Conference, provide keying schedule listing levels of keying as well as explanation of key system's function, key symbols used and door numbers controlled.
    b. Use ANSI/BHMA A156.28 "Recommended Practices for Keying Systems" as guideline for nomenclature, definitions, and approach for selecting optimal keying system.
    c. Provide 3 copies of keying schedule for review prepared and detailed in accordance with referenced DHI publication. Include schematic keying diagram and index each key to unique door designations.
    d. Index keying schedule by door number, keyset, hardware heading number, cross keying instructions, and special key stamping instructions.
    e. Provide one complete bitting list of key cuts and one key system schematic illustrating system usage and expansion.

        i. Forward bitting list, key cuts and key system schematic directly to The Commissioner

    f. Prepare key schedule by or under supervision of supplier, detailing the Commissioner's final keying instructions for locks.

6. Templates: After final approval of hardware schedule, provide templates for doors, frames and other work specified to be factory prepared for door hardware installation.

D. Informational Submittals:

1. Refer to DDC General Conditions.
2. Qualification Data: For Supplier, Installer and Architectural Hardware Consultant.

    a. Product Certificates for electrified door hardware, signed by manufacturer:
    b. Certify that door hardware approved for use on types and sizes of labeled fire-rated doors complies with listed fire-rated door assemblies.

3. Certificates of Compliance:

    a. Certificates of compliance for fire-rated hardware and installation instructions if requested by the Commissioner.
    b. Installer Instruction Meeting Certification: Letter of compliance, signed by Contractor, attesting to completion of installer instruction meeting specified in "QUALITY ASSURANCE" article, herein.
    c. Electrified Hardware Coordination Conference Certification: Letter of compliance, signed by Contractor, attesting to completion of electrified hardware coordination conference, specified in "QUALITY ASSURANCE" article, herein.

4. Product Test Reports: For compliance with accessibility requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by qualified testing agency, for door hardware on doors located in accessible routes.
5. Warranty: Special warranty specified in this Section.

E. Closeout Submittals:

1. Refer to DDC General Conditions.
2. Operations and Maintenance Data: Provide in accordance with DDC General Conditions and include:

    a. Complete information on care, maintenance, and adjustment; data on repair and replacement parts, and information on preservation of finishes.
    b. Catalog pages for each product.
    c. Name, address, and phone number of local representative for each manufacturer.
    d. Parts list for each product.
    e. Final approved hardware schedule, edited to reflect conditions as-installed.
    f. Final keying schedule
    g. Copies of floor plans with keying nomenclature
    h. As-installed wiring diagrams for each opening connected to power, both low voltage and 110 volts.
    i. Copy of warranties including appropriate reference numbers for manufacturers to identify project.

1.5 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Supplier Qualifications and Responsibilities: Recognized architectural hardware supplier with record of successful in-service performance for supplying door hardware similar in quantity, type, and quality to that indicated for this Project and that provides certified Architectural Hardware Consultant (AHC) available to The City of New York and The Commissioner, at reasonable times during the Work for consultation.

1. Warehousing Facilities: In Project's vicinity.
2. Scheduling Responsibility: Preparation of door hardware and keying schedules.
3. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
4. Coordination Responsibility: Coordinate installation of electronic security hardware with the Commissioner and provide installation and technical data to the Commissioner and related subcontractors.

    a. Upon completion of electronic security hardware installation, inspect and verify that all components are working properly.

C. Installer Qualifications: Qualified tradesmen, skilled in application of commercial grade hardware with record of successful in-service performance for installing door hardware similar in quantity, type, and quality to that indicated for this Project.

D. Architectural Hardware Consultant Qualifications: Experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and meets these requirements:

1. For door hardware, Architectural Hardware Consultant (AHC).
2. Can provide installation and technical data to the Commissioner and related subcontractors.
3. Can inspect and verify components are in working order upon completion of installation.

4. Capable of producing wiring diagrams.
5. Capable of coordinating installation of electrified hardware with the Commissioner.

E. Single Source Responsibility: Obtain each type of door hardware from single manufacturer.

1. Provide electrified door hardware from same manufacturer as mechanical door hardware, unless otherwise indicated.
2. Manufacturers that perform electrical modifications and that are listed by testing and inspecting agency.

F. Fire-Rated Door Openings: Provide door hardware for fire-rated openings that complies with NFPA 80. Provide only items of door hardware that are listed and are identical to products tested by Underwriters Laboratories, for use on types and sizes of doors indicated, based on testing at positive pressure and according to NFPA 252 or UL 10C and in compliance with requirements of fire-rated door and door frame labels.

G. Air Infiltration at Door Assemblies: At all door assemblies between "L1 Personnel Level" and the exterior, and all door assemblies between "L1 Personnel Level" and the "Garage Level", provide door hardware that meets the requirements of the project Deep Energy Conservation Measure (DECM) #7 for reduced exterior air infiltration.

1. Air Leakage Rate: Maximum air leakage of 0.25 cfm/sq. ft. at tested pressure differential of 0.3-inch wg (75 Pa) of water.
2. Enclosure Testing:

    a. Perform testing before installation of interior finishes unless otherwise indicated or recommended for testing application.
    b. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
    c. Whole Door Assembly Air Tightness Using an Orifice Blower Door: ASTM E 1827, Maximum Air Leakage Rate as indicated above.
    d. Applicable Doors: S1-1, S2-1, S4-1, S5-1, 106A, 106B, 113A, 113B, 130, 130.1.

H. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that meets requirements of assemblies tested according to UL 1784 and installed in compliance with NFPA 105.

1. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) at tested pressure differential of 0.3-inch wg (75 Pa) of water unless otherwise required to meet Air Leakage Rate noted above to meet DECM #7.

I. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by acceptable testing agency.

J. Means of Egress Doors: Latches do not require more than 15 lbf (67 N) to release latch. Locks do not require use of key, tool, or special knowledge for operation.

K. Accessibility Requirements: For door hardware on doors in an accessible route, comply with governing accessibility regulations cited in "REFERENCES" article, herein.

1. Provide operating devices that do not require tight grasping, pinching, or twisting of wrist and that operate with force of not more than 5 lbf (22.2 N).
2. Maximum opening-force requirements:

    a. Interior, Non-Fire-Rated Hinged Doors: 5 lbf (22.2 N) applied perpendicular to door.
    b. Sliding or Folding Doors: 5 lbf (22.2 N) applied parallel to door at latch.
    c. Fire Doors: Minimum opening force allowable.

3. Bevel raised thresholds with slope of not more than 1:2. Provide thresholds not more than 1/2 inch (13 mm) high.
4. Adjust door closer sweep periods so that, from open position of 70 degrees, door will take at least 3 seconds to move to 3 inches (75 mm) from latch, measured to leading edge of door.

L. Keying Conference: Conduct conference at Project site to comply with requirements in DDC General Conditions.

1. Attendees: The Commissioner, Installer, and Supplier's Architectural Hardware Consultant.
2. Incorporate keying conference decisions into final keying schedule after reviewing door hardware keying system including:

    a. Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
    b. Preliminary key system schematic diagram.
    c. Requirements for key control system.
    d. Requirements for access control.
    e. Address for delivery of keys.

M. Pre-installation Conference: Conduct conference at Project site.

1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Inspect and discuss preparatory work performed by other trades.
3. Inspect and discuss electrical roughing-in for electrified door hardware.
4. Review sequence of operation for each type of electrified door hardware.
5. Review required testing, inspecting, and certifying procedures.

N. Coordination Conferences:

1. Installation Coordination Conference: Prior to hardware installation, schedule and hold meeting to review questions or concerns related to proper installation and adjustment of door hardware.

    a. Attendees: Door hardware supplier, door hardware installer, Contractor.
    b. After meeting, provide letter of compliance to the Commissioner, indicating when meeting was held and who was in attendance.

2. Electrified Hardware Coordination Conference: Prior to ordering electrified hardware, schedule and hold meeting to coordinate door hardware with security, electrical, doors and frames, and other related suppliers.

    a. Attendees: electrified door hardware supplier, doors and frames supplier, electrified door hardware installer, electrical subcontractor, the Commissioner and Contractor.
    b. After meeting, provide letter of compliance to the Commissioner, indicating when coordination conference was held and who was in attendance.

1.6 DELIVERY, STORAGE, AND HANDLING:

A. Inventory door hardware on receipt and provide secure lock-up for hardware delivered to Project site.

B. Tag each item or package separately with identification coordinated with final door hardware schedule, and include installation instructions, templates, and necessary fasteners with each item or package.

1. Deliver each article of hardware in manufacturer's original packaging.

C. Project Conditions:

1. Maintain manufacturer-recommended environmental conditions throughout storage and installation periods.
2. Provide secure lock-up for door hardware delivered to Project, but not yet installed. Control handling and installation of hardware items so that completion of Work will not be delayed by hardware losses both before and after installation.

D. Protection and Damage:

1. Promptly replace products damaged during shipping.
2. Handle hardware in manner to avoid damage, marring, or scratching. Correct, replace or repair products damaged during Work.
3. Protect products against malfunction due to paint, solvent, cleanser, or any chemical agent.

E. Deliver keys to manufacturer of key control system for subsequent delivery to the Commissioner.
F. Deliver keys and permanent cores to the Commissioner by registered mail or overnight package service.

1.7 COORDINATION:

A. Coordinate layout and installation of floor-recessed door hardware with floor construction. Cast anchoring inserts into concrete. Concrete, reinforcement, and formwork requirements are specified in Division 03.
B. Installation Templates: Distribute for doors, frames, and other work specified to be factory prepared. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.
C. Security: Coordinate installation of door hardware, keying, and access control with the Commissioner.
D. Electrical System Roughing-In: Coordinate layout and installation of electrified door hardware with connections to power supplies and building safety and security systems.
E. Existing Openings: Where hardware components are scheduled for application to existing construction or where modifications to existing door hardware are required, field verify existing conditions and coordinate installation of door hardware to suit opening conditions and to provide proper door operation.

F. Direct shipments not permitted, unless approved by Commissioner.

1.8 WARRANTY:

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Years from date of Substantial Completion, for durations indicated.

a. Closers:
i. Mechanical: 30 years
ii. Mechanical: 15 years Concealed

b. Automatic Operators: 2 years
c. Exit Devices:
i. Mechanical: 3 years.
ii. Electrified: 1 year.

d. Locksets:
i. Mechanical Mortise Locks: 3 years.
ii. Electrified: 1 year.

e. Continuous Hinges: Lifetime warranty
f. Key Blanks: Lifetime

1.9 REQUIRED TOOLS:

A. Furnish complete set of special tools required for adjustment of hardware, including changing of cylinders.

1.10 REGULATORY REQUIREMENTS:

A. Locate latching hardware between 34 inches to 44 inches above the finished floor.

1. Panic Hardware: Locate between 36 inches to 44 inches above the finished floor.
2. Refer to Drawings for more information.

B. Handles, pull, latches, locks, other operating devices:

1. Readily openable from egress side without tight grasping, tight pinching, or twisting of the wrist to operate.
2. Force required to activate the operable parts: 5.0 pounds maximum.

C. Adjust doors to open with not more than 5.0-pounds pressure to open at exterior doors and 5.0-pounds at interior doors. Local authority may increase the allowable pressure for fire doors to achieve positive latching, but not to exceed 15-pounds.

1. Exception: Exterior doors' pressure-to-open may be increased to 8.5-pounds if: at a single location, and one of a bank of eight leafs or fraction of eight, and one leaf of this bank is fitted with a low- or high-energy operator.

D. Low-energy powered doors: comply with ANSI/BHMA A156.19.

1. Where powered door serves an occupancy of 150 or more, provide back-up battery power or stand-by generator power, capable of supporting a minimum of 150 cycles.
2. Actuators, vertical bar type: minimum 2-inches wide, 30-inches high, bottom located minimum 5-inches above floor or ground, top located minimum 35-inches above floor or ground. Displays International Symbol of Accessibility.
3. Actuators, plate type: use two at each side of the opening. Minimum 4-inches diameter or 4-inches square. Displays International Symbol of Accessibility. Locate centerline of lower plate between 7- and 8-inches above floor or ground, and upper plate between 30- and 44-inches above floor or ground.
4. Actuator location: conspicuously located, clear and level floor/ground space for forward or parallel approach.

E. Adjust door closer sweep periods so that from an open position of 90 degrees, the door will take at least 5 seconds to move to a point 12 degrees from the latch, measured to the landing side of the door.

1. Spring hinges: adjust for 1.5 seconds minimum for 70 degrees to fully-closed.

F. Smooth surfaces at bottom 10 inches of push sides of doors, facilitating push-open with wheelchair footrests.

G. Door opening clear width no less than 32 inches, measured from face of frame stop, or edge of inactive leaf of pair of doors, to door face with door opened to 90 degrees. Hardware projection not a factor in clear width if located above 30 inches and below 80 inches, and the hardware projects no more than 4 inches.

1. Exception: Doors not requiring full passage through the opening, that is, to spaces less than 24 inches in depth, may have the clear opening width reduced to 20 inches. Example: Shallow closets.
2. Door closers and overhead stops: Not less than 78 inches above the finished floor or ground.

H. Thresholds: Floor or landing no more than 0.50 inches below the top of the threshold of the doorway. Vertical rise no more than 0.25 inches, change in level between 0.25 inches and 0.50 inches: beveled to slope no greater than 1:2 (50 percent slope).

I. Floor stops: Do not locate in path of travel. Locate no more than 4 inches from walls.

J. Pairs of doors: Limit swing of inactive leaf to 90 degrees to protect persons reading wall-mounted tactile signage.

K. Pairs of doors with independently-activated hardware both leafs: Limit swing of right-hand or right-hand-reverse leaf to 90 degrees to protect persons reading wall-mounted tactile signage.

L. Door and door hardware encroachment: When door is swung fully-open into means-of-egress path, the door, including the hardware, may not encroach/project more than 7 inches into the required exit width.

PART II – PRODUCTS

2.1 MANUFACTURERS:

A. Hand of Door: Drawings show direction of slide, swing, or hand of each door leaf. Furnish each item of hardware for proper installation and operation of door movement as shown.

B. Where specified hardware is not adaptable to finished shape or size of members requiring hardware, furnish suitable types having same operation and quality as type specified, subject to the Commissioner 's approval.

2.2 MATERIALS:

A. Fasteners

1. Provide hardware manufactured to conform to published templates, generally prepared for machine screw installation.
2. Furnish screws for installation with each hardware item. Finish exposed (exposed under any condition) screws to match hardware finish, or, if exposed in surfaces of other work, to match finish of this other work including prepared for paint surfaces to receive painted finish.
3. Provide concealed fasteners for hardware units exposed when door is closed except when no standard units of type specified are available with concealed fasteners. Do not use thru-bolts for installation where bolt head or nut on opposite face is exposed in other work unless thru-bolts are required to fasten hardware securely. Review door specification and advise the Commissioner if thru-bolts are required.
4. Install hardware with fasteners provided by hardware manufacturer.

B. Modification and Preparation of Existing Doors: Where existing door hardware is indicated to be removed and reinstalled.

1. Provide necessary fillers, Dutchmen, reinforcements, and fasteners, compatible with existing materials, as required for mounting new opening hardware and to cover existing door and frame preparations.
2. Use materials which match materials of adjacent modified areas.
3. When modifying existing fire-rated openings, provide materials permitted by NFPA 80 as required to maintain fire-rating.

C. Provide screws, bolts, expansion shields, drop plates and other devices necessary for hardware installation.

1. Where fasteners are exposed to view: Finish to match adjacent door hardware material.

D. Cable and Connectors: Hardwired Electronic Access Control Lockset and Exit Device Trim:

1. Data: 24AWG, 4 conductor shielded, Belden 9843, 9841 or comparable product by Alpha Wire, General Cable or approved equal.
2. DC Power: 18 AWG, 2 conductor, Belden 8760 or comparable product by Alpha Wire, General Cable or approved equal.
3. Provide type of data and DC power cabling required by access control device manufacturer for this installation.
4. Where scheduled in the hardware sets, provide each item of electrified hardware and wire harnesses with sufficient number and wire gauge with standardized 'Molex' plug connectors by Molex, Mill Max, TE Connectivity or approved equal to accommodate electric function of specified hardware. Provide 'Molex' connectors by Molex, Mill Max, TE Connectivity or approved equal that plug directly into connectors from harnesses, electric locking and power transfer devices. Provide through-door wire harness for each electrified locking device

installed in a door and wire harness for each electrified hinge, electrified continuous hinge, electrified pivot, and electric power transfer for connection to power supplies.

2.3 FINISHES:

A. Finish: BHMA 626/652 (US26D); except:

1. Hinges at Exterior Doors: BHMA 630 (US32D)
2. Continuous Hinges: BHMA 630 (US32D)
3. Push Plates, Pulls, and Push Bars: BHMA 630 (US32D)
4. Protection Plates: BHMA 630 (US32D)
5. Overhead Stops and Holders: BHMA 630 (US32D)
6. Door Closers: Powder Coat to Match
7. Wall Stops: BHMA 630 (US32D)
8. Latch Protectors: BHMA 630 (US32D)
9. Weather-stripping: Clear Anodized Aluminum
10. Thresholds: Mill Finish Aluminum

2.4 HINGES:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ives 5BB series
2. Hager BB series
3. McKinney TA/T4A series
4. Stanley FBB Series
5. Or approved equal

B. Requirements:

1. Provide five-knuckle ball bearing hinges conforming to ANSI/BHMA A156.1.
2. 1-3/4 inch (44 mm) thick doors, up to and including 36 inches (914 mm) wide:
    a. Exterior: Standard weight, stainless steel, 4-1/2 inches (114 mm) high.
    b. Interior: Standard weight, steel, 4-1/2 inches (114 mm) high.
3. 1-3/4 inch (44 mm) thick doors over 36 inches (914 mm) wide:
    a. Exterior: Heavy weight, bronze/stainless steel, 5 inches (127 mm) high.
    b. Interior: Heavy weight, steel, 5 inches (127 mm) high.
4. 2 inches or thicker doors:
    a. Exterior: Heavy weight, bronze or stainless steel, 5 inches (127 mm) high.
    b. Interior: Heavy weight, steel, 5 inches (127 mm) high.
5. Provide three hinges per door leaf for doors 90 inches (2286 mm) or less in height, and one additional hinge for each 30 inches (762 mm) of additional door height.
6. Where new hinges are specified for existing doors or existing frames, provide new hinges of identical size to hinge preparation present in existing door or existing frame.
7. Hinge Pins: Except as otherwise indicated, provide hinge pins as follows:

a. Steel Hinges: Steel pins.
b. Non-Ferrous Hinges: Stainless steel pins.
c. Out-Swinging Exterior Doors: Non-removable pins.
d. Out-Swinging Interior Lockable Doors: Non-removable pins.
e. Interior Non-lockable Doors: Non-rising pins.

8. Width of hinges: 4-1/2 inches (114 mm) at 1-3/4 inch (44 mm) thick doors, and 5 inches (127 mm) at 2 inches (51 mm) or thicker doors. Adjust hinge width as required for door, frame, and wall conditions to allow proper degree of opening.
9. Doors 36 inches (914 mm) wide or less furnish hinges 4-1/2 inches (114 mm) high; doors greater than 36 inches (914 mm) wide furnish hinges 5 inches (127 mm) high, heavy weight or standard weight as specified.
10. Provide hinges with electrified options as scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware. Locate electric hinge at second hinge from bottom or nearest to electrified locking component.
11. Provide mortar guard for each electrified hinge specified.
12. Provide spring hinges where specified. Provide two spring hinges and one bearing hinge per door leaf for doors 90 inches (2286 mm) or less in height. Provide one additional bearing hinge for each 30 inches (762 mm) of additional door height.

2.5 CONTINUOUS HINGES:

A. Stainless Steel:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Ives
b. Markar
c. Stanley
d. Or approved equal

2. Requirements:

a. Provide pin and barrel continuous hinges conforming to ANSI/BHMA A156.26, Grade 2.
b. Provide pin and barrel continuous hinges fabricated from 14 gauge, type 304 stainless steel.
c. Provide twin self-lubricated nylon bearings at each hinge knuckle, with 0.25-inch (6 mm) diameter stainless steel pin.
d. Provide hinges capable of supporting door weights up to 600 pounds, and successfully tested for 1,500,000 cycles.
e. On fire-rated doors, provide pin and barrel continuous hinges that are classified for use on rated doors by acceptable testing agency.
f. Provide pin and barrel continuous hinges with electrified options as scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware.
g. Install hinges with fasteners supplied by manufacturer.

h. Provide hinges 1 inch (25 mm) shorter in length than nominal height of door, unless otherwise noted or door details require shorter length and with symmetrical hole pattern.

B. Cold-Rolled Steel:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Ives
b. Markar
c. Stanley
d. Or approved equal

2. Requirements:

a. Provide pin and barrel continuous hinges conforming to ANSI/BHMA A156.26, Grade 2.
b. Provide pin and barrel continuous hinges fabricated from type 1012 cold rolled steel.
c. Provide twin self-lubricated nylon bearings at each hinge knuckle, with 0.25-inch (6 mm) diameter stainless steel pin.
d. Provide hinges capable of supporting door weights up to 600 pounds, and successfully tested for 1,500,000 cycles.
e. On fire-rated doors, provide pin and barrel continuous hinges that are classified for use on rated doors by acceptable testing agency.
f. Provide pin and barrel continuous hinges with electrified options as scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware.
g. Install hinges with fasteners supplied by manufacturer.
h. Provide hinges 1 inch (25 mm) shorter in length than nominal height of door, unless otherwise noted or door details require shorter length and with symmetrical hole pattern.

C. Aluminum Geared:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Ives.
b. Select
c. Stanley
d. Or approved equal

2. Requirements:

a. Provide aluminum geared continuous hinges conforming to ANSI/BHMA A156.26, Grade 1.
b. Provide aluminum geared continuous hinges, where specified in the hardware sets, fabricated from 6063-T6 aluminum, with 0.25-inch (6 mm) diameter Teflon coated stainless steel hinge pin.

c. Provide split nylon bearings at each hinge knuckle for quiet, smooth, self-lubricating operation.
d. Provide hinges capable of supporting door weights up to 450 pounds, and successfully tested for 1,500,000 cycles.
e. On fire-rated doors, provide aluminum geared continuous hinges that are classified for use on rated doors by acceptable testing agency.
f. Provide aluminum geared continuous hinges with electrified option scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware.
g. Install hinges with fasteners supplied by manufacturer.
h. Provide hinges 1 inch (25 mm) shorter in length than nominal height of door, unless otherwise noted or door details require shorter length and with symmetrical hole pattern.

2.6 ELECTRIC POWER TRANSFER:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Von Duprin EPT-10
2. ABH PT1000
3. Securitron CEPT-10
4. Or approved equal

B. Provide power transfer with electrified options as scheduled in the hardware sets. Provide with number and gage of wires sufficient to accommodate electric function of specified hardware.

C. Locate electric power transfer per manufacturer's template and UL requirements, unless interference with operation of door or other hardware items.

2.7 OFFSET FLOOR CLOSERS AND INTERMEDIATE PIVOTS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Dorma
2. Jackson / CR Lawrence
3. Rixson
4. Or approved equal

B. Requirements:

1. Provide single-acting floor closers complete with ball-bearing top pivot, floor plates, intermediate pivots and cement boxes unless indicated otherwise.
2. Provide one intermediate pivot for doors less than 91 inches (2311 mm) high and one additional intermediate pivot per leaf for each additional 30 inches (762 mm) in height or fraction thereof. Intermediate pivots spaced equally not less than 25 inches (635 mm) or not more than 35 inches (889 mm) on center, for doors over 121 inches (3073 mm) high.
3. Provide floor closers with adjustable swing speed, latch speed, back-check, and hold open features, with built in positive stop at specified degree of opening.
4. Spring Power: Continuously adjustable over full range of closer sizes, with reduced opening force for physically handicapped.
5. Hydraulic Regulation: By tamper-proof, non-critical valves. Provide separate adjustment for latch speed, general speed, and backcheck.

6. Provide appropriate model where floor closers are specified at fire rated openings.
7. Provide lead-lined model where floor closers are specified at lead-lined doors.
8. Provide pivots with electrified options as scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware. Locate electrified pivot nearest to electrified locking component. If manufacturer of electrified locking component requires another device for power transfer then provide recommended power transfer device and appropriate quantity of pivots.
9. Provide mortar guard for each electric pivot specified, unless specified in hollow metal frame specification.

2.8 CENTER HUNG FLOOR CLOSERS – DOUBLE ACTING:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Dorma
2. Jackson / CR Lawrence
3. Rixson
4. Or approved equal

B. Requirements:

1. Provide double-acting center hung floor closers complete with ball-bearing top pivot, floor plates, and cement boxes unless indicated otherwise.
2. Provide floor closers with adjustable spring tension and closing speed, and automatic hold-open features.
3. Provide separate concealed overhead stop.
4. Spring Power: Continuously adjustable over full range of closer sizes, with reduced opening force for physically handicapped.
5. Hydraulic Regulation: By tamper-proof, non-critical valves. Provide separate adjustment for latch speed, general speed, and backcheck.
6. Provide appropriate model for wood doors.

2.9 PIVOT SETS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ives.
2. Dorma.
3. Rixson.
4. Or approved equal

B. Requirements:

1. Provide pivot sets complete with oil-impregnated top pivot, unless indicated otherwise.
2. Where offset pivots are specified, Provide one intermediate pivot for doors less than 91 inches (2311 mm) high and one additional intermediate pivot per leaf for each additional 30 inches (762 mm) in height or fraction thereof. Intermediate pivots spaced equally not less than 25 inches (635 mm) or not more than 35 inches (889 mm) on center, for doors over 121 inches (3073 mm) high.
3. Provide appropriate model where pivot sets are scheduled at fire rated openings.
4. Provide lead-lined model where pivot sets are specified at lead-lined doors.

5. Provide pivots with electrified options as scheduled in the hardware sets. Provide with sufficient number and wire gage to accommodate electric function of specified hardware. Locate electrified pivot nearest to electrified locking component. If manufacturer of electrified locking component requires another device for power transfer then provide recommended power transfer device and appropriate quantity of pivots.
6. Provide mortar guard for each electric pivot specified, unless specified in hollow metal frame specification.

2.10 FLUSH BOLTS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ives
2. Burns
3. Rockwood
4. Or approved equal

B. Requirements:

1. Provide automatic, constant latching, and manual flush bolts with stainless steel face plates, stainless steel levers, and with stainless/steel guides and strikes. Provide 12 inch (305 mm) steel rods at doors up to 90 inches (2286 mm) in height. For doors over 90 inches (2286 mm) in height increase top rods by 6 inches (152 mm) for each additional 6 inches (152 mm) of door height. Provide dust-proof strikes at each bottom flush bolt.

2.11 COORDINATORS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ives
2. Burns
3. Rockwood
4. Or approved equal

B. Requirements:

1. Where pairs of doors are equipped with automatic flush bolts, an astragal, or other hardware that requires synchronized closing of the doors, provide bar-type coordinating device, surface applied to underside of stop at frame head.
2. Provide filler bar of correct length for unit to span entire width of opening, and appropriate brackets for parallel arm door closers and surface vertical rod exit device strikes. Factory-prep coordinators for vertical rod devices if required/

2.12 MORTISE LOCKS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Schlage LV9000 series
2. Corbin-Russwin ML2000 series
3. Best 45H series
4. Sargent 8200 series

5. Or approved equal

B. Requirements:

1. Provide mortise locks conforming to ANSI/BHMA A156.13 Series 1000, Grade 1 Operational, Grade 1 Security, and manufactured from heavy gauge steel, containing components of steel with a zinc dichromate plating for corrosion resistance. Provide lock case that is multi-function and field reversible for handing without opening case. Cylinders: Refer to "KEYING" article, herein.
2. Indicators: Where specified, provide indicator window measuring a minimum 2 inch x 1/2 inch with 180 degree visibility. Provide messages color-coded with full text and/or symbols, as scheduled, for easy visibility.
    a. Inside Security Indicator: Provide indicator above cylinder for visibility during lockdown that identifies the trim as locked/unlocked status of the door. Indicator in unlocked state has a white background with black text and icon. Indicator in the locked state has a red background with white text and icon.
    b. Outside Status Indicator: Provide indicator above cylinder for visibility that identifies the trim as locked/unlocked status of the door. Indicator in unlocked state has a white background with black text and icon. Indicator in the locked state has a red background with white text and icon.
    c. Inside Security Indicator: Provide indicator above cylinder for visibility during lockdown that identifies the trim as locked/unlocked status of the door. Indicator in unlocked state has a white background with black icon. Indicator in the locked state has a red background with white icon.
    d. Outside Status Indicator: Provide indicator above cylinder for visibility that identifies the trim as locked/unlocked status of the door. Indicator in unlocked state has a white background with black icon. Indicator in the locked state has a red background with white icon.
    e. Occupied Indicator: Provide indicator above cylinder for visibility while operating the lock that identifies the trim as occupied/unoccupied status of the door. Indicator in unoccupied state has a white background with black text and icon. Indicator in the occupied state has a red background with white text and icon.
    f. Do Not Disturb Indicator: Provide indicator above cylinder for visibility while operating the lock that identifies the trims as do not disturb/blank status of the door. Indicator in blank (or unoccupied) state has a white background with black text and icon. Indicator in the do not disturb state has a red background with white text and icon.
3. Provide locks with standard 2-3/4 inches (70 mm) backset with full 3/4 inch (19 mm) throw stainless steel mechanical anti-friction latch bolt. Provide deadbolt with full 1 inch (25 mm) throw, constructed of stainless steel.
4. Provide standard ASA strikes unless extended lip strikes are necessary to protect trim.
5. Provide electrified options as scheduled in the hardware sets. Where scheduled, provide a request to exit (RX) switch that is actuated with rotation of inside lever.
6. Provide motor based electrified locksets with electrified options as scheduled in the hardware sets and comply with the following requirements:

a. Universal input voltage – single chassis accepts 12 or 24V DC to allow for changes in the field without changing lock chassis.
b. Fail Safe/Fail Secure – changing mode between electrically locked (fail safe) and electrically unlocked (fail secure) is field selectable without opening the lock case.
c. Low maximum current draw – maximum 0.4 amps to allow for multiple locks on a single power supply.
d. Low holding current – maximum 0.01 amps to produce minimal heat, eliminate "hot levers" in electrically locked applications, and to provide reliable operation in wood doors that provide minimal ventilation and air flow.
e. Request to Exit Switch (RX) –
    i. Modular Design – provide electrified locks capable of using, adding, or changing a modular RX switch without opening the lock case.
    ii. Monitoring – where scheduled, provide a request to exit (RX) switch that detects rotation of the inside lever.
f. Connections – provide standard quick-connect system.
g. UL Listed – 3 hour fire door

7. Lever Trim: Solid stainless steel, cast or forged in design specified, with wrought roses and external lever spring cages. Provide thru-bolted levers with 2-piece spindles.
    a. Lever Design: Schlage LV9000 02A
    b. Corbin-Russwin ML2000 series
    c. Best 45H series
    d. Or approved equal

8. Tactile Warning (Knurling): Where required, provide on levers on exterior (secure side) of doors serving rooms considered to be hazardous.

2.13 AUXILIARY LOCKS:

A. Deadlocks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Schlage L400 series
    b. Arrow D series
    c. Best 38H series
    d. Falcon MA series
    e. Or approved equal

2. Requirements:

    a. Provide mortise deadlock series conforming to ANSI/BHMA A156 and function as specified. Cylinders: Refer to "KEYING" article, herein.
    b. Provide deadlocks with standard 2-3/4 inches (70 mm) backset. Provide deadbolt with full 1 inch (25 mm) throw, constructed of stainless steel.
    c. Provide manufacturer's standard strike.

2.14 EXIT DEVICES:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Von Duprin 98/35A series
2. Sargent 19-43-GL-80 series
3. Precision Apex series
4. Or approved equal

B. Requirements:

1. Provide exit devices tested to ANSI/BHMA A156.3 Grade 1, and UL listed for Panic Exit or Fire Exit Hardware. Cylinders: Refer to "KEYING" article, herein.
2. Provide touchpad type exit devices, fabricated of stainless steel, or aluminum, plated to standard architectural finishes to match balance of door hardware.
3. Touchpad: Extend minimum of one half of door width. Match exit device finish, stainless steel for US26, US26D, US28, US32, and US32D finishes; and for all other finishes, provide compatible finish to exit device. No plastic inserts are allowed in touchpads.
4. Provide exit devices with dead latching feature for security and for future addition of alarm kits and/or other electrified requirements.
5. Provide flush end caps for exit devices.
6. Provide exit devices with manufacturer's approved strikes.
7. Provide exit devices cut to door width and height. Install exit devices at height recommended by exit device manufacturer, and approved by the Commissioner.
8. Mount mechanism case flush on face of doors, or provide spacers to fill gaps behind devices. Where glass trim or molding projects off face of door, provide glass bead kits.
9. Provide cylinder dogging at non-fire-rated exit devices.
10. Removable Mullions: 2 inches (51 mm) x 3 inches (76 mm) steel tube. Where scheduled as keyed removable mullion, provide type that can be removed by use of a keyed cylinder, which is self-locking when re-installed.
11. Where lever handles are specified as outside trim for exit devices, provide heavy-duty lever trims with forged or cast escutcheon plates. Provide vandal-resistant levers that will travel to 90-degree down position when more than 35 pounds of torque are applied, and which can easily be re-set.
    a. Lever Style: Match lever style of locksets.
    b. Tactile Warning (Knurling): Where required, provide on levers on exterior (secure side) of doors serving rooms considered to be hazardous.
12. Provide UL labeled fire exit hardware for fire rated openings.
13. Provide factory drilled weep holes for exit devices used in full exterior application, highly corrosive areas, and where noted in hardware sets.
14. Provide electrified options as scheduled.

2.15 ELECTRIC STRIKES:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Von Duprin 6400 series
2. Folger Adam 300 series
3. HES 1006 series
4. Or approved equal

B. Requirements:

1. Provide electric strikes designed for use with type of locks shown at each opening.
2. Provide electric strikes UL Listed as burglary-resistant.
3. Where required, provide electric strikes UL Listed for fire doors and frames.
4. Provide fail-secure type electric strikes, unless specified otherwise.
5. Coordinate voltage and provide transformers and rectifiers for each strike as required.

2.16 POWER SUPPLIES:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Schlage or Von Duprin PS900 series
2. Precision ELR series
3. Sargent 3500 series
4. Dynalock 5000 series
5. Securitron BPS series
6. Security Door Controls 600 series
7. Or approved equal

B. Requirements:

1. Provide power supplies, recommended and approved by manufacturer of electrified locking component, for operation of electrified locks, electrified exit devices, magnetic locks, electric strikes, and other components requiring power supply.
2. Provide appropriate quantity of power supplies necessary for proper operation of electrified locking components as recommended by manufacturer of electrified locking components with consideration for each electrified component using power supply, location of power supply, and approved wiring diagrams. Locate power supplies as directed by the Commissioner.
    a. Provide regulated and filtered 24 VDC power supply, and UL class 2 listed.
    b. Options:

    a. Provide power supply, where specified, with internal capability of charging sealed backup batteries 24 VDC, in addition to operating DC load.
    b. Provide sealed batteries for battery back-up at each power supply where specified.
    c. Provide keyed power supply cabinet.

3. Provide power supply in an enclosure, complete, and requiring 120VAC to fused input.
4. Provide power supply with emergency release terminals, where specified, that allow release of all devices upon activation of fire alarm system complete with fire alarm input for initiating "no delay" exiting mode.

2.17 CYLINDERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Schlage
2. Stanley
3. Yale
4. Dorma Kaba

5. Or approved equal

B. Requirements:

1. Provide cylinders/cores, compliant with ANSI/BHMA A156.5; latest revision, Section 12, Grade 1; permanent cylinders; cylinder face finished to match lockset, manufacturer's series as indicated. Refer to "KEYING" article, herein.
2. Provide cylinders in the below-listed configuration(s), distributed throughout the Project as indicated.

    a. Conventional Patented Restricted: cylinder with interchangeable core with patented, restricted keyway.

3. Nickel silver bottom pins.
4. Replaceable Construction Cores.

    a. Provide temporary construction cores replaceable by permanent cores, furnished in accordance with the following requirements.

        i. 3 construction control keys.
        ii. 12 construction change (day) keys.

    b. The Commissioner will replace temporary construction cores with permanent cores.

2.18 KEYING:

A. Provide a factory registered keying system, complying with guidelines in ANSI/BHMA A156.28, incorporating decisions made at keying conference.
B. Requirements:

1. Provide permanent cylinders/cores keyed by the manufacturer according to the following key system.

    a. Master Keying system as directed by the Commissioner.

2. Forward bitting list and keys separately from cylinders, by means as directed by The Commissioner. Failure to comply with forwarding requirements shall be cause for replacement of cylinders/cores involved at no additional cost to The City of New York.
3. Provide keys with the following features:

    a. Material: Nickel silver; minimum thickness of .107-inch (2.3mm).

4. Identification:

    a. Provide concealed key control stamping on cylinder cores.
    b. Provide visual stamping on cut keys.
    c. Identification stamping provisions must be approved by the Commissioner
    d. Failure to comply with stamping requirements shall be cause for replacement of keys involved at no additional cost to the City of New York.

e. Forward permanent cylinders/cores separately from keys, by means as directed by the Commissioner.

5. Quantity: Furnish in the following quantities.

a. Change (Day) Keys: 3 per cylinder/core.
b. Permanent Control Keys: 3.
c. Master Keys: 6.

2.19 DOOR CLOSERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. LCN 4010/4110/4020 series
2. Sargent 281/281P10/281TJ series factory assembled (without PRV)
3. Norton 7500
4. Or approved equal

B. Requirements:

1. Provide door closers conforming to ANSI/BHMA A156.4 Grade 1 requirements by BHMA certified independent testing laboratory. Stamp units with date of manufacture code.
   a. Provide door closers with fully hydraulic, full rack and pinion action with high strength cast iron cylinder, and full complement bearings at shaft.
   b. Cylinder Body: 1-1/2 inch (38 mm) diameter, with 5/8 inch (16 mm) diameter double heat-treated pinion journal.
   c. Hydraulic Fluid: Fireproof, passing requirements of UL10C, and requiring no seasonal closer adjustment for temperatures ranging from 120 degrees F to -30 degrees F.
   d. Spring Power: Continuously adjustable over full range of closer sizes, and providing reduced opening force as required by accessibility codes and standards.
   e. Hydraulic Regulation: By tamper-proof, non-critical valves with separate adjustment for latch speed, general speed, and backcheck.
   f. Provide closers with a solid forged steel main arms and factory assembled heavy-duty forged forearms for parallel arm closers.
   g. Pressure Relief Valve (PRV) Technology: Not permitted.
   h. Finish for Closer Cylinders, Arms, Adapter Plates, and Metal Covers: Powder coating finish which has been certified to exceed 100 hours salt spray testing as described in ANSI/BHMA Standard A156.4 and ASTM B117, or has special rust inhibitor (SRI).
   i. Provide special templates, drop plates, mounting brackets, or adapters for arms as required for details, overhead stops, and other door hardware items interfering with closer mounting.
   j. Provide metal covers for cylinder assemblies. Plastic covers will not be accepted.

2.20 ELECTRO-MECHANICAL AUTOMATIC OPERATORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. LCN Senior Swing
    a. Besam Swingmaster 900
    b. Horton 4000LE series
    c. Or approved equal

B. Requirements:

1. Provide low energy automatic operator units that are electro-mechanical design complying with ANSI/BHMA A156.19.

    a. Opening: Powered by DC motor working through reduction gears.
    b. Closing: Spring force.
    c. Manual, hydraulic, or chain drive closers: Not permitted.
    d. Operation: Motor is off when door is in closing mode. Door can be manually operated with power on or off without damage to operator. Provide variable adjustments, including opening and closing speed adjustment.
    e. Cover: Aluminum.

2. Provide units with manual off/auto/hold-open switch, push and go function to activate power operator, vestibule interface delay, electric lock delay, hold-open delay adjustable from 2 to 30 seconds, and logic terminal to interface with accessories, mats, and sensors.
3. Provide drop plates, brackets, or adapters for arms as required to suit details.
4. Provide hard-wired motion sensors and/or actuator switches for operation as specified. Provide weather-resistant actuators at exterior applications.
5. Provide key switches, with LED's, recommended and approved by manufacturer of automatic operator as required for function as described in operation description of hardware sets. Cylinders: Refer to "KEYING" article, herein.
6. Provide complete assemblies of controls, switches, power supplies, relays, and parts/material recommended and approved by manufacturer of automatic operator for each individual leaf. Actuators control both doors simultaneously at pairs. Sequence operation of exterior and vestibule doors with automatic operators to allow ingress or egress through both sets of openings as directed by the Commissioner. Locate actuators, key switches, and other controls as directed by the Commissioner.
7. Provide units with inputs for smoke evacuation doors, where specified, which allow doors to power open upon fire alarm activation and hold open indefinitely or until fire alarm is reset, presence detector input, which prevents closed door from opening or door that is fully opened from closing, hold open toggle input, which allows remote activation for indefinite hold open and close second time input is activated, vestibule inputs, which allow sequencing operation of two units, and SPDT relay for interfacing with latching or locking devices.

2.21 DOOR TRIM

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ives
2. Burns
3. Rockwood
4. Or approved equal

B. Requirements:

1. Provide push plates 4 inches (102 mm) wide by 16 inches (406 mm) high by 0.050 inch (1 mm) thick and beveled 4 edges. Where width of door stile prevents use of 4 inches (102 mm) wide plate, adjust width to fit.
2. Provide push bars of solid bar stock, diameter and length as scheduled. Provide push bars of sufficient length to span from center to center of each stile. Where required, mount back to back with pull.
3. Provide offset pulls of solid bar stock, diameter and length as scheduled. Where required, mount back to back with push bar.
4. Provide flush pulls as scheduled. Where required, provide back-to-back mounted model.
5. Provide pulls of solid bar stock, diameter and length as scheduled. Where required, mount back to back with push bar.
6. Provide pull plates 4 inches (102 mm) wide by 16 inches (406 mm) high by 0.050 inch (1 mm) thick, beveled 4 edges, and prepped for pull. Where width of door stile prevents use of 4 inches (102 mm) wide plate, adjust width to fit.
7. Provide wire pulls of solid bar stock, diameter and length as scheduled.
8. Provide decorative pulls as scheduled. Where required, mount back to back with pull.

2.22 PROTECTION PLATES:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ives
2. Burns
3. Rockwood
4. Or approved equal

B. Requirements:

1. Provide kick plates, mop plates, and armor plates minimum of 0.050 inch (1 mm) thick, beveled four edges as scheduled. Furnish with sheet metal or wood screws, finished to match plates.
2. Sizes of plates:

   a. Kick Plates: 10 inches high by 2 inches less width of door on single doors, 1 inch less width of door on pairs.
   b. Mop Plates: 4 inches high by 2 inches less width of door on single doors, 1 inch less width of door on pairs.
   c. Armor Plates: 36 inches high by 2 inches less width of door on single doors, 1 inch less width of door on pairs.

2.23 OVERHEAD STOPS AND OVERHEAD STOP/HOLDERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Glynn-Johnson
2. Rixson
3. Sargent
4. Or approved equal

B. Requirements:

1. Provide heavy duty concealed mounted overhead stop or holder as specified for exterior and interior vestibule single acting doors.
2. Provide heavy duty concealed mounted overhead stop or holder as specified for double acting doors.
3. Provide heavy or medium duty and concealed or surface mounted overhead stop or holder for interior doors as specified. Provide medium duty surface mounted overhead stop for interior doors and at any door that swings more than 140 degrees before striking wall, open against equipment, casework, sidelights, and where conditions do not allow wall stop or floor stop presents tripping hazard.
4. Where overhead holders are specified provide friction type at doors without closer and positive type at doors with closer.

2.24 DOOR STOPS AND HOLDERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ives
2. Burns
3. Rockwood
4. Or approved equal

B. Provide door stops at each door leaf:

1. Provide wall stops wherever possible. Provide convex type where mortise type locks are used and concave type where cylindrical type locks are used.
2. Where a wall stop cannot be used, provide universal floor stops for low or high rise options.
3. Where wall or floor stop cannot be used, provide medium duty surface mounted overhead stop.

2.25 THRESHOLDS, SEALS, DOOR SWEEPS, AUTOMATIC DOOR BOTTOMS, AND GASKETING:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Zero International
2. National Guard
3. Reese
4. Or approved equal

B. Requirements:

1. Provide thresholds, weather-stripping (including door sweeps, seals, and astragals) and gasketing systems (including smoke, sound, and light) as specified and per architectural details. Match finish of other items.
2. Size of thresholds:
    a. Saddle Thresholds: 1/2 inch (13 mm) high by jamb width by door width
    b. Bumper Seal Thresholds: 1/2 inch (13 mm) high by 5 inches (127 mm) wide by door width.
3. Provide door sweeps, seals, astragals, and auto door bottoms only of type where resilient or flexible seal strip is easily replaceable and readily available.

2.26 SILENCERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ives
2. Burns
3. Rockwood
4. Or approved equal

B. Requirements:

1. Provide "push-in" type silencers for hollow metal or wood frames.
2. Provide one silencer per 30 inches (762 mm) of height on each single frame, and two for each pair frame.
3. Omit where gasketing is specified.

PART III- EXECUTION

3.1 EXECUTION REQUIREMENTS:

a. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION:

A. Prior to installation of hardware, examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Existing Door and Frame Compatibility: Field verify existing doors and frames receiving new hardware and existing conditions receiving new openings. Verify that new hardware is compatible with existing door and frame preparation and existing conditions.

C. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION:

A. Where on-site modification of doors and frames is required:

1. Carefully remove existing door hardware and components being reused. Clean, protect, tag, and store in accordance with storage and handling requirements specified herein.
2. Field modify and prepare existing door and frame for new hardware being installed.
3. When modifications are exposed to view, use concealed fasteners, when possible.
4. Prepare hardware locations and reinstall in accordance with installation requirements for new door hardware and with:

a. Steel Doors and Frames: For surface applied door hardware, drill and tap doors and frames according to ANSI/SDI A250.6.
b. Wood Doors: DHI WDHS.5 "Recommended Hardware Reinforcement Locations for Mineral Core Wood Flush Doors."
c. Doors in rated assemblies: NFPA 80 for restrictions on on-site door hardware preparation.

3.4 INSTALLATION:

A. Mounting Heights: Mount door hardware units at heights to comply with the following, unless otherwise indicated.

1. Standard Steel Doors and Frames: ANSI/SDI A250.8.
2. Custom Steel Doors and Frames: HMMA 831.
3. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."

B. Install each hardware item in compliance with manufacturer's instructions and recommendations, using only fasteners provided by manufacturer.

C. Do not install surface mounted items until finishes have been completed on substrate. Protect all installed hardware during painting.

D. Set units level, plumb and true to line and location. Adjust and reinforce attachment substrate as necessary for proper installation and operation.

E. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.

F. Install operating parts so they move freely and smoothly without binding, sticking, or excessive clearance.

G. Hinges: Install types and in quantities indicated in door hardware schedule but not fewer than quantity recommended by manufacturer for application indicated or one hinge for every 30 inches (750 mm) of door height, whichever is more stringent, unless other equivalent means of support for door, such as spring hinges or pivots, are provided.

H. Intermediate Offset Pivots: Where offset pivots are indicated, provide intermediate offset pivots in quantities indicated in door hardware schedule but not fewer than one intermediate offset pivot per door and one additional intermediate offset pivot for every 30 inches (750 mm) of door height greater than 90 inches (2286 mm).

I. Lock Cylinders: Install construction cores to secure building and areas during construction period.

1. Replace construction cores with permanent cores as indicated in keying section.
2. Furnish permanent cores to The Commissioner for installation.

J. Wiring: Coordinate with Division 26, Electrical sections for:

1. Conduit, junction boxes and wire pulls.
2. Connections to and from power supplies to electrified hardware.
3. Connections to fire/smoke alarm system and smoke evacuation system.
4. Connection of wire to door position switches and wire runs to central room or area, as directed by the Commissioner.
5. Testing and labeling wires with the Commissioner's opening number.

K. Key Control System: Tag keys and place them on markers and hooks in key control system cabinet, as determined by final keying schedule.

L. Door Closers: Mount closers on room side of corridor doors, inside of exterior doors, and stair side of stairway doors from corridors. Closers shall not be visible in corridors, lobbies and other public spaces unless approved by the Commissioner.

M. Closer/Holders: Mount closer/holders on room side of corridor doors, inside of exterior doors, and stair side of stairway doors.

N. Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings or in equipment room, or alternate location as directed by the Commissioner.

O. Thresholds: Set thresholds in full bed of sealant complying with requirements specified in Section 079200 "Interior Joint Sealants" and 079201 "Exterior Joint Sealants."

P. Stops: Provide floor stops for doors unless wall or other type stops are indicated in door hardware schedule. Do not mount floor stops where they may impede traffic or present tripping hazard.
Q. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.
R. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.
S. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.

3.5 FIELD QUALITY CONTROL:

A. Architectural Hardware Consultant: Engage qualified independent Architectural Hardware Consultant to perform inspections and to prepare inspection reports.

1. Architectural Hardware Consultant will inspect door hardware and state in each report whether installed work complies with or deviates from requirements, including whether door hardware is properly installed and adjusted.

3.6 ADJUSTING:

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

1. Spring Hinges: Adjust to achieve positive latching when door is allowed to close freely from an open position of 30 degrees.
2. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.
3. Door Closers: Adjust sweep period to comply with accessibility requirements.

B. Occupancy Adjustment: Approximately three months after date of Substantial Completion, Installer's Architectural Hardware Consultant shall examine and readjust each item of door hardware, including adjusting operating forces, as necessary to ensure function of doors, door hardware, and electrified door hardware.

3.7 CLEANING AND PROTECTION:

A. Clean adjacent surfaces soiled by door hardware installation.
B. Clean operating items as necessary to restore proper function and finish.
C. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of Substantial Completion.

3.8 INSTRUCTION:

A. Provide instruction for the City of New York's operating personnel to adjust, operate, and maintain door hardware and door hardware finishes.

3.9 DOOR HARDWARE SCHEDULE

A. Locksets, exit devices, and other hardware items are referenced in the following hardware sets for series, type and function. Refer to the above-specifications for special features, options, cylinders/keying, and other requirements.
B. Hardware Sets: Refer to Section 080701 Door Hardware Schedule.

END OF SECTION 08 71 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 71 01
Door Hardware Schedule

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Door Hardware Schedule

B. Related Sections

1. Section 08 71 00 Door Hardware

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

PART II – PRODUCTS

A. Door hardware schedule includes basis of design manufacturers only. Additional manufacturers are included in 08 71 00 Door Hardware.

B. Hardware for New Buildings (A1)

1. **Hardware Group No. 01** – Exterior Storefront Entrance – Card Reader – Pair Doors

a. Provide each PR door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
2	EA	Concealed Floor Closer	By Storefront	-	-

2	EA	Top Pivot	By Storefront	-	-
2	EA	Bottom Pivot	By Storefront	-	-
2	EA	Panic Exit Device	DB-100-JS	SS	CRL
2	EA	Locking Ladder Pull	DB-100-JS	SS	CRL
2	EA	Mortise Cylinder			
2	EA	Electric Strike	6400 FSE	630	VON
1	EA	Integral Gasketing	By Storefront	-	-
2	EA	Door Bottom	328AA-S	AA	ZER
2	EA	Stile Gasketing	328AA-S	AA	ZER
1	EA	Perimeter Gasketing	8878AA-S	AA	ZER
1	EA	Threshold	655BK-V3-223	BK	ZER
1	EA	Power Supply			
2	EA	Door Position Switch	DPS-M	BK	ASSA
1	EA	Card Reader	By Security	-	-

b. Door Functions: Doors normally locked and secure. Presenting valid credentials retracts electric strike allowing entrance. In case of power failure or fire alarm, doors will be locked and secure with keyed entry override. Doors always available for free egress.

c. Notes: Electric strike mounted in header bar.

2. **Hardware Group No. 01A** – Exterior Storefront Entrance – Pair Doors Curtain

a. Provide each PR door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
2	EA	Concealed Floor Closer	By Storefront	-	-
2	EA	Top Pivot	By Storefront	-	-
2	EA	Bottom Pivot	By Storefront	-	-
2	EA	Panic Exit Device	DB-100-JS	SS	CRL
2	EA	Locking Ladder Pull	DB-100-JS	SS	CRL
2	EA	Mortise Cylinder			
2	EA	Integral Gasketing	By Storefront	-	-
2	EA	Door Bottom	328AA-S	AA	ZER
2	EA	Stile Gasketing	328AA-S	AA	ZER
1	EA	Perimeter Gasketing	8878AA-S	AA	ZER
1	EA	Threshold	655BK-V3-223	BK	ZER

b. Door Functions: Doors always unlocked for free ingress/egress

3. **Hardware Group No. 02** – Not Used

4. **Hardware Group No. 03** – Exterior Exit

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Cont. Hinge	157XY	710	IVE

1	EA	Exit Device	9875-L-NL-02	US32D	VON
1	EA	Rim Cylinder			
1	EA	Surface Closer	4111-SCUSH	BK	LCN
1	EA	Overhead Stop	90S-SPBLK	BLK	GLY
1	EA	Kickplate	8400 10" x 2" LDW	BLK	IVE
1	EA	Threshold	655BK-V3-223	BK	ZER
1	EA	Gasketing	328BK-S	BK	ZER
1	EA	Weather Stripping	488S	BK	ZER
1	EA	Door Bottom	355AA	AA	ZER

b. Notes: Surface closer on interior (room) side.

c. Door Functions: Doors normally locked and secure, allowing free egress only. Outside lever is always inoperable. Exterior trim provided for keyed entry during emergencies.

5. **Hardware Group No. 04** – Exterior Exit – Card Reader

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Cont. Hinge	157XY	710	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Electric Strike	6400 FSE	630	VON
1	EA	Surface Closer	4111-SCUSH	BK	LCN
1	EA	Overhead Stop	90S-SPBLK	BLK	GLY
1	EA	Kickplate	8400 10" x 2" LDW	BLK	IVE
1	EA	Threshold	655BK-V3-223	BK	ZER
1	EA	Gasketing	328BK-S	BK	ZER
1	EA	Weather Stripping	488S	BK	ZER
1	EA	Door Bottom	355AA	AA	ZER
1	EA	Power Supply			
2	EA	Door Position Switch	DPS-M	BK	ASSA
1	EA	Card Reader	By Security	-	-

b. Notes: Surface closer on interior (room) side.

c. Door Functions: Doors normally locked and secure. Presenting valid credentials retracts electric strike allowing entrance. In case of power failure or fire alarm, doors will be locked and secure with keyed entry override. Outside lever is always inoperable. Doors always available for free egress.

6. **Hardware Group No. 05** – Exterior Exit

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Cont. Hinge	157XY	710	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH

1	EA	FSIC Core			
1	EA	Surface Closer	4111-SCUSH	BK	LCN
1	EA	Overhead Stop	90S-SPBLK	BLK	GLY
1	EA	Kickplate	8400 10" x 2" LDW	BLK	IVE
1	EA	Threshold	655BK-V3-223	BK	ZER
1	EA	Gasketing	328BK-S	BK	ZER
1	EA	Door Bottom	355AA	AA	ZER

b. Notes: Surface closer on interior (room) side.

c. Door Functions: Doors normally locked and secure, allowing free egress only. Outside lever is always inoperable. Exterior trim provided for keyed entry during emergencies.

7. **Hardware Group No. 06** – Exterior Entrance

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Cont. Hinge	157XY	710	IVE
1	EA	Exit Device	9875-L-02	630	VON
1	EA	Rim Cylinder			
1	EA	Surface Closer	4111-SCUSH	BK	LCN
1	EA	Overhead Stop	90S-SPBLK	BLK	GLY
1	EA	Kickplate	8400 10" x 2" LDW	BLK	IVE
1	EA	Threshold	655BK-V3-223	BK	ZER
1	EA	Gasketing	328BK-S	BK	ZER
1	EA	Door Bottom	355AA	AA	ZER

b. Notes: Lever style to match project standard Schlage L Standard Series #02 (refer to 08 71 00 Door Hardware for additional manufacturers and approved equal). Surface closer on interior (room) side.

c. Door Functions: Doors normally locked and secure. Doors always available for free egress.

8. **Hardware Group No. 07** – Interior Storefront Entrance – Passage – Pair Doors

a. Provide each PR door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
2	EA	Concealed Floor Closer	By Storefront	-	-
2	EA	Top Pivot	By Storefront	-	-
2	EA	Bottom Pivot	By Storefront	-	-
4	EA	Ladder Pull	By Storefront	-	-
1	EA	Gasketing	By Storefront	-	-
1	EA	Threshold	655BK-V3-223	BK	ZER

b. Door Functions: Doors always unlocked for free ingress/egress.

9. **Hardware Group No. 08** – Interior 60-Min. Fire-Rated Storefront Entrance – Pair Doors

   a. Provide each PR door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
8	EA	Hinges	By Storefront	-	-
2	EA	Surface Closer	By Storefront	-	-
2	EA	Fire Exit Device	By Storefront	-	-
1	EA	Gasketing	By Storefront	-	-

   b. Notes: Refer to Fire-Rated Aluminum Storefront Entrance Specs. Lever style to match project standard Schlage L Standard Series #02 (refer to 08 71 00 Door Hardware for additional manufacturers and approved equal). Surface closer on interior stair room side.

   c. Door Functions: Doors always unlocked for free ingress/egress.

10. **Hardware Group No. 09** – Office – Card Reader

   a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
4	EA	Hinge	5BB1 4.5 X 4.5 NRP	631	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Electric Strike	6400 FSE	630	VON
1	EA	Surface Closer w/ Stop	4111-SCUSH	BK	LCN
1	EA	Kickplate	8400 10" x 2" LDW	BLK	IVE
1	EA	Gasketing	328BK-S	BK	ZER
1	EA	Door Bottom	355AA	AA	ZER
1	EA	Power Supply			
1	EA	Door Position Switch	DPS-M	BK	ASSA
1	EA	Card Reader	By Security	-	-

   b. Note: Surface closer on interior office room side.

   c. Door Functions: Doors normally locked and secure. Presenting valid credentials retracts electric strike allowing entrance. In case of power failure or fire alarm, doors will be locked and secure with keyed entry override. Outside lever is always inoperable. Doors always available for free egress.

11. **Hardware Group No. 09A** – Office – Card Reader

   a. Same as above No. 09 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Surface Closer w/ HO	4111-SHCUSH	BK	LCN

b. Notes: Provide surface closer with integral hold-open and stop at 90 degrees, mounted on pull-side of the opening in lieu of on push-side as specified in Hardware Group No. 09 above. Surface closer on interior office room side.

c. Door Functions: Doors normally locked and secure. Presenting valid credentials retracts electric strike allowing entrance. In case of power failure or fire alarm, doors will be locked and secure with keyed entry override. Doors always available for free egress on the pull side.

12. **Hardware Group No. 10** – Office

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Kickplate	8400 10" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Door Stop	FS410	626	IVE

b. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

13. **Hardware Group No. 10A** – Office

a. Same as above No. 10 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Surface Closer	4011	689	LCN

b. Notes: Provide surface closer, mounted on interior office room side.

14. **Hardware Group No. 11** – Interior Storefront Entrance – Office

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
4	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Gasketing	By Storefront	-	-
1	EA	Door Stop	FS410	626	IVE

b. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

15. **Hardware Group No. 11A** – Interior Storefront Entrance – Office

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Surface Closer	4011	689	LCN

b. Notes: Provide surface closer, mounted on interior office room side.

16. **Hardware Group No. 12** – Storage – Pair Doors

a. Provide each PR door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
6	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Const. Latch Flush Bolt	FB51T	630	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	FSIC Core			
2	EA	Silencers	SR64	GRY	IVE

b. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

17. **Hardware Group No. 13** – Storage

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	FSIC Core			
3	EA	Silencers	SR64	GRY	IVE
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Door Functions: Doors normally locked and secure. Outside lever is always inoperable. Doors always available for free egress.

18. **Hardware Group No. 13A** – 60 or 90-Min. Fire-Rated – Storage

a. Same as above No. 13 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Surface Closer	4011	689	LCN

1	EA	Gasketing	328AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER

b. Notes: Provide surface closer, mounted on interior room side and fire-gasketing. Surface closer on interior storage room side.

19. **Hardware Group No. 14** – Single Occupant Restroom

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	L9496T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Surface Closer	4011	689	LCN
1	EA	Kickplate	8400 10" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Wall Stop	WS443/WS447	626	IVE

b. Notes: Surface closer on interior restroom side.

c. Door Functions: Passage set with deadbolt and occupancy indicator. Doors always available for free egress.

20. **Hardware Group No. 14A** – Single Occupant Restroom

a. Same as above No. 14 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Surface Closer w/ Stop	4111-SCUSH	BK	LCN

b. Notes: Provide surface closer with integral stop in lieu of surface closer and wall stop as specified in Hardware Group No. 14 above. Surface closer on interior restroom side.

21. **Hardware Group No. 15** – Locker Room

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	L9465T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Surface Closer	4011	689	LCN
1	EA	Kickplate	8400 10" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Wall Stop	WS443/WS447	626	IVE

b. Notes: Surface closer on interior locker room side.
c. Door Functions: Doors normally unlocked during normal business hours and locked and secure with keyed entry override after hours. Outside lever is always operable; deadbolt by key. Doors always available for free egress.

22. **Hardware Group No. 16** – Locker Room - Vestibule

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Passage Leverset	L9010T 02A	630	SCH
1	EA	Surface Closer	4011	689	LCN
1	EA	Kickplate	8400 10" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Wall Stop	WS443/WS447	626	IVE

b. Notes: Surface closer on interior vestibule room side.
c. Door Functions: Doors always unlocked and available for free ingress/egress. Passage leverset with solid strike plate and latchbolt retracted, allowing handle to turn without latching closed.

23. **Hardware Group No. 17** – Janitor's Closet

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	Surface Closer w/ Hold	4111-SHCUSH	689	LCN
1	EA	Kickplate	8400 10" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE

b. Notes: Surface closer on interior janitor's closet room side.
c. Door Functions: Doors normally locked and secure. Doors always available for free egress. Outside lever is always inoperable. Surface closer with integral hold-open and stop at 105 degrees.

24. **Hardware Group No. 17A** – Janitor's Closet

a. Same as above No. 17 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Surface Closer	4111	689	LCN
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Notes: Provide surface closer and wall stop in lieu of surface closer with integrated hold-open and stop at 105 as specified in Hardware Group No. 17 above. Surface closer on interior janitor's closet room side.

25. **Hardware Group No. 18** – 90-Min. Fire-Rated – Mechanical Room

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	Surface Closer w/ Stop	4111-SCUSH	689	LCN
1	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Gasketing	328AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER

b. Notes: Surface closer on interior mechanical room side.
c. Door Functions: Doors normally locked and secure. Outside lever is always inoperable. Doors always available for free egress.

26. **Hardware Group No. 18A** – 90-Min. Fire-Rated – Mechanical Room

a. Same as above No. 18 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Surface Closer	4011	689	LCN
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Notes: Provide surface closer and wall stop in lieu of surface closer with integral stop as specified in Hardware Group No. 18 above. Surface closer on interior mechanical room side.

27. **Hardware Group No. 19** – 90-Min. Fire-Rated – Stair Entrance

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	Surface Closer	4011	689	LCN
1	EA	Kickplate	8400 10" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Perimeter Gasketing	8878AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER

b. Notes: Surface closer on interior stair room side.
c. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

28. **Hardware Group No. 19A** – 90-Min. Fire-Rated – Stair Entrance

a. Same as above No. 19 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Notes: Provide wall stop.

29. **Hardware Group No. 19B** – 90-Min. Fire-Rated – Stair Entrance

a. Same as above No. 19 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Passage Leverset	L9010T 02A	630	SCH
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Notes: Provide passage leverset in lieu of mortise lockset as specified in Hardware Group No. 19 above.
c. Door Functions: Doors unlocked and always available for free ingress/egress.

30. **Hardware Group No. 19C** – 90-Min. Fire-Rated – Boiler Room Exit

a. Same as above No. 19 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Mortise Lockset	LV9080T 02A	630	SCH

b. Notes: Provide storeroom-function mortise lockset in lieu of mortise lockset and remove kickplate as specified in Hardware Group No. 19 above.
c. Door Functions: Doors normally locked and secure. Outside lever is always inoperable. Doors always available for free egress.

31. **Hardware Group No. 20** – 90-Min. Fire-Rated – Mechanical Room Exit

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Fire Exit Device	9875-L-02-F	US32D	VON
1	EA	Surface Closer	4011	689	LCN
1	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Gasketing	328AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER

1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Notes: Surface closer on interior mechanical room side.
c. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

32. **Hardware Group No. 21** – 45-Min. Fire-Rated Repair Shop Exit Door

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Cont. Hinge	157XY	628	IVE
1	EA	Fire Exit Device	9875-L-02-F	US32D	VON
1	EA	Surface Closer w/ Stop	4111-SCUSH	689	LCN
1	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Gasketing	328AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER

b. Notes: Surface closer on interior repair shop room side.
c. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

33. **Hardware Group No. 21A** – 45-Min. Fire-Rated – Repair Shop Exit

a. Same as above No. 21 except provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Surface Closer	4011	689	LCN
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Notes: Provide surface closer and wall stop in lieu of surface closer with integral stop as specified in Hardware Group No. 21 above. Surface closer on interior repair shop room side.

34. **Hardware Group No. 22** – 45-Min. Fire-Rated – Office – Card Reader

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Electric Strike	6400 FSE	630	VON
1	EA	Surface Closer	4011	689	LCN
1	EA	Kickplate	8400 10" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Gasketing	328AA-S	AA	ZER

1	EA	Weather Stripping	488S	BK	ZER
1	EA	Door Bottom	355AA	AA	ZER
1	EA	Wall Stop	WS443/WS447	626	IVE
1	EA	Power Supply			
1	EA	Door Position Switch	DPS-M	BK	ASSA
1	EA	Card Reader	By Security	-	-

b. Notes: Surface closer on interior office room side.

c. Door Functions: Doors normally locked and secure. Presenting valid credentials retracts electric strike allowing entrance. In case of power failure or fire alarm, doors will be locked and secure with keyed entry override. Outside lever is always inoperable. Doors always available for free egress on the pull side.

35. **Hardware Group No. 23** – Storage – Card Reader – Pair Doors

a. Provide each PR door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
8	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Auto. Comb. Flush Bolts	FB458	630	IVE
1	EA	Dust Proof Strike	DP2	626	IVE
1	EA	Coordinator	COR X FL	628	IVE
1	EA	Electrified Lockset	L9092EU 02A	630	SCH
1	EA	FSIC Core			
1	EA	Surface Closer w/ Stop	4111-SCUSH	689	LCN
2	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
2	EA	Silencers	SR64	GRY	IVE
1	EA	Power Transfer	EPT10 CON	689	VON
1	EA	Power Supply			
1	EA	Door Position Switch	DPS-M	BK	ASSA
1	EA	Card Reader	By Security	-	-

b. Note: Surface closer on interior storage room side.

c. Door Functions: Doors normally locked and secure. Presenting valid credentials retracts electric strike allowing entrance. In case of power failure or fire alarm, doors will be locked and secure with keyed entry override. Outside lever is always inoperable. Active leaf of doors always available for free egress.

36. **Hardware Group No. 24** – Interior Storefront Entrance – Office – Card Reader

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
4	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH

1	EA	FSIC Core			
1	EA	Electric Strike	6400 FSE	630	VON
1	EA	Surface Closer	4011	689	LCN
1	EA	Integral Gasketing	By Storefront	-	-
1	EA	Door Bottom	328AA-S	AA	ZER
1	EA	Perimeter Gasketing	8878AA-S	AA	ZER
1	EA	Wall Stop	WS443/WS447	626	IVE
1	EA	Power Supply			
1	EA	Door Position Switch	DPS-M	BK	ASSA
1	EA	Card Reader	By Security	-	-

b. Notes: Surface closer on interior office room side.

c. Door Functions: Doors normally locked and secure. Presenting valid credentials retracts electric strike allowing entrance. In case of power failure or fire alarm, doors will be locked and secure with keyed entry override. Outside lever is always inoperable. Doors always available for free egress.

37. **Hardware Group No. 25** – Storage – Card Reader

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
4	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Electric Strike	6400 FSE	630	VON
1	EA	Surface Closer	4011	689	LCN
1	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Wall Stop	WS406/407CCV	630	IVE
1	EA	Power Supply			
1	EA	Door Position Switch	DPS-M	BK	ASSA
1	EA	Card Reader	By Security	-	-

b. Notes: Surface closer on interior storage room side.

c. Door Functions: Doors normally locked and secure. Presenting valid credentials retracts electric strike allowing entrance. In case of power failure or fire alarm, doors will be locked and secure with keyed entry override. Outside lever is always inoperable. Doors always available for free egress on the pull side.

38. **Hardware Group No. 26** – Storage

a. Provide each SGL door(s) with the following:

Qty	Description	Catalog Number	Finish	Mfr

4	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Surface Closer	4011	689	LCN
1	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Notes: Surface closer on interior storage room side.

c. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

39. **Hardware Group No. 27** – Training

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Heavy Duty Hinge	5BB1HW 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	FSIC Core			
3	EA	Silencers	SR64	GRY	IVE
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

40. **Hardware Group No. 28** – 90-Min. Fire-Rated Mech. Access Corridor

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
4	EA	Heavy Duty Hinge	5BB1HW 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Surface Closer	4011	689	LCN
1	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
1	EA	Gasketing	328AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Notes: Surface closer on corridor side.

c. Door Functions: Doors normally locked and secure from both sides. Outside lever is always inoperable. Doors are not available for free egress and are for secured access only.

41. **Hardware Group No. 29** – Exterior Rooftop

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
4	EA	Heavy Duty Hinge	5BB1HW 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Surface Closer w/ Stop	4111-SCUSH	689	LCN
1	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
1	EA	Gasketing	328AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER

b. Notes: Surface closer on interior (room) side.

c. Door Functions: Doors normally locked and secure from both sides. Outside lever is always inoperable. Doors are not available for free egress and are for secured access only.

42. **Hardware Group No. 50** – Exterior Overhead and Rapid Roll Door

a. Provide each SGL door(s) with the following:

Qty		Description	Mfr
1	EA	Remote-Control Station	By Overhead & Roll-Up Doors
1	EA	Limit Control Switch	By Overhead & Roll-Up Doors
1	EA	Obstruction Sensor	By Overhead & Roll-Up Doors
1	EA	Door Bottom Sensor	By Overhead & Roll-Up Doors
1	EA	Emergency Override	By Overhead & Roll-Up Doors
1	EA	Em. Manual Operation	By Overhead & Roll-Up Doors
1	EA	A-V Signal Alarms	By Overhead & Roll-Up Doors
1	EA	Radio Control System	By Overhead & Roll-Up Doors
1	EA	Door Head Seal	By Overhead & Roll-Up Doors
2	EA	Jamb Weather-Seals	By Overhead & Roll-Up Doors
1	EA	Door Bottom Seal	By Overhead & Roll-Up Doors

b. Notes: Refer to 083323 and 083324 for Overhead Coiling Doors and Roll-Up Door specs.

43. **Hardware Group No. 51** – Interior Repair Bay Overhead Door

a. Provide each SGL door(s) with the following:

Qty		Description	Mfr
1	EA	Remote-Control Station	By Overhead Door
1	EA	Limit Control Switch	By Overhead Door
1	EA	Obstruction Sensor	By Overhead Door
1	EA	Door Bottom Sensor	By Overhead Door
1	EA	Emergency Override	By Overhead Door

1	EA	Em. Manual Operation	By Overhead Door
1	EA	A-V Signal Alarms	By Overhead Door
1	EA	Radio Control System	By Overhead Door
1	EA	Door Head Seal	By Overhead Door
2	EA	Jamb Weather-Seals	By Overhead Door
1	EA	Door Bottom Seal	By Overhead Door

b. Notes: Refer to 083323 for Overhead Coiling Doors specs.

44. **Hardware Group No. 52** – Interior Storage Overhead Door

a. Provide each SGL door(s) with the following:

Qty		Description	Mfr
1	EA	Remote-Control Station	By Overhead Door
1	EA	Limit Control Switch	By Overhead Door
1	EA	Obstruction Sensor	By Overhead Door
1	EA	Door Bottom Sensor	By Overhead Door
1	EA	Emergency Override	By Overhead Door
1	EA	Em. Manual Operation	By Overhead Door
1	EA	A-V Signal Alarms	By Overhead Door
1	EA	Radio Control System	By Overhead Door

b. Notes: Refer to 083323 for Overhead Coiling Doors specs.

C. Hardware for Existing Building (A2):

1. **Hardware Group No. 70** – 60-Min. Fire-Rated – Existing Building (A2) Stair Entrance

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Passage Leverset	L9010T 02A	630	SCH
1	EA	Surface Closer	4011	689	LCN
1	EA	Kickplate	8400 10" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Gasketing	328AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER
1	EA	Wall Stop	WS406/407CCV	630	IVE

b. Notes: Surface closer on interior stair room side.
c. Door Functions: Door always unlocked for free ingress/egress.

2. **Hardware Group No. 71** – 90-Min. Fire-Rated – Existing Building (A2) Mechanical Room

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9080T 02A	630	SCH
1	EA	Surface Closer w/ Stop	4111-SCUSH	689	LCN
3	EA	Silencers	SR64	GRY	IVE
1	EA	Gasketing	328AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER

b. Notes: Surface closer on interior mechanical room side.
c. Door Functions: Doors normally locked and secure. Outside lever is always inoperable. Doors always available for free egress.

3. **Hardware Group No. 72** – 45-Min. Fire-Rated – Existing Building (A2) Office

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Kickplate	8400 10" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE
1	EA	Gasketing	328AA-S	AA	ZER
1	EA	Door Bottom	355AA	AA	ZER
1	EA	Door Stop	FS410	626	IVE

b. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

4. **Hardware Group No. 73** – Existing Building (A2) Storage

a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
3	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	Surface Closer w/ Stop	4111-SCUSH	689	LCN
1	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
3	EA	Silencers	SR64	GRY	IVE

b. Notes: Surface closer on interior storage room side.
c. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

5. **Hardware Group No. 74** – Existing Building (A2) Storage – Pair Doors

   a. Provide each PR door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
8	EA	Hinge	5BB1 4.5 X 4.5 NRP	652	IVE
1	EA	Auto. Comb. Flush Bolts	FB458	630	IVE
1	EA	Dust Proof Strike	DP2	626	IVE
1	EA	Coordinator	COR X FL	628	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Surface Closer w/ Stop	4111-SCUSH	689	LCN
2	EA	Armor Plate	8400 36" x 2" LDW	630	IVE
2	EA	Silencers	SR64	GRY	IVE

   b. Note: Surface closer on interior storage room side.
   c. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

D. Hardware for Household Goods (A4):

1. **Hardware Group No. 80** – Household Goods (A4) Exterior Door

   a. Provide each SGL door(s) with the following:

Qty		Description	Catalog Number	Finish	Mfr
1	EA	Cont. Hinge	157XY	710	IVE
1	EA	Mortise Lockset	LV9070T 02A	630	SCH
1	EA	FSIC Core			
1	EA	Surface Closer	4111-SCUSH	BK	LCN
1	EA	Overhead Stop	90S-SPBLK	BLK	GLY
1	EA	Kickplate	8400 10" x 2" LDW	BLK	IVE
1	EA	Threshold	655BK-V3-223	BK	ZER
1	EA	Gasketing	328BK-S	BK	ZER
1	EA	Door Bottom	355AA	AA	ZER

2. Notes: Closer on interior (room) side.

3. Door Functions: Doors normally locked and secure. Outside lever remains unlocked until relocked by key. Doors always available for free egress.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

END OF SECTION 08 71 01

SECTION 08 80 00
Exterior Glazing

PART I - GENERAL

1.1 RELATED DOCUMENTS:

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements

1. Refer to DDC General Conditions.

a. Section 01 33 00 – Submittal Procedures.

b. Section 01 81 13.04 – Sustainable Design Requirements for LEED v4 Buildings.

1.2 SUMMARY:

A. This Section includes the Glass and Glazing components for the associated building enclosure systems described in the Building Enclosure System Matrix.

B. Refer to Exterior Glass Type Matrix for a description of the components included in this Section as well as the requirements listed there.

C. This Section requires Engineering Services.

D. This Section incorporates the use of Sealants. Requirements specified in this Section are in addition to those in the following Section:

1. Section 07 92 01 – Exterior Joint Sealants.

2. Section 08 49 00 – Fire Rated Glass and Framing System.

E. The following Sections describe systems and materials that incorporate Glazing, and will require coordinated interfaces.

1. Section 08 40 01 – Glazed Storefronts and Curtain Wall System.

2. Section 08 63 01 – Aluminum-Framed Skylight System.

F. Reference Documents

1. Building Enclosure System Matrix: Refer to Drawing EN1-003.

2. Samples Matrix: Refer to Drawing EN1-003.

3. Exterior Glass Type Matrix: Refer to Drawing EN1-003.

1.3 DEFINITIONS:

A. Referenced System: Building enclosure system in which the Glazing shall be incorporated.

B. Glass Manufacturers: Firms that produce primary Glass, fabricated Glass, or both, as defined in referenced Glazing publications.

C. Glass Thicknesses: Indicated by the nominal SI thickness designations in millimeters according to ASTM C1036.

D. Interspace: Space between lites of an insulating Glass unit (IGU).

E. Sloped Glazing: Glass surfaces sloped more than 15° from vertical.

F. Definitions outlined in ASTM C162 are applicable to this Section.

1.4 REFERENCE STANDARDS AND REGULATIONS:

A. Refer to DDC General Conditions.

B. The Contractor's engineering, materials and workmanship shall comply with 2014 New York City Building Code and 2016 New York City Energy Conservation Code. Where their recommendations or requirements are to a lower standard than required by this Contract Document, the Contract Documents shall take precedence.

C. The Contractor's Engineering, materials, and workmanship shall comply with 2014 New York City Fire Code.

D. Comply with applicable provisions and recommendations of the standards listed below. Where standards conflict or conflict with the provisions of these Specifications, the more stringent shall apply. Unless otherwise noted, the latest editions of the standards shall apply:

1. American Architectural Manufacturers Association (AAMA)

   a. AAMA GDSG-1 – Glass Design for Sloped Glazing.

   b. AAMA TIR-A7 – Sloped Glazing Guidelines.

   c. AAMA 800 – Voluntary Specifications and Test Methods for Sealants.

   d. AAMA 806.1 – Specification for Bonding Type Back Bedding Glazing Tapes for Use with Architectural Aluminum.

   e. AAMA 807.1 – Specification for Oil Extended Cured Rubber Back Bedding Glazing Tapes for Use with Architectural Aluminum.

2. American Society of Civil Engineers (ASCE)

   a. ASCE 7 – Minimum Design Loads for Buildings and Other Structures.

3. American National Standards Institute (ANSI)

a. ANSI Z97.1 – Safety Glazing Materials Used in Buildings – Safety Performance Specifications and Methods of Test.

4. ASTM International (ASTM)

a. ASTM C162 – Terminology of Glass and Glass Products.

b. ASTM C1036 – Standard Specification for Flat Glass.

c. ASTM C1048 – Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass.

d. ASTM C1115 – Standard Specification for Dense Elastomeric Silicone Rubber Gaskets and Accessories.

e. ASTM C1172 – Standard Specification for Laminated Architectural Flat Glass.

f. ASTM C1249 – Standard Guide for Secondary Seal for Sealed Insulating Glass Units for Structural Sealant Glazing Applications.

g. ASTM C1281 – Standard Specification for Preformed Tape Sealants for Glazing Applications.

h. ASTM C1330 – Standard Specification for Cylindrical Sealant Backing for Use with Cold Liquid-Applied Sealants.

i. ASTM C1376 – Standard Specification for Pyrolytic and Vacuum Deposition Coatings on Flat Glass.

j. ASTM C1401 – Standard Guide for Structural Sealant Glazing.

k. ASTM C1464 – Standard Specification for Bent Glass.

l. ASTM D2244 – Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates.

m. ASTM D3363 – Standard Test Method for Film Hardness by Pencil Test.

n. ASTM E546 – Standard Test Method for Frost/Dew Point of Sealed Insulating Glass Units.

o. ASTM E576 – Standard Test Method for Frost/Dew Point of Sealed Insulating Glass Units in the Vertical Position.

p. ASTM E1300 – Standard Practice for Determining Load Resistance of Glass in Buildings.

q. ASTM E2188 – Standard Test Method for Insulating Glass Unit Performance.

r. ASTM E2189 – Standard Test Method for Testing Resistance to Fogging in Insulating Glass Units.

s. ASTM E2190 – Standard Specification for Insulating Glass Unit Performance and Evaluation.

t. ASTM E2269 – Standard Test Method for Determining Argon Concentration in Sealed Insulating Glass Units using Gas Chromatography.

u. ASTM E2649 – Standard Test Method for Determining Argon Concentration in Sealed Insulating Glass Units Using Spark Emission Spectroscopy.

5. Code of Federal Regulations (CFR)

a. 16 CFR Part 12 – Safety Standard for Architectural Glazing Materials.

6. European Committee for Standardization

a. EN 14179-1 – Glass in Building – Heat Soaked Thermally Toughened Soda Lime Silicate Safety Glass.

7. Glass Association of North America (GANA)

a. GANA Engineering Standards Manual.

b. GANA Glazing Manual.

c. GANA Laminated Glazing Reference Manual.

8. Insulating Glass Manufacturers Alliance (IGMA)

a. IGMA TB-3001 – Guidelines for Sloped Glazing.

b. IGMA TM-3000 – North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use.

9. National Fenestration Rating Council (NFRC)

a. NFRC 100 – Procedure for Determining Fenestration Product U-Factors.

b. NFRC 200 – Procedure for Determining Fenestration Product Solar Heat Gain Coefficient and Visible Transmittance at Normal Incidence.

10. National Fire Protection Association (NFPA)

a. NFPA 252 – Standard Methods of Fire Tests of Door Assemblies.

b. NFPA 257 – Standard on Fire Test for Window and Glass Block Assemblies.

1.5 PERFORMANCE REQUIREMENTS:

A. General Prescriptive Requirements

1. Provide laminated Glass where indicated and under the following conditions:

a. Sloped Glazing.

B. General Performance

1. Engineer Glass, including comprehensive engineering analysis according to ASTM E1300 by a qualified Professional Engineer licensed in the State of New York.

2. Provide Glazing meeting the performance and loading criteria specified in Section 08 40 01 – Glazed Storefronts and Curtain Wall System and Section 08 63 01 – Aluminum-Framed Skylight System, as well as the requirements specified herein.

3. Glass thickness and heat-treatment type designations indicated are preliminary. Confirm Glass thicknesses by analyzing Project loads and in-service conditions for each associated building enclosure system where they will be incorporated.

   a. Use thinner lites than indicated only with Commissioner's approval.

   b. Subdivide Glazing types into more subtypes only with the Commissioner's approval.

   c. Engineer sloped Glazing for a probability of breakage not greater than 0.001.

4. Failure includes, but is not limited to:

   a. Glass breakage; inclusive of spontaneous Glass breakage and any secondary breakage caused by failure of other Glass or components.

   b. Cracking, crazing, flaking, discoloration of coatings on Glass.

   c. Delamination of laminated Glass units.

   d. Loss of Transparency of laminated Glass.

      1) Insulated glazing that exhibits fogging, staining, corrosion deterioration of interior coating, spacer migration, a decrease in air space dimension or appearance of dust, moisture, or a film of any kind.

      2) Primary seal blisters or discontinuities , including thin spots where primary seal does not fully "wet" to surface of glass, and locations where there are skips in the primary seal. Other deterioration or irregularity of hermetic seals shall also constitute failure.

   e. Primary seal infringement into vision area beyond industry limits.

   f. Loss of glass bite due to shifting of Glass.

   g. Loss of glass bearing on setting blocks due to shifting of Glass and/or blocks.

   h. Sealant failure.

   i. Glass color mismatch between glass units that are produced from different batches of glass. Glass shall be held to a color match criteria that keeps the hue of the glass within the same color quadrant when testing for L*a*b* values in accordance with ASTM D2244. See additional requirements in this Section for additional performance criteria regarding color matching glass."

C. Structural Performance

1. Glazing shall transmit and resist loads and their combinations as defined by the associated building enclosure system, to the supporting framing of that system.

2. Include in engineering calculations specific load cases required by Code for Glazing and sloped Glazing.

3. Engineer Glass to resist thermal stresses induced by differential shading.

   a. Provide thermal stress analysis for each exterior Glass type for each building elevation or facet of the building enclosure, as appropriate.

      1) Analysis shall clearly indicate all expected service temperature ranges and the effects of partial and full shading on the Glass.

      2) Append to the thermal stress analysis a statement from the Glass manufacturer that, based upon this analysis the resulting thermal stresses will not increase the specified "statistical probability of breakage."

4. Consider internal loads on IGUs in their engineering. This includes the building altitude as well as the combined effects of temperature, altitude, atmospheric pressure, together with other specified loads.

D. Movement Performance

1. Glazing shall accommodate the movements specified and developed by the Referenced System without any reduction in performance below the minimum levels required herein.

2. Maximum Lateral Deflection

   a. For Glass supported on all four edges, limit center-of-glass deflection at design wind pressure or suction to not more than 3/4 in. or the following, whichever is less:

      1) L/75 of the Glass edge length (L) for each individual Glazing lite less than or equal to 5 ft.

      2) L/120 + 0.3 in. of the Glass edge length (L) for each individual Glazing lite greater than 5 ft.

   b. IGUs shall be limited to an edge of Glass deflection not exceeding:

      1) L/175 of the Glass edge length (L) for each individual Glazing lite less than or equal to 13 ft-6 in.

      2) L/240 + 1/4 in. of the Glass edge length (L) for each individual Glazing lite greater than 13 ft-6 in.

3. Glazing shall accommodate the following thermal movements without any reduction in the specified performance:

   a. Allow for thermal movements resulting from the maximum change (range) in ambient and surface temperatures of the associated building enclosure system. Base engineering calculation on surface temperatures of materials due to both solar heat gain and night-time-sky heat loss.

   b. Use associated building enclosure system's environmental conditions for analysis.

c. Due to changes in temperature of the supporting structure and interfacing construction.

4. Glazing shall accommodate the following moisture movements without any reduction in the specified performance:

a. Due to changes in the moisture content of its components, and wetting from rain.

b. Expansion of absorbed or retained moisture due to freezing.

c. Due to changes in the moisture content of the supporting structure and interfacing construction.

E. Energy Performance

1. Glazing shall have certified energy performance ratings in accordance with the standards required by 2014 New York City Building Code and 2016 New York City Energy Conservation Code.

2. Thermal Transmittance (U-Value)

a. Coordinate Glazing U-value with the framing values of the associated building enclosure system to achieve the system U-value requirements provided in the Building Enclosure System Matrix.

b. Glazing shall not have a U-value greater than that listed in the Exterior Glass Type Matrix without Commissioner's approval.

3. Solar Heat Gain Coefficient (SHGC)

a. Coordinate Glazing SHGC with the framing values of the associated building enclosure system to achieve the system SHGC requirements provided in the Building Enclosure System Matrix.

b. Glazing shall not have a SHGC greater than that listed in the Exterior Glass Type Matrix without Commissioner's approval.

4. Visible Light Transmittance (VLT)

a. Coordinate Glazing VLT with the framing values of the associated building enclosure system to achieve the system VLT requirements provided in the Building Enclosure System Matrix.

b. Glazing shall not have a VLT less than that listed in the Exterior Glass Type Matrix without Commissioner's approval.

5. Condensation Resistance

a. Provide Glazing that will not condense on the inside face of the Glazing per the requirements of the associated building enclosure system.

b. Provide IGUs that will not exhibit frost or condensation within the air space at a temperature equal to or above the minimum exterior temperature of the associated building enclosure system as per ASTM E546 or ASTM E576.

F. Fire Performance

1. Glazing shall meet the performance requirements specified for the associated building enclosure system. Refer to the 2014 New York City Fire Code in addition to Section 08 49 00 – Fire Rated Glass and Framing System for requirements.

1.6 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions.

1.7 SUBMITTALS:

A. Calculations

1. Provide structural calculations for Glazing.

a. Provide Glass producer/fabricator's certification that it has reviewed the Glazing details and thicknesses and finds same suitable for the purpose intended in accordance with its published literature and these Specifications. This includes, but is not limited to, a written analysis of stress due to all loads including wind loads, environmental conditions, and thermal factors showing a probability of failure no greater than amount specified at design wind loads and local environmental conditions, including altitude relative to location of manufacture, temperature variations, and barometric pressure variations anticipated at the completed Project.

2. Provide thermal calculations for Glazing to describe:

a. U-value, SHGC, and VLT performance of Glazing.

b. Condensation resistance of all elements of Glazing.

B. Testing reports.

C. Product Data

1. For Glass and Glazing products, submit Glazing manufacturer's guidelines highlighting the manufacturing tolerances and defects in accordance with those specified and ASTM C1036, ASTM C1048, and ASTM C1172, prior to the time of preliminary Glass order for verification of acceptable manufacturing tolerances and defects.

2. For all heat-treated Glazing, including Samples, provide measurement data for roller wave, bow, and edge dip.

3. For all coated Glazing, including Samples, provide measurement data for color with the associated sample.

4. Submit glass manufacturer's certification that all fully tempered glass has been heat-soak tested in accordance with the requirements set forth in this Section, including but not limited to the following:

a. Quality control procedures for minimizing risks of float glass contamination from float glass manufacturer.

b. Factory logs documenting heat soak testing of all fully tempered glass in accordance with EN-14179-1.

c. Records of glass manufacturer's past spontaneous breakage events and how they were resolved

D. LEED submittals.

E. Samples

1. Provide three (3) Samples in 12 in. lengths for all types of the following products:

a. Spacers for each type and size of spacer used for all Glass types.

b. Secondary Sealant Sample for each color of secondary Sealant used for all Glass types.

F. Quality Control Plan

1. Submit certificates signed by Glass and Glazing product manufacturers, certifying that products furnished comply with requirements.

2. For solar-control low-e-coated Glass, provide documentation demonstrating that manufacturer of coated Glass is certified by coating manufacturer.

G. Provide certification from Glass producer/fabricator and where applicable from gasket and Sealant manufacturer and coated-Glass manufacturers that gaskets, Sealants, secondary Sealants, gas fills, spacers and Glass products that contact are chemically and otherwise compatible.

H. Completion of Work: Upon completion of installation of the Glazing, submit written certification that the manufacturer's representative has supervised the work of this Section and that all materials are correctly installed.

1.8 QUALITY ASSURANCE:

A. Refer to DDC General Conditions Section 01 40 00 – Quality Requirements.

B. Installer Qualifications: In addition, the Contractor or subcontractor must be licensed or approved by the manufacturer.

C. Manufacturer Qualifications for IGUs with Sputter-Coated, Low-E Coatings: A qualified insulating Glass manufacturer who is approved and certified by coated-Glass manufacturer.

D. Glass Testing Agency Qualifications: A qualified independent Testing Agency accredited according to the NFRC CAP 1 Certification Agency Program.

E. Source Limitations for Glass and Glass Accessories: Obtain Glass and Glass accessories from one source for each product indicated below for all associated building enclosure systems unless approved by the Commissioner:

1. Primary Glass.

2. Fabricated Glass, including Glass which is coated, heat treated, laminated, fritted or printed.

3. Glazing gaskets.

4. Glazing accessories.

F. Glazing Publications: Comply with published recommendations of Glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for Glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: Laminated Glazing Reference Manual and Glazing Manual.

2. AAMA Publications: GDSG-1 – Glass Design for Sloped Glazing and TIR-A7 – Sloped Glazing Guidelines.

3. IGMA Publications: TB-3001 – Guidelines for Sloped Glazing and TM-3000 – North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

G. Safety Glass: Comply with the applicable requirements of the 2014 New York City Building Code. Wherever requirements conflict the more stringent shall apply. As a minimum, provide Category II materials complying with testing requirements in 16 CFR Part 12 and ANSI Z97.1.

1. Safety Glazing Labeling: Where safety Glazing labeling is indicated, permanently mark Glazing with certification label of the SGCC. Label shall indicate manufacturer's name, type of Glass, thickness, and safety Glazing standard with which Glass complies.

2. For Glazing types with multiple lites of Glass, laminated or assembled into an insulated unit, where safety labeling is required provide labels that align in position and orientation from lite to lite.

H. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.

I. Secondary Sealant Pre-Construction Adhesion Testing: Provide Project specific test data for adhesion and compatibility testing between Project glazing lites and secondary sealant. Comply with requirements in Pre-Construction Compatibility and Adhesion Testing clause in Section 07 92 01.

1. Provide test data prior to the fabrication of project units.

2. Include testing with proposed coated glass. Document procedure and equipment used to remove glass coatings.

1.9 WARRANTY:

A. Manufacturer's Warranty on Glass: Written warranty made out to City of New York and signed by Glass manufacturer agreeing to promptly furnish replacements against breakage, including spontaneous breakage due to defects in Glass materials (including NiS), fabrication, and/or installation. Upon notification of such deterioration within the warranty period, promptly furnish replacement Glass units, including labor for installation, for failed Glass units at no cost to the City of New York.

1. Warranty Period: 10 yrs from date of Substantial Completion.

B. Manufacturer's Special Warranty for Coated Glass Products: Written warranty made out to City of New York and signed by Glass manufacturer agreeing to promptly furnish replacements against coated Glass units that deteriorate within specified warranty period. Deterioration of coated Glass is defined as defects developed from normal use that are not attributed to Glass breakage or to maintaining and cleaning coated Glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating. Upon notification of such deterioration within the warranty period,

promptly furnish replacement Glass units, including labor for installation, for failed Glass units at no cost to the City of New York.

1. Warranty Period: 10 yrs from date of Substantial Completion.

C. Manufacturer's Special Warranty on Laminated Glass: Written warranty made out to City of New York and signed by laminated Glass manufacturer agreeing to promptly furnish replacements for laminated Glass units that develop edge separation, delamination materially obstructing vision through Glass, and blemishes exceeding those allowed by GANA standards within the specified warranty period indicated below. Upon notification of such deterioration within the warranty period, promptly furnish replacement Glass units, including labor for installation, for those Glass units having edge separation, delamination and blemishes at no cost to the City of New York.

1. Warranty Period: 10 yrs from date of Substantial Completion.

D. Manufacturer's Special Warranty on Insulating Glass: Written warranty made out to City of New York and signed by insulating Glass manufacturer agreeing to promptly furnish replacements for insulating Glass units whose hermetic seal has failed within specified warranty period indicated below. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of Glass. Upon notification of such deterioration within the warranty period promptly furnish replacement Glass units, including labor for installation, for failed Glass units at no cost to the City of New York.

1. Warranty Period: 10 yrs from date of Substantial Completion.

PART II - PRODUCTS

2.1 GLASS PRODUCTS:

A. General: All Glass products fabricated of components listed herein shall incorporate the requirements of each subcomponent without exception.

B. Float Glass

1. ASTM C1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.

2. Clear Glass shall mean non-low iron Glass.

3. To reduce possibility of Glass color range rejection, supplier of clear Glass products shall provide Glass from a single facility using stockpiled batch run materials from a single source for the entire Project.

4. Float Glass Quality Imperfection Limitations: In addition to the limitations included under ASTM C1036, all Glass supplied shall meet the following quality standards:

a. Point Blemishes: Seeds/stones with distortion, stain spots, dirt, or surface damage shall be limited to 0.06 in. maximum separated by $\geq$ 12 in.

b. Glass scratch/rubs shall be rejected if detectable at 10 ft.

c. Water blow off stains, tag residue, and handprints are not permitted.

5. Provide chamfered edges.

C. Heat-Treated Float Glass

1. Heat-treated lites to comply with ASTM C1048 and associated requirements specified herein for float Glass.

   a. For uncoated Glass, comply with requirements for Condition A.

   b. For coated vision Glass, comply with requirements for Condition C (other coated Glass).

2. Fabrication Quality Requirements: The allowable range of defects in heat-treated Glass shall be as accepted through Glass Sample submissions. Installed heat-treated Glass products outside of the accepted Sample range are subject to rejection by the Commissioner. In order to reduce the possibility of Glass rejections, the supplier of heat-treated Glass products shall provide Glass production runs for the entire Project from a single facility. The allowable range of defects are defined as follows:

   a. Bow and edge dip shall be half than the figures stated in relevant ASTM standards.

   b. Roller wave distortion shall be limited to 0.006 in. over 12 in.

   c. Roller wave distortion shall be parallel to bottom edge of Glass as installed unless otherwise indicated.

      1) Measure roller wave distortion of curved Glass over the arc length of 12 in. of the curved edge.

   d. Chill cracks, roller marks, and picture framing are not permitted.

   e. Tracking / Cloud, and Heat Dimples: Shall be rejected if detectable at 10 ft.

   f. The appearance of anisotropy, also known as "leopard spots" and "quench patterns", is known to be associated with heat-treated Glass under certain polarized lighting conditions. This will not be considered a fault unless it is visible in a range of reasonably typical naturally occurring conditions. The Commissioner will determine the acceptable range(s) of anisotropy from Glass Sample submittals and thereafter from the mockups and Sample installations. Coatings applied to heat-treated Glass products shall not exacerbate anisotropy to an unacceptable range(s).

3. Every lite of fully tempered Glass used on the Project shall be heat soaked off line in order to convert Nickel Sulfide impurities to the stable beta phase. Statistical heat soaking shall not be permitted.

   a. Heat soak test all fully tempered Glass in accordance with EN 14179-1, except as modified below:

      1) Holding Phase Glass Surface Temperature: 260°C (+/- 10°C); 270°C maximum.

      2) Holding Phase Duration: 4 hrs minimum.

b. Each pane of heat soak tested Glass shall be traceable to individual heat soak test batches, so that, in the event of failure, it is possible to identify and locate all Panels from that heat soaked batch.

c. Written warranties against nickel sulfide inclusions in lieu of heat soaking will not be accepted.

4. Sizes and Cutting

a. Prior to heat treatment, cut Glass to required sizes as determined by accurate measurement of openings to be glazed, making allowance for required edge clearances. Cut and process edges in accordance with Glass manufacturer's recommendations. Do not cut or treat edges in the field.

D. Tinted Float Glass

1. ASTM C1036, Type I, Quality-Q3, Class 2, complying with other requirements specified.

2. Tint Color: Refer to Exterior Glass Type Matrix.

E. Ceramic-Coated Float

1. Heat-treated lites to comply with ASTM C1048, Condition B and specified requirements for heat-treated float Glass.

2. Ceramic enamel applied by silk-screened process complying with Specification No. 95-1-31 in GANA's Tempering Division's – Engineering Standards Manual and with other requirements specified.

3. Ceramic Coating Color and Pattern: Refer to Exterior Glass Type Matrix.

F. Coated Float

1. Complying with ASTM C1376, coated by vacuum deposition (sputter-coating) process, and complying with other requirements specified in this Section and in the Exterior Glass Type Matrix.

2. Coating Quality Requirements: The allowable range of defects in coatings applied to Glass shall be as accepted through Glass Sample submissions. Installed coated Glass products which are outside of the accepted Sample range are subject to rejection by the Commissioner. In order to reduce the possibility of Glass rejections, the supplier of coated Glass products shall provide Glass coating production runs for the entire Project from a single coating facility. The allowable range of defects are defined as follows:

a. The vision Glass area is defined as the field of Glass which is greater than 1 in. from the Glass unit edge.

b. Pinholes

1) At an indoor viewing distance of 10 ft for non-reflective and reflective low-emissivity coatings:

a) Pinholes greater than 0.06 in. in diameter, separated by greater than or equal to 12 in., are not permitted in 80% of the central portion of the vision Glass area. Pinholes larger than 0.1 in. separated by greater than or equal to 12 in. are not allowed in the outer 20% of the perimeter vision Glass area.

b) No more than two readily-apparent blemishes are allowed in a 3 in. dia. circle and no more than five readily-apparent blemishes are allowed in a 12 in. diameter circle.

c. Scratches

1) At an indoor viewing distance of 10 ft for non-reflective and reflective low emissivity coatings:

a) Scratches are allowed in the 80% of the central Glass area if not detectable at the viewing distance; and scratches less than or equal to 1 in. are allowed in the outer 20% area if not detectable at the viewing distance. Concentrated scratches or abraded areas are not allowed.

b) Scuffs, rub marks, cup marks, or abraded areas are not permitted in any Glass area.

d. Reflectance and Transmission Inspection

1) When viewed outdoors against a bright uniform opaque background at a distance of 10 ft for low emissivity coatings, color, reflectance, and transmission is permitted to have a slight variance subject to Commissioner's acceptance.

a) Mottling and streaking of the coating is not permitted.

b) Coating arcing is not permitted.

c) Water blow off stains are not permitted.

d) Handprints are not permitted.

e) Roller marks are not permitted.

f) Positive and negative air distortion is not permitted.

g) Tag residue is not permitted.

2) Checkerboarding of coated Glass is not permitted. Checkerboarding occurs when Glazing panels of the same type take on noticeably different hues. In addition to the ASTM C1376 requirements, the color readings taken by the manufacturer shall all lie in the same quadrant of the L*a*b* color space as defined in ASTM D2244. Stated differently, 'a*' values (representing the red-green axis) shall be either all positive or all negative. In the same way, the 'b*' values (representing the yellow-blue axis) shall be either all positive or all negative.

G. Laminated Float

1. Comply with ASTM C1172, and comply with testing requirements in 16 CFR Part 12 for Category II materials, and with other specified requirements.

2. Use materials that have a proven record of no tendency to bubble, discolor, or lose physical and mechanical properties after fabrication and installation.

3. Where laminated Glass edges will be in direct contact with adjacent materials such as Sealants, provide one of the following:

   a. Manufacturers test data demonstrating long-term durability of the interlayer against delamination, discoloration, or any other loss of performance.

   b. Provide edge protection tape demonstrating compatibility with the Glass interlayer and adjacent material.

4. Use ionoplast-type interlayer where specified or where laminated Glass edges will be exposed to direct wetting or relative humidity (RH) conditions greater than 60%.

   a. Variations from this requirement are permitted only where approved by the Commissioner and reviewed and approved by the interlayer manufacturer.

5. Laminating Quality Requirements

   a. Prior to laminating, cut Glass to required sizes and profiles as determined by accurate measurement of openings to be glazed, making allowance for required edge clearances. Cut and process edges in accordance with Glass manufacturer's recommendations. Do not cut or treat edges in the field.

   b. Fabricate laminated Glass to produce Glass free of scuff vinyl markings, handprints, tag residue, and foreign substances such as lint, hair, vinyl shavings in the central Glass area and the outer 20% area when viewed from a distance of 3 ft and 10 ft respectively. Handprints, tag residue, scuff vinyl markings and foreign substances must be separated by distance greater than 12 in. if not detectable at less than the viewing distances.

   c. Delaminations, blow-ins, short interlayers, and air or gas pockets shall not be permitted in the central Glass area. In the outer 20% area, delamination will not be permitted, blow-ins, air or gas pockets, and short interlayers shall be limited to a maximum dimension of 0.1 in. in diameter, and 0.06 in. long respectively.

   d. Hazing: Hazing or clouding due to improper fabrication of the laminate interlayers is not acceptable

   e. No splicing of the interlayer material is permitted.

   f. Laminate units with the specified interlayer in autoclave with heat plus pressure process in strict accordance with the interlayer manufacturer's requirements for the following:

      1) Vacuum bag pressure and pre-vacuum times.

      2) Relative humidity.

3) Provide quality data of fabrication process.

4) Heat strengthening flatness.

5) Autoclave settings including temperature, pressure, and time.

g. Permanent deformation of the Glass during lamination which causes debonding stress on the interlayer shall be limited to 1/100th of the bond strength of the laminate. Provide procedures to comply with this criterion at the edges of each laminated unit.

6. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Kuraray.

b. Saflex.

c. Everlam.

d. Or approved equal.

7. Products: Subject to compliance with requirements, provide products by one of the following:

a. Kuraray; Trosifol Ultraclear.

b. Saflex; Saflex Clear PVB Interlayer.

c. Everlam; Everlam Clear PVB.

d. Or approved equal.

H. Insulating Glass

1. Factory-assembled units consisting of sealed lites of Glass separated by a dehydrated interspace, qualified according to ASTM E2190, and certified with the IGCC complying with other requirements specified.

2. Argon Filled Glass Unit Requirements

a. Argon filled insulated units shall have a minimum argon concentration of 95% when tested to ASTM E2269 or ASTM E2649. The Glass fabricator shall provide documentation demonstrating the concentration of units produced for each Referenced System.

3. Split spacers, bowing spacer sightlines, primary and secondary seal discontinuities, and excessive unit slide are not permitted.

4. Sealing System

a. Dual seal, with black polyisobutylene and silicone primary and secondary, respectively. The secondary seal shall conform to ASTM C1249.

1) Primary seal shall not have a reduced thickness at the corners. An increased thickness of the primary seal at the corners is acceptable.

b. Provide secondary Sealant compatible with structural and weather Sealants.

c. Select colors during pre-construction submittal and mockup review and evaluation.

5. Spacer type as specified in the Exterior Glass Type Matrix.

a. Locate spacer joint at the top or sides of the units, but in no instances at the sill or corners.

b. Engineer units to minimize the number of spacer joints. Provide welded spacer joints or solid keys, embedded in butyl sealant on all four sides, at spacer joints.

6. Provide molecular sieve or silica gel, or blend of both types of desiccant.

a. Desiccant shall not be visible on inside surfaces of the IGU.

7. Combined bow and pillowing of IGU lites shall not exceed half of the bow limits specified in ASTM C1048 and shall be measured on site.

2.2 GLAZING GASKETS:

A. Refer to requirements in the Referenced System.

2.3 SEALANTS:

A. Refer to Section 07 92 01 – Exterior Joint Sealants for performance requirements..

2.4 GLAZING TAPES:

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100% solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and Glass manufacturers for application indicated; and complying with ASTM C1281 and AAMA 800 for products indicated below:

1. AAMA 806.1 tape, for Glazing applications where tape is subject to continuous pressure.

2. AAMA 807.1 tape, for Glazing applications where tape is not subject to continuous pressure.

B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

1. AAMA 810.1, Type 1, for Glazing applications where tape acts as primary Sealant.

2. AAMA 810.1, Type 2, for Glazing applications where tape is used in combination with a full bead of liquid Sealant.

2.5 MISCELLANEOUS GLAZING MATERIALS:

A. Provide products of material, size, and shape complying with referenced Glazing standards, requirements of Glass and other Glazing material manufacturers for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Cleaners, Primers, and Sealers: Types recommended by Sealant or gasket manufacturer.

C. Setting Blocks: Silicone complying with ASTM C1115 (Type C) with a Shore, Type A durometer hardness of 85, plus or minus 5. 0.063 in. less than the channel width, and length based on the Glass unit face area to be supported, in accordance with GANA standards and Glass manufacturer recommendations but not less than 4 in.

D. Spacers: Silicone complying with ASTM C1115 (Type C), blocks or continuous extrusions of hardness and size of hardness required by Glass manufacturer to maintain Glass lites in place for installation indicated.

E. Edge Blocks: Silicone complying with ASTM C1115 (Type C), blocks of hardness and size needed to limit Glass lateral movement (side walking).

F. Cylindrical Glazing Sealant Backing: ASTM C1330, Type C (closed-cell material with a surface skin), of size and density to control Glazing Sealant depth and otherwise produce optimum Glazing Sealant performance.

G. Perimeter Insulation for Fire-Resistive Glazing: Product approved by Independent Testing Agency that listed and labeled fire-resistant Glazing product with which it is used for application and fire-protection rating indicated.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION:

A. Examine Glazing, associated framing, Glazing channels, and stops, with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
2. Presence and functioning of weep systems.
3. Minimum required face and edge clearances.
4. Effective sealing between joints of Glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected

3.3 DELIVERY, STORAGE, AND HANDLING:

A. Protect Glazing materials according to manufacturer's written instructions. Prevent damage to Glass and Glazing materials from condensation, temperature changes, direct exposure to sun, and other causes.

B. Deliver Glass to the site bearing the manufacturer's label (including clear identification of the location of low-e coatings and "glaze this side in" stickers), complete with Glazing instructions where applicable.

C. Where applicable based on the location of manufacture, comply with insulating Glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

3.4 PREPARATION:

A. Inspect each unit of Glass immediately before installation. Do not install units which are improperly sized or have damaged edges, scratches or abrasions, or other evidence of damage.

B. Examine Glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

C. Clean Glazing stops, Glazing channels, and rabbets that will contact the Glazing materials immediately before Glazing. Remove loose particles present or resulting from fabrication and cleaning by blowing out joints with oil-free compressed air or by vacuuming joints.

D. Remove protective coatings, oils from cutting and drilling operations, and residue on metallic surfaces with solvents that leave no residue. Do not allow solvent to air dry without wiping.

E. Use only lint-free towels for wiping of surfaces.

F. Wipe metal surfaces with IPA (isopropyl alcohol) unless otherwise required by compatibility and adhesion testing results.

G. Prime surfaces to receive Glazing compounds. When priming, comply with wet Glazing manufacturer's recommendations.

H. Remove labels from Glass immediately after installation.

3.5 FABRICATION OF GLAZING UNITS:

A. Fabricate Glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced Glazing publications, to comply with system performance requirements.

B. Edge and Surface Conditions: Comply with the recommendations of AAMA CW-12 Structural Properties of Glass for "clean cut" edges, except comply with manufacturer's recommendations when they are at variance therewith.

C. Clean-cut or flat-grind vertical edges of butt-Glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.

D. Grind smooth and polish exposed Glass edges and corners.

3.6 GLAZING:

A. Comply with combined written instructions of manufacturers of Glass, Sealants, gaskets, and other Glazing materials, unless more stringent requirements are indicated in these Specifications or on the Drawings, including those in referenced Glazing publications.

B. Adjust Glazing channel dimensions as required by Project conditions during installation, to provide necessary bite on Glass, minimum edge and face clearances, and adequate Sealant thicknesses, with reasonable tolerances.

C. Protect Glass edges from damage during handling and installation. Remove damaged Glass from Project site and legally dispose of off Project site. Damaged Glass is Glass with edge damage or other imperfections that, when installed, could weaken Glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of Sealants, as determined by pre-construction testing.

E. Install setting blocks in sill rabbets, sized and located to comply with referenced Glazing publications, unless more stringent requirements are provided by Glass manufacturer. Place blocks to allow water passage to weep holes. Set blocks in thin course of silicone Sealant.

F. Do not exceed edge pressures stipulated by Glass manufacturers for installing Glass lites.

G. Provide spacers for Glass lites where length plus width is larger than 50 in.

1. Locate spacers directly opposite each other on both inside and outside faces of Glass. Install correct size and spacing to preserve required face clearances, unless gaskets and Glazing tapes able to maintain required face clearances and comply with system performance requirements are used.

2. Provide 0.125 in. minimum bite of spacers on Glass and use thickness equal to Sealant width. With Glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking to prevent Glass lites from moving sideways in Glazing channel, sized and located to comply with the Glass manufacturers recommendations and referenced Glazing publication requirements.

I. Set Glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

J. Set Glass lites with proper orientation so that coatings face specified direction.

K. Install factory-molded gaskets as recommended by gasket manufacturer to provide an airtight and watertight seal at all joints.

1. Where wedge-shaped gaskets are driven into one side of channel to pressurize Sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

2. Square cut wedge-shaped gaskets at corners and install gaskets as recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with Sealant recommended by gasket manufacturer.

3.7 TAPE GLAZING:

A. Position tapes on fixed stops so that, when compressed by Glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to fit opening.

C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible Sealant approved by tape manufacturer.

E. Do not remove release paper from tape until right before each Glazing unit is installed.

F. Where indicated, apply heel bead of elastomeric sealant.

G. Center Glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.8 GASKET GLAZING (DRY):

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. On exterior and interior of units, use weather strip and gasket material that has been fabricated into units with molded or vulcanized corners. Where lineal gasket material must be used, miter cut and bond units at corners with Sealant recommended by gasket manufacturer.

C. Insert soft compression gasket between Glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

D. Installation with Drive-in Wedge Gaskets: Center Glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in Glass. Seal gasket joints with Sealant recommended by gasket manufacturer.

E. Installation with Pressure-Glazing Stops: Center Glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-Glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in Glass. Seal gasket joints with sealant recommended by gasket manufacturer.

F. Install gaskets so they protrude past face of Glazing stops.

3.9 SEALANT GLAZING (WET):

A. Install continuous spacers, or spacers combined with cylindrical Sealant backing, between Glass lites and Glazing stops to maintain Glass face clearances and to prevent Sealant from extruding into Glass channel and blocking weep systems until Sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed Sealant relative to edge clearance for optimum Sealant performance.

B. Force Sealants into Glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to Glass and channel surfaces.

C. Tool exposed surfaces of Sealants to provide a substantial wash away from Glass.

3.10 STRUCTURAL SILICONE GLAZING:

A. Glazing with structural silicone Sealant shall be accomplished in the shop. Units shall not be moved until structural silicone seal has achieved full cure.

B. Strictly observe the printed instructions of Sealant manufacturer regarding joint size, limitations, backer rod, mixing, cleaning, surface preparation, priming, and application.

C. Examine joints indicated to receive structural silicone Sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-Sealant performance. Proceed with installation only after unsatisfactory conditions have been corrected.

D. Surface Cleaning of Joints: Clean out joints immediately before installing structural silicone Sealants to comply with Sealant manufacturer's written instructions and the following requirements:

1. Cleaners used in the work shall be the same as those used in laboratory testing.

2. Remove foreign material from joint substrates that could interfere with adhesion of Sealant, including dust, protective coatings, oil, grease, water, surface dirt, and frost.

3. Clean nonporous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint Sealants.

E. Joint Priming: Prime joint substrates unless recommended otherwise in writing by joint-Sealant manufacturer, based on pre-construction joint-Sealant-substrate tests and prior experience. Apply primer to comply with joint-Sealant manufacturer's written instructions. Confine primers to areas of joint-Sealant bond; do not allow spillage or migration onto adjoining surfaces.

F. Masking Tape: Use masking tape where required to prevent Sealant contact with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove Sealant smears. Remove tape immediately after tooling without disturbing joint seal.

G. Structural-Sealant Glazing: Comply with recommendations in ASTM C1401 – Standard Guide for Structural Sealant Glazing.

H. Install Sealant backings and spacers of type indicated and approved by Sealant manufacturer to support Sealants during application and at position required to produce cross-sectional shapes and depths of installed Sealants relative to joint widths that meet structural performance requirements.

I. Do not leave gaps between ends of Sealant backings.

J. Do not stretch, twist, puncture, or tear Sealant backings.

K. Remove absorbent Sealant backings that have become wet before Sealant application and replace with dry materials.

L. Install temporary retaining clips to secure Glass in position and prevent movement until Sealant has fully cured.

M. Care shall be exercised to ensure against "Three Surface Adhesion."

N. Install bond-breaker tape behind Sealants where Sealant backings are not used between Sealant and back of joints.

O. Install Sealants by proven techniques complying with the following and at the same time backings are installed:

1. Place Sealants so they directly contact and fully wet joint substrates.

2. Completely fill recesses provided for each joint configuration.

3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum Sealant movement capability.

P. Tooling of Nonsag Sealants: Immediately after Sealant application and before skinning or curing begins, tool Sealants according to requirements specified below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of Sealant with sides of joint.

1. Remove excess Sealants from surfaces adjacent to joint.

Q. Remove temporary retaining clips after structural silicone has cured to its full strength. Fill openings left at clips with Sealant, following Sealant manufacturer's written instructions.

3.11 CLEANING AND PROTECTION:

A. Protect exterior Glass from damage immediately after installation by attaching crossed streamers to framing held away from Glass. Do not apply markers to Glass surface. Remove nonpermanent labels and clean surfaces.

B. Protect Glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances contact Glass, remove substances immediately as recommended in writing by Glass manufacturer.

C. Examine Glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by Glass manufacturer.

D. Remove and replace Glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

E. Wash Glass on both exposed surfaces in each area of Project not more than four (4) days before date scheduled for inspections that establish date of Substantial Completion. Wash Glass as recommended in writing by Glass manufacturer.

END OF SECTION 08 80 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 08 80 10
Interior Glass and Glazing

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Interior doors.
2. Interior borrowed lites.
3. Interior laminated glass partitions.
4. Interior frameless mirrors.

B. Related Sections

1. Steel Doors and Frames - Section 08 11 13.
2. Exterior Glazing - Section 08 80 00.
3. Toilet Accessories - Section 10 28 13, for framed bathroom mirrors.

1.3 REFERENCES

A. Comply with the recommendations of the following references unless more stringent requirements are indicated herein.

1. FGMA Publications: FGMA Glazing Manual.
2. LSGA Publications: LSGA Design Guide.
3. Safety Glass: Products complying with ANSI Z97.1 and testing requirements of 16 CFR Part 1201, Safety Standards for Architectural Glazing, Sealed Insulating Glass Manufacturing Association.

4. Fire-Resistive Glazing Products for Door Assemblies: Products identical to those tested per ASTM E 152, labeled and listed by UL or another testing and inspecting agency acceptable to the Commissioner.

5. ASTM C 920, Elastomeric Joint Sealant.

1.4 PERFORMANCE REQUIREMENTS

A. General: Provide glazing systems capable of withstanding normal thermal movement and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Glass units shall be annealed, heat strengthened, fully tempered or laminated where required to meet safety glazing requirements, as shown, specified, or recommended by the glass fabricator, and as required by the 2014 New York City Building Code.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

A. Product Data: Submit manufacturer's printed product data, specifications, standard details, installation instructions, use limitations and recommendations for each material used. Provide certifications that materials and systems comply with specified requirements, including performance requirements.

B. Submit compatibility and adhesion test reports from sealant manufacturer indicating materials were tested for compatibility and adhesion with glazing sealant, as well as other glazing materials including insulation units.

C. Initial Selection Samples: Submit samples of each glass and glazing material showing complete range of colors, textures, and finishes available for each material used.

D. Verification Samples: Submit representative samples of each glass and glazing material that is to be exposed in completed work. Show full color ranges and finish variations expected. Provide glass samples having minimum size of 144 sq. in. and 6 in. long samples of sealants and glazing materials; all samples shall bear the name of the manufacturer, brand name, thickness, and quality.

E. Test Reports: Provide certified reports for specified tests.

F. Warranties: Provide written warranties as specified herein.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Source: For each glass and glazing type required for work of this Section, provide primary materials which are products of one manufacturer. Provide secondary or accessory materials which are acceptable to manufacturers of primary materials.

C. Installer: A firm with a minimum of three years' experience in type of work required by this Section and which is properly trained by manufacturers of primary materials; and with a successful record of in-service installations similar in size and scope to this Project.

D. Glass Thickness: Glass thicknesses shown on drawings and/or specified herein are minimum thicknesses. Determine and provide size and thickness of glass products that are certified to meet or exceed performance requirements specified in this Section.

E. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated.

1. GANA Publications: GANA's "Glazing Manual" and "Laminated Glass Design Guide."

F. Glazing for Fire-Rated Door Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by a testing and inspecting agency acceptable to the Commissioner, for fire-protection ratings indicated, based on testing according to NFPA 252.

G. Safety Glazing Products: Comply with testing requirements in 16 CFR 1201.

1. Subject to compliance with requirements, obtain safety glazing products permanently marked with certification label of the Safety Glazing Certification Council.

2. Where glazing units, including Kind FT glass and laminated glass, are specified in Part 2 articles for glazing lites more than 9 sq. ft. in exposed surface area of one side, provide glazing products that comply with Category II materials, for lites 9 sq. ft. or less in exposed surface area of one side, provide glazing products that comply with Category I or II materials, except for hazardous locations where Category II materials are required by 16 CFR 1201 and the 2014 New York City Building Code.

1.8 PROJECT CONDITIONS

A. Temperature Limits: Install sealants only when temperatures are within limits recommended by sealant manufacturer, except, never install sealants when temperatures are below 40 deg. F.

1.9 DELIVERY, STORAGE AND HANDLING

A. Deliver materials and products in unopened, factory labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations and GANA Manual.

1. Protect materials from moisture, sunlight, excess heat, sparks and flame.

2. Sequence deliveries to avoid delays, but minimize on-site storage.

1.10 WARRANTIES

A. Manufacturer's Warranty on Coated Glass Products: Provide written warranty signed by manufacturer of coated glass agreeing to furnish f.o.b. point of manufacture, within specified warranty period indicated below, replacements for those coated glass units which develop manufacturing defects. Manufacturing defects are defined as peeling, cracking or deterioration in metallic coating due to normal conditions and not due to handling or installation or cleaning practices contrary to glass manufacturer's published instructions.

1. Warranty Period: Manufacturer's standard but not less than five (5) years after date of substantial completion.

B. Manufacturer's Warranty on Laminated Glass: Manufacturer's standard form, made out to the City of New York and signed by laminated glass manufacturer agreeing to replace laminated glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.

1. Warranty period five (5) years from date of Substantial Completion.

PART II - PRODUCTS

2.1 MANUFACTURERS/FABRICATORS

A. All glass and glazing used at the exterior of the Project shall be manufactured by the same manufacturer. The same manufacturer and the same furnace shall be used for all tempered and heat strengthened glass used throughout the project.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. PPG Industries
2. Guardian Industries
3. Pilkington
4. AFG
5. JE Berkowitz, LP
6. Viracon
7. Or approved equal

2.2 GLASS MATERIALS AND PRODUCTS

A. Clear Float Glass: ASTM C 1036, Type I (Transparent, Flat), Class 1 (Clear), Quality q3, minimum 1/4" thick.

B. Float Glass: ASTM C 1036, Type I (transparent, flat), Class 1 (clear) or Class 2 (tinted) as indicated, Quality q3, minimum 1/4" thick.

C. Heat-Strengthened Float Glass: ASTM C 1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality q3. Fabricate by horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.

D. Tempered Glass: ASTM C 1048, Condition A (uncoated), Type I (transparent, flat), Class 1 (clear) or Class 2 (tinted) as indicated, Quality q3, Kind FT, minimum 1/4" thick. Tempered glass must be certified by SGCC to meet applicable standards.

1. Performance Requirements for Tempered Glass

a. Length and Width: For 2.9 mm to 6.0 mm; +/-1.6 mm.
b. Diagonal: +/- 3.0 mm.

c. Edgework: Belt seaming or diamond wheels. 1.5 mm seam of upper and lower glass edges. No sharp edges.
d. Corners: No more than 3.0 mm from square.
e. Float Glass Defects: Must meet the requirements of ASTM C 1036. The most common defects are scratches, stones gaseous bubbles and edge chips. Tables in the glass standards have limits for size/quantity of defects.
f. Tempered glass shall have a minimum surface compression of 10,000 psi.
g. Tempered glass to be heat-treated by horizontal (roller hearth) process with inherent roller-wave distortion parallel to the bottom edge of the glass when installed.
h. Flatness Tolerances
   1). Roller-Wave or Ripple: The deviation from flatness at any peak shall be targeted not exceed 0.003" as measured per peak to valley for ¼" (6mm) thick glass.
   2). Bow and Warp: The bow and warp tolerances shall not exceed 1/32" per linear foot.
   3). Fully tempered glass shall be heat soaked.

E. Laminated Safety Glass: Provide two glass panes of equal thickness, laminated together with a polyvinyl butyl interlayer, conforming to ASTM C 1172 and as follows:

1. Interlayer Color: Clear unless otherwise noted.

2. Interlayer Materials

   a. PVB Interlayers: Eastman Chemical "Saflex" or "Vanceva," DuPont "Butacite," or approved equal, 0.030" thick at vertical applications, and 0.060" thick at sloped or horizontal applications.
   b. Ionoplast Interlayer: Dupont "SentryGlas Plus," Trosifol, Kurary America, Inc. or approved equal.

3. Minimum thickness of 1/4".

F. Frameless Mirrors: 1/4", Quality q2, clear float glass with silver, copper, and organic coating, edges uniformly ground and polished.

2.3 GLAZING MATERIALS AND PRODUCTS

A. General: Provide sealants and gaskets with performance characteristics suitable for applications indicated. Ensure compatibility of glazing sealants with insulating glass sealants, with laminated glass interlayers, and with any other surfaces in contact.

B. General Glazing and Cap Bead Sealant: Provide sealant with maximum Shore A hardness of 50.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Dow Corning 795
   b. General Electric Silglaze N 2500 or Contractors SCS-1000
   c. Tremco Spectrem 2
   d. Or approved equal

C. Dense Elastomeric Compression Seal Gaskets: Provide molded or extruded neoprene or EPDM gaskets, Shore A hardness of 75±5 for hollow profile, and 60±5 for solid profiles, ASTM C 864.

D. Cellular, Elastomeric Preformed Gaskets: Provide extruded or molded closed cell, integral-skinned neoprene, Shore A 40±5, and 20% to 35% compression, ASTM C 509; Type II.

E. Preformed Glazing Tape: Provide solvent-free butyl-polyisobutylene rubber with 100% solids content complying with ASTM C 1281 AAMA A 800 with integral continuous EPDM shim. Provide preformed glazing tape in extruded tape form.

F. Setting Blocks: Provide 100% silicone blocks with Shore A hardness of 80-90. Provide products certified by manufacturer to be compatible with silicone sealants. Length to be not less than 4". Width for setting blocks to be 1/16" more than glass thickness and high enough to provide the lite recommended by glass manufacturer. When thickness of setting block exceeds 3/4" the glass manufacturer must be consulted for sizes and configuration. In a vented system, setting block shall be designed so as to not restrict the flow of water within the glazing rabbet to the weep holes.

1. Shims: For shims used with setting blocks, provide same materials, hardness, length and width as setting blocks.

2. Structural Silicone Glazing: Provide silicone setting blocks where structural silicone occurs at sills and at insulating units with silicone edge seals.

G. Edge Blocks: Provide neoprene or silicone as required for compatibility with glazing sealants. Provide blocks with Shore A hardness of 55±5.

H. Spacers: Elastomeric blocks or continuous extrusions with a Shore A durometer hardness required by glass manufacturer to maintain glass lites in place.

I. Miscellaneous Glazing Materials: Provide sealant backer rods, primers, cleaners, and sealers of type recommended by glass and sealant manufacturers.

J. Mirror Adhesive: Adhesive mastic for adhering glass plate. Mastic must be compatible with mirror backing.

1. Clips: No. 4 finish Type 304 stainless steel.

2.4 FABRICATION OF GLASS AND OTHER GLAZING PRODUCTS

A. Fabricate glass and other glazing products in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing standard, to comply with system performance requirements.

B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites in a manner that produces square edges with slight kerfs at junctions with indoor and outdoor faces.

C. Grind smooth and polish exposed glass edges.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.3 GENERAL GLAZING STANDARDS

A. Install products using the recommendations from the manufacturer of glass, sealants, gaskets and other glazing materials, except where more stringent requirements are indicated, including those in the GANA "Glazing Manual."

B. Install glass in prepared glazing channels and other framing members.

C. Install setting blocks in rabbets as recommended by referenced glazing standards in GANA's "Glazing Manual."

D. Provide bite on glass, minimum edge and face clearances and glazing material tolerances recommended by GANA's "Glazing Manual."

E. Provide weep system as recommended by GANA's "Glazing Manual."

F. Set glass lites in each series with uniform pattern, draw, bow and similar characteristics.

G. Distribute the weight of glass unit along the edge rather than the corner.

H. Comply with manufacturers and referenced industry standards on expansion joint and anchors; accommodating thermal movement; glass openings; use of setting blocks, edge, face, and bite clearances; use of glass spacers; edge blocks and installation of weep systems.

I. Protect glass edge damage during handling and installation.

J. Prevent glass from contact with contaminating substances that result from construction operations, such as weld spatter, fireproofing or plaster.

K. Remove and replace glass that is broken, chipped cracked or damaged in any way.

3.4 GLAZING

A. Glazing channel dimensions, as indicated on Shop Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.

B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.

D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead. Install setting blocks at the one greater points of each lite along the horizontal mullion.

E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

F. Provide spacers for glass lites where the length plus width is larger than 50 inches as follows:

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.

2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

I. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

J. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

K. Flush Glazing

1. If the butt joint in the metal framing is in the vertical direction, the glazier shall run the tape initially on the head and sill members going directly over this joint. Should the butt joint in the metal framing run horizontally, tapes must first be applied to the jambs so that it crosses over the joint.

2. Each tape section shall butt the adjoining tape and be united with a tool to eliminate any opening.

3. Do not overlap the adjoining length of tape or rubber shim as this will prevent full contact around the perimeter of glass.

L. Off-Set Glazing

1. Where the glazing legs are off-set, the difference in the rabbet width shall be compensated by employing different glazing tapes with different diameter shims. The difference in shim shall be equal to the size of the off-set. The thinner tape shall be positioned first on the glazing leg closest to the interior. The thicker tape shall be cut to the exact length of the dimension between the applied tapes, and installed on the outermost glazing leg.

2. Immediately prior to setting glass, paper backing shall be removed. Apply a toe bead of sealant 6" in each direction, from each corner.

3. Locate setting blocks in the sill member at quarter points, or if necessary to within 6" of each corner. Setting blocks must be set equal distance from center line of the glass and high enough to provide the recommended bite and edge clearances.

4. Set edge block according to glass manufacturer's recommendations.

5. Set Glass: The glass shall be pressed firmly against the tape to achieve full contact.

6. In a vented system, apply a heel bead (air seal) of sealant around the perimeter of glass, between the sole of the I.G. unit and the base of the rabbet of the metal framing developing a positive bond to the unit and to the metal framing. The bead of the sealant shall be deep enough so that it will partially fill the channel to a depth of 1/4" between the glass edge and the base of the metal framing rabbet.

7. Interior stops shall be set, and glazing tape spline for the appropriate face clearance shall be rolled into place, compressing the glass to the shim within the glazing tape.

3.5 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. Where framing joints are vertical, cover these joints by applying tapes to heads and sills first and then to jambs. Where framing joints are horizontal, cover these joints by applying tapes to jambs and then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Do not remove release paper from tape until just before each glazing unit is installed.

F. Apply heel bead of elastomeric sealant as recommended by glass manufacturer or glass frame manufacturer.

G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape where noted on approved shop drawings.

3.6 GASKET GLAZING (DRY)

A. Fabricate compression gaskets in lengths recommended by gasket manufacturer to fit openings exactly, with stretch allowance during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Install gaskets so they protrude past face of glazing stops.

3.7 SEALANT GLAZING (WET)

A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

1. Exterior glazing gasket shall be set a minimum of 1/8" below exterior glazing stop to create a channel for sealant installation.

B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.

C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.8 FRAMELESS MIRRORS

A. Apply mastic to back of mirror "pats" spaced 4 pats/sq. ft.; adjust mirror so that it is plumb and in place to avoid distortion of reflecting images. Allow 1/8" space between back of mirror and wall surface.

1. Apply "pats" using an electric applicator.

B. Apply stainless steel z-clips or cleats concealed behind mirror; securely clip to substrate using non-corrosive anchors. At drywall back-up anchors must be secured to studs or steel wallplate spanning from stud to stud.

3.9 PROTECTION AND CLEANING

A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove them immediately as recommended by glass manufacturer.

C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for build-up of dirt, scum, alkaline deposits, or stains; remove as recommended by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged in any way, including natural causes, accidents, and vandalism, during construction period.

E. Clean excess sealant or compound from glass and framing members immediately after application, using solvents or cleaners recommended by manufacturers.

F. Glass to be cleaned according to:

1. GANA Glass Informational Bulletin GANA 01-0300 – "Proper Procedure for Cleaning Architectural Glass Products."

2. GANA Glass Informational Bulletin GANA TD-02-0402 – "Heat Treated Glass Surfaces are Different."

G. Do not use razor blades, scrapers or metal tools to clean glass.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 90 00
Louvers

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Aluminum louvers.
2. Blank off panels.
3. Bird screens.

B. Related Sections

1. Unit Masonry - Section 04 20 00.
2. Interior Joint Sealants - Section 07 92 00.
3. Exterior Joint Sealants - Section 07 92 01.
4. Steel Doors and Frames - Section 08 11 13 for louvers in hollow metal doors.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Structural Performance: Provide exterior metal louvers capable of withstanding the effects of loads and stresses from wind and snow and normal thermal movement without evidencing permanent deformation of louver components including blades, frames, and supports; noise or metal fatigue caused by louver blade rattle or flutter or permanent damage to fasteners and anchors.

1. Wind Load: Uniform pressure (velocity pressure) of not less than 30 lbf/sq. ft., acting inward or outward or greater.

C. Thermal Movements: Provide louvers that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, and other detrimental effects.

1. Temperature Change (Range): 120 deg. F., ambient; 180 deg. F, material surfaces.

D. Comply with SMACNA "Architectural Sheet Metal Manual" recommendations for fabrication, construction details and installation procedures, except as otherwise indicated.

E. Shop Assembly: Coordinate shop drawings with fabrication and shop assembly to minimize field adjustments, splicing, mechanical joints and field assembly of units. Preassemble units in shop to greatest extent possible and disassemble as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Submit manufacturer's specifications, certified test data, where applicable, and installation instructions for required products, including finishes.

B. Shop Drawings: Submit shop drawings for fabrication and erection of louver units and accessories. Include plans, elevations and details of sections and connections to adjoining work. Indicate materials, finishes, fasteners, joinery and other information to determine compliance with specified requirements.

C. Samples: Submit six (6) inch square samples of each required finish. Prepare samples on metal of same gauge and alloy to be used in work. Where normal color and texture variations are to be expected, include two (2) or more units in each sample showing limits of such variations.

1.6 WARRANTY

A. Finish shall be warranted for a period of 20 years, starting from date of Substantial Completion of the Project.

PART II - PRODUCTS

2.1 LOUVER MATERIAL

A. Provide nominal 7" deep storm resistant fixed horizontal louver (no mullions), Model No. RS-7315 by Construction Specialties or similar product from a manufacturer listed below, or approved equal.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Construction Specialties
   b. Airolite
   c. Airline Products Co.
   d. American Warming and Ventilating
   e. Or approved equal

B. Material: Heads, sills, jambs and mullions to be one-piece structural aluminum members with integral caulking slot and retaining beads. Louver shall be designed to collect and drain water to exterior at sill by means of multiple gutters in blades and channels in jambs and mullions. Louvers to be supplied with 4" high by full depth sill flashings formed from minimum 0.050" thick aluminum. Sill flashings to have welded side panels. Louvers and sill flashings to be installed in accordance with the manufacturer's recommended procedures to ensure complete water integrity performance of the louver system

C. AMCA Performance: A 4' x 4' unit shall conform to the following:

1. Free Area: 8.09 sq. ft.

2. Intake Pressure Drop at 900 fpm Free Area Velocity: 0.312 in. H_2O.

3. Exhaust Pressure Drip at 900 fpm Free Area Velocity: 0.394 in. H_2O.

D. Wind Driven Rain Performance: The louver test was based on a 39.370" x 39.370" core area. Unit tested at a rainfall rate of 3.0" per hour and with a wind directed tot he face of the louver at a velocity 29.1 mph. The test data shall show the water penetration effectiveness rating at each corresponding ventilation rate.

1. Core Ventilation Rate: (ft/min)	0	132	196	283	375	468	587	673
2. Free Area Velocity (ft/min)	0	264	392	567	751	937	1175	1347
3. Rating Effectiveness @ 29 & 3	A	A	A	A	B	C	C	D

E. High-Performance Organic Finish: AA-C12C42R1x (Chemical Finish: Cleaned with inhibited chemicals; Chemical Finish: Acid-chromate-fluoride-phosphate conversion coating; Organic Coating: As specified below). Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturer's written instructions.

1. Fluoropolymer Two-Coat System: Manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.

2. Color and Gloss: Manufacturer's standard black and standard gloss.

F. Bird Screens

1. All louvers to be furnished with bird screens, finish to match louvers.

2. Screens to be 5/8" mesh, 0.050" thick expanded and flattened aluminum bird screen secured with 0.055" thick extruded aluminum frames. Frames to have mitered corners and corner locks.

G. Blank off panels to be 2" thick and to be faced on both sides with 0.032" thick aluminum sheet. Panels to be fabricated with an expanded polystyrene (EPS) core having an R-value of 8. Panel perimeter frame to be 0.050" thick formed aluminum channels. Panel frame to be mitered at the corners. Panels to be finished to match louvers.

H. Fastenings: Fasteners for exterior application shall be stainless steel. Provide types, gauges and lengths to suit unit installation conditions. Use Phillips flat head machine screws for exposed fasteners, unless otherwise indicated.

I. Anchors and Inserts: Use non-ferrous metal or hot dip galvanized anchors and inserts for exterior installations and elsewhere as required for corrosion resistance. Use steel or lead expansion bolt devices for drilled in place anchors. Furnish inserts, as required, to be set into concrete or masonry work.

J. Bituminous Paint: SSPC-Paint 12 (cold applied asphalt mastic).

2.2 FABRICATION, GENERAL

A. Fabricate frames including integral sills to suit adjacent construction with tolerances for installation, including application of sealants in joints between louvers and adjoining work.

B. Include supports, anchorages, and accessories required for complete assembly.

C. Provide sill extensions made of same material as louvers, where indicated, or required for drainage to exterior and to prevent water penetrating to interior.

D. Join frame members to one another and to stationary louver blades by welding, except where indicated otherwise or where field bolted connections between frame members are necessary by size of louvers. Maintain equal blade spacing, including separation between blades and frames at head and sill, to produce uniform appearance.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions and directions for the installation of anchorages which are to be embedded in masonry construction.

3.3 INSTALLATION

A. Anchor louvers to the building substructure.

B. Erection Tolerances:

1. Maximum variation from plane or location shown on the approved shop drawings: 1/8" per 12 feet of length, but not exceeding 1/2" in any total building length or portion thereof (non-cumulative).

2. Maximum offset from true alignment between two members abutting end to end, edge to edge in line or separated by less than 3": 1/16" (shop or field joints). This limiting condition shall prevail under both load and no load conditions.

C. Cut and trim component parts during erection only with the approval of the manufacturer or fabricator, and in accordance with his recommendations. Restore finish completely. Remove and replace members where cutting and trimming has impaired the strength or appearance of the assembly.

D. Set units level, plumb and true to line, with uniform joints.

END OF SECTION 08 90 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 09 29 00
Gypsum Drywall

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Gypsum board work for partitions, ceilings, column enclosures, furring, and elsewhere where gypsum drywall work is shown on drawings.

2. Metal supports for gypsum drywall construction.

3. Acoustical insulation for gypsum drywall work.

4. Sealant for gypsum drywall work.

5. Concealed metal reinforcing for attachment of railings, toilet partitions and other items supported on drywall partitions and walls.

6. Taping and finishing of drywall joints.

7. Installing rings and frames in drywall surfaces for grilles, registers and lighting fixtures.

8. Gypsum shaftwall construction.

9. Bracing and connections.

B. Related Sections

1. Thermal Insulation - Section 07 21 00.

2. Firestops and Smokeseals - Section 07 84 13.

3. Steel Doors and Frames - Section 08 11 13.

4. Access Doors - Section 08 31 13.

5. Painting and Finishing - Section 09 90 00.
6. Diffusers, Registers and Grilles - Section 23 37 13.
7. Interior Lighting - Section 26 51 00.
8. Corner Guards – Section 10 26 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. The following standards, as well as other standards which may be referred to in this Section, shall apply to the work of this Section:

1. The Gypsum Construction Handbook, latest edition, USG.
2. Construction Guide, latest edition, National Gypsum.
3. ASTM A 568 "Standard Specification for Steel, Sheet, Carbon, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements For"
4. ASTM C 475 "Standard Specification for Joint Treatment Materials For Gypsum Wallboard Construction"
5. ASTM C 645 "Standard Specification for Non-Structural Steel Framing Members"
6. ASTM C 754 "Standard Specification for Installation of Steel Framing Members to Receive Screw Attached Gypsum Panel Products"
7. ASTM C 840 "Standard Specification for Application and Finishing of Gypsum Board"
8. ASTM C 919 "Standard Specification for Use of Sealants in Acoustical Applications"
9. ASTM C 954 "Standard Specification for Steel Drill Screws For the Application of Gypsum Board or Metal Plaster Bases to Steel Studs From 0.033 in. to 0.112 in. in Thickness"
10. ASTM C 1002 "Standard Specification for Steel Self-Piercing Tapping Screws For the Application of Gypsum Board"
11. ASTM C 1177 "Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing"
12. ASTM C 1178 "Standard Specification for Glass Mat Water Resistant Gypsum Backing Board"
13. ASTM C 1278 "Standard Specification for Fiber-Reinforced Gypsum Panel"
14. ASTM C 1396 "Standard Specification for Gypsum Board"
15. ASTM D 3273 "Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber"

C. Allowable Tolerances: 1/32" offsets between planes of board faces, and 1/16" in 8'-0" for plumb, level, warp and bow.

D. System Design Load

1. Provide standard drywall wall assemblies designed and tested by manufacturer to withstand a lateral load of 5 lbs. per sq. ft. for the maximum wall height required, and with deflection limited to L/240 of partition height.

a. Drywall assemblies with tile finish shall have a deflection limit of L/360.

2. Provide drywall ceiling assemblies designed, fabricated and installed to have a deflection not to exceed L/360.

E. Fire-Resistance Rating: Where gypsum drywall with fire resistance ratings are indicated, provide materials and installations which are identical with those of applicable assemblies tested per ASTM E 119 by fire testing laboratories, or to design designations in UL "Fire Resistance Directory" or in listing of other testing agencies acceptable to the Commissioner, and compliant with UL Test #2079; criteria for cycle movement for all field height wall sections requiring allowance for vertical deflection within framing details.

F. Installer: Firm with not less than 3 years of successful experience in the installation of specified materials.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Submit shop drawing for each drywall partition, furring and ceiling system showing size and gauges of framing members, hanger and anchorage devices, wallboard types, insulation, sealant, methods of assembly and fastening, control joints indicating column lines, corner details, joint finishing and relationship of drywall work to adjacent work.

B. Submit control joint plan.

C. Samples: Each material specified herein, 12" x 12", or 12" long, or in manufacturer's container, as applicable for type of material submitted.

D. Manufacturer's Literature: Submit technical and installation instructions for each drywall partition, furring and ceiling system specified herein, and for each fire-rated and sound-rated gypsum board assembly. Submit other data as required to show compliance with these specifications, including data for mold resistant joint compound.

E. Test Reports: This Contractor shall submit test report, obtained by drywall manufacturer, indicating conformance of drywall assemblies to required fire ratings and sound ratings.

1.6 JOB MOCK-UP

A. Build a portion of a finished wall and ceiling demonstrating the quality of work, including finishing, to be obtained under this Section. Omit drywall boards in locations as directed by the Commissioner to show stud spacing and attachments; after acceptance, complete assembly.

B. Adjust the finishing techniques as required to achieve the finish required by the Commissioner as described in this Section.

C. Upon approval of the mock-up, the mock-up may be left in place as a portion of the finished work of this Section.

D. All drywall work shall be equal in quality to approved mock-up.

PART II - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers of drywall: Subject to compliance with requirements, provide products by one of the following:

1). U.S. Gypsum Co.
2). Georgia Pacific
3). CertainTeed Corporation
4). Continental
5). National Gypsum Co.
6). Or approved equal

B. Manufacturers for Metal Supports of Drywall Assemblies: Subject to compliance with requirements, provide products by one of the following:

1). ClarkDietrich Building Systems
2). Super Stud Building Products
3). Marino/Ware
4). Or approved equal

2.2 METAL SUPPORTS

A. Metal Floor and Ceiling Runners

1. Channel Type: Formed from 20 U.S. Std. gauge (unless otherwise noted) galvanized steel, width to suit channel type metal studs. Use 20 ga. top runners with 1-1/4" minimum flanges.

2. Ceiling runners and head of wall connections at rated partitions shall conform to UL #2079 for cycle movement. Provide positive mechanical connection of framing to structure, allowing for vertical movement within connections. Minimum of 20 ga. galvanized steel for clips, 25 ga. galvanized steel for ceiling runners. Providing a friction free – anti-seizure movement capacity.

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1). Steel Network
2). VertiClip or VertiTrack
3). Metal-Lite Inc.
4). Fire Trak Corporation
5). Or approved equal

3. Track (including stud clips)

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1). Fire Trak Corporation
2). Metal-Lite Inc.
3). ClarkDietrich Building Systems
4). Or approved equal.

4. "J" Type: Formed from 20 U.S. Std. gauge galvanized steel, 1" x 2-1/2" or 4" wide (to suit detail) x 2-1/4" (for shaft wall).

B. Vertical Movement Clips:

Basis of Design: Subject to compliance with requirements, provide Fastclip Side Clips (FCSC) by ClarkDietrich Building Systems or comparable product by one of the following:

1). Super Stud Building Products
2). Marino/Ware
3). Or approved equal.

C. Metal Studs, Framing and Furring

1. Channel Type Studs: Channel type with holes for passage of conduit formed from minimum 20 U.S. Std. gauge (unless heavier gauge is required to meet deflection limits) galvanized steel, width as shown on drawings.

2. Furring Channels: Hat shaped, formed from galvanized steel, 25 U.S. Std. gauge.

3. "C-H," "CT," or "I" Type Stud: 1-1/2" x 2-1/2", 4" or 6" wide (to suit detail) galvanized steel. Use for shaft wall construction; gauge and size as required to meet deflection limits given herein.

4. Double "E" Type Stud or "J" Track with Holding Tabs: 1" x 2-1/2", 4" or 6" wide (to suit detail) galvanized steel. Use for shaft wall construction; gauge and size as required to meet deflection limits given herein.

5. Continuous 16 gauge x 8" wide steel wall plate screwed to studs as required for support of railings, toilet partitions and other items supported on drywall partitions and walls.

D. Suspended Ceiling and Fascia Supports

1. Main Runners: 1-1/2" steel channels, cold rolled at 0.475 lbs. per ft., rust-inhibitive paint finish.

2. Furring Members: Screw-type hat-shaped furring channels of 25 ga. zinc-coated steel; comply with ASTM C 645.

3. Hangers: Galvanized, 1" x 3/16" flat steel slats capable of supporting 5x calculated load supported.

4. Hanger Anchorages: Provide inserts, clips, bolts, screws and other devices applicable to the required method of structural anchorage for ceiling hangers. Size devices for 5x calculated load supported.

5. Furring Anchorages: 16 ga. galvanized wire ties, manufacturer's standard clips, bolts or screws as recommended by furring manufacturer.

E. All galvanized steel members shall have coating conforming to ASTM A 653, G60.

2.3 GYPSUM WALLBOARD TYPES

A. Gypsum Wall Board: 5/8" thick unless otherwise noted; 48" wide, in maximum lengths available to minimize end-to-end butt join

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. "Sheetrock" by USG
b. "Gold Bond" by National Gypsum
c. "Regular Gypsum" by CertainTeed Corp.
d. Or approved equal

B. Fire Rated Gypsum Wall Board: 5/8" thick unless otherwise noted; 48" wide, in maximum lengths available to minimize end-to-end butt join

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. "Sheetrock Firecode C" by USG
b. "Firecheck Type C" by Lafarge/Continental
c. "Gold Bond Fireshield" by National Gypsum
d. or approved equal

C. Water Resistant Backing Board for Tile Finish: 5/8" thick unless otherwise noted; Cover joints with a pressure sensitive woven glass fiber tape.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. "Fiberock Aqua-Tough" by USG
b. "Dens-Shield Tile Backer Board" by Georgia Pacific
c. "DiamondBack Tile Backer" by CertainTeed Corp.
d. or approved equal.

D. Moisture/Mold Resistant Gypsum Wall Board at locations listed below, unless otherwise shown on drawings: 5/8" thick unless otherwise noted; 48" wide, in maximum lengths available to minimize end-to-end butt joints. Board must have a rating of 10 per ASTM D 3273 with a core that meets ASTM C 1396, Section 6 or ASTM C 1658.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. "Mold Tough" or "Mold Tough FR" by U.S. Gypsum
   b. "DensArmor Plus" by Georgia Pacific
   c. "Mold Defense" and/or "Mold Defense Type X" by Lafarge/Continental
   d. "Gold Bond EXP Interior Extreme Gypsum Board" by National Gypsum
   e. Or approved equal

2. Areas in toilet rooms, lockers, janitor's closets not scheduled to receive ceramic tile, or where fire rating is required.

3. Walls and ceilings of spaces containing condensers, water tanks, water pumps and pressure reduction valves.

4. Portions of walls within 2 feet of kitchen sinks to a height of 4 feet above the floor.

5. Portions of walls within 2 feet of kitchen stoves to a height of 4 feet above the floor.

6. Walls of bathrooms that are not solely water closet compartments, other than walls where cement board is specifically required.

7. Walls and ceilings in service sink closets.

8. Portion of walls within 2 feet of mop sinks or service sinks to a height of 4 feet above the floor.

9. All perimeter walls and wet shafts.

E. Mold Resistant Shaft Wall Liner: Solid gypsum board liner for shaft wall construction, 1" thick, 24" wide, as required to suit condition, by standard lengths as required, beveled edges.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. "Mold Tough Liner Panel" by USG
   b. "DensGlass Ultra Shaft Guard" by Georgia Pacific
   c. "Mold Defense Shaftliner Type X" and/or "Weather Defense Shaftliner Type X" by Lafarge/Continental
   d. "Gold Bond Brand Fireshield Shaft Liner XP," "Gold Bond Brand EXP Extended Exposure Shaft Liner" by National Gypsum,
   e. "M2Tech Shaftliner" by CertainTeed Corp.
   f. Or approved equal.

2. Liner board must have a rating 10 per ASTM D 3273 with a core that meets ASTM C 1396 Section 6.

F. Horizontal Shaftwall Duct and Ceiling Assemblies: 1" thick fire-resistant gypsum core shaftwall panel with additives to enhance fire resistance of the core and surfaced with water repellent paper on front, back, and long edges and complying with ASTM C 1396

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Type X; "Firecode C Core, Sheetrock Brand" by USG

b. "Gold Bond Brand Fire-Shield Shaftliner" by National Gypsum
c. "DensGlass Ultra Shaft Guard" by Georgia Pacific
d. Or approved equal.

G. Impact-Resistant Wallboard: 5/8" thick,

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. "Sheetrock Brand Mold Tough VHI" by USG
b. "DensArmor Plus Impact-Resistant Panels" by Georgia-Pacific
c. "EXP Interior Extreme IR"
d. "Gold Bond Brand Hi-Impact XP" by National Gypsum
e. "Protecta HIR 300" by Lafarge/Continental
f. "AirRenew Extreme Impact" by CertainTeed Corp.
g. Or approved equal

2. 48" wide, in maximum lengths available to minimize end-to-end butt joints.

2.4 ACCESSORIES

A. Acoustical Insulation: Paper-less, non-combustible, semi-rigid mineral fiber, thickness to match full stud width, in walls (unless otherwise indicated), 3 lb./cu. ft. maximum density;

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Thermafiber LLC "Thermafiber,"
b. Roxul "Comfortbatt,"
c. Owens Corning "Sound Attenuation Fire Batt Insulation/MW,"
d. Or approved equal.

B. Fasteners for Wall Board: USG Brand Screws, or approved equal; Type S Bugle Head for fastening wallboard to lighter gauge interior metal framing (up to 20 ga.). Type S-12 Bugle Head for fastening wallboard to heavier gauge interior metal framing (20 ga. to 12 ga.); Type S and Type S-12 Pan Head for attaching metal studs to door frames and runners; and Type G Bugle Head for fastening wallboard to wall board. Lengths specified below under "Part 3 - Execution" Articles and as recommended by drywall manufacturer.

C. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.

D. Metal Trim - Corner Beads: For 90 degree External Corners - 27 U.S. Std. ga. galvanized steel, 1-1/4" x 1-1/4", for 90 degree external corners; ASTM C 1047.

E. Metal Trim - Edge Beads: Paper-faced galvanized-steel sheet; ASTM C 1047.

F. Metal Trim Treatment Materials and Joint Treatment Materials for Gypsum Drywall Boards: Paper tape for joint reinforcing; setting type or lightweight setting type joint compound for taping and topping; and ready-mix compound for finishing.

1. For mold-resistant drywall, water resistant drywall, and tile backer board, use glass mesh tape with setting joint compound that is rated 10 when tested in accordance with ASTM D 3273 and evaluated in accordance with ASTM D 3274.

2. Joint compound

   a. Basis of Design: Subject to compliance with requirements, provide "Rapid Set One Pass" made by CTS Cement Manufacturing Corp. or comparable product by one of the following:

      1). "Rapid Joint" manufactured by Lafarge North America
      2). "M2Tech 90" manufactured by CertainTeed
      3). Or approved equal

G. Control Joints:

1. Basis of Design: Subject to compliance with requirements, provide No. 0.093 by USG or comparable product by one of the following:

   1). Lafarge
   2). National Gypsum
   3). Or approved equal.

H. Acoustical Sealant:

1. Basis of Design: Subject to compliance with requirements, provide USG "Sheetrock Brand Acoustical Sealant"

   1). Tremco Mfg. Co. "Tremco Acoustical Caulking"
   2). Pecora "AIS-919"
   3). Or approved equal.

I. Neoprene Gaskets: Conform to ASTM D 1056.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. General

1. All metal framing for drywall partitions shall extend from floor to underside of structural deck above. Provide for vertical deflection with positive mechanical connections of framing members to structure.

2. Provide concealed reinforcement, 16 ga. thick by eight (8) inches wide or as detailed or as recommended by manufacturer, for attachment of railings, toilet partitions, and other items to be supported on the partitions which cannot be attached to the metal framing members. Concealed

reinforcement shall span between metal studs and be attached thereto using two (2) self-tapping pan head screws at each stud.

a. Back of drywall shall be scored or notched to prevent bulging out where reinforcement plate occurs.

B. Fire-Rated Assemblies: Install fire-rated assemblies in accordance with requirements of the 2014 New York City Building Code, Underwriters' Laboratories and test results obtained and published by the drywall manufacturer, for the fire-rated drywall assembly types indicated on the drawings.

C. Acoustical Assemblies: Install acoustically-rated assemblies to achieve a minimum STC as noted on drawings, in accordance with test results obtained and published by the drywall manufacturer, for the drywall assembly type indicated on the drawings.

D. Sealant

1. Install continuous acoustical sealant bead at top and bottom edges of wallboard where indicated or required for sound rating as wallboard is installed, and between metal trim edge beads and abutting construction.

2. Install acoustical sealant in 1/8" wide vertical control joints within the length of the wall or partitions, and in all other joints, specified below under "Control Joints." Install bead of acoustical sealant around electric switch and outlet boxes, piping, ducts, and around any other penetration in the wallboard; place sealant bead between penetrations and edge of wallboard.

3. Where sealant is exposed to view, protect adjacent surfaces from damage and from sealant material, and tool sealant flush with and in same plane as wallboard surface. Sealant beads shall be 1/4" to 3/8" diameter.

E. Wall Board Application

1. Do not install wallboard panels until steel door frames are in place; coordinate work with Section 08 11 13, "Steel Doors and Frames."

2. See drawings for all board types. Use fire-rated wallboard for fire-rated assemblies. Use sag-resistant board for ceilings. Use water-resistant wallboard where indicated on drawings and where wallboard would be subject to moisture. Install water-resistant wallboard in full, large sheets (no scraps) to limit number of butt joints.

3. Apply wallboard with long dimension parallel to stud framing members, and with abutting edges occurring over stud flanges.

4. Install wallboard for partitions from floor to underside of structure above and secure rigidly in place by screw attachment, unless otherwise indicated.

5. Provide safing insulation meeting standards of Section 07 84 13, Firestops and Smokeseals, at flutes of metal deck where partitions carry up to bottom of metal deck.

6. Neatly cut wallboard to fit around outlets, switch boxes, framed openings, piping, ducts, and other items which penetrate wallboard; fill gaps with acoustic sealant.

7. Where wallboard is to be applied to curved surfaces, dampen wallboard on back side as required to obtain required curve. Finish surface shall present smooth, even curve without fluting or other imperfections.

8. Screw fasten wallboard with power-driven electric screw driver, screw heads to slightly depress surface of wallboard without cutting paper, screws not closer than 3/8" from ends and edges of wallboard.

9. Where studs are doubled-up, screw fasten wallboard to both studs in a staggered pattern.

F. Cementitious Backer Board

1. General: Furnish cementitious backer board in maximum available lengths. Install horizontally, with end joints over framing members.

2. Fastening: Secure cementitious backer board to each framing member with screws spaced not more than 12 inches on center and not closer than 1/2" from the edge. Install screws with a conventional screw gun so that the screw heads are flush with the surface of the board.

3. Joint Treatment: Fill space between edge of backer and receptor with dry-set Portland cement or latex-Portland cement mortar. Fill all horizontal and vertical joints and corners with dry-set Portland cement or latex-Portland cement mortar. Apply fiberglass tape over joints and corners and embed with same mortar.

G. Metal Trim: Install and mechanically secure in accordance with manufacturer's instructions; and finish with three (3) coats of joint compound, feathered and finish sanded smooth with adjacent wallboard surface, in accordance with manufacturer's instructions.

1. Corner Beads: Install specified corner beads in single lengths at all external corners, unless corner lengths exceed standard stock lengths.

2. Edge Beads: Install specified edge beads in single lengths at all terminating edges of wallboard exposed to view, where edges abut dissimilar materials, where edges would be exposed to view, and elsewhere where shown on drawings. Where indicated on drawings, seal joint between metal edge bead and adjoining surface with specified gasket, 1/8" wide minimum and set back 1/8" from face of wallboard, unless other size and profile indicated on drawings.

3. Casing beads shall be set in long lengths, neatly butted at joints. Provide casing beads at juncture of board and vertical surfaces and at exposed perimeters.

H. Control Joint Locations: Gypsum board surfaces shall be isolated with control joints where:

1. Ceiling abuts a structural element, dissimilar wall or other vertical penetration.

2. Construction changes within the plane of the partition or ceiling.

3. Shown on approved shop drawings.

4. Ceiling dimensions exceed thirty (30) feet in either direction.
5. Wings of "L," "U," and "T" shaped ceiling areas are joined.
6. Expansion or control joints occur in the structural elements of the building.
7. Shaftwall runs exceed 30' without interruption.
8. Partition or furring abuts a structural element or dissimilar wall or ceiling.
9. Partition or furring runs exceed 30' without interruption.
10. Where control joints are required, ceiling height door frames may be used as control joints. Less than ceiling height frames shall have control joints extending to the ceiling from both corners.

I. Joint Treatment and Spackling

1. Joints between face wallboards in the same plane, joints at internal corners of intersecting partitions and joints at internal corners of intersections between ceilings and walls or partitions shall be filled with joint compound.
2. Screw heads and other depressions shall be filled with joint compound. Joint compound shall be applied in three (3) coats, feathered and finish surface sanded smooth with adjacent wallboard surface, in accordance with manufacturer's instructions. Treatment of joints and screw heads with joint compound is also required where wallboard will be covered by finish materials which require a smooth surface, such as vinyl wall coverings.

3.3 FURRED WALLS AND PARTITIONS

A. Use specified metal furring channels. Run metal furring channel framing members vertically, space sixteen (16) inches o.c. maximum. Fasten furring channels to concrete or masonry surfaces with power-driven fasteners or concrete stub nails spaced sixteen (16) inches o.c. maximum through alternate wing flanges (staggered) of furring channel. Furring channels shall be shimmed as necessary to provide a plumb and level backing for wallboard. At inside of exterior walls, an asphalt felt protection strip shall be installed between each furring channel and the wall. Furring channel and splices shall be provided by nesting channels at least eight (8) inches and securely anchoring to concrete or masonry with two (2) fasteners in each wing.

B. Wallboard Installation: Same as specified under Article 3.4 - "Metal Stud Partitions."

3.4 METAL STUD PARTITIONS

A. Unless otherwise noted, steel framing members shall be installed in accordance with ASTM C 754.

B. Runner Installation: Use channel type. Align accurately at floor according to partition layout. Anchor runners securely sixteen (16) inches o.c. maximum with power-driven anchors to floor slab, with power-driven anchors to structural slab above. See "Stud Installation" below for runners over heads of metal door frames. Where required, carefully remove sprayed-on fireproofing to allow partition to be properly installed.

C. Stud Installation

1. Use channel type, positioned vertically in runners, spaced as noted on drawings, but not more than twenty-four (24) inches o.c.

2. Anchor studs to floor runners with screw fasteners. Provide snap-in or slotted hole slip joint bolt connections of studs to ceiling runners leaving space for movement. Anchor studs at partition intersections, partition corners and where partition abuts other construction to floor and ceiling runners with sheet metal screws through each stud flange and runner flange.

3. Connection at ceiling runner for non-rated partitions shall be snap-in or slotted hole slip joint bolt connection that shall allow for movement. Seal studs abutting other construction with 1/8" thick neoprene gasket continuously between stud and abutting construction.

4. Connections for fire rated partitions at ceiling runners shall conform to UL Design #2079.

5. Install metal stud horizontal bracing wherever vertical studs are cut or wallboard is cut for passage of pipes, ducts or other penetrations, and anchor horizontal bracing to vertical studs with sheet metal screws.

6. At jambs of door frames and borrowed light frames, install doubled-up studs (not back to back) from floor to underside of structural deck, and securely anchor studs to jamb anchors of frames and to runners with screws. Provide cross braces from hollow metal frames to underside of slab.

7. Over heads of door frames, install cut-to-length section of runner with flanges slit and web bent to allow flanges to overlap adjacent vertical studs, and securely anchor runner to adjacent vertical studs with sheet metal screws. Install cut-to-length vertical studs from runner (over heads of door frame) to ceiling runner sixteen (16) inches maximum o.c. and at vertical joints of wallboard, and securely anchor studs to runners with sheet metal screws.

8. At control joints, in field of partition, install double-up studs (back to back) from floor to ceiling runner, with 1/4" thick continuous compressible gasket between studs. When necessary, splice studs with eight (8) inches minimum nested laps and attach flanges together with two (2) sheet metal screws in each flange. All screws shall be self-tapping sheet metal screws.

D. Runners and Studs at Chase Wall: As specified above for "Runners" and "Studs" and as specified herein. Chase walls shall have either a single or double row of floor and ceiling runners with metal studs sixteen (16) inches o.c. maximum and positioned vertically in the runners so that the studs are opposite each other in pairs with the flanges pointing in the same direction. Anchor all studs to runner flanges with sheet metal screws through each stud flange and runner flange following requirements of paragraph 3.4, B. Provide cross bracing between the rows of studs by attaching runner channels or studs set full width of chase attached to vertical studs with one self-tapping screw at each end. Space cross bracing not over thirty-six (36) inches o.c. vertically.

E. Wallboard Installation - Single Layer Application (Screw Attached)

1. Install wallboard with long dimension parallel to framing member and with abutting edge joints over web of framing member. Install wallboard with long dimension perpendicular to framing members

above and below openings in drywall extending to second stud at each side of opening. Joints on opposite sides of wall shall be arranged so as to occur on different studs.

2. Boards shall be fastened securely to metal studs with screws as specified. Where a free end occurs between studs, back blocking shall be required. Center abutting ends over studs. Correct work as necessary so that faces of boards are flush, smooth, true.

3. Wallboard screws shall be applied with an electric screw gun. Screws shall be driven not less than 3/8" from ends or edges of board to provide uniform dimple not over 1/32" deep. Screws shall be spaced twelve (12) inches o.c. in the field of the board and 8" o.c. staggered along the abutting edges.

4. All ends and edges of wallboard shall occur over screwing members (studs or furring channels). Boards shall be brought into contact but shall not be forced into place. Where ends or edges abut, they shall be staggered. Joints on opposite sides of a partition shall be so arranged as to occur on different studs.

5. At locations where piping receptacles, conduit, switches, etc., penetrate drywall partitions, provide non-drying sealant and an approved sealant stop at cut board locations inside partition.

F. Wallboard Installation - Double-Layer Application

1. General: See drawings for wallboard partition types required.

2. First Layer (Screw Attached): Install as described above for single layer application.

3. Second Layer (Screw Attached): Screw attach second layer, unless laminating method of attachment indicated on drawings or necessary to obtain required sound rating or fire rating. Install wallboard vertically with vertical joints offset thirty-two (32) inches from first layer joints and staggered on opposite sides of wall. Attach wallboard with 1-5/8" screws sixteen (16) inches o.c. along vertical joints and sixteen (16) inches o.c. in the field of the wallboard. Screw through first layer into metal framing members.

4. Second Layer (Laminated): Install wallboard vertically. Stagger joints of second layer from first layer joints. Laminate second layer with specified laminating adhesive in beads or strips running continuously from floor to ceiling in accordance with manufacturer's instructions. After laminating, screw wallboard to framing members with 1-5/8" screws, spaced twelve (12) inches o.c. around perimeter of wallboard.

G. Wallboard Installation - Laminated Application: Where laminated wallboard is indicated, use specified laminating adhesive, install wallboard vertically and retain tolerances as specified for screw attached wallboard.

H. Insulation Installation: Install where indicated on drawings. Place blanket tightly between studs.

I. Deflection of Structure Above: To allow for possible deflection of structure above partitions, provide top runners for non-rated partitions with 1-1/4" minimum flanges and do not screw studs or drywall to top runner. Where positive anchorage of studs to top runner is required, anchorage device shall be by means of slotted hole (in clip connection with screw attachment to web of steel through bushings located in slots of clips), or other anchorage device approved by the Commissioner.

J. Control Joints

1. Leave a 1/2" continuous opening between gypsum boards for insertion of surface mounted joint.
2. Back by double framing members.
3. Attach control joint to face layer with 9/16" galvanized staples six (6) inches o.c. at both flanges along entire length of joint.
4. Provide two (2) inch wide gypsum panel strip or other adequate seal behind control joint in fire rated partitions and partitions with safing insulation.

3.5 DRYWALL FASCIAS AND CEILINGS

A. Furnish and install inserts, hanger clips and similar devices in coordination with other work.

B. Secure hangers to inserts and clips. Clamp or bolt hangers to main runners.

C. Space main runners 4'-0" o.c. and space hangers 4'-0" o.c. along runners, except as otherwise shown.

D. Level main runners to a tolerance of 1/4" in 12'-0", measured both lengthwise on each runner and transversely between parallel runners.

E. Metal Furring Channels: Space sixteen (16) inches o.c. maximum. Attach to 1-1/2" main runner channels with furring channel clips (on alternate sides of main runner channels). Furring channels shall not be let into or come in contact with abutting masonry walls. End splices shall be provided by nesting furring channels no less than eight (8) inches and securely wire tying. At any openings that interrupt the furring channels, install additional cross reinforcing to restore lateral stability.

F. Mechanical accessories, hangers, splices, runner channels and other members used in suspension system shall be of metal, zinc coated, or coated with rust inhibitive paint, of suitable design and of adequate strength to support units securely without sagging, and such as to bring unit faces to finished indicated lines and levels.

1. Provide special furring where ducts are over two (2) feet wide.

G. Apply board with its long dimension at right angles to channels. Locate board butt joints over center of furring channels. Attach board with one (1) inch self-drilling drywall screws twelve (12) inches o.c. in field of board at each furring channel; eight (8) inches o.c. at butt joints located not less than 3/8" from edges.

3.6 SHAFT WALLS

A. General: Install gypsum board vertical and horizontal shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated and manufacturer's written installation instructions.

B. Runner Installation: Use "J" metal runners at floor and ceiling, with the short leg toward finish side of wall. Securely attach runners to structural supports with power-driven fasteners at both ends and twenty-four (24) inches o.c.

C. Shaft Wall Liner: Cut shaft wall liner panels one (1) inch less from floor to ceiling height and erect vertically between J-runners.

D. C-H Studs: Cut metal studs 3/8" to not more than 1/2" less than floor to ceiling height and install between shaft wall liner panels so that panels are fitted snugly into the one (1) inch wide "H," "T," or "I" portion of the stud. Space studs twenty-four (24) inches o.c., unless otherwise indicated on drawings. Install full-length steel E-Studs or J-runners vertically at T-intersections, corners, door jambs, and columns. Install full length E-Studs or J-runners over shaft wall liner both sides of closure panels. Frame openings cut within a liner panel with J-Runner around perimeter. For openings, frame with vertical E-Stud or J-runner at edges, horizontal runner at head and sill, and reinforcing as shown on the drawings. Suitably frame all openings to preserve structural support for wall. Over metal doors, install a cut to length section of runner and attach to strut-studs with clip angles and 3/8" Type S Screws space twelve (12) inches o.c.

E. Wallboard Installation - Double Layer Installation: Erect gypsum wallboard base layer vertically or horizontally to meet fire rating on one side of studs with end joints staggered. Fasten base layer panels to studs with one (1) inch Type S screws twenty-four (24) inches o.c. Caulk perimeter of base layer panels. Apply gypsum wallboard face layer vertically over base layer with joints staggered and attached with 1-5/8" Type S screws staggered from those in base, spaced eight (8) inches o.c. and driven into studs.

F. Wallboard Installation (Where Both Sides of Shaft Wall are Finished): Apply gypsum wallboard face layers vertically both sides of studs. Stagger joints on opposite partition sides. Fasten panels with one (1) inch or two (2) inches Type S screws spaced eight (8) inches o.c. in field and along edges into studs.

G. Where handrails are indicated for direct attachment to drywall shaft system, provide not less than a sixteen (16) ga. x eight (8) inches wide galvanized steel reinforcement strip, accurately positioned and secured to studs and concealed behind not less than one 1/2" thick course of gypsum board in the system.

H. Integrate stair hanger rods with drywall shaft system by locating cavity of system as required to enclose rods.

I. Horizontal Shaftwall Duct and Ceiling Assemblies: Provide I-stud cavity shaftwall system for horizontal duct protection consisting of I-studs 24" o.c. with 1" fire-rated shaft liner panels inserted in the stud tabs, and three layers of 1/2" firecode C gypsum board attached to the stud flanges opposite the shaft liner panels.

3.7 ERECTION AT COLUMN ENCLOSURES

A. Metal furring supports shall be provided under work of this Section, and shall be cut to lengths as necessary for tight fit such that spacing is not more than sixteen (16) inches o.c.

B. Board shall be fastened securely to supports with screws as specified. Place boards in position with minimum amount of joints. Where free ends occur between supports, back-blocking or furring shall be required. Center abutting ends over supports. Correct work as necessary so that faces of boards are flush, smooth and true. Provide clips or cross furring for attachment as required.

C. All layers shall be screw attached to furring.

3.8 FINISHING

A. Taping: A thin, uniform layer of compound shall be applied to all joints and angles to be reinforced. Reinforcing tape shall be applied immediately, centered over the joint, seated into the compound. A skim coat shall follow immediately, but shall not function as a fill or second coat. Tape shall be properly folded and embedded in all angles to provide a true angle.

B. Filling: After initial coat of compound has hardened, additional compound shall be applied, filling the board taper flush with the surface. The fill coat shall cover the tape and feather out slightly beyond the tape. On joints with no taper, the fill coat shall cover the tape and feather out at least four (4) inches on either side of the tape. No fill coat is necessary on interior angles.

C. After compound has hardened, a finishing coat of compound shall be spread evenly over and extending slightly beyond the fill coat on all joints and feathered to a smooth, uniform finish. Over tapered edges, the finished joint shall not protrude beyond the plane of the surface. All taped angles shall receive a finish coat to cover the tape and taping compound, and provide a true angle. Where necessary, sanding shall be done between coats and following the final application of compound to provide a smooth surface, ready for painting.

D. Fastener Depressions: Compound shall be applied to all fastener depressions followed, when hardened by at least two (2) coats of compound, leaving all depressions level with the plane of the surface.

E. Finishing Beads and Trim: Compound shall be applied to all bead and trim and shall be feathered out from the ground to the plane of the surface. When hardened, this shall be followed by two (2) coats of compound each extending slightly beyond the previous coat. The finish coat shall be feathered from the ground to the plane of the surface and sanded as necessary to provide a flat, smooth surface ready for decoration.

F. Except as otherwise noted, level of finish for surface exposed to view shall conform to Level 4 of ASTM C 840 and GA-214 of the Gypsum Association.

SECTION 09 30 00
Tiling

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Porcelain floor, wall tile and base.

2. Setting beds, grout, sealant and waterproofing membrane.

3. Metal edge strips.

B. Related Sections

1. Unit Masonry - Section 04 20 00.

2. Gypsum Drywall - Section 09 29 00.

1.3 REFERENCES

A. ANSI A108 Series/A118 Series - American National Standards for Installation of Ceramic Tile.

B. ANSI A136.1 - American National Standards for Organic Adhesives for Installation of Ceramic Tile.

C. ASTM C 144 - Standard Specification for Aggregate for Masonry Mortar.

D. ASTM C 150 - Standard Specification for Portland Cement.

E. TCNA - Handbook for Ceramic, Glass and Stone Tile Installation; Tile Council of North America.

F. ISO 13007 - International Standards Organization; Classification for Grout and Adhesives.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Qualifications of Installers: For cutting, installing and grouting of tile, use experienced tile setters who are completely familiar with the requirements of this work and the recommendations contained in the referenced standards. Installers must be properly trained for the specified work.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

A. Refer to DDC General Conditions.

B. Samples

1. Submit sample panels, approximately 12" x 12", mounted on hardboard back-up with selected grout color for each color and pattern of tile and grout specified.

2. Submit 12" x 12" samples of waterproofing membrane.

C. Master Grade Certificates: Prior to opening tile containers, submit to the Commissioner a Master Grade Certificate, signed by an officer of the firm manufacturing the tile used, and issued when the shipment is made, stating the grade, kind of tile, identification marks for tile containers, and the name and location of the project.

D. Mock-Ups

1. At an area on the site where approved by the Commissioner, provide a mock-up tile installation.

   a. Make the mock-up approximately 36" x 36" in dimension.
   b. Provide one mock-up for each type, class, and color of installation required under this Section.
   c. The mock-ups may be used as part of the Work, and may be included in the finished Work when so approved by the Commissioner.
   d. Revise as necessary to secure the Commissioner's approval.

2. The mock-ups, when approved by the Commissioner, will be used as datum for comparison with the remainder of the work of this Section for the purposes of acceptance or rejection.

3. If the mock-up panels are not permitted to be part of the finished Work, completely demolish and remove them from the job site upon completion and acceptance of the work of this Section.

PART II - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Manufacture all tile in accordance with Standard Grade Requirements of ANSI A-137.1.

B. Install all tile in accordance with the recommendations contained in "Tile Council of North America Handbook for Ceramic, Glass, and Stone Tile Installation (TCNA)," latest edition.

C. All floor surfaces shall have a minimum wet DCOF AcuTest value of 0.42 and tested per ANSI A326.3 Dynamic Coefficient of Friction of Hard Surface Flooring Materials.

2.2 MANUFACTURERS OF TILE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Dal-Tile Corp.
   2. Fiandre
   3. Stone Source
   4. Nemo
   5. American Olean
   6. Or approved equal

B. Basis of Design Product(s): See Finish Schedule.

2.3 TRIM AND SPECIAL SHAPES

A. Provide external and internal corners, trim shapes at openings, and all other trim and special shapes to match the tile specified herein, as required by field conditions and drawing details.

B. Metal Edge Strips: Angle or L-shaped, height to match tile and setting bed thickness.

   1. Exposed Edge Material: Extruded aluminum, finish as indicated on drawings.

   2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Schluter Systems, L.P.
      b. Blanke Corp.
      c. Ceramic Tool Co. Inc.
      d. Or approved equal

2.4 SETTING BEDS AND GROUT

A. Portland Cement: ASTM C 150, Type 1.

B. Hydrated Lime: ASTM C 207, Type S.

C. Sand: ASTM C 144, clean and graded natural sand.

D. Manufacturers of Latex Admixture for Mortar Bed: Subject to compliance with requirements, provide products by one of the following:
   1. MAPEI, Planicrete AC, blended with a 3:1 site mix.

   2. Laticrete 333.

   3. Pro Spec; Acrylic Additive.

   4. Custom Building Products; Custom Crete Thin Set Additive.

   5. Or approved equal.

E. Latex-Portland Cement Bond Coat, complying with ANSI A118.4 and ISO 13007, C2ES2P2 with minimum compressive strength of 400 psi.

   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. MAPEI, Keralastic System thin set mortar, consisting of Kerabond dry-set mortar and Keralastic latex admixture.
b. Laticrete; 211 dry-set mortar and 4237 latex admixture.
c. Pro Spec; Permalastic System consisting of Permalastic Dryset Mortar and Permalastic Admixture
d. Custom Building Products; Pro-Lite.
e. Or approved equal.

F. Wall and Base Tile

1. Over drywall, use ANSI A136.1-1967 Organic Adhesive for installation of tile, Type I and ISO 13007 D2TE. Shear strength shall be 50 psi minimum. Adhesive primer as recommended by adhesive manufacturer. Manufacturer shall certify, in writing, that adhesive and primer used are proper types for the intended tile types and application. Conform to TCA Detail W-242.

   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

      1). MAPEI Type 1 Mastic.
      2). Laticrete Type 1 Adhesive.
      3). ProSpec B-1000 Tile Adhesive.
      4). Custom Building Products' Reliabond Adhesive Type 1.
      5). Or approved equal.

2. Over masonry, use a mortar bed leveling coat conforming to ANSI A108.1A followed by a Latex Portland Cement Bond Coat, MAPEI, Kerabond/Keralastic System, Custom Mega Flex or equal by Laticrete, Pro Spec or approved equal, conforming to ANSI A118.4, ISO 13007-C2ES2P2, and TCA Detail W-211.

3. Over cement board, use a Latex Portland cement mortar bond coat, MAPEI, Kerabond/Keralastic System, Custom Mega Flex or equal by Laticrete, Pro Spec or approved equal, conforming to ANSI A118.4, ISO 13007-C2ES2P2, and TCA Detail W-244; coat back of board with waterproof membrane as specified below.

4. Over glass mat water resistant gypsum backer board, use a Latex Portland cement mortar bond coat, MAPEI, Kerabond/Keralastic System or equal by Laticrete, Custom Building Products or approved equal, conforming to ANSI A118.4, ISO 13007-C2ES2P2, and TCA Detail W-245.

G. Floor Tile: Comply with TCNA Detail F-144, thinset and waterproofing over CBU over plywood. CBU to be screwed down and joints to be finished per manufacturer's requirements.

H. Crack Isolation Membrane: Liquid rubber membrane meeting ASTM A118.12, with up to 1/8" in plane crack isolation

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Mapei
   b. Laticrete
   c. Custom Building Products
   d. or approved equal

I. Waterproofing Membrane: Complying with ANSI A118.10 and ANSI A118.12; and having IAPMO certification as a shower pan liner;

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. "Mapelastic 400" by Mapei with factory blended "Bio-Block" antimicrobial protection,
   b. "Laticrete 9235 with Microban" made by Laticrete International,"
   c. ProSpec "B6000," Custom Building Products 9240,"
   d. Or approved equal

2. Reinforce membrane with polyester fabric.

3. Run waterproofing up full height of walls.

J. Water: Clean, fresh and suitable for drinking.

K. Grout complying with A118.7; and ISO 13007, CG2WAF: For grouting tile, provide a commercial Portland cement grout.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. "Ultracolor Plus" (additive not required) made by MAPEI
   b. Laticrete Permacolor Select
   c. Custom Prism Sure Color Grout; (addition not required)
   d. Or approved equal

2. Add latex additive to grout made by same manufacturer as grout.

3. Color: Silver Grey unless otherwise noted on Finish Schedule.

L. Physical Properties: The setting beds and grouts must meet the following physical requirements:

1. Compressive Strength: 3000 psi min.

2. Shear Bond Strength: 500 psi min.

3. Water Absorption: 4.0% max.

4. Service Rating (ASTM C 627): Extra Heavy Duty.

M. Sealer: Seal all grout joints and all unglazed tile

1. Basis of Design: Subject to compliance with requirements, provide "Sealer's Choice 15 Gold" as manufactured by Aqua Mix Inc. or comparable product by one of the following:

   a. DuPont
   b. 3M
   c. Or approved equal

N. Temporary Protective Coating: Either product indicated below that is applied in the tile manufacturer's factory and formulated to protect exposed surfaces of tile against adherence of mortar and grout;

compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.

1. Petroleum paraffin wax, applied hot, fully refined and odorless, containing at least 0.5 percent oil with a melting point of 120 to 140 deg. F. per ASTM D 87.

2. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as temporary protective coating for tile.

O. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.5 SEALANT

A. Joint Backing: Preformed, compressible, resilient, non-extruding, non-staining strips of foam neoprene, foam polyethylene, or other material recommended by sealant manufacturer.

B. Bond Breaker: Polyethylene tape, 3 mils thick, or other material recommended by sealant manufacturer.

C. Sealant Primer: Colorless, non-staining, or type to suit substrate surface, as recommended by sealant manufacturer.

D. Sealant: One-part silicone based sanitary sealant, conforming to ASTM C 920, Type S, Grade NS, Class 25. Sealant hardness upon full cure shall be between 20-30 Shore "A" Durometer. Color of sealant to blend with or match adjacent materials, and as selected by the Commissioner.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Sanitary SCS1700 by GE Construction Sealants, 786-M White by Dow Corning Corporation,
   b. Bondaflex Sil 100 WF by May National Associates, Inc.;
   c. A Subsidiary of Sika Corporation U.S.,
   d. Or approved equal

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved samples. If not factory blended, either return to manufacturer or blend tiles at project site before installing.

B. Field Applied Temporary Protective Coating: Pre-coat tile with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.3 JOINTS IN TILE WORK

A. Joint Widths: 1/16"

B. Alignment: Wall, base and floor joints shall align through the field and trim. Direction and location of all joints as directed by Commissioner.

C. Movement Joints: Conform to TCA Detail EJ171. Locate where movement joints are in back-up material. Provide movement joint at joints between mop receptors and tile. Provide movement joint at all vertical internal joints of wall tile. Movement joints 1/8" wide in tile. Fill all movement joints with specified backing and sealant. Use bond breaker where sufficient space for joint backing does not exist.

1. Provide sealant between tile and plumbing fixtures, mirrors, pipes, countertops and other dissimilar materials penetrating or adjacent to tile.

3.4 INSTALLATION

A. Comply with the following installation standards:

1. Wall tile over drywall using organic adhesive - ANSI A136.1 and ISO 13007, D2TE.

2. Wall tile over cement board or glass mat backer board using dry set mortar with latex additive - ANSI A118.4 and ISO 13007, C2ES2P2.

3. Wall tile over masonry or concrete using dry set mortar with latex additive - ANSI A118.4 and ISO 13007, C2ES2P2.

4. Floor tile: ANSI A118.1, ANSI A118.4.

B. All setting beds and/or adhesives shall provide for an average contact area of not less than 95% coverage.

C. Allowable Variations in Finished Work: Do not exceed the following deviations from level and plumb, and from elevations, locations, slopes and alignment shown.

1. Walls: 1/8" in 8'-0" run, any direction; 1/8" at any location; offset at any location, 1/32".

2. Joints: +/- 1/32" joint width variation of any location; 1/16" in 3'-0" run deviation from plumb and true.

D. Waterproofing Membrane: Install the membrane in strict accordance with manufacturer's written recommendations.

E. Handle, store, mix and apply setting and grouting materials in compliance with the manufacturer's instructions.

F. Terminate work neatly at obstructions, edges and corners without disruption of pattern or joint alignment.

G. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight, aligned joints. Fit tile closely to electrical outlets, piping and fixtures so that plates, collars, or covers overlap tile.

H. Lay tile in grid pattern. Align joints when adjoining tiles on floor, base, walls and trim are the same size. Lay out tile work and center tile fields both directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths.

3.5 CLEANING AND PROTECTION OF TILE

A. Cleaning: On completion of placement and grouting, clean all tile surfaces so they are free of foreign matter.

1. Remove grout residue from tile as soon as possible.

2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use cleaners only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning to insure removal of all cleaning material.

3. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.

B. Protect installed tile work with Kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. Apply coat of sealer to all grout joints and all unglazed tile.

END OF SECTION 09 30 00

SECTION 09 51 13
Acoustical Panel Ceilings

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Acoustical panel units.

2. Exposed "T" suspension system, including hangers and inserts.

3. Provisions for the installation of lighting fixtures, diffusers, grilles and similar items provided under other Sections.

4. Cutting, drilling, scribing and fitting as required for electro-mechanical penetrations.

5. Perimeter and column moldings, trim and accessories for acoustical ceilings.

B. Related Sections

1. Gypsum Drywall - Section 09 29 00.

2. Diffusers, Registers and Grilles - Section 23 37 13.

3. Interior Lighting - Section 26 51 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Qualifications of Installers

1. For the actual fabrication and installation of all components of the system, use only personnel who are experienced in the skills required and completely familiar with the requirements established for this work.

2. Installer shall have a record of successful installation of similar ceilings acceptable to the Commissioner.

C. Referenced Standards

1. ASTM C 635 "Standard Specification for Metal Suspension Systems for Acoustical Tile and Lay-In Panel Ceilings," American Society for Testing and Materials.

2. ASTM C 636 "Standard Recommended Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels," American Society for Testing and Materials.

3. Comply with recommendations published by the Ceilings and Interior Systems Construction Association (CISCA).

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Shop Drawings: Submit completely dimensioned ceiling layouts for all areas where acoustical ceilings are required, showing:

1. Any deviations from reflected ceiling plan layouts, especially lighting fixture and dimensions. Also indicate if any light fixtures will not fit into the ceiling layout due to dimensional restrictions or field conditions.

2. Direction and spacing of suspension members and location of hangers for carrying suspension members.

3. Direction, sizes and types of acoustical units, showing suspension grid members, and starting point for each individual ceiling area.

4. Moldings at perimeter of ceiling, at columns and elsewhere as required due to penetrations or exposure at edge of ceiling tiles.

5. Location and direction of lights, air diffusers, air slots, and similar items in the ceiling plane.

6. Details of construction and installation at all conditions.

7. Materials, gauges, thickness and finishes.

B. Product Data

C. Samples

1. Twelve (12) inch long components of suspension systems, including moldings.

2. Acoustical units — full size.

PART II - PRODUCTS

2.1 ACOUSTICAL UNITS

A. Basis of Design: Subject to compliance with requirements, provide Armstrong World Industries or comparable product by one of the following:

1). USG Interiors, Inc.
2). Roxul Rockfon
3). Or approved equal

B. Acoustical Tiles

1. ACT-01: Provide 3/4" thick, 24" x 24" mineral fiber panels equal to "Ultima High NRC" with beveled tegular edge

   a. Basis of Design: Subject to compliance with requirements, provide Armstrong World Industries or comparable product by one of the following:

      1). USG Interiors, Inc.,
      2). Roxul Rockfon
      3). Or approved equal.

   b. Panels shall meet ASTM E 1264, Type IV, Form 2, Pattern E, Fire Class A, with Flame Spread Index 25 or less and Smoke Developed Index 50 or less per ASTM E 84.

2. ACT-02: Provide 7/8" thick, 24" x 24" mineral fiber panels with acoustically transparent water repellent membrane

   a. Basis of Design: Subject to compliance with requirements, provide "Ultima Health Zone High NRC" with beveled tegular edge, as manufactured by Armstrong World Industries or comparable product by one of the following:

      1). USG Interiors, Inc.
      2). Roxul Rockfon
      3). Or approved equal

   b. Panels shall meet ASTM E 1264, Type IV, Form 2, Pattern E, Fire Class A, with Flame Spread Index 25 or less and Smoke Developed Index 50 or less per ASTM E 84.

3. ACT-03: Provide 2'-0" x 8'-0" USG Halcyon Acoustical Panels with FL Edge

   a. Basis of Design: Subject to compliance with requirements, provide USG Interiors, Inc. or comparable product by one fo the following:

      1). Armstrong World Industries
      2). Chicago Metallic Corp

3). Or approved equal

2.2 SUSPENSION SYSTEM

A. ACT-01, ACT-02: Provide exposed "T" steel suspension system with low sheen white baked enamel finish, "Suprafine" 9/16" 2-way grid system by Armstrong, or comparable product by one of the manufacturers listed below, or approved equal.

1. Basis of Design: Subject to compliance with requirements, provide Armstrong World Industries or comparable product by one of the following:

1). USG Interiors, Inc.
2). Chicago Metallic Corp.
3). Or approved equal

B. ACT-03: Provide USG DONN Brand Identitee DXI 9/16" suspension system

1. Basis of Design: Subject to compliance with requirements, provide USG Interiors, Inc. or comparable product by one of the following:

1). Armstrong World Industries
2). Chicago Metallic Corp.
3). Or approved equal

C. The suspension system shall support the ceiling assembly shown on the drawings and specified herein, with a maximum deflection of 1/360 of the span, in accordance with ASTM C 635.

D. Hanger for suspension system shall be 1" x 3/16", galvanized steel flats or 1/4" diameter galvanized pencil rods spaced 4'-0" o.c. conforming to 2014 New York City Building Code.

E. Main carrying channels, to which suspension systems shall be fastened, shall be 1-1/2" cold rolled galvanized steel channel; spaced 4'-0" o.c., conforming to 2014 New York City Building Code.

F. Provide ceiling clips and inserts to receive hangers, type as recommended by suspension system manufacturer, sizes for pull-out resistance of not less than five (5) times the hanger design load, as indicated in ASTM C 635.

G. Suspension systems shall conform to ASTM C 635, intermediate duty.

H. Provide manufacturer's standard wall moldings with off-white baked enamel finish to match suspension systems. For circular penetrations of ceilings, provide edge moldings fabricated to diameter required to fit penetration exactly.

I. Provide perimeter shadow molding at all ACT systems.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Establish layout of acoustical units to balance border widths at opposite edges of each ceiling. Avoid use of less-than-half width units at borders, and comply with reflected ceiling plans.

B. Install acoustical panel ceilings according to ASTM C 636.

C. Install suspension systems to comply with ASTM C 636, with hangers supported only from building structural members. Locate hangers not more than 6" from each end, leveling to tolerance of 1/8" in 12'-0".

D. Space rod or flat iron hangers not more than 4'-0" o.c. along main carrying channels; attach by clips or wire ties to building structure. Locate hangers not more than 6" from each end. Space main carrying channels 4'-0" o.c. Attach suspension system to carrying channels using clips or ties, leveling to a tolerance of 1/8" in 12'-0".

E. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum which are not part of supporting structural or ceiling suspension system. Splay hangers only where required to miss obstructions and offset resulting horizontal force by bracing, reinforcing, countersplaying or other equally effective means.

F. Install edge moldings at edges of each acoustical ceiling area, and at locations where edge of acoustical units would otherwise be exposed after completion of the work.

1. Secure moldings to building construction by fastening through vertical leg. Space holes not more than 3" from each end and not more than sixteen (16) inches o.c. between end holes. Fasten tight against vertical surfaces.

2. Level moldings with ceiling suspension system, to a level tolerance of 1/8" in 12'-0".

G. Install acoustical units in coordination with suspension system, with edges concealed by support of suspension members. Scribe and cut panels to fit accurately at borders and at penetrations.

H. Install hold-down clips in toilet areas, and in areas where required by 2014 New York City Building Code; space 2'-0" o.c. on all cross tees.

I. Light fixtures or other ceiling apparatus shall not be supported from main beams or cross tees if their weight causes the total load to exceed the deflection capability of the ceiling suspension system. In such cases the load shall be supported by supplemental hangers furnished and installed by this Section of work.

J. Where fixture or ceiling apparatus installation causes eccentric loading on runners, provide stabilizer bars to prevent rotation.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 09 51 33
Metal Ceilings

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 74 19 "Construction Waste Management and Disposal"
   c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
   d. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"
   e. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

1.2 SUMMARY

A. Section includes:

1. Metal ceilings.
2. Concealed suspension system, including hangers and inserts.
3. Provisions for the installation of lighting fixtures, diffusers, grilles and similar items provided under other Sections.
4. Cutting, drilling, scribing and fitting as required, including for all electro/mechanical penetrations.
5. Perimeter and column moldings, trim and accessories for acoustical ceilings.

B. Related Sections

1. Cast-in-Place Concrete - Section 03 30 00.
2. Metal Decking - Section 05 30 00.
3. Gypsum Drywall - Section 09 29 00.
4. Diffusers, Registers and Grilles - Section 23 37 13.
5. Interior Lighting - Section 26 51 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Qualifications of Installers

1. For the actual fabrication and installation of all components of the system, use only personnel who are experienced in the skills required and completely familiar with the requirements established for this work.

2. Installer shall have a record of successful installation of similar ceilings acceptable to the Commissioner.

C. Referenced Standards

1. ASTM C 635 "Standard Specification for Metal Suspension Systems for Acoustical Tile and Lay-In Panel Ceilings," American Society for Testing and Materials.

2. ASTM C 636 "Standard Recommended Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels," American Society for Testing and Materials.

3. Comply with recommendations published by the Ceilings and Interior Systems Construction Association (CISCA).

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Shop Drawings: Submit completely dimensioned ceiling layouts for all areas where metal ceilings are required, showing:

1. Any deviations from Commissioner's reflected ceiling plan layouts, especially lighting fixture and dimensions. Also indicate if any light fixtures will not fit into Commissioner's ceiling layout due to dimensional restrictions of field conditions.

2. Direction and spacing of suspension members and location of hangers for carrying suspension members.

3. Direction, sizes and types of metal ceiling units, showing suspension grid members, and starting point for each individual ceiling area.

4. Moldings at perimeter of ceiling, at columns and elsewhere as required due to penetrations or exposure at edge of ceiling tiles.

5. Location and direction of lights, air diffusers, air slots, and similar items in the ceiling plane.

6. Details of construction and installation at all conditions.

7. Materials, gauges, thickness and finishes.

B. Product Data

C. Samples

1. All components of suspension systems, including moldings.
2. Metal ceiling unit: 24" x 24".

PART II - PRODUCTS

2.1 METAL CEILING UNITS

A. Provide products by Armstrong World Industries, Hunter Douglas Architectural Products, Inc., Ceilings Plus or approved equal.

B. Metal Ceiling Panels (MCT-01): See Finish Schedule.

2.2 SUSPENSION SYSTEM

A. See Finish Schedule.

B. Hanger for suspension system shall be 1" x 3/16", galvanized steel flats or 1/4" diameter galvanized pencil rods spaced 4'-0" o.c. conforming to New York City Building Code.

C. Main carrying channels, to which suspension systems shall be fastened, shall be 1-1/2" cold rolled galvanized steel channel; spaced 4'-0" o.c., conforming to New York City Building Code.

D. Provide ceiling clips and inserts to receive hangers, type as recommended by suspension system manufacturer, sizes for pull-out resistance of not less than five (5) times the hanger design load, as indicated in ASTM C 635.

E. Suspension system shall conform to ASTM C635, intermediate duty, with deflection limited to 1/360 of span.

F. Complete wall connection, consisting of galvanized steel perimeter trim, with relevant punchings, adjusted to the extruded drop-slide aluminum profile.

G. For circular penetrations of ceilings, provide edge moldings fabricated to diameter required to fit penetration exactly.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of metal ceiling units to balance border widths at opposite edges of each ceiling. Avoid use of less-than-half width units at borders and comply with reflected ceiling plans.

3.3 INSTALLATION

A. Install suspension systems to comply with ASTM C636, as applicable, with hangers supported only from building structural members. Locate hangers not less than 6" from each end and leveling to tolerance of 1/8" in 12'-0".

B. Install suspension systems to comply with ASTM C 636, with hangers supported only from building structural members. Locate hangers not more than 6" from each end, leveling to tolerance of 1/8" in 12'-0".

C. Space rod or flat iron hangers not more than 4'-0" o.c. along main carrying channels; attach by clips or wire ties to building structure. Locate hangers not more than 6" from each end. Space main carrying channels 4'-0" o.c. Attach suspension system to carrying channels using clips or ties, leveling to a tolerance of 1/8" in 12'-0".

D. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum which are not part of supporting structural or ceiling suspension system. Splay hangers only where required to miss obstructions and offset resulting horizontal force by bracing, reinforcing, countersplaying or other equally effective means.

E. Install edge moldings at perimeter of acoustical ceiling area and at locations where necessary to conceal edges of acoustical units.

1. Screw-attach moldings to substrate at intervals not over 16" o.c. and not more than 3" from ends, leveling with ceiling suspension system to tolerance of 1/8" in 12'-0". Miter corners accurately and connect securely.

F. Scribe and cut metal ceiling units for accurate fit at borders and at interruptions and penetrations for work through the ceilings. Stiffen edges of cut units as required to eliminate evidence of oil-canning or buckling.

G. Install snap-in acoustical units, complete with acoustical pads, in coordination with suspension system and exposed moldings.

1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions.

2. Fit adjoining tile to form flush, tight joints. Scribe and cut for accurate fit at borders and around work which penetrates ceiling.

H. Light fixtures or other ceiling apparatus shall not be supported from main beams or cross tees if their weight causes the total load to exceed the deflection capability of the ceiling suspension system. In such cases the load shall be supported by supplementary hangers furnished and installed by this Section of work.

END OF SECTION 09 51 33

SECTION 09 65 00
Resilient Tile Flooring

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 74 19 "Construction Waste Management and Disposal"
c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
d. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"
e. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

1.2 SUMMARY

A. Section includes:

1. Rubber tile.
2. Rubber base.
3. Accessories.

B. Related Sections

1. Cast-in-Place Concrete - Section 03 30 00.
2. Ornamental Metals - Section 05 70 00, for metal transition strips.
3. Gypsum Drywall - Section 09 29 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Qualifications of Installers: Use only personnel who are experienced in the skills required and completely familiar with the requirements established for this work.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data.

B. Samples

1. Tile: Full size.

2. Base and Edging Strips: Six (6) inches long.

1.6 FIELD CONDITIONS

A. Keep ambient temperatures within range recommended by manufacturer, but not less than 70 deg F. or more than 95 deg F., in spaces to receive floor tile during the following time periods:

1. 48 hours before installation.

2. During installation.

3. 48 hours after installation.

B. After installation and until Substantial Completion, keep ambient temperatures within range recommended by manufacturer, but not less than 55 deg F. or more than 95 deg F.

C. Close spaces to traffic during floor tile installation.

D. Close spaces to traffic for 48 hours after floor tile installation.

E. Install floor tile after other finishing operations, including painting, have been completed.

1.7 WARRANTY

A. Provide manufacturer's 5-year limited warranty.

PART II - PRODUCTS

2.1 RUBBER TILE (RF-01, RF-02, RF-03)

A. 12" x 12" x 1/8" thick rubber tile

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Flexco
   b. Pirelli
   c. Nora
   d. Or approved equal

2. Provide tile units with uniformly distributed color and pattern throughout the thickness of tile. Variations in shades and off-pattern matches between containers are not acceptable.

3. Type 1-A homogeneous rubber tile.

4. RLT Profile Color: See Finish Schedule.

5. Color: See Finish Schedule.

B. Rubber tile shall be oil resistant.

2.2 RUBBER BASE (RB-01)

A. Provide Rubber Wall Base

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Flexco
   b. Johnsonite
   c. Burke Mercer Flooring Products
   d. Armstrong World Industries
   e. Roppe Corporation
   f. Or approved equal

2. Product Standard: ASTM F 1861, Type TP (rubber, thermoplastic.

3. 4" high cove base; preformed outside corners, job formed inside corners.

4. Color: See Finish Schedule.

2.3 ACCESSORIES

A. Adhesives: Waterproof, stabilized type, as recommended by the tile manufacturer for the type of service indicated and compatible with crack isolation membrane.

B. Concrete Slab Primer: Non-staining type recommended by the tile manufacturer.

C. Leveling Compound: Latex/Portland cement flash patching and leveling compound

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. H.B. Fuller (No. DSP-520H)
   b. Laticrete (No. 226 with 3701 admixture)
   c. Mapei
   d. Sika
   e. Ardex
   f. Custom Building Products
   g. Or approved equal

D. Edging Strips: 1/8" thick, homogeneous vinyl or rubber composition, tapered or bullnose edge, color as selected by the Commissioner from manufacturer's standards.

E. Transition Strips: See Section 05 70 00, Ornamental Metals.

F. Crack Isolation Membrane:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. National Applied Construction (ECB 75)

b. Mapei
c. Laticrete
d. Or approved equal

G. Finish

1. Floor Polish: Provide protective, liquid floor-polish products recommended by floor tile manufacturer.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 CONDITION OF SURFACES

A. Allowable Variations in Substrate Levels (Floors): ± 1/8" in 10'-0" distance and 1/4" total maximum variation from levels shown.

B. Grind or fill concrete substrates as required to comply with allowable variation.

3.3 PREPARATION

A. Prepare substrates according to floor tile manufacturer's written instructions to ensure adhesion of resilient products.

B. Concrete Substrates: Prepare according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.

2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents.

3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 9 pH.

4. Moisture Testing: Proceed with installation only after substrates pass testing according to floor tile manufacturer's written recommendations, but not less stringent than the following:

   a. Perform anhydrous calcium chloride test according to ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb. of water/1000 sq. ft. in 24 hours.
   b. Perform relative humidity test using in situ probes according to ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install floor tiles until they are the same temperature as the space where they are to be installed.

1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.

E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.

F. Apply crack isolation membrane.

3.4 INSTALLATION

A. Place tile units with adhesive cement in strict compliance with the manufacturer's recommendations. Butt tile units tightly to vertical surfaces, thresholds, nosings and edgings. Scribe around obstructions and to produce neat joints, laid tight, even and in straight, parallel lines. Extend tile units into toe spaces, door reveals, and into closet and similar openings.

B. Preserve reference markers, holes, or openings that are in place or plainly marked for future cutting by repeating on the finish tile as marked in the subfloor. Use chalk or other non-permanent marking devices.

C. Lay tile from center marks established with principal walls, discounting minor off-sets, so that tile at opposite edges of the room are of equal width. Adjust as necessary to avoid use of cut widths less than 1/2 tile at room perimeters. Lay tile square to room axis, unless otherwise shown.

D. Match tiles for color and pattern by using tile from cartons in the same sequence as manufactured and packaged. Cut tile neatly to and around all fixtures. Broken, cracked, chipped or deformed tile is not acceptable.

E. Tightly cement tile to sub-base without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks through tile, or other surface imperfections.

F. Lay tile with grain in all tile running in the same direction unless indicated otherwise on drawings.

G. Place resilient edge strips tightly butted to tile and secure with adhesive. Provide edging strips at all unprotected edges of tile, unless otherwise shown.

H. Bases: In all spaces where base is indicated, install bases tight to walls, partitions, columns, built-in cabinets, etc., without gaps at top or bulges at bottom, with tight joints and flush edges, with molded corner pieces at internal and external corners. Provide end stops adjacent to flush type door frames and where base does not terminate against an adjacent surface. Keep base in full contact with walls until adhesive sets.

3.5 FINISHING

A. Finishing: After completion of the project and just prior to the final inspection of the work, thoroughly clean tile floors and accessories. Remove soil, adhesive, and blemishes from floor tile surfaces before applying liquid floor polish. Apply two (2) coats of floor polish.

END OF SECTION 09 65 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 09 90 00
Painting and Finishing

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

1. Refer to DDC General Conditions and the Addendum to the General Conditions

2. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Prime painting unprimed surfaces to be painted under this Section.

2. Painting all items furnished with a prime coat of paint, including touching up of or repairing of abraded, damaged or rusted prime coats.

3. Painting all ferrous metal (except stainless steel) exposed to view.

4. Painting all galvanized ferrous metals exposed to view.

5. Painting interior concrete block exposed to view.

6. Painting gypsum drywall exposed to view.

7. Sealing concrete floors.

8. Epoxy wall coating.

9. Painting of wood exposed to view, except items which are specified to be painted or finished under other Sections of these specifications. Back painting of all wood in contact with concrete, masonry or other moisture areas.

10. Painting pipes, pipe coverings, conduit, ducts, insulation, hangers, supports and other mechanical and electrical items and equipment exposed to view.

11. Painting surfaces above, behind or below grilles, gratings, diffusers, louvers, lighting fixtures, and the like, which are exposed to view through these items.

12. Incidental painting and touching up as required to produce proper finish for painted surfaces, including touching up of factory finished items.

13. Painting of any surface not specifically mentioned to be painted herein or on drawings, but for which painting is obviously necessary to complete the job, or work which comes within the intent of these specifications, shall be included as though specified.

B. Related Sections

1. Gypsum Drywall - Section 09 29 00.

2. Shop priming is required on some, but not all of the items scheduled to be field painted. Refer to other Sections of work for complete description.

3. Shop Coat on Machinery and Equipment: Refer to the Sections under which various items of manufactured equipment with factory applied shop prime coats are furnished. All items of equipment furnished with prime coat finish shall be finish painted under this Section.

4. Color Coding of Mechanical Piping and Electrical Conduits

a. Identification for Plumbing Piping and Equipment - Section 22 05 53.
b. Identification for HVAC Piping and Equipment - Section 23 05 53.
c. Identification for Electrical Systems - Section 26 05 53.
d. Color Coding consists of an adhesive tape system and is in addition to painting of piping and conduits under this Section, as specified above.

1.3 MATERIALS AND EQUIPMENT NOT TO BE PAINTED

A. Factory-finished toilet partitions.

B. Factory-finished acoustical tile.

C. Non-ferrous metals, except for items specified and/or indicated to be painted.

D. Finished hardware, excepting hardware that is factory primed.

E. Surfaces not to be painted shall be left completely free of droppings and accidentally applied materials resulting from the work of this Section.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Job Mock-Up

1. In addition to the samples specified herein to be submitted for approval, apply in the field, at their final location, each type and color of approved paint materials, applied 10 feet wide, floor to ceiling of wall surfaces, before proceeding with the remainder of the work, for approval by the Commissioner. Paint mock-ups to include door and frame assembly.

2. These applications when approved will establish the quality and workmanship for the work of this Section.

3. Repaint individual areas which are not approved, as determined by the Commissioner, until approval is received. Assume at least two paint mock-ups of each color and gloss for approval.

C. Qualification of Painters: Use only qualified painters for the mixing and application of paint on exposed surfaces.

D. Paint Coordination: Provide finish coats which are compatible with the prime paints used. Provide barrier coats over incompatible primers or remove and re-prime as required.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.6 SUBMITTALS

A. Materials List: Submit a complete list of materials proposed to be furnished and installed under this portion of the work.

B. Samples

1. Samples for Initial Selection: Accompanying the materials list, submit samples of the full range of colors available in each of the proposed products.

2. Samples for Verification: Submit samples of each of the selected colors and glosses painted onto 8-1/2" x 11" x 1/4" thick material; whenever possible, the material for Samples shall be the same material as that on which the coating will be applied in the work.

1.7 JOB CONDITIONS

A. Apply water-based paints only when the temperature of surfaces to be painted and the surrounding air temperatures are between 50 degrees F. and 90 degrees F., unless otherwise permitted by the paint manufacturer's printed instructions.

B. Apply solvent-thinned paints only when the temperature of surfaces to be painted and the surrounding air temperatures are between 45 degrees F. and 95 degrees F. unless otherwise permitted by the paint manufacturer's printed instructions.

C. Do not apply paint in snow, rain, fog or mist; or when the relative humidity exceeds eighty-five (85) percent; or to damp or wet surfaces; unless otherwise permitted by the paint manufacturer's printed instructions.

D. Painting may be continued during inclement weather only if the areas and surfaces to be painted are enclosed and heated within the temperature limits specified by the paint manufacturer during application and drying periods.

PART II - PRODUCTS

2.1 PAINT MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Benjamin Moore (Moore)
2. PPG Paints (PPG)
3. Sherwin Williams (S-W)
4. Or approved equal

B. Comply with number of coats and required minimum mil thicknesses as specified herein.

2.2 MATERIALS

A. Provide undercoat paint produced by the same manufacturer as the finish coats. Use only thinners approved by the paint manufacturer, and use only to recommended limits.

B. Colors and Glosses: All colors and glosses shall be as selected by the Commissioner. Certain colors will require paint manufacturer to prepare special factory mixes to match colors selected by the Commissioner. Color schedule (with gloss) shall be furnished by the Commissioner.

C. Coloring Pigment: Products of or furnished by the manufacturer of the paint or enamel approved for the work.

D. Linseed Oil: Raw or boiled, as required, of approved manufacture, per ASTM D 234 and D 260, respectively.

E. Turpentine: Pure distilled gum spirits of turpentine, per ASTM D 13.

F. Shellac: Pure gum shellac (white or orange) cut in pure denatured alcohol using not less than four (4) lbs. of gum per gallon of alcohol.

G. Driers, Putty, Spackling Compound, Patching Plaster, etc.: Best quality, of approved manufacture.

H. Heat Resistant Paint: Where required, use heat resistant paint when applying paint to heating lines and equipment.

2.3 GENERAL STANDARDS

A. Painting materials shall bear identifying labels on the containers with the manufacturer's instructions printed thereon.

B. Paint shall not be badly settled, caked or thickened in the container, shall be readily dispersed with a paddle to a smooth consistency and shall have excellent application properties.

C. Paint shall arrive on the job color-mixed except for tinting of undercoats and possible thinning.

D. All thinning and tinting materials shall be as recommended by the manufacturer for the particular material thinned or tinted.

2.4 SCHEDULE OF FINISHES

A. High Performance Coating On Exterior Galvanized Ferrous Metals

1. First Coat:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1). "27 Typoxy" or "N69 Epoxoline II" by Tnemec
2). "Intergard 345" by International Protective Coatings;
3). "Carboguard 893 SG" or "Carboguard 888" by Carboline

4). "Devran 203 WB Epoxy Primer" by Akzo
5). Epoxy Mastic Coating V 160 Series by Cortech/Moore
6). "Recoatable Epoxy Primer 867-45" by Sherwin Williams
7). Or approved equal.

2. Second Coat:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1). "V73 Endura Shield" or "1074/1075"
2). Tnemec; "Interthane 870UHS" or "990 UHS" by International Protective Coatings
3). "Carbothane 133 LH" by Carboline
4). "Devthane 379UH Aliphatic Vizethne" by Akzo;
5). Acrylic Aliphatic Urethane V 500 (Gloss) or V 510 (Semi-Gloss) by Corotech/Moore
6). "Hi-Solids Urethane B65-300/350" by Sherwin Williams
7). Or approved equal

B. High Performance Coating On Exterior Non-Galvanized Ferrous Metals

1. Prime Coat:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1). "Tneme-Zinc 90/97" by Tnemec
2). "Interzinc 52" or "315" by International Protective Coatings
3). "Carbozinc 859, Class B" by Carboline
4). "Cathacoat 302V Reinforced Inorganic Zinc Primer" by Akzo
5). Organic Zinc Rich Primer V 170 by Corotech/Moore
6). "Zinc Clad II Plus Inorganic Zinc Rich Coating B69V212" by Sherwin Williams
7). Or approved equal

2. Second Coat:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1). "27 Typoxy" or "N69 Epoxoline II" by Tnemec
2). "Intergard 345" by International Protective Coatings
3). "Carboguard 893 SG" or "Carboguard 888" by Carboline
4). "Bar-Rust 231V Multi Purpose Epoxy Mastic" by Akzo
5). Epoxy Mastic Coating V 160 Series by Corotech/Moore
6). "Macropoxy 646 I.C. Epoxy B58-600" by Sherwin Williams
7). Or approved equal.

3. Third Coat:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1). "V73 Endura Shield" or "1074/1075" by Tnemec
2). "Interthane 870UHS" or "990 UHS" by International Protective Coatings

3). "Carbothane 133 LH" by Carboline
4). "Devthane 379 UH Aliphatic Urethane" by Akzo
5). Acrylic Aliphatic Urethane V 500 (Gloss) or V 510 (Semi-Gloss) by Corotech/Moore
6). "Hi-Solids Polyurethane B65-300/350" by Sherwin Williams
7). Or approved equal.

C. Interior Ferrous Metal

1. Semi-Gloss Finish/Latex

a. Primer:
1). 1 coat Moore Ultra Spec-HP Acrylic Metal Primer (HP04)
2). 1 coat PPG Devflex 4020 PF DTM Primer/Flat Finish
3). 1 coat S-W Pro-Industrial Pro-Cryl Universal Primer B66-3100 Series
4). or approved equal

b. First Coat:
1). 1 coat Moore Ultra Spec HP DTM Acrylic Semi-Gloss (HP29)
2). 1 coat PPG Pitt Glaze WB1 Pre-Catalyzed Semi-Gloss Epoxy 16-510
3). 1 coat S-W Pro Industrial Acrylic Semi-Gloss, B66-650 Series
4). or approved equal

c. Second Coat:
1). 1 coat Moore Ultra Spec HP DTM Acrylic Semi-Gloss (HP29)
2). 1 coat PPG Pitt Glaze WB1 Pre-Catalyzed Semi-Gloss Epoxy 16-510
3). 1 coat S-W Pro Industrial Acrylic Semi-Gloss, B66-650 Series
4). or approved equal

d. Total DFT not less than: 4.0 mils

D. Interior Concrete Block

1. Semi-Gloss Finish/Vinyl Acrylic Latex over Filler

a. Block Filler:
1). 1 coat Moore Ultra Spec Masonry Int./Ext. High Build Block Filler (571)
2). 1 coat PPG Speedhide HI Fill Latex Block Filler 6-15XI
3). 1 coat S-W Pro Industrial Heavy-Duty Block Filler, B42-150
4). or approved equal

b. First Coat:
1). 1 coat Moore Ultra Spec 500 Interior Latex Gloss (N540)
2). 1 coat PPG Speedhide Zero Interior Semi-Gloss Latex, 6-4510XI Series
3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-2600 Series
4). or approved equal

c. Second Coat:
1). 1 coat Moore Ultra Spec 500 Interior Latex Gloss (N540)
2). 1 coat PPG Speedhide Zero Interior Semi-Gloss Latex, 6-4510XI Series
3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-2600 Series
4). or approved equal

d. Total DFT not less than: 10.7 mils

E. Interior Drywall

1. Flat Finish/Vinyl Acrylic Latex

a. Primer:
   1). 1 coat Moore Ultra Spec 500 Interior Latex Primer (N534)
   2). 1 coat PPG Speedhide Zero Interior Latex Primer 6-4900XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Primer, B28-2600
   4). or approved equal
b. First Coat:
   1). 1 coat Moore Ultra Spec 500 Latex Flat (N536)
   2). 1 coat PPG Speedhide Zero Interior Latex Flat 6-4110XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Flat, B30-12600 Series
   4). or approved equal
c. Second Coat:
   1). 1 coat Moore Ultra Spec 500 Latex Flat (N536)
   2). 1 coat PPG Speedhide Zero Interior Latex Flat 6-4110XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Flat, B30-12600 Series
   4). or approved equal
d. Total DFT not less than: 3.6 mils

2. Eggshell Finish/Vinyl Acrylic Latex

a. Primer:
   1). 1 coat Moore Ultra Spec 500 Interior Latex Primer (N534)
   2). 1 coat PPG Speedhide Zero Interior Latex Primer 6-4900XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Primer, B28-2600
   4). or approved equal
b. First Coat:
   1). 1 coat Moore Ultra Spec 500 Interior Latex Eggshell (N538)
   2). 1 coat PPG Speedhide Zero Interior Latex Eggshell 6-4310XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Eg-Shel, B20-1900 Series
   4). or approved equal
c. Second Coat:
   1). 1 coat Moore Ultra Spec 500 Interior Latex Eggshell (N538)
   2). 1 coat PPG Speedhide Zero Interior Latex Eggshell 6-4310XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Eg-Shel, B20-1900 Series
   4). or approved equal
d. Total DFT not less than: 3.8 mils

F. Interior Painted Wood

1. Satin Finish/Latex

a. Primer:
   1). 1 coat Moore Advance Waterborne Int. Alkyd Primer (790)
   2). 1 coat PPG Seal Grip Interior Primer/Finish 17-951
   3). 1 coat S-W Multi-Purpose Latex Primer/Sealer B51 Series
   4). or approved equal

b. First Coat:
   1). 1 coat Moore Advance Waterborne Int. Alkyd Satin (792)
   2). 1 coat PPG Speedhide Zero Interior Latex Satin, 6-4410XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Eg-Shel, B20-1900 Series
   4). or approved equal
c. Second Coat:
   1). 1 coat Moore Advance Waterborne Int. Alkyd Satin (792)
   2). 1 coat PPG Speedhide Zero Interior Latex Satin, 6-4410XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Eg-Shel, B20-1900 Series
   4). or approved equal
d. Total DFT not less than: 4.0 mils

2. Semi-Gloss Finish/Latex

a. Primer:
   1). 1 coat Moore Advance Waterborne Int. Alkyd Primer (790)
   2). 1 coat PPG Seal Grip Interior Primer/Finish 17-951
   3). 1 coat S-W Multi-Purpose Latex Primer/Sealer B51 Series
   4). or approved equal
b. First Coat:
   1). 1 coat Moore Advance Waterborne Int. Alkyd (793)
   2). 1 coat PPG Speedhide Zero Interior Semi-Gloss Latex, 6-4510XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-2600 Series
   4). or approved equal
c. Second Coat:
   1). 1 coat Moore Advance Waterborne Int. Alkyd (793)
   2). 1 coat PPG Speedhide Zero Interior Semi-Gloss Latex, 6-4510XI
   3). 1 coat S-W ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-2600 Series
   4). or approved equal
d. Total DFT not less than: 3.8 mils

G. Concrete Floor Sealer

1. Clear Sealer (SC-01): Water-based, low-VOC acrylic sealer

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1). "Everclear VOX" as manufactured by Euclid Chemical Company
   2). "V-Seal 101" as manufactured by V-Seal
   3). Penetrating sealer by Seal-Krete
   4). Or approved equal.

2. Opaque Sealer (SC-02): As selected by Commissioner.

H. Epoxy Wall Paint:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   1). Tnemec

2). Benjamin Moore
3). Sherwin Williams
4). Or approved equal

2. Drywall Surfaces

a. Primer: 1 coat 201 "Epoxoprime", 5-7 mils DFT
b. First Coat: 1 coat Series 280 "Tneme Glaze, 6-10 mils DFT
c. Second Coat: 1 coat 1080/1081 "Endura-Shield WB" 2-3 mils DFT

3. Masonry Surfaces

a. Primer: 1 coat 130 "Envirofill", 60-80 sq. ft./gallon
b. First Coat: 1 coat Series 280 "Tneme Glaze", 6-10 mils DFT
c. Second Coat: 1 coat "Endura-Shield WB" 2-3 mils DFT

2.5 PIPING AND MECHANICAL EQUIPMENT EXPOSED TO VIEW

A. Paint all exposed piping, conduits, ductwork and mechanical and electrical equipment. Use heat resisting paint when applied to heating lines and equipment. The Contractor is cautioned not to paint or otherwise disturb moving parts in the mechanical systems. Mask or otherwise protect all parts as required to prevent damage.

B. Exposed Uncovered Ductwork, Piping, Hangers and Equipment: Latex Enamel Undercoater and one (1) coat Acrylic Latex Flat.

C. Exposed Covered Piping, Duct Work and Equipment: Primer/Sealer and one (1) coat Acrylic Latex Flat.

D. Panel Boards, Grilles and Exposed Surfaces of Electrical Equipment: Latex Enamel Undercoater and two (2) coats Latex Semi-Gloss.

E. Equipment or Apparatus with Factory-Applied Paint: Refinish any damaged surfaces to match original finish. Do not paint over name plates and labels.

F. All surfaces of insulation and all other work to be painted shall be wiped or washed clean before any painting is started.

G. All conduit, boxes, distribution boxes, light and power panels, hangers, clamps, etc., are included where painting is required.

H. All items of Mechanical and Electrical trades which are furnished painted under their respective Contracts shall be carefully coordinated with the work of this Section so as to leave no doubt as to what items are scheduled to be painted under this Section.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL WORKMANSHIP REQUIREMENTS

A. Application may be by brush or roller. Spray application only upon acceptance from the Commissioner in writing.

B. Remove and protect hardware, accessories, device plates, lighting fixtures, and factory finished work, and similar items, or provide ample in place protection. Upon completion of each space, carefully replace all removed items by workmen skilled in the trades involved.

C. Remove electrical panel box covers and doors before painting walls. Paint separately and reinstall after all paint is dry.

D. All materials shall be applied under adequate illumination, evenly spread and flowed on smoothly to avoid runs, sags, holidays, brush marks, air bubbles and excessive roller stipple.

E. Coverage and hide shall be complete. When color, stain, dirt or undercoats show through final coat of paint, the surface shall be covered by additional coats until the paint film is of uniform finish, color, appearance and coverage.

F. Do not apply paint behind frameless mirrors that use mastic for adhering to wall surface.

3.3 PREPARATION OF SURFACES

A. Metal Surfaces

1. Weld Fluxes: Remove weld fluxes, splatters, and alkali contaminants from metal surfaces in an approved manner and leave surface ready to receive painting.

2. Bare Metal: Thoroughly clean off all foreign matter such as grease, rust, scale and dirt before priming coat is applied. Clean surfaces, where solder flux has been used, with benzene. Clean surfaces by flushing with mineral spirits. For aluminum surfaces, wipe down with an oil free solvent prior to application of any pre-treatment.

   a. Bare metal to receive high performance coating specified herein must be blast cleaned SSPC SP-6 prior to application if field applied primer; coordinate with steel trades furnishing ferrous metals to receive this coating to ensure that this cleaning method is followed.

3. Shop Primed Metal: Clean off foreign matter as specified for "Bare Metal." Prime bare, rusted, abraded and marred surfaces with approved primer after proper cleaning of surfaces. Sandpaper all rough surfaces smooth.

4. Galvanized Metal: Prepare surface as per the requirements of ASTM D 6386.

5. Metal Filler: Fill dents, cracks, hollow places, open joints and other irregularities in metal work to be painted with an approved metal filler suitable for the purpose and meeting the requirements of the related Section of work; after setting, sand to a smooth, hard finish, flush with adjoining surface.

B. Gypsum Drywall Surfaces: Scrape off all projections and splatters, spackles all holes or depressions, including taped and spackled joints, sand smooth. Conform to standards established in Section 09 29 00, Gypsum Drywall.

C. Wood Surfaces: Sand to remove all roughness, loose edges, slivers, or splinters and then brush to remove dust. Wash off grease or dirt with an approved cleaner. Fill all cracks, splits, nail holes, screw holes, and surface defects with putty after the priming coat has been applied. Putty shall be brought up flush with the surface and sanded smooth and touched-up with primer when dry.

D. Block Masonry Surfaces: Thoroughly clean off all grit, grease, dirt mortar drippings or splatters, and other foreign matter. Remove nibs or projections from masonry surfaces. Fill cracks, holes or voids with Portland cement grout, and bag surface so that it has approximately the same texture as the adjacent masonry surface.

E. Testing for Moisture Content: Contractor shall test all masonry and drywall surfaces for moisture content using a reliable electronic moisture meter. Contractor shall also test latex type fillers for moisture content before application of top coats of paint. Do not apply any paint or sealer to any surface or to latex type filler where the moisture content exceeds seven (7) percent as measured by the electronic moisture meter.

F. Touch-Up: Prime paint all patched portions in addition to all other specified coats.

3.4 MATERIALS PREPARATION

A. Mix and prepare painting materials in strict accordance with the manufacturer's directions.

B. Stir all materials before application to produce a mixture of uniform density, and as required during the application of the materials. Do not stir any film which may form on the surface into the material. Remove the film and, if necessary, strain the material before using.

C. Tint each undercoat a lighter shade to facilitate identification of each coat where multiple coats of the same material are to be applied. Tint undercoats to match the color of the finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

3.5 APPLICATION

A. General: Apply paint by brush or roller in accordance with the manufacturer's directions. Use brushes best suited for the type of material being applied. Use rollers of carpet, velvet back, or high pile sheep's wool as recommended by the paint manufacturer for material and texture required.

1. The number of coats and paint film thickness required is the same regardless of the application method. Do not apply succeeding coats until the previous coat has completely dried. Sand between each enamel or varnish coat application with fine sandpaper, or rub surfaces with pumice stone where required to produce an even, smooth surface in accordance with the coating manufacturer's directions.

2. Apply additional coats when undercoats, stains, or other conditions show through the final coat of paint, until the paint film is of uniform finish, color and appearance. Ensure that all surfaces, including edges, corners, crevices, welds, and exposed fasteners receive a film thickness equivalent to that of flat surfaces.

3. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Paint surfaces behind permanently fixed equipment or furniture with prime coat only.

   a. "Exposed surfaces" is defined as those areas visible when permanent or built-in fixtures, convector covers, covers for finned tube radiation, grilles, etc., are in place in areas scheduled to be painted.

4. Paint interior surfaces of ducts, where visible through registers or grilles, with a flat, non-specular black paint, before final installation of equipment.

5. Paint the back sides of access panels, removable or hinged covers to match the exposed surfaces.

6. Finish doors on tops, bottoms, and side edges the same as the faces, unless otherwise indicated.

7. Enamel finish applied to wood or metal shall be sanded with fine sandpaper and then cleaned between coats to produce an even surface.

8. Paste wood filler applied on open grained wood after beginning to flatten, shall be wiped across the grain of the wood, then with a circular motion, to secure a smooth, filled, clean surface with filler remaining in open grain only. After overnight dry, sand surface with the grain until smooth before applying specified coat.

B. Prime Coats: Re-coat primed and sealed walls and ceilings where there is evidence of suction spots or unsealed areas in first coat, to ensure a finish coat with no burn-through or other defects due to insufficient sealing.

C. Pigmented (Opaque) Finishes: Completely cover to provide an opaque, smooth surface of uniform finish, color, appearance and coverage.

D. Touching-Up of Factory Finishes: Unless otherwise specified or shown, materials with a factory finish shall not be painted at the project site. To touch up, the Contractor shall use the factory finished material manufacturer's recommended paint materials to repair abraded, chipped, or otherwise defective surfaces.

END OF SECTION 09 90 00

SECTION 10 14 00
Signage

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
   c. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"
   d. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

C. Related Sections:

1. 03 30 00 - Architectural Cast-In-Place Concrete
2. 03 45 00 - Architectural Pre-Cast Concrete
3. 08 45 19 - Polycarbonate Wall System

1.2 SUMMARY

A. Section includes:

1. Signage product & performance requirements
2. Interior panel sign requirements
3. Dimensional letter requirements
4. Field applied vinyl-character sign requirements

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's technical data and installation instructions for each type of signage required, including: construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of unit.

B. Samples: Submit samples of each type of signage showing finishes, colors, surface textures and qualities of manufacture and design of each sign component including graphics and method of attachment

C. Full-scale mockups: Submit full-scale mockup of cast concrete channel signage prior to final production (refer to part 2.8 for details), consisting of a 12" x 12" x 4" section of the larger cast concrete facade, with inset channels created with a form liner as specified in part 2.8. Refer to the signage drawings and elevations of the salt shed facade graphics for details on the sizing, depth, shape, and spacing of inset channels.

D. Shop Drawings: Submit shop drawings for fabrication and erection of signage. Include plans, elevations, and large scale details of sign wording and lettering layout. Show anchorage and accessory items. Furnish location template drawings for items supported or anchored to permanent construction. Include large-scale sections of typical members and other components. Show mounting methods, grounds, mounting heights, layout spacing, reinforcement, accessories, and installation details.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Installer Qualifications: For actual installation of signage, use only personnel who are experienced and thoroughly familiar with the manufacturer's recommended methods of installation.

C. Source Limitations: Obtain each sign type through one source, from a single manufacturer regulatory requirements: comply with ADA.

1.6 PROJECT CONDITIONS

A. Field Measurements: Where sizes of signs are determined by dimension of surfaces on which they are installed, verify dimensions by field measurement before fabrication and indicate measurements on shop drawings

PART II - PRODUCTS

2.1 MATERIALS

A. Basis-of-Design Product: Subject to compliance with requirements provide translucent vinyl film by 3M Crystal Glass Finishes Dusted Crystal Film or comparable product by one of the following:

1). Oracal
2). Avery Dennison
3). Or approved equal

2. Performance Requirements:

a. Usage: Interior/Exterior
b. Shading Coefficient: 0.93%
c. Visible light reflectance: 79%
d. Visible light transmittance: 85%
e. Solar heat transmittance: 76%

f. Solar heat absorbance: 17%

B. Basis-of-Design Product: Subject to compliance with requirements provide reflective vinyl film by 3M Scotchlite Reflective Graphic Film or comparable product by one of the following:

1). Oracal
2). Avery Dennison
3). Or approved equal

2. Performance Requirements:

a. 7-mil, flexible, enclosed lens, retroreflective;
b. Temperature range after application: -30 to +200°F (-34 to +93°C) (not for extended periods of time at the extremes);
c. Surface type: flat, with and without rivets, moderate curves
d. Substrate type: aluminum, Fiberglass Reinforced Plywood (FRP)
e. Paint Graphic orientation: Vertical only;
f. Application method: Dry;
g. Application temperature: air and substrate; Flat without rivets: 50–85°F (10–29°C);
h. Flat with rivets: 55–85°F (15–29°C)

C. Basis -of-Design Product: Subject to compliance with requirements, provide automotive-grade exterior paint by Matthews Satin MAP or comparable product by one of the following:

1). Sherwin Williams
2). RAL
3). Or approved equal

2. Performance Requirements:

a. Usage: Interior/Exterior
b. Volume Solids by Weight: 42–61%
c. Volume Solids (RTS) 33–47%

3. Theoretical Coverage (1mil @ 100% transfer efficiency) 426–520 sq. ft. /RTS gal.

4. Gloss: 15°-20° w/60° meter

D. Basis-of-Design Product: Subject to compliance with requirements, provide colored acrylic by Acrylite GP or comparable product by one of the following:

1). 3Form
2). Lucite
3). Or approved equal

2. Acrylic used for "DSNY" dimensional channels on salt shed facade. Refer to signage drawings and elevations for dimensions, mounting height, building faces, and alignment details.

3. Performance Requirements:

a. Color: frosted white (translucent)

b. Finish: matte
c. Mounting: Field-applied to polycarbonate salt shed facade with VHB adhesive, aligning to inset vertical channels in site-cast concrete base to complete "DSNY" letters. Channels comprised of fewest possible acrylic sections to reduce seams; all seams 90° butt-joints; fabricator to provide seam diagram prior to fabrication to verify alignment with all horizontal seams to architectural details of facade. At edge conditions where channels require mounting across vertical seam of two polycarbonate panels, channels to receive partially-backed VHB adhesive for attachment to only one polycarbonate panel with greater available surface area for adhesion; fabricator to verify durability of adhesive hold given the available surface area

E. Basis-of-Design Product: Subject to compliance with requirements provide a tinted lens LED traffic signal by EOI Group 8" LED Traffic Signal or comparable product by one of the following:

1). Econolite
2). GE Lighting
3). Or approved equal

2. Performance Requirements:

a. Operation Temperature Range: -40°C to + 74°C
b. Operation Voltage from 80 to 135 VAC RMS
c. Luminous intensity and color conforms with ITE VTCSH-LED
d. Dominant Wavelengths: Red (625), Green (500)

2.2 INTERIOR PANEL SIGNS

A. Typography

1. Type Style: Copy shall be a true, clean, accurate reproduction of typeface shown on drawings. All content as indicated in Sign Message Schedule. Letter spacing to comply with typical sign type drawings.

2. Arrows, Symbols and Logo Art: To be provided in style, sizes, colors and spacing as shown in drawings

3. Braille: Grade 2

4. Translations: Grade 2 Braille copy and any second language text, as noted in contract drawings on Sign Message Schedule, is responsibility of the sign manufacturer

B. Project Colors and Finishes

1. Typography: refer to typical sign type drawings and elevations

2. Colors: refer to typical sign type drawings and elevations

2.3 DIMENSIONAL LETTERS

A. Cutout Characters

1. Characters with uniform faces; square-cut, smooth, eased edges; precisely formed lines and profiles. Comply with requirements indicated for finish, style and size

2. Material, height, typeface, and finish: as indicated on typical sign type drawings and elevations

2.4 PRECAST / CIP CONCRETE CAST RELIEF CHANNELS

A. Parallel channels to be inset into vertical concrete architectural faces with inserted form-liners at the time of casting. Refer to signage drawings and elevations for channel dimensions, spacing, and depth.

B. Form liners to be produced from solid plastic, urethane, wood, or similarly-rigid material to create uniform, sharp reveals in concrete face. Liner to be prepared for clean removal following concrete cast, via tapered return faces and liner release solution as needed.

C. Production process -

1. Formwork panels to be delivered to fabricator's manufacturing facility.

2. Fabricator to mechanically attach form liner channels to individual formwork panels with screwed connections through back of formwork panels to prevent visible attachments on interior side of form and liner channels or movement of channels at the time of concrete casting.

3. All channels to be installed with precise alignment for consistency with design intent of vertical lines as specified in signage drawings and elevations.

4. Fabricator to create key diagram for assembly of formwork panels into correct arrangement for visual combination of channels into "DSNY" letters.

5. Fabricator to ship formwork panels with installed liner channels back to concrete contractor for shop and site assembly of precast and site cast forms, respectively.

6. Fabricator to supervise and approve re-assembly of lined formwork panels into correct arrangement, and supervise removal of lined formwork panels following concrete cast.

2.5 ADHESIVE VINYL CHARACTER LETTERING

1. Refer to typical sign type drawings and elevations for vinyl colors, finishes, application surfaces, style, and material sheet sizes.

2.6 PAINTED FENCE GRAPHIC

A. Refer to typical sign type drawings and elevations for graphic layout, paint colors, size, location, and fence structural layout.

B. Graphic to be masked onto front and return sides of metal fence slats, and painted in field by signage fabricator.

2.7 GROUND-INLAID METAL GRAPHICS

A. Refer to typical sign type drawings and ground diagram for graphic layout, material, size, and location.

B. Fabricator to manufacture metal channels as specified in signage drawing before providing channels to concrete contractor for installation in sidewalk surface.

C. Fabricator to site supervise installation of metal channels into correct arrangement as specified in signage drawings, for inlay installation with visible faces of channels flush with sidewalk surface.

2.8 FREESTANDING SIGNAGE TOTEMS

A. Refer to typical sign type drawings and elevations for graphic layouts, paint colors, materials, size, and locations of each signage totem.

B. Fabricator responsible for verifying size and depth requirements for below-grade concrete foundation for each signage totem; fabricator to install all foundations.

PART III – EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install units and components at the locations directed by the Commissioner, securely mounted with concealed theft-resistant fasteners. Attach to substrates in accordance with the manufacturer's instructions.

B. Install level, plumb, and at the proper height. Cooperate with other trades for installation of sign units to finish surfaces. Repair or replace damaged units as directed by the Commissioner.

C. Dimensional Letters and Numbers: Mount letters and numbers using standard fastening methods recommended by the manufacturer for letter form, type of mounting, wall construction, and condition of exposure indicated and in accordance with approved shop drawings. Provide heavy paper template to establish letter spacing and to locate holes for fasteners. No visible adhesive shall be exposed or seep around letters.

D. Field-Applied, Vinyl Character Signs: Clean and dry substrate. Align sign characters in final position before removing release liner. Remove release liner in stages, and apply and firmly press characters into final position. Press from the middle outward to obtain good bond without blisters or fishmouths. Remove carrier film without disturbing applied vinyl film.

END OF SECTION 10 14 00

SECTION 10 21 13
Toilet Compartments

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Floor-mounted, overhead-braced, toilet partitions.
2. Wall-mounted urinal screens.
3. Hardware and accessories.

B. Related Sections

1. Unit Masonry - Section 04 20 00.
2. Gypsum Drywall - Section 09 29 00.
3. Ceramic Tiling - Section 09 30 13.
4. Toilet Accessories - Section 10 28 13.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings

1. Include plans, elevations, sections, details, and attachment details.
2. Show locations of cutouts for compartment-mounted toilet accessories.
3. Show locations of centerlines of toilet fixtures.
4. Show locations of floor drains.
5. Show overhead support or bracing locations.

C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of toilet compartment material indicated.

1. Include samples of hardware and accessories involving material and color selection.

D. Samples for Verification: Actual sample of finished products for each type of toilet compartment indicated.

1. Size: 6" x 6", of same thickness indicated for Work.
2. Include each type of hardware and accessory.

PART II - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire Performance: Tested in accordance with, and pass the acceptance criteria of, NFPA 286.

B. Regulatory Requirements: Comply with applicable provisions in 2014 New York City Building Code for toilet compartments designated as accessible.

2.2 MANUFACTURERS

A. Toilet Compartments: Floor Anchored Overhead Braced Solid Plastic Partitions

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. ASI Global Partitions
2. Ampco
3. Hadrian
4. General Partitions
5. Or approved equal

C. Provide wall-mounted urinal screens of same material as toilet partitions.

2.3 COMPONENTS

A. Door, Panel, Screen, and Pilaster Construction: Solid, high-density polyethylene (HDPE) panel material, not less than 1 inch thick, seamless, with eased edges, no-sightline system, and with homogenous color and pattern throughout thickness of material.

1. Integral Hinges: Configure doors and pilasters to receive integral hinges.
2. Heat-Sink Strip: Manufacturer's standard continuous, extruded-aluminum or stainless steel strip fastened to exposed bottom edges of solid-plastic components to hinder malicious combustion.
3. Color and Pattern: See Finish Schedule.

B. Pilaster Shoes: Manufacturer's standard design; stainless steel.

C. Urinal-Screen Post: Manufacturer's standard post design of material matching the thickness and construction of pilasters; with shoe matching that on the pilaster.

D. Brackets (Fittings):

1. Full-Height (Continuous) Type: Manufacturer's standard design; clear-anodized extruded aluminum.

2.4 HARDWARE AND ACCESSORIES

A. Hardware and Accessories: Manufacturer's standard design, heavy-duty operating hardware and accessories.

1. Hinges: Manufacturer's minimum 0.062-inch- thick stainless continuous, cam type that swings to a closed or partially open position, allowing emergency access by lifting door. Mount with through bolts.
2. Latch and Keeper: Manufacturer's heavy-duty, surface-mounted, cast-stainless steel latch unit, designed to resist damage due to slamming, with combination rubber-faced door strike and keeper, and with provision for emergency access. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible. Mount with through bolts.
3. Coat Hook: Manufacturer's heavy-duty combination cast-stainless steel hook and rubber-tipped bumper, sized to prevent inswinging door from hitting compartment-mounted accessories. Mount with through bolts.
4. Door Bumper: Manufacturer's heavy-duty, rubber-tipped, cast-stainless steel bumper at outswinging doors. Mount with through bolts.
5. Door Pull: Manufacturer's heavy-duty, cast-stainless steel pull at outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible. Mount with through bolts.

B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

C. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized steel, or other rust-resistant, protective-coated steel compatible with related materials.

2.5 FABRICATION

A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories where required for attachment of toilet accessories.

B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.

C. Urinal-Screen Posts: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at bottoms of posts. Provide shoes at posts to conceal anchorage.

D. Door Size and Swings: Unless otherwise indicated, provide 24-inch-wide, inswinging doors for standard toilet compartments and 36-inch-wide, outswinging doors with a minimum 32-inch-wide, clear opening for compartments designated as accessible.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

1. Maximum Clearances:

   a. Pilasters and Panels: 1/2 inch.
   b. Panels and Walls: 1 inch.

2. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.

   a. Locate bracket fasteners, so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels and adjust, so tops of doors are parallel with overhead brace when doors are in closed position.

C. Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb, rigid, and secured to resist lateral impact.

3.3 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on inswinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on outswinging doors to return doors to fully closed position.

END OF SECTION 10 21 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 10 21 16
Shower Compartments

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Floor-mounted, overhead-braced, shower compartments.

2. Shower curtains and curtain hooks.

B. Related Sections

1. Plumbing Fixtures - Section 22 40 00, for shower receptors.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings

1. Include plans, elevations, sections, details, and attachment details.

2. Show locations of cutouts for compartment-mounted accessories.

3. Show locations of centerlines of drains.

4. Show overhead support or bracing locations.

C. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of toilet compartment material indicated.

1. Include samples of hardware and accessories involving material and color selection.

D. Samples for Verification: Actual sample of finished products for each type of toilet compartment indicated.

1. Size: 6" x 6", of same thickness indicated for Work.

2. Include each type of hardware and accessory.

3. Curtain Fabric: 12" x 12" swatch or larger as required to show complete pattern repeat, from dye lot used for the Work, with specified treatments applied. Mark top and face of material.

PART II - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire Performance: Tested in accordance with, and pass the acceptance criteria of, NFPA 286.

B. Regulatory Requirements: Comply with applicable provisions in 2014 New York City Building Code for shower and dressing compartments designated as accessible.

2.2 MANUFACTURERS

A. Shower Compartments: Floor Anchored Overhead Braced Solid Plastic Partitions

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. ASI Global Partitions
   b. Ampco
   c. Hadrian
   d. General Partitions
   e. Or approved equal

B. Provide partitions with integral seating and accessories as follows:

1. Shower curtains shall be constructed from vinyl and shall be 42" wide by 72" high.

2. Shower hooks shall be aluminum with a self-lubricating derlin slide.

2.3 COMPONENTS

A. Panel and Pilaster Construction: Solid, high-density polyethylene (HDPE) panel material, not less than 1 inch thick, seamless, with eased edges, no-sightline system, and with homogenous color and pattern throughout thickness of material.

1. Integral Hinges: Configure doors and pilasters to receive integral hinges.

2. Heat-Sink Strip: Manufacturer's standard continuous, extruded-aluminum or stainless steel strip fastened to exposed bottom edges of solid-plastic components to hinder malicious combustion.

3. Color and Pattern: See Finish Schedule.

B. Door Construction: Match panels.

C. Pilaster Shoes: Manufacturer's standard design; stainless steel.

D. Brackets (Fittings):

1. Full-Height (Continuous) Type: Manufacturer's standard design; clear-anodized extruded aluminum.

2.4 ACCESSORIES

A. Door Hardware and Accessories: Manufacturer's standard design, heavy-duty operating hardware and accessories.

1. Material: Stainless steel.

2. Hinges: Manufacturer's standard, continuous, cam type that swings to a closed or partially open position, allowing emergency access by lifting door.

3. Latch and Keeper: Manufacturer's standard, surface-mounted latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

4. Clothing Hooks: Manufacturer's standard clothing hooks in each dressing compartment; include one combination hook and rubber-tipped bumper at inswinging doors, sized to prevent door from hitting wall panel or compartment-mounted accessories.

5. Door Bumper: Manufacturer's standard, rubber-tipped bumper at outswinging doors.

6. Door Pull: Manufacturer's standard unit at outswinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible.

B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

C. Head Rail with Hooks: Manufacturer's standard, continuous, extruded-aluminum head rail or cap with curtain hooks running in concealed track; with antigrip profile; in manufacturer's standard finish.

D. Curtain: Flame-resistant, polyester-reinforced vinyl fabric that is stain resistant, self-sanitizing, antistatic, and antimicrobial; launderable to a temperature of not less than 90 deg F; color and pattern as selected by the Commissioner.

E. Seating: Manufacturer's standard panel-mounted benches.

1. Material: Solid phenolic.

2. Operation: Folding.

3. Color: See Finish Schedule.

F. Anchorages and Fasteners: Manufacturer's standard, exposed fasteners of stainless steel, chrome-plated steel, or solid brass, finished to match the items they are securing; with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless steel, hot-dip galvanized steel, or other rust-resistant, protective-coated steel.

2.5 FABRICATION

A. Overhead-Braced Compartments: Manufacturer's standard, corrosion-resistant supports, leveling method, and anchors at pilasters and walls to suit floor and wall conditions. Provide shoes at pilasters to conceal supports and leveling method.

B. Door Size and Swings: Unless otherwise indicated, provide 24-inch-wide, inswinging doors for standard toilet compartments and 36-inch-wide, outswinging doors with a minimum 32-inch-wide, clear opening for compartments designated as accessible.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

1. Maximum Clearances:

   a. Pilasters and Panels: 1/2 inch.
   b. Panels and Walls: 1 inch.

2. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.

   a. Locate bracket fasteners, so holes for wall anchors occur in masonry or tile joints.
   b. Align brackets at pilasters with brackets at walls.

B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels and adjust, so tops of doors are parallel with overhead brace when doors are in closed position.

C. Curtains: Install curtains to specified length and verify that they hang vertically without stress points or diagonal folds.

3.3 ADJUSTING

A. Curtain Adjustment: After hanging curtains, test and adjust each track or rod to produce unencumbered, smooth operation. Steam and dress down curtains as required to produce crease- and wrinkle-free installation. Remove and replace curtains that are stained or soiled or that have stress points or diagonal folds.

B. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

SECTION 10 26 00
Corner Guards

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 74 19 "Construction Waste Management and Disposal"
c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes corner guards.

B. Related Sections

1. Gypsum Drywall - Section 09 29 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: For each type of product.

B. Samples: 12" long.

PART II - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.

2. Smoke-Developed Index: 450 or less.

2.2 CORNER GUARDS

A. Surface-Mounted, Stainless Steel Corner Guards: Fabricated as one piece with formed edges; fabricated with 90-degree turn to match wall condition, 4 feet, unless otherwise indicated.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Pawling Corp., 15 Charles Colman Blvd., Pawling, New York 12564-1188.
   b. American Floor Products Co. Inc., One AFCO Center, 7300 Westmore Road, P.O. Box 1467, Rockville, MD 20850.
   c. Model WCGT-1/8 (3-1/2 inch legs) by Wilkinson Co. Inc., 1530 Commerce Drive, Stow, Ohio 44224.
   d. K.J. Miller Corporation, 22711 County Road 14 East, Elkhart, IN 46516
   e. Or approved equal

2. Wing Size: Nominal 3/4" by 3/4 inch.

3. Thickness: Minimum 16 gauge

4. Fasteners:

   a. Stainless steel tamper resistant screws.
   b. Screw Anchors, tubula, lead coated, braided fiber.

2.3 MATERIALS

A. Stainless Steel

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install corner guards according to manufacturer's written instructions, level, plumb, and true to line without distortions.

END OF SECTION 10 26 00

SECTION 10 28 13
Toilet Accessories

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes toilet accessories.

B. Related Sections

1. Unit Masonry - Section 04 20 00.
2. Gypsum Drywall - Section 09 29 00.
3. Ceramic Tiling - Section 09 30 13.
4. Toilet Partitions - Section 10 21 13.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Inserts and Anchorages: Furnish inserts and anchoring devices which must be set in concrete or built into masonry.

C. Accessory Locations: Coordinate accessory locations with other work to avoid interference and to ensure proper operation and servicing of accessory units. Accessories shall be installed at heights in compliance with 2014 New York City Building Code.

D. Products: Unless otherwise noted, provide products of same manufacturer for each type of unit and for units exposed in same areas.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Submit manufacturer's technical data, catalog cuts and installation instructions for each toilet accessory.

B. Setting Drawings: Provide setting drawings, templates, instructions, and directions for installation of anchorage devices in other work

C. Submit schedule of accessories indicating quantity and location of each item.

PART II - PRODUCTS

2.1 MATERIALS

A. Stainless Steel: AISI Type 302/304, with polished No. 4 finish, 22 gauge minimum, unless otherwise indicated.

B. Brass: ASTM B 19 flat products; ASTM B 16, rods, shapes, forgings, and flat products with finished edges; or ASTM B 30, castings.

C. Galvanized Steel Sheet: ASTM A 653, G60.

D. Chromium Plating: Nickel and chromium electro-deposited on base metal, ASTM B 456, Type SC 2.

E. Mirrors: ASTM C 1503, mirror glazing quality, clear glass mirrors, nominal 1/4" thick.

2.2 FASTENING DEVICES

A. Exposed Fasteners: Theft-proof type, chrome plated, or stainless steel; match finishes on which they are being used.

B. Concealed Fasteners: Galvanized (ASTM A 123) or cadmium plated.

C. No exposed fastening devices permitted on exposed frames.

D. For metal stud drywall partitions, provide ten (10) gauge galvanized sheet concealed anchor plates for securing surface mounted accessories.

2.3 FABRICATION

A. General: Stamped names or labels on exposed faces of toilet accessory units are not permitted. Unobtrusive labels on surfaces not exposed to view are acceptable. Where locks are required for a particular type of toilet accessory, provide same keying throughout project. Furnish two keys for each lock.

B. Surface-Mounted Toilet Accessories, General: Fabricate units with tight seams and joints, exposed edges rolled. Hang doors or access panels with continuous stainless steel piano hinge. Provide concealed anchorage.

C. Recessed Toilet Accessories, General: Fabricate units of all welded construction, without mitered corners. Hang doors of access panels with full-length stainless steel piano hinge. Provide anchorage that is fully concealed when unit is closed.

2.4 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following
1. Bobrick Washroom Equipment Co.
2. American Specialities, Inc. (ASI)
3. Bradley Corp.
4. Or approved equal

B. Products: See Toilet Accessory Schedule.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

A. Accessories that are to be partition mounted shall be closely coordinated with other trades, so that the necessary reinforcing is provided to receive the accessories.

B. Furnish templates and setting drawings and anchor plates required for the proper installation of the accessories at gypsum drywall and masonry partitions. Coordinate the work to ensure that base plates and anchoring frames are in the proper position to secure the accessories.

C. Verify by measurements taken at the job site those dimensions affecting the work. Bring field dimensions that are at variance with those on the approved shop drawings to the attention of the Commissioner. Obtain decision regarding corrective measures before the start of fabrication of items affected.

3.3 INSTALLATION

A. Install accessories at locations indicated on the drawings, using skilled mechanics, in a plumb, level and secure manner.

B. Concealed anchor assemblies for gypsum drywall partitions shall be securely anchored to metal studs to accommodate accessories. Assemblies shall consist of plates and/or angles tack welded to studs.

C. Secure accessories in place, at their designated locations by means of theft-proof concealed set screws, so as to render removing of the accessory with a screwdriver impossible.

D. Unless otherwise indicated, accessories shall conform to heights from the finished floor as shown on the drawings. Where locations are not indicated, such locations shall be as directed by the Commissioner.

E. Installed accessories shall operate quietly and smoothly for use intended. Doors and operating hardware shall function without binding or unnecessary friction. Dispenser type accessories shall be keyed alike. Prior to final acceptance, master key and one duplicate key shall be given to the Commissioner.

F. The Commissioner shall be the sole judge of workmanship. Workmanship shall be of the highest quality. Open joints, weld marks, poor connections, etc., will not be permitted. The Commissioner has the right to reject any accessory if he feels the workmanship is below the standards of this project.

G. Grab bars shall be installed so that they can support a three hundred (300) lb. load for five minutes per ASTM F 446.

END OF SECTION 10 28 13

SECTION 10 44 16
Fire Extinguisher Cabinets

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes fire extinguisher cabinets.

B. Related Sections

1. Gypsum Drywall - Section 09 29 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Submit manufacturer's technical data and installation instructions for fire extinguisher cabinets. Include roughing-in dimensions, and details showing mounting methods, relationships to surrounding construction, door hardware, cabinet type and materials, trim style and door construction, style and materials. Where color selections by the Commissioner are required, include color charts showing full range of manufacturer's standard colors and designs available.

B. Samples: Submit samples, 6" square, of each required finish. Prepare samples on metal of same gauge as metal to be used in the work.

PART II - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:

1. Larsen's Mfg. Co.
2. J. L. Industries
3. Potter Roemer
4. Allenco
5. Or approved equal

2.2 CABINETS

A. Type and Style: Fire extinguisher cabinets shall be Type 304 stainless steel with No. 4 finish, surface mounted, semi-recessed and recessed as indicated, with plexiglass panel. Recessed units shall be sized to fit within the partition or wall depth. Provide fire rated cabinets within fire rated partitions.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install items included in this Section in locations indicated and at heights to comply with 2014 New York City Building Code.

1. Prepare recesses in walls for fire extinguisher cabinets as required by type and size of cabinet and style of trim and to comply with manufacturer's instructions.

2. Securely fasten fire extinguisher cabinets to structure, square and plumb, to comply with manufacturer's instructions.

3.3 IDENTIFICATION

A. Identify fire extinguisher cabinet with lettering spelling "FIRE EXTINGUISHER" painted on door by silk-screen process. Provide lettering on door as selected by Commissioner from manufacturer's standard letter sizes, styles, colors and layouts.

END OF SECTION 10 44 16

SECTION 10 51 13
Metal Lockers

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Documents, (2) the Specifications, (3) the General Conditions, (4) the Addenda, and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Steel wardrobe lockers.

2. Locker room benches.

3. Trim, closures, anchors and accessories.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Qualifications of Installers: For installation of lockers, use only personnel who are experienced in the skills involved and who are completely familiar with the manufacturer's recommended methods of installation.

C. Uniformity: Provide each locker as produced by a single manufacturer, including necessary mounting accessories, fittings and fastenings.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Shop Drawings: Before any materials of this Section are delivered to the job site, submit complete shop drawings, technical data and installation instructions to the Commissioner. Shop drawing must show method of installation, fillers, trim and accessories. Include locker sequencing information.

B. Samples: Submit 6" x 6" samples of manufacturer's standard finish.

PART II - PRODUCTS

2.1 METAL LOCKERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Republic Storage Systems, LLC
   2. ASI Storage Solutions
   3. Corcraft
   4. Penco Products
   5. Or approved equal

B. Basic locker shall be 36" wide by 18" deep double door with center vertical partition to segregate wet from dry, with two doors and hat shelf. Locker shall be minimum 72" high, mounted to floor with recessed cove base.

   1. Lockers on West Side of Building: 15" wide by 18" deep by 72" high.

   2. Lockers on East Side of Building: 18" wide by 18" deep by 72" high.

C. Lockers shall be air evacuated with ventilation to rear plenum connected to through-floor exhaust.

D. The outside top of the lockers shall preclude storage on top of the lockers; provide continuous sloped tops unless otherwise indicated.

2.2 MATERIALS

A. Sheet Steel: Mild cold-rolled and leveled steel, free from buckle, scale, and surface imperfections.

2.3 FABRICATION, GENERAL

A. Construction: Fabricate lockers square, rigid, and without warp, with metal faces flat and free of dents or distortion. Make all exposed metal edges safe to touch. Weld or rivet connections; bolted connections not permitted. Grind exposed welds flush. Do not expose rivet heads on fronts of locker doors or frames.

B. Finishing: Chemically pretreat metal with degreasing and phosphatizing process. Apply baked-on enamel finish to all surfaces, exposed and concealed, except plates and non-ferrous metal.

   1. Color: See Finish Schedule. Concealed parts may be manufacturer's standard neutral color.

C. Door Frames: Frames shall be 16 gauge formed in a channel shape. Vertical members shall have additional flange to provide a continuous door strike. Cross frame members shall also be 16 gauge channel shaped, including intermediate cross frames on double and triple tier lockers.

D. Doors: Doors shall be 16 gauge, with louvers for ventilation; channel shaped on both the lock and hinge side, with angle formations across the top and bottom.

E. Body: Bottoms shall be 16 gauge. Tops, sides, backs, and shelves shall be 24 gauge. Bolt spacing shall not exceed 9" o.c.

F. Hinges: Hinges shall be full length 16 gauge continuous piano type riveted to both door and frame.

G. Handles: Handles shall be one-piece 20 gauge deep drawn stainless steel cup designed to accommodate locks.

H. Latching: Lifting trigger shall be 14 gauge steel, attached to the latching channel. The trigger shall have a padlock eye for use with 9/32" diameter padlock shackle. Doors to have latch clip engaging frame at three points on doors over 42" high and two points on all other doors. Locking device to be positive automatic type, whereby locker door may be locked when open, then closed without unlocking. A rubber silencer shall be firmly secured to the frame at each latch hook.

2.4 LOCKER ACCESSORIES

A. Equipment: Furnish each locker with hat shelf, hang rod, and not less than 2 single-prong wall hooks.

B. Number Plates: Manufacturer's standard etched, embossed, or stamped, non-ferrous metal number plates with numerals not less than 3/8" high. Number lockers in sequence as directed by Commissioner. Attach plates to each locker door, near top, centered, with at least 2 fasteners of same finish as number plate.

C. Continuous Sloping Tops: Not less than 20 ga. sheet steel, approximately 25 degree pitch, in lengths as long as practicable but not less than 4 lockers. Provide closures at ends. Finish to match lockers, unless otherwise indicated.

D. Filler Panels: Provide filler panels where required of not less than 16 ga. steel sheet, factory-fabricated and finished to match locker units.

2.5 LOCKER ROOM BENCHES

A. Manufacturer's standard units with 1-1/4" thick (minimum) hardwood top with rounded corners and edges, in sizes as shown on drawings. Overall assembly shall be 17-1/2" high. Provide steel pedestal supports not more than 6'-0" o.c., with provisions for concealed fastening to floor and securing to bench. Provide all anchorages. Apply manufacturer's standard clear lacquer-sealer coating to bench tops and baked enamel finish to pedestals.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install metal lockers at locations shown in accordance with manufacturer's instructions for plumb, level, rigid and flush installation.

B. Space fastenings 36" o.c. and apply through back-up reinforcing plates where necessary to avoid metal distortion; conceal all fasteners.

C. Install trim, sloping top units, and metal filler panels using concealed fasteners to provide flush, hairline joints against adjacent surfaces.

D. Install benches to comply with manufacturer's instructions in such a manner that they resist a 200 lb. load applied laterally to benches.

3.3 ADJUSTING

A. Adjust doors and latches to operate easily without binding. Verify that integral locking devices are operating properly.

END OF SECTION 10 51 13

SECTION 10 75 00
Flagpoles

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes flagpoles.

B. Related Sections

1. Cast-in-Place Concrete - Section 03 30 00.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Manufacturing Standards: Provide each flagpole as a complete unit produced by a single manufacturer, including fittings, accessories, bases and anchorage devices.

C. Design Criteria: Provide flagpoles and installations constructed to withstand a 90 mph wind velocity minimum when flying flag of appropriate size. Use heavier pipe sizes if required for flagpole type and height shown.

D. Pole Construction: Construct pole and ship to site in one piece, if possible. If more that one piece is necessary, provide snug-fitting, precision joints with self-aligning, internal splicing sleeve arrangement for weather-tight, hairline field joints.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Product Data: Submit manufacturer's technical data and installation instructions for each type of flagpole required.

B. Shop Drawings: Submit shop drawings of flagpoles and bases, showing general layout, jointing and complete anchoring and supporting systems.

C. Samples: Submit samples of each finished metal for flagpoles, and accessories as may be required.

PART II - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aabec Pole Div., Morgan-Francis Co.
2. Acme Flagpole, Div., Lingo Inc.
3. American Flagpole, Div. of Kearney-National
4. Concord Industries, Inc.
5. Or approved equal

2.2 FLAGPOLE MATERIALS

A. Provide cone tapered aluminum flagpoles fabricated from seamless extruded tubing complying with ASTM B241, alloy 6063-T6, having a minimum wall thickness of 3/16" (0.1875"), tensile strength not less than 35,000 psi and a yield of 30,000 psi. Heat-treat and age-harden flagpoles after fabrication.

B. Flagpole units shall have internal halyard system conforming to the following:

1. 35' exposed high, 7" butt, 4" top diameter, in wall thickness of .188, ground set.

2. Finish: Class 1 finish compying with AA M32-C22-A41 (Clear Anodized)

3. Ball: 4" diameter, seamless, aluminum, 14 ga., to match pole finish.

4. Truck: Extra heavy, non-fouling, ball-bearing, revolving truck, heavy duty; finish to match pole finish.

5. Winch Assembly: For raising and lowering flag, heavy duty winch assembly shall have bronze drum and hardened steel gear. Mount winch on galvanized steel frame within flagpole. Shaft of winch shall finish flush with outside face of pole through 1" (max.) diameter hole. Provide aluminum plug for winch shaft hole; plug to screw in, to finish flush with pole and to have same finish as pole. Provide removable winch handle. Provide access door in flagpole opposite winch. Access door to finish flush with pole, have same finish as pole, have concealed stainless steel hinges and lock, have stainless steel cylinder lock flush with door, and have hairline joints between door and pole.

6. Halyard: Provide one concealed, continuous 3/16" min. diameter stainless steel aircraft type cable. Halyard shall run concealed within pole from winch to top of pole, and then exposed over sheave and extend down outside of pole for sufficient length to properly fit flag. Flag end of halyard shall have two white neoprene-covered bronze swivel snaps, spaced for flag size. At bottom of flag end of halyard, provide rubber coated weight and Teflon-coated stainless steel rope sling around pole.

7. Foundation Tube: Provide 16 ga. min. galvanized corrugated steel tube, or 12 ga. rolled steel tube, sized to suit flagpole and installation. Furnish complete with welded steel bottom base and support plate, lightning ground spike, and steel centering wedges, all welded construction. Provide loose

hardwood wedges at top for plumbing pole after erection. Galvanize steel parts after assembly, including foundation tube.

8. Cast-Metal Shoe Base: Made from aluminum with same finish and color as flagpoles for anchor-bolt mounting.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Excavation: Excavate for foundation concrete to neat clean lines in undisturbed soil. Provide forms where required due to unstable soil conditions. Remove wood, loose soil, rubbish and other foreign matter from excavation, and moisten earth before replacing concrete.

B. Concrete: Provide concrete composed of Portland cement, coarse aggregate, fine aggregate and water, mixed in proportions to attain 28-day compressive strength of not less than 3000 psi. Use not less than 5 sacks of Portland cement, complying with ASTM C150, per cu. yd. of wet concrete.

1. Place concrete immediately after mixing. Perform chuting to avoid segregation of mix. Compact concrete in place by use of vibrators to consolidate.

C. Flagpole Installation: Install flagpoles plumb and in compliance with final shop drawings and manufacturer's instructions.

1. Provide positive lightning ground for each flagpole installation.

2. Paint portions of ground-set flagpole below grade with heavy coat of bituminous paint.

3. At time of erection, remove all protective wrappings.

END OF SECTION 10 75 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 11 11 36
Vehicle Charging Equipment

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes

1. Vehicle charging stations.
2. Cord and cord management kit.

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Use adequate numbers of skilled workmen who are experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

1.4 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. Shop Drawings: Provide shop drawings in sufficient detail to show fabrication, installation, anchorage, and interface of the work of this Section with the work of adjacent trades.

C. Product Data

1. Materials list of items proposed to be provided under this Section.
2. Manufacturer's specifications and other data needed to prove compliance with the specified requirements.
3. Manufacturer's recommended installation procedures.

PART II - PRODUCTS

2.1 MANUFACTURERS

A. Vehicle Charging Equipment: Provide units with two stations, dual pedestal mount and 18' cord and cord management system.

1. Quantity: As per Drawings

B. Basis-of-Design Product: Subject to compliance with requirements, provide ChargePoint, Inc.; CPF25-L18-CMK6-PD-Dual or comparable product by one of the following:

1. ChargePoint, Inc.
2. Clipper Creek
3. Leviton
4. Or approved equal.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Coordinate as required with other trades to ensure proper and adequate provision in the work of those trades for interface with the work of this Section.

B. Install the work of this Section in strict accordance with the original design, the approved Shop Drawings, the New York City Building Code, and the manufacturer's recommended installation procedures.

END OF SECTION 11 11 36

SECTION 11 24 00
Suspended Maintenance and Fall Protection

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. The supply and installation of tie-back anchors for building maintenance.

2. Tie-back anchors secured horizontally through roofing to underlying structure and vertically to exposed structural steel members.

B. Related Sections

1. Thermoplastic Membrane Roofing – Section 07 20 00.

2. Façade Sheet Metal Flashing - Section 07 62 01.

3. Roof Specialties and Accessories - Section 07 71 00

4. Exterior Joint Sealants - Section 07 92 01.

1.3 SCOPE OF WORK

A. Provide a tie-back system as shown on the drawings.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Submit shop drawings showing complete layout and configuration of system, equipment locations and all other components and accessories. Shop drawings shall be reviewed by the Commissioner complete with calculations. The shop drawing shall include installation and rigging instruction and all necessary restrictive and non-restrictive working usage notes and general safety notes.

B. Provide a safety inspection log book for yearly inspections.

C. Clearly indicate design and fabrication details, hardware and installation details.

D. Include all necessary restrictive and non-restrictive working usage notes and general safety notes.

E. Contractor to engage a Structural Engineer licensed in the State of New York to prepare calculations and drawings. Calculations and drawings shall be signed and sealed by this Engineer.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.7 STANDARDS & CODES

A. Federal OSHA standard 1910.66, subpart D (Walking and Working Surfaces)

B. Appendix C to 1910.66 Personal Fall Arrest Systems.

C. Department of Labor Memorandum to Regional Administrators for Descent control Devices, by Patricia K. Clark, directorate of Compliance Programs.

D. Comply with the requirements of the AISC publication: "Load and Resistance Factor Design Specification for Structural Steel Buildings", the AISI publication: "Specification for Design of Cold-Formed Steel Structural Members (1986 &1989 Addendum)" and the Aluminum Association's publication: "Specification for Aluminum Structures".

E. Welding shall comply with "AWS D1.1 "Structural Welding Code-Steel" and shall be performed by welders qualified to work in the state which the project is being completed.

Comply with the Aluminum Association publication No.30: "Specification for Aluminum Structures", and with AWS D1.2-90 "Structural Welding Code- Aluminum".

PART II - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Anchoring system shall be capable of resisting without fracture or pull out with a force of 5,000 lbs. applied in any direction

B. Safety anchoring eye shall be make of not less than 3/4 inch diameter material or equivalent with an eye opening not less than 1.5 inch diameter or equivalent. The anchor eye shall be made of stainless steel or other corrosion resistant material. Bolts and connecting hardware shall be made of stainless steel or hot dipped galvanized material.

C. All steel bases shall be hot dipped galvanized mild steel.

D. Deformed threads of all safety anchor studs behind nuts after nuts have been tightened.

E. Multiple cast in place anchors studs shall be made of hot dipped galvanized mild steel. Single insert

anchor stud securement bolt must be made of stainless steel.

F. Drilled concrete anchors shall only be adhesive epoxy anchors manufactured by U- pat or Hilti. Mechanical fasteners should not be used. If adhesive securement is considered 100% of the inserts are to be tested 5,000 lbs.

G. Weldment roof anchors must be attached to steel that is large enough to accept a 4 inch diameter tube complete with 100% weld. The structure or a plate must be provided to accept this anchor and must be a minimum 5 inches wide.

H. All wall anchors must be properly flashed into the surface to which they are applied.

I. All roof anchors must be properly roofed in. All stand-alone metal roof anchors must be directly flashed into the roofing in a manner compatibly with the existing roofing. Flashings for metal roof anchors are to be spun aluminum and seamless. Top of anchor to be sealed with mastic tape and heat shrink rubberized membrane. Rubber gaskets, worm gears, grommets and pitch pans must not be used.

2.2 MANUFACTURERS

A. Subject to compliance with requirements, provide products by one of the following:
   1). HighRise Systems, Inc.
   2). Pro-Bel Enterprises Limited
   3). Tractel Group
   4). Spider Engineered Systems Group, a Division of SafeWorks, LLC
   5). Or approved equal

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine job conditions before commencement of work. Commencement of work will denote acceptance of existing conditions unless the client has been notified in writing of unacceptable conditions prior to commencement.

B. Faults occurring in the work completed under this Section of the Specification due to the acceptance of incorrect conditions of existing work will be rectified at no cost to the owner.

3.3 INSTALLATION

A. Install life line anchors and davit bases and arms, according to shop drawing(s), the Specifications, the manufacturer's instructions.

B. Provide all items to be installed. Provide handling, installation instructions, anchorage information, roughing-in dimensions, templates and service requirements for completion of the work of this Section.

Assist or supervise, or both, the setting of anchorage devices when handled by others. Provide advice and assistance with respect to construction of other work related to products specified in this section.

C. Install all work true, level, tightly fitted, and flush to adjacent surfaces where required for installation.

D. Provide anchorage and mounting devices required for the installation of each product.

3.4 ADJUSTMENT AND FINAL INSPECTION

A. Verify that all work done under this section has been completed correctly and that all installed products function properly. Adjust items where necessary to ensure satisfactory operation.

B. Complete the inspection log book to certify system for use.

END OF SECTION 11 24 00

SECTION 11 91 01
Wooden Pallets

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 74 19 "Construction Waste Management and Disposal"
c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes:

1. Furnishing and delivery of wood pallets for:

a. New Building (A1)
b. Existing Building (A2)
c. Site Parking

B. Related Sections:

1. Division 05 Metals for attachment plates and other preparations for fastening.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's specifications and product data for wood pallets.

B. Shop Drawings: Submit shop drawings indicating pallet class, category, type, style, species of wood, grade of engineered wood components, and fasteners used. Include dimensioned plans, elevations and large-scale details.

C. Samples: Provide one full sized sample of complete pallet assembly to verify compatibility with metal snow plow racks.

1. Obtain Resident Engineer's approval of the sample before start of Work.

2. Approved sample may become part of the complete Work.

Wood Pallet Quality Assurance Labels and Certificates: NWPCA Quality Assurance Program, Specified Pallets, Engineered for Quality labels.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART II - PRODUCTS

2.1 WOODEN PALLETS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1). Acme Pallet Company, New York, NY
   2). Berry Industrial Group, Inc., Nyack, NY
   3). Cutler Brothers Box & Lumber Co., Fairview, NJ
   4). Delisa Pallet Corporation, Newark, NJ
   5). General Pallet LLC, Flemington, NJ
   6). McNeilly Wood Products, Inc. Campbell Hall, NY
   7). Pallets Unlimited, Inc., New Hyde Park, NY
   8). Or approved equal

B. Pallets for the storage of snow plow blades shall meet the following requirements:
   1). Class: Stringer Pallet.
   2). Category: "M" Multiple use.
   3). Type: Partial four-way entry.
   4). Style: Double Deck Face, flush, non-reversible.
   5). Load Capacity: 1800 pounds.
   6). Materials: Mixed hardwoods. No softwoods will be permitted.
   7). Dimensions: As indicated on Drawings. Top and bottom panels shall be a minimum of 3/4-inch thick plywood rated "Exposure 1." Interior depth shall be 4-inches.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 DELIVERY

A. Deliver pallets to job site at a location designated by the Resident Engineer.

B. Pallets shall be delivered no sooner than the date of Substantial Completion and no later than the completion of the final punch list.

END OF SECTION 10 75 00

SECTION 12 48 23
Entrance Floor Grids

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures"
b. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"

1.2 SUMMARY

A. Section includes entrance floor grids.

B. Related Sections

1. Cast-in-Place Concrete - Section 03 30 00.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's specifications and installation instructions for entrance floor grid. Include methods of installation for each type of substrate.

B. Samples: Submit samples for each type and finish of exposed entrance floor grid, frames and accessories required. Provide 12" square samples of entrance floor grid materials and 12" lengths of frame members.

C. Shop Drawings: Submit shop drawings for all portions of the Work. Include plans, elevations, sections, and details of screen panels and accessories:

1. Show screen profiles, angles, spacing of wires, unit dimensions related to wall openings and construction, assembly length, interface dimensions for mating slots or other interfaces, materials of construction and assembly weight.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART II - PRODUCTS

2.1 ENTRANCE FLOOR GRID ASSEMBLY

A. Basis of Design: Subject to compliance with requirements, provide stainless steel floor grate "Johnson 130 Vee Wire" by Johnson Screens or comparable product by one of the following:

1). "KD98" by Kadee Industries,
2). "Wedgewire 130 V" by Hendrick
3). Or approved equal

2. All screen surface wire, support bars, frame structure and associated components shall be fabricated from Type 316 stainless steel in 5/8" depth.

3. Flat screen surface wires shall be 0.13" x 0.25" electronically welded and spaced 0.13" apart. Surface wire, support beam and frame structure shall be an all-welded matrix designed to provide specified strength with minimal interference with through screen flow pattern. Support bars shall be 0.074" x 1" rod on 1" centers. When completed, screen panels should be flat within 1/4 inch when one corner is held flat. Diagonal measurements of panel should be within 3/8" of each other.

4. Slot Size: Screen slot size shall be .13" (50% open area), Slot size shall be controlled and continuously monitored during manufacture.

5. Grid Frame: SSA - Stainless Steel Angle Frame shall be Type 316 stainless steel, sized to fit recess with 1/8" exposed surface as indicated on drawings.

6. Lock Down Mechanism: Hidden Lock Down tabs shall be hidden device to secure grille to concrete substrate, made from Type 316 stainless steel.

7. Finish: See Finish Schedule.

B. Unit must withstand 500 lb. wheel loads (load applied to solid 5" x 2" wide polyurethane wheel, 1000 passes without damage).

C. Unit shall have a continuous stainless steel welded edge banding.

D. Provide stainless steel frames and aluminum drip pan as noted on drawings.

E. Accessories: Provide hidden locking devices to prevent warping and rattling. Furnish number of lock downs as recommended by manufacturer.

F. Waterproof membrane beneath entrance floor grid.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Install entrance floor grid frames within recess in cementitious underlayment, to be flush with top surface of adjacent finish flooring.

B. Protection: Upon completion of frame installation, provide temporary filler of plywood or fiberboard in entrance floor grid recesses, and cover frames with plywood protective flooring.

C. Install entrance floor grid in frame and anchor with hidden lock downs.

END OF SECTION 12 48 23

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 14 24 00
Hydraulic Elevators

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED / Environmentally Preferable Purchase (EPP) General Requirements:

a. Refer to DDC General Conditions and the Addendum to the General Conditions
b. LEED requirements apply to all Phase II work with the exception of the Existing Building scope. EPP requirements apply to the project's Existing Building scope only.

1.2 SUMMARY

A. Section includes:

1. Machine-roomed hydraulic passenger elevators:

a. New Building (A1):
1). Duplex Passenger Elevators: Cars PE1 and PE2.
2). Single Passenger Elevator: Car PE3.

b. Existing Building (A2):
1). Single Passenger Elevator: Car PE4.

B. Related Sections

1. Division 03 Concrete for setting sleeves, inserts and anchoring devices in concrete.

2. Division 05 Metals for attachment plates, angle brackets and other preparation of structural steel for fastening to and supporting guide-rail brackets, divider beams, hoist beam, pit ladders, and structural-steel shapes for subsills.

3. Division 09 Finishes for field painting of elevator pit and shaft.

4. Division 22 Plumbing for sump pumps, sumps, and sump covers in elevator pits.

5. Division 26 Electrical for electrical service for elevators to and including fused disconnect switches at machine room door or in control space and standby power source, transfer switch, connection from auxiliary contacts in transfer switch to controller, and emergency voice/fire alarm communication systems for smoke detectors and tie-ins to elevator controllers.

6. Division 27 Communications for telephone service for elevators and two-way emergency communication service.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 SUBMITTALS

A. Product Data: Include capacities, sizes, performances, operations, safety features, finishes, and similar information. Include product data for car enclosures; hoistway entrances; and operation, control, and signal systems.

B. Shop Drawings: Include plans, elevations, sections, and large-scale details indicating service at each landing; coordination with building structure; relationships with other construction; and locations of equipment.

1. Include large-scale layout of car-control station and standby-power operation control panel.

2. Indicate maximum dynamic and static loads imposed on building structure at points of support as well as maximum and average power demands.

C. Samples for Initial Selection: For finishes involving color selection.

D. Samples for Verification: For exposed car, hoistway door and frame, and signal equipment finishes, 3-inch-square Samples of sheet materials and 4-inch lengths of running trim members.

E. Qualification Data: For Installer.

F. Manufacturer Certificates: Signed by elevator manufacturer, certifying that hoistway and pit layout and dimensions, as shown on Drawings, and electrical service including standby-power generator if shown and specified, are adequate for elevator system being provided.

G. Sample Warranty: For special warranty.

H. Operation and Maintenance Data:

1. For elevators to include in emergency, operation, and maintenance manuals.

2. Submit manufacturer's/installer's standard operation and maintenance manual, in accordance with ASME A17.1/CSA B44.

I. Inspection and Acceptance Certificates and Operating Permits: As required by New York City Department of Buildings Elevator Inspections and Tests for normal, unrestricted elevator use.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.6 DELIVERY, STORAGE, AND HANDLING:

A. Deliver, store, and handle materials, components and equipment in manufacturer's protective packaging. Store materials, components, and equipment off of ground, under cover, and in a dry location.

1.7 COORDINATION:

A. Coordinate installation of sleeves, block outs, elevator equipment with integral anchors, and other items that are embedded in concrete or masonry for elevator equipment. Furnish templates, sleeves, elevator equipment with integral anchors, and installation instructions and deliver to Project site in time for installation.

B. Coordinate locations and dimensions of other work specified in other Sections that relates to hydraulic elevators, including pit ladders; sumps and floor drains in pits; entrance subsills; electrical service; and electrical outlets, lights, and switches in hoistways and pits.

1.8 WARRANTY:

A. Manufacturer's Special Warranty: Manufacturer agrees to repair, restore, or replace elevator work that fails in materials or workmanship within specified warranty period. Failures include, but are not limited to, operation or control system failure, including excessive malfunctions; performances below specified ratings; excessive wear; unusual deterioration or aging of materials or finishes; unsafe conditions; need for excessive maintenance; abnormal noise or vibration; and similar unusual, unexpected, and unsatisfactory conditions.

B. Warranty Period

1. One year from date of Substantial Completion.

PART II - PRODUCTS

2.1 HYDRAULIC ELEVATOR MANUFACTURERS:

A. Basis-of-Design Product: Subject to compliance with requirements, provide ThyssenKrupp Elevator; Endura Twinpost Above-Ground Holeless Hydraulic Elevator or comparable product by one of the following:

1). Otis Elevator Co.
2). Schindler Elevator Corp.
3). Or approved equal

B. Source Limitations: Obtain elevators from single manufacturer. Major elevator components, including pump-and-tank units, plunger-cylinder assemblies, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.

2.2 PERFORMANCE REQUIREMENTS:

A. Regulatory Requirements: Comply with ASME A17.1/CSA B44.

B. Accessibility Requirements: Comply with Section 407 in the United States Department of Justice's "2010 ADA Standards for Accessible Design" and with ICC A117.1.

2.3 HYDRAULIC ELEVATOR SCHEDULE:

A. Duplex Elevator PE1 and PE2 (New Building)

1. Loading Class: Passenger
2. Type: Holeless, beside-the-car, telescoping, dual cylinder
3. Application: Machine-room-less.
4. Speed: Not less than 100 fpm but up to 150 fpm
5. Capacity: 3,500 lbs
6. Stops / Openings: 2 stops / 2 openings.
7. Landings: 2 front.
8. Operation System: Duplex automatic operation.
9. Auxiliary Operation:
    a. Independent Service.
    b. Maintenance Service.
    c. Inspection Service.
    d. Firefighter's Emergency Service.
    e. Emergency Power.
    f. Standby-power operation.
    g. Standby-power lowering.
    h. Automatic dispatching of loaded car.
    i. Nuisance call cancel.
    j. Automatic operation of lights and ventilation fans.
10. Car Enclosures:
    a. Inside Clear: 6'-8" width by 5'-5" depth.
    b. Inside Height: Not less than 7'-4" to underside of ceiling.
    c. Ambulatory Accessible Compliant: Required.
    d. Front Walls (Return Panels): Satin stainless steel, No. 4 finish with integral car door frames.
    e. Car Fixtures: Satin stainless steel, No. 4 finish.
    f. Side and Rear Wall Panels: Satin stainless steel, No. 4 finish.
    g. Reveals: Satin stainless steel, No. 4 finish.
    h. Door Faces (Interior): Satin stainless steel, No. 4 finish.
    i. Door Sills: Nickel silver.
    j. Ceiling: Satin stainless steel, No. 4 finish.
    k. Handrails: 1/4 by 2 inches, rectangular stain stainless steel, No. 4 finish, at rear of car.
    l. Floor: Prepared to receive resilient tile flooring specified in Section 096500 – Resilient Tile Flooring. See Finish Schedule and Drawings.
11. Hoistway / Entrances:
    a. Entrance Size: 3'-6" wide x 7'-0" high, verify.
    b. Door Operation: Single-speed side sliding.

c. Frames: Satin stainless steel, No. 4 finish.
d. Doors: Satin stainless steel, No. 4 finish.
e. Sills: Nickel silver.
f. Hall Fixtures: Satin stainless steel, No. 4 finish.

12. Additional Requirements:

a. Provide inspection certificate in each car, mounted under acrylic cover with frame made from stainless steel, No. 4 finish.
b. Provide hooks for protective pads in all cars and two complete sets of full-height protective pads.
c. Remote machine room for each elevator, see Drawings.

B. Elevator PE3 (New Building):

1. Loading Class: Passenger.

2. Type: Holeless, beside-the-car, telescoping, dual cylinder.

3. Application: Machine-room-less.

4. Speed: Not less than 100 fpm but up to 150 fpm.

5. Capacity: 3,500 lbs.

6. Stops / Openings: 3 stops / 3 openings.

7. Landings: 3 front.

8. Operation System: Single automatic operation.

9. Auxiliary Operation:

a. Independent Service.
b. Maintenance Service.
c. Inspection Service.
d. Firefighter's Emergency Service.
e. Emergency Power.
f. Standby-power operation.
g. Standby-power lowering.
h. Automatic dispatching of loaded car.
i. Nuisance call cancel.
j. Automatic operation of lights and ventilation fans.

C. Elevator PE4 (Existing Building):

1. Loading Class: Passenger.

2. Type: Holeless, beside-the-car, telescoping, dual cylinder.

3. Application: Machine-room-less.

4. Speed: Not less than 100 fpm but up to 150 fpm.

5. Capacity: 3,500 lbs.

6. Stops / Openings: 3 stops / 3 openings.

7. Landings: 2 front, 1 rear.

8. Operation System: Single automatic operation.

9. Auxiliary Operation:

    a. Independent Service.
    b. Maintenance Service.
    c. Inspection Service.
    d. Firefighter's Emergency Service.
    e. Emergency Power.
    f. Standby-power operation.
    g. Standby-power lowering.
    h. Automatic dispatching of loaded car.
    i. Nuisance call cancel.
    j. Automatic operation of lights and ventilation fans.

10. Car Enclosures:

    a. Inside Clear: 6'-8" width by 5'-5" depth.
    b. Inside Height: Not less than 7'-4" to underside of ceiling.
    c. Ambulatory Accessible Compliant: Not Required.
    d. Front Walls (Return Panels): Satin stainless steel, No. 4 finish with integral car door frames.
    e. Car Fixtures: Satin stainless steel, No. 4 finish.
    f. Side and Rear Wall Panels: Satin stainless steel, No. 4 finish.
    g. Reveals: Satin stainless steel, No. 4 finish.
    h. Door Faces (Interior): Satin stainless steel, No. 4 finish.
    i. Door Sills: Nickel silver.
    j. Ceiling: Satin stainless steel, No. 4 finish.
    k. Handrails: 1/4 by 2 inches, rectangular stain stainless steel, No. 4 finish, on sides and rear of car.
    l. Floor: Prepared to receive resilient tile flooring specified in Section 096500 – Resilient Tile Flooring. See Finish Schedule and Drawings.

11. Hoistway / Entrances:

    a. Entrance Size: 3'-6" wide x 7'-0" high, verify.
    b. Door Operation: Single-speed side sliding.
    c. Frames: Satin stainless steel, No. 4 finish.
    d. Doors: Satin stainless steel, No. 4 finish.
    e. Sills: Nickel silver.
    f. Hall Fixtures: Satin stainless steel, No. 4 finish.

12. Additional Requirements:

a. Provide inspection certificate in each car, mounted under acrylic cover with frame made from stainless steel, No. 4 finish.
b. Provide hooks for protective pads in all cars and two complete sets of full-height protective pads.
c. Adjacent machine room, see Drawings.

D. Source Limitations: Obtain elevators from single manufacturer. Major elevator components, including pump-and-tank units, plunger-cylinder assemblies, controllers, signal fixtures, door operators, car frames, cars, and entrances, shall be manufactured by single manufacturer.

2.4 SYSTEM AND COMPONENTS:

A. Pump Units: Positive-displacement type with a maximum of 10 percent variation between no load and full load and with minimum pulsations.

1. Pump shall be submersible type with submersible squirrel-cage induction motor, and shall be suspended inside oil tank from vibration isolation mounts.

2. Motor shall have wye-delta or solid-state starting.

B. Hydraulic Silencers: System shall have hydraulic silencer containing pulsation-absorbing material in blowout-proof housing at pump unit.

C. Piping: Size, type, and weight of piping as recommended by elevator manufacturer, with flexible connectors to minimize sound and vibration transmissions from power unit.

D. Hydraulic Fluid: Elevator manufacturer's standard fire-resistant fluid with additives as needed to prevent oxidation of fluid, corrosion of cylinder and other components, and other adverse effects.

E. Inserts: Furnish required concrete and masonry inserts and similar anchorage devices for installing guide rails, machinery, and other components of elevator work. Device installation is specified in another Section.

F. Guides: Polymer-coated, nonlubricated sliding guides or sliding guides with guide-rail lubricators. Provide guides at top and bottom of car frame.

2.5 OPERATION SYSTEMS:

A. General: Provide manufacturer's standard microprocessor operation system as required to provide type of operation indicated.

B. Auxiliary Operations:

1. Single-Car Standby-Power Operation: On activation of standby power, car is returned to a designated floor and parked with doors open. Car can be manually put in service on standby power, either for return operation or for regular operation, by switches in control panel located at main lobby. Manual operation causes automatic operation to cease.

2. Automatic Operation of Lights and Fan: When elevator is stopped and unoccupied with doors closed, lighting, ventilation fan, and cab displays are de-energized after 5 minutes and are re-energized before car doors open.

C. Security Features: Security features shall not affect emergency firefighters' service.

D. Keyswitch Operation: Push buttons are activated and deactivated by security keyswitches at car-control stations. Key is removable in either position.

1. Duplex Elevators PE1 and PE2 (New Building): None.

2. Elevator PE3 (New Building): Roof access is denied except by keyswitch operation.

3. Elevator PE4 (Existing Building): None.

2.6 DOOR-REOPENING DEVICES:

A. Infrared Array: Provide door-reopening device with uniform array of 36 or more microprocessor-controlled, infrared light beams projecting across car entrance. Interruption of one or more light beams shall cause doors to stop and reopen.

2.7 CAR ENCLOSURES:

A. General: Provide steel-framed car enclosures with nonremovable wall panels, with car roof, access doors, power door operators, and ventilation.

1. Provide standard railings complying with ASME A17.1/CSA B44 on car tops where required by ASME A17.1/CSA B44.

B. Materials and Finishes: Manufacturer's standards, but not less than the following:

1. Subfloor: Exterior, underlayment-grade plywood, not less than 5/8-inch nominal thickness.

2. Wall Panels: Flush, formed-metal construction; fabricated from stainless-steel sheet.

3. Fabricate car with recesses and cutouts for signal equipment.

4. Fabricate car door frame integrally with front wall of car.

5. Stainless-Steel Doors: Flush, hollow-metal construction; fabricated from stainless-steel sheet.

6. Sills: Extruded or machined metal, with grooved surface, 1/4 inch thick.

7. Metal Ceiling: Flush panels, with six low-voltage LED downlights in each panel.

8. Light Fixture Efficiency: Not less than 35 lumens/W.

9. Ventilation Fan Efficiency: Not less than 3.0 cfm/W.

2.8 HOISTWAY ENTRANCES:

A. Hoistway Entrance Assemblies: Manufacturer's standard horizontal-sliding, door-and-frame hoistway entrances complete with track systems, hardware, sills, and accessories. Frame size and profile shall accommodate hoistway wall.

B. Fire-Rated Hoistway Entrance Assemblies: Door-and-frame assemblies shall comply with NFPA 80 and be listed and labeled by a testing and inspecting agency acceptable to New York City Department of Buildings Elevator Inspections and Tests based on testing at as close-to-neutral pressure as possible according to NFPA 252 or UL 10B.

1. Fire-Protection Rating: 1-1/2 hours.

C. Materials and Fabrication: Manufacturer's standards, but not less than the following:

1. Steel Subframes: Formed from cold- or hot-rolled steel sheet, with factory-applied enamel or powder-coat finish or rust-resistant primer. Fabricate to receive applied finishes indicated.

2. Stainless-Steel Frames: Formed from stainless-steel sheet.

3. Stainless-Steel Doors: Flush, hollow-metal construction; fabricated from stainless-steel sheet.

4. Sills: Extruded or machined metal, with grooved surface, 1/4 inch thick.

2.9 SIGNAL EQUIPMENT

A. General: Provide hall-call and car-call buttons that light when activated and remain lit until call has been fulfilled. Provide buttons and lighted elements illuminated with LEDs.

B. Car-Control Stations: Provide manufacturer's standard car-control stations. Mount in return panel adjacent to car door unless otherwise indicated. Mark buttons and switches for required use or function. Use both tactile symbols and Braille.

1. Provide "No Smoking" sign matching car-control station, either integral with car-control station or mounted adjacent to it, with text and graphics as required by New York City Department of Buildings Elevator Inspections and Tests.

C. Emergency Communication System: Two-way voice communication system, with visible signal, which dials preprogrammed number of monitoring station and does not require handset use. System is contained in flush-mounted cabinet, with identification, instructions for use, and battery backup power supply.

1. Firefighters' Two-Way Telephone Communication Service: Provide telephone jack in each car and required conductors in traveling cable for firefighters' two-way telephone communication service.

D. Car Position Indicator: Provide illuminated, digital-type car position indicator, located above car door. Also, provide audible signal to indicate to passengers that car is either stopping at or passing each of the floors served. Include travel direction arrows if not provided in car-control station.

E. Hall Push-Button Stations: Provide one hall push-button station at each landing.

1. Provide units with flat faceplate for mounting with body of unit recessed in wall.

2. Equip units with buttons for calling elevator and for indicating applicable direction of travel.

F. Hall Lanterns: Units with illuminated arrows; however, provide single arrow at terminal landings. Provide the following:

1. Manufacturer's standard wall-mounted units, for mounting above entrance frames.

    a. Units mounted in both car door jambs.

G. Hall Annunciator: With each hall lantern, provide audible signals indicating car arrival and direction of travel. Signals sound once for up and twice for down.

1. At manufacturer's option, audible signals may be placed on cars.

H. Hall Position Indicators: Provide illuminated, digital-display-type position indicators, located above each hoistway entrance at ground floor.

I. Standby-Power Elevator Selector Switches: Provide switches, as required by ASME A17.1/CSA B44, where indicated. Adjacent to switches, provide illuminated signal that indicates when normal power supply has failed.

J. Emergency Pictorial Signs: Fabricate from materials matching hall push-button stations, with text and graphics as required by New York City Department of Buildings Elevator Inspections and Tests, indicating that in case of fire, elevators are out of service and exits should be used instead. Provide one sign at each hall push-button station unless otherwise indicated.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

A. Examine elevator areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work. Verify critical dimensions and examine supporting structure and other conditions under which elevator work is to be installed:

1. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Install cylinder plumb and accurately centered for elevator car position and travel. Anchor securely in place, supported at pit floor and braced at intervals as needed to maintain alignment. Anchor cylinder guides at spacing needed to maintain alignment and avoid overstressing guides.

B. Welded Construction: Provide welded connections for installing elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS workmanship and welding operator qualification standards.

C. Sound Isolation: Mount rotating and vibrating equipment on vibration-isolating mounts to minimize vibration transmission to structure and structure-borne noise due to elevator system.

D. Lubricate operating parts of systems as recommended by manufacturer.

E. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with car. Where possible, delay installation of sills and frames until car is operable in shaft. Reduce clearances to minimum, safe, workable dimension at each landing.

F. Leveling Tolerance: 1/4 inch, up or down, regardless of load and travel direction.

G. Set sills flush with finished floor surface at landing. Fill space under sill solidly with nonshrink, nonmetallic grout.

H. Locate hall signal equipment for elevators as indicated on Drawings.

3.4 FIELD QUALITY CONTROL

A. Acceptance Testing: On completion of elevator installation and before permitting elevator use (either temporary or permanent), perform acceptance tests as required and recommended by ASME A17.1/CSA B44 and by New York City Department of Buildings Elevator Inspections and Tests.

B. Advise the Commissioner in advance of dates and times that tests are to be performed on elevators

3.5 PROTECTION

A. Temporary Use: Limit temporary use for construction purposes to one elevator. Comply with the following requirements for elevator used for construction purposes:

1. Provide car with temporary enclosure, either within finished car or in place of finished car, to protect finishes from damage.

2. Provide strippable protective film on entrance and car doors and frames.

3. Provide padded wood bumpers on entrance door frames covering jambs and frame faces.

4. Provide other protective coverings, barriers, devices, signs, and procedures as needed to protect elevator and elevator equipment.

5. Do not load elevators beyond their rated weight capacity.

6. Provide full maintenance service during construction. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleanup, and adjustment as necessary for proper elevator operation at rated speed and capacity. Provide parts and supplies same as those used in the manufacture and installation of original equipment.

7. Restore damaged work, if any, so no evidence remains of correction. Return items that cannot be refinished in the field to the shop, make required repairs and refinish entire unit, or provide new units as required

3.6 DEMONSTRATION:

A. Engage a factory-authorized service representative to instruct the City of New York's maintenance personnel to operate, adjust, and maintain elevators.

B. Check operation of each elevator with the City of New York's personnel present before date of Substantial Completion and again not more than one month before end of warranty period. Determine that operation systems and devices are functioning properly.

3.7 GUARANTEE SERVICE:

A. Initial Guarantee Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of elevator Installer. Include monthly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper elevator operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

B. Perform maintenance during normal working hours.

1. Include 24-hour-per-day, 7-day-per-week emergency callback service with response time of two hours or less.

END OF SECTION 14 24 00

SECTION 14 60 50
Single Girder Crane

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

   a. Section 01 33 00 "Submittal Procedures"
   b. Section 01 74 19 "Construction Waste Management and Disposal"
   c. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings"
   d. Section 01 81 13.13 "Volatile Organic Compound Limits for Adhesives, Sealants, Paints and Coatings for LEED Buildings"
   e. Section 01 81 19 "Indoor Air Quality Requirements for LEED Buildings"

1.2 SUMMARY

A. Work Included: The Work of this Section shall include but not be limited to the following:

1. Motorized overhead under running single girder crane.

B. Related Sections

1. Structural Steel - Section 05 12 00.
2. Steel Joist Framing - Section 05 21 00.
3. Miscellaneous Metals – Section 05 50 00
4. HVAC – Division 23
5. Electrical – Division 26

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 SUBMITTALS

A. Manufacturer's data for the following:

1. Overhead crane assembly including data on, motors, trolley, main hoist, runway and electrical requirements.

B. Shop drawings for overhead crane showing plan layout, elevations, cross-sections, service run-spaces, location and type of motors and service fittings, together with indication of associated service supply connections required.

1. Include details and location of anchorages and fitting to runway beams.

2. Include layout of units with relation to surrounding walls, doors, windows, lighting and air-conditioning fixtures, ductwork and junction boxes.

3. Coordinate shop drawings with other trades whose work affects and is in the vicinity of overhead crane.

4. Provide roughing-in drawings for mechanical and electrical services.

1.6 PRODUCT HANDLING

A. Coordinate delivery of overhead crane with installation of structural runway beams.

PART II – PRODUCTS

2.1 MOTORIZED OVERHEAD CRANE

A. Selected Manufacturer/Product: Provide Overhead Under Running Crane with factory painted finish.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Crane and Equipment Corporation
2. Deshazo
3. G.W. Becker
4. Or approved equal

C. Performance Requirements

1. Capacity: 3 tons, unless otherwise indicated.

2. Crane Span: 60'-0", approximately.

3. Longitudinal Travel of Crane: 220'-0", approximately

4. Girder Type: Standard wide flange structural shapes, to include I-beams.

5. Cross Conducter Type: Flat cable festoon.

6. End Truck Type: Steel Channel type construction for underhung design. Equipped with rail sweeps to allow for decelerating/stopping of the crane assembly and single-flanged wheels and axles.

7. Type of Drive: Dual, Geared motor

8. Motors: Two, AC squirrel cage motor, continuous duty, Class f insulation.

9. Brakes: DC disc type.

10. Controls: Heavy duty electrical components housed within a control panel meeting requirements of NEMA 12.

11. Options: Provide optional design features selected by the Commissioner from submitted manufacturer's data to include, but not be limited to warning light and horn.

PART III - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. General: Install specialty equipment plumb, level, aligned, rigid, and securely anchored to building, in proper location, in accordance with manufacturer's instructions and approved shop (layout) drawings.

B. Coordinate sequence of work with mechanical and electrical trades.

3.3 FIELD QUALITY CONTROL

A. Field Test: Field test each unit after completion of installation to verify proper operation and structural capability of overhead single girder crane. Perform load test in compliance with OSHA 1910.179 Section (K) testing (2) Rated Load Test.

3.4 ADJUST AND CLEAN

A. Moving Parts: Carefully check and adjust moving parts to ensure smooth and accurate operation.

B. Clean exposed components of girder crane to be free from dirt, dust grime and other visible surface imperfections.

C. Damaged Work: Repair any item of component of the crane assembly to be of equal quality to new undamaged work, or replace with new units, as deemed acceptable to the Commissioner.

END OF SECTION 14 60 50

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 210500
Common Work Results for Fire Suppression

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions

a. Section 01 33 00 "Submittal Procedures."

1.2. SUMMARY

A. This Section includes the following:

1. Piping materials and installation instructions common to most piping systems.
2. Mechanical sleeve seals.
3. Sleeves.
4. Escutcheons.
5. Grout.
6. Fire-suppression equipment and piping demolition.
7. Equipment installation requirements common to equipment sections.
8. Painting and finishing.
9. Concrete bases.
10. Supports and anchorages.

B. Related Sections:

1. Section 033000 "Cast in-Place Concrete" for concrete work coordination and concrete base.
2. Section 051200 "Structure Steel" for erection of metal supports and anchorages.
3. Section 053100 "Metal Decking" for erection of metal supports and anchorages.
4. Section 078413 "Firestops and Smokeseals" for firestop materials.
5. Section 076201 "Sheet Metal Flashing" for flashing.
6. Section 079200 "Interior Joint Sealants" for materials and installation.
7. Section 083113 "Access Doors" for Access panels and doors specifications.

1.3. DEFINITIONS

A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.

E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

F. The following are industry abbreviations for plastic materials:

1. CPVC: Chlorinated polyvinyl chloride plastic.

G. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.

2. NBR: Acrylonitrile-butadiene rubber.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For the following:

1. Mechanical sleeve seals.

2. Escutcheons.

C. Welding certificates.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."

2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

D. Electrical Characteristics for Fire-Suppression Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.6. DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.7. COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for fire-suppression installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for fire-suppression items requiring access that are concealed behind finished surfaces.

PART 2 - PRODUCTS

2.1. PIPE, TUBE, AND FITTINGS

A. Refer to individual piping sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2. JOINING MATERIALS

A. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch maximum thickness unless thickness or specific material is indicated.

   a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.

   b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.3. MECHANICAL SLEEVE SEALS

A. Units in this Article are usually furnished with EPDM sealing elements, plastic pressure plates, and carbon-steel bolts. NBR and silicone sealing elements, carbon- and stainless-steel pressure plates, and stainless-steel bolts are available for special applications.

B. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Manufacturers:

   a. Advance Products & Systems, Inc.

   b. Calpico, Inc.

   c. Metraflex Co.

   d. Pipeline Seal and Insulator, Inc.

   e. Or Approved Equal

2. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.

3. Pressure Plates: Carbon steel. Include two for each sealing element.

4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.4. SLEEVES

A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

C. Sleeve in paragraph below is available with many end variations.

D. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral water stop, unless otherwise indicated.

E. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set screws.

2. Sleeve is without seepage holes

2.5. ESCUTCHEONS

A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.

C. One-Piece, Cast-Brass Type: With set screw.

1. Finish: Polished chrome-plated.

D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.

1. Finish: Polished chrome-plated.

E. One-Piece, Stamped-Steel Type: With set screw and chrome-plated finish.

F. Split-Plate, Stamped-Steel Type: With concealed hinge, set screw or spring clips, and chrome-plated finish.

G. One-Piece, Floor-Plate Type: Cast-iron floor plate.

H. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

2.6. GROUT

A. Description: ASTM C 1107, Grade B, non-shrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.

2. Design Mix: 5000-psi, 28-day compressive strength.

3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following requirements and sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

1. New Piping:
    a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
    b. Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish.
    c. Insulated Piping: One-piece, stamped-steel type with spring clips.
    d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
    e. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
    f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
    g. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished chrome-plated finish.

h. Bare Piping in Equipment Rooms: One-piece, cast-brass type.
i. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.

M. Sleeves are not required for core-drilled holes.

N. Permanent sleeves are not required for holes formed by removable PE sleeves.

O. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.

P. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

2. Install sleeves in new walls and slabs as new walls and slabs are constructed.

3. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:

a. Steel Pipe Sleeves: For pipes smaller than NPS 6.

b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.

c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level. Refer to Section 076200 "Sheet Metal Flashing" for flashing.

1) Seal space outside of sleeve fittings with grout.

4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to 079200 Section "Interior Joint Sealants" for materials and installation.

Q. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

1. Install steel pipe for sleeves smaller than 6 inches in diameter.

2. Install cast-iron "wall pipes" for sleeves 6 inches and larger in diameter.

3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

R. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

S. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to 078413 Section "Firestops and Smokeseals."

T. Verify final equipment locations for roughing-in.

3.3. PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and sections specifying piping systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.

2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

3. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

4. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.4. PAINTING

A. Damage and Touchup: Restore marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

B. Paint all systems in accordance with LL 33/2007 and its amendments with sections 903 and 905 of the NYC Building Code.

3.5. CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes from 2014 NYC Building Code.

1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger in both directions than supported unit.

2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.

3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.

4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

5. Install anchor bolts to elevations required for proper attachment to supported equipment.

6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.6. ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor fire-suppression materials and equipment.

B. Field Welding: Comply with AWS D1.1.

C. Erection of wood supports and anchorages

D. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor fire-suppression materials and equipment.

E. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.

F. Attach to substrates as required to support applied loads.

3.7. GROUTING

A. Mix and install grout for fire-suppression equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

END OF SECTION 210500

SECTION 210513
Common Motor Requirements for Fire Suppression Equipment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC Standard Conditions.

a. Section 01 33 00 "Submittal Procedures."

1.2. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.3. SUMMARY

A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 480 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.4. COORDINATION

A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:

1. Motor controllers.
2. Torque, speed, and horsepower requirements of the load.
3. Ratings and characteristics of supply circuit and required control sequence.
4. Ambient and environmental conditions of installation location.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

PART 2 - PRODUCTS

2.1. GENERAL MOTOR REQUIREMENTS

A. Comply with requirements in this Section except when stricter requirements are specified in fire suppression equipment.

B. Comply with NEMA MG 1 unless otherwise indicated.

C. Comply with IEEE 841 for severe-duty motors.

2.2. MOTOR CHARACTERISTICS

A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet (1000 m) above sea level.

B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3. POLYPHASE MOTORS

A. Description: NEMA MG 1, Design B, medium induction motor.

B. Efficiency: Energy efficient, as defined in NEMA MG 1.

C. Service Factor: 1.15.

D. Multispeed Motors: Variable torque.

1. For motors with 2:1 speed ratio, consequent pole, single winding.
2. For motors with other than 2:1 speed ratio, separate winding for each speed.

E. Multispeed Motors: Separate winding for each speed.

F. Rotor: Random-wound, squirrel cage.

G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.

H. Temperature Rise: Match insulation rating.

I. Insulation: Class F.

J. Code Letter Designation:

1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.

K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4. POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.

1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5. SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:

1. Permanent-split capacitor.
2. Split phase.
3. Capacitor start, inductor run.
4. Capacitor start, capacitor run.

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.

C. Bearings: Pre-lubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

END OF SECTION 210513

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 210548
Vibration and Seismic Controls for Fire Suppression Piping and Equipment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 33 00 "Submittal Procedures."

1.2. SUMMARY

A. This Section includes the following:

1. Isolation pads.
2. Isolation mounts.
3. Restrained elastomeric isolation mounts.
4. Freestanding and restrained spring isolators.
5. Housed spring mounts.
6. Elastomeric hangers.
7. Spring hangers.
8. Spring hangers with vertical-limit stops.
9. Pipe riser resilient supports.
10. Resilient pipe guides.
11. Restrained vibration isolation roof-curb rails.
12. Seismic snubbers.
13. Restraining braces and cables.
14. Steel and inertia, vibration isolation equipment bases.

1.3. DEFINITIONS

A. IBC: International Building Code.

B. ICC-ES: ICC-Evaluation Service.

C. Life Safety Systems:

1. All systems involved with fire protection including sprinkler piping, fire pumps, jockey pumps, fire pump control panels, service water supply piping, water tanks, fire dampers and smoke exhaust systems.
2. All systems involved with and/or connected to emergency power supply transformers and all flow paths to fire protection and/or emergency lighting systems.
3. Fresh air relief systems on emergency control sequence including air handlers, conduit, duct, dampers, etc.

D. Positive Attachment:

1. A positive attachment is defined as a cast-in anchor, a drill-in wedge anchor, a double-sided beam clamp loaded perpendicular to a beam, or a welded or bolted connection to structure. Single sided "C" type beam clamps for support rods of overhead piping, ductwork, fire protection, electrical conduit, bus duct, or cable trays, or any other equipment are not acceptable on this project as seismic anchor points.

E. Transverse Bracing:

1. Restraint(s) applied to limit motion perpendicular to the centerline of the pipe, duct or conduit.

F. Longitudinal Bracing:

1. Restraint(s) applied to limit motion parallel to the centerline of the pipe, duct or conduit.

1.4. GENERAL

A. Seismic Bracing - Applies to all trades as applicable (to withstand 6 forces in shear).

a) The following life safety items shall be seismically braced in accordance with the New York City Code requirements.
b) Fire standpipe system piping throughout.
c) Constant pressure pumps (which fill fire reserve tanks) or fire reserve tank fill pumps solidly anchored to base and with seismic vibration isolation to concrete pad.
d) Tank fill line seismically braced. (From pump to roof tank)
e) Fire water service all piping seismically braced & anchored.
f) Entire sprinkler system seismically braced in accordance with NFPA13, Section 4-14.4.3
g) Roof House tank (and/or suction tank for fire reserve) anchored and internally braced.
h) Emergency lighting fixtures - seismically braced or anchored
i) All fire alarm equipment - solid anchored
j) All emergency conduit and systems.
k) All other life safety equipment - seismically braced and/or anchored.
l) Electric feeders to tank fill pump - embedded or seismically braced.
m) Roof tank controls - Seismically braced.

B. Intent

1. All mechanical equipment, piping and ductwork as noted on the equipment shall be mounted on vibration isolators to prevent the transmission of vibration and mechanically transmitted sound to

the building structure. Vibration isolators shall be selected in accordance with the weight distribution so as to produce reasonably uniform detections. This applies only to life safety equipment and hazardous systems (gas systems)

2. All isolators and isolation materials shall be of the same manufacturer.
3. It is the intent of the seismic portion of this specification to keep all mechanical and electrical building system components in place during a seismic event.
4. All such systems must be installed in strict accordance with seismic codes.
5. Component manufacturer's and building construction standards. Whenever a conflict occurs between the manufacturers or construction standards, the most stringent shall apply.
6. Any variance or non-compliance with these specification requirements shall be corrected by the contractor in an approved manner.
7. Seismic restraints shall be designed in accordance with seismic force levels as detailed in this section.

C. The work in this section applies only to "Life Safety Systems" and includes, the following:

1. Vibration isolation for piping and equipment.
2. Equipment isolation bases.
3. Flexible piping connections.
4. Seismic restraints for isolated equipment.
5. Seismic restraints for non-isolated equipment.
6. Certification of seismic restraint designs and installation supervision.
7. Certification of seismic attachment of housekeeping pads.

D. All fire protection systems defined as life safety systems. Equipment referred to below is typical. (Equipment not listed is still included).

1. Piping
2. Pumps related to Fire Standpipe, Sprinkler

E. Housekeeping Pads

1. Housekeeping pad reinforcement and monolithic pad attachment to the structure details and design shall be prepared by the restraint vendor if not already indicated on the drawings.
2. Housekeeping pads shall be coordinated with restraint vendor and sized to provide a minimum edge distance of ten (10) bolt diameters all around the outermost anchor bolt to allow development of full drill-in wedge anchor ratings. If cast-in anchors are to be used, the housekeeping pads shall be sized to accommodate the ACI requirements for bolt page coverage and embedment.
   a. Supplementary Support Steel
      1) Contractor shall supply supplementary support steel for all equipment, piping, ductwork, etc. including roof-mounted equipment, as required or specified.
   b. Attachments
      1) Contractor shall supply restraint attachment plates cast into housekeeping pads, concrete inserts, double-sided beam clamps, etc. in accordance with the requirements of the vibration vendor's calculations.

1.5. PERFORMANCE REQUIREMENTS

A. Wind-Restraint Loading:

1. Basic Wind Speed: 30 psf.
2. Building Classification Category: Seismic Design Category C.
3. Minimum 10 lb/sq. ft. multiplied by the maximum area of the HVAC component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

B. Seismic-Restraint Loading:

1. Site Class as Defined in the New York City Building Code: D.
2. Assigned Seismic Use Group or Building Category as Defined in the New York City Building Code: I.

   a. Component Importance Factor: 1.5.

C. Seismic Force Level as per NYC LL17\95 as Modified UBC Section 2312-1990

1. Seismic Zone #2:
2. "G" Forces for Life Safety Equipment either rigidly or flexibly Mounted

   a. Horizontal G force = 0.6
   b. Vertical G Force = 0.2

1.6. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

B. Product Data: For the following:

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.

   a. Tabulate types and sizes of seismic restraints, complete with report numbers and rated strength in tension and shear.
   b. Annotate to indicate application of each product submitted and compliance with requirements.

3. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.

C. Engineering Data Submittal: For vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the state of New York responsible for their preparation.

1. Design Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic and wind forces required to select vibration isolators, seismic and wind) restraints, and for designing vibration isolation bases.

a. Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with all other requirements for equipment mounted outdoors.

2. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification that riser system has been examined for excessive stress and that none will exist.

3. Vibration Isolation Base Details: Detail overall dimensions, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, base weights, equipment static loads, power transmission, component misalignment, and cantilever loads.

4. Seismic and Wind-Restraint Details:

a. Design Analysis: To support selection and arrangement of seismic and wind restraints. Include calculations of combined tensile and shear loads.
b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
c. Coordinate seismic-restraint and vibration isolation details with wind-restraint details required for equipment mounted outdoors. Comply with requirements in other sections for equipment mounted outdoors.
d. Preapproval and Evaluation Documentation: By the NYC Department of Buildings, showing maximum ratings of restraint items and the basis for approval (tests or calculations).

D. Air-Mounting System Performance Certification: Include natural frequency, load, and damping test data performed by an independent agency.

E. Field quality-control test reports.

F.Operation and Maintenance Data: For air-mounting systems to include in operation and maintenance manuals.

1.7. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 Quality Requirements.

B. Materials and work shall conform to the latest edition of reference specifications specified herein and requirements of the NYC Department of Buildings.

C. Testing Agency Qualifications: An independent agency that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to The Commissioner.

D. Comply with seismic-restraint requirements in the IBC unless requirements in this Section are more stringent.

E. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval by ICC-ES, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a qualified professional engineer licensed in the state of New York.

F.Codes and Standards

1. New York City LL17/95 2.UBC Section 2312-1990
2. New York City Building Code

PART 2 - PRODUCTS

2.0. VIBRATION ISOLATORS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. Ace Mountings Co., Inc.
2. Amber/Booth Company, Inc.
3. California Dynamics Corporation.
4. Isolation Technology, Inc.
5. Kinetics Noise Control.
6. Mason Industries.
7. Vibration Eliminator Co., Inc.
8. Vibration Isolation.
9. Vibration Mountings & Controls, Inc.
10. Or Approved Equal

B. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.

1. Resilient Material: Oil- and water-resistant neoprene.

C. Mounts: Double-deflection type, with molded, oil-resistant rubber, hermetically sealed compressed fiberglass, or neoprene isolator elements with factory-drilled, encapsulated top plate for bolting to equipment and with baseplate for bolting to structure. Color-code or otherwise identify to indicate capacity range.

1. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
2. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.

D. Restrained Mounts: All-directional mountings with seismic restraint.

1. Materials: Cast-ductile-iron or welded steel housing containing two separate and opposing, oil-resistant rubber or neoprene elements that prevent central threaded element and attachment hardware from contacting the housing during normal operation.
2. Neoprene: Shock-absorbing materials compounded according to the standard for bridge-bearing neoprene as defined by AASHTO.

E. Spring Isolators: Freestanding, laterally stable, open-spring isolators.

1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
2. Minimum Additional Travel: 50 percent of the required deflection at rated load.
3. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
5. Baseplates: Factory drilled for bolting to structure and bonded to 1/4-inch- thick, rubber isolator pad attached to baseplate underside. Baseplates shall limit floor load to 500 psig.
6. Top Plate and Adjustment Bolt: Threaded top plate with adjustment bolt and cap screw to fasten and level equipment.

F. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic or limit-stop restraint.

1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch- thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
2. Restraint: Seismic or limit stop as required for equipment.
3. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
4. Minimum Additional Travel: 50 percent of the required deflection at rated load.
5. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
6. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

G. Housed Spring Mounts: Housed spring isolator with integral seismic snubbers.

1. Housing: Ductile-iron or steel housing to provide all-directional seismic restraint.
2. Base: Factory drilled for bolting to structure.
3. Snubbers: Vertically adjustable to allow a maximum of 1/4-inch travel up or down before contacting a resilient collar.

H. Elastomeric Hangers: Single or double-deflection type, fitted with molded, oil-resistant elastomeric isolator elements bonded to steel housings with threaded connections for hanger rods. Color-code or otherwise identify to indicate capacity range.

I. Spring Hangers: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression.

1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
7. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

J. Spring Hangers with Vertical-Limit Stop: Combination coil-spring and elastomeric-insert hanger with spring and insert in compression and with a vertical-limit stop.

1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
7. Adjustable Vertical Stop: Steel washer with neoprene washer "up-stop" on lower threaded rod.
8. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

K. Pipe Riser Resilient Support: All-directional, acoustical pipe anchor consisting of 2 steel tubes separated by a minimum of 1/2-inch- thick neoprene. Include steel and neoprene vertical-limit stops arranged to prevent vertical travel in both directions. Design support for a maximum load on the isolation material of 500 psig and for equal resistance in all directions.

L. Resilient Pipe Guides: Telescopic arrangement of 2 steel tubes or post and sleeve arrangement separated by a minimum of 1/2-inch- thick neoprene. Where clearances are not readily visible, a factory-set guide height with a shear pin to allow vertical motion due to pipe expansion and contraction shall be fitted. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of motion to meet location requirements.

2.1. VIBRATION ISOLATION EQUIPMENT BASES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Amber/Booth Company, Inc.
2. California Dynamics Corporation.
3. Isolation Technology, Inc.
4. Kinetics Noise Control.
5. Mason Industries.

6. Vibration Eliminator Co., Inc.
7. Vibration Isolation.
8. Vibration Mountings & Controls, Inc.
9. Or Approved Equal

B. Steel Base : Factory-fabricated, welded, structural-steel bases and rails.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.

   a. Include supports for suction and discharge elbows for pumps.

2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.

C. Inertia Base: Factory-fabricated, welded, structural-steel bases and rails ready for placement of cast-in-place concrete.

1. Design Requirements: Lowest possible mounting height with not less than 1-inch clearance above the floor. Include equipment anchor bolts and auxiliary motor slide bases or rails.

   a. Include supports for suction and discharge elbows for pumps.

2. Structural Steel: Steel shapes, plates, and bars complying with ASTM A 36/A 36M. Bases shall have shape to accommodate supported equipment.
3. Support Brackets: Factory-welded steel brackets on frame for outrigger isolation mountings and to provide for anchor bolts and equipment support.
4. Fabrication: Fabricate steel templates to hold equipment anchor-bolt sleeves and anchors in place during placement of concrete. Obtain anchor-bolt templates from supported equipment manufacturer.

2.2. SEISMIC-RESTRAINT DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Amber/Booth Company, Inc.
2. California Dynamics Corporation.
3. Cooper B-Line, Inc.; a division of Cooper Industries.
4. Hilti, Inc.
5. Kinetics Noise Control.
6. Loos & Co.; Cableware Division.
7. Mason Industries.
8. TOLCO Incorporated; a brand of NIBCO INC.
9. Unistrut; Tyco International, Ltd.
10. Or Approved Equal

B. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an agency acceptable to the Commissioner.

1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.

C. Snubbers: Factory fabricated using welded structural-steel shapes and plates, anchor bolts, and replaceable resilient isolation washers and bushings.

1. Anchor bolts for attaching to concrete shall be seismic-rated, drill-in, and stud-wedge or female-wedge type.
2. Resilient Isolation Washers and Bushings: Oil- and water-resistant neoprene.
3. Maximum 1/4-inch air gap, and minimum 1/4-inch- thick resilient cushion.

D. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.

E. Restraint Cables: ASTM A 603 galvanized-steel cables with end connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.

F.Hanger Rod Stiffener: Reinforcing steel angle clamped to hanger rod.

G. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.

H. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.

I. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

J. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

K. Adhesive Anchor Bolts: Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

2.3. FACTORY FINISHES

A. Finish: Manufacturer's standard prime-coat finish ready for field painting.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine areas and equipment to receive vibration isolation and seismic and wind control devices for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. GENERAL

A. All vibration isolators and seismic restraint systems must be installed in strict accordance with the manufacturers written instructions and all certified submittal data.

B. Installation of vibration isolators and seismic restraints must not cause any change of position of equipment, piping or ductwork resulting in stresses or misalignment.

C. No rigid connections between equipment and the building structure shall be made that degrades the noise and vibration control system herein specified.

D. Coordinate work with other trades to avoid rigid contact with the building.

E. Correct all installations which are deemed defective in workmanship and materials at no cost to the City of New York.

F.Overstressing of the building structure must not occur because of overhead support of equipment. Contractor must submit loads to the structural engineer of record for approval. Generally bracing may occur from:

1. Flanges of structural beams.
2. Upper truss cords in bar joist construction.
3. Cast in place inserts or wedge type drill-in concrete anchors.

G. Cable restraints shall be installed slightly slack to avoid short circuiting the isolated suspended equipment, piping or conduit.

H. Cable assemblies are installed taut on non-isolated systems. Seismic solid braces may be used in place of cables on rigidly attached systems only.

I. At locations where restraints are located, the support rods must be braced when necessary to accept compressive loads with braces.

J. At all locations where restraints are attached to pipe clevises, the clevis cross bolt must be reinforced with braces.

K. Drill-in concrete anchors shall be used for ceiling and wall installation and specification female wedge type for floor mounted equipment.

L. Vibration isolation manufacturer shall furnish integral structural steel bases as required. Independent steel rails are not permitted on this project.

M. Hand built elastomeric expansion joints may be used when pipe sizes exceed 24".

N. Where piping passes through walls, floors or ceilings the vibration isolation manufacturer shall provide wall seals.

O. Air handling equipment and centrifugal fans shall be protected against excessive displacement which results from high air thrust in relation to the equipment weight.

P.Locate isolation hangers as near to the overhead support structure as possible.

3.4. APPLICATIONS

A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps approved for application.

B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.

C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.5. VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

A. Comply with requirements in Section 077100 "Roof Specialties and Accessories" for installation of roof curbs, equipment supports, and roof penetrations.

B. Piping Restraints:

1. Comply with requirements in MSS SP-127.
2. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
3. Brace a change of direction longer than 12 feet.

C. Install cables so they do not bend across edges of adjacent equipment or building structure.

D. Install seismic-restraint devices using methods approved by an agency acceptable to the Commissioner providing required submittals for component.

E. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.

F. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

G. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

H. Drilled-in Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the Commissioner if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
5. Set anchors to manufacturer's recommended torque, using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.6. ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment. Comply with requirements covering hydronic piping for piping flexible connections.

3.7. FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Provide evidence of recent calibration of test equipment by a testing agency acceptable to the Commissioner.
2. Schedule test with Commissioner, before connecting anchorage device to restrained component (unless post connection testing has been approved), and with at least seven days' advance notice.
3. Obtain Commissioner's approval before transmitting test loads to structure. Provide temporary load-spreading members.
4. Test at least four of each type and size of installed anchors and fasteners selected by Commissioner.
5. Test to 90 percent of rated proof load of device.
6. Measure isolator restraint clearance.

7. Measure isolator deflection.
8. Verify snubber minimum clearances.
9. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.

B. Remove and replace malfunctioning units and retest as specified above.

C. Prepare test and inspection reports.

3.8. ADJUSTING

A. Adjust isolators after piping system is at operating weight.

B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

C. Adjust active height of spring isolators.

D. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.9. VIBRATION ISOLATION OF PIPING

A. Horizontal pipe isolation: The first three pipe hangers in the main lines near the mechanical equipment shall be as described in section 210513, part 3.5. 1.1 hangers must also be used in all transverse braced isolated locations. Brace hanger rods with SRC clamps. Horizontal runs in all other locations throughout the building shall be isolated by hangers as described in. Floor supported piping shall rest on isolators as described in. Heat exchanger's and expansion tanks are considered part of the piping run. The first three isolators from the isolated equipment will have the same static deflection as specified for the mounting under the connected equipment. If piping is connected to equipment located in basements and hangs from ceilings under occupied spaces the first three hangers shall have 0.75" deflection for pipe sizes up to and including 3",1 1/2" deflection for pipe sizes up to and including 6", and 2 1/2" deflection thereafter. Hangers shall be located as close to the overhead structure as practical. Where piping connects to mechanical equipment install expansion joints or stainless hoses if expansion joint is not suitable for the service.

B. Riser isolation: Risers shall be suspended from hangers or supported by mountings, anchored with anchors, and guided with sliding guides. Steel springs shall be a minimum of 0.75" except in those expansion locations where additional deflection is required to limit load changes to + 25% of the initial load. Submittals must include riser diagrams and calculations showing anticipated expansion and contraction at each support point. Initial and final loads on the building structure. Spring deflection changes and seismic loads. Submittal data shall include certification that the riser system has been examined for excessive stresses and that none will exist in the proposed design.

C. Seismic Restraint of Piping

1. Seismically restrain all piping listed as a. b or c below. Use cables if isolated. Restraints may be used on unisolated piping.

a. Gas piping that is 1" I.D. or larger.
b. Piping located in boiler rooms, mechanical equipment rooms, and refrigeration equipment rooms that is 1-1 /4" I.D. and larger.
c. All other piping 2-1/2" diameter and larger.

2. Transverse piping restraints shall be at 40' maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads.
3. Longitudinal restraints shall be at 80' maximum spacing for all pipe sizes, except where lesser spacing as required to limit anchorage loads.
4. Where thermal expansion is a consideration, guides and anchors may be used as transverse and longitudinal restraints provided they have a capacity equal to or greater than the restraint loads in addition to the loads induced by expansion or contraction.
5. For fuel oil and all gas piping transverse restraints must be at 20' maximum and longitudinal restraints at 40' maximum spacing.
6. Transverse restraint for one pipe section may also act as a longitudinal restraint for a pipe section of the same size connected perpendicular to it if the restraint is installed within 24" of the elbow or TEE or combined stresses are within allowable limits at longer distances.
7. Hold down clamps must be used to attach pipe to all trapeze members before applying restraints in a manner similar to clevis supports.
8. Branch lines may not be used to restrain main lines.
9. Cast iron pipe of all types, glass pipe and any other pipes joined with a four band shield and clamp assembly in Zones 2B, 3 and 4 shall be braced as in sections 3.02.C.2 and 3. For Zones 0, 1 and 2A, 2 band clamps may be used with reduced spacings of 1/2 of those listed in sections 3.7.C.2 and 3.

D. All fire protection piping shall be braced in accordance with NFPA 13.

E. All fire protection equipment is considered life safety equipment and shall be seismically restrained using the seismic force levels for life safety equipment in table 1.06-1.if higher levels is shown.

3.10. VIBRATION CONTROL SCHEDULE

A. Installation

1. At each equipment location, provide the required deflection under the imposed load and produce uniform loading and deflection even when equipment weight is not evenly distributed. Jack bases into position and wedge in place before spring loading; leveling bolts shall not be used as jacking screws. After equipment is in place and springs are loaded through leveling bolts, remove wedges and jacks. Isolators shall be suitable for the lowest operating speed of the equipment.
2. Where the floor is waterproofed or finished with waterproof cement, install vibration isolation in such manner that the waterproofing is not damaged.
3. Isolation equipment shall be in accordance with the following table unless noted otherwise in these specifications:

Lowest RPM	Min. Deflection (in.)	Efficiency %	Type
1750 & Over	.25	95	Single Neoprene in-shear
1200-1749	.50	95	Double Neoprene in-shear

1100-1199	.75	95	Spring
570-999	1.25	90-95	Spring
330-519	1.5	80-90	Spring
Up to 329	3.5	80	Spring

4. Slab above Grade

   a. Seismically rated spring mounts with a minimum static defection of 1" are required, no matter if the residence are located above or below the boilers.
   b. Piping to be seismically braced to the building structure. Isolation hangers shall be installed in addition to the bracing to attenuate structure borne energy.

END OF SECTION 210548

SECTION 21 08 00
COMMISSIONING OF FIRE SUPPRESSION SYSTEM

PART I - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project: (1) the contract drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. This section includes commissioning process requirements for Fire Suppression systems, assemblies, and equipment.

B. Related Sections:

1. Refer to DDC General Conditions for general commissioning process description.

1.3 DESCRIPTION

A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system's installation, operation, and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a complete design or installing Sub-Contractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup, and transfer to beneficial use by the City of New York.

B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:

1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing Sub-Contractors.
2. Verify and document proper performance of equipment and systems.
3. Verify that Operation & Maintenance documentation is complete and transferred to City of New York.
4. Verify that the City of New York's operating personnel are adequately instructed.
5. Perform a post occupancy review with O&M staff within 10 months after Substantial Completion.

C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, and performance checkouts.

D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the City of New York, Contractor, Sub-Contractors, manufacturers, and equipment suppliers.

E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

A. Refer to DDC General Conditions for definitions.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for CxA's role.

B. Refer to DDC General Conditions for specific submittals requirements. In addition, provide the following:

1. Certificates of readiness
2. Certificates of completion of installation, and startup activities.
3. Test reports
4. O&M manuals

1.6 QUALITY ASSURANCE

A. Test Equipment Calibration Requirements: The Contractor will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

A. Refer to DDC General Conditions for requirements pertaining to coordination during the commissioning process.

PART II - PRODUCTS

2.1 TEST EQUIPMENT

A. The Contractor shall ensure that the equipment and system perform startup, initial checkout and functional performance testing as outlined in the DDC General Conditions. For example, the Contractor shall ensure the fire suppression Sub-Contractor provides and installs the Fire Suppression system be responsible for all standard testing equipment for the plumbing system in Division 21. A sufficient quantity of two-way radios shall be provided by the Contractor.

B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.

C. Test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. The Contractor shall ensure that the manufacturer provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.

D. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of ±0.1°F. Pressure sensors shall have an accuracy of ±2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART III - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for commissioned components, equipment, and systems.

B. Red-lined Drawings:

1. The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
4. The Contractor will create the as-built drawings.

C. Operation and Maintenance Data:

1. The Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
2. The CxA will review the O&M literature once for conformance to project requirements.
3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.

D. Demonstration and Instruction:

1. The Contractor will provide demonstration and instruction as required by the specifications for fire suppression systems.
2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any instruction.
3. An instruction agenda for each instructing session must be submitted to the CxA one (1) week prior the instructing session.

4. The CxA shall be notified at least 72 hours in advance of scheduled fire pump test so that testing may be observed by the CxA. A copy of the test record shall be provided to the CxA and Commissioner.
5. Engage a Factory-authorized service representative to instruct City of New York's service personnel to adjust, operate, and maintain specialty valves.
6. Engage a Factory-authorized service representative to instruct City of New York's service personnel to adjust, operate, and maintain Fire Pump.
7. Instruct City of New York's service personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining units.
8. Review data in O&M Manuals.

3.2 CONTRACTOR RESPONSIBILITIES FOR SUB-CONTRACTOR PERFORMANCE

A. The Contractor shall cause the Sub-Contractor to have the following instruction responsibilities in performing Fire Suppression System work. The commissioning responsibilities are as follows (all references apply to commissioned equipment only):

1. Perform commissioning tests at the direction of the CxA.
2. Attend construction phase coordination meetings.
3. Participate in Fire Suppression systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
4. Provide information requested by the CxA for final commissioning documentation.
5. Include requirements for submittal data, operation and maintenance data, and instructing in each purchase order or sub-contract written.
6. Prepare preliminary schedule for Fire Suppression system orientations and inspections, operation and maintenance manual submissions, instructing sessions, flushing and cleaning, pressure testing, equipment start-up, and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.
7. Update schedule as required throughout the construction period.
8. During the startup and initial checkout process, execute the pressure testing of all piping system.
9. Assist the CxA in all Installation and Functional Checks.
10. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
11. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
12. Coordinate inspection and testing with the CxA to provide (72) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
13. Participate in, and schedule vendors and Sub-Contractors to participate in the instruction sessions.
14. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.

a. Fire Suppression equipment including pumps, piping, and all other equipment furnished under this Division.

b. Automatic sprinkler system.

c. Fire stopping in fire rated construction, including caulking, gasketing and sealing of smoke barriers.

15. The Contractor shall ensure that the equipment suppliers document the performance of his equipment.

16. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.

17. The Contractor shall ensure equipment Suppliers perform the following tasks:

a. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York, to keep warranties in force.

b. Assist in equipment testing per agreements with the Sub-Contractors.

c. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

18. Provide instruction to the City of New York service personnel using qualified personnel, as specified.

19. Refer to DDC General Conditions for additional responsibilities.

3.3 CxA'S RESPONSIBILITIES

A. Refer DDC General Conditions for CxA's Responsibilities.

3.4 TESTING PREPARATION

A. Certify in writing to the CxA that Fire Suppression systems, subsystems, and equipment have been installed, tested, calibrated, and started and are operating according to the Contract Documents.

B. Certify in writing to the CxA that Fire Suppression instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

C. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

D. Inspect and verify the position of each device and interlock identified on checklists.

E. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.

F. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 GENERAL TESTING REQUIREMENTS

A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of Fire Protection testing shall include entire Fire Suppression installation. Testing shall include measuring capacities and effectiveness of operational and control functions.

C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions.

D. The Contractor shall prepare detailed testing plans, procedures, and checklists for Fire Suppression systems, subsystems, and equipment and submit for CxA review.

E. Tests will be performed using design conditions whenever possible.

F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

G. The CxA may direct that set points be altered when simulating conditions is not practical.

H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.

I. If tests cannot be completed because of a deficiency outside the scope of the Fire Suppression system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.6 FIRE SUPPRESSION SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in Division 21. Provide submittals, test data, inspector record, and certifications to the CxA.

B. Fire Suppression Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of sprinkler distribution systems.

C. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems, and subsystems in Division 21. The following equipment and systems shall be evaluated:

1. Pumps
2. Piping
3. Sprinkler system

3.7 OPERATION AND MAINTENANCE MANUALS

A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements.

B. Refer to DDC General Conditions for the Contractor and CxA roles in the Operation and Maintenance Manual contribution, review, and approval process.

3.8 INSTRUCTION OF SERVICE PERSONNEL

A. Refer DDC General Conditions for requirements pertaining to instruction.

END OF SECTION 21 08 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 211100
Facility Fire-Suppression Water Service Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Section includes fire-suppression water-service piping and related components outside the building and service entrance piping through floor into the building.

B. Utility-furnished products include water meters that will be furnished to the site, ready for installation.

C. Related Sections:

1. Section 211200 "Fire-Suppression Standpipes" for fire-suppression standpipes inside the building.
2. Section 211313 "Wet-Pipe Sprinkler Systems" for wet-pipe fire-suppression sprinkler systems inside the building.
3. Section 213113 "Electric-Drive Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps and controllers.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Regulatory Requirements:

1. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.
2. Comply with standards of New York City Building Code for fire-suppression water-service piping, including materials, hose threads, installation, and testing.

C. Piping materials shall bear label, stamp, or other markings of specified testing agency.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a testing agency, and marked for intended location and application.

E. Comply with the "Approval Guide," published by FM Global, or UL's "Fire Protection Equipment Directory" for fire-service-main products.

F. NFPA Compliance: Comply with NFPA 24 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-suppression water-service piping.

1.5. DELIVERY, STORAGE, AND HANDLING

A. Preparation for Transport: Prepare valves, according to the following:

1. Ensure that valves are dry and internally protected against rust and corrosion.
2. Protect valves against damage to threaded ends and flange faces.
3. Set valves in best position for handling. Set valves closed to prevent rattling.

B. During Storage: Use precautions for valves, according to the following:

1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
2. Protect from weather. Store indoors and maintain temperature higher than ambient dew point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.

C. Handling: Use sling to handle valves and fire hydrants if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.

F. Protect flanges, fittings, and specialties from moisture and dirt.

1.6. PROJECT CONDITIONS

A. Interruption of Existing Fire-Suppression Water-Service Piping: Do not interrupt service to facilities occupied by the City of New York or unless permitted under the following conditions and then only after arranging to provide temporary water-distribution service according to requirements indicated:

1. Notify Commissioner no fewer than two days in advance of proposed interruption of service.
2. Do not proceed with interruption of service without Commissioner's written permission.

1.7. COORDINATION

A. Coordinate connection to water main with utility company.

PART 2 - PRODUCTS

2.0. DUCTILE-IRON PIPE AND FITTINGS

A. Ductile-iron pipe is intended for fire-suppression water-service-piping outside the building and underslab within the building.

B. Grooved-Joint, Ductile-Iron Pipe: AWWA C151, with cut, rounded-grooved ends.

C. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end.

D. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end.

E. Grooved-End, Ductile-Iron Pipe Appurtenances:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Anvil International, Inc.

b. Shurjoint Piping Products.
c. Star Pipe Products.
d. Victaulic Company.
e. Or Approved Equal

2. Grooved-End, Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron castings with dimensions matching pipe.
3. Grooved-End, Ductile-Iron-Piping Couplings: AWWA C606, for ductile-iron-pipe dimensions. Include ferrous housing sections, gasket suitable for water, and bolts and nuts.

F. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.

1. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

G. Push-on-Joint, Ductile-Iron Fittings: AWWA C153, ductile-iron compact pattern.

1. Gaskets: AWWA C111, rubber.

H. Flanges: ASME B16.1, Class 125, cast iron.

2.1. SPECIAL PIPE FITTINGS

A. Ductile-Iron Flexible Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. EBAA Iron, Inc.
b. ROMAC Industries Inc.
c. Star Pipe Products.
d. Or Approved Equal

2. Description: Compound, ductile-iron fitting with combination of flanged and mechanical-joint ends complying with AWWA C110 or AWWA C153. Include two gasketed ball-joint sections and one or more gasketed sleeve sections. Assemble components for offset and expansion indicated. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
3. Pressure Rating: 250 psig minimum.

B. Ductile-Iron Deflection Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. EBAA Iron, Inc.
b. ROMAC Industries Inc.

c. Star Pipe Products.
d. Or Approved Equal

2. Description: Compound, ductile-iron coupling fitting with sleeve and one or two flexing sections for up to 15-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.
3. Pressure Rating: 250 psig minimum.

2.2. ENCASEMENT FOR PIPING

A. Standard: ASTM A 674 or AWWA C105.

B. Material: Linear low-density PE film of 0.008-inch or High-density, cross-laminated PE film of 0.004-inch minimum thickness.

C. Form: Sheet or tube.

D. Color: Black or natural.

2.3. JOINING MATERIALS

A. Gaskets for Ferrous Piping and Copper-Alloy Tubing: ASME B16.21, asbestos free.

2.4. CURB VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Amcast Industrial Corporation.
2. Ford Meter Box Company, Inc. (The); Pipe Products Division.
3. Jones, James Company.
4. Master Meter, Inc.
5. McDonald, A. Y. Mfg. Co.
6. Mueller Co.; Water Products Division.
7. Red Hed Manufacturing & Supply.
8. Or Approved Equal

B. Curb Valves: Comply with AWWA C800 for high-pressure service-line valves. Valve has bronze body, ground-key plug or ball, wide tee head, and inlet and outlet matching service piping material.

C. Service Boxes for Curb Valves: Similar to AWWA M44 requirements for cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately 3 inches in diameter.

1. Shutoff Rods: Steel; with tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.

D. Meter Valves: Comply with AWWA C800 for high-pressure service-line valves. Include angle- or straight-through-pattern bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.

2.5. GATE VALVES

A. UL-Listed or FM-Approved Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American AVK Company; Valve & Fittings Division.
b. American Cast Iron Pipe Company; American Flow Control Division.
c. American Cast Iron Pipe Company; Waterous Company Subsidiary.
d. Clow Valve Company; a division of McWane, Inc.
e. Crane Co.; Crane Valve Group; Jenkins Valves.
f. Crane Co.; Crane Valve Group; Stockham Division.
g. East Jordan Iron Works, Inc.
h. Hammond Valve.
i. Kennedy Valve; a division of McWane, Inc.
j. M&H Valve Company; a division of McWane, Inc.
k. Milwaukee Valve Company.
l. Mueller Co.; Water Products Division.
m. NIBCO INC.
n. Shurjoint Piping Products.
o. Troy Valve; a division of Penn-Troy Manufacturing, Inc.
p. Tyco Fire & Building Products LP.
q. United Brass Works, Inc.
r. U.S. Pipe.
s. Watts Water Technologies, Inc.
t. Or Approved Equal

2. 175-psig (1200-kPa), UL-Listed or FM-Approved, Iron, Nonrising-Stem Gate Valves:

a. Description: Iron body and bonnet, bronze seating material, and inside screw.
b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
c. Pressure Rating: 175 psig (1200) minimum.
d. End Connections: Mechanical or push-on joint.
e. Indicator-Post Flange: Include on valves used with indicator posts.

3. 250-psig UL-Listed or FM-Approved, Iron, Nonrising-Stem Gate Valves:

a. Description: Iron body and bonnet, bronze seating material, and inside screw.
b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
c. Pressure Rating: 250 psig minimum.
d. End Connections: Mechanical or push-on joint.
e. Indicator-Post Flange: Include on valves used with indicator posts.

4. 175-psig, UL-Listed or FM-Approved, Iron, OS&Y, Gate Valves:

a. Description: Iron body and bonnet and bronze seating material.
b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
c. Pressure Rating: 175 psig minimum.
d. End Connections: Flanged or grooved.

5. 250-psig, UL-Listed or FM-Approved, Iron, OS&Y Gate Valves:

   a. Description: Iron body and bonnet and bronze seating material.
   b. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
   c. Pressure Rating: 250 psig minimum.
   d. End Connections: Flanged or grooved.

6. UL-Listed or FM-Approved, OS&Y Bronze, Gate Valves:

   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

      1) Crane Co.; Crane Valve Group; Crane Valves.
      2) Crane Co.; Crane Valve Group; Stockham Division.
      3) Milwaukee Valve Company.
      4) NIBCO INC.
      5) United Brass Works, Inc.
      6) Or Approved Equal

   b. Description: Bronze body and bonnet and bronze stem.
   c. Standards: UL 262 and "Approval Guide," published by FM Global, listing.
   d. Pressure Rating: 175 psig minimum.
   e. End Connections: Threaded.

2.6. GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
   b. Clow Valve Company; a division of McWane, Inc.
   c. East Jordan Iron Works, Inc.
   d. Flowserve.
   e. Kennedy Valve; a division of McWane, Inc.
   f. M&H Valve Company; a division of McWane, Inc.
   g. Mueller Co.; Water Products Division.
   h. U.S. Pipe.
   i. Or Approved Equal

2. Description: Sleeve and valve compatible with drilling machine.
3. Standard: MSS SP-60.
4. Tapping Sleeve: Cast-iron, ductile-iron, or stainless-steel, two-piece bolted sleeve with flanged outlet for new branch connection. Sleeve shall match size and type of pipe material being tapped and have recessed flange for branch valve.
5. Valve: AWWA, cast-iron, nonrising-stem, metal-seated gate valve with one raised-face flange mating tapping-sleeve flange.

B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches in diameter.

1. Operating Wrenches: Steel; with tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.

2. Description: Vertical-type, cast-iron body with operating wrench, extension rod, and adjustable cast-iron barrel of length required for depth of burial of valve.
3. Standards: UL 789 and "Approval Guide," published by FM Global, listing.

2.7. BUTTERFLY VALVES

A. Provide AWWA, UL-listed, or FM-approved valves as required by New York City Building Code.

B. AWWA Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. DeZurik/Copes-Vulcan; a unit of SPX Corporation.
   b. Milliken Valve Company.
   c. Mosser Valve; a division of Olson Technologies, Inc.
   d. Mueller Co.; Water Products Division.
   e. Pratt, Henry Company.
   f. Val-Matic Valve & Manufacturing Corp.
   g. Or Approved Equal

2. Description: Rubber seated.
3. Standard: AWWA C504.
4. Body Material: Cast or ductile iron.
5. Body Type: Wafer or flanged.
6. Pressure Rating: 150 psig.

C. UL Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Kennedy Valve; a division of McWane, Inc.
   b. Milwaukee Valve Company.
   c. Mueller Co.; Water Products Division.
   d. NIBCO INC.
   e. Pratt, Henry Company.
   f. Or Approved Equal

2. Description: Metal on resilient material seating.
3. Standards: UL 1091 and "Approval Guide," published by FM Global, listing.
4. Body Material: Cast or ductile iron.
5. Body Type: Wafer or flanged.

6. Pressure Rating: 175 psig.

2.8. CHECK VALVES

A. AWWA Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. American AVK Company; Valves & Fittings Division.
   b. American Cast Iron Pipe Company; American Flow Control Division.
   c. APCO Willamette Valve and Primer Corporation.
   d. Clow Valve Company; a division of McWane, Inc.
   e. Crane Co.; Crane Valve Group; Crane Valves.
   f. Crane Co.; Crane Valve Group; Stockham Division.
   g. Kennedy Valve; a division of McWane, Inc.
   h. M&H Valve Company; a division of McWane, Inc.
   i. Mueller Co.; Water Products Division.
   j. NIBCO INC.
   k. Watts Water Technologies, Inc.
   l. Or Approved Equal

2. Description: Swing-check type with resilient seat; with interior coating according to AWWA C550 and ends to match piping.
3. Standard: AWWA C508.
4. Pressure Rating: 175 psig.

B. UL-Listed or FM-Approved Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
   b. Clow Valve Company; a division of McWane, Inc.
   c. Crane Co.; Crane Valve Group; Stockham Division.
   d. Globe Fire Sprinkler Corporation.
   e. Kennedy Valve; a division of McWane, Inc.
   f. Kidde Fire Fighting.
   g. Matco-Norca.
   h. Mueller Co.; Water Products Division.
   i. NIBCO INC.
   j. Reliable Automatic Sprinkler Co., Inc.
   k. Tyco Fire & Building Products LP.
   l. United Brass Works, Inc.
   m. Victaulic Company.
   n. Viking Corporation.
   o. Watts Water Technologies, Inc.
   p. Or Approved Equal

2. Description: Swing-check type with pressure rating, rubber-face checks unless otherwise indicated, and ends matching piping.

3. Standards: UL 312 and "Approval Guide," published by FM Global, listing.
4. Pressure Rating: 175 psig.

C. Double-Check, Detector-Assembly Backflow Preventers:

1. Standards: ASSE 1048 and UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Operation: Continuous-pressure applications.
3. Pressure Loss: 8 psig maximum, through middle one-third of flow range.
4. Size: 6.
5. Design Flow Rate: 500 gpm.
6. Selected Unit Flow Range Limits: 750 gpm.
7. Pressure Loss at Design Flow Rate: 8 psig maximum.
8. Body Material: Ductile iron ASTM A536 grade 4.
9. End Connections: Flanged.
10. Configuration: Designed for horizontal flow.
11. Accessories:

a. Valves: UL 262, "Approval Guide," published by FM Global, listing, approved; OS&Y gate type with flanged ends on inlet and outlet.
b. Bypass: With displacement-type water meter, shutoff valves, and reduced-pressure backflow preventer.

D. Backflow Preventer Test Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Conbraco Industries, Inc.; Apollo Valves.
b. FEBCO; SPX Valves & Controls.
c. Flomatic Corporation.
d. Watts Water Technologies, Inc.
e. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
f. Or Approved Equal

2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

2.9. FIRE-DEPARTMENT CONNECTIONS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Elkhart Brass Mfg. Company, Inc.
2. Fire-End & Croker Corporation.
3. Guardian Fire Equipment, Inc.
4. Kidde Fire Fighting.
5. Potter Roemer.
6. Reliable Automatic Sprinkler Co., Inc.
7. Or Approved Equal

B. Description: Wall mount flush recessed chrome plated brass, thread inlets according to NFPA 1963 and matching 2014NYCBC. Include lugged caps, gaskets, and chains; lugged swivel connection and drop clapper for each hose-connection inlet.

C. Standard: UL 405.

D. Connections: Two NPS 3 inlets and one NPS 4 outlet.

E. Finish: Polished chrome plated.

F. Escutcheon Plate Marking: "Standpipe and auto sprinkler."

2.10. ALARM DEVICES

A. General: UL 753 and "Approval Guide," published by FM Global, listing, of types and sizes to mate and match piping and equipment.

B. Water-Flow Indicators: Vane-type water-flow detector, rated for 250-psig working pressure; designed for horizontal or vertical installation; with two single-pole, double-throw circuit switches to provide isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal when cover is removed.

C. Supervisory Switches: Single pole, double throw; designed to signal valve in other than fully open position.

D. Pressure Switches: Single pole, double throw; designed to signal increase in pressure.

2.11. SLEEVES

A. Cast-Iron Wall-Pipe Sleeves: Cast or fabricated of cast iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

B. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, standard-weight, zinc-coated, plain ends.

2.12. SLEEVE SEALS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Advance Products & Systems, Inc.
2. Calpico, Inc.
3. Metraflex, Inc.
4. Pipeline Seal and Insulator, Inc.
5. Or Approved Equal

B. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

C. Sealing Elements: EPDM-rubber or NBR interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.

D. Pressure Plates: Carbon steel.

E. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements.

2.13. GROUT

A. Standard: ASTM C 1107, Grade B, posthardening and volume adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink; recommended for interior and exterior applications.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EARTHWORK

A. Comply with excavating, trenching, and backfilling requirements in Section 310000 "Earthwork."

3.3. PIPING INSTALLATION

A. Water-Main Connection: Tap water main according to requirements of water utility company and of size and in location indicated.

B. Make connections larger than NPS 2 with tapping machine according to the following:

1. Install tapping sleeve and tapping valve according to MSS SP-60.
2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.

C. Comply with NFPA 24 for fire-service-main piping materials and installation.

D. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.

1. Install encasement for piping according to ASTM A 674 or AWWA C105.

E. Bury piping with depth of cover over top at least 48 inches according to the following:

1. Under Driveways: With at least 48 inches of cover over top.

F. Install piping by tunneling or jacking, or combination of both, under streets and other obstructions that cannot be disturbed.

G. Extend fire-suppression water-service piping and connect to water-supply source and building fire-suppression water-service piping systems at locations and pipe sizes indicated.

1. Terminate fire-suppression water-service piping at building floor slab until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building's fire-suppression water-service piping systems when those systems are installed.

H. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.

I. Comply with requirements in Sections 211313 "Water Sprinkler System" for fire-suppression-water piping inside the building.

J. Comply with requirements in Section 221116 "Domestic Water Piping" for potable-water piping inside the building.

3.4. JOINT CONSTRUCTION

A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure rating same as or higher than systems pressure rating for aboveground applications unless otherwise indicated.

B. Install unions adjacent to each valve in tubing NPS 2 and smaller.

C. Install flanges, flange adaptors, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

D. Ream ends of tubes and remove burrs.

E. Remove scale, slag, dirt, and debris from outside and inside of pipes, tubes, and fittings before assembly.

F. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.

G. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with grooved-end, ductile-iron-piping couplings, gaskets, lubricant, and bolts.

H. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with bolts according to ASME B31.9.

I. Dissimilar Materials Piping Joints: Use adapters compatible with both piping materials, with OD, and with system working pressure.

J. Do not use flanges or unions for underground piping.

3.5. ANCHORAGE INSTALLATION

A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:

1. Concrete thrust blocks.
2. Locking mechanical joints.
3. Set-screw mechanical retainer glands.
4. Bolted flanged joints.
5. Heat-fused joints.
6. Pipe clamps and tie rods.

B. Install anchorages for tees, plugs and caps, bends, crosses and valves, in fire-suppression water-service piping according to NFPA 24 and the following:

1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: According to AWWA C600.

C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.6. VALVE INSTALLATION

A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.

B. AWWA Valves Other Than Gate Valves: Comply with AWWA C600 and AWWA M44.

C. UL-Listed or FM-Approved Gate Valves: Comply with NFPA 24. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.

D. UL-Listed or FM-Approved Valves Other Than Gate Valves: Comply with NFPA 24.

E. MSS Valves: Install as component of connected piping system.

F. Curb Valves: Install each underground curb valve with head pointed up and with service box.

G. Support valves and piping, not direct buried, on concrete piers. Comply with requirements for concrete piers in Section 033000 "Cast-in-Place Concrete."

3.7. DOUBLE DETECTOR CHECK VALVE INSTALLATION

A. Install in indoors or aboveground.

B. Install for proper direction of flow. Install bypass with water meter, gate valves on each side of meter, and check valve downstream from meter.

C. Support detector check valves and piping on concrete piers. Comply with requirements for concrete piers in Section 033000 "Cast-in-Place Concrete."

3.8. FIRE-DEPARTMENT CONNECTION INSTALLATION

A. Install ball drip valves at each check valve for fire-department connection to mains.

3.9. ALARM DEVICE INSTALLATION

A. General: Comply with NFPA 24 for devices and methods of valve supervision. Underground valves with valve box do not require supervision.

B. Supervisory Switches: Supervise valves in open position.

1. Valves: Grind away portion of exposed valve stem. Bolt switch, with plunger in stem depression, to OS&Y gate-valve yoke.
2. Indicator Posts: Drill and thread hole in upper-barrel section at target plate. Install switch, with toggle against target plate, on barrel of indicator post.

C. Locking and Sealing: Secure unsupervised valves as follows:

1. Valves: Install chain and padlock on open OS&Y gate valve.
2. Post Indicators: Install padlock on wrench on indicator post.

D. Pressure Switches: Drill and thread hole in exposed barrel of fire hydrant. Install switch.

E. Water-Flow Indicators: Install in water-service piping in vault. Select indicator with saddle and vane matching pipe size. Drill hole in pipe, insert vane, and bolt saddle to pipe.

F. Connect alarm devices to building's fire-alarm system. Wiring and fire-alarm devices are specified in Section 283111 " Digital, Addressable Fire Alarm System".

3.10. CONNECTIONS

A. Connect fire-suppression water-service piping to existing street water main.

B. Connect fire-suppression water-service piping to interior fire-suppression piping.

3.11. SLEEVE INSTALLATION

A. General Requirements: Install sleeves for pipes and tubes passing through penetrations in exterior walls.

1. Exception: Sleeves are not required for core-drilled holes.

B. Cut sleeves to length for mounting flush with both surfaces.

C. Install sleeves in new floor slabs and walls as they are constructed.

D. For exterior wall penetrations above grade, seal annular space between sleeves and piping using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Section 079200 "Interior Joint Sealants."

E. For exterior wall penetrations below grade, seal annular space between sleeves and piping using sleeve seals.

F. Seal space outside of sleeves in concrete walls with grout.

G. Install the following sleeve materials:

1. Galvanized- steel pipe or steel-sheet sleeves for pipes smaller than NPS 6.
2. Cast-iron wall-pipe or galvanized-steel pipe sleeves for pipes NPS 6 and larger.

3.12. SLEEVE SEAL INSTALLATION

A. Install sleeve seals in sleeves in exterior concrete floor slabs and walls at fire-suppression water-service piping entries into the building.

B. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.13. FIELD QUALITY CONTROL

A. Use test procedure prescribed by New York City Building Code or, if method is not prescribed, use procedure described below.

B. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.

C. Hydrostatic Tests: Test at not less than one-and-one-half times the working pressure for two hours.

1. Increase pressure in 50-psig increments and inspect each joint between increments. Hold at test pressure for one hour; decrease to 0 psig. Slowly increase again to test pressure and hold for one

more hour. Maximum allowable leakage is 2 quarts per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.

D. Prepare test and inspection reports.

3.14. IDENTIFICATION

A. Install continuous underground detectable warning tape during backfilling of trench for underground fire-suppression water-service piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Section 310000 "Earthwork."

3.15. CLEANING

A. Clean and disinfect fire-suppression water-service piping as follows:

1. Purge new piping systems and parts of existing systems that have been altered, extended, or restoreed before use.
2. Use purging and disinfecting procedure prescribed by New York City Building Code or, if method is not prescribed, use procedure described in NFPA 24 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
3. Use purging and disinfecting procedure prescribed by New York City Building Code or, if method is not prescribed, use procedure described in AWWA C651 or do as follows:

    a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
    b. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for three hours.
    c. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
    d. Submit water samples in sterile bottles as code requires. Repeat procedure if biological examination shows evidence of contamination.

B. Prepare reports of purging and disinfecting activities.

C. Underground fire-suppression water-service piping NPS 6 to NPS 12 shall be one of the following:

1. Grooved-end, ductile-iron pipe; grooved-end, ductile-iron pipe appurtenances; and grooved joints.
2. Mechanical-joint, ductile-iron pipe; mechanical-joint, ductile- or gray-iron, standard-pattern or ductile-iron, compact-pattern fittings; glands, gaskets, and bolts; and gasketed joints.
3. Push-on-joint, ductile-iron pipe; push-on-joint, ductile-iron compact-pattern fittings; and gasketed joints.

D. Aboveground fire-suppression water-service piping NPS 5 to NPS 12 shall be grooved-end, ductile-iron pipe; grooved-end, ductile-iron pipe appurtenances; and grooved joints.

E. Underslab fire-suppression water-service piping NPS 6 to NPS 12 shall be one of the following:

1. Grooved-end, ductile-iron pipe; grooved-end, ductile-iron pipe appurtenances; and grooved joints.
2. Mechanical-joint, ductile-iron pipe; mechanical-joint, ductile- or gray-iron, standard-pattern fittings; glands, gaskets, and bolts; and restrained, gasketed joints.
3. Push-on-joint, ductile-iron pipe; push-on-joint, ductile-iron compact-pattern fittings; and restrained, gasketed joints.

3.16. VALVE SCHEDULE

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

B. Valves shall be of pressure rating required for specific application.

C. Underground fire-suppression water-service shutoff valves NPS 3 and larger shall be one of the following:

1. 200-psig, AWWA, iron, nonrising-stem, metal-seated gate valves.
2. 250-psig, AWWA, iron, nonrising-stem, resilient-seated gate valves.
3. 175-psig,250-psig, UL-listed or FM-approved, iron, nonrising-stem gate valves.

D. Standard-pressure, aboveground fire-suppression water-service shutoff valves NPS 3 and larger shall be one of the following:

1. 200-psig, AWWA, iron, OS&Y, metal-seated gate valves.
2. 250-psig, AWWA, iron, OS&Y, resilient-seated gate valves.
3. 175-psig, 250-psig, UL-listed or FM-approved, iron, OS&Y gate valves.
4. AWWA UL-listed or FM-approved butterfly valves.

E. Fire-suppression water-service check valves NPS 3 and larger shall be one of the following:

1. AWWA UL-listed or FM-approved check valves.
2. UL-listed or FM-approved detector check valves.

END OF SECTION 211100

SECTION 211200
Fire-Suppression Standpipes

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Section Includes:

1. Pipes, fittings, and specialties.
2. Fire-protection valves.
3. Hose connections.
4. Hose stations.
5. Monitors.
6. Fire-department connections.
7. Alarm devices.
8. Manual control stations.
9. Control panels.
10. Pressure gages.

B. Related Sections:

1. Section 211313 "Wet-Pipe Sprinkler Systems" for wet-pipe sprinkler piping.
2. Section 283111 "Digital, Addressable Fire-Alarm System" for alarm devices not specified in this Section.

1.3. DEFINITIONS

A. High-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at working pressure higher than standard 175 psig (1200 kPa), but not higher than 350 psig.

B. Standard-Pressure Standpipe Piping: Fire-suppression standpipe piping designed to operate at working pressure 175 psig maximum.

1.4. SYSTEM DESCRIPTIONS

A. Manual – Wet Standpipe System: Includes NPS 2-1/2 (DN 65) hose connections. Has open water-supply valve with pressure maintained and is capable of supplying water demand.

1.5. PERFORMANCE REQUIREMENTS

A. Standard-Pressure, Fire-Suppression Standpipe System Component: Listed for 175-psig minimum working pressure.

B. High-Pressure, Fire-Suppression Standpipe System Component: Listed for 350-psig working pressure.

C. Engineering Criteria: Engineer fire-suppression standpipes, including comprehensive engineering analysis by a professional engineer licensed in the State of New York, using performance requirements and design criteria indicated.

D. Fire-suppression standpipe design shall be approved by the Commissioner.

1. Maximum residual pressure at required flow at each hose-connection outlet is as follows unless otherwise indicated:

   a. NPS 2-1/2 (DN 65) Hose Connections: 100 psig (1200 kPa).

E. Seismic Performance: Fire-suppression standpipes shall withstand the effects of earthquake motions determined according to NFPA 13 and (ASCE/SEI 7).

1.6. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

C. Shop Drawings: For fire-suppression standpipes. Include plans, elevations, sections, details, and attachments to other work.

1. Wiring Diagrams: For power, signal, and control wiring.

D. Engineering Data Submittal: For standpipe systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the state of New York responsible for their preparation.

E. Coordination Drawings: Fire-suppression standpipes, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Plumbing piping and equipment.
2. Piping.
3. HVAC piping, ductwork and equipment.
4. Electric conduits and equipment.
5. All general construction entities

F.Qualification Data: For qualified Installer.

G. Approved Standpipe Drawings: Working plans, prepared according to NYC Building Code and NFPA 14, that have been approved by NYC Department of Buildings, including hydraulic calculations if applicable.

H. Welding certificates.

I. Fire-hydrant flow test report.

J. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NYC Building Code and NFPA 14. Include "Contractor's Material and Test Certificate for Aboveground Piping" and "Contractor's Material and Test Certificate for Underground Piping."

K. Field quality-control reports.

L. Operation and Maintenance Data: For fire-suppression standpipes specialties to include in emergency, operation, and maintenance manuals.

1.7. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Installer Qualifications:

1. Installer's responsibilities include fabricating and installing fire-suppression standpipes and providing professional engineering services. Base calculations on results of fire-hydrant flow test.

a. Engineering Services: Preparation of working plans, calculations, and field test reports by a qualified professional engineer licensed in the State of New York.

C. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. NFPA Standards: Fire-suppression standpipe equipment, specialties, accessories, installation, and testing shall comply with NYC Building Code and NFPA 14, "Installation of Standpipe and Hose Systems."

PART 2 - PRODUCTS

2.1. PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

2.2. STEEL PIPE AND FITTINGS

A. Standard Weight, Galvanized-and Black-Steel Pipe: ASTM A 53/A 53M, Grade B. Pipe ends may be factory or field formed to match joining method.

B. Schedule 10, Black-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, Schedule 10 in NPS 2.5 to NPS5; and NFPA 13-specified wall thickness in NPS 6 to NPS 10, plain end.

C. Standard-Weight, Galvanized-and Black-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, seamless steel pipe with threaded ends.

D. Galvanized and Uncoated, Steel Couplings: ASTM A 865, threaded.

E. Galvanized and Uncoated, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.

F. Malleable- or Ductile-Iron Unions: UL 860.

G. Cast-Iron Flanges: ASME B16.1, Class 125.

H. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.

I. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.

J. Grooved-Joint, Steel-Pipe Appurtenances:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Anvil International, Inc.
    b. Corcoran Piping System Co.
    c. National Fittings, Inc.
    d. Shurjoint Piping Products.
    e. Tyco Fire & Building Products LP.
    f. Victaulic Company.
    g. Or Approved Equal

2. Pressure Rating: 175 psig (1200 kPa).
3. Galvanized and Uncoated, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.3. PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free.

1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.4. LISTED FIRE-PROTECTION VALVES

A. General Requirements:

1. Valves shall be UL listed or FM approved.
2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig 350.

B. Ball Valves:

1. Standard: UL 1091 except with ball instead of disc.
2. Valves NPS 1-1/2 and Smaller: Bronze body with threaded ends.
3. Valves NPS 2 and NPS 2-1/2 : Bronze body with threaded ends or ductile-iron body with grooved ends.
4. Valves NPS 3 : Ductile-iron body with grooved ends.

C. Iron Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Anvil International, Inc.
   b. Fivalco Inc.
   c. Global Safety Products, Inc.
   d. Kennedy Valve; a division of McWane, Inc.
   e. Milwaukee Valve Company.
   f. NIBCO INC.
   g. Pratt, Henry Company.
   h. Shurjoint Piping Products.
   i. Tyco Fire & Building Products LP.
   j. Victaulic Company.
   k. Or approved equal.

2. Standard: UL 1091.
3. Pressure Rating: 175 psig .
4. Body Material: Cast or ductile iron.
5. Style: Lug or wafer.
6. End Connections: Grooved.

D. Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following :

   a. AFAC Inc.
   b. American Cast Iron Pipe Company; Waterous Company Subsidiary.

c. Anvil International, Inc.
d. Clow Valve Company; a division of McWane, Inc.
e. Crane Co.; Crane Valve Group; Crane Valves.
f. Crane Co.; Crane Valve Group; Jenkins Valves.
g. Crane Co.; Crane Valve Group; Stockham Division.
h. Fire-End & Croker Corporation.
i. Fire Protection Products, Inc.
j. Fivalco Inc.
k. Globe Fire Sprinkler Corporation.
l. Groeniger & Company.
m. Kennedy Valve; a division of McWane, Inc.
n. Matco-Norca.
o. Metraflex, Inc.
p. Milwaukee Valve Company.
q. Mueller Co.; Water Products Division.
r. NIBCO INC.
s. Potter Roemer.
t. Reliable Automatic Sprinkler Co., Inc.
u. Shurjoint Piping Products.
v. Tyco Fire & Building Products LP.
w. United Brass Works, Inc.
x. Venus Fire Protection Ltd.
y. Victaulic Company.
z. Viking Corporation.
aa. Watts Water Technologies, Inc.
bb. Or approved equal.

2. Standard: UL 312.
3. Pressure Rating: 250 psig minimum.
4. Type: Swing check.
5. Body Material: Cast iron.
6. End Connections: Flanged or grooved.

E. Iron OS&Y Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
b. American Valve, Inc.
c. Clow Valve Company; a division of McWane, Inc.
d. Crane Co.; Crane Valve Group; Crane Valves.
e. Crane Co.; Crane Valve Group; Jenkins Valves.
f. Crane Co.; Crane Valve Group; Stockham Division.
g. Hammond Valve.
h. Milwaukee Valve Company.
i. Mueller Co.; Water Products Division.
j. NIBCO INC.
k. Shurjoint Piping Products.

l. Tyco Fire & Building Products LP.
m. United Brass Works, Inc.
n. Watts Water Technologies, Inc.
o. Or approved equal.

2. Standard: UL 262.
3. Pressure Rating: 250 psig (1725 kPa) minimum.
4. Body Material: Cast or ductile iron.
5. End Connections: Flanged or grooved.

F. Indicating-Type Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Anvil International, Inc.
b. Fivalco Inc.
c. Global Safety Products, Inc.
d. Kennedy Valve; a division of McWane, Inc.
e. Milwaukee Valve Company.
f. NIBCO INC.
g. Shurjoint Piping Products.
h. Tyco Fire & Building Products LP.
i. Victaulic Company.
j. Or approved equal.

2. Standard: UL 1091.
3. Pressure Rating: 175 psig minimum.
4. Valves NPS 2 and Smaller:

a. Valve Type: Ball or butterfly.
b. Body Material: Bronze.
c. End Connections: Threaded.

5. Valves NPS 2-1/2 and Larger:

a. Valve Type: Butterfly.
b. Body Material: Cast or ductile iron.
c. End Connections: Flanged, grooved, or wafer.

6. Valve Operation: Integral electrical, 115-V ac, prewired, single-circuit, supervisory switch electrical, 115-V ac, prewired, two-circuit, supervisory switch visual indicating device, as required for operating conditions.

G. NRS Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Cast Iron Pipe Company; Waterous Company Subsidiary.

b. American Valve, Inc.
c. Clow Valve Company; a division of McWane, Inc.
d. Crane Co.; Crane Valve Group; Stockham Division.
e. Kennedy Valve; a division of McWane, Inc.
f. Mueller Co.; Water Products Division.
g. NIBCO INC.
h. Tyco Fire & Building Products LP.
i. Or approved equal.

2. Standard: UL 262.
3. Pressure Rating: 250 psig (1725 kPa) minimum.
4. Body Material: Cast iron with indicator post flange.
5. Stem: Nonrising.
6. End Connections: Flanged or grooved.

2.5. TRIM AND DRAIN VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" lists or "Approval Guide," published by FM Global, listing.
2. Pressure Rating: 175 psig minimum.

B. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Affiliated Distributors.
b. Anvil International, Inc.
c. Barnett.
d. Conbraco Industries, Inc.; Apollo Valves.
e. Fire-End & Croker Corporation.
f. Fire Protection Products, Inc.
g. Flowserve.
h. FNW.
i. Jomar International, Ltd.
j. Kennedy Valve; a division of McWane, Inc.
k. Kitz Corporation.
l. Legend Valve.
m. Metso Automation USA Inc.
n. Milwaukee Valve Company.
o. NIBCO INC.
p. Potter Roemer.
q. Red-White Valve Corporation.
r. Southern Manufacturing Group.
s. Stewart, M. A. and Sons Ltd.
t. Tyco Fire & Building Products LP.
u. Victaulic Company.

v. Watts Water Technologies, Inc.
w. Or approved equal.

2.6. SPECIALTY VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating:

   a. Standard-Pressure Piping Specialty Valves: 175 psig minimum.
   b. High-Pressure Piping Specialty Valves: 350 psig.

3. Body Material: Cast or ductile iron.
4. Size: Same as connected piping.
5. End Connections: Flanged or grooved.

B. Automatic Ball Drip Drain Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AFAC Inc.
   b. Reliable Automatic Sprinkler Co., Inc.
   c. Tyco Fire & Building Products LP.
   d. Or approved equal.

2. Standard: UL 1726.
3. Pressure Rating: 175 psig minimum.
4. Type: Automatic draining, ball check.
5. Size: NPS 3/4 .
6. End Connections: Threaded.

2.7. HOSE CONNECTIONS

A. Adjustable-Valve Hose Connections:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AFAC Inc.
   b. Elkhart Brass Mfg. Company, Inc.
   c. Fire-End & Croker Corporation.
   d. Fire Protection Products, Inc.
   e. GMR International Equipment Corporation.
   f. Guardian Fire Equipment, Inc.
   g. Potter Roemer.
   h. Tyco Fire & Building Products LP.
   i. Wilson & Cousins Inc.

j. Zurn Plumbing Products Group; Wilkins Water Control Products Division.
k. Or approved equal.

2. Standard: UL 668 hose valve, with integral UL 1468 reducing or restricting pressure-control device, for connecting fire hose.
3. Pressure Rating: 350 psig minimum.
4. Material: Brass or bronze.
5. Size: NPS 1-1/2 or NPS 2-1/2, as indicated.
6. Inlet: Female pipe threads.
7. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching 2014NYCBC.
8. Pattern: Angle or gate.
9. Pressure-Control Device Type: Pressure reducing.
10. Design Outlet Pressure Setting: psig.
11. Finish: Rough brass or bronze.

B. Nonadjustable-Valve Hose Connections:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AFAC Inc.
b. Elkhart Brass Mfg. Company, Inc.
c. Fire-End & Croker Corporation.
d. Fire Protection Products, Inc.
e. GMR International Equipment Corporation.
f. Guardian Fire Equipment, Inc.
g. Kennedy Valve; a division of McWane, Inc.
h. Mueller Co.; Water Products Division.
i. NIBCO INC.
j. Potter Roemer.
k. Tyco Fire & Building Products LP.
l. Wilson & Cousins Inc.
m. Or approved equal.

2. Standard: UL 668 hose valve for connecting fire hose.
3. Pressure Rating: 300 psig minimum.
4. Material: Brass or bronze.
5. Size: NPS 1-1/2 or NPS 2-1/2, as indicated.
6. Inlet: Female pipe threads.
7. Outlet: Male hose threads with lugged cap, gasket, and chain. Include hose valve threads according to NFPA 1963 and matching 2014NYCBC.
8. Pattern: Angle or gate.
9. Finish: Rough brass or bronze.

C. Flush-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AFAC Inc.
b. Elkhart Brass Mfg. Company, Inc.
c. GMR International Equipment Corporation.
d. Guardian Fire Equipment, Inc.
e. Potter Roemer.
f. Or approved equal.

2. Standard: FM approved.
3. Type: Flush, for wall mounting, two-way inlet
4. Pressure Rating: 600 psig minimum.
5. Body Material: Corrosion-resistant metal.
6. Inlets: Brass with threads according to NFPA 1963 and matching 2014NYCBC sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
8. Escutcheon Plate: Rectangular, brass, wall type.
9. Outlet: With pipe threads.
10. Body Style: Horizontal.
11. Number of Inlets: Two.
12. Outlet Location: Back Bottom Left side, Right side Top as required.
13. Escutcheon Plate Marking: Similar to "AUTO SPKR & STANDPIPE."
14. Finish: Polished chrome plated.
15. Outlet Size: NPS 4 (DN 100) NPS 5 (DN 125) NPS 6 (DN 150).

2.8. ALARM DEVICES

A. Alarm-device types shall match piping and equipment connections.

B. Electrically Operated Alarm Bell:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Fire-Lite Alarms, Inc.; a Honeywell company.
b. Notifier; a Honeywell company.
c. Potter Electric Signal Company.
d. Or approved equal.

2. Standard: UL 464.
3. Type: Vibrating, metal alarm bell.
4. Size: 8-inch minimum 10-inch (250-mm) diameter.
5. Finish: Red-enamel factory finish, suitable for outdoor use.

C. Water-Flow Indicators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ADT Security Services, Inc.
b. McDonnell & Miller; ITT Industries.
c. Potter Electric Signal Company.

d. System Sensor; a Honeywell company.
e. Viking Corporation.
f. Watts Industries (Canada) Inc.
g. Or approved equal.

2. Standard: UL 346.
3. Water-Flow Detector: Electrically supervised.
4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
5. Type: Paddle operated.
6. Pressure Rating: 250 psig.
7. Design Installation: Horizontal or vertical.

D. Pressure Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. AFAC Inc.
b. Barksdale, Inc.
c. Detroit Switch, Inc.
d. Potter Electric Signal Company.
e. System Sensor; a Honeywell company.
f. Tyco Fire & Building Products LP.
g. United Electric Controls Co.
h. Viking Corporation.
i. Or approved equal.

2. Standard: UL 346.
3. Type: Electrically supervised water-flow switch with retard feature.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design Operation: Rising pressure signals water flow.

E. Valve Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Fire-Lite Alarms, Inc.; a Honeywell company.
b. Kennedy Valve; a division of McWane, Inc.
c. Potter Electric Signal Company.
d. System Sensor; a Honeywell company.
e. Or approved equal.

2. Standard: UL 346.
3. Type: Electrically supervised.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design: Signals that controlled valve is in other than fully open position.

2.9. PRESSURE GAGES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AMETEK; U.S. Gauge Division.
2. Ashcroft Inc.
3. Brecco Corporation.
4. WIKA Instrument Corporation.
5. Or approved equal.

B. Standard: UL 393.

C. Dial Size: 3-1/2- to 4-1/2-inch diameter.

D. Pressure Gage Range: 0 to 300 psig.

E. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.

2.10. ESCUTCHEONS

A. General: Manufactured ceiling, floor, and wall escutcheons and floor plates.

B. One-Piece, Cast-Brass Escutcheons: Polished chrome-plated finish with set-screws.

C. One-Piece, Deep-Pattern Escutcheons: Deep-drawn, box-shaped brass with chrome-plated finish.

D. One-Piece, Stamped-Steel Escutcheons: Chrome-plated finish with set-screw.

E. Split-Casting, Cast-Brass Escutcheons: Polished chrome-plated finish with concealed hinge and set-screw.

F.Split-Plate, Stamped-Steel Escutcheons: Chrome-plated finish with concealed hinge and set-screw.

G. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.

H. Split-Casting Floor Plates: Cast brass with concealed hinge.

2.11. SLEEVES

A. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.

B. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, standard weight, zinc coated, plain ends.

C. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set-screws.

2.12. SLEEVE SEALS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Advance Products & Systems, Inc.
2. Calpico, Inc.
3. Metraflex, Inc.
4. Pipeline Seal and Insulator, Inc.
5. Or approved equal.

B. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Carbon steel.
3. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements.

2.13. GROUT

A. Standard: ASTM C 1107, Grade B, posthardening and volume adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink, and recommended for interior and exterior applications.

C. Design Mix: 5000-psi , 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PREPARATION

A. Perform fire-hydrant flow test according to NYC DEP NFPA 14 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.

B. Report test results promptly and in writing.

3.3. EXAMINATION

A. Examine roughing-in for hose connections and stations to verify actual locations of piping connections before installation.

B. Examine walls and partitions for suitable thickness, fire- and smoke-rated construction, framing for hose-station cabinets, and other conditions where hose connections and stations are to be installed.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.4. SERVICE-ENTRANCE PIPING

A. Connect fire-suppression standpipe piping to water-service piping at service entrance into building. Comply with requirements for exterior piping in Section 221113 "Facility Water Distribution Piping."

B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories at connection to fire-suppression water-service piping. Comply with requirements for backflow preventers in Section 221113 "Facility Water Distribution Piping."

C. Install shutoff valve, check valve, pressure gage, and drain at connection to water service.

3.5. PIPING INSTALLATION

A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.

1. Deviations from approved working plans for piping require written approval from the Commissioner. File written approval with Commissioner before deviating from approved working plans.

B. Piping Standard: Comply with requirements in NYC Building Code NFPA 14 for installation of fire-suppression standpipe piping.

C. Install seismic restraints on piping. Comply with requirements in NFPA 13 for seismic-restraint device materials and installation.

D. Install listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

E. Install drain valves on standpipes. Extend drain piping to outside of building.

F.Install automatic ball drip drain valves to drain piping between fire-department connections and check valves. Drain to floor drain or outside building.

G. Install alarm devices in piping systems.

H. Install hangers and supports for standpipe system piping according to NYC Building Code and NFPA 14. Comply with requirements in NFPA 13 for hanger materials.

I. Install pressure gages on riser or feed main and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 and with soft-metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.

J. Fill wet-type standpipe system piping with water.

K. Install electric heating cables and pipe insulation on wet-type, fire-suppression standpipe piping in areas subject to freezing.

3.6. JOINT CONSTRUCTION

A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.

B. Install unions adjacent to each valve in pipes NPS 2 and smaller.

C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

F.Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.

G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

H. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.

I. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

J. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.

K. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.7. VALVE AND SPECIALTIES INSTALLATION

A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NYC Building Code NFPA 14 and NYC Department of Buildings.

B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.

3.8. HOSE-CONNECTION INSTALLATION

A. Install hose connections adjacent to standpipes.

B. Install freestanding hose connections for access and minimum passage restriction.

C. Install NPS 1-1/2 hose-connection valves with flow-restricting device.

D. Install NPS 2-1/2 hose connections with quick-disconnect NPS 2-1/2 by NPS 1-1/2 (DN 65 by DN 40) reducer adapter and flow-restricting device.

3.9. FIRE-DEPARTMENT CONNECTION INSTALLATION

A. Install wall-type, fire-department connections.

B. Install automatic ball drip drain valve at each check valve for fire-department connection.

3.10. ESCUTCHEON INSTALLATION

A. Install escutcheons for penetrations of walls, ceilings, and floors.

B. Escutcheons for New Piping:

1. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
2. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
3. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
4. Bare Piping in Unfinished Service Spaces: One piece, stamped steel with set-screw.
5. Bare Piping in Equipment Rooms: One piece, stamped steel with set-screw.
6. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

3.11. SLEEVE INSTALLATION

A. General Requirements: Install sleeves for pipes and tubes passing through penetrations in floors, partitions, roofs, and walls.

B. Sleeves are not required for core-drilled holes.

C. Permanent sleeves are not required for holes formed by removable PE sleeves.

D. Cut sleeves to length for mounting flush with both surfaces unless otherwise indicated.

E. Install sleeves in new partitions, slabs, and walls as they are built.

F. For interior wall penetrations, seal annular space between sleeve and pipe or pipe insulation using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Section 079200 "Interior Joint Sealants."

G. For exterior wall penetrations above grade, seal annular space between sleeve and pipe using joint seal ants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Sec tion 079201"Exterior Joint Sealants."

H. For exterior wall penetrations below grade, seal annular space between sleeve and pipe using sleeve seals.

I. Seal space outside of sleeves in concrete slabs and walls with grout.

J. Install sleeves that are large enough to provide 1 inch annular clear space between sleeve and pipe or pipe insulation unless otherwise indicated.

K. Install sleeve materials according to the following applications:

1. Sleeves for Piping Passing through Concrete Floor Slabs: Galvanized-steel pipe.
2. Sleeves for Piping Passing through Concrete Floor Slabs of Mechanical Equipment Areas or Other Wet Areas: Galvanized-steel pipe.

    a. Extend sleeves 2 inches above finished floor level.
    b. For pipes penetrating floors with membrane waterproofing, extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.

3. Sleeves for Piping Passing through Gypsum-Board Partitions:

    a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6.
    b. Galvanized-steel-sheet sleeves for pipes NPS 6 and larger.
    c. Exception: Sleeves are not required for water-supply tubes and waste pipes for individual plumbing fixtures if escutcheons will cover openings.

4. Sleeves for Piping Passing through Concrete Roof Slabs: Galvanized-steel pipe.
5. Sleeves for Piping Passing through Exterior Concrete Walls:

    a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6.
    b. Cast-iron wall pipe sleeves for pipes NPS 6 (DN 150) and larger.
    c. Install sleeves that are large enough to provide 1-inch annular clear space between sleeve and pipe or pipe insulation when sleeve seals are used.

6. Sleeves for Piping Passing through Interior Concrete Walls:

    a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6.
    b. Galvanized-steel-sheet sleeves for pipes NPS 6 and larger.

L. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials.

3.12. SLEEVE SEAL INSTALLATION

A. Install sleeve seals in sleeves in exterior concrete walls at water-service piping entries into building.

B. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.13. IDENTIFICATION

A. Install labeling and pipe markers on equipment and piping according to requirements in NYC Building Code and NFPA 14. Each hose connection provided with a conspicuous sign that reads "Manual Stand pipe for Fire Department Use Only."

B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.14. FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Leak Test: After installation, charge systems and test for leaks. Restore leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Flush, test, and inspect standpipe systems according to NYC Building Code NFPA 14, "System Acceptance" Chapter.
4. Energize circuits to electrical equipment and devices.
5. Start and run air compressors.
6. Coordinate with fire-alarm tests. Operate as required.
7. Coordinate with fire-pump tests. Operate as required.

B. Fire-suppression standpipe system will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.15. INSTRUCTION

A. Engage a factory-authorized service representative to instruct the City of New York's operating person nel to adjust, operate, and maintain specialty valves.

3.16. PIPING SCHEDULE

A. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded or grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.

B. Standard-pressure, wet-type, fire-suppression standpipe piping, NPS 2.5 and smaller, shall be one of the following:

1. Standard-weight, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
2. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

C. Standard-pressure, wet-type, fire-suppression standpipe piping, NPS 3 and larger shall be one of the fol lowing:

1. Standard-weight, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
2. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
3. Standard-weight, black-steel pipe with cut- or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
4. Standard-weight, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
5. Schedule 10,black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

END OF SECTION 211200

SECTION 211313
Wet-Pipe Sprinkler Systems

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Section Includes:

1. Pipes, fittings, and specialties.
2. Fire-protection valves.
3. Fire-department connections.
4. Sprinklers.
5. Alarm devices.
6. Control panels.
7. Pressure gages.

B. Related Sections:

1. Section 211200 "Fire-Suppression Standpipes" for standpipe piping.
2. Section 213113 "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and fire-pump controllers.

1.3. DEFINITIONS

A. High-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure higher than standard 175 psig, but not higher than 350 psig.

B. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of 175 psig (1200 kPa) maximum.

1.4. SYSTEM DESCRIPTIONS

A. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply through a fire pump. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.

1.5. PERFORMANCE REQUIREMENTS

A. Standard-Pressure Piping System Component: Listed for 175-psig, minimum working pressure.

B. Engineering Requirements: Engineer sprinkler system(s), including comprehensive engineering analysis by a professional engineer licensed in the State of New York, using performance requirements and design criteria indicated.

C. Sprinkler system design shall be approved as required by the New York City Building Code.

1. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.
2. Sprinkler Occupancy Hazard Classifications:
   a. Building Service Areas: Ordinary Hazard, Group 1.
   b. General Storage Areas: Ordinary Hazard, Group 1.
   c. Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
   d. Office and Public Areas: Light Hazard.
3. Minimum Density for Automatic-Sprinkler Piping Design:
   a. Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. area.
   b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. area.
   c. Ordinary-Hazard, Group 2 Occupancy: 0.20 gpm over 1500-sq. ft. area.
4. Maximum Protection Area per Sprinkler:
   a. Office Spaces: 225 sq. ft.
   b. Storage Areas: 130 sq. ft.
   c. Mechanical Equipment Rooms: 130 sq. ft.
   d. Electrical Equipment Rooms: 130 sq. ft.
   e. Other Areas: According to NFPA 13 recommendations unless otherwise indicated.
5. Total Combined Hose-Stream Demand Requirement: According to NYC Building Code and NFPA 13 unless otherwise indicated:
   a. Light-Hazard Occupancies: 100 gpm for 30 minutes.
   b. Ordinary-Hazard Occupancies: 250 gpm for 60 to 90 minutes.

D. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13.

1.6. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

C. Shop Drawings: For wet-pipe sprinkler systems. Include plans, elevations, sections, details, and attachments to other work.

1. Wiring Diagrams: For power, signal, and control wiring.

D. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Domestic water piping.
2. Sanitary Piping.
3. HVAC hydronic piping and other conduits.
4. Ductwork.
5. Items penetrating finished ceiling include the following:

   a. Lighting fixtures.
   b. Air outlets and inlets.
   c. Speakers.
   d. Miscellaneous ceiling mounted devices.

E. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved, including hydraulic calculations if applicable.

F. Welding certificates.

G. Fire-hydrant flow test report.

H. Field quality-control reports.

I. Operation and Maintenance Data: For sprinkler specialties to include in emergency, operation, and maintenance manuals.

J. Engineering Data Submittal: For wet standpipe systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the state of New York responsible for their preparation.

1.7. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Materials and work shall conform to the latest edition of reference specifications specified herein and requirements of the New York City Building Code.

C. Installer Qualifications:

1. Installer's responsibilities include fabricating and installing sprinkler systems and providing professional engineering services. Base calculations on results of fire-hydrant flow test.

   a. Engineering Services: Preparation of working plans, calculations, and field test reports by a professional engineer licensed in the State of New York.

D. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:

1. NYC Building Code.
2. NFPA 13, "Installation of Sprinkler Systems."

1.8. COORDINATION

A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

PART 2 - PRODUCTS

2.1. PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

2.2. STEEL PIPE AND FITTINGS

A. Standard Weight, Galvanized and Black-Steel Pipe: ASTM A 53/A 53M. Pipe ends may be factory or field formed to match joining method.

B. Schedule 10, Black-Steel Pipe: ASTM A 135 or ASTM A 795/A 795M, Schedule 10 in NPS 2.5 and larger.

C. Galvanized and Black-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M, standard-weight, seamless steel pipe with threaded ends.

D. Galvanized and Uncoated, Steel Couplings: ASTM A 865, threaded.

E. Galvanized and Uncoated, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.

F. Malleable- or Ductile-Iron Unions: UL 860.

G. Cast-Iron Flanges: ASME 16.1, Class 125.

H. Flanges and fittings in first paragraph below are available in NPS 1/2 to NPS 24 (DN 15 to DN 600).

I. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.

J. Steel Welding Fittings: ASTM A 234/A 234M and ASME B16.9.

K. Grooved-Joint, Steel-Pipe Appurtenances:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Anvil International, Inc.
   b. Corcoran Piping System Co.
   c. National Fittings, Inc.
   d. Shurjoint Piping Products.
   e. Tyco Fire & Building Products LP.
   f. Victaulic Company.
   g. Or Approved Equal

2. Pressure Rating: 175 psig.
3. Galvanized and Uncoated, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.3. PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick and or ASME B16.21, nonmetallic and asbestos free.

   1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
   2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.4. LISTED FIRE-PROTECTION VALVES

A. General Requirements:

   1. Valves shall be UL listed or FM approved.
   2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig.
   3. Minimum Pressure Rating for High-Pressure Piping: 350 psig.

B. Ball Valves:

   1. Standard: UL 1091 except with ball instead of disc.
   2. Valves NPS 1-1/2 and Smaller: Bronze body with threaded ends.
   3. Valves NPS 2 and NPS 2-1/2: Bronze body with threaded ends or ductile-iron body with grooved ends.
   4. Valves NPS 3: Ductile-iron body with grooved ends.

C. Bronze Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Fivalco Inc.
   b. Global Safety Products, Inc.
   c. Milwaukee Valve Company.
   d. Or Approved Equal

2. Standard: UL 1091.
3. Pressure Rating: 175 psig.
4. Body Material: Bronze.
5. End Connections: Threaded.

D. Iron Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Anvil International, Inc.
   b. Fivalco Inc.
   c. Global Safety Products, Inc.
   d. Kennedy Valve; a division of McWane, Inc.
   e. Milwaukee Valve Company.
   f. NIBCO INC.
   g. Pratt, Henry Company.
   h. Shurjoint Piping Products.
   i. Tyco Fire & Building Products LP.
   j. Victaulic Company.
   k. Or Approved Equal

2. Standard: UL 1091.
3. Pressure Rating: 175 psig .
4. Body Material: Cast or ductile iron.
5. Style: Lug or wafer.
6. End Connections: Grooved.

E. Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AFAC Inc.
   b. American Cast Iron Pipe Company; Waterous Company Subsidiary.
   c. Anvil International, Inc.
   d. Clow Valve Company; a division of McWane, Inc.
   e. Crane Co.; Crane Valve Group; Crane Valves.
   f. Crane Co.; Crane Valve Group; Jenkins Valves.
   g. Crane Co.; Crane Valve Group; Stockham Division.
   h. Fire-End & Croker Corporation.
   i. Fire Protection Products, Inc.

j. Fivalco Inc.
k. Globe Fire Sprinkler Corporation.
l. Groeniger & Company.
m. Kennedy Valve; a division of McWane, Inc.
n. Matco-Norca.
o. Metraflex, Inc.
p. Milwaukee Valve Company.
q. Mueller Co.; Water Products Division.
r. NIBCO INC.
s. Potter Roemer.
t. Reliable Automatic Sprinkler Co., Inc.
u. Shurjoint Piping Products.
v. Tyco Fire & Building Products LP.
w. United Brass Works, Inc.
x. Venus Fire Protection Ltd.
y. Victaulic Company.
z. Viking Corporation.
aa. Watts Water Technologies, Inc.
bb. Or Approved Equal

2. Standard: UL 312.
3. Pressure Rating: 250 psig minimum.
4. Type: Swing check.
5. Body Material: Cast iron.
6. End Connections: Flanged or grooved.

F. Bronze OS&Y Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Crane Co.; Crane Valve Group; Crane Valves.
b. Crane Co.; Crane Valve Group; Stockham Division.
c. Milwaukee Valve Company.
d. NIBCO INC.
e. United Brass Works, Inc.
f. Or Approved Equal

2. Standard: UL 262.
3. Pressure Rating: 175 psig.
4. Body Material: Bronze.
5. End Connections: Threaded.

G. Iron OS&Y Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
b. American Valve, Inc.
c. Clow Valve Company; a division of McWane, Inc.
d. Crane Co.; Crane Valve Group; Crane Valves.
e. Crane Co.; Crane Valve Group; Jenkins Valves.
f. Crane Co.; Crane Valve Group; Stockham Division.
g. Hammond Valve.
h. Milwaukee Valve Company.
i. Mueller Co.; Water Products Division.
j. NIBCO INC.
k. Shurjoint Piping Products.
l. Tyco Fire & Building Products LP.
m. United Brass Works, Inc.
n. Watts Water Technologies, Inc.
o. Or Approved Equal

2. Standard: UL 262.
3. Pressure Rating: 250 psig minimum.
4. Body Material: Cast or ductile iron.
5. End Connections: Flanged or grooved.

H. Indicating-Type Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Anvil International, Inc.
b. Fivalco Inc.
c. Global Safety Products, Inc.
d. Kennedy Valve; a division of McWane, Inc.
e. Milwaukee Valve Company.
f. NIBCO INC.
g. Shurjoint Piping Products.
h. Tyco Fire & Building Products LP.
i. Victaulic Company.
j. Or Approved Equal

2. Standard: UL 1091.
3. Pressure Rating: 175 psig minimum.
4. Valves NPS 2 and Smaller:

a. Valve Type: Ball or butterfly.
b. Body Material: Bronze.
c. End Connections: Threaded.

5. Valves NPS 2-1/2 and Larger:

a. Valve Type: Butterfly.
b. Body Material: Cast or ductile iron.
c. End Connections: Flanged, grooved, or wafer.

6. Valve Operation: Integral electrical, 115-V ac, prewired, single-circuit, supervisory switch electrical, 115-V ac, prewired, two-circuit, supervisory switch, visual indicating device as required by project requirements.

I. NRS Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. American Cast Iron Pipe Company; Waterous Company Subsidiary.
b. American Valve, Inc.
c. Clow Valve Company; a division of McWane, Inc.
d. Crane Co.; Crane Valve Group; Stockham Division.
e. Kennedy Valve; a division of McWane, Inc.
f. Mueller Co.; Water Products Division.
g. NIBCO INC.
h. Tyco Fire & Building Products LP.
i. Or Approved Equal

2. Standard: UL 262.
3. Pressure Rating: 250 psig minimum.
4. Body Material: Cast iron with indicator post flange.
5. Stem: Nonrising.
6. End Connections: Flanged or grooved.

2.5. TRIM AND DRAIN VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory"listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating: 175 psig minimum.

B. Angle Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Fire Protection Products, Inc.
b. United Brass Works, Inc.
c. Milwaukee Valve Company
d. Or Approved Equal

C. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Affiliated Distributors.
   b. Anvil International, Inc.
   c. Barnett.
   d. Conbraco Industries, Inc.; Apollo Valves.
   e. Fire-End & Croker Corporation.
   f. Fire Protection Products, Inc.
   g. Flowserve.
   h. FNW.
   i. Jomar International, Ltd.
   j. Kennedy Valve; a division of McWane, Inc.
   k. Kitz Corporation.
   l. Legend Valve.
   m. Metso Automation USA Inc.
   n. Milwaukee Valve Company.
   o. NIBCO INC.
   p. Potter Roemer.
   q. Red-White Valve Corporation.
   r. Southern Manufacturing Group.
   s. Stewart, M. A. and Sons Ltd.
   t. Tyco Fire & Building Products LP.
   u. Victaulic Company.
   v. Watts Water Technologies, Inc.
   w. Or Approved Equal

D. Globe Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Fire Protection Products, Inc.
   b. NIBCO INC.
   c. United Brass Works, Inc.
   d. Or Approved Equal

E. Plug Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Southern Manufacturing Group.
   b. Flowserve
   c. Kennedy Valve; a division of McWane, Inc.
   d. Or Approved Equal

2.6. SPECIALTY VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating:
   a. Standard-Pressure Piping Specialty Valves: 175 psig minimum.
   b. High-Pressure Piping Specialty Valves: 350 psig minimum.
3. Body Material: Cast or ductile iron.
4. Size: Same as connected piping.
5. End Connections: Flanged or grooved.

B. Automatic (Ball Drip) Drain Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. AFAC Inc.
   b. Reliable Automatic Sprinkler Co., Inc.
   c. Tyco Fire & Building Products LP.
   d. Or Approved Equal
2. Standard: UL 1726.
3. Pressure Rating: 175 psig minimum.
4. Type: Automatic draining, ball check.
5. Size: NPS 3/4.
6. End Connections: Threaded.

2.7. FIRE-DEPARTMENT CONNECTIONS

A. Flush-Type, Fire-Department Connection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. AFAC Inc.
   b. Elkhart Brass Mfg. Company, Inc.
   c. GMR International Equipment Corporation.
   d. Guardian Fire Equipment, Inc.
   e. Potter Roemer.
   f. Or Approved Equal
2. Standard: UL 405.
3. Type: Flush, for wall mounting.

4. Pressure Rating: 175 psig minimum.
5. Body Material: Corrosion-resistant metal.
6. Inlets: Brass with threads according to NFPA 1963 and matching sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
8. Escutcheon Plate: Rectangular, brass, wall type.
9. Outlet: With pipe threads.
10. Body Style: Horizontal.
11. Number of Inlets: Two.
12. Outlet Location: Back, Bottom, Left side, Right side or Top as required.
13. Escutcheon Plate Marking: Similar to "AUTO SPKR."
14. Finish: Polished chrome plated.
15. Outlet Size: As indicated on the drawings.

2.8. SPRINKLER SPECIALTY PIPE FITTINGS

A. Branch Outlet Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Anvil International, Inc.
   b. National Fittings, Inc.
   c. Shurjoint Piping Products.
   d. Tyco Fire & Building Products LP.
   e. Victaulic Company.
   f. Or Approved Equal

2. Standard: UL 213.
3. Pressure Rating: 175 psig minimum.
4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
5. Type: Mechanical-T and -cross fittings.
6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
8. Branch Outlets: Grooved or threaded.

B. Flow Detection and Test Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AGF Manufacturing Inc.
   b. Reliable Automatic Sprinkler Co., Inc.
   c. Tyco Fire & Building Products LP.
   d. Victaulic Company.
   e. Or Approved Equal

2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
3. Pressure Rating: 175 psig minimum.
4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded.

C. Branch Line Testers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Elkhart Brass Mfg. Company, Inc.
   b. Fire-End & Croker Corporation.
   c. Potter Roemer.
   d. Or Approved Equal

2. Standard: UL 199.
3. Pressure Rating: 175 psig.
4. Body Material: Brass.
5. Size: Same as connected piping.
6. Inlet: Threaded.
7. Drain Outlet: Threaded and capped.
8. Branch Outlet: Threaded, for sprinkler.

D. Sprinkler Inspector's Test Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AGF Manufacturing Inc.
   b. Triple R Specialty.
   c. Tyco Fire & Building Products LP.
   d. Victaulic Company.
   e. Viking Corporation.
   f. Or Approved Equal

2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
3. Pressure Rating: 175 psig minimum.
4. Body Material: Cast- or ductile-iron housing with sight glass.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded.

2.9. SPRINKLERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFAC Inc.

2. Globe Fire Sprinkler Corporation.
3. Reliable Automatic Sprinkler Co., Inc.
4. Tyco Fire & Building Products LP.
5. Venus Fire Protection Ltd.
6. Victaulic Company.
7. Viking Corporation.
8. Or Approved Equal

B. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating for Automatic Sprinklers: 175 psig minimum.

C. Automatic Sprinklers with Heat-Responsive Element:

1. Nonresidential Applications: UL 199.
2. Characteristics: Nominal 1/2-inch orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.

D. Sprinkler Finishes:

1. Chrome plated.
2. Bronze.
3. Painted.

E. Special Coatings:

1. Wax.
2. Lead.
3. Corrosion-resistant paint.

F. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: Chrome-plated steel, one piece, flat and Chrome-plated steel, two piece, with 1-inch vertical adjustment.
2. Sidewall Mounting: Chrome-plated steel, one piece, flat.

G. Sprinkler Guards:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Reliable Automatic Sprinkler Co., Inc.
   b. Tyco Fire & Building Products LP.
   c. Victaulic Company.
   d. Viking Corporation.
   e. Or Approved Equal

2. Standard: UL 199.
3. Type: Wire cage with fastening device for attaching to sprinkler.

2.10. ALARM DEVICES

A. Alarm-device types shall match piping and equipment connections.

B. Electrically Operated Alarm Bell:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Fire-Lite Alarms, Inc.; a Honeywell company.
   b. Notifier; a Honeywell company.
   c. Potter Electric Signal Company.
   d. Or Approved Equal

2. Standard: UL 464.
3. Type: Vibrating, metal alarm bell.
4. Size: 8-inch minimum-diameter.
5. Finish: Red-enamel factory finish, suitable for outdoor use.

C. Water-Flow Indicators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. ADT Security Services, Inc.
   b. McDonnell & Miller; ITT Industries.
   c. Potter Electric Signal Company.
   d. System Sensor; a Honeywell company.
   e. Viking Corporation.
   f. Watts Industries (Canada) Inc.
   g. Or Approved Equal

2. Standard: UL 346.
3. Water-Flow Detector: Electrically supervised.
4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
5. Type: Paddle operated.
6. Pressure Rating: 250 psig.
7. Design Installation: Horizontal or vertical.

D. Pressure Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AFAC Inc.
   b. Barksdale, Inc.

c. Detroit Switch, Inc.
d. Potter Electric Signal Company.
e. System Sensor; a Honeywell company.
f. Tyco Fire & Building Products LP.
g. United Electric Controls Co.
h. Viking Corporation.
i. Or Approved Equal

2. Standard: UL 346.
3. Type: Electrically supervised water-flow switch with retard feature.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design Operation: Rising pressure signals water flow.

E. Valve Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Fire-Lite Alarms, Inc.; a Honeywell company.
b. Kennedy Valve; a division of McWane, Inc.
c. Potter Electric Signal Company.
d. System Sensor; a Honeywell company.
e. Or Approved Equal

2. Standard: UL 346.
3. Type: Electrically supervised.
4. Components: Single-pole, double-throw switch with normally closed contacts.
5. Design: Signals that controlled valve is in other than fully open position.

2.11. PRESSURE GAGES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AMETEK; U.S. Gauge Division.
2. Ashcroft, Inc.
3. Brecco Corporation.
4. WIKA Instrument Corporation.
5. Or Approved Equal

B. Standard: UL 393.

C. Dial Size: 3-1/2- to 4-1/2-inch diameter.

D. Pressure Gage Range: 0 to 250 psig minimum, 0-350 psig for high pressure piping.

E. Water System Piping Gage: Include "WATER" or "AIR/WATER" label on dial face.

F. Air System Piping Gage: Include retard feature and "AIR" or "AIR/WATER" label on dial face.

2.12. ESCUTCHEONS

A. General: Manufactured ceiling, floor, and wall escutcheons and floor plates.

B. One-Piece, Cast-Brass Escutcheons: Polished chrome-plated finish with set-screws.

C. One-Piece, Deep-Pattern Escutcheons: Deep-drawn, box-shaped brass with chrome-plated finish.

D. One-Piece, Stamped-Steel Escutcheons: Chrome-plated finish with set-screw.

E. Split-Casting, Cast-Brass Escutcheons: Polished chrome-plated finish with concealed hinge and set-screw.

F. Split-Plate, Stamped-Steel Escutcheons: Chrome-plated finish with concealed hinge and set-screw.

G. One-Piece Floor Plates: Cast-iron flange (with holes for fasteners).

H. Split-Casting Floor Plates: Cast brass with concealed hinge.

2.13. SLEEVES

A. Cast-Iron Wall Pipe Sleeves: Cast or fabricated of cast iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

B. Galvanized-Steel-Sheet Sleeves: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

C. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, standard weight, zinc coated, plain ends.

D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set-screws.

2.14. SLEEVE SEALS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Advance Products & Systems, Inc.
2. Calpico, Inc.
3. Metraflex, Inc.
4. Pipeline Seal and Insulator, Inc.
5. Or Approved Equal

B. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Carbon steel.
3. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements.

2.15. GROUT

A. Standard: ASTM C 1107, Grade B, posthardening and volume adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink, and recommended for interior and exterior applications.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PREPARATION

A. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.

B. Report test results promptly and in writing.

3.3. PIPING INSTALLATION

A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.

1. Deviations from approved working plans for piping require written approval from the Commissioner. File written approval with Commissioner before deviating from approved working plans.

B. Piping Standard: Comply with requirements for installation of sprinkler piping in NFPA 13.

C. Install seismic restraints on piping. Comply with requirements for seismic-restraint device materials and installation in NFPA 13.

D. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

E. Install unions adjacent to each valve in pipes NPS 2 and smaller.

F. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

G. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.

H. Install sprinkler piping with drains for complete system drainage.

I. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.

J. Install automatic (ball drip) drain valve at each check valve for fire-department connection, to drain piping between fire-department connection and check valve. Install drain piping to and spill over floor drain or to outside building.

K. Install alarm devices in piping systems.

L. Install hangers and supports for sprinkler system piping according to NYC Building Code and NFPA 13. Comply with requirements for hanger materials in NYC Building Code and NFPA 13.

M. Install pressure gages on riser or feed main and at each sprinkler test connection. Include pressure gages with connection not less than NPS 1/4 and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.

N. Fill sprinkler system piping with water.

3.4. JOINT CONSTRUCTION

A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.

B. Install unions adjacent to each valve in pipes NPS 2 and smaller.

C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.

G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

H. Welded Joints: Construct joints according to AWS D10.12M/D10.12, using qualified processes and welding operators according to "Quality Assurance" Article.

1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.

I. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe joints.

J. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 for steel-pipe grooved joints.

K. Dissimilar-Material Piping Joints: Make joints using adapters compatible with materials of both piping systems.

3.5. VALVE AND SPECIALTIES INSTALLATION

A. Install listed fire-protection valves, trim and drain valves, specialty valves and trim, controls, and specialties according to NFPA 13 and the New York City Building Code.

B. Install listed fire-protection shutoff valves supervised open, located to control sources of water supply except from fire-department connections. Install permanent identification signs indicating portion of system controlled by each valve.

C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water-supply sources.

D. Specialty Valves:

1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.

3.6. SPRINKLER INSTALLATION

A. Install sprinklers in suspended ceilings in center of narrow dimension of acoustical ceiling panels.

B. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.

3.7. FIRE-DEPARTMENT CONNECTION INSTALLATION

A. Install wall-type, fire-department connections.

B. Install automatic (ball drip) drain valve at each check valve for fire-department connection.

3.8. ESCUTCHEON INSTALLATION

A. Install escutcheons for penetrations of walls, ceilings, and floors.

B. Escutcheons for New Piping:

1. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
2. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish stamped steel with set-screw.
3. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish. One piece, stamped steel with set-screw.
4. Bare Piping in Unfinished Service Spaces: One piece, stamped steel with set-screw.
5. Bare Piping in Equipment Rooms: One piece, stamped steel with set-screw.
6. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

3.9. SLEEVE INSTALLATION

A. General Requirements: Install sleeves for pipes and tubes passing through penetrations in floors, partitions, roofs, and walls.

B. Sleeves are not required for core-drilled holes.

C. Permanent sleeves are not required for holes formed by removable PE sleeves.

D. Cut sleeves to length for mounting flush with both surfaces unless otherwise indicated.

E. Install sleeves in new partitions, slabs, and walls as they are built.

F. For interior wall penetrations, seal annular space between sleeve and pipe or pipe insulation using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Section 079200 "Interior Joint Sealants."

G. For exterior wall penetrations above grade, seal annular space between sleeve and pipe using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Section 079201 "Exterior Joint Sealants."

H. For exterior wall penetrations below grade, seal annular space between sleeve and pipe using sleeve seals.

I. Seal space outside of sleeves in concrete slabs and walls with grout.

J. Install sleeves that are large enough to provide 1 inch annular clear space between sleeve and pipe or pipe insulation unless otherwise indicated.

K. Install sleeve materials according to the following applications:

1. Sleeves for Piping Passing through Concrete Floor Slabs: Galvanized-steel pipe.
2. Sleeves for Piping Passing through Concrete Floor Slabs of Mechanical Equipment Areas or Other Wet Areas: Galvanized-steel pipe.

    a. Extend sleeves 2 inches above finished floor level.
    b. For pipes penetrating floors with membrane waterproofing, extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.

3. Sleeves for Piping Passing through Gypsum-Board Partitions:

    a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6.
    b. Galvanized-steel-sheet sleeves for pipes NPS 6 and larger.

4. Sleeves for Piping Passing through Exterior Concrete Walls:

    a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6.
    b. Cast-iron wall-pipe sleeves for pipes NPS 6 and larger.
    c. Install sleeves that are large enough to provide 1-inch annular clear space between sleeve and pipe or pipe insulation when sleeve seals are used.

5. Sleeves for Piping Passing through Interior Concrete Walls:

    a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6 (DN 150).
    b. Galvanized-steel-sheet sleeves for pipes NPS 6 and larger.

L. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials.

3.10. SLEEVE SEAL INSTALLATION

A. Install sleeve seals in sleeves in exterior concrete walls at water-service piping entries into building.

B. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.11. IDENTIFICATION

A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.

B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.12. FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Leak Test: After installation, charge systems and test for leaks. Restore leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Flush, test, and inspect sprinkler systems according to NYC Building Code and NFPA 13, "Systems Acceptance" Chapter.
4. Energize circuits to electrical equipment and devices.
5. Coordinate with fire-alarm tests. Operate as required.
6. Coordinate with fire-pump tests. Operate as required.
7. Verify that equipment hose threads are same as NYC fire-department equipment.

C. Sprinkler piping system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

3.13. CLEANING

A. Clean dirt and debris from sprinklers.

B. Remove and replace sprinklers with paint other than factory finish.

3.14. INSTRUCTION

A. Engage a factory-authorized service representative to instruct the City of New York's operating personnel to adjust, operate, and maintain specialty valves and pressure-maintenance pumps.

3.15. PIPING SCHEDULE

A. Piping between Fire-Department Connections and Check Valves: Galvanized, standard-weight steel pipe with threaded ends; cast-iron threaded fittings; and threaded or grooved ends; grooved-end fittings; grooved-end-pipe couplings; and grooved joints.

B. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.

C. Standard-pressure, wet-pipe sprinkler system, NPS 2 and smaller, shall be one of the following:

1. Standard-weight, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
2. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.

D. Standard-pressure, wet-pipe sprinkler system, NPS 2-1/2 and larger, shall be one of the following:

1. Standard-weight, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.

2. Standard-weight, galvanized-steel pipe with threaded ends; galvanized, gray-iron threaded fittings; and threaded joints.
3. Standard-weight, black-steel pipe with cut or roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
4. Standard-weight, galvanized-steel pipe with cut-grooved ends; galvanized, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
5. Standard-weight, black-steel pipe with plain ends; steel welding fittings; and welded joints.
6. Schedule 10, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
7. Schedule 10, black-steel pipe with plain ends; welding fittings; and welded joints.

3.16. SPRINKLER SCHEDULE

A. Use sprinkler types in subparagraphs below for the following applications:

1. Rooms without Ceilings: Upright or sidewall sprinklers.
2. Rooms with Suspended Ceilings: Pendent, recessed, flush, and concealed sprinklers as indicated.
3. Wall Mounting: Sidewall sprinklers.
4. Spaces Subject to Freezing: Upright, pendent, dry sprinklers; and sidewall, dry sprinklers as indicated
5. Special Applications: Extended-coverage and quick-response sprinklers where indicated.

B. Provide sprinkler types in subparagraphs below with finishes indicated.

1. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
2. Flush Sprinklers: Bright chrome, with painted white escutcheon.
3. Recessed Sprinklers: Bright chrome, with bright chrome escutcheon.
4. Upright Pendent and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

END OF SECTION 211313

SECTION 213113
Electric-Drive, Centrifugal Sprinkler Booster Pumps

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Section Includes:

1. In-line fire pumps.
2. Fire-pump accessories and specialties.
3. Flow meter systems.

1.3. PERFORMANCE REQUIREMENTS

A. Seismic Performance: Fire pumps shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified.

B. Pump Equipment, Accessory, and Specialty Pressure Rating: 175 psig minimum unless higher pressure rating is indicated.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, performance curves, electrical characteristics, and furnished specialties and accessories.

C. Shop Drawings: For fire pumps, motor drivers, and fire-pump accessories and specialties. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.

D. Seismic Qualification Certificates: For fire pumps, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

E. Product Certificates: For each fire pump, from manufacturer.

F. Source quality-control reports.

G. Field quality-control reports.

H. Operation and Maintenance Data: For fire pumps to include in operation and maintenance manuals.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NYC Building Code and NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Code Compliance: Comply with NYC Building Code and NFPA 20, "Installation of Stationary Pumps for Fire Protection."

1.6. COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1. GENERAL REQUIREMENTS FOR CENTRIFUGAL FIRE PUMPS

A. Description: Factory-assembled and -tested fire-pump and driver unit.

B. Base: Fabricated and attached to fire-pump and driver unit with reinforcement to resist movement of pump during seismic events when base is anchored to building substrate.

C. Finish: Red paint applied to factory-assembled and -tested unit before shipping.

2.2. VERTICAL, SINGLE-STAGE, SPLIT-CASE FIRE PUMPS

A. Manufacturers: Subject to compliance with requirements, provide product indicated on drawings or comparable product by one of the following:

1. A-C Fire Pump Systems; a business of ITT Industries.
2. Patterson Pump Company; a subsidiary of the Gorman-Rupp Company.

3. PACO Pumps; Grundfos Pumps Corporation, U.S.A.
4. Peerless Pump, Inc.
5. Or Approved Equal

B. Pump:

1. Standard: UL 448, for split-case pumps for fire service.
2. Casing: Axially split case, cast iron with ASME B16.1 pipe-flange connections.
3. Impeller: Cast bronze, statically and dynamically balanced, and keyed to shaft.
4. Wear Rings: Replaceable bronze.
5. Shaft and Sleeve: Steel shaft with bronze sleeve.

    a. Shaft Bearings: Grease-lubricated ball bearings in cast-iron housing.
    b. Seals: Stuffing box with minimum of four rings of graphite-impregnated braided yarn and bronze packing gland.

6. Mounting: Pump and driver shafts are horizontal, with pump and driver on same base.

C. Coupling: Flexible and capable of absorbing torsional vibration and shaft misalignment. Include metal coupling guard.

D. Driver:

1. Standard: UL 1004A.
2. Type: Electric motor; NEMA MG 1, polyphase Design B.

2.3. FIRE-PUMP ACCESSORIES AND SPECIALTIES

A. Automatic Air-Release Valves: Comply with NYC Building Code and NFPA 20 for installation in fire-pump casing.

B. Circulation Relief Valves: UL 1478, brass, spring loaded; for installation in pump discharge piping.

C. Relief Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. BERMAD Control Valves.
    b. CLA-VAL Automatic Control Valves.
    c. Kunkle Valve; a part of Tyco International Ltd.
    d. OCV Control Valves.
    e. Watts Regulator Company; a division of Watts Water Technologies, Inc.
    f. Zurn Plumbing Products Group; Wilkins Water Control Products.
    g. Or Approved Equal

2. Description: UL 1478, bronze or cast iron, spring loaded; for installation in fire-suppression water-supply piping.

D. Inlet Fitting: Eccentric tapered reducer at pump suction inlet.

E. Outlet Fitting: Concentric tapered reducer at pump discharge outlet.

F. Discharge Cone: Closed or open type.

G. Hose Valve Manifold Assembly (Provided on the Roof):

1. Standard: Comply with requirements in NYC Building Code and NFPA 20.
2. Header Pipe: ASTM A 53/A 53M, Schedule 40, galvanized steel with ends threaded according to ASME B1.20.1.
3. Header Pipe Fittings: ASME B16.4, galvanized cast-iron threaded fittings.
4. Automatic Drain Valve: UL 1726.
5. Manifold:

   a. Test Connections: Comply with UL 405 except provide outlets without clappers instead of inlets.
   b. Body: Flush type, brass or ductile iron, with number of outlets required by NFPA 20.
   c. Nipples: ASTM A 53/A 53M, Schedule 40, galvanized-steel pipe with ends threaded according to ASME B1.20.1.
   d. Adapters and Caps with Chain: Brass or bronze, with outlet threaded according to NFPA 1963 and matching NYC fire-department threads.
   e. Escutcheon Plate: Brass or bronze; rectangular.
   f. Hose Valves: UL 668, bronze, with outlet threaded according to NFPA 1963 and matching NYC fire-department threads.
   g. Exposed Parts Finish: Rough brass.
   h. Escutcheon Plate Marking: Equivalent to "FIRE PUMP TEST."

2.4. GROUT

A. Standard: ASTM C 1107, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink and recommended for interior and exterior applications.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

2.5. SOURCE QUALITY CONTROL

A. Testing: Test and inspect fire pumps according to UL 448 requirements for "Operation Test" and "Manufacturing and Production Tests."

1. Verification of Performance: Rate fire pumps according to UL 448.

B. Fire pumps will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine equipment bases and anchorage provisions, with Installer present, for compliance with requirements and for conditions affecting performance of fire pumps.

B. Examine roughing-in for fire-suppression piping systems to verify actual locations of piping connections before fire-pump installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Fire-Pump Installation Standard: Comply with NYC Building Code and NFPA 20 for installation of fire pumps, relief valves, and related components.

B. Equipment Mounting: Install fire pumps on concrete bases. Comply with requirements for concrete bases specified in 033000 Section Cast-in-Place Concrete.

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.

C. Install fire-pump suction and discharge piping equal to or larger than sizes required by NYC Building Code and NFPA 20.

D. Support piping and pumps separately so weight of piping does not rest on pumps.

E. Install valves that are same size as connecting piping. Comply with requirements for fire-protection valves specified in Section 211200 "Fire-Suppression Standpipes" and Section 211313 "Wet-Pipe Sprinkler Systems."

F. Install pressure gages on fire-pump suction and discharge flange pressure-gage tappings. Comply with requirements for pressure gages specified in Section 211200 "Fire-Suppression Standpipes." and Section 211313 "Wet-Pipe Sprinkler Systems."

G. Install piping hangers and supports, anchors, valves, gages, and equipment supports according to NYC Building Code and NFPA 20.

H. Install flowmeters and sensors. Install flowmeter-system components and make connections according to NYC Building Code and NFPA 20 and manufacturer's written instructions.

I. Electrical Wiring: Install electrical devices furnished by equipment manufacturers but not factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.

J. Wiring Method: Conceal conductors and cables in accessible ceilings, walls, and floors where possible.

3.4. ALIGNMENT

A. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.

B. Align piping connections.

C. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.

3.5. CONNECTIONS

A. Comply with requirements for piping and valves specified in Section 211200 "Fire-Suppression Standpipes." And Section 211313 "Wet-Pipe Sprinkler Systems." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to pumps and equipment to allow service and maintenance.

C. Connect relief-valve discharge to drainage piping or point of discharge.

D. Connect fire pumps to their controllers.

3.6. IDENTIFICATION

A. Identify system components. Comply with requirements for fire-pump marking according to NYC Building Code and NFPA 20.

3.7. FIELD QUALITY CONTROL

A. Test each fire pump with its controller as a unit. Comply with requirements for electric-motor-driver fire-pump controllers specified in Section 213900 "Controllers for Fire-Pump Drivers."

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:

1. After installing components, assemblies, and equipment including controller, test for compliance with requirements.
2. Test according to NYC Building Code and NFPA 20 for acceptance and performance testing.
3. Leak Test: After installation, charge system and test for leaks. Restore leaks and retest until no leaks exist.
4. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
5. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Components, assemblies, and equipment will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

F. Furnish fire hoses in number, size, and length required to reach storm drain or other acceptable location to dispose of fire-pump test water. Hoses are for tests only.

3.8. STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

3.9. INSTRUCTION

A. Engage a factory-authorized service representative to instruct the City of New York's operating personnel to adjust, operate, and maintain fire pumps.

END OF SECTION 213113

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 213900
Controllers for Sprinkler Booster Pump Drivers

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Section Includes:

1. Full-service, full-voltage controllers rated 600 V and less.

1.3. DEFINITIONS

A. ATS: Automatic transfer switches (es).

B. ECM: Electronic control module.

C. MCCB: Molded-case circuit breaker.

D. N.O.: Normally open.

1.4. PERFORMANCE REQUIREMENTS

A. Seismic Performance: Fire-pump controllers and alarm panels shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 and the New York City Building Code.

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

C. Shop Drawings: For each type of product indicated. Include dimensioned plans, elevations, sections, details, and attachments to other work, including required clearances and service spaces around controller enclosures.

1. Show tabulations of the following:

a. Each installed unit's type and details.
b. Enclosure types and details for types other than NEMA 250, Type 2.

c. Factory-installed devices.
d. Nameplate legends.
e. Short-circuit current (withstand) rating of integrated unit.
f. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices.

2. Detail equipment assemblies and indicate dimensions, weights, loads, method of field assembly, components, and location and size of each field connection.
3. Schematic and Connection Diagrams: For power, signal, alarm, and control wiring and for pressure-sensing tubing.

D. Product Certificates: For each type of product indicated, from manufacturer.

E. Manufacturer's factory test reports of fully assembled and tested equipment.

F. Field quality-control reports.

G. Operation and Maintenance Data: For each type of product indicated to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions Section "Operation and Maintenance Data," include the following:

1. Manufacturer's written instructions for setting field-adjustable timers, controls, and status and alarm points.
2. Manufacturer's written instructions for testing, adjusting, and reprogramming microprocessor-based logic controls.

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Source Limitations: Obtain fire-pump controllers and all associated equipment from single source or producer.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with standards of NYC Building Code pertaining to materials and installation.

E. Comply with NYC Building Code and NFPA 20 and NFPA 70.

F. IEEE Compliance: Fabricate and test enclosed controllers according to IEEE 344 to withstand seismic forces defined in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

1.7. DELIVERY, STORAGE, AND HANDLING

A. Store controllers indoors in clean, dry space with uniform temperature to prevent condensation. Protect enclosed controllers from exposure to dirt, fumes, water, corrosive substances, and physical damage.

1.8. PROJECT CONDITIONS

A. Environmental Limitations:

1. Ambient Temperature Rating: Not less than 40 deg F and not exceeding 122 deg F unless otherwise indicated.
2. Altitude Rating: Not exceeding 6600 feet unless otherwise indicated.

1.9. COORDINATION

A. Coordinate layout and installation of controllers with other construction including conduit, piping, fire-pump equipment, and adjacent surfaces. Maintain required clearances for workspace and equipment access doors and panels. Ensure that controllers are within sight of fire-pump drivers.

B. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.1. FULL VOLTAGE FIRE PUMP CONTROLLERS

A. Basis of Design: Subject to compliance with requirements, provide:

1. Aquarius Fluid Products, Inc.
2. ASCO Power Technologies, LP; Firetrol Products.
3. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
4. Hubbell Incorporated; Hubbell Industrial Controls.
5. Joslyn Clark Corporation.
6. Master Control Systems, Inc.
7. Metron, Inc.
8. Tornatech.
9. Or Approved Equal

B. General Requirements for Full-Service Controllers:

1. Comply with NYC Building Code NFPA 20 and UL 218.
2. Listed by an NRTL for electric-motor driver for fire-pump service.
3. Combined automatic and nonautomatic operation.
4. Factory assembled, wired, and tested; continuous-duty rated.
5. Service Equipment Label: NRTL labeled for use as service equipment.

C. Method of Starting:

1. Pressure-switch actuated.

a. Water-pressure-actuated switch and pressure transducer with independent high- and low-calibrated adjustments responsive to water pressure in fire-suppression piping.
b. System pressure recorder, electric ac driven, with spring backup.
c. Programmable minimum-run-time relay to prevent short cycling.

d. Programmable timer for weekly tests.

2. Combined manual and automatic across the line type rated for HP specified.
3. Emergency Start: Mechanically operated start handle that closes and retains the motor RUN contactor independent of all electric or pressure actuators.

D. Method of Stopping: Non-automatic shutdown after automatic starting.

E. Capacity: Rated for fire-pump-driver horsepower and short-circuit-current (withstand) rating equal to or greater than short-circuit current available at controller location.

F. Method of Isolation and Overcurrent Protection: Interlocked isolating switch and nonthermal MCCB; with a common, externally mounted operating handle, and providing locked-rotor protection.

G. Door-Mounted Operator Interface and Controls:

1. Monitor, display, and control the devices, alarms, functions, and operations listed in NFPA 20 as required for drivers and controller types used.
2. Method of Control and Indication:

a. Controller, with multiline digital readout.
b. Membrane keypad.
c. LED alarm and status indicating lights.

3. Local and Remote Alarm and Status Indications:

a. Controller power on.
b. Motor running condition.
c. Loss-of-line power.
d. Line-power phase reversal.
e. Line-power single-phase condition.

4. Audible alarm, with silence push button.
5. Nonautomatic START and STOP push buttons or switches.

2.2. ENCLOSURES

A. Fire-Pump Controllers, ATS, Remote Alarm Panels, and Low-Suction-Shutdown Panels: NEMA 250, to comply with environmental conditions at installed locations and NFPA 20.

B. Enclosure Color: Manufacturer's standard "fire-pump-controller red.

C. Nameplates: Comply with NYC Building Code and NFPA 20; complete with capacity, characteristics, approvals, listings, and other pertinent data.

D. Optional Features:

1. Floor stands, 12 inches high, for floor-mounted controllers.

2.3. SOURCE QUALITY CONTROL

A. Testing: Test and inspect fire-pump controllers according to requirements in NYC Building Code and NFPA 20 and UL 218.

1. Verification of Performance: Rate controllers according to operation of functions and features specified.

B. Fire-pump controllers will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine areas and surfaces to receive equipment, with Installer present, for compliance with requirements and other conditions affecting performance.

B. Examine equipment before installation. Reject equipment that is wet or damaged by moisture or mold.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. CONTROLLER INSTALLATION

A. Install controllers within sight of their respective drivers.

B. Connect controllers to their dedicated pressure-sensing lines.

C. Floor-Mounting Controllers: Install controllers on 4-inch nominal-thickness concrete bases, using floor stands high enough so that the bottom of enclosure cabinet is not less than 12 inches (305 mm) above finished floor. Comply with requirements for concrete bases specified in Section 033000 "Cast-in-Place Concrete."

1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.

D. Seismic Bracing: Comply with requirements specified in Section 260548 "Vibration and Seismic Controls for Electrical Systems."

E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

F. Comply with NEMA ICS 15.

3.4. POWER WIRING INSTALLATION

A. Install power wiring between controllers and their services or sources, and between controllers and their drivers. Comply with requirements in NYC Building Code and NFPA 20, NFPA 70, and Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.5. CONTROL AND ALARM WIRING INSTALLATION

A. Install wiring between controllers and remote devices and facility's central monitoring system. Comply with requirements in NYC Building Code and NFPA 20, and NFPA 70.

B. Install wiring between controllers and the building's fire-alarm system. Comply with requirements specified in Section 283111 "Digital, Addressable Fire-Alarm System."

C. Bundle, train, and support wiring in enclosures.

D. Connect remote manual and automatic activation devices where applicable.

3.6. IDENTIFICATION

A. Comply with requirements in NYC Building Code and NFPA 20 for marking fire-pump controllers.

B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification in NYC Building Code and NFPA 20 and as specified in Section 260553 "Identification for Electrical Systems."

3.7. FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Acceptance Testing Preparation:

1. Inspect and Test Each Component:

a. Inspect wiring, components, connections, and equipment installations. Test and adjust components and equipment.

b. Test insulation resistance for each element, component, connecting supply, feeder, and control circuits.
c. Test continuity of each circuit.

2. Verify and Test Each Electric-Driver Controller:
   a. Verify that voltages at controller locations are within plus 10 or minus 1 percent of motor nameplate rated voltages, with motors off. If outside this range for any motor, notify Commissioner before starting the motor(s).
   b. Test each motor for proper phase rotation.

3. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Field Acceptance Tests:

1. Do not begin field acceptance testing until suction piping has been flushed and hydrostatically tested and the certificate for flushing and testing has been submitted to Commissioner and NYC Department of Buildings.
2. Prior to starting, notify NYC Department of Buildings of the time and place of the acceptance testing.
3. Engage manufacturer's factory-authorized service representative to be present during the testing.
4. Perform field acceptance tests as outlined in NFPA 20.

E. Controllers will be considered defective if they do not pass tests and inspections.

F. Prepare test and inspection reports.

3.8. STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

3.9. ADJUSTING

A. Adjust controllers and battery charger systems to function smoothly and as recommended by manufacturer.

B. Set field-adjustable switches, auxiliary relays, time-delay relays, and timers.

C. Program microprocessors for required operational sequences, status indications, alarms, event recording, and display features. Clear events memory after final acceptance testing and prior to Substantial Completion.

D. Set field-adjustable pressure switches.

3.10. PROTECTION

A. Temporary Heating: Apply temporary heat to maintain temperature according to manufacturer's written instructions until enclosed controllers are ready to be energized and placed into service.

B. Replace controllers whose interiors have been exposed to water or other liquids prior to Substantial Completion.

3.11. INSTRUCTION

A. Engage a factory-authorized service representative to instruct the City of New York's operating personnel to adjust, operate, and maintain controllers, and to use and reprogram microprocessor-based controls within this equipment.

END OF SECTION 213900

SECTION 220500
Common Work Results For Plumbing

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Submittal Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. This Section includes the following:

1. Piping materials and installation instructions common to most piping systems.
2. Transition fittings.
3. Dielectric fittings.
4. Mechanical sleeve seals.
5. Sleeves.
6. Escutcheons.
7. Grout.
8. Plumbing demolition.
9. Equipment installation requirements common to equipment sections.
10. Painting and finishing.
11. Concrete bases.
12. Supports and anchorages.

B. Related Sections:

1. Section 024119 "Selective Demolition and Alteration Work" for general demolition requirements and procedures.

1.3. DEFINITIONS

A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.

E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For the following:

1. Transition fittings.
2. Dielectric fittings.
3. Mechanical sleeve seals.
4. Escutcheons.

C. Welding certificates.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

D. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.6. DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.7. COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Section 083113 "Access Doors."

PART 2 - PRODUCTS

2.1. PIPE, TUBE, AND FITTINGS

A. Refer to individual Sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2. JOINING MATERIALS

A. Refer to individual Sections for special joining materials not listed below.

B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.

    a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
    b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

1. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

E. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

F. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

G. Solvent Cements for Joining Plastic Piping:

1. ABS Piping: ASTM D 2235.
2. CPVC Piping: ASTM F 493.
3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
4. PVC to ABS Piping Transition: ASTM D 3138.

H. Fiberglass Pipe Adhesive: As furnished or recommended by pipe manufacturer.

2.3. TRANSITION FITTINGS

A. AWWA Transition Couplings: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.

1. Manufacturers:

a. Cascade Waterworks Mfg. Co.
b. Dresser Industries, Inc.; DMD Div.
c. Ford Meter Box Company, Incorporated (The); Pipe Products Div.
d. JCM Industries.
e. Smith-Blair, Inc.
f. Viking Johnson.
g. Or Approved Equal

2. Underground Piping NPS 1-1/2 (DN 40) and Smaller: Manufactured fitting or coupling.
3. Underground Piping NPS 2 (DN 50) and Larger: AWWA C219, metal sleeve-type coupling.

B. Plastic-to-Metal Transition Fittings: CPVC and PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.

C. Plastic-to-Metal Transition Adaptors: One-piece fitting with manufacturer's SDR 11 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-joint end.

D. Plastic-to-Metal Transition Unions: MSS SP-107, CPVC and PVC four-part union. Include brass end, solvent-cement-joint end, rubber O-ring, and union nut.

E. Flexible Transition Couplings for Underground Nonpressure Drainage Piping: ASTM C 1173 with elastomeric sleeve ends same size as piping to be joined, and corrosion-resistant metal band on each end.

1. Manufacturers:

a. Cascade Waterworks Mfg. Co.
b. Fernco, Inc.
c. Mission Rubber Company.
d. Plastic Oddities, Inc.

e. Or Approved Equal

2.4. DIELECTRIC FITTINGS

A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.

C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).

1. Manufacturers:

a. Capitol Manufacturing Co.
b. Central Plastics Company.
c. Eclipse, Inc.
d. Epco Sales, Inc.
e. Hart Industries, International, Inc.
f. Watts Industries, Inc.; Water Products Div.
g. Zurn Industries, Inc.; Wilkins Div.
h. Or Approved Equal

D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.

1. Manufacturers:

a. Capitol Manufacturing Co.
b. Central Plastics Company.
c. Epco Sales, Inc.
d. Watts Industries, Inc.; Water Products Div.
e. Or Approved Equal

E. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

1. Manufacturers:

a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Central Plastics Company.
d. Pipeline Seal and Insulator, Inc.
e. Or Approved Equal

2. Separate companion flanges and steel bolts and nuts shall have 150- or 300-psig (1035- or 2070-kPa) minimum working pressure where required to suit system pressures.

F. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

G. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

1. Manufacturers:

   a. Perfection Corp.
   b. Precision Plumbing Products, Inc.
   c. Sioux Chief Manufacturing Co., Inc.
   d. Victaulic Co. of America.
   e. Or Approved Equal

2.5. MECHANICAL SLEEVE SEALS

A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Manufacturers:

   a. Advance Products & Systems, Inc.
   b. Calpico, Inc.
   c. Metraflex Co.
   d. Pipeline Seal and Insulator, Inc.
   e. Or Approved Equal

2. Sealing Elements: Include type and number required for pipe material and size of pipe.
3. Pressure Plates: Include two for each sealing element.
4. Connecting Bolts and Nuts: Length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.6. SLEEVES

A. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set screws.

E. Molded PVC: Permanent, with nailing flange for attaching to wooden forms.

F. PVC Pipe: ASTM D 1785, Schedule 40.

G. Molded PE: Reusable, PE, tapered-cup shaped, and smooth-outer surface with nailing flange for attaching to wooden forms.

2.7. ESCUTCHEONS

A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.

C. One-Piece, Cast-Brass Type: With set screw.

1. Finish: Polished chrome-plated and rough brass.

D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.

1. Finish: Polished chrome-plated and rough brass.
2. One-Piece, Stamped-Steel Type: With set screw or spring clips and chrome-plated finish.

E. Split-Plate, Stamped-Steel Type: With set screw or spring clips, and chrome-plated finish.

F. One-Piece, Floor-Plate Type: Cast-iron floor plate.

G. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

2.8. GROUT

A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PLUMBING DEMOLITION

A. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.

1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to the Commissioner.

B. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.3. PIPING SYSTEMS - COMMON REQUIREMENTS

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

E. Install piping to permit valve servicing.

F. Install piping at indicated slopes.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Install piping to allow application of insulation.

J. Select system components with pressure rating equal to or greater than system operating pressure.

K. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

1. New Piping:

   a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
   b. Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish.
   c. Insulated Piping: One-piece, stamped-steel type with spring clips.

d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
e. Bare Piping at Ceiling Penetrations in Finished Spaces: cast-brass type with polished chrome-plated finish.
f. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with polished chrome-plated and rough-brass finish.
g. Bare Piping in Equipment Rooms: One-piece, cast-brass type.
h. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.

3.4. PIPING JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

D. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

E. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

F. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

G. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

H. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
2. ABS Piping: Join according to ASTM D 2235 and ASTM D 2661 Appendixes.
3. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
4. PVC Pressure Piping: Join schedule number ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
5. PVC Nonpressure Piping: Join according to ASTM D 2855.

6. PVC to ABS Nonpressure Transition Fittings: Join according to ASTM D 3138 Appendix.
7. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D 3139.
8. Plastic Nonpressure Piping Gasketed Joints: Join according to ASTM D 3212

I. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.

1. Plain-End Pipe and Fittings: Use butt fusion.
2. Plain-End Pipe and Socket Fittings: Use socket fusion.

J. Fiberglass Bonded Joints: Prepare pipe ends and fittings, apply adhesive, and join according to pipe manufacturer's written instructions.

3.5. PIPING CONNECTIONS

A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.6. EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.

B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

C. Install plumbing equipment to facilitate service, maintenance, and restore or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

D. Install equipment to allow right of way for piping installed at required slope.

3.7. PAINTING

A. Painting of plumbing systems, equipment, and components is specified in Sections 099000 "Painting and Finishing."

B. Damage and Touchup: Restore marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

END OF SECTION 220500

SECTION 220516
Expansion Fittings and Loops for Plumbing Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Section Includes:

1. Flexible-hose packless expansion joints.
2. Metal-bellows packless expansion joints.
3. Rubber packless expansion joints.
4. Grooved-joint expansion joints.
5. Pipe loops and swing connections.
6. Alignment guides and anchors.

1.3. PERFORMANCE REQUIREMENTS

A. Compatibility: Products shall be suitable for piping service fluids, materials, working pressures, and temperatures.

B. Capability: Products to absorb 200 percent of maximum axial movement between anchors.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Product Certificates: For each type of expansion joint, from manufacturer.

D. Maintenance Data: For expansion joints to include in maintenance manuals.

PART 2 - PRODUCTS

2.1. PACKLESS EXPANSION JOINTS

A. Flexible-Hose Packless Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, provide products by one the following:

   a. Flex-Hose Co., Inc.
   b. Flexicraft Industries.
   c. Flex Pression Ltd.
   d. Metraflex, Inc.
   e. Unisource Manufacturing, Inc.
   f. Or Approved Equal

2. Description: Manufactured assembly with inlet and outlet elbow fittings and two flexible-metal-hose legs joined by long-radius, 180-degree return bend or center section of flexible hose.
3. Flexible Hose: Corrugated-metal inner hoses and braided outer sheaths.
4. Expansion Joints for Copper Tubing NPS 2 (DN 50) and Smaller: Copper-alloy fittings with solder-joint end connections.
5. Expansion Joints for Copper Tubing NPS 2-1/2 to NPS 4: Copper-alloy fittings with threaded end connections.

B. Metal-Bellows Packless Expansion Joints:

1. Manufacturers: Subject to compliance with requirements, provide products by one the following:

   a. Adsco Manufacturing LLC.
   b. American BOA, Inc.
   c. Badger Industries, Inc.
   d. Expansion Joint Systems, Inc.
   e. Flex-Hose Co., Inc.
   f. Flexicraft Industries.
   g. Flex Pression Ltd.
   h. Flex-Weld, Inc.
   i. Flo Fab inc.
   j. Hyspan Precision Products, Inc.
   k. Metraflex, Inc.
   l. Proco Products, Inc.
   m. Senior Flexonics Pathway.
   n. Tozen Corporation.
   o. Unaflex.
   p. Unisource Manufacturing, Inc.
   q. Universal Metal Hose; a subsidiary of Hyspan Precision Products, Inc.
   r. U.S. Bellows, Inc.
   s. WahlcoMetroflex.
   t. Or Approved Equal

2. Standards: ASTM F 1120 and EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."
3. Type: Circular, corrugated bellows with external tie rods.
4. Minimum Pressure Rating: 175 psig unless otherwise indicated.
5. Configuration: Single joint with base and double joint with base class(es) unless otherwise indicated.
6. Expansion Joints for Copper Tubing: Single- or multi-ply phosphor-bronze bellows, copper pipe ends, and brass shrouds.

C. Rubber Packless Expansion Joints:

1. Manufacturers: Subject to compliance with requirements:

   a. Amber/Booth Company, Inc.; a div. of Vibration Isolation Products of Texas, Inc.
   b. Flex-Hose Co., Inc.
   c. Flexicraft Industries.
   d. Flex-Weld, Inc.
   e. Garlock Sealing Technologies.
   f. General Rubber Corporation.
   g. Mason Industries, Inc.; Mercer Rubber Co.
   h. Metraflex, Inc.
   i. Proco Products, Inc.
   j. Red Valve Company, Inc.
   k. Tozen Corporation.
   l. Unaflex.
   m. Unisource Manufacturing, Inc.
   n. Or Approved Equal

2. Standards: ASTM F 1123 and FSA's "Technical Handbook: Non-Metallic Expansion Joints and Flexible Pipe Connectors."
3. Material: Fabric-reinforced rubber complying with FSA-NMEJ-703.
4. Minimum Pressure Rating for NPS 1-1/2 to NPS 4: 150 psig at 220 deg F.
5. Minimum Pressure Rating for NPS 5 and NPS 6: 140 psig at 200 deg F.
6. Minimum Pressure Rating for NPS 8 to NPS 12: 140 psig at 180 deg F.
7. Material for Water: EPDM.
8. End Connections: Full-faced, integral steel flanges with steel retaining rings.

2.2. ALIGNMENT GUIDES AND ANCHORS

A. Alignment Guides:

1. Manufacturers: Subject to compliance with requirements, provide products by one the following:

   a. Adsco Manufacturing LLC.
   b. Advanced Thermal Systems, Inc.
   c. Flex-Hose Co., Inc.
   d. Flexicraft Industries.
   e. Flex-Weld, Inc.
   f. Hyspan Precision Products, Inc.

g. Metraflex, Inc.
h. Senior Flexonics Pathway.
i. Unisource Manufacturing, Inc.
j. U.S. Bellows, Inc.
k. Or Approved Equal

2. Description: Steel, factory-fabricated alignment guide, with bolted two-section outer cylinder and base for attaching to structure; with two-section guiding spider for bolting to pipe.

B. Anchor Materials:

1. Steel Shapes and Plates: ASTM A 36/A 36M.
2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel hex head.
3. Washers: ASTM F 844, steel, plain, flat washers.
4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened portland cement concrete, with tension and shear capacities appropriate for application.

a. Stud: Threaded, zinc-coated carbon steel.
b. Expansion Plug: Zinc-coated steel.
c. Washer and Nut: Zinc-coated steel.

5. Chemical Fasteners: Insert-type-stud, bonding-system anchor for use with hardened portland cement concrete, with tension and shear capacities appropriate for application.

a. Bonding Material: ASTM C 881/C 881M, Type IV, Grade 3, two-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud unless otherwise indicated.
c. Washer and Nut: Zinc-coated steel.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXPANSION-JOINT INSTALLATION

A. Install expansion joints of sizes matching sizes of piping in which they are installed.

B. Install metal-bellows expansion joints according to EJMA's "Standards of the Expansion Joint Manufacturers Association, Inc."

C. Install rubber packless expansion joints according to FSA-NMEJ-702.

D. Install grooved-joint expansion joints to grooved-end steel piping

3.3. PIPE LOOP AND SWING CONNECTION INSTALLATION

A. Install pipe loops cold-sprung in tension or compression as required to partly absorb tension or compression produced during anticipated change in temperature.

B. Connect risers and branch connections to mains with at least five pipe fittings including tee in main.

C. Connect risers and branch connections to terminal units with at least four pipe fittings including tee in riser.

D. Connect mains and branch connections to terminal units with at least four pipe fittings including tee in main.

3.4. ALIGNMENT-GUIDE AND ANCHOR INSTALLATION

A. Install alignment guides to guide expansion and to avoid end-loading and torsional stress.

B. Install one guide(s) on each side of pipe expansion fittings and loops. Install guides nearest to expansion joint not more than four pipe diameters from expansion joint.

C. Attach guides to pipe and secure guides to building structure.

D. Install anchors at locations to prevent stresses from exceeding those permitted by ASME B31.9 and to prevent transfer of loading and stresses to connected equipment.

E. Anchor Attachments:

1. Anchor Attachment to Galvanized-Steel Pipe: Attach with pipe hangers. Use MSS SP-69, Type 42, riser clamp welded to anchor.
2. Anchor Attachment to Copper Tubing: Attach with pipe hangers. Use MSS SP-69, Type 24, U-bolts bolted to anchor.

F. Use grout to form flat bearing surfaces for guides and anchors attached to concrete.

END OF SECTION 220516

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 220519
Meters and Gages For Plumbing Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.
   a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Section Includes:

1. Bimetallic-actuated thermometers.
2. Liquid-in-glass thermometers.
3. Thermowells.
4. Dial-type pressure gages.
5. Gage attachments.
6. Test plugs.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Product Certificates: For each type of meter and gage, from manufacturer.

D. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

PART 2 - PRODUCTS

2.1. BIMETALLIC-ACTUATED THERMOMETERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ernst Flow Industries.
2. Marsh Bellofram.
3. Trerice, H. O. Co.
4. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
5. Weiss Instruments, Inc.
6. WIKA Instrument Corporation - USA.
7. Or Approved Equal

B. Standard: ASME B40.200.

C. Case: Hermetically sealed type(s); stainless steel with 3-inch nominal diameter.

D. Dial: Nonreflective aluminum with permanently etched scale markings and scales in deg F.

E. Connector Type(s): Union joint, adjustable angle, with unified-inch screw threads.

F. Connector Size: 1/2 inch, with ASME B1.1 screw threads.

G. Stem: 0.25 in diameter; stainless steel.

H. Window: Double strength glass.

I. Ring: Stainless steel.

J. Element: Bimetal coil.

K. Pointer: Dark-colored metal.

L. Accuracy: Plus or minus 1 percent of scale range.

2.2. LIQUID-IN-GLASS THERMOMETERS

A. Metal-Case, Industrial-Style, Liquid-in-Glass Thermometers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Ernst Flow Industries.
    b. Trerice, H. O. Co.
    c. Weiss Instruments, Inc.
    d. Or Approved Equal

2. Standard: ASME B40.200.
3. Case: Cast aluminum; 9-inch nominal size unless otherwise indicated.
4. Case Form: Adjustable angle unless otherwise indicated.
5. Tube: Glass with magnifying lens and blue or red organic liquid.
6. Tube Background: Non-reflective aluminum with permanently etched scale markings graduated in deg F.
7. Window: Glass or acrylic.

8. Stem: Aluminum, brass or stainless steel and of length to suit installation.

   a. Design for Air-Duct Installation: With ventilated shroud.
   b. Design for Thermowell Installation: Bare stem.

9. Connector: 1-1/4 inches, with ASME B1.1 screw threads.
10. Accuracy: Plus or minus 1 percent of scale range or one scale division, to a maximum of 1.5 percent of scale range.

2.3. THERMOWELLS

A. Thermowells:

1. Standard: ASME B40.200.
2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material: Brass or stainless steel.
4. Type: Stepped shank unless straight or tapered shank is indicated.
5. External Threads: ½ inch, ¾ inch, or 1 inch, ASME B1.20.1 pipe threads.
6. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
7. Bore: Diameter required to match thermometer bulb or stem.
8. Insertion Length: Length required to match thermometer bulb or stem.
9. Lagging Extension: Include on thermowells for insulated piping and tubing.
10. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

2.4. PRESSURE GAGES

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. AMETEK, Inc.; U.S. Gauge.
   b. Marsh Bellofram.
   c. Trerice, H. O. Co.
   d. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
   e. Weiss Instruments, Inc.
   f. WIKA Instrument Corporation - USA.
   g. Or Approved Equal

2. Standard: ASME B40.100.
3. Case: Liquid-filled type(s); stainless steel; 4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube unless otherwise indicated.
5. Pressure Connection: 316L stainless steel, with 1/4 inch, ASME B1.20.1 pipe threads and bottom-outlet type unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.

9. Window: Glass.
10. Ring: Stainless steel.
11. Accuracy: Grade A, plus or minus 1 percent of middle half of scale range.

2.5. GAGE ATTACHMENTS

A. Snubbers: ASME B40.100, brass; with 1/4 inch ASME B1.20.1 pipe threads and surge-dampening device. Include extension for use on insulated piping.

B. Siphons: Loop-shaped section of brass pipe with 1/4 inch pipe threads.

C. Valves: Brass or stainless-steel needle, with 1/4 inch, ASME B1.20.1 pipe threads.

2.6. TEST PLUGS

A. Product: Subject to compliance with requirements, provide product by one of the following:

1. Petersin Equipment Co. Inc.
2. Trerice, H. O. Co.
3. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
4. Weiss Instruments, Inc.
5. Or Approved Equal

B. Description: Test-station fitting made for insertion into piping tee fitting.

C. Body: Brass or stainless steel with core inserts and gasketed and threaded cap. Include extended stem on units to be installed in insulated piping.

D. Thread Size: 1/2 inch, ASME B1.20.1 pipe thread.

E. Minimum Pressure and Temperature Rating: 500 psig at 240 deg F.

F. Core Inserts: Neoprene self-sealing rubber.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. INSTALLATION

A. Install thermowells with socket extending one-third of pipe diameter and in vertical position in piping tees.

B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.

C. Install thermowells with extension on insulated piping.

D. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.

E. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.

F. Install valve and snubber in piping for each pressure gage for fluids.

G. Install test plugs in piping tees.

H. Install thermometers in the following locations:

1. Inlet and outlet of each water heater.
2. Inlets and outlets of each domestic water heat exchanger.
3. Inlet and outlet of each domestic hot-water storage tank.

I. Install pressure gages in the following locations:

1. Building water service entrance into building.
2. Inlet and outlet of each pressure-reducing valve.
3. Suction and discharge of each domestic water pump.

3.3. CONNECTIONS

A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

3.4. ADJUSTING

A. Adjust faces of meters and gages to proper angle for best visibility.

3.5. THERMOMETER SCHEDULE

A. Thermometers at inlet and outlet of each domestic water heater shall be one of the following:

1. Sealed, bimetallic-actuated type.
2. Industrial-style, liquid-in-glass type.

B. Thermometers at inlets and outlets of each domestic water heat exchanger shall be one of the following:

1. Sealed, bimetallic-actuated type.
2. Industrial-style, liquid-in-glass type.

C. Thermometers at inlet and outlet of each domestic hot-water storage tank shall be one of the following:

1. Sealed, bimetallic-actuated type.

2. Industrial-style, liquid-in-glass type.

D. Thermometer stems shall be of length to match thermowell insertion length.

3.6. THERMOMETER SCALE-RANGE SCHEDULE

A. Scale Range for Domestic Cold-Water Piping: 0 to 100 deg F.

B. Scale Range for Domestic Hot-Water Piping: 20 to 240 deg F.

3.7. PRESSURE-GAGE SCHEDULE

A. Pressure gages at discharge of each water service into building shall be the following:

1. Liquid-filled direct-mounted, metal case.

B. Pressure gages at inlet and outlet of each water pressure-reducing valve shall be of the following:

1. Liquid-filled direct-mounted, metal case.

C. Pressure gages at suction and discharge of each domestic water pump shall be the following:

1. Liquid-filled direct-mounted, metal case.

3.8. PRESSURE-GAGE SCALE-RANGE SCHEDULE

A. Scale Range for Water Service Piping: 0 to 160 psi.

B. B. Scale Range for Domestic Water Piping: 0 to 160 psi.

END OF SECTION 220519

SECTION 220523
General Duty Valves for Plumbing Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. Section Includes

1. Gate valves
2. Globe and angle valves
3. Swing check valves
4. Lift check valves
5. Silent check valves (pump discharge)
6. Ball valves
7. Butterfly valves
8. Plug lubricated valves
9. Pressure reducing valves
10. Solenoid valves
11. Water service valves

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Provide valves of same manufacturer throughout.

C. Provide valves with manufacturer's name and pressure rating clearly marked on the outside of the body.

D. Manufacturers

1. Gate, globe, angle valves, swing, lift and ball check valves

    a. Jenkins
    b. Stockham
    c. Hammond
    d. Kennedy
    e. Crane
    f. Flygt
    g. Or Approved Equal

2. Silent check valves

    a. Smolensky
    b. Williams - Hager
    c. Mueller
    d. Or Approved Equal

3. Ball valves

    a. Apollo
    b. Watts
    c. Worcester
    d. Jamesbury
    e. Fairbanks
    f. Rockwell McCanna
    g. Or Approved Equal

4. Butterfly Valves

    a. Rockwell - McCanna Co.
    b. Jamesbury Co.
    c. Duriron
    d. Or Approved Equal

5. Plug lubricated valves

    a. Rockwell Norstrom
    b. DeZurik
    c. Dresser
    d. Or Approved Equal

6. Pressure reducing valves (PRV)

a. Central station

1. Cla-Val
2. Roll Seal
3. Gungenhauser
4. Or Approved Equal

b. Local PRV

1. Ford
2. A.W. Cash
3. Watts
4. Or Approved Equal

PART 2 - PRODUCTS

2.1. GATE VALVES

A. Valve bodies three inches (3") and smaller shall be all bronze with bronze trim.

B. Valve bodies four inches (4") and larger shall be iron body with bronze trim.

C. Bronze valve shall have aluminum alloy hand wheels. Iron body valves shall have malleable, cast iron or high tensile strength alloy steel hand wheels.

D. Use rising stem gate valves where space permits.

E. Valves six inches (6") and larger shall be equipped with valve bypass.

F. Ball valves may be substituted for gate valves in sizes three inches (3") and smaller.

G. Valve Application:

1. Domestic Water System

Sizes	Pressure Class SWP/CWP	Model No.	Valve End
2 1/2" & smaller	/300	0282	Socket
3" & larger	125/200	0405	Flange
2" & larger	250/500	0312	Flange

2. Storm Water Sump Pump Discharge

Sizes SWP/CWP	Pressure Class	Model No.	Valve End
2" & 2 1/2"	150/300	0252	Screw
3" & larger	125/200	0405	Flange

2.2. GLOBE & ANGLE VALVES

A. Valve bodies three inches (3") and smaller shall be all bronze with bronze trim.

B. Valve bodies four inches (4") and larger shall be iron body with bronze mounted trim.

C. Provide re-grindable seats and composite discs for all globe valves and throttling nuts for globe valves used for pipe line balancing.

D. Ball valves may be substituted for globe valves in sized three inches (3") and smaller.

E. Valve Application

1. Domestic Water System

Sizes SWP/CWP	Pressure Class Rating	Model No.	Valve End
2" & smaller	/300	4502-2	Socket
2 1/2" & 3"	150/300	U-01	Screw
4" & larger	125/200	0102	Flange

2.3. SWING CHECK VALVES

A. Valve bodies three inches (3") and smaller shall be all bronze.

B. Valve bodies four inches (4") and larger shall be iron body bronze mounted.

C. Swing check valves shall be provided with composite discs for sewage ejector and sump pump discharge.

D. Double door check valves for compressed air shall be threaded full flange type, carbon steel body, stainless steel door and pins (type C), monel spring, and Buna-N seats.

2.4. SILENT CHECK VALVE

A. Silent check valves for domestic water, non-potable water system pump discharges shall be flanged globe type with stainless steel (S/S) spring and Buna-N insert.

B. Silent check valves for fire standpipe pump discharges shall be flanged water type with stainless steel spring and Buna-N insert.

C. Valve seat and disc shall be renewable and reseated without special tools.

D. All parts of valves in contact with deionized, demineralized, and/or process water shall be stainless steel.

E. Valve Application

1. Domestic Water Pump Discharge

Sizes	Pressure Class & WOG Rating	Model No.	Body	Disc	Seat Ring
2 1/2" & smaller	125/175	329	Semi-Steel	Bronze	Bronze
2 1/2" & smaller	150/285	329	Cast steel	S/S	S/S
2 1/2" & smaller	250/400	329	Cast steel	S/S	S/S
3" & larger	125/175	636	Semi-Steel	Bronze	Bronze
3" & larger	150/285	636	Cast-Steel	S/S	S/S
3" & larger	250/400	636	Semi-Steel	Bronze	Bronze
3" & larger	300/740	636	Cast-Steel	S/S	S/S

2. Non-Potable Water Pump Discharge

Size	Pressure Class & WOG Rating	Model No.	Body	Disc	Seat Ring
2 1/2" & Smaller	125/175	329	Semi-Steel	Bronze	Bronze
3" & larger	125/175	636	Semi-Steel	Bronze	Bronze

2.5. BALL VALVES

A. Ball valves may be substituted for gate and globe valves in sizes three inches (3") and smaller.

B. Ball valves installed in piping for balancing shall be provided with memory balancing stops.

C. Ball valves shall have full port ball and body construction.

D. Bronze ball valves shall be constructed of a one piece bronze casting and machined end piece retainer, rated at 600 P.S.I. CWP, with blow-out proof stem design complete with teflon seat and seals and chrome plated full port bronze ball.

E. All ball valves shall be (100%) factory tested.

F. Provide union end valves at equipment in lieu of one union.

G: Provide ball valves with mounting pad where valve actuators are required.

H. Provide "T" handle to actuate valves two inches (2") and smaller in lieu of lever handle when space limitations exist.

I. Valve Application

1. Domestic Water Systems

Size	Model No.	Valve End
1/2"	70-203	Socket
3/4"	77-204	Socket
1"	77-205	Socket
1 1/4"	77-206	Socket
1 1/2"	77-207	Socket
2"	77-208	Socket
2 1/2"	77-209	Screw w/adapter
3"	70-200	Screw w/adapter

2.6. PLUG VALVES

A. Manufacturers:

1. Subject to compliance with requirements, provide products by one of the following:

a) Nibco
b) Crane Co.
c) Stockham
d) Or Approved Equal

B. Up to and including 2 inches: Bronze body, bronze tapered plug, non-lubricated, Teflon packing, threaded ends.

C. Over 2 inches: Bronze body, bronze tapered plug, non-lubricated, Teflon packing, threaded ends.

2.7. RELIEF VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Watts Regulator Co.
2. Kunkle Valve Co.
3. Taco, Inc.
4. Bell & Gossett Co.
5. Or Approved Equal

B. Bronze body, Teflon seat, steel stem and springs automatic direct pressure actuated, capacities ASME certified and labeled.

2.8. STRAINERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Sarco
2. Mueller Brass Co.
3. Hoffman Specialty ITT.
4. Or Approved Equal

B. Size 2 inch and under: Screwed brass or iron body for 175 psig working pressure, Y pattern with a/32 inch stainless steel perforated screen.

C. Size 2 inch to 4 inch: Flanged iron body for 175 psig working pressure, Y pattern with 3/64 inch stainless steel perforated screen.

D. Size 5 inch and larger: Flanged iron body for 175 psig working pressure, basket pattern with 1/8 inch stainless steel perforated screen.

2.9. CHAINWHEELS

A. Manufacturers: Subject to compliance with requirements, provide products by one the following:

1. Babbitt Steam Specialty co.
2. Roto Hammer Industries.
3. Trumbull Industries.
4. Or approved equal.

B. Description: Valve actuation assembly with sprocket rim, brackets, and chain.

1. Brackets: Type, number, size, and fasteners required to mount actuator on valve.

2. Attachment: for connection to fall butterfly and plug valve stema.
3. Sprocket Rim with Chain Guides: Ductile or cast iron of type and size required for valve.
4. Chain: Hot-dip, galvanized steel of size required to fit sprocket rim.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to restore defective valves; replace with new valves.

F. Ream pipe and tube ends. Remove burrs.

G. Remove scale and dirt on inside and outside before assembly.

H. Prepare piping connections to equipment with flanges or unions.

3.3. VALVE INSTALLATION

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.

B. Locate valves for easy access and provide separate support where necessary.

C. Install valves in horizontal piping with stem at or above center of pipe.

D. Install valves in position to allow full stem movement.

E. Install chain wheels on operators for valves 4 inch and larger and more than 96 inches above floor. Extend chains to 60 inches above finished floor.

F. Install check valves for proper direction of flow and as follows:

1. Revise check valve installation requirements to suit Project; delete those not required.
2. Swing Check Valves: In horizontal position with hinge pin level.
3. Center-Guided Check Valves: In horizontal or vertical position, between flanges.
4. Lift Check Valves: With stem upright and plumb.

G. Install in accordance with manufacturer's instructions.

H. Provide non-conducting dielectric connections wherever jointing dissimilar metals.

I. Provide clearance for installation of insulation and access to valves and fittings.

J. Provide access where valves and fittings are not exposed. Coordinate size and location of access doors with Section 083113 "Access Doors."

K. Install valves with stems upright or horizontal, not inverted.

L. Provide one plug valve wrench for every ten plug valves sized 2 inches and smaller, minimum of one. Provide each plug valve sized 2" inches and larger with a wrench with set screw.

M. Pipe vents from gas pressure reducing valves to outdoors and terminate in weatherproof hood.

3.4. APPLICATION

A. Install unions downstream of valves and at equipment or apparatus connections.

B. Install brass male adapters each side of valves in copper piped system. Sweat solder adapters to pipe.

C. Install gate ball or ball valves for shut-off and to isolate equipment, part of systems, or vertical risers.

D. Install globe ball valves for throttling, bypass, or manual flow control services.

E. Provide swing check valves on discharge of circulation pumps.

F. Provide plug valves in natural gas systems for shut-off service.

3.5. ADJUSTING

A. Adjust or replace valve packing after piping systems have been tested and put into services but before final adjusting and balancing. Replace valves if persistent leaking occurs.

END OF SECTION 220523

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 220529
Hangers and Supports for Plumbing Piping and Equipment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements:

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. This Section includes the following hangers and supports for plumbing system piping and equipment:

1. Steel pipe hangers and supports.
2. Trapeze pipe hangers.
3. Metal framing systems.
4. Thermal-hanger shield inserts.
5. Fastener systems.
6. Pipe stands.
7. Pipe positioning systems.
8. Equipment supports.

B. Related Sections include the following:

1. Section 220516 "Expansion Fittings and Loops for Plumbing Piping" for pipe guides and anchors.

1.3. DEFINITIONS

A. MSS: Manufacturers Standardization Society for The Valve and Fittings Industry Inc.

B. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

1.4. PERFORMANCE REQUIREMENTS

A. Provide supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.

B. Provide equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

C. Provide seismic-restraint hangers and supports for piping and equipment.

1.5. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For the following:

1. Steel pipe hangers and supports.
2. Thermal-hanger shield inserts.
3. Pipe positioning systems.

C. Shop Drawings: Show fabrication and installation details and include calculations for the following:

1. Trapeze pipe hangers. Include Product Data for components.
2. Metal framing systems. Include Product Data for components.
3. Pipe stands. Include Product Data for components.
4. Equipment supports.

D. Welding certificates.

1.6. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."
2. AWS D1.2, "Structural Welding Code--Aluminum."
3. AWS D1.4, "Structural Welding Code--Reinforcing Steel."
4. ASME Boiler and Pressure Vessel Code: Section IX.

PART 2 - PRODUCTS

2.1. STEEL PIPE HANGERS AND SUPPORTS

A. Description: MSS SP-58, Types 1 through 58, factory-fabricated components. Refer to Part 3 "Hanger and Support Applications" Article for where to use specific hanger and support types.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AAA Technology & Specialties Co., Inc.
2. Bergen-Power Pipe Supports.
3. B-Line Systems, Inc.; a division of Cooper Industries.
4. Carpenter & Paterson, Inc.
5. Empire Industries, Inc.
6. ERICO/Michigan Hanger Co.

7. Globe Pipe Hanger Products, Inc.
8. Grinnell Corp.
9. GS Metals Corp.
10. National Pipe Hanger Corporation.
11. PHD Manufacturing, Inc.
12. PHS Industries, Inc.
13. Piping Technology & Products, Inc.
14. Tolco Inc.
15. Or Approved Equal

C. Galvanized, Metallic Coatings: Pregalvanized or hot dipped.

D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

E. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion for support of bearing surface of piping.

2.2. TRAPEZE PIPE HANGERS

A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural-steel shapes with MSS SP-58 hanger rods, nuts, saddles, and U-bolts.

2.3. METAL FRAMING SYSTEMS

A. Description: MFMA-3, shop- or field-fabricated pipe-support assembly made of steel channels and other components.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. B-Line Systems, Inc.; a division of Cooper Industries.
2. ERICO/Michigan Hanger Co.; ERISTRUT Div.
3. GS Metals Corp.
4. Power-Strut Div.; Tyco International, Ltd.
5. Thomas & Betts Corporation.
6. Tolco Inc.
7. Unistrut Corp.; Tyco International, Ltd.
8. Or Approved Equal

C. Coatings: Manufacturer's standard finish unless bare metal surfaces are indicated.

D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

2.4. FASTENER SYSTEMS

A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. Hilti, Inc.
   b. ITW Ramset/Red Head.
   c. Masterset Fastening Systems, Inc.
   d. MKT Fastening, LLC.
   e. Powers Fasteners.
   f. Or Approved Equal

B. Mechanical-Expansion Anchors: Insert-wedge-type zinc-coated steel, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. B-Line Systems, Inc.; a division of Cooper Industries.
   b. Empire Industries, Inc.
   c. Hilti, Inc.
   d. ITW Ramset/Red Head.
   e. MKT Fastening, LLC.
   f. Powers Fasteners.
   g. Or Approved Equal

2.5. PIPE STAND FABRICATION

A. Pipe Stands, General: Shop or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.

B. Compact Pipe Stand: One-piece plastic unit with integral-rod-roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

C. Low-Type, Single-Pipe Stand: One-piece stainless-steel base unit with plastic roller, for roof installation without membrane penetration.

D. High-Type, Single-Pipe Stand: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   a. ERICO/Michigan Hanger Co.
   b. MIRO Industries.
   c. Portable Pipe Hangers.
   d. Or Approved Equal

2. Base: Stainless steel.
3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

E. High-Type, Multiple-Pipe Stand: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.

1. Bases: One or more plastic.
2. Vertical Members: Two or more protective-coated-steel channels.
3. Horizontal Member: Protective-coated-steel channel.
4. Pipe Supports: Galvanized-steel, clevis-type pipe hangers.

F. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe support made from structural-steel shape, continuous-thread rods, and rollers for mounting on permanent stationary roof curb.

2.6. PIPE POSITIONING SYSTEMS

A. Description: IAPMO PS 42, system of metal brackets, clips, and straps for positioning piping in pipe spaces for plumbing fixtures for commercial applications.

B. Manufacturers: Subject to compliance with requirements, provide products by the one of the following:

1. C & S Mfg. Corp.
2. HOLDRITE Corp.; Hubbard Enterprises.
3. Samco Stamping, Inc.
4. Or Approved Equal

2.7. EQUIPMENT SUPPORTS

A. Description: Welded, shop- or field-fabricated equipment support made from structural-steel shapes.

2.8. MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.
2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. HANGER AND SUPPORT APPLICATIONS

A. Specific hanger and support requirements are specified in Sections specifying piping systems and equipment.

B. Comply with MSS SP-69 for pipe hanger selections and applications that are not specified in piping system Sections.

C. Use hangers and supports with galvanized, metallic coatings for piping and equipment that will not have field-applied finish.

D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

E. Use padded hangers for piping that is subject to scratching.

F. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated stationary pipes, NPS 1/2 to NPS 30 .
2. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes, NPS 1/2 to NPS 24, if little or no insulation is required.
3. Pipe Hangers (MSS Type 5): For suspension of pipes, NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.
4. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated stationary pipes, NPS 3/4 to NPS 8.
5. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 8.
6. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 8.
7. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 2.
8. Split Pipe-Ring with or without Turnbuckle-Adjustment Hangers (MSS Type 11): For suspension of noninsulated stationary pipes, NPS 3/8 to NPS 8.
9. Extension Hinged or 2-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated stationary pipes, NPS 3/8 to NPS 3.
10. U-Bolts (MSS Type 24): For support of heavy pipes, NPS 1/2 to NPS 30.
11. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
12. Pipe Saddle Supports (MSS Type 36): For support of pipes, NPS 4 to NPS 36, with steel pipe base stanchion support and cast-iron floor flange.
13. Pipe Stanchion Saddles (MSS Type 37): For support of pipes, NPS 4 to NPS 36, with steel pipe base stanchion support and cast-iron floor flange and with U-bolt to retain pipe.
14. Adjustable, Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes, NPS 2-1/2 to NPS 36, if vertical adjustment is required, with steel pipe base stanchion support and cast-iron floor flange.

G. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers, NPS 3/4 to NPS 20.
2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers, NPS 3/4 to NPS 20, if longer ends are required for riser clamps.

H. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.

I. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction to attach to top flange of structural shape.
3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
6. C-Clamps (MSS Type 23): For structural shapes.
7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
11. Malleable Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
12. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:
    a. Light (MSS Type 31): 750 lb.
    b. Medium (MSS Type 32): 1500 lb .
    c. Heavy (MSS Type 33): 3000 lb.
13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

J. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

K. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41 roll hanger with springs.
4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from hanger.
6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from base support.
7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from trapeze support.
8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:

    a. Horizontal (MSS Type 54): Mounted horizontally.
    b. Vertical (MSS Type 55): Mounted vertically.
    c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.

L. Comply with MSS SP-69 for trapeze pipe hanger selections and applications that are not specified in piping system Sections.

M. Comply with MFMA-102 for metal framing system selections and applications that are not specified in piping system Sections.

N. Use powder-actuated fasteners or mechanical-expansion anchors instead of building attachments where required in concrete construction.

O. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

3.3. HANGER AND SUPPORT INSTALLATION

A. Steel Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.

B. Trapeze Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified above for individual pipe hangers.
2. Field fabricate from ASTM A 36/A 36M, steel shapes selected for loads being supported. Weld steel according to AWS D1.1.

B. Fiberglass Pipe Hanger Installation: Comply with applicable portions of MSS SP-69 and MSS SP-89. Install hangers and attachments as required to properly support piping from building structure.

C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping and support together on field-assembled metal framing systems.

D. Fiberglass Strut System Installation: Arrange for grouping of parallel runs of piping and support together on field-assembled fiberglass struts.

E. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

F. Fastener System Installation:

1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

G. Pipe Stand Installation:

1. Pipe Stand Types except Curb-Mounting Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
2. Curb-Mounting-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. Refer to Section 077100 "Roof Specialties and Accessories" for curbs.

H. Pipe Positioning System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture. Refer to Section 224000 "Plumbing Fixtures" for plumbing fixtures.

I. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.

J. Each equipment support in first paragraph below requires calculation and detail.

K. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

L. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

M. Install lateral bracing with pipe hangers and supports to prevent swaying.

N. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

O. Load Distribution: Install hangers and supports so piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

P. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so maximum pipe deflections allowed by ASME B31.9 (for building services piping) are not exceeded.

Q. Insulated Piping: Comply with the following:

1. Attach clamps and spacers to piping.
    a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
    b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
    c. Do not exceed pipe stress limits according to ASME B31.9 for building services piping.
2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
    a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
    a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
    a. NPS 1/4 to NPS 3-1/2 : 12 inches long and 0.048 inch thick.
    b. NPS 4: 12 inches long and 0.06 inch thick.
    c. NPS 5 and NPS 6 : 18 inches long and 0.06 inch thick.
    d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
    e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
5. Pipes NPS 8 and Larger: Include wood inserts.
6. Insert Material: Length at least as long as protective shield.
7. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.4. EQUIPMENT SUPPORTS

A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.

B. Grouting: Place grout under supports for equipment and make smooth bearing surface.

C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.5. METAL FABRICATIONS

A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1 procedures for shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work, and with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections so no roughness shows after finishing and contours of welded surfaces match adjacent contours.

3.6. ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.7. PAINTING

A. Touch Up: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.

B. Touch Up: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Section 099000 Painting and Finishes.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-restore paint to comply with ASTM A 780.

END OF SECTION 220529

SECTION 220533
Heat Tracing for Plumbing Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. This Section includes heat tracing with the following electric heating cables:

1. Self-regulating, parallel resistance.

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.

1. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.

C. Field quality-control test reports.

D. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.

E. Warranty: Special warranty specified in this Section.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the NYC Department of Buildings, and marked for intended use.

C. All heating-cable components shall be UL Listed, CSA Certified, or FM Approved for use as part of the system to provide pipe freeze protection.

1.5. WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to restore or replace electric heating cable that fails in materials or workmanship within specified warranty period.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1. SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. BH Thermal Corporation.
2. Chromalox, Inc.; Wiegard Industrial Division; Emerson Electric Company.
3. Delta-Therm Corporation.
4. Easy Heat Inc.
5. Nelson Heat Trace.
6. Pyrotenax; a division of Tyco Thermal Controls.
7. Raychem; a division of Tyco Thermal Controls.
8. Thermon Manufacturing Co.
9. Trasor Corp.
10. Or Approved Equal.

B. Heating Element: Pair of parallel No. 16 AWG, nickel-coated stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.

C. Electrical Insulating Jacket: Flame-retardant polyolefin.

D. Cable Cover: Tinned-copper braid, and polyolefin outer jacket with UV inhibitor.

E. Maximum Operating Temperature (Power On): 150 deg F.

F. Maximum Exposure Temperature (Power Off): 185 deg F.

G. Maximum Operating Temperature: 300 deg F .

H. Capacities and Characteristics:

1. Maximum Heat Output: 8 W/ft.
2. Piping Diameter: 2-1/2"
3. Volts: 120 V.

4. Phase: 1
5. Hertz: 60

2.2. CONTROLS

A. Remote bulb unit with adjustable temperature range from 30 to 50 deg .

B. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.

C. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.

D. Corrosion-resistant, waterproof control enclosure.

2.3. ACCESSORIES

A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.

B. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.

1. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches: 3/4 inch minimum.
2. Width for Markers on Pipes with OD, Including Insulation, 6 Inches or Larger: 1-1/2 inches minimum.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine surfaces and substrates to receive electric heating cables for compliance with requirements for installation tolerances and other conditions affecting performance.

1. Ensure surfaces and pipes in contact with electric heating cables are free of burrs and sharp protrusions.
2. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. INSTALLATION

A. Install electric heating cable across expansion joints according to manufacturer's written recommendations using slack cable to allow movement without damage to cable.

B. Install electric heating cables after piping has been tested and before insulation is installed.

C. Install electric heating cables according to IEEE 515.1.

D. Install insulation over piping with electric cables according to Section 230700 "Piping Insulation."

E. Install warning tape on piping insulation where piping is equipped with electric heating cables.

F. Set field-adjustable switches and circuit-breaker trip ranges.

G. Protect installed heating cables, including nonheating leads, from damage.

3.4. CONNECTIONS

A. Ground equipment according to Electrical Specification Sections.

B. Connect wiring according to Electrical Specification Sections.

C. All branch circuits shall be connected to a GFI type circuit breaker.

3.5. FIELD QUALITY CONTROL

A. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.

1. Test cables for electrical continuity and insulation integrity before energizing.
2. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.

B. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.

C. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 220533

1.5. COORDINATION

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1. EQUIPMENT LABELS

A. Metal Labels for Equipment:

1. Material and Thickness: Brass, 0.032-inch, Stainless steel, 0.025-inch , Aluminum, 0.032-inch or anodized aluminum, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch
3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
4. Fasteners: Stainless-steel rivets or self-tapping screws.
5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, and having predrilled holes for attachment hardware.
2. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
3. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
4. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
5. Fasteners: Stainless-steel rivets or self-tapping screws.
6. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

C. Label Content: Include equipment's Drawing designation or unique equipment number, and drawing numbers where equipment is indicated (plans, details, and schedules).

D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules). Equipment schedule shall be included in operation and maintenance data.

SECTION 220553
Identification for Plumbing Piping and Equipment

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

1.3. SUMMARY

A. Section Includes:

1. Equipment labels.
2. Warning signs and labels.
3. Pipe labels.
4. Stencils.
5. Valve tags.
6. Warning tags.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Samples: For color, letter style, and graphic representation required for each identification material and device.

D. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.

E. Valve numbering scheme.

F. Valve Schedules: For each piping system to include in maintenance manuals.

2.2. WARNING SIGNS AND LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, and having predrilled holes for attachment hardware.

B. Letter Color: White.

C. Background Color: Red.

D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

G. Fasteners: Stainless-steel rivets or self-tapping screws.

H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.3. PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.

C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
2. Lettering Size: At least 1-1/2 inches high.

2.4. STENCILS

A. Stencils: Prepared with letter sizes according to ASME A13.1 for piping; minimum letter height of 1-1/4 inches for ducts; and minimum letter height of 3/4 inch for access panel and door labels, equipment labels, and similar operational instructions.

1. Stencil Material: Aluminum.
2. Stencil Paint: Exterior, gloss, acrylic enamel black unless otherwise indicated. Paint may be in pressurized spray-can form.
3. Identification Paint: Exterior, acrylic enamel in colors according to ASME A13.1 unless otherwise indicated.

2.5. VALVE TAGS

A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.

1. Tag Material: Brass, 19 gauge minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Fasteners: Brass wire-link or beaded chain; or S-hook.

B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.

2.6. WARNING TAGS

A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.

1. Size: 3 by 5-1/4 inches minimum.
2. Fasteners: Brass grommet and wire.
3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
4. Color: Yellow background with black lettering.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.3. EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

3.4. PIPE LABEL INSTALLATION

A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Near each valve and control device.
2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 50 feet along each run. Reduce intervals to 25 feet in areas of congested piping and equipment.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

B. Pipe Label Color Schedule:

1. Domestic Water Piping:

   a. Background Color: Red.
   b. Letter Color: White.

2. Sanitary Waste and Storm Drainage]Piping:

   a. Background Color: Green.
   b. Letter Color: White.

3.5. VALVE-TAG INSTALLATION

A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:

1. Valve-Tag Size and Shape:

   a. Cold Water: 2 inches square.
   b. Hot Water: 2 inches square.

2. Valve-Tag Color:

   a. Cold Water: Natural.

b. Hot Water: Green.

3. Letter Color:

a. Cold Water: White.
b. Hot Water: White.

3.6. WARNING-TAG INSTALLATION

A. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION 220553

SECTION 220700
Plumbing Insulation

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SUMMARY

A. Section Includes:

1. Insulation Materials
2. Mineral fiber.
3. Adhesives.
4. Mastics.
5. Sealants.
6. Factory-applied jackets.
7. Field-applied fabric-reinforcing mesh.
8. Field-applied jackets.
9. Tapes.
10. Corner angles.

B. Related Sections include the following:

1. Section 230700 "Piping Insulation."

1.3. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated. Include thermal conductivity, thickness, and jackets (both factory and field applied).

C. Material Test Reports: From a testing agency licensed in the state of New York acceptable to Commissioner indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

D. Field quality-control reports.

1.4. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Materials and work shall conform to the latest edition of reference specifications specified herein and to applicable codes and requirements of NYC Department of Buildings.

C. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable Commissioner. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

1.5. DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6. COORDINATION

A. Coordinate size and location of supports, hangers, and insulation shields specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

B. Coordinate clearance requirements with piping Installer for piping insulation application and equipment Installer for equipment insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.7. SCHEDULING

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1. INSULATION MATERIALS

A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be acceptable according to ASTM C 795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type I. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

G. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For equipment applications, provide insulation with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

H. Mineral-Fiber, Preformed Pipe Insulation:

1. Type I, 850 deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.2. ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Mineral-Fiber Adhesive:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

   a. Childers Products, Division of ITW; CP-82.
   b. Foster Products Corporation, H. B. Fuller Company; 85-20.
   c. ITW TACC, Division of Illinois Tool Works; S-90/80.
   d. Marathon Industries, Inc.; 225.
   e. Mon-Eco Industries, Inc.; 22-25.
   f. Or approved equal.

2. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. ASJ Adhesive, and FSK and PVDC Jacket Adhesive:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:
   a. Childers Products, Division of ITW; CP-82.
   b. Foster Products Corporation, H. B. Fuller Company; 85-20.
   c. ITW TACC, Division of Illinois Tool Works; S-90/80.
   d. Marathon Industries, Inc.; 225.
   e. Mon-Eco Industries, Inc.; 22-25.
   f. Or approved equal.
2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.3. MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates:

B. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:
   a. Childers Products, Division of ITW; CP-76-8.
   b. Foster Products Corporation, H. B. Fuller Company; 95-44.
   c. Marathon Industries, Inc.; 405.
   d. Mon-Eco Industries, Inc.; 44-05.
   e. Vimasco Corporation; 750.
   f. Or approved equal.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.
6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: White.
5. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.4. FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.

2.5. FIELD-APPLIED FABRIC-REINFORCING MESH

A. Woven Glass-Fiber Fabric for Pipe Insulation: Approximately 2 oz./sq. yd. (68 g/sq. m) with a thread count of 10 strands by 10 strands/sq. inch for covering pipe and pipe fittings.

B. Woven Glass-Fiber Fabric for Equipment Insulation: Approximately 6 oz./sq. yd. with a thread count of 5 strands by 5 strands/sq. inch for covering equipment.

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:
   a. Childers Products, Division of ITW; Chil-Glas No. 5.
   b. Foster Products Corporation, H. B. Fuller Company; Mast-A-Fab.
   c. Vimasco Corporation; Elastafab 894.
   d. Or approved equal.

2.6. FIELD-APPLIED CLOTHS

A. Woven Glass-Fiber Fabric: Type I, plain weave, and presized a minimum of 8 oz./sq. yd..

2.7. FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. Metal Jacket:

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:
   a. Childers Products, Division of ITW; Metal Jacketing Systems.
   b. PABCO Metals Corporation; Surefit.
   c. RPR Products, Inc.; Insul-Mate.
   d. Or approved equal.
2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105 or 5005, Temper H-14.
   a. Finish and thickness are indicated in field-applied jacket schedules.

b. Moisture Barrier for Indoor Applications: 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper.
c. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper thick Polysurlyn.
d. Factory-Fabricated Fitting Covers:

1) Same material, finish, and thickness as jacket.
2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
3) Tee covers.
4) Flange and union covers.
5) End caps.
6) Beveled collars.
7) Valve covers.
8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M.

a. Factory cut and rolled to size.
b. Material, finish, and thickness are indicated in field-applied jacket schedules.
c. Moisture Barrier for Indoor Applications: 1-mil- (0.025-mm-) thick, heat-bonded polyethylene and kraft paper.
d. Moisture Barrier for Outdoor Applications: 3-mil- (0.075-mm-) thick, heat-bonded polyethylene and kraft paper.
e. Factory-Fabricated Fitting Covers:

1) Same material, finish, and thickness as jacket.
2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
3) Tee covers.
4) Flange and union covers.
5) End caps.
6) Beveled collars.
7) Valve covers.
8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

C. Underground Direct-Buried Jacket: 125-mil- thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.

2.8. TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0835.
b. Compac Corp.; 104 and 105.
c. Ideal Tape Co., Inc., an American Biltrite Company; 428 AWF ASJ.
d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.

e. Or approved equal.

2. Width: 3 inches.
3. Thickness: 11.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
b. Compac Corp.; 110 and 111.
c. Ideal Tape Co., Inc., an American Biltrite Company; 491 AWF FSK.
d. Venture Tape; 1525 CW, 1528 CW, and 1528 CW/SQ.
e. Or approved equal.

2. Width: 3 inches.
3. Thickness: 6.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

C. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. Products: Subject to compliance with requirements, products that may be incorporated into the Work include the following:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
b. Compac Corp.; 120.
c. Ideal Tape Co., Inc., an American Biltrite Company; 488 AWF.
d. Venture Tape; 3520 CW.
e. Or approved equal.

2. Width: 2 inches.
3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch in width.

2.9. CORNER ANGLES

A. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105 or 5005; Temper H-14.

B. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 or 316.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2. EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.

1. Verify that systems and equipment to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3. PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.4. GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment and piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment and pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Install insulation with factory-applied jackets as follows:

1. Draw jacket tight and smooth.
2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
   a. For below ambient services, apply vapor-barrier mastic over staples.
4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

N. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

O. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

P. For above ambient services, do not install insulation to the following:

1. Vibration-control devices.
2. Testing agency labels and stamps.
3. Nameplates and data plates.
4. Manholes.
5. Handholes.
6. Cleanouts.

3.5. PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
4. Seal jacket to wall flashing with flashing sealant.

D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.

1. Comply with requirements in Section 078413 "Firestops and Smokeseals" firestopping and fire-resistive joint sealers.

F. Insulation Installation at Floor Penetrations:

1. Pipe: Install insulation continuously through floor penetrations.
2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Firestops and Smokeseals."

3.6. EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION

A. Mineral Fiber, Pipe and Tank Insulation Installation for Tanks and Vessels: Secure insulation with adhesive and anchor pins and speed washers.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for percent coverage of tank and vessel surfaces as recommended by manufacturer.
2. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
3. Protect exposed corners with secured corner angles.
4. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:
   a. Do not weld anchor pins to ASME-labeled pressure vessels.
   b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
   c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches o.c. in both directions.
   d. Do not overcompress insulation during installation.
   e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
   f. Impale insulation over anchor pins and attach speed washers.
   g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
5. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
6. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.
7. Stagger joints between insulation layers at least 3 inches.
8. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
9. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.

10. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.

3.7. GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:

1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.

2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.

3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.

4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.

5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.

6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.

7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.

8. Stencil or label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
3. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.
4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.

3.8. MINERAL-FIBER INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.
4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.

2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.9. FIELD-APPLIED JACKET INSTALLATION

A. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

B. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

3.10. FINISHES

A. Equipment and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 099000 "Painting and Finishing."

1. Flat Acrylic Finish: Two coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
   a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation recommended protective coating.

C. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.

D. Do not field paint aluminum or stainless-steel jackets.

3.11. FIELD QUALITY CONTROL

A. Testing Agency: Engage a testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Inspect field-insulated equipment, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.

2. Inspect pipe, fittings, strainers, and valves, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, two locations of threaded strainers, two locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.

D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.12. EQUIPMENT INSULATION SCHEDULE

A. Insulation materials and thicknesses are identified below.

B. Insulate indoor and outdoor equipment in paragraphs below that is not factory insulated.

C. Heat-exchanger (water-to-water for domestic water heating service) insulation shall be the following:

1. Mineral-Fiber Pipe and Tank: 2 inches thick.

D. Domestic water, hydropneumatic tank insulation shall be the following:

1. Mineral-Fiber Pipe and Tank: 1 inch thick.

E. ASHRAE/IESNA 90.1 requires an R-value of 12.5 for domestic hot-water storage tanks.

F. Domestic hot-water storage tank insulation shall be the following,:

1. Mineral-fiber pipe and tank: 2 inch thick.

3.13. PIPING INSULATION SCHEDULE, GENERAL

A. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:

1. Drainage piping located in crawl spaces.
2. Underground piping.

3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.14. INDOOR PIPING INSULATION SCHEDULE

A. Domestic Cold Water:

1. All sizes: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1/2 inch thick.
2. Service main: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch (25 mm) thick.

B. Domestic Hot and Recirculated Hot Water:

1. 1-½ inch and Smaller: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.
2. Larger than 1-1/2": Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1-½ inch thick.

C. Stormwater and Overflow:

1. Mineral-Fiber, Preformed Pipe Insulation, Type I: ½ inch thick.

D. Sanitary Waste Piping Where Heat Tracing Is Installed:

1. All Pipe Sizes: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1-½ inch thick.

E. Condensate and Equipment Drain Water below 60 Deg F:

1. All Pipe Sizes: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.

3.15. OUTDOOR, ABOVEGROUND PIPING INSULATION SCHEDULE

A. Domestic Water Piping:

1. All Pipe Sizes: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 3 inches thick.

B. Domestic Hot and Recirculated Hot Water:

1. All Pipe Sizes: Insulation shall be the following:
   a. Mineral-Fiber, Preformed Pipe Insulation, Type I: 4 inches thick.

3.16. OUTDOOR, UNDERGROUND PIPING INSULATION SCHEDULE

A. Sanitary Waste Piping, All Sizes, Where Heat Tracing Is Installed: Cellular glass, 2 inches thick.

3.17. INDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Equipment, Concealed:

1. Aluminum, Smooth Corrugated Stucco Embossed: 0.016 inch thick.

C. Equipment, Exposed, up to 48 Inches in Diameter or with Flat Surfaces up to 72 Inches:

1. Aluminum, Smooth: 0.016 inch (0.41 mm) thick.

D. Equipment, Exposed, Larger Than 48 Inches in Diameter or with Flat Surfaces Larger Than 72 Inches :

1. Painted Aluminum, Smooth with 1-1/4-Inch- Deep Corrugations 0.032 inch (0.81 mm) thick.

E. Piping, Concealed:

1. Aluminum, Smooth: 0.016 inch thick.

F. Piping, Exposed:

1. Aluminum, Smooth: 0.016 inch thick.

3.18. OUTDOOR, FIELD-APPLIED JACKET SCHEDULE

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.

B. Equipment, Concealed:

1. Aluminum, Smooth 0.032 inch (0.81 mm) thick.

C. Equipment, Exposed, up to 48 Inches in Diameter or with Flat Surfaces up to 72 Inches:

1. Painted Aluminum, Smooth 0.032 inch (0.81 mm) thick.

D. Equipment, Exposed, Larger Than 48 Inches in Diameter or with Flat Surfaces Larger Than 72 Inches:

1. Painted Aluminum, Smooth Stucco Embossed with 1-1/4-Inch- (32-mm-) Deep Corrugations 0.040 inch (1.0 mm) thick.

E. Piping, Concealed:

1. None.

F. Piping, Exposed:

1. Painted Aluminum, Smooth 0.016 inch thick.

3.19. UNDERGROUND, FIELD-INSTALLED INSULATION JACKET

A. For underground direct-buried piping applications, install underground direct-buried jacket over insulation material.

END OF SECTION 220700

SECTION 22 08 00
COMMISSIONING OF PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project: (1) the contract drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. This section includes commissioning process requirements for Plumbing systems, assemblies, and equipment.

1.3 DESCRIPTION

A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system's installation, operation and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a complete design or installing Sub-Contractors to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.

B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:

1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing Sub-Contractors.
2. Verify and document proper performance of equipment and systems.
3. Verify that Operation & Service documentation is complete and transferred to City of New York.
4. Verify that the City of New York's operating personnel are adequately oriented.
5. Perform a post occupancy review with O&M staff within 10 months after Substantial Completion.

C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.

D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the City of New York, Contractor, Sub-Contractors, manufacturers and equipment suppliers.

E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

A. Refer to DDC General Conditions for definitions.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for CxA's role.

B. Refer to DDC General Conditions for specific submittal requirements. In addition, provide the following:

1. Certificates of readiness
2. Certificates of completion of installation, prestart, and startup activities.
3. O&M manuals
4. Test reports

1.6 QUALITY ASSURANCE

A. Test Equipment Calibration Requirements: The Contractor will comply with test equipment manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

A. Refer to DDC General Conditions for requirements pertaining to coordination during the commissioning process.

PART II - PRODUCTS

2.1 TEST EQUIPMENT

A. The Contractor shall ensure that the equipment and system perform startup, initial checkout and functional performance testing as outlined in the DDC General Conditions, except for equipment specific to and used by Sub-Contractor performing TAB work in their commissioning responsibilities. A sufficient quantity of two-way radios shall be provided by the Contractor.

B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.

C. Test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. The Contractor shall ensure that the manufacturer provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.

D. If required and necessary, data logging equipment and software required for testing will be provided by the CxA, but shall not become the property of the City of New York.

E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of ±0.1°F. Pressure sensors shall have an accuracy of ±2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART III - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for commissioned components, equipment, and systems.

B. Red-lined Drawings:

1. The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
4. The Contractor will create the as-built drawings.

C. Operation and Service Data:

1. The Contractor shall cuase the Sub-Contractor to provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
2. The CxA will review the O&M literature once for conformance to project requirements.
3. The CxA will receive a copy of the final approved O&M literature from the Contractor once corrections have been made by the Sub-Contractor.

D. Demonstration and Instruction:

1. The Contractor will provide demonstration and instruction as required by the specifications.
2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any instruction.
3. An instruction agenda for each instruction session must be submitted to the CxA one (1) week prior the instructing session.
4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA. A copy of the test record shall be provided to the CxA and Commissioner.

5. Engage a Factory-authorized service representative to demonstrate to the City of New York service personnel to adjust, operate, and maintain specific equipment.
6. Instruct the City of New York service personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
7. Review data in O&M Manuals.

3.2 CONTRACTOR RESPONSIBILITIES FOR SUB-CONTRACTOR PERFORMANCE

A. The Contractor shall cause the Sub-Contractor to have the following instruction responsibilities in performing plumbing System work: The commissioning responsibilities are as follows (all references apply to commissioned equipment/systems only):

1. Perform commissioning test at the direction of the CxA.
2. Attend construction phase controls coordination meetings.
3. Attend domestic water balancing review and coordination meetings.
4. Participate in Plumbing systems, assemblies, equipment, and component service orientation and inspection as directed by the CxA.
5. Provide information requested by the CxA for final commissioning documentation.
6. Include requirements for submittal data, operation and maintenance data, and instruction in each purchase order or sub-contract written.
7. Prepare preliminary schedule for Plumbing system orientations and inspections, operation and maintenance manual submissions, orientation sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for the Commissioner. Distribute preliminary schedule to commissioning team members.
8. Update schedule as required throughout the construction period.
9. During the startup and initial checkout process, execute the related portions of the pre-functional checklists for all commissioned equipment.
10. Assist the CxA in all verification and functional performance tests.
11. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.
12. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the specifications. Submit to CxA (45) days after submittal acceptance.
13. Coordinate with the CxA to provide (72) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
14. Notify the CxA a minimum of (2) weeks in advance of the time for start of the balancing work. Attend the initial balancing meeting for review of the balancing procedures.
15. Participate in, and schedule vendors and Sub-Contractors to participate in the instruction sessions.
16. Provide written notification to the CxA that the following work has been completed in accordance with the contract documents, and that the equipment, systems, and sub-system are operating as required.
    a. Plumbing equipment including backflow preventers, domestic water heaters, pumps, plumbing fixtures, and all other equipment furnished under Division 22.

b. Gas piping, sanitary waste and vent piping, storm drainage piping, sump pumps and, sewage ejectors.

17. The Contractor shall ensure that the equipment suppliers documents the performance of their equipment.

18. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.

19. The Contractor shall ensure that the Sub-Contractor perform Test, Adjust and Balance work:
    a. Attend initial commissioning coordination meeting scheduled by the CxA.
    b. Submit the site specific balancing plan to the CxA and Commissioner for review and acceptance.
    c. Attend the balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in balancing the Plumbing system.
    d. At the completion of the balancing work, and the submittal of the final balancing report, notify the Commissioner.
    e. Participate in verification of the balancing report, which will consist of repeating measurements contained in the balancing reports. Assist in diagnostic purposes when directed.

20. The Contractor shall ensure equipment Suppliers perform the following tasks:
    a. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York, to keep warranties in force.
    b. Assist in equipment testing per agreements with respective Sub-Contractors.
    c. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

21. Provide instruction for the City of New York service personnel using qualified personnel, as specified.

22. Refer to DDC General Conditions for additional responsibilities.

3.3 CxA's RESPONSIBILITIES

A. Refer to DDC General Conditions for CxA's Responsibilities.

3.4 TESTING PREPARATION

A. Certify in writing to the CxA that Plumbing systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.

B. Certify in writing to the CxA that Plumbing instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

C. Certify in writing that balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.

D. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

E. Inspect and verify the position of each device and interlock identified on checklists.

F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.

G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 DOMESTIC WATER BALANCING VERIFICATION

A. Prior to performance of Domestic Water Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.

B. Notify the CxA at least ten (10) days in advance of testing and balancing work, and provide access for the CxA to witness balancing work.

C. Provide technicians, instrumentation, and tools to verify testing and balancing of Plumbing systems at the direction of the CxA

1. The CxA will notify the Sub-Contractor performing balancing work ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
2. The Contractor shall cause the Sub-Contractor performing balancing work shall use the same instruments (by model and serial number) that were used when original data were collected.
3. Failure of an item includes a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final balancing report.
4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.6 GENERAL TESTING REQUIREMENTS

A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of Plumbing testing shall include entire Plumbing installation. Testing shall include measuring capacities and effectiveness of operational and control functions.

C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

D. The CxA along with the Contractor performing plumbing work and the Sub-Contractor performing balancing work shall prepare detailed testing plans, procedures, and checklists for Plumbing systems, subsystems, and equipment.

E. Tests will be performed using design conditions whenever possible.

F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

G. The CxA may direct that set points be altered when simulating conditions is not practical.

H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.

I. If tests cannot be completed because of a deficiency outside the scope of the Plumbing system, document the deficiency and report it to the City of New York. After deficiencies are resolved, reschedule tests.

J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.7 PLUMBING SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Equipment Testing and Acceptance Procedures: Testing and Acceptance requirements are specified in Division 22. Provide submittals, test data, inspector records, and certifications to the CxA.

B. Plumbing Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 22. Assist the CxA with preparation of testing plans.

C. Pipe system cleaning, flushing, hydrostatic tests and chemical treatment: The Contractor performing plumbing work shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA.

D. Plumbing Distribution System Testing: The Contractor shall provide technicians, instrumentation, tools, and equipment to test performance of domestic water distribution system.

E. Vibration and Sound Tests: The Contractor shall provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

F. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and subsystems. The systems shall be evaluated shall include, but not limited to:

1. Domestic Hot Water Heater System
2. Fuel Gas System for Boilers
3. Sump Pumps
4. Solar Hot Water Heaters

3.8 SEASONAL TESTING

A. Refer to DDC General Conditions for requirements pertaining to seasonal testing.

3.9 OPERATION AND MAINTENANCE MANUALS

A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements.

B. Refer to DDC General Conditions for requirements for the Contractor and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

3.10 INSTRUCTION OF SERVICE PERSONNEL

A. Refer to DDC General Conditions for requirements pertaining to instruction.

B. The Contractor shall cause the plumbing Sub-Contractor to have the following instruction responsibilities:

1. Provide the CxA with an instruction plan two weeks before the planned instruction.
2. Provide the City of New York service personnel with comprehensive orientation and instruction in the understanding of the systems and the operation and service of each piece of Plumbing equipment.
3. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
4. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing Sub-Contractor or manufacturer's representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.
5. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference. Instruction shall include but not limited to:
   a. Use the printed installation, operation and maintenance instruction material included in the O&M manuals.
   b. Include a review of the written O&M instructions emphasizing safe and proper operating requirements, preventative maintenance, special tools needed and spare parts inventory suggestions. The instruction shall include start-up, operation in all modes possible, shut-down, seasonal changeover and any emergency procedures.
   c. Discuss relevant health and safety issues and concerns.
   d. Discuss warranties and guarantees.
   e. Cover common troubleshooting problems and solutions.
   f. Explain information included in the O&M manuals and the location of all plans and manuals in the facility.
   g. Discuss any peculiarities of equipment installation or operation.
6. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance for all pieces of equipment.
7. The Contractor shall ensure that the Sub-Contractor fully explain and demonstrate the operation, function and overrides of any local packaged controls.
8. Instruction shall occur after functional testing is complete, unless approved otherwise by the Commissioner.

END OF SECTION 22 08 00

SECTION 221113
Facility Water Distribution Piping

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. LEED General Requirements.

1. Refer to DDC General Conditions.

a. Section 01 81 13.04 "Sustainable Design Requirements for LEED v4 Buildings."

1.2. SUMMARY

A. This Section includes water-distribution piping and related components outside the building for water service.

B. Utility-furnished products include water meters that will be furnished to the site, ready for installation.

C. Related Sections:

1. 220500 "Common Results for Plumbing" for commonly used joining material, piping-system common requirements, sleeves and mechanical sleeve seals.

2. 221116 "Domestic Water Piping" for potable-water piping inside the building.

3. 260526 "Grounding and Bonding for Electrical Systems" for ground equipment.

4. 260519 "Low-Voltage Electrical Power Conductors and Cables" for wire connections.

5. 310000 "Earthwork" for excavating, trenching, and backfilling.

1.3. DEFINITIONS

A. EPDM: Ethylene propylene diene terpolymer rubber.

B. LLDPE: Linear, low-density polyethylene plastic.

C. PA: Polyamide (nylon) plastic.

D. PE: Polyethylene plastic.

E. PP: Polypropylene plastic.

F. PVC: Polyvinyl chloride plastic.

G. RTRF: Reinforced thermosetting resin (fiberglass) fittings.

H. RTRP: Reinforced thermosetting resin (fiberglass) pipe.

1.4. SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures."

B. Product Data: For each type of product indicated.

C. Coordination Drawings: For piping and specialties including relation to other services in same area, drawn to scale. Show piping and specialty sizes and valves, meter and specialty locations, and elevations.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For water valves and specialties to include in emergency, operation, and maintenance manuals.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements."

B. Regulatory Requirements:

1. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.
2. Comply with standards of NYC Building Code for potable-water-service piping, including materials, installation, testing, and disinfection.
3. Comply with standards of NYC Building Code for fire-suppression water-service piping, including materials, hose threads, installation, and testing.

C. Piping materials shall bear label, stamp, or other markings of specified testing agency.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner, and marked for intended use.

E. NSF Compliance:

1. Comply with NSF 61 for materials for water-service piping and specialties for domestic water.

1.6. DELIVERY, STORAGE, AND HANDLING

A. Preparation for Transport: Prepare valves, including fire hydrants, according to the following:

1. Ensure that valves are dry and internally protected against rust and corrosion.
2. Protect valves against damage to threaded ends and flange faces.
3. Set valves in best position for handling. Set valves closed to prevent rattling.

B. During Storage: Use precautions for valves, according to the following:

1. Do not remove end protectors unless necessary for inspection; then reinstall for storage.
2. Protect from weather. Store indoors and maintain temperature higher than ambient dew-point temperature. Support off the ground or pavement in watertight enclosures when outdoor storage is necessary.

C. Handling: Use sling to handle valves and fire hydrants if size requires handling by crane or lift. Rig valves to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

D. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

E. Protect stored piping from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.

F. Protect flanges, fittings, and specialties from moisture and dirt.

G. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

1.7. COORDINATION

A. Coordinate connection to water main with utility company.

PART 2 - PRODUCTS

2.1. DUCTILE-IRON PIPE AND FITTINGS

A. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.

1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
2. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.

B. Pipe and fittings in first paragraph and subparagraphs below are available in NPS 3 to NPS 48 (DN 80 to DN 1200).

C. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.

1. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
2. Gaskets: AWWA C111, rubber.

D. Grooved-Joint, Ductile-Iron Pipe: AWWA C151, with cut, rounded-grooved ends.

1. Grooved-End, Ductile-Iron Pipe Appurtenances:

a. Grooved-End, Ductile-Iron Fittings: ASTM A 47/A 47M, malleable-iron castings or ASTM A 536, ductile-iron castings with dimensions matching pipe.
