R. A uniform hazardous waste manifest shall be prepared by the asbestos abatement contractor and signed by the asbestos abatement contractor each time the asbestos abatement contractor ships a dumpster load of Asbestos-Containing Waste Material. The uniform hazardous waste manifest shall include the site of waste generation, the names and addresses of the Transporter, the asbestos abatement contractor, and the landfill operator with information on the type and number of

asbestos-waste containers, time and date. Asbestos abatement contractor shall provide the Construction Project Manager, Third-Party Air Monitor or authorized designated representative with signed copies of the waste manifest before each departure.

S. Asbestos abatement contractor or his registered hazardous Waste Hauler shall transport asbestos-containing waste material from the abatement site directly to the specified disposal site. Asbestos abatement contractor or their Waste Hauler shall not accept material from any other site when transporting asbestos-containing waste material from the abatement site. The authorized DDC representative or Construction Project Manager reserves the right to travel with asbestos abatement contractor's Waste Hauler to the waste disposal site. No intermediate storage of waste material (i.e., asbestos abatement contractor's warehouse) shall be permitted.

T. Final or progress application for payments will not be processed unless all hazardous waste manifests generated to date have been received and reviewed by the Construction Project Manager.

U. All asbestos materials, wastes, shower water, polyethylene disposable equipment and supplies shall be disposed of as asbestos contaminated waste, in accordance with the EPA regulation (40 CFR, Section 61.150) and those requirements of the New York State Department of Environmental Conservation and the New York Department of Sanitation.

V. Asbestos abatement contractor shall transport all sealed drums to a landfill disposal site approved by the Department of Environmental Conservation and the EPA. Transportation shall be performed by a New York State registered Waste Hauler, where required. When presenting the ACW for disposal the Asbestos abatement contractor or sub Asbestos abatement contractor shall:

1. Ensure that waste container is properly labeled according to the National Emission Standard for Hazardous Air Pollutants (NESHAP); Asbestos Revision, 40 CFR, Part 61, Subpart M. The labels shall include the name of the waste generator and the location where the waste was generated.

2. Comply with all applicable orders issued pursuant to asbestos disposal.

3. Ensure that ACW has been sufficiently wetted down.

4. Re-wet and repackage any damaged containers.

5. Keep ACW separate from all other wastes.

W. Asbestos abatement contractor shall notify the waste disposal site, at least 24 hours prior to transportation of asbestos contaminated waste to be delivered. Asbestos abatement contractor shall determine if a larger notification period is required.

X. At the site asbestos abatement contractors or Waste Hauler trucks shall approach the dump location as close as possible for unloading asbestos waste. Containers shall be carefully placed in the ground. Do not throw containers from truck.

Y. Asbestos abatement contractor or Waste Hauler shall inspect containers as they are unloaded at the disposal site. Material in damaged containers shall be repacked in empty containers, as necessary.

Z. Asbestos abatement contractor or Waste Hauler shall not remove asbestos-containing waste Material from drums unless required to do so by the disposal site City. Used drums shall be disposed of as asbestos-asbestos contaminated waste.

AA. All personnel engaged in unloading of the containers at the waste site shall wear protective clothing. The disposable clothing shall include head, body and foot protection. Minimum respiratory protection shall be half face, dual cartridge, air purifying respirators with HEPA-filters. Workers shall remove their protective clothing at the disposal site, place it in labeled disposal bags and leave them with the deposited waste shipment.

BB. For the compaction operation, the asbestos abatement contractor shall ensure that disposal sites personnel have been provided with personal protective equipment by the disposal operator. If the disposal site City has not provided this protective equipment, the asbestos abatement contractor shall supply protective clothing and respiratory protection for the duration of this operation (PAPR respirators are mandatory).

CC. If containers are broken or damaged, the asbestos abatement contractor or Waste Hauler shall, using personnel who are properly trained and wearing proper protective equipment, shall repackage the waste in properly labeled containers. Asbestos abatement contractor shall then clean the entire truck and its contents using HEPA-vacuums and wet cleaning techniques until no visible residue is observed.

DD. Following the removal of all containerized waste, the asbestos abatement contractor shall decontaminate the truck cargo area using HEPA-vacuums and/or wet cleaning techniques until no residue is observed. All 6-mil polyethylene sheeting shall be removed and discarded as asbestos-containing waste material along with contaminated cleaning material and protective clothing, in containers at the disposal site.

EE. The transporter(s) of all asbestos waste shall not back-haul any items on his return from landfill/disposal site.

FF. All asbestos waste shall be disposed of in an approved Asbestos Landfill site only.

1. NO PERSON UNDER ANY CIRCUMSTANCES SHALL ABANDON ACW. The same shall be disposed of only by certified persons in approved landfills.

2. A manifest form will be signed by the Landfill documenting receipt and acceptance of the asbestos-containing waste. This manifest will be furnished to the City of New York within thirty calendar days from the project completion date.

3. It is the responsibility of the Asbestos abatement contractor to determine current waste handling, transportation and disposal regulations for the work site and for each waste disposal landfill. The Asbestos abatement contractor must comply fully with these regulations and all appropriate U.S. Department of Transportation, EPA and other Federal, State and Local entities' regulations and all other current legal requirements.

4. The asbestos abatement contractor shall obtain an agreement from the transporter (s) that the practice of "Back-Hauling" will not be engaged in, with respect to any and all waste loads taken from this site during the work.

5. The asbestos abatement contractor will document actual disposal of the waste at the designated landfill by having completed a Disposal Certificate and will provide a copy of the same to the Department of Design and Construction.

PART 6 – ACCEPTANCE

6.01 ACCEPTANCE

Upon satisfactory completion of all decontamination procedures, a certificate will be issued by the Construction Project Manager with copies to all parties.

A. A letter of Compliance stating that all the work on the project was performed in accordance with the Specifications and all applicable Federal, State and Local regulations.

B. All warranties as stated in the Specifications.

END OF SECTION 028213

PAGE LEFT INTENTIONALLY BLANK

SECTION 03 00 00 - CONCRETE

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2. WORK INCLUDED

A. The Work of this Section includes all labor, materials, equipment and services necessary to complete the removal and restoration of floor area as required herein including, the following:

1. Cut the existing slab and construct the reinforced concrete.

2. Provide waterproofing on the exterior walls underside of slab below grade level.

1.3. RELATED WORK

A. The following Section contains requirements that relate to the Work of this Section:

2. Section 31 23 33 – Trenching, Backfilling and Compaction.

1.4. DELIVERY, STORAGE & HANDLING

A. Deliver materials properly identified as to type, size, manufacturer's name, specification code, etc., and undamaged.

B. Do not store exposed to weather; cover with suitable type material to protect from damage.

C. Store and protect all materials from injury prior to installation. Do not store any materials directly on the ground or floor. Keep materials as clean and dry as possible and free from damage or deteriorating elements.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Cement: ASTM C-150.

B. Sand, Stone and Gravel for Concrete: ASTM C-33.

C. Sand for Mortar and Grout: ASTM C-144.

D. Steel Reinforcement:

1. Epoxy Coated Reinforcing Bars: ASTM A 775/A 775M, and as follows:
   Steel Reinforcement: ASTM A 615/A 615M, Grade 60, Deformed.

E. Reinforcing Wire mesh: ASTM A-185.

F. Form Work:

1. Smooth Formed Finished Concrete – Form – facing panels that will provide continuous, true, and smooth concrete surfaces. Use appropriate size panels to minimize number of joints.

2. Form Ties – Factory fabricated, removable or snap-off metal or glass-fiber- reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

G. Concrete shall be well mixed stone concrete using Portland cement. Exposed concrete shall have float finish, f'c = 4,000 PSI at 28 days. All concrete materials, construction, shall be in accordance with the American Concrete Institute (ACI 318-05) and the latest New York City Building Code.

H. Water: complying with ASTM C 94, (Maximum allowable: 5 gallons per sack of cement) Clean, clear, potable and free from deleterious chemicals and substances.

I. Curing Materials:

1. Liquid Membrane Forming Compound: ASTM C309, Type 1 with fugitive dye or type 2; formulated to disintegrate after 28 days, and guaranteed not to affect the bond of applied finishes.

2. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz. / sq. yd. (305 g/sq. m.) dry.

3. Moisture Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

4. Water: Potable.

J. Waterproofing for exterior face and slabs of Pump Pit and Sump Pit: W/GM High Density Polyethylene (HDPE) with expandable quality granular Bentonite Waterproofing System. - ASTM D412, ASTM D751.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2. SLAB OPENING

A. All cutting shall be saw cut and shall be done as neatly as possible. All concrete steel mesh or steel bar removed as result of the required cutting shall be replaced with new material in kind and tied to existing mesh or bars. Restore/retouch all cracked and spalled concrete floor.

B. Legally dispose of all debris materials.

3.3. CONCRETE

A. All concrete shall be job mixed or ready-mixed in accordance with RS 10-3 of the New York City Building Code. Aggregates shall be measured by weight. Admixtures will be added to the concrete only as specifically called for by the Commissioner.

B. The consistency of the concrete shall be such that it can be placed without segregation of the materials. Slumps for stone concrete of over 5 inches and for lightweight concrete of over 4 inches will not be permitted unless approved by the Commissioner.

C. The old and new slab shall be well bonded. Isolation joints shall be used at junctions with wall, columns and other points of restraint such as drain pipes and stairways.

D. Forms for concrete work shall conform to the requirements of the New York Building Code. Forms for all concrete work shall be held to true horizontal and vertical planes and shall conform to the lines, dimensions and shapes of concrete indicated as required, for the members for which provided. They shall be tight to prevent leakage of concrete, shall be securely braced and maintained in position to prevent any possibility of movement after the concrete is poured and shall insure safety to workmen and the public.

E. All concrete shall be kept wet for a period of 7 days by covering with orange label sisalkraft, HD Supply curing blankets, Sika Ultracure, or approved equal.

END OF SECTION 03 00 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 03 11 00 - CONCRETE FORMWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

1.2 REFERENCES

A. Refer to DDC General Conditions

B. Reinforcement Bars: Section 03 21 00.

C. Cast-In-Place Concrete: Section 03 30 00.

D. Except as shown or specified otherwise, the Work of this Section shall conform to the requirements of Specifications for Structural Concrete for Buildings ACI 301-99 of the American Concrete Institute.

1.3 REQUIREMENTS

A. ACI 301, Section 2.1 – Formwork and formwork accessories.

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Field Examples: Provide formwork for mock-up of cast-in-place concrete. Construct forms using facing materials required to provide specified finishes and textures. Do not proceed with structure formwork until sample panels and forms have been approved by the Commissioner in writing.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Chamfer Strips: Wood, metal, PVC or rubber; 1-inch chamfer, unless otherwise indicated on the Drawings.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2. PREPARATION OF FORM SURFACES

A. Apply form-coating material in accordance with manufacturer's instructions.

3.3. INSTALLATION

A. Provide chamfer on all exposed external corners of concrete.

B. Provisions for Work of Related Contracts: Provide openings in concrete formwork to accommodate Work of related contracts. Obtain information for size and location of openings, recesses and chases from contractor requiring such items.

C. Shores and Supports:

1. Concrete members subject to additional loads during construction shall be shored in such a manner as will protect the member from damage by the loads.
2. Place shores supporting successive stories directly over those below or engineer the shores to transmit the load directly to them.
3. Do not remove shores until the member supported has acquired sufficient strength to safely support its weight and any weight imposed thereon.

3.4. REMOVAL OF FORMS

A. ACI 301, Section 2.3.2 - Removal of Forms

3.5. RE-USE OF FORMS

A. Split, frayed, delaminated or otherwise damaged form facing material shall not be used.

END OF SECTION 03 11 00

SECTION 03 15 00 - CONCRETE ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

B. Section Includes:

1. Anchors installed in hardened concrete:
   a. Expansion type anchors, including wedge-type, and shell type (drop-in) anchors.
   b. Powder driven fasteners.
   c. Epoxy anchors.
   d. Inspection and testing of concrete anchors.

1.2 REFERENCES

A. Refer to DDC General Conditions.

B. General:

1. The following documents form part of the Specifications to the extent stated. Where differences exist, the one affording the greatest protection shall apply.
2. Unless otherwise noted, the referenced standard edition is the current one at the time of commencement of the Work.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

1.5 PROJECT CONDITIONS

A. Fill over deck is lightweight concrete.

B. Cast-in-place normal weight concrete.

PART 2 - PRODUCTS

2.1 CONCRETE ANCHORS

A. Torque-Controlled Expansion Anchors: Kwik Bolt TZ, by Hilti (ICC ESR-1917), Strong-Bolt by Simpson (ICC ESR-1771), PK5 DeWalt Engineered by Power Fasteners or approved equal.

B. Shell-type (drop-in) Anchors: HDI by Hilti, Drop-in by Simpson, DeWalt Engineered by Power Fasteners or approved equal.

C. Powder Driven Fasteners: X-U fasteners as manufactured by Hilti, Inc.(ICC- ESR-2269), Ramset, DeWalt Engineered by Powers or approved equal.

D. Epoxy Adhesive (Cartridge-Type): Approved as per NYC Building Code, two component structural epoxy; prepackaged in cartridges for manually or pneumatically operated caulk gun and automatically mixed at nozzle. Subject to compliance with requirements provide one of the following:

1. HIT RE500-SD Adhesive Anchoring System, Hilti, Inc. (ICC ESR-2322).
2. SET-XP Adhesive Anchoring Systems, Simpson Strong-Tie Co. (ICC ESR-2508).
3. Red Head Epcon C6+ (ICC ESR-4046)
4. HIT-HY 150 MAX-SD Adhesive Anchoring System, Hilti, Inc. (ICC ESR-3013).
5. Approved Equal

2.2 ANCHOR RESTRICTIONS

A. Wedge-type Anchors: Acceptable for applications within the limitations of the applicable NYC Building Code.

B. Shell-type (drop-in) Anchors: Shall not be used in applications requiring resistance to forces due to wind or earthquake or tension forces due to gravity.

C. Powder Driven Fasteners: Shall not be used in applications requiring resistance to forces due to wind or earthquake forces or tension forces due to gravity.

D. Epoxy Anchors: Acceptable for applications within the limitations of the applicable NYC Building Code and shall not be used to fasten overhead, wall mounted or fire resistive construction. Epoxy dowels shall not be used for substitution of lap splices.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine areas to be drilled to verify conditions of access, interferences, and existing materials.

B. Locate existing reinforcing steel, which might interfere with drilling, with a suitable metal detector.

3.3 INSTALLATION

A. Holes for anchors and dowels shall be located to miss existing reinforcing steel wherever practical.

1. Where reinforcement is encountered and anchor cannot be shifted, install wedge type anchor with minimum 4 anchor diameter embedment above bottom of reinforcement.

B. Hole diameter shall be as specified in the applicable NYC Building Code for the size and type of anchor or dowel to be installed. Hole depth shall be as necessary to obtain the embedment specified on the drawings.

1. Torque controlled mechanical anchors installed in applications to resist tension due to gravity or seismic forces shall have an embedment equal to 8 anchor diameters, wherever practical.

C. Holes shall be prepared as specified in the applicable NYC Building Code. At a minimum, holes shall be cleaned of all dust and debris prior to installation of anchors or dowels. Cleaning shall consist of removal of debris with oil free compressed air (90 psi (632 gr/cm²), minimum), brushing of the hole twice in a twisting motion with a nylon brush and removal of debris with oil free compressed air (90 psi (632 gr/cm²), minimum).

D. Wedge-type anchors shall be installed to the minimum torque specified in the applicable NYC Building Code.

3.4 FIELD QUALITY CONTROL

A. The Testing Laboratory will:

1. Develop and utilize an effective method of field marking anchor and dowel test locations and results.

B. Test 25 percent of torque controlled mechanical anchors installed on a given day in tension using pullout procedure. Test to 80% of specified yield strength of the dowel or 200% of the NYC Building Code rated static capacity for 2500 psi concrete whichever is the lesser. Anchors specifically noted on the drawings as “No test required” do not require tension testing.

C. Test 25 percent of reinforcing steel dowels and threaded rods installed with epoxy on a given day in tension using pullout procedure. Test to 80% of specified yield strength of the dowel or 150% of the NYC Building Code rated static capacity whichever is the lesser with special inspection. Dowels specifically noted on the drawings as "No test required" do not require tension testing.

D. Pull test 25 percent of epoxy-type anchors installed on a given day in tension using pullout procedure. Test to 150 percent of the NYC Building Code rated static capacity with special inspection.

E. If the failure rate of anchors or dowels exceeds 10 percent, testing will be increased to 100 percent of that day's installation of similar anchors or dowels. Testing will be reduced to 25 percent of that day's installation when the failure rate is reduced to 10 percent or less.

F. Failed anchors and dowels shall be replaced at no additional cost to the City of New York.

END OF SECTION 03 15 00

SECTION 03 20 00 - CONCRETE REINFORCING

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

B. Section Includes: Concrete reinforcement and accessories.

1.2. REFERENCES

A. Refer to DDC General Conditions.

B. General:

1. The following documents form part of the Specifications to the extent stated. Where differences exist between codes and standards, the one affording the greatest protection shall apply.

C. ACI – American Concrete Institute:

1. ACI 117 Tolerances for Concrete Construction
2. ACI 301 Specifications for Structural Concrete
3. ACI 315 Standard Practice for Detailing Reinforced Concrete Structures

D. ASTM :

1. ASTM A185 / A185M Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete
2. ASTM A615 / A615M Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement
3. ASTM A706 / A706M Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement
4. ASTM A970 / A970M Standard Specification for Headed Steel Bars for Concrete Reinforcement

E. CRSI - Manual of Standard Practice.

F. ICBO - Evaluation Reports.

1.3. SUBMITTALS

A. Refer to DDC General Conditions.

B. Shop Drawings: Prepare placing drawings in accordance with ACI 315. Show size, shape and location of bars and wire fabric in structure. Show splice locations and lengths. Where details are not shown, conform to standards of practice indicated in ACI 315 and submit for approval.

1. Bill reinforcing bars for walls on elevations. Bill reinforcing bars for slabs on plans. Plans and elevations need not be true views. When more than one wall or slab are identical, only one such wall or slab is required. Take sections to clarify the arrangement of reinforcement. Identify, but do not bill bars on sections.
2. Unless the location of reinforcing is clear, give dimensions to some structural feature that will be readily distinguishable at time bars are placed.
3. Make placing drawings complete, including the location of support bars and chairs, without reference to the design drawings.

C. Submit data required to evaluate proposed mechanical splices.

D. Submit manufacturer's certified mill test reports on each heat of reinforcing steel delivered, showing physical and chemical analysis before placing reinforcement.

1.4. QUALITY ASSURANCE

A. Codes and Standards: Comply with provisions of ACI 301 CRSI's "Manual of Standard Practice", except where more stringent requirements are shown or specified.

B. Requirements of Regulatory Agencies: Proprietary products, including bar couplers.

C. Material Quality Assurance: Mill test reports including chemical analysis, tensile properties and bend test shall be examined for all reinforcing. Conform to one of the following:

D. Maintain positive identification of reinforcing by heat number. Provide certified mill test reports to Testing Laboratory.

E. Where positive identification cannot be made and procedures are not deemed adequate to ensure compliance, Testing Laboratory will randomly sample and make one tensile and one bend test from each 2-1/2 tons or fraction thereof of each size of reinforcement. Contractor will bear the cost of testing.

PART 2 - PRODUCTS

2.1. REINFORCING MATERIALS

A. Bar Reinforcement: ASTM A615, Grade 60, deformed billet bars.

1. ASTM A706, where noted on Drawings.
2. Recycled content shall be a minimum of 75 percent recycled post consumer steel.

B. Headed Bar Reinforcement: ASTM A970.

C. Spirals: ASTM A82.

D. Welded Wire Fabric: ASTM A185.

E. Threaded Bars: Grade 75, manufactured by DYWIDAY Systems International, Williams Form Engineering Corp., Steel Supply, Hillman Steelworks or approved equal.

F. Smooth Dowels, ASTM A615, Grade 40 or 60, smooth; sawcut or grind one end to remove offsets; shop paint with iron oxide zinc chromate primer.

G. Welded Deformed Bar Anchors: ASTM A-108 f_y = 70,000 psi, flux-filled deformed bar anchors welded to structural steel.

H. Mechanical Bar Couplers: Provide mechanical couplers. Coupler shall develop 160% percent of specified minimum yield strength of spliced reinforcement. Subject to compliance with requirements provide one of the following, or approved equal:

1. Baeteck Dextra Inc.
2. Lenton Taper Threaded Connection, Erico Inc.
3. Bar Lock, Dayton Superior Inc.

2.2. ACCESSORIES

A. Tie Wire: Minimum 16-gage black annealed wire.

B. Bar Supports:

1. At surfaces not exposed to view in completed structure: Precast concrete bar supports with two 16 ga. embedded wires or CRSI Class 2 wire supports.
2. Supports placed against ground or on top of vapor barrier: Precast concrete blocks not less than 3 inches square (1935 mm²) with two 16 ga. embedded wires.
3. At Architectural Concrete and surfaces exposed to weather: CRSI Class 2 stainless steel or CRSI Class 1 plastic protected.
4. Where support is no closer to concrete surface than 1/2 inch (13 mm): CRSI Class 3 wire supports.

2.3. FABRICATION

A. Fabricate reinforcement in accordance with ACI 315 where specific details are not shown.

PART 3 - EXECUTION

3.1. PLACEMENT

A. Surface Condition of Reinforcement: Before placing concrete, clean reinforcement of loose scale, dirt, grease and other substances which would impair bond with concrete.

B. Place reinforcement in accordance with the Drawings and the CRSI Manual.
1. Steel bars shall be of size and length indicated, accurately bent or formed to shapes detailed or scheduled by experienced shops by methods that will not injure the materials. Reinforcing bars shall be shop fabricated to lengths and bends shown on the drawings. Fabrication tolerance shall be in accordance with the requirements of ACI 315.

2. Reinforcing bars shall be as long as possible with a minimum number of joints.
3. Steel reinforcement shall not be bent or straightened in a manner that will injure the material or the embedding concrete. Bars with kinks or bends not shown on the Drawings shall not be used. Heating of reinforcement for bending will not be permitted.
4. Reinforcement shall be tagged with suitable identification to facilitate sorting and placing.

C. Place reinforcing bars accurately as to spacing and clearance and securely tied at intersections and supports with wire and in such a manner as will preclude displacement during pouring of concrete. Placing tolerances shall be in conformance with the requirements of ACI 117.

D. Place and secure reinforcement to maintain the proper distance and clearance between parallel bars and from the forms. Provide vertical steel with metal spreaders to maintain steel properly centered in the forms. Horizontal reinforcement shall be supported at proper height on concrete pads, chairs or transverse steel bars.

E. After placing, maintain bars in a clean condition until completely embedded in concrete.

F. Bars shall not be spaced closer than 1-1/2 diameters of the largest of two adjacent bars, 1-1/2 times the maximum aggregate size, nor one inch, except at bar laps. Where reinforcement in members is placed in two layers, the clear distance between layers shall be not less than one inch (25 mm) or more than 1-1/2 inches (13 mm) unless otherwise noted on the drawings. The bars in the upper layer shall be placed directly above those in the bottom layer unless otherwise detailed.

G. Coverage of bars shall be as shown and scheduled. Conform to ACI 301 where not indicated.

H. Where obstruction prevents the intended placement of reinforcement, provide additional reinforcement as directed by the City of New York around the obstruction.

I. Splice bars as indicated by lapping and securely wiring together. Splices at locations other than those indicated are subject to the approval of the City of New York. Splices of reinforcement shall not be made at the point of maximum stress. Splices shall provide sufficient lap to transfer the stress between bars by bond and shear. Bars shall be spread the minimum distance specified. Stagger splices of adjacent bars where possible.

J. Reinforcing bars shall not have welded joints.

K. Mechanical Bar Couplers: Install in accordance with applicable NYC Building Code. Maintain clearance and coverage at coupler. Stagger couplers wherever practical.

3.2. FIELD INSPECTION

A. The City of New York Testing Laboratory will:

1. Review Quality Assurance procedures for maintaining identification of steel. Collect certificates of compliance and test reports for reinforcing steel.
2. Special Inspect placement of reinforcement for conformance with the Contract Documents and as required by NYC Building Code.

3. Special Inspect installation of mechanical couplers in accordance with requirements of applicable NYC Building Code.
4. Special Inspect shop and field welding as required by NYC Building Code.

END OF SECTION 03 20 00

SECTION 03 21 00 - REINFORCEMENT BARS

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2. RELATED WORK SPECIFIED ELSEWHERE

A. Concrete Formwork: Section 03 11 00.

B. Cast-In-Place Concrete: Section 03 30 00.

1.3. REFERENCES

A. Refer to DDC General Conditions

B. Except as shown or specified otherwise, the Work of this Section shall conform to the applicable requirements of the following:

1. Specifications for Structural Concrete, ACI 301-99 of the American Concrete Institute.
2. Manual of Standard Practice, MSP-1-01 of the Concrete Reinforcing Steel Institute.

1.4. SUBMITTALS

A. Refer to DDC General Conditions
B. Shop Drawings: Placing drawings for bar reinforcement.

C. Samples:

1. Bar Supports: Full size.
2. Fabric Reinforcement: 8 inches square, each wire size.
3. Fabric Reinforcement Supports: 3’-0” long pieces.
4. Reed Clips: 2’-6” long pieces.

D. Quality Control Submittals:

1. Certificates: Affidavit required under Quality Assurance Article.

1.5. QUALITY ASSURANCE

A. Refer to DDC General Conditions

B. Certifications: Affidavit by the bar reinforcement manufacturer certifying that bar material meets the contract requirements.

1. Submit evidence of steel material compliance with this Specification. Evidence shall consist of certification of source of material, copies of purchase orders and manufacturer's certifications. For stock material, submit copies of latest mill or purchase orders for material replacement.
   a. Documentation to confirm compliance with General Conditions Article 25.4 Domestic Steel.
2. Fabricator's and Erector's Qualifications Data: 3 years of experience performing similar work.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Bar Reinforcement: ASTM A 615, Grade 60, deformed steel bars.

B. Fabric Reinforcement: ASTM A 185, welded wire fabric, fabricated into flat sheets unless otherwise indicated.

C. Bar Supports; Either of the Following Types:
1. Galvanized steel or AISI Type 430 stainless steel, and without plastic tips.
2. Insoluble plastic, with minimum 1,500 psi tensile strength and capable of retaining fabricated shape at temperatures between 5 degrees F and 170 degrees F.

D. Fabric Reinforcement Supports:

1. Uni Zag by Universal Form Clamp
2. Continuous Support, “CS” by Dayton Superior
3. Concrete Wire mesh, by Beton

E. Tie Wire: Black annealed wire, 16-1/2 gage or heavier.

PART 3 – EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution

3.2. PLACING

B. ACI 301, Section 3.3 Execution

3.3. SCHEDULE

A. Unless other reinforcing is shown on the drawings, reinforce the following items of concrete as indicated below:
   1. Concrete Slabs on Grade: 4 x 4 – W4.0x W4.0 welded wire fabric.
   2. Concrete Floor Fills 2-1/2 Inches Thick or Less: 6 x 6 - W2.1 x W2.1 welded wire fabric.
   3. Concrete Floor Fills Greater than 2-1/2 Inches Thick: 6 x 6 - W4 x W4 welded wire fabric.
   4. Concrete Slabs Supported by Steel Joists: 6 x 6 - W2.1 x W2.1 welded wire fabric.

1.3 REFERENCES

A. Refer to DDC General Conditions.

B. Except as shown or specified otherwise, the Work of this Section shall conform to the requirements of American Concrete Institute (ACI) and American Society for Testing and Materials (ASTM) documents.

1. ACI 301-05: Specification for Structural Concrete for Buildings.
2. ACI 302.1R-04: Guide for Concrete Floor and Slab Construction.
3. ACI 302.2R-06: Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials.
4. ACI 304.2R-96: Placing Concrete by Pumping Methods.
5. ACI 305R-10: Hot Weather Concreting.
6. ACI 306R-10: Cold Weather Concreting.
7. ACI 308.1-11: Standard Specification for Curing Concrete.
8. ACI 318 -05 Building Code Requirements for Structural Concrete.
9. ASTM C 94/C 94M – 11b: Standard Specification for Ready- Mixed Concrete.
10. ASTM C 494/C 494M - 11: Standard Specification for Chemical Admixtures for Concrete.
11. ASTM F 710- 11: Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

1.4 DEFINITIONS

A. Refer to DDC General Conditions.

B. ACI 301, Section 1.2 – Definitions.

1.5 SUBMITTALS

A. Refer to DDC General Conditions.

B. Submittals Package: Submit product data for design mix(es) and materials for concrete specified below at the same time as a package.

C. Product Data:

1. Mix Design: Submit proposed concrete design mix(es) together with name and location of batching plant at least 28 days prior to the start of concrete work.

   a. Include test results of proposed concrete proportions based on previous field experience or laboratory trial batches in accordance with ACI 301, Section 4.
   b. Pumped Concrete: Include test results of proposed design mix(es) tested under actual field conditions with the maximum horizontal run and vertical lift required for this project.

2. Portland Cement: Brand and manufacturer's name.
3. Fly Ash: Name and location of source, and DOT test numbers.
4. Air-entraining Admixture: Brand and manufacturer's name.
5. Water-reducing Admixture: Brand and manufacturer's name.
6. High Range Water-reducing Admixture (Superplasticizer): Brand and manufacturer's name.
7. Corrosion Inhibitor Admixture: Brand and manufacturer's name.
8. Accelerating Admixture: Brand and manufacturer's name.
9. Aggregates: Name and location of source, and DOT test numbers.
10. Lightweight Coarse Aggregates: Brand and manufacturer's name.
11. Chemical Hardener (Dustproofing): Brand and manufacturer's name, and application instructions.
12. Bonding Agent (Adhesive): Brand and manufacturer's name, and preparation and application instructions.
13. Expansion Joint Fillers: Brand and manufacturer's name.
14. Waterstop: Brand and manufacturer's name, and installation instructions.
15. Emery Aggregate: Brand and manufacturer's name, and application instructions.
16. Integral Water-Repellent Admixture: Brand, manufacturer name, specifications, and application instructions.

D. Quality Control Submittals:

1. Batching Plant Records: At the end of each day of placing concrete, furnish the Commissioner with a legible copy of all batch records for the concrete placed.
2. Concrete Pumping Equipment Data: Include manufacturer's name and model of principal components, type of pump, and type and diameter of pipe/hose.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Qualifications of Crew Pumping Concrete: Workers pumping concrete shall have had at least one year of experience pumping concrete.

C. Concrete batching plants shall be currently approved as concrete suppliers by the New York State Department of Transportation.

D. Truck mixers for concrete shall be currently approved by the New York State Department of Transportation.

E. Pumping equipment for pumped concrete shall be subject to the approval of the Commissioner.

F. Fly ash supplier shall be on the New York State Department of Transportation's current "Approved List of Suppliers of Fly Ash".

G. Source Quality Control: The Commissioner reserves the right to inspect and approve the following items, at his own discretion, either with his own forces or with a designated inspection agency:

1. Batching and mixing facilities and equipment.
2. Sources of materials.

H. ACI 301, Section 1.3 Reference standards and cited publications.

I. Pre-Construction Conference: A minimum of 14 days prior to the initial submission of shop drawings, a conference will be held by the Commissioner at the Site for the purpose of reviewing the Contract Documents and discussing the requirements and procedures for submittals and for the Work. The conference shall be attended by the Contractor, the concrete supplier representative, and the reinforcement fabricator's project coordinator.

1. If resilient flooring is to be placed on slab-on-grade, the meeting will also include discussion of curing procedures and moisture mitigation measures.

1.7 DELIVERY

A. ASTM C 94/C 94M, Article 14 - Batch Ticket Information: In addition to the information required by Paragraph 14.1, also include the following:

1. Type and brand, and amount of cement.
2. Weights of fine and coarse aggregates.
3. Class and brand, and amount of fly ash (if any).

PART 2 PRODUCTS

2.1. MATERIALS

A. Cement: ASTM C 150, Type I or II Portland cement. Do not use Type I cement if soil report indicates sulphate concentrations.

B. Water: Potable

C. Air-entraining Admixture: ASTM C 260, and on the New York State Department of Transportation's current "Approved List".

D. Water-reducing Admixture: ASTM C 494/C 494M, Type A, and on the New York State Department of Transportation's current "Approved List".

E. High Range Water-reducing Admixture (Superplasticizer): ASTM C 494/C 494M, Type F, and on the New York State Department of Transportation's current "Approved List".

F. Corrosion-Inhibiting Admixture: ASTM C 494/C 494M, for use in resisting corrosion of steel reinforcement.
1. DCI Corrosion Inhibitor by W. R. Grace & Co
2. Rheocrete CNI by Master Builders/ BASF Building Systems
3. Sika CNI by Sika Corporation
4. DCI - S Corrosion Inhibitor by W. R. Grace & Co
5. Or approved equal.

G. Retarding Admixture: ASTM C 494, Type D, Water-reducing and retarding, for use in hot weather concreting, and on the New York State Department of Transportation's current "Approved List".

H. Accelerating Admixture: Non-corrosive admixture, containing no chloride, complying with ASTM C 494, Type C or E, and on the New York State Department of Transportation's current "Approved List".

I. Fly Ash: ASTM C 618, including Table 1 (except for footnote A), Class F except that loss on ignition shall not exceed 4.0 percent.

J. ACI 301, Section 4.2.1.2 – Aggregates.

K. Chemical Hardener (Dustproofing): Colorless aqueous solution of magnesium-zinc fluosilicate.

1. Lapidolith by Sonneborn/ BASF Building Systems, 889 Valley Park Dr., Shakopee, MN 55379, (800) 433-9517.

2. Surfhard by The Euclid Chemical Co., 19218 Redwood Rd., Cleveland, OH 44110, (216) 531-9222.
3. Pena-Lith by W.R. Meadows, Inc., PO Box 543, Elgin, IL 60121, (847) 683-4500.
4. FluoHard by L & M Construction Chemicals, Inc., 14851 Calhoun Rd., Omaha, NE 68152, (402) 453-6600.
5. Armortop by Anti Hydro International, Inc., 265 Badger Ave., Newark, NJ 07108, (800) 777-1773.
6. Diamond by Kaufman Products, Inc., 3811 Curtis Avenue, Baltimore, MD 21226, (800) 637-6372
7. Or approved equal.

L. Type 1 Expansion Joint Filler: Preformed, resilient, nonextruding cork units complying with ASTM D 1752, Type II.

M. Epoxy Bonding Agent (Adhesive): 100 percent solids epoxy-resin-base bonding compound, complying with ASTM C 881, Types I, II, IV and V, Grade 2 (horizontal areas) or Grade 3 (overhead/vertical areas), and Class B (40-60 degrees Fahrenheit) or Class C (60 degree Fahrenheit and above).

1. SurePoxy HM Series by Kaufman Products, Inc., 3811 Curtis Avenue, Baltimore, MD 21226, (800) 637-6372.
2. Sikadur Hi-Mod 32 by Sika Corporation, 201 Polito Avenue, Lyndhurst, NJ 07071, (800) 933-7452.
3. Epogrip by Sonneborn/-BASF Building Systems, 889 Valley Park Drive, Shakopee, MN 55379, (800) 433-9517
4. Or approved equal.

N. Emery Aggregate: Natural emery, crushed, polyhedral in shape, with not more than 10 percent flat or elongated pieces, properly screened, graded and packaged in the manufacturer's plant, and delivered to the Site in sealed, labeled packages.

1. Emerundum by Anti Hydro International, Inc., 265 Badger Ave., Newark, NJ 07108, (800) 777-1773.
2. Non-Slip Aggregate by Setcon Industries, Inc., 5 Mathews Ave., Riverdale, NJ 07457-1020, (201) 283-0500.
3. Frictex H by Sonneborn/ BASF Building Systems, 889 Valley Park Dr., Shakopee, MN 55379, (800) 433-9517
4. Or approved equal.

O. Expansion Joint Dowels: Smooth steel expansion joint dowel with minimum 5-inch-long steel dowel cap, unless otherwise indicated.

P. Integral Water-Repellent Admixture:

1. Hydrocide Powder by Sonneborn/ BASF Building Systems, 889 Valley Park Drive, Shakopee, MN 55379, (800) 433-9517,

2. Darapel by W. R. Grace & Co., - Conn., 62 Whittemore Ave., Cambridge, MA 02140, (617) 876-1400, Sikamix W-10
3. Sikamix W-10
4. Or approved equal.

2.2. PROPORTIONING OF MIXES

A. Cast-in-place concrete shall be air-entrained normal weight concrete.

1. Normal weight concrete, except as otherwise specified, shall have a minimum compressive strength of 3000 psi with a minimum of 564 pounds per cubic yard or 4000 psi, with a minimum of 611 pounds of cement per cubic yard. Slump: Maximum 4 inches; minimum 2 inches before the addition of any water-reducing admixtures or high-range water-reducing admixtures (superplasticizers) at the Site.
2. Normal weight concrete for garage floors, and for exterior slabs, ramps and stairs shall have a minimum compressive strength of 4000 psi, with a minimum of 611 pounds of cement per cubic yard. Slump: Maximum 3 inches; minimum 2 inches before the addition of any water-reducing admixtures or high-range water-reducing admixtures (superplasticizers) at the Site.
3. Optional Material: Fly ash may be substituted for (Portland) cement in normal weight and lightweight concrete up to a maximum of 15 percent by weight of the required minimum (Portland) cement. If fly ash is incorporated in a concrete design mix, make necessary adjustments to the design mix to compensate for the use of fly ash as a partial replacement for (Portland) cement.

    a. Adjustments shall include the required increase in air-entraining admixture to provide the specified air content.
    b. Lower early strength of the concrete shall be considered in deciding when to remove formwork.

B. Slump for Pumped Concrete: When a water-reducing admixture is not used, maximum slump shall be 4 inches. When a water-reducing admixture is used, maximum slump shall be 6 inches and when a high-range water-reducing admixture (superplasticizers) is used, maximum slump shall be 8 inches.

C. Design Air Content: Air content for concrete shall be 6 percent by volume, with an allowable tolerance of plus or minus 1.5 percent for total air content, except as otherwise specified. Use air-entraining admixture, not air-entrained cement.

D. Water-Cement Ratio: Cast-in-place concrete shall have a maximum water-cement ratio of 0.40.

E. ACI 301, Section 4.2.2.3.

F. Admixtures: Do not use admixtures in concrete unless specified or approved in writing by the Commissioner.

G. ACI 301, Section 4.1.2.1 - Mixture Proportions.

H. Application Rate for Integral Water Repellent Admixture:

1. Hydrocide Powder, 1 lb. for each 94 lb. of cement
2. Darapel, 3 to 6 oz. for each 100 lb. of cement.

2.3. JOINTS

A. ACI 301, Section 5.3.2.6 - Construction joints and other bonded joints.

B. ACI 301, Section 10.2.5 – Isolation-joint filler materials.

2.4. PRODUCTION OF CONCRETE

A. Provide ready-mixed concrete, either central-mixed or truck-mixed, unless otherwise approved in writing by the Commissioner.

B. ACI 301, Section 5.3.2.1 Weather considerations.

C. Protect concrete from physical damage or reduced strength due to weather extremes during mixing, placement and curing.

1. In cold weather, comply with ACI 306R.

a. When air temperature is below 40 degrees F (4 degrees C) heat the mixing water and, if necessary, the aggregates to obtain a concrete mixture temperature of not less than 50 degrees F (10 degrees C) and not more than 80 degrees F (27 degrees C) at point of placement. If the mixing water is heated, do not exceed a temperature of 140 degrees F at the time it is added to the cement and aggregates.

2. In hot weather, comply with ACI 305R.

a. When air temperature is between 85 degrees F (30 degrees C) and 90 degrees F (32 degrees C), reduce mixing and delivery time from 1 1/2 hours to 75 minutes, and when air temperature is above 90 degrees F (32 degrees C), reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2. EXAMINATION AND PREPARATION

A. Do not use items of aluminum for mixing, chuting, conveying, forming or finishing concrete, except magnesium alloy tools may be used for finishing.

B. Check items of aluminum required to be embedded in the concrete and ensure that they are coated, painted or otherwise isolated in an approved manner.

C. Install waterstops in accordance with manufacturer's printed instructions.

D. Hardened concrete, reinforcement, forms, and earth which will be in contact with fresh concrete shall be free from frost at the time of concrete placement.

E. Do not deposit concrete in water. Keep excavations free of water by pumping or by other approved methods.

F. Prior to placement of concrete, remove all hardened concrete spillage and foreign materials from the space to be occupied by the concrete.

3.3. ADMIXTURE ADDITIONS AT THE SITE

A. Site additions shall be limited to high-range water-reducers, non-chloride accelerators, and corrosion inhibitors. Comply with manufacturers' printed instructions for discharge of admixtures shall be furnished.

B. High-Range Water-Reducers:

1. Concrete shall arrive at a slump of 2 to 4 inches (50 to 100 mm). Water additions at the Site shall be limited to comply with water-to-cementitious ratio requirements.
2. Following addition of high-range water-reduced concrete, a minimum of 70 revolutions or 5 minutes of mixing shall be completed to assure a consistent mixture.

C. All concrete with other admixture additions shall mix a minimum of 70 revolutions or 5 minutes to assure a consistent mixture.

3.4. PLACING

A. ACI 301, Section 5.3.2.3 Conveying equipment.

B. ACI 301, Section 5.3.2.2 – Conveying.

C. ACI 301, Section 5.3.2.4 – Depositing.

3.5. RESTORING/RETOUCHING SURFACE DEFECTS

A. ACI 301, Section 5.3.7 – Restore/retouch of surface defects.

B. ACI 301, Section 5.3.7.2 - Restore/retouch of tie holes.

3.6. FINISHING FORMED SURFACES

A. Finish Schedule: Except where indicated otherwise on the Drawings, provide the finishes below:

1. Rough Form Finish for concrete surfaces not exposed to view.
2. Smooth Form Finish for concrete surfaces exposed to view.

B. ACI 301, Section 5.3.3.3 - As-cast Finishes.

3.7. SLABS

A. Slabs on Grade: Provide key type joints unless otherwise shown. Tool exposed joints.

B. ACI 301, Section 5.3.4 – Finishing unformed surfaces.

C. Finish Schedule: Except where indicated otherwise on the Drawings, provide the finishes below:

1. Floated Finish for:

a. Slabs and fill over which waterproofing, roofing, vapor barrier, insulation, terrazzo, or resin bound flooring is required.

2. Troweled Finish for:

a. Interior slabs that are to be exposed to view.
b. Slabs and fill over which thin-set ceramic tile is required, except fine-broom finished surface.
c. Treads and platforms of interior steps and stairs.

3. Broom or Belt Finish for:

a. Exterior slabs. Texture as approved by the Commissioner.

4. Scratched Finish for:

a. Surfaces to be covered with floor topping.

5. Integral Emery Aggregate Surfacing with Floated Finish

D. ACI 302 Chapter 8.2.8.2 - Tools for jointing; Saw-cutting.

E. ACI 302 Chapter 8.3.12 – Saw-cut joints.

F. Exposed surfaces with fibrous reinforcement: After curing of the concrete, remove any protruding fibers in a manner which will not harm the parent concrete.

G. Floor flatness and levelness tolerances: For flatness and levelness tolerances of floor slabs refer to ACI 302 Chapter 8.15 – Floor flatness and levelness. Floor surface tolerances shall be 1/8 inch over a horizontal distance of 10 feet in any direction, unless otherwise specified by floor profile quality classifications in ACI 302.

1. When flatness or levelness tolerances are not met then the floor shall be ground or scarified and repoured to meet specifications.

3.8. CURING AND PROTECTION

A. Hot Weather Concreting: Comply with ACI 305R (Guide to Hot Weather Concreting) whenever the atmospheric temperature or the form surface temperature is at or above 90 degrees F., or climatic conditions of wind and/or low humidity will cause premature drying of the concrete.

B. Curing Temperature: Maintain the temperature of the concrete at 50 degrees F. or above during the curing period. Keep the concrete temperature as uniform as possible and protect from rapid atmospheric temperature changes. Avoid temperature changes in concrete which exceeds 5 degrees F. in any one hour and 50 degrees F. in any 24-hour period.

C. Curing and Moisture Mitigation for Resilient Flooring:

1. Acceptable curing and drying conditions include a minimum ambient temperature of 70 degrees F and a maximum relative humidity of 50%.

   a. Air movement at 15 mph.

2. Do not cure slabs by adding water; ponding or wet burlap method.
3. Do not use curing compounds or cure-and-seal materials unless such use is approved in writing by the adhesive and floor covering manufacturers. The curing product manufacturer's conformance to ASTM c 1315 is not a substitute for the adhesive and floor covering manufacturer's approval.
4. Cure the slab by covering with waterproof paper, plastic sheets, or a combination of the two for 3 to 7 days.

3.9. CHEMICAL HARDENER (DUSTPROOFING)

A. Apply chemical hardener to all troweled finished interior floors which are to be left exposed.

B. Do not apply chemical hardener until concrete has cured the number of days recommended in manufacturer's instructions.

C. Prepare surfaces and apply chemical hardener in accordance with manufacturer's printed instructions and recommendations.

3.10. FIELD QUALITY CONTROL

A. ACI 301, Section 1.6.4.2 - Testing Services.

B. ACI 301, Section 1.6.3.3 – Tests required of Contractor's testing agency.

C. Adjustment to Concrete Mixes: Mix design adjustments may be requested by the Contractor when characteristics of materials, job conditions, weather, test results, or other circumstances warrant, at no additional cost to the City of New York and as accepted by the Commissioner. Laboratory test data for revised mix design and strength results must be submitted to and accepted by the Commissioner before using in the work.

D. Test results will be reported in writing to the Commissioner, Ready-Mix Producer, and Contractor within 24 hours after tests. Reports of compressive strength tests shall contain the project identification name and number, date of concrete placement, name of concrete testing service, concrete type and class, location of concrete batch in structure, design compressive strength at 28 days, concrete mix proportions and materials, compressive breaking strength, and type of break for both 7-day tests and 28-day tests.

E. Nondestructive Testing: Impact hammer, Windsor probe, or other nondestructive device may be permitted but shall not be used as the sole basis for acceptance or rejection.

F. Additional Tests: The Commissioner shall make additional tests of in-place concrete when test results indicate specified concrete strengths and other characteristics have not been attained in the structure. The testing service may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42, or by other methods as directed.

G. Moisture Testing: Test all slabs-on-grade for moisture content that will receive resilient flooring. For a preferred moisture testing method and limits; consult the written instructions of the floor covering manufacturer, the adhesive manufacturer, the patching/underlayment manufacturer, or combination thereof. Test repeatedly until the desired moisture content is obtained.

H. pH Testing: Test concrete floors for pH level prior to the installation of resilient flooring. Do not exceed the recommended pH level of the resilient flooring manufacturer or the adhesive manufacturer, or both.

END OF SECTION 03 30 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 04 20 00 – UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Scope of Work in this section includes the following:

1. Selective face brick replacement at existing and rebuilt parapets, roof curbs and infill wall as indicated on drawings. New face bricks shall match existing face brick in profile, finish, texture and color. The coursing and pattern of bricks shall match existing coursing and pattern.

2. Concrete masonry units at rebuilt and raised parapets and at infill wall, as indicated on drawings.

1.3 REFERENCES

A. Refer to DDC General Conditions

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications or mandated by NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. American Society of Testing and Materials (ASTM) standards, latest editions.

a. A153 Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Products.

b. A240 Standard Specification for Heat-Resisting Chromium and Chromium Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels.

c. A615 Standard Specification for Deformed and Plain Billet - Steel Bars for Concrete Reinforcement.

d. A706 Standard Specifications for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.

e. A951 Standard Specification for Steel Wire for Joint Reinforcement.

f. C62 Standard Specification for Building Brick (Solid Masonry Units Made from Clay or Shale.

g. C109 Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-inch or 50 MM Cube Specimens).

h. C144 Standard Specifications for Aggregate for Masonry Mortar.

i. C150 Standard Specification for Portland Cement.

j. C207 Standard Specification for Hydrated Lime for Masonry Purposes.

k. C216 Standard Specification for Facing Brick (Solid Masonry Units made from Clay or Shale).

l. C270 Standard Specification for Mortar for Unit Masonry.

m. C404 Standard Specifications for Aggregates for Masonry Grout.

n. C476 Standard Specification for Grout for Reinforced and Nonreinforced Masonry.

o. C652 Standard Specification for Hollow Brick

p. C780 Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry.

q. C979 Standard Specification for Pigments for Integrally Colored Concrete.

r. C1019 Method of Sampling and Testing Grout.

2. American Welding Society – AWS D1.4 – Structural Welding Code – Reinforcing Steel

3. Underwriters Laboratory- UL 618, Standard for Concrete Masonry Units.

1.4 DESIGN REQUIREMENTS

A. No air-entraining admixtures or material containing such shall be permitted in the mortar. Also, no anti-freeze compounds, calcium chloride, or other compounds, unless expressly permitted otherwise, shall be permitted in the mortar.

B. Mortar types to be used shall be 'Type N', unless otherwise stated

1.5 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: Submit manufacturer supplied Product Data for following items to show compliance with specified requirements.

1. Complete data for each type of masonry units used in work. Laboratory test reports for brick shall be no more than two years old.

2. A list indicating the maximum dry weight of each type and size of CMU to be used in the project.

3. Complete date for reinforcements, anchors and ties, of each type.

4. Portland Cement: Brand and manufacturer's name and data.

5. Lime: Brand and manufacturer's name.

6. Mortar Pigments: Brand and manufacturer's name.

7. Packaged Products: Brand and manufacturer's name.

8. Sand: Location of pit, name of owner and previous test data.

9. Masonry reinforcement, anchors.

C. Samples

1. Submit samples of brick:

a. Submit minimum 3 samples of face bricks for each color and type for selection by the commissioner. Brick samples shall closely match existing, surrounding brick after cleaning of existing brick surfaces. Note that different brick finishes exist at different locations.

b. No brick is to be installed without the approval of the Commissioner.

2. Submit mortar samples for each location of new brick masonry work. New mortar is to match the color, texture and general appearance of the existing cleaned mortar.

D. Mock Up

1. Provide sample mock up installation of face brick at following 3 different conditions for review and approval by commissioner prior to installation. The sample installation shall illustrate mortar, bonding, jointing and course heights and conform with appearance and workmanship indicted in the drawings and specifications. Exact location for mock up samples to be determined in the field by the commissioner.

    a. 24”x24”face brick sample installation at rebuilt parapet in one of the corners of two story roofs.

    b. 24” long face brick installation at the raised roof curb along the single story roof.

2. Do not proceed with face brick masonry work until written approval of mock ups are obtained from the Commissioner.

3. Approved mock up installations may remain in place as part of the project work.

E. Quality Control Submittals

1. Schedule of Uses: By mortar type.

2. Certificates

    a. Submit Building Department affidavit from masonry manufacturer (Form 10H) stating materials delivered to project comply with the Specification requirements.

    b. Submit Building Department affidavit from masonry supplier (Form 10J) stating materials delivered to project comply with the Specification requirements.

    c. Submit lightweight CMU producer’s certificate stating aggregate used is 100% lightweight, expanded shale, clay, or slate (rotary kiln) aggregate, in accordance with ASTM C331. To provide the required recycled content, it is acceptable to provide up to 20% lightweight recycled aggregate that will maintain the same fire resistance equivalent thickness of 100% expanded shale, clay, or slate without a decrease in block strength.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Qualifications

1. Installers specializing in the Work of this Section shall have a minimum of three years experience with similar scope of work and quantity of materials. Experience shall include

experience for all masonry work indicated, including mortar matching, masonry cleaning and unit masonry installation.

C. Regulatory Requirements

1. Work of this Section shall conform to all requirements of the NYC Building Code. Where more severe requirements than those contained in the New York City Building Code are given in this Section, the requirements of this Section shall govern.

2. NYC Board of Standards and Appeals (BSA) approvals, NYC Materials and Equipment Acceptance (MEA) approvals or Office of Technical Certification and Research (OTCR)

D. Certifications

1. Masonry construction shall conform to the material acceptance, certification and inspection requirements of the NYC Building Code.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to project site in undamaged condition per ASTM guidelines. Store in an enclosed location or off the ground with waterproof covering as needed to protect all materials from moisture, contaminants, corrosion, deleterious temperature changes, and other harmful conditions. Insure proper identification of reinforcement after bundles are broken. Masonry units may not be stored on roofs.

B. Packaged Products:

1. Deliver materials to the site in manufacturer's original, sealed containers. Do not deliver materials which have exceeded shelf life limitation set forth by the manufacturer.

2. Material containers shall bear the manufacturer's label indicating manufacturer's name, trade name of product, lot number, shelf life of product, and mix ratio (if applicable). This includes individual bags of pre-bagged mortar mixes.

3. Comply with manufacturer's printed instructions for storing and protecting materials.

1.8 ENVIRONMENTAL REQUIREMENTS

A. Cold Weather Construction Requirements

1. Salt or other chemicals for lowering the freezing temperature of the mortar shall not be used.

2. Masonry units, mortar, and grout shall be preconditioned and masonry protected for the following cold weather conditions per Section 2104.3 of the NYC Building Code:

   a. Air temperature 40 deg. F to 32 deg. F:

      1) Heat mixing water ‘or’ sand to minimum 70 deg. F and max.140 deg. F.

      2) Mortar and grout temperature shall be between 40 deg. F and 120 deg. F at the time of mixing.

   b. Air temperature 32 deg. F to 25 deg. F:

      1) Heat mixing water ‘or’ sand to minimum 70 deg. F and max.140 deg. F.

      2) Mortar and grout temperature shall be between 40 deg. F and 120 deg. F at the time of mixing. Grout temperature shall be maintained to above 70 deg. F at the time of grout placement.

      3) Provide heat source to maintain temperature of 32 deg. F on each side of masonry construction.

   c. Air temperature 25 deg. F to 20 deg. F:

      1) Heat mixing water and sand to minimum of 70°F and to maximum of 120°F.

      2) Provide heat source to maintain a minimum air temperature of 32° on each side of masonry construction.

      3) Provide wind breaks for wind in excess of 15 miles per hour.

      4) Keep temperature of masonry units a minimum of 40oF when laid and prior to grout placement

   d. Air temperature 20 deg. F and below:

      1) Heat mixing water and sand to a minimum of 70oF and to maximum of 120oF.

      2) Provide enclosures and heat source to maintain a minimum air temperature of 32oF on each side of masonry construction during construction.

      3) Keep temperature of masonry units a minimum of 40oF when laid and prior to grout placement.

B. Cold Weather Protection Requirements

1. Mean Daily Air Temperature of 40°F to 32°F:

    a. Protect masonry with weather resistive membrane from rain or snow for 24 hours.

2. Mean Daily Air Temperature of 32°F and Below:

    a. Protect masonry with weather resistive membrane from rain or snow for 24 hours.

    b. An air temperature of at least 32°F shall be maintained on each side of masonry for a period of at least 48 hours if Type M or S mortar is used and at least 72 hours if Type N or O mortar is used.

C. Hot Weather Construction

1. Follow the requirements of NYC BC 2104.4. When temperatures exceed 100°F, or 90°F with a wind speed of 8 mph, provide necessary conditions and equipment to produce mortar having a temperature below 120oF and to maintain the mortar and grout below 120oF.

D. Wetting of Clay Masonry Units

1. Provide pre-wetting of masonry for units with initial rates of absorption that require their wetting before laying (21.42 grams per 30 square inches or 0.025 ounce psi). In cold weather requirements, follow the following requirements:

    a. If surface temperatures are above 32ºF, use water heated to about 70ºF.

    b. If surface temperatures are below 32oF, use water heated to about 120oF.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Facebrick Distributors

1. Consolidated Brick and Building Supplies, NY

2. Tri-Stte Brick & Building Materials, Inc., NY

3. Belden Brick Sales & Service, Inc., NY

4. Or approved equal

B. Reinforcement and Ties

1. Hohmann & Barbard, Inc., Hauppage, NY
2. Dur-O-Wall, Arlington Heights, IL
3. Wire Bond, Charlotte, NC
4. Or approved equal

C. Mortar Coloring

1. "SGS" Mortar Colors, Solomin Grind- Chem Services Inc.
2. "True Tone Mortar Colors", Rockwood Industries Inc.,
3. "Flamingo Colors", Lehigh Corp
4. Or approved equal

D. Mortar Additives

1. Biordi Co.
2. Master Builders INC., Cleveland, OH
3. Sika Corp, Lyndhurst, NJ
4. Or approved equal

E. Mortar Weeps

1. Mortar Net USA
2. Hohmann & Bernard Inc., Hauppauge, NY
3. Wire Bond, Charlotte, NC
4. Or approved equal

2.2 MATERIALS

A. Facebrick: Clay or Shale, ASTM C216, grade SW, type FBX, cored or solid, Size shall match existing construction, unless otherwise indicated. Colors and textures to closely match existing, and as selected by the Commissioner. Brick shall be manufactured to special sizes and shapes, not cut in the field. Brick shall be tested for efflorescence in accordance with ASTM Test Methods C67 and the rating shall be "Not Effloresced".

B. Concrete Masonry Units (CMU)

1. Concrete Masonry Units (CMU) shall be of type indicated in the drawings:

a. Hollow Load-Bearing: ASTM C90. Aggregate shall conform to ASTM C331.

b. Solid Load-Bearing (units with 75% or more net area), including Bond Beam Units: ASTM C90. Aggregate shall conform to ASTM C331.

c. High Strength CMU: Compressive strength shall be 3500 psi. Provide only where indicated on Drawings. Aggregate shall conform to ASTM C331.

d. Unit weight: Unit weight of concrete for CMU not to exceed 90 pcf when tested in accordance with ASTM C140 (105 pcf for the high strength CMU).

2. The size of CMU shall be 8”x16” or as indicated on drawings. The nominal face dimensions, type and coursing shall match existing CMU used in the building and/or as indicated in drawings.

C. Reinforcements and Ties

1. Reinforcements and ties used on exterior walls shall beformed of stainless steel, type 304.

2. All components of the reinforcement and tie assemblies shall be from single manufacturer.

D. Portland Cement: Shall conform to ASTM C150 Type II (Maximum 8% C3A) unless otherwise permitted by the Commissioner and shall be of the non air-entrained type. Provide Type II for exterior pavements.

1. Slag Cement: Shall conform to ASTM C989, Grade 100 or 120.

2. No other alternate cementitious materials may be utilized.

E. Sand for mortar mix shall be washed natural sand with 100% passing through no.8 sieve and conforming to ASTM C144. Mix shall not contain and chlorides.

F. Aggregate for masonry grout shall conform to ASTM C404, Standard Specification for Aggregates for Masonry Grouts.

G. Hydrated Lime shall be ‘Type S’, conforming to ASTM C207

H. Water shall be clean potable water free of injurious foreign matter conforming to the requirements of Section BC 1903.4 of NYC Building Code.

I. Mortar Coloring: Provide pure mineral pigments, natural and synthetic iron oxides, and chromium oxides compounded for use in mortart mixes. Material shall conform to ASTM C979. Coloring shall not contain alkalyde salts or chlorides. No liquid colorants shall be permitted.

J. Premixed sand and lime for mortar mixes is not permitted. The use of batched material by and factory-packaged cement-lime-pigment by major mortar manufacturers is permitted. Each individual bag of material shall have the manufacturer's label identifying the mortar type.

K. Reinforcing Steel

1. Deformed bars conforming to ASTM A615, Grade 60. Reinforcement to be welded shall conform to the requirements of ASTM A706, Grade 60.

2. Reinforcement in exterior construction, such as parapets, shall be galvanized in accordance with ASTM A767 or epoxy coated in accordance with ASTM A775.Touch up coating for galvanized material shall be in accordance with ASTM A780. Touch-up epoxy coating in accordance with coating manufacturer’s instructions.

L. Miscellaneous Accessories

1. Weeps shall be of high density polyester, polypropylene or polyethylene woven mesh, 90% open full height of brick and full width of joint, recessed 1/4" from face of brick and extending to full depth of brick.

2.3 MIXES

A. Mortar

1. Shall conform to ASTM C270, Standard Specification for Mortar for Unit Masonry, and BIA M1-88. Provide Type I Portland cement (Type II Portland Cement when used for manholes). Masonry cement shall not be used as a substitute. Preconstruction testing with the proportions carefully monitored is to be used to establish the upper end of the strength range, which should generally be near the minimum strength of the next higher strength mortar.

a. Type N: 1 part gray cement, 1 part lime, 6 parts dry sand. Minimum compressive strength shall be 750 psi at 28 days.

b. Type N "White": 1 part white cement, 1 part lime, 6 parts dry white sand. Minimum compressive strength shall be 750 psi at 28 days.

B. Mortar Color

1. Proportion mortar coloring with other components of mortar mix to obtain color for mortar approved by commissioner for the project. Provide white cement instead of grey cement where required to obtain desired color. Do not exceed 1 part pigment to 10 parts cement, by weight.

C. Grout for Masonry

1. Fine Grout: 1 part Portland Cement, 0-1/10 part Hydrated Lime, 21/4-3 times the sum of volumes of cementitious materials of fine aggregate (Proportions by volumes).

2. Course Grout: 1 part Portland Cement, 0-1/10 part Hydrated Lime, 21/4-3 times the sum of volumes of cementitious materials of fine aggregate, and 1-2 times the sum of the volumes of cementitious materials of coarse aggregate (Portions by volume).

3. Aggregates for Mixes: ASTM C 404.

4. Slump: 8" minimum, 11" maximum.

5. Compressive Strength: At least equal to the strength of the masonry, and not less than 2000 psi as determined by ASTM C1019 - Method of Sampling and Testing Grout.

6. For locations less than 2” in any direction, use fine grout and for locations more than 2” in any directions use course grout.

D. Normal Weight Concrete

1. Unless otherwise specified, proportion and produce normal weight concrete to have a maximum slump of 4” or less. A tolerance of up to 1" above the indicated maximum shall be allowed for individual batches provided the average for all batches or the most recent 10 batches tested, whichever is fewer, does not exceed the maximum limit. The slump shall be determined by ASTM C143. Concrete containing High Range Water Reducer shall have a slump not exceeding 9”, unless other wise approved by the Commissioner. The concrete shall arrive at the job site at a slump of 2" to 3", be verified by the Commissioner, and the HRWR admixture added to increase the slump to the approved level.

2.4 SOURCE QUALITY CONTROL

A. Inspection

1. Special Inspector: The City of New York will assign, under the requirements of Section BC 1704.4 a Special Inspector who will inspect masonry construction under the requirements of Section BC 1704.5 of the NYC Building Code.

B. Preconstruction Testing

1. Preconstruction testing of mortar properties shall be done in accordance with ASTM C780, Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry. Do not proceed with masonry work until the preconstruction testing is completed. Contractor shall mix mortar as it intends for the actual construction.

2. Preconstruction testing of masonry grout properties will be done in accordance with ASTM C1019, Standard Test Method for Sampling and Testing Grout. Do not proceed with masonry work until the preconstruction testing is completed. Contractor shall mix mortar as it intends for the actual construction.

3. Compressive strength tests of field mixed mortar and factory batched/prepackaged mortar are to be done during construction of the mock-up, or earlier if desired by the Contractor, to provide a benchmark for the strength based on actual field conditions and proportioning of the mortar. If mortar strengths are too high or too low, proportions and material source may be required to be modified if directed by the Commissioner.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine all adjoining work on which this Work is in anyway dependent for proper installation and workmanship. Report to the Commissioner any condition that prevents the performance of this Work.

3.3 PROTECTION

A. Cover top of masonry wall with waterproof plastic membrane at the end of the work period, when work is not in progress, and at other times when Work needs to be protected from rain and other precipitation. Extend cover down sides as needed to thoroughly protect the Work.

B. During cold weather, do not use wet masonry units and frozen masonry units.

C. Do not use frozen materials or lay masonry on frozen materials; remove frozen materials from wall. Refer to Part 1 of this Section, "Environmental Requirements" for temperature restrictions.

D. Remove excess mortar from walls as soon after laying units as practicable to prevent staining and to facilitate cleaning of wall.

E. Prevent masonry cleaners from coming in contact with adjacent glass, metal, and other masonry surfaces such as cast stone. Protect adjoining glass and metal surfaces and all other adjacent materials and property from masonry operations.

3.4 MIXING PROCEDURES FOR MORTAR

A. Measure material by volume or equivalent weight. In measuring by volume, measure ingredients by container. Do not measure by shovel.

B. Mix ingredients in a clean mechanical mixer for a minimum of 3 minutes, maximum of 5, with the minimum amount of water to produce a workable consistency. Water rententivity must be appropriate for the IRA of the brick. Bricks of 3 grams per minute per 30 sq in require a lower water retentivity property to maintain production by allowing the mortar to give up the water easier to the brick.

C. Mortar that has stiffened because of evaporation of water from the mortar may be retempered only once, and only during the first hour of placement to restore the required consistency. Do not over water to make mortar “soupy” as water retentivity must be appropriate for the IRA of the brick. Mortar shall be used within 21/2 hours after initial mixing. Limit amount of mortar batched at one time to stay within these requirements.

3.5 LAYING

A. Lay units true to dimensions, plumb and level, square; exterior and interior bond work as indicated on the Drawings or specified herein. Lay courses level with joints uniform; vertical joints spaced properly for plumb alignment. Provide masonry lines, plumb bobs, and utilize a 4 foot level to maintain wall within ¼” of theoretical dimensions.

B. Fill bed joints and cross joints solid with mortar. Furrowed bed and spotted cross joints not permitted. For hollow block units, apply mortar full length on all bearing surfaces.

C. "Tooth" temporary openings in exposed masonry walls, to maintain proper bond when closed.

D. All raking and repointing work shall be done by hand.

E. Tool joints in exposed masonry with a concave jointer to provide a neat, smooth, compacted surface.

F. Remove excess mortar, leaving masonry surface clean.

G. Cut brick and concrete masonry units with circular masonry wet saw.

H. Build-in miscellaneous metal inserts and other items not furnished under this Section but specified to be installed under this Section.

I. Lay brick in bond patterns as shown on the Drawings. If bond is not indicated on Drawings, bond patterns shall match existing adjacent walls.

J. Installation of new face brick shall be plumb and flush with adjacent existing face brick.

3.6 FIELD QUALITY CONTROL

A. Special Inspection

1. The City of New York will assign under the requirements of Section 1704.5 of the NYC Building Code a Special Inspector who will inspect the masonry construction.

2. The Special Inspector will make inspections and any testing deemed necessary. Testing of mortar properties shall be in accordance with ASTM C780. Mortar suspected or tested to be too strong or too weak will be subject to petrographic analysis or other methods deemed necessary by the Commissioner and Special Inspector. Testing of masonry grout shall be in accordance with ASTM C1019. The Contractor shall pay for all tests if they verify improper work. Inspections will include, but not be limited to, the following:

   a. Proper installation of reinforcement and placement of brick on angles.
   b. Proper installation of mortar, including proportioning and mixing. Those mortar properties listed in the Appendix of ASTM C780 are to be tested at the discretion of the Special Inspector. Mortar strengths, when tested, will be determined in accordance with ASTM C780 using cylinders.
   c. Proper installation of weeps, flashing, drip edges, mortar mesh, cleaning of cavity (if cavity wall construction), etc.
   d. For cavity wall construction, all bed and head joints are filled completely. At solid masonry construction, all bed, head, and collar joints are filled completely.

3. If any results are found to be not in conformance with the applicable ASTM, industry practice, and/or the Specifications, the masonry in question shall be removed and redone by the contractor at no additional cost to the City of New York. No additional costs for testing shall be borne by the City of New York if results of testing verify improper workmanship or proportions not in conformance with the specifications and ASTM standards.

4. Contractor shall cooperate with the Special Inspector, the testing laboratory performing the testing required by the specifications, and any other agency contracted by the City of New York to inspect or test the work.

3.7 CLEANING

A. Before cleaning masonry walls, examine faces for holes, cracks, and other defects. If corrections cannot be made to provide an appearance acceptable to the Commissioner, replace defective units

B. Concrete Masonry Units

1. Clean wall surfaces to be painted; rub with carborundum stone: remove mortar from surfaces; remove rough edges from joints.
2. Point up holes and joints. Brush with stiff bristle brush. Leave surface in condition to receive paint.
3. Clean other wall surfaces with stiff-bristle brush. Do not use wire brush.

END OF SECTION 04 20 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 04 43 50 – CAST STONE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Scope of Work in this section includes the following:

1. Provide cast stone copings at existing and rebuilt parapets and roof curbs at all roofs, as indicated on the drawings, specified herein and as required for a complete and proper installation.

1.3 REFERENCES

A. Refer to DDC General Conditions.

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications or mandated by the NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. American Concrete Institute (ACI).

a. ACI 211.1 Selecting Proportions for Normal, Heavyweight, and Mass Concrete

b. ACI 318/318R Building Code Requirements for Structural Concrete (ACI 318-05) and Commentary (ACI 318R-05)

c. ACI/MCP 205 Manual of Concrete Practice Part 2 - ACI 224R-01 to ACI 313R-97

d. ACI/MCP 305 Manual of Concrete Practice Part 3:315-99 to 343R-95

2. Concrete Reinforcing Steel Institute (CRSI)

   a. CRSI 1 MSP Manual of Standard Practise

3. Precast Prestressed Concrete Institute (PCI)

   a. PCI MNL-116 Manual for Quality Control for Plants and Production of Precast and Prestressed Concrete Products

4. American Society of Testing and Materials (ASTM)

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data:

1. Materials list of items to be provided under this section.

C. Shop Drawings

1. Submit shop drawings showing complete information for fabrication and erection of work in this section for review and approval by the Commissioner.

2. The shop drawings shall be based on actual, verified, field dimensions and shall be fully coordinated with all existing conditions related to the work.

3. Shop drawings shall be legible, drawn to scale, indicate all dimensions.

4. Show layout with all individual cast stone coping pieces identified with unique numbering/labeling over entire extent of work.

5. Clearly show all typical installation details including enlarged plans and cross sections.

6. Show all anchorages reinforcements and ties, clearly identified for their constituent parts.

7. Coordinate with new and existing unit masonry work, coping flashings and roofing work and include them in details to clearly show relationship. Include location and details of anchorage devices that are to be embedded in other construction.

8. Show all erection procedures, sequence of erection, and required handling equipment.

D. Samples

1. Color Selection

   a. Provide color chart with full range of colors available for coping stone for initial selection of color by the commissioner. Color for coping stone shall closely match color of existing brick coping.

   b. Samples for Initial Selection of Mortar Color: Submit the full range of colors available. Where mortar color is to match existing, provide proposed colors.

2. Product Samples

   a. Submit 3 cast stone samples 6”x6”x2”, showing quality, texture, and color of the proposed finish.

   b. Submit samples of anchorages and other attachments and accessories.

   c. Full Size Cast Stone Samples: Prior to start of installation, and after the review of finish Samples, submit one full size Sample of each shape of required cast stone unit, delivered to the job site. Acceptable full size samples may be incorporated in the construction.

   d. Review of samples by the Commissioner will be for color, texture, and general condition only. Compliance with all other requirements is the exclusive responsibility of the Contractor.

E. Quality Control Submittals

1. Provide certifications and proof of qualifications for all requirements for manufacturer, installer and testing laboratories that are listed under the ‘Quality Assurance’ article of this specification.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Qualifications

1. Installers qualification:

   a. A firm with at least 3 years experience in installing cast stone units of a type and quantity similar to those indicated for this Project.

   b. Use adequate numbers of skilled workman who are properly trained and experienced in the necessary crafts and who are completely familiar with the

specified requirements and the methods needed for proper performance of the work of this Section.

2. Manufacturer qualification:

a. Precast decorative concrete units shall be designed and fabricated by an experienced and acceptable precast concrete manufacturer certified under the PCI Plant Certification Program.

b. The manufacturer shall have been regularly and continuously engaged in the manufacture of precast concrete work similar to that indicated on the drawings for at least 3 years.

c. The Contractor shall submit a statement detailing the Manufacturer's Qualifications.

3. Testing Laboratory qualification:

a. An independent testing laboratory qualified according to ASTM E329 to conduct the testing specified.

C. Source Limitations

1. Obtain all precast coping stones from one source from a single manufacturer.

2. Obtain mortar ingredients of a uniform quality, including color, from one manufacturer for each cementitious component and from one source or producer for each aggregate.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver the Work of this Section to the job site in such quantities and at such times as to assure the continuity of construction; carefully pack or crate to prevent damage.

B. Store units at the job site in a manner to prevent cracking, distortion, warping, staining, and other physical damage, and in a manner to keep markings visible.

C. Lift and support the units only at designated lifting points or supporting points as shown on the approved Shop Drawings.

D. Any units damaged before final acceptance shall be replaced. Patching of units will not be acceptable.

E. Pack, handle, and ship cast stone units in suitable packs or pallets.

a. Lift with wide-belt slings; do not use wire rope or ropes that might cause staining. Move cast stone units, if required, using dollies with wood supports.

b. Store cast stone units on wood skids or pallets with non-staining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to units. Ventilate under covers to prevent condensation.

F. Store installation materials on elevated platforms, under cover, and in a dry location.

G. Store mortar aggregates where grading and other required characteristics can be maintained and contamination avoided.

PART 2 - PRODUCTS

2.1 CAST STONE MATERIALS

A. General: Comply with ASTM C1364 – Standard Specification for Architectural Cast Stone, and the following for each ingredient.

B. Portland Cement: ASTM C150 – Standard Specification for Portland Cement, Type I, white, containing not more than 0.60 percent total alkali when tested according to ASTM C114.

C. Coarse Aggregates: Granite, quartz, or limestone complying with ASTM C33 – Standard Specification for Concrete Aggregates; gradation as needed to produce required textures. Used for wet mix process.

D. Fine Aggregates: Manufactured or natural sands complying with ASTM C33 – Standard Specification for Concrete Aggregates, gradation as needed to produce required textures.

E. Coloring Admixture for Cast Stone: ASTM C979 – Standard Specification for Pigments for Integrally Colored Concrete, synthetic mineral-oxide pigments or colored water-reducing admixtures, temperature stable, non-fading, and alkali resistant.

F. Air-Entraining Admixture: ASTM C260 – Standard Specification for Air-Entraining Admixtures for Concrete, certified by the manufacturer to be compatible with other admixtures used.

G. Other Admixtures: ASTM C494 – Standard Specification for Chemical Admixtures for Concrete.

H. Reinforcement: Deformed steel bars complying with ASTM A615/A615M – Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.

I. Epoxy Coating: ASTM A775/A775M – Standard Specification for Epoxy-Coated Steel Reinforcing Bars.

J. Anchors, pins and Inserts: Fabricated from stainless steel complying with ASTM A276 – Standard Specification for Stainless Steel Bars and Shapes or ASTM A666 – Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar, Type 304.

2.2 CAST STONE UNITS

A. Provide cast stone units complying with ASTM C1364 – Standard Specification for Architectural Cast Stone

1. Compressive Strength: At 28 days after manufacture, not less than 6500 psi, when tested in accordance with Test Method ASTM C1194 – Standard Test Method for Compressive Strength of Architectural Cast Stone.

2. Absorption, Cold Water: At 28 days after manufacture, not greater than 6%, when tested in accordance with Method A, Cold Water of Test Method ASTM C1195 – Standard Test Method for Absorption of Architectural Cast Stone.

3. Absorption, Hot Water: At 28 days after manufacture, not greater than 10%, when tested in accordance with Method B, Boiling Water Test of Test Method ASTM C1195 – Standard Test Method for Absorption of Architectural Cast Stone.

4. Provide units that are resistant to freezing and thawing as determined by laboratory testing according to ASTM C666 – Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar, Procedure A, as modified by ASTM C1364 – Standard Specification for Architectural Cast Stone.

5. Fabricate the Work of this Section to the sizes and shapes indicated, and of texture matching the approved Samples.

6. Provide finished units that are straight, true to size and shape, and within the specified casting tolerances.

7. Make exposed edges sharp, straight, and square, unless indicated otherwise. Make flat surfaces into a true plane.

8. Warped, cracked, broken, spalled, stained, and otherwise defective units will not be acceptable.

9. Place and secure in the forms all anchors, clips, stud bolts, inserts, lifting devices, shear ties, and other devices required for handling and installing the precast units and for attachment of subsequent items as indicated or specified.

B. Reinforce units as indicated and as required by ASTM C1364 – Standard Specification for Architectural Cast Stone. Use epoxy-coated reinforcement.

C. Fabricate units with sharp arris and details accurately reproduced with indicated texture on all exposed surfaces, unless otherwise indicated. Match existing units in texture, color and shape where units are being replaced. Take all molds as necessary.

1. Slope exposed horizontal surfaces at least 1:12, unless otherwise indicated.

2. Provide drips on projecting elements, unless otherwise indicated.

D. Colors and Textures

1. Colors and textures shall be as indicated in drawings and as selected by commissioner from color range submitted for selection.

2. Color and texture shall be uniform for each unit and consistent for all units.

E. Casting tolerances

1. Maintain casting, bowing, warping, and dimension tolerance below the following maximums:

a. Overall dimension for height and width of units: Plus zero, and minus 1/16" of unit length.

b. Make thickness of units plus or minus 1/8" maximum.

c. Bowing or warping: Do not exceed 1/360 of the length.

d. Insert locations: Place within plus or minus 1/4" in each direction.

F. Cure and finish units as follow:

1. Cure units in totally enclosed curing room under dense fog and water spray at 95 percent relative humidity for a minimum of 24 hours. Follow PCI recommendations.

2. Yard cure units until the sum of the mean daily temperatures for each day equals or exceeds 350˚F.

3. Acid etch units to remove cement film from surfaces indicated to be finished.

2.3 MORTAR MATERIALS

A. Portland Cement: ASTM C150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color, white, or a blend to produce mortar color indicated.

B. Hydrated Lime: ASTM C207, Type S.

C. Mortar Aggregate: ASTM C144.

1. White-Mortar Aggregates: Natural, white sand or ground, white stone.

D. Mortar Coloring: Provide pure mineral pigments, natural and synthetic iron oxides, and chromium oxides compounded for use in mortar mixes. Material shall conform to ASTM C979. Coloring shall not contain alkalyde salts. No liquid colorants shall be permitted. Use only pigments with record of satisfactory performance in masonry mortars.

E. Water: Potable

2.4 MORTAR MIXES

A. Setting Mortar: Comply with ASTM C 270 - Standard Specification for Mortar for Unit Masonry, Proportion Specification, Type S.

1. Limit cementitious materials to Portland cement and lime. The use of masonry cement is not permitted.

2. Pigmented Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.

2.5 ACCESSORIES

A. Anchors: Type and size indicated, fabricated from stainless steel complying with ASTM A276 or ASTM A666, Type 304.

B. Dowels: Round stainless-steel bars complying with ASTM A276, Type 304, 1/2-inch (12-mm) diameter.

C. Job-Mixed Detergent Solution: Solution of 1/2 cup (125 mL) of dry-measure tetrasodium polyphosphate and 1/2 cup (125 mL) of dry-measure laundry detergent dissolved in 1 gal. (4 L) of water.

D. Sealant

1. Sealant as specified in Section 07 90 00 - Joint Sealers, as applicable for vertical joints and for horizontal joints.

2. Bond breaker tape as specified in Section 07 90 00 - Joint Sealers.

2.6 SOURCE QUALITY CONTROL

A. Employ an independent testing agency to sample and test cast stone according to ASTM C1364 – Standard Specification for Architectural Cast Stone, and the specific test methods specified in Article "2.2 Cast Stone Units", of this specifications. The testing shall include:
   1. Compressive Strength in accordance with Test Method ASTM C1194 - Standard Test Method for Compressive Strength of Architectural Cast Stone. Test units from each 500 ft^3 of cast stone.
   2. Absorption, Cold Water and Hot Water, in accordance with Test Method ASTM C1195 - Standard Test Method for Absorption of Architectural Cast Stone. Test units from each 500 ft^3 of cast stone.
   3. Resistance to Freezing and Thawing in accordance with Test Method ASTM C666 - Standard Test Method for Resistance of Concrete to Rapid Freezing and Thawing, Procedure A. Test one unit from each cast stone mixture design.

B. If test specimens fail, the specimens and the entire 500 ft^3 lot they came from shall be rejected and shall not be used in the project.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine substrates and conditions, with installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of cast stone.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Coordinate as required with other trades to assure proper and adequate accommodation with the Work of this Section.

B. Set cast stone as indicated on Drawings and as per approved shop drawing submittals. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure units in

place. Set units accurately in locations indicated with edges and faces aligned according to established relationships and indicated tolerances.

C. Drench units with clear water just before setting.

D. Set units in full bed of mortar with full head joints, unless otherwise indicated. Build anchors and ties into mortar joints as units are set. Anchors to be set in substrate with non-shrink grout.
   1. Set 3/8" of mortar prior to installation of flashing providing full bed. Rake joint to allow for sealant installation. Seal flashing penetrations with sealant. Install another 3/8" mortar on top of flashing and place stone. Provide full bed of mortar. After stones are set and mortar cured, install bond breaker tape and sealant under the flashing.
   2. Fill dowel holes and anchor slots with mortar.
   3. Fill collar joint solid as units are set.
   4. Build concealed flashing into mortar joints as units are set.

E. After coping units are set in or on the wall they shall have all top surfaces covered and protected from the elements at the close of each day's work and shall be kept covered and protected until all the Work is completed.

F. Lead, Plastic or hard rubber buttons shall be used in setting large units to sustain the weight until mortar has set.

G. All joints in units shall be raked out 3/8" deep and shall be filled with joint sealer, (after bond breaker tape) as specified in Article titled “Accessories”.

H. Expansion Joints
   1. Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.
   2. Provide expansion joints at a maximum spacing of approximately 40 feet on center. Match joint spacing with parapet expansion joints.
   3. Provide filler seal, bond breaker tape, and joint sealers at expansion joints where indicated on the Drawings and where required for proper installation. (See Section 07 90 00 Joint Sealers).
   4. Keep joints free of mortar and other rigid materials.

I. Weather Protection
   1. Protect mortar and cast stone units from freezing during construction and maintain an ambient temperature for cast stone work of at least 32 deg F for a period of at least 72 hours.
   2. At 40 deg F and below, heat water or sand to a minimum of 70 deg F and to maximum of 160 deg F.
   3. At 32 deg F and below, heat mixing water and sand to a minimum of 70 deg F and to maximum of 160 deg F.
   4. Do not use admixtures to lower the freezing temperature of the mortar

J. If there are any discrepancies in installation with drawings and specifications, immediately notify commissioner. Do not proceed until discrepancy is addressed and fully corrected to the satisfaction of the commissioner.

3.4 INSTALLATION TOLERANCES

A. Variation from Plumb: Do not exceed 1/8 inch in 10 feet (3 mm in 3 m) or 1/4 inch in 20 feet (6 mm in 6 m) or more.

B. Variation from Level: Do not exceed 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 3/8 inch (9 mm) maximum.

C. Variation in Joint Width: Do not vary joint thickness more than 1/8 inch in 36 inches (3 mm in 900 mm) or one-fourth of nominal joint width, whichever is less.

D. Variation in Plane between Adjacent Surfaces (Lipping): Do not exceed 1/16-inch (1.5-mm) difference between planes of adjacent units or adjacent surfaces indicated to be flush with units.

3.5 FIELD QUALITY CONTROL

A. If there is evidence that the strength of cast stone units may be deficient or may not comply with the specified requirements, the City of New York will employ an independent testing laboratory to obtain, prepare, and test cores drilled from hardened cast stone units to determine the compressive strength according to ASTM C 42 – Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete. A minimum of 3 units shall be field tested and destroyed. If the units are found to be defective, other units will be tested and replaced at no additional cost to the City of New York.
   1. Allow the testing laboratory and special inspection agency employed by the Commissioner, access to material storage areas. Cooperate and provide samples of materials and concrete mixes as may be requested for testing and evaluation.
   2. A minimum of three representative cores will be taken from units of suspect strength, from locations directed by the commissioner.
   3. Cores will be tested in an air-dry condition.
   4. The strength of the cast stone for each series of 3 cores will be considered satisfactory if the average compressive strength is equal to at least 85 percent of the 28-day design compressive strength and no single core is less than 75 percent of the 28-day design compressive strength.
      a. Test results will be made in writing on the same day that tests are performed, with copies to the Commissioner, Contractor, and cast stone fabricator. Test reports will include the following:
         1) Project identification name and number.
         2) Date when tests were performed.
         3) Name of cast stone fabricator.

4) Name of testing laboratory.
5) Identification letter, name, and type of cast stone unit or units represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of cast stone as placed.

B. Defective Work
1. Cast Stone units that do not comply with the specified requirements, including compressive strength, manufacturing tolerances, and finishes, are unacceptable. The Contractor shall remove and replace defective Work with cast stone units that comply with the specified requirements at no cost to the City of New York.
2. Contractor shall perform additional testing of corrected work to determine compliance to the specifications, at no cost to City of New York.

3.6 ADJUSTING AND CLEANING

A. Remove and replace stained and otherwise damaged units and units not matching approved Samples.

B. Replace units in a manner that results in cast stone matching approved Samples, complying with other requirements, and showing no evidence of replacement.

C. In-Progress Cleaning: Clean cast stone as work progresses. Remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, and after completion of other work liable to damage or soil cast stone units, clean exposed cast stone as follows:
1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Protect adjacent surfaces from contact with cleaner by covering them with liquid strippable masking agent, polyethylene film, or waterproof masking tape.
3. Clean in conjunction with the cleaning of all other masonry work. Do not clean in temperature below 50 degrees F. Clean by scrubbing with soap powder and water, applied vigorously with stiff fiber brushes, adding clean, sharp, fine, white sand to the soap and water mixture where necessary. After scrubbing, drench all surfaces of the cast stone units thoroughly with clean water. The use of sand blast, wire brushes; or acids of any kind will not be permitted under any circumstances for the cleaning of cast stone Work. Start the cleaning operation at the top of the structure and proceed downward.

END OF SECTION 04 43 50

SECTION 05 12 10 – STRUCTURAL STEEL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Furnish and erect all structural steel as shown on Drawings.

B. Provide shop or field painting, finish painting, and galvanizing as specified.

1.3 REFERENCES

A. Refer to DDC General Conditions.

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications or mandated by the NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. American Society of Testing and Materials (ASTM) standards, latest editions.
   a. A36 Standard Specification for Carbon Structural Steel
   b. A53 Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless
   c. A307 Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength
   d. A500 Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes
   e. A563 Standard Specification for Carbon and Alloy Steel Nut
   f. A780 Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings
   g. A992 Standard Specification for Structural Steel Shapes
   h. D1654 Standard Test Method for Evaluation of Painted or Coated Specimens Subjected to Corrosive Environments

i. D1735 Standard Practice for Testing Water Resistance of Coatings Using Water Fog Apparatus
j. D4541 Standard Test Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers
k. F436 Standard Specification for Hardened Steel Washers Inch and Metric Dimensions
l. F1554 Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength
m. F3125 Standard Specification for High Strength Structural Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength, and Metric Dimensions 830 MPa and 1040 MPa Minimum Tensile Strength

2. "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings" 13th edition, including supplements. (AISC 335).

3. American Welding Society (AWS) standards for procedures and materials.

4. "Code of Standard Practice for Steel Buildings and Bridges" (AISC 303)

5. Steel Structures Painting Council (SSPC) standards.
   a. SSPC-SP10 Near-White Metal Blast Cleaning

1.4 DEFINITIONS

A. Refer to DDC General Conditions.

B. Structural Steel: Structural Steel consists of the steel elements of the structural steel frame essential to support the design loads. These elements consist of material as shown on the structural steel plan and listed in Article 2.1 of the AISC "Code of Standard Practice for Steel Buildings and Bridges.", 2016 version. Structural steel also includes structural lintels framing over masonry openings bearing on masonry.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: Submit manufacturer's information for the following:

1. Primer paint, finish paint, and galvanizing touch up paint

2. Expansion/adhesive anchors

3. Zinc Metallizing

C. Shop Drawings

1. Failure to submit legible shop drawings will be cause for return without review.

2. Provide a set of shop drawings showing all connections, bolting, welding, and size of material. Shop drawing shall show intended method of reinforcing existing members and making connections to existing steel as developed by the detailer based on conditions and actual dimensions. Shop Drawings for MEP equipment dunnage and access platforms shall not be submitted until after approval of the submitted MEP units. Ensure shop drawings submitted for MEP equipment dunnage and access platforms are coordinated and based on unit approved. The Contractor shall take into account in their schedule the potential time impact in the sequencing of the steel drawings.

3. Do not order steel in advance of approval of shop drawings, except at own risk.

4. Shop drawings shall be specific for the Project and shall be prepared under supervision of and bear the seal of a Professional Engineer licensed in the State of New York. Connections not designed on the Drawings shall be done by the detailer's licensed Engineer. Do not submit unchecked shop drawings. After final approval of all shop drawings, submit a final set sealed and signed by the Professional Engineer.

5. Shop drawings will be checked for size of material and strength of connection by the Commissioner, which shall not render the Commissioner responsible for any errors in construction dimensions, etc. that have been made in preparation of shop drawings. The Contractor shall assume full responsibility for the correctness of dimensions and fit.

6. Calculations shall be submitted upon request.

7. After shop drawings are 100% complete and approved and all field changes have been made, submit a set of as-built drawings to the Commissioner.

D. Quality Control Submittals

1. Certificates and Affidavits

a. Furnish Building Department affidavit from steel manufacturer (Form SS24) certifying materials conform to Specification requirements and material was erected as designed.

b. Furnish bolt manufacturer's test reports, covering physical and chemical tests, for each lot of high strength bolts submitted.

c. Furnish steel manufacturer's certificate certifying welders employed on the Work have met AWS qualifications within the previous twelve months, and for work performed in the field are NYC licensed welders as per §28 407.1 of the Administrative Code of the NYC Construction Code.

d. Furnish complete listing of ASTM's of materials listed in Part 2 of this Section and certification that materials supplied meet those listed.

e. For mechanical and adhesive anchors installed in concrete, submit ICC certification for use in cracked concrete.

2. Contractor Qualification

a. Provide proof of Installer, Producer, and Rebar Detailer qualifications specified under "Quality Assurance".

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Qualifications

1. Fabricator: Company specializing in the fabrication of steel products to be used in this Contract shall have a minimum of three years' experience.

2. Erector: Company specializing in performing the Work of this Section shall have a minimum of three years' experience.

3. Zinc metallizer: The company or individual responsible for application of zinc metallizing shall be certified as qualified to perform this process by the Thermal Spray Certification by The Society for Protective Coatings (SSPC).

4. The firm providing the zinc metallizing shall also perform the painting of the members at the shop also to provide a single source responsibility.

C. Regulatory Requirements

1. Work of this Section shall conform to all requirements of the NYC Building Code and all applicable regulations. Where more severe requirements than those contained in the New York City Building Code are given in this Section, the requirements of this Section shall govern.

2. New York City Board of Standards and Appeals (BSA): Rules for Arc and Gas Welding and Oxygen Cutting and Steel Covering the Specifications for Design, Fabrication, and

Inspection of Arc and Gas Welded Steel Structures and Qualification of Welders and Supervisors.

3. Standards specified in Article 1.3 apply to Work of this Section. Where more severe requirements then those contained in the Standards are given in this Section or the New York City Building Code, requirements of this Section or the New York City Building Code shall govern.

D. Certifications

1. Structural steel shall conform to the material acceptance, certification, and inspection requirements of Section BC 1701 of the NYC Building Code.

2. Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedure".

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to the site at such intervals as to insure uninterrupted progress of Work.

B. Deliver anchor bolts and other anchorage devices, which are to be embedded in cast-in-place concrete or masonry, in ample time so as not to delay Work.

C. Store materials to permit easy access for inspection and identification. Store material of the ground and protect from the weather and contamination.

1.8 FIELD MEASUREMENTS

A. Take field measurements as required by Drawings. Where possible, take field measurements of existing conditions prior to fabrication. Verify that field measurements are the same as those shown on Drawings and shop drawings. Report all deviations to the Commissioner in writing.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Zinc Metallizing

1. Atlantic Coast Metallizing & Coatings Corp., Melville, NY

2. East Coast Metallizing & Coating Systems Inc., Westbury, NY

3. Island Wide Sandblasting Inc., Wyandanch, NY

4. Or approved equal

B. Structural Thermal Break

1. Fabreeka International, Inc, Boston, MA

2. Armatherm, Acushnet, MA

3. Farrat Ltd, United Kingdom

4. Or approved equal

2.2 MATERIAL

A. Structural Steel Shapes, Shims, Plates, and Bars
1. Structural steel shall conform to the provisions of ASTM A36 or ASTM A992, pipe steel to the provisions of ASTM A53, Grade B, and tube steel to the provisions of ASTM A500, Grade B, unless otherwise noted.

B. Bolts
1. Anchor Bolts: Shall conform to the provisions of ASTM F1554 – Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength, Grade 36, unless different grade is specified elsewhere. Size and detailing indicated on Drawings.
2. Unfinished Bolts: Shall conform to the provision of ASTM A325 – Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum tensile Strength.
3. Expansion/Screw/Adhesive Anchors, Fasteners Provide types as indicated on Drawings. As a minimum, all anchors exposed to weather or embedded in masonry are to be Type 316 stainless steel. Anchors installed in concrete shall be ICC certified for cracked concrete as per BC 1912 of the NYC Building Code.
   a. Wedge Expansion and Undercut Anchors/ expansion bolts shall have an ICC-ES Evaluation Service Report (ESR) issued in accordance with ACI 355.2 for use in cracked concrete, and including seismic applicability loading.
   b. Adhesive anchors shall have an ICC-ES Evaluation Service report (ESR) issued in accordance with ICC-ES AC308 - Post-installed Adhesive Anchors in Concrete Elements, and for use in cracked concrete, and seismic loading and pursuant to the Office of Technical Certification and Research (OTCR) Building Bulletin 2009-019.

C. Hardware

1. Nuts for anchor bolts and unfinished bolts shall conform to the requirements of ASTM A563.

2. Washers shall conform to the provisions of ASTM F436.

D. Filler Metal for Welding

1. Welding electrode shall conform to E70XX classification of AWS A5.1 - Specification for Carbon Steel Electrodes for Shielded Metal ArcWelding, for welding of new steel to new steel.

2. Welding electrode shall be compatible with existing steel where connections are made to steel of existing building. Electrode shall be E7018 unless determined otherwise. E7018 are low hydrogen electrodes that must be kept extremely dry.

E. Galvanizing by the Zinc Metallizing Process

1. Zinc/aluminum metallizing (referred to herein as zinc metallizing) is the process of thermally applying an 85/15 zinc-aluminum wire over the surface of steel. Zinc metallizing and finish coating system shall have the following performance characteristics and results of tests performed on representative samples (hot dip galvanizing is not acceptable):

a. Adhesion: Test zinc metallizing with complete finish coating (epoxy primer and polyurethane topcoat system) in accordance with ASTM D4541, Test Method E. Pull-off strength throughout the system shall be not less than 750 psi before and after environmental cycling. Environmental cycling shall be 10 cycles of the following: 4 hrs at 100% humidity per ASTM D1735; 16 hours below 0°F; and 4 hours at 140°F.

b. Corrosion resistance of zinc metallizing with epoxy primer and polyurethane topcoat system: A rating of 10 after 1000 hours salt fog (prohesion method) when tested in accordance with ASTM D1654, Procedure A. Scribe shall be cut through all coatings to bare steel substrate. Expose specimens in accordance with ASTM G85

2. Galvanizing touch up paint for regalvanizing welds and damaged areas shall conform to ASTM A780 – Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

2.3 SHOP ASSEMBLY- FABRICATION

A. General

1. Do not fabricate until shop drawings have been reviewed.

2. Fabricate and assemble steel in shop to greatest extent possible. Fabricate items and assemblies in accordance with AISC Specifications and the shop drawings. Properly mark members for field assembly.

B. Shop Connection

1. Weld or high-strength bolt shop connections as indicated on Drawings.

2. Comply with "Structural Welding Code", 2015, for procedures, appearance, and quality of welds and methods used in correcting welded work.

C. Holes for other work

1. Provide holes and openings required for securing other Work to steel framing and for passage of other Work through framing members. Coordinate with Drawings of other Work.

2. Cut, drill, flame cut, or punch holes perpendicular to metal surfaces. Method of cutting must not produce a roughness of over 1000 microinches. Surfaces exceeding these limits must be restored by machine grinding. Reinforce all openings with steel shapes as shown on shop drawings

2.4 GALVANIZING

A. General: All steel shall be galvanized by the zinc metallizing process.

B. Cleaning and Surface Preparation

1. Hardware (bolts, nuts, etc.): Clean and leave free of mill scale before galvanizing.

2. Clean all steel first in accordance with SSPC-SP1 – Solvent Cleaning, if needed.

3. Steel members: Clean in accordance with SSPC-SP10 – Near-White Metal Blast Cleaning, before zinc metallizing. Surface shall have a 3-4 mil anchor pattern. Moisture cannot be present on steel and temperature cannot be less than 5°F above the dew point. Thermal spray must be applied within 4 hours of blasting.

C. Shop Coat – Zinc Metallizing – Provide for galvanized items to have finish paint - All items exposed to public view and other items shown on Drawings or specified herein.

1. Thermally spray material at a rate of 4-5 mils DFT. Sprayed coating shall be free of lumps, blisters, and loosely adhering particles.

2. After material has cured, apply shop coats of paint.

2.5 SOURCE QUALITY CONTROL

A. Testing

1. General

a. Structural steel work is subject to all tests required by the Special Inspection requirements of the NYC Building Code.

b. Cooperate with the Testing Laboratory in making all required tests.

2. Tests

a. Shop bolted connections: Tested in accordance with AISC – American Institute of Steel Construction, specifications.

b. Shop welding - The laboratory will perform the following functions

1) Certify Welders

2) Visually inspect all welds, record type and locations of defects, and perform tests if necessary. Check all corrected work.

3) Perform non-destructive tests if necessary or as required by the Special Inspector.

B. Inspection

1. Testing Laboratory

a. City of New York will engage a special inspection agency or a testing laboratory to assist in inspection of steel fabrication and to conduct tests at mill, shop or foundry. The laboratory will assist in checking erection tolerances and provide shop and field testing required for all structural steel and metal deck work, including metal deck and studs.

b. The Testing Laboratory will be responsible to and under the supervision of a Special Inspector.

2. Special Inspector

a. The City of New York will assign, under the requirements of Section 1704.3 of the NYC Building Code, a Special Inspector to supervise the Work listed above under "Testing Laboratory".

3. Notification: Notify the Commissioner before beginning fabrication of the structural steel and supply laboratory with copies of agreements, approved drawings, approved prints of all shop details, etc., and all necessary information relating thereto. Do not ship material to job site until after inspection and approval by the Testing Laboratory.

4. Reports: Shop and field reports, including shipments, will be submitted by the Testing Laboratory to the Commissioner as the work proceeds at the shop or job site. A final report will be submitted by the Testing Laboratory when work is completed at the shop, and again when work is completed in the field. The Special Inspector reserves right to reject material not in compliance with specified requirements at any time.

5. Corrections: Correct deficiencies in work which inspections and tests have indicated to not be in compliance with requirements. Pay for additional tests, at own expense, necessary to reconfirm any non-compliance of original work and as necessary to show compliance of corrected work.

6. Contractor's Responsibility: Inspection and acceptance or failure to inspect shall in no way relieve the Contractor or the mill and shops from their responsibility to furnish satisfactory material strictly in accordance with Drawings and Specifications.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Verify that field conditions are acceptable and that erection may proceed. Notify the Commissioner in writing of conditions that adversely affect the Work. Do not proceed with erection until conditions have been corrected. Beginning of installation means the erector accepts existing conditions.

3.3 ERECTION

A. General

1. Erection shall conform to Section BC 3305 – Material Placement and Installation, of the NYC Building Code and AISC 360 – Specification for Structural Steel Buildings.

2. All work shall be erected plumb, square, and true to lines and levels in strict accordance with the structural requirements of the building.

3. Provide all machinery, apparatus, and staging required for the erection of steel work in a thoroughly safe and efficient manner. Install, maintain and remove, without injury to other Work, such temporary bracing, scaffolding, etc. as may be necessary or required. Care shall be taken that no part of the structure is overloaded during construction.

4. Arrange for deliveries of material to facilitate the rapid and continuous progress of operation, but the site or streets adjacent to same shall not be used for the storage of material unless absolutely necessary and then only with special permission of the Commissioner.

5. Employ a Licensed Professional Engineer (licensed in the state of New York) and Land Surveyor (licensed in the state of New York) to ensure accurate erection of the steel.

6. Do not alter or cut structural members without written approval of the Commissioner. Flame cutting in field of members to correct fabrication errors is to be avoided and to be done only upon approval of the Commissioner based on the method proposed. Roughness cannot exceed 1000 microinches. Restoration of surfaces shall be by mechanical grinding.

B. Temporary Shoring and Bracing

1. Provide temporary shoring and bracing members with connections of sufficient strength to bear erection loads and guy wires to maintain structure plumb and in true alignment until completion of erection. Remove temporary work when permanent members and bracing are in place and final connections are made. Fill erection bolt-holes on exposed to view members with plug welds and grind smooth.

C. Anchor Bolts

1. Furnish to the concrete masons anchor bolts and other connectors required for securing structural steel to cast-in-place concrete work, together with instructions, templates, etc. necessary for setting them. Anchor bolts are to be surveyed and any approved modifications made prior to placement of columns.

2. For expansion/adhesive anchors used as anchor bolts, drill holes of depth and size required by the manufacturer for the required loading.

3. Tighten anchor bolts after support members have been positioned and plumbed. Cut off protruding edges of wedges or shims flush with edge of base or bearing plate prior to packing with grout. Tighten expansion bolts/anchors to torque required by manufacturer.

D. Field Assembly

1. Erect structural frames accurately to lines and elevations indicated. Align and adjust members forming a part of a complete frame or structure before permanently fastening.

2. Clean bearing surfaces and other surfaces that will be in permanent contact before assembly.

3. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

4. Level and plumb individual members of structure within specified AISC tolerances.

5. Establish required leveling and plumbing measurements on mean operating temperature of structure. Make allowances for difference between temperature at time of erection and mean temperature at which structure will be when completed and in service.

6. Splice members only where indicated and accepted on shop drawings.

E. Connections

1. Field connections between new steel members will typically be bolted unless otherwise indicated on Drawings. Connections made to existing steel shall be welded utilizing E7018 electrode. Follow preheat and interpass temperature requirements given in AWS.

   a. Provide unfinished bolts where indicated on Drawings. Lock nuts by upsetting bolt end or by similar method when unfinished bolts are not encased in concrete. Tighten all bolts and nuts fully.

   b. For ASTM A307 bolts, hardened washer shall be installed under the turned element.

   c. Where connections are to be made to the vertical face of existing concrete, drill holes to the proper diameter and depth required for installation of expansion/ adhesive anchors and install the anchors as per manufacturer's instructions. Tighten to the torque values specified by the manufacturer. Attach plates flush with concrete surfaces after the surfaces have been cleaned.

2. Holes

   a. The size of bolt holes shall be in accordance with American Institute of Steel Construction (AISC), "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings."

   b. Ream holes that must be enlarged to admit bolts. Burning or use of drift pins is not permitted.

F. Field Touch up

1. Painted Members: After erection, clean all damaged areas in shop coat, exposed surfaces of bolts, bolt heads, nuts and washers, abrasions, and all field welds and unpainted areas adjacent to field welds to the same standards as the shop coat and paint with same paint to same thickness as the shop coat. These areas shall be thoroughly cleaned of rust and other bond inhibiting materials before applying the touch-up paint.

2. Galvanized Members: After erection, clean and paint all damaged areas to the galvanizing, welds, and areas adjacent to welds with the galvanizing touch up paint.

3.4 TOLERANCES

A. Erection tolerances shall be in accordance with "Code of Standard Practice for Steel Buildings and Bridges".

3.5 FIELD QUALITY CONTROL

A. Cooperate with the Special Inspector and the Testing Laboratory performing Special Inspection testing.Unless otherwise permitted, welding of crossing bars (tack welding) for assembly of reinforcement is prohibited.

B. The Special Inspector will review erection of structural framework and test field bolting and welding as listed in Part 2 of this Section. Lifting of bars and welded wire fabric into position during placement of concrete is not permitted.

END OF SECTION 05 12 10

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 30 00 – METAL DECK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Furnish material, labor, equipment, services necessary to erect all metal deck, including connections, welding and accessories required for installation of Work. Field cut and fit deck as required and cut all openings.

1.3 REFERENCES

A. Refer to DDC General Conditions.

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications or mandated by the NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. American Society of Testing and Materials (ASTM) standards, latest editions.

a. A29 Standard Specification for General Requirements for Steel Bars, Carbon and Alloy, Hot-Wrought.

b. A36 Standard Specification for Carbon Structural Steel.

c. A108 Standard Specification for Steel Bars, Carbon, Cold-finished, Standard Quality.

d. A653 Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

e. A780 Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coating.

f. A992 Standard Specification for Steel for Structural Shapes for Use in Building Framing

g. B633 Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel

2. "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings" 13th edition, including supplements. (AISC 335).

3. “Load and Resistance Factor Design Specification for Structural Steel Buildings” 2nd edition, including supplements. - American Institute of Steel Constructors (AISC LRFD 1999), as modified by the NYC Building Code.
4. Seismic Provisions for Structural Steel Buildings AISC 341-05.
5. Section BC 2209 of the NYC Building Code

6. International Code Council Evaluation Service (ICC-ES):

a. International Building Code, 2015

b. Acceptance Criteria for Steel Deck Roof and Floor Systems (AC43)

c. Steel Deck Diaphragms (ESR-2199)

7. "Structural Welding Code - AWS D1.1" - American Welding Society (AWS).

8. "Specifications for Mild Steel Covered Arc - Welding Electrodes - AWS A5.1" - AWS.

9. "Diaphragm Design Manual for Floor Decks and Roof Decks" 3rd Edition - Steel Deck Institute (SDI).

10. "Fire Resistance Directory" - Underwriters Laboratory (UL).

1.4 ENGINEERING REQUIREMENTS

A. Engineering of metal deck is governed by Section BC 2209 – Cold-formed Steel, of the NYC Building Code. Structural integrity requirements of the Section BC 2213.3 shall be met.

B. Metal deck unit sizes and gages are indicated on the Drawings.

C. Units shall be of three-span length except where framing layout does not permit. Deck sheets shall be butted over supports.

D. Use of integral and non-piercing hanger tabs to support ceiling systems is not permitted. Piercing hanger tabs with a safe working loading of 250 lbs or greater are permitted for ceilings

weights below the hanger tab capacity. Integral hanger tabs are to be used for venting purposes only.

E. Units included in a fire rated assembly must be classified in appropriate UL designs or have MEA, BSA, or OTCR approval.

F. Use fasteners or welds for decking attachment that provide adequate diaphragm shear strength, uplift resistance and stiffness for imposed load combinations.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: Submit manufacturer's information for the following:

1. Metal Deck

2. Deck Fasteners, if used

3. Primer Paint

C. Shop Drawings

1. Failure to submit legible shop drawings will be cause for return without review.

2. Shop drawings shall include the following:

a. Type and gage of metal deck.

b. Metal deck layout and orientation including clear indication where shoring is required.

c. Welding or fastener types, sizes and patterns.

d. Side and End details for metal deck.

e. Supplementary framing details.

f. Location of all openings and fittings.

g. Shop finish.

h. Size, location and spacing of stud shear connectors, where required, for each beam.

i. Designation of the welding electrode strength to be used.

3. Do not order steel in advance of approval of shop drawings, except at own risk.

4. Shop drawings reviewed by the Commissioner for general conformity with the Drawings shall not relieve the Contractor or the metal deck supplier of responsibility for correctness of fit, quantities of materials, and adequacy of attachment details of deck and accessories to the structural steel. Deck must have UL or OTCR approval as part of the fire rated assembly. Approval of shop drawings does not absolve the Contractor of this requirement.

5. Shop drawings shall be specific for the Project and shall be prepared under supervision of and bear the seal of a Professional Engineer licensed in the State of New York. Required connections not designed on the Drawings shall be done by the detailer's licensed Engineer. Do not submit unchecked shop drawings. After final approval of all shop drawings, submit a final set sealed and signed by the Professional Engineer.

6. Calculations in accordance with ICC-ES AC 43 – Steel Deck Roof and Floor Systems or SDI Design Method verifying diaphragm shear strength and stiffness: Submit calculations for the load tables of the metal deck supplied. Calculations shall be signed and sealed by a Professional Engineer licensed in the State of New York. Calculations shall be submitted upon request.

D. Quality Control Submittals

1. Certificates and Affidavits

a. Submit certificates from the manufacturers of the specified materials stating compliance with the applicable requirements set forth for all materials specified in this Section. Furnish bolt manufacturer's test reports, covering physical and chemical tests, for each lot of high strength bolts submitted.

b. Submit certificates from the manufacturers of the specified materials stating compliance with the applicable requirements set forth for all materials specified in this Section.

c. Furnish proof that deck to be used is part of a UL, MEA, BSA, or OTCR approved fire-rated assembly if other than deck shown on Drawings.

d. Submit certificate stating deck manufacturer is a member producer of SDI.

2. Manufacturers' Instructions

a. Furnish manufacturers' printed material, specifications and installation instructions for each type of decking and accessories.

3. Contractor Qualification

   a. Provide proof of Installer, Producer, and Rebar Detailer qualifications specified under "Quality Assurance".

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Qualifications

1. Manufacturer: Company specializing in the manufacture of metal deck as used in this Contract shall have a minimum of three years experience and is a member producer of SDI.

2. Erector: Company specializing in performing the Work of this Section shall have a minimum of three years experience and have done at least three projects with similar quantity of material.

3. Welders: All steel roof deck welders shall be AWS certified for welding of sheet steel and NYC licensed.

C. Regulatory Requirements

1. Work of this Section shall conform to all requirements of the NYC Building Code and all applicable regulations. Where more severe requirements than those contained in the NYC Building Code are given in this Section, the requirements of this Section shall govern. The City of New York shall hire a Professional Engineer licensed in the State of New York to conduct all Special Inspections required by the New York City Building Code. Any corrections to the installed Work shall be done at no cost to the City of New York.
2. New York City Board of Standards and Appeals (BSA): Rules for Arc and Gas Welding and Oxygen Cutting and Steel Covering the Specifications for Design, Fabrication, and Inspection of Arc and Gas Welded Steel Structures and Qualification of Welders and Supervisors.

3. Standards specified in Article 1.3 apply to Work of this Section. Where more severe requirements then those contained in the Standards are given in this Section or the New York City Building Code, requirements of this Section or the New York City Building Code shall govern.

D. Certifications

1. Structural metal deck and stud shear connectors shall conform to the material acceptance, certification and inspection requirements of Section BC 1701 – Structural tests and special inspections of the NYC Building Code..

2. Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedure".

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver deck to site undamaged. With each deck unit bearing the UL label and marking for specific system detailed.

B. Store deck units off the ground with one end elevated to provide drainage. Protect units from the elements with a waterproof covering.

C. Store materials to permit easy access for inspection and identification.

1.8 FIELD MEASUREMENTS

A. Take field measurements as required by Drawings. Where possible, take field measurements of existing conditions prior to fabrication. Verify that field measurements are the same as those shown on Drawings and shop drawings. Report all deviations to the Commissioner in writing.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Metal Deck

1. Vulcraft (Nucor Corporation)

2. Wheeling Corrugating Co.

3. United Steel Deck, Inc.

4. Or approved equal.

2.2 MATERIALS

A. Steel for Roof Metal Deck

1. Formed from galvanic steel sheets conforming to ASTM A653. Size of deck is to follow SDI requirements for thickness and tolerances.

2. Minimum yield strength of 33,000 psi.

3. Formed with integral locking lugs.

B. Miscellaneous Steel Shapes

1. Shall conform to the requirements of ASTM A36 – Standard Specification for Carbon Structural Steel or A992 – Standard Specification for Structural Steel Shapes. Members to receive fireproofing shall be unprimed and free of lubricants or oils that would impair the adhesion of the fireproofing material

C. Shop Finish

1. Steel sheet shall receive before being formed a coating of zinc conforming to ASTM A653 coating class G60 (both sides). Salt spray resistance of paint shall be 100+ hours when tested in accordance with ASTM B117 – Standard Practice for Operating Salt Spray (Fog) Appartatus.

D. Metal Deck Accessories (cants, pour stops, closure pieces, etc.)

1. Shall conform to the requirements of ASTM A653 – Standard Specification for Steel Sheet, Zinc-Coated(Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process, coating class G60. Unless a thicker gage is required by design considerations, such as at cantilever edge conditions, minimum thickness shall be same gage as metal deck.

E. Welds

1. Welding electrodes shall conform to either E60XX or E70XX classification of AWS A5.1 as selected by the licensed welder depending on the gauge of steel deck and strength of steel member being welded to and is subject to approval by the Commissioner.

F. Galvanizing by the Zinc Metallizing Process

1. Zinc/aluminum metallizing (referred to herein as zinc metallizing) is the process of thermally applying an 85/15 zinc-aluminum wire over the surface of steel. Zinc metallizing and finish coating system shall have the following performance characteristics and results of tests performed on representative samples (hot dip galvanizing is not acceptable):

a. Adhesion: Test zinc metallizing with complete finish coating (epoxy primer and polyurethane topcoat system) in accordance with ASTM D4541 – Standard Test

Method for Pull-Off Strength of Coatings Using Portable Adhesion Testers, Test Method E. Pull-off strength throughout the system shall be not less than 750 psi before and after environmental cycling. Environmental cycling shall be 10 cycles of the following: 4 hrs at 100% humidity per ASTM D1735; 16 hours below 0°F; and 4 hours at 140°F.

b. Corrosion resistance of zinc metallizing with epoxy primer and polyurethane topcoat system: A rating of 10 after 1000 hours salt fog (prohesion method) when tested in accordance with ASTM D1654, Procedure A. Scribe shall be cut through all coatings to bare steel substrate. Expose specimens in accordance with ASTM G85 – Standard Practice for Modified Salt Spray(fog) Testing.

G. Galvanizing Paint Repair

1. Galvanizing touch up paint for regalvanizing welds and damaged areas shall conform to ASTM A780 and comply with Military Specification MIL-P-21035, such as ZRC Cold Galvanizing Compound.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Do not begin placement of metal deck until all surfaces and members are deemed acceptable to receive the deck. Do not proceed with Work until any unsatisfactory conditions have been corrected to the satisfaction of the Commissioner.

3.3 ERECTION

A. General

1. Care should be taken to avoid overloading the supporting structural elements when placing bundles of metal deck or other construction loads on floors.

2. Do not use floor deck units for storage or working platforms until they are permanently secured.

B. Temporary Shoring and Bracing

1. Provide temporary shoring and bracing members with connections of sufficient strength to bear erection loads until completion of erection. Remove temporary work when permanent members are in place and final connections are made.

C. Metal Deck and Accessories Installation

1. Lay units in strict accordance with manufacturer's instructions and requirements and as shown on Drawings.

2. Adjust units in place before permanent fastening and accurately align end to end. Rectify inaccuracies in alignment and level of bearing before units are finally placed.

3. Provide proper bearing at all supports. Metal deck must be placed to bear fully on surface of beam flanges.

4. Fasten side laps of adjacent units between supports by crimping or mechanically fastening with sheet metal screws of size and spacing required by manufacturer. In no case shall fasteners exceed two feet.

5. Furnish, install, and weld in position all accessories, including pour stops, closures, cant strips, etc., where required.

a. Furnish sheet metal pour stops and closures for open ends of walls, and openings shown on Drawings. Pour stop gage is to be selected by manufacturer based on overhang. Revise gage if survey shows overhang exceeds that designed. Provide additional supports to strengthen pour stop at wedge inserts if required.

b. Provide welding hole cover, with friction fastening, to close welding access holes when required.

D. Cutting, Drilling, and Reinforcing of Openings

1. Where predetermined openings are framed by structural steel beams on all sides (shown on the Drawings), the metal deck shall be engineered by the manufacturer to fit these conditions. Clean bearing surfaces and other surfaces that will be in permanent contact before assembly.

2. Any opening which is not framed by structural steel beams on all sides, and which is required in steel decking, shall be cut by the respective trades requiring it.

3. Reinforcing of Openings in Steel Deck

a. Holes 6" or less in dimension need not be reinforced.

b. Holes greater than 6" but less than 30" in any dimension shall be reinforced by the Contractor as shown on the Structural Contract Drawings.

E. Field Touch Up

1. Clean scarred and rusted areas in galvanizing after deck installation is completed and paint welds and the scarred and rusted areas with the galvanizing repair paint. Apply in accordance with the manufacturer's instructions.

3.4 CLEANING

A. After installation, metal deck surfaces to receive fire proofing shall be clean of dust, greese, excessive oils, loose material and any other matter that would impair the adhesion of fire proofing material to deck and accessories.

END OF SECTION 05 30 00

SECTION 06 10 00 – ROUGH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

Provide rough carpentry Work as indicated on the Drawings, as required for the completed Work of this Contract, and as specified herein, including, the following:

1. Blocking and cants for roofing work

2. Plywood substrates for liquid applied roofing

3. Miscellaneous lumber.

1.3 REFERENCE DOCUMENTS

A. Refer to DDC General Conditions.

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. U.S. Department of Commerce.

a. American Softwood Lumber Standard PS 20

b. Product Standard PS 1 for Softwood Plywood

2. APA Engineered Wood Association. APA Design/Construction Guide

3. Grading Rules by:

a. Western Wood Product Association (WWPA)

b. Southern Pine Inspection Bureau (SPIB).

c. Redwood Inspection Service (RIS).

d. West Coast Lumber Inspection Bureau (WCLIB).

4. American Wood Preservers' Association (AWPA).

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Quality Control Submittals

1. Certifications for the following wood treatments

a. Dip Treatment: Certification by treating plant stating chemical solutions used, submersion period, and conformance with applicable standards.

b. Waterborne Preservative: Certified written statement that moisture content of treated materials was reduced to a maximum of 19 percent prior to shipment to Project site.

c. Pressure Treatment: Certification by treating plant stating chemicals and process used, net amount of chemical retained, and conformance with specified standards.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Mill and Producers Mark
1. Each piece of lumber and plywood shall be grade stamped indicating type, grade, mill, and grading agency certified by the Board of Review of the American Lumber Standards Committee. Mark shall appear on unfinished surface, or ends of pieces with finished surfaces.

C. Standards
1. Comply with following standards unless otherwise stated in drawings
a. Lumber: Shall conform with applicable provisions of American Softwood Lumber Standard PS 20 by the U.S. Department of Commerce.
b. Grading Rules:
1) Douglas Fir, Hem-Fir, Idaho White Pine, and other Western Woods: Western Wood Products Association (WWPA) or West Coast Lumber Inspection Bureau (WCLIB).

2) Southern Pine: Southern Pine Inspection Bureau (SPIB).
3) Redwood: Redwood Inspection Service (RIS).

c. Preservative Treatment: American Wood Preservers' Association (AWPA) Standards, quality control methods, and inspection requirements

1.6 DELIVERY, STORAGE AND HANDLING

A. Keep materials dry during delivery. Store materials 6" minimum above ground surface. Protect against exposure to weather and contact with damp or wet surfaces. Stack lumber and plywood, and provide air circulation between stacks.

B. Cover stored materials until ready for use for protection from moisture. Place and anchor covering in a manner which will assure good ventilation under the covering.

1.7 ENVIRONMENTAL REQUIREMENTS

A. Preservatives shall have a maximum VOC content of 350 gms/liter.

PART 2 - PRODUCTS

2.1 LUMBER

A. General

1. Furnish seasoned dimensional lumber dressed to nominal sizes indicated with 19 percent maximum moisture content at time of dressing, marked "S-DRY". Comply with dry size requirements of PS 20.

a. Dress: Surfaced 4 sides (S4S) unless otherwise indicated.

B. Board Lumber; less than 2" thick: Southern Pine No. 3 (SPIB), any species No. 4 (WWPA) or any species Standard (WCLIB), or Redwood Merchantable (RIS).

C. Plywood shall be ‘Exterior Grade’ with minimum ¾” thickness.

D. Miscellaneous Lumber

1. Standard grade, No. 3 grade, or better grade of the following species unless otherwise indicated:

a. Nailers and Blocking: Douglas Fir, Hem-Fir, Idaho White Pine or Southern Pine.

2.2 PRESERVATIVE TREATMENT

A. Treat lumber where indicated and as specified. Comply with applicable AWPA Standards and quality control and inspection requirements.

1. Fasteners and anchoring devices to be used with wood treated with waterborne preservatives shall be hot-dip galvanized or stainless steel if the wood will be exposed to moisture.

B. Complete fabrication of items to be treated to the greatest extent possible, prior to treatment. Where items must be cut after treatment, coat cut surfaces with heavy brush coat of the same chemical used for treatment or other solution recommended by AWPA Standards for the treatment.

C. Inspect wood after treating and drying. Discard warped or twisted items.

D. Pressure Treatment (Above Ground Use)

1. Treat the following wood items with waterborne preservatives for above ground use, complying with AWPA Standards C2 & C9. Redry wood to a maximum moisture content of 19 percent after treatments.

a. Nailers, blocking, cants, shim stock, and similar members used in conjunction with roofing (including related flashings, trim and vapor barrier), coping, and waterproofing.

b. Nailers, blocking, furring, stripping, and similar concealed members in contact with exterior masonry and concrete (including interior wythe of exterior walls), and all sills for framing.

PART 3 - EXECUTION

3.1 RELATED DOCUMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine substrate and supporting structure on which rough carpentry is to be installed for defects that will adversely affect the execution and quality of the Work. Do not proceed with installation until unsatisfactory conditions are corrected.

3.3 INSTALLATION

A. Do not use units of material with defects which impair the quality of the Work and units which are too small to fabricate the Work with minimum joints or with optimum joint arrangement.

B. Install Work accurately to required lines and levels with members plumb and true, accurately cut and fitted and securely fastened. Closely fit rough carpentry to other associated construction.

C. Securely attach carpentry Work to substrates by anchoring and fastening as indicated, or, if not indicated, as required by the referenced standards. Select fasteners of size that will not penetrate through members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood; predrill as required. Set nail heads in exposed Work which is to be painted or stained and fill resulting holes.

END OF SECTION 06 10 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 07 27 00 – FIRESTOPPING / SMOKE SEALS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Provide firestopping at all penetrations and juncture joints of fire-rated walls, floors and ceilings in accordance with the requirements of the New York City Building Code.

B. Firestopping and Smoke Seals shall be provided to the following specific locations:

1. Penetrations for the passage of duct, cable, conduit, piping and electrical busways and raceways through fire-rated vertical barriers (walls and partitions), horizontal barriers (floor slabs and floor/ceiling assemblies), and vertical service shafts. Provide 3 hour rated firestops at all new floor slab penetrations. Provide 2 hour firestops at penetrations through rated interior partitions.

2. New and existing openings and penetrations in fire-rated partitions or walls.

3. Locations shown specifically on the Drawings.

1.3 REFERENCE DOCUMENTS

A. Refer to DDC General Conditions.

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. American Society for Testing and Materials (ASTM)

2. Underwriters Laboratories, Inc. (UL)

3. National Fire Protection Association (NFPA)

4. Warnock Hersey

1.4 DEFINITIONS

A. Penetration: Any opening or foreign material passing through or into a fire-rated barrier.

B. Fire-Rated: Have the ability to withstand the effects of a standard fire exposure for a specified time period, as determined by qualified testing.

C. Fire-Rated Barrier: A floor, wall, partition or floor-ceiling assembly able to withstand a standard fire and hose stream test without failure.

D. Fire resistance rating: The ability of a structure to act as a barrier to the spread of fire and to confine it to the area of origin. Ratings are expressed in hours and apply to beams, columns, floors, ceilings, roofs, walls and partitions.

E. Firestopping: A means of sealing openings in fire-rated barriers to preserve or restore the fire resistance rating.

F. Firestop System: A material, or combination of materials, installed to retain the integrity of fire-rated construction by maintaining an effective barrier against the spread of flame, smoke or gases through penetrations in fire-rated barriers.

G. F Rating: The time period that the through-penetration firestop system limits the spread of fire through the penetration when tested in accordance with ASTM E814.

H. T Rating: The time period that the penetration firestop system, including the penetrating item, limits the maximum temperature rise to 325°F (163°C) above its initial temperature through the penetration on the non-fire side when tested in accordance with ASTM E814.

1.5 REQUIREMENTS

A. Technical Requirements

1. Firestopping materials shall be UL Classified as "Fill, Void or Cavity Material" for use in Through-Penetration Firestop Systems.

2. Firestop Systems shall provide a fire resistance rating at least equal to the hourly resistance rating of the fire-rated barrier and resist passage of smoke and other gases.

B. General Considerations

1. Firestop Systems do not re-establish the structural integrity of load bearing partitions. The Contractor shall consult the Commissioner prior to penetrating any load bearing assembly.

2. Firestop systems are not intended to support live loads or traffic. Contractor shall consult the Commissioner if there is reason to believe these limitations may be violated.

1.6 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data

1. Submit manufacturer's product information for each type of firestopping/smoke seal and assembly installed, including application instructions and specifications.

C. Shop Drawings

1. Submit manufacturer's product information for each type of firestopping/smoke seal and assembly installed, including application instructions and specifications.

D. Quality Control Submittals

1. Certificates

a. Furnish manufacturer's certification that materials meet or exceed specification requirements for each of the performance tests specified in Part 2.

b. Furnish applicator's certification that material has been completed as specified to meet fire resistance ratings, thickness requirements, and application requirements of the applicable assembly.

c. Furnish UL, BSA, MEA, or OTCR approval of material.

d. Furnish certificate stating each material is 100% asbestos free.

2. Contractor Qualifications

a. Provide proof of Manufacturer and Applicator qualifications specified under “Quality Assurance”.

E. Mock Up

1. Provide mock-up as indicated under Quality Assurance.

F. Guarantee

1. Contractor’s installation guarantee.

G. Low Emitting Materials Compliance Certifications

1. Provide documentation for each sealer to be used on site, indicating that the sealers comply with low V.O.C. requirements of The City of New York.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Qualifications

1. Manufacturer: Company specializing in the manufacture of firestopping/smoke seal materials to be used in this Contract shall have a minimum of three years’ experience

2. Installer: All firestopping Work shall be performed by a Subcontractor who will be acceptable to the firestopping manufacturer in the application of its products and systems and have a minimum of three years’ experience.

C. Regulatory Requirements

1. Material and application shall meet the requirements for firestopping materials in accordance with the NYC Building Code.

2. Material must have UL or NYC BSA, MEA or OTCR approval for each assembly utilized. Comply with the following for firestopping that is required to be in compliance with Section BC 713 – Penetrations, of the NYC Building Code:

a. ASTM E84 - Surface Burning Characteristics of Building Materials.

b. ASTM E814 - Fire Tests of Through Penetration Firestops.

c. U.L. 1479 - Fire Tests of Through-penetration `Firestops.

d. U.L. - Fire Resistance Directory; Through-Penetration Firestop Systems (XHEZ), and Fill, Void or Cavity Materials (XHHW).

e. U.L. 723 - Standard Test Method for Surface Burning Characteristics of Building Materials

D. Manufacturer Certification

1. Manufacturer shall provide written certification stipulating that its products and systems used in this Project, if installed in accordance with the manufacturer's recommendations, shall provide the firestopping specified in this Section, as indicated by its UL rating for that specific installation

E. Mock-up

1. Install, on representative substrates (on site), one mock-up of each type of firestopping system to be used on Project, for each fire rating required and for each type of wall, floor, and ceiling. Acceptable mock-up installations may remain as part of the completed work.

1.8 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in original, unopened packages bearing name of manufacturer, product identification, and the proper UL labels for fire hazard and fire-resistance classification.

B. Reject damaged packages found unsuitable for use and remove from job site.

C. Store materials off ground, under cover, and away from damp surfaces.

D. Keep materials dry at all times. Wet material shall be discarded.

E. Rotate stock material and use prior to expiration date.

1.9 ENVIRONMENTAL REQUIREMENT

A. Maintain air and substrate temperature at a minimum temperature of 50oF for 24 hours before, during, and for 24 hours after application of the material or as required by the product literature, which ever is more stringent. Contractor shall provide enclosures with heat to maintain temperatures.

1.10 CONTRACTORS GUARANTEE

A. Submit a guarantee, executed by the Contractor, agreeing to repair/replace firestopping work performed under this Contract which has cracked, flaked, dusted excessively, peeled, or has separated or fallen from the substrate due to defective workmanship for a period of one (1) year from the date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The manufacturer of products for this sections shall be one of the following:
1. Hilti Construction Chemicals, Inc., Tulsa, OK.
2. The Carborundum Company, Niagara Falls, NY.
3. 3M Fire Protection Products, St. Paul, MN.
4. W. R. Grace & Co., Macungie, PA
5. Or approved equal.

2.2 MATERIALS

A. Grout and sealant systems, as well as integral firestopping sleeves and membranes, shall meet or exceed requirements as specified in Part 1 of this Section and shall be acceptable to The Commissioner.

B. Firestopping systems shall meet the requirements of ASTM E814, which include the following:
   1. Prevent flame pass-through.
   2. Restrict temperature to not exceed 325°F over ambient on side of assembly opposite flames.
   3. Provide a positive smoke seal.
   4. Withstand hose stream test with a minimum positive pressure differential of 0.01 inch (2.49 pa).
   5. Provide an F rating of not less than the required fire rating of the wall penetrated.
   6. Provide an F rating and a T rating for floor penetrations of not less than 1 hour, but not less than the required fire rating of the floor penetrated, except as follows:
      a. Floor penetrations contained and located within the cavity of a wall do not require a T-rating.
      b. Metallic piping or tubing penetrating a single fire rated floor, having a maximum 6" diameter can be firestopped with concrete, grout or mortar of thickness to maintain the fire rating of the floor penetrated. No limit to the number of floors penetrated if the area of the penetration does not exceed 144 square inches in any 100 square feet of floor area.

C. Firestopping materials shall be asbestos-free, emit no toxic or combustible fumes and be capable of maintaining an effective barrier against flame, smoke, gas, and water in compliance with requirements of this Section.

D. Firestopping materials/systems shall be flexible to allow for normal movement of building structure and penetrating items(s) without affecting the adhesion or integrity of the system.

E. Firestopping materials shall not require hazardous waste disposal of used containers/packages.

F. On insulated pipe, the fire-rating classification must not require the removal of the insulation.

G. Firestopping materials shall be free of solvents. Shrinkage while curing shall not exceed shrinkage experienced during specified testing. Firestopping shall remain in complete contact with adjacent construction when fully cured.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine and confirm the compatibility of surfaces to receive firestopping materials. Verify that surfaces are sound, clean and dry and are ready to receive the firestopping.

B. Verify that penetration elements are properly located and securely fixed, with the proper space between the penetration element and surfaces of the opening

3.3 PREPARATION

A. Protect adjacent surfaces and equipment from damage.

B. Clean surfaces of openings.

3.4 INSTALLATION

A. Install firestopping system in strict accordance with the manufacturer's instructions to obtain the fire-rating required at the specific location. The Commissioner shall be immediately notified of conditions that will not allow the proper installation of the material to achieve the required rating, such as the annular space between the penetration and sleeve not being wide enough to meet the requirements of the assembly.

B. Provide escutcheons for piping at each side of penetration.

3.5 FIELD QUALITY CONTROL

A. Special Inspection
   1. The City of New York will assign under the requirements of Section 1704.25 of the NYC Building Code a Special Inspector who will inspect the firestopping/smoke seal installation to meet both the Special and periodic Special Requirements of the NYC Building Code.
   2. The Special Inspector will make inspections and any testing deemed necessary.

B. Nonconforming Firestopping/Smoke Seal Installation

1. When inspection indicates firestopping does not comply with the required assembly, remove and replace firestopping.
2. Areas of restoration or replacement will be re-inspected for compliance to the approved assembly.

C. Contractors Responsibility for Quality Control
1. Inspect all installations to ensure that all work meets the requirements specified as the Work progresses.
2. Cooperate with the Special Inspector performing Special and Periodic Inspection. Provide all access, including scaffolding and ladders.
3. Do not cover firestopping work until it is accepted and approved by the Special Inspector.

3.6 CLEANING AND PROTECTION

A. Remove excess materials, droppings, and debris; remove excess materials from adjacent surfaces.

B. Protect firestopping installations from damage until completion of all Project Work.

END OF SECTION 07 27 00

SECTION 07 52 16 – SBS MODIFIED BITUMINOUS MEMBRANE ROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Provide Styrene-butadiene-styrene (SBS) modified bituminous membrane, cold applied roofing system on steel deck, including but not limited to:

1. Polyisocyanurate insulation, Min. R Value of 30, mechanically fastened to deck.

2. 1/4” gypsum cover board, cold adhesive adhered.

3. Two trilaminate base ply membranes.

4. Granulated SBS modified bitumen white cap sheet ply adhered in cold process adhesive.

5. Base flashings

6. Metal flashing components and miscellaneous accessories as required.

1.3 DEFINITIONS

A. Refer to DDC General Conditions.

B. Roofing terminology and definition of terms related to roofing work in this section are as per ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual".

1.4 PERFORMANCE REQUIREMENTS

A. General Performance: Installed membrane roofing and base flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Membrane roofing and base flashings shall remain watertight.

B. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by membrane roofing manufacturer based on testing and field experience.

C. Roofing Membrane Load-Strain Properties

1. Provide a three-ply cold-applied roofing membrane identical to component systems that have been successfully tested by a qualified independent testing and inspecting agency to meet the following minimum load-strain properties at membrane failure when tested according to ASTM D 2523:

a. Tensile strain at failure, at 0 deg F: 740 lbf/machine direction, minimum; 4.00 percent elongation at break.

b. Tensile strain at failure, at 0 deg F: 780 lbf/cross-machine direction, minimum; 4.20 percent elongation at break.

D. Flashings and Fastening: Comply with requirements of 'Section 07 60 00 – Flashing and Sheet Metal'. Provide base flashings, perimeter flashings, detail flashings and component materials and installation techniques that comply with requirements and recommendations of the following:

1. FMG 1-49: Loss Prevention Data Sheet for Perimeter Flashings.

2. NRCA Roofing and Waterproofing Manual (Fifth Edition) for construction details and recommendations.

3. SMACNA Architectural Sheet Metal Manual (Fifth Edition) for construction details.

4. The metal edge securement, except gutter, shall be installed as tested in accordance with the most current version of the ANSI\SPRI ES-1, American National Standard for Edge Systems Used with Low-Slope Roofing Systems.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Shop Drawings:

1. Roof Survey locating high and low points of existing roof deck, pitch and locations of roof penetrations. Roof survey after new roofing installation to demonstrate compliance with required new pitch and general layout.

2. Tapered insulation layout, including slopes. The proposed tapered insulation layout shall be coordinated with the high points, low points and slopes of existing roof deck as identified in the roof survey performed as per item 1.5 B.1.

3. Crickets, saddles, and tapered edge strips, including slopes.

C. Samples for Verification: For the following products:

1. 8-by-10-inch sample of base plies.

2. 8-by-10-inch of sample granulated cap sheet.

3. 8-by-10-inch sample of flashing sheet and backer sheet.

4. 4-by-4-inch of roof insulation and cover board.

5. Six insulation fasteners of each type, length, and finish.

D. Installer Certificates: Signed by roofing system manufacturer certifying that Installer is approved, authorized, or licensed by manufacturer to install roofing system.

E. Qualification Data: For manufacturer's technical representative.

F. Warranties: Sample of warranties as specified in this Section.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Manufacturer Qualifications:

1. Manufacturer of roofing system shall demonstrate a minimum five (5) year track record of successful production and application of cold process roofing systems similar to the one specified for this project.

2. The manufacturer shall have current ISO-9001 Certification.

C. Installer Qualifications:

1. Installer performing Work of this Section sall have minimum 3 years experience in installing cold process roofing systems on projects of comparable size and scope.

2. Installer shall be approved, authorized, or licensed by the roofing system manufacturer to install manufacturer's product and shall be eligible to receive and issue the standard roofing manufacturer's warranty.

D. Installer's supervisor/foreman qualification:

1. Installer must maintain full-time supervisor/foreman on job-site during times that roofing work is in progress. Supervisor must have a minimum 3 years of experience in roofing.

E. Manufacturer's Technical Representative

1. Contractor shall employ a full time technical representative of manufacturer experienced in the installation and maintenance of the specified roofing system, qualified to perform roofing observation and inspections specified in Field Quality Control Article.

2. Manufacturer's representative shall be authorized by the manufacturer to issue warranty certification.

3. Manufacturer's Technical Representative must inspect roof installation every other day and report progress to the Commissioner. Provide progress photos for application of each operation of roofing system. In addition to regular inspections, Manufacturer's Technical (non-sales) Representative shall be present for roof work starts at each section.

4. It will be the contractor's responsibility to coordinate with the manufacturer to employ the manufacturer's representative or the roof observer to ensure receipt of the specified manufacturer warranty for the installed roofing.

F. Source Limitation: Obtain all roofing system components and accessories from the selected roofing manufacturer or approved in writing by the selected roofing system manufacturer.

G. Pre-installation Roofing Conference: Conduct conference at Project site.

1. Meet with Commissioner, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.

2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.

3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.

4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.

5. Review structural loading limitations of roof deck during and after roofing.

6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.

7. Review NYC Building Code regulations and requirements for insurance and certificates if applicable.

8. Review temporary protection requirements for roofing system during and after installation.

9. Review roof observation and restoration procedures after roofing installation.

H. Random Sampling:

1. Roofing material:

a. During course of work, the commissioner may secure samples according to ASMT D140-93 of materials being used from containers at job site and submit them to an independent laboratory for comparison to specified material.

b. Should test results prove that a material is not functionally equal to specified material:

1) Contractor shall be responsible for the expenses of the testing.

2) Roofing installed and found not to comply with the specifications shall be removed and replaced by contractor at no additional expense to the City of New York.

I. Fire-Test-Response Characteristics: Provide roofing materials with the fire-test-response characteristics indicated as determined by testing identical products per test method below by UL, FMG, or another testing and inspecting agency acceptable to the NYC Department of Buildings. Materials shall be identified with appropriate markings of applicable testing and inspecting agency.

1. Exterior Fire Test Exposure: Class A; ASTM E 108, for application and roof slopes indicated.

2. Fire-Resistance Ratings: ASTM E 119, for fire-resistance-rated roof assemblies of which roofing system is a part.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Do not leave unused felts and other sheet materials on the roof overnight or when roofing work is not in progress unless protected from weather and moisture and unless maintained at a temperature exceeding 50 deg F.

E. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

F. Contractor is responsible for the safekeeping of materials stored onsite.

1.8 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

B. Prevent dust, vapors, gases, and odors from entering into the building during roof installation. When shutting down or blocking air intakes, provide makeup air or additional intake air from sources away from the work area. Coordinate these procedures with Commissioner.

1.9 WARRANTY

A. Manufacturer’s Roofing Warranty: Submit a written warranty, signed by the roofing system manufacturer agreeing to promptly restore any leaks in the roof membrane system resulting from defects in materials or workmanship including roof plies and adhesive, base flashings, roof

insulations and adhesives, wood components, fasteners, and all roof system metal components for the indicated warranty period.

1. Manufacturer's 20-Year Systems Warranty.

2. Indicate a wind speed warranty of 74 M.P.H., as reported by the certified weather reporting station nearest to the site for the New York, N.Y. region. Provide a sample copy of standard roofing manufacturer's warranty, stating obligations, remedies, limitations, and exclusions of warranty.

3. Warranty shall run for a continuous 20 years from date of substantial completion.

4. Warranty containing any requirement(s) for commissioner to renew the warranty at any time during the 20 year period will not be accepted that

5. In year(s) number 2, 5, 10 and 15 of this warranty, manufacturer shall provide roof inspections, and limited housekeeping services, at no additional charge.

6. Upon successful completion of the work, the manufacturer's warranty as stated above shall be issued to the commissioner.

B. Applicator/Roofing Contractor Guarantee: Submit roofing installer's written warranty, signed by the installer, covering work of this section, including but not limited to, roof plies and adhesive, insulation layers, base flashings, roof insulations, wood components, fasteners, and all roof system metal components for two years from the date of substantial completion. The warranty shall guarantee material and workmanship for watertightness, weathertightness, and against all leaks. During the two-year period, upon notification to manufacturer to uphold warranty, the contractor shall respond and fix all reported leaks within 24 hours from time of notification, and fix all leaks without any expense to the City of New York.

1. Warranty Period: Two years from date of Substantial Completion.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Provide products which meet all VOC requirements of New York State Department of Environmental Conservation for applications outlined herein

1. Roof Coatings: Max VOC content of 250 gms/liter
2. Bituminous Roof Coatings: Max VOC content of 300 gms/ liter
3. Bituminous Roof Primers: Max VOC content of 350 gms/liter
4. Thermoplastic Rubber Coatings/Mastics: Max VOC content of 550 gms/liter

B. Modified Bitumen Granulated Cap Sheet and Reflective Elastomeric Coating shall be “Energy Star” rated.

1.11 SUSTAINABILITY REQUIREMENTS

A. Provide products complying with the following requirements:

1. Polyisocyanurate insulation shall have 9% of recycled content.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with meeting or exceeding specified performance requirements, provide the roofing system manufactured by one the following:

1. Tremco, Inc., Beechwood, OH. Phone: (908) 616 6437

2. Johns Manville Corporation, Denver, CO. Phone (914) 359-0110

3. The Garland Company, Cleveland, OH Ph.: (516) 717-5051

4. Or approved equal

2.2 MATERIALS

A. The roofing system shall be a fully adhered, three-ply preformed roofing system, including the components and accessories specified in this section.

B. Mineral Granular Roof System

1. SBS Modified Bitumen Granulated Cap Sheet, Color: White.

a. ‘POWERPLY 300 FR’ by Tremco Inc.

b. ‘DynaGlas FR CR’ by Johns Manville

c. ‘StressPLY E FR Mineral’ by The Garland Company

d. Or approved equal

2. Base and Intermediate Plys:

a. ‘BURmastic Composite Ply HT’ by Tremco Inc.

b. ‘Dyna Base base and intermediate ply’ by Johns Manville

c. ‘StressBase 80’ by The Garland Company

d. Or approved equal

C. Fluid Applied Flashing System

1. Flashing assembly shall consist of a white fluid applied membrane, with a reinforcing fabric/mat, for a finished dry film thickness of 70 mils, as manufactured by:

a. ‘Alphaguard’ by Tremco

b. ‘MBR Flashing Cement’ coated with‘CR Seam Coating’ by Johns Manville

c. ‘TuffFlash’ by The Garland Company

d. Or approved equal.

2. Flashing system shall be the type provided by the roof system manufacturer, and shall be compatible with the roofing.

D. Cold applied Interply Adhesive:

1. ‘Powerply Standard Cold’ by Tremco Inc.

2. ‘MBR Cold Application Adhesive’ by Johns Manville

3. ‘Weatherking’ by The Garland Company

4. Or approved equal

E. Cold applied Insulation and Coverboard adhesive:

1. Insulation and coverboard attachment shall be with a cold applied, modified urethane adhesive by the roof manufacturer:

a. ‘Low Rise Foam Insulation’ adhesive by Tremco Inc.

b. Johns Manville Two-part Insulation Adhesive

c. ‘Insul-Lock II’ by The Garland Company

d. Or approved equal

F. Roof Insulation

1. General:

a. Roof insulation shall consist of substrate board (where shown on the Contract Drawings or where required), foam insulation, and cover board as required for compliance with the requirements of this Section. Tapered and fill insulation is applied over the primary insulation to provide the required slope and pitch to roof drains. All insulation shall be sufficiently rigid to span the fluted openings of the metal deck, if applicable.

b. Preformed roof insulation boards manufactured or approved by roofing manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses required to create a minimum R-Value of 30.

c. Provide minimum 1/2" thick cover board, over polyisocyanurate insulation, over minimum 1/2 inch thick substrate board, unless indicated otherwise in drawings.

d. Slope insulation to drain. Taper insulation as tapered insulation layout submitted for review and approved by commissioner.

e. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where required for sloping to drain.

2. Polyisocyanurate Board Insulation: :

a. Rigid, closed-cell cellular polyisocyanurate thermal insulation with integrally laminated to heavy non-asphaltic fiber-reinforced felt facers core formed by using HCFCs as blowing agents to comply with ASTM C 1289 Type II, Class 1, Grade 2; with minimum compressive strength of 20 psi, nominal 2.0 pcf density

b. Facer Type shall be Felt or Glass-fiber mat.

c. Insulation shall be manufactured by or approved for use with the roof system, by the roof system manufacturer. Provide Insulation manufactured by:

1) 'AC Foam-II' by Atlas Energy Products, Atlanta, GA

2) ISO 1 and ISO 1 Tapered by Johns Manville

3) ISO95+ GL by Firestone Building Products Co., Carmel, IN

4) Multi-Max FA by R-Max Inc, Dallas, TX

5) Or approved equal.

G. Insulation Accessories
1. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatible with membrane roofing.
2. Fasteners: Factory-coated steel fasteners and plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening roofing membrane components to substrate, tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.
3. Wood Nailers and Cants: Comply with recommendations in FMG Loss Prevention Data Sheet 1-49, including requirements for wood nailers and cants. Fibrous cants are not permitted.
4. Tapered Edge Strips: ASTM C 208, Type II, Grade 1, cellulosic-fiber insulation board.

H. Cover Board
1. General: ASTM C 1278/C 1278M, cellulosic-fiber-reinforced, water-resistant gypsum substrate, minimum 1/2 inch thick.
2. Provide one of the following manufacturers/products:
   a. "Dens-Deck Prime Roof Guard," manufactured by Georgia-Pacific Corporation ; ASTM C 1177, glass-mat, water-resistant gypsum substrate, 1/2 inch thick with factory-primed face.
   b. “Securock Gypsum-Fiber,” as manufactured by United States Gypsum Company, Chicago, IL; ASTM C 1278, compressive strength minimum 1,800 psi, ½ inch thick.
   c. “JM DensDeck” by Johns Manville
   d. Or approved equal

I. Auxillary Roofing Membrane Materials
1. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with roofing membrane.
2. Water-Based Asphalt Primer: Water-based, asbestos-free, polymer modified, asphalt primer.
3. Asphalt Roofing Mastic: ASTM D 4586, Type II, Class 1, one-part, asbestos-free, cold-applied mastic specially formulated for compatibility and use with specified roofing membranes and flashings.
4. Elastomeric Stripping Mastic: One-part, asbestos-free, trowel-grade, elastomeric roof mastic specially formulated for compatibility and use with specified roofing membranes and flashings, with the following properties:
5. Elongation at 77 deg. F, minimum, ASTM D 412: 1000 percent.
6. Fasteners: Factory-coated steel fasteners and metal plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening roofing membrane components to substrate, tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.
7. Lead Flashings: Plumbing stacks and Drain Bowls: 4 lb. sheets ASTM B29-79

8. Termination Bar: .060" thick aluminum bar x 2" wide x 10' lengths. Fastener spacing 8" o.c.
9. Gasket Sealant: Two sided, butyl adhesive, 1" x 1/8 compression tape for termination bars.
10. Pitch Pocket mastic: Pourable Sealer.
11. Reflective Elastomeric Coating: Energy Star rated, white elastomeric coating with compatible primers, as recommended by the roofing manufacturer.
12. Roofing Granules: Ceramic-coated roofing granules, No. 11 screen size with 100 percent passing No. 8 sieve and 98 percent of mass retained on No. 40 sieve, color to match roofing membrane cap sheet.
13. Glass-Fiber Fabric for Stripping: Vinyl coated glass-fiber mesh cloth.
14. Miscellaneous Accessories: Provide miscellaneous accessories recommended by roofing system manufacturer.

J. Roof Pavers

1. Provide concrete Roof Ballast Pavers as indicated on drawings from one of the following manufacturers:
   a. 'Skyscape Ballast Pavers' by 'Firestone Building Products'
   b. 'Westile Ballast Paver' by Westile
   c. 'Wausau Ballast Pavers' by 'Wausau Tile'
   d. Or approved equal
2. The weight of the Roof Pavers shall be a minimum of 7 psf and a maximum of 12 psf.
3. Provide 'Ballast Paver Mats' as bearing between the pavers and roofing membrane and coordinate with roofing manufacturer for any implications of roofing pavers to maintenance of roofing warranty.
4. Do not store Pavers on the roof prior to installation.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:

1. Verify that roof openings and penetrations are in place and set and braced and that roof drains are securely clamped in place.

2. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.

3. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch out of plane relative to adjoining deck.

4. Verify that substrate is visibly dry and free of moisture.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Complete abatement of asbestos containing materials, if any, following all prescribed legal requirements.

B. All roof top curbs, units, projections and wall flashings must be raised to allow finish roof system flashing height of 8" minimum.

C. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

D. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

E. Upon award of contract and before any roofing work is started, roofing contractor shall check the roof drains for any damage. Roofing contractor shall clean out the roof leaders with "snakes" to ensure drains are open and free-flowing. Use hoses to flush out and ensure there is a constant flow of water from drains. Commissioner to be present for testing.

3.4 INSTALLATION, GENERAL

A. Install roofing system in accordance with manufacturer's recommendations.

B. Comply with recommendations in FMG Loss Prevention Data Sheet 1-49, including requirements for wood nailers and cants.

C. Begin the built up roof membrane system installation in the presence of roofing manufacturer technical (non-sales) personnel.

D. Coordinate installation of roofing system components so insulation and roofing plies are not exposed to moisture or remain exposed at the end of the workday or when rain is forecast.

E. Provide water cutoffs at the end of each day's work to cover exposed ply sheets and insulation with a course of coated felt with joints and edges sealed.

F. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of the roofing system.

G. Roofing system and building shall be water-tight at the end of each working day.

H. Remove and discard temporary seals before beginning work on adjoining.

I. Shingling Plies: Install base sheet and roofing plies with ply sheets shingled uniformly to achieve required number of membrane plies throughout. Shingle in direction to shed water.

J. Cooperate with inspecting and testing agencies engaged or required to perform services for installing modified bitumen membrane roofing system.

K. Asphalt Primer Application: Prime all surfaces and substrates to which cold adhesive or asphalt mastic or membrane will come in contact. Apply at the rate of 200 square feet per gallon. Coat all metal flashings and fascia with primer that will come in contact with membrane materials.

L. Contractor shall erect all required roof barriers and safety lines as required by OSHA and comply with OSHA regulations for safety.

3.5 ROOF DRAINS

A. General:

1. Inspect roof drains at time of existing roof tear-off to ascertain requirements for restoration and/or replacement of broken or missing parts.

2. Provide temporary means of protecting roof drains from clogging of foreign material during construction. (E.g. inclement weather, weekends, holidays, etc.)

B. Preparation:

1. For all existing roof drain locations, remove all foreign material from body of drain, tailpiece, connecting piping, and roof leader.

2. Flush through roof leaders to building drainage system to remove sediment and to test drain capacity.

3. Verify that all roof drains are clear and free flowing, and attain Commisioner approval prior to commencement of work.

4. Clean drain body of all bitumen and other contaminants.

5. Fasteners: Coat all bolt threads with manufacturer’s recommended permanent type lubricant to prevent freeze-up.

6. Set membrane under new clamping ring in full bead of water stop mastic.

7. Use bronze, brass or stainless steel machine bolts.

8. Do not seal the dome strainer to the drain body or clamping ring. It must be removable for future cleaning of the drain bowl or roof leader. Install only cast iron drain strainers. PVC or plastic-type drain strainers are not permitted.

3.6 INSULATION INSTALLATION

A. Comply with built-up roofing manufacturer's written instructions for installing roof insulation.

B. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.

C. Install insulation under area of roofing to achieve required thickness to achieve specified Continuous R-Value of 30 and minimum slope of 1/8.

D. Where overall insulation thickness is 2.7 inches or greater, install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.

E. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch with insulation.

1. Cut and fit insulation within 1/4 inch of nailers, projections, and penetrations.

F. Trim surface of insulation where necessary at roof drains so completed surface is flush with ring and does not restrict flow of water.

G. Wood Cants: Install and secure preformed 45-degree wood cants at junctures of built-up roofing membrane system with vertical surfaces or angle changes greater than 45 degrees.

H. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.

I. Taper insulation to provide a 48” square sump at drains.

J. Mechanically Fastened Insulation: Install each layer of polyisocyanurate insulation and secure to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.

1. Fasten insulation at a rate of one fastener/plate for every two square feet of board surface.

a. Increase fastener rate at perimeter and corners to meet specified wind uplift requirement.

3.7 COVER BOARD INSTALLATION

A. Install cover boards over existing insulation with long joints in continuous straight lines with end joints staggered between rows. Stagger joints from joints in insulation below a minimum of 6 inches in each direction. Loosely butt cover boards together.

1. Set cover board in ribbons of foamed cold-applied insulation adhesive at a rate of 12 O.C. with enhancements of 50% at edges and 75% in corners, firmly pressing and maintaining insulation in place.

B. Install tapered edge strips at perimeter edges of roof that do not terminate at vertical surfaces.

3.8 ROOFING MEMBRANE INSTALLATION, GENERAL

A. Install roofing membrane system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing".

B. Start installation of roofing membrane in presence of roofing system manufacturer's technical personnel.

C. Cooperate with inspecting agencies engaged or required to perform services for installing roofing system.

D. Coordinate installation of roofing so insulation and other components of built-up roofing not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.

1. Provide tie-offs at end of each day's work to cover exposed built-up roofing sheets and insulation with a course of coated felt set in roofing cement with joints and edges sealed.

2. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing.

3. Remove and discard temporary seals before beginning work on adjoining roofing.

E. Cold Process Asphalt Heating

1. An in-line heat exchange unit may be used to facilitate application

a. Do not exceed maximum adhesive temperature of 100° F.

b. Heat exchange unit: Use heat transfer oil approved by heating equipment manufacturer.

c. Follow operation procedures recommended by heating equipment manufacturer.

F. Substrate-Joint Penetrations: Prevent roofing asphalt and adhesives from penetrating substrate joints, entering building, or damaging built-up roofing components or adjacent building construction.

3.9 BASE-PLY SHEETS INSTALLATION

A. Install two roofing membrane trilaminate ply sheets according to roofing system manufacturer's written instructions starting at low point of roofing system. Align ply sheets without stretching. Extend sheets over and terminate beyond cants.

1. Shingle side laps of ply sheets uniformly to ensure that required number of ply sheets covers substrate at any point. Shingle in direction to shed water.

2. Embed each ply sheet in cold-applied membrane adhesive applied at rate of 2 gallons per 100 square feet, or as required by roofing manufacturer, to form a uniform membrane without ply sheets touching.

3. Avoid walking on plies until adhesive has set.

3.10 SBS-MODIFIED BITUMINOUS CAP SHEET INSTALLATION

A. Install SBS-modified bituminous roofing membrane cap sheet according to roofing manufacturer's written instructions, starting at low point of roofing system. Extend roofing membrane sheets over and terminate beyond cants, installing as follows:

1. Unroll roofing membrane sheets and allow them to relax for minimum time period required by manufacturer.

2. Embed each ply sheet in cold-applied membrane adhesive applied at rate of 2.0 gallons per 100 square feet.

B. Laps: Accurately align roofing membrane sheets, without stretching, and maintain uniform side and end laps. Stagger end laps. Install roofing membrane sheets so side and end laps shed water. Completely bond and seal laps, leaving no voids.

1. Restore tears and voids in laps and lapped seams not completely sealed.

2. Cast granules into adhesive lap bleed out, while adhesive is still fluid, to ensure a uniform granulated roofing surface.

C. Install modified bituminous membranes with side laps shingled with slope of roof deck. Nail off all roof plies into wood cants with 1" nails fastened 12" on center.

D. On reflective white cap sheets, apply coating to all areas where bituminous material has bled out or the reflective material has cracked or separated, to provide a uniformly white roof surface. For roof membrane and base flashings that are not manufactured to be reflective white, apply coating to all exposed surfaces. Prepare substrate and provide base coat of primers as recommended by roofing manufacturer.

3.11 FLASHING AND STRIPPING INSTALLATION

A. Install one ply base flashing system over cant strips and other sloping and vertical surfaces, at roof edges, and at penetrations through roof, and secure to substrates according to roofing system manufacturer's written instructions and as follows:

1. Adhere one ply base flashing ply in a continuous layer of flashing adhesive, applied at the rate required by the roofing system manufacturer.

2. Adhere SBS-modified granulated flashing cap sheet over backer sheet in manufacturer's specified cold-applied flashing adhesive at a rate of 1.0 gallon per 10 square feet, per ply.

B. Extend base flashings up a minimum of 8-inches above roof membrane and 6-inches onto field of roof membrane. Lap ends 6-inches minimum, and stagger end laps 18-inches minimum.

C. Mechanically fasten top of base flashing securely at terminations and perimeter of roofing.

1. Seal top termination of base flashing with a metal termination bar.

2. Set butyl tape behind base flashing.

3. Fasten through termination bar, flashing membrane, and butyl tape 8 inches on center.

4. Install metal counterflashing to cover flashing termination.

D. Seal base flashing to roofing membrane with a three course application of elastomeric stripping mastic and mesh.

E. Install two-ply stripping where metal flanges and edgings are set on membrane roofing. Extend plies minimum of 4" beyond edge of metal flange or beyond edge of previous installed ply and embed each ply in a full bed of asphalt mastic. Lap ends 6-inches minimum, and stagger end laps 18-inches minimum. Set all metal flanges on roof in full bed of mastic and prime flanges before stripping.

F. Roof Drains: Install four pound lead flange in bed of asphalt roofing cement on completed modified bitumen membrane roofing. Prime lead flashing and cover with stripping plies extending a minimum of 6 inches beyond edge of metal flashing onto field of roof membrane. Clamp roof membrane, metal flashing, and stripping into roof-drain clamping rings if required by roofing manufacturer.

1. Install stripping according to roofing system manufacturer's written instructions.

G. Complete all flashing details in accordance with attached drawings. Complete details to meet FM 1-49 approval requirements utilizing wood nailers and cant strips

3.12 FIELD QUALITY CONTROL

A. Manufacturer’s Technical Representative must inspect roof installation every other day and report progress to Commissioner.

B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion and submit report to the Commissioner

1. Notify commissioner 48 hours in advance of date and time of inspection.

2. Results will be made available to commissioner in written form. Any defects or entrapped moisture found within the new roofing system installation will be removed and replaced at no additional expense to the City of New York.

C. Restore or remove and replace components of roofing system where test results or inspections indicate that they do not comply with specified requirements.

D. Additional testing and inspecting, at no additional expense to the City of New York, will be performed to determine compliance of replaced or additional work with specified requirements.

3.13 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to the Commissioner.

B. Correct deficiencies in or remove roofing system that does not comply with requirements, restore substrates, and restore or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Sequence operations to avoid excessive or concentrated foot traffic and storage over roof areas while they cure.

D. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 52 16

SECTION 07 60 00 – FLASHING AND SHEET METAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Provide all flashing, trim and sheet metal Work as indicated on the Drawings, as required for the completed Work, and as specified herein. The Work shall include, but shall not be limited to, the following:

1. Roof flashings, counterflashing, drip edge/fascia and reglets

2. Insulated rooftop duct Curbs (prefabricated)

3. Miscellaneous flashings and other sheet metal work as indicated in the drawings.

1.3 REFERENCE DOCUMENTS

A. Refer to DDC General Conditions.

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by the NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

C. Sheet Metal and Air Conditioning Contractors National Association (SMACNA).

D. American Society for Testing and Materials (ASTM).

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Shop Drawings

1. Provide shop drawings for each sheet metal item to indicate shape, dimensions, material and gauge, finish. Show the manner of forming, jointing, and securing the metal flashings, trim, and other specified sheet metal items. Include expansion joint connections, and the method of forming waterproof connections to adjoining construction.

C. Samples

1. Materials for Flashing and Counter Flashing: One 6" sq piece, for each material specified.

D. Certificates of qualifications as specified under Article titled “Quality Assurance”.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Except as otherwise shown or specified, comply with applicable recommendations, details, and standards of SMACNA.

C. The installer shall have a minimum of three (3) years’ experience in the fabrication and installation of flashing systems, sheet metal components and other items utilizing the materials indicated in the specifications and drawings.

D. All metal Work shall be ink-stamped at intervals, identifying Manufacturer, type metal, and gage or thickness.

E. Materials containing asbestos are prohibited.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver, store, and handle products of this Section in such manner to protect them from damage.

1.7 PROJECT CONDITIONS

A. Make the roof and all uncompleted flashings watertight at the end of each work day.

1.8 CONTRACTORS GUARANTEE

A. The Contractor shall provide a two (2) year written guarantee, covering the flashing and sheet metal materials and workmanship. Should any defects occur during the stated period, they shall be corrected immediately, and all damage caused by such defects shall be corrected; all corrective Work shall be at the Contractor's expense.

PART 2 - PRODUCTS

2.1 MATERIALS FOR FABRICATION

A. Zinc-coated Copper sheet- match to existing

B. Stainless steel Sheet: Match to existing stainless gauge

C. For duct roof curbs, use min 16GA galvanized steel sheet

2.2 FASTENERS

A. Screws, Bolts, and other Fastening Accessories: Stainless steel

B. Anchors: Provide one of the following types:
   1. Hammer driven anchors, consisting of a stainless steel drive pin and a corrosion resistant metal expansion shield inserted thru a stainless steel disc with an EPDM sealing washer.
   2. Self-tapping, corrosion resistant, concrete and masonry screw inserted thru a stainless steel disc with an EPDM sealing washer

2.3 MISCELLANEOUS MATERIAL

A. Solder
   1. Composition of block tin/pig lead of proportion recommended by the metal manufacturer, stamped either 50/50 or 60/40 "Warranted".

B. Flux
   1. Paste or acid type as recommended by the metal manufacturer

C. Flashing Sealants, Cements, Mastics, and Adhesives

D. Provide products recommended in writing by the flashing manufacturer. Materials containing asbestos are prohibited.

   1. Where low modulus silicone sealant is indicated provide ASTM C 920, single-component, neutral-curing silicone; Class 100/50, Grade NS, Use NT, Use O

2.4 FABRICATION

A. General: Where practicable, form and fabricate sheet metal Work in the factory or shop. Produce bends and profiles accurately to the indicated shapes. Where not indicated or specified, follow the applicable requirements of the reference standards listed in PART 1. All corners to be factory prefabricated. Hem exposed sheet metal to eliminate all sharp edges and corners.

B. Stainless Steel and Copper Flashing and Counterflashing: Fabricated to be spring-tight against wall/roofing flashing when required. All corners shall be factory prefabricated: mitered and lapped approximately 1" at corner, and fully soldered or welded.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Coordinate the work of this Section with other Work for the correct sequencing of items which make up the entire system of weatherproofing or waterproofing.

3.3 PREPARATION

A. Do not install the Work of this Section unless all necessary nailers, blocking and other supporting components have been provided.

B. Do not install the Work of this Section unless all substrates are clean and dry. Do not cover air barrier membrane until the completion of a curing period if recommended by the membrane manufacturer.

3.4 INSTALLATION

A. Isolation: Separate dissimilar metals from each other with a dielectric coating to prevent galvanic action. Coating shall be bituminous or synthetic material as required for compatibility with adjacent materials. Provide escutcheons for piping at each side of penetration.

B. Tinning and Soldering:
   1. Use soldering irons (heavy coppers) as Industry Standard. Torch soldering is not acceptable.
   2. Clean, flux and tin all surfaces to be soldered.
   3. Sweat solder thoroughly into seams, completely filling the seam for the full width.
   4. Upon completion of soldering, remove all traces of flux residue, and if required, apply a neutralizing wash followed by a clean water wash.

END OF SECTION 07 60 00

SECTION 07 72 00 – ROOF ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Provide all roof accessories as indicated on the drawings and as specified herein, including but not limited to

1. Insulated Roof Hatches

1.3 REFERENCE DOCUMENTS

A. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by the NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

B. Underwriters Laboratories, Inc. (UL).

C. New York City Board of Standards and Appeals (BSA, or New York City Materials Equipment Acceptance (MEA).

D. Occupational Safety and Health Administration (OSHA).

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

B. Shop Drawings

1. Provide shop drawings showing relationship with adjoining Work and anchorage methods. Include plans, sections, and details.

C. Product Data

1. Manufacturer's catalog sheets, specifications, and installation instructions for roof hatches.
2. Manufacturer's Operations And Maintenance Manual

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. The manufacturers shall have a minimum of three (3) years' experience in the fabrication of type of specified roof hatches.

C. The installer shall have a minimum of three (3) years' experience in installation of type of specified roof hatches

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver, store, and handle products of this Section as recommended by the manufacturers and in such manner to protect them from damage.

1.7 PROJECT CONDITIONS

A. Coordinate sequence of hatch installation with roofing and flashing in such a manner as to maintain the warranty of all products.

1.8 WARRANTY

A. All roof hatches shall be furnished with manufacturer's standard 5 year warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Bilco Co., New Haven, CT

B. Babcock-Davis Hatchways, Inc., Arlington, MA

C. Karp Associates Inc., Melville, NY

D. Or approved Equal

2.2 ROOF HATCHES

A. Type
1. Aluminum units consisting of an insulated and weather stripped hinged cover on an insulated curb fitted with integral cap flashing and safety railing.
2. Cover shall be 11 gage, mill finish aluminum with 3" beaded or hemmed flange, 1" thick fiberglass insulation covered by a 18 gage aluminum liner, and neoprene or closed cell rubber gasket seal around perimeter. Cover shall open to 90 degrees.
3. Curb for Roof Hatch shall be 11 gage minimum, mill finish aluminum with 3½ " flange at bottom with holes for securing to roof deck, 11 gage aluminum cap flashing at top, and 1" thick rigid fiberboard insulation on exterior of curb.
4. Curb Height shall be as required to provide a dimension of at least 6” from top of roof surfacing (gravel, pavers, etc.) to bottom of integral cap flashing.

B. Fabrication
1. Continuously weld metal joints.

C. Hardware
1. Zinc or cadmium plated steel; heavy pintel hinges, enclosed spring operators, positive snap latch with turn handles inside and outside, padlock hasp inside, and automatic hold-open operating arm with one hand grip release handle.

D. Safety Railing
1. Conform to OSHA Standard CFR 29 1910.23 Fall Protection in General Industry. Hatch manufacturer’s railing system, with chain or gate on access side. Rail system shall be supported from hatch assembly without penetrating roofing. Provide weatherproof label: “NO HOISTING”. Provide corrosion resistant materials throughout.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Coordinate the work of this Section with other Work for the correct sequencing of items which make up the entire system of weatherproofing or waterproofing.

3.3 INSTALLATION

A. Install roof accessories in accordance with the manufacturer's instructions, unless shown otherwise on the Drawings. Securely anchor units in place to the substrate by bolting, screwing or welding.

B. Where mounting flanges are set directly in the roofing, embed the flanges in roofing cement or other waterproof mastic or adhesive as recommended by the manufacturer of the roofing. On sloping surfaces, integrate mounting flanges with roofing elements to properly shed water.

END OF SECTION 07 72 00

SECTION 07 90 00 – JOINT SEALERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Provide all joint sealer Work as indicated on the Drawings, as required for the completed Work, and as specified herein. Sealant installation locations include the following locations:

1. Coping transverse joints and masonry joints.

2. Around Door Openings

3. Miscellaneous locations indicated in drawings

1.3 REFERENCE DOCUMENTS

A. Refer to DDC General Conditions.

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. American Society for Testing and Materials (ASTM).

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data

1. Catalog sheets, specifications, and installation instructions for each product specified

C. Samples for initial selection

1. Provide Manufacturer’s color charts consisting of strips of cured sealants showing the full range of Manufacturer’s standard colors available for each product exposed to view.

D. Samples for Verification: For each type and color of joint sealant required, provide Samples with joint sealants in ½ inch wide joints formed between two 6-inch long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

E. Quality Control Submittals

1. Product Certificates: For each type of joint sealant and accessory, signed by product manufacturer.

2. Test Results

a. Sealant manufacturer's test reports certifying compatibility with all contiguous materials.

b. Sealant manufacturer's test reports certifying that the sealant will not stain contiguous materials.

c. Results of field adhesion testing

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Installers Qualification

1. The persons installing the sealants and their supervisor shall have a minimum of three (3) years' experience in the installation of sealants.

C. Container Labels: Include manufacturer's name, trade name of product, kind of material, federal specification number (if applicable), expiration date (if applicable), and packaging date or batch number.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver, store, and handle joint sealers as recommended by the manufacturer, to protect from damage.

1.7 PROJECT CONDITIONS

A. Environmental Requirements

1. Temperature: Unless otherwise approved or recommended in writing by the sealant manufacturer, do not install sealants at temperatures below 40 degrees F or above 85 degrees F.

2. Humidity and Moisture: Do not install the Work of this Section under conditions that are detrimental to the application, curing, and performance of the materials.

3. Ventilation: Provide sufficient ventilation wherever sealants, primers, and other similar materials are installed in enclosed spaces. Follow manufacturer's recommendations.

4. Do not proceed with installation of Joint Sealers under following conditions:

   a. When joint substrates are wet

   b. When joint widths are less than allowed by manufacturer for the application.

   c. Contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

   d. Substrates are frozen or superheated by the sun.

B. Protection

1. Protect all surfaces adjacent to sealants with non-staining removable tape or other approved covering to prevent soiling or staining

2. Protect all other surfaces in the Work area with tarps, plastic sheets, or other approved covering to prevent defacement from droppings.

3. Protect any painted surfaces which are not included in the Work from impact or damage.

PART 2 - PRODUCTS

2.1 SEALANTS

A. Type 1 Sealant; for general purpose use

1. One part low-medium modulus silicone sealant (plus or minus 50% movement); ASTM C920 classifications type S, grade NS, class 25, uses NT, M, G, and A; The product shall be:

   a. General Electric Silpruf Dow Corning’s 791

   b. Pecora’s 864

   c. Tremco Spectrem 2

d. Sika Sikasil C-955

e. Or approved equal.

2. Silicones shall meet following requirements:

a. ASTM C719- Low-Medium Modulus (+ or - 50%). Sealants shall not exhibit any cracking or surface degradation after 5000 hours exposure in the Atlas Twin Arc Weatherometer.

b. ASTM C661- Shall not incur a durometer increase greater than 10 points.

c. Sealants shall contain zero parts of toxic isocyanurate ingredients.

3. Provide custom colors if directed by commissioner

4. Thoroughly clean surfaces on which sealant is to be applied and prime surfaces as recommended by manufacturer before applying sealant.

2.2 JOINT FILLERS

A. Expanded Polyethylene Joint Filler:
1. Flexible, compressible, closed cell polyethylene of not less than 10 psi compression deflection (25 percent)

2.3 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint sealer manufacturer where required for adhesion to substrates indicated.

B. Cleaners for nonporous surfaces: Chemical cleaners acceptable to manufacturer of sealants and backing materials, free of oily residues or other ingredients capable of staining or harming joint substrates or adjacent material.

C. Masking Tape: Non-staining, nonabsorbent material compatible with joint sealants and adjacent surfaces.

D. Backing Material: Non-staining material compatible with joint substratesm sealants, primers and joint fillers, that are approved for applications indicated by the sealant manufacturer.

E. Bond Breaker tape: Polyethylene or other plastic tape as recommended by sealant manufacturer; nonbonding to sealant and self adhesive where applicable.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine all joint surfaces for conditions that may be detrimental to the performance of the completed Work. Do not proceed until satisfactory corrections have been made.

3.3 PREPARATION

A. Clean joint surfaces immediately before installation of sealant and other materials specified in this Section.
   1. Remove all loose materials, dirt, dust, rust, oils and other foreign matter that will impair the performance of materials installed under this Section.
   2. Remove lacquers, protective coatings and similar materials from joint faces with manufacturer's recommended solvents
   3. Use methods such as grinding, acid etching or other approved and manufacturer's recommended means, if required, to clean the joint surfaces, assuring that the sealant materials will obtain positive and permanent adhesion.

3.4 JOINT BACKING INSTALLATION

A. Install bond breaker tape in relaxed condition as it comes off the roll. Do not stretch the tape. Lap individual lengths.

B. Install backer rod of sufficient size to fill the joint width at all points in a compressed state. Compress backer rod at the widest part of the joint by a minimum of 25 percent. Do not cut or puncture the surface skin of the rod.

3.5 SEALANT INSTALLATION

A. Except as shown or specified otherwise, install sealants in accordance with the manufacturer's printed instructions.

B. Install sealants with ratchet hand gun or other approved mechanical gun. Where gun application is impracticable, install sealant by knife or by pouring, as applicable.

C. Finishing

1. Tool all vertical, non-sag sealants so as to compress the sealant, eliminating all air voids and providing a neat smoothly finished joint. Provide slightly concave joint surface, unless otherwise indicated or recommended by the manufacturer.
2. Use tool wetting agents as recommended by manufacturer.

3.6 FIELD QUALITY CONTROL

A. Field Adhesion Testing of Sealants - Test completed elastomeric joints as follows:
   1. Extent of Testing: Test completed elastomeric sealant joints at one test for each 500 feet of joint length.
   2. Test Method: Test joints by hand pull method described below:
      a. Make knife cuts from one side of joint to other, followed by two cuts 2 inches long at sides of joint and meeting cross cut at one end. Place a mark 1 inch from cross cut end of 2 inch piece.
      b. Use fingers to grasp 2 inch piece of sealant between cross-cut end and 1" mark, pull firmly at a 90 degree angle or more in direction of side cuts while holding a ruler along sides of sealant. Pull sealant out of joint to the distance recommended by the sealant manufacturer for testing adhesive capability, but not less than that equaling specified maximum movement capability in extension, hold this position for 10 seconds.
      c. For joints with dissimilar substrates, check adhesion to each substrate separately. Do this by extending cut along one side, checking adhesion to opposite side.
   3. Inspect joints for complete fill, for absence of voids, and for joint configuration complying with specified requirements. Record results in a field-adhesion-test log.
   4. Inspect tested joints and report on the following:
      a. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each type of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.
      b. Whether sealants filled joint cavities and are free of voids.
      c. Whether sealant dimensions and configurations comply with specified requirements
   5. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
   6. Restore sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.
   7. Evaluation of Field Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.7 CLEANING

A. Immediately remove misapplied sealant and droppings from metal surfaces with solvents and wiping cloths. On other materials, remove misapplied sealant and droppings by methods and materials recommended in writing by the manufacturer of the sealant material.

B. After sealants are applied and before skin begins to form on sealant, remove all masking and other protection and clean up remaining defacement caused by the Work.

END OF SECTION 07 90 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 07 92 00 - JOINT SEALANTS FOR CONCRETE WORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SECTION INCLUDED

A. Silicone joint sealants.

B. Preformed silicone joint sealants and molded silicone cruciforms.

1.3 PRECONSTRUCTION TESTING

A. Preconstruction Compatibility and Adhesion Testing: Submit to joint-sealant manufacturers, for testing indicated below, samples of materials that will contact or affect joint sealants.

1. Use ASTM C 1087 to determine whether priming and other specific joint preparation techniques are required to obtain rapid, optimum adhesion of joint sealants to joint substrates.
2. Submit not fewer than [eight] pieces of each kind of material, including joint substrates, shims, joint-sealant backings, secondary seals, and miscellaneous materials.
3. Schedule sufficient time for testing and analyzing results to prevent delaying the Work.
4. For materials failing tests, obtain joint-sealant manufacturer's written instructions for corrective measures including use of specially formulated primers.

B. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:

1. Locate test joints where indicated on Project or, if not indicated, as directed by the Commissioner.
2. Conduct field tests for each application indicated below:

    a. Each kind of sealant and joint substrate indicated.

3. Notify Commissioner seven days in advance of dates and times when test joints will be erected.
4. Arrange for tests to take place with joint-sealant manufacturer's technical representative present.

a. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.

1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

5. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
6. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.4 ACTION SUBMITTALS

A. Product Data: For each joint-sealant product indicated.

B. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.

C. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in 1/2-inch- wide joints formed between two 6-inch- long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

D. Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.
2. Joint-sealant manufacturer and product name.
3. Joint-sealant color.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer Retain first paragraph below for product certificates from manufacturers.

B. Product Certificates: For each kind of joint sealant and accessory, from manufacturer.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that sealants comply with requirements.

D. Preconstruction Compatibility and Adhesion Test Reports: From sealant manufacturer, indicating the following:

1. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
2. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.

E. Preconstruction Field-Adhesion Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.

F. Field-Adhesion Test Reports: For each sealant application tested.

G. Warranties: Sample of special warranties.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A firm with minimum three years of experience installation of specified products in successful use on similar projects, including a full-time on-site supervisor with a minimum of [three] years of experience installing similar work.

B. Source Limitations: Obtain each kind of joint sealant from single source from single manufacturer.

C. Product Testing: Test joint sealants using a qualified testing agency.
1. Test for compliance with requirements specified by reference to ASTM C 920 for adhesion and cohesion under cyclic movement, adhesion-in-peel, and indentation hardness.

D. Mockups: Install sealant in mockups of assemblies specified in other Sections that are indicated to receive joint sealants specified in this Section. Use materials and installation methods specified in this Section.

E. Preinstallation Conference: Conduct conference at Project site.

1.7 PROJECT CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.8 WARRANTY/GUARANTEE

A. Manufacturer's standard guarantee form in which the contractor agrees to restore/retouch or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified guarantee period.

1. Guarantee Period: Two years from date of Substantial Completion.

B. Manufacturer's standard warranty form in which joint-sealant manufacturer agrees to furnish joint sealants to restore/retouch or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:

1. Movement of the structure caused by structural settlement or errors attributable to design or construction resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
2. Disintegration of joint substrates from natural causes exceeding design specifications.
3. Mechanical damage caused by individuals, tools, or other outside agents.
4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

B. Liquid-Applied Joint Sealants: Comply with ASTM C 920 – Standard Specification for Elastomeric Joint Sealants, and other requirements indicated for each liquid-applied joint sealant specified, including those referencing ASTM C 920 – Standard Specification for Elastomeric Joint Sealants, classifications for type, grade, class, and uses related to exposure and joint substrates.

1. Suitability for Immersion in Liquids. Where sealants are indicated for Use I for joints that will be continuously immersed in liquids, provide products that have undergone testing according to ASTM C 1247. Liquid used for testing sealants is deionized water, unless otherwise indicated.

C. Stain-Test-Response Characteristics: Where sealants are specified to be nonstaining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.

2.2 SILICONE JOINT SEALANTS

A. Single-Component, Nonsag, Non-Staining, Neutral-Curing Silicone Joint Sealant General Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, Use NT, M, G, A, and O; SWRI validation.

1. Hardness, ASTM C 661: 15 durometer Shore A, minimum.
2. Volatile Organic Compound (VOC) Content: 1 g/L maximum.
3. Volatile Organic Emissions (VOE): Not greater than NYC Building Code emissions levels.
4. Staining, ASTM C 1248: None on concrete, marble, granite, limestone, and brick.
5. Color: Provide color chart and/or samples to the Commissioner.

B. Single-Component, Nonsag, Non-Staining, Neutral-Curing Silicone Joint Sealant General Sealant: ASTM C920, Type S, Grade NS, Class __, Use NT; ASTM C 1184.

1. Tensile Strength, ASTM D 412: 350 psi (2.4 MPa), at 100 percent elongation.
2. Tear Strength, ASTM D 624: 67 pli (11.7 kN/m).
3. Peel Strength, ASTM C 794: 60 pli (10.5 kN/m).
4. Hardness, ASTM C 661: 40 durometer Shore A, minimum.
5. Volatile Organic Compound (VOC) Content: 14 g/L maximum.
6. Volatile Organic Emissions (VOE): Not greater than NYC Building Code emissions levels.
7. Staining, ASTM C 1248: None on concrete, marble, granite, limestone, and brick.
8. Color: Black.

2.3 PREFORMED JOINT SEALANTS

A. Preformed Silicone Joint Sealants: Manufacturer's standard sealant consisting of precured low-modulus silicone extrusion, in sizes to fit joint widths indicated, combined with a neutral-curing silicone sealant for bonding extrusions to substrates.

B. Preformed Silicone Joint Seals PS#1: Manufacturer's standard seal consisting of precured low-modulus silicone extrusion, in sizes to fit applications indicated on Drawings, combined with a neutral-curing liquid silicone sealant for bonding seals to substrates.

1. Shore A hardness ASTM D2240: 29-32
2. Tensile strength ASTM D412: 218 psi
3. Elongation at break ASTM D412: 554%
4. Movement classification ASTM C1523: Class 200%
5. Tear propagation classification ASTM C1523: PT (partial tear)

C. Preformed Silicone Joint Seals PS#2: Manufacturer's standard seal consisting of precured low-modulus silicone extrusion, in sizes to fit applications indicated on Drawings, combined with a neutral-curing liquid silicone sealant for bonding seals to substrates.

1. Ozone Resistance, 100 mPa 100 hr @ 104 °F (40 °C) 20% Elongation ASTM D1149: No cracks
2. Brittleness Temperature at 40°F (-40°C): Pass
3. Four products characterized by hardness (durometer)

    a. Shore "A" hardness ASTM D2240: 40 durometer
        1) Compression set ASTM D395, 22 hour @ 212°F, Ozone resistance, 100mPa ASTM D395: 13.8%
        2) Tensile strength ASTM D412: 1060 psi (7.3 MPa)
        3) Elongation at rupture ASTM D412: 323%
        4) Tear strength ASTM D624: 120 lb/in (21 kN/m)
    b. Shore "A" hardness ASTM D2240: 60 durometer
        1) Compression set ASTM D395, 22 hour @ 212°F, Ozone resistance, 100mPa ASTM D395: 12.5%
        2) Tensile strength ASTM D412: 1139 psi (7.8 MPa)
        3) Elongation at rupture ASTM D412: 235%
        4) Tear strength ASTM D624: 107 lb/in (18.7 kN/m)
    c. Shore "A" hardness ASTM D2240: 70 durometer
        1) Compression set ASTM D395, 22 hour @ 212°F, Ozone resistance, 100mPa ASTM D395: 11%
        2) Tensile strength ASTM D412: 1075 psi (7.4 MPa)
        3) Elongation at rupture ASTM D412: 167%
        4) Tear strength ASTM D624: 121 lb/in (21.2 kN/m)
    d. Shore "A" hardness ASTM D2240: 80 durometer
        1) Compression set ASTM D395, 22 hour @ 212°F, Ozone resistance, 100mPa ASTM D395: 12.9%
        2) Tensile strength ASTM D412: 1095 psi (7.6 MPa)
        3) Elongation at rupture ASTM D412: 113%
        4) Tear strength ASTM D624: 92 lb/in (16.1 kN/m)

2.4 JOINT SEALANT BACKING

A. General: Provide sealant backings of material that are nonstaining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin) Type B (bicellular material with a surface skin) or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

D. Pre-Compressed Impregnated Foam Tape:

1. Preformed Foam Joint Seals PS#3: Manufacturer's standard preformed, pre-compressed, open-cell foam seal manufactured from urethane foam with minimum density of 10 lb/cu. ft. (160 kg/cu. m), impregnated with water-repellent agent. Provide factory-produced pre-compressed sizes selected to fit joint widths; coated on one side with a pressure-sensitive adhesive.

    a. Thermal conductivity ASTM C 518: .28-0.30 BTU-in/hr-°F-ft^2
    b. Thermal resistance ASTM C 518: 3.3-3.6 hr-°F-ft^2/BTU
    c. Frame spread ASTM E84: 0
    d. Smoke development ASTM E84: 5
    e. Volatile Organic Compound (VOC) Content: 0 g/L maximum.
    f. Volatile Organic Emissions (VOE): Not greater than NYC Building Code emissions levels.
    g. Color: Black or Grey.

2. Preformed Foam Joint Seals PS#2: Manufacturer's standard preformed, precompressed, open-cell foam seal manufactured from urethane foam impregnated with water-repellent agent. Provide factory-produced precompressed sizes selected to fit joint; coated on one side with a pressure-sensitive adhesive.

    a. Resistance to driving rain ASTM E331: 2.86 psf (137 Pa)
    b. Overall heat transfer R Value ASTM C518-10: minimum R value 3.1 in^{-1}
    c. Flame spread ASTM E84: 0
    d. Smoke development ASTM E84: 5

3. Preformed Foam Joint Seals PS#2: Manufacturer's standard preformed, precompressed, open-cell foam seal manufactured from urethane foam impregnated with water-repellent agent. This foam sealant has an extra layer of impregnation that acts as a vapor retarder. Provide factory-produced precompressed sizes selected to fit joint; coated on one side with a pressure-sensitive adhesive.

    a. Flammability class: B2 (normal flammability)
    b. Overall heat transfer R Value ASTM C518-10: minimum R value 3.1 in^{-1}
    c. Coefficient of diffusional resistance EN 150 12572: $\mu < 100$
    d. Water vapor permeability ASTM E96: 28 perms at 70°F (21°C) and 50% RH
    e. Windload cycling (before ASTM E2357) ASTM E283: 0.0014 cfm/ft^2 at 75 Pa
    f. Windload cycling (after ASTM E2357) ASTM E283: 0.0017 cfm/ft^2 at 75 Pa
    g. Flame spread ASTM E84: 5
    h. Smoke development ASTM E84: 150

2.5 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Remove laitance and form-release agents from concrete.
3. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants.

B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 – Standard Guide for Use of Joint Sealants for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of sealant backings.
2. Do not stretch, twist, puncture, or tear sealant backings.
3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.

D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint profile per Figure 8A in ASTM C 1193, unless otherwise indicated.
4. Provide flush joint profile where indicated per Figure 8B in ASTM C 1193.
5. Provide recessed joint configuration of recess depth and at locations indicated per Figure 8C in ASTM C 1193.

    a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

3.4 FIELD QUALITY CONTROL

A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:

1. Extent of Testing: Test completed and cured sealant joints as follows:

    a. Perform 10 tests for the first 1000 feet of joint length for each kind of sealant and joint substrate.

2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193-Standard Guide for Use of Joint Sealants, or Method A, Tail Procedure, in ASTM C 1521 – Standard Practice for Evaluating Adhesion of Installed Waterproofing Sealant Joints.

    a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.

3. Inspect tested joints and report on the following:

    a. Whether sealants filled joint cavities and are free of voids.
    b. Whether sealant dimensions and configurations comply with specified requirements.
    c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.

4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.
5. Restore/retouch sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

B. Evaluation of Field-Adhesion Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without

deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with restore/retouched areas are indistinguishable from original work.

3.7 JOINT SEALANT SCHEDULE

A. Glazing-Sealant Application: Exterior joints in glazing systems JS-#1.

1. Joint Locations:
   a. Aluminum to aluminum joints.
   b. Concrete to aluminum joints.
   c. Other joints as indicated.

2. Silicone Glazing Sealant: Single component, nonsag, neutral curing, Class 100/50
3. Joint-Sealant Color: As selected by the Commissioner from manufacturer's full range of colors.

B. Glazing-Sealant Application: Exterior joints in glazing systems JS-#2.

1. Joint Locations:

   a. Glazing cap and weather beads
   b. Other joints as indicated.

2. Silicone Glazing Sealant: Single component, nonsag, neutral curing, Class 50.
3. Joint-Sealant Color: As selected by the Commissioner from manufacturer's full range of colors.

C. Glazing-Sealant Application: Exterior joints in glazing systems JS-#3.

1. Joint Locations:
   a. Joints between aluminum.
   b. Other joints as indicated.

2. Silicone Glazing Sealant: Preformed silicone seal.
3. Joint-Sealant Color: As selected by the Commissioner from manufacturer's full range of colors.

END OF SECTION 07 92 00

PAGE INTENTIONALLY LEFT BLANK

SECTION 08 11 00 – STEEL DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Provide galvannealed steel doors and frames as indicated on Drawings and specified herein.

1.3 REFERENCES

A. Refer to DDC General Conditions.

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by the NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. Underwriter's Laboratory, Inc. (UL)
2. American Society for Testing and Materials (ASTM)
3. National Fire Protection Association (NFPA)
4. Steel Door Institute (SDI)
5. Hollow Metal Manufacturers Association (HMMA)
6. Warnock Hersey Inc.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data

1. Submit manufacturer's catalog sheets, specifications and installation instructions.

C. Shop Drawings

1. All shop drawing shall be Site specific for the Project. Show details of each frame type, elevation, construction and installation for each door type, conditions at openings, location for each door type, location and installation requirements for finish hardware (including cutouts and reinforcements), details of connections, and anchorage and accessory items.Include dimensional drawings coordinated with existing openings and conditions verified in field and coordinated with new work.

2. Include a schedule of doors and frames using the same reference numbers for details and openings as those on the Contract Drawings.

D. Samples

1. Frames: Corner sample of each type, 18" x 18" with mortises and reinforcements, shop painted.

2. Doors: Corner sample of each type showing construction, 18" x 18", with mortises and reinforcements, shop painted.

E. Certificates

1. Include approval data and acceptance by a New York City Building Department approved testing agency for all fire-rated assemblies.

2. Provide certification for oversized assemblies as described in Quality Assurance.

3. Provide certification for watertight door assemblies and certified test/calculation data.

4. Provide certification for maximum U Value for exterior doors as specified in item ‘1.10A Environmental Requirements’.

1.5 QUALITY ASSURANCE

A. Provide doors and frames complying with ANSI/SDI A250.8 and as specified herein.

B. Fire rated assemblies:

1. Wherever fire resistance classification is shown or scheduled for steel doors and frames, provide fire rated units that have been tested as fire door assemblies and comply with National Fire Protection Association (NFPA) Standard No. 80, are tested in accordance with NFPA 252 or UL 10B/UL 10C and UL 1784 as required by the NYC Building Code and comply with these Specifications. Identify each door and frame with metal UL, or

Warnock Hersey Inc. labels indicating applicable fire class of the unit. Rivet or weld labels on the hinge edge of door and jamb rabbet of frame.

2. Whenever fire rated assemblies are larger than size limitations established by NFPA, provide manufacturer's certification that they have been constructed with materials and methods equivalent to requirements for labeled construction.

3. See Door Schedule in the Drawings for Label Requirements (Class) for respective openings.

C. Regulatory Requirements

1. Not withstanding the requirements for fire-rated assemblies noted above, all fire-rated doors and frames shall be approved for use in New York City.

2. Provide evidence of acceptance by an approved testing agency. Provide permanent labels on doors and frames as required by the New York City Building Code. Labels shall be applied at the factory or where fabrication and assembly are performed.

1.6 WARRANTY

A. Submit warranty signed by manufacturer, agreeing to replace assemblies which fail in materials, performance or workmanship within the specified warranty period.

1. Warranty Period: 1 year from date of Substantial Completion.

B. Contractor’s guarantee: 1 year from date of substantial completion.

1.7 DELIVERY, STORAGE AND HANDLING

A. Store doors and frames on raised platforms in vertical position with blocking between units to allow air circulation.

B. During delivery, storage and handling, protect doors and frames from water damage.

C. Provide delivery, storage and handling in such manner to prevent damage to products.

1.8 GAGE STANDARDS

A. Gages specified are based on U.S Standard Gauge for hot rolled and cold rolled steel sheets.

B. The allowable tolerances for steel sheet thicknesses shall be in accordance with HMMA Standards for ‘Tolerances and Clearances for Commercial Hollow Metal Doors and Frames’

1.9 ENVIRONMENTAL REQUIREMENTS

A. Opaque Exterior Doors in this project shall comply with the NYC Energy Conservation Code requirements. The maximum U Value shall be U-0.61.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the requirements of this Section, furnish and install products of one of the following manufacturers:

1. General Fireproof Door Corp., Bronx, NY 10474

2. Acme & Dorf Door Co., New City, NY 10956

3. Ceco Door Products Div., Brentwood, TN 37027

4. Acme Steel Door Co., Brooklyn, NY 11222

5. Curries Company, Mason City, IA 50401

6. Metallines Fire Door Co., Bronx, NY 10457

7. Long Island Fireproof Door, Port Washington, NY 11050

8. Or approved equal

2.2 MATERIALS

A. Hot-Rolled Steel Sheets and Strip

1. Commercial quality carbon steel, pickled and oiled, complying with ASTM A1011 - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength and ASTM A568 - Standard Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements

B. Cold-Rolled Steel Sheets

1. Commercial Quality carbon steel complying with ASTM A1008 - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-

Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable and ASTM A568 - Standard Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements.

C. Galvannealed Steel Sheets

1. Carbon steel sheets of commercial quality complying with ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process, Doors and frames shall have **A**60 zinc-iron coating, mill phosphatized, complying with ASTM A653

D. Anchors and Supports

1. Fabricate of gages indicated on and of not less than 16 gage sheet steel, unless otherwise indicated, on the drawings.

a. Galvanized Units: Galvanized anchors and supports used with galvanized frames, complying with ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware, Class B.

b. Stainless Steel Units: Stainless steel used with stainless steel frames complying with ASTM A167.

E. Anchorage Devices, Bolts, and other Fasteners

1. Manufacturer's standard units unless otherwise indicated on the Drawings.

a. Galvanized or Galvannealed Units: Galvanized items used with galvanized frames complying with ASTM A153, Class C or D as applicable.

2.3 FABRICATION

A. Fabricate hollow metal work accurately and assemble neatly to ensure work smooth and free from dents, tool marks, visible waves, warp, buckles and conspicuous joints.

B. Align lines straight and true with arises and angles as sharp as practicable. Miter corners in true alignment and join similar abutting profiles accurately.

C. Assemble all joints to form imperceptible intersections when finished.

D. Form each member, such as jamb and head, from a single piece of metal, unless otherwise shown or approved

E. Fasten all members together to provide rigid construction in assembled work. Weld all connections except those for removable members such as glazing beads.

F. Weld, dress smooth and flush joints on exposed faces.

G. Clearances: Comply with NFPA 80.

H. Work showing defects or blemishes will be rejected, and rejected work shall be replaced with satisfactory work.

2.4 DOORS

A. General

1. Provide steel doors of types and styles indicated on drawings or schedules. Comply with ANSI/SDI A250.8 requirements unless more restrictive requirements are specified herein. Also doors shall have been pretested by the manufacturer to conform to ASTM F476, Door Impact Test, Grade 40, Table X5.1.

2. Design and Thickness: Flush design doors, seamless vertical edges, hollow construction, 1-3/4" thick unless specifically noted otherwise.

3. Reinforce inside of doors with continuous formed steel sections not less than 20 gage, spaced 6 inches on center. Spot weld at not more than 5 inches on center to both face sheets.

4. Sound Deadening (ASTM E90): Minimum Sound Transmission Class (STC) of 30.

5. Door Edges: Meeting stiles of pairs of single acting doors shall be "V" beveled or rounded as detailed on the Drawings or as required to meet NFPA 80 – Standard for Fire Doors and Other Opening Protectives.

B. Doors

1. Fabricate doors with two (2) outer stretcher-leveled, galvannealed steel sheets or stainless steel sheets of 14 gauge unless indicated otherwise on the Drawings. Construct doors with smooth, flush surfaces without visible joints or seams on exposed faces and stile edges.

2. On mortise face of door, vertical joints shall be continuously welded and ground smooth and steel doors shall be coated with zinc-rich primer.

3. Provide reinforcement for surface sheet, edge, hardware, stops, and other provisions, of size and gage as specified or detailed on Drawings.

4. Provide 14 GA bottom channel and top channel and closure, as detailed on Drawings.

2.5 FRAMES

A. General

1. Provide steel frames for doors and other openings where shown, of size and profile as indicated on Drawings.

2. Construction: Full-welded unit construction, with corners mitered and continuously welded full depth and width of frame, unless otherwise indicated. Knock-down type frames will not be accepted.

a. Fixed Stops: Integral 5/8" stop unless otherwise indicated. Construct jambs and heads from one piece of metal each; rabbeted and flanged as required for the various types of openings, and neatly mitered or interlocked and welded together. Provide channel, angle and bent plate reinforcing as indicated on approved Shop Drawings or otherwise required. Provide reinforcing in the heads of frames where shown or required.

3. Frame Material shall be 12 gage Galvannealed steel sheet, unless indicated otherwise on Drawings.

4. Provide frames for masonry openings with adjustable Underwriter's type masonry anchors to suit conditions of installation, using not less than three (3) at each jamb, in addition to floor anchors.

5. Provide frames with calking stops, filler pieces and trim where indicated on Drawings or required; integrally formed as part of the frame wherever possible. Applied calking stops, filler pieces, and other members as indicated, shall be neatly attached by spot welding. All welds at galvannealed frames shall be painted with zinc-rich primer.

6. At Butts, cut back jamb the thickness of one leaf of butt.

7. Drill and tap reinforcement to template

8. Provide reinforcement for hardware as indicated on Drawings and as required for proper hardware installation. Refer to Section 08 71 00 - Finish Hardware.

2.6 SHOP PAINTING

A. All doors shall shall be delivered to the site with a full shop coat. Doors not fully shop coated shall not be accepted. Galvanized or galvannealed steel doors shall be painted with following paint system or approved equal:

1. Primer shall be 4 DFT, Epoxy primer, by one of the following:
   a. 'Carboguard 888' by Carcoline
   b. 'Amercoat 385' by PPG PMC
   c. 'Macropxy 646' by Sherwin Williams
   d. Or approved equal
2. Top Coat shall be 4 DFT, Aliphatic Polyurethane Gloss, by one of the following:
   a. 'Carbothane 134HG' by Carboline
   b. 'Amercoat 450 H' by PPG PMC
   c. 'Acrolon 218 HS B65-600' by Sherwin Williams
   d. Or approved equal
3. Provide primer and top coat by same manufacturer.

B. Units shall pass the following tests:
   1. Salt Spray Test complying with ASTM B117 for 120 continuous hours
   2. Water fog Test complying with ASTM D1735 for 240 continuous hours.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Verification of Conditions
   1. Examine substrate and conditions, under which the frames are to be installed, for defects which will adversely affect the execution and quality of the Work. Do not proceed until unsatisfactory conditions are corrected.

3.3 INSTALLATION

A. Install steel doors, frames, and accessories in accordance with the Drawing Details, approved Shop Drawings, and the manufacturer's printed instructions, except as otherwise indicated.

B. Frame Installations
   1. Place frames accurately in position; plumb, align, and brace securely until permanent anchors are set. After wall construction is complete, remove temporary braces and spreader bars, leaving surfaces smooth and undamaged.
   2. Place fire rated frames in accordance with NFPA Standard No. 80 – Standard for Fire Doors and Other Opening Protectives..

3. Provide necessary field splices in frames as detailed on approved Shop Drawings, welded and finished to match factory fabrication.
4. Extend jambs to structural floor slab and securely anchor in place.

C. Door Installation
1. Install doors accurately in their respective frames within the clearance specified in Part 2.
2. Place fire rated doors with clearances as specified in NFPA standard No. 80.

D. Drill and tap doors and frames to receive surface applied hardware.

3.4 ADJUSTING

A. Coat touch up: If damaged during installation, apply touch up of original painting system.

B. Final Adjustments: Check and adjust operating finish hardware items prior to final inspection. Leave work in complete and proper operating condition

3.5 CLEANING

A. Clean doors, frames, and accessories, leaving free of dirt and other foreign material after completion of installation.

END OF SECTION 08 11 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 08 71 00 – FINISH HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Provide finish hardware as indicated on Drawings, as specified herein and as needed for complete hardware requirements

1.3 REFERENCES

A. Reference to DDC General Conditions.

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, or mandated by the NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. Underwriter's Laboratory, Inc. (UL)

2. American National Standards Institute (ANSI)

3. National Fire Protection Association (NFPA)

4. Door and Hardware Institute (DHI)

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data

1. Submit Manufacturer's Technical Product Data for each hardware item type, including cuts, specifications and characteristics, instructions for installation, operation, and maintenance.

C. Hardware Schedule

1. Provide Schedule for entire Project in one submittal, unless otherwise directed. Submit Hardware Schedule in book form (8½" x 11" pages), indicating the following for each item. No continuous computer printout permitted:

   a. Locations of hardware, with cross-reference to schedules and other indications on Drawings.

   b. Name, manufacturer, type, style, size, function, and finish.

   c. Information for fastenings.

   d. Mounting Locations

   e. Materials and Sizes of doors and frames

   f. Explanation of abbreviations and symbols

2. At time of submittal of Hardware schedule, furnish hardware templates to fabricators of other factory- prepared work necessary for installation of hardware.

D. Key Schedule

1. Consult with the NYC Department of Sanitation prior to preparing a keying schedule in order to confirm the required keying scheme.

2. Submit Hardware Key Schedule, prepared by hardware supplier, within forty-five (45) days after starting date of Contract.

3. Stamp top face of each key with letter and number using keyset symbols as set forth in the BHMA handbook. Tag each series of keys.

4. Stamp face of each cylinder with the same corresponding keyset symbols.

5. Locks shall be made up on combinations as specified.

1.5 QUALITY ASSURANCE

A. Hardware Supplier

1. Finish hardware shall be furnished by those having a minimum 3 years of builders hardware experience and shall have in their employ at least one Architectural Hardware Consultants (AHC) to correctly interpret the plans, detailed drawings and specifications.

B. Manufacturer
   1. Manufacturer shall have minimum of three (3) years successful experience manufacturing types and sizes of Hardware specified herein
   2. Obtain each hardware type from a single manufacturer.

C. Minimum Quality Requirements
   1. The manufacturer shall certify that the Hardware items to be furnished shall be of quality specified herein, and meet the requirements of the applicable ANSI A156 Grade 1 standard for each item

D. Fire Rated Openings
   1. Provide hardware in compliance with NFPA Standard No. 80 and NYC Building Code requirements, tested and listed by UL for types and sizes of doors, and in compliance with requirements of door frame and door labels.

1.6 SHIPPING, STORAGE AND HANDLING

A. Package and ship hardware to prevent damage. Properly identify and tag each item. Sort, package and mark hardware with set numbers.

B. Inventory hardware immediately upon delivery.

C. Provide secure (locked) storage area for hardware until installed.

1.7 PROJECT CONDITIONS

A. Coordinate hardware with other work. Tag each item or package separately, with identification related to the final hardware schedule and include basic installation instructions in the package. Furnish hardware items of proper design for use on doors and frames of the thickness, profile, swing, security and similar requirements indicated and as necessary for proper installation and functions. Deliver packaged hardware items to the proper locations for installation.

B. Furnish hardware templates to each fabricator of doors, frames and other work to be factory prepared for the installation of hardware.

1.8 WARRANTIES

A. The hardware manufacturers shall provide full replacement warranty as listed below. Replacement warranty shall include material and labor cost.

1. Locksets, etc. 1 year.
2. Hinges 2 years.
3. Balance of hardware 1 year.
4. Closers 2 years

B. Closers shall be warranted to properly operate door, free from mechanical defects for ten years from date of substantial completion of the Work. Closers which fail to meet specified requirements shall be replaced or repaired and made to operate properly by Contractor without additional expense to the City of New York.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Butts
1. Stanley
2. McKinney
3. Hagar
4. Bommer
5. Lawrence
6. Or approved equal

B. Locksets, Passage Sets (Lever Type)
1. Yale SL 8800 FL Series with mortise lock, satin stainless steel finish (US32D)
2. Sargent 8200 Series mortise in satin stainless steel finish (US32D)
3. Schlage L9000 Series mortise lock in satin stainless steel finish (US32D)
4. Or approved equal

C. Rim Latch
1. Yale
2. Segal
3. Hagar
4. Or approved equal

D. Cylinders
   1. Sargent
   2. Corbin Russwin
   3. Schlage
   4. Yale
   5. Or approved equal

E. Door Closers
   1. LCN
   2. Norton
   3. Sargent
   4. Yale
   5. Or approved equal

F. Stop and Holder
   1. Glynn Johnson
   2. Architectural Builder Hardware
   3. Rixzon
   4. Or approved equal

G. Surface Bolts
   1. Ives
   2. Rockwood
   3. Securitech
   4. Or approved equal

H. Smoke Seals
   1. Pemko
   2. McKinney
   3. National Guard Products
   4. Or approved equal

2.2 MATERIALS AND FABRICATION

A. General

1. Commercial Hardware: Heavy duty cast or forged (.080 min.) bronze with satin chromium finish U.S. 26D, except as otherwise specified.

2. Interior Door Holders: Steel, satin chromium U.S. 26D finish.

3. Door closers: As specified herein.

4. Interior butts and horizontal releases: As hereinafter specified with chrome finish.

5. Surfaces of castings shall be true, smooth and free from burrs. Lock mechanism and accessory components in contact with or bear upon other parts shall be dressed to a true, smooth surface.

6. Items of cast iron shall be annealed.

7. Whenever weight is specified, it shall mean actual weight of casting without screws, washers and accessories.

8. Do not use products with manufacturer's name in an exposed location, except name on rim of lock cylinders.

9. Backset: 2-3/4" for locksets and latchsets unless indicated otherwise.

B. Screws

1. Secure hardware with suitable screws and bolts of same material and finish as hardware items unless otherwise specified. Screws for strike and face plates, hinges, overhead door holders, and door checks and brackets for these items shall be flat-headed counter-sunk screws. Screws for other exposed hardware shall be oval-headed. Screws shall be countersunk unless expressly specified otherwise. Provide Phillips head screws unless otherwise indicated.

2. Hardware for metal frames and doors shall be secured with suitable machine screws, mill screws and bolts.

3. Manufacturer of each hardware item shall provide the fastenings required for the installation of that item.

4. Self-tapping or TEK screws are not permitted.

5. Wood screws for securing door butts shall be at least two inches long to secure butts through jamb and into wood stud behind jamb and blocking.

2.3 GENERAL HARDWARE REQUIREMENTS

A. Hardware Schedule is intended to guide Contractor in preparing the Schedule for Work of this Section. It shall not relieve Contractor from the necessity of examining Specifications, Drawings and Details, and providing everything necessary to properly complete hardware installation. Align lines straight and true with arises and angles as sharp as practicable. Miter corners in true alignment and join similar abutting profiles accurately.

B. Hardware used on hollow metal doors, sash or jambs, shall be made to templates and packed with machine screws or other fastenings recommended by the manufacturer for the particular application scheduled.Form each member, such as jamb and head, from a single piece of metal, unless otherwise shown or approved

C. Hardware items not described shall be equal in grade, workmanship, and other particulars to similar items of hardware described.Weld, dress smooth and flush joints on exposed faces.

2.4 FINISHES

A. All Hardware finishes shall be US32D- Satin Stainless Steel (U.S. Bureau of Standards), unless otherwise specified.

2.5 HARDWARE TYPE REQUIREMENTS

A. Locks and Latches

1. General Cylinder Lockset: Unless otherwise indicated:

a. Type: mortise, easy spring cylinder lock with latch bolt and guard bolt.

b. Case: 5-5/8" high, 4" wide, 3/4" thick. Steel, with zinc dichromate finish.

c. Backset: 2-3/4"

d. Hub: sintered steel, copper infiltrated.

e. Front: 8" high x 1-1/4" wide stainless steel, adjustable, protected, attached to case by machine screws.

f. Levers: solid stainless steel, secured to 5/16" square, hardened steel spindles.

g. Full Escutcheon: stainless steel, each side, 2-1/2" x 8".

h. Operation: From inside by lever. Outside lever operated by key or made stationary, as desired. Guard bolt, working on closed strike plate, automatically locks latch bolt to prevent it from being forced back when closed.

i. Secure locksets to doors with Phillips Head screws unless otherwise indicated.

2. Cylinders

a. Cylinders of locks shall be of proper length to fit doors for which they are intended. Cylinders shall be solid brass with common standard diameter rotating plug. The keyway shall be paracentric type of single section with seven pins or multiple (four or more) sections with six pins capable of being masterkeyed and grand masterkeyed as specified without duplications or interchanges.

b. Provide cylinders with removable cores.

c. Removable Cores: Core insert, removable by use of a special key; for use only with core manufacturer's cylinder.

3. Strikes

a. Strikes for latches shall project sufficiently to properly protect trim. Slots in strike plates shall not be more than 1/4" longer than bolts. Metal between slots for latch and bolt shall not be less than 1/4".

b. Strikes used with hollow metal jambs shall be of box type with closed back.

4. Latch Bolts

a. Latch bolts shall be constructed so that they will not work loose. Where washer is riveted to latch spindle, rivet head shall be full and machine upset. Latch and lock bolts not otherwise specified shall be cast bronze.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Provide complete installation of finish hardware items as indicated on Drawings and as specified herein.

B. Mount hardware as recommended by respective manufacturer.

C. Mount door (room) hardware items at heights and locations on doors and frames in accordance with "Recommended Locations for Builders Hardware for Standard Steel Doors and Frames" by Door and Hardware Institute, except where specifically indicated otherwise.

D. Set hardware items plumb and level and secure with proper fasteners..

3.3 APPLYING HARDWARE

A. Hardware specified in this Section shall be fitted, installed and adjusted.

B. Use screws and/or bolts furnished by the manufacturer of the hardware item and install in accordance with the manufacturer's instructions and templates and as required. Install full complement of screws and/or bolts.

C. At completion of Project, leave hardware in perfect condition, free from stains, varnish, scratches and mars. Half-surface butts shall be bolted on doors with nuts on hinge side of doors.

D. No surface hardware, except butts and pivots, shall be installed before final coat of paint or varnish has been applied.

3.4 CLEANING

A. Clean hardware items thoroughly and adjust for proper operation.

3.5 KEY OPERATION AND INSPECTION

A. Upon completion of the building and after locks have been secured in proper positions, keys belonging thereto shall be fitted and made to work freely in respective locks in the presence of the Commissioner. The required number of keys for each lock, properly marked, shall be delivered to the Commissioner, who will give a receipt of such delivery.

3.6 FINISH HARDWARE SCHEDULE

A. Provide hardware for each door, each pair of doors, and each set of doors, in compliance with "Hardware Set Numbers" indicated in Door Schedule on Drawings, and as specified herein.

B. Manufacturer's names and product designations for hardware types are listed for the purpose of establishing minimum requirements. Provide the product specified or comparable product of other manufacturers listed in Art. 2.1 for each hardware type.

C. All door frames located in smoke partitions and fire-rated partitions shall be provided with continuous smoke seals at jambs and head, whether or not listed in Hardware Sets below.

3.7 HARDWARE SETS (FOR MANUFACTURERS REFER TO SECTION 2.1)

A. Hardware Set 1 (Door 01)

1.	Butts	3 each	McKinney TA314
2.	Lockset	1 each	Sargent 8204 LW1B
3.	Cylinder	1 each	Corbin
4.	Door Closer	1 each	LCN 411 EDA
5.	Silencers	3 each	Glynn Johnson 64
6.	Smoke Seal	1 each	Pemko S44D

B. Hardware Set 2 (Door 02)

1.	Butts	3 each	McKinney TA314
2.	Exit Device	1 each	Von Duprin 33A-L
3.	Cylinder	1 each	Corbin
4.	Door Closer	1 each	LCN 411 EDA
5.	Silencers	3 each	Glynn Johnson 64
6.	Smoke Seal	1 each	Pemko S44D

C. Hardware Set 3 (Door 03, Pair of Doors)

1	Butts	6 each	McKinney TA314
2	Exit Device	1 each	Von Duprin 9847NL
3	Exit Device	1 each	Von Duprin 9847EO
3	Cylinder	1 each	Corbin
4	Door Closer	1 each	LCN 411 EDA

5	Silencers	6 each	Glynn Johnson 64
6	Smoke Seal	1 each	Pemko S44D

D. Hardware Set 4 (Door 04, Pair of Doors)

1.	Butts	6 each	McKinney TA314
2.	Exit Device	1 each	Von Duprin 9847NL
3.	Exit Device	1 each	Von Duprin 9847EO
4.	Cylinder	1 each	Corbin
5.	Door Closer	1 each	LCN 411 EDA
6.	Silencers	6 each	Glynn Johnson 64
7.	Rain Drip	2 each	NGP 16A
8.	Weather Strips	2 each	NGP 152V
9.	Sweeps	2 each	NGP 97V

3.8 KEYING

A. Coordinate all keying requirements with the Commissioner and DSNY.

END OF SECTION 08 71 00

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 09 26 00 – GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Provide all materials, labor and equipment to properly install the following Work:
   1. Abuse and impact resistant gypsum board
   2. Non-load-bearing steel framing
   3. All accessory components

1.3 REFERENCES

A. Refer to DDC General Conditions

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications or mandated by the NYC Building code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

   1. American Society of Testing and Materials (ASTM) standards, latest editions.
      a. A641 Zinc-Coated (Galvanized) Carbon Steel Wire.
      b. A653 General Requirements for Steel Sheet, Zinc A653M Coated (Galvanized) by the Hot-Dip Process
      c. C11 Standard Terminology Related to Gypsum and Related Building Materials and Systems
      d. C473 Standard Test Methods for Physical Testing of Gypsum Panel Products
      e. C475 Joint Treatment Materials for Gypsum Wallboard Construction
      f. C630 Water Resistant Gypsum Backing Boards
      g. C645 Non-Load (Axial) Bearing Steel Studs, Runners (Track), and Rigid Furring Channels for Screw Application of Gypsum Board

h. C754 Installation of Steel Framing Members to Receive Screw-Attached Gypsum Wallboard, Backing Board or Water Resistant Backing Board

i. C834 Standard Specification for Latex Sealants

j. C840 Specification for Application and Finishing of Gypsum Board

k. C1002 Steel Drill Screws for the Application of Gypsum Board

l. C1047 Standard Specification for accessories for Gypsum Wallboard and Gypsum Veneer Base

m. C1396 Standard Specification for Gypsum Board

n. E84 Surface Burning Characteristics of Building Materials

o. E119 Fire Tests of Building Construction and Materials

2. Gypsum Association

a. GA-600 Fire Resistance Design Manual

b. GA-214 Levels of Finishes

c. GA-216 Recommended Specifications for the Application and Finishing of Gypsum Board

d. GA-505 Gypsum Board Products - Glossary of Terminology

3. Underwriters Laboratories Inc. (UL)

a. Fire Resistance Directory

4. International Code Council, ICC-ES (Evaluation Service)

a. AC86 - Acceptance Criteria for Cold-Formed Steel Framing Members – Interior Non load-bearing Wall Assemblies.

5. American Iron and Steel Institute (AISI)

a. AISI S905 Test Methods for Mechanically Fastened Cold-Formed Steel Connections

b. AISI Standard for Cold-Formed Steel Framing – General Provisions

c. AISI NASPEC

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data

1. Submit manufacturers' product information, specifications, and installation instructions for the following products: abuse and impact resistant gypsum board, joint compounds, acoustical sealants, insulation, fasteners, trim, joint reinforcing, metal furring members, metal studs, tracks, runners, and all related accessories.

C. Samples

1. Submit samples of the following materials:

a. Wallboard, each type: 12" square.

b. Metal studs and track: 12"

c. Accessories: 12", outside corner bead

D. Materials Certificates and Acceptance

1. Submit certificates from the manufacturers of the specified materials stating compliance with the applicable requirements set forth for all materials specified in this Section.

2. Submit certification and listing in accordance with NYC Dept. of Buildings rules, indicating that the materials and assemblies as regulated by the NYC Building Code are acceptable for the intended use. When test methods are stipulated in the NYC Building Code, the tests utilized shall be stated in the certification. Prior MEA and BSA approvals are acceptable for materials conforming to NYC Building Code requirements.

3. Submit written acceptances from the wallboard manufacturer and metal stud manufacturer accepting the type of metal studs, tracks, and fasteners to be used for each type of wallboard.

E. Quality Assurance Submittal

1. Submit affidavit certifying qualification requirement listed in Article 1.5 B.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions

B. Qualifications

1. Installer is to be a firm with not less than three (3) years of successful experience in the installation of specified materials.

C. Regulatory Requirements

1. Building Code: Work of this Section shall conform to all requirements of the N.Y.C. Building Code.

2. New York City Board of Standards and Appeals (BSA), and New York City Materials Equipment Acceptance (MEA) approvals are acceptable for materials and assemblies conforming to NYC Building Code requirements.

3. Fire- Resistance Ratings

   a. Comply with fire-resistance ratings as indicated and as required by NYC Building Code. Provide certification and listing in accordance with NYC Dept. of Buildings rules, indicating that the materials and assemblies as regulated by the NYC Building Code are acceptable for the intended use.

   b. Provide materials, accessories and application procedures which have been listed by UL or tested in accordance with ASTM E119 for the type of construction shown. Provide materials and construct assemblies which qualify for required fire resistance classifications in accordance with the Gypsum Association "Fire Resistance Design Manual" as referenced in the Building Code of the City of New York, or in accordance with the acceptance requirements of the New York City MEA or BSA.

D. Industry Standards

1. Comply with applicable requirements of ASTM C840, except where more detailed or more stringent requirements are indicated, including the recommendations of the manufacturer

2. Acoustical Ratings: Comply with acoustical ratings as required and based on type of construction indicated on the Drawings. Provide materials, accessories, including fasteners, seals, sealants and application procedures which have been listed by manufacturer or tested in accordance with ASTM E90 for the type of construction shown.

E. Single Source Responsibility

1. Obtain all steel studs and other metal framing components and accessories from a single manufacturer.

1.6 PROGRESS INSPECTIONS

A. The City of New York will employ a special inspection agency to perform all special inspections related to the work, under a separate contract.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in original packages, containers or bundles bearing brand name and identification of manufacturer.

B. Store all materials inside, under cover, in a manner to keep them dry, protected from weather, direct sunlight, surface contamination, corrosion and damage from construction traffic and other causes. Neatly stack gypsum boards to prevent sagging. Do not store at temperature exceeding 125°F.

C. Handle gypsum boards to prevent damage to edges, ends or surfaces. Protect metal framing members, corner beads, and trim from being bent or damaged.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products which vary slightly from specified criteria will be considered for acceptance upon submission of a written explanation and complete technical data to the Commissioner. Written authorization from the Commissioner is required prior to installation of such materials whether or not the manufacturers are listed herein.

B. Abuse and Impact Resistant gypsum board and related products
1. SHEETROCK brand Mold Tough VHI (Very High Impact) FIRECODE Core Gypsum Panels, USG Corporation
2. Fire-Shield Hi-Impact brand XP Wallboard Panels – National Gypsum Company
3. Protecta HIR 300 Type X With Mold Defense panels, Lafarge / Continental Building Products LLC.
4. Or approved equal

C. Metal Support Material
1. Marino Ware, South Plainfield, NJ
2. ClarkDietrich Building Systems, West Chester, OH
3. Super Stud Building Products Inc., Edison, NJ
4. United States Gypsum Co., Chicago, IL
5. Or approved equal

2.2 MATERIALS

A. Metal Framing

1. Steel Studs

a. In compliance with ASTM C645, provide galvanized steel, C-shaped members as specified and as shown on the drawings.

b. Stud thickness: 0.0296 inch minimum thickness of base metal or 20 gage min., for all wall framing members unless otherwise indicated

c. Pull-out strength for #6 screws in 20 ga. equivalent studs shall be at least 45 lbs. in accordance with AISI S905 test method.

d. Conform to all requirements indicated on the Drawings and specified herein, including fire resistance ratings of assemblies.

e. Stud thickness: 0.0428 inch min. thickness of base metal or 18 gage min., unless otherwise indicated, for use at all framed openings, with double studs at each door jamb.

2. Runners

a. In compliance with ASTM C645, provide galvanized steel runners to match applicable assembly specified, to match wall framing members, unless indicated otherwise.

3. Horizontal Bracing

a. Provide 3/4 inch galvanized cold rolled steel channels, or steel studs, fastened to webs in a horizontal position. Angle or channel shaped galvanized horizontal bracing that is fixed in place without fasteners may be used subject to written acceptance of the steel stud manufacturer and meeting all required partition ratings and performance criteria; 0.0296" minimum base metal thickness, 7/8" x 7/8" minimum size angle or equivalent channel shape. Comply with ASTM C645, ASTM C754.

4. Protective coating of framing shall conform to ASTM A653/A653M - G40 minimum, or shall be a protective coating with equal or better corrosion resistance.

5. Fasteners for Metal Framing

a. Provide fasteners of type, size, style, grade, holding power, class, and other properties required for secure installation of framing and furring. Galvanize all fasteners and accessories. Powder actuated fasteners shall not be used in occupied areas of a building

b. All devices, other than bolts, used to interconnect ceiling members are required to be certified and listed by an Approved Agency in accordance with NYC

Department of Buildings rules. Prior MEA and BSA approvals are acceptable for materials conforming to NYC Building Code requirements.

B. Abuse and Impact Resistant Gypsum Board

1. Provide reinforced abuse and impact resistant gypsum board, consisting of gypsum, or gypsum and cellulose fiber, with fiberglass mesh reinforcement. Weight of 5/8" thick panel approximately 2.8 psf. Surfaces shall be true, free from imperfections, and suitable for use with or without decoration. Provide in 48" widths and in such lengths as will result in the minimum number of joints. Provide 5/8" thick panels generally, unless indicated otherwise on the Drawings. Panels shall not contain asbestos. Panels shall be mold resistant, meeting a minimum average panel score of "10" in accordance with ASTM D3273.

2. Reinforcement: Fiberglass mesh embedded in the back of full panel.

3. Meet or exceed criteria when tested in accordance with ASTM C473, or ASTM C1396

C. Trim Accessories

1. Comply with ASTM C1047, standard accessories as recommended by gypsum board manufacturer. Where exposed to view provide accessories recommended for level-5 finish. Metal trim shall be formed of galvanized or zinc-coated steel. Provide paper faced metal trim where recommended by board manufacturer. Designed for concealment of paper or metal flanges in joint compound. Provide corner beads, L-type edge trim beads, V-type edge trim beads, and control joint beads.

2. Corner Reinforcement: Provide paper faced metal outside corner, tape-on bead at all outside corners.

D. Joint Treatment Materials

1. Jointing System - typical: Comply with ASTM C475. Type recommended by the manufacturer for the application indicated, to prevent cracking, and to meet fire resistance requirements where applicable. Reinforcing tape and compound shall be designed as a system to be used together.

2. Provide setting type or ready-mixed drying type joint compound as recommended by the board manufacturer for each type of board, for joints, fastener heads and cut edges of board.

3. Skim coat: For final coat of Level 5 finish, use type recommended by manufacturer.

4. Jointing compound shall be asbestos free.

E. Miscellaneous Materials

1. Provide required materials for gypsum board work of the type and grade recommended by the gypsum board manufacturer.

2. Gypsum board Screws:

a. Comply with recommendations of the wallboard and metal framing manufacturers and ASTM C1002.

b. For fastening the gypsum board in place, specially designed for use with power-driven tools, of length recommended for application in board manufacturers printed instructions, but not less than 1¼" long, with self-tapping threads and self-drilling points. Screws shall be steel with rust inhibitive coating.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION AND PREPARATION

A. Inspection

1. Prior to installation of the Work of this Section, carefully inspect the installed Work of all other trades and verify that all such Work is complete to the point where this installation may properly commence.

2. Installation shall comply with manufacturer's recommendations as a minimum standard.

B. Coordination of Work

1. Coordinate Work of this Section with the Work of other Divisions which have items installed in, on or contiguous to gypsum board assemblies.

C. Verification of Conditions

1. Start of Work constitutes acceptance of existing conditions, Contractor shall bring any discrepancies to the attention of the Commissioner prior to start of Work.

D. Construction Tolerances

1. Do not exceed 1/8" in 8 feet variation from plumb or level in any exposed line or surface except at joints between boards. Do not exceed 1/16" variation between planes or abutting edges or ends. Shim as required to comply with specified tolerances. Variations shall not be visible in finished surfaces.

3.3 ENVIRONMENTAL REQUIREMENTS

A. Comply with requirements of all referenced application standards and manufacturers recommendations for environmental conditions before, during and after gypsum board application.

B. Maintain continuous uniform building temperatures of not less than 55ºF and not more than 90ºF for a minimum of 48 hours prior to, during and following application of gypsum board and joint treatment materials and until joint and finishing compounds have dried. Conform to more restrictive environmental conditions where required by the manufacturer.

C. Do not install gypsum board in any location where it may be exposed to moisture during the Construction Phase of the Project.

D. Ventilate building spaces as required to remove water in excess of that required for drying of joint treatment material immediately after its application. Avoid drafts during dry hot weather to prevent too rapid drying.

E. Provide adequate drying time between coats of joint compound.

3.4 INSTALLATION – STEEL FRAMING

A. Comply with ASTM C754 and manufacturers installation instructions for all non-load bearing steel stud installations.

B. Extend all partitions to underside of roof and floor construction unless indicated otherwise. Brace laterally to building structure as required for stability.

C. Where fire-rated work is indicated on Drawings, construct assemblies in accordance with the Article herein titled Quality Assurance, Paragraph titled Regulatory Requirements.

D. Accurately align top and bottom tracks. Secure runner tracks as recommended by the framing manufacturer for the upper and lower construction involved, except, do not exceed 24" on center spacing for power driven fasteners. Provide fasteners approximately 2" from corners and ends of tracks.

E. Position studs vertically and engage both floor and top tracks. Install studs at 16" on center maximum spacing unless closer spacing is indicated on the Drawings, or is required for height

of partition or transverse loading in order to meet deflection requirements. Fasten studs to track flanges with screws, or as otherwise required to meet fire resistance ratings and NYC Building Code requirements.

F. Use full length studs between tracks wherever possible. If necessary, splice studs with a minimum 8" nested lap and fasten with 2 screws per stud flange.

G. Provide additional studs to support inside corners at partition intersections, and to support outside corners and terminations of partitions (and both sides of control joints).

H. Provide two 18 gauge studs at each door jamb unless heavier gauge studs are required by Drawings. Comply with stud manufacturers recommendations for the types of frames and weights of doors used in the project. Provide 14 gauge studs surrounding openings to receive interior window guards. Studs shall extend to underside of roof or floor construction above.

I. Running Channel Installation: Floor and top running channels or stud tracks shall be galvanized cold rolled steel with 1½" extended leg on top runner to allow movement (legs longer as recommended by manufacturer or as required to prevent transfer of structural loads or movements to partitions). Match gauge of studs indicated for assembly. Securely fasten to floor, slab above or vertical structural elements with fasteners approved by manufacturer, spaced not more than 24" on center. Provide slip or cushion type joint between channel and structural elements as indicated in paragraph titled Steel Stud Installation, above. Maintain lateral bracing of partitions to building structure.

J. Horizontal Bracing or Stiffener Installation: Install metal stud bracing fastened to each partition stud with webs in a horizontal position, or horizontal bracing fixed to each stud in accordance with manufacturer's instructions. Provide continuous horizontal rows of bracing, spaced vertically 4'-0" on center maximum, unless otherwise indicated. The uppermost row shall be located 12 inches from the top of stud, or as otherwise recommended by the stud manufacturer. Provide additional bracing as recommended by stud manufacturer.

K. Tolerances: Do not exceed 1/8" in 8 feet variation from plumb or level in any exposed line or surface, except at joints between planes or abutting edges or ends. Shim as required to comply with specified tolerances. Variations shall not be visible in finished wall surfaces

3.5 INSTALLATION - PANELS

A. Applying and Finishing Panels, General: Comply with manufacturer's printed installation instructions and recommendations based upon Project conditions, ASTM C840, GA-216, and these Specifications, for all gypsum board application and finishing.

1. Provide wallboard panels of type, thicknesses, and number of layers indicated on the Drawings. Provide multi-layer assemblies using abuse and impact resistant gypsum board panels in conjunction with other types of panels where indicated on the Drawings.

2. Attach gypsum board to supplementary framing and blocking provided for additional support at openings and cutouts.

3. Firestopping required for fire-rated work shall be covered under Section 07 27 00 - Firestopping/Smoke Seals.

4. Where fire-rated work is indicated on Drawings construct assemblies in accordance with the Article herein titled Quality Assurance, Paragraph titled Regulatory Requirements.

5. Install the gypsum board with separate boards in moderate contact but not forced into place. At internal and external corners, conceal the cut edges of the board by overlapping covered edges of the abutting boards. Stagger the boards so that corners of any four boards will not meet at a common point except in vertical corners.

6. Extend all partitions to underside of slab above and floor construction, unless indicated otherwise.

7. All interior partitions, unless otherwise indicated, shall have mineral fiber sound attenuating blankets, ASTM C665 Type 1, density 2.5 lbs./cubic foot minimum. Sound attenuating blankets shall be installed friction fitted between studs, completely filling solid the partitions for the full height of the partitions.

8. Fasten the gypsum board with drywall screws as recommended by the gypsum board manufacturer. Drive the required screws with clutch-controlled power screwdrivers. Provide fasteners in gypsum panels according to referenced gypsum board application and finishing standard, manufacturer's written recommendations, and as required for fire-resistance-rated assembly. Maximum spacing shall be as follows:

    a. Maximum fastener spacing for abuse resistant gypsum board: 8” o.c., except where 12 inches o.c. is recommended by panel manufacturer.

    b. Maximum fastener spacing for other panels: 8 inches o.c.

B. Panel Application

1. Single layer application on walls/partitions: install the gypsum board to studs at right angles to the furring or framing members, unless otherwise required for fire-resistance-rated assembly, minimizing end joints. Stagger abutting end joints not less than one framing member in alternate courses of board.

2. Multilayer application on partitions/walls: Apply board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.

3. Make end and edge joints, where required, over furring or framing members. Position boards so that like edges abut, with tapered edges against tapered edges and mill-cut or field-cut ends against mill-cut or field-cut ends. Do not place tapered edges against cut edges or ends. Stagger vertical joints over different studs on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

4. Cover both faces of steel stud partition framing with wallboard as indicated on the Drawings (including above ceilings).

5. Multilayer Fastening Methods: fasten base layers and face layers separately to supports with screws unless otherwise indicated or required by fire-resistance-rated assembly

C. Finishing and Joint Treatment

1. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

2. Prefill open joints and damaged surface areas.

3. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.

4. Gypsum Board Finish Levels: Finish panels to levels indicated below, according to ASTM C840 and as indicated, for locations as follows:

   a. Exposed locations: ASTM C840 - Level 5, with finished surfaces completely flat and uniform, with no visible irregularities or imperfections: Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges, and apply skim coat of joint compound over entire surface at panel and trim surfaces that will be exposed to view.

5. Outside Corners

   a. Install corner bead fitting neatly over the corner and apply compound to both sides of corner.

   b. Treat the corner with joint compound as recommended by accessory manufacturer, allowing compound to dry between coats. Final coat shall completely cover corner.

6. Inside Corners: Treat as specified for joints, except that the reinforcing tape shall be folded lengthwise through the middle and fitted neatly into corner.

7. Properly prepare surfaces to receive paint.

D. Other Trim: The Drawings do not purport to show all locations and all requirements for trim in connection with the Work of this Section. Carefully study the Drawings and the installation; provide in place all trim normally recommended by the manufacturer of the gypsum board used.

3.6 CLEAN UP AND PROTECTION

A. In addition to the requirements of these Specifications, use all necessary care during execution of this portion of the Work to prevent scattering of gypsum board scraps and dust and to prevent tracking of joint and finishing compound onto floor surfaces. At completion of each segment of installation in a room or space, promptly pick up and remove from the working area all scraps, debris and surplus material of this Section.

END OF SECTION 09 26 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 09 51 00 – ACOUSTICAL CEILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Provide acoustical ceiling Work as indicated on Drawings and as specified herein, including the following:

1. Acoustical Mineral Fiber Tile and Panel Ceilings

    a. Lay-in panel installation - exposed grid

1.3 REFERENCES

A. Refer to DDC General Conditions

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. American Society of Testing and Materials (ASTM) standards, latest editions.

    a. C423 Test Method for Sound Absorption and Sound Absorption Coefficient by the Reverberation Room Method.

    b. C635 Metal Suspension System for Acoustical Tile and Lay-In Panel Ceilings.

    c. E84 Surface Burning Characteristics of Building Materials.

    d. E90 Standard Test Method for Laboratory Sound Transmission Class

    e. E119 Method for Fire Tests of Building Construction and Materials.

f. E413 Determination of Sound Transmission Class

g. E1264 Standard Classification for Acoustical Ceiling Products.

2. AMA -1-II Ceiling Sound Transmission Test By Two-Room Method

3. Acoustical and Insulation Materials Association, "Job Conditions".

4. New York City Board of Standards and Appeals (BSA) approvals; New York City Materials Equipment Acceptance (MEA).

5. New York City Building Code.

1.4 DEFINITIONS

A. Refer to DDC General Conditions.

B. Direct Suspension System: Directly fastened to floor or roof construction above.

C. Indirect Suspension System: Installed as part of the Work of this Section, as furnished by ceiling system manufacturer to be attached to direct suspension system.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data

1. Submit manufacturer's product specifications and installation instructions for ceiling materials, indicating compliance with applicable requirements. Include information pertaining to fire performance, flame spread, and smoke development.

C. Shop Drawings

1. Submit shop drawing details indicating the relationship to mechanical and electrical Work and other items penetrating or connected to the ceiling. Indicate framing and support details for the ceiling Work.

D. Samples

1. Submit samples of the following materials, prior to installation:

a. Lay-in mineral fiber acoustical panel with field cut tegular edge on one edge, painted to match factory tegular edges. The other three edges shall have manufactured tegular profile: 12” x 24” sample.

b. Exposed runners: 8" long samples of each color and system type required.

c. Concealed suspension members: 1 set of each assembly specified.

E. Quality Assurance Submittals

1. Affidavit certifying experience of installation company.

2. Certification and listing by an Approved Agency in accordance with NYC Dept. of Buildings rules, indicating that the materials and assemblies regulated by the NYC Building Code are acceptable for the intended use. When test methods are stipulated in the NYC Building Code, the tests utilized shall be stated in the Certification. Prior MEA and BSA approvals are acceptable for materials conforming to code requirements.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions

B. Qualifications

1. Installer is to be a firm with not less than three (3) years of successful experience in the installation of specified materials.

C. Regulatory Requirements

1. Building Code: Work of this Section shall conform to all requirements of the NYC. Building Code.

2. Certification and listing by an Approved Agency in accordance with NYC Dept. of Buildings rules. Prior MEA and BSA approvals are acceptable for materials conforming to code requirements.

D. Fire Performance Characterestics

1. Provide ceiling components that are identical to those tested for the following fire performance characteristics, according to ASTM test method, by UL. Identify ceiling components with appropriate marking of applicable testing and inspecting agency.

2. Surface Burning Characteristics: Tested per ASTM E84. Tested surfaces shall be the surfaces facing the occupied space.

a. Flame Spread: 25 or less

b. Smoke Deceloped: 25 or less

E. Coordination of Work

1. Coordinate layout and installation of ceiling units and suspension system components with other work above, supported by, or penetrating through ceilings, including light fixtures, HVAC equipment, fire-suppression systems and partitions. Resolve all discrepancies and conflicts prior to start of Work.

1.7 DELIVERY, STORAGE AND HANDLING

A. Delivery

1. Deliver all acoustical units in manufacturer's original, unopened packages fully identified with type, finish, performance data and compliance labeling

B. Storage

1. Store materials where they will be protected against damage from moisture, direct sunlight, surface contamination or other causes.

2. Store tile containers in space where they will be installed for at least 24 hours prior to installation to stabilize moisture content and temperature.

C. Handling

1. Handle ceiling units carefully to avoid chipping edges or damaging units in any way.

1.8 PROJECT CONDITIONS

A. Space Enclosure

1. Do not install interior acoustical ceilings until space is enclosed and weatherproof, wet work in space is completed and dry, work above ceilings is completed, and until air temperature and humidity are maintained at values of final occupancy.

1.9 GUARANTEE

A. Work showing defects in workmanship or materials within the one year guarantee period specified in the Contract shall be corrected as directed by the Commissioner. Defects include:

1. Tiles or suspension system loose or improperly secured.

2. Tiles or suspension members showing discoloration or cracking.

3. Tiles or suspension members warping, sagging, or deforming.

1.10 REQUIRED MATERIALS

A. Deliver required materials to Commissioner. Furnish required materials, described below, matching products installed, packaged with protective covering for storage and identified with appropriate labels.

1. Acoustical Ceiling Units: Furnish 80 square feet of full size units.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acoustical Panels:

1. Mineral Composition Panels (24" x 48" x 3/4")
   a. 'Mars / 88785' by USG Interiors inc
   b. 'Ultima /1914' by Armstrong Worl Industries
   c. 'Symphony-m/1220BB-I0F-1' by Certain Teed Corporation
   d. Or approved equal

2. Indirect Metal Suspension Systems
   a. Chicago Metallic Corporation
   b. Donn Corporation/ USG Interiors Inc.
   c. Armstrong World Industries
   d. Or approved equal

2.2 MATERIALS – ACOUSTIC TILES AND PANELS

A. Mineral Fiber Tile and Panels

1. Provide units per ASTM E1264; of designation, style, finish, color, acoustical range, edge detail and size as indicated below:

a. Suspended (Exposed grid, lay-in) Installation

1)	Style	Fine Texture
2)	Size	24”x48”x3/4” or 24”x24”x3/4” as indicated
3)	Edge Profile	Reveal beveled tegular, or as indicated
4)	Weight	0.95-1.05 lbs/sft
5)	NRC	Min. 70
6)	CAC	Min. 35
7)	Light Reflectance	Min 85 Average
8)	Color	White
9)	Finish	Factory finish

2.3 MATERIALS – METAL SUSPENSION SYSTEMS- INDIRECT HUNG

A. Exposed Grid Suspension System

1. Manufacturer's standard system, with design and finish as selected by the Commissioner

   a. Structural Classification: Heavy-duty system in accordance with ASTM C 635.

2. Face width: 15/16".

3. Main Runners: Connect to direct suspension system. Conform to ASTM C 635 for heavy-duty classification.

4. Provide runners suitable for attachment of hold-down clips and impact clips as applicable.

2.4 MISCELLANEOUS MATERIALS

A. Drop Clips

1. 18 gage galv steel with key hole slot, or other configuration approved by NYC DOB for connection of ceiling suspension members to carrying channels.

2. Drop clips shall be of length required for indicated ceiling heights and to provide clearances of lighting fixtures, mechanical equipment and other items above ceilings.

3. Where necessary because of limited clearance, provide clips that connect runners tight to bottom of carrying channels.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine the building before beginning Work to determine that it is properly enclosed and the structure is in proper condition to receive acoustical materials and suspension system. Area shall be broom cleaned and uninterrupted for free movement of rolling scaffold. Do not proceed until satisfactory conditions prevail.

B. Verify that direct suspension system has been installed properly, that main runners are spaced evenly and have been leveled to a tolerance of 1/8" in 12' measured both lengthwise on each runner and transversely between parallel runners so that indirect suspension system installation may proceed accurately.

C. Start of Work constitutes acceptance of existing conditions, therefore, contractor is advised to bring any discrepancies to the attention of the Commissioner prior to start of Work.

3.3 PREPARATION

A. Coordination
   1. Provide and coordinate the locations of inserts, clips, or other supports for support of acoustical ceilings.
   2. Determine the length of drop clips required to maintain indicated ceiling height and to provide necessary clearance for electrical, mechanical and other equipment. Where necessary for clearance, clips that connect runners tight to the bottom of carrying channels shall be used.

B. Measure each ceiling area and establish layout of acoustical units to balance border widths at opposite edges of each ceiling. Avoid use of less than half width units at borders and comply with reflected ceiling plans.

3.4 INSTALLATION – GENERAL

A. Install materials in accordance with manufacturer's printed instructions and in compliance with ASTM C636, fire resistance rating requirements, as indicated.
   1. Coordinate requirements for Work of other trades to be built into ceiling system. Provide supplementary framing as required.

B. Cut as required for installation of electric fixtures, air diffusers, grilles, sprinkler heads, security devices, access doors, etc., provided under other contracts. Verify sizes and locations with other trades.

C. On completion, the ceilings shall present a uniform horizontal plane surface, unless otherwise indicated, free from blemishes and imperfections. Exposed grid cross runners shall fit tightly against adjacent main runners, with no visible gaps.

D. Install panels in coordination with suspension system with suspension members concealed by support of tile units.

E. Neatly scribe and cut panels to fit accurately at borders, interruptions, and penetrations. The cut edges of reveal tegular lay-in mineral fiber panels shall be field cut to match profile of factory edges, in accordance with manufacturer's printed instructions. Paint the cut edges to match factory finish where exposed to view, using paint supplied by panel manufacturer.

3.5 ADJUSTING AND CLEANING

A. Clean exposed surfaces of ceilings, including trim, edge moldings, and suspension members; comply with manufacturer's instructions for cleaning and touch-up of minor finish damage.

B. Remove and replace Work which cannot be successfully cleaned and restored to permanently eliminate evidence of damage

C. Remove and replace Work that is damaged or soiled by other trades as directed by Commissioner

END OF SECTION 09 51 00

SECTION 09 91 00 – PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes, but is not limited to, surface preparation, shop and field painting of the following:

1. Existing and new exterior steel items including: structural steel dunnage at roof.

2. Interior painting including new first floor electrical service room.

1.3 REFERENCES

A. Refer to DDC General Conditions

B. References and industry standards listed in this Section are applicable to the Work. Unless more restrictive criteria or differing requirements are explicitly stated in the Specifications or mandated by the NYC Building Code, the recommendations, suggestions, and requirements described in the referenced standards shall be deemed mandatory and applicable to the Work.

1. Occupational Safety and Health Administraion (OSHA)
2. Steel Structures Painting Council (SSPC)
3. American Society of Testing and Materials (ASTM)

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data

1. Provide manufacturers' product literature for all materials specified and material manufacturer's printed directions and recommendations for environmental conditions,

surface preparation, priming, mixing, reduction, spreading rate, application, storage and VOC content, as applicable for each of the materials specified

C. Samples for selection

1. Submit entire color chart from manufacturer for each type and location to be painted.

D. Quality Assurance Submittals

1. Certification that materials comply with regulations for Volatile Organic Compounds (VOC).

E. Guarantee Submittal

1. Provide Guarantee per article 1.8

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions

B. General

1. All painting materials shall arrive at the job ready-mixed.

2. Remove all rejected materials from the premises immediately.

3. All thinning and tinting materials shall be as recommended by the manufacturer. Generally, all paints shall not require additional thinning.

4. Verify that the specified shop prime paint for each applicable item in this Project is compatible with the total coating system, prior to application.

5. Materials selected for each system type shall be products of a single manufacturer.

6. In existing building locations, restoration of existing base surface is to be approved prior to commencement of painting.

C. Qualifications

1. Work of this Section shall be performed by personnel with a minimum of three years experience in performing this type of Work.

2. The Contractor shall ensure that all employees meet the qualifications set forth in OSHA, 29 CFR 1926.62 - Lead in Construction Standard.

1.6 DELIVERY, STORAGE AND HANDLING

A. Delivery

1. Deliver materials to the site in original, unopened containers bearing manufacturers name and label containing the following information:

a. Product name or title of material

b. Manufacturer stock number, batch number, VOC content in grams per liter and date of manufacture

c. Manufacturer's name

d. Contents by volume for major pigment and vehicle constitutions

e. Thinning instructions

f. Application instructions

g. Color name and number

B. Storage

1. The Commissioner will designate space on premises for storage of materials. Contractor shall restrict storage in this area to paint materials and related equipment, and provide the following:

a. Provide one (1) approved chemical dry fire extinguisher equal to 20 lb. CO_2 rating in all assigned rooms or locations where painting materials are stored. Fire extinguisher shall bear the label of the National Board of Fire Underwriters and tag of most recent inspection.

b. Provide three (3) standard size red fire pails with clean sand in above locations. At the completion of project, fire extinguishers and pails shall become property of Contractor.

2. Maintain storage area in clean condition, store materials not in use in tightly covered containers. Remove oily rags, waste and empty containers from site each night.

3. Provide the Commissioner with one key for each space if spaces are to be kept locked when not in use.

4. Protect all materials from freezing.

1.7 PROJECT CONDITIONS

A. Environmental Requirements

1. Comply with manufacturer's recommendations as to environmental conditions under which coatings and coating systems can be applied.

2. Do not apply finish in areas where dust is being generated or will be generated while the material is drying

3. Provide paint and coating products to comply with VOC requirements of New York State Department of Environmental Conservation.

4. The Contractor shall ensure that all requirements of OSHA 29 CFR 1926.62 – Lead in Construction Standard, are adhered to during the project. In addition, the Contractor shall ensure that proper work area protection and clean-up procedures (as described in this Section) are strictly adhered to during all phases on the project.

1.8 GUARANTEE

A. Adherence of workmanship and materials to Specifications requirements shall be maintained for the contractor's one year guarantee period. These requirements shall include the following:

1. There shall be no evidence of blistering, peeling, crazing, alligatoring, streaking, staining, or chalking.

2. Dirt shall be removed without blemishing the finish by washing with mild soap and water.

3. Colors of surfaces shall remain free from serious fading; the variation, if any, shall be uniform.

B. Correct all defects, appearing within the guarantee period, by removal of the defective work and replacement as directed.

C. All corrective measures shall be the Contractor's responsibility, and shall be made at no extra cost to the City of New York. The requirements set forth in Part 3 of these Specifications shall be strictly adhered to.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Benjamin Moore and Co.

B. Carboline

C. The Sherwin-Williams Co.

D. PPG

E. Or approved equal

2.2 MATERIALS

A. Provide products which meet all VOC requirements of New York State Department of Environmental Conservation for applications outlined herein.

1. Primers for Flat paints: Max VOC content of 100 gms/liter
2. Primers for Non- Flat paint: Max VOC content of 150 gms/liter
3. Non Flat Coatings: Max VOC content of 150 gms/liter
4. Rust Preventive/Anti corrosive paint: Max VOC content of 250 gms/liter
5. Stains: Max VOC content of 250 gms/liter

B. Provide products which meet all Federal regulations for amount of lead in paint (less than 0.06% lead in non-volatile ingredients).

C. Use only thinners approved by paint manufacturers for applications intended and use only within recommended limits.

D. Miscellaneous Standards and Requirements

1. Turpentine: ASTM D13.
2. Mineral Spirits (Petroleum Paint Thinner): FS TT-T-29
3. Cleaning Solvents: Low toxicity; flash point in excess of 100oF.
4. Polyester Filler: Polyester resin base autobody filler standard weight or finishing grade required by conditions; "White Lightning" and "Topcoat" by Marson's, "Dynatron Dynalite" by 3M, "Duraglass" by USG, or approved equal.
5. Color Pigments: Pure, non-fading, finely ground pigments, at least 99 percent passing a 325 mesh sieve. Color pigments that are to be used on masonry and concrete shall be lime proof - FS-TT-P-381.

2.3 INTERIOR PAINTING SYSTEM

A. Interior Gypsum board walls – new and existing

1. Semi Gloss finish
   a. 1st coat – Vinly Acrylic Latex Primer Sealer – 1.0 mils DFT
   b. 2nd & 3rd coats - Semi Gloss Vinyl Acrylic Latex Enamel- 1.3 Mils DFT each coat

2.4 EXTERIOR PAINTING SYSTEM

A. All metal and galvanized or zinc metallized steel items shall be coated with following paint system:

1. Primer: Epoxy primer, 4.0 Mils DFT
   a. 'Carboguard 888' by Carboline
   b. 'Amercoat 385' by PPG PMC
   c. 'Macropoxy 646' by SW
   d. Or approved equal

2. Top coat shall be two coats of Polyurethane gloss, 4.0 mils DFT each
   a. 'Carbothane 134HG' by Carboline
   b. 'Amercoat 450 H' by PPG PMC
   c. 'Acrolon 218 HS B65-600' by SW
   d. Or approved equal

2.5 CONCRETE FLOOR SEALER

A. Concrete floor surface shall be coated with following system:

1. Provide two coats of epoxy finish ver unpainted concrete surfaces as follows:
   a. First coat – Waterborne Epoxy or Acrylic – 2.0 Mils DFT
   b. Second coat – Waterborne Epoxy or Acrylic – 2.0 Mils DFT

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Verification of Conditions

1. The application of painter's finish to any surface shall be taken to indicate that the contractor considers such surfaces suitable for a first-class finish.

2. Do not apply painter's finish in any locations until the Work of other Contractors that might damage the new finish is completed.

3. Notify the Commissioner in writing regarding Work by others that does not provide a suitable surface for the new finish.

4. In case of dispute regarding the suitability of any surface, the Commissioner's decision shall be final and conclusive upon all concerned.

5. Contractor shall check the compatibility of previously painted surface with the new coating by applying a test panel 4 foot wide x wall height. Allow test panel to dry thoroughly; verify proper adhesion before proceeding with painting Work.

3.3 PREPARATION AND APPLICATION

A. Protection

1. Cover or otherwise protect finished Work of other trades and surfaces not to be painted concurrently or not to be painted.

B. Surface Preparation

1. Perform preparation and cleaning procedures in accordance with the paint manufacturer's instructions and as specified.

a. Sand bare spots and abraded areas of shop primed and previously painted surfaces. Where paint is missing or removed, sand surrounding edges of sound paint film so edges of existing paint do not show through the finished system.

b. Clean surfaces to be painted before applying paint or surface treatments. Remove oil and grease with clean cloths and cleaning solvents prior to other cleaning procedures. Program the cleaning and painting so that dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

2. Ferrous Metals

a. Remove dirt and grease with cleaning solvents that will not affect shop prime coat. Wipe off with clean cloths.

b. Remove rust, mill scale and defective paint down to bare metal, using scraper, sandpaper, or wire brush. Grind if necessary to remove shoulders at edge of sound paint to prevent flaws from photographing finish coats.

3. Galvanized Metal

a. Remove dust and oil with mineral spirits and wipe dry with clean cloth. Restore welded and abraded surfaces with a 2 mil (dry) minimum thick coating of cold galvanizing compound in conformance with ASTM A780; comply with manufacturer's application instructions.

4. Gypsum Board: Fill cracks and other blemishes with spackling or patching compound and sand smooth.

5. Concrete Masonry Unit: Prepare cementitious surfaces by removing efflorescence, chalk, dust, grease and oils. Mortar shall be cured as recommended by paint manufacturer.

C. Material Preparation

1. Mix and prepare painting materials in accordance with the manufacturer's directions.

2. Stir materials before and during application to produce and maintain a mixture of uniform density. Do not stir any film that may form on the surface of materials into the material; remove the film and strain the material before using.

3. Thinning: Use only thinners recommended by the paint manufacturer and use only within the recommended or specified limits.

3.4 APPLICATION

A. Apply paint materials to produce smooth finished surfaces, free of brush or roller marks, drops, runs, or sags.

B. Paint materials shall be kept at a proper and uniform consistency.

C. Thin only when necessary to achieve best results.

D. Thinners shall be material recommended by manufacturer of paint, and in quantity as recommended.

E. Excessive use of thinner as indicated by variation in absorption, lack of "hide", thickness of dry film, mottled or streaky coat, shall be cause for rejection. Correct as directed.

F. Apply all coats with brush or roller (spraying will not be permitted) varying slightly the color of succeeding coats.

G. Brush out or roll on first or prime coat; work well into surface.

H. Each coat shall be inspected, approved and dry before proceeding with additional coats.

I. The surfaces of metals shall be sanded or rubbed between coats to assure smooth finish and proper adhesion of subsequent coats.

3.5 CLEANING

A. Contractor shall clean-up behind each paint crew such that painting and clean-up will be a continuous uninterrupted operation. The practice of one general clean-up after completion of all painting will be strictly prohibited. This clean-up will include the following:

1. Remove spots or defacement resulting from Work of this Section.

2. Retouch all damaged surfaces to leave Work in perfect finished condition.

3. If spots or defacement cannot be satisfactorily removed and retouched, re-finish the surfaces as directed.

4. Remove from premises all surplus paint materials, debris and any other rubbish resulting from the Work.

5. Leave storage space clean and in condition required for equivalent spaces in project.

3.6 PROTECTION

A. Provide caution tape and/or locked entryways during paint removal activities in existing buildings to prevent access to the work area from unauthorized personnel.

B. Provide "Wet Paint" signs to protect newly-painted finishes. Remove temporary protective wrappings provided by others for protection of their Work after completion of painting operations.

C. At the completion of Work of other trades, touch-up and restore all damaged or defaced painted surfaces as directed by the Commissioner.

END OF SECTION 09 91 00

THIS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 21 05 00 - COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following:

1. Piping materials and installation instructions common to most piping systems.
2. Mechanical sleeve seals.
3. Sleeves.
4. Escutcheons.
5. Grout.
6. Fire-suppression equipment and piping demolition.
7. Equipment installation requirements common to equipment sections.
8. Painting and finishing.
9. Concrete bases.
10. Supports and anchorages.

1.3 DEFINITIONS

A. Refer to DDC general conditions.

B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

C. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

D. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

E. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.

F. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

G. The following are industry abbreviations for plastic materials:

1. CPVC: Chlorinated polyvinyl chloride plastic.

H. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For the following:

1. Mechanical sleeve seals.
2. Escutcheons.

C. Welding certificates.

1.5 QUALITY ASSURANCE

A. Steel Support Welding: Qualify processes and operators according to AWS D1.1 2015, "Structural Welding Code—Steel"

B. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

C. Electrical Characteristics for Fire-Suppression Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment shall comply with requirements.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.7 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for fire-suppression installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for fire-suppression items requiring access that are concealed behind finished surfaces. Access panels and doors are specified in Section 081100 "Steel Doors and Frames."

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.

2.2 PIPE, TUBE, AND FITTINGS

A. Refer to individual Division 21 piping Sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.3 JOINING MATERIALS

A. Refer to individual Division 21 piping Sections for special joining materials not listed below.

B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.

a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

E. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.

F. Brazing Filler Metals: AWS A5.8, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated; and AWS A5.8, BAg1, silver alloy for refrigerant piping, unless otherwise indicated.

G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

H. Solvent Cements for Joining CPVC Plastic Piping: ASTM F 493.

2.4 MECHANICAL SLEEVE SEALS

A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Manufacturers:

a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Metraflex Co.
d. Or approved equal

2. Sealing Elements: EPDMinterlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: Stainless steel. Include two for each sealing element.
4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.5 SLEEVES

A. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set screws.

2.6 ESCUTCHEONS

A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.

C. One-Piece, Cast-Brass Type: With set screw.

1. Finish: Polished chrome-plated.

D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.

1. Finish: Polished chrome-plated.].

E. One-Piece, Stamped-Steel Type: With set screw or spring clips and chrome-plated finish.

F. One-Piece, Floor-Plate Type: Cast-iron floor plate.

G. Split-Casting, Floor-Plate Type: Cast brass with concealed hinge and set screw.

2.7 GROUT

A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install piping according to the following requirements and Division 21 Sections specifying piping systems.

B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping to permit valve servicing.

G. Install piping at indicated slopes.

H. Install piping free of sags and bends.

I. Install fittings for changes in direction and branch connections.

J. Install piping to allow application of insulation.

K. Select system components with pressure rating equal to or greater than system operating pressure.

L. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

1. New Piping:

   a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
   b. Chrome-Plated Piping: One-piece, cast-brass type with polished chrome-plated finish.
   c. Insulated Piping: One-piece, stamped-steel type with spring clips.
   d. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
   e. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
   f. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece or split-casting, cast-brass type with polished chrome-plated finish.
   g. Bare Piping in Unfinished Service Spaces: One-piece, cast-brass type with rough-brass finish.
   h. Bare Piping in Equipment Rooms: One-piece, cast-brass type.

i. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.

M. Sleeves are not required for core-drilled holes.

N. Permanent sleeves are not required for holes formed by removable PE sleeves.

O. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.

P. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

2. Install sleeves in new walls and slabs as new walls and slabs are constructed.
3. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:

a. Steel Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).
b. Steel Sheet Sleeves: For pipes NPS 6 (DN 150) and larger, penetrating gypsum-board partitions.
c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Refer to Specification 076000 "Flashing and Sheet Metal" for flashing.

1) Seal space outside of sleeve fittings with grout.

4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Specification 079000 "Joint Sealers" for materials and installation.

Q. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Specification 072700 "Firestopping and Smoke Seals" for materials.

R. Verify final equipment locations for roughing-in.

S. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.3 PIPING JOINT CONSTRUCTION

A. Join pipe and fittings according to the following requirements and 211313 Wet-Pipe Sprinkler Systems.

B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 – Standard Practice for Making Capillary Joints by Soldering of Copper and Copper Alloy Tube and Fittings, or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.

F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1 – Pipe Threads, General Purpose. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Welded Joints: Construct joints according to AWS D10.12 – Guide for Welding Mild Steel Pipe, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.

H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

I. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F 402 – Standard Practice for Safe Handling of Solvent Cements, Primers, and Cleaners Used for Joining Thermoplastic Pipe and Fittings, for safe-handling practice of cleaners, primers, and solvent cements.
2. CPVC Piping: Join according to ASTM D 2846/D 2846M – Standard Specification for Chlorinated Polyvinyl Chloride Plastic Hot- and Cold-Water Distribution Systems, Appendix.

J. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D 3139 – Standard Specification for Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals.

3.4 PAINTING

A. Painting of fire-suppression systems, equipment, and components is specified in Section 099100 Painting.

B. Damage and Touchup: Restore marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.5 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Refer to Section 051210 Structural Steel.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor fire-suppression materials and equipment.

C. Field Welding: Comply with AWS D1.1.

3.6 GROUTING

A. Mix and install grout for fire-suppression equipment base bearing surfaces, pump and other equipment base plates, and anchors.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placement of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases and provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout.

END OF SECTION 210500

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 21 05 18 - ESCUTCHEONS FOR FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Escutcheons.
2. Floor plates.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.1 ESCUTCHEONS

A. One-Piece, Cast-Brass Type: With rough-brass finish and setscrew fastener.

B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with chrome-plated finish and spring-clip fasteners.

C. One-Piece, Stamped-Steel Type: With chrome-plated finish and spring-clip fasteners.

D. Split-Casting Brass Type: With rough-brass finish and with concealed hinge and setscrew.

E. Split-Plate, Stamped-Steel Type: With chrome-plated finish, concealed hinge, and spring-clip fasteners.

2.2 FLOOR PLATES

A. One-Piece Floor Plates: Cast-iron flange with holes for fasteners.

B. Split-Casting Floor Plates: Cast brass with concealed hinge.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.

B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

1. Escutcheons for New Piping:

a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, stamped-steel type.
c. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge.
d. Bare Piping in Unfinished Service Spaces: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge**.**
e. Bare Piping in Equipment Rooms: One-piece, stamped-steel type or split-plate, stamped-steel type with concealed hinge**.**

C. Install floor plates for piping penetrations of equipment-room floors.

D. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

1. New Piping: One-piece, floor-plate type.
2. Existing Piping: Split-casting, floor-plate type.

3.3 FIELD QUALITY CONTROL

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION 210518

SECTION 21 05 53 - IDENTIFICATION FOR FIRE SUPPRESSION SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Equipment identification.
2. Identification signs, nameplates and labels.
3. Pipe labels.
4. Fire department connection nameplates & signs.
5. Valve tags.
6. Warning signs.
7. Cabinet equipment identification.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated.

C. Samples: For color, letter style, and graphic representation required for each identification material and device.

D. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label. Contractor shall provide a labeling matrix for Commissioner review and approval.

E. Equipment labeling shall include: Equipment Name Designation, Equipment description, Equipment Functionality, Equipment information, Equipment location, Label Color and Label Location.

F. Valve numbering scheme.

G. Valve Schedules: For each piping system shall be included in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Comply with NYC Building Code.

C. Comply with ANSI A13.1 “Scheme for Identification of Piping Systems”.

1.5 COORDINATION

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT SIGNS

A. Metal Labels for Equipment:

1. Material and Thickness: Stainless steel, 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
4. Fasteners: Stainless-steel rivets or self-tapping screws.
5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
2. Letter Color: Black.
3. Background Color: White.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering

for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

7. Fasteners: Stainless-steel rivets or self-tapping screws.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data. Provide equipment label schedule for Commissioner's review and approval.

2.2 IDENTIFICATION SIGNS, NAMEPLATES AND LABELS

A. Identification on signs for outside sprinkler alarm devices shall be located above or next to the device and shall be worded "SPRINKLER FIRE ALARM – WHEN BELL RINGS NOTIFY FIRE DEPARTMENT OR POLICE."

B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.

C. Letter Color: Red

D. Background Color: White.

E. Maximum Temperature: Able to withstand temperatures up to 160 deg F.

F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.

G. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

H. Fasteners: Stainless-steel rivets or self-tapping screws.

I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

J. Label Content: Include caution and warning information, plus emergency notification instructions.

K. Provide sign on the entrance door of sprinkler valve. The sign shall read "Sprinkler control valves".

2.3 WARNING SIGNS

A. Warning Signs: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.

1. Size: 3 by 5-1/4 inches (75 by 133 mm) minimum, Approximately 4 by 7 inches (100 by 178 mm).
2. Fasteners: Brass grommet and wire.
3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
4. Color: Red background with white lettering.

B. Label Content: Include caution and warning information, plus emergency notification instructions.

2.4 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.

1. Factory fabricated, snap-on type pipe markers every 10 feet indicating system and direction of flow. The pipe markers shall be the weather-proof plastic type and shall not be used where surface temperature exceeds 180 deg F.
2. The pipe markers shall be:

a. Smaller than 6 inch: completely encircling pipe.
b. 6 inch and larger: stainless steel spring fasteners.
c. Adhesive type markers will not be permitted.

C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
2. Lettering Size: At least 1-1/2 inches high.

2.5 PIPE MARKERS

A. Provide factory fabricated, snap-on type pipe markers with service legend and flow arrows. The pipe markers shall be the weather-proof plastic type and shall not be used where surface temperature exceeds 180EF.

B. The pipe markers shall be in accordance with the following types:
1. Smaller than six inches: completely encircling pipe.

2. Six inches and larger: stainless steel spring fasteners.

C. Adhesive type markers will not be permitted.

2.6 VALVE TAGS

A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.

1. Tag Material: 2 inch square Stainless steel, 0.025-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Fasteners: Brass wire-link or beaded chain; or S-hook

B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Mount charts on walnut grained wood plaque with clear plastic laminations covering diagrams and/or lists.
2. Mount charts, diagrams, and/or lists, in aluminum frame and glass.
3. Letter and number equipment, valves and controls to correspond with designations on metal tags and/or nameplates.
4. Fasten permanently in locations, as directed, with four brass screws.
5. Valve-tag schedule shall be included in operation and maintenance data.

2.7 CHARTS

A. Provide valve tag chart indicating valve number, system, type, size, location and function for all valves.

B. Mount charts on walnut grained wood plaque with clear plastic laminations covering diagrams.

C. Mount in aluminum frame and glass.

D. Letter and number valves and controls to correspond with designations on metal tags.

E. Fasten charts permanently in locations, as directed, with four brass screws.

F. Supplement numbering and lettering of valve tags and charts of existing building.

G. Valve Chart: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Mount charts, diagrams, and/or lists, in aluminum frame.

2. Letter and number equipment, valves and controls to correspond with designations on metal tags and/or nameplates.
3. Fasten permanently in locations, as directed, with four brass screws.
4. Valve-tag schedule shall be included in operation and maintenance data.

2.8 WARNING SIGNS

A. Warning Signs: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.

1. Size: Approximately 4 by 7 inches.
2. Fasteners: Brass grommet and wire
3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
4. Color: Yellow background with black lettering.

2.9 NAMEPLATES

A. Provide engraved black Lamicoid sheet with white lettering nameplates with inscriptions, subject to review, indicating equipment and voltage, and fasten with epoxy cement and chrome plated screws.

B. Provide nameplates for gauges, meters, valve boxes, instruments, control devices, pilot lamps, transmitters, motor controllers and panel-mounted equipment.

2.10 CABINET EQUIPMENT IDENTIFICATION

A. Material and thickness same as equipment labels.

B. Minimum label size: Approximately 4 inches high by 7 inches in length.

C. Minimum letter size: 2 inches by 5 inches high (50 mm).

D. Unless code exception applies.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.3 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment, and for gauges, meters, valve boxes, instruments, control devices, pilot lamps, transmitters, motor controllers, and panel-mounted equipment.

B. Label each 1½ inch hose racks with operating instructions.

C. Provide metal sign for each riser control valve.

D. Locate equipment labels where accessible and visible.

3.4 IDENTIFICATION SIGNS, NAMEPLATES AND LABELS

A. All interior fire standpipe signage shall have a red background with a minimum one inch high background with minimum one inch high red letters.

C. Each remotely controlled R.C.V. valve shall have a metal sign indicating if it is normally closed or open.

D. Each riser control valve shall have metal sign hanging from the valve stating that it is a riser control valve.

3.5 PIPE LABEL INSTALLATION

A. Piping Color-Coding: Painting of piping is specified in Section 099100 Painting

B. Stenciled Pipe Label Option: Stenciled labels may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels complying with ASME A13.1 on each piping system.

1. Identification Paint: Use for contrasting background.
2. Stencil Paint: Use for pipe marking.

C. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Near each valve and control device.

2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 10 feet along each run.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
8. Where removable ceiling tiles are provided, install buttons, tabs, or markers to identify location of concealed work and/or valves. Submit for review.

D. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13 and following client's color coding requirements.

1. Item Description	Color Designation
a. Fire Service	Red
b. Sprinkler piping – all type	Red

3.6 VALVE-TAG INSTALLATION

A. Install tags on all valves and control devices in piping systems, except check valves; valves within factory-fabricated fire pumping equipment units. List tagged valves in a valve schedule.

B. Valve-Tag Application: Securely attach tags to each valve. Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:

1. Valve-Tag Size and Shape:

   a. Fire Standpipe (FSP): 2 inches, round.
   b. Sprinkler (SPK): 2 inches square
   c. Combined FSP and SPK: 2 inches square

2. Valve-Tag Color:

   a. Natural

3. Letter Color:

   a. Black

3.7 PAINTING APPLICATION

A. All valve handles, risers and cross connections, run outs to auxiliary hose valve handles, and control cabinets must be painted, including concealed piping.

B. In addition to exposed risers, cross connections and control valve handles, all concealed control valve handles, risers and cross connections that are exposed during the course of the alteration whether to remain exposed or to be concealed again shall be painted.

C. Required Paint Color:

1. Red for all risers (sprinkler, standpipe or combined) and cross connections and standpipe control valve handles.
2. Green for sprinkler valve handles.
3. Yellow for combined standpipe/sprinkler riser valve handles.

3.8 WARNING-TAG INSTALLATION

A. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION 210553

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 21 13 13 - WET-PIPE SPRINKLER SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Piping materials.
2. Pipe joining materials.
3. Cover system for sprinkler piping.
4. Listed fire-protection valves.
5. Trim and drain valves.
6. Specialty valves:
   a. Sprinkler specialty pipe fittings.
7. Sprinklers.
8. Alarm devices.
9. Escutcheons.
10. Sleeves.
11. Sleeve seals.
12. Grout.

1.3 DEFINITIONS

A. Refer to DDC general conditions.

B. Standard-Pressure Sprinkler Piping: Wet-pipe sprinkler system piping designed to operate at working pressure of 175 psig maximum.

C. NFPA 13 – Standard for the Installation of Sprinkler Systems

1.4 SYSTEM DESCRIPTIONS

A. Wet-Pipe Sprinkler System: Automatic sprinklers are attached to piping containing water and that is connected to water supply through alarm valve. Water discharges immediately from sprinklers when they are opened. Sprinklers open when heat melts fusible link or destroys frangible device. Hose connections are included if indicated.

1.5 PERFORMANCE REQUIREMENTS

A. Standard-Pressure Piping System Component: Listed for 175-psig (1200-kPa) minimum working pressure.

B. Engineering Services: Design sprinkler system(s), including comprehensive engineering analysis by a qualified professional engineer licensed in the State of New York, using performance requirements and design criteria indicated.

1. Available pressure and gpm:
   a. See Building Riser diagram for elevations and design information
   b. Provide hydrant flow test for obtaining most recent street flow and pressure for the hydraulic calculations.

2. Available fire-hydrant flow test records indicate the following conditions:

C. Sprinkler system design shall be approved by New York City Department of Buildings and Fire Department of New York.

1. Margin of Safety for Available Water Flow and Pressure: 10 percent, including losses through water-service piping, valves, and backflow preventers.

2. Sprinkler Occupancy Hazard Classifications:

   a. Building Service Areas: Ordinary Hazard, Group 1.
   b. Electrical Equipment Rooms: Ordinary Hazard, Group 1.
   c. General Storage Areas: Ordinary Hazard, Group 1.
   d. Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
   e. Office and Public Areas: Light Hazard.

3. Minimum Density for Automatic-Sprinkler Piping Design:

   a. Light-Hazard Occupancy: 0.10 gpm over 1500-sq. ft. area.
   b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm over 1500-sq. ft. area.
   c. Special Occupancy Hazard: As determined by the City of New York

4. Maximum Protection Area per Sprinkler:

   a. Office Spaces: 225 sq. ft.
   b. Storage Areas: 130 sq. ft.
   c. Mechanical Equipment Rooms: 130 sq. ft.
   d. Electrical Equipment Rooms: 130 sq. ft.
   e. Other Areas: According to NFPA 13 recommendations unless otherwise indicated.

5. Total Combined Hose-Stream Demand Requirement: According to NFPA 13 unless otherwise indicated:

   a. Light-Hazard Occupancies: 100 gpm for 30 minutes.
   b. Ordinary-Hazard Occupancies: 250 gpm for 60 to 90 minutes.

D. Seismic Performance: Sprinkler piping shall withstand the effects of earthquake motions determined according to NFPA 13.

1.6 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

C. Shop Drawings: For wet-pipe sprinkler systems. Include plans, elevations, sections, details, and attachments to other work.

1. Wiring Diagrams: For power, signal, and control wiring.

D. Engineering Services Submittal: For sprinkler systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation.

E. Coordination Drawings: Sprinkler systems, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Domestic water piping.
2. HVAC piping and ducts.
3. Items penetrating finished ceiling include the following:

a. Lighting fixtures.
b. Air outlets and inlets.

F. Qualification Data: For qualified Installer.

G. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13, that have been approved by New York City Department of Buildings and Fire Department of New York, including hydraulic calculations if applicable.

H. Welding certificates.

I. Fire-hydrant flow test report.

J. Field Test Reports and Certificates: Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."

K. Field quality-control reports.

L. Operation and Maintenance Data: For sprinkler specialties to include in emergency, operation, and maintenance manuals.

M. Submittals shall indicate M.E.A. approval with a Calendar Number.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Installer Qualifications:

1. Installer's responsibilities include fabricating, and installing sprinkler systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.

a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a qualified professional engineer licensed in the State of New York.

C. Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. NFPA Standards: Sprinkler system equipment, specialties, accessories, installation, and testing shall comply with the following:

1. NFPA 13, "Installation of Sprinkler Systems."
2. NFPA 24, "Installation of Private Fire Service Mains and Their Appurtenances."
3. NFPA 72E.
4. Americans with Disabilities Act.

F. Provide products with BS & A approval as required.

1.8 PROJECT CONDITIONS

A. Interruption of Existing Sprinkler Service: Do not interrupt sprinkler unless permitted under the following conditions and then only after arranging to provide temporary sprinkler service according to requirements indicated:

1. Notify The Commissioner no fewer than two days in advance of proposed interruption of sprinkler service.
2. Do not proceed with interruption of sprinkler service without The Commissioner’s written permission.

1.9 COORDINATION

A. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

1.10 REQUIRED MATERIALS

A. Furnish required materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.

B. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
1. Wheatland.
2. Cerro.
3. Allied.
4. Or Approved Equal.

2.2 STEEL PIPE AND FITTINGS

A. Schedule 40, Black Steel Pipe: ASTM A 53/A 53M (Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless), Type E, Grade B. Pipe ends may be factory or field formed to match joining method.

B. Schedule 10, Black-Steel Pipe: ASTM A 135 (Standard Specification for Electric Resistance-Welded Steel Pipe) or ASTM A 795/A 795M (Standard Specification for Black and Hot-Dipped Zinc-Coated Welded and Seamless Steel Pipe for Fire Protection Use), Schedule 10 in NPS 5 and smaller; and NFPA 13-specified wall thickness in NPS 6 to NPS 10, plain end.

C. Black Steel Pipe Nipples: ASTM A 733 (Standard Specification for Welded and Seamless Carbon Steel and Austenitic Stainless Steel Pipe Nipples), made of ASTM A 53/A 53M (Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless), standard-weight, seamless steel pipe with threaded ends.

D. Uncoated, Steel Couplings: ASTM A 865 (Standard Specification for Threaded Couplings, Steel, Black or Zinc-Coated Welded or Seamless, for Use in Steel Pipe Joints), threaded.

E. Uncoated, Gray-Iron Threaded Fittings: ASME B16.4 (Cast Iron Threaded Fittings), Class 125, standard pattern.

F. Malleable- or Ductile-Iron Unions: UL 860.

G. Cast-Iron Flanges: ASME 16.1 (Cast Iron Pipe Flanges and Flanged Fittings), Class 125.

H. Steel Flanges and Flanged Fittings: ASME B16.5 (Pipe Flanges and Flanged Fittings), Class 150.

I. Steel Welding Fittings: ASTM A 234/A 234M (Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Services) and ASME B16.9 (Factory-Made Wrought Steel Butt-welding Fittings).

J. Grooved-Joint, Steel-Pipe Appurtenances:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

   a. Anvil International, Inc.
   b. Corcoran Piping System Co.
   c. National Fittings, Inc.
   d. Shurjoint Piping Products.
   e. Tyco Fire & Building Products LP.
   f. Victaulic Company
   g. Or approved equal

2. Pressure Rating: 175 psig minimum.
3. Uncoated, Grooved-End Fittings for Steel Piping: ASTM A 47/A 47M, malleable-iron casting or ASTM A 536, ductile-iron casting; with dimensions matching steel pipe.
4. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213, rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.3 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free.

1. Class 125, Cast-Iron Flanges and Class 150, Bronze Flat-Face Flanges: Full-face gaskets.
2. Class 250, Cast-Iron Flanges and Class 300, Steel Raised-Face Flanges: Ring-type gaskets.

B. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.

C. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.

D. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.4 LISTED FIRE-PROTECTION VALVES

A. General Requirements:

1. Valves shall be UL listed or FM approved.
2. Minimum Pressure Rating for Standard-Pressure Piping: 175 psig.

B. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

   a. Anvil International, Inc.
   b. Victaulic Company
   c. Trion
   d. Or Approved Equal.

2. Standard: UL 1091 except with ball instead of disc.
3. Valves NPS 1-1/2 and Smaller: Bronze body with threaded ends.
4. Valves NPS 2 and NPS 2-1/2: Bronze body with threaded ends or ductile-iron body with grooved ends.
5. Valves NPS 3: Ductile-iron body with grooved ends.
6. Grooved end shut-off valve shall be ball type, two-piece bronze body ASTM A584 with threaded or grooved end connections. Chrome-plated brass ball, 316 stainless steel stem, TFE seat, die-cast brass gearbox, pre-wired supervisory switches.

C. Bronze Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide Valve product by one of the following:

   a. Milwaukee Company
   b. Fivalco Inc.
   c. Global Safety Products, Inc.
   d. Or Approved Equal.

2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Bronze.
5. End Connections: Threaded.
6. Operation: Slow closing with position indicator with tamper switch.

D. Iron Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

   a. Anvil International, Inc.
   b. Fivalco Inc.
   c. Global Safety Products, Inc.

d. Kennedy Valve; a division of McWane, Inc.
e. Milwaukee Valve Company.
f. NIBCO Inc.
g. Shurjoint Piping Products.
h. Tyco Fire & Building Products LP.
i. Or Approved Equal.

2. Standard: UL 1091.
3. Pressure Rating: 175 psig (1200 kPa).
4. Body Material: Cast or ductile iron.
5. Style: Lug or wafer.
6. End Connections: Grooved.

E. Check Valves:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
   a. Anvil International, Inc.
   b. Clow Valve Company; a division of McWane, Inc.
   c. Crane Co.; Crane Valve Group; Crane Valves.
   d. Crane Co.; Crane Valve Group; Stockham Division.
   e. Fire-End & Croker Corporation.
   f. Fivalco Inc.
   g. Globe Fire Sprinkler Corporation.
   h. Kennedy Valve; a division of McWane, Inc.
   i. Milwaukee Valve Company.
   j. Mueller Co.; Water Products Division.
   k. NIBCO Inc.
   l. Potter Roemer.
   m. Reliable Automatic Sprinkler Co., Inc.
   n. Shurjoint Piping Products.
   o. Tyco Fire & Building Products LP.
   p. Viking Corporation.
   q. Or Approved Equal.

2. Standard: UL 312.
3. Pressure Rating: 250 psig minimum.
4. Type: Swing check.
5. Body Material: Cast iron.
6. End Connections: Flanged or grooved.
7. Two inch and smaller valves, except as noted, shall be threaded bronze, 175 psig wwp. 2-1/2 inch and larger, except as noted shall be flanged IBBM, 175 psig wwp.
8. Wafer type check valves or grooved end spring-assisted check valves 250# WWP UL, FMG, MEA approved may be used.
9. Threaded bronze, swing type check valves, 175 psig wwp with composition or leather disc for air lines.

F. Bronze OS&Y Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

    a. Crane Co.; Crane Valve Group; Crane Valves.
    b. Crane Co.; Crane Valve Group; Stockham Division.
    c. NIBCO Inc.
    d. Tyco Fire & Building Products LP.
    e. Or Approved Equal.

2. Standard: UL 262.
3. Pressure Rating: 175 psig .
4. Body Material: Bronze.
5. End Connections: Threaded.
6. Equal to Kennedy Fig. 66.

G. Iron OS&Y Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
    a. Clow Valve Company; a division of McWane, Inc.
    b. Crane Co.; Crane Valve Group; Crane Valves.
    c. Crane Co.; Crane Valve Group; Stockham Division.
    d. Hammond Valve.
    e. Mueller Co.; Water Products Division.
    f. NIBCO Inc.
    g. Shurjoint Piping Products.
    h. Tyco Fire & Building Products LP.
    i. Or Approved Equal.

2. Standard: UL 262.
3. Pressure Rating: 250 psig (1725 kPa) minimum
4. Body Material: Cast or ductile iron.
5. End Connections: Flanged or grooved.
6. 2-1/2 inch and larger, shall be flanged IBBM, OS&Y gate type.
7. Seal valves in proper position and provide approved type metal signs indicating purpose of valve.

H. Indicating-Type Butterfly Valves:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

    a. Anvil International, Inc.
    b. Fivalco Inc.
    c. Global Safety Products, Inc.
    d. Kennedy Valve; a division of McWane, Inc.
    e. Milwaukee Valve Company.
    f. NIBCO Inc.
    g. Shurjoint Piping Products.

h. Tyco Fire & Building Products LP.
i. Or Approved Equal.

2. Standard: UL 1091.
3. Pressure Rating: 175 psig minimum.
4. Valves NPS 2 and Smaller:

a. Valve Type: Ball or butterfly.
b. Body Material: Bronze.
c. End Connections: Threaded.

5. Valves NPS 2-1/2 and Larger:

a. Valve Type: Butterfly.
b. Body Material: Cast or ductile iron.
c. End Connections: Flanged, grooved, or wafer.

6. Valve Operation: Integral electrical, 115-V ac, prewired, single-circuit, supervisory switch indicating device.

2.5 TRIM AND DRAIN VALVES

A. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating: 175 psig minimum.

B. Angle Valves:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

a. Fire Protection Products, Inc.
b. United Brass Works, Inc.
c. Or Approved Equal.

C. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
a. Milwaukee Valve Company
b. Anvil International, Inc.
c. Conbraco Industries, Inc.; Apollo Valves.
d. Fire-End & Croker Corporation.
e. Kennedy Valve; a division of McWane, Inc.
f. NIBCO Inc.
g. Potter Roemer.

h. Tyco Fire & Building Products LP.
i. Victaulic Company.
j. Watts Water Technologies, Inc.
k. Or Approved Equal.

2. Grooved end shut-off valve shall be ball type, two-piece bronze body ASTM A584 with threaded or grooved end connections. Chrome-plated brass ball, 316 stainless steel stem, TFE seat, die-cast brass gearbox, pre-wired supervisory switches.

D. Globe Valves:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

a. Milwaukee Valve Company No. 502
b. Fire Protection Products, Inc.
c. United Brass Works, Inc.
d. Or Approved Equal.

2.6 SPRINKLER SPECIALTY PIPE FITTINGS

A. Branch Outlet Fittings:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

a. Victaulic Company
b. Anvil International, Inc.
c. Shurjoint Piping Products.
d. Tyco Fire & Building Products LP.
e. Or Approved Equal.

2. Standard: UL 213.
3. Pressure Rating: 175 psig (1200 kPa) minimum.
4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
5. Type: Mechanical-T and -cross fittings.
6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
8. Branch Outlets: Grooved, plain-end pipe, or threaded.

B. Flow Detection and Test Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
a. Reliable Automatic Sprinkler Co., Inc.
b. Tyco Fire & Building Products LP.
c. Victaulic Company.
d. Or Approved Equal.

2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
3. Pressure Rating: 175 psig (1200 kPa) minimum.
4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded.

C. Sprinkler Inspector's Test Fittings:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
   a. Tyco Fire & Building Products LP.
   b. Victaulic Company.
   c. Viking Corporation.
   d. Or Approved Equal.

2. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
3. Pressure Rating: 175 psig (1200 kPa) minimum.
4. Body Material: Cast- or ductile-iron housing with sight glass.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded.
7. Where required, test pipe with sight glass, and calibrated orifice
8. Where applicable, use a grooved end 90 degree elbow at fire department connection

D. Adjustable Drop Nipples:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

   a. Merit Manufacturing; a division of Anvil International, Inc. CECA, LLC.
   b. Aegis Technologies Inc.
   c. Corcoran Piping System Co.
   d. Or Approved Equal.

2. Standard: UL 2443.
3. Pressure Rating: 250 psig (1725 kPa) minimum.
4. Body Material: Steel pipe with EPDM-rubber O-ring seals.
5. Size: Same as connected piping.
6. Length: Adjustable.
7. Inlet and Outlet: Threaded.

E. Flexible, Sprinkler Hose Fittings:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

   a. Fivalco Inc.
   b. FlexHead Industries, Inc.

c. Gateway Tubing, Inc.
d. Or Approved Equal.

2. Standard: UL 2443.
3. Type: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
4. Pressure Rating: 175 psig (1200 kPa) minimum.
5. Size: Same as connected piping, for sprinkler.

2.7 SPRINKLERS

A. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
1. Globe Fire Sprinkler Corporation.
2. Tyco Fire & Building Products LP.
3. Victaulic Company.
4. Viking Corporation.
5. Or Approved Equal.

B. General Requirements:

1. Standard: UL's "Fire Protection Equipment Directory" listing or "Approval Guide," published by FM Global, listing.
2. Pressure Rating for Automatic Sprinklers: 175 psig (1200 kPa) minimum.

C. Sprinkler Finishes:

1. Chrome plated.
2. Bronze.
3. Painted.

D. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: Concealed, flushed and recessed.
2. Sidewall Mounting: Concealed and recessed.

E. Sprinkler Guards:

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

a. Globe Fire Sprinkler Corp.
b. Tyco Fire & Building Products LP.
c. Victaulic Company.
d. Viking Corporation.
e. Or Approved Equal.

2. Standard: UL 199.
3. Type: Wire cage with fastening device for attaching to sprinkler.

F. Quick Response Sprinklers (5.6 K-Factor Only):
1. Sprinklers shall be provided where noted and installed in accordance with their listing.
   a. Upright:
      1) Reliable Model GFR (fusible link UL Listing only)
      2) Reliable Model F1FR (frangible bulb UL & FM listed)
      3) Victaulic Model V2704 (frangible bulb UL and FM listed)
      4) Or approved equal
   b. Pendent:
      1) Reliable Model GFR (fusible link UL listing only)
      2) Reliable Model F1FR (frangible bulb UL & FM listed)
      3) Victaulic Model V2708 (frangible bulb UL and FM listed)
      4) Or approved equal
   c. Sidewall:
      1) Reliable Model GFR (fusible link UL listing only)
      2) Reliable Model F1FR (frangible bulb UL & FM listed)
      3) Victaulic Model V2710 (frangible bulb UL and FM listed)
      4) Or approved equal
   d. Concealed:
      1) Reliable Model G4A (fusible link UL listing only)
      2) Victaulic Model V3802 (frangible bulb UL listing only)
      3) Or approved equal
2.

2.8 ESCUTCHEONS

A. General: Manufactured ceiling, floor, and wall escutcheons and floor plates.

B. One-Piece, Cast-Brass Escutcheons: rough-brass finish with set-screws.

2.9 SLEEVES

A. Cast-Iron Wall Pipe Sleeves: Cast or fabricated of cast iron and equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

B. Galvanized-Steel-Pipe Sleeves: ASTM A 53/A 53M, Type E, standard weight, zinc coated, plain ends.

C. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

   1. Underdeck Clamp: Clamping ring with set-screws.

D. Except where framed openings are provided in General Construction Work, provide No. 22 USSG galvanized sheet metal sleeves though interior floors, ceilings, walls, and partitions.

1. Galvanized-Steel-Sheet Sleeves: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.

E. Projecting flashing type sleeves though interior membrane waterproofed floors, except as noted. Sleeves shall be cast iron with integral flashing flange for built up membrane, with clamping ring. For liquid membrane, furnish sleeves with integral or brazed 4 inch wide flange.

F. Flush flashing type sleeves though membrane waterproofed walls, slabs with earth fill above and slabs on ground. Sleeves shall be cast iron with integral flashing flange and clamping ring for built up membrane. For liquid membrane sleeves shall be with integral or brazed 4 inch wide flange. Sleeves shall be modified for wall or slab thickness.

G. Through elastomeric type waterproofing, galvanized cast iron sleeves with integral bottom flange.

1. Exposed sleeves after packing shall be covered by close-fitting metal escutcheons on both sides of construction.

H. Generally, sleeves though foundations are by others. Provide additional sleeves required and cutting and patching to install same or to relocate existing sleeves.

2.10 SLEEVE SEALS

A. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

1. Advance Products & Systems, Inc.
2. Calpico, Inc.
3. Metraflex, Inc.
4. Pipeline Seal and Insulator, Inc.
5. Or Approved Equal.

B. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Sealing Elements: EPDM-rubber or NBR interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
2. Pressure Plates: Carbon steel.
3. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements.

2.11 GROUT

A. Standard: ASTM C 1107, Grade B, posthardening and volume adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink, and recommended for interior and exterior applications.

C. Design Mix: 5000-psi (34-MPa), 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 PREPARATION

A. Perform fire-hydrant flow test according to NFPA 13 and NFPA 291. Use results for system design calculations required in "Quality Assurance" Article.

B. Report test results promptly and in writing.

3.3 PIPING INSTALLATION

A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.

1. Deviations from approved working plans for piping require written approval from New York City Department of Buildings and Fire Department of New York. File written approval with the Commissioner before deviating from approved working plans.

B. Piping Standard: Comply with requirements for installation of sprinkler piping in NFPA 13.

C. Install seismic restraints on piping. Comply with requirements for seismic-restraint device materials and installation in NFPA 13.

D. Use listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

E. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.

F. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.

G. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, and sized and located according to NFPA 13.

H. Install sprinkler piping with drains for complete system drainage.

1. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes. Drain pipes or test pipes shall spill

through building wall, over ejector pit, over sump pit, over mop sink, over anti-splash standpipe drain, on roof or as noted.

I. Install automatic (ball drip) drain valve at each check valve for fire-department connection, to drain piping between fire-department connection and check valve. Install drain piping to and spill over floor drain or to outside building.

J. Install alarm devices in piping systems.

K. Install hangers and supports for sprinkler system piping according to NFPA 13. Comply with requirements for hanger materials in NFPA 13.

L. Pressurize and check preaction sprinkler system piping and air-pressure maintenance devices.

M. Fill sprinkler system piping with water.

3.4 JOINT CONSTRUCTION

A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.

B. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller.

C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger end connections.

D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts according to ASME B31.9.

G. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

H. Welded Joints: Construct joints according to AWS D10.12M/D10.12 (Guide for Welding Mild Steel Pipe), using qualified processes and welding operators according to "Quality Assurance" Article.

1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.

I. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe according to AWWA C606 (Standard for Grooved and Shouldered Joints). Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 (Standard for Grooved and Shouldered Joints) for steel-pipe joints.

J. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe according to AWWA C606 (Standard for Grooved and Shouldered Joints). Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings according to AWWA C606 (Standard for Grooved and Shouldered Joints) for steel-pipe grooved joints.

K. Specialty Valves:

1. General Requirements: Install in vertical position for proper direction of flow, in main supply to system.
2. Alarm Valves: Include bypass check valve and retarding chamber drain-line connection.

3.5 SPRINKLER INSTALLATION

A. Install sprinklers in suspended ceilings in center of acoustical ceiling panels.

B. Install sprinklers into flexible, sprinkler hose fittings and install hose into bracket on ceiling grid.

3.6 ESCUTCHEON INSTALLATION

A. Install escutcheons for penetrations of walls, ceilings, and floors.

B. Escutcheons for New Piping:

1. Piping with Fitting or Sleeve Protruding from Wall: One piece, deep pattern.
2. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
3. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
4. Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish.
5. Bare Piping in Equipment Rooms: One piece, cast brass.
6. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

3.7 SLEEVE INSTALLATION

A. General Requirements: Install sleeves for pipes and tubes passing through penetrations in floors, partitions, roofs, and walls.

B. Sleeves are not required for core-drilled holes.

C. Permanent sleeves are not required for holes formed by removable PE sleeves.

D. Cut sleeves to length for mounting flush with both surfaces unless otherwise indicated.

E. Install sleeves in new partitions, slabs, and walls as they are built.

F. For interior wall penetrations, seal annular space between sleeve and pipe or pipe insulation using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Section 07 92 00 "Joint Sealants."

G. For exterior wall penetrations above grade, seal annular space between sleeve and pipe using joint sealants appropriate for size, depth, and location of joint. Comply with requirements for joint sealants in Section 07 92 00 "Joint Sealants."

H. For exterior wall penetrations below grade, seal annular space between sleeve and pipe using sleeve seals.

I. Provide sleeves of cast iron or steel pipe through exterior walls, beams, interior machine room floors and interior sprinklered area floors, except as noted. Extend sleeves 3 inches to 6 inches above finished floor. Provide continuously welded center flange for sleeves though exterior walls, and floors of machine rooms and sprinklered areas.

J. Seal space outside of sleeves in concrete slabs and walls with grout.

K. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation unless otherwise indicated.

L. Install sleeve materials according to the following applications:

1. Sleeves for Piping Passing through Gypsum-Board Partitions:

    a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6 (DN 150).
    b. Galvanized-steel-sheet sleeves for pipes NPS 6 (DN 150) and larger.
    c. Exception: Sleeves are not required for water-supply tubes and waste pipes for individual plumbing fixtures if escutcheons will cover openings.

2. Sleeves for Piping Passing through Interior Concrete Walls:

    a. Galvanized-steel-pipe sleeves for pipes smaller than NPS 6 (DN 150).
    b. Galvanized-steel-sheet sleeves for pipes NPS 6 (DN 150) and larger.

M. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestop materials and installations in Section 07 27 00 " Firestopping/Smokeseals."

3.8 SLEEVE SEAL INSTALLATION

A. Install sleeve seals in sleeves in exterior concrete walls at water-service piping entries into building.

B. Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble sleeve seal components and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.9 IDENTIFICATION

A. Install labeling and pipe markers on equipment and piping according to requirements in NFPA 13.

B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

3.10 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Leak Test: After installation, charge systems and test for leaks. Restore leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Flush, test, and inspect sprinkler systems according to NFPA 13, "Systems Acceptance" Chapter.
4. Energize circuits to electrical equipment and devices.
5. Start and run excess-pressure pumps.
6. Coordinate with fire-alarm tests. Operate as required.
7. Coordinate with fire-pump tests. Operate as required.
8. Verify that equipment hose threads are same as local fire-department equipment.

C. Sprinkler piping system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

E. Submit a copy of Department of Buildings/Plumbing Division On Site Inspection Report.

3.11 CLEANING

A. Clean dirt and debris from sprinklers.

B. Remove and replace sprinklers with paint other than factory finish.

3.12 PIPING APPLICATION

A. Standard-pressure, wet-pipe sprinkler system, NPS 2 (DN 50) and smaller, shall be one of the following:

1. Standard-weight, Schedule 40, threaded, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
2. Standard-weight, black-steel pipe with roll grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

B. Standard-pressure, wet-pipe sprinkler system, NPS 2-1/2 to NPS 4, shall be one of the following:

1. Schedule 30, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.
2. Schedule 30, black-steel pipe with grooved-end-pipe couplings for steel piping; and grooved joints.
3. Schedule 30, black-steel pipe with plain ends; steel welding fittings; and welded joints.
4. Schedule 10, black-steel pipe with roll-grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.
5. Schedule 10, black-steel pipe with plain ends; welding fittings; and welded joints.

3.13 SPRINKLER SCHEDULE

A. Use sprinkler types in subparagraphs below for the following applications:

1. Rooms without Ceilings: Upright sprinklers.
2. Rooms with Suspended Ceilings: Concealed sprinklers.
3. Wall Mounting: Sidewall sprinklers.
4. Spaces Subject to Freezing: Pendent, dry sprinklers.

B. Provide sprinkler types in subparagraphs below with finishes indicated.

1. Concealed Sprinklers: Rough brass, with factory-painted white cover plate.
2. Flush Sprinklers: Bright chrome, with painted white escutcheon.
3. Upright Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces not exposed to view; wax coated where exposed to acids, chemicals, or other corrosive fumes.

END OF SECTION 211313

PAGE INTENTIONALLY LEFT BLANK

SECTION 22 05 00 - COMMON WORK RESULTS FOR PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following:

1. Pipe, tube and fittings
2. Dielectric fittings
3. Mechanical sleeve seals
4. Sleeves
5. Escutcheons
6. Grout

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

C. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

D. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

E. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.

F. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

G. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.

2. NBR: Acrylonitrile-butadiene rubber.

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For the following:

1. Pipe, tube and fittings
2. Dielectric fittings
3. Mechanical sleeve seals
4. Sleeves
5. Escutcheons
6. Grout

C. Welding certificates.

D. Coordinated Drawings.

E. As-built Record Drawings.

F. Record Files.

G. Layout (Shop) Drawings:

1. Prepare layout shop drawings for all areas.

H. From the layout drawings, prepare and submit Coordinated Drawings as herein specified below.

I. Coordinated Drawings:
1. This Contractor shall prepare coordinated drawings which shall show work of all trades including:
   a. Items noted in the Addendum to the General Conditions.
   b. Mechanical Equipment.

J. As-built (Record) Drawings:
1. Provide after installation is complete. Final signoff and acceptance will not occur prior to submission of As-built drawings to Commissioner.
2. Indicate as-built conditions and all revisions that occurred subsequent to "Coordinated Drawings" submittal, fully illustrating all revisions made by all trades in the course of work.
3. Dimension physical locations of piping with reference elevations and distances above finished roof, below beams, and from wall (parapet) faces, and from column lines.
4. Indicate all equipment sizes and capacities and tag numbers.
5. Provide drawing on reproducible CADD mylar.
6. These drawings shall be for as-built record purposes for the Commissioner's use and are not considered shop drawings.

K. Record Files:

1. Provide 5 (five) electronic file copies of the As-built CADD drawings in the media of Commissioner's choice.
2. Include hard copy and electronic copy of file naming convention, layering standards, drawing index and file descriptions.
3. Electronic files shall be modifiable and shall include all associated referenced background files.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, 2015, "Structural Welding Code--Steel."

C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

1.7 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for plumbing installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for plumbing items requiring access that are concealed behind finished surfaces.

PART 2 - PRODUCTS

2.1 PIPE, TUBE, AND FITTINGS

A. Refer to individual Division 22 piping Sections for pipe, tube, and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 DIELECTRIC FITTINGS

A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

B. Insulating Material: Suitable for system fluid, pressure, and temperature.

C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg F.

1. Manufacturers:

a. Capitol Manufacturing Co.
b. Central Plastics Company.
c. Eclipse, Inc.
d. Epco Sales, Inc.
e. Hart Industries, International, Inc.
f. Watts Industries, Inc.; Water Products Div.
g. Zurn Industries, Inc.; Wilkins Div.
h. Or approved equal

2.3 MECHANICAL SLEEVE SEALS

A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

1. Manufacturers:

a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Metraflex Co.
d. Pipeline Seal and Insulator, Inc.
e. Or approved equal

2. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: Carbon steel. Include two for each sealing element.
4. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.4 SLEEVES

A. Galvanized-Steel Sheet: 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint.

B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.

C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

1. Underdeck Clamp: Clamping ring with set screws.

2.5 ESCUTCHEONS

A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

B. One-Piece, Stamped-Steel Type: With set screw or spring clips and chrome-plated finish.

C. Split-Plate, Stamped-Steel Type: With exposed-rivet hinge, set screw or spring clips, and chrome-plated finish.

D. One-Piece, Floor-Plate Type: Cast-iron floor plate.

2.6 GROUT

A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 PLUMBING DEMOLITION

A. Refer to DDC General Conditions and Section 02 41 13 " Selective Removals & Demolitions" for general demolition requirements and procedures.

B. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.3 PIPING SYSTEMS - COMMON REQUIREMENTS

A. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

1. New Piping:

a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
b. Insulated Piping: One-piece, stamped-steel type with spring clips.
c. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
d. Bare Piping at Ceiling Penetrations in Finished Spaces: One-piece, cast-brass type with polished chrome-plated finish.
e. Bare Piping in Equipment Rooms: One-piece, stamped-steel type with set screw or spring clips.
f. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece, floor-plate type.

2. Existing Piping: Use the following:
a. Insulated Piping: Split-plate, stamped-steel type with concealed or exposed-rivet hinge and spring clips.
b. Bare Piping at Wall and Floor Penetrations in Finished Spaces: Split-casting, cast-brass type with chrome-plated finish.
c. Bare Piping at Floor Penetrations in Equipment Rooms: Split-casting, floor-plate type.

B. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs.

C. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

2. Install sleeves in new walls and slabs as new walls and slabs are constructed.
3. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:

a. Steel Pipe Sleeves: For pipes smaller than NPS 6.
b. Steel Sheet Sleeves: For pipes NPS 6 and larger, penetrating gypsum-board partitions.
c. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level. Refer to Section 07 60 00 "Flashing and Sheet Metal" for flashing.

1) Seal space outside of sleeve fittings with grout.

4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using joint sealants appropriate for size, depth, and location of joint. Refer to Section 07 92 00 "Joint Sealants" for materials and installation.

D. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials.

3.4 PAINTING

A. Painting of plumbing systems, equipment, and components is specified in Section 09 91 00 Painting.

3.5 ERECTION OF METAL SUPPORTS AND ANCHORAGES

A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.

B. Field Welding: Comply with AWS D1.1.

3.6 GROUTING

A. Clean surfaces that will come into contact with grout.

B. Provide forms as required for placement of grout.

C. Avoid air entrapment during placement of grout.

D. Place grout around anchors.

E. Cure placed grout.

END OF SECTION 220500

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 05 29 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following hangers and supports for plumbing system piping and equipment:

1. Steel pipe hangers and supports.
2. Fastener systems.

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. MSS: Manufacturers Standardization Society for The Valve and Fittings Industry Inc.

C. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For the following:

1. Steel pipe hangers and supports.

C. Shop Drawings: Signed and sealed by a qualified professional engineer licensed in the State of New York. Show fabrication and installation details and include calculations for the following:

1. Pipe hangers. Include Product Data for components.

D. Welding certificates.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel."

C. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."
2. AWS D1.4, "Structural Welding Code--Reinforcing Steel."

PART 2 - PRODUCTS

2.1 STEEL PIPE HANGERS AND SUPPORTS

A. Description: MSS SP-58, Types 1 through 58, factory-fabricated components. Refer to Part 3 "Hanger and Support Applications" Article for where to use specific hanger and support types.

B. Manufacturers:

1. AAA Technology & Specialties Co., Inc.
2. Anvil International.
3. Bergen-Power Pipe Supports.
4. B-Line Systems, Inc.; a division of Cooper Industries.
5. Carpenter & Paterson, Inc.
6. Empire Industries, Inc.
7. ERICO/Michigan Hanger Co.
8. Globe Pipe Hanger Products, Inc.
9. Grinnell Corp.
10. GS Metals Corp.
11. National Pipe Hanger Corporation.
12. PHD Manufacturing, Inc.
13. PHS Industries, Inc.
14. Piping Technology & Products, Inc.
15. PSI Corp.
16. Tolco Inc.
17. Or approved equal

C. Galvanized, Metallic Coatings: Pregalvanized or hot dipped.

D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

E. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion for support of bearing surface of piping.

2.2 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.
2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 HANGER AND SUPPORT APPLICATIONS

A. Specific hanger and support requirements are specified in Sections specifying piping systems and equipment.

B. Comply with MSS SP-69 (Pipe Hangers and Supports – Selection and Application) for pipe hanger selections and applications that are not specified in piping system Sections.

C. Use hangers and supports with galvanized, metallic coatings for piping and equipment that will not have field-applied finish.

D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

E. Use padded hangers for piping that is subject to scratching.

F. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated stationary pipes, NPS 1/2 to NPS 30.
2. Split Pipe-Ring with or without Turnbuckle-Adjustment Hangers (MSS Type 11): For suspension of noninsulated stationary pipes, NPS 3/8 to NPS 8.

G. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers, NPS 3/4 to NPS 20.

H. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
2. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
3. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
4. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.

I. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.

    a. Inserts shall be steel, slotted type and factory-painted.

        1) Multi-rod shall include end caps and closure strips.
        2) Clip form nails flush with inserts.
        3) Maximum loading including pipe, contents and covering shall not exceed 75% of rated insert capability.

2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction to attach to top flange of structural shape.
3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
6. C-Clamps (MSS Type 23): For structural shapes.
7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
11. Malleable Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
12. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:

    a. Light (MSS Type 31): 750 lb.
    b. Medium (MSS Type 32): 1500 lb.

13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.

15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

J. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.

3.3 HANGER AND SUPPORT INSTALLATION

A. Steel Pipe Hanger Installation: Comply with MSS SP-69 (Pipe Hangers and Supports – Selection and Application) and MSS SP-89 (Pipe Hangers and Supports – Fabrication and Installation Practices). Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.

B. Fastener System Installation:

1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

C. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.

D. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

E. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

F. Install lateral bracing with pipe hangers and supports to prevent swaying.

G. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

H. Load Distribution: Install hangers and supports so piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

I. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so maximum pipe deflections allowed by ASME B31.9 (for building services piping) are not exceeded.

J. Insulated Piping: Comply with the following:

1. Attach clamps and spacers to piping.

a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.

2. Shield Dimensions for Pipe: Not less than the following:
   a. NPS 4: 12 inches long and 0.06 inch thick.
   b. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.

3. Insert Material: Length at least as long as protective shield.
4. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

K. Suspended Horizontal Piping:

1. Support piping independently from structure using heavy iron-hinged type hangers.
2. Provide electroplated solid-band hangers equal to Auto-Grip, for 2-inch and smaller pipe.
3. Provide wall brackets for wall-supported piping, and furnish pipe saddles for floor-mounted piping.
4. Suspend piping from inserts or expansion anchors, using beam clips, steel fish plates, cantilever brackets or other accepted means.
5. Suspend piping by rods with double nuts.

3.4 EQUIPMENT SUPPORTS

A. Provide corrosion resistant mounting systems when exposed to the elements and other corrosive environments. Provide hot dip galvanized metal parts of mountings (except springs and hardware). Provide cadmium-plated and neoprene-coated springs and cadmium-plated nuts and bolts.

3.5 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.6 PAINTING

A. Touch Up: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.

B. Touch Up: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Section 09 91 00 “Painting”.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-restore paint to comply with ASTM A 780 (Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings).

D. Dip in epoxy primer, uncoated hangers, supports, rods, and inserts.

END OF SECTION 220529

PAGE INTENTIONALLY LEFT BLANK

SECTION 22 05 53 - IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:
1. Pipe labels.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated.

C. Samples: For color, letter style, and graphic representation required for each identification material and device.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

1.5 COORDINATION

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 PIPE LABELS

A. Manufacturers Subject to compliance with requirements, provide product by one of the following.
   1. Seton Nameplate Corp.
   2. Compliance Signs.
   3. Brady.
   4. Or approved equal

B. Description:
   1. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
   2. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
      a. Factory fabricated, snap-on type pipe markers every 10 feet indicating system and direction of flow. The pipe markers shall be the weather-proof plastic type and shall not be used where surface temperature exceeds 160 deg F.
      b. Pipe markers shall be equal to the following types:
         1) Smaller than 6 inch: completely encircling pipe.
         2) 6 inch and larger: stainless steel spring fasteners.
         3) Adhesive type markers will not be permitted.
   3. Pipe Label Contents: Include identification of piping service using same designations as stated herein, pipe size, and an arrow indicating flow direction.
      a. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
      b. Lettering Size: At least 1-1/2 inches high.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 PREPARATION

A. Clean piping surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.3 PIPE LABEL INSTALLATION

A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
   2. At access doors, access hatches, and similar access points that permit view of concealed piping.
   3. Spaced at maximum intervals of 20 feet. Pipe identification text shall be repeated at maximum intervals of 25 feet (7620 mm) and at each point where the piping passes through a wall, floor or roof.
   4. Where removable ceiling tiles are provided, install buttons, tabs, or markers to identify location of concealed work and/or valves. Submit for review.
   5. Identification shall include the contents of the piping system and an arrow indicating the direction of flow.
   6. The size of the background color field and lettering shall be as follows:

Pipe Diameter	Length Background Color Field (Inches)	Size of Letters (Inches)
2½ to 6	12	1.25
8 to 10	24	25

B. Pipe Label Designations & Color Coding:

DESIGNATION	BACKGROUND	TEXT
Storm Water	Black	White
Natural Gas	Yellow	Black

END OF SECTION 220553

SECTION 22 07 00 - PLUMBING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Insulation Materials:
   a. Cellular glass.
   b. Mineral fiber.
2. Adhesives.
3. Sealants.
4. Tapes.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated. Include thermal conductivity, thickness, and jackets (both factory and field applied, if any).

C. Shop Drawings:

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Detail insulation application at pipe expansion joints for each type of insulation.
3. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
4. Detail removable insulation at piping specialties, equipment connections, and access panels.
5. Detail application of field-applied jackets.

D. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:

1. Sample Sizes:

a. Preformed Pipe Insulation Materials: 12 inches long by NPS 2.
b. Sheet Form Insulation Materials: 12 inches square.
c. Jacket Materials for Pipe: 12 inches long by NPS 2.
d. Sheet Jacket Materials: 12 inches square.
e. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

E. Qualification Data: For qualified Installer.

F. Material Test Reports: From a qualified testing agency acceptable to City of New York indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

G. Field quality-control reports.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Fire-Test-Response Characteristics: Insulation and related materials shall have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to City of New York. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

C. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Commissioner. Use materials indicated for the completed Work.

1. Piping Mockups:

a. One 10-foot section of NPS 2 straight pipe.

2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
3. Notify Commissioner seven days in advance of dates and times when mockups will be constructed.
4. Obtain Commissioner's approval of mockups before starting insulation application.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

7. Demolish and remove mockups when directed.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.6 COORDINATION

A. Coordinate size and location of supports, hangers, and insulation shields specified in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

B. Coordinate clearance requirements with piping Installer for piping insulation application and equipment Installer for equipment insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.7 SCHEDULING

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Comply with requirements in Part 3 schedule articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide one of the following:

   a. Cell-U-Foam Corporation; Ultra-CUF.
   b. Pittsburgh Corning Corporation; Foamglas Super K.
   c. SPI
   d. Or approved equal

2. Block Insulation: ASTM C 552, Type I.
3. Special-Shaped Insulation: ASTM C 552, Type III.
4. Board Insulation: ASTM C 552, Type IV.
5. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.
6. Preformed Pipe Insulation with Factory-Applied ASJ: Comply with ASTM C 552, Type II, Class 2.
7. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

G. Mineral-Fiber, Preformed Pipe Insulation:

1. Products: Subject to compliance with requirements, provide one of the following:

   a. Fibrex Insulations Inc.; Coreplus 1200.
   b. Johns Manville; Micro-Lok.
   c. Knauf Insulation; 1000(Pipe Insulation.
   d. Manson Insulation Inc.; Alley-K.
   e. Owens Corning; Fiberglas Pipe Insulation.
   f. Or approved equal

2. Type I, 850 deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.2 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass, Phenolic, and Polyisocyanurate Products: Subject to compliance with requirements, provide one of the following:

   a. Childers Products, Division of ITW; CP-76.
   b. Foster Products Corporation, H. B. Fuller Company; 30-45.
   c. Marathon Industries, Inc.; 405.
   d. Mon-Eco Industries, Inc.; 44-05.

e. Pittsburgh Corning Corporation; Pittseal 444.
f. Vimasco Corporation; 750.
g. Or approved equal

B. ASJ Flashing Sealants and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Products, Division of ITW; CP-76.
b. MM Systems Corp.
c. Marathon Industries, Inc.
d. Mon-Eco Industries, Inc.
e. Vimasco Corporation
f. Or approved equal

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.
6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.3 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0835.
b. Compac Corp.; 104 and 105.
c. Ideal Tape Co., Inc., an American Biltrite Company; 428 AWF ASJ.
d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
e. Or approved equal

2. Width: 3 inches.
3. Thickness: 11.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
b. Compac Corp.; 120.

c. Ideal Tape Co., Inc., an American Biltrite Company; 488 AWF.
d. Venture Tape; 3520 CW.
e. Or approved equal

2. Width: 2 inches.
3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch in width.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.

1. Verify that systems and equipment to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Surface Preparation: Clean and prepare surfaces to be insulated. Before insulating, apply a corrosion coating to insulated surfaces as follows:

1. Stainless Steel: Coat 300 series stainless steel with an epoxy primer 5 mils thick and an epoxy finish 5 mils thick if operating in a temperature range between 140 and 300 deg F. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.
2. Carbon Steel: Coat carbon steel operating at a service temperature between 32 and 300 deg F with an epoxy coating. Consult coating manufacturer for appropriate coating materials and application methods for operating temperature range.

C. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

D. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.4 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment and piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment and pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
3. Install insert materials and install insulation to tightly join the insert. Replace normal insulation inside hanger shields with incompressible insulating block. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

L. Install insulation with factory-applied jackets as follows:

1. Draw jacket tight and smooth.
2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.

    a. For below ambient services (i.e. cold water, chilled water, insulated storm water, and other frost protected services), apply vapor-barrier mastic over staples.

4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

N. Finish installation with systems at operating conditions. Restore joint separations and cracking due to thermal movement.

O. Restore damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

3.5 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

C. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.

1. Comply with requirements in Section 07 27 00 "Firestopping/Smokeseals" firestopping and fire-resistive joint sealers.

3.6 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings:

1. Install insulation over fittings and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
3. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.

3.7 CELLULAR-GLASS INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient services, secure laps with outward clinched staples at 6 inches o.c.
4. For insulation with factory-applied jackets on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

3.8 MINERAL-FIBER INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.

2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.
4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

3.9 FIELD-APPLIED JACKET INSTALLATION

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

C. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.10 FINISHES

A. Equipment and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Section 09 91 00 “Painting”.

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Color: Final color as selected by the Commissioner. Vary first and second coats to allow visual inspection of the completed Work.

C. Do not field paint aluminum or stainless-steel jackets.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Inspect field-insulated equipment, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to one location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.
2. Inspect pipe and fittings, randomly selected by the Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be limited to three locations of straight pipe.

D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.12 PIPING INSULATION SCHEDULE, GENERAL

A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.

B. Soundproof piping in walls and ceilings of as noted for insulation on respective service, except with a minimum 2 inch thick fiberglass, or as recommended by an acoustical consultant retained by contractor.

3.13 INDOOR PIPING INSULATION SCHEDULE

A. Stormwater:

1. All Pipe Sizes: Insulation shall be one of the following:

a. Cellular Glass: 1-1/2 inches thick.
b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.

B. Roof Drain Bodies:

1. All Pipe Sizes: Insulation shall be one of the following:

    a. Cellular Glass: 1-1/2 inches thick.
    b. Mineral-Fiber, Preformed Pipe Insulation, Type I: 1 inch thick.

END OF SECTION 220700

SECTION 22 08 00 - COMMISSIONING OF PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

1.2 SUMMARY

A. This section includes commissioning process requirements for Plumbing systems, assemblies, and equipment.

B. Related Sections:

1. DDC General Conditions Section 019113 General Commissioning Requirements for MEP Systems for general commissioning process requirements.

1.3 DESCRIPTION

A. Commissioning is a systematic process of confirming that all building systems perform interactively according to the City of New York's Project Requirements and continuing through construction, acceptance and the warranty period with actual verification of performance.

B. The Commissioning process does not take away from or reduce the responsibility of the Contractor to provide a finished and fully functioning product.

C. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the City of New York's Project Requirement's as detailed in the Contract Documents.

1.4 DEFINITIONS

A. Refer to DDC General Conditions Section for definitions.

1.5 SUBMITTALS

A. The CxA will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment specifications. The CxA will notify the

Contractor, or Commissioner as requested, of items missing or areas that are not in conformance with Contract Documents and which require resubmission.

B. The CxA will receive a copy of the final approved submittals.

C. In addition, the Contractor is to provide the following:

1. Certificate of readiness

2. Certificates of completion of installation, prestart, and startup activities.

3. O&M manuals

4. Test reports

D. Refer to DDC General Conditions Section 013300 Submittal Procedures and Section 019113 General Commissioning Requirements for MEP Systems for general commissioning submittal requirements.

1.6 QUALITY ASSURANCE

A. Test Equipment Calibration Requirements: The Contractor will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

A. Commissioning Kick-Off Meeting – Construction Team: The Contractor will attend a meeting of the Commissioning Team, chaired by the CxA, to review the scope of commissioning process activities and the Commissioning Plan with discussions on milestones, activities, and assignments of responsibilities. The flow and type of documents and the amount of submittal data given to the CxA will be determined. Meeting minutes will then be distributed to all parties by the CxA.

B. Commissioning Meetings: The Contractor will attend coordination meetings with the Commissioning Team, chaired by the CxA, to review progress on the Commissioning Plan, construction deficiencies, scheduling conflicts, and to discuss strategies and processes for upcoming commissioning process activities.

C. Miscellaneous Construction Meetings: The CxA attends selected planning and job-site meetings in order to remain informed on construction progress and to update parties involved in the commissioning process. This will not include 100% meeting attendance, but the CxA shall be provided with the subsequent meeting minutes for review.

D. Pre-testing Meetings: The Contractor will attend pretest meetings with the Commissioning Team, chaired by the CxA, to review startup reports, pre-test inspection results, testing procedures, testing personnel and instrumentation requirements, and manufacturers' authorized service representative services for each system, subsystem, equipment, and component to be tested.

E. Testing: Contractor will coordinate with testing personnel and agencies for timing and access for CxA to witness test.

F. Manufacturers' Inspection and Startup Services: Contractor will coordinate services of manufacturers' inspection and startup services.

G. Testing, Adjusting and Balancing: Contractor will coordinate with plan and schedule for testing, adjusting and balancing for timing and access for CxA to witness process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. The Contractor will require the HVAC subcontractor to complete testing. For example, the Contractor shall ultimately be responsible for all standard testing equipment for the plumbing system in Division 22. A sufficient quantity of two-way radios shall be provided by the Contractor.

B. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York's personnel upon completion of the commissioning process.

C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems. These checklists shall be provided to the Contractor for completion. The CxA shall gather and review the completeness and accuracy of these checklists via site visits.

B. Red-lined Drawings (As-Builts): The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings. The contracted party, as defined in the Contract Documents will create the as-built drawings.

C. Operation and Maintenance Data: The Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems. The CxA will review the O&M literature once for conformance to project requirements. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.

D. Demonstration and Orientation: The Contractor will provide demonstration and orientation as required by the specifications. A complete orientation plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any orientation. An orientation agenda for each orientation session must be submitted to the CxA one (1) week prior the orientation session.

3.2 CONTRACTOR'S RESPONSIBILITIES

A. Refer to DDC General Conditions Section 019113 General Commissioning Requirements for MEP Systems for general Contractor's responsibilities.

B. The Contractor shall ensure that the plumbing subcontractor attends construction phase controls coordination meetings.

C. The Contractor shall ensure that the plumbing subcontractor attends domestic water balancing review and coordination meetings.

D. The Contractor shall ensure that the plumbing subcontractor participates in plumbing systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.

E. Provide information requested by the CxA for final commissioning documentation.

F. Prepare preliminary schedule for Plumbing system orientations and inspections, operation and maintenance manual submissions, orientation sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for owner. Distribute preliminary schedule to commissioning team members. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.

G. Provide detailed startup procedures.

H. Provide a written list of all user adjustable set-points and reset schedules with a brief discussion of the purpose of each and the range of reasonable adjustments with energy implications

I. Provide a written schedule frequency to review the various set-points and reset schedules to ensure they are current relevant and efficient values.

J. Respond to provided new deficiencies and/or responses within five (5) business days.

K. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the Contract Documents. Submit to CxA 45 days after submittal acceptance.

L. Coordinate with the CxA to provide 48-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.

M. Notify the CxA a minimum of two weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.

N. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
1. Natural Gas piping

O. The equipment supplier shall document the performance of their equipment.

P. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.

Q. Test, Adjust and Balance subcontractor, under the direction of the Contractor
1. Attend initial commissioning coordination meeting scheduled by the CxA.
2. Submit the site-specific testing and balancing plan to the CxA and Commissioner for review and acceptance.
3. Attend the testing and balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in testing, adjusting, and balancing the HVAC&R system.
4. At the completion of the testing and balancing work, and the submittal of the final testing and balancing report, notify the HVAC&R subcontractor and the Contractor.
5. Participate in verification of the testing and balancing report, which will consist of repeating measurements contained in the testing and balancing reports. Assist in diagnostic purposes when directed.
6. Provided recommended setpoints as determined by testing, adjusting, and balancing such as static pressure and differential pressure setpoints.

R. Contractor responsibilities to be completed by Equipment Suppliers:
1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York's personnel, to keep warranties in force.
2. Assist in equipment testing.
3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

3.3 CxA'S RESPONSIBILITIES

A. Roles and Responsibilities

1. Refer to DDC General Conditions Section 019113 General Commissioning Requirements for MEP Systems for general CxA responsibilities.

3.4 TESTING PREPARATION

A. Certify in writing to the CxA that Plumbing systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.

B. Certify in writing to the CxA that Plumbing instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

C. Certify in writing that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.

D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

E. Inspect and verify the position of each device and interlock identified on checklists.

F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.

G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 TESTING, ADJUSTING AND BALANCING VERIFICATION

A. Prior to performance of Testing, Adjusting, and Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.

B. Notify the CxA at least ten (10) days in advance of testing and balancing Work, and provide access for the CxA to witness testing and balancing Work.

C. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.

1. The CxA will notify the Contractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
2. The Contractor will ensure that the testing and balancing subcontractor shall use the same instruments (by model and serial number) that were used when original data were collected.
3. Failure of an item includes, other than sound, a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final testing, adjusting, and balancing report. For sound pressure readings, a deviation of 3 dB shall result in rejection of final testing. Variations in background noise must be considered.
4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.6 GENERAL TESTING REQUIREMENTS

A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of Plumbing testing shall include entire Plumbing installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.

C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

D. The CxA along with the Contractor will ensure that the plumbing subcontractor, testing and balancing subcontractor, and plumbing Instrumentation and Control subcontractor shall prepare detailed testing plans, procedures, and checklists for plumbing systems, subsystems, and equipment.

E. Tests will be performed using design conditions whenever possible.

F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

G. The CxA may direct that set points be altered when simulating conditions is not practical.

H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.

I. If tests cannot be completed because of a deficiency outside the scope of the Plumbing system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.7 PLUMBING SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 22 sections. Provide submittals, test data, inspector record, and certifications to the CxA.

B. Plumbing Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls." Assist the CxA with preparation of testing plans.

C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 22 piping Sections. Plumbing Contractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include the following:

1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
2. Description of equipment for flushing operations.
3. Minimum flushing water velocity.

4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.

D. Plumbing Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, fuel gas, sanitary waste and vent piping, storm drainage piping, sprinkler and domestic water distribution systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

E. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

F. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. Commissioning shall be performed on equipment and systems including but not limited to the following:

1. Natural Gas piping

3.8 DEFICIENCIES/NON-CONFORMANCE, FAILURE DUE TO MANUFACTURER DEFECT

A. Deficiencies/Non-Conformance

1. The CxA will record the results of the functional test on the test form. All deficiencies or non-conformance items shall be noted and reported to the Commissioner and Contractor on a standardized form.
2. The Contractor shall respond to new deficiencies within five (5) business days. The response shall either indicate the issue will be corrected with anticipated date of completion indicated or the response should clearly indicate why the Contractor disputes the claim while referencing the Contract Documents in dispute or request further information to clarify the concern.
3. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA.
4. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.
5. As tests progress and a deficiency is identified, the CxA discusses the issue with the Contractor.
6. When there is no dispute on the deficiency and the Contractor accepts responsibility to correct it, the CxA documents the deficiency and the Contractor's response and intentions or corrections. The CxA and Contractor then proceed to another test or sequence. Once the Contractor corrects the deficiency, the test is rescheduled and repeated in the anticipation of correct operation or function.
7. When there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible, the CxA documents the deficiency and the Contractor's response. The deficiency is then forwarded to parties assumed to be responsible for the deficiency. Resolutions are made at the lowest management level possible. Other parties are brought into the discussion as needed. Final interpretive authority is with the Commissioner. Final acceptance authority is with the Commissioner and CxA. The CxA will then document the resolution process. Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency. The CxA then reschedules the test as stated in the section above.

8. Deficiencies that are not corrected at the time of documentation, shall be completed by the affected Contractor and photo evidence of the deficiency resolution shall be sent to both the Commissioner and the CxA.

B. Failure due to Manufacturer Defect

1. If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the CxA and the Commissioner. In such case, the Contractor shall provide the Commissioner with the following:
   i. Within one week of notification from the Contractor the manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the Commissioner within two weeks of the original notice.
   ii. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
   iii. The Commissioner will determine whether a replacement of all identical units or a repair is acceptable.
   iv. Two examples of the proposed solution will be installed by the Contractor and the Contractor will be allowed to test the installations for up to one week, upon which the Commissioner will decide whether to accept the solution.
   v. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

3.9 APPROVAL

A. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA. The CxA recommends acceptance of each test to the Commissioner using a standard form.

3.10 SEASONAL TESTING

A. Seasonal Testing – During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by the Contractor, with facilities staff and the CxA witnessing. Any final adjustments to the O&M manuals and record documents due to seasonal testing will be made by the Contractor.

3.11 OPERATION AND MAINTENANCE MANUALS

A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in the DDC General Conditions Section 017839 Contract Record Documents and Section 019113 General Commissioning Requirements for MEP Systems.

B. The specific content and format requirements for the standard O&M manuals are detailed in DDC General Conditions Section 017839 Contract Record Documents and Section 019113 General Commissioning Requirements for MEP Systems. Special requirements for the controls Contractor and TAB Contractor are found in Division 23.

CxA Review and Approval – Prior to substantial completion, the CxA shall review the O&M manuals, documentation and record documents for systems that were commissioned to verify compliance with the Specifications. The CxA will communicate deficiencies in the manuals to the Contractor, or Commissioner, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the Commissioner. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated.

3.12 INSTRUCTION OF CITY OF NEW YORK PERSONNEL

A. The Contractor shall be responsible for instruction coordination, scheduling, and ultimately for ensuring that instruction is completed.

B. The CxA shall oversee the instruction of the City of New York's personnel for commissioned equipment and systems.

1. The CxA shall interview the City of New York's personnel to determine the special needs and areas where instruction will be most valuable. The Commissioner and CxA shall decide how rigorous the instruction should be for each piece of commissioned equipment. The CxA shall communicate the results to the Contractor who will ensure that the subcontractors and vendors are also notified about the results.
2. In addition to these general requirements, the specific instruction requirements of the City of New York's personnel by the Contractor are specified in the individual sections listed in Section 1.2 – Summary & DDC's General Conditions Section 017900 Demonstration and Owners' Pre-Acceptance Orientation.
3. The Contractor shall ensure that each subcontractor and vendor responsible for instruction will submit a written instruction plan to the Contractor for review and approval prior to instruction. The Contractor will submit one comprehensive instruction plan to the CxA and the Commissioner.
4. The plan will be reviewed by the CxA and the Commissioner. Comments pertaining to its deficiencies will be forwarded to the Contractor. The instruction plan will be rewritten until approved by the CxA and the Commissioner. The final approved instruction plan will cover the following elements:
    a. Equipment (included in instruction)
    b. Intended audience
    c. Location of instruction
    d. Objectives
    e. Subjects covered (description, duration of discussion, special methods, etc.)
    f. Duration of instruction on each subject
    g. Qualified instructor for each subject
    h. Instructor qualifications
    i. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)
5. For the primary plumbing equipment, the Contractor shall ensure that the controls subcontractor provide a discussion of the control of the equipment during the mechanical or electrical instruction conducted by each subcontractor or vendor.

6. Instruction documentation shall include the following items:
    a. Copy of the instruction plan, including schedule, syllabus, and agenda.
    b. Copy of the Owner's Project Requirements.
    c. Copy of the Basis of Design.
    d. Compiled operations manuals.
    e. Compiled maintenance manuals.
    f. Completed manufacturer instruction manuals.
    g. Red-lined drawings.
    h. Other pertinent documents.

7. The CxA develops criteria for determining that the instruction was satisfactorily completed, including attending the instruction, etc. The CxA recommends approval of the instruction to the Commissioner using a standard form. The Commissioner signs the approval form/letter template.

8. At one of the instruction sessions, the CxA presents a presentation discussing the use of the blank functional test forms for re-commissioning equipment.

9. Video recording of the instruction sessions may be provided by the CxA in electronic format, at the discretion of the Commissioner.

END OF SECTION 220800

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 13 16 - VENT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following for vent piping inside the building:

1. Pipe, tube, and fittings.
2. Special pipe fittings.

B. Related Sections include the following:

1. Division 22 Section 220529 "Hangers and Supports for Plumbing, Piping and Equipment."

1.3 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working pressure, unless otherwise indicated:

1. Vent Piping: 10-foot head of water

B. Seismic Performance: Vent piping and support and installation shall be capable of withstanding the effects of seismic events determined according to specification section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Shop Drawings – provide product data for each type of the following:
1. Piping
2. Fittings
3. Joints
4. Supports

C. Seismic-Design Submittal: Provide for natural-gas piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation.

1. Detail fabrication and assembly of seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.

D. Field quality-control inspection and test reports.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Refer to Section 220500 “Common Work Results for Plumbing”.

C. Reference Standards:

1. New York City Building Code.

D. Piping materials shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.

2.2 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 74, Service class.

B. Gaskets: ASTM C 564, rubber.

C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

2.3 HUBLESS CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 888 or CISPI 301.

2.4 SPECIAL PIPE FITTINGS

A. Wall-Penetration Fittings: Compound, ductile-iron coupling fitting with sleeve and flexing sections for up to 20-degree deflection, gaskets, and restrained-joint ends complying with AWWA C110 or AWWA C153. Include AWWA C111, ductile-iron glands, rubber gaskets, and steel bolts.

1. Manufacturers: Subject to compliance with requirements, provide product by one of the following:

a. SIGMA Corp.
b. EBBA Iron
c. Ford Meter Box Company, Inc.
d. Or approved equal

PART 3 - EXECUTION

3.1 PIPING APPLICATIONS

A. Flanges and unions may be used on aboveground pressure piping, unless otherwise indicated.

B. Aboveground, vent piping NPS 4 and smaller shall be any of the following:

1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless cast-iron soil pipe and fittings; standard shielded, stainless-steel couplings; and hubless-coupling joints.
3. Dissimilar Pipe-Material Couplings: Flexible shielded nonpressure pipe couplings for joining dissimilar pipe materials with small difference in OD.

C. Aboveground, vent piping NPS 5 and larger shall be any of the following:

1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Hubless cast-iron soil pipe and fittings; standard shielded, stainless-steel couplings; and hubless-coupling joints.
3. Dissimilar Pipe-Material Couplings: Flexible shielded nonpressure pipe couplings for joining dissimilar pipe materials with small difference in OD.

3.2 PIPING INSTALLATION

A. Basic piping installation requirements are specified in Section 22 05 00 "Common Work Results for Plumbing."

B. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Division 22 Section "Common Work Results for Plumbing."

C. Install wall-penetration fitting at each service pipe penetration through foundation wall. Make installation watertight.

D. Make changes in direction for vent piping using appropriate branches, bends, and long-sweep bends. Straight tees, elbows, and crosses may be used on vent lines. Use proper size of standard increasers and reducers if pipes of different sizes are connected.

E. Install vent piping at the following minimum slopes, unless otherwise indicated:

1. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.

F. Install ABS vent piping according to ASTM D 2661 (Standard Specification for Acrylonitrile-Butadiene-Styrene (ABS) Schedule 40 Plastic Drain, Waste, and Vent Pipe and Fittings).

G. Install PVC vent piping according to ASTM D 2665 (Standard Specification for Poly(Vinyl Chloride) (PVC) Plastic Drain, Waste, and Vent Pipe and Fittings).

3.3 JOINT CONSTRUCTION

A. Basic piping joint construction requirements are specified in Section 22 05 00 "Common Work Results for Plumbing."

B. Join hub-and-spigot, cast-iron soil piping with gasket joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

C. Join hub-and-spigot, cast-iron soil piping with calked joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead and oakum calked joints.

D. Join hubless cast-iron soil piping according to CISPI 310 (Coupling for Use in Connection with Hubless Cast Iron Soil Pipe and Fittings for Sanitary and Storm Drain, Waste, and Vent Piping Applications) and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.

E. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.

F. Grooved Joints: Assemble joint with keyed coupling, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.

G. PVC Nonpressure Piping Joints: Join piping according to ASTM D 2665 (Standard Specification for Poly(Vinyl Chloride)(PVC) Plastic Drain, Waste, and Vent Pipe and Fittings).

3.4 HANGER AND SUPPORT INSTALLATION

A. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

B. Pipe hangers and supports are specified in Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment." Install the following:

1. Vertical Piping: MSS Type 8 or Type 42, clamps.
2. Install individual, straight, horizontal piping runs according to the following:

    a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
    b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
    c. Longer Than 100 Feet, if Indicated: MSS Type 49, spring cushion rolls.

3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
4. Base of Vertical Piping: MSS Type 52, spring hangers.

C. Install supports according to Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

D. Support vertical piping and tubing at base and at each floor.

E. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.

F. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
2. NPS 3: 60 inches with 1/2-inch rod.
3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
4. NPS 6: 60 inches with 3/4-inch rod.
5. NPS 8 to NPS 12: 60 inches with 7/8-inch rod.

G. Install supports for vertical cast-iron soil piping every 15 feet
1. NPS 6: 10 feet with 5/8-inch rod.

H. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.5 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.

C. Connect vent piping to existing vent piping. Match existing piping material.

3.6 FIELD QUALITY CONTROL

A. During installation, notify New York City Department of Buildings at least 24 hours before inspection must be made. Perform tests specified below in presence of New York City Department of Buildings.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
2. Final Inspection: Arrange for final inspection by New York City Department of Buildings to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If New York City Department of Buildings find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by New York City Department of Buildings.

D. Test vent piping according to procedures of New York City Department of Buildings or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Roughing-in Plumbing Test Procedure: Test drainage and vent piping, except outside leaders, on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg. Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.
5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
6. Prepare reports for tests and required corrective action.

3.7 CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Place plugs in ends of uncompleted piping at end of day and when work stops.

END OF SECTION 221316

SECTION 22 14 13 - FACILITY STORM DRAINAGE PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following storm drainage piping inside the building:

1. Pipe, tube, and fittings.
2. Roof Drains

B. Related Sections include the following:

1. Division 22 Section 220529 “Hangers and Supports for Plumbing, Piping and Equipment.”

1.3 PERFORMANCE REQUIREMENTS

A. Components and installation shall be capable of withstanding the following minimum working-pressure, unless otherwise indicated:

1. Storm Drainage Piping: 10-foot head of water

B. Seismic Performance: Soil, waste, and vent piping and support and installation shall be capable of withstanding the effects of seismic events determined according to specification section 23 05 48 “Vibration and Seismic Controls for HVAC Piping and Equipment.”

1.4 SUBMITTALS

A. Refer to DDC General Conditions

B. Product Data: For pipe, tube, fittings, couplings, and roof drains

C. Shop Drawings – provide product data for each type of the following:
1. Piping
2. Fittings
3. Joints
4. Supports

D. Seismic-Design Submittal: Provide for natural-gas piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation.

1. Detail fabrication and assembly of seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.

E. Field quality-control inspection and test reports.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Refer to Section 220500 “Common Work Results for Plumbing”.

C. Reference Standards:

1. New York City Building Code.

D. Piping materials shall bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 PIPING MATERIALS

A. Refer to Part 3 "Piping Applications" Article for applications of pipe, tube, fitting, and joining materials.

2.3 HUB-AND-SPIGOT, CAST-IRON SOIL PIPE AND FITTINGS

A. Pipe and Fittings: ASTM A 74, Service class.

B. Gaskets: ASTM C 564, rubber.

C. Calking Materials: ASTM B 29, pure lead and oakum or hemp fiber.

2.4 ROOF DRAINS

A. Metal Roof Drains:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Olympic Manufacturing Group.
b. Josam Company; Josam Div.
c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
d. Tyler Pipe; Wade Div.
e. Or approved equal.

2. Standard: ASME A112.21.2M.
3. Pattern: Roof drain.
4. Body Material: Cast Iron
5. Dimensions of Body:
6. Combination Flashing Ring and Gravel Stop: Required
7. Flow-Control Weirs: Not Required
8. Outlet: Bottom
9. Dome Material: Cast Iron
10. Underdeck Clamp: Required
Type Gravel Roofs: Sump type with gravel stop and cast-iron sediment cup dome strainer, cast aluminum mushroom dome strainer.
11. Type Gravel Roof: Combined clamping ring and gravel stop and cast aluminum mushroom dome strainer with a nonadjustable weir notch.
12. Type Deck Roof: Extension collar of required height with weep holes, square top and flat grate.
13. Type Deck Roof (Insulated Membrane): Square top and flat grate with perforated extension collar of required height.

EXECUTION

2.5 PIPING APPLICATIONS

A. Aboveground storm drainage piping NPS 6 and smaller shall be any of the following:

1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Dissimilar Pipe-Material Couplings: Flexible shielded nonpressure pipe couplings for joining dissimilar pipe materials with small difference in OD.

B. Aboveground, storm drainage piping NPS 8 and larger shall be any of the following:

1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
2. Dissimilar Pipe-Material Couplings: Flexible shielded nonpressure pipe couplings for joining dissimilar pipe materials with small difference in OD.

2.6 PIPING INSTALLATION

A. Basic piping installation requirements are specified in Division 22 Section 220500 "Common Work Results for Plumbing."

B. Install seismic restraints on piping. Seismic requirements are specified in Division 23 Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

C. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Division 22 Section 220500 "Common Work Results for Plumbing."

D. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

1. Install encasement on underground piping according to ASTM A 674 or AWWA C105.

E. Make changes in direction for storm drainage piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

F. Install storm drainage piping at the following minimum slopes, unless otherwise indicated:

1. Building Storm Drain: 1 percent downward in direction of flow for piping NPS 3 and smaller; 1 percent downward in direction of flow for piping NPS 4 and larger.
2. Horizontal Storm-Drainage Piping: 2 percent downward in direction of flow.

G. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.

H. Do not enclose, cover, or put piping into operation until it is inspected and approved by New York City Department of Buildings.

2.7 JOINT CONSTRUCTION

A. Basic piping joint construction requirements are specified in Section 22 05 00 "Common Work Results for Plumbing."

B. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

C. Hub-and-Spigot, Cast-Iron Soil Piping Calked Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for lead and oakum calked joints.

2.8 HANGER AND SUPPORT INSTALLATION

A. Seismic-restraint devices are specified in Division 23 Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

B. Pipe hangers and supports are specified in Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment." Install the following:

1. Vertical Piping: MSS Type 8 or Type 42, clamps.
2. Individual, Straight, Horizontal Piping Runs: According to the following:

    a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
    b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
    c. Longer Than 100 Feet, if Indicated: MSS Type 49, spring cushion rolls.

3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
4. Base of Vertical Piping: MSS Type 52, spring hangers.

C. Install supports according to Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

D. Support vertical piping and tubing at base and at each floor.

E. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.

F. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/2 and NPS 2: 60 inches with 3/8-inch rod.
2. NPS 3: 60 inches with 1/2-inch rod.
3. NPS 4 and NPS 5: 60 inches with 5/8-inch rod.
4. NPS 6: 60 inches with 3/4-inch rod.
5. NPS 8 to NPS 12: 60 inches with 7/8-inch rod.
6. Spacing for 10-foot lengths may be increased to 10 feet. Spacing for fittings is limited to 60 inches.

G. Install supports for vertical cast-iron soil piping every 15 feet.

H. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

2.9 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

C. Connect storm drainage piping to roof drains and storm drainage specialties.

2.10 FIELD QUALITY CONTROL

A. During installation, notify New York City Department of Buildings at least 24 hours before inspection must be made. Perform tests specified below in presence of New York City Department of Buildings.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
2. Final Inspection: Arrange for final inspection by New York City Department of Buildings to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If New York City Department of Buildings find that piping will not pass test or inspection, make required corrections and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by New York City Department of Buildings.

D. Test storm drainage piping according to procedures of New York City Department of Buildings or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced storm drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Test Procedure: Test storm drainage piping on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

2.11 CLEANING

A. Clean interior of piping. Remove dirt and debris as work progresses.

B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

END OF SECTION 221413

SECTION 22 70 00 – NATURAL FUEL GAS SYSTEMS - PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:

1. The Contract Drawings
2. The Specifications
3. The general conditions,
4. The Addendum
5. The Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section Includes:

1. Pipes, tubes, and fittings.
2. Piping specialties.
3. Piping and tubing joining materials.
4. Valves.
5. Dielectric fittings.
6. Labeling and identification.
7. Concrete bases.

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.

C. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

D. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

1.4 PERFORMANCE REQUIREMENTS

A. Minimum Operating-Pressure Ratings:

1. Piping and Valves: 125 psig minimum unless otherwise indicated.
2. Minimum Operating Pressure of Service Meter: 125 psig.

B. Natural-Gas System Pressure within Buildings: 4 inches WC to 3 psig.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Shop Drawings Provide product data for each type of the following:

1. Piping
2. Fittings
3. Joints.
4. Piping specialties
5. Corrugated, stainless-steel tubing with associated components.
6. Valves. Include pressure rating, capacity, settings, and electrical connection data of selected models.
7. Supports

C. Seismic-Design Submittal: Provide for natural-gas piping and equipment indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation.

1. Detail fabrication and assembly of seismic restraints.
2. Design Calculations: Calculate requirements for selecting seismic restraints.

D. Coordination Drawings: Plans and details, drawn to 3/8 scale, on which natural-gas piping is shown and coordinated with other installations, using input from installers of the items involved.

E. Site Survey: Plans, drawn to scale, on which natural-gas piping is shown and coordinated with other services and utilities.

F. Qualification Data: For qualified professional engineer licensed in the State of New York.

G. Welding certificates.

H. Field quality-control reports.

I. Operation and Maintenance Data: For gas valves pressure regulators and service meters to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Refer to Section 220500 “Common Work Results for Plumbing”.

C. Reference Standards:

1. New York City Building Code.
2. New York City Fuel Gas Code.
3. National Grid.
4. American Gas Association (AGA).
5. Compressed Gas Association (CGA).
6. Military Standard Spec. (MSS).
7. Underwriters Laboratory.
8. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
9. Pipe Welding Qualifications: Qualify procedures and operators according to ASME IX Boiler and Pressure Vessel Code 1980.
10. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Handling Flammable Liquids: Remove and dispose of liquids from existing natural-gas piping according to requirements of City of New York.

B. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

C. Store and handle pipes and tubes having factory-applied protective coatings to avoid damaging coating, and protect from direct sunlight.

1.8 PROJECT CONDITIONS

A. Perform site survey, research public utility records, and verify existing utility locations. Contact utility-locating service for area where Project is located.

B. Interruption of Existing Natural-Gas Service: Do not interrupt natural-gas service to facilities occupied by the City of New York or others unless permitted under the following conditions and then only after arranging to provide purging and startup of natural-gas supply according to requirements indicated:

1. Notify Commissioner no fewer than 2 days in advance of proposed interruption of natural-gas service.
2. Do not proceed with interruption of natural-gas service without Commissioner's written permission.

1.9 COORDINATION

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

B. Coordinate requirements for access panels and doors for valves installed concealed behind finished surfaces.

C. Provide valved gas piping for heating, ventilating and air conditioning equipment to within ten (10) feet of equipment connections.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Exterior wall sleeves:

1. Innerlinks.
2. Thunderline.
3. EJ Prescott
4. Or approved equal

B. Steel pipe and fittings:

1. Crane Co.
2. National Tube Co.
3. Republic Steel Co.
4. Allied Steel.
5. Or approved equal

C. Fittings:

1. Crane Co.
2. Tube Turn.
3. Walworth.
4. Allied Steel.
5. Or approved equal

D. Hangers and supports:

1. Anvil International.
2. Michigan Hanger (Erico).
3. PSI Corp.
4. B-Line.
5. Carpenter & Patterson, Inc.
6. Or approved equal

E. Paint:

1. Sherwin Williams.
2. Pittsburgh Plate Glass Co.
3. Pratt & Lambert.
4. Or approved equal

F. Valves:

1. Plug valves, (Gas Cocks):

a. Conbraco Industries.
b. A.Y. McDonald Mfg. Co.
c. Crane Co.
d. DeZurik Healy Co.
e. Nordstrom Valves, Inc.
f. Walworth Co.
g. Or approved equal.

2.2 PIPING

A. Steel piping:

1. For low pressure 0.5 PSIG or less use standard weight black steel pipe with 150 PSIG threaded malleable iron fittings for piping 4 in. and smaller.

B. In no case shall any gas pipe be less than ¾ inch.

2.3 PIPING SPECIALTIES

A. Appliance Flexible Connectors:

1. Indoor, Fixed-Appliance Flexible Connectors: Comply with ANSI Z21.24.
2. Corrugated stainless-steel tubing with polymer coating.
3. Operating-Pressure Rating: 0.5 psig.
4. End Fittings: Zinc-coated steel.
5. Threaded Ends: Comply with ASME B1.20.1.
6. Maximum Length: 72 inches.

B. 1¼ in. to 4 in. standard pipe threaded elbow with 12 x 12 mesh stainless steel screen.

2.4 PIPE AND TUBING JOINING MATERIALS

A. Joint Compound and Tape: Suitable for natural fuel gas.

B. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

2.5 VALVES

A. Manual Shut-off Valves Inside Building

B. General Requirements for Metallic Valves, NPS 2and Smaller: Comply with ASME B16.33.

1. CWP Rating: 125 psig.
2. Threaded Ends: Comply with ASME B1.20.1.
3. Dryseal Threads on Flare Ends: Comply with ASME B1.20.3.
4. Tamperproof Feature: Locking feature for valves where required by Con. Ed.
5. Listing: Listed and labeled by an NRTL acceptable to City of New York for valves 1 inch and smaller.
6. Service Mark: Valves 1-1/4 inches to NPS 2 shall have initials "WOG" permanently marked on valve body.
7. Threaded cast iron body, 125 PSIG wog

C. Provide 2 wrenches for each size used.

1. Attach wrench to each valve.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine roughing-in for natural-gas piping system to verify actual locations of piping connections before equipment installation.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Close equipment shutoff valves before turning off natural gas to premises or piping section.

B. Inspect natural-gas piping according to NFPA 54 Fuel Gas Code to determine that natural-gas utilization devices are turned off in piping section affected.

C. Comply with NFPA 54 Fuel Gas Code requirements for prevention of accidental ignition.

3.4 INSTALLATION

A. Install piping free from traps and with drain pocket consisting of nipple and cap at low points for inside building and drip pot for underground piping.

B. Install shut-off valves at connection to each piece of equipment. Provide union or right and left nipple and coupling at equipment side of individual shut-off valve.

C. Threaded Joints:

D. Make-up joints with U.L. listed gas resistant Teflon tape or Teflon paste, suited for gas piping.

D. Provide a two elbow-swing on all branches taken from a riser.

E. Provide valve tags for piping systems indicating the operating system pressure.

F. Color code piping at different pressures within the gas meter room. Paint fifteen (15) to five (5) psi system brown and reduced pressure piping yellow.

G. Welders must be qualified in accordance with either API 1104 or A.S.M.E. IX Boiler and Pressure Vessel Code and as required by New York City Building code.

3.5 OUTDOOR PIPING INSTALLATION

A. Comply with NFPA 54 Fuel Gas Code for installation and purging of natural-gas piping.

B. Steel Piping with Protective Coating:

C. Apply joint cover kits to pipe after joining to cover, seal, and protect joints.

D. Restore damage to PE coating on pipe as recommended in writing by protective coating manufacturer.

E. Replace pipe having damaged PE coating with new pipe.

F. Install fittings for changes in direction and branch connections.

3.6 VALVE INSTALLATION

A. Install manual gas shutoff valve for each gas appliance ahead of corrugated stainless-steel tubing, aluminum, or copper connector.

3.7 PIPING JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Threaded Joints:

1. Thread pipe with tapered pipe threads complying with ASME B1.20.1 (Pipe Threads, General Purpose).

    a. Cut threads full and clean using sharp dies.

    b. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.

c. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.

d. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

D. Welded Joints:

1. Construct joints according to AWS D10.12/D10.12M (Guide for Welding Mild Steel Pipe), using qualified processes and welding operators.

2. Bevel plain ends of steel pipe.

3. Patch factory-applied protective coating as recommended by manufacturer at field welds and where damage to coating occurs during construction.

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.

F. Flanged Joints: Install gasket material, size, type, and thickness appropriate for natural-gas service. Install gasket concentrically positioned.

G. Flared Joints: Cut tubing with roll cutting tool. Flare tube end with tool to result in flare dimensions complying with SAE J513. Tighten finger tight, then use wrench. Do not overtighten.

1. Plain-End Pipe and Socket Fittings: Use socket fusion.

3.8 HANGER AND SUPPORT INSTALLATION

A. Install seismic restraints on piping. Comply with requirements for seismic-restraint devices specified in Division 23 Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

B. Comply with requirements for pipe hangers and supports.

C. Maximum spans below are from NFPA 54 or MSS SP-69. Copper-tube sizes were adjusted to ASTM B 88 (ASTM B 88M).

D. Install hangers for horizontal steel piping with the following maximum spacing and minimum rod sizes:

1. NPS ¾ and 1 – 8 ft on center

2. NPS 1-1/4 and NPS 2: Maximum span, 108 inches; minimum rod size, 3/8 inch.

3. NPS 2-1/2 to NPS 3-1/2: Maximum span, 10 feet; minimum rod size, 1/2 inch.

3.9 CONNECTIONS

A. Install natural-gas piping electrically continuous and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.

B. Install piping adjacent to appliances to allow service and maintenance of appliances.

C. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.

D. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

3.10 LABELING AND IDENTIFYING

A. Comply with requirements in "Identification for Plumbing Piping and Equipment" for piping and valve identification.

B. Install detectable warning tape directly above gas piping, 12 inches below finished grade, except 6 inches below subgrade under pavements and slabs.

3.11 PAINTING

A. Comply with requirements in Section 09 91 00 “Painting” for painting interior and exterior natural-gas piping.

B. Paint exposed, exterior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.

1. Alkyd System: MPI EXT 5.1D.

2. Prime Coat: Alkyd anticorrosive metal primer.

3. Intermediate Coat: Exterior alkyd enamel matching topcoat.

4. Topcoat: Exterior alkyd enamel (semigloss).

5. Color: Yellow.

C. Paint exposed, interior metal piping, valves, service regulators, service meters and meter bars, earthquake valves, and piping specialties, except components, with factory-applied paint or protective coating.

1. Latex Over Alkyd Primer System: MPI INT 5.1Q.

2. Prime Coat: Alkyd anticorrosive metal primer.

3. Intermediate Coat: Interior latex matching topcoat.

4. Topcoat: Interior latex (semigloss).

5. Color: Yellow.

   a. Alkyd System: MPI INT 5.1E.

6. Prime Coat: Alkyd anticorrosive metal primer.

7. Intermediate Coat: Interior alkyd matching topcoat.

8. Topcoat: Interior alkyd (semigloss).

9. Color: Yellow.

D. Damage and Touchup: Restore marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

3.12 CONCRETE BASES

A. Concrete Bases: Anchor equipment to concrete base.

1. Construct concrete bases of dimensions indicated, but not less than 6 inches larger in both directions than supported unit.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to supported equipment.
6. Use 3000-psig, 28-day, compressive-strength concrete and reinforcement as specified in Section 03 00 50 “Concrete Work.”

3.13 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Tests and Inspections:

1. Test, inspect, and purge natural gas according to New York City Gas Code and other applicable codes and standards of New York City Building Code.

C. Pressure Tests:

1. New York City Building Code.

2. Test low pressure systems up to 0.5 PSIG with air at 3 PSIG for a minimum of one hour.

D. Controlled Inspection:

1. Perform radiography test on all welds in gas service and at gas meter and piping where operating pressures exceed 3 PSIG and where required by Con Edison or code. Radiography shall be performed in accordance with API 1104 or A.S.M.E. Section IX Boiler and Pressure Vessel Code and as required by New York City Building Code.

E. Purge all piping after pressure test and all appliances after piping has been purged.

F. Natural-gas piping will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

3.14 INSTRUCTION

A. Engage a factory-authorized service representative to instruct the City of New York's operating personnel to adjust, operate, and maintain earthquake valves.

END OF SECTION 227000

PAGE INTENTIONALLY LEFT BLANK

SECTION 23 01 30 - HVAC AIR DUCT CLEANING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes cleaning of the following existing duct systems:

1. Supply system.
2. Return system.
3. Exhaust system.

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. ASCS: Air system cleaning specialist.

C. NADCA: National Air Duct Cleaners Association.

D. SMACNA: Sheet Metal and Air Conditioning Contractors' National Association.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Qualification Data: For ASCS.

C. Field quality-control test reports.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. ASCS Qualifications: A certified member of NADCA or A member of a nationally recognized nonprofit industry organization dedicated to the cleaning of HVAC systems.

1. Certification: Employ a staff of ASCSs certified by a nationally recognized certification program.
2. Supervisor Qualifications: Certified as an ASCS by NADCA.
3. Experience: Submit records of experience in the field of HVAC systems cleaning.
4. Equipment, Materials, and Labor: Have equipment, materials, and labor required to perform specified services.

C. Comply with current published standards of NADCA.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 SHEET METAL MATERIALS

A. See Section 233300 "Air Duct Accessories" for sheet metal materials.

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods, unless otherwise indicated.

2.3 DUCT-MOUNTING ACCESS DOORS

A. General Description: Fabricate doors airtight and suitable for duct pressure class.

B. See Section 233300 "Air Duct Accessories" for duct mounted access doors.

C. Rectangular Duct Door: Double wall; fabricated of galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class. Include vision panel where indicated. Include 1-by-1-inch butt or piano hinge and cam latches.

1. Manufacturers:

a. American Warming and Ventilating.
b. Cesco Products.
c. Ductmate Industries, Inc.
d. Flexmaster U.S.A., Inc.
e. Greenheck.
f. McGill AirFlow Corporation.

g. Nailor Industries Inc.
h. Ventfabrics, Inc.
i. Ward Industries, Inc.
j. Or approved equal

2. Frame: Galvanized-steel sheet; with bendover tabs and foam gaskets.
3. Provide number of hinges and locks as follows:

a. Less Than 12 Inches Square: Secure with two sash locks.
b. Up to 18 Inches Square: Two hinges and two sash locks.
c. Up to 24 by 48 Inches: Three hinges and two compression latches with outside and inside handles.
d. Sizes 24 by 48 Inche sand Larger: Four hinges and two compression latches with outside and inside handles.

D. Round Duct Door: Double wall; fabricated of galvanized sheet metal with insulation fill and 1-inch thickness. Include cam latches.

1. Manufacturers:

a. Flexmaster U.S.A., Inc.
b. Ventfabrics, Inc.
c. Ward Industries, Inc.
d. Or approved equal

2. Frame: Galvanized-steel sheet; with spin-in notched frame.

E. Pressure Relief Access Door: Double wall; fabricated of galvanized sheet metal with insulation fill and thickness as required for duct pressure class. Include vision panel with latches and retaining chain.

1. Manufacturers:

a. American Warming and Ventilating.
b. Cesco Products.
c. Ductmate Industries, Inc.
d. Greenheck.
e. KEES, Inc.
f. McGill AirFlow Corporation.
g. Nexus PDQ; div. of Shilco Holdings Inc.
h. Or approved equal

2. Frame: Galvanized-steel sheet; with bendover tabs and foam gaskets.

F. Seal around frame attachment to duct and door to frame with neoprene or foam rubber.

G. Insulation: 1-inch-thick fibrous-glass or polystyrene-foam board.

2.4 FLEXIBLE CONNECTORS

A. See Section 233300 "Air Duct Accessories" for flexible connectors.

B. Manufacturers:

1. Duro Dyne Corp.
2. Ventfabrics, Inc.
3. Ward Industries, Inc.
4. Or approved equal

C. General Description: Flame-retardant or noncombustible fabrics, coatings, and adhesives complying with UL 181, Class 1.

D. Metal-Edged Connectors: Factory fabricated with a fabric strip 5-3/4 inches wide attached to 2 strips of 2-3/4-inch-wide, 0.028-inch-thick, galvanized-steel sheet or 0.032-inch-thick aluminum sheets. Select metal compatible with ducts.

E. Indoor-System, Flexible-Connector Fabric: Glass fabric double coated with neoprene.

1. Minimum Weight: 26 oz./sq. yd.
2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
3. Service Temperature: Minus 40 to plus 200 deg F.

F. Outdoor-System, Flexible-Connector Fabric: Glass fabric double coated with weatherproof synthetic rubber resistant to UV rays and ozone.

1. Minimum Weight: 24 oz./sq. yd.
2. Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.
3. Service Temperature: Minus 50 to plus 250 deg F.

G. High-Temperature System, Flexible Connectors: Glass fabric coated with silicone rubber.

1. Minimum Weight: 16 oz./sq. yd..
2. Tensile Strength: 285 lbf/inch in the warp and 185 lbf/inch in the filling.
3. Service Temperature: Minus 67 to plus 500 deg F

H. High-Corrosive-Environment System, Flexible Connectors: Glass fabric with chemical-resistant coating.

1. Minimum Weight: 14 oz./sq. yd..
2. Tensile Strength: 450 lbf/inch in the warp and 340 lbf/inch in the filling.
3. Service Temperature: Minus 67 to plus 500 deg F

2.5 FLEXIBLE DUCTS

A. See Section 233300 "Air Duct Accessories" for flexible ducts.

B. Manufacturers:

1. Ductmate Industries, Inc.
2. Flexmaster U.S.A., Inc.
3. Hart & Cooley, Inc.
4. McGill AirFlow Corporation.
5. Or approved equal

C. Noninsulated-Duct Connectors: UL 181, Class 1, 2-ply vinyl film supported by helically wound, spring-steel wire.

1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
2. Maximum Air Velocity: 4000 fpm
3. Temperature Range: Minus 10 to plus 160 deg F

D. Noninsulated-Duct Connectors: UL 181, Class 1, black polymer film supported by helically wound, spring-steel wire.

1. Pressure Rating: 4-inch wg positive and 0.5-inch wg negative.
2. Maximum Air Velocity: 4000 fpm
3. Temperature Range: Minus 20 to plus 175 deg F

E. Noninsulated-Duct Connectors: UL 181, Class 1, multiple layers of aluminum laminate supported by helically wound, spring-steel wire.

1. Pressure Rating: 10-inch wgp ositive and 1.0-inch wg negative.
2. Maximum Air Velocity: 4000 fpm.
3. Temperature Range: Minus 20 to plus 210 deg F.

F. Noninsulated-Duct Connectors: UL 181, Class 1, aluminum laminate and polyester film with latex adhesive supported by helically wound, spring-steel wire.

1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
2. Maximum Air Velocity: 4000 fpm.
3. Temperature Range: Minus 20 to plus 210 deg F.

G. Noninsulated-Duct Connectors: UL 181, Class 0, interlocking spiral of aluminum foil.

1. Pressure Rating: 8-inch wg positive or negative.
2. Maximum Air Velocity: 5000 fpm.
3. Temperature Range: Minus 100 to plus 435 deg F.

H. Insulated-Duct Connectors: UL 181, Class 1, 2-ply vinyl film supported by helically wound, spring-steel wire; fibrous-glass insulation; and polyethylene, aluminized vapor barrier film.

1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
2. Maximum Air Velocity: 4000 fpm
3. Temperature Range: Minus 10 to plus 160 deg F.

I. Insulated-Duct Connectors: UL 181, Class 1, black polymer film supported by helically wound, spring-steel wire; fibrous-glass insulation; and aluminized vapor barrier film.

1. Pressure Rating: 4-inch wg positive and 0.5-inch wg negative.
2. Maximum Air Velocity: 4000 fpm
3. Temperature Range: Minus 20 to plus 175 deg F

J. Insulated-Duct Connectors: UL 181, Class 1, multiple layers of aluminum laminate supported by helically wound, spring-steel wire; fibrous-glass insulation; and aluminized vapor barrier film.

1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
2. Maximum Air Velocity: 4000 fpm.
3. Temperature Range: Minus 20 to plus 210 deg F.

K. Insulated-Duct Connectors: UL 181, Class 1, aluminum laminate and polyester film with latex adhesive supported by helically wound, spring-steel wire; fibrous-glass insulation; and aluminized vapor barrier film.

1. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
2. Maximum Air Velocity: 4000 fpm.
3. Temperature Range: Minus 20 to plus 210 deg F.

L. Insulated-Duct Connectors: UL 181, Class 0, interlocking spiral of aluminum foil; fibrous-glass insulation; and aluminized vapor barrier film.

1. Pressure Rating: 8-inch wg positive or negative.
2. Maximum Air Velocity: 5000 fpm
3. Temperature Range: Minus 20 to plus 250 deg F

M. Flexible-Duct Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action, in sizes 3 through 18 inches to suit duct size.

2.6 DUCT ACCESSORY HARDWARE

A. See Section 233300 "Air Duct Accessories" for duct accessory hardware.

B. Fusible Links: Replaceable, 212 deg Frated.

C. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine systems to determine appropriate methods, tools, and equipment required for performance of work.

B. Prepare written report listing conditions detrimental to performance of work.

C. Proceed with work only after unsatisfactory conditions have been corrected.

D. Provide video documentation of existing duct conditions prior to start of cleaning.

3.3 CLEANING

A. Engage a qualified ASCS to clean the following systems:

1. Supply system.
2. Return system.
3. Exhaust system.

B. Perform cleaning before air balancing or mark position of dampers and air-directional mechanical devices before cleaning.

C. Use duct-mounted access doors, as required, for physical and mechanical entry and for inspection.

1. Install additional duct-mounting access doors to comply with duct cleaning standards. Comply with requirements in Section 233300 "Air Duct Accessories" for additional duct-mounting access doors.
2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection. Replace damaged and deteriorated flexible ducts. Comply with requirements "Air Duct Accessories" for flexible ducts.
3. Duct Mounting Access Doors
4. Flexible Connectors
5. Flexible Ducts
6. Duct Accessory Hardware

D. Mark position of dampers and air-directional mechanical devices before cleaning, and restore to their marked position on completion.

E. Particulate Collection and Odor Control:

1. Where venting vacuuming system inside building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron size (or greater) particles.
2. When venting vacuuming system outside building, use filtration to contain debris removed from the HVAC system and locate exhaust down wind and away from air intakes and other points of entry into building.

F. Clean the following metal-duct system components by removing visible surface contaminants and deposits:

1. Air outlets and inlets (registers, grilles, and diffusers).
2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
3. Air-handling-unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
4. Coils and related components.
5. Return-air ducts, dampers, and actuators, except in ceiling plenums and mechanical room.
6. Supply-air ducts, dampers, actuators, and turning vanes.
7. Dedicated exhaust and ventilation components.

G. Mechanical Cleaning Methodology:

1. Clean metal-duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of ducts so areas being cleaned are under negative pressure.
3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts or duct liner.
4. Clean fibrous-glass duct liner with HEPA vacuuming equipment, and do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
5. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
6. Provide operative drainage system for washdown procedures.
7. Biocidal Agents and Coatings: Apply biocidal agents if fungus is present; use according to manufacturer's written instructions after removal of surface deposits and debris.

H. Cleanliness Verification:

1. Verify cleanliness after mechanical cleaning and before application of treatment, including biocidal agents and protective coatings.
2. Visually inspect metal-duct systems for contaminants. Provide video of final duct condition.
3. Where contaminants are discovered, reclean and reinspect duct systems.

3.4 DUCT ACCESSORIES INSTALLATION

A. Install duct accessories according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.

B. Provide duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

C. Install duct-mounting access doors where access doors do not currently exist to allow for the cleaning of ducts, accessories, and terminal units as follows:

1. On both sides of duct coils.
2. Downstream from volume dampers, turning vanes, and equipment.
3. Adjacent to fire or smoke dampers; reset or install new fusible links.
4. Before and after each change in direction, at maximum 50-footspacing.
5. On sides of ducts where adequate clearance is available.

D. Install the following sizes for duct-mounting, rectangular access doors:

1. One-Hand or Inspection Access: 8 by 5 inches.
2. Two-Hand Access: 12 by 6 inches.
3. Head and Hand Access: 18 by 10 inches.
4. Head and Shoulders Access: 21 by 14 inches.
5. Body Access: 25 by 14 inches.
6. Body Plus Ladder Access: 25 by 17 inches.

E. Install the following sizes for duct-mounting, round access doors:

1. One-Hand or Inspection Access: 8 inches in diameter.
2. Two-Hand Access: 10 inches in diameter.
3. Head and Hand Access: 12 inches in diameter.
4. Head and Shoulders Access: 18 inches in diameter.
5. Body Access: 24 inches in diameter.

F. Install the following sizes for duct-mounting, pressure relief access doors:

1. One-Hand or Inspection Access: 7 inches in diameter.
2. Two-Hand Access: 10 inches in diameter.
3. Head and Hand Access: 13 inches in diameter.
4. Head and Shoulders Access: 19 inches in diameter.

3.5 CONNECTIONS

A. Reconnect ducts to fans and air-handling units with existing flexible connectors after cleaning ducts and flexible connectors. Replace existing damaged and deteriorated flexible connectors.

B. For fans developing static pressures of 5-inch wg and higher, cover replacement flexible connectors with loaded vinyl sheet held in place with metal straps.

C. Reconnect terminal units to supply ducts with existing flexible ducts or replace damaged and deteriorated existing flexible ducts with maximum 12-inch lengths of new flexible duct.

D. Reconnect diffusers or light troffer boots to low-pressure ducts with existing flexible ducts or replace damaged and deteriorated existing flexible ducts with maximum 60-inch lengths of flexible duct clamped or strapped in place.

E. Reconnect existing and new flexible ducts to metal ducts with adhesive plus sheet metal screws.

3.6 FIELD QUALITY CONTROL

A. Gravimetric Analysis: Sections of metal-duct system, chosen randomly by the Commissioner, may be tested for cleanliness according to NADCA vacuum test gravimetric analysis.

1. If analysis determines that levels of debris are equal to or lower than suitable levels, system shall have passed cleanliness verification.
2. If analysis determines that levels of debris exceed suitable levels, system cleanliness verification will have failed and metal-duct system shall be recleaned and reverified.

B. Verification of Coil Cleaning: Cleaning shall restore coil pressure drop to within 10 percent of pressure drop measured when coil was first installed. If original pressure drop is not known, coil will be considered clean only if it is free of foreign matter and chemical residue, based on thorough visual inspection.

C. Report results of tests in writing to the Commissioner.

END OF SECTION 230130

SECTION 23 05 00 - COMMON WORK RESULTS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:

(1) The Contract Drawings
(2) The Specifications
(3) The general conditions,
(4) The Addendum
(5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes and applies to all work included in Division 23: Heating, Ventilating, and Air Conditioning (HVAC).

B. Work in this Section includes providing labor, materials, equipment, services necessary, fabrication, installation and testing for fully operational and safe systems including all necessary materials , appurtenances and features whether specified or shown in the contract documents or not, in conformity with all NYC Mechanical Code for the following:

1. Mechanical work covered by all sections within Division 23: Heating, Ventilating, and Air Conditioning (HVAC) of the specifications, including:

a. Heating, ventilating and air conditioning systems and equipment and accessories.
b. Motors and controllers.
c. Control systems.
d. Testing and balancing.
e. Cleaning of piping systems.
f. Cleaning of ductwork, casings, plenums, etc.
g. Dielectric fittings.
h. Mechanical sleeve seals.
i. Escutcheons.
j. HVAC demolition.
k. Equipment installation requirements common to equipment sections.
l. Painting and finishing.
m. Supports and anchorages.

C. Provide cutting and patching, for the Mechanical Work.

D. Provide piping from plumbing terminations, 10 feet from equipment, for water, gas, compressed air and as indicated.

E. Provide drainage from noted equipment to floor drains, roof drains, sink, or funnel drains.

F. Provide piping connections to equipment, as required, for kitchens, laboratories, laundries, and as indicated.

1.3 ABBREVIATIONS

A. The following are industry abbreviations for plastic materials.

1. CPVC: Chlorinated polyvinyl chloride plastic.
2. PE: Polyethylene plastic.
3. PVC: Polyvinyl chloride plastic.

B. The following are industry abbreviations for rubber materials:

1. EPDM: Ethylene-propylene-diene terpolymer rubber.
2. NBR: Acrylonitrile-butadiene rubber.

C. Following is a list of abbreviations and symbols that are used in the specifications:

Word or Symbol	Abbreviation or Symbol Used in Specifications
ϕ	Phase
air conditioning unit	ACU
alternating current	AC
Ampere	Amp
brake horsepower (bhp)	BHP
British thermal units	Btu
Celsius	C
Cubic feet per hour	CFH
cubic feet per minute	Cfm
cubic feet per second	Cfs
Department of Design and Construction	DDC
Degree	°
direct current	DC
emergency power system	EPS
Fahrenheit	F
Feet	ft.
feet per minute	Fpm
Gallon	gal.
gallons per minute	Gpm
Hertz	Hz
Horsepower	Hp
Inches	in.
Kilovolt	kV

Word or Symbol	Abbreviation or Symbol Used in Specifications
Kilowatt	kW
Length	Length
Manufacturer	Mfr.
Minute	Min
Number	No.
Ounce	oz.
percent	%
plus and minus	±
pound or pounds	lb. or lbs.
pounds per square inch (psi)	Psi
power factor	Pf
revolutions per minute (rpm)	Rpm
square foot or square feet	sq. ft.
uninterruptible power supply (UPS)	UPS
Variable Frequency Drive	VFD
Volt	V
water gauge	w.g.
wire-gauge	Awg

1.4 UTILITY CONNECTIONS

A. Arrange for and pay utility costs for work of this Division.

B. Included:
1. Connection to utility company mains.
2. Connection to on-site piping mains.
3. Payment of service charges.
4. Provisions for temporary utilities.

1.5 JOB CONDITIONS

A. Examine all drawings and specifications in a manner to be fully cognizant of all work required under this Division.

B. Examine site related work and surfaces before starting work of any Section.

1. Report to Commissioner, in writing, conditions which will prevent proper provision of this work.
2. Beginning work of any Section without reporting unsuitable conditions to Commissioner constitutes acceptance of conditions by Contractor.

3. Perform any required removal, restoration or replacement of this work caused by unsuitable conditions at no additional cost to the City of New York.

C. Connections to existing work.

1. Verification of existing:

   a. Become thoroughly familiar with actual existing conditions and systems at the building, and of the existing installations to which connections must be made, including any necessary alterations, and existing building engineering practices and requirements. The intent of the work is shown on the drawings and described herein, and no consideration will be granted by reason of lack of familiarity on the part of the contractor with actual physical conditions, requirements, and practices at the site.

2. Install new work and connect to existing work with minimum interference to existing facilities.
3. Temporary shutdowns of existing services:

   a. At no additional charges.
   b. At times not to interfere with normal operation of existing facilities.
   c. Only with written consent of Commissioner.

4. Maintain continuous operation of existing facilities as required with necessary temporary connections between new and existing work.
5. Restore existing disturbed work to original condition.

D. Removal and relocation of existing work.

1. Disconnect, remove or relocate material, equipment, plumbing fixtures, piping and other work noted and required by removal or changes in existing construction.
2. Where existing pipes, conduits and/or ducts which are to remain prevent installation of new work as indicated, relocate, or arrange for relocation, of existing pipes, conduits and/or ducts.
3. Provide new material and equipment required for relocated equipment.
4. Plug or cap active piping or ductwork behind or below finish.
5. Do not leave long dead-end branches. Cap or plug as close as possible to active line.
6. Remove unused piping, ductwork and material.
7. Dispose of removed fixtures and equipment as directed.
8. Turn over removed fixtures and equipment to Commissioner as directed.

E. Special Traffic Requirements:

1. Maintain emergency and service entrances useable to pedestrian, truck, and ambulance traffic at all times.
2. Where trenches are cut, provide adequate bridging for above mentioned traffic.

F. If asbestos insulation is found when working in existing areas, immediately stop work and notify Commissioner. Do not restart work until advised in writing by Commissioner that it is safe to do so following abatement, encapsulation, etc.

1.6 CLEARANCE FROM ELECTRICAL EQUIPMENT

A. Piping or ductwork:

1. Prohibited in:

a. Electric rooms and closets.
b. Telephone rooms and closets.
c. Elevator machine rooms.
d. Electric switchboard room.

2. Prohibited above an area within 5 ft. of:

a. Transformers.
b. Motor control centers.
c. Standby power plant.
d. Bus ducts.

1.7 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Submit the following items as hereinafter specified:

1. Names and qualifications of test and balance agencies.
2. Record Files.
3. Operating and Maintenance Manuals.
4. Welding certificates.
5. Equipment and material submittals as required by sections within this division.

C. Items shall comply with the requirements as hereinafter specified.

D. Submit shop drawings, product data, samples and certificates of compliance required by contract documents.

E. For all equipment requiring MEA numbers by NYC, numbers shall be included within the equipment submittals.

F. Schedule of submittals, as agreed to by the Commissioner, will set the basis of the minimum required submittals. Submittals shall be provided by the Contractor promptly and in accordance with the Schedule of submittals and in such sequence as to cause no delay in work or in work of any other divisions.

G. Resubmission Requirements:

1. In addition to DDC General Conditions requirements, make any corrections or change in Submittals required. Resubmit for review until no exceptions are taken or a resubmission is not required.
2. Shop Drawings and Product Data:

a. Revise initial drawings or data, and resubmit as specified for initial submittal.
b. Indicate any changes which have been made other than those requested.

3. Samples: Submit new samples as required for initial submittal.
4. Clearly identify resubmittal by original submittal date, number and revision number and indicate all changes from previous submittal.

H. Corrections or comments made on the shop drawings during review do not relieve the Contractor from compliance with requirements of the drawings and specifications. Shop drawing checking by the Commissioner is only for review of general conformance with the design concept of the project and general compliance with the information given in the contract documents. The Contractor is responsible for:

1. Confirming and correlating all quantities and dimensions.
2. Selecting fabrication processes and techniques of construction.
3. Coordinating his work with that of all other trades.
4. Performing his work in a safe and satisfactory manner.

I. Layout (Shop) Drawings:

1. Submit Layout Drawings indicating work within mechanical rooms areas containing, air handlers or pumps, areas containing acoustically lined ductwork, food service areas and for any areas. See DDC General Conditions specification sections for additional requirements on layout drawings.
2. Layout Drawings for mechanical rooms shall be at a scale of 3/8"=1’-0”.
3. Prepare layout shop drawings for all areas.
4. From the layout drawings, prepare and submit Coordinated Drawings as herein specified below.

1.8 RELATED WORK AND REQUIREMENTS

A. Requirements of DDC General Conditions apply to all work in this division.

B. Carefully check the documents of each section with those of other sections and Divisions. Ascertain the requirements of any interfacing materials or equipment being furnished and/or installed by those sections and Divisions, and provide the proper installation and/or required interface.

C. As a minimum requirement and condition, the Contractor shall provide CADD generated drawings (for the purpose of Layout Drawings, Coordinated Drawings, As-built Drawings and Record Drawings) with a proven layering standard. Deviation from this requirement shall be:

1. At the sole discretion of the Commissioner.
2. Submitted as a substitution within the specified time frame.

D. Related work specified elsewhere:

1. Including pipe stenciling.
2. Access doors..

3. Wall louvers and screens.
4. Plenums other than sheet metal.
5. Flashing.

1.9 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. All equipment and accessories to be the product of a manufacturer regularly engaged in its manufacture.

C. Supply all equipment and accessories new and free from defects.

D. All items of a given type shall be the products of the same manufacturer.

E. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

F. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

1.10 REFERENCE STANDARDS

A. Published codes, specifications, standards, tests or recommended methods of trade, industry or governmental organizations apply to work in this Division where cited below:

1. AABC: Associated Air Balance Council.
2. ADC: Air Diffuser Council.
3. AMCA: Air Moving and Conditioning Association.
4. ANSI: American National Standards Institute.
5. ARI: Air-Conditioning and Refrigeration Institute.
6. ASHRAE: American Society of Heating, Refrigerating and Air Conditioning Engineers.
7. ASME: American Society of Mechanical Engineers.
8. ASSE: American Society of Sanitary Engineers.
9. ASTM: American Society for Testing and Materials.
10. AWS: American Welding Standards.
11. FM: Factory Mutual.
12. Local Utility Authorities.
13. NEMA: National Electrical Manufacturer's Association.
14. NFPA: National Fire Protection Association.
15. OSHA: Occupational Safety and Health Act.
16. PDI: Plumbing and Drainage Institute.
17. NYC Energy Conservation Code
18. UBC: Uniform Building Code.

19. UL: Underwriters' Laboratories, Inc.
20. UMC: Uniform Mechanical Code.
21. UPC: Uniform Plumbing Code.
22. New York City Building Code
23. New York City Mechanical Code
24. New York City Fire Code
25. New York City Energy Conservation Code

1.11 COORDINATION

A. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction, to allow for HVAC installations.

B. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

C. Coordinate requirements for access panels and doors for HVAC items requiring access that are concealed behind finished surfaces.

1.12 REQUIRED TOOLS

A. Furnish to Commissioner at completion of work:

1. One set of any required tools required to operate, adjust, dismantle or repair equipment furnished under any section of this Division.
2. "Required tools": needed for certain equipment not normally found.

3. Tag each item and cross reference in Maintenance Manual.
4. Turn over to Commissioner or temporarily secure to unit at Commissioner's instruction.

1.13 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and to prevent entrance of dirt, debris, and moisture.

B. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

C. Check dimensions of access route through the site from delivery point to final location. Where necessary, ship in crated sections of size to permit passing through available space. Dismantle and/or reassemble, reposition and retest equipment too large to pass through available access route to final location in one piece.

D. Ship equipment in original packages, to prevent damaging or entrance of foreign matter.

E. Handle and ship in accordance with manufacturer's recommendations.

F. Provide protective coverings during construction.

G. Replace at no expense to City of New York, equipment or material damaged during storage or handling, as directed by Commissioner.

H. Tag all items with weatherproof tag, identifying equipment by name and purchase order number.

I. Include packing and shipping lists.

J. Special requirements as specified in individual sections.

1.14 PROTECTION OF MATERIALS

A. Protect from damage, water, dust, etc., material, equipment and apparatus provided under this Division, both in storage and installed, until Substantial Completion.

B. Provide temporary storage facilities for material and equipment.

C. Arrange with Commissioner for storage facilities for materials and equipment.

D. Material, equipment or apparatus damaged because of improper storage or protection will be rejected.

1. Remove from site and provide new, duplicate, material equipment or apparatus in replacement of that rejected.

E. Cover motors and other moving machinery to protect from dirt and water during construction.

F. Protect premises and work of other Divisions from damage arising out of installation of work of this Division.

1. Restore or replace, as directed by Commissioner, materials and parts of premises which become damaged as result of installation of work of this Division.
2. Remove replaced parts from premises.

1.15 REVIEW OF CONSTRUCTION

A. Work may be reviewed at any time by Commissioner.

B. Advise Commissioner in writing that work is ready for review at following times:
1. Prior to concealment of work in walls and above ceilings.
2. When all requirements of Contract have been completed.

C. Conceal work only after Commissioner's consent.

1.16 SCHEDULE OF WORK

A. Arrange work to conform to schedule of construction established or required to comply with Contract Documents.

B. In scheduling, anticipate means of installing equipment through available openings in structure.

C. Confirm in writing to Commissioner, anticipated number of days required to perform test, balance, and acceptance testing of mechanical systems:

1. This phase must occur after completion of mechanical systems, including all control calibration and adjustment, and requires substantial completion of the building, including closure, ceilings, lighting, partitioning, etc.
2. Submit for approval at this time, names and qualifications of test and balancing agencies to be used.

D. Arrange with Commissioner schedule for work in each area.

E. Unless otherwise directed by Commissioner perform work during normal working hours.

F. Work delays:

1. In case noisy work interferes with City of New York's operations, Commissioner may require work to be stopped and performed at some other time, or after normal working hours.

1.17 NOISE REDUCTION

A. Cooperate in reducing objectionable noise or vibration caused by mechanical systems.

1. To extent of adjustments to specified and installed equipment and appurtenances.

B. Correct noise problems caused by failure to install work in accordance with Contract Documents. Include labor and materials required as result of such failure.

1.18 PERMITS, LICENSES, AND INSPECTIONS

A. Permits and Licenses:

1. Secure required permits and licenses including payments of all charges and fees.

B. Inspections:

1. Obtain certificates of final inspection approval from NYC DOB, and submit to Commissioner before substantial completion of the Work.
2. Obtain inspections during the Work as required to allow timely progress of these and other trades.

1.19 GUARANTEE

A. Guarantee all materials, equipment, apparatus and workmanship to be free of defective materials and faulty workmanship for period of one year from date of Substantial Completion, unless extended guarantee periods are specified in individual sections.

B. Furnish guarantee covering all work in accordance with general requirements of the Contract.

C. Provide new materials, equipment, apparatus and labor to replace that determined by Commissioner to be defective or faulty.

D. This guarantee also applies to services such as Instructions, Adjusting, Testing, Noise, Balancing, etc.

E. Equipment manufacturers shall include extended warranty to give full coverage during warranty period, unless longer period is specified.

1.20 PRELIMINARY OPERATION

A. Any portion of the system or equipment shall be placed in operation at the request of the Commissioner prior to the substantial completion and acceptance of the work. Such operation shall be under the direct supervision of the Contractor.

B. Preliminary operation thereof shall not be construed as acceptance of any part of the Work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Division 23 Sections where articles and subparagraphs introduce lists, the following requirements apply for product selection:

2.2 GROUT

A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

2.3 MISCELLANEOUS METAL WORK

A. Ladders:

1. Under General Construction Work.
2. Galvanized structural steel.
3. 18 in. wide.
4. 2 1/2 in. x 1/2 in. side rails.
5. 3/4 in. diameter rungs 12 in. on center.
6. In accordance with OSHA regulations.

B. Guards and Railings:

1. Furnish guards and railings as indicated and/or as required by OSHA.
2. Provide OSHA approved guards for belt drives and rotating equipment.
3. Guards removable with:

    a. Frames: No. 18 USSG steel.
    b. Fronts: No. 20 USSG galvanized perforated steel with:

        1) Covered test openings to permit rpm readings without removal.

    c. Supports: galvanized steel angles or channels, braced to maintain clearances of moving parts.
    d. Clearance for motor adjustment.

4. Railings: removable of 1¼ in. pipe and rail fittings.

2.4 PAINTING

A. Manufacturers:

1. Sherwin-Williams.
2. Pittsburgh Plate Glass Co.
3. Pratt and Lambert.
4. Rust-Oleum.
5. Or approved equal.

B. Materials:

1. Best grade for its purpose.
2. Deliver in original sealed containers.
3. Apply in accordance with manufacturers instructions.
4. Heat resistant paint for hot piping, equipment and materials.
5. Colors as selected by the Commissioner.

2.5 UNIT HEATER DOUBLE WALL FLUE

A. Manufacturers:

1. American Metal Products
2. MASCO Corporation

3. FAMCO
4. Hart & Cooley, Inc
5. Or approved equal

B. Materials:

1. Double-wall metal vents tested in accordance to UL 441 and rated for 550 deg F (288 deg C) continuously for Type BW; with neutral or negative flue pressure complying with NFPA 211.
2. Inner shell and outer jacket separated by at least 1/4-inch (6-mm) airspace
3. Inner Shell: Type 3105 aluminum
4. Outer Jacket: Aluminized steel
5. Welded fittings, threaded fittings are not allowed.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 HVAC DEMOLITION

A. Refer to Section 024113 "Selective Removals and Demolition" for general demolition requirements and procedures.

B. Disconnect, demolish, and remove HVAC systems, equipment, and components indicated to be removed.

1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
3. Ducts to Be Removed: Remove portion of ducts indicated to be removed and plug remaining ducts with same or compatible ductwork material.
4. Ducts to Be Abandoned in Place: Cap or plug ducts with same or compatible ductwork material.
5. Equipment to Be Removed: Disconnect and cap services and remove equipment.
6. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
7. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to Commissioner.

C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.3 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to allow maximum possible headroom unless specific mounting heights are indicated.

B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

C. Install HVAC equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

D. Install equipment to allow right of way for piping installed at required slope.

E. Access to Valves and Equipment.

1. Access shall be possible where valves, expansion joints, fire dampers, motors, filters, control devices, and any other equipment requiring access for servicing, repairs, or maintenance are located in walls, chases, and/or above ceilings.
2. Definition of Accessible:

    a. Valves and dampers may be operated.
    b. Control devices may be adjusted.
    c. Fire dampers may be reset.
    d. Equipment access panels may be opened.
    e. Normal maintenance work such as replacement of filters, lubrication of bearings, etc., may be performed readily within arm's reach of access opening.
    f. It shall not be necessary to crawl through furred ceiling space to perform such operations.

3. Group concealed valves, expansion joints, controls, dampers and equipment requiring service access, so as to be freely accessible through access doors and to minimize the number of access doors required.
4. Relocate piping equipment and accessories as required, at no extra cost to afford proper maintenance access.
5. For access into ductwork see Section 233300: Air Duct Accessories.
6. Coordinate location of access panels with applicable trades installing walls or ceiling.

    a. Coordinate panel locations with lights and other architectural features.
    b. Submit proposed panel locations to Commissioner for review.

7. Access doors or panels will be installed by the Contractor.
8. Arrange for location and marking of removable tiles in splined ceilings where access panels are not installed.
9. Existing Structures:

    a. When installation requires access openings through existing construction, provide necessary panels, and arrange for Contractor.
    b. Restore adjoining existing surfaces to original condition after new access panels have been installed.

3.4 PAINTING

A. Painting of exposed roof-top equipment.

B. Finish painting under Section 099100 “Painting”.

1. Colors coordinated by Contractor as directed by Commissioner.

C. Painting under this Division:

1. Interior of ductwork as far back as visible from outside: flat black.
2. Uncoated hangers, supports, rods and inserts: dip in zinc chromate primer.
3. Factory prime coat for following except as noted.

    a. Pumps.
    b. Fans.
    c. Motors.
    d. Equipment.
    e. Air outlets.
    f. Converter.

4. Marred surfaces of prime coated equipment and piping: spot prime coat to match adjacent coat.
5. Shop prime coat for following, except as noted:

    a. Structural frames.
    b. Platforms.
    c. Ladders.
    d. Railings.
    e. Tanks.

D. General:

1. Labor, materials and equipment necessary for field painting.
2. Protect flooring and equipment with drip cloths.
3. Paint and materials stored in location where directed.
4. Oily rags and waste removed from building every night.
5. Furnish each space containing stored painting materials with approved 2½ gallon fire extinguisher.
6. Wire brush and clean off all oil, dirt and grease areas to be painted before paint is applied.
7. Mixing:

    a. Mixed and strained as required by manufacturer.
    b. Use thinners only in accordance with manufacturers recommendation.
    c. Follow printed instructions on paint containers. If none are available, instructions shall be obtained in writing from manufacturer.

8. Workmanship:

    a. No painting or finishing shall be done with:

1) Dust laden air.
2) Unsuitable weather conditions.
3) Space temperature below 60ºF.

b. Pipes being painted: containing no heat and to remain cold until paint is dried.
c. Paint spread: uniform and proper film thickness showing no runs, sags, crawls or other defects.
d. Finished surfaces shall be uniform in sheen, color, and texture.
e. All coats to be thoroughly dry before succeeding coats are applied, minimum 24 hrs. between coats.
f. Priming undercoat: slightly different color for inspection purposes.

9. Exposed, uninsulated, ungalvanized sheet metal other than stainless steel and aluminum: Two coats of aluminum paint or alkyd paint color as directed.
10. Exposed, uninsulated, galvanized sheet metal in finished space including mechanical equipment rooms:

a. One coat galvanized iron primer.
b. Two coats alkyd oil paint, color as directed.

11. Exposed, insulated piping and equipment covering:

a. One coat primer sealer.
b. Two coats alkyd oil paint, color as directed.

12. Finned tube radiation: One coat factory or field applied coat of heat resisting paint.
13. Paint following with two coats alkyd oil paint, color as directed:

a. Exposed steel and metal work not furnished with factory-painted finish.
b. Structural steel supports for piping ductwork and equipment.
c. Exposed, uninsulated piping.

14. Exposed, uninsulated aluminum sheet metal in finished space:

a. One coat zinc chromate primer.

15. No paint on exposed, uninsulated stainless steel sheet metal in finished space.

E. Finish painting:

1. Consisting of two finished coats of high gloss medium or long alkyd paint over prime coat.
2. Submit color shade for approval.
3. Piping continuously painted in all exposed areas.
4. Color coding shall comply with industry standard practice.

F. Interior of ductwork as far back as visible from outside: flat black.

G. Uncoated hangers, supports, rods and inserts: dip in zinc chromate primer.

H. Factory finish:

1. Steel air outlets in acoustical tile ceilings: baked white enamel.
2. Aluminum air outlets: anodized.
3. Exposed fan coil units: baked enamel.
4. Unit ventilators and unit heaters: baked enamel.

I. Factory prime coat, except as noted:
1. Pumps.
2. Fans.
3. Motors.
4. Equipment.
5. Registers.
6. Diffusers.
7. Grilles.

J. Marred surfaces of prime coated equipment and piping: spot prime coat to match adjacent coat.

K. Shop prime coat for following except as noted:

1. Structural frames.
2. Platforms.
3. Ladders.
4. Railings.
5. Tanks.

3.5 CLEANING AND ADJUSTING

A. Brush and clean work prior to concealing, painting and acceptance. Perform in stages if directed.

B. Painted or exposed work soiled or damaged: clean and restore to match adjoining work before final acceptance.

C. Remove debris from inside and outside of materials and equipment.

D. Flush out piping after installation.

E. Clean piping systems.

F. Adjust valves and automatic control devices.

G. Traps, wastes and supplies: unobstructed.

3.6 FIELD QUALITY CONTROL

A. Tests:

1. Perform as specified in individual sections, and as required by New York City Building Code and NYC Mechanical Code.

2. Duration as required by NYC BC.

B. Provide required labor, material, equipment, and connections.

C. Furnish written report and certification that tests have been satisfactorily completed.

D. Restore or replace defective work, as directed.

3.7 INSTRUCTION

A. Provide instruction by qualified manufacturers' representatives for equipment as specified in this Division.

B. Instruction to include:

1. Site-specific briefing to operating staff.
2. Minimum hours as specified in each Section.
3. Instructional materials (minimum six sets).
4. Video (2 copies) of each instruction session upon completion.

C. Each instruction session to be scheduled with Commissioner at least 30 days in advance.

END OF SECTION 230500

SECTION 23 05 13 - COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.3 COORDINATION

A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:

   1. Motor controllers.
   2. Torque, speed, and horsepower requirements of the load.
   3. Ratings and characteristics of supply circuit and required control sequence.
   4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.

B. Comply with NEMA MG 1 unless otherwise indicated.

C. Comply with IEEE 841, Institute of Electrical and Electronics Engineers, Standard for Petroleum and Chemical Industry--Premium-Efficiency, Severe-Duty, Totally Enclosed Fan-Cooled (TEFC) Squirrel Cage Induction Motors--Up to and Including 370 kW (500 hp), for severe-duty motors.

2.2 MOTOR CHARACTERISTICS

A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.

B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

A. Description: NEMA MG 1, Design B, medium induction motor.

B. Efficiency: Energy efficient, as defined in NEMA MG 1, including applications of premium efficiency motors.

C. Service Factor: 1.15.

D. Multispeed Motors: Variable torque.

1. For motors with 2:1 speed ratio, consequent pole, single winding.
2. For motors with other than 2:1 speed ratio, separate winding for each speed.

E. Multispeed Motors: Separate winding for each speed.

F. Rotor: Random-wound, squirrel cage.

G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.

H. Temperature Rise: Match insulation rating.

I. Insulation: Class F.

J. Code Letter Designation:

1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.

K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.

B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.

1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.
5. Shaft Grounding System:
   a. Motors 5 hp and greater shall have a single shaft grounding system to protect the bearings from capacitive discharge through the bearings. A shaft grounding system equal to that manufactured by Shaft Grounding Systems, Inc., CR Series, MME Group, or approved equal shall be used.
   b. The shaft grounding system shall reduce the shaft to frame voltage below 3 volts (as measured with 50 MHZ Fluke 97 oscilloscope), have low drag, be field installable with hand held tools, sealed to be resistant to weather and contaminants and require no periodic adjustments or maintenance for a normal running life of five to ten years at speed up to 1800 rpm. The grounding brush element must be changeable without shutting down or using special tools. Experience has shown that brush life may often be as long as ten years.

C. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.5 SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:

1. Permanent-split capacitor.
2. Split phase.
3. Capacitor start, inductor run.
4. Capacitor start, capacitor run.

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.

C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

END OF SECTION 230513

SECTION 23 05 29 - HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:

(1) The Contract Drawings
(2) The Specifications
(3) The general conditions,
(4) The Addendum
(5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following hangers and supports for HVAC system piping and equipment:

1. Steel pipe hangers and supports.
2. Trapeze pipe hangers.
3. Fiberglass pipe hangers.
4. Metal framing systems.
5. Fiberglass strut systems.
6. Thermal-hanger shield inserts.
7. Fastener systems.
8. Pipe stands.
9. Equipment supports.

B. Related Sections include the following:
1. Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment" for vibration isolation devices.
2. Section 233113 "Metal Ducts" for duct hangers and supports.

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. Terminology: As defined in MSS SP-69, "Pipe Hangers and Supports - Selection and Application"

C. Terminology: As defined in MSS SP-89, "Pipe Hangers and Supports - Fabrication and Installation Practices"

D. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

E. Terminology: MFMA-103, "Guidelines for the Use of Metal Framing"

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: Manufacturer's catalog data, including load ratings, dimensions and installation instructions, for the following:

1. Steel pipe hangers and supports.
2. Fiberglass pipe hangers.
3. Thermal-hanger shield inserts.
4. Powder-actuated fastener systems.

C. Shop Drawings: Signed and sealed by a Professional Engineer licensed in the State of New York. Show fabrication and installation details and include calculations for the following:

1. Trapeze pipe hangers. Include Product Data for components.
2. Metal framing systems. Include Product Data for components.
3. Fiberglass strut systems. Include Product Data for components.
4. Pipe stands. Include Product Data for components.
5. Equipment supports.

D. Welding certificates.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.1, "Structural Welding Code--Steel."
2. AWS D1.2, "Structural Welding Code--Aluminum."
3. AWS D1.3, "Structural Welding Code--Sheet Steel."
4. AWS D1.4, "Structural Welding Code--Reinforcing Steel."
5. ASME Boiler and Pressure Vessel Code: Section IX.

C. Codes and Standards: Provide pipe hangers and supports conforming to the following:

1. American Society of Mechanical Engineering:

a. B31.1 Power Piping.
b. B31.2 Fuel Gas Piping.
c. B31.5 Refrigerating Piping and Heat Transfer Components.
d. B31.9 Building Services Piping.

2. American Society for Testing and Materials (ASTM):

a.	A36	Standard Specification for Carbon Structural Steel.
b.	A123	Standard Specification for Zinc (Hot Dip Galvanized) Coatings on Iron and Steel Products.
c.	A307	Standard Specification for Carbon Steel Bolts and Studs, 60000 PSI Tensile Strength.
d.	A575	Standard Specification for Steel Bars, Carbon, Merchant Quality, M-Grades.
e.	D695	Compressive Properties of Rigid Plastics.
f.	D790	Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.
g.	F708	Standard Practice for Design and Installation of Rigid Pipe.

3. Manufacturers Standardization Society of the Valve and Fittings Industry, Inc. (MSS):

a.	SP58	Pipe Hangers and Supports - Materials, Design And Manufacture.
b.	SP69	Pipe Hangers And Supports – Selection And Application.
c.	SP89	Pipe Hangers And Supports – Fabrication And Installation Practices.
d.	SP90	Guidelines on Terminology for Pipe Hangers and Supports.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 STEEL PIPE HANGERS AND SUPPORTS

A. Description: MSS SP-58, Types 1 through 58, factory-fabricated components. Refer to Part 3 "Hanger and Support Applications" Article for where to use specific hanger and support types.

B. Manufacturers:

1. AAA Technology & Specialties Co., Inc.
2. Bergen-Power Pipe Supports.
3. B-Line Systems, Inc.; a division of Cooper Industries.
4. Carpenter & Paterson, Inc.
5. Empire Industries, Inc.
6. ERICO/Michigan Hanger Co.
7. Globe Pipe Hanger Products, Inc.
8. Grinnell Corp.
9. GS Metals Corp.

10. National Pipe Hanger Corporation.
11. PHD Manufacturing, Inc.
12. PHS Industries, Inc.
13. Piping Technology & Products, Inc.
14. Tolco Inc.
15. Or approved equal.

C. Galvanized, Metallic Coatings: Pregalvanized or hot dipped.

D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

E. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion for support of bearing surface of piping.

2.3 TRAPEZE PIPE HANGERS

A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural-steel shapes with MSS SP-58 hanger rods, nuts, saddles, and U-bolts.

2.4 METAL FRAMING SYSTEMS

A. Description: MFMA-3, shop- or field-fabricated pipe-support assembly made of steel channels and other components.

B. Manufacturers:

1. B-Line Systems, Inc.; a division of Cooper Industries.
2. ERICO/Michigan Hanger Co.; ERISTRUT Div.
3. GS Metals Corp.
4. Power-Strut Div.; Tyco International, Ltd.
5. Thomas & Betts Corporation.
6. Tolco Inc.
7. Unistrut Corp.; Tyco International, Ltd.
8. Or approved equal.

C. Coatings: Manufacturer's standard finish, unless bare metal surfaces are indicated.

D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

2.5 FIBERGLASS STRUT SYSTEMS

A. Description: Shop- or field-fabricated pipe-support assembly, similar to MFMA-3, made of fiberglass channels and other components.

B. Manufacturers:

1. B-Line Systems, Inc.; a division of Cooper Industries.

2. Champion Fiberglass, Inc.
3. Cope, T. J., Inc.; Tyco International Ltd.
4. Seasafe, Inc.
5. Or approved equal.

2.6 THERMAL-HANGER SHIELD INSERTS

A. Description: 100-psig- (690-kPa-) minimum, compressive-strength insulation insert encased in sheet metal shield.

B. Manufacturers:

1. Carpenter & Paterson, Inc.
2. ERICO/Michigan Hanger Co.
3. PHS Industries, Inc.
4. Pipe Shields, Inc.
5. Rilco Manufacturing Company, Inc.
6. Value Engineered Products, Inc.
7. Or approved equal.

C. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with vapor barrier.
1. Insulated pipe shields by:
   a. Mechanical Pipe Shields MFG., “SNAPPITZ”
   b. Fergusion Insulated Pipe Shields
   c. Anvil International.
   d. Or approved equal.

D. Insulation-Insert Material for Hot Piping: ASTM C 552, Type II cellular glass.
1. Insulated pipe shields by:
   a. Mechanical Pipe Shields MFG., “SNAPPITZ”
   b. Fergusion Insulated Pipe Shields
   c. Anvil International.
   d. Or approved equal.

E. Insert and shield shall cover entire circumference of pipe.

F. Insert Length: Extend a minimum of 2 inches (50 mm) beyond sheet metal shield.

2.7 FASTENER SYSTEMS

A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Manufacturers:

   a. Hilti, Inc.

b. ITW Ramset/Red Head.
c. Masterset Fastening Systems, Inc.
d. MKT Fastening, LLC.
e. Powers Fasteners.
f. Or approved equal.

B. Mechanical-Expansion Anchors: Insert-wedge-type zinc-coated steel, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Manufacturers:

a. B-Line Systems, Inc.; a division of Cooper Industries.
b. Empire Industries, Inc.
c. Hilti, Inc.
d. ITW Ramset/Red Head.
e. MKT Fastening, LLC.
f. Powers Fasteners.
g. Or approved equal.

2.8 PIPE STAND FABRICATION

A. Pipe Stands, General: Shop or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.

B. Compact Pipe Stand: One-piece plastic unit with integral-rod-roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.

1. Manufacturers:

a. ERICO/Michigan Hanger Co.
b. MIRO Industries.
c. Hilti, Inc.
d. Or approved equal.

C. Low-Type, Single-Pipe Stand: One-piece stainless-steel base unit with plastic roller, for roof installation without membrane penetration.

1. Manufacturers:

a. ERICO/Michigan Hanger Co.
b. MIRO Industries.
c. Hilti, Inc.
d. Or approved equal.

D. High-Type, Single-Pipe Stand: Assembly of base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.

1. Manufacturers:

    a. ERICO/Michigan Hanger Co.
    b. MIRO Industries.
    c. Hilti, Inc.
    d. Or approved equal.

2. Base: Stainless steel.
3. Vertical Members: Two or more cadmium-plated-steel or stainless-steel, continuous-thread rods.
4. Horizontal Member: Cadmium-plated-steel or stainless-steel rod with plastic or stainless-steel, roller-type pipe support.

E. Curb-Mounting-Type Pipe Stands: Shop- or field-fabricated pipe support made from structural-steel shape, continuous-thread rods, and rollers for mounting on permanent stationary roof curb.

2.9 EQUIPMENT SUPPORTS

A. Description: Welded, shop- or field-fabricated equipment support made from structural-steel shapes.

2.10 MISCELLANEOUS MATERIALS

A. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.
2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

C. Hanger Rods: ASTM A 575, hot rolled Steel, ANSI B1.1 threads, continuously threaded, with electro-galvanized finish.

D. Steel Pipe Columns: ASTM A 53, Schedule 40, black steel.

E. Bolts and Nuts: ASTM A 307, Grade A, regular hexagon-head type.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 HANGER AND SUPPORT INSTALLATION

A. Steel Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.

B. Metal Trapeze Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified above for individual pipe hangers.
2. Field fabricate from ASTM A 36/A 36M, steel shapes selected for loads being supported. Weld steel according to AWS D1.1.

C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping and support together on field-assembled metal framing systems.

D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

E. Fastener System Installation:

1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick in concrete after concrete is placed and completely cured. Use operators that are properly trained by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

F. Pipe Stand Installation:

1. Pipe Stand Types except Curb-Mounting Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
2. Curb-Mounting-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb.

G. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.

H. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

I. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

J. Install lateral bracing with pipe hangers and supports to prevent swaying.

K. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 (DN 65)

and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

L. Load Distribution: Install hangers and supports so piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

M. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so maximum pipe deflections allowed by ASME B31.1 (for power piping) and ASME B31.9 (for building services piping) are not exceeded.

N. Insulated Piping: Comply with the following:

1. Attach clamps and spacers to piping.

    a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
    b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
    c. Do not exceed pipe stress limits according to ASME B31.1 for power piping and ASME B31.9 for building services piping.

2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.

    a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.

3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.

    a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN 100) and larger if pipe is installed on rollers.

4. Shield Dimensions for Pipe: Not less than the following:

    a. NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.
    b. NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.
    c. NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.
    d. NPS 8 to NPS 14 (DN 200 to DN 350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.
    e. NPS 16 to NPS 24 (DN 400 to DN 600): 24 inches (610 mm) long and 0.105 inch (2.67 mm) thick.

5. Pipes NPS 8 (DN 200) and Larger: Include wood or reinforced calcium-silicate insulation.
6. Inserts of length at least as long as protective shield.
7. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

O. Outdoor Piping: Pipe hangers, supports and hardware including screws, bolts, nuts, and washers, located outdoors shall be hot-dip galvanized in accordance with ASTM A123.

P. Miscellaneous Steel: Provide miscellaneous framing, steel members, beams, brackets, etc. for support of work in Division, unless specifically included in other Divisions.

3.3 EQUIPMENT SUPPORTS

A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.

B. Grouting: Place grout under supports for equipment and make smooth bearing surface.

C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.4 METAL FABRICATIONS

A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1M procedures for shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work, and with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections so no roughness shows after finishing and contours of welded surfaces match adjacent contours.

3.5 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches (40 mm).

3.6 PAINTING

A. Touch Up: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils (0.05 mm).

B. Touch Up: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Section 099100 “Painting”.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing- touch-up paint to comply with ASTM A 780.

3.7 HANGER AND SUPPORT SCHEDULE

A. Specific hanger and support requirements are specified in Sections specifying piping systems and equipment.

B. Comply with MSS SP-69 for pipe hanger selections and applications that are not specified in piping system Sections.

C. Use hangers and supports with galvanized, metallic coatings for piping and equipment that will not have field-applied finish.

D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.

E. Use carbon-steel pipe hangers and supports, metal trapeze pipe hangers and metal framing systems and attachments for general service applications.

F. Use stainless-steel pipe hangers and stainless-steel attachments for hostile environment applications.

G. Use copper-plated pipe hangers and stainless-steel attachments for copper piping and tubing.

H. Use padded hangers for piping that is subject to scratching.

I. Use thermal-hanger shield inserts for insulated piping and tubing.

J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated stationary pipes, NPS 1/2 to NPS 30 (DN 15 to DN 750).
2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of 1050 deg F (566 deg C) pipes, NPS 4 to NPS 16 (DN 100 to DN 400), requiring up to 4 inches (100 mm) of insulation.
3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes, NPS 3/4 to NPS 36 (DN 20 to DN 900), requiring clamp flexibility and up to 4 inches (100 mm) of insulation.
4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes, NPS 1/2 to NPS 24 (DN 15 to DN 600), if little or no insulation is required.

5. Pipe Hangers (MSS Type 5): For suspension of pipes, NPS 1/2 to NPS 4 (DN 15 to DN 100), to allow off-center closure for hanger installation before pipe erection.
6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated stationary pipes, NPS 3/4 to NPS 8 (DN 20 to DN 200).
7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 8 (DN 15 to DN 200).
8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 8 (DN 15 to DN 200).
9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 8 (DN 15 to DN 200).
10. Split Pipe-Ring with or without Turnbuckle-Adjustment Hangers (MSS Type 11): For suspension of noninsulated stationary pipes, NPS 3/8 to NPS 8 (DN 10 to DN 200).
11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated stationary pipes, NPS 3/8 to NPS 3 (DN 10 to DN 80).
12. U-Bolts (MSS Type 24): For support of heavy pipes, NPS 1/2 to NPS 30 (DN 15 to DN 750).
13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
14. Pipe Saddle Supports (MSS Type 36): For support of pipes, NPS 4 to NPS 36 (DN 100 to DN 900), with steel pipe base stanchion support and cast-iron floor flange.
15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes, NPS 4 to NPS 36 (DN 100 to DN 900), with steel pipe base stanchion support and cast-iron floor flange or carbon-steel plate and with U-bolt to retain pipe.
16. Adjustable, Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes, NPS 2-1/2 to NPS 36 (DN 65 to DN 900), if vertical adjustment is required, with steel pipe base stanchion support and cast-iron floor flange.
17. Single Pipe Rolls (MSS Type 41): For suspension of pipes, NPS 1 to NPS 30 (DN 25 to DN 750), from 2 rods if longitudinal movement caused by expansion and contraction might occur.
18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes, NPS 2-1/2 to NPS 24 (DN 65 to DN 600), from single rod if horizontal movement caused by expansion and contraction might occur.
19. Complete Pipe Rolls (MSS Type 44): For support of pipes, NPS 2 to NPS 42 (DN 50 to DN 1050), if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes, NPS 2 to NPS 24 (DN 50 to DN 600), if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes, NPS 2 to NPS 30 (DN 50 to DN 750), if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.

K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers, NPS 3/4 to NPS 24 (DN 20 to DN 600).
2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers, NPS 3/4 to NPS 24 (DN 20 to DN 600), if longer ends are required for riser clamps.

L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches (150 mm) for heavy loads.
2. Steel Clevises (MSS Type 14): For 120 to 450 deg F (49 to 232 deg C) piping installations.
3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F (49 to 232 deg C) piping installations.

M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction to attach to top flange of structural shape.
3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
6. C-Clamps (MSS Type 23): For structural shapes.
7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
11. Malleable Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
12. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:

    a. Light (MSS Type 31): 750 lb (340 kg).
    b. Medium (MSS Type 32): 1500 lb (680 kg).
    c. Heavy (MSS Type 33): 3000 lb (1360 kg).

13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Steel Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of standard length.
3. Thermal-Hanger Shield Inserts: For supporting insulated pipe. See section 2.6, "Thermal-Hanger Shield Inserts".

O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:

1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches (32 mm).
3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41 roll hanger with springs.
4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from hanger.
6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from base support.
7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from trapeze support.
8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:

    a. Horizontal (MSS Type 54): Mounted horizontally.
    b. Vertical (MSS Type 55): Mounted vertically.
    c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.

P. Comply with MSS SP-69 for trapeze pipe hanger selections and applications that are not specified in piping system Sections.

Q. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

R. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.

S. Supports of wire rope, wood, chain, strap perforated bar or any other makeshift device shall not be permitted.

END OF SECTION 230529

SECTION 23 05 48 - VIBRATION AND SEISMIC CONTROLS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following:

1. Isolation pads.
2. Isolation mounts.
3. Freestanding and restrained spring isolators.
4. Housed spring mounts.
5. Spring hangers.
6. Spring hangers with vertical-limit stops.
7. Pipe riser resilient supports.
8. Resilient pipe guides.
9. Restrained vibration isolation roof-curb rails.
10. Seismic snubbers.
11. Restraining braces and cables.

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. IBC: International Building Code.

C. Life Safety and Hazardous Components - All systems involved with fire protection including sprinkler piping, fire pumps, jockey pumps, fire pump control panels, service water supply piping, water tanks, fire dampers and smoke exhaust systems and mechanical, electrical, plumbing or fire protection systems that support the operation of or are connected to emergency power equipment including all lighting, generators, transfer switches and transformers. Hazardous components include any pipe, vessel, duct or piece of equipment that contains flammable or toxic material.

D. Component – a part or element of an architectural, mechanical, electrical or structural system.

E. Positive Attachment – a cast in place anchor, a drill in wedge anchor, a chemical anchor, a double sided beam clamp loaded perpendicular to the beam or a welded or bolted connection to the structure.

F. Terminology: MSS SP-127, "Bracing for Piping Systems: Seismic – Wind – Dynamic Design, Selection, and Application"

1.4 PERFORMANCE REQUIREMENTS

A. Wind-Restraint Loading:

1. Values as specified as per ASCE/SEI and as identified on Structural drawings.

B. Seismic-Restraint Loading:

1. Values as specified as per ASCE/SEI and as identified on Structural drawings.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For the following:

1. Include rated load, rated deflection, and overload capacity for each vibration isolation device.
2. Illustrate and indicate style, material, strength, fastening provision, and finish for each type and size of seismic-restraint component used.
   a. Annotate to indicate application of each product submitted and compliance with requirements.
3. Interlocking Snubbers: Include ratings for horizontal, vertical, and combined loads.
4. Catalog cuts and data sheets on specific vibration isolators and restraints to be utilized showing compliance with specifications.
5. An itemized list showing the items of equipment or piping to be isolated, the isolator type and model number selected, isolator loading and deflection, and reference to specific drawings showing base and construction where applicable.
6. Seismic restraint calculations and structural or civil engineers stamp verifying design and calculations for seismic restraining system used.
7. Drawings showing equipment base construction for each piece of equipment, including dimensions, structural member sizes and support point locations.
8. Drawing showing methods of suspension, support guides for piping.
9. Drawings showing methods for isolation of pipes piercing walls and slabs.
10. Concrete and steel details for bases including anchor bolt locations.
11. Number and location of seismic restraints and anchors for each piece of equipment.
12. Specific details of restraints including anchor bolts for mounting and maximum loading at each location, for each piece of equipment and or pipe.

C. For vibration isolation and seismic-restraint details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the Professional Engineer licensed in the State of New York responsible for their preparation.

1. Engineer Calculations: Calculate static and dynamic loading due to equipment weight and operation, seismic forces required to select vibration isolators, seismic restraints, and for designing vibration isolation bases.

    a. Coordinate design calculations with wind load calculations required for equipment mounted outdoors. Comply with requirements in other Division 23 Sections for equipment mounted outdoors.

2. Riser Supports: Include riser diagrams and calculations showing anticipated expansion and contraction at each support point, initial and final loads on building structure, spring deflection changes, and seismic loads. Include certification that riser system has been examined for excessive stress and that none will exist.
3. Vibration Isolation Base Details: Detail overall dimensions, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, base weights, equipment static loads, power transmission, component misalignment, and cantilever loads.
4. Seismic-Restraint Details:

    a. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
    b. Details: Indicate fabrication and arrangement. Detail attachments of restraints to the restrained items and to the structure. Show attachment locations, methods, and spacings. Identify components, list their strengths, and indicate directions and values of forces transmitted to the structure during seismic events. Indicate association with vibration isolation devices.
    c. Coordinate seismic-restraint and vibration isolation details with wind-restraint details required for equipment mounted outdoors. Comply with requirements in other sections for equipment mounted outdoors.

D. Coordination Drawings: Show coordination of seismic bracing for HVAC piping and equipment with other systems and equipment in the vicinity, including other supports and seismic restraints.

E. Welding certificates.

F. Qualification Data: For Professional Engineer licensed in the State of New York and testing agency.

G. Air-Mounting System Performance Certification: Include natural frequency, load, and damping test data performed by an independent agency.

H. Field quality-control test reports.

I. Operation and Maintenance Data: For air-mounting systems to include in operation and maintenance manuals.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7.

C. Comply with seismic-restraint requirements in the NYCBC unless requirements in this Section are more stringent.

D. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

E. Seismic-restraint devices shall have horizontal and vertical load testing and analysis and shall bear anchorage preapproval by ICC-ES, showing maximum seismic-restraint ratings. Ratings based on independent testing are preferred to ratings based on calculations. If preapproved ratings are not available, submittals based on independent testing are preferred. Calculations (including combining shear and tensile loads) to support seismic-restraint designs must be signed and sealed by a Professional Engineer licensed in the State of New York. It is the objective of this Specification to provide the necessary design for the seismic restraint and control of excessive noise and vibration in the buildings due to the operation of machinery or equipment, and/or due to interconnected piping. The installation of all vibration isolation units, and associated hangers and bases, shall be under the direct supervision of the vibration isolation manufacturer's representatives.

1. All vibration isolators shall have either known undeflected heights or calibration markings so that, after adjustment when carrying their load, the deflection under load can be verified, thus determining that the load is within the proper range of the device and that the correct degree of vibration isolation ins being provided according to the design.
2. All isolators shall operate in the linear portion of their load versus deflection curve. Load versus deflection curves shall be furnished by the manufacturer, and must be linear over a deflection range of not less than 50 percent above the design deflection.
3. The theoretical vertical natural frequency for each support point, based upon load per isolator and isolator stiffness, shall not differ from the design objectives for the equipment as whole by more than plus or minus 10 percent.
4. All neoprene mountings shall have a shore hardness of 30 to 60 plus or minus 5, after minimum aging of 20 days or corresponding oven aging.

1.7 MANUFACTURER RESPONSIBILITIES

A. Manufacturer of vibration isolation and seismic control equipment shall have the following responsibilities:

1. Determine vibration isolation and seismic restraint sizes and locations.
2. Provide piping and equipment isolation systems and seismic restraints as scheduled or specified.
3. Guarantee specified isolation system deflection.

4. Provide installation instructions, drawings and field supervision to assure proper installation and performance.
5. Purchased and/or fabricated equipment must be designed to safely accept external forces of one-half "G" load in any direction for all rigidly and resiliently supported equipment and piping without failure and permanent displacement of the equipment. Life safety equipment including, fire pumps, sprinkler piping, and machinery must be capable of safely accepting external forces up to one "G" load in any direction without permanent displacement of the supported equipment.

1.8 CONTRACTOR RESPONSIBILITIES

A. The Contractor performing the work on equipment in the section shall have the following responsibilities.
1. All electrical components for standby or emergency power systems.
2. All flammable, combustible and highly toxic piping and their associated mechanical systems.
3. All ductwork containing hazardous materials.
4. All equipment using combustible or toxic energy sources.
5. List control procedures within the contractor's organization including methods and frequency of reporting and their distribution.
6. Purchased and/or fabricated equipment must be designed to safely accept external forces of load in any direction for all rigidly and resiliently supported life safety or hazardous equipment components, piping and ductwork without failure and permanent displacement of the equipment.

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Amber/Booth Company, Inc.
2. Kinetics Noise Control.
3. Mason Industries.
4. Vibration Eliminator Co., Inc.
5. Vibration Mountings & Controls, Inc.
6. Or approved equal.

B. Vibration Isolator Types:

1. Type A: Spring isolators shall incorporate the following:

a. Minimum diameter of 0.8 of the loaded operating height.
b. Corrosion resistance where exposed to corrosive environment with:

1) Springs cadmium plated or electro-galvanized.
2) Hardware cadmium plated.
3) All other metal parts hot-dip galvanized.

c. Reserve deflection (from loaded to solid height) of 50 percent of rated deflection.
d. Minimum 1/4-inch-thick neoprene acoustical base pad on underside, unless designated otherwise.
e. Designed and installed so that ends of springs remain parallel and all springs installed with adjustment bolts.
f. Non-resonant with equipment forcing frequencies or support structure natural frequencies.
g. Spring isolators to be manufactured by one of the manufacturers listed above.
h. This isolator must be accompanied by seismic isolator Type II.

2. Type B: Spring isolators shall be same as Type A, except:

a. Provide built-in vertical limit stops with minimum 1/4-inch clearance under normal operation.
b. Tapped holes in top plate for bolting to equipment when subject to wind load.
c. Capable of supporting equipment at a fixed elevation during equipment erection. Installed and operating heights shall be identical.
d. Adjustable and removable spring pack with separate neoprene pad isolation.
e. Housing shall be designed to accept 1 G of acceleration.
f. Spring isolators to be as manufactured by one of the manufacturers listed above.

3. Type C: Spring hanger rod isolators shall incorporate the following:

a. Spring element seated on a steel washer within a neoprene cup incorporating a rod isolation bushing.
b. Steel retainer box encasing the spring and neoprene cup.
c. Requires seismic restraint Type III.
d. Spring hanger rod isolators shall be as manufactured by one of the manufacturers listed above.

4. Type E: Elastomer hanger rod isolators shall be incorporate the following:

a. Molded unit type neoprene element with projecting bushing lining rod clearance hole.
b. Neoprene element shall be minimum 1-3/4 inch thick.
c. Steel retainer box encasing neoprene mounting.
d. Clearance between mounting hanger rod and neoprene bushing shall be minimum of 1/8 inch.
e. Requires seismic restraint Type III.
f. Elastomer hanger rod isolators shall be as manufactured by one of the manufacturers listed above.

5. Type F: Combination spring/elastomer hanger rod isolators to incorporate the following:

a. Spring and neoprene isolator elements in a steel box retainer. Neoprene of double deflection type. Single deflection is unacceptable. Spring seated in a neoprene cup with extended rod bushing.
b. Characteristics of spring and neoprene as describe in Type A and Type E isolators.
c. Requires seismic restraint Type III.
d. Combination spring/elastomer hanger rod isolators shall bras manufactured by one of the manufacturers listed above.

6. Type G: Pad type elastomer mountings to incorporate the following:

a. 0.750-inch minimum thickness.
b. 50 psi maximum loading.
c. Ribbed or waffled design.
d. 0.10-inch deflection per pad thickness.
e. 1/16-inch galvanized steel plate between multiple layers or pad thickness.
f. Suitable bearing plate to distribute load.
g. Pad type elastomer mountings shall be manufactured by one of the manufacturers listed above.

7. Type H: Pad type elastomer mountings to incorporate the following:

a. Laminate canvas duck and neoprene.
b. Maximum loading 1000 psi.
c. Suitable bearing plate to distribute load.
d. Minimum thickness, 1/2 inch.
e. Pad type elastomer mountings shall be as manufactured by one of the manufacturers listed above.

8. Type J: Rail type spring isolators:

a. Rail type spring isolators shall provide steel members of sufficient strength to prevent flexure with equipment operation.
b. Springs shall be the same as Type A with seismic restraint Type II or seismic restraint Type I isolation.
c. Rail type spring isolators shall be as manufactured by one of the manufacturers listed above.

9. Type K: Pipe anchors:

a. Vibration isolator manufacturer shall provide an all directional acoustical pipe anchor, consisting of a telescopic arrangement of two sizes of steel tubing separated by a minimum half inch thickness of heavy duty neoprene and duck or neoprene isolation material.
b. Vertical restraints shall be provided by similar material arranged to prevent vertical travel in either direction.
c. Allowable loads on the isolation material shall not exceed 500 psi and the design shall be balanced for equal resistance in any direction.
d. Pipe anchors shall be as manufactured by one of the manufacturers listed above.

2.2 AIR-MOUNTING SYSTEMS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Kinetics Noise Control.
2. Mason Industries.
3. Vibration Eliminator Co., Inc.
4. Or approved equal.

B. Air Mounts: Freestanding, single or multiple, compressed-air bellows.

1. Assembly: Upper and lower steel sections connected by a replaceable, flexible, nylon-reinforced neoprene bellows.
2. Maximum Natural Frequency: 3 Hz.
3. Operating Pressure Range: 25 to 100 psig (172 to 690 kPa).
4. Burst Pressure: At least three times manufacturer's published maximum operating pressure.
5. Leveling Valves: Minimum of 3 required to maintain leveling within plus or minus 1/8 inch (3 mm).

C. Restrained Air Mounts: Housed compressed-air bellows.

1. Assembly: Upper and lower steel sections connected by a replaceable, flexible, nylon-reinforced neoprene bellows and spring, with angle-iron frame having vertical-limit stops and channel-section top with leveling adjustment and attachment screws.
2. Maximum Natural Frequency: 3 Hz.
3. Operating Pressure Range: 25 to 100 psig (172 to 690 kPa).
4. Burst Pressure: At least three times manufacturer's published maximum operating pressure.
5. Leveling Valves: Minimum of 3 required to maintain leveling within plus or minus 1/8 inch (3 mm).

2.3 VIBRATION ISOLATION EQUIPMENT BASES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Amber/Booth Company, Inc.
2. Kinetics Noise Control.
3. Mason Industries.
4. Vibration Eliminator Co., Inc.
5. Vibration Mountings & Controls, Inc.
6. Or approved equal.

B. Type B-1: Integral Structural Steel Base

1. Reinforced, as required, to prevent base flexure at start-up and misalignment of drive and driven units. Centrifugal fan bases complete with motor slide rails. Drilled for drive and driven unit mounting template.
2. Integral Structural Steel Base shall be as manufactured by one of the manufacturers listed above.

C. Type B-2: Concrete Inertia Base

1. Concrete inertia bases shall be formed in a structural steel perimeter base, reinforced as required to prevent flexure, misalignment of drive and driven unit or stress transferal into equipment. The base shall be complete with motor slide rails, pump base elbow supports, and complete with height saving brackets, reinforcing, equipment bolting provisions and isolators.
2. Minimum thickness of the inertia base shall be according to the following tabulation:

Motor Size		Minimum Thickness	
(hp)	(kW)	(in)	(mm)
5-15	(4-11)	6	(150)
20-50	(15-37)	8	(200)
60-75	(45-55)	10	(250)
100-250	(75-190)	12	(300)
300-500	(220-375)	18	(350)

3. Concrete Inertia Base shall be as manufactured by one of the manufacturers listed above.

D. Type B-3: Curb Mounted Base

1. Curb mounted rooftop equipment shall be mounted on spring isolation curbs that directly sit on roof construction and are flashed and incorporated into roof's membrane waterproofing system.
2. All spring locations shall have removable waterproof covers to allow for spring adjustment and/or removal.
3. All spring mounts shall be as Isolator Type B.
4. Curb and spring mounting shall be capable of withstanding 110mph wind and 1.0 g seismic loads for life safety or hazardous components.
5. Curb Mounted Base shall be as manufactured by one of the manufacturers listed above.

2.4 SEISMIC-RESTRAINT DEVICES

A. Type I: Spring Incorporating Seismic Restraint

1. Shall comply with general characteristics of spring isolators.
2. Shall have vertical restraints and are capable of supporting equipment at fixed elevation during equipment erection. Vertical restraint shall be separate from equipment load support.
3. Shall incorporate seismic snubbing restraint in all directions at specified acceleration loadings.

4. System to be field bolted to structure with minimum capability to withstand external forces of 1.0 g.
5. Spring Incorporating Seismic Restraint shall be as manufactured by one of the manufacturers listed above.

B. Type II: Stationary Seismic Restraint

1. Each corner or side seismic restraint shall incorporate minimum 5/8" (16 mm) thick pad limit stops. Restraints shall be made of plate, structural members or square metal tubing in a welded assembly, incorporating resilient pads. Angle bumpers are not acceptable. System to be field bolted to deck with 1.0 g acceleration capacity.
2. Seismic spring mountings as described above are an acceptable alternative providing all seismic loading requirements are met.
3. Stationary Seismic Restraint shall be as manufactured by one of the manufacturers listed above.

C. Type III: Cable Seismic Restraint,

1. Metal cable type with approved end fastening devices to equipment and structure. System to be field bolted to deck or overhead structural members or deck with aircraft cable and clamps as per SMACNA guidelines.

D. General Requirements for Restraint Components: Rated strengths, features, and applications shall be as defined in reports by an evaluation service member of ICC-ES.

1. Structural Safety Factor: Allowable strength in tension, shear, and pullout force of components shall be at least four times the maximum seismic forces to which they will be subjected.

E. Channel Support System: MFMA-3, shop- or field-fabricated support assembly made of slotted steel channels with accessories for attachment to braced component at one end and to building structure at the other end and other matching components and with corrosion-resistant coating; and rated in tension, compression, and torsion forces.

F. Restraint Cables: ASTM A 603 galvanized-steel cables with end connections made of steel assemblies with thimbles, brackets, swivel, and bolts designed for restraining cable service; and with a minimum of two clamping bolts for cable engagement.

G. Hanger Rod Stiffener: Steel tube or steel slotted-support-system sleeve with internally bolted connections to hanger rod.

H. Bushings for Floor-Mounted Equipment Anchor Bolts: Neoprene bushings designed for rigid equipment mountings, and matched to type and size of anchor bolts and studs.

I. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for rigid equipment mountings, and matched to type and size of attachment devices used.

J. Resilient Isolation Washers and Bushings: One-piece, molded, oil- and water-resistant neoprene, with a flat washer face.

K. Mechanical Anchor Bolts: Drilled-in and stud-wedge or female-wedge type in zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488. Minimum length of eight times diameter.

L. Adhesive Anchor Bolts: Adhesive anchor bolts are not permitted where seismic restraint is required. Drilled-in and capsule anchor system containing polyvinyl or urethane methacrylate-based resin and accelerator, or injected polymer or hybrid mortar adhesive. Provide anchor bolts and hardware with zinc-coated steel for interior applications and stainless steel for exterior applications. Select anchor bolts with strength required for anchor and as tested according to ASTM E 488.

2.5 FLEXIBLE CONNECTORS

A. Elastomer Type FC-1:

1. Manufactured of nylon tire cord and EPDM both molded and cured with hydraulic presses.
2. Straight connectors shall have two spheres reinforced with a molded-in external ductile iron ring between spheres.
3. Elbow shall be long radius reducing type.
4. Rated 250 psi at 170 degrees F dropping in a straight line to 170 psi at 250 degrees F for sizes 1-1/2 inch to 12 inch elbows. Elbows shall be rated no less than 90 percent of straight connections.
5. Sizes 10 inches to 12 inches to employ control cables with neoprene end fittings isolated from anchor plates by means of 1/2 inch bridge bearing neoprene bushings.
6. Minimum safety factor, 4 to 1 at maximum pressure ratings.
7. Submittals shall include test reports.
8. Elastomer Type FC-1 shall be as manufactured by one of the manufacturers listed above.

B. Flexible Stainless Hose, Type FC-2:

1. Braided flexible metal hose.
2. 2 inch pipe size and smaller with male nipple fittings.
3. 2-1/2 inch and larger pipe size with fixed steel flanges.
4. Suitable for operating pressure with 4 to 1 minimum safety factor.
5. Length as required or shown on drawings.
6. Flexible Stainless Hose, Type FC-2 shall be as manufactured by one of the manufacturers listed above.

2.6 FACTORY FINISHES

A. Finish: Manufacturer's standard prime-coat finish ready for field painting.

B. Finish: Manufacturer's standard paint applied to factory-assembled and -tested equipment before shipping.

1. Powder coating on springs and housings.
2. All hardware shall be galvanized. Hot-dip galvanize metal components for exterior use.
3. Baked enamel or powder coat for metal components on isolators for interior use.
4. Color-code or otherwise mark vibration isolation and seismic-control devices to indicate capacity range.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine areas and equipment to receive vibration isolation and seismic-control devices for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine roughing-in of reinforcement and cast-in-place anchors to verify actual locations before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 APPLICATIONS

A. Multiple Pipe Supports: Secure pipes to trapeze member with clamps

B. Hanger Rod Stiffeners: Install hanger rod stiffeners where indicated or scheduled on Drawings to receive them and where required to prevent buckling of hanger rods due to seismic forces.

C. Strength of Support and Seismic-Restraint Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static and seismic loads within specified loading limits.

3.4 VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE INSTALLATION

A. Comply with requirements for installation of roof curbs, equipment supports, and roof penetrations.

B. Equipment Restraints:

1. Install seismic snubbers on HVAC equipment mounted on vibration isolators. Locate snubbers as close as possible to vibration isolators and bolt to equipment base and supporting structure.
2. Install resilient bolt isolation washers on equipment anchor bolts where clearance between anchor and adjacent surface exceeds 0.125 inch (3.2 mm).
3. .

C. Piping Restraints:

1. Comply with requirements in MSS SP-127.
2. Space lateral supports a maximum of 40 feet (12 m) o.c., and longitudinal supports a maximum of 80 feet (24 m).
3. Brace a change of direction longer than 12 feet (3.7 m).

D. Install cables so they do not bend across edges of adjacent equipment or building structure.

E. Install bushing assemblies for anchor bolts for floor-mounted equipment, arranged to provide resilient media between anchor bolt and mounting hole in concrete base.

F. Install bushing assemblies for mounting bolts for wall-mounted equipment, arranged to provide resilient media where equipment or equipment-mounting channels are attached to wall.

G. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.

H. Drilled-in Anchors:

1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcing or embedded items during coring or drilling. Notify the Commissioner if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Adhesive Anchors: Clean holes to remove loose material and drilling dust prior to installation of adhesive. Place adhesive in holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive.
5. Set anchors to manufacturer's recommended torque, using a torque wrench.
6. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.5 ACCOMMODATION OF DIFFERENTIAL SEISMIC MOTION

A. Install flexible connections in piping where they cross seismic joints, where adjacent sections or branches are supported by different structural elements, and where the connections terminate with connection to equipment that is anchored to a different structural element from the one supporting the connections as they approach equipment.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Provide evidence of recent calibration of test equipment by a testing agency.
2. Schedule test with the City of New York, through Commissioner, before connecting anchorage device to restrained component (unless post connection testing has been approved), and with at least seven days' notice.
3. Obtain Commissioner’s approval before transmitting test loads to structure. Provide temporary load-spreading members.
4. Test at least four of each type and size of installed anchors and fasteners selected by the Commissioner.
5. Test to 90 percent of rated proof load of device.
6. Measure isolator restraint clearance.
7. Measure isolator deflection.
8. Verify snubber minimum clearances.
9. Air-Mounting System Leak Test: After installation, charge system and test for leaks. Restore leaks and retest until no leaks exist.
10. Air-Mounting System Operational Test: Test the compressed-air leveling system.
11. Test and adjust air-mounting system controls and safeties.
12. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.

D. Remove and replace malfunctioning units and retest as specified above.

E. Prepare test and inspection reports.

3.7 ADJUSTING

A. Adjust isolators after piping system is at operating weight.

B. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operation.

C. Adjust air-spring leveling mechanism.

D. Adjust active height of spring isolators.

E. Adjust restraints to permit free movement of equipment within normal mode of operation.

3.8 INSTRUCTION

A. Engage a factory-authorized service representative to instruct City of New York's operating personnel to adjust, operate, and maintain air-mounting systems. Refer to "DDC General Conditions."

3.9 HVAC VIBRATION-CONTROL AND SEISMIC-RESTRAINT DEVICE SCHEDULE

A. As scheduled on drawings.

1. Equipment Location
2. Pads:

   a. Material: Neoprene.
   b. Thickness: 2 inches.
   c. Number of Pads: thick.

3. Isolator Type
4. Base Type
5. Minimum Deflection: 2 inches.
6. Component Importance Factor: 1.5.
7. Component Response Modification Factor: 1.5.
8. Component Amplification Factor: 1.0.

Equipment	Base Type	Isolator Type	Minimum Static Deflection (inches)	Seismic Restraint Type (if part of life safety or hazardous component)
Floor Mounted Centrifugal Fans	B-1	A	1.0	II
Pumps	B-2	A	1.0	II
Generators	--	B	1.0	I

END OF SECTION 23 05 48

PAGE INTENTIONALLY LEFT BLANK

SECTION 23 05 53 - IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Equipment labels.
2. Warning signs and labels.
3. Pipe labels.
4. Duct labels.
5. Stencils.
6. Valve tags.
7. Access Tile Identification.
8. Warning tags.

1.3 DEFINITIONS

A. Terminology: ASME A13.1, “Scheme for the Identification of Piping Systems”

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated, manufacturer’s catalog data, including size, color and materials.

C. Samples: For color, letter style, and graphic representation required for each identification material and device.

D. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.

E. Valve numbering scheme.

F. Valve Schedules: For each piping system to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Comply with ASME A 13.1 "Scheme for the Identification of Piping Systems."

1.6 COORDINATION

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

A. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, and having predrilled holes for attachment hardware.
2. Letter Color: White.
3. Background Color: Black.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
6. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
7. Fasteners: Stainless-steel rivets or self-tapping screws.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number and identify Drawing numbers

where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, and having predrilled holes for attachment hardware.

B. Letter Color: White.

C. Background Color: Red.

D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).

E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).

F. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

G. Fasteners: Stainless-steel rivets or self-tapping screws.

H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.3 PIPE LABELS

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.

B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.

1. NPS 5 (DN 125) and smaller: Attach to pipe without fasteners or adhesive.
2. NPS 6 (DN 150) and larger: Attach to pipe with stainless steel spring fasteners.

C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
2. Lettering Size: At least 1-1/2 inches (38 mm) high.

D. Maximum Temperature: Able to withstand temperatures up to 180 deg F (83 deg C).

2.4 DUCT LABELS

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8-inch-thick, and having predrilled holes for attachment hardware.

B. Letter Color:
1. Supply: White.
2. Return: Black.
3. All others: White.

C. Background Color:
1. Supply: Green.
2. Return: Yellow.
3. All others: Blue.

D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).

E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).

F. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

G. Fasteners: Stainless-steel rivets or self-tapping screws.

H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

I. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions, or as separate unit on each duct label to indicate flow direction.
2. Lettering Size: At least 1-1/2 inches (38 mm) high.

2.5 STENCILS

A. Stencils: Prepared with letter sizes according to ASME A13.1 for ductwork; minimum letter height of 1-1/2 inches (32 mm) for ducts.

1. Stencil Material: Fiberboard or metal.
2. Stencil Paint: Exterior, gloss, acrylic enamel unless otherwise indicated. Paint may be in pressurized spray-can form.

3. Identification Paint: Exterior, acrylic enamel in colors according to ASME A13.1 unless otherwise indicated.

B. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.

1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions, or as separate unit on each duct label to indicate flow direction.

2.6 VALVE TAGS

A. Valve Tags: Stamped or engraved with 1/4-inch (6.4-mm) letters for piping system abbreviation and 1/2-inch (13-mm) numbers.

1. Tag Material: Brass, 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Fasteners: Brass wire-link or beaded chain; or S-hook.

B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch (A4) bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Valve-tag schedule shall be included in operation and maintenance data.

2.7 ACCESS TILE IDENTIFICATION

A. Buttons, tabs, and markers: To identify location of concealed work.

B. Type: As approved by Commissioner.

2.8 WARNING TAGS

A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.

1. Size: Approximately 4 by 7 inches (100 by 178 mm).
2. Fasteners: Brass grommet and wire.
3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
4. Color: Yellow background with black lettering.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 PREPARATION

A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.3 EQUIPMENT LABEL INSTALLATION

A. Install or permanently fasten labels on each major item of mechanical equipment.

B. Locate equipment labels where accessible and visible.

3.4 PIPE LABEL INSTALLATION

A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Near each valve and control device.
2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
4. At access doors, manholes, and similar access points that permit view of concealed piping.
5. Near major equipment items and other points of origination and termination.
6. Spaced at maximum intervals of 50 feet (15 m) along each run. Reduce intervals to 25 feet (7.6 m) in areas of congested piping and equipment.
7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.

B. Pipe Label Color Schedule:

1. Heating Water Piping:

   a. Background Color: White.
   b. Letter Color: Orange.

2. Refrigerant Piping:

   a. Background Color: White.

b. Letter Color: Yellow.

3. Vent and Relief Piping:

a. Background Color: White.
b. Letter Color: Black.

4. City Water Piping:

a. Background Color: White.
b. Letter Color: Yellow.

3.5 DUCT LABEL INSTALLATION

A. Stencil duct label on air ducts in the following color codes:

1. Blue: For cold-air supply ducts.
2. Yellow: For hot-air supply ducts.
3. Green: For exhaust-, outside-, relief-, return-, and mixed-air ducts.
4. ASME A13.1 Colors and Designs: For hazardous material exhaust.

B. Stenciled Duct Label Option: Stenciled labels, showing service and flow direction, may be provided instead of plastic-laminated duct labels, at Installer's option, if lettering larger than 1 inch (25 mm) high is needed for proper identification because of distance from normal location of required identification.

C. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 50 feet in each space where ducts are exposed or concealed by removable ceiling system.

3.6 VALVE-TAG INSTALLATION

A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.

B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:

1. Valve-Tag Size and Shape:

a. All systems: 1-1/2 inches (38 mm), round.

2. Valve-Tag Color:

a. All systems: Natural.

3. Letter Color:

   a. All systems: Black.

3.7 ACCESS TILE IDENTIFICATION

A. Install buttons, tabs, or markers, where removable ceiling tiles are provided, to identify location of:

1. Valves.
2. Volume dampers.
3. Terminal Units.
4. Other concealed equipment requiring access.

3.8 WARNING-TAG INSTALLATION

A. Write required message on, and attach warning tags to, equipment and other items where required.

END OF SECTION 230553

SECTION 23 05 93 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the providing of labor, materials, equipment, and services necessary for complete testing, adjusting, balancing (TAB) of all heating, ventilating and air conditioning systems in accordance with the contract documents for the following:
   1. Air Systems: Balancing of air distribution systems including supply, return and exhaust systems, condensing units, all fan-coils and related equipment for:
      a. Constant-volume air systems.
      b. Variable-air-volume systems.
      c. Terminal devices for HVAC systems.
   2. Hydronic Piping Systems: Testing and balancing, including pumps, chillers, boilers, heat exchangers, coils, and all related equipment for:
      a. Variable-flow systems.
   3. Existing systems TAB.
      a. Recording flow of existing air and water systems which are to remain.
      b. Rebalancing and adjusting of existing systems.
   4. Verifying that automatic control devices are functioning properly.
   5. Reporting results of activities and procedures specified in this Section.
   6. Required Controlled Inspection, including Equipment Use Permits.

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. Adjust: To regulate fluid flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.

C. Balance: To proportion flows within the distribution system, including submains, branches, and terminals, according to indicated quantities.

D. Barrier or Boundary: Construction, either vertical or horizontal, such as walls, floors, and ceilings that are designed and constructed to restrict the movement of airflow, smoke, odors, and other pollutants.

E. Draft: A current of air, when referring to localized effect caused by one or more factors of high air velocity, low ambient temperature, or direction of airflow, whereby more heat is withdrawn from a person's skin than is normally dissipated.

F. NC: Noise criteria.

G. Procedure: An approach to and execution of a sequence of work operations to yield repeatable results.

H. RC: Room criteria.

I. Report Forms: Test data sheets for recording test data in logical order.

J. Static Head: The pressure due to the weight of the fluid above the point of measurement. In a closed system, static head is equal on both sides of the pump.

K. Suction Head: The height of fluid surface above the centerline of the pump on the suction side.

L. System Effect: A phenomenon that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.

M. System Effect Factors: Allowances used to calculate a reduction of the performance ratings of a fan when installed under conditions different from those presented when the fan was performance tested.

N. TAB: Testing, adjusting, and balancing.

O. Terminal: A point where the controlled medium, such as fluid or energy, enters or leaves the distribution system.

P. Test: A procedure to determine quantitative performance of systems or equipment.

Q. Testing, Adjusting, and Balancing (TAB) Firm: The entity responsible for performing and reporting TAB procedures.

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Qualification Data: Within 30 days from Contractor's Notice to Proceed, submit 6 copies of evidence that TAB firm and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.

C. Strategies and Procedures Plan: Within 90 days from Contractor's Notice to Proceed, submit 6 copies of TAB strategies and step-by-step procedures as specified in Part 3 "Preparation" Article. Include a complete set of report forms intended for use on this Project.

D. Certified TAB Reports: Submit two copies of reports prepared, as specified in this Section, on approved forms certified by TAB firm.

E. Sample Report Forms: Submit two sets of sample TAB report forms.

F. Warranties specified in this Section.

G. At least fifteen (15) days prior to starting field work, submit three (3) copies of report forms filled out, including design flow values, installed equipment pressure drops and required air flow for air terminals. Submit a complete list of instruments proposed to be used, organized in appropriate categories and include data sheets for each. Indicate each manufacturer and model number, description and use when needed to further identify instrument, size or capacity range and latest calibration date.

1. Commissioner will review submittals for compliance with Contract Documents, and will return one set marked to indicate discrepancies noted between data shown and Contract Documents, additional, or more accurate, instruments required and requests for recalibration of specific instruments.
2. Submit proposed method of balancing variable air volume systems to account for system diversity.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. TAB Firm Qualifications: Engage a TAB firm certified by AABC, NEBB, or TABB.

1. Furnish documentation that TAB firm is a member of one of the noted entities and that it has satisfactorily balanced at least three systems of comparable type and size of this project. Include list of such projects. TAB contractor shall be a certified member of the Testing Adjusting and Balancing Bureau (TABB) or the National Environmental Balancing Bureau (NEBB).
2. Inspection agency contracted by The City of New York will performs all Special Inspections (controlled Inspections) under a separate contract.

C. TAB Conference: Meet with Commissioner on approval of TAB strategies and procedures plan to develop a mutual understanding of the details. Ensure the participation of TAB team members, equipment manufacturers' authorized service representatives, HVAC controls installers, and other support personnel. Provide seven days' advance notice of scheduled meeting time and location.

1. Agenda Items: Include at least the following:

a. Submittal distribution requirements.
b. TAB plan.

c. Work schedule and Project-site access requirements.
d. Coordination and cooperation of trades and subcontractors.
e. Coordination of documentation and communication flow.

D. Certification of TAB Reports: Certify TAB field data reports. This certification includes the following:

1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
2. Certify that TAB team complied with approved TAB plan and the procedures specified and referenced in this Specification.

E. TAB Report Forms: Use standard forms from AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems." or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems." Or SMACNA's TABB "HVAC Systems - Testing, Adjusting, and Balancing."

F. Instrumentation Type, Quantity, and Accuracy: As described in AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems," Section II, "Required Instrumentation for NEBB Certification."

G. Instrumentation Calibration: Calibrate instruments at least every six months or more frequently if required by instrument manufacturer.

1. Keep an updated record of instrument calibration that indicates date of calibration and the name of party performing instrument calibration.

H. ASHRAE Compliance: Applicable requirements in the latest edition of ASHRAE 62.1-, Section 7.2.2 - "Air Balancing."

I. ASHRAE/IESNA 90.1 Latest Edition Compliance: Applicable requirements in the latest edition of ASHRAE/IESNA 90.1, Section 6.7.2.3 - "System Balancing."

1.6 PROJECT CONDITIONS

A. Full City of New York Occupancy: City of New York will occupy the site and existing building during entire TAB period. Cooperate with City of New York during TAB operations to minimize conflicts with City of New York operations.

B. Partial City of New York Occupancy: City of New Yorkmay occupy completed areas of building before Substantial Completion. Cooperate with City of New York during TAB operations to minimize conflicts with City of New York operations.

1.7 COORDINATION

A. Coordinate the efforts of factory-authorized service representatives for systems and equipment, HVAC controls installers, and other mechanics to operate HVAC systems and equipment to support and assist TAB activities.

B. Notice: Provide seven days' advance notice for each test. Include scheduled test dates and times.

C. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

1.8 WARRANTY

A. National Project Performance Guarantee: Provide a guarantee on AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems" forms stating that AABC will assist in completing requirements of the Contract Documents if TAB firm fails to comply with the Contract Documents. Guarantee includes the following provisions:

1. The certified TAB firm has tested and balanced systems according to the Contract Documents.
2. Systems are balanced to optimum performance capabilities within design and installation limits.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.

1. Contract Documents are defined in the DDC General Conditions of Contract.
2. Verify that balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, are required by the Contract Documents. Verify that quantities and locations of these balancing devices are accessible and appropriate for effective balancing and for efficient system and equipment operation.

B. Examine approved submittal data of HVAC systems and equipment.

C. Examine Project Record Documents described in DDC General Conditions.

D. Examine design data, including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of assumptions about HVAC system and equipment controls.

E. Examine equipment performance data including fan and pump curves. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system. Calculate system effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from those presented when the equipment was performance tested at the factory. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," Sections 7 through 10; or in SMACNA's "HVAC Systems--Duct Design," Sections 5 and 6. Compare this data with the design data and installed conditions.

F. Examine system and equipment installations to verify that they are complete and that testing, cleaning, adjusting, and commissioning specified in individual Sections have been performed.

G. Examine system and equipment test reports.

H. Examine HVAC system and equipment installations to verify that indicated balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers, are properly installed, and that their locations are accessible and appropriate for effective balancing and for efficient system and equipment operation.

I. Examine systems for functional deficiencies that cannot be corrected by adjusting and balancing.

J. Examine HVAC equipment to ensure that clean filters have been installed, bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.

K. Examine terminal units, such as variable-air-volume boxes, to verify that they are accessible and their controls are connected and functioning.

L. Examine plenum ceilings used for supply air to verify that they are airtight. Verify that pipe penetrations and other holes are sealed.

M. Examine strainers for clean screens and proper perforations.

N. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.

O. Examine heat-transfer coils for correct piping connections and for clean and straight fins.

P. Examine system pumps to ensure absence of entrained air in the suction piping.

Q. Examine equipment for installation and for properly operating safety interlocks and controls.

R. Examine automatic temperature system components to verify the following:

1. Dampers, valves, and other controlled devices are operated by the intended controller.
2. Dampers and valves are in the position indicated by the controller.
3. Integrity of valves and dampers for free and full operation and for tightness of fully closed and fully open positions. This includes dampers in multizone units, mixing boxes, and variable-air-volume terminals.
4. Automatic modulating and shutoff valves, including two-way valves and three-way mixing and diverting valves, are properly connected.
5. Thermostats and humidistats are located to avoid adverse effects of sunlight, drafts, and cold walls.
6. Sensors are located to sense only the intended conditions.
7. Sequence of operation for control modes is according to the Contract Documents.
8. Controller set points are set at indicated values.
9. Interlocked systems are operating.
10. Changeover from heating to cooling mode occurs according to indicated values.

S. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values. Submit report recommending addition and/or relocation of balancing devices, including, volume dampers, balancing valves, flow metering devices for air and water, and pressure and temperature measuring points.

3.3 PREPARATION

A. Prepare a TAB plan that includes strategies and step-by-step procedures.

B. Complete system readiness checks and prepare system readiness reports. Verify the following:

1. Permanent electrical power wiring is complete.
2. Hydronic systems are filled, clean, and free of air.
3. Automatic temperature-control systems are operational.
4. Equipment and duct access doors are securely closed.
5. Balance, smoke, and fire dampers are open.
6. Isolating and balancing valves are open and control valves are operational.
7. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
8. Windows and doors can be closed so indicated conditions for system operations can be met.
9. Ensure that special equipment such as computers and electronic equipment are in full operation.

3.4 GENERAL PROCEDURES FOR TESTING AND BALANCING

A. Perform testing and balancing procedures on each system according to the procedures contained in ASHRAE 111 or AABC's "National Standards for Testing and Balancing Heating, Ventilating, and Air Conditioning Systems" or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems" or SMACNA's TABB "HVAC Systems - Testing, Adjusting, and Balancing" and this Section.

1. Comply with requirements in the latest edition of ASHRAE 62.1, Section 7.2.2 - "Air Balancing."

B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary to allow adequate performance of procedures. After testing and balancing, close probe holes and patch insulation with new materials identical to those removed. Restore vapor barrier and finish according to insulation Specifications for this Project.

C. Mark equipment and balancing device settings with paint or other suitable, permanent identification material, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, to show final settings.

D. Take and report testing and balancing measurements in inch-pound (IP) units.

3.5 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.

B. Prepare schematic diagrams of systems' "as-built" duct layouts.

C. For variable-air-volume systems, develop a plan to simulate diversity.

D. Determine the best locations in main and branch ducts for accurate duct airflow measurements.

E. Check airflow patterns from the outside-air louvers and dampers and the return- and exhaust-air dampers, through the supply-fan discharge and mixing dampers.

F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

G. Verify that motor starters are equipped with properly sized thermal protection.

H. Check dampers for proper position to achieve desired airflow path.

I. Check for airflow blockages.

J. Check condensate drains for proper connections and functioning.

K. Check for proper sealing of air-handling unit components.

L. Check for proper sealing of air duct system.

3.6 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.

1. Measure fan static pressures to determine actual static pressure as follows:

    a. Measure outlet static pressure as far downstream from the fan as practicable and upstream from restrictions in ducts such as elbows and transitions.
    b. Measure static pressure directly at the fan outlet or through the flexible connection.
    c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from flexible connection and downstream from duct restrictions.
    d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.

2. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.

    a. Simulate dirty filter operation and record the point at which maintenance personnel must change filters.

3. Measure static pressures entering and leaving other devices such as sound traps, heat recovery equipment, and air washers, under final balanced conditions.
4. Compare design data with installed conditions to determine variations in design static pressures versus actual static pressures. Compare actual system effect factors with calculated system effect factors to identify where variations occur. Recommend corrective action to align design and actual conditions.
5. Obtain approval from Commissioner for adjustment of fan speed higher or lower than indicated speed. Make required adjustments to pulley sizes, motor sizes, and electrical connections to accommodate fan-speed changes.
6. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full cooling, full heating, economizer, and any other operating modes to determine the maximum required brake horsepower.

B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows within specified tolerances.

1. Measure static pressure at a point downstream from the balancing damper and adjust volume dampers until the proper static pressure is achieved.

    a. Where sufficient space in submain and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.

2. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust submain and branch ducts to indicated airflows within specified tolerances.

C. Measure terminal outlets and inlets without making adjustments.

1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.

D. Adjust terminal outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using volume dampers rather than extractors and the dampers at air terminals.

1. Adjust each outlet in same room or space to within plus or minus 5 percent of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
2. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.7 PROCEDURES FOR VARIABLE-AIR-VOLUME SYSTEMS

A. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a maximum set-point airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced airflow terminal units so they are distributed evenly among the branch ducts.

B. Pressure-Independent, Variable-Air-Volume Systems: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:

1. Set outside-air dampers at minimum, and return- and exhaust-air dampers at a position that simulates full-cooling load.
2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering static pressure for the critical terminal unit is not less than the sum of terminal-unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge system losses.
3. Measure total system airflow. Adjust to within +10% of indicated airflow.
4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use terminal-unit manufacturer's written instructions to make this adjustment. When total airflow is correct, balance the air outlets downstream from terminal units as described for constant-volume air systems.
5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow as described for constant-volume air systems.

    a. If air outlets are out of balance at minimum airflow, report the condition but leave outlets balanced for maximum airflow.

6. Remeasure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets as described for constant-volume air systems.
7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure that adequate static pressure is maintained at the most critical unit.
8. Record the final fan performance data.

3.8 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

A. Prepare test reports with pertinent design data and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against approved pump flow rate. Correct variations that exceed plus or minus 5 percent.

B. Prepare schematic diagrams of systems' "as-built" piping layouts.

C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:

1. Open all manual valves for maximum flow.
2. Check expansion tank liquid level.
3. Check makeup-water-station pressure gage for adequate pressure for highest vent.
4. Check flow-control valves for specified sequence of operation and set at indicated flow.
5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
6. Set system controls so automatic valves are wide open to heat exchangers.
7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
8. Check air vents for a forceful liquid flow exiting from vents when manually operated.

3.9 PROCEDURES FOR HYDRONIC SYSTEMS

A. Measure water flow at pumps. Use the following procedures, except for positive-displacement pumps:

1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.
2. Check system resistance. With all valves open, read pressure differential across the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
4. Report flow rates that are not within plus or minus 5 percent of design.

B. Set calibrated balancing valves, if installed, at calculated presettings.

C. Measure flow at all stations and adjust, where necessary, to obtain first balance.

1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.

D. Measure flow at main balancing station and set main balancing device to achieve flow that is 5 percent greater than indicated flow.

E. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:

1. Determine the balancing station with the highest percentage over indicated flow.
2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
3. Record settings and mark balancing devices.

F. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.

G. Measure the differential-pressure control valve settings existing at the conclusions of balancing.

3.10 PROCEDURES FOR VARIABLE-FLOW HYDRONIC SYSTEMS

A. Balance systems with automatic two- and three-way control valves by setting systems at maximum flow through heat-exchange terminals and proceed as specified above for hydronic systems.

3.11 PROCEDURES FOR MOTORS

A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:

1. Manufacturer, model, and serial numbers.
2. Motor horsepower rating.
3. Motor rpm.
4. Efficiency rating.
5. Nameplate and measured voltage, each phase.
6. Nameplate and measured amperage, each phase.
7. Starter thermal-protection-element rating.

B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass for the controller to prove proper operation. Record observations, including controller manufacturer, model and serial numbers, and nameplate data.

3.12 PROCEDURES FOR CONDENSING UNITS

A. Verify proper rotation of fans.

B. Measure entering- and leaving-air temperatures.

C. Record compressor data.

3.13 PROCEDURES FOR BOILERS

A. Measure entering- and leaving-water temperatures and water flow.

3.14 PROCEDURES FOR HEAT-TRANSFER COILS

A. Electric-Heating Coils: Measure the following data for each coil:

1. Nameplate data.
2. Airflow.
3. Entering- and leaving-air temperature at full load.
4. Voltage and amperage input of each phase at full load and at each incremental stage.
5. Calculated kilowatt at full load.
6. Fuse or circuit-breaker rating for overload protection.

B. Refrigerant Coils: Measure the following data for each coil:

1. Dry-bulb temperature of entering and leaving air.
2. Wet-bulb temperature of entering and leaving air.
3. Airflow.
4. Air pressure drop.
5. Refrigerant suction pressure and temperature.

3.15 PROCEDURES FOR TEMPERATURE MEASUREMENTS

A. During TAB, report the need for adjustment in temperature regulation within the automatic temperature-control system.

B. Measure indoor wet- and dry-bulb temperatures every other hour for a period of two successive eight-hour days, in each separately controlled zone, to prove correctness of final temperature settings. Measure when the building or zone is occupied.

C. Measure outside-air, wet- and dry-bulb temperatures.

3.16 PROCEDURES FOR TESTING, ADJUSTING, AND BALANCING EXISTING SYSTEMS

A. Perform a preconstruction inspection of existing equipment that is to remain and be reused.

1. Measure and record the operating speed, airflow, and static pressure of each fan.
2. Measure motor voltage and amperage. Compare the values to motor nameplate information.
3. Check the refrigerant charge.
4. Check the condition of filters.
5. Check the condition of coils.
6. Check the operation of the drain pan and condensate drain trap.
7. Check bearings and other lubricated parts for proper lubrication.

8. Report on the operating condition of the equipment and the results of the measurements taken. Report deficiencies.

B. Before performing testing and balancing of existing systems, inspect existing equipment that is to remain and be reused to verify that existing equipment has been cleaned and refurbished.

1. New filters are installed.
2. Coils are clean and fins combed.
3. Drain pans are clean.
4. Fans are clean.
5. Bearings and other parts are properly lubricated.
6. Deficiencies noted in the preconstruction report are corrected.

C. Perform testing and balancing of existing systems to the extent that existing systems are affected by the renovation work.

1. Compare the indicated airflow of the renovated work to the measured fan airflows and determine the new fan, speed, filter, and coil face velocity.
2. Verify that the indicated airflows of the renovated work result in filter and coil face velocities and fan speeds that are within the acceptable limits defined by equipment manufacturer.
3. If calculations increase or decrease the airflow and water flow rates by more than 5 percent, make equipment adjustments to achieve the calculated airflow and water flow rates. If 5 percent or less, equipment adjustments are not required.
4. Air balance each air outlet.

3.17 TEMPERATURE-CONTROL VERIFICATION

A. Verify that controllers are calibrated and commissioned.

B. Check transmitter and controller locations and note conditions that would adversely affect control functions.

C. Record controller settings and note variances between set points and actual measurements.

D. Check the operation of limiting controllers (i.e., high- and low-temperature controllers).

E. Check free travel and proper operation of control devices such as damper and valve operators.

F. Check the sequence of operation of control devices. Note air pressures and device positions and correlate with airflow and water flow measurements. Note the speed of response to input changes.

G. Check the interaction of electrically operated switch transducers.

H. Check the interaction of interlock and lockout systems.

I. Check main control supply-air pressure and observe compressor and dryer operations.

J. Record voltages of power supply and controller output. Determine whether the system operates on a grounded or nongrounded power supply.

K. Note operation of electric actuators using spring return for proper fail-safe operations.

3.18 TOLERANCES

A. Set HVAC system airflow and water flow rates within the following tolerances:

1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus 5 to plus 10 percent.
2. Air Outlets and Inlets: 0 to minus 10 percent.
3. Heating-Water Flow Rate: 0 to minus 10 percent.
4. Cooling-Water Flow Rate: 0 to minus 5 percent.

3.19 REPORTING

A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

B. Status Reports: As Work progresses, prepare reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.20 FINAL REPORT

A. General: Typewritten, or computer printout in letter-quality font, on standard bond paper, in three-ring binder, tabulated and divided into sections by tested and balanced systems.

B. Include a certification sheet in front of binder signed and sealed by the certified testing and balancing engineer.

1. Include a list of instruments used for procedures, along with proof of calibration.

C. Final Report Contents: In addition to certified field report data, include the following:

1. Pump curves.
2. Fan curves.
3. Manufacturers' test data.
4. Field test reports prepared by system and equipment installers.
5. Other information relative to equipment performance, but do not include Shop Drawings and Product Data.

D. General Report Data: In addition to form titles and entries, include the following data in the final report, as applicable:

1. Title page.
2. Name and address of TAB firm.
3. Project name.
4. Project location.
5. Architect's name and address.
6. Engineer's name and address.
7. Contractor's name and address.
8. Report date.
9. Signature of TAB firm who certifies the report.
10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
11. Summary of contents including the following:

    a. Indicated versus final performance.
    b. Notable characteristics of systems.
    c. Description of system operation sequence if it varies from the Contract Documents.

12. Nomenclature sheets for each item of equipment.
13. Data for terminal units, including manufacturer, type size, and fittings.
14. Notes to explain why certain final data in the body of reports varies from indicated values.
15. Test conditions for fans and pump performance forms including the following:

    a. Settings for outside-, return-, and exhaust-air dampers.
    b. Conditions of filters.
    c. Cooling coil, wet- and dry-bulb conditions.
    d. Face and bypass damper settings at coils.
    e. Fan drive settings including settings and percentage of maximum pitch diameter.
    f. Inlet vane settings for variable-air-volume systems.
    g. Settings for supply-air, static-pressure controller.
    h. Other system operating conditions that affect performance.

E. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:

1. Quantities of outside, supply, return, and exhaust airflows.
2. Water and steam flow rates.
3. Duct, outlet, and inlet sizes.
4. Pipe and valve sizes and locations.
5. Terminal units.
6. Balancing stations.
7. Position of balancing devices.

F. Air-Handling Unit Test Reports: For air-handling units with coils, include the following:

1. Unit Data: Include the following:

a. Unit identification.
b. Location.
c. Make and type.
d. Model number and unit size.
e. Manufacturer's serial number.
f. Unit arrangement and class.
g. Discharge arrangement.
h. Sheave make, size in inches, and bore.
i. Sheave dimensions, center-to-center, and amount of adjustments in inches.
j. Number of belts, make, and size.
k. Number of filters, type, and size.

2. Motor Data:

a. Make and frame type and size.
b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full-load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Sheave dimensions, center-to-center, and amount of adjustments in inches.

3. Test Data (Indicated and Actual Values):

a. Total airflow rate in cfm.
b. Total system static pressure in inches wg.
c. Fan rpm.
d. Discharge static pressure in inches wg.
e. Filter static-pressure differential in inches wg.
f. Preheat coil static-pressure differential in inches wg.
g. Cooling coil static-pressure differential in inches wg.
h. Heating coil static-pressure differential in inches wg.
i. Outside airflow in cfm.
j. Return airflow in cfm.
k. Outside-air damper position.
l. Return-air damper position.
m. Vortex damper position.

G. Apparatus-Coil Test Reports:

1. Coil Data:

a. System identification.
b. Location.
c. Coil type.
d. Number of rows.
e. Fin spacing in fins per inch o.c.
f. Make and model number.
g. Face area in sq. ft.
h. Tube size in NPS.
i. Tube and fin materials.

j. Circuiting arrangement.

2. Test Data (Indicated and Actual Values):

a. Airflow rate in cfm.
b. Average face velocity in fpm.
c. Air pressure drop in inches wg.
d. Outside-air, wet- and dry-bulb temperatures in deg F.
e. Return-air, wet- and dry-bulb temperatures in deg F.
f. Entering-air, wet- and dry-bulb temperatures in deg F.
g. Leaving-air, wet- and dry-bulb temperatures in deg F.
h. Water flow rate in gpm.
i. Water pressure differential in feet of head or psig.
j. Entering-water temperature in deg F.
k. Leaving-water temperature in deg F.
l. Refrigerant expansion valve and refrigerant types.
m. Refrigerant suction pressure in psig.
n. Refrigerant suction temperature in deg F.
o. Inlet steam pressure in psig.

H. Gas- and Oil-Fired Heat Apparatus Test Reports: In addition to manufacturer's factory startup equipment reports, include the following:

1. Unit Data:

a. System identification.
b. Location.
c. Make and type.
d. Model number and unit size.
e. Manufacturer's serial number.
f. Fuel type in input data.
g. Output capacity in Btuh.
h. Ignition type.
i. Burner-control types.
j. Motor horsepower and rpm.
k. Motor volts, phase, and hertz.
l. Motor full-load amperage and service factor.
m. Sheave make, size in inches, and bore.
n. Sheave dimensions, center-to-center, and amount of adjustments in inches.

2. Test Data (Indicated and Actual Values):

a. Total airflow rate in cfm.
b. Entering-air temperature in deg F.
c. Leaving-air temperature in deg F.
d. Air temperature differential in deg F.
e. Entering-air static pressure in inches wg.
f. Leaving-air static pressure in inches wg.
g. Air static-pressure differential in inches wg.
h. Low-fire fuel input in Btuh.

i. High-fire fuel input in Btuh.
j. Manifold pressure in psig.
k. High-temperature-limit setting in deg F.
l. Operating set point in Btuh.
m. Motor voltage at each connection.
n. Motor amperage for each phase.
o. Heating value of fuel in Btuh.

I. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:

1. Unit Data:

a. System identification.
b. Location.
c. Coil identification.
d. Capacity in Btuh.
e. Number of stages.
f. Connected volts, phase, and hertz.
g. Rated amperage.
h. Airflow rate in cfm.
i. Face area in sq. ft.
j. Minimum face velocity in fpm.

2. Test Data (Indicated and Actual Values):

a. Heat output in Btuh.
b. Airflow rate in cfm.
c. Air velocity in fpm.
d. Entering-air temperature in deg F.
e. Leaving-air temperature in deg F.
f. Voltage at each connection.
g. Amperage for each phase.

J. Fan Test Reports: For supply, return, and exhaust fans, include the following:

1. Fan Data:

a. System identification.
b. Location.
c. Make and type.
d. Model number and size.
e. Manufacturer's serial number.
f. Arrangement and class.
g. Sheave make, size in inches, and bore.
h. Sheave dimensions, center-to-center, and amount of adjustments in inches.

2. Motor Data:

a. Make and frame type and size.

b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full-load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Sheave dimensions, center-to-center, and amount of adjustments in inches.
g. Number of belts, make, and size.

3. Test Data (Indicated and Actual Values):

a. Total airflow rate in cfm.
b. Total system static pressure in inches wg.
c. Fan rpm.
d. Discharge static pressure in inches wg.
e. Suction static pressure in inches wg.

K. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:

1. Report Data:

a. System and air-handling unit number.
b. Location and zone.
c. Traverse air temperature in deg F.
d. Duct static pressure in inches wg.
e. Duct size in inches.
f. Duct area in sq. ft.
g. Indicated airflow rate in cfm.
h. Indicated velocity in fpm.
i. Actual airflow rate in cfm.
j. Actual average velocity in fpm.
k. Barometric pressure in psig.

L. Air-Terminal-Device Reports:

1. Unit Data:

a. System and air-handling unit identification.
b. Location and zone.
c. Test apparatus used.
d. Area served.
e. Air-terminal-device make.
f. Air-terminal-device number from system diagram.
g. Air-terminal-device type and model number.
h. Air-terminal-device size.
i. Air-terminal-device effective area in sq. ft.

2. Test Data (Indicated and Actual Values):

a. Airflow rate in cfm.
b. Air velocity in fpm.

c. Preliminary airflow rate as needed in cfm.
d. Preliminary velocity as needed in fpm.
e. Final airflow rate in cfm.
f. Final velocity in fpm.
g. Space temperature in deg F.

M. Compressor and Condenser Reports: For refrigerant side of unitary systems, stand-alone refrigerant compressors, air-cooled condensing units, or water-cooled condensing units, include the following:

1. Unit Data:

a. Unit identification.
b. Location.
c. Unit make and model number.
d. Compressor make.
e. Compressor model and serial numbers.
f. Refrigerant weight in lb.
g. Low ambient temperature cutoff in deg F.

2. Test Data (Indicated and Actual Values):

a. Inlet-duct static pressure in inches wg.
b. Outlet-duct static pressure in inches wg.
c. Entering-air, dry-bulb temperature in deg F.
d. Leaving-air, dry-bulb temperature in deg F.
e. Condenser entering-water temperature in deg F.
f. Condenser leaving-water temperature in deg F.
g. Condenser-water temperature differential in deg F.
h. Condenser entering-water pressure in feet of head or psig.
i. Condenser leaving-water pressure in feet of head or psig.
j. Condenser-water pressure differential in feet of head or psig.
k. Control settings.
l. Unloader set points.
m. Low-pressure-cutout set point in psig.
n. High-pressure-cutout set point in psig.
o. Suction pressure in psig.
p. Suction temperature in deg F.
q. Condenser refrigerant pressure in psig.
r. Condenser refrigerant temperature in deg F.
s. Oil pressure in psig.
t. Oil temperature in deg F.
u. Voltage at each connection.
v. Amperage for each phase.
w. Kilowatt input.
x. Crankcase heater kilowatt.
y. Number of fans.
z. Condenser fan rpm.
aa. Condenser fan airflow rate in cfm.

bb. Condenser fan motor make, frame size, rpm, and horsepower.
cc. Condenser fan motor voltage at each connection.
dd. Condenser fan motor amperage for each phase.

N. Pump Test Reports: Calculate impeller size by plotting the shutoff head on pump curves and include the following:

1. Unit Data:

a. Unit identification.
b. Location.
c. Service.
d. Make and size.
e. Model and serial numbers.
f. Water flow rate in gpm.
g. Water pressure differential in feet of head or psig.
h. Required net positive suction head in feet of head or psig.
i. Pump rpm.
j. Impeller diameter in inches.
k. Motor make and frame size.
l. Motor horsepower and rpm.
m. Voltage at each connection.
n. Amperage for each phase.
o. Full-load amperage and service factor.
p. Seal type.

2. Test Data (Indicated and Actual Values):

a. Static head in feet of head or psig.
b. Pump shutoff pressure in feet of head or psig.
c. Actual impeller size in inches.
d. Full-open flow rate in gpm.
e. Full-open pressure in feet of head or psig.
f. Final discharge pressure in feet of head or psig.
g. Final suction pressure in feet of head or psig.
h. Final total pressure in feet of head or psig.
i. Final water flow rate in gpm.
j. Voltage at each connection.
k. Amperage for each phase.

O. Boiler Test Reports:

1. Unit Data:

a. Unit identification.
b. Location.
c. Service.
d. Make and type.
e. Model and serial numbers.
f. Fuel type and input in Btuh.

g. Number of passes.
h. Ignition type.
i. Burner-control types.
j. Voltage at each connection.
k. Amperage for each phase.

2. Test Data (Indicated and Actual Values):

a. Operating pressure in psig.
b. Operating temperature in deg F.
c. Entering-water temperature in deg F.
d. Leaving-water temperature in deg F.
e. Number of safety valves and sizes in NPS.
f. Safety valve settings in psig.
g. High-limit setting in psig.
h. Operating-control setting.
i. High-fire set point.
j. Low-fire set point.
k. Voltage at each connection.
l. Amperage for each phase.
m. Draft fan voltage at each connection.
n. Draft fan amperage for each phase.
o. Manifold pressure in psig.

P. Air-to-Air Heat-Recovery Unit Reports:

1. Unit Data:

a. Unit identification.
b. Location.
c. Service.
d. Make and type.
e. Model and serial numbers.

2. Motor Data:

a. Make and frame type and size.
b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Sheave dimensions, center-to-center, and amount of adjustments in inches.

3. If fans are an integral part of the unit, include the following for each fan:

a. Make and type.
b. Arrangement and size.
c. Sheave make, size in inches, and bore.
d. Sheave dimensions, center-to-center, and amount of adjustments in inches.

4. Test Data (Indicated and Actual Values):

    a. Total exhaust airflow rate in cfm.
    b. Purge exhaust airflow rate in cfm.
    c. Outside airflow rate in cfm.
    d. Total exhaust fan static pressure in inches wg.
    e. Total outside-air fan static pressure in inches wg.
    f. Pressure drop on each side of recovery wheel in inches wg.
    g. Exhaust air temperature entering in deg F.
    h. Exhaust air temperature leaving in deg F.
    i. Outside-air temperature entering in deg F.
    j. Outside-air temperature leaving in deg F.
    k. Calculate sensible and total heat capacity of each airstream in MBh.

Q. Instrument Calibration Reports:

1. Report Data:

    a. Instrument type and make.
    b. Serial number.
    c. Application.
    d. Dates of use.
    e. Dates of calibration.

3.21 INSPECTIONS

A. Initial Inspection:

1. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the Final Report.
2. Randomly check the following for each system:

    a. Measure airflow of at least 10 percent of air outlets.
    b. Measure water flow of at least 5 percent of terminals.
    c. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
    d. Measure sound levels at two locations.
    e. Measure space pressure of at least 10 percent of locations.
    f. Verify that balancing devices are marked with final balance position.
    g. Note deviations to the Contract Documents in the Final Report.

B. Final Inspection:

1. After initial inspection is complete and evidence by random checks verifies that testing and balancing are complete and accurately documented in the final report, request that a final inspection be made by Commissioner.
2. TAB firm test and balance engineer shall conduct the inspection in the presence of Commissioner.

3. Commissioner shall randomly select measurements documented in the final report to be rechecked. The rechecking shall be limited to either 10 percent of the total measurements recorded, or the extent of measurements that can be accomplished in a normal 8-hour business day.
4. If the rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
5. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
6. TAB firm shall recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes and resubmit the final report.
7. Request a second final inspection. If the second final inspection also fails, The City of New York shall contract the services of another TAB firm to complete the testing and balancing in accordance with the Contract Documents.

3.22 ADDITIONAL TESTS

A. Within 90 days of completing TAB, perform additional testing and balancing to verify that balanced conditions are being maintained throughout and to correct unusual conditions.

B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional testing, inspecting, and adjusting during near-peak summer and winter conditions.

3.23 RECORD OF EXISTING AIRFLOW

A. Prior to demolition of existing work, measure and record existing air flows in main supply, return and exhaust ducts of each system. Make pitot tube traverse in sections of existing ducts which are to remain, or as near as practicable. Use these recorded measurements to rebalance existing duct systems after completion of new systems.

3.24 RECORD OF EXISTING WATER FLOW RATES

A. Prior to demolition of existing work, measure and record existing flow rates in chilled water, heating water and condenser water systems.

B. Procedure: Make flow meter readings. Where no flow meters are installed in existing systems, measure and record differential pressures across pumps, coils, heat exchangers, and differential temperatures across coils, heat exchangers, boilers, chillers, cooling towers, etc. In sections of existing piping systems which are to remain, or as near as practicable, use these recorded measurements to rebalance existing water systems after completion of new systems.

END OF SECTION 230593

PAGE INTENTIONALLY LEFT BLANK

SECTION 23 07 13 - DUCT INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section includes insulating the following duct services:

1. Indoor, concealed supply and outdoor air.
2. Indoor, exposed supply and outdoor air.
3. Indoor, concealed return located in unconditioned space.
4. Indoor, exposed return located in unconditioned space.
5. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
6. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
7. Outdoor, concealed supply and return.
8. Outdoor, exposed supply and return.

B. Related Sections:
   1. Section 233113 "Metal Ducts" for duct liners.

1.3 DEFINITIONS

A. Terminology: As defined in ASTM C-518, " Standard Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus"

B. Terminology: As defined in ASTM C-177, " Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus"

C. Terminology: As defined in ASTM C-553, " Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications"

D. Terminology: As defined in MIL-PRF-19565C, Type II, " Terminology: As defined in ASTM C-553, " Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications"

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Action Submittals:
1. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).
2. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
   a. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
   b. Detail insulation application at elbows, fittings, dampers, specialties and flanges for each type of insulation.
   c. Detail application of field-applied jackets.
   d. Detail application at linkages of control devices.
3. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:
   a. Sheet Form Insulation Materials: 12 inches square.
   b. Sheet Jacket Materials: 12 inches square.
   c. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.

C. Informational Submittals:
1. Qualification Data: For qualified Installer.
2. Material Test Reports: From a qualified testing agency.
3. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions

B. Installer Qualifications: Skilled mechanics

C. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E 84, by a testing agency. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

D. Sealant shall meet the applicable requirements of UL-181, 181A or 181B.

E. Duct insulation R values shall be based on insulation only and tested in accordance with ASTM C-518 or C-177.

F. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Commissioner. Use materials indicated for the completed Work.

1. Ductwork Mockups:

a. One 10-foot section each of rectangular and round straight duct.
b. One each of a 90-degree mitered round and rectangular elbow, and one each of a 90-degree radius round and rectangular elbow.
c. One rectangular branch takeoff and one round branch takeoff from a rectangular duct. One round tee fitting.
d. One rectangular and round transition fitting.
e. Four support hangers for round and rectangular ductwork.
f. Each type of damper and specialty.

2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
3. Notify Commissioner seven days in advance of dates and times when mockups will be constructed.
4. Obtain Commissioner approval of mockups before starting insulation application.
5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Commissioner specifically approves such deviations in writing.
6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
7. Demolish and remove mockups when directed.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.7 COORDINATION

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."

B. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.8 SCHEDULING

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Insulation shall comply with ASHRAE/IESNA 90.1. All supply and return air ducts and plenums shall be insulated with a minimum of R-5 insulation when located in unconditioned spaces within the building enclosure including hung ceiling spaces and with a minimum of R-8 insulation when located outside the building.

D. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

E. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

F. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

G. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type II for sheet materials.

1. Products: Subject to compliance with requirements, provide one of the following:

   a. Aeroflex USA, Inc.; Aerocel.
   b. Armacell LLC; AP Armaflex.
   c. K-Flex USA; Insul-Sheet, K-Flex Gray Duct Liner, and K-FLEX LS.
   d. Or approved equal.

2. Thermal Conductivity (k-value) at 75°F (24°C) mean temperature is 0.245 Btu x in./hr. x ft. x degree F. (0.036 W/m x K) or less. Water absorption not be more than 0.2% by volume.

H. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, with factory-applied FSK jacket.

1. Products: Subject to compliance with requirements, provide one of the following:

a. CertainTeed Corp; Soft Touch Duct Wrap.
b. Johns Manville; Microlite
c. Knauf Insulation; Friendly Feel Duct Wrap.
d. Manson Insulation Inc.; Alley Wrap.
e. Owens Corning; SOFTR All Service Duct Wrap.
f. Or approved equal.

2. Thermal Conductivity (k-value) at 75°F (24°C) mean temperature is 0.29 Btu x in./hr. x ft. x degree F. (0.043 W/m x K) or less.

I. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For duct and plenum applications, provide insulation with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide one of the following:

a. CertainTeed Corp; Commercial Board.
b. Johns Manville; 800 Series Spin-glas.
c. Knauf Insulation; Insulation Board.
d. Manson Insulation Inc; AK Board
e. Owens Corning; Fiberglas 700 Series.
f. Or approved equal.

2. Thermal Conductivity (k-value) at 75°F (24°C) mean temperature is 0.23 Btu x in./hr. x ft. x degree F. (0.033 W/m x K) or less.

2.2 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.

B. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Aeroflex USA, Inc; Aeroseal.
b. Armacell LLC; Armaflex 520 Adhesive.
c. Foster Brand, of H. B. Fuller Company; 85-75.
d. K-Flex USA; R-373 Contact Adhesive.
e. Or approved equal.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, of H. B. Fuller Company; CP-127.
b. Eagle Bridges - Marathon Industries; 225.
c. Foster Brand, of H. B. Fuller Company; 85-60/85-70.
d. Mon-Eco Industries, Inc; 22-25.
e. Or approved equal.

2. For indoor applications, adhesive shall have a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Childers Brand, of H. B. Fuller Company; CP-82.
b. Eagle Bridges - Marathon Industries; 225.
c. Foster Brand, of H. B. Fuller Company; 85-50.
d. Mon-Eco Industries, Inc.; 22-25.
e. Or approved equal.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

E. PVC Jacket Adhesive: Compatible with PVC jacket.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Dow Corning Corporation; 739, Dow Silicone.
b. Johns Manville;.Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
c. P.I.C. Plastics, Inc; Welding Adhesive.
d. Speedline Corporation; Polyco VP Adhesive.
e. Or approved equal.

2. For indoor applications, adhesive shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.3 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.

1. For indoor applications, use mastics that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below ambient services.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

   a. Foster Brand, of H. B. Fuller Company; 30-80/30-90.
   b. Vimasco Corporation; 749.
   c. Mon-Eco Industries.
   d. Or approved equal.

2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
5. Color: White.

C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below ambient services.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

   a. Childers Brand, of H. B. Fuller Company; CP-30.
   b. Eagle Bridges - Marathon Industries; 501.
   c. Foster Brand, of H. B. Fuller Company; 30-35.
   d. Mon-Eco Industries, Inc.; 55-10.
   e. Or approved equal.

2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm at 35-mil dry film thickness.
3. Service Temperature Range: 0 to 180 deg F.
4. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.
5. Color: White.

D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below ambient services.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, , the following:

   a. Childers Brand, of H. B. Fuller Company; Encacel.
   b. Eagle Bridges - Marathon Industries; 570.
   c. Foster Brand, of H. B. Fuller Company; 60-95/60-96.
   d. Or approved equal.

2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm at 30-mil dry film thickness.
3. Service Temperature Range: Minus 50 to plus 220 deg F.
4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
5. Color: White.

E. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

    a. Childers Brand, of H. B. Fuller Company; CP-10.
    b. Eagle Bridges - Marathon Industries; 550.
    c. Foster Brand, of H. B. Fuller Company; 46-50.
    d. Mon-Eco Industries, Inc.; 55-50.
    e. Or approved equal.

2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms at 0.0625-inch dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: 60 percent by volume and 66 percent by weight.
5. Color: White.

2.4 LAGGING ADHESIVES

A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.

1. For indoor applications, use lagging adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

    a. Childers Brand, of H. B. Fuller Company; CP-50 AHV2.
    b. Foster Brand, of H. B. Fuller Company; 30-36.
    c. Vimasco Corporation; 713 and 714.
    d. Or approved equal.

3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
4. Service Temperature Range: 0 to plus 180 deg F.
5. Color: White.

2.5 SEALANTS

A. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

    a. Childers Brand, of H. B. Fuller Company; CP-76.
    b. Eagle Bridges - Marathon Industries; 405.
    c. Foster Brand, of H. B. Fuller Company; 95-44.
    d. Mon-Eco Industries, Inc; 44-05.
    e. Or approved equal.

2. Materials shall be compatible with insulation materials, jackets, and substrates.

3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. ASJ Flashing Sealants, and Vinyl and PVC Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

   a. Childers Brand, of H. B. Fuller Company; CP-76.
   b. HB SEALANT
   c. DAP Butyl
   d. Or approved equal.

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: White.
6. For indoor applications, sealants shall have a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.6 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.

2.7 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.

C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

    a. Johns Manville; Zeston.
    b. P.I.C. Plastics, Inc.; FG Series.
    c. Proto Corporation; LoSmoke.
    d. Speedline Corporation; SmokeSafe.
    e. Or approved equal.

2. Adhesive: As recommended by jacket material manufacturer.
3. Color: Color-code jackets based on system. Color as selected by Commissioner.

D. Self-Adhesive Outdoor Jacket: 60-mil- thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a crosslaminated polyethylene film covered with white or stucco-embossed aluminum-foil facing.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

    a. Polyguard Products, Inc.; Alumaguard 60.
    b. Johns Manville;
    c. Venturecladd.
    d. Or approved equal.

2.8 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:
    a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0836.
    b. Compac Corporation; 104 and 105.
    c. Ideal Tape Co., Inc,;an American Biltrite Co.
    d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
    e. Or approved equal.

2. Width: 3 inches.
3. Thickness: 11.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:
   a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
   b. Compac Corporation; 110 and 111.
   c. Ideal Tape Co., Inc,;an American Biltrite Co.
   d. Venture Tape; 1525 CW NT, 1528 CW Plus, and 1528 CW /SQ.
   e. Or approved equal.

2. Width: 3 inches.
3. Thickness: 6.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:
   a. Compac Corporation; 130.
   b. Ideal Tape Co., Inc,;an American Biltrite Co.
   c. Venture Tape; 1506 CW NS.
   d. Or approved equal.

2. Width: 2 inches.
3. Thickness: 6 mils.
4. Adhesion: 64 ounces force/inch in width.
5. Elongation: 500 percent.
6. Tensile Strength: 18 lbf/inch in width.

D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:
   a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
   b. Compac Corporation; 120.
   c. Ideal Tape Co., Inc,;an American Biltrite Co.
   d. Venture Tape; 3520 CW.
   e. Or approved equal.

2. Width: 2 inches.
3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch in width.

2.9 SECUREMENTS

A. Bands:

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

   a. ITW Insulation Systems; Gerrard Strapping and Seals.
   b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.
   c. ACME Insulations.
   d. Or approved equal.

2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 316; 1/2 inch wide with wing seal or closed seal.
3. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated.

   a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

      1) AGM Industries, Inc.; CWP-1.
      2) GEMCO; CD.
      3) Hardcast, Inc.
      4) Midwest Fasteners, Inc.; CD.
      5) Nelson Stud Welding; TPA, TPC, and TPS.
      6) Or approved equal.

2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
   a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

      1) AGM Industries, Inc.; CHP-1.
      2) GEMCO; Cupped Head Weld Pin.
      3) Hard Cast, Inc.
      4) Midwest Fasteners, Inc.; Cupped Head.
      5) Nelson Stud Welding; CHP.
      6) Or approved equal.

3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:

a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

1) AGM Industries, Inc.; Tactoo Perforated Base Insul-Hangers.
2) GEMCO; Perforated Base.
3) Midwest Fasteners, Inc.; Spindle.
4) Or approved equal.

b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
c. Spindle: Stainless steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.
d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

1) GEMCO; Nylon Hangers.
2) Midwest Fasteners, Inc.; Nylon Insulation Hangers.
3) AGM Industries.
4) Or approved equal.

b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
c. Spindle: Nylon, 0.106-inch- diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

1) AGM Industries, Inc.; Tactoo Self-Adhering Insul-Hangers.
2) GEMCO; Peel & Press.
3) Hardcast, Inc.
4) Midwest Fasteners, Inc.; Self Stick.
5) Or approved equal.

b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
c. Spindle: Stainless steel, fully annealed, 0.106-inch- diameter shank, length to suit depth of insulation indicated.

d. Adhesive-backed base with a peel-off protective cover.

6. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick, stainless-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
   a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

      1) AGM Industries, Inc.; RC-150.
      2) GEMCO; R-150.
      3) Hardcast, Inc.
      4) Midwest Fasteners, Inc.; WA-150.
      5) Nelson Stud Welding; Speed Clips.
      6) Or approved equal.

   b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.

7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
   a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, the following:

      1) GEMCO.
      2) Midwest Fasteners, Inc.
      3) AGM Industries.
      4) Or approved equal.

C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.

D. Wire: 0.062-inch soft-annealed, stainless steel.
   1. C & F Wire.
   2. Simpson Strong.
   3. Southwestern Wire Fabrications Inc.
   4. Or approved equal.

2.10 CORNER ANGLES

A. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 316.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.

1. Verify that systems to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.4 GENERAL INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.

B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Keep insulation materials dry during application and finishing.

G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

H. Install insulation with least number of joints practical.

I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.

J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

K. Install insulation with factory-applied jackets as follows:

1. Draw jacket tight and smooth.
2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 4 inches o.c.

    a. For below ambient services, apply vapor-barrier mastic over staples.

4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.

L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

M. Finish installation with systems at operating conditions. Restore joint separations and cracking due to thermal movement.

N. Restore damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

3.5 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.

1. Seal penetrations with flashing sealant.

2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).
4. Seal jacket to wall flashing with flashing sealant.

C. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

D. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches (50 mm).

E. Insulation Installation at Floor Penetrations:

1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches (50 mm).

3.6 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION

A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.7 INSTALLATION OF MINERAL-FIBER INSULATION

A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

    a. On duct sides with dimensions 18 inches (450 mm) and smaller, place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.
    b. On duct sides with dimensions larger than 18 inches (450 mm), place pins 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    d. Do not overcompress insulation during installation.
    e. Impale insulation over pins and attach speed washers.

f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch (13-mm) outward-clinching staples, 1 inch (25 mm) o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

   a. Restore punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
   b. Install vapor stops for ductwork and plenums operating below 50 deg F (10 deg C) at 18-foot (5.5-m) intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches (75 mm).

5. Overlap unfaced blankets a minimum of 2 inches (50 mm) on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches (450 mm) o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- (150-mm-) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) o.c.

B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

   a. On duct sides with dimensions 18 inches (450 mm) and smaller, place pins along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.
   b. On duct sides with dimensions larger than 18 inches (450 mm), space pins 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
   c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
   d. Do not overcompress insulation during installation.

e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch (13-mm) outward-clinching staples, 1 inch (25 mm) o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

   a. Restore punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
   b. Install vapor stops for ductwork and plenums operating below 50 deg F (10 deg C) at 18-foot (5.5-m) intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches (75 mm).

5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- (150-mm-) wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches (150 mm) o.c.

3.8 FIELD-APPLIED JACKET INSTALLATION

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

   1. Draw jacket smooth and tight to surface with 2-inch (50-mm) overlap at seams and joints.
   2. Embed glass cloth between two 0.062-inch- (1.6-mm-) thick coats of lagging adhesive.
   3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where FSK jackets are indicated, install as follows:

   1. Draw jacket material smooth and tight.
   2. Install lap or joint strips with same material as jacket.
   3. Secure jacket to insulation with manufacturer's recommended adhesive.
   4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
   5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

C. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

D. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

3.9 FIRE-RATED INSULATION SYSTEM INSTALLATION

A. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.

B. Insulate duct access panels and doors to achieve same fire rating as duct.

3.10 FINISHES

A. Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Paint jacket with paint system identified below.

1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.

a. Finish Coat Material: Interior, flat, latex-emulsion size.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.

D. Do not field paint aluminum or stainless-steel jackets.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: A qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Inspect ductwork, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection shall be

limited to one location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.

D. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.12 DUCT INSULATION SCHEDULE, GENERAL

A. Plenums and Ducts Requiring Insulation:

1. Indoor, concealed supply and outdoor air.
2. Indoor, exposed supply and outdoor air.
3. Indoor, concealed return located in unconditioned space.
4. Indoor, exposed return located in unconditioned space.
5. Indoor, concealed exhaust between isolation damper and penetration of building exterior.
6. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
7. Outdoor, concealed supply and return.
8. Outdoor, exposed supply and return.

B. Items Not Insulated:

1. Fibrous-glass ducts.
2. Metal ducts with duct liner of sufficient thickness to comply with NYC energy code and ASHRAE/IESNA 90.1.
3. Factory-insulated flexible ducts.
4. Factory-insulated plenums and casings.
5. Flexible connectors.
6. Vibration-control devices.
7. Factory-insulated access panels and doors.

3.13 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. General:
1. Provide continuous unbroken vapor barrier on ducts and plenums with surface temperature below ambient.

B. Concealed, round and flat-oval, supply-air duct insulation shall be the following:
1. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

C. Concealed, round and flat-oval, return-air duct insulation shall be the following:
1. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

D. Concealed, round and flat-oval, outdoor-air duct insulation shall be the following:
1. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

E. Concealed, rectangular, supply-air duct insulation shall be the following:
1. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

F. Concealed, rectangular, outdoor-air duct insulation shall be the following:
   1. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

G. Concealed, rectangular, exhaust-air duct insulation between isolation damper and penetration of building exterior shall be the following:
   1. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

H. Concealed, supply-air plenum insulation shall be the following:
   1. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

I. Concealed, outdoor-air plenum insulation shall be the following:
   1. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

J. Concealed, exhaust-air plenum insulation shall be the following:
   1. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density.

K. Exposed, round and flat-oval, supply-air duct insulation shall be the following:
   1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density. Within 8 feet of finished floor.
   2. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density. 8 feet and above finished floor.

L. Exposed, round and flat-oval, return-air duct insulation, in non-condition space such as mechanical rooms, shall be the following:
   1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density. Within 8 feet of finished floor.
   2. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density. 8 feet and above finished floor.

M. Exposed, round and flat-oval, outdoor-air duct insulation shall be the following:
   1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density. Within 8 feet of finished floor.
   2. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density. 8 feet and above finished floor.

N. Exposed, rectangular, supply-air duct insulation shall be the following:
   1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density. Within 8 feet of finished floor.
   2. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density. 8 feet and above finished floor.

O. Exposed, rectangular, return-air duct in non-conditions space such as mechanical rooms, insulation shall be the following:
   1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density. Within 8 feet of finished floor.
   2. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density. 8 feet and above finished floor.

P. Exposed, rectangular, outdoor-air duct insulation shall be the following:

1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density. Within 8 feet of finished floor.
2. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density. 8 feet and above finished floor.

Q. Exposed, rectangular, exhaust-air duct insulation between isolation damper and penetration of building exterior shall be the following:
1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density. Within 8 feet of finished floor.
2. Mineral-Fiber Blanket: 1-1/2 thick and 0.75-lb/cu. ft. (12-kg/cu. m) nominal density. 8 feet and above finished floor.

R. Exposed, supply-air plenum insulation shall be the following:
1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.

S. Exposed, return-air plenum insulation shall be the following:
1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.

T. Exposed, outdoor-air plenum insulation shall be the following:
1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.

U. Exposed, exhaust-air plenum insulation shall be the following:
1. Mineral-Fiber Board: 2 inches (50 mm) thick and 3-lb/cu. ft. (48-kg/cu. m) nominal density.

3.14 ABOVEGROUND, OUTDOOR DUCT AND PLENUM INSULATION SCHEDULE

A. General:

1. Provide continuous unbroken vapor barrier on ducts and plenums with surface temperature below ambient.

B. Insulation materials and thicknesses are identified below. If more than one material is listed for a duct system, selection from materials listed is Contractor's option.

C. Exposed, round and flat-oval, supply-air duct insulation shall be the following:
1. Mineral-Fiber Board: 3 inche thick and 6-lb/cu. ft. nominal density.

D. Exposed, round and flat-oval, return-air duct insulation shall be the following:
1. Mineral-Fiber Board: 3 inche thick and 6-lb/cu. ft. nominal density.

E. Exposed, rectangular, supply-air duct insulation shall be the following:
1. Mineral-Fiber Board: 3 inche thick and 6-lb/cu. ft. nominal density.

F. Exposed, rectangular, return-air duct insulation shall be the following:
1. Mineral-Fiber Board: 3 inche thick and 6-lb/cu. ft. nominal density.

G. Exposed, supply-air plenum insulation shall be the following:
   1. Mineral-Fiber Board: 3 inche thick and 6-lb/cu. ft. nominal density.

H. Exposed, return-air plenum insulation shall be one of the following:
   1. Mineral-Fiber Board: 3 inche thick and 6-lb/cu. ft. nominal density.

END OF SECTION 230713

SECTION 23 08 00 - COMMISSIONING OF HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

1.2 SUMMARY

A. This section includes commissioning process requirements for HVAC&R systems, assemblies, and equipment.

B. Related Sections:

1. DDC General Conditions Section 019113 General Commissioning Requirements for MEP Systems for general commissioning process requirements.

1.3 DESCRIPTION

A. Commissioning is a systematic process of confirming that all building systems perform interactively according to the New York City's Project Requirements and the Basis of Design and continuing through construction, acceptance and the warranty period with actual verification of performance.

B. The Commissioning process does not take away from or reduce the responsibility of the Contractor to provide a finished and fully functioning product.

C. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the New York City's Project Requirement's as detailed in the Contract Documents.

1.4 DEFINITIONS

A. Refer to DDC General Conditions for definitions.

1.5 SUBMITTALS

A. The CxA will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment specifications. The CxA will notify the

Contractor, or Commissioner as requested, of items missing or areas that are not in conformance with Contract and which require resubmission.

B. The CxA will receive a copy of the final approved submittals.

C. In addition, the contractor is to provide the following:

1. Certificate of readiness

2. Certificates of completion of installation, prestart, and startup activities.

3. O&M manuals

4. Test reports

D. Refer to DDC General Conditions Sections 013300 Submittal Procedures and 019113 General Commissioning Requirements for MEP Systems for general commissioning submittal requirements.

1.6 QUALITY ASSURANCE

A. Test Equipment Calibration Requirements: The Contractor will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

A. Commissioning Kick-Off Meeting – Construction Team: The Contractor will attend a meeting of the Commissioning Team, chaired by the CxA, to review the scope of commissioning process activities and the Commissioning Plan with discussions on milestones, activities, and assignments of responsibilities. The flow and type of documents and the amount of submittal data given to the CxA will be determined. Meeting minutes will then be distributed to all parties by the CxA.

B. Commissioning Meetings: The Contractor will attend coordination meetings with the Commissioning Team, chaired by the CxA, to review progress on the Commissioning Plan, construction deficiencies, scheduling conflicts, and to discuss strategies and processes for upcoming commissioning process activities.

C. Miscellaneous Construction Meetings: The CxA attends selected planning and job-site meetings in order to remain informed on construction progress and to update parties involved in the commissioning process. This will not include 100% meeting attendance, but the CxA shall be provided with the subsequent meeting minutes for review.

D. Pre-testing Meetings: The Contractor will attend pretest meetings with the Commissioning Team, chaired by the CxA, to review startup reports, pre-test inspection results, testing procedures, testing personnel and instrumentation requirements, and manufacturers' authorized service representative services for each system, subsystem, equipment, and component to be tested.

E. Testing: The Contractor will coordinate with testing personnel and agencies for timing and access for CxA to witness test.

F. Manufacturers' Inspection and Startup Services: The Contractor will coordinate services of manufacturers' inspection and startup services.

G. Testing, Adjusting and Balancing: The Contractor will coordinate with plan and schedule for testing, adjusting and balancing for timing and access for CxA to witness process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the Contractor shall ultimately be responsible for all standard testing equipment for the HVAC&R system and controls system in Division 23. A sufficient quantity of two-way radios shall be provided by the Contractor.

B. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York's personnel upon completion of the commissioning process.

C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems. These checklists shall be provided to the Contractor for completion. The CxA shall gather and review the completeness and accuracy of these checklists via site visits.

B. Red-lined Drawings (As-Builts): Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings. The Contractor will create the as-built drawings.

C. Operation and Maintenance Data: Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems. The CxA will review the O&M literature once for conformance to project requirements. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.

D. Demonstration and Orientation: Contractor will provide demonstration and orientation as required by the specifications. A complete orientation plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any orientation. An orientation agenda for each orientation session must be submitted to the CxA one (1) week prior the orientation session.

3.2 CONTRACTOR'S RESPONSIBILITIES

A. Refer to the DDC 019113 General Commissioning Requirements for MEP systems for contractor's responsibilities.

B. The Contactor will ensure that the HVAC and controls subs attend construction phase controls coordination meetings.

C. The Contactor will ensure that the HVAC and controls subs attend testing, adjusting, and balancing review and coordination meetings.

D. Provide information requested by the CxA for final commissioning documentation.

E. Prepare preliminary schedule for mechanical system orientations and inspections, operation and maintenance manual submissions, orientation sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for City of New York. Distribute preliminary schedule to commissioning team members at the beginning of the construction phase.

F. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.

G. Provide detailed startup procedures.

H. Provide a written list of all user adjustable set-points and reset schedules with a brief discussion of the purpose of each and the range of reasonable adjustments with energy implications

I. Provide a written schedule frequency to review the various set-points and reset schedules to ensure they are current relevant and efficient values.

J. Respond to provided new deficiencies and/or responses within five (5) business days.

K. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the Contract Documents. Submit to CxA 45 days after submittal acceptance.

L. Coordinate with the CxA to provide 48-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.

M. Notify the CxA a minimum of two weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.

N. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
1. HVAC&R equipment including all fans, air handling units, ductwork, dampers, terminals, and all other equipment furnished under this Division.
2. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
3. Fire detection and smoke detection devices furnished under other divisions.

O. The equipment suppliers shall document the performance of their equipment.

P. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.

Q. Test, Adjust and Balance subcontractor, under the direction of the Contractor:
1. Attend initial commissioning coordination meeting scheduled by the CxA.
2. Submit the site-specific testing and balancing plan to the CxA and Commissioner for review and acceptance.
3. Attend the testing and balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in testing, adjusting, and balancing the HVAC&R system.
4. At the completion of the testing and balancing work, and the submittal of the final testing and balancing report, notify the HVAC&R subcontractor and the Contractor.
5. Participate in verification of the testing and balancing report, which will consist of repeating measurements contained in the testing and balancing reports. Assist in diagnostic purposes when directed.
6. Provided recommended setpoints as determined by testing, adjusting, and balancing, such as static pressure and differential pressure setpoints.

R. Contractor responsibilities to be completed by Equipment Suppliers:
1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York's personnel, to keep warranties in force.
2. Assist in equipment testing.
3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

3.3 CxA'S RESPONSIBILITIES

A. Roles and Responsibilities

1. Refer to the 019113 General Commissioning Requirements for MEP Systems for CxA responsibilities.

3.4 TESTING PREPARATION

A. Certify in writing to the CxA that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.

B. Certify in writing to the CxA that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

C. Certify in writing that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.

D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

E. Inspect and verify the position of each device and interlock identified on checklists.

F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.

G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 TESTING, ADJUSTING AND BALANCING VERIFICATION

A. Prior to performance of Testing, Adjusting, and Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.

B. Notify the CxA at least ten (10) days in advance of testing and balancing Work and provide access for the CxA to witness testing and balancing Work.

C. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.

1. The CxA will notify the Contractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
2. The Contractor will ensure that the testing and balancing subcontractor shall use the same instruments (by model and serial number) that were used when original data were collected.
3. Failure of an item includes, other than sound, a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final testing, adjusting, and balancing report. For sound pressure readings, a deviation of 3 dB shall result in rejection of final testing. Variations in background noise must be considered.
4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.6 GENERAL TESTING REQUIREMENTS

A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of HVAC&R testing shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space.

Testing shall include measuring capacities and effectiveness of operational and control functions.

C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

D. The CxA along with the Contractor, who will ensure that the HVAC&R subcontractor, testing and balancing subcontractor, and HVAC&R Instrumentation and Control subcontractor participate, shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.

E. Tests will be performed using design conditions whenever possible.

F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

G. The CxA may direct that set points be altered when simulating conditions is not practical.

H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.

I. If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.7 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 23 sections. Provide submittals, test data, inspector record, and certifications to the CxA.

B. HVAC&R Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 23 Sections "Instrumentation and Control for HVAC" and "Sequence of Operations for HVAC Controls." Assist the CxA with preparation of testing plans.

C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 23 piping Sections. HVAC&R subcontractor shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include the following:

1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.

2. Description of equipment for flushing operations.
3. Minimum flushing water velocity.
4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.

D. Refrigeration System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of chillers, cooling towers, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

E. HVAC&R Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, steam, and hydronic distribution systems; special exhaust; and other distribution systems, including HVAC&R terminal equipment and unitary equipment.

F. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

G. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. Commissioning shall be performed on equipment and systems including but not limited to the following:

1. Air Cooled Air Condensing Units
2. Exhaust Fans
3. Cabinet Unit Heaters
4. Gas Fired Unit Heaters
5. Split AC Units
6. Dedicated Outdoor Air Systems
7. Make Up Units
8. Heating Ventilation Units
9. Roof Top Units
10. Variable Frequency Drives
11. Variable Air Volume Terminal Units
12. Building Management System

3.8 DEFICIENCIES/NON-CONFORMANCE, FAILURE DUE TO MANUFACTURER DEFECT

A. Deficiencies/Non-Conformance

1. The CxA will record the results of the functional test on the test form. All deficiencies or non-conformance items shall be noted and reported to the Commissioner and the Contractor on a standardized form.
2. The Contractor shall respond to new deficiencies within five (5) business days. The response shall either indicate the issue will be corrected with anticipated date of completion indicated or the response should clearly indicate why the Contractor disputes the claim while referencing the Contract Documents in dispute or request further information to clarify the concern.
3. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA.
4. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.
5. As tests progress and a deficiency is identified, the CxA discusses the issue with the Contractor.

6. When there is no dispute on the deficiency and the Contractor accepts responsibility to correct it, the CxA documents the deficiency and the Contractor's response and intentions or corrections. The CxA and Contractor then proceed to another test or sequence. Once the Contractor corrects the deficiency, the test is rescheduled and repeated in the anticipation of correct operation or function.
7. When there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible, the CxA documents the deficiency and the Contractor's response. The deficiency is then forwarded to parties assumed to be responsible for the deficiency. Resolutions are made at the lowest management level possible. Other parties are brought into the discussion as needed. Final interpretive authority is with the Commissioner. Final acceptance authority is with the Commissioner and CxA. The CxA will then document the resolution process. Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency. The CxA then reschedules the test as stated in the section above.
1. Deficiencies that are not corrected at the time of documentation, shall be completed by the affected Contractor and photo evidence of the deficiency resolution shall be sent to both the Commissioner and the CxA.

B. Failure due to Manufacturer Defect

1. If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the CxA and the Commissioner. In such case, the Contractor shall provide the Commissioner with the following:
    i. Within one week of notification from the Contractor the manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the Commissioner within two weeks of the original notice.
    ii. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
    iii. Commissioner will determine whether a replacement of all identical units or a repair is acceptable.
    iv. Two examples of the proposed solution will be installed by the Contractor and the Contractor will be allowed to test the installations for up to one week, upon which the Commissioner will decide whether to accept the solution.
    v. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

3.9 APPROVAL

A. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA. The CxA recommends acceptance of each test to the Commissioner using a standard form.

3.10 SEASONAL TESTING

A. Seasonal Testing – During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by the Contractor, with facilities staff and the CxA witnessing. Any final adjustments to the O&M manuals and record documents due to seasonal testing will be made by the Contractor.

3.11 OPERATION AND MAINTENANCE MANUALS

A. The Operation and Maintenance Manuals shall conform to Contract requirements as stated in the DDC General Conditions Sections 017839 Contract Record Documents and 019113 General Commissioning Requirements for MEP Systems.

B. The specific content and format requirements for the standard O&M manuals are detailed in the DDC General Conditions 017839 Contract Record Documents and 019113 General Commissioning Requirements for MEP Systems. Special requirements for the controls Contractor and TAB Contractor are found in Division 23.

C. CxA Review and Approval – Prior to substantial completion, the CxA shall review the O&M manuals, documentation and record documents for systems that were commissioned to verify compliance with the Specifications. The CxA will communicate deficiencies in the manuals to the Contractor, or Commissioner, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the Commissioner. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated.

3.12 INSTRUCTION OF CITY OF NEW YORK PERSONNEL

A. The Contractor shall be responsible for instruction coordination, scheduling, and ultimately for ensuring that instruction is completed.

B. The CxA shall oversee the instruction of the City of New York's personnel for commissioned equipment and systems.

1. The CxA shall interview the City of New York's personnel to determine the special needs and areas where instruction will be most valuable. The Commissioner and CxA shall decide how rigorous the instruction should be for each piece of commissioned equipment. The CxA shall communicate the results to the Contractor who will ensure participation by the subcontractors.

2. In addition to these general requirements, the specific instruction requirements of the City of New York's personnel by the Contractor are specified in the DDC's General Conditions Section 017900 Demonstration and Owners' Pre-Acceptance Orientation.

3. The Contractor shall ensure that each subcontractor and vendor responsible for instruction will submit a written instruction plan to the Contractor for review and approval prior to instruction. The Contractor will submit one comprehensive instruction plan to the CxA and the Commissioner.

4. The plan will be reviewed by the CxA and the Commissioner. Comments pertaining to its deficiencies will be forwarded to the Contractor. The instruction plan will be rewritten until approved by the CxA and the Commissioner. The final approved instruction plan will cover the following elements:
    a. Equipment (included in instruction)
    b. Intended audience
    c. Location of instruction
    d. Objectives
    e. Subjects covered (description, duration of discussion, special methods, etc.)
    f. Duration of instruction on each subject
    g. Qualified instructor for each subject
    h. Instructor qualifications
    i. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)

5. For the primary HVAC equipment, the Contractor shall ensure that the controls subcontractor provide a discussion of the control of the equipment during the mechanical or electrical instruction conducted by each subcontractor or vendor.

6. Instruction documentation shall include the following items:
    a. Copy of the instruction plan, including schedule, syllabus, and agenda.
    b. Copy of the Owner's Project Requirements.
    c. Copy of the Basis of Design.
    d. Compiled operations manuals.
    e. Compiled maintenance manuals.
    f. Completed manufacturer instruction manuals.
    g. Red-lined drawings.

7. The CxA develops criteria for determining that the instruction was satisfactorily completed, including attending the instruction, etc. The CxA recommends approval of the instruction to the Commissioner using a standard form. The Commissioner signs the approval form/letter template.

8. At one of the instruction sessions, the CxA presents a presentation discussing the use of the blank functional test forms for re-commissioning equipment.

9. Video recording of the instruction sessions will be verified by the CxA in electrical format, at the discretion of the Commissioner.

END OF SECTION 230800

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 09 00 – INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1. Summary
   a. The contractor is responsible to provide and install all control and monitoring devices to provide a complete system. The Contractor shall provide a complete system consisting of Direct Digital Control Panels, field I/O devices, power supplies, and supportive software, to meet the written sequences of operations, as written in contract specifications. The system shall support communications to Direct Digital Control Panels, and provide operator interaction, data consolidation and global control functions via a Local Area Network (LAN) or Wide Area Network (WAN) communication.
   b. The Contractor shall install the primary communication network for the facility. Work shall include HVAC control, energy management, alarm monitoring, point trending, point reporting and maintenance management functions. Coordinate with all site low voltage systems as specified.
   c. All labor, material, equipment, and software not specifically referred to herein or on the plans, that is required to meet the functional intent of this specification, shall be provided without additional cost to the City of New York.
   d. All BMS network cabling, Ethernet switches, routers etc. shall conform to Department of Design and Construction standards.
   e. Refer to “Scope of Work” paragraph for additional information.

1.4 DEFINITIONS

A. Refer to DDC General Conditions

B. Algorithm: A software procedure for solving a recurrent mathematical or logical problem.

C. Analog: A continuously varying signal or value (temperature, current, velocity, etc.).

D. BACnet: The Building Automation and Control Network open protocol communication standard develop by ASHRAE (ASHRAE SSPC/135) and which is now an ISO and ANSI standard. BACnet can operate over multi-media including Ethernet, ARCnet and MSTP. BACnet components shall be UL listed; and shall be fully complaint with ASHRAE Standard SSPC/135 and all other applicable codes.

E. BACnet Object: A physical or virtual point with a set of associated properties such as a temperature sensor that has properties including – name, current value, maximum/minimum values, high/low alarm levels, etc.

F. BACnet Conformance: A description of the capabilities of a device for communicating information to other BACnet devices. It is usually a set of requirements to be met in order for a device to conform to BACnet standards. There are 6 class levels of conformance for standard BACnet objects and services. The higher the conformance class level, the more features that are

covered. The BACnet devices furnished under this contract shall at a minimum, be conformance class 3. Preference will be given to higher conformance class of the latest controllers at time of purchase.

G. BACnet Interoperability Building Blocks (BIBBs): A BIBB defines a small portion of BACnet functionality needed to perform a particular task. BIBBs come in pairs, A and B, which reflect the client/server nature. The "A" BIBB represents the client, i.e. the device furnishing the information. The "B" BIBB represents the server, i.e. the device furnishing the information or executing the command. For 2 devices to be interoperable the "A" BIBB and the "B" BIBB must be the same.

H. BACnet/IP: The Building Automation and Control Network open protocol communication standard using Internet Protocol (IP) complying with Annex J of the ASHRAE SSPC/135 standard.

I. Binary: A two-state system where an "ON" condition is represented by a high signal level and an "OFF" condition is represented by a low signal level.

J. Building Management System (BMS): The entire system of hardware and software specifically designed to centrally manage building HVAC and related utilities. The BMS includes the Direct Digital Control subsystem, open system ports, and open protocol bus or integrators and network routers for connection to information networks. It includes components at the Field, Automation and Management Levels.

K. Contractor: The Building Management System Contractor responsible for the installation of the Building Management System specified herein.

L. Control Process: The software required to perform a complete control loop from input signal to interlock logic, process calculation to final output signal control.

M. Component: Any individual element of the BMS furnished under this contract including hardware, software and materials.

N. Control Wiring: Includes conduit, wire and wiring devices to install a complete Control System including motor control circuits, interlocks, thermostats, PE and EP switches and like devices. Includes all wiring from controllers to all sensors and points specified herein and required to execute the sequence of operation. Does not include line voltage power wiring.

O. Dead band: A temperature range over which no heating or cooling energy is supplied, such as 23-26 degrees C, i.e. as opposed to single point changeover or overlap, or a range from setpoint over which no control action is taken.

P. Diagnostic Program: Machine executable instructions used to detect and isolate system and component malfunctions.

Q. Direct Digital Control System: The portion of the BMS that involves the connection of microprocessor-based controllers to field level sensors and actuators. The signals received from field level instrumentation are converted from analog to digital format so that the data can be

used in software logic. Control signals are determined by software logic and they are converted from digital to analog format so that the final control element can be adjusted.

R. Distributed Control: A system whereby all control processing is decentralized and independent of a central computer. The control system is built up of stand-alone controllers. A single controller failure shall not impact more than one system.

S. Furnish: Purchase and deliver to the appropriate installing contractor, complete with every appurtenance, document, commission and warranty.

T. Integration: The ability of control system components from different manufacturers connect together while providing coordinated control via real-time data exchange through a common communications data exchange protocol. Integration shall extend to the BMS controllers which shall support user interaction with all control system components. Methods of integration include industry standard protocols such as: BACnet, LonMark/LonTalk, Modbus and OLE for Process Control (OPC) or integrator interfaces between cooperating manufacturer's systems.

U. Interoperability: The ability of systems from different manufacturers and of different types to share information with each other without losing any of their independent functional capabilities and without the need for complex programming.

V. Native BACnet: This term is used to imply that BACnet devices (i.e. the BMS controllers and workstation) only communicate in BACnet protocol and do not require an intermediate gateway for protocol conversion. The BACnet devices shall be connected on a peer-to-peer network using one of the approved LAN technologies such as Ethernet, MS/TP, LonTalk or BACnet/IP.

W. Network: A system of distributed control units that are linked together on a communication highway. A network allows sharing of point information between all control units. Additionally, a network provides central monitoring and control of the entire system from any distributed control unit location. First tier (Management Level) networks shall provide "Peer-to-Peer" communications. Second tier (Automation Level) networks shall provide either "Peer-to-Peer", Master-Slave or Supervised Token Passing communications.

X. Open Protocol Bus (OPB): A pre-programmed communications integrator that allows devices from one manufacturer to communicate and interact with those of another.

Y. Operating System (OS): Software that controls the execution of computer programs and which provides scheduling, debugging, input/output controls, accounting, compilation, storage assignment, data management and related services.

Z. Open System Port (OSP): A user programmable communications port that provides the ability to develop custom communications processes to integrate other operating systems with the BMS System.

AA. Operator Interface Workstation (OIW): The OIW consists of a high-level processing personal computer and peripheral I/O devices that enable access to the PC and to the entire Management Level Network. The OIW allows an operator to command, monitor, and program the system.

BB. Peer-to-Peer Communications: Communications directly between devices that operate on the same communications level of a network, without intervention from any intermediary devices such as a host computer or server.

CC. Peripheral: Input/Output equipment used to communicate with the computer and make copies of system outputs; peripherals include VDUs, printers, hard drives, disk drives and modems, etc.

DD. Portable Operator Terminal (POT): Permits portable operator interface remotely from the Operator Interface Workstation (OIW) to facilitate network management, point-to-point node commissioning, diagnostics and general operator interface with the BMS.

EE. Programmable Device: A device that does not have a pre-established built-in application. An application creation software tool is required for an application to be created and downloaded to the device.

FF. Pick Point: A pick point is a graphical display element that allows the operator to "click" the item and automatically display the associated screen or service. Any screen may have pick points to or be linked from any other screen. Pick points shall be configured on each display screen to provide a logical user navigation system using a ladder tree hierarchy.

GG. PID Control Loop: A mathematical calculation used to evaluate a control input and determine the control output value required to maintain the input value at setpoint. The PID (Proportional, Integral, and Derivative) control loop shall have operator adjustable maximum rate of change, P and D gains and loop response time delay. The loop shall be self-integrating so that no integral constant is required and the loop shall not be subject to "Integral Windup".

HH. Provide: The term "provide" means "provide complete in place", that is, furnish, install, commission, test, warrant and ready for operation and use. Refer to the definition of "Furnish".

II. Router: A device that routes messages destined for another segment net or domain of the control network. The device controls message traffic based on node address and priority. Media converters which serve as communication links between power line, twisted pair, fiber optic, coax and RF media are sometimes referred to as Routers.

JJ. Software: Programs that are executed by a computer-based BMS beyond the physical hardware of the computer system, encompasses any programs such as operating systems (OS), application programs, operating sequences and databases. The term "Software" in this specification shall also include all firmware provided with read-only memory as part of the BMS to meet all applicable criteria detailed to meet sequence of operations.

KK. SOAP: Simple Object Access Protocol (SOAP) is a simple extensible mark-up language (XML) - based protocol that enables applications to exchange information through a WEB Service.

LL. Unitary Controller: A controller generally designed for a specific application and for a single piece of equipment. Fully programmable unitary controllers shall be provided for this project.

MM. Virtual Private Network (VPN): This is a network that uses encryption and other technologies to provide secure communications over the Internet or an Intranet.

NN. XIF: External Interface File that contains contents of the manufacturer's product documentation.

1.5 BMS SYSTEM ARCHITECTURE

A. The BMS shall connect to one of the two new Local Area Networks (LANs) using BACnet/IP Protocol. These LANs are hereafter referred to as the "Site Management Level".

B. The Site Management Level
1. Network controllers and related applications shall reside on the management level.
2. Routers shall reside on the management level.
3. Communication Control Panels (CCPs) shall reside on the management level.
4. All Management Level components shall be support by a site or local Uninterruptible Power Supply (UPS).

C. The Automation Level
1. The automation level shall comprise of Direct Digital Control Panels (Direct Digital Control Panels) and Unitary Controllers (UC). The controllers shall be in compliance with ASHRAE SSPC/135, BACnet Protocol standards latest revision.
2. Supervisory controllers shall reside on the Automation level.
3. All Automation Level components shall be support by a site or local Uninterruptible Power Supply (UPS).

D. The Field Level
1. The field level shall include all instrumentation interfaced to the automation level controllers such as temperature, humidity, level, pressure and switches, etc.
2. It shall also include the final control elements such as the control valves, damper actuators and control relays.
3. All field level cables shall Plenum-type Teflon insulated (LSF - Low Smoke and Fire) rated.

1.6 SCOPE OF WORK

A. Installation of Building Management System (BMS)
1. The Contractor shall furnish and install a complete Building Management System (BMS) for all mechanical systems and other facility systems as included in the project documents. The BMS will provide the functional features as defined in Part 1-General requirements, Part 2-Products, and Part 3- Execution of these Specifications. The Contractor shall provide a complete and operational system that will perform sequences of operations as verified by Commissioner.
2. The components furnished shall be the most recent products offered by the BMS manufacturer that meet the specifications. If there are improved models of any components that become available before the on-site commencement of installation, then

these shall be offered by the Contractor to the subcontractor at no additional cost to The City of New York. The Commissioner shall have the option to accept or decline the offer. The components offered shall have been in successful operation in at least 2 similar applications for a minimum of 12 months.

3. The Contractor shall provide all software licenses necessary for the legal operation of the BMS. Coordinate with the subcontractor.
4. The Contractor is responsible to coordinate all installation activities with the subcontractor Site Facility personnel and the Commissioner by submitting a written installation schedule outlining all proposed BMS installation activities. The schedule should include the anticipated time to install new controllers and network equipment, removal of existing equipment if applicable, installation of new monitoring devices and wiring, software programming, testing/the commissioning performed by DDC, instructing and system acceptance.
5. Commissioning of Mechanical Systems: The Contractor shall provide all labor as required to assist with the commissioning of all equipment and systems as scheduled and required by the project's Commissioning Agent.

6. In addition, the following apply:
   a. The work under this Section shall include all materials and labor to perform all work required for the installation of the BMS as specified.
   b. The drawings and Specifications are complementary to one another—meaning that what is called for on one is to be considered called for in both. Where conflicts exist between the Specifications and/or drawings, the more stringent requirement shall apply.
   c. Where work specified under other Sections of this Specification connects to equipment or systems that are listed and described in this Section, the Contractor shall provide proper connection(s) to such equipment, including trade coordination.
   d. The BMS shall control shall include but not be limited to:
      1) RTUs
      2) Split AC Units
      3) Purge Fans
      4) H&V Units
      5) Exhaust Fans
      6) CAV Boxes
      7) Make-up Air Units
      8) Solar power generation integration
      9) Networking
   e. The BMS ethernet networks shall be limited to make-up air units, their respective exhaust fans, purge fans, and the CO detection systems. Each garage will have it's own BMS ethernet network which shall facilitate communication between the controllers for that garage.
   f. All other equipment shall be considered standalone
   g. Where VFDs or motor starters are within close proximity to one another, the Contractor shall make an effort to consolidate their controls on to a single controller

B. Provide all miscellaneous low voltage field device mounting and interconnecting wiring for all Building mechanical systems.

C. Provide control power transformers/power supplies for all new equipment.

D. Provide and install proper earth ground on all BMS equipment to prevent the build-up of electromagnetic voltage potential. All BMS equipment shall be EMI immune.

E. All components of the BMS at the Management level and at the BMS Automation level, except for the unitary controllers, shall be support by the Uninterruptible Power Supply (UPS).

F. Interface/integrate with third-party equipment as defined and specified.

G. Provide hardwire interlocks for all systems requiring interlock as noted (Fire Alarm System, Mechanical, etc.).

H. Provide communication network amplification devices as required whenever device quantity and/or network wiring standard limitations length are exceeded.

I. Provide the following support for all components furnished under this contract:
   1. Submittals, samples and record documentation, refer to DDC General Conditions.
   2. Comprehensive commissioning and testing services.
   3. Detailed theoretical and practical instructing services for the BMS Supervisors and Operators.
   4. BMS equipment coordination with other site Specialists (Fire Alarm, etc.).
   5. Comprehensive and complete interoperability documentation and method statement for all third-party systems.
   6. Comprehensive PICS documentation regarding the BACnet Protocol object ID, component IP addresses, databases for all system database points.

1.7 COORDINATION WITH OTHER TRADES

A. Contractors Employees
   1. It will be the duty of this Contractor to work in cooperation with Commissioner, rendering assistance and arranging his or her work so that the entire project will be delivered in the best possible condition and in the shortest time. The Contractor will coordinate with other Trade Contractors regarding the location and size of pipes, equipment, fixtures, conduit, ducts, openings, switches, outlets, structural, architectural features and so forth, in order to eliminate any delays in the progress of the job.
   2. Any task related to the BMS turnkey installation that is not clearly identified in this document as being the responsibility of another trade shall be the responsibility of the Contractor.

B. Coordination with Commissioner
   1. The Contractor shall cooperate with Commissioner when performing work on this project as necessary to achieve a complete and neat installation. The Contractor shall also consult

the drawings and specifications of existing on-site documentation, if applicable to further determine the nature and extent of BMS work.

1.8 BMS EXPANSION

A. Network architecture shall allow unlimited expandability by the addition of new sub networks and associated routers, gateways and controllers, etc.

B. Each BMS as installed shall be capable to be expandable, at minimum to incorporate the following in addition to the above:
   1. A minimum of 200 percent additional hardware (field) points with the addition of CCP, Direct Digital Control Panels and UC.
   2. A minimum of 2 additional communication interfaces to other low voltage building systems to those integrated under this contract.

C. Subsequent to the potential expansion cited in "B" above, the BMS performance shall not be degraded in any manner and shall meet all performance criteria detailed in these specifications.

1.9 SUBMITTAL PROCEDURES

A. Refer to the Department of Design and Construction General Conditions for all submittals.

B. Product Data: Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.
   1. Each control device labeled with setting or adjustable range of control.

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Shop drawings shall be CAD generated, minimum 11 X 17 inches. Drawings shall include diagrams, mounting instructions, installation procedures, equipment details and software descriptions for all aspects of the system to be installed.
   2. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.
   3. Wiring Diagrams: Power, signal, and control wiring. Differentiate between manufacturer-installed and field-installed wiring.
   4. Details of control panel faces, including controls, instruments, and labeling.
   5. Submit shop drawings of all control field panels for review before fabrication.
   6. Written description of sequence of operation.
   7. Schedule of dampers including size, leakage, construction data, and flow characteristics.
   8. Schedule of valves including leakage, construction data, and flow characteristics. Submit valve calculations for each valve for Commissioner's approval.
   9. Trunk cable schematic showing programmable control unit locations and trunk data conductors. Listing of connected data points, including connected control unit and input device.

10. System configuration showing peripheral devices, batteries, power supplies, diagrams, modems, and interconnections.
11. Provide Table of Contents for Devices' data Sheets.

D. Samples: For each color required, of each type of thermostat cover.

E. Software and Firmware Operational Documentation: Include the following:
1. Software operating and upgrade manuals.
2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
3. Device address list.
4. Printout of software application.
5. Software license required by and installed for BMS control systems.

F. Software Upgrade Kit: For The City of New York to use in modifying software to suit future monitoring and control revisions.

G. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.

H. Maintenance Data: For systems to include in maintenance manuals as specified. Include the following:
1. Maintenance instructions for each type of control device.
2. Interconnection wiring diagrams with identified and numbered system components and devices.
3. Keyboard illustrations and step-by-step procedures indexed for each operator function.
4. Inspection period, cleaning methods, cleaning materials recommended, and calibration tolerances.
5. Calibration records and list of set points.

I. Qualification Data:
1. General: Project Record Documents: Record actual locations of control components, including control units, thermostats, and sensors. Revise Shop Drawings to reflect actual installation and operating sequences.

J. Contract Closeout Submittals: Refer to DDC General Conditions. All manuals shall be 100 percent custom written for this project. Closeout documents will include all asbuilt software and hardware revision documentation, including a step-by-step, `easy to read' decision tree diagram, which would lead facility operating personnel to specific manual sections for operating procedures, maintenance procedures, and diagnostic/trouble-shooting procedures. All manuals will be subject to the approval of Commissioner prior to the warranty period, and shall provide as a minimum:
1. Project Record Documents for:
   a. Electronic As-Built Drawings in AutoCAD Format.
   b. As-Built Riser Diagram.

c. Final software database (electronic). Includes PICS documentation regarding the BACnet Protocol object ID, component IP addresses, databases for all system database points.
d. Complete program listing with section and line by line comments.
e. Color coding, labeling, and other identification for point to point wiring.

2. Operation and Maintenance Documentation for:
   a. Operation and maintenance manuals for each system component.
   b. List of recommended system spare parts.
3. Test Data for:
   a. All final system field test data to of temperature, humidity, air flow measurement, room differential pressure, etc. shall be provided in a standalone document to The City of New York.
4. Warranty Documentation for:
   a. Materials, manufactured units, equipment and components.
   b. Software.
   c. Auxiliary system equipment.

1.10 WARRANTY AND SERVICES DURING THE WARRANTY PERIOD

A. Contractor's Guarantee :
   1. The Control System shall be free from defects in material and workmanship under normal use and service. Warranty shall begin after the substantial completion of the installation. If within one year from the date of substantial completion any of the equipment herein described is defective in operation, workmanship or materials, it will be replaced, restored or adjusted at the option of the Contractor free of charge. The warranty period for all components of the BMS and their installation shall be 1 year following the date of substantial completion of the project.

B. Any material furnished by the Contractor which is defective or fails during normal operation of the system, shall be remedied (replaced or restored) immediately by the Contractor at no additional cost to The City of New York, during the period prior to the issue of the certificate of substantial completion, and during the warranty period.

C. Restored work shall only be undertaken at times approved by the Commissioner.

D. Respond and be on site within 4 hours of the Commissioner placing a system trouble call for items of an immediate nature (e.g. failed component, non-functioning controller, etc.).

E. Response to warranty calls made by the Commissioner shall be within 24 hours for items not requiring immediate attention.

F. Work to troubleshoot and identify the cause of the BMS system or component failure shall begin immediately and shall continue until restored to the satisfaction of the Commissioner

G. Any software upgrades and new software programs that become standard product offerings from the Contractor and/or BMS equipment vendors during the Warranty Period shall be brought to the attention of the Commissioner together with the cost and, if the Commissioner

wishes, he shall purchase the software. If at any time during the Warranty Period, software patches that correct software errors becomes available, the Commissioner shall be notified immediately, and they shall be made available to The City of New York at no additional cost.

1.11 CODES, PERMITS AND APPROVAL

A. All work shall conform to the following Codes and Standards, where applicable:
1. NYC Electrical Code.
2. National Fire Protection Association (NFPA) Standards, as specified.
3. National Electrical Code (NEC)
4. Underwriters Laboratories (UL) listing and labels, as specified.
5. American National Standards Institute (ANSI).
6. National Electric Manufacturers' Association (NEMA).
7. Building Automation and Control Network (BACnet) open protocol communication standard develop by ASHRAE (ASHRAE SSPC/135).
8. American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE).
9. American Society of Mechanical Engineers (ASME).
10. Air Movement and Control Association (AMCA).
11. Institute of Electrical and Electronic Engineers (IEEE).
12. American Standard Code for Information Interchange (ASCII).
13. Electronics Industries Association (EIA).
14. Occupational Safety and Health Administration (OSHA).
15. American Society for Testing and Materials (ASTM).
16. NYC Energy Code.
17. NYC Building Code.
18. ANSI/TIA/EIA-862, Building Automation Systems Cabling Standards for Commercial Building.
19. NFPA 92A and 92B/UL 864/UUKL Smoke Purge Control Equipment.

B. Obtain all required permits and inspection certificates. All permits and certificates shall be made available to The City of New York.

C. All electrical equipment, devices and components and their installation shall comply with the latest edition of the IEEE Wiring and all associated addenda.

D. Interior enclosures shall be, at minimum, NEMA I and exterior enclosures shall be weatherproof NEMA IV unless specifically noted otherwise within these documents.

E. The Contractor shall only offer equipment that meets UL 916 requirements and all electrical components shall be UL listed and shall carry the UL label.

F. The BMS shall be listed and manufactured to ISO 9001 and ISO 9002 standards.

G. Equipment, devices and materials shall be immune against Electro-Magnetic interferences and shall conform to all performance requirements of' the specifications when exposed to the following interferences:

1. Project lighting, telephone and elevator equipment.
2. AM signals as generated from transmitters.
3. VHF and UHF signals as generated by external or internal portable or fixed transmitters.
4. Electrical noise on the building power system, both spurious and harmonies.
5. The installations shall not radiate signals that cause interference that hinder the correct operation of the Commissioner's on-site equipment.
6. The BMS and all individual electrical equipment, devices and components shall comply with the requirements of the Federal Communication Commission (FCC) rules and regulations Part 15, sub part J with respect to the radiation and conduction of radio frequency interference.

1.12 SCHEDULE

A. Complete site requirements of the BMS contract in accordance with the project program and prior to the scheduled Substantial Completion date for each phase.

B. Attend project meetings as requested by the Contractor.

C. Provide to the Contractor a schedule indicating the sequence of work, durations of individual tasks, delivery dates for all material, devices and equipment and detail any interface that must be coordinated with any other Specialists.

D. Provide written status reports at required intervals in an electronic format acceptable to the Commissioner. An updated schedule of work shall be included in each status report.

E. Comply with, the Project Construction Schedule. Provide additional staffing or as required to comply with the Project Schedule so as not to interfere with other on-site Specialists in their effort to comply with the Overall Project Schedule. Confirm, prior to tender submittal that all equipment, devices, material and services proposed are available and will be delivered accordingly to comply with the Overall Project Schedule.

F. Provide written Request 'For Information (RFI) notices to the Commissioner when specific information or clarification of the specifications is required. Request For Information notices shall be provided at least two (2) weeks prior to the need for the information to the Commissioner.

1.13 HEALTH AND SAFETY

A. Work shall comply with the requirements of Occupational Safety and Health Administration (OSHA), the Health and Safety requirements for the project and with all of the daily Health and Safety instructions given by the Contractor.

1.14 DELIVERY, STORAGE AND HANDLING

A. Provide factory-shipping cartons for each piece of equipment and control device. Maintain cartons through shipping, storage, and handling as required to prevent equipment damage.

B. Deliver, store, protect, and handle products to site under provisions of the contract Documents. Coordinate all site delivers with the Commissioner.

C. Accept products on-site and verify any damage equipment. Damage equipment shall be re-ordered/replaced immediately without cost to The City of New York.

D. Protect products from construction operations, dust, and debris, by storing materials inside, protected from weather in a conditioned space.

1.15 QUALITY ASSURANCE

A. Refer to the Department of Design and Construction General Conditions.

B. General
1. The Building Management System (BMS) herein specified shall be fully integrated and installed as a complete package by the Building Management System subcontractor. The System shall include all wiring, piping, installation supervision, calibration, adjustments, and checkout necessary for a complete and fully operational system.
2. The Building Management System subcontractor shall be a factory owned branch office that is regularly engaged in the engineering, programming, installation and service of Building Management Systems of similar size and complexity.
3. The Contractor shall be responsible for all work fitting into place in a satisfactory and neat workmanlike manner acceptable to the Commissioner.

C. Products
1. The Building Management System architecture shall consist of the products of a manufacturer regularly engaged in the production of Building Management Systems, and shall be the manufacturer's latest standard of design. Direct Digital Control Panels, CCP and UC system components shall be latest (current) production products.
2. All other equipment shall be the products of the BMS manufacturers or of an approved manufacturer regularly engaged in production of specialized Building Management System materials or equipment.

D. ISO-9001
1. The manufacturer of the Building Management System shall provide documentation supporting compliance with ISO-9001 (Model of Quality Assurance in Design/Development, Production, Installation, and Servicing). Product Literature provided by the BMS manufacturer shall contain the ISO-9001 Certification Mark from the applicable registrar. Manufacturers delivering products that do not comply with the ISO-9001 certification requirement shall provide the following information to assure that quality systems are in place and are equivalent to the ISO-9001 standard:
   a. Marketing Specification Standards

b. Design File Standards
c. Manufacturing Test Standards
d. Calibration Standards
e. Quality System Standards
f. Quality System Procedures
g. Documented management commitment that all employees participate in quality programs
h. Instructing Procedures
i. Methods by which corrective actions are taken for problems identified within the factory process.

E. Quality Assurance Program
1. The Contractor shall implement a Quality Assurance Program. At minimum, this program shall consist of the following requirements:
a. The Contractor shall assign a single individual to serve as the Quality Assurance Manager, who is to be responsible for the management of the program.
b. The Quality Assurance Manager shall provide or maintain:
1) Documentation of instructions for employees—including office, field, and subcontractors—on the Quality Assurance Program.
2) Written verification that each worker on the project has read the Specification sections outlining the project requirements for his or her area of specialty. The initial project team shall be documented in the first project submittal.
3) A detailed audit trail for all Quality Assurance issues, including: problem ID number, date of original problem report, name of individual initiating report, and individual assigned responsibility for resolving the problem.
c. Each individual team member shall be responsible for identifying and reporting Quality Assurance problems and for assisting, as requested by the Quality Assurance Manager, in the resolution thereof.

F. Governing Code Compliance
1. The Contractor shall comply with NYC Building Code and Electrical Code.

G. FCC Regulation
1. All electronic equipment shall conform to the requirements of FCC Regulation, Part 15, Section 15, Governing Radio Frequency Electromagnetic Interference and Subpart J, governing Class A Computing Devices and be so labeled.

PART 2 - PRODUCTS

2.1 APPROVED SYSTEM MANUFACTURERS

A. General: Subject to compliance with requirements, provide products by the manufacturer specified or approved equal:
1. Schneider Electric
2. Johnson Controls Inc. (JCI)

3. Alerton Controls
4. Approved Equal

2.2 EQUIPMENT AND MATERIAL – GENERAL

A. All equipment and materials shall be new and without any defect.

B. Asbestos and PCB Certification: After completion of installation, but prior to Substantial Completion, the Contractor shall certify in writing that products and materials installed, and processes used, do not contain asbestos or polychlorinated biphenyls (PCB).

2.3 PERFORMANCE CERTIFICATION

A. The Contractor shall certify in writing with the tender submittal that all components proposed for this project comply with all of the following requirements:
   1. Complete and thorough testing has proven that performance shall not be affected when the building electrical distribution system experiences disturbances of the type and magnitude normally encountered in building of this nature.
   2. An independent testing laboratory has verified that the VAV terminal unit unitary controller meets the performance requirements detailed in these specifications. If so required by the Commissioner, the testing laboratory shall test a project VAV terminal unit complete with the BMS unitary controller and the Contractor shall demonstrate that the VAV terminal unit UC can meet all of the requirements for monitoring and control accuracy and can undertake all of the sequences of operation associated with the VAV as detailed in these specifications. The independent testing laboratory test report is to be submitted with the shop drawings.
   3. Provide power line disturbance tests involving the cycling of mains voltage that will show that all BMS components operate satisfactorily when voltage drops to 75% or less of the nominal mains voltage and normal operation resumed when the voltage returned to less than 85% of the normal mains voltage. Following these brownout conditions, BMS components shall be free of any stress and/or damage, and shall operated normally with no data at the PC, CCP, Direct Digital Control Panels and/or UC lost or corrupted.

B. The Contractor shall certify in writing with the tender submittal that all components are free of date related problems.

2.4 AMBIENT CONDITIONS

A. Provide equipment, devices and materials for interior and exterior applications that shall be capable of withstanding and operating satisfactory in, at a minimum, at the following ambient conditions:
   1. BMS central hardware (processors, console, and peripherals): 50 deg F to 100 deg F 10 percent to 90 percent RH.
   2. Indoor hardware: 32 deg F to 120 deg F, 10 percent to 90 percent RH.
   3. Outdoor hardware: -30 deg F to 150 deg F, 0 percent to 100 percent RH.

2.5 REQUIRED PARTS

A. Submit required parts for each different item of equipment furnished. Data to include a complete list of each supplier and product by part number, a list of parts and supplies that are either normally furnished at extra cost with the purchase of the equipment, or specified hereinafter as "Required Materials" to be furnished as part of the contract.

B. Submit a list of additional items recommended by the manufacturer to assure efficient operation for a period of 360 days at the particular installation. The foregoing shall not relieve the Contractor of any responsibilities during the BMS Warranty Period.

2.6 REQUIRED MATERIALS

A. Provide special hardware and software tools required for maintenance.

2.7 LABELING

A. Provide labeling for all DIRECT DIGITAL controllers, gateways, routers, hubs, field level components, panels and enclosures, etc., Labeling shall meet, at minimum, the following requirements:
1. Plastic laminated label that shall be affixed to the panel or enclosure with rivets or permanent adhesive.
2. Lettering 6mm (025 inch) high that sharply contracts the background color.
3. Consistent throughout the project.
4. Indicated on the record (close-out) documentation.

B. Provide labeling of all cabling and containment. Labeling shall meet, at minimum, the following requirements:
1. Identified with permanent tag or self-adhesive label within the panel.
2. Cross referenced on the associated record (close-out) documentation and laminated record drawing within the panel enclosure.
3. The Contractor shall provide labeling for all cable furnished and installed by the Contractor.

2.8 PANEL AND ENCLOSURES

A. Install equipment in a secure, lockable enclosure, suitable for mounting peripheral equipment and data network equipment. Enclosure will be free-standing, with a minimum height of 4.5 foot from finish floor.

B. Direct Digital Control panels used for as a "Master" panel shall be installed separately from its mirrored "Redundant" panel.

C. Provide panels and enclosures for all components of the BMS except where it is specifically identified within these contract documents that the enclosure shall be furnished by another trade. Panels and enclosures shall meet, at minimum, the following requirements:
   1. Painted steel panels with locking door. All panels shall be lockable with the same key.
   2. Ventilated to prevent excessive heat buildup, where required.
   3. Field cabling shall be terminated on a terminal strip. Provide cable support.
   4. Internal components shall be installed to allow easy access for diagnostics, maintenance, removal or replacement.
   5. Panel or enclosure shall be suitable rated for the environment for which it is to be installed, Interior enclosures shall he, at minimum, NEMA I and exterior enclosures shall be weatherproof NEMA IV unless specifically noted otherwise within these documents.
   6. Panel or enclosures shall have 20% spare space for future addition of BMS controllers.

D. Panels and enclosures shall only be located as indicate on the drawings and at Commissioner approved locations.

E. The Contractor shall coordinate with the trade furnishing the motor starters and variable frequency drives to provide an interface terminal strip (for Contractor use) in a dedicated external enclosure or may be a compartment within the motor starter enclosure. Refer to the contract documents for the trade furnishing the motor starter and the variable frequency drive controllers for the details of the enclosure. Direct Digital controllers shall not be located in the MCC panels.

2.9 CONDUIT AND FITTING

A. The Contractor shall provide conduit and fittings as necessary for a fully functioning system as detailed in these specifications.

B. Flexible metallic rustproof conduit shall be provided for the final one (1) meter before connection from a non-vibrating location to equipment subject to vibration or movement. Flexible metallic conduit shall be provided for between the last 300mm and the last l000mm of connection to field instrumentation, relays and final control elements as necessary to facilitate the removal of devices without the disconnection or the bending of the non-flexible conduit. Watertight conduit to be provided where appropriate.

C. Conduit shall be securely mounted in accordance with IEEE Regulations and shall be concealed in all, areas to which the public have access.

D. Conduit shall run parallel or perpendicular to the building lines and shall be installed in a workmanlike manner. Avoid obstructions and crossovers where possible.

E. Conduit shall be installed such that any condensation in the conduit cannot run into BMS equipment. Where necessary conduit shall enter enclosures from the bottom or shall be sloped up to the enclosure.

F. Junction and pull boxes shall be securely fastened to the conduit and be accessible where required by NYC Electrical Code or where necessary to facilitate the pulling of cables.

G. Coordinate installation of conduit with building structure and other trades.

H. Containment shall be provided, for all BMS cable except where specifically noted otherwise.

I. Signal wiring and cables shall be installed in minimum sized raceways and/or electric metallic tubing (EMT) where required by The City of New York.

J. Following shall be minimum approved raceways for their specific application:
   1. EMT: machine rooms, electrical closets, building exterior and in all locations where cables are subject to mechanical damage.
   2. Plenum Rated Cable (Without Conduit): from field equipment/sensors above accessible ceilings. Locations where cable is protected by building construction.

2.10 CABLE – COPPER

A. Provide all cables for the BMS Automation and Field levels, including all cables to interconnect the BMS Management level devices and the BMS Management level Network as detailed in these specifications. Cables shall meet, at minimum, the following requirements:
   1. Minimum 98% conductivity copper.
   2. Stranded conductors.
   3. Proper impedance for the application as recommended by the BMS component manufacturer.
   4. Monitoring and control cable shall be screen #18 AWG (1.02362 mm) or larger dependent on the application.
   5. LAN cable shall be screened #24 AWG (0.51054 mm) CAT 6 or twisted pair as identified elsewhere in these documents.
   6. All monitoring and control cable shall be screened with the screen earthed at the CCP, Direct Digital Control Panels, UC or control panel end only so as to avoid earth loops.
   7. Continuous runs without splices.
   8. Identification of each end at the termination point. Field identification of all BMS cables shall correspond to the record drawings.
   9. All cabling installed without conduit shall be suitable rated for the application and the cable jacket shall be clearly marked. Use unique color schemes for easy identification and prevention of inadvertent splicing of cabling. If there no conflict with existing color schemes, the color for exposed cable shall be purple.

B. Power wiring shall be sized in accordance with the NYC Electrical Code and shall be a minimum of # 14 AWG (1.62814 mm) stranded copper. The contractor shall provide all power cable and containment and shall terminate the power cable at a power outlet close to the BMS component to be powered. The contractor shall terminate the power cable at the MCC/distribution board as applicable. The Contractor shall coordinate all BMS equipment power requirements at all BMS equipment locations with the contractor.

C. All field level cables shall Plenum-type Teflon insulated (LSF - Low Smoke and Fire) rated.

D. Terminations shall be mechanically and electrically secure. Twist type wire nuts shall not be acceptable. Insulated tinned copper lugs shall be provided.

E. Cable within panels or enclosures shall be installed in wiring guides.

F. LSF cables not required to be in conduit (refer to requirements for conduit above) shall be routed parallel and perpendicular with the building column lines. Provide cable rings and supports to support the cabling. Supports shall be positioned in accordance with NEC.

G. All wiring terminations within field panels shall be terminated at terminal stripes and shall be marked by identification tags on each end of the cable at each terminal strip. All termination strips shall be labeled.

H. All LSF wiring installation above accessible ceilings shall be such that there will be no interference with the installation of lighting fixtures, fire protection devices, air distribution devices or any other devices.

I. Cable run in vertically shall have means of cable support, at minimum, every 3 m.

J. Cables shall comply with all NYC electrical codes including, the IEEE wiring regulations latest edition and the contract documents. Where there is a conflict between any codes, standards, ordinances, regulations or The City of New York, the most stringent requirements shall apply.

2.11 UNINTERRUPTIBLE POWER SUPPLY (UPS)

A. The Contractor shall provide uninterruptible power for all BMS components, such as CCP, Direct Digital Control Panels, routers, switches, gateways, field instrumentation, final control elements etc., as necessary to ensure continuous monitoring and control by the BMS and the associated satellite OIW of all equipment that operates on emergency power.

2.12 SYSTEM SOFTWARE

A. General
   1. All necessary software to form a complete operating system as described in this specification shall be provided.
   2. The software programs specified in this section shall be provided as an integral part of the Direct Digital controller and shall not be dependent upon any higher level computer for execution.

B. Control Software Description:
   1. Pre-Tested Control Algorithms: The Direct Digital controllers shall have the ability to perform the following pre-tested control algorithms:
      a. Two Position Control
      b. Proportional Control
      c. Proportional plus Integral Control
      d. Proportional, Integral, plus Derivative Control
      e. Automatic Control Loop Tuning
   2. Equipment Cycling Protection: Control software shall include a provision for limiting the number of times each piece of equipment may be cycled within any one-hour period.

3. Heavy Equipment Delays: The system shall provide protection against excessive demand situations during start-up periods by automatically introducing time delays between successive start commands to heavy electrical loads.
4. Power fail Motor Restart: Upon the resumption of normal power, the Direct Digital Control panel shall analyze the status of all controlled equipment, compare it with normal occupancy scheduling, and turn equipment on or off as necessary to resume normal operation. (i.e. - Restart of equipment following the return to normal condition after equipment shutdown by the Fire Alarm System).
5. Sequential Start: Provide sequential start for all equipment. After a power failure, and after restoration of normal power, equipment shall start per a predetermined sequence as programmed via the BMS.

C. Energy Management Applications: Direct Digital controllers shall have the ability to perform any or all of the following energy management routines:
1. Time-of-Day Scheduling.
2. Calendar Based Scheduling.
3. Holiday Scheduling.
4. Temporary Schedule Overrides.
5. Optimal Start/Optimal Stop.
6. Night Setback Control.
7. Enthalpy Switch Over (Economizer).
8. Peak Demand Limiting.
9. Energy Usage & Demand.
10. Fan Speed/CFM Control.
11. Heating/Cooling Interlock.
12. Supply Air Reset.
13. Chilled Water Reset.
14. Condenser Water Reset.
15. Hot Water Reset.
16. Chiller Sequencing.

D. All programs shall be executed automatically without the need for operator intervention, and shall be flexible enough to allow operator customization. Programs shall be applied to building equipment as described in the Execution portion of this specification.

E. Custom Process Programming Capability: Direct Digital controllers shall be able to execute custom, job-specific processes defined by the operator, to automatically perform calculations and special control routines.
1. Process Inputs and Variables: It shall be possible to use any of the following in a custom process:
   a. Any system-measured point data or status.
   b. Any calculated data.
   c. Any results from other processes.
   d. User-Defined Constants.
   e. Arithmetic functions (+,-,*, /, square root, exponential, etc.).
   f. Boolean logic operators (and, or, exclusive or, etc.).
   g. On-delay/Off-delay/One-shot timers.

2. Process Triggers: Custom processes may be triggered based on any combination of the following:
   a. Time interval.
   b. Time of day.
   c. Date.
   d. Other processes.
   e. Time programming.
   f. Events (e.g., point alarms).
   g. Restart of equipment following the return to normal condition after equipment shutdown by the Fire Alarm System (FAS).

F. Dynamic Data Access: A single process shall be able to incorporate measured or calculated data from any and all other Direct Digital controllers on the local area network. In addition, a single process shall be able to issue commands to points in any and all other Direct Digital Control panels on the local area network.

G. Advisory/Message Generation: Processes shall be able to generate operator messages and advisories to operator I/O devices. A process shall be able to directly send a message to a specified device, buffer the information in a follow-up file, or cause the execution of a dial-up connection to a remote device such as a printer.

H. Custom Process Documentation: The custom control programming feature shall be self-documenting. All interrelationships defined by this feature shall be documented via graphical flowcharts and English language descriptors.

I. Runtime Totalization: Standalone Direct Digital Control panels shall automatically accumulate and store runtime hours for binary input and output points as specified in the Execution portion of this specification.
   1. The Totalization routine shall have a sampling resolution of one minute or less.
   2. The user shall have the ability to define a warning limit for Runtime Totalization. Unique, user-specified messages shall be generated when the limit is reached.

J. Analog/Pulse Totalization: Standalone DIRECT DIGITAL CONTROL's shall automatically sample, calculate and store consumption totals on a daily, weekly, or monthly basis for user-selected analog and binary pulse input-type points.
   1. Totalization shall provide calculation and storage of accumulations of up to 99,999.9 units (e.g. KWH, gallons, KBTU, tons. etc.).
   2. The Totalization routine shall have a sampling resolution of one minute or less.
   3. The user shall have the ability to define a warning limit. Unique, user-specified messages shall be generated when the limit is reached.

K. Event Totalization: Standalone Direct Digital Control panels shall have the ability to count events such as the number of times a pump or fan system is cycled on and off. Event totalization shall be performed on a daily, weekly, or monthly basis.
   1. The Event Totalization feature shall be able to store the records associated with a minimum of 9,999,999 events before reset.

2. The user shall have the ability to define a warning limit. Unique, user-specified messages shall be generated when the limit is reached.

L. Integration
1. Open, Interoperable, Integrated Architectures
   a. The intent of this specification is to provide a peer-to-peer networked, stand-alone, distributed control system utilizing ANSI/ASHRAE SSPC/135 (BACnet Protocol) communication protocol in an open, interoperable system.
   b. In addition, adherence to BACnet Protocol industry standard ANSI / ASHRAE SSPC/135 to assure interoperability between all system components is required. For each BACnet Protocol device, the device supplier must provide a PICS document showing the installed device's compliance level. Minimum compliance is Level 3; with the ability to support data read and write functionality. Physical connection of BACnet Protocol devices shall be via Ethernet.
   c. All components and controllers supplied under this contract shall be true "peer-to-peer" communicating devices. Components or controllers requiring "polling" by a host to pass data shall not be acceptable.
   d. The supplied system must incorporate the ability to access all data using Java enabled browsers without requiring proprietary operator interface and configuration programs. An Open Database Connectivity (ODBC), Open Process Control (OPC) DX and Structured Query Language (SQL) compliant server database is required for all system database parameter storage. This data shall reside on a supplier-installed server for all database access. Systems requiring proprietary database and user interface programs shall not be acceptable.
   e. Protocols: The following standard control protocols shall be provided for Programmable Logic Controller (PLC) and Direct Digital Control platforms for control and data acquisition:
      1) ModBus TCP
      2) ModBus RTU
      3) BACnet MS/TP
      4) BACnet/IP
   f. A network topology is required to assure reasonable system response times and to manage the flow and sharing of data without unduly burdening the customer's internal Intranet network.
   g. Maximum acceptable response time from any alarm occurrence (at the point of origin) to the point of annunciation shall not exceed 5 seconds for network connected user interfaces.
   h. Maximum acceptable response time from any alarm occurrence (at the point of origin) to the point of annunciation shall not exceed 60 seconds for remote or dial-up connected user interfaces.
2. Third Party Communication Software
   a. Provide direct Protocol Integration software to allow bi-directional data communications between the BMS system and 3rd party manufacturers' control panels. The BMS shall receive, react to, and return information from multiple building systems, the chillers, boilers, variable frequency drives, power monitoring system, fire alarm, access control, lighting systems, etc.

b. All data required by the application shall be mapped into the Network Controller's database, and shall be transparent to the operator.
c. Point inputs and outputs from the third-party controllers shall have real-time interoperability with BMS software features such as: Control Software, Energy Management, Custom Process Programming, Alarm Management, Historical Data and Trend Analysis, Totalization, and Dial-Up and Local Area Network Communications.
d. The Building Management System shall provide any combination of third-party controllers on a single network. A minimum of 100 third-party controllers shall be supported on a single network. Integration shall be via RS-232, RS-485 or Modbus technologies.
e. The system operator shall have the ability to verify, and diagnose communication messages and point information between third-party controllers and the BMS.

2.13 BMS CONTROLLERS: GENERAL

A. There shall be 3 types of BMS control panels:
1. Communications Control Panels (CCP).
2. Direct Digital Control Panels (Direct Digital Control Panels).
3. Unitary Controllers (UC).

B. All BACnet Protocol controllers shall be based on native BACnet Protocol and shall support all applicable BIBBs from the data sharing, alarm event, schedule, trend and device manager groups. Standard BACnet Protocol object types supported by the controllers shall include:
1. Binary input and output and value.
2. Analog input, output and value.
3. Multi-state input and output.
4. Loop calendar, notification class, command, file, program, schedule, group, event enrollment and device.
5. Proprietary object types shall not be used unless specifically approved by the Commissioner.

C. All Controllers shall have a minimum of 10-bit Input /Output resolution.

D. Following a loss of power the PC, CCP, Direct Digital Controland UC shall reboot in an orderly fashion and attain a normal operating status within 2 minutes of the return of power. That shall be accomplished without operator intervention.

2.14 COMMUNICATION CONTROL PANELS (CCP)

A. The Communication Control Panels shall be programmable controllers on the BMS primary LAN and shall undertake two roles:
1. Gateway interface to third-party controllers, if the data communicated from the third party system cannot be provided in the form of BACnet Protocol Objects.

B. The CCP shall incorporate software as necessary to provide communications on the network including Network interface Cards if necessary. Additionally, if the CCP acts as a gateway, then the CCP shall incorporate all software as necessary to perform this function including any change of protocol between the networks. The Contractor shall provide all third-party controller gateways and complete software/hardware documentation.

C. Communication Control Panels shall also meet the following requirements:
1. Provide integral network communication connections.
2. CCP shall be totally independent of any other LAN/BMS Management Level Network nodes for their operating functions.
3. CCP failure shall not place any BMS component or any component controlled by the BMS in a situation that may cause damage to equipment or harm or discomfort to building occupants and operations staff. The failure of a CCP shall not affect the operation of any other network node.
4. The failure of any CCP shall be annunciated as a critical alarm at the OIW.
5. Cabling shall be terminated on rugged and easily accessible terminal strips. Each termination shall be clearly marked and shall be as detailed in the shop and record drawings.
6. Each CCP shall have, at minimum, an l6 bit microprocessor.
7. All CCP shall be powered from a UPS source, but memory shall be battery-backed RAM. Battery shall be rechargeable with a minimum life of 7 years and shall be capable of providing data retention for a minimum of 60 days.
8. Provide a real-time clock at each CCP. The real-time clock at the CCP shall be synchronized at least once every 24 hours.
9. Provide a hardware or software watchdog timer.
10. Provide interoperability documentation for the CCP. All the data related to the CCP shall be presented along with their respective BACnet Protocol object ID created in the system, along with their PICS, BIBBS, addresses and method statements to read and write data via integration of the CCP with another system in the future. This may be part of the overall interoperability documentation.
11. The CCP shall have a port for the connection of POT.

D. The CCP shall be housed in the enclosure panels as detailed in the “Panels and Enclosures” Paragraph.

E. Diagnostics – Controller shall continuously perform self-diagnostics, communication diagnosis, and diagnosis of all panel components. The network controller shall provide both local and remote annunciation of any detected component failures, low battery conditions, or repeated failures to establish communication.

F. Certification – All controllers shall be listed by Underwriters Laboratories (UL).

2.15 DIRECT DIGITAL CONTROL PANELS (DDCP)

A. The Direct Digital Control shall be standalone, shall reside on the Automation Level and shall meet the following requirements:

1. Direct Digital Control Panels controllers shall be freely programmable and shall have an I/O capability to handle major items of equipment such as air handling units.
2. Direct Digital Control Panels shall interface via Point Interface Modules (PIM) to the field instrumentation and final control elements.
3. Direct Digital Control Panels may be used for any equipment monitored and controlled by the BMS. A dedicated Direct Digital Control Panels shall be provided at minimum to monitor and control the following:
   a. A Single Air Handling Unit (each AHU shall have a dedicated Direct Digital Control Panels).
   b. Other major items of equipment.
4. The Direct Digital Control Panels shall control its own communications so that the failure of any one node, including any PC shall not inhibit communications on the network between the remaining nodes. Provide integral network communications connections.
5. Direct Digital Control Panels shall be totally independent of any other primary and secondary LAN nodes for their monitoring and control functions. Direct Digital Control Panels shall monitor and control entire systems, multiple Direct Digital Control Panels for a single system shall not be allowed.
6. Where a Direct Digital Control Panels receives data from other nodes, such as an outdoor air temperature, which is used for a global system program strategy executed at that Direct Digital Control Panels, then alternative control strategies shall be automatically initiated, based on operator definable default values, if there is a loss of communication of the required data.
7. Direct Digital Control Panels failure shall not place any BMS component or any BMS controlled component in a situation that may cause damage to equipment or harm or discomfort to building occupants and operations staff. The failure of a Direct Digital Control Panels shall not affect the operation of any other network node.
8. The failure of any Direct Digital Control Panels shall be annunciated as a critical alarm at the OIW.
9. Cabling shall be terminated on rugged and easily accessible terminal strips. Each termination shall be clearly marked and shall be as detailed in the shop and record drawings.
10. Each Direct Digital Control Panels shall have its own power supplies that shall be rated such that they will adequately accommodate all foreseeable uses of the Direct Digital Control Panels.
11. Each Direct Digital Control Panels shall have, at minimum, an l6 bit microprocessor.
12. All operating sequences, schedules and trend data for equipment controlled by the Direct Digital Control Panels shall reside at the Direct Digital Control Panels.
13. Provide each Direct Digital Control Panels with a battery back-up for the protection of volatile memory for a minimum of 72 hours. Provide a 10-hour minimum full function, battery support capability.
14. Provide a real-time clock, at each Direct Digital Control Panels. The real-time clock at the Direct Digital Control Panels shall be synchronized at least once every 24 hours.
15. The Direct Digital Control Panels shall have a port for the connection of the POT.
16. Direct Digital Control Panels shall be housed in enclosures that shall meet the requirements detailed in Section titled “Panels and Enclosures” of these specifications. The Direct Digital Control Panels shall be placed at the same location as the equipment they control. The Contractor shall provide a suitably rated enclosure for all associated

BMS components, including the controllers, relays, wiring guides, terminal strips, etc. The installation of the control enclosure and the installation of all cable and containment between the field instrumentation, including any current sensing relays in the MCC panels, and the Direct Digital Control Panels shall be by the Contractor.

17. Interfaces to field instrumentation and final control elements shall have Point Interface Modules (PIM) that shall:
    a. Enable the Direct Digital Control Panels to receive signals from the digital and analog instrumentation.
    b. Enable the Direct Digital Control Panels to output control signals to the final control elements.
18. PIM shall be incorporated into the Direct Digital Control Panels by one or the following methods:
    a. Plug-in type modules with specific or universal input/output capabilities.
    b. Integral to the Direct Digital Control Panels controller board.
19. PIM shall accommodate the following point types:
    a. Analog and digital inputs.
    b. Analog and digital outputs.
    c. Pulse inputs.
20. Analog input PIM shall have a minimum 14-bit analog-to-digital conversion and shall interface to all of the signal types required by the sequence of operations.
21. Analog output PIM shall have a minimum 10-bit digital-to-analog conversion and shall meet all of the output signal required by the sequence of operations.
22. Digital input and output PIM shall have electrical isolation and all relay contacts shall be suitably rated for the application.
23. All PIM shall be easily exchanged and the failure of one PIM shall not affect any other PIM. Field terminations shall be such that the removal of a failed PIM shall not require the removal and reconnecting of field device cable terminations.
24. All PIM shall be such that all output points can be manually positioned via an on board on-off-auto or potentiometer dial as applicable to the individual point.
25. Control shall be based on either three term algorithms, i.e. proportional plus integral plus derivative, or two term algorithms, i.e. proportional plus integral, unless specified otherwise.
26. Direct Digital Control Panels mounted on vibrating equipment, such as an air handling units, shall have vibration isolation protection that ensures their satisfactory operation.
27. Direct Digital Control Panels shall have optic-isolation or equivalent.
28. Direct Digital Control Panels shall be BACnet Protocol compliant and shall comply with all of the requirements of ASHRAE SSPC/135.
29. The Contractor shall provide interoperability documentation for the Direct Digital Control Panels. All the data related to the Direct Digital Control Panels shall be presented along with their respective BACnet Protocol object ID created in the system, along with their PICS, BIBBS, addresses and method statements to read and write data via integration of the Direct Digital Control Panels with another system in the future. This may be part of the overall interoperability documentation.

2.16 UNITARY CONTROLLERS (UC) – GENERAL

A. Unitary Controllers (UC) shall be "freely programmable" controllers with pre-packaged operating sequences maintained in EEPROM or flash EPROM.

B. Unitary controllers shall reside at the BMS Automation Level.

C. Customization of "freely programmable" controllers shall be possible to the extent that variable operating parameters, such as sequences of operation, setpoints, control loop parameters, control constants, and schedules shall be changeable on-line by the OIW operator.

D. UC shall reside on a BACnet Protocol BMS LAN.

E. UC shall provide an interface via PIM to the field instrumentation and final control elements of the following types of equipment:
1. One (1) Fan Powered VAV terminal unit with or without Electric Reheat
2. One (1) Fan Coil Unit with or without Electric Reheat
3. One (1) VAV terminal unit (cooling only).
4. Up to Six (6) miscellaneous fans.
5. Up to Four (4) miscellaneous pumps.
6. Up to Two (2) self-contained A/C units.
7. Miscellaneous equipment input monitoring.

F. Panels meeting the requirements of Direct Digital Control Panels shall control all other types of 'equipment and systems.

G. The UC shall be a node on the primacy BMS LAN. The UC shall control its own communications so that the failure of any one node shall not inhibit communications on the network between the remaining nodes and the BMS Management Level Network.

H. UC shall be totally independent of other Management and BMS Automation Level components for their monitoring and control functions.

I. UC failure shall not place any BMS component or any BMS controlled component in a situation that may cause damage to equipment or harm or discomfort to building occupants and operations staff. The failure of a UC shall not affect the operation of any other network node.

J. The failure of any UC shall be annunciated as a critical alarm at the OIW.

K. Cabling shall be terminated on rugged and easily accessible terminal strips. Each termination shall be clearly marked and shall be as detailed in the shop and record drawings.

L. UC shall be powered from the electrical service that serves the equipment monitored and controlled by the UC. The Contractor shall furnish transformers suitably rated for the application. The UC shall be housed in an enclosure that provides adequate physical and electrical protection.

M. Each UC shall have, at minimum, a 16 bit microprocessor.

N. Provide each UC with a battery back-up for the protection of volatile memory for a minimum of 72 hours. Batteries shall be rated for a 7 year life. The UC serving VAV terminal units and FCU shall not be placed on UPS power.

O. UC shall be housed in enclosures that shall meet the requirements detailed in Section titled "Panels and Enclosures" of these specifications. The UC shall be placed at the same location as the equipment they control. The Contractor shall provide a suitably rated enclosure for all associated BMS components, including the controllers, relays, wiring guides, terminal strips, etc. The installation of the control enclosure and the installation of all cable and containment between the field instrumentation and the UC shall be by the Contractor.

P. Interfaces to field instrumentation and final control elements shall have Point Interface Modules (PIM) that shall:
1. Enable the UC to receive signals from the digital and analog instrumentation.
2. Enable the UC to output control signals to the final control elements.

Q. PIM shall accommodate the following point types:
1. Analog and digital inputs.
2. Analog and digital outputs.
3. Pulse inputs.

R. Analog input PIM shall have a minimum 8-bit analog-to-digital conversion and shall interface to all of the signal types required by the sequence of operations.

S. Analog output PIM shall have a minimum 8-bit digital-to-analog conversion and shall meet all of the output signal required by the sequence of operations.

T. Digital input and output PIM shall have electrical isolation and all relay contacts shall be suitably rated for the application.

U. UC shall control and monitor all points associated with a system. Multiple UC shall not be used to control and monitor a single system.

V. All application programs shall reside at the UC.

W. Operating sequences for UC shall be resident at the UC. Database changes shall be undertaken from the OIW and POT. Schedules and trend data shall reside at the UC.

X. Control shall be based on either three term algorithms, i.e. proportional plus integral plus derivative, or two term algorithms, i.e. proportional plus integral, unless specified otherwise.

Y. UC mounted on vibrating equipment, such as on FCUs, shall have vibration isolation protection that ensures their satisfactory operation.

Z. UC shall be BACnet Protocol compliant and shall comply with all of the requirements of ASHRAE SSPC/135.

AA. The Contractor shall provide interoperability documentation for the UC. All the data related to the UC shall be presented along with their respective BACnet Protocol object ID created in the system, along with their PICS, BIBBS, addresses and method statements to read and write data via integration of the UC with another system in the future. This may be part of the overall interoperability documentation.

2.17 VAV TERMINAL UNIT CONTROLLER (VAV - UC)

A. General: Ship VAV-UC Controllers to terminal box manufacturer's factory for controller mounting prior to shipping to site. Coordinate with Box manufacturer.

B. The VAV UC shall provide both standalone and networked direct digital control of pressure-independent, variable air volume terminal units.

C. The integral damper actuator shall be a fast response stepper motor capable of stroking 90 degrees in 30 seconds for quick damper positioning to speed commissioning and troubleshooting tasks.

D. The VAV UC shall be a configurable digital controller with an integral differential pressure transducer. It shall be compatible with 3 wire (incremental) and proportional damper actuators.

E. The VAV UC shall determine airflow by dynamic pressure measurement using an integral dead-ended differential pressure transducer. The transducer shall be maintenance-free and shall not require air filters.

F. Each VAV UC shall have the ability to automatically calibrate the flow sensor to eliminate pressure transducer offset error due to ambient temperature / humidity effects.

G. The VAV UC shall utilize a proportional plus integration (PI) algorithm for the space temperature control loops.

H. Each VAV UC shall continuously, adaptively tune the control algorithms to improve control and controller reliability through reduced actuator duty cycle. In addition, this tuning reduces commissioning costs, and eliminates the maintenance costs of manually re-tuning loops to compensate for seasonal or other load changes.

I. The VAV UC shall provide the ability to download and upload UC configuration files, both locally and via the communications network. Controllers shall be able to be loaded individually or as a group using a zone schedule generated spreadsheet of controller parameters.

J. UC control setpoint changes initiated over the network shall be written to UC non-volatile memory to prevent loss of setpoint changes and to provide consistent operation in the event of communication failure.

K. The VAV UC firmware shall be flash-upgradeable remotely via the communications bus to minimize costs of feature enhancements.

L. The VAV UC shall provide fail-soft operation if the airflow signal becomes unreliable, by automatically reverting to a pressure-dependent control mode.

M. The VAV UC shall interface with balancer tools that allow automatic recalculation of box flow pickup gain ("K" factor), and the ability to directly command the airflow control loop to the box minimum and maximum airflow setpoints.

N. The VAV UC shall be capable of direct electronic connection to a balancing hood. Connection shall be through a port located on the room sensor, or directly at the controller. As an alternative, software balancing tools shall be provided that will run in a hand-held PC tablets/laptops. The balancing tools shall allow adjustment of airflow setpoints and parameters, and provide permanent upload of the values entered to the UC. The PC tablets/laptops shall connect to the terminal unit through the room sensor port.

O. The VAV UC performance shall be self-documenting via on-board diagnostics. These diagnostics shall consist of control loop performance measurements executing at each control loop's sample interval, which may be used to continuously monitor and document system performance. The UC shall calculate exponentially weighted moving averages (EWMA) for each of the following. These metrics shall be available to the end user for efficient management of the VAV terminals.
1. Absolute temperature loop error.
2. Signed temperature loop error.
3. Absolute airflow loop error.
4. Signed airflow loop error.
5. Average damper actuator duty cycle.

P. The VAV UC shall detect system error conditions to assist in managing the VAV zones. The error conditions shall consist of:
1. Unreliable space temperature sensor.
2. Unreliable differential pressure sensor.
3. Starved box.
4. Insufficient cooling.
5. Insufficient heating.

Q. The VAV UC shall provide a compliant interface for ASHRAE Standard 62-1989 (indoor air quality), and shall be capable of resetting the box minimum airflow based on the percent of outdoor air in the primary air stream.

R. The VAV UC shall comply with ASHRAE Standard 90.1 (energy efficiency) by preventing simultaneous heating and cooling, and where the control strategy requires reset of airflow while in reheat, by modulating the box reheat device fully open prior to increasing the airflow in the heating sequence.

S. The VAV UC shall be compatible with the U.S. EPA Energy Star Buildings recommendations for fan energy reduction via demand-based static pressure reset down to 2/3 of duct static pressure set point, "VSD 2/3 Reset."

T. Inputs:

1. Analog inputs shall monitor the following analog signals, without the addition of equipment outside the terminal controller cabinet:
   a. 0-10 VDC Sensors
   b. 4-20 mA Sensors
   c. 1000ohm RTDs
   d. NTC Thermistors
2. Binary inputs shall monitor dry contact closures. Input shall provide filtering to eliminate false signals resulting from input "bouncing."
3. For noise immunity, the inputs shall be internally isolated from power, communications, and output circuits.

U. Outputs
1. Analog outputs shall provide the following control outputs:
   a. 0-10 VDC
   b. 4-20 mA
2. Binary outputs shall provide a SPST Triac output rated for 500mA at 24 VAC.
3. For noise immunity, the outputs shall be internally isolated from power, communications, and other output circuits.

2.18 BACNET PROTOCOL ROUTERS

A. Provide all BACnet Protocol routers as necessary to meet the requirements of these specifications.

B. BACnet Protocol routers shall be native BACnet Protocol only. Proprietary and other standard protocols shall not be provided. Routers shall be provided at necessary to connect one medium to another, e.g. BACnet/IP to BACnet MS/TP, etc.

C. The BACnet Protocol routers shall, at minimum, support BIBBs for data sharing, alarm and event management.

2.19 HVAC INPUT DEVICES

A. General Requirements
1. Installation, testing, and calibration of all sensors, transmitters, and other input devices shall be provided to meet the system requirements.

B. Temperature Sensors
1. General Requirements:
   a. Sensors and transmitters shall be provided, as outlined in the input/output summary and sequence of operations.
   b. The temperature sensor shall be of the resistance type, and shall be either two-wire 1000 ohm nickel RTD, or two-wire 1000 ohm platinum RTD.
   c. The following point types (and the accuracy of each) are required, and their associated accuracy values include errors associated with the sensor, lead wire, and A to D conversion:

Point Type	Accuracy
Chilled Water	± .5°F.
Room Temp	± .5°F.
Duct Temperature	± .5°F.
All Others	± .75°F.

2. Room Temperature Sensors with Integral Display
   a. Room sensors shall be constructed for either surface or wallbox mounting.
   b. Thermistors are acceptable for space temperature monitoring.
   c. Room sensors shall have an integral LCD display and four button keypad with the following capabilities:
      1) Display room and outside air temperatures.
      2) Display and adjust room comfort setpoint.
      3) Display and adjust fan operation status.
      4) Timed override request push button with LED status for activation of after-hours operation.
      5) Display controller mode.
      6) Password selectable adjustment of setpoint and override modes.
3. Thermowells
   a. When thermowells are required, the sensor and well shall be supplied as a complete assembly, including well head and flexible conduit fitting.
   b. Thermowells shall be pressure rated and constructed in accordance with the system working pressure.
   c. Thermowells and sensors shall be mounted in a threadolet or 1/2" NFT saddle and allow easy access to the sensor for repair or replacement.
   d. Thermowells shall be constructed of 316 stainless steel.
4. Outside Air Sensors
   a. Outside air sensors shall be designed to withstand the environmental conditions to which they will be exposed. They shall also be provided with a solar shield.
   b. Sensors exposed to wind velocity pressures shall be shielded by a perforated plate that surrounds the sensor element.
   c. Temperature transmitters shall be of NEMA IV construction and rated for ambient temperatures.
5. Duct Mount Sensors
   a. Duct mount sensors shall mount in an electrical box through a hole in the duct, and be positioned so as to be easily accessible for repair or replacement.
   b. Duct sensors shall be insertion type and constructed as a complete assembly, including lock nut and mounting plate.
   c. For outdoor air duct applications, a weatherproof mounting box with weatherproof cover and gasket shall be used.
6. Averaging Sensors
   a. For ductwork greater in any dimension that 48 inches and/or where air temperature stratification exists, an averaging sensor with multiple sensing points shall be used.

b. For plenum applications, such as mixed air temperature measurements, a string of sensors mounted across the plenum shall be used to account for stratification and/or air turbulence. The averaging string shall have a minimum of 4 sensing points per 12-foot long segment.
c. Capillary supports at the sides of the duct shall be provided to support the sensing string.

C. Humidity Sensors
1. The sensor shall be a solid state type, relative humidity sensor of the Bulk Polymer Design. The sensor element shall resist service contamination.
2. The humidity transmitter shall be equipped with non-interactive span and zero adjustments, a 2-wire isolated loop powered, 4-20 mA, 0-100% linear proportional output.
3. The humidity transmitter shall be factory calibrated to an accuracy of plus or minus 2% RH over a range of 0% - 90% RH meet the following overall accuracy, including lead loss and Analog to Digital conversion.
4. Outside air relative humidity sensors shall be installed with a rain proof, perforated cover. The transmitter shall be installed in a NEMA IV enclosure with liquid-tight fittings and stainless steel bushings.
5. A single point humidity calibrator shall be provided, if required, for field calibration. Transmitters shall be shipped factory pre-calibrated.
6. Duct type sensing probes shall be constructed of 304 stainless steel, and shall be equipped with a neoprene grommet, bushings, and a mounting bracket.
7. Manufacturers: Johnson Controls, Siemens, Veris Industries or Mamac or approved equal.

D. Humidity and Temperature Transmitter Assembly
1. Assembly shall consist of capacitive type humidity sensing element with 1000 ohm platinum RTD and a solid-state, 2-wire, 4-20mA transmitter mounted in housing suitable for outdoor installation (NEMA IV) or indoor (wall-mounted) applications. Sensing elements shall be installed in a weatherproof aspirating enclosure.
2. Assembly shall be factory calibrated to an accuracy of plus or minus 2% RH over a range of 0% - 90% RH.
3. Manufacturers: Hy-Cal Engineering, Rotronics, Vaisala, or approved equal.

E. Differential Pressure Transmitters
1. General Air and Water Pressure Transmitter Requirements:
a. Pressure transmitters shall be constructed to withstand 100% pressure over-range without damage, and to hold calibrated accuracy when subject to a momentary 40% over-range input.
b. Pressure transmitters shall transmit a 0 to 5 VDC, 0 to 10 VDC, or 4 to 20 mA output signal.
c. Differential pressure transmitters used for flow measurement shall be sized to the flow sensing device, and shall be supplied with Tee fittings and shut-off valves in the high and low sensing pick-up lines to allow the balancing subcontractor and Commissioner permanent, easy-to-use connection.

d. A minimum of a NEMA 1 housing shall be provided for the transmitter. Transmitters shall be located in accessible local control panels wherever possible.

2. Low Differential Water Pressure Applications (0" - 20" w.c.)
   a. The differential pressure transmitter shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of flow meter differential pressure or water pressure sensing points.
   b. The differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from the outside cover and meet the following performance specifications:
      1) .01-20" w.c. input differential pressure range.
      2) 4-20 mA output.
      3) Maintain accuracy up to 20 to 1 ratio turndown.
      4) Reference Accuracy: +0.2% of full span.
   c. Manufacturers: Setra, Mamac, ABB or approved equal.
3. Medium to High Differential Water Pressure Applications (Over 21" w.c.)
   a. The differential pressure transmitter shall meet the low pressure transmitter specifications with the following exceptions:
      1) Differential pressure range 10" w.c. to 300 PSI.
      2) Reference Accuracy: $\pm$1% of full span (includes non-linearity, hysteresis, and repeatability).
   b. Standalone pressure transmitters shall be mounted in a bypass valve assembly panel. The panel shall be constructed to NEMA 1 standards. The transmitter shall be installed in the panel with high and low connections piped and valved. Air bleed units, bypass valves, and compression fittings shall be provided.
   c. Manufacturers: Setra, Mamac, Fisher Porter, or Dieterich Standard Co. - Producer series, or approved equal.
4. Building Differential Air Pressure Applications (-1" to +1" w.c.)
   a. The differential pressure transmitter shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of differential pressure or air pressure sensing points.
   b. The differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from the outside cover and meet the following performance specifications:
      1) -1.00 to +1.00 w.c. input differential pressure ranges. (Select range appropriate for system application)
      2) 4-20 mA output.
      3) Maintain accuracy up to 20 to 1 ratio turndown.
      4) Reference Accuracy: +0.2% of full span.
   c. Manufacturers: Johnson Controls, Siemens, Setra, or approved equal.
5. Low Differential Air Pressure Applications (0" to 5" w.c.)
   a. The differential pressure transmitter shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of differential pressure or air pressure sensing points.
   b. The differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from the outside cover and meet the following performance specifications:

1) (0.00 - 1.00" to 5.00") w.c. input differential pressure ranges. (Select range appropriate for system application.)
2) 4-20 mA output.
3) Maintain accuracy up to 20 to 1 ratio turndown.
4) Reference Accuracy: +0.2% of full span.

c. Manufacturers: Johnson Controls, Ashcroft, Setra, or approved equal.

6. Medium Differential Air Pressure Applications (5" to 21" w.c.)
   a. The pressure transmitter shall be similar to the Low Air Pressure Transmitter, except that the performance specifications are not as severe. Differential pressure transmitters shall be provided that meet the following performance requirements:
      1) Zero & span: (c/o F.S. /Deg. F): .04% including linearity, hysteresis and repeatability.
      2) Accuracy: 1% F.S. (best straight line) Static Pressure Effect: 0.5% F.S. (to 100 PSIG.
      3) Thermal Effects: <+.033 F.S. /Deg. F. over 40°F. to 100°F. (calibrated at 70°F.).
   b. Standalone pressure transmitters shall be mounted in a bypass valve assembly panel. The panel shall be constructed to NEMA 1 standards. The transmitter shall be installed in the panel with high and low connections piped and valved. Air bleed units, bypass valves, and compression fittings shall be provided.
   c. Manufacturers: Johnson Controls, Siemens, Setra, or approved equal.

F. Indoor Air Quality (CO2) Sensors- Wall and Duct Mounted
   1. Provide indoor air quality sensors to monitor Carbon Dioxide (CO2). The sensors shall be of microprocessor-based photo-acoustic type with heated stannic dioxide semiconductor.
   2. The CO2 sensors shall have no more than 1% drift during the first year of operation and minimal drift thereafter so that no calibration will be required.
   3. The units shall be wall or duct mounted type as indicated on plans and in the sequence of operation.
   4. Wall mounted sensors shall be provided with white plastic cover, without LED indicators.
   5. Duct mounted sensors shall be provided with LED indicators in a dust proof plastic housing with transparent cover.
   6. The sensor shall meet the following requirements:
      a. Operating voltage: 24 VAC +/- 20%
      b. Frequency: 50/60 Hz
      c. Power consumption: max. 6 VA
      d. CO2 measuring range: 0 – 2000 ppm
      e. Tolerance: +/- 100 ppm
      f. Output: 0 – 10 VAC
      g. Calibration: none required
      h. Permissible air velocity in duct: <26.2 Ft/s.
      i. The sensors shall be model: Siemens QPA63 Series, Johnson Controls, Honeywell or approved equal

G. Carbon Monoxide (CO) Transmitter

1. Sensor assemblies to be rated general purpose and suitable for N.E.C. installation. (NEMA 1 enclosure).
2. Carbon monoxide analyzer shall be capable of measurement in the range of 0-500 parts per million with 4-20 mA output. (7000 to 9000 square feet per sensor).
3. Operating temperature: -15 deg C to 40 deg C
4. Stability: ±1%
5. Repeatability: less than ±2% full scale
6. Manufacturer: Siemens, Honeywell, Brasch gas detector or an approved equal.

H. Flow Monitoring

1. Air Flow Monitoring (Main Ductwork and/or Outdoor Air Intakes)
   a. Duct Air Flow Measuring Stations
      1) Each device shall be designed and built to comply with, and provide results in accordance with, accepted practice as defined for system testing in the ASHRAE Handbook of fundamentals, as well as in the Industrial Ventilation Handbook.
      2) Airflow measuring stations shall be fabricated of 14-gauge galvanized steel welded casing with 90 Deg. connecting flanges in configuration and size equal to that of the duct into which it is mounted. Each station shall be complete with an air directionalizer and parallel cell profile suppressor (3/4" maximum cell) across the entering air stream and mechanically fastened to the casing in such a way to withstand velocities up to 6000 feet per minute. This air directionalizer and parallel cell honeycomb suppressor shall provide 98% free area, equalize the velocity profile, and eliminate turbulent and rotational flow from the air stream prior to the measuring point.
      3) The total pressure measurement side (high side) will be designed and spaced to the Industrial Ventilation Manual 16th Edition, Page 9-5. The self-averaging manifolding will be manufactured of brass and copper components.
      4) The static pressure sensing probes (low side) shall be bullet-nosed shaped, per detailed radius, as illustrated in Industrial Ventilation Manual 16th Edition, Page 9-5.
      5) The main take-off point from both the total pressure and the static pressure manifolds must be symmetrical.
      6) Total and static pressure manifolds shall terminate with external ports for connection to control tubing. An identification label shall be placed on each unit casing, listing model number, size, area, and specified airflow capacity.
      7) Installation Considerations. The maximum allowable pressure loss through the Flow and Static Pressure elements shall not exceed .065" w.c. at 1000 feet per minute, or .23" w.c. at 2000 feet per minute.

         a) Each unit shall measure the airflow rate within an accuracy of plus 2% as determined by U.S. – GSA certification tests, and shall contain a minimum of one total pressure sensor per 36 square inches of unit measuring area.

b) The units shall have a self-generated sound rating of less than NC40, and the sound level within the duct shall not be amplified nor shall additional sound be generated.

c) Where the stations are installed in insulated ducts, the airflow passage of the station shall be the same size as the inside airflow dimension of the duct. Station flanges shall be two inch to three inch to facilitate matching connecting ductwork.

d) Where control dampers are shown as part of the airflow measuring station, opposed blade precision controlled volume dampers integral to the station and complete with actuator, pilot positioner, and linkage shall be provided. Stations shall be installed in strict accordance with the manufacturer's published requirements, and in accordance with ASME Guidelines affecting non-standard approach conditions.

8) Air flow measurement accuracy shall be ±3% of actual flow over a range of 6 to 1 capacity turndown. The probe installation shall not produce any static barrier (resistance to air flow). Provide a minimum of two (2) probes per each outdoor air intake. Follow manufacturer guidelines for installation and additional probe requirements.

9) Manufacturers: Air Monitor Corp., Tek-Air, Ebtron Gold GP1, Dietrich Standard, or approved equal.

b. Fan Inlet Probe Type

1) Fan Inlet Type: Provide where indicated on the plans, airflow measuring stations of fan inlet type. Airflow traverse probes shall be suitable for mounting in the inlet bell(s) of the indicated fan.

2) Probes shall be provided with the appropriate end support brackets for mounting in the inlet bell(s). Where fans are of dual inlet type, two sets of inlet probes must be provided.

3) Fan inlet probes shall be provided with the fittings to allow for the connection of control tubing to the probe assemblies.

4) Probes shall be capable of operating with an accuracy of 3% of actual volume over the fan operating range.

5) The installation of the air flow measuring stations shall be coordinated with sheet metal contractor to ensure actual accuracy and accessibility for maintenance.

6) The installation of the air flow measuring stations shall be coordinated with sheet metal subcontractor to ensure actual accuracy and accessibility for maintenance.

7) Fan inlet probes shall be Tek-Air T-FP7000, Ebtron GCA/STA, Dwyer STRA series or approved equal.

c. Static Pressure Traverse Probe

1) Duct static probes shall be provided where required to monitor duct static pressure.

2) Manufacturers: Air Monitor, Tek-Air, Ebtron or an approved equal.

2. BTU Monitoring Devices

a. BTU Meter: (Chilled water and Hot Water Applications): Provide a BTU Meter. The BTU meter shall provide the following information via both an integral LCD, and via serial network communications (protocol conforming to BACnet Protocol): Energy Total, Energy Rate, Flow Total, Flow Rate, Supply Temperature and Return Temperature. Each BTU meter shall be factory programmed for its specific application, and shall be re-programmable using the front panel keypad (no special interface device or computer required). Provide the following with each BTU meter application:

1) Temperature sensors: Temperature sensors shall be loop-powered current based (mA) sensors and shall be bath-calibrated and matched (NIST* traceable) for the specific temperature range for each application. The calculated differential temperature used in the energy calculation shall be accurate to within $\pm 0.15^{0}$F (including the error from individual temperature sensors, sensor matching, input offsets, and calculations).

2) Ultrasonic Flow Meter: The flowmeter shall be a clamp-on, dual channel or dual path transit-time precluding the requirement of penetrating into the pipe. The dual channel operating mode shall be capable of acting as two independent meters with the ability to perform math functions between the two channels (add or subtract). The dual path operating mode will eliminate the effects of flow profile distortion, cross flow or swirl errors caused by upstream interference or pumping irregularities. The flowmeter shall be completely microprocessor based utilizing the transit-time flow measurement technique. The flowmeter shall employ the phase detection multiple pulse transmit principle in conjunction with multiple frequency axial beam transducer technology to insure operation on liquids with solids and/or bubbles. In addition, the flowmeter shall incorporate an alternate Doppler method measurement mode for highly aerated or heavy solid bearing liquids.

3) The flowmeter shall provide automatic transducer spacing utilizing a Universal Mounting Frame or mounting track. The meter shall also provide automatic Reynolds Number and liquid sonic velocity variation compensation and live zero flow as well as the ability to zero flow automatically at programmed intervals. The flowmeter shall have the ability to indicate flow rate, flow velocity, total flow, signal strength, liquid sonic velocity, Reynolds Number and liquid aeration level for both channels or paths. The flowmeter shall also have the ability to be programmed to compensate for specific upstream profile disturbances. The flowmeter shall be equipped with an integral front panel keypad and multifunction 240 x 128 pixel LCD display with the ability of displaying both channels or paths simultaneously. In addition, the flowmeter shall provide self and application diagnostics to isolate any fault conditions to either equipment failure or abnormal process conditions. The flowmeter shall have full HELP menu routines corresponding to all levels of programming and operation.

4) The flowmeter electronics shall be housed in a NEMA 4X enclosure and powered by 115 VAC, 60 Hz. One (1) isolated 4 to 20 ma DC and one (1) 0 to 5,000 Hz. pulse output proportional to flow shall be provided for each channel or the average of both paths. In addition, the unit shall provide one

(1) 0 to 10 volt output and four (4) SPDT alarm relays assignable to flow velocity, liquid sonic velocity, signal strength or liquid aeration. An internal 250 KB datalogger shall be provided to allow storage of all measured and calculated variables and alarms. A bi-directional RS-232 connection shall be provided to allow remote programming and interrogation.

5) The flowmeter shall have an accuracy of ±1% of flow over a ±40 fps flow range. Repeatability shall be 0.1% of flow with a flow sensitivity of 0.001 fps at any flow rate including no flow conditions.

6) Flowmeters that employ amplitude detection/correlation routines or use a single frequency transducer design will not be acceptable. Shear mode flowmeters or meters utilizing wetted transducers or electrodes, or flow-measuring techniques other than previously described will not be acceptable.

7) By use of either transit-time or Doppler modes of operation, the flowmeter shall be capable of measuring all liquids in full sonically conductive pipes. Flowmeters that simply offer standalone transit-time or Doppler measurement modes are not acceptable.

8) The furnished flowmeter shall be Controlotron, Model 1010DN, Panametrics or approved equal.

3. Water Flow Monitoring Devices
   a. Magnetoflow Flow Meter:
      1) The magnetoflow flowmeter shall be completely microprocessor based utilizing pulsed DC creating a magnetic field across the diameter of the pipe.
      2) The magnetoflow flowmeter shall be equipped with an optional panel for remote monitoring and signaling.
      3) The magnetoflow flowmeter electronics shall be housed in a NEMA 4 enclosure and powered by 115 VAC, 60 Hz.
      4) The magnetoflow flowmeter shall have an accuracy of ±.5% of flow over a ±.1 -1 fps flow range. Repeatability shall be 0.25% of flow with a flow sensitivity of 1-33 fps at any flow rate including no flow conditions.
      5) Magnetoflow flowmeter shall be Onicon F 1220, Badgermeter Inc. Mag Meter, Model Magnetoflow Wafer or an approved equal.

I. Status and Safety Switches
   1. General Requirements
      a. Switches shall be provided to monitor equipment status, safety conditions, and generate alarms at the BMS when a failure or abnormal condition occurs. Safety switches shall be provided with two sets of contacts and shall be interlock wired to shut down respective equipment.
   2. Current Sensing Switches
      a. The current sensing switch shall be self-powered with solid state circuitry and a dry contact output. It shall consist of a current transformer, a solid state current sensing circuit, adjustable trip point, solid state switch, SPDT relay, and an LED indicating the on or off status. A conductor of the load shall be passed through the window of the device. It shall accept over-current up to twice its trip point range.
      b. Current sensing switches shall be used for run status for fans, pumps, and other miscellaneous motor loads.

c. Current sensing switches shall be calibrated to show a positive run status only when the motor is operating under load. A motor running with a broken belt or coupling shall indicate a negative run status.
d. Manufacturers: Veris Industries, Kele, Hawkeye or approved equal.

3. Water Flow Switches
   a. Water flow switches shall be equal to the Siemens, Johnson Controls P74, Honeywell or approved equal.
4. Low Temperature Limit Switches
   a. The low temperature limit switch shall be of the manual reset type with Double Pole/Single Throw snap acting contacts rated for 16 amps at 120VAC.
   b. The sensing element shall be a minimum of 15 feet in length and shall react to the coldest 18-inch section. Element shall be mounted horizontally across duct in accordance with manufacturers recommended installation procedures.
   c. For large duct areas where the sensing element does not provide full coverage of the air stream, additional switches shall be provided as required to provide full protection of the air stream.
   d. The low temperature limit switch shall be Johnson Controls A70, Honeywell, Siemens or approved equal.

2.20 HVAC OUTPUT DEVICES

A. Actuators
1. General Requirements
   a. Damper and valve actuators shall be electric/electronic. Provide local position indicator dial on all actuators.
   b. Provide a separate actuator for each damper bank. Linkages are not allowed.
2. Electronic Damper Actuators
   a. Electronic damper actuators shall be direct shaft mount.
   b. Modulating and two-position actuators shall be provided as required by the sequence of operations. Damper sections shall be sized based on actuator manufacturer's recommendations for face velocity, differential pressure and damper type. The actuator mounting arrangement and spring return feature shall permit normally open or normally closed positions of the dampers, as required. All actuators (except terminal units) shall be furnished with mechanical spring return unless otherwise specified in the sequences of operations. All actuators shall have external adjustable stops to limit the travel in both direction, and a gear release to allow manual positioning. Spring-return actuators with more than 7 Nm (60 in.-lb) torque capacity shall have a manual crank for this purpose.
   c. Minimum Torque Requirements: 150 inch-lbs.
   d. Modulating actuators shall accept 24 VAC or VDC power supply, consume no more than 15 VA, and be UL listed. The control signal shall be 2-10 VDC or 4-20 mA, and the actuator shall provide a clamp position feedback signal of 2-10 VDC. The feedback signal shall be independent of the input signal and may be used to parallel other actuators and provide true position indication. The feedback signal of one damper actuator for each separately controlled damper shall be wired back to a terminal strip in the control panel for trouble-shooting purposes.

e. Two-position or open/closed actuators shall accept 24 or 120 VAC power supply and be UL listed. Isolation, smoke, exhaust fan, and other dampers, as specified in the sequence of operations, shall be furnished with adjustable end switches to indicate open/closed position or be hard wired to start/stop associated fan. Two-position actuators, as specified in sequences of operations as "quick acting," shall move full stroke within 20 seconds. All smoke damper actuators shall be quick acting and be UL listed for smoke control service.
f. Provide normally open spring-return actuators for dampers serving all battery room locations.
g. Manufacturers: Belimo, Siemens, Honeywell or approved equal.

3. Pneumatic Damper Actuator:
   a. Pneumatic: Shall be spring return piston type with metal housing, rolling diaphragm and low friction shaft bearing. Shall be capable of modulating 20 square feet of damper section.
4. Electronic Valve Actuators
   a. Electronic valve actuators shall be manufactured by the valve manufacturer.
   b. Each actuator shall have current limiting circuitry incorporated in its design to prevent damage to the actuator.
   c. Provide electric/electronic actuators in all areas, sized by the manufacturer, of sufficient size and power to operate the valve under all conditions and to close the valve tight against 150% maximum differential pressure.
   d. Provide pilots for sequence operations, and cases where valve spring ranges have been increased to close off against system pressure.
   e. Provide pilots for sequence operations, and cases where valve spring ranges have been increased to close off against system pressure.
   f. Valve actuators for finned tube radiation and terminal units shall be electronic, floating control, fail to last position.
   g. Modulating and two-position actuators shall be provided as required by the sequence of operations. Actuators shall provide the minimum torque required for proper valve close-off against the system pressure for the required application. The valve actuator shall be sized based on valve manufacturer's recommendations for flow and pressure differential. All actuators shall fail in the last position unless specified with mechanical spring return in the sequence of operations. The spring return feature shall permit normally open or normally closed positions of the valves, as required. All direct shaft mount rotational actuators shall have external adjustable stops to limit the travel in either direction.
   h. Modulating Actuators shall accept 24 VAC or VDC and 120 VAC power supply and be UL listed. The control signal shall be 2-10 VDC or 4-20 mA and the actuator shall provide a clamp position feedback signal of 2-10 VDC. The feedback signal shall be independent of the input signal, and may be used to parallel other actuators and provide true position indication. The feedback signal of each valve actuator (except terminal valves) shall be wired back to a terminal strip in the control panel for trouble-shooting purposes.
   i. Two-position or open/closed actuators shall accept 24 or 120 VAC power supply and be UL listed. Butterfly isolation and other valves, as specified in the sequence of operations, shall be furnished with adjustable end switches to indicate

open/closed position or be hard wired to start/stop the associated equipment such as a pump, chiller, etc.

B. Control Dampers/Smoke Control Dampers/Fire Smoke Dampers
   1. The Contractor shall furnish all automatic dampers. All automatic dampers shall be sized for the application by the Contractor or as specifically indicated on the Drawings.
   2. All dampers used for throttling airflow shall be of the opposed blade type arranged for normally open or normally closed operation, as required. The damper is to be sized so that, when wide open, the pressure drop is a sufficient amount of its close-off pressure drop to shift the characteristic curve to near linear.
   3. All dampers used for two-position, open/close control shall be parallel blade type arranged for normally open or closed operation, as required.
   4. Damper frames and blades shall be constructed of either stainless steel or aluminum. Maximum blade length in any section shall be 48". Damper blades shall be 16-gauge minimum and shall not exceed six (6) inches in width. Damper frames shall be 16-gauge minimum hat channel type with corner bracing. Additional stiffening or bracing shall be provided for any section exceeding 48" in height. All damper bearings shall be made of stainless steel or oil-impregnated bronze. Dampers shall be tight closing, low leakage type, with synthetic elastomer seals on the blade edges and flexible stainless steel side seals. Dampers of 48"x48" size shall not leak in excess of 6 cfm per square foot when closed against 4" w.g. static pressure when tested in accordance with AMCA Std. 500.
   5. Air foil blade dampers of double skin construction with linkage out of the air stream shall be used whenever the damper face velocity exceeds 1500 FPM or system pressure exceeds 2.5" w.g., but no more than 4000 FPM or 6" w.g.
   6. Manufacturers: Fire Smoke/Smoke control damper (Class I) - Ruskin Industries, Johson; Control Damper – Siemens, Johnson Controls D-1300, Ruskin CD50 or approved equal.
   7. One piece rolled blade dampers with exposed linkage may be used with face velocities of 1500 FPM or below. Manufacturers: Johnson Controls D-1100, Ruskin CD36, Portoff CD36 or approved equal.
   8. Multiple section dampers may be jack-shafted to allow mounting of direct connect electronic actuators. Each end of the jack shaft shall receive at least one actuator to reduce jack shaft twist.

C. Control Relays
   1. Control Pilot Relays
      a. Control pilot relays shall be of a modular plug-in design with retaining springs or clips.
      b. Mounting bases shall be snap-mount.
      c. DPDT, 3PDT, or 4PDT relays shall be provided, as appropriate for application.
      d. Contacts shall be rated for 10 amps at 120VAC.
      e. Relays shall have an integral indicator light and check button.
      f. Manufacturers: Johnson Controls, Honeywell, ASCO, Lectro or approved equal.

D. Control Valves
   1. All automatic control valves shall be fully proportioning and provide near linear heat transfer control. The valves shall be quiet in operation and fail-safe open, closed, or in their last position. All valves shall operate in sequence with another valve when required

by the sequence of operations. All control valves shall be sized by the control manufacturer, and shall be guaranteed to meet the heating and cooling loads, as specified. All control valves shall be suitable for the system flow conditions and close against the differential pressures involved. Body pressure rating and connection type (sweat, screwed, or flanged) shall conform to the mechanical pipe schedule.

a. Leakage: Control valves shall provide tight shut off in the closed position at 150 percent of maximum working pressure.

2. Chilled water control valves shall be modulating plug, ball, and/or butterfly, as required by the specific application. Modulating water valves shall be sized per manufacturer's recommendations for the given application. In general, valves (2 way) serving variable flow air handling unit coils shall be sized for a pressure drop equal to the actual coil pressure drop, but no less than 3 PSI. Valves for terminal reheat coils shall be sized for a 2 PSIG pressure drop, but no more than a 5 PSI drop.
3. All modulating steam valves shall have linear characteristic for 90 percent of the closing stroke and equal-percentage for the final 10 percent. Size low pressure steam valves for a 10 psig inlet pressure and a pressure drop of 8 psig, unless otherwise noted on drawings. On low pressure steam systems, when load exceeds the capacity of 2-1/2" valve, provide two valves each controlling 50 percent of load.
4. Characteristics:
   a. Chilled Water Service: equal percentage flow characteristics, single seated type.
   b. Hot water service: equal percentage, single seated. For water temperature 12-120 deg C or greater provide stainless steel plug.
   c. Steam service: Equal percentage flow characteristics, single seated. Provide stainless steel plug.
   d. Bypass service: linear flow characteristics. Double seated.
5. Valve action: Cooling valves normally closed, Preheat valves normally open, Reheat valves normally closed, humidity control valve normally closed (spring return type).
6. Modulating plug water valves of the single-seat type with equal percentage flow characteristics shall be used for all steam and chilled water applications, except those described hereinafter. The valve discs shall be composition type. Valve stems shall be stainless steel.
7. Ball valves shall be acceptable for water terminal reheat coils, radiant panels, unit heaters, package air conditioning units, and fan coil units.
8. Globe valves are acceptable for use with Air Handlers. Automatic control valves for temperature control shall be fully proportioning with V-port inner guides, unless otherwise specified. Valves shall be quiet in operation and fail safe in either normally open or normally closed position in the event of control air failure. Valves shall be capable of operation in sequence when required by the sequence of operation. Size all globe control valves by the control manufacturer and guarantee they meet the heating and cooling loads as specified. Control valves shall be suitable for the system pressure conditions and shall close against the differential pressure involved.
9. Butterfly valves shall be acceptable for modulating large flow applications greater than modulating plug valves, and for all two-position, open/close applications. In-line and/or three-way butterfly valves shall be heavy-duty pattern with a body rating comparable to the pipe rating, replaceable lining suitable for temperature of system, and a stainless steel vane. Valves for modulating service shall be sized and travel limited to 50 degrees of full

open. Valves for isolation service shall be the same as the pipe. Valves in the closed position shall be bubble-tight.

10. Provide electric high performance butterfly motorized valves for on/off service with manually operated declutchable handwheels for overriding the operator in both emergency and normal operation. Valve body shall be carbon steel with 316 stainless disc with a stainless shaft. Valve seat material shall be teflon. All valves shall be provided with two (2) limit switches that will indicate open and close valve positions remotely at the BMS. Minimum ANSI B16.104 Shut-off Class: Class 300.
11. Manufacturers: Johnson Controls, Siemens, Honeywell or as approved equal.

2.21 HVAC MISCELLANEOUS DEVICES

A. Local Control Panels

1. All control panels shall be factory constructed, incorporating the BMS manufacturers standard designs and layouts. All control panels shall be UL inspected and listed as an assembly and carry a UL 508 label listing compliance. Control panels shall be fully enclosed, with sub-panel, hinged door, and key-locking latch.
2. In general, the control panels shall consist of the Direct Digital Control controller(s), display module, and I/O devices—such as relays, transducers, and so forth—that are not required to be located external to the control panel due to function. The display module shall be flush mounted in the panel face unless otherwise noted.
3. All I/O connections on the Direct Digital controller shall be extended to a numbered, color-coded, and labeled terminal strip for ease of maintenance and expansion. Wiring to I/O devices shall be made from this terminal strip.
4. All other wiring in the panel, internal and external, shall be made to additional line or low voltage color-coded and labeled terminal strips. Low and line voltage wiring shall be segregated. All terminal strips and wiring shall be UL listed 300-volt service and provide adequate clearance for field wiring.
5. All wiring for every control panel shall follow a common color-coded format. All terminal strip color coding and numbering shall follow a common format. All wiring shall be neatly installed in plastic trays or tie-wrapped.
6. A convenience 120 VAC duplex receptacle shall be provided in each enclosure, fused on/off power switch, and required transformers.

B. Power Supplies (Provide new power supplies for all new BMS control panels)

1. DC power supplies shall be sized for the connected device load. Total rated load shall not exceed 75% of the rated capacity of the power supply.
2. Input: 120 VAC +10%, 60Hz.
3. Output: 24 VDC.
4. Line Regulation: +0.05% for 10% line change.
5. Load Regulation: +0.05% for 50% load change.
6. Ripple and Noise: 1 mV rms., 5-mV peak to peak.
7. An appropriately sized fuse and fuse block shall be provided and located next to the power supply.
8. A power disconnect switch shall be provided next to the power supply.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to the Department of Design and Construction General Conditions for the requirements governing execution.

3.2 INSTALLATION PRACTICES

A. Control System Wiring
   1. All conduit, wiring, accessories and wiring connections required for the installation of the Building Management System, as herein specified, shall be provided by the BMS Sub - Contractor. All wiring shall comply with the requirements of NYC electric codes, unless specified otherwise in this section.
   2. The Contractor is responsible for the installation of all low voltage control, monitoring and network wiring.
   3. Power wiring 120VAC and greater shall be provided by the Contractor.
   4. All system-input wiring shall be twisted shielded pair, minimum 18-gauge wire. All system analog output wiring shall be twisted shielded pair/3-wire as required, minimum 18-gauge wire. Preconfigured cables between Terminal Unit Controllers and Thermostats are acceptable, minimum 24 gauge.
   5. All internal panel device wiring for binary outputs and pilot relay shall be minimum 16-gauge wire.
   6. All Class 2 (24VAC or less) wiring shall be installed in conduit unless otherwise specified.
      a. Class 2 wiring not installed in conduit shall be supported every 5’ from the building structure utilizing metal hangers designed for this application. Wiring shall be installed parallel to the building structural lines. All wiring shall be installed in accordance with NYC code requirements. Exposed wiring shall only be allowed in concealed accessible locations.
   7. Low voltage control wiring and 24VAC can be run in the same conduit. Power wiring 120VAC and greater must be in a separate conduit.
   8. All wiring in mechanical rooms shall be in conduit. Minimum control wiring conduit size 3/4”.
   9. All cabling installed without conduit shall be suitable rated for the application and the cable jacket shall be clearly marked.

B. Identification Standards
   1. Controller Identification: All controllers shall be identified by a plastic engraved nameplate securely fastened to the outside of the controller enclosure.
   2. Panel Identification: All local control panels shall be identified by a plastic engraved nameplate securely fastened to the outside of the controller enclosure.
   3. Field Devices: All field devices shall be identified by a typed (not handwritten) securely attached tag label.
   4. Panel Devices: All panel devices shall be identified by a typed label securely fastened to the backplane of the local control panel.

5. Raceway Identification: All the covers to junction and pull boxes of the control system raceways shall be painted blue or have identification labels stating "Control System Wiring" affixed to the covers. Labels shall be typed, not hand written.
6. Wire Identification: All low and line voltage control wiring shall be identified by a number, as referenced to the associated control diagram, at each end of the conductor or cable. Identification number shall be permanently secured to the conductor or cable and shall be typed.

C. Dedicated Digital Controller Per Major System
1. Each major system will be provided with its own dedicated BMS controller. Mechanical systems such as AHUs or Refrigeration Plant shall not share or be controlled from the same BMS controller.

D. Input Devices
1. All Input devices shall be installed per the manufacturer's recommendation. The mechanical contractor shall install all in-line devices such as temperature wells, pressure taps, duct smoke detectors, air flow stations, etc.
   a. Low Differential Air Pressure Applications (Under 5" w.c.) Differential pressure transmitters used for flow measurement shall be sized to the flow sensing device and shall be supplied with Tee fittings and shut-off valves in the high and low sensing pick-up lines to allow the balancing subcontractor and Commissioner permanent easy-to-use connection. Provide a minimum of a NEMA 1 housing for the transmitter. Locate transmitters in accessible local control panels wherever possible. Except on VAV box applications.
   b. Medium Differential Air Pressure Applications (5" to 21" w.c.) Mount stand-alone pressure transmitters in a bypass valve assembly panel. The panel shall be constructed to NEMA 1 standards. The transmitter shall be installed in the panel with hi and low connections piped and valved. Air bleed units, bypass valves and compression fittings shall be provided.
   c. Medium to High Differential Water Pressure Applications (Over 21" w.c.): Mount stand-alone pressure transmitters in a bypass valve assembly panel. The panel shall be constructed to NEMA 1 standards. The transmitter shall be installed in the panel with hi and low connections piped and valved. Air bleed units, bypass valves and compression fittings shall be provided.
   d. Building Differential Air Pressure Applications (-1" to +1" w.c.): Mount pressure transmitter in the local control panel. Transmitter's exterior sensing tip shall be installed with a shielded static air probe to reduce pressure fluctuations caused by wind. The interior tip shall be inconspicuous and located within a central corridor shown on the drawings.
   e. Air Flow Measuring Stations: Where the stations are installed in insulated ducts, the airflow passage of the station shall be the same size as the inside airflow dimension of the duct. Station flanges shall be two inch to three inch to facilitate matching connecting ductwork. Stations shall be installed in strict accordance with the manufacturer's published requirements, and with ASME Guidelines affecting non-standard approach conditions.

f. Water Flow Monitoring Stations: Water Flow Monitoring Stations shall be installed in strict accordance with the manufacturer's published requirements, and with ASME Guidelines affecting non-standard approach conditions.

g. Outside Air Humidity Sensors: Outside air relative humidity sensors shall be installed with a rain proof, perforated cover. The transmitter shall be installed in a NEMA IV enclosure with sealtite fittings and stainless steel bushings.

h. Outside Air Sensors: Outside air sensors shall be mounted on the North wall to minimize solar radiant heat impact or located in a continuous intake flow adequate to monitor outside air temperatures accurately. Sensors exposed to solar radiation must be installed with solar shields. Sensors exposed to wind velocity pressures shall be shielded by a perforated plate surrounding the sensor element.

i. Duct Temperature Sensors: Duct mount sensors shall mount in an electrical box through a hole in the duct and be positioned so as to be easily accessible for repair or replacement. The sensors shall be insertion type and constructed as a complete assembly including lock nut and mounting plate. For ductwork greater in any dimension that 48 inches and/or air temperature stratification exists such as a mixed air plenum, utilize an averaging sensor with multiple sensing points. The sensor shall be mounted to suitable supports using factory approved element holders. For large plenum applications such as mixed air temperature measurements, utilize a string of sensors mounted across the plenum to account for stratification and/or air turbulence. The averaging string shall have a minimum of 4 sensing points per 12 foot long segment.

j. Space Temperature Sensors: Shall be mounted at 60" above the finished floor. Temperature sensors installed in public areas shall be provided with lockable covers to prevent tampering.

k. Low Temperature Limit Switches: Mount element horizontally across duct in a serpentine pattern insuring each square foot of coil is protected by 1 foot of sensor. For large duct areas where the sensing element does not provide full coverage of the air stream, provide additional switches as required to provide full protection of the air stream.

l. Differential Pressure Status Switches: Provide complete installation kit including; static pressure tops, tubing, fittings and air filters. Provide appropriate scale range and differential adjustment for intended service.

m. Valve Limit Switches: Mount limit switch on valve yolk as recommended by switch manufacturer. Provide valve limit switches that will indicate both 100% Open and 100% Closed Positions.

E. Output Devices

1. All output devices shall be installed per the manufacturer's recommendation. The mechanical contractor shall install all in-line devices such as control valves, dampers, etc.
2. Actuators: All control actuators shall be sized capable of closing against the maximum system shut-off pressure. The actuator shall modulate in a smooth fashion through the entire stroke.
3. Control Dampers: Shall be opposed blade for modulating control of air flows. Parallel blade dampers shall be installed for two position applications.

4. Control Valves: Shall be sized for proper flow control with equal percentage valve plugs. The maximum pressure drop for water applications shall be 5 PSI. The maximum pressure drop for steam applications shall be 7 PSI.
5. Electronic Signal Isolation Transducers: Whenever an analog output signal from the Building Management System is to be connected to an external control system as an input (such as a chiller control panel), or is to receive as an input a signal from a remote system, provide a signal isolation transducer. Signal isolation transducer shall provide ground plane isolation between systems. Signals shall provide optical isolation between systems.

3.3 INSTRUCTION

A. General
1. The controls subcontractor shall provide the following instructing services.
2. Operator Instruction (provide 24 hours): Operator instruction shall include the detailed review of the control installation drawings, points list, and equipment list. The instructor shall then walk through the building identifying the location of the control devices installed. For each type of systems, the instructor shall demonstrate how the system accomplishes the sequence of operation.

END OF SECTION 230900

SECTION 23 09 93 – SEQUENCE OF OPERATIONS FOR HVAC CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. The Building Management System (BMS) vendor is responsible to provide and install all control and monitoring devices for HVAC and Electrical equipment including third party interfaces, software, graphics, wiring and commissioning of automatic control systems, so as to provide a complete control system, meeting equipment manufacturer's requirements as noted, and in accordance with Contract Documents, as listed and specified.

B. Refer to "Section 230900 INSTRUMENTATION AND CONTROL FOR HVAC" for equipment and installation scope requirements.

C. The BMS Vendor is responsible to review all mechanical, electrical, plumbing Contract drawings to meet system technical performance requirements as specified. Additional devices required by other specification sections to meet performance, or due to variations in duct and piping configurations shown on mechanical or electrical plans shall be provided at no cost to the City of New York.

D. Operation of typical motor starter controls:
   1. Adjustable Frequency Control Drives with HOA mode Selector:
      a. The BMS contractor is to provide a BACnet Protocol communication interface between each VFD and it's respective Direct Digital Control panel. All Direct Digital Control equipment shall have the capabilities of remote monitoring and control at a BMS System.
      b. Coordinate with fan drive supplier specific wiring and location of all control and monitoring interfaces.
      c. Variable Frequency Drives (VFD) shall start at the minimum speed setting and shall ramp to the control point. Unless otherwise noted, the VFD shall ramp up and down full scale over 30 seconds (Adjustable). If an electrical disconnect is connected between the VFD and the equipment, the VFD shall not be allowed to operate if the disconnect is open.
      d. In addition to the BMS direct communication interface to each VFD, the following points shall be hard-wired:
         1) Enable/Disable
         2) Speed Control
         3) Run Status
         4) Bypass Status
   2. HOA switches:

a. Safety devices interlocked with "hand" and "automatic" positions in series with motor controller holding coil circuit.
b. Interlocking (via software) with other fans and equipment of system through "automatic" position only.
c. "Hand", "On", position for local control only.
d. Automatic starting from BMS through Automatic ("Auto") position only.
e. Where fans are equipped with HOA switches without BMS tie-in, operators will manually toggle HOA switches between "Hand" and "Off" to operate equipment

3. Starter switches: exhaust fans software interlocked with supply fans or CO detection system.
   a. Remote starting from BMS system through "automatic" position only.
   b. "Hand", "On", position for maintenance operation only.
4. Exhaust fans, general exhaust fans, and toilet exhaust fans controlled independently from each other. All other exhaust fans shall be controlled as per their respective associated system's specified sequence of operations. All specified fans are to be started and stopped from the BMS system. All specified fans are to have fan status. Variable frequency driven fans are to include fan "bypass" status.
   a. All safety devices interlocked with "high", "low", "on", "bypass" and "automatic" positions in series with motor controller holding coil circuit.
   b. Remote starting from BMS system through "automatic" position only.
   c. "Hand", "On", position for local control only.
   d. Automatic starting from BMS through Automatic ("Auto") position only.
   e. Where fans are equipped with HOA switches without BMS tie-in, operators will manually toggle HOA switches between "Hand" and "Off" to operate equipment

E. Operation of typical control safety devices: Provide for all systems except as otherwise noted.
   1. General:
      a. To be manually reset (except as noted), hardwired and operated to protect system in the event of Direct Digital Control Panel failure.
      b. Provide auxiliary contact on each device for connection to Direct Digital Control Panels (DDCPs) as specified.
   2. Freeze protection thermostat (freezestat, TSL) - provide one (1) 20 foot long bulb freeze protection thermostat (TSL) in length for the face of coils up to 80 square foot coil section, wired to stop supply fan (via Hard-Wired Connections). Freezestat devices are to be mounted in a serpentine pattern at the face of the cooling coil. Freeze protection thermostat (TSL) shall stop the supply fan if the air entering the cooling coil drops below 35°F (adjustable) when the fan stops, an alarm shall be transmitted to the workstation. Low temperature switches shall be capable of being reset locally and at the BMS workstation using latching relays. Fan shutdown will be operative whether the starter H-O-A switch is in the "Auto" or "Hand" or "Bypass" position.
   3. High static and low devices (PSH, PSL): Provide at AHU unit to prevent physical damage to AHU unit casing due to local mechanical equipment failure. Provide both a high static and low static device that will stop the supply fan (associated return fan noted) and annunciate a remote signal at the BMS system. Pressure differential switches installed in the discharge of each supply and exhaust fan, which sense discharge pressure, shall stop the fan and transmit an alarm to the operator workstation if the pressure set point of the switch is met. When the fan stops, an alarm shall be transmitted to the workstation. Pressure differential switches shall be capable of being reset locally and at

the BMS workstation using latching relays. Fan shutdown will be operative whether the starter H-O-A switch is in the "Auto" or "Hand" or “Bypass” position.

4. Damper end switches: Provide to prevent operation of fans until damper is fully open. Provide damper end switches as follows:
   a. On dampers, which if closed with fan running, could cause distribution system damage.
   b. On exhaust fan dampers as noted.
   c. When a fan is commanded to start (by BMS system, hand position or bypass position), the dampers will open. When open position is confirmed via end switches, fan will then start through appropriate hardware and software interlocks.
   d. Normally closed return smoke-rated control damper end switch is bypassed after startup sequence is complete to allow for mixing damper control.
   e. On air handler unit’s normally closed smoke-rated dampers.
   f. When a fan is commanded to start (by BMS system, hand position or bypass position), the dampers will open. When open position is confirmed via end switches, fan will then start through appropriate hardware and software interlocks.

F. Pump with Current Sensor for Feedback:
   1. When the device is required to run, the control system shall command the device to start by energizing the discrete output to the motor starter. The device shall run until the control system commands the device to stop or an equipment failure occurs.
   2. Equipment failure is detected by a significant reduction in amp draw as measured by a hardwired current sensor in the starter when the device is commanded on. If a failure occurs, the device shall be stopped and a critical alarm shall be generated designating that device as failed. This interlock shall be disabled for 20 seconds after the device is initially commanded to start.

G. Lead/Stand-By Device Operation
   1. The lead device (adjustable) shall be defined to be the active device. The device shall be switched between lead and standby based on run-time (adjustable based on a pre-determined schedule). The device with the lowest run-time shall become the lead device when both devices are stopped. If the lead device runs for 24 hours (adjustable), the stand-by device shall be started and the lead device shall stop. The stand-by device shall become the primary. Before the run time switchover occurs, the operator will be prompted by the BMS to determine if the switchover is appropriated. If message not responded within 10 minutes (adjustable), BMS shall switch automatically.
   2. On a failure of the lead device as sensed by feed-back instrumentation e.g. current sensor across a pump, flow switch, or a motor starter contact), the stand-by device shall become the lead and started. The original lead device shall be disabled and a critical alarm shall be generated.

H. Lead/Lag Device Operation
   1. The lead device (Adjustable) is defined as the device which starts before any other system devices and stops after all other devices have stopped. The lag device(s) start after the lead device and stop before the lead device. If multiple lag devices exist, the first lag device (Adjustable) shall start first, followed by the second (Adjustable), third (Adjustable), etc. Stopping shall occur in reverse order.
   2. The device(s) shall be switched between lead and lag based on run-time (Adjustable). The device with the lowest run-time shall become the lead device when all devices are

stopped. The device with the highest run-time shall become the lag device if all devices are operating. If the lead device runs for 24 hours (adjustable), the lag device with the lowest runtime shall be started and the lead device shall be stopped. This lag device shall then become the lead. Before the switchover occurs, the operator shall be prompted to determine if the switchover is appropriate.

3. On a failure of the lead device as measured by feedback instrumentation (e.g. current switch), the lag device with the lowest runtime shall become the lead and started by the BMS system. The original lead device shall be disabled and a critical alarm shall be generated.

I. Operation Of On/Off Valves Equipped With Limit Switches

1. The valve shall stroke in the direction of the command. If the valve has not reached the command position as measured by the appropriated position switch within the required stroking time, a critical alarm shall annunciate at the BMS workstation.

J. Loss of Power or Control Signal to Plant Valve Actuator

1. Upon loss of electrical power or control signal serving Chilled Water Plant control valves, valves shall remain at their last commanded state prior to incident. An alarm will be reported to the BMS.

K. Loss of Power or Control Signal to Spring Return Damper Actuators:

1. Upon loss of electrical power or control signal serving spring return damper actuators, actuators shall be positioned in their “normally open” or “normally closed” failsafe position.

L. System Digital Inputs

1. All digital inputs shall be provided with latching relays to remain at last commanded state.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 230993

SECTION 23 23 00 - REFRIGERANT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes refrigerant piping, valves and refrigerant accessories used for air-conditioning applications.

1.3 DEFINITIONS

A. ASTM: American Society for Testing and Materials

B. Terminology: As defined in ASTM B828, " Standard Practice for Making Capillary Joints by Soldering of Copper and Copper Alloy Tube and Fittings"

C. Terminology: As defined in ASTM B31.5, " Refrigeration Piping and Heat Transfer Components"

1.4 PERFORMANCE REQUIREMENTS

A. Line Test Pressure for Refrigerant R-410A:

1. Suction Lines for Air-Conditioning Applications: 300 psig.
2. Suction Lines for Heat-Pump Applications: 535 psig.
3. Hot-Gas and Liquid Lines: 535 psig.

1.5 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of valve and refrigerant piping specialty indicated. Include pressure drop, based on manufacturer's test data, for the following:

1. Thermostatic expansion valves.
2. Solenoid valves.
3. Hot-gas bypass valves.
4. Filter dryers.
5. Strainers.
6. Pressure-regulating valves.
7. Receivers.
8. Miscellaneous specialties and accessories

C. Shop Drawings: Show layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes, flow capacities, valve arrangements and locations, slopes of horizontal runs, oil traps, double risers, wall and floor penetrations, and equipment connection details. Show interface and spatial relationships between piping and equipment.

1. Shop Drawing Scale: 1/4 inch equals 1 foot.
2. Refrigerant piping indicated on Drawings is schematic only. Size piping and design actual piping layout, including oil traps, double risers, specialties, and pipe and tube sizes to accommodate, as a minimum, equipment provided, elevation difference between compressor and evaporator, and length of piping to ensure proper operation and compliance with warranties of connected equipment.

D. Product Data: Catalog cuts giving general assembly of specialties and data including load capacity.

E. Welding certificates.

F. Field quality-control test reports.

G. Operation and Maintenance Data: For refrigerant valves and piping specialties to include in maintenance manuals, including assembly views, instructions for changing cartridges, and spare parts list.

1.6 SYSTEM DESCRIPTION

A. Where more than one piping system material is specified ensure system components are compatible and joined to ensure the integrity of the system is not jeopardized. Provide necessary joining fittings. Ensure flanges, union, dielectric unions, and couplings for servicing are consistently provided.

B. Provide pipe hangers and supports in accordance with ASTM unless indicated otherwise.

C. Refrigerant Charging (Packed Angle) Valve: Use in liquid line between receiver shut-off valve and expansion valve.

D. Pressure Relief Valves: Install on ASME receivers. Discharge piped to outdoors.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Welding: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

C. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."

D. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."

1.8 PRODUCT STORAGE AND HANDLING

A. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed. Dehydrated and charge components such as piping and receivers, seal prior to shipment, and maintain seal until connected into system.

1.9 COORDINATION

A. Coordinate size and location of roof curbs, equipment supports, and roof penetrations.

1.10 QUALIFICATIONS

A. Design piping system under direct supervision of a Professional Engineer licensed in the State of New York experienced in design of this work.

1.11 REQUIRED SITE MAERIALS

A. Provide two refrigeration oil test kits each containing everything required to conduct one test.

B. Provide two filter-dryer cartridges of each type.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

A. Copper Tube: ASTM B 280, Type ACR.

B. Wrought-Copper Fittings: ASME B16.22.

C. Wrought-Copper Unions: ASME B16.22.

D. Brazing Filler Metals: AWS A5.8, BCuP silver/phosphorus/copper alloy with melting range 1190 to 1480 deg F.

E. Flexible Connectors:

1. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.
2. End Connections: Socket ends.
3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
4. Pressure Rating: Factory test at minimum 500 psig.
5. Maximum Operating Temperature: 250 deg F.

2.2 REFRIGERANTS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Atofina Chemicals, Inc.
2. DuPont Company; Fluorochemicals Div.
3. Honeywell, Inc.; Genetron Refrigerants.
4. INEOS Fluor Americas LLC.
5. Or approved equal.

B. ASHRAE 34, R-410A: Pentafluoroethane/Difluoromethane.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 PIPING APPLICATIONS FOR REFRIGERANT R-410A

A. Suction Lines NPS 1-1/2 for Conventional Air-Conditioning Applications: Copper, Type ACR, drawn-temper tubing and wrought-copper fittings with brazed joints.

B. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications: Copper, Type ACR, annealed- or drawn-temper tubing and wrought-copper fittings with brazed joints.

3.3 VALVE AND SPECIALTY APPLICATIONS

A. Install as per manufacturer’s installation guidelines

3.4 PIPING INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.

B. Install refrigerant piping and specialties in accordance with ASHRAE 15 and manufacturers instructions.

C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.

D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.

F. Install piping adjacent to machines to allow service and maintenance.

G. Install piping free of sags and bends.

H. Install fittings for changes in direction and branch connections.

I. Select system components with pressure rating equal to or greater than system operating pressure.

J. Refer to Division 23 Section 230900 "Instrumentation and Control for HVAC".

K. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.

L. Install piping to allow for expansion and contraction without stressing pipe, joints, or connects equipment.

M. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors if valves or equipment requiring maintenance is concealed behind finished surfaces.

N. Install refrigerant piping in protective conduit where installed belowground.

O. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.

P. Slope refrigerant piping as follows:

1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
2. Install horizontal suction lines with a uniform slope downward to compressor.

3. Install traps and double risers to entrain oil in vertical runs.
4. Liquid lines may be installed level.

Q. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.

R. Before installation of steel refrigerant piping, clean pipe and fittings using the following procedures:

1. Shot blast the interior of piping.
2. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through tubing by means of a wire or electrician's tape.
3. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
4. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
5. Finally, draw a clean, dry, lintless cloth through the tube or pipe.
6. Safety-relief-valve discharge piping is not required to be cleaned but is required to be open to allow unrestricted flow.

S. Install pipe sleeves at penetrations in exterior walls and floor assemblies.

T. Seal penetrations through fire and smoke barriers according to Section 072700 “Firestopping/Smokeseals."

U. Insulate piping.

V. Install sleeves through floors, walls, or ceilings, sized to permit installation of full-thickness insulation.

W. Seal pipe penetrations through exterior walls according to Section 072700 “Firestopping/Smokeseals" for materials and methods.

X. Identify refrigerant piping and valves according to Section 230553 "Identification for HVAC Piping and Equipment."

3.5 PIPE JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

C. Fill pipe and fittings with an inert gas (nitrogen or carbon dioxide), during brazing or welding, to prevent scale formation.

D. Soldered Joints: Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook."

E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."

1. Use Type BcuP, copper-phosphorus alloy for joining copper socket fittings with copper pipe.
2. Use Type BAg, cadmium-free silver alloy for joining copper with bronze or steel.

F. Threaded Joints: Thread steel pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads unless dry-seal threading is specified.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

G. Steel pipe can be threaded, but threaded joints must be seal brazed or seal welded.

H. Welded Joints: Construct joints according to AWS D10.12/D10.12M.

I. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.6 HANGERS AND SUPPORTS

A. Hanger, support, and anchor products are specified in Division 23 Section 230529 "Hangers and Supports for HVAC Piping and Equipment." Install in accordance with ASTM and M55.

B. Install the following pipe attachments:

1. Adjustable steel clevis hangers for individual horizontal runs less than 20 feet long.
2. Roller hangers and spring hangers for individual horizontal runs 20 feet or longer.
3. Pipe Roller: MSS SP-58, Type 44 for multiple horizontal piping 20 feet or longer, supported on a trapeze.
4. Spring hangers to support vertical runs.
5. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.

C. Install hangers for copper tubing with the following maximum spacing and minimum rod sizes:

1. NPS 1/2: Maximum span, 60 inches; minimum rod size, 1/4 inch.
2. NPS 5/8: Maximum span, 60 inches; minimum rod size, 1/4 inch.
3. NPS 1: Maximum span, 72 inches; minimum rod size, 1/4 inch.
4. NPS 1-1/4: Maximum span, 96 inches; minimum rod size, 3/8 inch.
5. NPS 1-1/2: Maximum span, 96 inches; minimum rod size, 3/8 inch.
6. NPS 2: Maximum span, 96 inches; minimum rod size, 3/8 inch.

D. Support multifloor vertical runs with riser clamps, at least at each floor.

E. Install hangers within 12 inches of each horizontal elbow.

3.7 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.

B. Tests and Inspections:

1. Comply with ASME B31.5, Chapter VI.
2. Test refrigerant piping, specialties, and receivers. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in Part 1 "Performance Requirements" Article.

    a. Fill system with nitrogen to the required test pressure.
    b. System shall maintain test pressure at the manifold gage throughout duration of test.
    c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
    d. Remake leaking joints using new materials, and retest until satisfactory, no leakage, results are achieved.

3.8 SYSTEM CHARGING

A. Charge system using the following procedures:

1. Install core in filter dryers after leak test but before evacuation.
2. Evacuate entire refrigerant system with a vacuum pump to 500 micrometers. If vacuum holds for 12 hours, system is ready for charging.
3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
4. Charge system with a new filter-dryer core in charging line.

3.9 ADJUSTING

A. Adjust thermostatic expansion valve to obtain proper evaporator superheat.

B. Adjust high- and low-pressure switch settings to avoid short cycling in response to fluctuating suction pressure.

C. Adjust set-point temperature of air-conditioning or chilled-water controllers to the system design temperature.

D. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:

1. Open shutoff valves in condenser water circuit.

2. Verify that compressor oil level is correct.
3. Open compressor suction and discharge valves.
4. Open refrigerant valves except bypass valves that are used for other purposes.
5. Check open compressor-motor alignment and verify lubrication for motors and bearings.

E. Replace core of replaceable filter dryer after system has been adjusted and after design flow rates and pressures are established.

END OF SECTION 232300

PAGE INTENTIONALLY LEFT BLANK

SECTION 23 31 13 - METAL DUCTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Single-wall rectangular ducts and fittings.
2. Double-wall rectangular ducts and fittings.
3. Single-wall round ducts and fittings.
4. Double-wall round ducts and fittings.
5. Sheet metal materials.
6. Duct liner.
7. Sealants and gaskets.
8. Hangers and supports.

B. Related Sections:
   1. Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing requirements for metal ducts.
   2. Section 233300 "Air Duct Accessories" for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

1.3 PERFORMANCE REQUIREMENTS

A. Engineering Submittal: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.

B. Structural Performance: Duct hangers and supports and seismic restraints shall withstand the effects of gravity and seismic loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and ASCE/SEI 7.

1. Seismic Hazard Level A: Seismic force to weight ratio, 0.48.
2. Seismic Hazard Level B: Seismic force to weight ratio, 0.30.

3. Seismic Hazard Level C: Seismic force to weight ratio, 0.15.

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of the following products:

1. Liners and adhesives.
2. Sealants and gaskets.
3. Seismic-restraint devices.

C. Shop Drawings:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
2. Factory- and shop-fabricated ducts and fittings.
3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
4. Elevation of top of ducts.
5. Dimensions of main duct runs from building grid lines.
6. Fittings.
7. Reinforcement and spacing.
8. Seam and joint construction.
9. Penetrations through fire-rated and other partitions.
10. Equipment installation based on equipment being used on Project.
11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
12. Hangers and supports, including methods for duct and building attachment, seismic restraints, and vibration isolation.

D. Engineering Submittal:

1. Sheet metal thicknesses.
2. Joint and seam construction and sealing.
3. Reinforcement details and spacing.
4. Materials, fabrication, assembly, and spacing of hangers and supports.
5. Design Calculations: Calculations for selecting hangers and supports.

E. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
2. Suspended ceiling components.
3. Structural members to which duct will be attached.
4. Size and location of initial access modules for acoustical tile.
5. Penetrations of smoke barriers and fire-rated construction.
6. Items penetrating finished ceiling including the following:

a. Lighting fixtures.
b. Air outlets and inlets.
c. Speakers.
d. Sprinklers.
e. Access panels.
f. Perimeter moldings.

F. Welding certificates.

G. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.

C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
3. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.

D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."

E. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1, Section 6.4.4 - "HVAC System Construction and Insulation."

F. Mockups:

1. Before installing duct systems, build mockups representing static-pressure classes in excess of 3-inch wg. Build mockups to comply with the following requirements, using materials indicated for the completed Work:

a. Five transverse joints.
b. One access door(s).
c. Two typical branch connections, each with at least one elbow.
d. Two typical flexible duct or flexible-connector connections for each duct and apparatus.
e. One 90-degree turn(s) with turning vanes.
f. One fire damper(s).
g. Perform leakage tests specified in "Field Quality Control" Article. Revise mockup construction and perform additional tests as required to achieve specified minimum acceptable results.

2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

PART 2 - PRODUCTS

2.1 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.

B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.2 FLUSH FLAT SEAM RECTANGULAR DUCTS AND FITTINGS

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class, except use sheet metal 2 gauge numbers heavier than required for classification with normal standing seam construction.

B. Transverse Joints: Fabricate joints in accordance with transverse joint detail shown on drawings. Provide all joints and seams, smooth, and alighted with no projections. In other aspects conform to SMACNA’s “HVAC Duct Construction Standards” for applicable sealing requirements, duct-support intervals and other provisions.

C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible." Install ducts with longitudinal seams at lop of ducts.

D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 2, "Rectangular Duct Construction," for static-pressure class, applicable

sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

E. Reinforcing: Install vertical stays for interval reinforcement at transverse joints and at 2 foot intervals along run of duct, as follows:

1. Ducts up to 60 inches wide: Provide 1 vertical stay at mid-point of duct.
2. Ducts 61 inches to 90 inches wide: Provide 2 vertical stays at third points of duct.
3. Ducts over 90 inches wide: Provide 3 vertical stays at quarter points of duct.
4. Vertical Stays: 10 USSG galvanized steel, free of burrs and rough edges, with both ends bent and fastened to the top and bottom of ducts.

2.3 SHEET METAL MATERIALS

A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

1. Galvanized Coating Designation: G60 (Z180).
2. Finishes for Surfaces Exposed to View: Mill phosphatized.

C. PVC-Coated, Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

1. Galvanized Coating Designation: G60 (Z180).
2. Minimum Thickness for Factory-Applied PVC Coating: 4 mils (0.10 mm) thick on sheet metal surface of ducts and fittings exposed to corrosive conditions, and minimum 1 mil (0.025 mm) thick on opposite surface.
3. Coating Materials: Acceptable to the Commissioner for use on ducts listed and labeled by an NRTL for compliance with UL 181, Class 1.

D. Carbon-Steel Sheets: Comply with ASTM A 1008/A 1008M, with oiled, matte finish for exposed ducts.

E. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304 or 316, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish shall be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.

F. Aluminum Sheets: Comply with ASTM B 209 (ASTM B 209M) Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.

G. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.

H. Tie Rods: Galvanized steel, 1/4-inch (6-mm) minimum diameter for lengths 36 inches (900 mm) or less; 3/8-inch (10-mm) minimum diameter for lengths longer than 36 inches (900 mm).

2.4 DUCT LINER

A. Fibrous-Glass Duct Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."

1. Product: Subject to compliance with requirements, provide product by one of the following:

a. CertainTeed Corporation; Insulation Group.
b. Johns Manville.
c. Knauf Insulation.
d. Owens Corning.
e. Or approved equal.

2. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
3. Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C 916.

a. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
4. Maximum Thermal Conductivity:
a. Type I, Flexible: 0.27 Btu x in./h x sq. ft. x deg F (0.039 W/m x K) at 75 deg F (24 deg C) mean temperature.
b. Type II, Rigid: 0.23 Btu x in./h x sq. ft. x deg F (0.033 W/m x K) at 75 deg F (24 deg C) mean temperature.

B. Flexible Elastomeric Duct Liner: Preformed, cellular, closed-cell, sheet materials complying with ASTM C 534, Type II, Grade 1; and with NFPA 90A or NFPA 90B.

1. Product: Subject to compliance with product by one of the following:

a. Aeroflex USA Inc.
b. Armacell LLC.
c. Rubatex International, LLC
d. Or approved equal.

2. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
3. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A (Standard for the Installation of Air-Conditioning and Ventilating Systems)

or NFPA 90B (Standard for the Installation of Warm Air Heating and Air-Conditioning Systems).

a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
b. Adhesive shall comply with the testing and product requirements of "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Natural-Fiber Duct Liner: 85 percent cotton, 10 percent borate, and 5 percent polybinding fibers, treated with a microbial growth inhibitor and complying with NFPA 90A or NFPA 90B.

1. Product: Subject to compliance with product by one of the following:

a. Bonded Logic, Inc.
b. Reflectix Inc.
c. The Green Products Company
d. Or approved equal

2. Maximum Thermal Conductivity: 0.24 Btu x in./h x sq. ft. x deg F (0.034 W/m x K) at 75 deg F (24 deg C) mean temperature when tested according to ASTM C 518.
3. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to ASTM E 84; certified by an NRTL.
4. Liner Adhesive: As recommended by insulation manufacturer and complying with NFPA 90A or NFPA 90B.

a. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Insulation Pins and Washers:

1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- (3.5-mm-) diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch (38-mm) galvanized carbon-steel washer.
2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick galvanized steel; with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.

E. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."

1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
3. Butt transverse joints without gaps, and coat joint with adhesive.

4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
6. Apply adhesive coating on longitudinal seams in ducts with air velocity of 2500 fpm (12.7 m/s).
7. Secure liner with mechanical fasteners 4 inches (100 mm) from corners and at intervals not exceeding 12 inches (300 mm) transversely; at 3 inches (75 mm) from transverse joints and at intervals not exceeding 18 inches (450 mm) longitudinally.
8. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:

    a. Fan discharges.
    b. Intervals of lined duct preceding unlined duct.
    c. Upstream edges of transverse joints in ducts where air velocities are higher than 2500 fpm (12.7 m/s) or where indicated.

9. Secure insulation between perforated sheet metal inner duct of same thickness as specified for outer shell. Use mechanical fasteners that maintain inner duct at uniform distance from outer shell without compressing insulation.

    a. Sheet Metal Inner Duct Perforations: 3/32-inch (2.4-mm) diameter, with an overall open area of 23 percent.

10. Terminate inner ducts with buildouts attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated buildouts (metal hat sections) or other buildout means are optional; when used, secure buildouts to duct walls with bolts, screws, rivets, or welds.

2.5 SEALANT AND GASKETS

A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.

B. Two-Part Tape Sealing System:

1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
2. Tape Width: As per manufacturer’s written instructions.
3. Sealant: Modified styrene acrylic.
4. Water resistant.
5. Mold and mildew resistant.
6. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive and negative.
7. Service: Indoor and outdoor.
8. Service Temperature: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).

9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
10. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Water-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Solids Content: Minimum 65 percent.
3. Shore A Hardness: Minimum 20.
4. Water resistant.
5. Mold and mildew resistant.
6. VOC: Maximum 75 g/L (less water).
7. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive and negative.
8. Service: Indoor or outdoor.
9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

D. Solvent-Based Joint and Seam Sealant:

1. Application Method: Brush on.
2. Base: Synthetic rubber resin.
3. Solvent: Toluene and heptane.
4. Solids Content: Minimum 60 percent.
5. Shore A Hardness: Minimum 60.
6. Water resistant.
7. Mold and mildew resistant.
8. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
9. VOC: Maximum 395 g/L.
10. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive or negative.
11. Service: Indoor or outdoor.
12. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

E. Flanged Joint Sealant: Comply with ASTM C 920.

1. General: Single-component, acid-curing, silicone, elastomeric.
2. Type: S.
3. Grade: NS.
4. Class: 25.
5. Use: O.
6. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

F. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

G. Round Duct Joint O-Ring Seals:

1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg (0.14 L/s per sq. m at 250 Pa) and shall be rated for 10-inch wg (2500-Pa) static-pressure class, positive or negative.
2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

2.6 HANGERS AND SUPPORTS

A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.

B. Hanger Rods for Corrosive Environments: Electrogalvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.

C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1 (Table 5-1M), "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."

D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603 (Standard Specification for Metallic-Coated Steel Structural Wire Rope).

E. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492 (Standard Specification for Stainless Steel Rope Wire).

F. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

H. Trapeze and Riser Supports:

1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

2.7 FIRE BARRIER DUCT WRAP

A. Fire Barrier Wrap: Comply with ASTM E2336 (Standard Test Methods for Fire Resistive Grease Duct Enclosure Systems)

1. Product: Subject to compliance with product by one of the following:

a. Duct Wrap 615+, 3M.
b. Fyre Wrap Elite 1.5, Unifrax
c. Fire Master by Thermal Ceramics

d. Or approved equal

2. Installation shall be in strict accordance with the manufacturer's written instructions and as shown on contract documents. The duct wrap shall be high temperature fibrous thermal insulation blanket encapsulated in a fiber glass reinforced aluminized polyester foil. Duct wrap density shall be nominal 6 pcf and have a 1.5" nominal thickness. The blanket shall have a continuous use limit of 1832 F. The blanket thermal resistance at ambient temperature shall be minimum 6.3 F-ft^2 hr/BTU. Smoke developed index and flame spread index of the bare blanket, and of the foil encapsulated blanket shall be 0/0. The foil encapsulation shall be bonded to core blanket material.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 DUCT INSTALLATION

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.

B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.

C. Install round ducts in maximum practical lengths.

D. Install ducts with fewest possible joints.

E. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.

F. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.

G. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

H. Install ducts with a clearance of 1 inch (25 mm), plus allowance for insulation thickness.

I. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.

J. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches (38 mm).

K. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Section 233300 "Air Duct Accessories" for fire and smoke dampers.

L. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."

3.3 INSTALLATION OF EXPOSED DUCTWORK

A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.

B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.

C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.

D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.

E. Restore or replace damaged sections and finished work that does not comply with these requirements.

3.4 INSTALLATION OF DUCTS OUTDOORS

A. Ducts shall be made completely watertight.

B. Construct ducts as follows to assure water run-off.

1. Arrange standing seams so as not to act as dams.
2. Erect ducts with longitudinal seams at bottom of duct.
3. Slope entire top of duct down towards side.
4. Provide vertical struts within duct to bow tap panels of duct into convex shape.
5. Erect ducts with mastic sealant within sheet metal joints.

3.5 DUCT SEALING

A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

B. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":

1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
2. Outdoor, Supply-Air Ducts: Seal Class A.
3. Outdoor, Exhaust Ducts: Seal Class C.
4. Outdoor, Return-Air Ducts: Seal Class C.
5. Unconditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg (500 Pa) and Lower: Seal Class B.
6. Unconditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg (500 Pa): Seal Class A.
7. Unconditioned Space, Exhaust Ducts: Seal Class C.
8. Unconditioned Space, Return-Air Ducts: Seal Class B.
9. Conditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg (500 Pa) and Lower: Seal Class C.
10. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg (500 Pa): Seal Class B.
11. Conditioned Space, Exhaust Ducts: Seal Class B.
12. Conditioned Space, Return-Air Ducts: Seal Class C.

3.6 CONNECTIONS

A. Make connections to equipment with flexible connectors complying with Section 233300 "Air Duct Accessories."

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.7 PAINTING

A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Section 099100 “Painting.”

3.8 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Leakage Tests:

1. Comply with SMACNA's "HVAC Air Duct Leakage Test Manual." Submit a test report for each test.
2. Test the following systems:

   a. Ducts with a Pressure Class Higher Than 3-Inch wg (750 Pa): Test representative duct sections totaling no less than 25 percent of total installed duct area for each designated pressure class.

3. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
4. Test for leaks before applying external insulation.
5. Conduct tests at static pressures equal to maximum design pressure of system or section being tested. If static-pressure classes are not indicated, test system at maximum system design pressure. Do not pressurize systems above maximum design operating pressure.
6. Give seven days' advance notice for testing.

C. Duct System Cleanliness Tests:

1. Visually inspect duct system to ensure that no visible contaminants are present.
2. Test sections of metal duct system, chosen randomly by the Commissioner, for cleanliness according to "Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."

a. Acceptable Cleanliness Level: Net weight of debris collected on the filter media shall not exceed 0.75 mg/100 sq. cm.

D. Duct system will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.9 DUCT CLEANING

A. Clean new and existing duct system(s) before testing, adjusting, and balancing.

B. Use service openings for entry and inspection.

1. Create new openings and install access panels appropriate for duct static-pressure class if required for cleaning access. Provide insulated panels for insulated or lined duct. Patch insulation and liner as recommended by duct liner manufacturer. Comply with Section 233300 "Air Duct Accessories" for access panels and doors.
2. Disconnect and reconnect flexible ducts as needed for cleaning and inspection.
3. Remove and reinstall ceiling to gain access during the cleaning process.

C. Particulate Collection and Odor Control:

1. When venting vacuuming system inside the building, use HEPA filtration with 99.97 percent collection efficiency for 0.3-micron-size (or larger) particles.
2. When venting vacuuming system to outdoors, use filter to collect debris removed from HVAC system, and locate exhaust downwind and away from air intakes and other points of entry into building.

D. Clean the following components by removing surface contaminants and deposits:

1. Air outlets and inlets (registers, grilles, and diffusers).
2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.

3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
4. Coils and related components.
5. Return-air ducts, dampers, actuators, and turning vanes except in ceiling plenums and mechanical equipment rooms.
6. Supply-air ducts, dampers, actuators, and turning vanes.
7. Dedicated exhaust and ventilation components and makeup air systems.

E. Mechanical Cleaning Methodology:

1. Clean metal duct systems using mechanical cleaning methods that extract contaminants from within duct systems and remove contaminants from building.
2. Use vacuum-collection devices that are operated continuously during cleaning. Connect vacuum device to downstream end of duct sections so areas being cleaned are under negative pressure.
3. Use mechanical agitation to dislodge debris adhered to interior duct surfaces without damaging integrity of metal ducts, duct liner, or duct accessories.
4. Clean fibrous-glass duct liner with HEPA vacuuming equipment; do not permit duct liner to get wet. Replace fibrous-glass duct liner that is damaged, deteriorated, or delaminated or that has friable material, mold, or fungus growth.
5. Clean coils and coil drain pans according to NADCA 1992. Keep drain pan operational. Rinse coils with clean water to remove latent residues and cleaning materials; comb and straighten fins.
6. Provide drainage and cleanup for wash-down procedures.
7. Antimicrobial Agents and Coatings: Apply EPA-registered antimicrobial agents if fungus is present. Apply antimicrobial agents according to manufacturer's written instructions after removal of surface deposits and debris.

3.10 START UP

A. Air Balance: Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC."

3.11 DUCT SCHEDULE

A. Fabricate ducts with galvanized sheet steel except as otherwise indicated and as follows:

B. Supply Ducts:

1. Ducts Connected to Constant-Volume Air-Handling Units:

a. Pressure Class: Positive 3-inch wg (750 Pa).
b. Minimum SMACNA Seal Class: A.
c. SMACNA Leakage Class for Rectangular: 12.

2. Ducts Connected to Variable-Air-Volume Air-Handling Units:

a. Pressure Class: Positive 4-inch wg (1000 Pa).
b. Minimum SMACNA Seal Class: A.
c. SMACNA Leakage Class for Rectangular: 6.

3. Ducts Connected to Equipment Not Listed Above:

a. Pressure Class: Positive 4-inch wg (1000 Pa).
b. Minimum SMACNA Seal Class: A.
c. SMACNA Leakage Class for Rectangular: 6.

C. Return Ducts:

1. Ducts Connected to Air-Handling Units:

a. Pressure Class: Positive or negative 3-inch wg (750 Pa).
b. Minimum SMACNA Seal Class: A.
c. SMACNA Leakage Class for Rectangular: 12.

2. Ducts Connected to Equipment Not Listed Above:

a. Pressure Class: Positive or negative 4-inch wg (1000 Pa).
b. Minimum SMACNA Seal Class: A.
c. SMACNA Leakage Class for Rectangular: 6.

D. Intermediate Reinforcement:

1. Galvanized-Steel Ducts: Galvanized steel.
2. PVC-Coated Ducts:

a. Exposed to Airstream: Match duct material.
b. Not Exposed to Airstream: Match duct material.

3. Stainless-Steel Ducts:

a. Exposed to Airstream: Match duct material.
b. Not Exposed to Airstream: Match duct material.

4. Aluminum Ducts: Aluminum or galvanized sheet steel coated with zinc chromate.

E. Liner:

1. Supply Air Ducts: Fibrous glass, Type I, 1 inch (25 mm) thick.
2. Return Air Ducts: Fibrous glass, Type I, 1 inch (25 mm) thick.

F. Elbow Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."

a. Velocity 1000 fpm (5 m/s) or Lower:

1) Radius Type RE 1 with minimum 0.5 radius-to-diameter ratio.
2) Mitered Type RE 4 without vanes.

b. Velocity 1000 to 1500 fpm (5 to 7.6 m/s):

1) Radius Type RE 1 with minimum 1.0 radius-to-diameter ratio.
2) Radius Type RE 3 with minimum 0.5 radius-to-diameter ratio and two vanes.
3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."

c. Velocity 1500 fpm (7.6 m/s) or Higher:

1) Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
2) Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
3) Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."

2. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-2, "Rectangular Elbows."

a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.
c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-3, "Vanes and Vane Runners," and Figure 4-4, "Vane Support in Elbows."

G. Branch Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 4-6, "Branch Connection."

a. Rectangular Main to Rectangular Branch: 45-degree entry.
b. Rectangular Main to Round Branch: Spin in.

END OF SECTION 233113

PAGE INTENTIONALLY LEFT BLANK

SECTION 23 33 00 - AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Backdraft and pressure relief dampers.
2. Barometric relief dampers.
3. Manual volume dampers.
4. Control dampers.
5. Fire dampers.
6. Ceiling dampers.
7. Smoke dampers.
8. Combination fire and smoke dampers.
9. Flange connectors.
10. Turning vanes.
11. Duct-mounted access doors.
12. Flexible connectors.
13. Flexible ducts.
14. Duct accessory hardware.
15. Wire mesh grilles.
16. Louvers.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated.
   1. Performance: Show compliance with pressure drops or specific requirements noted.
   2. Provide manufacturer's installation instructions.
   3. For duct silencers/sound attenuators, include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.

C. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.

1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:

a. Special fittings.
b. Manual volume damper installations.
c. Control damper installations.
d. Fire-damper, smoke-damper, combination fire- and smoke-damper, ceiling, and corridor damper installations, including sleeves; and duct-mounted access doors and remote damper operators.
e. Duct security bars.
f. Wiring Diagrams: For power, signal, and control wiring.

2. Duct silencers/sound attenuators:

a. Connection details, manufacturer's installation instructions and installation requirements to maintain integrity of sound isolation.
b. Test reports indicating dynamic insertion loss and noise generation values of silencers/attenuators.

D. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.

E. Source quality-control reports.

F. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

C. Comply with AMCA 500-D (Laboratory Methods of Testing Dampers for Rating) testing for damper rating.

D. Demonstrate resetting of fire dampers to Commissioner.

E. Fire and smoke dampers shall be approved UL 555S.

1.5 REQUIRED SITE INVENTORY

A. Furnish required site materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fusible Links: Furnish quantity equal to 10 percent of amount installed.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.

1. Galvanized Coating Designation: G60 (Z180).
2. Exposed-Surface Finish: Mill phosphatized.

C. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304, and having a No. 2 finish for concealed ducts and No. 2 finish for exposed ducts.

D. Aluminum Sheets: Comply with ASTM B 209 (ASTM B 209M), Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.

E. Extruded Aluminum: Comply with ASTM B 221 (ASTM B 221M), Alloy 6063, Temper T6.

F. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.

G. Tie Rods: Galvanized steel, 1/4-inch (6-mm) minimum diameter for lengths 36 inches (900 mm) or less; 3/8-inch (10-mm) minimum diameter for lengths longer than 36 inches (900 mm).

2.2 BACKDRAFT AND PRESSURE RELIEF DAMPERS

A. Description: Gravity balanced.

B. Maximum Air Velocity: 2000 fpm (10 m/s).

C. Maximum System Pressure: 2-inch wg (0.5 kPa).

D. Frame: 0.052-inch- (1.3-mm-) thick, galvanized sheet steel, with welded corners.

E. Blades: Multiple single-piece blades, center-pivoted, maximum 6-inch (150-mm) width, 0.025-inch- (0.6-mm-) thick, roll-formed aluminum with sealed edges.

F. Blade Action: Parallel.

G. Blade Seals: Neoprene, mechanically locked.

H. Blade Axles:

1. Material: Nonferrous metal.
2. Diameter: 0.20 inch (5 mm).

I. Tie Bars and Brackets: Aluminum.

J. Return Spring: Adjustable tension.

K. Bearings: Steel ball or synthetic pivot bushings.

L. Accessories:

1. Adjustment device to permit setting for varying differential static pressure.
2. Counterweights and spring-assist kits for vertical airflow installations.
3. Electric actuators.
4. Chain pulls.
5. Screen Mounting: Front mounted in sleeve.
    a. Sleeve Thickness: 20-gage (1.0-mm) minimum.
    b. Sleeve Length: 6 inches (152 mm) minimum.
6. Screen Mounting: Rear mounted.
7. Screen Material: Galvanized steel.
8. Screen Type: Bird.
9. 90-degree stops.

M. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. American Warming and Ventilating; a division of Mestek, Inc.
3. Duro Dyne Inc.
4. Greenheck Fan Corporation.
5. Ruskin Company.
6. Vent Products Company, Inc.
7. Pottorf.
8. Or approved equal.

2.3 BAROMETRIC RELIEF DAMPERS

A. Suitable for horizontal or vertical mounting.

B. Maximum Air Velocity: 2500 fpm (13 m/s).

C. Maximum System Pressure: 2-inch wg (0.5 kPa).

D. Frame: 0.064-inch- (1.6-mm-) thick, galvanized sheet steel, with welded corners.

E. Blades:

1. Multiple, 0.025-inch- (0.6-mm-) thick, roll-formed aluminum.
2. Maximum Width: 6 inches (150 mm).
3. Action: Parallel.
4. Balance: Gravity.
5. Eccentrically pivoted.

F. Blade Seals: Neoprene.

G. Blade Axles: Galvanized steel.

H. Tie Bars and Brackets:

1. Material: Aluminum.
2. Rattle free with 90-degree stop.

I. Return Spring: Adjustable tension.

J. Bearings: Synthetic.

K. Accessories:

1. Flange on intake.
2. Adjustment device to permit setting for varying differential static pressures.

L. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. American Warming and Ventilating; a division of Mestek, Inc.
3. Duro Dyne Inc.
4. Greenheck Fan Corporation.
5. Ruskin Company.
6. Vent Products Company, Inc.
7. Pottorf.
8. Or approved equal.

2.4 MANUAL VOLUME DAMPERS

A. Standard, Steel, Manual Volume Dampers:

1. Standard leakage rating, with linkage outside airstream.
2. Suitable for horizontal or vertical applications.
3. Frames:

a. Hat-shaped, galvanized-steel channels, 0.064-inch (1.62-mm) minimum thickness.
b. Mitered and welded corners.
c. Flanges for attaching to walls and flangeless frames for installing in ducts.

4. Blades:

a. Single blade up to 6 inches blade width; multiple blades for width over 6 inches.
b. Opposed-blade design for multiple blades dampers.
c. Round or oval ducts: butterfly type.
d. Stiffen damper blades for stability.
e. Galvanized-steel, 0.064 inch (1.62 mm) thick.

5. Blade Axles: Galvanized steel Stainless steel Nonferrous metal.
6. Bearings:

a. Molded synthetic.
b. Dampers in ducts with pressure classes of 3-inch wg (750 Pa) or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

7. Tie Bars and Brackets: Galvanized steel.

8. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Air Balance Inc.; a division of Mestek, Inc.
b. American Warming and Ventilating; a division of Mestek, Inc.
c. McGill AirFlow LLC.
d. Ruskin Company.
e. Vent Products Company, Inc.
f. Pottorf.
g. Or approved equal.

B. Standard, Aluminum, Manual Volume Dampers:

1. Standard leakage rating, with linkage outside airstream.
2. Suitable for horizontal or vertical applications.
3. Frames: Hat-shaped, 0.10-inch- (2.5-mm-) thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.
4. Blades:

a. Single blade up to 6 inches blade width; multiple blades for width over 6 inches.
b. Opposed-blade design for multiple blades dampers.
c. Stiffen damper blades for stability.
d. Roll-Formed Aluminum Blades: 0.10-inch- (2.5-mm-) thick aluminum sheet.
e. Extruded-Aluminum Blades: 0.050-inch- (1.2-mm-) thick extruded aluminum.

5. Blade Axles: Nonferrous metal.
6. Bearings:

a. Molded synthetic.

b. Dampers in ducts with pressure classes of 3-inch wg (750 Pa) or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

7. Tie Bars and Brackets: Aluminum.

8. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Air Balance Inc.; a division of Mestek, Inc.
b. American Warming and Ventilating; a division of Mestek, Inc.
c. McGill AirFlow LLC.
d. Ruskin Company.
e. Vent Products Company, Inc.
f. Pottorf.
g. Or approved equal.

C. Low-Leakage, Steel, Manual Volume Dampers:

1. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
2. Suitable for horizontal or vertical applications.
3. Frames:

a. Hat shaped.
b. Galvanized-steel channels, 0.064 inch (1.62 mm) thick.
c. Mitered and welded corners.
d. Flanges for attaching to walls and flangeless frames for installing in ducts.

4. Blades:

a. Single blade up to 6 inches blade width; multiple blades for width over 6 inches.
b. Opposed-blade design for multiple blades dampers.
c. Stiffen damper blades for stability.
d. Galvanized, roll-formed steel, 0.064 inch (1.62 mm) thick.

5. Blade Axles: Nonferrous metal.
6. Bearings:

a. Molded synthetic.
b. Dampers in ducts with pressure classes of 3-inch wg (750 Pa) or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

7. Blade Seals: Neoprene.
8. Jamb Seals: Cambered aluminum.
9. Tie Bars and Brackets: Galvanized steel.
10. Accessories:

a. Include locking device to hold dampers in a fixed position without vibration.

11. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Air Balance Inc.; a division of Mestek, Inc.
    b. American Warming and Ventilating; a division of Mestek, Inc.
    c. McGill AirFlow LLC.
    d. Ruskin Company.
    e. Vent Products Company, Inc.
    f. Or approved equal.

D. Low-Leakage, Aluminum, Manual Volume Dampers:

1. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.
2. Suitable for horizontal or vertical applications.
3. Frames: Hat-shaped, 0.10-inch- (2.5-mm-) thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.
4. Blades:

    a. Single blade up to 6 inches blade width; multiple blades for width over 6 inches.
    b. Opposed-blade design for multiple blades dampers.
    c. Roll-Formed Aluminum Blades: 0.10-inch- (2.5-mm-) thick aluminum sheet.
    d. Extruded-Aluminum Blades: 0.050-inch- (1.2-mm-) thick extruded aluminum.

5. Blade Axles: Galvanized steel.
6. Bearings:

    a. Molded synthetic.
    b. Dampers in ducts with pressure classes of 3-inch wg (750 Pa) or less shall have axles full length of damper blades and bearings at both ends of operating shaft.

7. Blade Seals: Neoprene.
8. Jamb Seals: Cambered stainless steel.
9. Tie Bars and Brackets: Galvanized steel.
10. Accessories:

    a. Include locking device to hold dampers in a fixed position without vibration.

11. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Air Balance Inc.; a division of Mestek, Inc.
    b. American Warming and Ventilating; a division of Mestek, Inc.
    c. McGill AirFlow LLC.
    d. Ruskin Company.
    e. Vent Products Company, Inc.
    f. Or approved equal.

E. Jackshaft:

1. Size: 1-inch (25-mm) diameter.
2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.

F. Damper Hardware:

1. Zinc-plated, die-cast core with quadrant and lever handle made of 3/32-inch- (2.4-mm-) thick zinc-plated steel, and a lockscrew.
2. Include center hole to suit damper operating-rod size.
3. Include elevated platform to clear insulation for insulated duct mounting.

2.5 CONTROL DAMPERS

A. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.

B. Frames:

1. Hat shaped.
2. Galvanized-steel channels, 0.064 inch (1.62 mm) thick.
3. Mitered and welded corners.

C. Blades:

1. Multiple blades with maximum blade width of 8 inches (200 mm).
2. Opposed-blade design.
3. Galvanized steel.
4. 0.064 inch (1.62 mm) thick.
5. Blade Edging: Closed-cell neoprene edging.
6. Blade Edging: Inflatable seal blade edging, or replaceable rubber seals.

D. Blade Axles: 1/2-inch- (13-mm-) diameter; nonferrous metal; blade-linkage hardware of zinc-plated steel and brass; ends sealed against blade bearings.

1. Operating Temperature Range: From minus 40 to plus 200 deg F (minus 40 to plus 93 deg C).

E. Bearings:

1. Molded synthetic.
2. Dampers in ducts with pressure classes of 3-inch wg (750 Pa) or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
3. Thrust bearings at each end of every blade.

F. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Warming and Ventilating; a division of Mestek, Inc.
2. Arrow United Industries; a division of Mestek, Inc.
3. Duro Dyne Inc.
4. McGill AirFlow LLC.
5. Ruskin Company.
6. Vent Products Company, Inc.
7. Young Regulator Company.
8. Pottorf.
9. Or approved equal.

2.6 FIRE DAMPERS

A. Type: Static and dynamic; UL listed and rated and labeled according to UL 555 by an NRTL. Conformance with NFPA 90A and applicable codes and standards of New York City Department of Buildings.

B. Closing rating in ducts up to 4-inch wg (1-kPa) static pressure class and minimum 4000-fpm (20-m/s) velocity.

C. Fire Rating: 1-1/2 hours.

D. Frame: Multiple-blade type; fabricated with roll-formed, 0.034-inch- (0.85-mm-) thick galvanized steel; with mitered and interlocking corners.

E. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.

1. Minimum Thickness: 0.052 or 0.138 inch (1.3 or 3.5 mm) thick, as indicated, and of length to suit application.
2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.

F. Mounting Orientation: Dynamic spring closure type, vertical or horizontal as indicated.

1. Horizontal ducts: May be gravity drop type.
2. Vertical ducts: Spring loaded type.

G. Blades: Roll-formed, interlocking, 0.034-inch- (0.85-mm-) thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- (0.85-mm-) thick, galvanized-steel blade connectors. Where installed in stainless steel or aluminum ductwork, use Type 304 stainless steel.

H. Horizontal Dampers: Include blade lock and stainless-steel closure spring.

I. Heat-Responsive Device: Electric resettable link and switch package, factory installed, 165 deg F (74 deg C) rated.

J. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. Arrow United Industries; a division of Mestek, Inc.
3. McGill AirFlow LLC.
4. Pottorff; a division of PCI Industries, Inc.
5. Ruskin Company.
6. Or approved equal.

2.7 CEILING DAMPERS

A. General Requirements:

1. Labeled according to UL 555C by an NRTL.
2. Comply with construction details for tested floor- and roof-ceiling assemblies as indicated in UL's "Fire Resistance Directory."

B. Frame: Galvanized sheet steel, round or rectangular, style to suit ceiling construction.

C. Blades: Galvanized sheet steel with refractory insulation.

D. Heat-Responsive Device: Replaceable, 165 deg F (74 deg C) rated, fusible links.

E. Fire Rating: 2 hours.

F. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. Cesco Products; a division of Mestek, Inc.
3. Ruskin Company.
4. Vent Products Company, Inc.
5. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
6. Pottorf.
7. Or approved equal.

2.8 SMOKE DAMPERS

A. General Requirements: Label according to UL 555S by an NRTL.

B. Smoke Detector: Integral, factory wired for single-point connection.

C. Frame: Multiple-blade type; fabricated with roll-formed, 0.034-inch- (0.85-mm-) thick galvanized steel; with mitered and interlocking corners.

D. Blades: Roll-formed, horizontal, interlocking, 0.034-inch- (0.85-mm-) thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- (0.85-mm-) thick, galvanized-steel blade connectors.

E. Leakage: Class I.

F. Rated pressure and velocity to exceed design airflow conditions.

G. Mounting Sleeve: Factory-installed, 0.052-inch- (1.3-mm-) thick, galvanized sheet steel; length to suit wall or floor application with factory-furnished silicone calking.

H. Damper Motors: Modulating or two-position action.

I. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 23 Section 230900 "Instrumentation and Control for HVAC."
3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 150 in. x lbf (17 N x m).
5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F (minus 40 deg C).
6. Nonspring-Return Motors: For dampers larger than 25 sq. ft. (2.3 sq. m), size motor for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 300 in. x lbf (34 N x m).
7. Electrical Connection: 115 V, single phase, 60 Hz.

J. Accessories:
1. Test and reset switches, damper mounted.

K. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. Ruskin Company.
3. Pottorf.
4. Or approved equal.

2.9 COMBINATION FIRE AND SMOKE DAMPERS

A. Type: Static and dynamic; rated and labeled according to UL 555 and UL 555S by an NRTL.

B. Closing rating in ducts up to 4-inch wg (1-kPa) static pressure class and minimum 4000-fpm (20-m/s) velocity.

C. Fire Rating: 1-1/2 and 3 hours.

D. Frame: Multiple-blade type; fabricated with roll-formed, 0.034-inch- (0.85-mm-) thick galvanized steel; with mitered and interlocking corners.

E. Heat-Responsive Device: Electric resettable link and switch package, factory installed, rated. Conform to NFPA 90A and NFPA 92A for fire and smoke dampers.

F. Smoke Detector: Integral, factory wired for single-point connection.

G. Blades: Roll-formed, horizontal, interlocking, 0.034-inch- (0.85-mm-) thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch- (0.85-mm-) thick, galvanized-steel blade connectors.

H. Leakage: Minimum UL Class II metal to metal, non-degradable, seals rated to 850°F.

I. Rated pressure and velocity to exceed design airflow conditions.

J. Mounting Sleeve: Factory-installed, 0.052-inch- (1.3-mm-) thick, galvanized sheet steel; length to suit wall or floor application with factory-furnished silicone calking Operator located exterior of sleeve.

K. Master control panel for use in dynamic smoke-management systems.

L. Damper Motors: Modulating or two-position action.

M. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 23 230513 Section "Common Motor Requirements for HVAC Equipment."

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 23 Section 230900 "Instrumentation and Control for HVAC."
3. Permanent-Split-Capacitor or Shaded-Pole Motors: With oil-immersed and sealed gear trains.
4. Spring-Return Motors: Equip with an integral spiral-spring mechanism where indicated. Enclose entire spring mechanism in a removable housing designed for service or adjustments. Size for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 150 in. x lbf (17 N x m).
5. Outdoor Motors and Motors in Outdoor-Air Intakes: Equip with O-ring gaskets designed to make motors weatherproof. Equip motors with internal heaters to permit normal operation at minus 40 deg F (minus 40 deg C).
6. Nonspring-Return Motors: For dampers larger than 25 sq. ft. (2.3 sq. m), size motor for running torque rating of 150 in. x lbf (17 N x m) and breakaway torque rating of 300 in. x lbf (34 N x m).
7. Electrical Connection: 115 V, single phase, 60 Hz.
8. For outdoor dampers, provide damper with internal actuator. Contractor to increase the duct size to accommodate the reduction of the free area due to internal actuator.

N. Accessories:

1. Test and reset switches, damper mounted.

O. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. Ruskin Company.
3. Pottorf.
4. Or approved equal.

2.10 FLANGE CONNECTORS

A. Description: Add-on or roll-formed, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.

B. Material: Galvanized steel or aluminum to match duct material.

C. Gage and Shape: Match connecting ductwork.

D. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ductmate Industries, Inc.
2. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
3. Ductsox.
4. Or approved equal.

2.11 TURNING VANES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ductmate Industries, Inc.
2. Duro Dyne Inc.
3. METALAIRE, Inc.
4. Or approved equal.

B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized steel, aluminum or stainless steel sheet, to match duct material; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.

1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.

C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.

D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; "Vanes and Vane Runners," and "Vane Support in Elbows."

E. Vane Construction: Double wall.

2.12 DUCT-MOUNTED ACCESS DOORS

A. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; "Duct Access Doors and Panels," and "Access Panels - Round Duct."

1. Door:

a. Double wall, rectangular.
b. Sheet metal, to match duct material, with insulation fill and thickness as indicated for duct pressure class.
c. Vision panel.
d. Hinges and Latches: 2-by-2-inch (50-by-50-mm) butt or piano hinge and cam latches.
e. Fabricate doors airtight and suitable for duct pressure class.
f. Size: Not less than 16 inches by 14 inches. Ducts less than 16 inches in height, install with one dimension 16 inches and other dimension 2 inches less than duct width. Install larger sized doors where required for access.

2. Frame: Same material as door, with bend-over tabs and foam gaskets.
3. Number of Hinges and Locks:

a. Access Doors Less Than 12 Inches (300 mm) Square: No hinges and two sash locks.
b. Access Doors up to 18 Inches (460 mm) Square: Two hinges and two sash locks.
c. Access Doors up to 24 by 48 Inches (600 by 1200 mm): Three hinges and two compression latches.
d. Access Doors Larger Than 24 by 48 Inches (600 by 1200 mm): Four hinges and two compression latches with outside and inside handles.

B. Pressure Relief Access Door:

1. Door and Frame Material: Sheet steel, to match duct material.
2. Door: Double wall with insulation fill with metal thickness applicable for duct pressure class.
3. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.
4. Factory set at 10-inch wg (2500 Pa).
5. Doors close when pressures are within set-point range.
6. Hinge: Continuous piano.
7. Latches: Cam.
8. Seal: Neoprene or foam rubber.
9. Insulation Fill: 1-inch- (25-mm-) thick, fibrous-glass or polystyrene-foam board.

C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Warming and Ventilating; a division of Mestek, Inc.
2. Ductmate Industries, Inc.
3. McGill AirFlow LLC.
4. Pottorff; a division of PCI Industries, Inc.
5. Ventfabrics, Inc.
6. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
7. Or approved equal.

2.13 DUCT ACCESS PANEL ASSEMBLIES

A. Labeled according to UL 1978 by an NRTL.

B. Panel and Frame: Minimum thickness 0.0528-inch (1.3-mm) carbon steel.

C. Fasteners: Carbon steel. Panel fasteners shall not penetrate duct wall.

D. Gasket: Comply with NFPA 96; grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F (1093 deg C).

E. Minimum Pressure Rating: 10-inch wg (2500 Pa), positive or negative.

F. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ductmate Industries, Inc.
2. Flame Gard, Inc.
3. 3M.
4. Or approved equal.

2.14 FLEXIBLE CONNECTORS

A. Materials: Flame-retardant or noncombustible fabrics.

B. Coatings and Adhesives: Comply with UL 181, Class 1.

C. Metal-Edged Connectors: Factory fabricated with a fabric strip 3-1/2 inches (89 mm) wide attached to 2 strips of 2-3/4-inch- (70-mm-) wide, 0.028-inch- (0.7-mm-) thick, galvanized sheet steel or 0.032-inch- (0.8-mm-) thick aluminum sheets. Provide metal compatible with connected ducts.

D. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.

1. Minimum Weight: 30 oz./sq. yd. (880 g/sq. m).
2. Tensile Strength: 480 lbf/inch (84 N/mm) in the warp and 360 lbf/inch (63 N/mm) in the filling.

3. Service Temperature: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).

E. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.

1. Minimum Weight: 30 oz./sq. yd. (810 g/sq. m).
2. Tensile Strength: 530 lbf/inch (93 N/mm) in the warp and 440 lbf/inch (77 N/mm) in the filling.
3. Service Temperature: Minus 50 to plus 250 deg F (Minus 45 to plus 121 deg C).

F. High-Temperature System, Flexible Connectors: Glass fabric coated with silicone rubber.

1. Minimum Weight: 16 oz./sq. yd. (542 g/sq. m).
2. Tensile Strength: 285 lbf/inch (50 N/mm) in the warp and 185 lbf/inch (32 N/mm) in the filling.
3. Service Temperature: Minus 67 to plus 500 deg F (Minus 55 to plus 260 deg C).

G. High-Corrosive-Environment System, Flexible Connectors: Glass fabric with chemical-resistant coating.

1. Minimum Weight: 14 oz./sq. yd. (474 g/sq. m).
2. Tensile Strength: 450 lbf/inch (79 N/mm) in the warp and 340 lbf/inch (60 N/mm) in the filling.
3. Service Temperature: Minus 67 to plus 500 deg F (Minus 55 to plus 260 deg C).

H. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.

1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
2. Outdoor Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch (6-mm) movement at start and stop.

I. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Ductmate Industries, Inc.
2. Duro Dyne Inc.
3. Ventfabrics, Inc.
4. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
5. Or approved equal.

2.15 WIRE MESH GRILLES

A. Construction: 1/2 inch (12.5 mm) mesh screen with 1 inch (2.5 mm) sheet metal frame, bolted to flanged duct connection.

B. Materials:

1. Screen: Minimum 18 gauge galvanized steel.
2. Frame: Minimum 0.040 inch (1.02 mm) thick galvanized sheet steel.
3. Bolts and nuts: Indoors, galvanized steel; exposed to weather, stainless steel.

2.16 LOUVERS

A. Connect to louvers furnished under General Construction work.

B. Tested in accordance with AMCA Standard 500 and provided with AMCA Certified Rating Seal.

C. Material: Extruded aluminum; comply with ASTM B 221 (ASTM B 221M), Alloy 6063 T 5, with anodized finish.

D. Frame: Minimum 0.071 inch (1.8 mm) thick extruded aluminum, with welded corners and mounting flange. Mounting arrangement shall be suitable for installation in particular building construction.

E. Blades: 4 inch (100 mm) deep stationary blades, minimum 0.071 inch (1.8 mm) thick extruded aluminum, welded to frame for a complete welded assembly.

1. Set at 45° angle, with 50 percent free area.
2. Stormproof, double drainage type blade configuration.
3. Performance: Water penetration shall be not more than 0.01 oz/sq ft at 950 ft/min.

F. Screen: Aluminum wire, 0.5 inch (12.5 mm) mesh in a removable frame.

1. Bolted to interior face of louver.
2. Secured on interior of louver with 2 inch space.

G. Blank-off panels: Provide for unused portion of louvers.

1. Double wall construction. Inner and outer casing: 0.032 inch (0.8 mm) thick aluminum.
2. Internal insulation: 2 inch (50 mm) thick glass fiber, per SMACNA Duct Construction Standards.

H. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Airolite Co.
2. Arrow United Industries.
3. Carnes Co.

4. Ruskin Co.
5. Or approved equal.

2.17 DUCT ACCESSORY HARDWARE

A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.

B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing the execution.

3.2 INSTALLATION

A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.

B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.

C. Install backdraft dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.

D. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts and as indicated. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.

1. Install volume dampers at the following locations:

a. At all splits, except grease exhaust ducts.
b. In ducts serving single supply, return and exhaust outlets.
c. In open return ducts above ceiling.
d. In ducts connecting to a common plenum.
e. Where indicated on drawings and in details.
f. Where required for balancing.

2. Install remote damper operators for volume dampers above ceilings which are non-accessible or without access panels.

3. Install steel volume dampers in steel ducts.
4. Install aluminum volume dampers in aluminum ducts.
5. Do not install volume dampers in grease ducts.

E. Set dampers to fully open position before testing, adjusting, and balancing.

F. Install test holes at fan inlets and outlets and elsewhere as indicated and in ductwork where required for testing and adjusting.

G. Install fire and smoke dampers according to UL listing in ducts and openings in the following:

1. Shaft walls.
2. Floors and ceilings.
3. Fire walls.
4. Fire resistance partitions.
5. Fire rated ceilings.
6. Exit corridor walls.
7. Elsewhere as indicated on drawings.

H. Install duct security bars. Construct duct security bars from 0.164-inch (4.18-mm) steel sleeve, continuously welded at all joints and 1/2-inch- (13-mm-) diameter steel bars, 6 inches (150 mm) o.c. in each direction in center of sleeve. Weld each bar to steel sleeve and each crossing bar. Weld 2-1/2-by-2-1/2-by-1/4-inch (63-by-63-by-6-mm) steel angle to 4 sides and both ends of sleeve. Connect duct security bars to ducts with flexible connections. Provide 12-by-12-inch (300-by-300-mm) hinged access panel with cam lock in duct in each side of sleeve.

I. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:

1. On both sides of duct coils.
2. Upstreamand downstream from duct filters.
3. At outdoor-air intakes and mixed-air plenums.
4. At drain pans and seals.
5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
7. At each change in direction and at maximum 50-foot (15-m) spacing.
8. Upstream from turning vanes.
9. Upstream or downstream from duct silencers.
10. Control devices requiring inspection, including smoke detection heads.
11. At fan bearings enclosed in ducts.
12. Inlet side of each single width centrifugal fan.
13. At inlet and outlet sides of each in-line centrifugal and axial fan.
14. At duct humidifiers.

J. Install access doors with swing against duct static pressure.

K. Access Door Sizes:

1. One-Hand or Inspection Access: 8 by 5 inches (200 by 125 mm).
2. Two-Hand Access: 12 by 6 inches (300 by 150 mm).
3. Head and Hand Access: 18 by 12 inches (460 by 300 mm).
4. Head and Shoulders Access: 21 by 14 inches (530 by 355 mm).
5. Body Access: 25 by 14 inches (635 by 355 mm).
6. Body plus Ladder Access: 25 by 17 inches (635 by 430 mm).

L. Label access doors according to Division 23 Section 230553 "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.

M. Install flexible connectors at duct connections to equipment, at building expansion joints, at connections between ducts of dissimilar metals and at penetrations of mechanical equipment room walls.
1. Install flexible connections with 2 inches slack in fabric and minimum movement of 1 inch.

N. For fans developing static pressures of 5-inch wg (1250 Pa) and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.

O. Connect terminal units to supply ducts directly or with maximum 12-inch (300-mm) lengths of flexible duct. Do not use flexible ducts to change directions.

P. Connect diffusers or light troffer boots to ducts directly or with maximum 18-inch (460-mm) lengths of flexible duct clamped or strapped in place.

Q. Connect flexible ducts to metal ducts with adhesive plus sheet metal screws. Attach to supply air duct with low entrance lass, bellmouth type connector at air inlet end.

R. Install duct test holes where required for testing and balancing purposes.

S. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch (6-mm) movement during start and stop of fans.

T. Install wire mesh screen grilles at return air ducts in hung ceilings and in other places where indicated. Bolt grilles to flanged connections or ducts at terminations.

U. Install louvers in building construction at locations where indicated. Coordinate mounting details with particular building construction and/or window framing details. Install blank-off panels at unused portions of louvers; secured with bolts and/or screws.

V. Air Flow Measuring Stations
1. Install air flow measuring stations where indicated, or as directed by Commissioner.
2. Install all interconnecting tubing between measuring station, companion meter and control systems, in accordance with the manufacturer’s printed instructions.

W. Install air blenders in accordance with the manufacturer's recommendations.

3.3 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors and verify that purpose of access door can be performed.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
4. Inspect turning vanes for proper and secure installation.
5. Operate remote damper operators to verify full range of movement of operator and damper.

3.4 MANUFACTURER'S FIELD SERVICES

A. Provide services of an AABC testing agency to take noise measurements. Use meters meeting requirements of ASA 47 (ANSI S1.4).

B. After start-up, and final corrections and balancing of systems, take octave band sound measurements over full audio frequency range in areas adjacent to mechanical equipment rooms, duct and pipe shafts, and other critical locations, as directed.

C. Provide one-third octave band measurements of artificial sound sources in areas indicated as having critical requirements.

D. Submit complete report of test results including sound curves.

END OF SECTION 233300

SECTION 23 34 23 - HVAC POWER VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following:
   1. Centrifugal roof ventilators.
   2. Axial roof ventilators.
   3. Upblast propeller roof exhaust fans.
   4. Centrifugal wall ventilators.
   5. Ceiling-mounting ventilators.
   6. In-line centrifugal fans.
   7. Propeller fans.

1.3 PERFORMANCE REQUIREMENTS

A. Project Altitude: Base fan-performance ratings on actual Project site elevations.

B. Operating Limits: Classify according to AMCA 99.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated and include the following:

   1. Certified fan performance curves with system operating conditions indicated.
   2. Certified fan sound-power ratings.
   3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
   4. Material thickness and finishes, including color charts.
   5. Dampers, including housings, linkages, and operators.
   6. Roof curbs.
   7. Fan speed controllers.

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, and control wiring.
2. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
3. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to structure and to supported equipment. Include auxiliary motor slides and rails, and base weights.

D. Coordination Drawings: Reflected ceiling plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Roof framing and support members relative to duct penetrations.
2. Ceiling suspension assembly members.
3. Size and location of initial access modules for acoustical tile.
4. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

E. System Effect calculations: Since all fans are tested in accordance with AMCA standards and data catalogued consists of fan capacity (CFM at external static pressure) while connected to straight inlet and discharge duct conditions, the vendor is responsible for calculating the "System Effect" pressure drop of inlet and discharge connections to the ducts shown on the drawings. This static pressure will be added to the external static pressure of the fan and the submitted fan, fan accessories and fan curve shall indicate the rpm, dfm, bhp, tip speed and other required capacity data to be corrected to account for the "System Effect" pressure drop and for a minimum 5% or higher belt drive losses based upon the size and number of V-belts required for the fan sheaves in the selection of the actual motor horse power to provide.

F. Field quality-control test reports.

G. Operation and Maintenance Data: For power ventilators to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to The City of New York and marked for intended use.

C. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.

D. AMCA Compliance: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210, “Laboratory methods of Testing Fans for Rating.” Label fans with the AMCA Certified Ratings Seal..

E. American Society for Testing Materials (ASTM): Standard E84, Surface Burning Characteristics of Building Materials.

F. National Fire Protection Association (NFPA): Standard 255, Test Methods, Surface Burning Characteristics of Building Materials.

G. NEMA Compliance: Motors and electrical accessories shall comply with NEMA standards.

H. UL Standard: Power ventilators shall comply with UL 705.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver fans as factory-assembled unit, to the extent allowable by shipping limitations, with protective crating and covering.

B. Disassemble and reassemble units, as required for moving to final location, according to manufacturer's written instructions.

C. Lift and support units with manufacturer's designated lifting or supporting points.

D. Protect motors, shafts, and bearings from weather and construction dust. Comply with manufacturer’s wheel and motor rotation schedule for extended storage.

1.7 COORDINATION

A. Coordinate size and location of structural-steel support members. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 03 00 50 “Concrete Work.”

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations.

1.8 REQUIRED MATERIALS

A. Furnish required materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Belts: One set(s) for each belt-driven unit.

PART 2 - PRODUCTS

2.1 General

A. Units furnished shall be complete with all components assembled. All features considered standard by the manufacturer and which are required to complete the system, and to make it functional, shall be included without respect to specific detailing in these specifications.

B. A specific configuration of the duct at each unit has been indicated on the drawings based on required discharge and intake requirements. If the configuration of the units furnished on the project differs from that indicated on the drawings (whether or not the units furnished are scheduled units or a listed manufacturer), it shall be the Contractor's responsibility to modify duct, etc. as required to accommodate the actual configuration of units furnished on the project.

C. Low leakage motorized backdraft dampers: The fan manufacturer shall provide ultra low leakage type motorized backdraft dampers as indicated on the plans. Frames shall not be less than 0.093 inch (2.3 mm) thick stainless steel. Blades must not be over (8 inches) wide not less than stainless steel roll formed with edge seals. Bearing shall be ball bearing or nylon with ½" shafts. Side seals shall be stainless steel of the tight-seal spring type. Dampers and seals shall be suitable for temperature ranges of 40°F to 200°F. Dampers shall be minimum (ultra-low leakage) leakage type to conserve energy and the manufacturer shall submit leakage and flow characteristic data for all backdraft dampers with the fan manufacturer temperature control submitted. Maximum leakage shall be 0.07% at static pressure of 3 inches of WC.

D. Preview safety disconnects shall be mounted on the fans at the fan motor with flexible conduit and shall conform to requirements of Division 26. Roof mounted fans with three phase motors shall have NEMA-3R disconnects pre-wired.

E. Three phase motors 1 ½ hp and larger shall be TEFC premium plus high efficiency.

F. Furnish and install curb mounted outside air intake hoods, exhaust fan discharge air hoods, relief hoods, and curb mounted rook exhaust fans on roof curbs where indicated on the drawings.
   1. Openings in roof and supporting miscellaneous steel and structural framing as required for support of all roof mounted outside air intake hoods, roof mounted relief hoods, roof mounted discharge hoods for ceiling exhaust fans, and roof mounted exhaust fans shall be by the Contractor.
   2. HVAC Subcontractor must furnish to the Contractor exact curb outside dimensions, exact roof opening sizes and dimensioned location of roof curbs on roof.
   3. Roof curbs for aluminum fans shall be minimum 36 tall, factory pre-fabricated all welded aluminum construction, factory insulated with built in cant, 1 ½" by 1 ½" wolmanized and fire treated wooded nailer strip, 1 1/2" wide by 1/8" thick neoprene full perimeter curb gasket. Roof curbs shall be furnished with damper trays for ease of mounting damper and duct connection. Roof curbs for galvanized steel fans shall be same as for aluminum curbs, except factory pre-fabricated all welded galvanized construction.
   4. Where fans are installed on sloping roofs, the fan manufacturer shall provide a roof curb that matches the roof slop or curvature to allow the fan to be installed level and shall be responsible for coordination with Architectural drawings for exact roof slop and for flashing and sealing details.

5. Where fans are installed on standing seam metal sloping roofs, the standing seam metal roofing manufacturer shall provide the roof curb.
   a. The standing seam metal roofing manufacturer shall provide a 12" high insulated, welded, galvanized, steel roof curb with 1 ½" by 1 ½" wolmanized and fire treated wooden nailer strip for all roof mounted outside air intake goods, roof mounted discharge hoods for ceiling exhaust fans, roof mounted exhaust fans to match slope and roofing material corrugations and standing seam configuration. Roofing manufacturer must coordinate with Architectural drawings for exact roof slope and for flashing sealing details.
   b. Roofing manufacturer must coordinate with HVAC Subcontractor for exact curb outside dimensions, exact backdraft damper tray opening and dimensions, and exact roof opening size for fans furnished by the contractor.
   c. Contractor must install roof curbs in manner as recommended by standing seam metal roofing manufacturer furnished on the project and as detailed by the Commissioner.

2.2 CENTRIFUGAL ROOF VENTILATORS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Aerovent; a Twin City Fan Company.
   2. Carnes Company HVAC.
   3. Greenheck.
   4. Hartzell Fan, Inc.
   5. Jenco Fan; Div. of Breidert Air Products.
   6. Loren Cook Company.
   7. Penn Ventilation.
   8. Or Approved Equal

B. Description: Direct- or belt-driven centrifugal fans consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, curb base, and accessories.

   1. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.

C. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.

D. Belt-Driven Drive Assembly: Resiliently mounted to housing, with the following features:

   1. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
   2. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
   3. Fan and motor isolated from exhaust airstream.
   4. Pulleys: Cast-iron, adjustable-pitch motor pulley.
      a. Fan pulley: Fixed pitch diameter.
      b. Motor pulley: Variable pitch diameter for use with motors up to 5 hp; Fixed pitch diameter for larger motors and for fans with solid state speed controllers. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.

5. Belts: Oil resistant, non-sparking, non-static, notch grip construction; matched sets for multiple belt drives.

E. Accessories:

1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.
2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside or outside fan housing, factory wired through an internal aluminum conduit.
3. Bird Screens: Removable, 1/2-inch mesh, aluminum or brass wire.
4. Dampers: Counterbalanced, rattle free, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.
5. Motorized Dampers: Parallel-blade dampers mounted in curb base with electric actuator; wired to close when fan stops.
6. Configuration: Built-in cant and mounting flange.
7. Overall Height: 36 inches.
8. Sound Curb: Curb with sound-absorbing insulation matrix.
9. Pitch Mounting: Manufacture curb for roof slope.
10. Metal Liner: Aluminum.
11. Mounting Pedestal: Galvanized steel with removable access panel.
12. Vented Curb: Unlined with louvered vents in vertical sides.

F. Characteristics:
1. Drive Arrangement: Direct or Belt drive, refer to fan schedules.
2. Damper: Yes.

2.3 UPBLAST PROPELLER ROOF EXHAUST FANS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Aerovent; a Twin City Fan Company.
2. Carnes Company HVAC.
3. Greenheck.
4. Hartzell Fan, Inc.
5. Industrial Air; a division of Lau Industries, Inc.
6. Jenco Fan; Div. of Breidert Air Products.
7. Loren Cook Company.
8. New York Blower Company (The).
9. Penn Ventilation.
10. Or Approved Equal

B. Description: Direct- or belt-driven propeller fans consisting of housing, wheel, butterfly-type discharge damper, fan shaft, bearings, motor and disconnect switch, drive assembly, curb base, and accessories.

C. Wind Band, Fan Housing, and Base: Reinforced and braced aluminum, containing aluminum butterfly dampers and rain trough, motor and drive assembly, and fan wheel.

1. Damper Rods: Steel with bronze or nylon bearings.

2. Hinged Subbase: Galvanized-steel hinged arrangement permitting service and maintenance.

D. Fan Wheel: Replaceable, extruded-aluminum, airfoil blades fastened to cast-aluminum hub; factory set pitch angle of blades.

E. Belt-Driven Drive Assembly: Resiliently mounted to housing; weatherproof housing of same material as fan housing with the following features:

1. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
2. Shaft Bearings: Prelubricated and sealed, self-aligning, pillow-block-type ball bearings.
3. Pulleys: Cast-iron, adjustable-pitch motor pulley.
   a. Fan pulley: Fixed pitch diameter.
   b. Motor pulley: Variable pitch diameter for use with motors up to 5 hp; Fixed pitch diameter for larger motors and for fans with solid state speed controllers. Select pulley so pitch adjustment is at the middle of adjustment range at fan design conditions.
4. Belts: Oil resistant, non-sparking, non-static, notch grip construction; matches, etc. for multiple belt drives.
5. Motor Mount: On outside of fan cabinet, adjustable base for belt tensioning.

F. Roof Curbs: Aluminum; mitered and welded corners; 1-1/2-inch- thick, rigid, fiberglass insulation adhered to inside walls, damper tray and 1-1/2-inch woodnailer, and neoprene curb sealing gasket. Size as required to suit roof opening and fan base.

1. Configuration: Built-in cant and mounting flange.
2. Overall Height: 36 inches.
3. Sound Curb: Curb with sound-absorbing insulation matrix.
4. Pitch Mounting: Manufacture curb for roof slope.
5. Metal Liner: Galvanized steel.
6. Mounting Pedestal: Galvanized steel with removable access panel.

G. Characteristics:
1. Drive Arrangement: Direct or Belt drive.
2. Damper: Yes.

H. Special Applications:
1. Smoke Exhaust Fans:
   a. Up-blast type, all steel construction, with heat slinger wheel and seal.
   b. High temperature bearings and bearing grease.
   c. Motor and belt outside of air stream with insulated belt housing.
   d. Bifurcated housing for direct drive motor outside of air stream.
   e. U.L. 792 listed for high temperature operation and duration, i.e. 1,000°F (538°C) with minimum operation of 15 minutes and 500°F (260°C) with 4 hours minimum operation.
   f. Ultra-low leakage motorized back-draft damper.
   g. Inlet bell with debris screen.
   h. Flexible electrical connector with pre-wired NEMA 3R disconnect switch.

I. Comply with requirements in Section 23 05 13 "Common Motor Requirements for HVAC Equipment."

J. Enclosure Type: Totally enclosed, fan cooled.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Install power ventilators level and plumb.

B. Vibration- and seismic-control devices are specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

1. Secure vibration and seismic controls to concrete bases using anchor bolts cast in concrete base.

C. Install floor-mounting units on concrete bases. Concrete, reinforcement, and formwork requirements are specified in Section 03 30 00 "Cast-in-Place Concrete."

D. Install floor-mounting units on concrete bases designed to withstand, without damage to equipment, the seismic force required by code. Concrete, reinforcement, and formwork requirements are specified in Section 03 30 00 "Cast-in-Place Concrete."

E. Secure roof-mounting fans to roof curbs with stainless steel hardware.
1. Contractor shall coordinate all required roof openings with the existing roof structure and shall provide a roof opening shop drawing with the required roof openings dimensioned and sized for the General Contractor to frame out and provide roof openings. Refer to structural plans for required roof opening framing.
2. Roof curbs shall be furnished and located by the Contractor.
3. Secure unit curb cap to roof curb with stainless steel or cadmium-plated screws a maximum of 12” on center minimum four per side.
4. All roof-mounted equipment must be properly secured to the building structure to withstand local Coastal Windstorm criteria, i.e., minimum 114 MPH hurricane force winds or required seismic criteria.

F. Support suspended units from structure using threaded steel rods. Vibration-control devices are specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC Piping and Equipment."

G. Install units with clearances for service and maintenance.

H. Label units according to requirements specified in Section 23 05 53 "Identification for HVAC Piping and Equipment."

3.3 CONNECTIONS

A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 23 33 00 "Air Duct Accessories."

B. Install ducts adjacent to power ventilators to allow service and maintenance.

C. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

D. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Verify that shipping, blocking, and bracing are removed.
2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
3. Verify that cleaning and adjusting are complete.
4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
5. Adjust belt tension.
6. Adjust damper linkages for proper damper operation.
7. Verify lubrication for bearings and other moving parts.
8. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
9. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
10. Shut unit down and reconnect automatic temperature-control operators.
11. Remove and replace malfunctioning units and retest as specified above.

B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.5 ADJUSTING

A. Adjust damper linkages for proper damper operation.

B. Adjust belt tension and align motor belt drive sheaves with fan sheaves.

C. Refer to Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.

D. Replace fan and motor pulleys as required to achieve design airflow.

E. Lubricate bearings.

END OF SECTION 233423

SECTION 23 36 00 - AIR TERMINAL UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following:

1. Constant volume single-duct air terminal units.
2. Variable air volume single-duct air terminal units.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated, include rated capacities, furnished specialties, sound-power ratings, and accessories.

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, required clearances, materials used in fabrication, method of field assembly, components, and location and size of each field connection.

1. Include a schedule showing unique model designation, room location, model number, size, and accessories furnished.
2. Wiring Diagrams: Power, signal, and control wiring and differentiate between factory-installed and field-installed wiring.
3. Include catalog performance ratings which indicate air flow, static pressure and NC designation.
4. Include a schedule listing discharge and radiated sound power levels, for each unit, of second to sixth octave band at inlet static pressure of 1 to 4 in. w.g. NC data alone will not be acceptable.

D. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Ceiling suspension assembly members.

2. Method of attaching hangers to building structure.
3. Size and location of initial access modules for acoustical tile.
4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

E. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions, include the following:

1. Instructions for resetting minimum and maximum air volumes.
2. Instructions for adjusting software set points.
3. Directions for resetting constant volume regulators.
4. Parts list for each type of air terminal unit and troubleshooting maintenance guide.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Product Options: Drawings indicate size, profiles, and dimensional requirements of air terminal units and are based on the specific system indicated.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner, and marked for intended use.

D. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

E. NFPA Compliance: Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

F. Air terminal units shall be certified under AIR Standard 880-98 (Air Conditioning & Refrigeration Institute 1998 Standard for Air Terminals) certification program and carry the ARI seal.

G. Air terminal unit lining shall meet UL 181 and NFPA 90A standards.

1.5 COORDINATION

A. Coordinate layout and installation of air terminal units and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

B. Air terminal units shall be equipped with pressure independent direct digital controls supplied by the Control Subcontractor and mounted at the factory by the terminal unit manufacturer.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 CONSTANT VOLUME SINGLE DUCT AIR TERMINAL UNITS

A. Manufacturers:

   1. Anemostat; a Mestek Company.
   2. Carnes.
   3. Krueger.
   4. Titus.
   5. Trane co. (The); Worldwide Applied systems Group.
   6. Tuttle & Bailey.
   7. Or approved equal.

B. Configuration: Volume-damper assembly inside unit casing with control components located inside a protective metal enclosure.

C. Casing: 0.034-inch galvanized steel.

   1. Casing Lining 1-inch thick, coated, fibrous-glass duct liner complying with ASTM C 1071; secured with adhesive. Cover liner with nonporous foil and perforated metal.
   2. Air Inlets: Round stub connections of S-slip and drive connections for duct attachment.
   3. Air Outlet: S=slip and drive connections.
   4. Access: Removable panels for access to dampers and other parts requiring service, adjustment, or maintenance; with airtight gasket.
   5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.

   1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 6-inch wg inlet static pressure.
   2. Damper Position: Normally open.

E. Electronic Controls: Bidirectional damper operator and microprocessor-based thermostat with integral airflow transducer and room sensor shall be compatible with temperature controls specified in Section 230900 “Instrumentation and Control for HVAC.” And shall have the following features:

   1. Damper Actuator: 24 V, powered closed.

2. Velocity Controller: Cross flow type factory calibrated to indicated air volumes, field adjustable. Shall maintain constant airflow within 5 percent of set point while compensating for inlet static-pressure variations up to 4-inch wg; and shall have a multipoint, velocity sensor. Locate velocity sensors in air inlet and air outlet.

F. Direct Digital Controls: Single-package unitary controller and actuator specified in Section 230900 "Instrumentation and Control for HVAC."

2.3 VARIABLE AIR VOLUME SINGLE DUCT AIR TERMINAL UNITS

A. Manufacturers:

1. Anemostat; a Mestek Company.
2. Carnes.
3. Krueger.
4. Titus.
5. Trane co. (The); Worldwide Applied systems Group.
6. Tuttle & Bailey.
7. Or approved equal.

B. Configuration: Volume-damper assembly inside unit casing with control components located inside a protective metal enclosure.

C. Casing: 0.034-inch galvanized steel.
1. Casing Lining: 1-inch thick, coated, fibrous-glass duct liner complying with ASTM C 1071; secured with adhesive. Cover liner with nonporous foil and perforated metal.
2. Air Inlets: Round stub connections of S-slip and drive connections for duct attachments.
3. Air Outlet: S-slip and drive connections.
4. Access: Removable panels for access to dampers and other parts requiring service, adjustment, or maintenance; with airtight gasket.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

D. Volume Damper: Galvanized steel with peripheral gasket and self-lubricating bearings.
1. Maximum Damper Leakage: ARI 880 rated, 2 percent of nominal airflow at 3-inch wg inlet static pressure.
2. Damper Position: Refer to control sequences

E. Electric Heating Coil: Slip-in-type, open-coil design with integral control box factory wired and installed. Include the following features:

F. Electronic Controls: Bidirectional damper operator and microprocessor-based thermostat with integral airflow transducer and room sensor shall be compatible with temperature controls specified in Section 030900 "Instrumentation and Control for HVAC." And shall have the following features:

1. Damper Actuator: 24 V.
2. Velocity controller: cross flow type, factory calibrated to minimum and maximum air volumes, field adjustable at thermostat; shall maintain constant airflow dictated by

thermostat within 5 percent of set point while compensating for inlet static-pressure variations up to 4-inch wg (1000 Pa); and shall have a multipoint velocity sensor. Locate velocity sensors in air inlet and air outlet.

3. Thermostat: Wall-mounting electronic type with the flowing features:

    a. Proportional, plus integral control of room temperature.
    b. Time-proportional reheat-coil control.
    c. Temperature set-point display in Fahrenheit and Celsius.
    d. Auxiliary switch shall energize heating control circuit.
    e. Changeover thermistor shall reverse action.

G. Direct Digital Controls: Bidirectional damper operators and microprocessor-based controller and room sensor shall be compatible with temperature controls specified in Section 230900 "Instrumentation and Control for HVAC" and shall have the following features:

1. Damper Actuator: 24 V.
2. Terminal Unit Controller: Pressure-independent, variable-air-volume controller with electronic airflow transducer with multipoint cross flow type velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes, and having the following features:

    a. Proportional, plus integral control of room temperature.
    b. Time-proportional reheat-coil control.
    c. Occupied and unoccupied operating mode.
    d. Remote reset of airflow or temperature set points.
    e. Adjusting and monitoring with portable terminal.
    f. Communication with temperature-control system specified in Section 230900 "Instrumentation and Control for HVAC."

3. Room Sensor: Wall mounting, with temperature set-point adjustment and access for connection of portable operator terminal.

H. Control Sequence:

1. Suitable for operation with duct pressures between 0.25- and 3.0-inch wg (60- and 750-Pa) inlet static pressure.
2. Control modulating damper to maintain vary supply air flow to maintain room temperature.
3. Wall mounting thermostat with temperature set-point adjustment.

2.4 SOURCE QUALITY CONTROL

A. Identification: Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, coil type, and ARI certification seal.

B. Verification of Performance: Rate air terminal units according to ARI 880.

C. Noise Levels at noted capacities: Units tested in accordance with ASHRAE Standard 36B or ADC, with ratings tabulated for inlet pressure of 3 in, 1 3/4 in, 1 1/2 in, and minimum static pressure.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Install air terminal units level and plumb. Maintain sufficient clearance for normal service and maintenance.

B. Provide sound lining downstream of units for a minimum of 5 ft. or as recommended by unit manufacturer to maintain scheduled NC levels.

C. Maintain sufficient clearance for normal service and maintenance.

D. Coordinate access through ceilings with respective trades.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to air terminal units to allow service and maintenance.

C. Connect ducts to air terminal units according to Section 233113 "Metal Ducts."

D. Ground units with electric heating coils according to Section 260526 "Grounding and Bonding for Electrical Systems."

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

F. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections Report results in writing.

B. Perform the following field tests and inspections and prepare test reports:

1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
2. Leak Test: After installation, fill water coils and test for leaks. Patch leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Remove and replace malfunctioning units, controls and equipment, and retest as specified above.

3.5 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions and do the following:

a. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.
b. Verify that controls and control enclosure are accessible.
c. Verify that control connections are complete.
d. Verify that nameplate and identification tag are visible.
e. Verify that controls respond to inputs as specified.

3.6 INSTRUCTION

A. Engage a factory-authorized service representative to instruct City of New York operating personnel to adjust, operate, and maintain air terminal units. Refer to DDC General Conditions.

END OF SECTION 233600

PAGE INTENTIONALLY LEFT BLANK

SECTION 23 37 13 - DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Rectangular and square ceiling diffusers.
2. Fixed face registers and grilles.
3. Linear bar grilles.

B. Related Sections:

1. Division 23 Section 233300 "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated, include the following:

1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.

C. Samples for Initial Selection: For diffusers, registers, and grilles with factory-applied color finishes.

D. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.

E. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:

1. Ceiling suspension assembly members.
2. Method of attaching hangers to building structure.
3. Size and location of initial access modules for acoustical tile.
4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
5. Duct access panels.

F. Source quality-control reports.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Test and rate performance of air outlets and inlets in accordance with ASHRAE 70.

C. Install diffusers, registers, and grilles according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating System."

PART 2 - PRODUCTS

2.1 GENERAL

A. Manufacturer shall examine application of each air inlet and outlet and guarantee that each will provide comfort space conditions without drafts or noise at noted capacities.

B. Noise Level: Noise levels at rated capacities shall not exceed criteria specifies under 1.4 "Quality Assurance."

C. All outlets shall be suitable for operation at 5 percent more and at 25 percent less than noted capacities.

D. Air inlets and outlets for surface mounting shall have a concealed mounting frame, with no mounting screws visible in face frame of outlet and/or plastic frame, unless otherwise noted.

E. Scheduled air outlets shall be as manufactured by the listed manufacturer and shall, to the greatest extent possible, all be manufactured by the same manufacturer.

F. The contractor and vender shall be jointly responsible for all quantity and neck size take-offs and coordination of mounting details with the ceiling, wall, or floor mounting in which it is installed.

G. Air distribution devices shall have unit mounted opposed blade volume dampers operable from the face of the air distribution devices.

H. Diffusers in the same room shall all be the same size and type, except as otherwise indicated.

I. Contractor shall provide all required blank offs for directional pattern throws.

2.2 CEILING DIFFUSERS

A. Rectangular and Square Ceiling Diffusers

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Anemostat Products; a Mestek company.
    b. Krueger.
    c. Nailor.
    d. Titus.
    e. Or approved equal.

2. Devices shall be specifically designed for variable-air-volume flows.
3. Material: Steel (unless indicated otherwise).
4. Finish: Baked enamel, white.
5. Face Size: 24 by 24 inches or 12 by 12 inches as indicated in schedules
6. Face Style: Plaque.
7. Mounting: Surface or T-bar (as coordinated with RCPs).
8. Pattern: Fixed.
9. Dampers: Radial opposed blade.
10. Accessories:

    a. Equalizing grid.
    b. Plaster ring.
    c. Safety chain.
    d. Wire guard.
    e. Sectorizing baffles.
    f. Operating rod extension.

2.3 REGISTERS AND GRILLES

A. Adjustable Bar Register & Grilles:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Anemostat Products; a Mestek company.
    b. Krueger.
    c. Nailor.
    d. Titus.
    e. Or approved equal.

2. Material: Steel, Aluminum or Stainless steel (as indicated in schedules).

3. Finish: Baked enamel, white, for steel or aluminum. Stainless steel shall not be painted.
4. Face Blade Arrangement: Horizontal spaced 3/4 inch apart.
5. Core Construction: Integral.
6. Rear-Blade Arrangement: Vertical spaced 3/4 inch apart.
7. Frame: 1-1/4 inches wide.
8. Mounting: Countersunk screw.
9. Damper Type: Adjustable opposed blade.

2.4 SOURCE QUALITY CONTROL

A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Install diffusers, registers, and grilles level and plumb.

B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Commissioner for a determination of final location.

C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

D. Carefully install all ceiling mounted air distribution devices back pan insulation and vapor barrier. Where pre-molded insulation and vapor barrier is not furnished as an accessory to the air distribution device by the manufacturer the Contractor is responsible for field installation of insulation and vapor barrier for ceiling air distribution device back pans.

E. All visible interior surfaces of all grilles and air device accessories and components visible through the face of the outlet shall be factory painted flat black.

F. Install a manual volume damper in the branch duct to the air distribution device or at the conical bell-mouth spin-in fitting for connection of round flexible duct to the rectangular duct for balancing purposes.

G. Provide all required blank off for directional pattern.

H. Diffusers Utilizing a Plenum Box: Provide plenum box fabricated of 24 USBG galvanized steel, with internal surfaces lined with minimum 1/2 inch thick duct liner as specified under Division 23 Section 233113 "Metal Ducts."

I. Install return and exhaust registers with blades oriented to prevent sight though outlets.

J. Transfer Grilles: Provide 2 grilles, one on each side of wall with connecting sheet metal collar.

K. Transfer Ducts: Provide 2 grilles, one at each end of duct.

L. Air Handling Type Lighting Fixtures:

1. Furnish, install, connect, and balance all air boots for lighting fixtures, as required.
2. Remove air slot covering strip before mounting air boots to lighting fixtures.
3. Install flexible duct connections from branch duct to fixture air boot.
4. Balance and adjust slot air pattern with directional control blades.

3.4 ADJUSTING

A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 233713

PAGE INTENTIONALLY LEFT BLANK

SECTION 23 37 23 - HVAC GRAVITY VENTILATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following types of roof-mounting intake and relief ventilators:

1. Louver penthouses.

B. Related Sections include the following:
1. Specification 233423 "HVAC Power Ventilators" for roof-mounting exhaust fans.

1.3 PERFORMANCE REQUIREMENTS

A. Structural Performance: Intake and relief ventilators shall be capable of withstanding the effects of gravity loads, wind loads, and thermal movements without permanent deformation of components, noise or metal fatigue, or permanent damage to fasteners and anchors.

B. Water Entrainment: Limit water penetration through unit to comply with ASHRAE 62.1-2004.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of product indicated. For louvers specified to bear AMCA seal, include printed catalog pages showing specified models with appropriate AMCA Certified Ratings Seals.

C. Shop Drawings: For intake and relief ventilators. Include plans, elevations, sections, details, and ventilator attachments to curbs and curb attachments to roof structure.

D. Coordination Drawings: Roof framing plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Structural members to which roof curbs and ventilators will be attached.
2. Sizes and locations of roof openings.

E. Samples for Verification: For each type of exposed finish required for intake and relief ventilators.

F. Welding certificates.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Source Limitations: Obtain ventilators through one source from a single manufacturer where indicated to be of same type, design, or factory-applied color finish.

C. Product Options: Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance.

D. Product Options: Drawings indicate size, profiles, and dimensional requirements of intake and relief ventilators and are based on the specific equipment indicated.

1. Do not modify intended aesthetic effects, as judged solely by Commissioner, except with Commissioner's approval. If modifications are proposed, submit comprehensive explanatory data to Commissioner for review.

E. Welding: Qualify procedures and personnel according to the following:

1. AWS D1.2, "Structural Welding Code--Aluminum."
2. AWS D1.3, "Structural Welding Code--Sheet Steel."

1.6 COORDINATION

A. Coordinate installation of roof curbs and roof penetrations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 MATERIALS

A. Aluminum Extrusions: ASTM B 221, Alloy 6063-T5 or T-52.

B. Aluminum Sheet: ASTM B 209, Alloy 3003 or 5005 with temper as required for forming or as otherwise recommended by metal producer for required finish.

C. Fasteners: Same basic metal and alloy as fastened metal or 300 Series stainless steel, unless otherwise indicated. Do not use metals that are incompatible with joined materials.

1. Use types and sizes to suit unit installation conditions.
2. Use hex-head or Phillips pan-head screws for exposed fasteners, unless otherwise indicated.

D. Post-Installed Fasteners for Concrete and Masonry: Torque-controlled expansion anchors, made from stainless-steel components, with capability to sustain, without failure, a load equal to 4 times the loads imposed, for concrete, or 6 times the load imposed, for masonry, as determined by testing per ASTM E 488, conducted by a qualified independent testing agency.

E. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.3 FABRICATION, GENERAL

A. Factory or shop fabricate intake and relief ventilators to minimize field splicing and assembly. Disassemble units to the minimum extent as necessary for shipping and handling. Clearly mark units for reassembly and coordinated installation.

B. Fabricate frames, including integral bases, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

C. Fabricate units with closely fitted joints and exposed connections accurately located and secured.

D. Fabricate supports, anchorages, and accessories required for complete assembly.

E. Perform shop welding by AWS-certified procedures and personnel.

2.4 LOUVER PENTHOUSES

A. Manufacturers:

1. Acme Engineering & Mfg. Corp.
2. Aerovent; a Twin City Fan company.
3. Carnes.
4. Greenheck.
5. JencoFan.
6. Loren Cook Company.

7. Penn Ventilation.
8. Or approved equal

B. Construction: All-welded assembly with 4-inch -deep louvers, mitered corners, and 0.080-inch aluminum sheet roof.

C. Frame and Blade Material and Nominal Thickness: Extruded aluminum, of thickness required to comply with structural performance requirements, but not less than 0.080 inch for frames and 0.080 inch for blades.

1. Blade Spacing: as per manufacturer's design.
2. Blade Angle: as per manufacturer's design
3. Air Performance: Not more than 0.10-inch wg static pressure drop at 700-fpm free-area velocity.
4. AMCA Seal: Mark units with the AMCA Certified Ratings Seal.
5. Exterior Corners: Prefabricated corner units with mitered and welded blades and with mullions at corners.

D. Roof Curbs: Aluminum Sheet; with mitered and welded corners; 1-1/2-inch thick, rigid fiberglass insulation adhered to inside walls; and 1-1/2-inch wood nailer. Size as required to fit roof opening and ventilator base.

1. Configuration: Built-in cant and mounting flange.
2. Overall Height: 36 inches.

E. Bird Screening: Aluminum, 1/2-inch square mesh, 0.063-inch wire.

F. Galvanized-Steel Sheet Finish:

1. Surface Preparation: Clean surfaces of dirt, grease, and other contaminants. Clean welds, mechanical connections, and abraded areas and repair galvanizing according to ASTM A 780. Apply a conversion coating suited to the organic coating to be applied over it.
2. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply an air-dried primer immediately after cleaning and pretreating.
3. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of 1 mil for topcoat and an overall minimum dry film thickness of 2 mils.

a. Color and Gloss: As indicated by manufacturer's designations.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Install intake and relief ventilators level, plumb, and at indicated alignment with adjacent work; make necessary adjustments in position to confirm with architectural features, symmetry, and arrangement.

B. Secure intake and relief ventilators to roof curbs with cadmium-plated hardware. Use concealed anchorages where possible.

C. Install goosenecks on curb base where throat size exceeds 9 by 9 inches.

D. Install intake and relief ventilators with clearances for service and maintenance.

E. Install perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

F. Install concealed gaskets, flashings, joint fillers, and insulation as installation progresses. Comply with Section 079200 "Joint Sealants" for sealants applied during installation.

G. Label intake and relief ventilators according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

H. Protect galvanized and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.

I. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.

3.3 CONNECTIONS

A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories.

3.4 ADJUSTING

A. Adjust damper linkages for proper damper operation.

END OF SECTION 233723

PAGE INTENTIONALLY LEFT BLANK

SECTION 23 41 03 – CARBON MONOXIDE DETECTION SYSTEM WITH ALARM CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes transducers, system controllers, control wiring, and all accessories for a fully functioning carbon monoxide detection system.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data: Include sensing range in ppm, alarm outputs, display range, furnished specialties, installation requirements, and electric power requirements, and wiring diagrams.

C. Shop Drawings: Location and sizes of all field mounted components.

D. Operation and Maintenance Data: For carbon monoxide detection system to include in emergency, operation, and maintenance manuals. Include list and wiring diagrams.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Electrical Components, Devices and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to The City of New York and marked for intended use.

1.5 WARRANTY

A. The manufacturer shall warrant all equipment for 24 months (2 years) from date of manufacturer or manufacturer's representative's final report to the Commissioner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Kidde
   2. Mine Safety Appliances

3. Macurco.
4. Intec.
5. Or Approved Equal.

2.2 CARBON MONOXIDE DETECTION SYSTEM

A. Description: 2 physically distinct continuous carbon monoxide detection systems (one each for each garage) for monitoring the carbon monoxide levels in the area as noted and to notify the relevant BMS to activate and control the purge fans in the alarmed garage for air quality.

B. Carbon Monoxide Detectors: Maintenance free, solid state electronic carbon monoxide detectors. Each detector shall cover a maximum area of 5,000 square feet (465 square meters) and have a life expectancy of 7 to 10 years.

C. Sequence of Operation: Carbon monoxide detection systems shall integrate with the BMS installed in their respective garages, through BACnet/IP Protocol, to notify/alarm the relevant BMS to control operation of purge fans.
1. When carbon monoxide level rises to 50 ppm (adjustable), the CO detection system shall raise an alarm in the relevant BMS. The BMS shall start all of the purge fans in that garage and shall operate them until carbon monoxide levels drop below 35ppm (adjustable) for 10 minutes (adjustable).
2. A high priority alarm will be actuated in the CO detection system and in the relevant BMS in the event that carbon monoxide concentrations reach 150 ppm (adjustable), for more than 5 minutes (adjustable).

2.3 TRANSDUCERS

A. Carbon monoxide to voltage transducers: To measure the level of carbon monoxide and provide information to the system controllers in an analog mode. Voltage transducers shall mount in standard electrical boxes and operate on low voltage.

B. Power: 12 volt DC or 12 volt AC at 0.15 amps.

C. Output Level: 1.0 to 4.0 volts at 10 MA.

D. Sensors: Solid state, supervised.

2.4 SYSTEM CONTROLLERS

A. The system controllers for the CO detection systems' features shall include but not be limited to:
1. Alarm Control Range: 100 to 400 ppm. Maximum.
2. Programmable Alarm Delay: ¼ to 60 minutes.
3. Alarm Turn Off: Immediate.
4. BACnet/IP Protocol Integration (addresses for 2 controllers shall be separate, so the networks can be bridged at a future date. Coordinate addressing with BMS subcontractor)
5. Panels shall bear the UL and ETL Seal of Approval

B. Display: A series of colored LED lights on the panel to provide a continuous display of all system operations.
   1. Bright green: Proper sensor operation.
   2. Yellow flashing: Solid state 2 minute delay period before turning on; continuously when relay closes and fan starts.
   3. Red flashing: Programmed delay period before turning on; continuously when the relay closes and alarm sounds.

C. The system controller's printed circuit board shall allow easy programming of the alarm time delay. This, in conjunction with the alarm threshold control shall allow the controller to meet all standards for safe levels of carbon monoxide including the OSHA TWA and STEL Levels or the Uniform Building Code STEL Level that is satisfied by the 10 percent hemoglobin concentration curve.

D. Calibrated potentiometer inside the control panels shall allow setting of the alarm threshold for all systems sensors.

E. Provide BACnet/IP Protocol integration at indicated location.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Install carbon monoxide detectors at strategically located points throughout parking area and at other points indicated on drawings.

B. Mount carbon monoxide sensors 5 feet above finished floors.

C. Electrical Connections: Comply with requirements in Division 26 sections for power wiring and switches.

D. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."

E. Provide all control and interlock wiring in accordance with manufacturer's instructions.

3.3 START-UP SERVICE

A. Manufacturer's factory-authorized representative shall review and test entire system after it is completed and operating and submit his full report to the Commissioner.

B. Manufacturer's factory-authorized representative shall work in conjunction with contractor to ensure complete operation of BMS alarming and fan control based on CO detection system integration

END OF SECTION 234103

SECTION 23 74 13 - PACKAGED, OUTDOOR, CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes packaged, outdoor, central-station air-handling units (rooftop units) with the following components and accessories:

1. Direct-expansion cooling.
2. Hot-gas reheat.
3. Gas furnace.
4. Economizer outdoor- and return-air damper section.
5. Integral, space temperature controls.
6. Roof curbs.

1.3 DEFINITIONS

A. Refer to DDC General Conditions.

B. DDC: Direct-digital controls.

C. ECM: Electrically commutated motor.

D. Outdoor-Air Refrigerant Coil: Refrigerant coil in the outdoor-air stream to reject heat during cooling operations and to absorb heat during heating operations. "Outdoor air" is defined as the air outside the building or taken from outdoors and not previously circulated through the system.

E. Outdoor-Air Refrigerant-Coil Fan: The outdoor-air refrigerant-coil fan in RTUs. "Outdoor air" is defined as the air outside the building or taken from outdoors and not previously circulated through the system.

F. RTU: Rooftop unit. As used in this Section, this abbreviation means packaged, outdoor, central-station air-handling units. This abbreviation is used regardless of whether the unit is mounted on the roof or on a concrete base on ground.

G. Supply-Air Fan: The fan providing supply air to conditioned space. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.

H. Supply-Air Refrigerant Coil: Refrigerant coil in the supply-air stream to absorb heat (provide cooling) during cooling operations and to reject heat (provide heating) during heating operations. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.

I. VVT: Variable-air volume and temperature.

1.4 PERFORMANCE REQUIREMENTS

A. Engineering Services: Design RTU supports to comply with wind and seismic performance requirements, including comprehensive engineering analysis by a qualified professional engineer licensed in the state of New York, using performance requirements and design criteria indicated.

B. Wind-Restraint Performance:

1. Basic Wind Speed: 15 miles/hr.
2. Building Classification Category: III.
3. Minimum 10 lb/sq. ft multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

C. Seismic Performance: RTUs shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

2. Equipment must have NYC, MEA approval.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data: Include manufacturer's technical data for each RTU, including rated capacities, dimensions, required clearances, characteristics, furnished specialties, and accessories.

C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, safety, and control wiring.

D. Engineering Services Submittal: For RTU supports indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the state of New York responsible for their preparation.

1. Design Calculations: Calculate requirements for selecting vibration isolators and seismic restraints and for designing vibration isolation bases.
2. Detail mounting, securing, and flashing of roof curb to roof structure. Indicate coordinating requirements with roof membrane system.
3. Wind- and Seismic-Restraint Details: Detail fabrication and attachment of wind and seismic restraints and snubbers. Show anchorage details and indicate quantity, diameter, and depth of penetration of anchors.

E. Manufacturer Wind Loading Qualification Certification: Submit certification that specified equipment will withstand wind forces identified in "Performance Requirements" Article and in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculations.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of wind force and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

F. Manufacturer Seismic Qualification Certification: Submit certification that RTUs, accessories, and components will withstand seismic forces defined in "Performance Requirements" Article and in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

G. Coordination Drawings: Plans and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Structural members to which RTUs will be attached.
2. Roof openings
3. Roof curbs and flashing.

H. Field quality-control test reports.

I. Operation and Maintenance Data: Including parts listing, for RTUs to include in emergency, operation, and maintenance manuals.

J. Warranty: Special warranty specified in this Section.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. ARI Compliance:

1. Comply with ARI 210/240 and ARI 340/360 for testing and rating energy efficiencies for RTUs.
2. Comply with ARI 270 for testing and rating sound performance for RTUs.

C. ASHRAE Compliance:

1. Comply with ASHRAE 15 for refrigeration system safety.
2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.
3. Comply with applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."
4. Comply with ASHRAE 90A for energy conservation in new building design.

D. ASHRAE/IESNA 90.1 Latest Edition Compliance: Applicable requirements in the latest edition of ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning."

E. NFPA Compliance: Comply with NFPA 90A and NFPA 90B.

F. UL Compliance: Comply with UL 1995.

G. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to The City of New York, and marked for intended use.

H. Refer to the New York City Energy Conservation Code for minimum efficiency requirements for HVAC equipment installed in new buildings New York City.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace components of RTUs that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: Manufacturer's standard, but not less than five years from date of Substantial Completion.
2. Warranty Period for Gas Furnace Heat Exchangers: Manufacturer's standard, but not less than five years from date of Substantial Completion.
3. Warranty Period for Solid-State Ignition Modules: Manufacturer's standard, but not less than three years from date of Substantial Completion.
4. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

1.8 DELIVERY, STORAGE AND HANDLING

A. Comply with manufacturers installation instructions for rigging, unloading and transporting units.

B. Protect units from physical damage. Leave factory shipping covers in place until installation.

PART 2 - PRODUCTS

2.1 ROOFTOP GAS HEATING UNITS

A. Manufacturers:

1. Trane.
2. Sterling.
3. Reznor.
4. Or approved equal.

B. Units:

1. Units shall be completely factory assembled, piped wired and test fired. All units must contain duct furnaces that are ETL certified and conform to the latest ANSI Standards for safe and efficient performance.
2. Units shall be mounted on metal rails with lifting and anchor holes and shall be suitable for slab or curb mounting.
3. Units shall be able to operate on either natural or LP (propane) gas.
4. Each furnace section firing rate shall be no more than 400 MBH and shall contain its own heat exchanger, flue collector, venting, burners, safety and ignition controls.
5. All units shall be UL certified for electrical safety in compliance with UL 1995 and CAS C22.2 No. 236 safety standard for heating, ventilating and cooling equipment. Standard socket relays shall be socket mounted with terminal block connections.
6. Outside air hoods shall be provide with moisture eliminators with a pressure switch.

C. Air Handling:

1. Centrifugal fan shall be belt driven, forward curved, statically and dynamically balanced with double inlet. The blower wheel shall be fixed on a keyed shaft, supported with in-shear vibration isolators, and ball bearing secured. 7-1/2 through 15 hp motors shall be equipped with pillow block bearing assembly on the drive side.
2. An access interlock switch shall be installed in the blower compartment and will disengage the blower upon removing the service panel. An override shall be incorporated into the interlock switch for serviceability.

D. Factory Installed VFD

1. A Variable Frequency Drive (VFD) shall be provided. The VFD shall be properly sized, factory mounted and wired to the fan motor. The VFD shall provide overload protection and soft start operation. The VFD shall be covered by UL 1995 Standards and manufactured with a NEMA 1 plenum rated enclosure.
2. 3 Speed VFD Relays Factory installed relays shall be provided to energize second and third speed settings. Relay coil will accept 24V, 115V and 230 V.

E. Casing and Jacketing:

1. Double wall cabinet construction shall be provided by the manufacturer on applicable filter / damper, blower, coil and plenum cabinets. Casing and trim pieces shall be

fabricated from 18-gauge steel and finished in air-dry enamel. The construction shall consist of a 24-gauge inner liner wall with 1" 1 1/2 LB density insulation. Insulation shall be fire resistant, odorless, matte faced 1" glass fiber material.

2. Access doors on the specified side will be hinged and of the same double wall design. Furnace sections shall be provided with standard construction.

F. Heat Exchanger:

1. Heat exchanger shall consist of tube sections not lighter than 20-gauge and connecting plates not lighter than 18 gauge. Heat exchanger shall be 100% welded. Material shall be type 409 stainless steel. Stainless steel drip pan shall be provided.
2. Each duct furnace shall have a low pressure drop across the heat exchanger, allowing higher air flow capacities and an 80% eff rating with delta T of 20-60F per furnace.

G. Draft Diverter/Flue Collector:

1. Draft diverter shall be no lighter than 20 gauge.
2. Draft diverter shall be corrosion resistant type 409 stainless steel.
3. Unit shall be provided with power venting. A power vent fan(s) for venting shall be provided. Outside air for combustion and products of combustion shall have individual air inlet and discharge grilles located in the upper section of a split burner service panel.

H. Burners:

1. Gas burner shall be atmospheric type with adjustable combustion air supply on LP units.
2. Burners shall be corrosion resistant type 409 stainless steel.
3. Service access to the burners shall be provided by a side access burner drawer that slides out from the side of the unit. The pilot must be accessible through a pilot access plate without removing the burner assembly.
4. Burners shall be individually removable for ease of inspection and servicing.
5. Gas Burner Safety Controls: Thermo-couple sensor prevents opening of solenoid gas valve until pilot flame is proven and stops gas flow on ignition failure.

I. Filters:

1. Filters shall be 2” pleated media type and shall be easily removable. Filter rack shall be constructed of galvanized steel with access through hinged access door.

J. Dampers:

1. Low leak dampers shall be of the opposed blade type, construction of galvanized steel with neoprene nylon bushings and vinyl blade edge seals, blades to be mechanically interlocked.
2. Rooftop units with 100 percent outdoor air shall contain:

    a. Outside air hood with moisture eliminators and two position spring return damper motor and controls. Motor shall power the damper full open when unit is on, and to full closed when the unit is shut down.

K. Controls:

1. All control wiring shall terminate at terminal strip and include an identifying marker corresponding to the wiring diagram. Control wiring shall be harnessed with terminal block wiring. Each furnace shall be provided with 24-volt transformer and high limit switch.
2. Electrical cabinet shall be isolated from the air stream with a non-removable access panel interior to the outer service panel. There shall be a provision in this cabinet for component mounting, wire routing and high voltage isolation.
3. High limit Control: Fixed stop at maximum permissible setting, de-energizes burner on high bonnet temperature and re-energizes when temperature drops to lower value.
4. Gas Valve:
    a. Unit shall be provided with a 24-volt combination automatic gas valve, including main operating valve and pilot safety shutoff, pressure regulator, manual main and pilot shutoff valve, and adjustable pilot valve.
    b. Gas valve shall be suitable to a maximum inlet pressure of 14-inch W.C. on natural gas.
    c. Unit shall be provided with a low voltage circuit breaker rated for 150% of the units normal 24 volt operating load.
    d. Unit shall be provided with a disconnect.
5. The unit shall be suitable for natural gas and provided with solid state ignition control system which ignites the intermittent pilot by spark during each cycle of operation. When pilot frame is proven, main burner valve opens to allow gas flow to burners. Pilot and burners are extinguished during the off cycle.
6. Fan Control: A fan time delay switch shall be provided and shall be controlled by a low voltage thermostat. The fan time delay relay shall delay the fan start until the heat exchanger reaches a predetermined temperature. It shall also allow the fan to operate burner shutdown, removing residual heat from the heat exchanger. Double and triple furnace units shall contain a reverse airflow interlock switch. The normally interlocked switch, when activated causes the gas valves to close and continue blower operation.

L. Operating Controls

1. Provided modulated heat output. An automatic valve in series with the modulating valve shall be provided to cycle the unit. Ignition is at full fire (100% input) and modulates the gas input from 100% to 40% rated input.

M. Programmable Thermostat

1. A seven-day programmable thermostat with 2 stage cooling and heating shall be provided. The thermostat shall have heat, off, cool, auto system switch, four-time periods per day for occupied and unoccupied modes with three-hour override of unoccupied mode. Automatic heat/cool changeover and battery backup. Includes fan and heating relays. Set point range 40.0 F to 90.0 F.
2. Provide universal guard for room thermostat.
3. Provide Energy Star Certified thermostat.

N. Accessories:

1. High gas line pressure regulator shall be supplied to accommodate a main gas line pressure of 2 psi.

2. Unit shall be provided with a 115-volt convenience outlet.
3. A unit mounted DDC (Direct Digital Controls) control station shall be provided. It shall be provided with 6 LED status lamps with System On/Off, Fan Auto/on, Heat Auto/off, Cool/Auto/off, Auxiliary On/Off switching and modulating damper potentiometer mounting.
4. Unit shall be provided with a firestat and smoke detector. Unit shall also be provided with a freezestat.
5. Unit shall be provided with status indicator lamps. Lamps shall include power on, blower on and one lamp per stage of heat mounted in the electrical cabinet.
6. Rooftop unit shall be provided with insulated 36" high roof curb
7. A clogged filter pressure switch with adjustable operating range and normally open switch shall be installed to sense increased suction pressure by the blower due to filter obstruction. Provision shall be provided for remote indication by terminal block connection points. lamp mounted status in the electrical cabinet shall be included.
8. A high pressure and a low-pressure interlock switch and shutoff valve shall be provided for each furnace section. High/low gas pressure limits disengage heating upon detecting either low line pressure or high manifold pressure.
9. Gas regulator shall be provided to reduce main gas line pressure to a minimum of 7" W.C. Pressure at the job site must be specified. The regulator is selected to accommodate that specific pressure.
10. Unit shall Include a factory mounted switch type fused disconnect and GFI convenience outlet mounted behind a hinged access door on the unit's blower section. Both items shall be accessible from the outside of the unit via a weatherproof hinged access door.

2.2 ROOFTOP PACKAGED AC UNIT WITH ERV AND GAS HEAT

A. Manufacturers:

1. Carrier Corporation.
2. Trane
3. Johnson Controls Inc
4. or approved equal

B. General Unit Description

1. Unit(s) furnished and installed shall be packaged outdoor air unit(s) as scheduled on contract documents and described in these specifications. Unit(s) shall be designed for dehumidification, cooling and/or heating of 100% Outdoor Air. For dehumidification and cooling modes the evaporator temperature shall be monitored, reported at unit controller. Compressor controls shall modulate capacity to maintain evaporator leaving set point for dehumidification mode. Hot Gas Bypass shall not be used to control compressor capacity. Compressor Hot Gas Reheat shall be factory installed. To prevent rehydration of evaporator condensate the reheat coil face shall be located a minimum of 6" downstream from the leaving face of the evaporator coil. Heating system shall include modulating controls. Compressor on-off only or primary heating on-off only controls shall not be acceptable control strategies.
2. Unit(s) shall have labels, decals, and/or tags to aid in the service of the unit and indicate caution areas.

3. Unit discharge airflow configuration shall be:

    a. Horizontal discharge through side of unit.

C. Cabinet

1. Cabinet panels: 2” double-wall foamed panel with thermal break construction throughout the indoor section of unit to provide nonporous, cleanable interior surfaces. All interior seams exposed to airflow shall be sealed.
2. Insulation: 2” polyurethane foam metal encapsulated with no exposed edges. Initial R value of 6.6 per inch of thickness.
3. Cabinet base shall be double wall construction designed to prevent trapping or ponding of water within the unit base. Cabinet base pan shall be insulated with 2” thick polyurethane foam. Foam insulation shall be fully enclosed with galvanized steel insulation cover. Insulation shall not be applied to underside of unit base.
4. Cabinet Base Rails: Side and end base rails shall include openings for forklift and tie-down access. To protect unit base from fork damage side rails shall include removable heavy gauge fork pockets.
5. Shipping anchors attach to and/or through unit base rails. Straps over unit shall not be used to secure unit for shipping.
6. Cabinet material interior and base rails: shall be G-90 zinc-coated galvanized steel. Material gauge shall be a minimum of 14-gauge for base rails, 16-gauge for structural members and 22-gauge for access doors and cabinet panels.
7. Exterior Corrosion Protection: Exterior cabinet panels shall be a base coat of G-90 galvanized steel with both exterior and interior surfaces cleaned, phosphatized and finished with a weather-resistant baked enamel finish. Unit’s surface shall be in compliance with ASTM B45 salt spray testing at a minimum of 627 hour duration.
8. Cabinet construction shall provide hinged panels providing easy access for all parts requiring routine service.
9. Cabinet top cover shall be one piece construction or where seams exist, it shall be double-hemmed and gasket-sealed.
10. Hinged Access Panels: Water- and air-tight hinged access panels shall provide access to all areas requiring routine service including air filters, heating section, electrical and control cabinet sections, ERV and power exhaust fan section, supply air fan section, evaporator and reheat coil sections. Insulated doors shall be constructed to allow the access door to open in either direction or be removed without removal of a hinge.

    a. Hold-open devices shall be factory installed on all hinged access doors. Chains shall not be used as hold-open devices.
    b. Latches with locking hasp or tool operated closure devices shall be factory installed on all hinged access panels.
11. Drain Pan material shall be Type 304 Stainless steel drain and constructed to slope in two directions to ensure positive drainage with corners exposed to standing water and drain fittings welded liquid tight to prevent leaks. Pan shall have a minimum depth of 2”. Base of drain pan shall be insulated with 1” thick foam insulation minimum.
12. Provide openings either on side of unit or thru the base for power, control and gas connections.
13. Cabinet shall include interior liner constructed of Type 304 stainless steel with sealed seams.

14. Air inlet hood shall be factory installed and shall not require field assembly. Hood shall include 2" thick removable aluminum mesh mist eliminators sized for a velocity not to exceed 500 FPM at maximum unit rated airflow. Service access shall be hinged and held in place with thumb latches that shall not require tools for service access.
15. Unit shall be equipped with a 6" filter rack upstream of the evaporator. Frame shall be field-adjustable to match any filter combination specified in the following section.

D. Air Filters

1. Unit inlet hood shall include 2" thick aluminum mesh removable mist eliminators with hinged access cover. Inlet velocity shall not exceed 500 FPM.
2. Evaporator Inlet shall include a full complement of pleated media air filters. Filters shall be:

    a. 2" deep MERV 13

E. Dampers

1. Unit shall include a motor operated outdoor air damper constructed of galvanized steel.
2. Damper blades shall be v-groove design with rubber edge seals designed not to exceed a 4 CFM/SQ FT leakage rate exceeding ASHRAE 90.1 damper leakage requirements.
3. Damper actuator shall be factory mounted and wired sealed spring return and either two-position or fully modulating.
4. Dampers air velocity shall not exceed 2000 fpm.
5. Return Air damper shall be of same material, construction and leakage rate as outdoor air damper. Return air damper actuator shall be factory mounted and wired sealed spring fully modulating and operate based on outdoor air damper feedback signal to properly regulate RA airflow.

F. Dehumidification/Cooling

1. Compressors

    a. All units shall have direct-drive, scroll type compressors.
    b. Digital Scroll Compressor
    c. Circuit One
    d. Motor shall be suction gas-cooled and shall have a voltage utilization range of plus or minus 10 percent of unit nameplate voltage.
    e. Internal overloads shall be provided with the scroll compressors.
    f. Each compressor shall have a crankcase heater or equivalent to minimize the amount of liquid refrigerant present in the oil sump during off cycles.
    g. Each compressor shall be mounted on rubber vibration isolators, to reduce the transmission of noise.
    h. Provide each unit with hermetically sealed refrigerant circuit(s) factory-supplied completely piped with liquid line filter-drier, liquid line charging port, suction and liquid line pressure ports, sight glass, and thermal expansion valve.
    i. Provide each circuit with automatic reset high and low pressure and high temperature switches for safety control.

2. Coils

a. Evaporator, Condenser and Hot Gas Reheat coils shall be constructed with copper tubes mechanically bonded to configured aluminum plate fins.
b. Coils shall be factory leak tested in accordance ANSI/ASHRAE 15-1992 at a minimum pressure of 500 PSIG.
c. The condenser coil shall have a fin designed for ease of cleaning.
d. Evaporator coil shall include (six / four) rows of cooling interlaced for superior sensible and latent cooling with a maximum of 14 FPI for ease of cleaning.
e. Reheat coil shall be fully integrated into the supply airstream and be capable of delivering design supply air temperature.
f. To prevent re-hydration of condensate from evaporator coil, the evaporator coil face and the hot gas reheat coil face shall be separated by a minimum of six inches.
g. The unit(s) must comply per above - spray coatings not acceptable
h. Condenser coil hail guards shall be factory installed.

3. Condenser Section

a. Outdoor Fans: Shall be direct drive vertical discharge design with low-noise corrosion resistant glass reinforced polypropylene props, powder coated wire discharge guards and electro-plated motor mounting brackets.
b. Fans shall be statically and dynamically balanced.

4. Compressor Capacity Control

a. Electronic Control: Compressor output capacity shall be controlled by the Main Control Module.

G. Fans and Motors

1. Indoor fan shall be direct drive plenum fan, factory installed and wired to on-board Variable Frequency Drive and shall be equipped with slide out service access.
2. All fan motors shall be premium efficiency ODP and meet the New York City Energy Conservation Code.
3. All fan motors shall either be permanently lubricated and/or have internal thermal overload protection.
4. Outdoor fans shall be direct drive with premium efficiency motors, statically and dynamically balanced, draw through in the vertical discharge position.
5. Provide shafts constructed of solid hot rolled steel, ground and polished, with key-way, and protectively coated with lubricating oil.

H. Heating

1. Modulating Indirect Gas Fired Heating System

a. Completely assembled and factory installed heating system shall be located in the primary heating position located beneath the indoor fan assembly and be integral to unit and approved for use downstream from refrigerant cooling coils in units mounted outdoors. Threaded gas connection shall terminate at field provided manual shut-off valve. Provide capability for sidewall gas piping.

b. Heaters shall include high turn-down burners firing into individual stainless steel tubular heat exchangers. Heat exchangers shall be constructed of type 439 stainless steel and be a high efficiency dimpled tubular design capable of draining internal condensate. Units with multiple heaters shall include one fully modulating high turndown heater with additional on-off heater sections. Total heater turndown shall be based on heater gas input capacity 5:1 when ≤150 MBH or a minimum of 10:1 when >150 MBH.
c. Heater outdoor air inlet shall be hooded and include internal baffle system to prevent rain blow thru. To prevent recirculation of flue gas and to prevent flue gas condensate from draining onto and obstructing the heater air inlet the inlet shall be hooded and shall be located a minimum of 8" beneath the flue outlet. Inlet hood shall include bird screen.
d. Heater flue outlet(s) shall include hooded outlet with wire cloth all constructed of Type 430 stainless steel. Hooded outlet shall be sealed to prevent flue gas recirculation.
e. Gas Burner Safety Controls: Provide safety controls for the proving of combustion air prior to ignition, continuous air proving monitoring following ignition and continuous electronic flame supervision.
f. Unit controls shall monitor heat output and shall discontinue all heating attempts and or unit operation in the event the heating section fails to ignite or fails to maintain programmed supply air temperature/time.
g. Inducer fan shall be direct drive high pressure centrifugal type with two speeds and shall include built- in thermal overload protection.
h. Limit controls: High temperature automatic reset limits shall be located on blower wall and in indoor fan chamber to shut off gas flow in the event of excessive temperatures resulting from restricted indoor airflow, or loss of indoor airflow.
i. Flame roll-out safeties shall provide continuous monitoring of proper burner operation.

I. Electrical Ratings and Connections

1. All high voltage power components such as fuses, switches and contactors shall include a service personnel protection barrier or shall be a listed as touch-safe design.
2. Field wiring access to be provided thru unit base into isolated enclosure with removable cover.
3. Power wiring to be single point connection.
4. Wiring internal to the unit shall be colored and numbered for identification.
5. Unit shall be factory wired to field wiring terminal block mounted in isolated enclosure.
6. Factory wired main power disconnect and overcurrent device shall be rated for total unit connected power
7. Unit SCCR rating shall be a minimum of 65kA
8. Factory wired Voltage/Phase monitor shall be included as standard. In the event of any of the following, the units will be shut down and a fault code will be stored in the monitor for the most recent 25 faults. Upon correction of the fault condition the unit will reset and restart automatically.

    a. Phase Unbalance Protection: Factory set 2%
    b. Over/Under/Brown Out Voltage Protection: +/-10% of nameplate voltage
    c. Phase Loss/Reversal

9. Factory to mount and wire 120 volt convenience outlet. Field wiring of convenience outlet not acceptable.
10. All low voltage field wiring connections shall be made at factory installed low voltage terminal strip.

J. Unit Controls

1. Main Unit Controller (MCM) shall be a microprocessor-based controller with resident control logic. Controller program logic shall include

    a. Include single program with field selectable

        i. Discharge Air control with unit conditioning modes enabled based on outdoor air conditions and controlled to maintain discharge air setpoints.
        ii. Space control with unit conditioning modes enabled and controlled to maintain space setpoints.

    b. Multi-Zone Variable Air Volume Control (MZVAV) with unit conditioning modes enabled based on discharge air temperature setpoint and supply fan controlled within design minimum and maximum performance ratings to maintain a duct pressure setpoint monitored by the factory furnished, field installed duct pressure sensor.

2. MCM shall:

    a. Prevent simultaneous operation of any conditioning modes.
    b. Accept separate setpoints for Occupied and Unoccupied states.
    c. Call for Dehumidification based on dew point setpoints. When no call for Dehumidification is present MCM shall control calls for Cooling, Heating and Economizer modes based on sensible or enthalpy temperature setpoints. MCM shall have onboard clock and scheduling function for occupancy.
    d. Include non-volatile memory to retain all programmed values without the use of a battery, in the event of a power failure.
    e. Enable HGRH dehumidification and cooling modes and control modulation to maintain (discharge air temperature / space temperature).
    f. Unit shall include minimum discharge air control.

3. MCM Touch Screen shall include full color display and shall be (factory installed in unit control compartment / field mounted remote from unit and field wired up to a maximum of 300 ft.) and provide a full list of points included in the MCM. The display shall provide a list and history of all unit alarms.
4. System Sensors shall include: Factory installed and wired Outdoor Air Temperature, Outdoor Air Humidity and Evaporator Leaving Air Temperature and factory furnished, field installed Discharge Air Temperature.

    a. Space Control or Single Zone VAV: Factory shall furnish Space Temperature and Space Humidity sensor for field installation and connection to the unit
    b. Economizer includes Return Air Temperature and Humidity sensor
    c. ERV includes exhaust air leaving temperature sensor
    d. Powered Exhaust with Economizer includes duct pressure sensor to be field installed.

5. System controls shall include:

a. Anti-cycle timing.
b. Minimum compressor run/off-times.

6. Smoke Detectors to sense (Return Air / Discharge Air / Return and Discharge Air) stream(s) shall be factory installed and wired.

K. Power Exhaust – Barometric Relief

1. Provide a factory installed power exhaust assembly that shall be designed to ventilate return air to atmosphere.
2. Plenum mounted direct drive airfoil design exhaust wheel material shall be heavy gauge aluminum, welded construction and rated for up to Class III speed/pressure performance. Factory install and wire fan motor to on-board Variable Frequency Drive. Belt-drive and/or forward curve plenums fans shall not be used.
3. Exhaust to discharge through gravity dampers located on each side of unit cabinet.

a. powered isolation dampers in place of gravity dampers

L. Outdoor Air Section Energy Recovery (ERV)

1. The rotor media shall be made of aluminum, formed into a honeycomb structure to minimize pressure loss and avoid plugging. Paper, plastic or fibrous media are not acceptable. The rotor media must be coated to resist corrosion. All surfaces must be coated with a non-migrating desiccant layer to insure that adequate latent capacity is provided. The desiccant coating must be firmly bonded to the aluminum surface and will not be dislodged when challenged with high velocity air up to 5000 feet per minute. Products that lose desiccant when served with high velocity air are not acceptable. The cassette must be a slide out design for serviceability. The media shall be cleanable with low temperature steam, hot water or light detergent without degrading the latent recovery.
2. Sensible and latent recovery efficiencies must be clearly documented through a testing program conducted in accordance with ASHRAE Standard 84 and AHRI 1060. The testing must have been conducted by a qualified independent organization. The performance test reports must be provided for engineering review as part of the submittals for this project.
3. The rotor design shall ensure laminar airflow to minimize parasitic pressure loss and to optimize the operating efficiency of the system fans. The pressure loss across the media shall be no greater than the scheduled pressure loss values. The energy wheel shall operate effectively up to 180 degrees F.
4. The rotor media shall be permanent, with an anticipated life of 20 years. It must be tested in accordance with ASTM Standard E-84 and provide smoke and flame spread ratings of less than 25 and 50 as required by NFPA 90A and UL 1995. A copy of the ASTM E-84 test report confirming the method of test and results shall be provided with the submittal. Heat recovery wheels incorporating “throw-away” media and tested to UL900 for Class 2 filters are not acceptable.
5. The wheel manufacturer must have been producing energy recovery wheels for a minimum of three years.
6. The rotor shall be supplied with perimeter brush seals and face contact seals to minimize air leakage and wheel bypass.

7. The rotor media shall be supported by a structural aluminum hub and aluminum reinforcing spoke system. The rotor bearings must be greaseable and provide L10 life in excess of 20 years.
8. The cassette framework shall be made of galvanized steel to prevent corrosion.
9. The rotor must be driven by long-life polyurethane/polyester composite link belt system. The rotor/cassette shall be designed so that belt can be removed or serviced without the removal of the bearing. A 3 phase A/C gear motor shall be utilized to accommodate variable speed applications.

M. ROOF CURB

1. Contractor shall provide factory supplied 36" tall roof curb, 18 gauge perimeter made of zinc coated steel with supply and return air gasketing and wood nailer strips. Ship knocked down and provided with instructions for easy assembly.
2. Curb shall be manufactured in accordance with the National Roofing Contractors Association guidelines.

2.3 ROOF CURBS

A. Roof curbs with vibration isolators and wind or seismic restraints are specified in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

1. Curb shall be manufactured in accordance with the National Roofing Contractors Associated guidelines for rooftop equipment support.
2. Ship curbs knocked down and provide instructions for easy assembly.

B. Materials: Galvanized steel, 0.08 inch (2.1 mm) thick, with corrosion-protection coating, watertight gaskets, baseplate, and factory-installed wood nailer; complying with NRCA standards.

1. Curb Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.

a. Materials: ASTM C 1071, Type I or II.
b. Thickness: 2 inches.

2. Application: Factory applied with adhesive and mechanical fasteners to the internal surface of curb.

a. Liner Adhesive: Comply with ASTM C 916, Type I.
b. Mechanical Fasteners: Galvanized steel, suitable for adhesive attachment, mechanical attachment, or welding attachment to duct without damaging liner when applied as recommended by manufacturer and without causing leakage in cabinet.
c. Liner materials applied in this location shall have air-stream surface coated with a temperature-resistant coating or faced with a plain or coated fibrous mat or fabric depending on service air velocity.
d. Liner Adhesive: Comply with ASTM C 916, Type I.

C. Curb Height: 36 inches.

D. Wind and Seismic Restraints: Metal brackets compatible with the curb and casing, painted to match RTU, used to anchor unit to the curb, and designed for loads at Project site. Comply with requirements in Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment" for wind-load requirements.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of RTUs.

B. Examine roughing-in for RTUs to verify actual locations of piping and duct connections before equipment installation.

C. Examine roofs for suitable conditions where RTUs will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Reassemble factory fabricated components in field, at no additional cost, where units are shipped in sections.

B. Roof Curb: Install on roof structure or concrete base, level and secure, according to NRCA's (National Roofing Contractors Association) "Low-Slope Membrane Roofing Construction Details Manual," Illustration "Raised Curb Detail for Rooftop Air Handling Units and Ducts." Install RTUs on curbs and coordinate roof penetrations and flashing with the Commissioner. Secure RTUs to upper curb rail, and secure curb base to roof framing or concrete base with anchor bolts.

C. Unit Support: Install unit level on structural curbs. Coordinate wall penetrations and flashing with wall construction. Secure RTUs to structural support with anchor bolts.

D. Install wind and seismic restraints according to manufacturer's written instructions.

3.4 CONNECTIONS

A. Install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.

B. Install piping adjacent to RTUs to allow service and maintenance.

1. Gas Piping: Comply with applicable requirements in Section 227000 "Natural Fuel Gas Systems." Connect gas piping to burner, full size of gas train inlet, and connect with union and shutoff valve with sufficient clearance for burner removal and service.

C. Duct installation requirements are specified in other Division 23 Sections. Drawings indicate the general arrangement of ducts. The following are specific connection requirements:

1. Install ducts to termination at top of roof curb.
2. Remove roof decking only as required for passage of ducts. Do not cut out decking under entire roof curb.
3. Connect supply ducts to RTUs with flexible duct connectors specified in section 233300 "Air Duct Accessories."
4. Install return-air duct continuously through roof structure.
5. Install normal-weight, 3000-psi, compressive strength (28-day) concrete mix inside roof curb, 4 inches thick. Concrete, formwork, and reinforcement are specified in Division 03.

3.5 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

B. Perform tests and inspections and prepare test reports.

C. Tests and Inspections:

1. After installing RTUs and after electrical circuitry has been energized, test units for compliance with requirements.
2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Remove and replace malfunctioning units and retest as specified above.

3.6 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

B. Complete installation and startup checks according to manufacturer's written instructions and do the following:

1. Inspect for visible damage to unit casing.
2. Inspect for visible damage to furnace combustion chamber.

3. Inspect for visible damage to compressor, coils, and fans.
4. Inspect internal insulation.
5. Verify that labels are clearly visible.
6. Verify that clearances have been provided for servicing.
7. Verify that controls are connected and operable.
8. Verify that filters are installed.
9. Clean condenser coil and inspect for construction debris.
10. Clean furnace flue and inspect for construction debris.
11. Connect and purge gas line.
12. Remove packing from vibration isolators.
13. Inspect operation of barometric relief dampers.
14. Verify lubrication on fan and motor bearings.
15. Inspect fan-wheel rotation for movement in correct direction without vibration and binding.
16. Adjust fan belts to proper alignment and tension.
17. Start unit according to manufacturer's written instructions.

    a. Start refrigeration system.
    b. Do not operate below recommended low-ambient temperature.
    c. Complete startup sheets and attach copy with Contractor's startup report.

18. Inspect and record performance of interlocks and protective devices; verify sequences.
19. Operate unit for an initial period as recommended or required by manufacturer.
20. Perform the following operations for both minimum and maximum firing. Adjust burner for peak efficiency.

    a. Measure gas pressure on manifold.
    b. Inspect operation of power vents.
    c. Measure combustion-air temperature at inlet to combustion chamber.
    d. Measure flue-gas temperature at furnace discharge.
    e. Perform flue-gas analysis. Measure and record flue-gas carbon dioxide and oxygen concentration.
    f. Measure supply-air temperature and volume when burner is at maximum firing rate and when burner is off. Calculate useful heat to supply air.

21. Calibrate thermostats.
22. Adjust and inspect high-temperature limits.
23. Inspect outdoor-air dampers for proper stroke and interlock with return-air dampers.
24. Start refrigeration system and measure and record the following when ambient is a minimum of 15 deg F above return-air temperature:

    a. Coil leaving-air, dry- and wet-bulb temperatures.
    b. Coil entering-air, dry- and wet-bulb temperatures.
    c. Outdoor-air, dry-bulb temperature.
    d. Outdoor-air-coil, discharge-air, dry-bulb temperature.

25. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.

26. Measure and record the following minimum and maximum airflows. Plot fan volumes on fan curve.

    a. Supply-air volume.
    b. Return-air volume.
    c. Relief-air volume.
    d. Outdoor-air intake volume.

27. Simulate maximum cooling demand and inspect the following:

    a. Compressor refrigerant suction and hot-gas pressures.
    b. Short circuiting of air through condenser coil or from condenser fans to outdoor-air intake.

28. Verify operation of remote panel including pilot-light operation and failure modes. Inspect the following:

    a. High-temperature limit on gas-fired heat exchanger.
    b. Low-temperature safety operation.
    c. Filter high-pressure differential alarm.
    d. Economizer to minimum outdoor-air changeover.
    e. Relief-air fan operation.
    f. Smoke and firestat alarms.

29. After startup and performance testing and prior to Substantial Completion, replace existing filters with new filters.

3.7 CLEANING AND ADJUSTING

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to site during other-than-normal occupancy hours for this purpose.

B. After completing system installation and testing, adjusting, and balancing RTU and air-distribution systems, clean filter housings and install new filters.

3.8 INSTRUCTION

A. Engage a factory-authorized service representative to instruct Operating Personnel to adjust, operate, and maintain RTUs. Refer to DDC General Condition.

END OF SECTION 237413

PAGE INTENTIONALLY LEFT BLANK

SECTION 23 81 36 - VARIABLE REFRIGERANT FLOW SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   (1) The Contract Drawings
   (2) The Specifications
   (3) The general conditions,
   (4) The Addendum
   (5) The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. The variable capacity, heat pump/heat recovery air conditioning system shall be a Variable Refrigerant Flow (VRF) System. The simultaneous heating and cooling with heat recovery, split system or heating and cooling split system heat pump as specified. The system shall consist of multiple evaporators, branch selector boxes, refrigeration distribution system using microprocessor control and condenser unit. The condenser shall be a direct expansion (DX), air-cooled heat recovery, multi-zone air-conditioning system with variable speed inverter driven compressors using R-410A refrigerant. All zones are each capable of operating separately with individual temperature control. A dedicated hot gas pipe shall be required to ensure optimum heating operation performance.

B. Operation of the system shall permit either individual cooling or heating of each indoor unit simultaneously or all of the indoor units associated with each branch of the cool/heat selector box. Each indoor unit or group of indoor units and outdoor units shall be able to provide set temperature independently via a local remote controller connected (networked) to a central controller provided by the VRF manufacturer and interconnected via BACNet to the Building Management System (BMS).

C. Each branch of the branch selector box shall be provided with required electronic expansion valves, refrigerant control piping and electronics to facilitate communications between the box and main processor and between the box and indoor units. The branch selector box shall control the operational mode of the subordinate indoor units.

D. System shall provide outside air capability.

E. Unit shall meet NYC Energy Conservation Code.

F. All distribution piping including number of pipes, size and arrangement, pipe fittings, wiring, and controls shall be per manufacturer’s written recommendations and shall be incorporated by the mechanical subcontractor to achieve the design intent.

G. Related Sections:

   1. Section 232300 “Refrigerant Piping.”

2. Section 230553 "Identification for HVAC Piping and Equipment" for valve tags and schedules.
3. Section 230900 “Instrumentation and Control for HVAC.”

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Action Submittals:

1. Product Data: Submit manufacturer’s standard technical product data indicating conformance to the stipulated reference specifications, construction materials, dimensions, construction details, and test and operating pressures. Include rated capacities, dimensions, connections for piping and electric, furnished specialties, and accessories for each type of product indicated. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics. Submit manufacturer’s product data on the following:

a. Outdoor units, indoor units and unit components.
b. Refrigerant type.
c. Valves: Submit schedule listing type make and model number, size and service for valves, motorized valve operators, fittings, and equipment. Include flow and pressure drop curves based on manufacturer's testing for calibrated-orifice balancing valves and automatic flow-control valves.
d. Unit microprocessor controls. Submit complete list of "Read-Write" points, functions and alarms available to BMS via BACNet integration protocol.
e. Hydronic specialties: Submit schedule listing type, make and model number, size and service for all hydronic specialties.
f. Provide complete wiring diagram including all indoor units networked to a central controller with touch screen display interface. Diagram should differentiate between factory and field wiring. All field power connections and control equipment power usage to be shown on wiring diagram.

C. Closeout Submittals:

1. Operation and Maintenance Data: For all devices, including normal and emergency operation, and maintenance manuals.

D. Shop Drawings: Power, signal, and control wiring diagrams, Cooling and heating capacity, operating temperatures (ambient and indoor), Power supply, refrigerant type/charge, Number of Indoor units, Sound pressure level at 3 ft.(dBA), weight, dimensions, etc. for each equipment.

E. Samples for Initial Selection: For units with factory-applied color finishes.

F. Field quality-control test reports.

G. Provide written start-up report.

H. Warranty: Special warranty specified in this Section.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. The contractor or subcontractor that will perform the specific areas of work specified above must, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of split-system units and are based on the specific system indicated. Refer to DDC General Conditions.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the Commissioner, and marked for intended use.

E. ASHRAE Compliance: Applicable requirements in the latest edition of ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

F. ASHRAE/IESNA 90.1 Latest Edition Compliance: Applicable requirements in the latest edition of ASHRAE/IESNA 90.1, Section 6 - "Heating, Ventilating, and Air-Conditioning.

G. Listings: The unit shall be UL listed or tested and listed according to UL by Electrical.

H. All wiring shall be in accordance with the NYC Electrical Code (NYCEC).

I. The units shall be manufactured in a facility registered to ISO 9001 and ISO14001 which is a set of standards applying to environmental protection set by the International Standard Organization (ISO).

J. A full charge of R-410A for the condensing unit only shall be provided in the condensing unit.

K. All indoor units concealed above ceilings shall be rated for plenum use.

1.5 COORDINATION

A. Coordinate size and location of concrete bases for units. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Section 030000 “Concrete”.

1.6 WARRANTY

A. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to restore or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Eighteen (18) months from date of substantial completion.

2. Compressor Warranty: Six (6) years from date of substantial completion.

1.7 DELIVERY AND STORAGE

A. Deliver products to site and store and protect products until installation.

B. Protect finished cabinets from physical damage by leaving factory packing cases in place before installation and by providing temporary covers after installation.

C. Protect internal parts against rust and corrosion.

D. Store equipment indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store equipment off the ground in watertight enclosures.

1.8 REQUIRED MATERIALS

A. Furnish required materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Filters: One set of filters for each unit.

2. Fan Belts: One set of belts for each unit.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS

A. Source Limitations: Obtain each type of equipment from single source from single manufacturer.

B. Furnish the system standards as defined by the base bid model numbers, model families or as otherwise specified herein or on the design documents. In any event, the contractor shall be responsible for all specified items and intents of this document. This includes verification and calculations of circuiting, capacities and considerations of line length restrictions.

2.2 MANUFACTURERS

A. Manufacturers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. LG.
b. Mitsubishi Electronics America, Inc.; HVAC Division.
c. Samsung.

d. Or approved equal.

2.3 MINI 4-WAY CEILING CASSETTE WITH GRILLE, INDOOR UNIT

A. General:

1. The indoor unit shall be a mini 4-way cassette style indoor unit that recesses into the ceiling with a ceiling grille and shall have a modulating linear expansion device. The mini 4-way cassette shall be compatible with heat recovery outdoor units and mode change unit or heat pump outdoor units. The mini 4-way cassette shall support individual control using control systems.

2. Each system shall perform in accordance to the required ratings shown in the contract documents. Performance shall be based on nominal cooling conditions of 75°F DB, 62°F WB for the indoor unit and 95°F DB, 74°F WB for the outdoor unit, and nominal heating conditions of 72°F DB for the indoor unit and 13°F DB for the outdoor unit.

B. Indoor Unit:

1. The indoor unit shall be factory assembled, wired and run tested. Contained within the unit shall be all factory wiring, piping, electronic modulating linear expansion device, control circuit board and fan motor. The unit shall have a self-diagnostic function, 3-minute time delay mechanism, an auto restart function. Indoor unit and refrigerant pipes shall be charged with dehydrated air (nitrogen gas) before shipment from the factory.

C. Unit Cabinet:

1. The cabinet shall be space-saving ceiling-recessed cassette.

2. Construction shall be insulated high impact polystyrene (HIPS) chassis and fascia panel certified to UL94 V0.

3. The cabinet panel shall have provisions for a field installed, filtered, outside air intake. A booster fan is necessary. A 12V DC relay terminal is available to control the booster fan (with separate PCB connector).

4. The compact cabinet size can be installed in one standard ceiling tile (24” x 24”).

D. Fan:

1. The indoor fan assembly shall be direct driven fans by a single motor.

2. The indoor fan shall be statically and dynamically balanced to run on a motor with permanently lubricated bearings.

3. The indoor fan shall consist of three (3) speeds: Low, Medium, and High.

4. The auto air swing vanes (4) shall be capable of automatically swinging up and down for uniform air distribution.

E. Filter:

1. Return air shall be filtered by means of an easily removable, washable filter or 1 inch thick, in fiberboard frames with ASHRAE 52.2 MERV rating of 8 or higher.

2. Supplemental antibacterial and anti-odor filters shall be included.

F. Coil:

1. The indoor coil shall be staggered copper tubing, with mechanically bonded aluminum fins, complying with ARI 210/240.

2. The tubing shall have inner grooves for high efficiency heat exchange.

3. All tube joints shall be brazed with phos-copper or silver alloy.

4. The coils shall be pressure tested at the factory.

5. A condensate pan and drain outlet shall be provided under the coil. Drain pan and drain connection shall comply with the latest edition of ASHRAE 62.1. The insulated drain pan shall be provided with condensate pump.

6. The coil fins are coated with hydrophilic paints.

7. The condensate lift mechanism shall be able to raise drain water 29 inches above the condensate pan with float switch.

8. Both refrigerant lines from outdoor units to the mini four-way cassette indoor units shall be insulated.

G. Electrical:

1. The unit electrical power shall be 208/230 volts, 1-phase, 60 hertz.

2. The system shall be capable of satisfactory operation within voltage limits of 187-228 volts (208V/60Hz) or 207-253 volts (230V/60Hz).

3. The control circuit between the indoor units, MCU (mode change unit) and the outdoor unit shall be 0.5VDC - 7VDC completed using stranded, annealed copper conductor, two-core, 16 AWG, shielded cable to provide total integration of the system.

4. The indoor unit shall have a thermal fuse under high-voltage terminal block to disable unit in the event of overheating due to electrical malfunction/poor connection.

H. Controls:

1. This unit shall use microprocessor based factory mounted controls to perform functions necessary to operate the system.

2.4 HIGH STATIC PRESSURE, CEILING-CONCEALED, DUCTED, INDOOR UNIT

A. General:

1. The indoor unit shall be a high-performance, high static pressure capable, concealed ducted indoor fan coil that mounts above the ceiling with a fixed horizontal discharge supply and shall have a modulating linear expansion device (gear type). The high static pressure capable, concealed ducted indoor unit shall be compatible with heat recovery outdoor units and mode change unit or heat pump outdoor units. The high static pressure capable, concealed ducted indoor unit shall support individual control using control systems.

2. Each system shall perform in accordance to the required ratings shown in the design documents. Performance shall be based on nominal cooling conditions of 75°F DB, 62°F WB for the indoor unit and 95°F DB, 74°F WB for the outdoor unit, and nominal heating conditions of 72°F DB for the indoor unit and 13°F DB for the outdoor unit.

B. Indoor Unit:

1. The indoor unit shall be factory assembled, wired and run tested. Contained within the unit shall be all factory wiring, piping, electronic modulating linear expansion device, control circuit board and fan motor. The unit shall have a self-diagnostic function, 3-minute time delay mechanism, and an auto restart function. Indoor unit and refrigerant pipes shall be charged with dehydrated air (nitrogen gas) before shipment from the factory.

C. Unit Cabinet:

1. The cabinet shall be space saving, ceiling-concealed ducted.

2. The cabinet shall be constructed of insulated galvanized steel.

D. Fan:

1. The indoor unit fan assembly shall have two direct driven fans by a single motor.

2. The indoor fan shall be statically and dynamically balanced to run on a motor with permanently lubricated bearings.

3. The indoor fan shall consist of three (3) speeds: High, Medium, and Low.

4. The indoor unit shall have field provided ducted air outlet system and ducted return air system.

5. The fan speed shall be adjustable by remote controller or by control software which shall vary the fan speed according to external static pressure.

E. Filter:

1. Return air shall be filtered by means of an easily removable, washable filters or 1 inch thick, in fiberboard frames with ASHRAE 52.2 MERV rating of 8 or higher.

2. Supplemental antibacterial and anti-odor filters shall be included.

F. Coil:

1. The indoor coil shall be staggered copper tubing, with mechanically bonded aluminum fins, complying with ARI 210/240.

2. The tubing shall have inner grooves for high efficiency heat exchanger.

3. All tube joints shall be brazed with phos-copper or silver alloy.

4. The coils shall be pressure tested at the factory.

5. A condensate pan and drain shall be provided under the coil. Drain pan and drain connection shall comply with the latest edition of ASHRAE 62.1. The insulated drain pan shall be provided with condensate pump.

6. Condensate shall be gravity drained. Provide condensate pumps as required.

7. Both refrigerant lines from outdoor units to the ceiling-concealed ducted indoor unit shall be insulated.

8. The coil fins are coated with hydrophilic paint.

G. Condensate Pump

1. The manufacturer shall provide the most suitable condensate pump to match the indoor unit models.

H. Electrical:

1. The unit electrical power shall be 208/230 volts, 1 phase, 60 hertz.

2. The system shall be capable of satisfactory operation within voltage limits of 187-228 volts (208V/60Hz) or 207-253 volts (230V/60Hz).

3. The control circuit between the indoor units, mode change unit and the outdoor unit shall be 0.5VDC - 7VDC completed using stranded, annealed copper conductor, two-core, 16 AWG, shielded cable to provide total integration of the system.

4. The indoor unit shall have a thermal fuse under high-voltage terminal block to disable unit in the event of overheating due to electrical malfunction/poor connection.

I. Controls:

1. This unit shall use microprocessor based controls to perform functions necessary to operate the system.

2.5 CONCEALED CEILING EVAPORATOR-FAN COMPONENTS

A. General: Indoor unit shall be a built-in ceiling concealed fan coil unit, operable with refrigerant R-410A, equipped with an electronic expansion valve, direct-drive DC (ECM) and multi-speed type fan with CFM adjustment, for installation into the ceiling cavity. It is constructed of a galvanized steel casing. It shall be a horizontal discharge air with horizontal return air configuration. Computerized PID control shall be used to control superheat to deliver a comfortable room temperature condition. The unit shall be equipped with a programmed drying mechanism that dehumidifies while limiting changes in room temperature. Included as standard equipment, a condensate drain pan and drain pump kit that pumps to 18-3/8" from the drain pipe opening.

B. Chassis: Galvanized steel with flanged edges, removable panels for servicing, and insulation on back of panel. Vertical or horizontal type as noted.

1. Insulation: Faced, glass-fiber duct liner.

2. Drain pans: Galvanized steel, with connection for drain; insulated And condensate pump.

3. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in the latest edition of ASHRAE 62.1.

C. Refrigerant Coil: Staggered copper tubing, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve. Refrigerant lines shall be insulated from the outdoor unit.

D. Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.

E. Fan Motors: Comply with requirements in Section 230513 "Common Motor Requirements for HVAC Equipment."

1. Special Motor Features: Multi-tapped, multispeed and ECM type with internal thermal protection and permanent lubrication.

F. Disposable Filters: 1 inch thick, in fiberboard frames with ASHRAE 52.2 MERV rating of 8 or higher.

G. Wiring Terminations: Connect motor to chassis wiring with plug connection.

2.6 HEAT RECOVERY OUTDOOR UNIT

A. General:

1. The heat recovery outdoor unit shall consist of the outdoor unit, mode change unit, indoor units and control systems. The outdoor units shall be equipped with multiple circuit boards that interface to the control systems and shall perform all functions necessary for operation. The outdoor unit shall have a powder coated finish. The outdoor unit shall be completely factory assembled, piped and wired. Each unit shall be run tested at the factory.

2. The heat recovery system shall have the ability of simultaneous heating and cooling operation modes on all indoor units.

3. The heat recovery system shall have the ability to change operation mode (MAIN heating /MAIN cooling) without turning off the compressors allowing for constant heating and cooling operation.

4. The heat recovery modular system shall have rotational defrost capability to perform defrost operations while still providing heat to indoor units (operation and conditions restrictions exist).

5. The sum of connected capacity of all indoor air handlers shall range from 50% to 130% of outdoor rated capacity.

6. The heat recovery system shall have optional snow blowing settings to prevent snow accumulation on top of unit.

7. The heat recovery system shall have optional night quite modes to reduce unit sound in evenings (4 level settings).

8. The heat recovery system shall have current control to limit current (50% - 100% of design current) adjustable at outdoor unit or central control devices.

9. The heat recovery system compressors shall be hermetically sealed, inverter driven, direct vapor injected, asymmetric, DC scroll type. No fixed capacity compressors will be present in the refrigerant system.

10. Outdoor unit (individual modules) shall have a sound rating no higher than 62 dB(A).

11. All three refrigerant lines from the outdoor unit to the heat recovery mode change unit (MCU) shall be insulated.

12. The heat recovery system shall have the ability to adjust cooling and heating temperature/pressure compensation values depending on project conditions thus saving energy.

13. The heat recovery outdoor unit shall have an accumulator with heater and controls.

14. The heat recovery outdoor unit shall have a high pressure safety switch, high voltage fuses, over-current protection, phase detection protection, thermal fan protection, low pressure protection, compressor over current protection, fan motor voltage protection, current transformer(s), crank case heaters, and intelligent logic to ensure proper operation within unit design limitations and operational parameters.

15. The inverter compressor shall be cooled with liquid refrigerant circuit(s) to operate at optimal temperatures and to prevent failure due to overheating. No compressor inverter will be cooled by air over heat sink.

16. The heat recovery outdoor unit shall have the ability to operate with a maximum height difference of 163 feet with the condensing unit installed higher than the indoor units or

131 feet with the condensers installed lower than the indoor units and have total refrigerant tubing length of 3,281 feet. The greatest length is not to exceed 656 (722 equivalent) feet between outdoor unit and the farthest indoor unit.

17. The heat recovery outdoor unit shall be capable of operating in heat mode between -4°F ~ 75°F ambient temperatures.

18. The heat recovery outdoor unit shall be capable of operating in cool mode between 23°F to 120°F ambient temperatures as standard.

19. The heat recovery outdoor unit shall have high efficiency, individual oil separator(s) for each compressor plus additional logic controls to ensure adequate oil volume in the compressor is maintained.

20. The heat recovery outdoor unit shall have a flat-plate type subcooler to subcool liquid refrigerant further to increase capacity and performance with long pipe lengths and to decrease refrigerant sounds at indoor equipment.

21. The compressors shall have vapor injection capability to increase performance in both heating and cooling modes. This will be automatically enabled by the outdoor unit(s) by forcing saturated refrigerant vapor into the scroll compression cycle increasing mass flow and overall system capacity.

B. Unit Cabinet:

1. The chassis shall be fabricated of galvanized steel, bonderized and finished with a powder coated baked enamel.

C. Fan:

1. The heat recovery outdoor unit shall be furnished with the required number of fans based on the system capacity.

2. General:

a. All fan motors shall be Brushless DC (BLDC) type.
b. All fan motors shall have inherent protection, thermal protection, and have permanently lubricated bearings, and be completely variable speed.
c. All fan motors shall be mounted for quiet operation.
d. All fans shall be provided with a raised guard to prevent contact with moving parts.
e. The heat recovery outdoor unit shall have vertical discharge airflow.
f. The heat recovery outdoor units shall have the capability for ducting of discharge air up to 0.31” WC static pressure with factory provided dimensional design drawings.

D. Refrigerant:

1. R410A refrigerant shall be required for the heat recovery outdoor systems.

2. Provide additional refrigerant based on installed liquid refrigerant pipe diameters and lengths.

3. Provide modular systems outdoor refrigerant kits for module connection. Manufacturer shall be responsible to provide appropriate type and number of required modules to meet the requirement. Provide outdoor Tee's as approved by the unit manufacturer.

E. Coil:

1. The outdoor coil shall be copper tubing, with mechanically bonded aluminum fins, complying with ARI 210/240.

2. The coil shall be protected with an integral metal guard.

3. Refrigerant flow from the outdoor unit shall be controlled by means of capacity modulation capable, vapor injected, DC inverter, scroll compressor.

F. Compressor:

1. The 208/230 VAC and/or 460 VAC heat recovery system shall be provided with the required number of compressors. All compressors shall be modulation capable, direct vapor injected, DC inverter, scroll type.

2. General:

a. Crankcase heaters shall be factory mounted on the compressors.
b. The outdoor unit compressor shall have variable modulation technology to modulate capacity. System capacity shall be completely variable down to 7,513 Btu/h.
c. The outdoor unit compressor(s) shall have vapor injection technology which can increase the mass flow rate of refrigerant and offset refrigerant condensing temperatures resulting in a capacity and performance improvement in heating and cooling modes.
d. The compressor(s) will be equipped with an internal thermal overload.
e. The compressor(s) shall be mounted to avoid the transmission of vibration.

G. Electrical:

1. The outdoor unit electrical power shall be 208/230 volts, 3 phase, 60 hertz or 460 Volts, 3 phase, 60 hertz.

2. The 208/230 VAC outdoor unit shall be capable of satisfactory operation within voltage limits of 187-228 volts (208V/60Hz) or 207-253V (230V/60Hz).

3. The outdoor unit shall be controlled by integral factory mounted microprocessor based controls.

4. The control circuit between the indoor units, mode change unit (MCU) and the outdoor unit shall be 0.5VDC - 7VDC completed using stranded, annealed copper conductor, two-core, 16 AWG, shielded cable to provide total integration of the system (F1/F2).

2.7 MODE CHANGE UNIT (MCU) FOR HEAT RECOVERY OUTDOOR UNIT

A. General:

1. The MCU shall be used with the outdoor units. These units shall be equipped with a circuit board that interfaces to the Control systems and shall perform all functions necessary for operation. The unit shall have a galvanized steel finish. The MCU shall be completely factory assembled, piped and wired. Each unit shall be run tested at the factory. The unit shall be mounted indoors. The sum of connected capacity of indoor units shall range from 7,000 – 152,000 btu/h capacity at one MCU. The outdoor unit shall connect multiple MCUs, up to 16 total per system.

2. The selection of MCU shall be based on number of connectable Indoor units and sum of Indoor unit capacity.

B. Mode Change Unit Cabinet:

1. The condensing unit shall be completely weatherproof and corrosion resistant. The unit shall be constructed from rust-proofed mild steel panels coated with a baked enamel finish.

2. Each cabinet shall house multiple refrigeration control solenoid valves and electronic expansion valves.

3. Each cabinet shall house required tube-in-tube sub cooling device with electronic expansion valve and temperature sensors to maintain design refrigerant temperatures (sub cooling).

C. Refrigerant:

1. R410A refrigerant shall be provided for MCUs.

D. Refrigerant Valves:

1. The unit shall be furnished with multiple two position solenoid valves.

2. When connecting a large indoor unit section, two adjacent branch circuits shall be joined together at the branch controller to deliver an appropriate amount of refrigerant. The two refrigerant valves shall operate simultaneously. The MCU shall include the Y-joints necessary to connect 2 circuits or ports.

3. Linear electronic expansion valves and solenoid valves shall be used to control the variable refrigerant flow inside each MCU.

4. When cooling down to 5°F outside ambient temperatures, all indoor units must connect to 2 outlet ports on mode change unit(s) with included Y-connectors. This will allow adequate refrigerant volumes in low ambient conditions.

E. Integral drain pan:

1. An integral condensate pan and drain shall be provided. Drain termination is required upon installation with an appropriate termination.

F. Electrical:

1. The unit electrical power shall be 208/230 volts, 1 phase, 60 hertz.

2. The unit shall be capable of satisfactory operation within voltage limits of 187-228 volts (208V/60Hz) or 207-253V (230V/60Hz).

3. The MCU shall be controlled by integral microprocessors.

4. The control circuit between the indoor units, MCU and the outdoor unit shall be 0.5VDC - 7VDC completed using stranded, annealed copper conductor, two conductor, 16 AWG, shielded cable to provide total integration of the system.

2.8 ACCESSORIES

A. Branch selector boxes provided for heat recovery function.

1. Electronic refrigerant valves for refrigerant flow direction control, brazed type.

2. Units require no condensate removal.

B. All evaporator units shall be provided with a hard wired room thermostat by equipment manufacturer. Wireless remote control not acceptable.

C. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.

1. Minimum Insulation Thickness: Minimum 1 inch thick.

2.9 VRF CONTROLS

A. The VRF Controls Network is made up of local remote controllers, multi-zone controllers, advanced multi-zone controllers, and open protocol network devices that transmit information via the communication bus. The VRF Controls Network shall also have the ability to be accessed via a networked PC. The VRF Controls Network supports operation monitoring, scheduling, error e-mail distribution, general user software, tenant billing, maintenance support, and integration with Building Management Systems (BMS) using open protocol via BACNet, Modbus, Lon Works, or approved equal interface; all of which blend to provide the optimal control strategy for the best HVAC comfort solution.

B. Local controllers are compatible with all VRF indoor units. The remote controller wiring consists of a non-polar two-wire connection to the indoor unit. The local remote controllers may be wall-mounted and can be adjusted to maintain the optimal operation of the connected indoor unit(s). Set temperatures can be adjusted in increments of 1°F. In the cases where a

system or unit error may occur, the VRF controllers will display a two-digit error code and the unit address. The local remote controllers do not require addressing.

C. The VRF advanced multi-zone controllers are compatible with all VRF indoor units with the use of manufacturer provided adapter. The advanced multi-zone controller wiring consists of a non-polar two-wire connection to the outdoor unit. The advanced multi-zone controllers may be wall-mounted and can be adjusted to maintain the optimal operation of up to 64 connected indoor unit groups and 128 indoor units. Set temperatures can be adjusted in increments of 1°F. In the cases where a system or unit error may occur, the VRF controllers will display a two-digit error code and the unit address.

D. The intelligent system shall be equipped with two RJ-45 Ethernet ports to support interconnection with a network PC via the Internet, Local Area Network (LAN), or connection with a non-networked PC after completed installation. Web access functions shall be available so that facility staff can securely log into each controller via the PC's web browser to support monitoring, scheduling, error email, and general user functions.

E. Software functions of Power Proportional Distribution tenant billing and Energy Navigator shall also be available.

F. Control equipment is specified in Section 230900 "Instrumentation and Control for HVAC."

G. Basic Operation:

1. Capable of controlling by Area(s) or Group(s).

2. Controller shall control the following group operations:

a. On/Off
b. Operation Mode (Cool, Heat, Fan, Dry, and Auto)
c. Setpoint for current mode in the occupied period
d. Controller shall be able to limit the user adjustable setpoint ranges individually for cooling and heating based upon the Area or Group configurations.
e. Relative Setup (Cooling) and Setback (Heating) setpoints in the unoccupied mode adjustable to 2 - 12^0F**.**

1) The high and low relative setback setpoints.
2) Setup and setback setpoints can be set inside or outside of the occupied setpoint range.
3) The recovery differential shall be 4^oF (default) and adjustable between 2 – 10^oF.
4) Settings shall be applied based upon the area or group configurations.

f. Fan Speed:

1) Up to 3 speeds (dependent upon indoor unit type).

g. Louver direction (dependent upon indoor unit type):

1) 5 fixed positions or swing position.

h. Remote controller permit/prohibit of On/Off, Mode, and Setpoint.

i. Lock out setting for Intelligent Touch Manager display.

j. Indoor unit Group/Area assignment.

3. Capable of providing battery backup power for the clock at least 1 year when no AC power is applied.

a. The battery can last at least 13 years when AC power is applied.

b. Settings stored in non-volatile memory.

H. Programmability:

1. Controller shall support weekly schedule settings.

a. 7 day weekly pattern.

b. The schedule shall have the capabilities of being enabled or disabled.

c. 100 independent schedules configurable with up to 20 events settable for each day's schedule:

1) Each scheduled event shall specify time and target area or group.

2) Each scheduled event shall include On/Off, Operation Mode, Occupied Setpoint, Pre-Cool, Pre-Heat, Setback High, Setback Low, Remote Controller On/Off Prohibit, Remote Controller Mode Prohibit, Remote Controller Setpoint Prohibit, Timer Extension Setting, Fan Speed, and Setpoint Range Limit:

a) Setpoint when unit is on (occupied).

b) Configurable Setup (Cooling) and Setback (Heating) setpoints when unit is off (unoccupied).

3) Time setting in 1-minute increments.

4) Timer Extension shall be used for a timed override (settable from 30 – 180 minutes) to allow indoor unit operation during the unoccupied period.

d. A maximum of 40 exception days can be schedule on the yearly schedule (repeats yearly):

1) Exception days shall be used to override specified days on the weekly schedule based upon irregular occupied/unoccupied conditions.

2) Exception days can be configured on a set date (Jan 1) or floating date (1st Monday in September).

2. Controller shall support auto-changeover:

    a. Auto-change shall provide Fixed, Operating, and Averaging changeover methods for both heat pump and heat recovery systems based upon the changeover group configuration. This will allow for the optimal room temperature to be maintained by automatically switching the indoor unit's mode between Cool and Heat in accordance with the room temperature and setpoint.

    b. When selecting the Auto-changeover method the Differential should also be set (default value 4°F, adjustable between 0 – 13°F). The (Thermal) Differential is the tolerance for the indoor unit's setpoint.

        1) When the difference between the representative room temperature and the representative indoor unit setpoint exceed the thermal differential, the operation mode is changed

    c. When the mode is changed from Cool to Heat, the setpoint will be decreased by the thermal differential set in the Auto-changeover configuration (i.e., If the mode is Cool with a 74°F setpoint and a changeover differential of 4°F, when switched from Cool to Heat the new setpoint for heating will be 70°F).

    d. When the mode is changed from Heat to Cool, the setpoint will be increased by the thermal differential set in the Auto Changeover configuration (i.e., If the mode is Heat with a 72°F setpoint and a changeover differential of 4°F, when switched from Heat to Cool the new setpoint for cooling will be 76°F).

3. Fixed Method:

    a. Changeover evaluated by room temperature and setpoint of the representative indoor unit (first registered indoor unit in group) in the changeover group even when it is not operating (must be in Cool, Heat, or Auto mode).

4. Operating Method:

    a. Changeover evaluated by searching for an indoor unit group that is operating in Cool, Heat, or Auto mode and uses the indoor unit room temperature and setpoint as the representative room temperature and setpoint.

    b. The order of the search is based upon the order each indoor unit group is assigned to the intelligent Touch Manager within the changeover group.

    c. If none of the indoor units in the group meet the above requirements, the fixed method of changeover will be applied.

5. Average Method:

    a. Changeover evaluated by the average of all indoor unit group's room temperatures and setpoints operating in Cool, Heat, or Auto mode in the changeover group list.

b. If none of the indoor units in the group meet the above requirements, the fixed method of changeover will be applied.

c. If the average room temperature ≤ average setpoint, the indoor units will be placed in Heat mode.

d. If the average room temperature ≥ average setpoint, the indoor units will be placed in Cool mode.

6. Changeover shall change the operation mode of the indoor unit that is set as the Changeover Master. The Changeover Master indoor unit shall then change the operation mode of all indoor unit groups daisy chained to the same outdoor unit in the heat pump system or branch selector box in the heat recovery system.

7. Changeover from Heat to Cool mode shall occur when the room temperature is greater than or equal to the heating setpoint, plus the setting of the thermal difference (0 – 13°F) with a safety allowance if necessary is established.

8. Changeover from Cool to Heating mode shall occur when room temperature is less than or equal to the cooling setpoint, minus the setting of the thermal difference (0 – 13°F) with a safety allowance if necessary is established.

9. 30 Minute Guard Timer:

a. Upon changeover, guard timer will prevent another changeover during this period.

b. Guard timer is ignored by a change of setpoint manually from either intelligent Touch Manger or Remote Controller or by schedule.

I. Controller Shall Support Interlock:

1. Interlock feature for use with 3rd party equipment (DOAS, dampers, occupancy sensing, window switch, etc.) to automatically control groups or areas corresponding to the change of the operation status or the On/Off status of any group.

2. WAGO I/O unit – Di, Do, Ai:

a. On/Off based monitoring and control of equipment
b. Manual or scheduled operation of equipment
c. Operation based upon interlock with indoor unit group(s)
d. Monitor equipment error/alarm status

3. Digital Input/Output Unit or Digital Input Unit:

a. On/Off based monitoring and control of equipment
b. Manual or scheduled operation of equipment
c. Operation based upon interlock with indoor unit group(s)
d. Monitor equipment error/alarm status

J. Controller shall support force shutdown of associated indoor unit groups.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Install units level and plumb. Coordinate installation of units with architectural, mechanical and electrical work.

B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.

C. Install ground-mounting, compressor-condenser components on 4-inch thick, reinforced concrete base; 6 inches larger on each side than unit. Concrete, reinforcement, and formwork are specified in Section 030000 "Concrete." Coordinate anchor installation with concrete base.

D. Install ground-mounting, compressor-condenser components on polyethylene mounting base.

E. Install seismic restraints.

F. Install compressor-condenser components on restrained, spring isolators with a minimum static deflection of 1 inch. Refer to Section 230548 "Vibration and Seismic Controls for HVAC Piping and Equipment."

G. Install and connect precharged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.3 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to unit to allow service and maintenance.

C. Duct Connections: Duct installation requirements are specified in Section 233113 "Metal Ducts." Drawings indicate the general arrangement of ducts. Connect supply and return ducts to split-system air-conditioning units with flexible duct connectors. Flexible duct connectors are specified in Section 233300 "Air Duct Accessories."

D. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

E. Electrical Connections: Comply with requirements in Sections 262726 “Wiring Devices” for power wiring, switches, and motor controls.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.

B. Perform the following field tests and inspections and prepare test reports:

1. Leak Test: After installation, charge system and test for leaks. Correct leaks and retest until no leaks exist.

2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.

3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Remove and replace malfunctioning units and retest as specified above.

3.5 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

3.6 INSTRUCTION

A. Engage a factory-authorized service representative to instruct City of New York’s operating maintenance personnel to adjust, operate, and maintain units. Provide a minimum of four (4) hours instructional session.

END OF SECTION 238136

SECTION 26 05 00 - COMMON WORK RESULTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:

1. The Contract Drawings
2. The Specifications
3. The general conditions,
4. The Addendum
5. The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section covers and applies to all work specified in Division 26.

B. Work Included: Materials, equipment, fabrication, installation and tests for fully operational and safe systems, including all necessary materials, appurtenances and features whether specified or shown on drawings or not for the following:

1. Electrical work specified in all sections within Division 26 of these specifications, including:

a. Short circuit analysis and protective device coordination study.
b. Lighting and power distribution facilities, including distribution boards, panelboards with feeders, branch circuit wiring, connections to outlets, and wiring devices.
c. Lighting fixtures and lamps.
d. Motor and other power-consuming equipment connections from distribution apparatus to equipment.
e. Control, alarm and interlock wiring for mechanical equipment, where indicated.
f. Electrical grounding system.
g. Emergency power and lighting system.
h. Cutting and patching for the Electrical Work.
i. Adjustment and testing of the Electrical Work.
j. Lighting control system.
k. Examine the drawings and specifications of other Divisions and provide electrical service for all equipment, devices and controls noted therein, unless work specifically is not included.

1.3 DESCRIPTION OF BID DOCUMENTS

A. Drawings:

1. Electrical layouts are generally diagrammatic and, although size and location of equipment is drawn to scale wherever possible, Contractor shall make use of all data in Contract Documents and verify this information at building site.
2. Locations of items on the drawings may be distorted for purposes of clearness and legibility. Actual locations of architectural and mechanical items are shown on architectural and mechanical drawings.
3. Contractor shall adjust locations of light fixtures in mechanical rooms to compensate for changes in duct routing, to provide reasonably uniform lighting in work areas.
4. Outlets shall be located in accordance with architectural design, and specific locations may be determined by the Commissioner at jobsite prior to installation.
5. Outlets located on architectural plans by dimension shall be held. Additional outlets may be shown on electrical plans and shall be installed as close as practical to the location shown.
6. Manufacturers' drawings and instructions shall be followed in all cases where the makers of devices and equipment furnish directions, where details are not shown on the drawings, or where described in the specifications.
7. Work installed in a manner contrary to that shown in the contract documents shall be removed and reinstalled when so directed by the Commissioner. Discrepancies and questionable points shall be immediately reported to the Commissioner for clarification.
8. The City of New York and the Commissioner reserve the right to make reasonable changes in outlet locations in each area prior to roughing-in at no additional cost to the City of New York.

B. If any part of specifications or drawings appears unclear or contradictory, apply to Commissioner for his interpretation and decision as early as possible. Do not proceed with such work without the Commissioner’s decision.

1.4 JOB CONDITIONS

A. Examine all drawings and specifications in a manner to be fully cognizant of all work required under this Division.

B. Adjoining work of other Divisions shall be examined for interferences and conditions affecting this Division.

C. Examine site related work and surfaces before starting work of any Section.
1. Report to the Commissioner, in writing, conditions which will prevent proper provision of this work.
2. Beginning work of any Section without reporting unsuitable conditions to the Commissioner constitutes acceptance of conditions by Contractor.
3. Perform any required removal, restore or replacement of this work caused by unsuitable conditions at no additional cost to the City of New York.

D. Connections to existing work:

1. The intent of the work is shown on the drawings and described herein, and no consideration will be granted by reason of lack of familiarity on the part of the contractor with actual physical conditions, requirements, and practices at the site.
2. Install new work and connect to existing work with minimum interference to existing facilities.
3. Temporary shutdowns of existing services: At times not to interfere with normal operation of existing facilities and only with written approval of the Commissioner at no additional charges.
4. Maintain continuous operation of existing facilities as required with necessary temporary connections between new and existing work. Do not interrupt alarm and emergency systems.
5. Connect new work to existing work in neat and acceptable manner. Restore existing disturbed work to original condition including maintenance of wiring continuity as required.

E. Removal and Relocation of Existing Work:
1. Disconnect, remove or relocate electrical material, equipment and other work noted and required by removal or changes in existing construction.
2. Provide new material and equipment required for relocated equipment.
3. Disconnect load and supply end of conductors feeding existing equipment.
4. Remove conductors from existing raceways to be rewired.
5. Tape both ends of abandoned conductors. Cap outlets and abandoned raceways.
6. Cut and cap abandoned floor raceways flush with concrete floor or behind walls and ceilings.
7. Dispose of removed raceways and wire.
8. Dispose of removed electrical equipment as directed.

F. If asbestos insulation is found when working in existing areas, immediately stop work and notify the Commissioner. Do not restart work until advised in writing by the Commissioner that it is safe to do so following abatement, encapsulation, etc.

1.5 DEFINITIONS

A. Refer to DDC General Conditions

B. "Wiring": Raceway, fittings, wire, boxes and related items.

C. "Concealed": Embedded in masonry or other construction, installed in furred spaces, within double partitions or hung ceilings, in trenches, in crawl spaces or in enclosures.

D. "Exposed": Not installed underground or "concealed" as defined above.

E. "Indicated" "Shown" or "Noted": As indicated, shown or noted on drawings or specifications.

F. "Equal": Equal in quality, workmanship, materials, weight, size, design and efficiency of specified product, conforming with "Manufacturers".

G. "Reviewed," "Satisfactory," "Accepted," or "Directed": As reviewed, satisfactory, accepted or directed by or to the Commissioner.

H. "Motor Controllers": Manual or magnetic starters (with or without switches), individual pushbuttons, or hand-off-automatic (HOA) switches controlling the operation of motors.

I. "Control Devices": Automatic sensing and switching devices such as thermostats, pressure, float, electro-pneumatic switches and electrodes controlling operation of equipment.

1.6 UTILITY CONNECTIONS

A. Finalize electrical service arrangements including verification of locations and details with the Con Edison Electric Company.

B. In addition to the requirements shown on the drawings and stated herein, the work shall comply with the following:

1. Construction Standards and Service Requirements of the respective utilities including any supplementary drawings issued by the utilities.
2. Be subjected to inspection approval of these utilities.

1.7 ELECTRICAL SYSTEM CHARACTERISTICS

A. Service: 208 volts, 3 phase, 4 wire with ground conductor.

B. High efficiency LED lighting: 120 volts.

C. Motors ½ horsepower and above: 208 volts, 3 phase.

D. Fractional horsepower motors less than ½ horsepower: 120 volts single phase.

E. General receptacles will be supplied at 120 volts.

1.8 MOUNTING HEIGHTS

A. Mounting heights of devices and equipment shown on the architectural drawings shall govern, but in the absence of such indications, the following centerline heights above the finished floor shall be maintained.

1.	Wall switches	3 feet - 6 inches (or as directed by Commissioner).
2.	Wall lights (interior)	7 feet - 0 inches (or as directed by the Commissioner).

3.	Pendant or chain hung fixture	10 feet - 0 inches (or as directed by the Commissioner).
4.	Convenience receptacles	1 foot - 3 inches except in Toilets and over cabinets or -counters where devices shall be mounted at 4 feet - 0 inches (9 inches above counter).
5.	Fire alarm stations	4 feet - 0 inches.
6.	Telephone and communication outlets	1 foot - 3 inches.
7.	Clock outlets	1 foot - 6 inches below finished ceiling.
8.	Panelboard cabinets	Shall be installed with the top 6 feet - 6 inches above the floor for cabinets more than 2 feet - 6 inches high and 6 feet - 0 inches for cabinets less than 2 feet - 6 inches high.
9.	Motor controllers	5 feet-0 inches.

1.9 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Submit shop drawings, product data, samples and certificates of compliance required by contract documents.

C. Layout Shop Drawings Required:

1. Prepare and submit following coordinated layout shop drawings on 1/4" scale:

   a. Mechanical equipment rooms containing motor control center and/or transformers.
   b. All electrical rooms and closets with equipment dimensions.
   c. Areas requiring deviations from design documents. Such deviations shall be clearly identified.

2. Layout drawings not varying from design documents shall not be submitted and will not be reviewed.

D. Operating Instructions, Maintenance Manuals and Parts Lists.

1. Before requesting acceptance of work submit one set for review by the Commissioner.
2. After review, furnish five printed and bound sets.
3. Include:

    a. Manufacturer's name, model number, service manual, spare-parts list, and descriptive literature for all components, cross referenced and numbered on Reference Drawings.
    b. Maintenance instructions.
    c. Listing of possible breakdown and repairs.
    d. Instruction for starting, operation and programming.
    e. Detailed and simplified one line and wiring diagrams.
    f. Field test report.
    g. Name, address and phone number of contractors, equipment suppliers and service agencies.
    h. Assemble manufacturer's equipment manuals in chronological order following the specification alpha-numeric system in heavy duty three-ring binders clearly titled on the spine and front cover.

1.10 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

1.11 COORDINATION

A. Coordinate arrangement, mounting, and support of electrical equipment:

    1. To allow maximum possible headroom unless specific mounting heights that reduce headroom are indicated.
    2. To provide for ease of disconnecting the equipment with minimum interference to other installations.
    3. To allow right of way for piping and conduit installed at required slope.
    4. So that connecting raceways, cables, wireways, cable trays, and busways will be clear of obstructions and of the working and access space of other equipment.

B. Coordinate installation of required supporting devices and set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

C. Coordinate location of access panels and doors for electrical items that are behind finished surfaces or otherwise concealed.

D. Coordinate sleeve selection and application with selection and application of firestopping specified in Section 072700 "Firestopping/Smokeseals."

PART 2 - PRODUCTS

2.1 SLEEVES FOR RACEWAYS AND CABLES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

C. Sleeves for Rectangular Openings: Galvanized sheet steel.

1. Minimum Metal Thickness:

a. For sleeve cross-section rectangle perimeter less than 50 inches and no side more than 16 inches, thickness shall be 0.052 inch.
b. For sleeve cross-section rectangle perimeter equal to, or more than, 50 inches and 1 or more sides equal to, or more than, 16 inches, thickness shall be 0.138 inch.

2.2 SLEEVE SEALS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Advance Products & Systems, Inc.
b. Calpico, Inc.
c. Metraflex Co.
d. Pipeline Seal and Insulator, Inc.
e. Or approved equal.

2. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
3. Pressure Plates: Stainless steel. Include two for each sealing element.
4. Connecting Bolts and Nuts: Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.3 GROUT

A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, nonstaining, mixed with water to consistency suitable for application and a 30-minute working time.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

A. Comply with NECA 1.

B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.

C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.

D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

E. Right of Way: Give to piping systems installed at a required slope.

F. Layout and installation of electrical work shall be coordinated with the overall construction schedule and work schedules of various trades, to prevent delay in completion of the Project.

1. Complete drawings and specifications for the entire project will be available at the Project site.

2. It shall be obligatory to thoroughly check these drawings before organizing the electrical work schedule, or installing material and equipment.

G. Dimensions and information regarding accurate locations of equipment, and structural limitations and finish shall be coordinated and verified with other Division of Work. Be prepared to promptly furnish dimensions and information regarding electrical Work to other trades and cooperate with them to secure harmony and the best progress of the Project.

H. The drawings do not show off-sets, bends, and special fittings, or junction or pull boxes necessary to meet job conditions. These items shall be provided as required at no additional cost to the City of New York.

I. Accessibility and Clearance:

1. Electrical equipment, outlets, junction and pull boxes shall be installed in accessible locations, avoiding obstructions, preserving headroom, and keeping openings and passageways clear.

2. Minor adjustments in the locations of equipment shall be made where necessary, providing such adjustments do not adversely affect functioning of the equipment.

J. Scaffolds and staging for installation of electrical work shall be provided under the work of this Division.

3.3 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

E. Cut sleeves to length for mounting flush with both surfaces of walls.

F. Extend sleeves installed in floors 2 inches above finished floor level.

G. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable, unless indicated otherwise.

H. Seal space outside of sleeves with grout for penetrations of concrete and masonry

1. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.

I. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Section 079000 " Sealants."

J. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Section 072700 "Firestopping/Smokeseals."

K. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

L. Aboveground, Exterior-Wall Penetrations: Seal penetrations using cast-iron pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

M. Underground, Exterior-Wall Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing mechanical sleeve seals.

3.4 SLEEVE-SEAL INSTALLATION

A. Install to seal exterior wall penetrations.

B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.5 FIRESTOPPING

A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Section 072700 "Firestopping/Smokeseals."

3.6 WEATHERPROOF EQUIPMENT

A. Electrical devices or equipment located in damp, semi-exposed areas shall be weather-resistant. Enclosure shall comply with NEMA Type 3R requirements.

B. Surface mounted outlet boxes shall be cast metal with threaded hubs. Pull or junction boxes shall be cast metal with bolted and gasketed covers.

C. Outlet box covers shall be of a suitable weatherproof type with gaskets, packing glands, weatherproof doors, or other required means to prevent entry of moisture.

D. Lighting fixtures shall be installed with suitable gasket, and UL labeled for location.

3.7 HOUSEKEEPING PADS AND FOUNDATIONS

A. Concrete work required for housekeeping pads and foundations will be provided by General Construction Work. Comply with the requirement for concrete base specified in Division 03 section.
   1. Use 3000-psi 28-day compressive-strength concrete and reinforcement as specified in Section 030000 "Concrete"
   2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of the base.
   3. Install epoxy-coated anchor bolts for anchoring equipment to the concrete base.
   4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

5. Bolt equipment to channel-iron sills embedded in concrete bases. Install sills level and grout flush with floor or base.
6. Refinish damaged or scratched surfaces.
7. Provide 24 inch wide insulating mat in front of operable electrical equipment and in front and rear of free standing ones.
8. Tighten all bolted connections prior to energizing.

B. Furnish required dimensional drawings and specify locations. Minimum height of housekeeping pads shall be 4 inches and shall extend out 6 inches from the footprint of the equipment.

C. Furnish anchor bolts and sleeves, and verify accuracy of installation.

D. Provide for:

1. Switchboards.
2. Pumps.
3. All other floor mounted equipment.

END OF SECTION 26 05 00

PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 19 - LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following:

1. Building wires and cables rated 600 V and less.
2. Connectors, splices, and terminations rated 600 V and less.
3. Sleeves and sleeve seals for cables.

B. Related Sections include the following:
1. Specification 26 05 29 "Hangers and Supports for Electrical Systems."
2. Specification 26 05 53 "Identification for Electrical Systems."
3. Specification 07 90 00 "Joint Sealars."
4. Specification 07 27 00 "Firestopping/Smokeseals"

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. EPDM: Ethylene-propylene-diene terpolymer rubber.

C. NBR: Acrylonitrile-butadiene rubber.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For each type of product indicated.

C. Qualification Data: For testing agency.

D. Field quality-control test reports.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to The City of New York.

1. Testing Agency's Field Supervisor: the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to The City of New York, and marked for intended use.

D. Comply with NFPA 70.

1.6 COORDINATION

A. Set sleeves in cast-in-place concrete, masonry walls, and other structural components as they are constructed.

PART 2 - PRODUCTS

2.1 CONDUCTORS AND CABLES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Insulated Wire Corp.; a Leviton Company.
2. General Cable Corporation.
3. Okonite Company, The.
4. Southwire Wire and Cable Company.
5. Southwest Wire and Cable.
6. Or approved equal.

B. Copper Conductors: Comply with NEMA WC 70.

C. The design is based on copper conductors.

D. Conductor Insulation: Comply with NEMA WC 70 for Types THHN-THWN and XPLE.

E. Multiconductor Cable: Comply with NEMA WC 70 for armored cable, Type AC and metal-clad cable, Type MC with ground wire.

2.2 PHOTOVOLTAIC CONDUCTORS AND CABLES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. General Cable Corporation.
2. Okonite Company, The.
3. Southwire Wire and Cable Company.
4. Or approved equal.

B. Copper Conductors: Comply with UL 4703 & RPVU90.

C. The design is based on copper conductors.

D. Conductor Insulation: Comply with UL 4703 & RPVU90 for XPLE.

2.3 CONNECTORS AND SPLICES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hubbell Power Systems, Inc.
2. O-Z/Gedney; EGS Electrical Group LLC.
3. 3M; Electrical Products Division.
4. Tyco Electronics Corp.
5. Or approved equal.

B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

2.4 SLEEVES FOR CABLES

A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.

B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

C. Sleeves for Rectangular Openings: Galvanized sheet steel with minimum 0.052- or 0.138-inch thickness as indicated and of length to suit application.

D. Coordinate sleeve selection and application with selection and application of firestopping specified 07 27 00 "Firestopping/Smokeseals"

2.5 SLEEVE SEALS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

B. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and cable.

1. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.
2. Pressure Plates: Carbon steel or Stainless steel. Include two for each sealing element.
3. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating or Stainless steel of length required to secure pressure plates to sealing elements. Include one for each sealing element.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 CONDUCTOR MATERIAL APPLICATIONS

A. Feeders: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

B. Branch Circuits: Copper. Solid for No. 10 AWG and smaller; stranded for No. 8 AWG and larger.

C. Minimum size No. 12 AWG up to 100 feet at 120V; lengths exceeding 100 feet, use No. 10. For 277V, over 220 feet, use No. 10 minimum.

3.3 CONDUCTOR INSULATION AND MULTICONDUCTOR CABLE APPLICATIONS AND WIRING METHODS

A. Service Entrance: Type THHN-THWN, single conductors in raceway, Type SE or USE multiconductor cable or as require by the Electrical Utility company Con Edison.

B. Exposed Feeders: Type THHN-THWN, single conductors in raceway.

C. Feeders Concealed in Ceilings, Walls, Partitions, and Crawlspaces: Type THHN-THWN, single conductors in raceway.

D. Feeders Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway or as require by the Electrical Utility company Con Edison.

E. Feeders in Cable Tray: Type THHN-THWN, single conductors in raceway.

F. Exposed Branch Circuits: Type THHN-THWN, single conductors in raceway.

G. Branch Circuits Concealed in Ceilings, Walls, and Partitions: Type THHN-THWN, single conductors in raceway, Armored cable, Type AC or Metal-clad cable, Type MC.

H. Branch Circuits Concealed in Concrete, below Slabs-on-Grade, and Underground: Type THHN-THWN, single conductors in raceway.

I. Branch Circuits in Cable Tray: Type THHN-THWN, single conductors in raceway and Metal-clad cable, Type MC.

J. Cord Drops and Portable Appliance Connections: Type SO, hard service cord with stainless-steel, wire-mesh, strain relief device at terminations to suit application.

K. Photovoltaic wire in Cable Tray or Wiring Gutter: Type XLPE single conductor in Cable Tray or Wiring Gutter UV and Sunlight Resistant.

L. Class 1 Control Circuits: Type THHN-THWN, in raceway.

M. Class 2 Control Circuits: Type THHN-THWN, in raceway.

3.4 INSTALLATION OF CONDUCTORS AND CABLES

A. Conceal cables in finished walls, ceilings, and floors, unless otherwise indicated.

B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.

C. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.

D. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.

E. Support cables according to Specification 26 05 29 "Hangers and Supports for Electrical Systems."

F. Identify and color-code conductors and cables according to Specification 26 05 53 "Identification for Electrical Systems."

G. Not more than three lighting or convenience outlet circuits in one conduit unless otherwise indicated.

H. Pull no thermoplastic wires at temperatures lower than 32°F.

I. Unless specifically indicated, separate raceways for conductors of 120/208 and 277/480 volt systems, except 480 volt motor branch circuit wiring and related 120 volt control wiring. Separate raceways for emergency system conductors.

J. Separate raceways for Photovoltaic systems cable and control wiring.

K. Individual raceways for two pole ungrounded circuits.

3.5 CONNECTIONS

A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

B. Terminations, splices and taps:

1. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation rating than unspliced conductor.
2. Copper conductors No. 10 and smaller: Compression type or twist-on spring loaded connectors and clear nylon insulated covering.
3. Copper conductors No. 8 and larger: Mechanical bolted pressure or hydraulic compression type using manufacturers recommended tooling.
4. Cable lugs and connectors: Compression type of same metal as conductor to match cables with marking indicating size and type.
5. For copper lug connection to bus bars provide anti-seize compound.

C. Wiring at Outlets: Install conductor at each outlet, with at least 12 inches of slack.

3.6 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

A. Coordinate sleeve selection and application with selection and application of firestopping specified in Specification 07 27 00 "Firestopping/ Smokeseals"

B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls. Comply with requirements in Specification 26 05 44 “Sleeves and Sleeve Seals for Electrical Raceways and Cabling”.

C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.

D. Rectangular Sleeve Minimum Metal Thickness:

1. For sleeve rectangle perimeter less than 50 inches and no side greater than 16 inches, thickness shall be 0.052 inch.
2. For sleeve rectangle perimeter equal to, or greater than, 50 inches and 1 or more sides equal to, or greater than, 16 inches, thickness shall be 0.138 inch.

E. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.

F. Cut sleeves to length for mounting flush with both wall surfaces.

G. Extend sleeves installed in floors 2 inches above finished floor level.

H. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.

I. Seal space outside of sleeves with grout for penetrations of concrete and masonry and with approved joint compound for gypsum board assemblies.

J. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and cable, using joint sealant appropriate for size, depth, and location of joint according to Specification 07 90 00 “Joint Sealers."

K. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at cable penetrations. Install sleeves and seal with firestop materials according to Specification 07 27 00 " Firestopping/smokeseals"

L. Roof-Penetration Sleeves: Seal penetration of individual cables with flexible boot-type flashing units applied in coordination with roofing work. Obtain written approval from roofing contractor for actual materials being used and methods of installation.

M. Aboveground Exterior-Wall Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Size sleeves to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

N. Underground Exterior-Wall Penetrations: Install cast-iron "wall pipes" for sleeves. Size sleeves to allow for 1-inch annular clear space between cable and sleeve for installing mechanical sleeve seals.

3.7 SLEEVE-SEAL INSTALLATION

A. Install to seal underground exterior-wall penetrations.

B. Use type and number of sealing elements recommended by manufacturer for cable material and size. Position cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.8 FIRESTOPPING

A. Apply firestopping to electrical penetrations of fire-rated floor and wall assemblies to restore original fire-resistance rating of assembly according to Specification 07 27 00 "firestopping/ smokeseals."

3.9 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Perform tests and inspections and prepare test reports.

C. Tests and Inspections:

1. After installing conductors and cables and before electrical circuitry has been energized, test service entrance and feeder conductors, and conductors feeding the following critical equipment and services for compliance with requirements.

   a. New Electrical Service board

   b. New Electrical Switchboard

   c. New Photovoltaic inverter equipment

2. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

3. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each splice in cables and conductors No. 3 AWG and larger. Perform scans when the facility is operational and at highest peak of electrical load as possible. Remove box and equipment covers so splices are accessible to portable scanner.

   a. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each splice 11 months after date of Substantial Completion.
   b. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
   c. Record of Infrared Scanning: Prepare a certified report that identifies splices checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

D. Test Reports: Prepare a written report to record the following:

1. Test procedures used.
2. Test results that comply with requirements.
3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

E. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 260519

SECTION 26 05 23 - CONTROL-VOLTAGE ELECTRICAL POWER CABLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. UTP cabling.
2. Low-voltage control cabling.
3. Control-circuit conductors.
4. Identification products.

1.3 DEFINITIONS

A. Refer to DDC General Conditions.

B. Basket Cable Tray: A fabricated structure consisting of wire mesh bottom and side rails.

C. BICSI: Building Industry Consulting Service International

D. BICSI TDMM: Telecommunications Distribution Methods Manual

E. Channel Cable Tray: A fabricated structure consisting of a one-piece, ventilated-bottom or solid-bottom channel section.

F. EIA: Electronic Industries Alliance

G. EMI: Electromagnetic interference.

H. IDC: Insulation displacement connector.

I. ICEA S-90-661: Category 3, 5, & 5e individually unshielded twisted pair indoor cables(with or without and overall shield) for use in general purpose and LAN communication wiring systems technical requirements.

J. ITSIM: Information Technology Systems Installation Methods

K. Ladder Cable Tray: A fabricated structure consisting of two longitudinal side rails connected by individual transverse members (rungs).

L. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control and signaling power-limited circuits.

M. Open Cabling: Passing telecommunications cabling through open space (e.g., between the studs of a wall cavity).

N. RCDD: Registered Communications Distribution Designer.

O. Solid-Bottom or Nonventilated Cable Tray: A fabricated structure consisting of integral or separate longitudinal side rails, and a bottom without ventilation openings.

P. Trough or Ventilated Cable Tray: A fabricated structure consisting of integral or separate longitudinal rails and a bottom having openings sufficient for the passage of air and using 75 percent or less of the plan area of the surface to support cables.

Q. TIA/EIA 568: Commercial Building Telecommunications Cabling Standard

R. TIA/EIA-569-A: Commercial Building Standards for Telecommunications Pathways and Spaces

S. UTP: Unshielded twisted pair.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Shop Drawings: For cable tray layout, showing cable tray route to scale, with relationship between the tray and adjacent structural, electrical, and mechanical elements. Include the following:

1. Vertical and horizontal offsets and transitions.
2. Clearances for access above and to side of cable trays.
3. Vertical elevation of cable trays above the floor or bottom of ceiling structure.
4. Load calculations to show dead and live loads as not exceeding manufacturer's rating for tray and its support elements.

C. Qualification Data: For qualified layout technician, installation supervisor, and field inspector.

D. Source quality-control reports.

E. Field quality-control reports.

F. Maintenance Data: For wire and cable to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 50 or less.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Test cables upon receipt at Project site.
1. Test each pair of UTP cable for open and short circuits.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install UTP and connecting materials until wet work in spaces is complete and dry, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

PART 2 - PRODUCTS

2.1 PATHWAYS

A. Support of Open Cabling: NRTL labeled for support of Category 5e or Category 6 cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.

1. Support brackets with cable tie slots for fastening cable ties to brackets.
2. Lacing bars, spools, J-hooks, and D-rings.
3. Straps and other devices.

B. Cable Trays:

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, the following:

a. Cable Management Solutions, Inc.
b. Cablofil Inc.
c. Cooper B-Line, Inc.
d. Cope - Tyco/Allied Tube & Conduit.

e. GS Metals Corp.
f. Or approved equal.

2. Cable Tray Materials: Metal, suitable for indoors and protected against corrosion by hot-dip galvanizing, complying with ASTM A 123/A 123M, Grade 0.55, not less than 0.002165 inch (0.055 mm) thick.
   a. Ladder Cable Trays: Nominally 18 inches wide, and a rung spacing of 12 inches.

C. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceway and Boxes for Electrical Systems."Flexible metal conduit shall not be used.

1. Outlet boxes shall be no smaller than 2 inches wide, 3 inches high, and 2-1/2 inches deep.

2.2 BACKBOARDS

A. Description: Plywood, fire-retardant treated, 3/4 by 48 by 96 inches. Comply with requirements for plywood backing panels in Division 06 Section "Rough Carpentry."

2.3 UTP CABLE

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Belden CDT Inc.; Electronics Division.
2. Berk-Tek; a Nexans company.
3. CommScope, Inc.
4. Draka USA.
5. Genesis Cable Products; Honeywell International, Inc.
6. KRONE Incorporated.
7. Mohawk; a division of Belden CDT.
8. Nordex/CDT; a subsidiary of Cable Design Technologies.
9. Superior Essex Inc.
10. SYSTIMAX Solutions; a CommScope, Inc. brand.
11. 3M.
12. Tyco Electronics/AMP Netconnect; Tyco International Ltd.
13. Or approved equal.

B. Description: 100-ohm, four-pair UTP, formed into 25-pair binder groups covered with a blue thermoplastic jacket.

1. Comply with ICEA S-90-661 for mechanical properties.
2. Comply with TIA/EIA-568-B.1 for performance specifications.
3. Comply with TIA/EIA-568-B.2, Category 5e and Category 6.
4. Listed and labeled by an NRTL acceptable to Commissioner as complying with UL 444 and NFPA 70 for the following types:

   a. Communications, General Purpose: Type CM or Type CMG.

b. Communications, Plenum Rated: Type CMP, complying with NFPA 262.
c. Communications, Riser Rated: Type CMR; complying with UL 1666.
d. Multipurpose: Type MP or Type MPG.
e. Multipurpose, Plenum Rated: Type MPP, complying with NFPA 262.
f. Multipurpose, Riser Rated: Type MPR, complying with UL 1666.

2.4 UTP CABLE HARDWARE

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, the following:

1. American Technology Systems Industries, Inc.
2. Dynacom Corporation.
3. Hubbell Premise Wiring.
4. KRONE Incorporated.
5. Leviton Voice & Data Division.
6. Molex Premise Networks; a division of Molex, Inc.
7. Nordex/CDT; a subsidiary of Cable Design Technologies.
8. Panduit Corp.
9. Siemon Co. (The).
10. Tyco Electronics/AMP Netconnect; Tyco International Ltd.
11. Or approved Equal.

B. UTP Cable Connecting Hardware: IDC type, using modules designed for punch-down caps or tools. Cables shall be terminated with connecting hardware of the same category or higher.

C. Connecting Blocks: 110 style for Category 5e and 110 style for Category 6. Provide blocks for the number of cables terminated on the block; integral with connector bodies, including plugs and jacks where indicated.

2.5 LOW-VOLTAGE CONTROL CABLE

A. Paired Cable: NFPA 70, Type CMG.

1. One pair, twisted, No. 16 AWG, stranded (19x29) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

B. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

1. One pair, twisted, No. 16 AWG, stranded (19x29) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with NFPA 262.

C. Paired Cable: NFPA 70, Type CMG.

1. One pair, twisted, No. 18 AWG, stranded (19x30) tinned-copper conductors.
2. PVC insulation.
3. Unshielded.
4. PVC jacket.
5. Flame Resistance: Comply with UL 1581.

D. Plenum-Rated, Paired Cable: NFPA 70, Type CMP.

1. One pair, twisted, No. 18 AWG, stranded (19x30) tinned-copper conductors.
2. Fluorinated ethylene propylene insulation.
3. Unshielded.
4. Plastic jacket.
5. Flame Resistance: NFPA 262, Flame Test.

2.6 CONTROL-CIRCUIT CONDUCTORS

A. Class 1 Control Circuits: Stranded copper, Type THHN-THWN and Type XHHN, in raceway, complying with UL 83 and UL 44.

B. Class 2 Control Circuits: Stranded copper, Type XHHN, in raceway, complying with UL 44.

C. Class 3 Remote-Control and Signal Circuits: Stranded copper, Type TW or Type TF, complying with UL 83.

2.7 IDENTIFICATION PRODUCTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, the following:

1. Brady Corporation.
2. HellermannTyton.
3. Kroy LLC.
4. Panduit Corp.
5. Or approved equal.

B. Comply with UL 969 for a system of labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

C. Comply with requirements in Specification 260553 "Identification for Electrical Systems."

2.8 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate cables.

B. Factory test UTP and optical fiber cables on reels according to TIA/EIA-568-B.1.

C. Factory test UTP cables according to TIA/EIA-568-B.2.

D. Factory test multimode optical fiber cables according to TIA/EIA-526-14-A(Optical Power Loss Measurements of Installed Multimode Fiber Cable Plant) and TIA/EIA-568-B.3.

E. Cable will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION OF PATHWAYS

A. Cable Trays: Comply with NEMA VE 2 and TIA/EIA-569-A-7.

B. Comply with TIA/EIA-569-A for pull-box sizing and length of conduit and number of bends between pull points.

C. Comply with requirements in Specification 260533 "Raceway and Boxes for Electrical Systems" for installation of conduits and wireways.

D. Install manufactured conduit sweeps and long-radius elbows if possible.

E. Pathway Installation in Equipment Rooms:

1. Position conduit ends adjacent to a corner on backboard if a single piece of plywood is installed or in the corner of room if multiple sheets of plywood are installed around perimeter walls of room.
2. Install cable trays to route cables if conduits cannot be located in these positions.
3. Secure conduits to backboard if entering room from overhead.
4. Extend conduits 3 inches above finished floor.
5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

F. Backboards: Install backboards with 96-inch dimension vertical. Butt adjacent sheets tightly and form smooth gap-free corners and joints.

3.3 INSTALLATION OF CONDUCTORS AND CABLES

A. Comply with NECA 1.

B. General Requirements for Cabling:

1. Comply with TIA/EIA-568-B.1.
2. Comply with BICSI ITSIM, Ch. 6, "Cable Termination Practices."
3. Terminate all conductors; no cable shall contain unterminated elements. Make terminations only at indicated outlets, terminals, and cross-connect and patch panels.
4. Cables may not be spliced. Secure and support cables at intervals not exceeding 30 inches and not more than 6 inches from cabinets, boxes, fittings, outlets, racks, frames, and terminals.
5. Bundle, lace, and train conductors to terminal points without exceeding manufacturer's limitations on bending radii, but not less than radii specified in BICSI ITSIM, "Cabling Termination Practices" Chapter. Install lacing bars and distribution spools.
6. Do not install bruised, kinked, scored, deformed, or abraded cable. Do not splice cable between termination, tap, or junction points. Remove and discard cable if damaged during installation and replace it with new cable.
7. Cold-Weather Installation: Bring cable to room temperature before dereeling. Heat lamps shall not be used for heating.
8. Pulling Cable: Comply with BICSI ITSIM, Ch. 4, "Pulling Cable." Monitor cable pull tensions.

C. UTP Cable Installation:

1. Comply with TIA/EIA-568-B.2.
2. Install 110-style IDC termination hardware unless otherwise indicated.
3. Do not untwist UTP cables more than 1/2 inch from the point of termination to maintain cable geometry.

D. Installation of Control-Circuit Conductors:

1. Install wiring in raceways. Comply with requirements specified in Division 26 Section "Raceway and Boxes for Electrical Systems."

E. Open-Cable Installation:

1. Install cabling with horizontal and vertical cable guides in telecommunications spaces with terminating hardware and interconnection equipment.
2. Suspend copper cable not in a wireway or pathway a minimum of 8 inches above ceilings by cable supports not more than 60 inches apart.
3. Cable shall not be run through structural members or in contact with pipes, ducts, or other potentially damaging items.

F. Separation from EMI Sources:

1. Comply with BICSI TDMM (Telecommunications Distribution Methods Manual) and TIA/EIA-569-A (Commercial Building Standards for Telecommunications Pathways and Spaces) recommendations for separating unshielded copper voice and data communication cable from potential EMI sources, including electrical power lines and equipment.
2. Separation between open communications cables or cables in nonmetallic raceways and unshielded power conductors and electrical equipment shall be as follows:

a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 5 inches.
b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 12 inches.
c. Electrical Equipment Rating More Than 5 kVA: A minimum of 24 inches.

3. Separation between communications cables in grounded metallic raceways and unshielded power lines or electrical equipment shall be as follows:

a. Electrical Equipment Rating Less Than 2 kVA: A minimum of 2-1/2 inches.
b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 6 inches.
c. Electrical Equipment Rating More Than 5 kVA: A minimum of 12 inches.

4. Separation between communications cables in grounded metallic raceways and power lines and electrical equipment located in grounded metallic conduits or enclosures shall be as follows:

a. Electrical Equipment Rating Less Than 2 kVA: No requirement.
b. Electrical Equipment Rating between 2 and 5 kVA: A minimum of 3 inches.
c. Electrical Equipment Rating More Than 5 kVA: A minimum of 6 inches.

5. Separation between Cables and Electrical Motors and Transformers, 5 kVA or HP and Larger: A minimum of 48 inches.
6. Separation between Cables and Fluorescent Fixtures: A minimum of 5 inches.

3.4 REMOVAL OF CONDUCTORS AND CABLES

A. Remove abandoned conductors and cables.

3.5 CONTROL-CIRCUIT CONDUCTORS

A. Minimum Conductor Sizes:

1. Class 1 remote-control and signal circuits, No 14 AWG.
2. Class 2 low-energy, remote-control, and signal circuits, No. 16 AWG.
3. Class 3 low-energy, remote-control, alarm, and signal circuits, No 12 AWG.

3.6 FIRESTOPPING

A. Comply with requirements in Specification 072700 "Firestopping/ Smokeseals"

B. Comply with TIA/EIA-569-A, Annex A, "Firestopping."

C. Comply with BICSI TDMM, "Firestopping Systems" Article.

3.7 GROUNDING

A. For data communication wiring, comply with ANSI-J-STD-607-A and with BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.

B. For low-voltage wiring and cabling, comply with requirements in Specification 260526 "Grounding and Bonding for Electrical Systems."

3.8 IDENTIFICATION

A. Identify system components, wiring, and cabling according to TIA/EIA-606-A. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.9 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. Visually inspect UTP materials for UL certification markings. Inspect cabling terminations to confirm color-coding for pin assignments, and inspect cabling connections to confirm compliance with TIA/EIA-568-B.1.
2. Visually inspect cable placement, cable termination, grounding and bonding, equipment and patch cords, and labeling of all components.
3. Test UTP cabling for DC loop resistance, shorts, opens, intermittent faults, and polarity between conductors. Test operation of shorting bars in connection blocks. Test cables after termination but not after cross connection.

    a. Test instruments shall meet or exceed applicable requirements in TIA/EIA-568-B.2. Perform tests with a tester that complies with performance requirements in "Test Instruments (Normative)" Annex, complying with measurement accuracy specified in "Measurement Accuracy (Informative)" Annex. Use only test cords and adapters that are qualified by test equipment manufacturer for channel or link test configuration.

D. Document data for each measurement. Print data for submittals in a summary report that is formatted using Table 10.1 in BICSI TDMM as a guide, or transfer the data from the instrument to the computer, save as text files, print, and submit.

E. End-to-end cabling will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

END OF SECTION 26 05 23

SECTION 26 05 26 - GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes methods and materials for grounding systems and equipment, plus the following special applications:
   1. Underground distribution grounding.
   2. Common ground bonding with lightning protection system.
   3. Foundation steel electrodes

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Other Informational Submittals: Plans showing dimensioned as-built locations of grounding features specified in Part 3 "Field Quality Control" Article, including the following:

   1. Test wells.
   2. Ground rods.
   3. Ground rings.
   4. Grounding arrangements and connections for separately derived systems.

C. Qualification Data: For testing agency and testing agency's field supervisor.

D. Field quality-control test reports.

E. Operation and Maintenance Data: For grounding to include the following in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions, include the following:

   1. Instructions for periodic testing and inspection of grounding features at test wells and ground rings based on NETA MTS and NFPA 70B.

      a. Tests shall be to determine if ground resistance or impedance values remain within specified maximums, and instructions shall recommend corrective action if they do not.

b. Include recommended testing intervals.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to Commissioner.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to Commissioner, and marked for intended use.

D. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with requirements, provide products by one of the following:

1. Burndy; Part of Hubbell Electrical Systems.
2. Heary Bros. Inc.
3. Fushi Copperweld Inc.
4. O-Z/Gedney; a brand of Emerson Industrial Automation.
5. Thomas & Betts Corporation, a Member of the ABB Group.
6. Or approved equal.

2.2 SYSTEM DESCRIPTIONS

A. Electrical Components, Devices and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Comply with UL 467 for grounding and bonding materials and equipment.

2.3 CONDUCTORS

A. Insulated Conductors: Copper wire or cable insulated for 600 V unless otherwise indicated.

B. Bare Copper Conductors:

1. Solid Conductors: ASTM B 3.
2. Stranded Conductors: ASTM B 8.
3. Tinned conductor: ASTM B33.

4. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG conductor, 1/4 inch in diameter.
5. Bonding Conductor: No. 4 or No. 6 AWG, stranded conductor.
6. Bonding Jumper: Copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.
7. Tinned Bonding Jumper: Tinned-copper tape, braided conductors, terminated with copper ferrules; 1-5/8 inches wide and 1/16 inch thick.

C. Bare Grounding Conductor and Conductor Protector for Wood Poles:

1. No. 4 AWG minimum, soft-drawn copper.
2. Conductor Protector: Half-round PVC or wood molding. If wood, use pressure-treated fir or cypress or cedar.

D. Grounding Bus: Rectangular bars of annealed copper, 1/4 by 4 inches in cross section, drilled and tapped with 3/8" coarse thread (2 rows at 2" centers), unless otherwise indicated; with insulators. Stand-off insulators for mounting shall comply with UL 891 for use in switchboards, 600V. Lexan or PVC, impulse tested at 5000V.

E. Signal Reference Grid for sensitive electronic equipment unless otherwise shown on the drawings. Provide 2” x 26 gage copper strips under the revised floor space 2’ on center, factory welded at each crossover furnished in sections with widths from 4 ft. to 18 ft.; the grid shall be connected to main grounding system via #2 STR cable.

2.4 CONNECTORS

A. Listed and labeled by a nationally recognized testing laboratory acceptable to Commissioner for applications in which used, and for specific types, sizes, and combinations of conductors and other items connected.

B. Bolted Connectors for Conductors to Pipes: Copper or copper alloy, bolted pressure-type, with at least two bolts.

1. Pipe Connectors: Clamp type, sized for pipe.

C. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

D. Bus-bar Connectors: Mechanical type, cast silicon bronze solderless compression-type wire terminals and long-barrel two-bolt connection to ground bus-bar.

2.5 GROUNDING ELECTRODES

A. Ground Rods: Copper- clad steel, suitable for adding multiple sections, minimum 10 feet long, ¾ inch diameter.

B. Chemical-Enhanced Grounding Electrodes: Copper tube, straight or L-shaped, charged with nonhazardous electrolytic chemical salts.

1. Termination: Factory-attached No. 4/0 AWG bare conductor at least 48 inches long.
2. Backfill Material: Electrode manufacturer's recommended material.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 APPLICATIONS

A. Conductors: Install solid conductor for No. 8 AWG and smaller, and stranded conductors for No. 6 AWG and larger, unless otherwise indicated.

B. Underground Grounding Conductors: Install bare tinned-copper conductor, No. 2/0 AWG minimum.

1. Bury at least 24 inches below grade.
2. Duct-Bank Grounding Conductor: Bury 12 inches above duct bank when indicated as part of duct-bank installation. For concrete encased duct banks, provide #4/0 bare copper conductor in concrete 1" above top duct.

C. Isolated Grounding Conductors: Green-colored insulation with continuous yellow stripe. On feeders with isolated ground, identify grounding conductor where visible to normal inspection, with alternating bands of green and yellow tape, with at least three bands of green and two bands of yellow.

D. Grounding Bus: Install in electrical and telephone/telecommunication equipment rooms, in rooms housing service equipment, and all other low-voltage equipment rooms and elsewhere as indicated.

1. Install bus on insulated spacers 1 inch, minimum, from wall 6 inches above finished floor, unless otherwise indicated.
2. Where indicated on both sides of doorways, route bus up to top of door frame, across top of doorway, down to specified height above floor, and connect to horizontal bus.

E. Conductor Terminations and Connections:

1. Pipe and Equipment Grounding Conductor Terminations: Bolted connectors.
2. Underground Connections: Welded connectors, except at test wells and as otherwise indicated.
3. Connections to Ground Rods at Test Wells: Bolted connectors.
4. Connections to Structural Steel: Welded connectors.

3.3 GROUNDING AT THE SERVICE

A. Equipment grounding conductors and grounding electrode conductors shall be connected to the ground bus. Install a main bonding jumper between the neutral and ground buses.

3.4 GROUNDING UNDERGROUND DISTRIBUTION SYSTEM COMPONENTS

A. Comply with IEEE C2 grounding requirements.

B. Grounding Manholes and Handholes: Install a driven ground rod through manhole or handhole floor, close to wall, and set rod depth so 4 inches will extend above finished floor. If necessary, install ground rod before manhole is placed and provide No. 1/0 AWG bare, tinned-copper conductor from ground rod into manhole through a waterproof sleeve in manhole wall. Protect ground rods passing through concrete floor with a double wrapping of pressure-sensitive insulating tape or heat-shrunk insulating sleeve from 2 inches above to 6 inches below concrete. Seal floor opening with waterproof, nonshrink grout.

C. Grounding Connections to Manhole Components: Bond exposed-metal parts such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to ground rod or grounding conductor. Make connections with No. 4 AWG minimum, stranded, hard-drawn copper bonding conductor. Train conductors level or plumb around corners and fasten to manhole walls. Connect to cable armor and cable shields as recommended in written instructions by manufacturer of splicing and termination kits.

D. Pad-Mounted Transformers and Switches: Install two ground rods and ground ring around the pad. Ground pad-mounted equipment and noncurrent-carrying metal items associated with substations by connecting them to underground cable and grounding electrodes. Install tinned-copper conductor not less than No. 2 AWG for ground ring and for taps to equipment grounding terminals. Bury ground ring not less than 6 inches from the foundation.

3.5 GROUNDING SEPARATELY DERIVED SYSTEMS

A. Generator, transformer and other systems as defined by NFPA 70.

B. Install grounding electrode(s) at the system location. The electrode shall be connected to the equipment grounding conductor and to the frame of the separately derived system.

3.6 EQUIPMENT GROUNDING

A. Install insulated equipment grounding conductors with all feeders and branch circuits.

B. Install insulated equipment grounding conductors with the following items, in addition to those required by NFPA 70:

1. Feeders and branch circuits.
2. Lighting circuits.
3. Receptacle circuits.

4. Single-phase motor and appliance branch circuits.
5. Three-phase motor and appliance branch circuits.
6. Flexible raceway runs.
7. Armored and metal-clad cable runs.
8. Busway Supply Circuits: Install insulated equipment grounding conductor from grounding bus in the switchgear, switchboard, or distribution panel to equipment grounding bar terminal on busway.
9. Computer and Rack-Mounted Electronic Equipment Circuits: Install insulated equipment grounding conductor in branch-circuit runs from equipment-area power panels and power-distribution units.
10. Photovoltaic Equipment and Components: Install insulated equipment grounding conductor in Photovoltaic equipment circuits.

C. Air-Duct Equipment Circuits: Install insulated equipment grounding conductor to duct-mounted electrical devices operating at 120 V and more, including air cleaners, heaters, dampers, humidifiers, and other duct electrical equipment. Bond conductor to each unit and to air duct and connected metallic piping.

D. Heat-Tracing, and Antifrost Heating Cables: Install a separate insulated equipment grounding conductor to each electric water heater and heat-tracing cable. Bond conductor to heater units, piping, connected equipment, and components.

E. Signal and Communication Equipment: In addition to grounding and bonding required by NFPA 70, provide a separate grounding system complying with requirements in TIA/ATIS J-STD-607-A.
1. For telephone, alarm, voice and data, and other communication equipment, provide No. 4 AWG minimum insulated grounding conductor in raceway from grounding electrode system to each service location, terminal cabinet, wiring closet, and central equipment location.
2. Service and Central Equipment Locations and Wiring Closets: Terminate grounding conductor on a 1/4-by-4-by-36-inch grounding bus.
3. Terminal Cabinets: Terminate grounding conductor on cabinet grounding terminal.

3.7 INSTALLATION

A. Grounding Conductors: Route along shortest and straightest paths possible, unless otherwise indicated. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.

B. Ground Bonding Common with Lightning Protection System: Comply with NFPA 780 (standard for the Installation of Lightning Protection Systems) and UL 96 when interconnecting with lightning protection system. Bond electrical power system ground directly to lightning protection system grounding conductor at closest point to electrical service grounding electrode. Use bonding conductor sized same as system grounding electrode conductor and install in conduit.

C. Ground Rods: Drive rods until tops are 2 inches below finished floor or final grade, unless otherwise indicated.

1. Interconnect ground rods with grounding electrode conductor below grade and as otherwise indicated. Make connections without exposing steel or damaging coating, if any.
2. For grounding electrode system, install at least three rods spaced at least one-rod length from each other and located at least the same distance from other grounding electrodes, and connect to the service grounding electrode conductor.

D. Test Wells: Ground rod driven through drilled hole in bottom of handhole. Handholes are specified in Specification 260543 "Underground Ducts and Raceways for Electrical Systems," and shall be at least 12 inches deep, with cover.

1. Test Wells: Install at least one test well for each service, unless otherwise indicated. Install at the ground rod electrically closest to service entrance. Set top of test well flush with finished grade or floor.

E. Bonding Straps and Jumpers: Install in locations accessible for inspection and maintenance, except where routed through short lengths of conduit.

1. Bonding to Structure: Bond straps directly to basic structure, taking care not to penetrate any adjacent parts.
2. Bonding to Equipment Mounted on Vibration Isolation Hangers and Supports: Install so vibration is not transmitted to rigidly mounted equipment.
3. Use exothermic-welded connectors for outdoor locations, but if a disconnect-type connection is required, use a bolted clamp.

F. Grounding and Bonding for Piping:

1. Metal Water Service Pipe: Install insulated copper grounding conductors, in conduit, from building's main service equipment, or grounding bus, to street side ahead of the water meter main metal water service entrances to building. Connect grounding conductors to main metal water service pipes, using a bolted clamp connector or by bolting a lug-type connector to a pipe flange, using one of the lug bolts of the flange. Where a dielectric main water fitting is installed, connect grounding conductor on street side of fitting. Bond metal grounding conductor conduit or sleeve to conductor at each end.
2. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with a bolted connector.
3. Bond each aboveground portion of gas piping system downstream from equipment shutoff valve.

G. Bonding Interior Metal Ducts: Bond metal air ducts to equipment grounding conductors of associated fans, blowers, electric heaters, and air cleaners. Install tinned bonding jumper to bond across flexible duct connections to achieve continuity.

H. Grounding for Steel Building Structure: Install a driven ground rod at base of each corner column and at intermediate exterior columns at distances not more than 60 feet apart.

I. Ground Ring: Install a grounding conductor, electrically connected to each building structure ground rod and to each steel column, extending around the perimeter of the building.

1. Install tinned-copper conductor not less than No. 2/0 AWG for ground ring and for taps to building steel.
2. Bury ground ring not less than 24 inches from building foundation.
3. Where roof drip line varies from above locations, install conductor at roofing drip lines.

J. Ufer Ground (Concrete-Encased Grounding Electrode): Fabricate according to NFPA 70, using a minimum of 20 feet of bare copper conductor not smaller than No. 4 AWG.

1. If concrete foundation is less than 20 feet long, coil excess conductor within base of foundation.
2. Bond grounding conductor to reinforcing steel in at least four locations and to anchor bolts. Extend grounding conductor below grade and connect to building grounding grid or to grounding electrode external to concrete.

K. Exothermic Connectors: Welds shall be made in accordance with kit recommendations. Damp materials shall not be used. Puffed up or connections that are not fully formed or where material is missing, shall be replaced.

3.8 LABELING

A. Comply with requirements in 260553 "Identification for Electrical Systems" Article for instruction signs. The label or its text shall be green.

B. Install labels at the telecommunications bonding conductor and grounding equalizer and at the grounding electrode conductor where exposed.

1. Label Text: "If this connector or cable is loose or if it must be removed for any reason, notify the facility manager."

3.9 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform the following tests and inspections and prepare test reports:

1. After installing grounding system but before permanent electrical circuits have been energized, test for compliance with requirements.
2. Inspect physical and mechanical condition. Verify tightness of accessible, bolted, electrical connections with a calibrated torque wrench according to manufacturer's written instructions.
3. Test completed grounding system at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal at ground test wells. Make tests at ground rods before any conductors are connected.

a. Measure ground resistance not less than two full days after last trace of precipitation and without soil being moistened by any means other than natural

drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance.

b. Perform tests by fall-of-potential method according to IEEE 81.

4. Prepare dimensioned drawings locating each test well, ground rod and ground rod assembly, and other grounding electrodes. Identify each by letter in alphabetical order, and key to the record of tests and observations. Include the number of rods driven and their depth at each location and include observations of weather and other phenomena that may affect test results. Describe measures taken to improve test results.

C. Grounding system will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

E. Report to Commissioner, in a separate document, measured ground resistances that exceed the following values:

1. Power and Lighting Equipment or System with Capacity 500 kVA and Less: 10 ohms.
2. Power and Lighting Equipment or System with Capacity 500 to 1000 kVA: 5 ohms.
3. Substations and Pad-Mounted Equipment: 5 ohms.
4. Manhole Grounds: 10 ohms.

F. Excessive Ground Resistance: If resistance to ground exceeds specified values, notify the Commissioner promptly and include recommendations to reduce ground resistance.

END OF SECTION 26 05 26

THIS PAGE IS LEFT INTENTIONALLY BLANK

SECTION 26 05 29 - HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following:

1. Hangers and supports for electrical equipment and systems.
2. Construction requirements for concrete bases.

1.3 DEFINITIONS

A. Refer to DDC General Conditions.

B. EMT: Electrical metallic tubing

C. IMC: Intermediate metal conduit.

D. NECA 1: Standard for Good Workmanship in Electrical Construction

E. NECA 101: Standard for Installing Steel Conduits

F. RMC: Rigid metal conduit.

1.4 PERFORMANCE REQUIREMENTS

A. Engineering Services: Contractor shall provide all required support, seismic bracing (based on structural assigned zone) and anchor bolts. Drawings signed by a Professional structural engineer licensed in the state of New York to be retained by the Contractor. Design supports for multiple raceways, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.

C. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

D. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For the following:

1. Steel slotted support systems.
2. Nonmetallic slotted support systems.
3. The drawings provided by the contractor shall be submitted in a shop drawing format for Commissioner for review and comment.

C. Shop Drawings: professional engineer licensed in the state of New York. Show fabrication and installation details and include calculations for the following:

1. Trapeze hangers. Include Product Data for components.
2. Steel slotted channel systems. Include Product Data for components.
3. Nonmetallic slotted channel systems. Include Product Data for components.
4. Equipment supports.

D. Welding certificates.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

C. Comply with NFPA 70.

1.7 COORDINATION

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Specification 075216 "SBS Modified Bituminous Roofing"

PART 2 - PRODUCTS

2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Allied Tube & Conduit.
      b. Cooper B-Line, Inc.; a division of Cooper Industries.
      c. ERICO International Corporation.
      d. GS Metals Corp.
      e. Thomas & Betts Corporation.
      f. Unistrut; Tyco International, Ltd.
      g. Wesanco, Inc.
      h. Or approved equal.
   2. Metallic Coatings: Hot-dip galvanized after fabrication and applied according to MFMA-4.
   3. Nonmetallic Coatings: Manufacturer's standard PVC, polyurethane, or polyester coating applied according to MFMA-4.
   4. Painted Coatings: Manufacturer's standard painted coating applied according to MFMA-4.
   5. Channel Dimensions: Selected for applicable load criteria.

B. Nonmetallic Slotted Support Systems: Structural-grade, factory-formed, glass-fiber-resin channels and angles with 9/16-inch diameter holes at a maximum of 8 inches o.c., in at least 1 surface.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Allied Tube & Conduit.
      b. Cooper B-Line, Inc.; a division of Cooper Industries.
      c. Fabco Plastics Wholesale Limited.
      d. Seasafe, Inc.
      e. Or approved equal.
   2. Fittings and Accessories: Products of channel and angle manufacturer and designed for use with those items.
   3. Fitting and Accessory Materials: Same as channels and angles**,** except metal items may be stainless steel.
   4. Rated Strength: Selected to suit applicable load criteria.

C. Raceway and Cable Supports: As described in NECA 1 and NECA 101.

D. Conduit and Cable Support Devices: Steel and malleable-iron hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.

E. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs shall have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body shall be malleable iron.

F. Structural Steel for Fabricated Supports and Restraints: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.

G. Mounting, Anchoring, and Attachment Components: Items for fastening electrical items or their supports to building surfaces include the following:

1. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete, steel, or wood, with tension, shear, and pullout capacities appropriate for supported loads and building materials where used.
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

      1) Hilti Inc.
      2) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      3) MKT Fastening, LLC.
      4) Simpson Strong-Tie Co., Inc.; Masterset Fastening Systems Unit.
      5) Or approved equal.

2. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated or stainless steel, for use in hardened portland cement concrete with tension, shear, and pullout capacities appropriate for supported loads and building materials in which used.

   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

      1) Cooper B-Line, Inc.; a division of Cooper Industries.
      2) Empire Tool and Manufacturing Co., Inc.
      3) Hilti Inc.
      4) ITW Ramset/Red Head; a division of Illinois Tool Works, Inc.
      5) MKT Fastening, LLC.
      6) Or approved equal.

3. Concrete Inserts: Steel or malleable-iron, slotted support system units similar to MSS Type 18; complying with MFMA-4 or MSS SP-58.
4. Clamps for Attachment to Steel Structural Elements: MSS SP-58, type suitable for attached structural element.
5. Through Bolts: Structural type, hex head, and high strength. Comply with ASTM A 325.
6. Toggle Bolts: All-steel springhead type.
7. Hanger Rods: Threaded steel.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 APPLICATION

A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.

B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as required by NFPA 70. Minimum rod size shall be 1/4 inch in diameter.

C. Multiple Raceways or Cables: Install trapeze-type supports fabricated with steel slotted support system, sized so capacity can be increased by at least 25 percent in future without exceeding specified design load limits.

1. Secure raceways and cables to these supports with two-bolt conduit clamps.

D. Spring-steel clamps designed for supporting single conduits without bolts may be used for 1-1/2-inch and smaller raceways serving branch circuits and communication systems above suspended ceilings and for fastening raceways to trapeze supports.

3.3 SUPPORT INSTALLATION

A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.

B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC, and RMC may be supported by openings through structure members, as permitted in NFPA 70.

C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components plus 200 lb.

D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise required:

1. To Wood: Fasten with lag screws or through bolts.
2. To New Concrete: Bolt to concrete inserts.
3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.

4. To Existing Concrete: Expansion anchor fasteners.
5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.
6. To Steel: Welded threaded studs complying with AWS D1.1/D1.1M, with lock washers and nuts.
7. To Light Steel: Sheet metal screws.
8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate by means that meet seismic-restraint strength and anchorage requirements.

E. Drill holes for expansion anchors in concrete at locations and to depths that avoid reinforcing bars.

3.4 INSTALLATION OF FABRICATED METAL SUPPORTS

A. Comply with installation requirements in Specification 051210 "Structural Steel" for site-fabricated metal supports.

B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor electrical materials and equipment.

C. Field Welding: Comply with AWS D1.1/D1.1M.

3.5 CONCRETE BASES

A. Construct concrete bases of dimensions indicated but not less than 4 inches larger in both directions than supported unit, and so anchors will be a minimum of 10 bolt diameters from edge of the base.

B. Use 3000-psi, 28-day compressive-strength concrete. Concrete materials, reinforcement, and placement requirements are specified in 030000 Section "Concrete"

C. Anchor equipment to concrete base.

1. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
2. Install anchor bolts to elevations required for proper attachment to supported equipment.
3. Install anchor bolts according to anchor-bolt manufacturer's written instructions.

3.6 PAINTING

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.

B. Touchup: Comply with requirements in Division 09 painting Sections for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION 26 05 29

THIS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 26 05 33 - RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

B. Related Sections include the following:
   1. Specification 260500 "Common Work Results for Electrical."
   2. Specification 033000 “Cast-In-Place Concrete”
   3. Specification 312333 “Trenching, Backfilling, and Compacting”

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. AASHTO: American Association of State Highway and Transportation Officials

C. ACI: American Concrete Institute

D. EMT: Electrical metallic tubing.

E. EPDM: Ethylene-propylene-diene terpolymer rubber.

F. FMC: Flexible metal conduit.

G. IMC: Intermediate metal conduit.

H. LFMC: Liquidtight flexible metal conduit.

I. LFNC: Liquidtight flexible nonmetallic conduit.

J. NBR: Acrylonitrile-butadiene rubber.

K. RNC: Rigid nonmetallic conduit.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

C. Shop Drawings: For the following raceway components. Include plans, elevations, sections, details, and attachments to other work.

1. Custom enclosures and cabinets.
2. For handholes and boxes for underground wiring, including the following:

a. Duct entry provisions, including locations and duct sizes.
b. Frame and cover design.
c. Grounding details.
d. Dimensioned locations of cable rack inserts, and pulling-in and lifting irons.
e. Joint details.

D. Samples for Initial Selection: For wireways and surface raceways with factory-applied texture and color finishes.

1. Size: 12”

E. Samples for Verification: For each type of exposed finish required for wireways and surface raceways, prepared on Samples of size indicated below.

1. Size: 12”

F. Coordination Drawings: Conduit routing plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

1. Structural members in the paths of conduit groups with common supports.
2. HVAC and plumbing items and architectural features in the paths of conduit groups with common supports.

G. Qualification Data: For professional engineer licensed in the State of New York and testing agency.

H. Source quality-control test reports.

1.5 QUALITY ASSURANCE

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to The City of New York, and marked for intended use.

B. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 METAL CONDUIT AND TUBING

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFC Cable Systems, Inc.
2. Alflex Inc.
3. Allied Tube & Conduit; a Tyco International Ltd. Co.
4. Anamet Electrical, Inc.; Anaconda Metal Hose.
5. Electri-Flex Co.
6. Manhattan/CDT/Cole-Flex.
7. Maverick Tube Corporation.
8. O-Z Gedney; a unit of General Signal.
9. Wheatland Tube Company.
10. Or approved equal.

B. Rigid Steel Conduit: ANSI C80.1.

C. Aluminum Rigid Conduit: ANSI C80.5.

D. IMC: ANSI C80.6.

E. EMT: ANSI C80.3.

F. FMC: Zinc-coated steel or aluminum.

G. LFMC: Flexible steel conduit with PVC jacket.

H. Fittings for Conduit (Including all Types and Flexible and Liquidtight), EMT, and Cable: NEMA FB 1; listed for type and size raceway with which used, and for application and environment in which installed.

1. Conduit Fittings for Hazardous (Classified) Locations: Comply with UL 886.
2. Fittings for EMT: compression type.

I. Joint Compound for Rigid Steel Conduit or IMC: Listed for use in cable connector assemblies, and compounded for use to lubricate and protect threaded raceway joints from corrosion and enhance their conductivity.

2.2 NONMETALLIC CONDUIT AND TUBING

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AFC Cable Systems, Inc.

2. Anamet Electrical, Inc.; Anaconda Metal Hose.
3. Arnco Corporation.
4. CANTEX Inc.
5. CertainTeed Corp.; Pipe & Plastics Group.
6. Condux International, Inc.
7. ElecSYS, Inc.
8. Electri-Flex Co.
9. Lamson & Sessions; Carlon Electrical Products.
10. Manhattan/CDT/Cole-Flex.
11. RACO; a Hubbell Company.
12. Thomas & Betts Corporation.
13. Or approved Equal.

B. RNC: NEMA TC 2, Type EPC-40-PVC, unless otherwise indicated.

C. LFNC: UL 1660.

D. Fittings for ENT and RNC: NEMA TC 3; match to conduit or tubing type and material.

E. Fittings for LFNC: UL 514B.

2.3 COMMUNICATIONS CABLE RACEWAY AND FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Arnco Corporation.
2. Endot Industries Inc.
3. IPEX Inc.
4. Lamson & Sessions; Carlon Electrical Products.
5. Or approved Equal.

B. Description: Inner duct system shall comply with UL 2024 (Standard for Cable Routing Assemblies and Communications Raceways); flexible type, approved for plenum installation.

2.4 METAL WIREWAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cooper B-Line, Inc.
2. Hoffman.
3. Square D; Schneider Electric.
4. Or approved equal.

B. Description: Sheet metal sized and shaped as indicated, NEMA 250, Type 3R, unless otherwise indicated.

C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

D. Wireway Covers: Flanged-and-gasketed type.

E. Finish: Manufacturer's standard enamel finish.

2.5 NONMETALLIC WIREWAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hoffman.
2. Lamson & Sessions; Carlon Electrical Products.
3. CANTEX Inc
4. Or approved equal.

B. Description: Fiberglass polyester, extruded and fabricated to size and shape indicated, with no holes or knockouts. Cover is gasketed with oil-resistant gasket material and fastened with captive screws treated for corrosion resistance. Connections are flanged, with stainless-steel screws and oil-resistant gaskets.

C. Description: PVC plastic, extruded and fabricated to size and shape indicated, with snap-on cover and mechanically coupled connections with plastic fasteners.

D. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

2.6 SURFACE RACEWAYS

A. Surface Metal Raceways: Galvanized steel with snap-on covers. Manufacturer's standard enamel finish in color selected by the Commissioner.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Thomas & Betts Corporation.
b. Walker Systems, Inc.; Wiremold Company (The).
c. Wiremold Company (The); Electrical Sales Division.
d. Or approved equal.

B. Surface Nonmetallic Raceways: Two-piece construction, manufactured of rigid PVC with texture and color selected by the Commissioner from manufacturer's standard colors.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following

a. Butler Manufacturing Company; Walker Division.
b. Enduro Systems, Inc.; Composite Products Division.
c. Hubbell Incorporated; Wiring Device-Kellems Division.
d. Lamson & Sessions; Carlon Electrical Products.
e. Panduit Corp.
f. Walker Systems, Inc.; Wiremold Company (The).
g. Wiremold Company (The); Electrical Sales Division.
h. Or approved equal.

2.7 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. Cooper Crouse-Hinds; Div. of Cooper Industries, Inc.
2. EGS/Appleton Electric.
3. Erickson Electrical Equipment Company.
4. Hoffman.
5. Hubbell Incorporated; Killark Electric Manufacturing Co. Division.
6. O-Z/Gedney; a unit of General Signal.
7. RACO; a Hubbell Company.
8. Robroy Industries, Inc.; Enclosure Division.
9. Scott Fetzer Co.; Adalet Division.
10. Spring City Electrical Manufacturing Company.
11. Thomas & Betts Corporation.
12. Walker Systems, Inc.; Wiremold Company (The).
13. Woodhead, Daniel Company; Woodhead Industries, Inc. Subsidiary.
14. Or approved equal.

B. Sheet Metal Outlet and Device Boxes: NEMA OS 1.

C. Cast-Metal Outlet and Device Boxes: NEMA FB 1, aluminum, Type FD, with gasketed cover.

D. Nonmetallic Outlet and Device Boxes: NEMA OS 2 (Nonmetallic Outlet Boxes, Device Boxes, Covers, and Box Supports).

E. Nonmetallic Floor Boxes: Nonadjustable, round.

F. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1 (Sheet-Steel Outlet Boxes, Device Boxes, Covers, and Box Supports).

G. Cast-Metal Access, Pull, and Junction Boxes: NEMA FB 1, galvanized, cast iron with gasketed cover.

H. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous-hinge cover with flush latch, unless otherwise indicated.

1. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.

2. Nonmetallic Enclosures: Plastic.

I. Cabinets:

1. NEMA 250, Type 1, galvanized-steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel.
2. Hinged door in front cover with flush latch and concealed hinge.
3. Key latch to match panelboards.
4. Metal barriers to separate wiring of different systems and voltage.
5. Accessory feet where required for freestanding equipment.

J. Underground Precast Handholes and Pull Boxes
1. Handholes and pull boxes are defined as boxes up to a size of 17"x30".
2. Construct the box using precast concrete or polymer concrete with an open bottom unless noted otherwise on the drawings.
3. The box shall be rated for incidental traffic. It shall be suitable for AASHTO H-20 loading in off-street locations that are not subject to high density traffic.
4. Engrave the cover to indicate the contents such as “ELECTRIC,” “COMM,” “LIGHTING,” “SIGNALS,” or as noted on the drawings.
5. The cover shall be a non-skid surface, include lift or pull slots, and be capable of being secured to the body with fasteners.
6. The manufacturer’s name and model number shall be permanently indicated to an interior wall face.
7. Manufacturers:
   a. Oldcastle
   b. Christy
   c. Hanson
   d. Hubbell
   e. Approved equal

K. Precast Concrete Vaults/Manholes
1. Vaults are defined as boxes larger than 17"x30".
2. Vaults shall be precast concrete, solid bottom with a knocked-out sump to allow for drainage, embedded galvanized channels in each wall, a 1-inch diameter ground rod knockout in the floor, and galvanized pull/lift irons in each corner. Vaults shall have an opening in the bottom to allow drainage.
3. Construct vaults using concrete that has a minimum 4,000 psi strength at 28 days.
4. The vault/manhole is to be meet the following requirements:
   a. Tops and walls of structures shall comply with AASHTO H-20 highway loading, with 30 percent loading added for impact.
   b. Precast structures shall be in accordance with AASHTO Specification for Highway Bridges. Concrete and reinforcing shall be in accordance with ACI Code 318. Precast units shall conform to ASTM C478.
   c. Walls shall withstand all soil pressures, taking into consideration the soil to be encountered and groundwater level present at the site. Assume ground water level is at ground surface unless a lower water table is indicated in the boring logs.
   d. Precast vaults shall be built and constructed not to float.

e. Assembled sections shall have mating edges with tongue-and-groove joints. Joints shall firmly interlock adjoining components, and provide waterproof junctions. Joints shall be sealed watertight using preformed plastic strips installed in accordance with the manufacturer's instructions.
f. Slope floor 2 percent in all directions to the sump.
g. Steel components other than reinforced steel shall be hot-dip galvanized after fabrication.
h. Identify vaults using the manufacturer's name embedded in, or otherwise permanently attached to, an interior wall face.

5. Vaults located in roadways shall be provided with round high-density H-20 rated traffic covers. Other areas such as sidewalks, parking lots, and landscape areas shall be provided with galvanized steel hatches unless otherwise noted on the drawings.
   a. High density traffic areas shall be provided with H-20 rated cast iron manhole covers. These covers shall be a minimum of 30-inch diameter, with lift holes and provisions to secure into the vault top with fasteners. Round vault covers and frames shall be Class 30B grey cast iron in accordance with ASTM A48.
   b. Sidewalks, parking lots, and landscape areas shall be provided with traffic rated galvanized steel hatches unless noted otherwise on the drawings. Include a locking latch, a recessed lift handle, and a hinging system that allows the cover to open a full 180 degrees. Communication vaults containing fiber optic back bone cables shall be provided with a pad-lock compartment in the cover.
6. Permanently label all vaults with vault numbers. Vault designations shall be visible from the surface. Communication vaults will be designated "CVLT-xxxx" and electrical vaults designated "EVLT-xxxx," where xxxx is a vault number assigned by the City of New York. Cast covers shall have the designation cast into the cover at the casting foundry. If casting the designation into the cover is not an option, the Contractor shall propose other means to permanently label the vault. Galvanized steel hatches shall include the bead welded designation onto the cover. If the cover cannot be bead welded, the Contractor shall propose other permanent marking options.
7. Conduit entries through vertical vault walls shall be through cast-in-place molded plastic duct connections.
8. Cable Racks
   a. Cable racks shall be installed in all manholes to properly support cables.
   b. 1/2-inch threaded inserts shall be cast-in walls for cable rack connections with a horizontal spacing no greater than 24 inches on-center.
   c. Concrete inserts for cable rack bolts and all accessories to be hot-dipped galvanized.
9. Pull-in Irons
   a. Each wall of each manhole will have at least one 1" hot-dipped galvanized pull-in iron.
   b. A pull-in irons shall be installed directly across from each set of duct bank terminators, and new and future duct bank openings.
10. Ground Rods
    a. All electric and communication manholes shall have a minimum of two (2) 5/8" x 8'0" copper-clad steel ground rods, installed outside and adjacent to the manhole, one each where the duct banks enters the manholes. The top of the ground rods shall be at the same elevation as the duct banks.

b. A 4/0 THW copper ground cable shall be connected to each ground rod and brought into the manhole along with the ground cable from the adjacent duct bank.
c. Inside the manholes, all the ground cables shall be connected together along with the ground cables in the adjacent manhole with a 4/0 copper THW ground cable.
d. Ground cables shall be neatly laid vertical and horizontal, and clamped to the manhole walls.
e. All connections shall be made using the exothermic weld method.

2.8 CONDUIT EXPANSION/DEFLECTION FITTINGS

A. Conduit expansion/deflection fittings in embedded runs shall be rated for indoor use, outdoor use, buried underground, or embedded in concrete in non-hazardous areas.

B. Fittings shall allow axial expansion or contraction up to 3/4 inch and angular misalignment of the axes of the coupled runs in any direction to 30 degrees. Inner sleeves shall maintain constant inside diameter in any position and provide smooth insulated wireway for protection of wire insulation.

C. Fittings shall have a watertight flexible neoprene outer jacket and tinned copper flexible braid grounding strap.

D. Use with galvanized rigid steel conduit or PVC Schedule 40 conduit utilizing rigid metal conduit nipples and rigid metal to PVC adapters.

E. Manufacturers:
1. Crouse-Hinds Cooper
2. O-Z/Gedney
3. Carlon Electrical Products
4. Or approved equal.

2.9 SOURCE QUALITY CONTROL FOR UNDERGROUND ENCLOSURES

A. Handhole and Pull-Box Prototype Test: Test prototypes of handholes and boxes for compliance with SCTE 77 (Specification for Underground Enclosure Integrity). Strength tests shall be for specified tier ratings of products supplied.

1. Tests of materials shall be performed by a independent testing agency.
2. Strength tests of complete boxes and covers shall be by either an independent testing agency or manufacturer. A licensed professional engineer in the state of New York shall certify tests by manufacturer.
3. Testing machine pressure gages shall have current calibration certification complying with ISO 9000 and ISO 10012, and traceable to NIST standards.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 RACEWAY APPLICATION

A. Outdoors: Apply raceway products as specified below, unless otherwise indicated:

1. Exposed Conduit: Rigid steel conduit.
2. Concealed Conduit, Aboveground: Rigid steel conduit or EMT.
3. Underground Conduit: RNC, Type EPC-40-PVC, direct buried.
4. Underground Service Conduit: Fiber Glass Conduit meeting the Con Edison Electric standards.
5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.
6. Boxes and Enclosures, Aboveground: NEMA 250, Type 3R.
7. Application of Handholes and Boxes for Underground Wiring:

    a. Handholes and Pull Boxes in Driveway, Parking Lot, and Off-Roadway Locations, Subject to Occasional, Nondeliberate Loading by Heavy Vehicles: Polymer concrete, SCTE 77, Tier 15 structural load rating.

B. Comply with the following indoor applications, unless otherwise indicated:

1. Exposed, Not Subject to Physical Damage: EMT or RNC.
2. Exposed, Not Subject to Severe Physical Damage, in office space only: EMT.
3. Exposed and Subject to Severe Physical Damage: Rigid steel conduit. Includes raceways in the following locations:

    a. Loading dock.
    b. Corridors used for traffic of mechanized carts, forklifts, and pallet-handling units.
    c. Mechanical rooms.
    d. Garage area.
    e. Machine shops, storage and equipment areas.

4. Concealed in Ceilings and Interior Walls and Partitions: EMT.
5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC, except use LFMC in damp or wet locations.
6. Damp or Wet Locations: Rigid steel conduit.
7. Raceways for Communications Cable in Spaces Used for Environmental Air: EMT.
8. Raceways for Communications Cable Risers in Vertical Shafts: EMT.
9. Raceways for Concealed General Purpose Distribution of Communications Cable: EMT.
10. Boxes and Enclosures: NEMA 250, Type 1, except use NEMA 250, Type 4, stainless steel or nonmetallic in damp or wet locations.

C. Minimum Raceway Size: 3/4-inch trade size.

D. Raceway Fittings: Compatible with raceways and suitable for use and location.

1. Rigid and Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.

E. Install nonferrous conduit or tubing for circuits operating above 60 Hz. Where aluminum raceways are installed for such circuits and pass through concrete, install in nonmetallic sleeve.

F. Do not install aluminum conduits in contact with concrete.

3.3 INSTALLATION

A. Comply with NECA 1 (Standard for Good Workmanship in Electrical Construction) for installation requirements applicable to products specified in Part 2 except where requirements on Drawings or in this Article are stricter.

B. Keep raceways at least 6 inches away from parallel runs of flues and steam or hot-water pipes. Install horizontal raceway runs above water and steam piping.

C. Complete raceway installation before starting conductor installation.

D. Support raceways as specified in Specification 260529 Section "Hangers and Supports for Electrical Systems."

E. Arrange stub-ups so curved portions of bends are not visible above the finished slab.

F. Install no more than the equivalent of three 90-degree bends in any conduit run except for communications conduits, for which fewer bends are allowed.

G. Conceal conduit and EMT within finished walls, ceilings, and floors, unless otherwise indicated.

H. Raceways Embedded in Slabs:

1. Run conduit larger than 1-inch trade size, parallel or at right angles to main reinforcement. Where at right angles to reinforcement, place conduit close to slab support.
2. Arrange raceways to cross building expansion joints at right angles with expansion fittings.
3. Change from ENT to RNC, Type EPC-40-PVC, rigid steel conduit, or IMC before rising above the floor.

I. Threaded Conduit Joints, Exposed to Wet, Damp, Corrosive, or Outdoor Conditions: Apply listed compound to threads of raceway and fittings before making up joints. Follow compound manufacturer's written instructions.

J. Raceway Terminations at Locations Subject to Moisture or Vibration: Use insulating bushings to protect conductors, including conductors smaller than No. 4 AWG.

K. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb tensile strength. Leave at least 12 inches of slack at each end of pull wire.

L. Raceways for Communications Cable: Install raceways, metallic and nonmetallic, rigid inner duct and flexible, as follows:

1. 3/4-Inch Trade Size and Smaller: Install raceways in maximum lengths of 50 feet.
2. 1-Inch Trade Size and Larger: Install raceways in maximum lengths of 75 feet.
3. Install with a maximum of two 90-degree bends or equivalent for each length of raceway unless Drawings show stricter requirements. Separate lengths with pull or junction boxes or terminations at distribution frames or cabinets where necessary to comply with these requirements.

M. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.
2. Where otherwise required by NFPA 70.

N. Expansion-Joint Fittings for RNC: Install in each run of aboveground conduit that is located where environmental temperature change may exceed 30 deg F, and that has straight-run length that exceeds 25 feet.

1. Install expansion-joint fittings for each of the following locations, and provide type and quantity of fittings that accommodate temperature change listed for location:

    a. Outdoor Locations Not Exposed to Direct Sunlight: 125 deg F temperature change.
    b. Outdoor Locations Exposed to Direct Sunlight: 155 deg F temperature change.
    c. Indoor Spaces: Connected with the Outdoors without Physical Separation: 125 deg F temperature change.

2. Install fitting(s) that provide expansion and contraction for at least 0.00041 inch per foot of length of straight run per deg F of temperature change.
3. Install each expansion-joint fitting with position, mounting, and piston setting selected according to manufacturer's written instructions for conditions at specific location at the time of installation.

O. Flexible Conduit Connections: Use maximum of 72 inches of flexible conduit for recessed and semirecessed lighting fixtures, equipment subject to vibration, noise transmission, or movement; and for transformers and motors.

1. Use LFMC in damp or wet locations subject to severe physical damage.

2. Use LFMC or LFNC in damp or wet locations not subject to severe physical damage.

P. Recessed Boxes in Masonry Walls: Saw-cut opening for box in center of cell of masonry block, and install box flush with surface of wall.

Q. Set metal floor boxes level and flush with finished floor surface.

R. Set nonmetallic floor boxes level. Trim after installation to fit flush with finished floor surface.

3.4 INSTALLATION OF UNDERGROUND CONDUIT

A. Direct-Buried Conduit:

1. Excavate trench bottom to provide firm and uniform support for conduit. Prepare trench bottom as specified in Specification 310000 Section "Earthwork" for pipe less than 6 inches in nominal diameter.
2. Install backfill as specified in Specification 310000 Section "Earthwork."
3. After installing conduit, backfill and compact. Start at tie-in point, and work toward end of conduit run, leaving conduit at end of run free to move with expansion and contraction as temperature changes during this process. Firmly hand tamp backfill around conduit to provide maximum supporting strength. After placing controlled backfill to within 12 inches of finished grade, make final conduit connection at end of run and complete backfilling with normal compaction as specified in Specification 310000 Section "Earthwork."
4. Install manufactured duct elbows for stub-ups at poles and equipment and at building entrances through the floor, unless otherwise indicated. Encase elbows for stub-up ducts throughout the length of the elbow.
5. Install manufactured rigid steel conduit elbows for stub-ups at poles and equipment and at building entrances through the floor.

    a. Couple steel conduits to ducts with adapters designed for this purpose and encase coupling with 3 inches of concrete.
    b. For stub-ups at equipment mounted on outdoor concrete bases, extend steel conduit horizontally a minimum of 60 inches from edge of equipment pad or foundation. Install insulated grounding bushings on terminations at equipment.

3.5 INSTALLATION OF UNDERGROUND HANDHOLES AND BOXES

A. Install handholes and boxes level and plumb and with orientation and depth coordinated with connecting conduits to minimize bends and deflections required for proper entrances.

B. Unless otherwise indicated, support units on a level bed of crushed stone or gravel, graded from 1/2-inch sieve to No. 4 sieve and compacted to same density as adjacent undisturbed earth.

C. Elevation: In paved areas, set so cover surface will be flush with finished grade. Set covers of other enclosures 1 inch above finished grade.

D. Install handholes and boxes with bottom below the frost line, 36” below grade.

E. Install removable hardware, including pulling eyes, cable stanchions, cable arms, and insulators, as required for installation and support of cables and conductors and as indicated. Select arm lengths to be long enough to provide spare space for future cables, but short enough to preserve adequate working clearances in the enclosure.

F. Field-cut openings for conduits according to enclosure manufacturer's written instructions. Cut wall of enclosure with a tool designed for material to be cut. Size holes for terminating fittings to be used, and seal around penetrations after fittings are installed.

3.6 UTILITY WARNING TAPE AND LOCATE WIRE

A. Place a continuous strip of utility warning tape approximately 12 inches above ducts or conduits before backfilling trenches. See Section 31 23 33, Trenching, Backfilling, and Compacting, for tape description and installation requirements.

B. Provide warning tape as described in Section 330597.23 Underground Utility Warning Tape.

C. Extend locate wire to near vault top and secure with an additional 2 feet of spare loop. Additional conductor length allows equipment used by locators to be positioned outside the vault, thereby eliminating a confined space entry.

3.7 PROTECTION

A. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.

1. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
2. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

END OF SECTION 260533

SECTION 26 05 44 - SLEEVES AND SLEEVE SEALS FOR ELECTRICAL RACEWAYS AND CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Sleeves for raceway and cable penetration of non-fire-rated construction walls and floors.
2. Sleeve-seal systems.
3. Sleeve-seal fittings.
4. Grout.
5. Silicone sealants.

B. Related Requirements:

1. Specification 072700 "Firestopping/smokeseals" for penetration firestopping installed in fire-resistance-rated walls, horizontal assemblies, and smoke barriers, with and without penetrating items.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For each type of product.

PART 2 - PRODUCTS

2.1 SLEEVES

A. Wall Sleeves:

1. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, zinc coated, plain ends.

2. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop unless otherwise indicated.

B. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies: Galvanized-steel sheet; 0.0239-inch minimum thickness; round tube closed with welded longitudinal joint, with tabs for screw-fastening the sleeve to the board.

C. PVC-Pipe Sleeves: ASTM D 1785, Schedule 40.

D. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.

E. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

F. Sleeves for Rectangular Openings:

1. Material: Galvanized sheet steel.
2. Minimum Metal Thickness:

a. For sleeve cross-section rectangle perimeter less than 50 inches and with no side larger than 16 inches, thickness shall be 0.052 inch.
b. For sleeve cross-section rectangle perimeter 50 inches or more and one or more sides larger than 16 inches, thickness shall be 0.138 inch.

2.2 SLEEVE-SEAL SYSTEMS

A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Advance Products & Systems, Inc.
b. Calipco, Inc.
c. Metraflex Company (The).
d. Pipeline Seal and Insulator, Inc.
e. Proco Products, Inc.
f. Or approved equal.

2. Sealing Elements: EPDM rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
3. Pressure Plates: Stainless steel.
4. Connecting Bolts and Nuts: Carbon steel, with corrosion-resistant coating or Stainless steel of length required to secure pressure plates to sealing elements.

2.3 SLEEVE-SEAL FITTINGS

A. Description: Manufactured plastic, sleeve-type, waterstop assembly made for embedding in concrete slab or wall. Unit shall have plastic or rubber waterstop collar with center opening to match piping OD.

1. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

a. Presealed Systems.
b. Link-seal
c. Flexicraft Pipeseal
d. Or approved Equal.

2.4 GROUT

A. Description: Nonshrink; recommended for interior and exterior sealing openings in non-fire-rated walls or floors.

B. Standard: ASTM C 1107/C 1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

C. Design Mix: 5000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

2.5 SILICONE SEALANTS

A. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below.

1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces that are not fire rated.

B. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 SLEEVE INSTALLATION FOR NON-FIRE-RATED ELECTRICAL PENETRATIONS

A. Comply with NECA 1.

B. Comply with NEMA VE 2 for cable tray and cable penetrations.

C. Sleeves for Conduits Penetrating Above-Grade Non-Fire-Rated Concrete and Masonry-Unit Floors and Walls:

1. Interior Penetrations of Non-Fire-Rated Walls and Floors:

a. Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Specification 079000 Section "Joint Sealants."
b. Seal space outside of sleeves with mortar or grout. Pack sealing material solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect material while curing.

2. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
3. Size pipe sleeves to provide 1/4-inch annular clear space between sleeve and raceway or cable unless sleeve seal is to be installed or unless seismic criteria require different clearance.
4. Install sleeves for wall penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of walls. Cut sleeves to length for mounting flush with both surfaces of walls. Deburr after cutting.
5. Install sleeves for floor penetrations. Extend sleeves installed in floors 2 inches above finished floor level. Install sleeves during erection of floors.

D. Sleeves for Conduits Penetrating Non-Fire-Rated Gypsum Board Assemblies:

1. Use circular metal sleeves unless penetration arrangement requires rectangular sleeved opening.
2. Seal space outside of sleeves with approved joint compound for gypsum board assemblies.

E. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

F. Aboveground, Exterior-Wall Penetrations: Seal penetrations using steel pipe sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch annular clear space between pipe and sleeve for installing mechanical sleeve seals.

G. Underground, Exterior-Wall and Floor Penetrations: Install cast-iron pipe sleeves. Size sleeves to allow for 1-inch annular clear space between raceway or cable and sleeve for installing sleeve-seal system.

3.3 SLEEVE-SEAL-SYSTEM INSTALLATION

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at raceway entries into building.

B. Install type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.4 SLEEVE-SEAL-FITTING INSTALLATION

A. Install sleeve-seal fittings in new walls and slabs as they are constructed.

B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.

C. Secure nailing flanges to concrete forms.

D. Using grout, seal the space around outside of sleeve-seal fittings.

END OF SECTION 260544

PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 53 - IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following:

1. Identification for raceway and metal-clad cable.
2. Identification for power conductors and communication and control cable.
3. Underground-line warning tape.
4. Warning labels and signs.
5. Instruction signs.
6. Equipment identification labels.
7. Miscellaneous identification products.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For each electrical identification product indicated.

C. Identification Schedule: An index of nomenclature of electrical cables, equipment and system components used in identification signs and labels.

D. Samples: For each type of label and sign to illustrate size, colors, lettering style, mounting provisions, and graphic features of identification products.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Comply with ANSI A13.1 and ANSI C2 and IEEE C2.

C. Comply with NFPA 70.

D. Comply with 29 CFR 1910.144 and 29 CFR 1910.145.

E. Comply with NFPA 70E (Standard for Electrical Safety in the Workplace).

F. Comply with OSHA requirements for electrical labeling.

G. Adhesive-attached labeling materials, including label stocks, laminating adhesives, and inks used by label printers, shall comply with UL 969.

1.5 COORDINATION

A. Coordinate identification names, abbreviations, colors, and other features with requirements in other sections requiring identification applications, Drawings, Shop Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual. Use consistent designations throughout Project.

B. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.

C. Coordinate installation of identifying devices with location of access panels and doors.

D. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.1 RACEWAY AND METAL-CLAD CABLE IDENTIFICATION MATERIALS

A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.

B. Colors for Raceways Carrying Circuits at 600 V or Less:

1. Black letters on an orange field.
2. Legend: Indicate voltage and system or service type.

C. Colors for Raceways Carrying Circuits at More Than 600 V:

1. Black letters on an orange field.
2. Legend: "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch-high letters on 20-inch centers.

D. Self-Adhesive Vinyl Labels for raceways carrying circuits 600V or less: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

E. Snap-Around Labels for raceways carrying circuits 600V or less: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeves, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

F. Snap-Around, Color-Coding Bands for raceways carrying circuits 600V or less: Slit, pretensioned, flexible, solid-colored acrylic sleeves, 2 inches long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

G. Tape and Stencil for Raceways Carrying Circuits More Than 600 V: 4-inch wide black stripes on 10-inch centers diagonally over orange background that extends full length of raceway or duct and is 12 inches wide. Stop stripes at legends.

H. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking cable tie fastener.

I. Write-On Tags: Polyester tag, 0.010 inch thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.
   1. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.2 ARMORED AND METAL-CLAD CABLE IDENTIFICATION MATERIALS

A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.

B. Colors for Raceways Carrying Circuits at 600 V and Less:

   1. Black letters on an orange field.
   2. Legend: Indicate voltage and system or service type.

C. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

D. Self-Adhesive Vinyl Tape: Colored, heavy duty, waterproof, fade resistant; 2 inches wide; compounded for outdoor use.

2.3 POWER AND CONTROL CABLE IDENTIFICATION MATERIALS

A. Comply with ANSI A13.1 for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.

B. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

C. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking cable tie fastener.

D. Write-On Tags: Polyester tag, 0.010 inch thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.
   1. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

E. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeve, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

F. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeve, 2 inches long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

2.4 CONDUCTOR IDENTIFICATION MATERIALS

A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.

B. Self-Adhesive Vinyl Labels: Preprinted, flexible label laminated with a clear, weather- and chemical-resistant coating and matching wraparound adhesive tape for securing ends of legend label.

C. Snap-Around Labels: Slit, pretensioned, flexible, preprinted, color-coded acrylic sleeve, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

D. Snap-Around, Color-Coding Bands: Slit, pretensioned, flexible, solid-colored acrylic sleeve, 2 inches long, with diameter sized to suit diameter of raceway or cable it identifies and to stay in place by gripping action.

E. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

F. Write-On Tags: Polyester tag, 0.010 inch thick, with corrosion-resistant grommet and cable tie for attachment to conductor or cable.
   1. Marker for Tags: Machine-printed, permanent, waterproof, black ink marker recommended by printer manufacturer.

2.5 FLOOR MARKING TAPE

A. 2-inch- wide, 5-mil pressure-sensitive vinyl tape, with black and white stripes and clear vinyl overlay.

2.6 UNDERGROUND-LINE WARNING TAPE

A. Tape:

1. Recommended by manufacturer for the method of installation and suitable to identify and locate underground electrical utility lines.
2. Printing on tape shall be permanent and shall not be damaged by burial operations.
3. Tape material and ink shall be chemically inert, and not subject to degrading when exposed to acids, alkalis, and other destructive substances commonly found in soils.

B. Color and Printing:

1. Comply with ANSI Z535.1 through ANSI Z535.5.
2. Inscriptions for Red-Colored Tapes: ELECTRIC LINE, HIGH VOLTAGE.
3. Inscriptions for Orange-Colored Tapes: TELEPHONE CABLE, CATV CABLE, COMMUNICATIONS CABLE, OPTICAL FIBER CABLE.

C. Tag: Type II:

1. Multilayer laminate consisting of high-density polyethylene scrim coated with pigmented polyolefin, bright-colored, continuous-printed on one side with the inscription of the utility, compounded for direct-burial service.
2. Thickness: 12 mils.
3. Weight: 36.1 lb/1000 sq. ft.
4. 3-Inch Tensile According to ASTM D 882: 400 lbf, and 11,500 psi.

D. Tag: Type IID:

1. Reinforced, detectable three-layer laminate, consisting of a printed pigmented woven scrim, a solid aluminum-foil core, and a clear protective film that allows inspection of the continuity of the conductive core, bright-colored, continuous-printed on one side with the inscription of the utility, compounded for direct-burial service.
2. Overall Thickness: 8 mils.
3. Foil Core Thickness: 0.35 mil.
4. Weight: 34 lb/1000 sq. ft.
5. 3-Inch Tensile According to ASTM D 882: 300 lbf, and 12,500 psi.

2.7 CONDUCTOR AND COMMUNICATION- AND CONTROL-CABLE IDENTIFICATION MATERIALS

A. Color-Coding Conductor Tape: Colored, self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.

B. Marker Tapes: Vinyl or vinyl-cloth, self-adhesive wraparound type, with circuit identification legend machine printed by thermal transfer or equivalent process.

C. Aluminum Wraparound Marker Labels: Cut from 0.014-inch-thick aluminum sheet, with stamped, embossed, or scribed legend, and fitted with tabs and matching slots for permanently securing around wire or cable jacket or around groups of conductors.

D. Metal Tags: Brass or aluminum, 2 by 2 by 0.05 inch, with stamped legend, punched for use with self-locking nylon tie fastener.

E. Write-On Tags: Polyester tag, 0.010 inch thick, with corrosion-resistant grommet and polyester or nylon tie for attachment to conductor or cable.

1. Marker for Tags: Permanent, waterproof, black ink marker recommended by tag manufacturer.

2.8 WARNING LABELS AND SIGNS

A. Comply with NFPA 70, NFPA 70E and 29 CFR 1910.145.

B. Self-Adhesive Warning Labels: Factory printed, multicolor, pressure-sensitive adhesive labels, configured for display on front cover, door, or other access to equipment, unless otherwise indicated.

C. Baked-Enamel Warning Signs:
1. Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for application.
2. 1/4-inch grommets in corners for mounting.
3. Nominal size, 7 by 10 inches.

D. Metal-Backed, Butyrate Warning Signs:
1. Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch galvanized-steel backing; and with colors, legend, and size required for application.
2. 1/4-inch grommets in corners for mounting.
3. Nominal size, 10 by 14 inches.

E. Warning label and sign shall include, but are not limited to, the following legends:

1. Multiple Power Source Warning: "DANGER - ELECTRICAL SHOCK HAZARD - EQUIPMENT HAS MULTIPLE POWER SOURCES."
2. Workspace Clearance Warning: "WARNING - OSHA REGULATION - AREA IN FRONT OF ELECTRICAL EQUIPMENT MUST BE KEPT CLEAR FOR 36 INCHES."

2.9 INSTRUCTION SIGNS

A. Engraved, laminated acrylic or melamine plastic, minimum 1/16 inch thick for signs up to 20 sq. in. and 1/8 inch thick for larger sizes.

1. Engraved legend with black letters on white face.
2. Punched or drilled for mechanical fasteners.

3. Framed with mitered acrylic molding and arranged for attachment at applicable equipment.

B. Adhesive Film Label: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch.

C. Adhesive Film Label with Clear Protective Overlay: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch. Overlay shall provide a weatherproof and UV-resistant seal for label.

2.10 EQUIPMENT IDENTIFICATION LABELS

A. Adhesive Film Label: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch.

B. Adhesive Film Label with Clear Protective Overlay: Machine printed, in black, by thermal transfer or equivalent process. Minimum letter height shall be 3/8 inch. Overlay shall provide a weatherproof and ultraviolet-resistant seal for label.

C. Self-Adhesive, Engraved, Laminated Acrylic or Melamine Label: Adhesive backed, with white letters on a dark-gray background. Minimum letter height shall be 3/8 inch.

D. Engraved, Laminated Acrylic or Melamine Label: Punched or drilled for screw mounting. White letters on a dark-gray background. Minimum letter height shall be 3/8 inch.

E. Stenciled Legend: In nonfading, waterproof, black ink or paint. Minimum letter height shall be 1 inch.

2.11 CABLE TIES

A. General-Purpose Cable Ties: Fungus inert, self extinguishing, one piece, self locking, Type 6/6 nylon.

1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 deg F, According to ASTM D 638: 12,000 psi.
3. Temperature Range: Minus 40 to plus 185 deg F.
4. Color: Black except where used for color-coding.

B. UV-Stabilized Cable Ties: Fungus inert, designed for continuous exposure to exterior sunlight, self extinguishing, one piece, self locking, Type 6/6 nylon.

1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 deg F, According to ASTM D 638: 12,000 psi.
3. Temperature Range: Minus 40 to plus 185 deg F.
4. Color: Black.

C. Plenum-Rated Cable Ties: Self extinguishing, UV stabilized, one piece, self locking.

1. Minimum Width: 3/16 inch.
2. Tensile Strength at 73 deg F, According to ASTM D 638: 7000 psi.
3. UL 94 Flame Rating: 94V-0.
4. Temperature Range: Minus 50 to plus 284 deg F.
5. Color: Black.

2.12 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Cable Ties: Fungus-inert, self-extinguishing, 1-piece, self-locking, Type 6/6 nylon cable ties.

1. Minimum Width: 3/16 inch.
2. Tensile Strength: 50 lb, minimum.
3. Temperature Range: Minus 40 to plus 185 deg F.
4. Color: Black, except where used for color-coding.

B. Paint: Paint materials and application requirements are specified in Division 09 painting Sections.

1. Exterior Concrete, Stucco, and Masonry (Other Than Concrete Unit Masonry):

a. Semigloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Exterior concrete and masonry primer.
2) Finish Coats: Exterior semigloss acrylic enamel.

2. Exterior Concrete Unit Masonry:

a. Semigloss Acrylic-Enamel Finish: Two finish coat(s) over a block filler.

1) Block Filler: Concrete unit masonry block filler.
2) Finish Coats: Exterior semigloss acrylic enamel.

3. Exterior Ferrous Metal:

a. Semigloss Alkyd-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Exterior ferrous-metal primer.
2) Finish Coats: Exterior semigloss alkyd enamel.

4. Exterior Zinc-Coated Metal (except Raceways):

a. Semigloss Alkyd-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Exterior zinc-coated metal primer.
2) Finish Coats: Exterior semigloss alkyd enamel.

5. Interior Concrete and Masonry (Other Than Concrete Unit Masonry):

a. Semigloss Alkyd-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Interior concrete and masonry primer.
2) Finish Coats: Interior semigloss alkyd enamel.

6. Interior Concrete Unit Masonry:

a. Semigloss Acrylic-Enamel Finish: Two finish coat(s) over a block filler.

1) Block Filler: Concrete unit masonry block filler.
2) Finish Coats: Interior semigloss acrylic enamel.

7. Interior Gypsum Board:

a. Semigloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Interior gypsum board primer.
2) Finish Coats: Interior semigloss acrylic enamel.

8. Interior Ferrous Metal:

a. Semigloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Interior ferrous-metal primer.
2) Finish Coats: Interior semigloss acrylic enamel.

9. Interior Zinc-Coated Metal (except Raceways):

a. Clean/pickle bare metal with white vinegar.
b. Semigloss Acrylic-Enamel Finish: Two finish coat(s) over a primer.

1) Primer: Interior zinc-coated metal primer.
2) Finish Coats: Interior semigloss acrylic enamel.

C. Fasteners for Labels and Signs: Self-tapping, stainless-steel screws or stainless-steel machine screws with nuts and flat and lock washers.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 APPLICATION

A. Raceways and Duct Banks More Than 600 V Concealed within Buildings: 4-inch wide black stripes on 10-inch centers over orange background that extends full length of raceway or duct

and is 12 inches wide. Stencil legend "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch high black letters on 20-inch centers. Stop stripes at legends. Apply to the following finished surfaces:

1. Floor surface directly above conduits running beneath and within 12 inches of a floor that is in contact with earth or is framed above unexcavated space.
2. Wall surfaces directly external to raceways concealed within wall.
3. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in the building, or concealed above suspended ceilings.

B. Accessible Raceways and Metal-Clad Cables More Than 600 V: Identify with "DANGER-HIGH VOLTAGE" in black letters at least 2 inches high, with snap-around labels. Repeat legend at 10-foot maximum intervals.

C. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 30 A: Identify with orange self-adhesive vinyl label self-adhesive vinyl tape applied in bands.

D. Accessible Raceways and Cables of Auxiliary Systems: Identify the following systems with color-coded, snap-around, color-coding bands:

1. Fire Alarm System: Red.
2. Fire-Suppression Supervisory and Control System: Red and yellow.
3. Combined Fire Alarm and Security System: Red and blue.
4. Mechanical and Electrical Supervisory System: Green and blue.
5. Control Wiring: Green and red.

E. Power-Circuit Conductor Identification: For primary and secondary conductors No. 1/0 AWG and larger in vaults, pull and junction boxes, manholes, and handholes use metal tags. Identify source and circuit number of each set of conductors. For single conductor cables, identify phase in addition to the above.

F. Branch-Circuit Conductor Identification: Where there are conductors for more than three branch circuits in same junction or pull box, use write-on tags. Identify each ungrounded conductor according to source and circuit number.

G. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, signal, sound, intercommunications, voice, and data connections.

1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and Operation and Maintenance Manual.

H. Locations of Underground Lines: Identify with underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable. Install underground-line warning tape for both direct-buried cables and cables in raceway.

I. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Comply with 29 CFR 1910.145 and apply metal-backed, butyrate warning signs. Identify system voltage with black letters on an orange background. Apply to exterior of door, cover, or other access.

1. Equipment with Multiple Power or Control Sources: Apply to door or cover of equipment including the following:

   a. Power transfer switches.
   b. Controls with external control power connections.
   c. PV Inverter, collector and combiners systems.

2. Equipment Requiring Workspace Clearance According to NFPA 70: Unless otherwise indicated, apply to door or cover of equipment but not on flush panelboards and similar equipment in finished spaces.

J. Instruction Signs:

1. Operating Instructions: Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation.
2. Emergency Operating Instructions: Install instruction signs with white legend on a red background with minimum 3/8-inch high letters for emergency instructions at equipment used for PV system.

K. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.

1. Labeling Instructions:

   a. Indoor and Outdoor Equipment: Screwed-on engraved white laminated plastic sheet with minimum 3/8 inch to 3/4 inch black lettering for normal systems and red laminated plastic sheet with lettering for energy systems.
   b. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.

2. Equipment to Be Labeled:

   a. Panelboards, electrical cabinets, and enclosures.
   b. Access doors and panels for concealed electrical items.
   c. Electrical switchgear and switchboards.
   d. Transformers.
   e. Electrical substations.
   f. Emergency system boxes and enclosures.

g. Motor-control centers.
h. Disconnect switches.
i. Enclosed circuit breakers.
j. Motor starters.
k. Push-button stations.
l. Power transfer equipment.
m. Contactors.
n. Remote-controlled switches, dimmer modules, and control devices.
o. Power-generating units.
p. Intercommunication and call system master and staff stations.

q. Fire-alarm control panel and annunciators.
r. Monitoring and control equipment.
s. Uninterruptible power supply equipment.
t. Terminals, racks, and patch panels for voice and data communication and for signal and control functions.

3.3 INSTALLATION

A. Verify identity of each item before installing identification products.

B. Location: Install identification materials and devices at locations for most convenient viewing without interference with operation and maintenance of equipment.

C. Apply identification devices to surfaces that require finish after completing finish work.

D. Self-Adhesive Identification Products: Clean surfaces before application, using materials and methods recommended by manufacturer of identification device.

E. Attach nonadhesive signs and plastic labels that are not self-adhesive type with mechanical fasteners appropriate to the location and substrate.

F. System Identification Color Banding for Raceways and Cables: Each color band shall completely encircle cable or conduit. Place adjacent bands of two-color markings in contact, side by side. Locate bands at changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.

G. Aluminum Wraparound Marker Labels and Metal Tags: Secure tight to surface of conductor or cable at a location with high visibility and accessibility.

H. Cable Ties: For attaching tags. Use general-purpose type, except as listed below:

1. Outdoors: UV-stabilized nylon.
2. In Spaces Handling Environmental Air: Plenum rated.

I. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at 6 to 8 inches below finished grade. Use

multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.

J. Painted Identification: Comply with requirements in Division 09 painting Sections for surface preparation and paint application.

3.4 IDENTIFICATION SCHEDULE

A. Concealed Raceways, Duct Banks, More Than 600 V, within Buildings: Tape and stencil 4-inch- wide black stripes on 10-inch centers over orange background that extends full length of raceway or duct and is 12 inches wide. Stencil legend "DANGER CONCEALED HIGH VOLTAGE WIRING" with 3-inch- high black letters on 20-inch centers. Stop stripes at legends. Apply to the following finished surfaces:

1. Floor surface directly above conduits running beneath and within 12 inches of a floor that is in contact with earth or is framed above unexcavated space.
2. Wall surfaces directly external to raceways concealed within wall.
3. Accessible surfaces of concrete envelope around raceways in vertical shafts, exposed in the building, or concealed above suspended ceilings.

B. Accessible Raceways, Armored and Metal-Clad Cables, More Than 600 V: Snap-around labels. Install labels at 10-foot maximum intervals.

C. Accessible Raceways and Metal-Clad Cables, 600 V or Less, for Service, Feeder, and Branch Circuits More Than 30A, and 120V to ground: Identify with self-adhesive vinyl tape applied in bands. Install labels at 10-foot maximum intervals.

D. Accessible Raceways and Cables within Buildings: Identify the covers of each junction and pull box of the following systems with self-adhesive vinyl labels with the wiring system legend and system voltage. System legends shall be as follows:

1. Emergency Power.
2. Power.
3. PV System.

E. Power-Circuit Conductor Identification, 600 V or Less: For conductors in vaults, pull and junction boxes, manholes, and handholes, use color-coding conductor tape to identify the phase.

1. Color-Coding for Phase and Voltage Level Identification, 600 V or Less: Use colors listed below for ungrounded feeder and branch-circuit conductors.

a. Color shall be factory applied or field applied for sizes larger than No. 8 AWG.
b. Colors for 208/120-V Circuits:

1) Phase A: Black.
2) Phase B: Red.
3) Phase C: Blue.

c. Colors for 480/277-V Circuits:

1) Phase A: Brown.
2) Phase B: Orange.
3) Phase C: Yellow.

d. Field-Applied, Color-Coding Conductor Tape: Apply in half-lapped turns for a minimum distance of 6 inches from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Locate bands to avoid obscuring factory cable markings.

F. Aluminum Wraparound Marker Labels and Metal Tags: Secure tight to surface of conductor or cable at a location with high visibility and accessibility.

G. Underground-Line Warning Tape: During backfilling of trenches install continuous underground-line warning tape directly above line at 10 to 12 inches below finished grade. Use multiple tapes where width of multiple lines installed in a common trench or concrete envelope exceeds 16 inches overall.

H. Painted Identification: Prepare surface and apply paint according to Division 09 painting Sections.

I. Power-Circuit Conductor Identification, More than 600 V: For conductors in vaults, pull and junction boxes, manholes, and handholes, use nonmetallic plastic tag holder with adhesive-backed phase tags, and a separate tag with the circuit designation.

J. Install instructional sign including the color-code for grounded and ungrounded conductors using adhesive-film-type labels.

K. Conductors to Be Extended in the Future: Attach marker tape to conductors and list source.

L. Auxiliary Electrical Systems Conductor Identification: Identify field-installed alarm, control, and signal connections.

1. Identify conductors, cables, and terminals in enclosures and at junctions, terminals, and pull points. Identify by system and circuit designation.
2. Use system of marker tape designations that is uniform and consistent with system used by manufacturer for factory-installed connections.
3. Coordinate identification with Project Drawings, manufacturer's wiring diagrams, and the Operation and Maintenance Manual.

M. Locations of Underground Lines: Identify with underground-line warning tape for power, lighting, communication, and control wiring and optical fiber cable.

1. Limit use of underground-line warning tape to direct-buried cables.
2. Install underground-line warning tape for both direct-buried cables and cables in raceway.

N. Workspace Indication: Install floor marking tape to show working clearances in the direction of access to live parts. Workspace shall be as required by NFPA 70 and 29 CFR 1926.403 unless otherwise indicated. Do not install at flush-mounted panelboards and similar equipment in finished spaces.

O. Warning Labels for Indoor Cabinets, Boxes, and Enclosures for Power and Lighting: Metal-backed, butyrate warning signs.

1. Comply with 29 CFR 1910.145.
2. Identify system voltage with black letters on an orange background.
3. Apply to exterior of door, cover, or other access.
4. For equipment with multiple power or control sources, apply to door or cover of equipment including the following:

    a. Power transfer switches.
    b. Controls with external control power connections.
    c. PV System.

P. Operating Instruction Signs: Install instruction signs to facilitate proper operation and maintenance of electrical systems and items to which they connect. Install instruction signs with approved legend where instructions are needed for system or equipment operation.

Q. Emergency Operating Instruction Signs: Install instruction signs with white legend on a red background with minimum 3/8-inch- high letters for emergency instructions at equipment used for PV System operations.

R. Equipment Identification Labels: On each unit of equipment, install unique designation label that is consistent with wiring diagrams, schedules, and the Operation and Maintenance Manual. Apply labels to disconnect switches and protection equipment, central or master units, control panels, control stations, terminal cabinets, and racks of each system. Systems include power, lighting, control, communication, signal, monitoring, and alarm systems unless equipment is provided with its own identification.

1. Labeling Instructions:

    a. Indoor Equipment: Engraved, laminated acrylic or melamine label. Unless otherwise indicated, provide a single line of text with 1/2-inch- high letters on 1-1/2-inch- high label; where two lines of text are required, use labels 2 inches high.
    b. Outdoor Equipment: Stenciled legend 4 inches high.
    c. Elevated Components: Increase sizes of labels and letters to those appropriate for viewing from the floor.
    d. Unless provided with self-adhesive means of attachment, fasten labels with appropriate mechanical fasteners that do not change the NEMA or NRTL rating of the enclosure.

2. Equipment to Be Labeled:

a. Panelboards: Typewritten directory of circuits in the location provided by panelboard manufacturer. Panelboard identification shall be engraved, laminated acrylic or melamine label.
b. Enclosures and electrical cabinets.
c. Access doors and panels for concealed electrical items.
d. Switchgear.
e. Switchboards.
f. Transformers: Label that includes tag designation shown on Drawings for the transformer, feeder, and panelboards or equipment supplied by the secondary.
g. Substations.
h. Emergency system boxes and enclosures.
i. Motor-control centers.
j. Enclosed switches.
k. Enclosed circuit breakers.
l. Enclosed controllers.
m. Variable-speed controllers.
n. Push-button stations.
o. Power transfer equipment.
p. Contactors.
q. Remote-controlled switches, dimmer modules, and control devices.
r. Power-generating units.
s. Monitoring and control equipment.
t. PV Inverter System, Collectors and combiners.

END OF SECTION 26 05 53

SECTION 26 05 72 - OVERCURRENT PROTECTIVE DEVICE SHORT-CIRCUIT STUDY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section includes a computer-based, fault-current study to determine the minimum interrupting capacity of circuit protective devices.

B. Related Sections:

1. Section 26 05 73 “Overcurrent Protective Device Coordination Study.”

C. DEFINITIONS

1. Refer to DDC General Conditions
2. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.
3. One-Line Diagram: A diagram which shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
4. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.
5. SCCR: Short-circuit current rating.
6. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For computer software program to be used for studies.

C. Product Certificates: Fault-current study computer software programs, certifying compliance with IEEE 399 (Recommended Practice for Industrial and Commercial Power Systems Analysis).

D. Qualification Data: For short circuit-study specialist.

E. Other Submittals: Submit the following prior to submittal of electrical service and distribution equipment. Submittals shall be in digital form.

1. Short-circuit study input data, including completed computer program input data sheets.
2. Short-circuit study and equipment evaluation report; signed, dated, and sealed by a licensed professional engineer in the state of New York.

a. Submit study report for action prior to receiving final approval of the distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from Commissioner for preliminary submittal of sufficient study data to ensure that the selection of devices and associated characteristics is satisfactory.
b. Revised single-line diagram, reflecting results of short-circuit study and field investigation results.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are unacceptable.

C. Short-Circuit Study Specialist Qualifications: Professional Engineer Licensed in the state of New York in charge of performing the study and documenting recommendations. All elements of the study shall be performed under the direct supervision and control of this professional engineer. The Professional Engineer shall have a minimum of three years of experience in performance power systems studies. All overcurrent protective device studies (short circuit, coordination and arc flash) shall be performed by the same qualified specialist.

D. Field Adjusting Agency Qualifications: An independent agency, with the experience and capability to adjust overcurrent devices and to conduct the testing indicated, that is a member company of a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to Commissioner and the City of New York.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE

A. Computer Software: Subject to compliance with requirements, provide products by one of the following:
1. SKM Systems Analytics, Inc.
2. ESA Inc.
3. Operation Technology, Inc.
4. Power Analytics Corporation.
5. Or approved equal

B. Comply with IEEE 399 and IEEE 551.

C. Analytical features of fault-current-study computer software program shall have the capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

D. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output.

2.2 SHORT-CIRCUIT STUDY REPORT CONTENTS

A. Executive summary.

B. Study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpretation of the computer printout.

C. One-line diagram, showing the following:

1. Protective device designations and ampere ratings.
2. Cable size and lengths.
3. Transformer kilovolt ampere (kVA) and voltage ratings.
4. Motor and generator designations and kVA ratings.
5. Switchgear, switchboard, motor-control center, and panelboard designations.

D. Comments and recommendations for system improvements, where needed.

E. Protective Device Evaluation:

1. Evaluate equipment and protective devices and compare to short-circuit ratings.
2. Tabulations of circuit breaker, fuse, and other protective device ratings versus calculated short-circuit duties.
3. For 600-V overcurrent protective devices, ensure that interrupting ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.
4. For devices and equipment rated for asymmetrical fault current, apply multiplication factors listed in the standards to 1/2-cycle symmetrical fault current.
5. Verify adequacy of phase conductors at maximum three-phase bolted fault currents; verify adequacy of equipment grounding conductors and grounding electrode conductors at maximum ground-fault currents. Ensure that short-circuit withstand ratings are equal to or higher than calculated 1/2-cycle symmetrical fault current.

F. Short-Circuit Study Input Data: As described in "Power System Data" Article in the Evaluations.

G. Short-Circuit Study Output:

1. Low-Voltage Fault Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

a. Voltage.
b. Calculated fault-current magnitude and angle.

c. Fault-point X/R ratio.
d. Equivalent impedance.

2. Momentary Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

a. Voltage.
b. Calculated symmetrical fault-current magnitude and angle.
c. Fault-point X/R ratio.
d. Calculated asymmetrical fault currents:

1) Based on fault-point X/R ratio.
2) Based on calculated symmetrical value multiplied by 1.6.
3) Based on calculated symmetrical value multiplied by 2.7.

3. Interrupting Duty Report: Three-phase and unbalanced fault calculations, showing the following for each overcurrent device location:

a. Voltage.
b. Calculated symmetrical fault-current magnitude and angle.
c. Fault-point X/R ratio.
d. No AC Decrement (NACD) ratio.
e. Equivalent impedance.
f. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a symmetrical basis.
g. Multiplying factors for 2-, 3-, 5-, and 8-cycle circuit breakers rated on a total basis.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Obtain all data necessary for the conduct of the study.

1. Verify completeness of data supplied on the one-line diagram. Call any discrepancies to the attention of Commissioner.
2. For equipment provided that is Work of this Project, use characteristics submitted under the provisions of action submittals and information submittals for this Project.
3. For new equipment and existing to remain equipment, obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers. The qualifications of technicians and engineers shall be qualified as defined by NFPA 70E.

B. Gather and tabulate the following input data to support the short-circuit study. Comply with recommendations in IEEE 551 as to the amount of detail that is required to be acquired in the field. Field data gathering shall be under the direct supervision and control of the engineer in charge of performing the study.

1. Product Data for Project's overcurrent protective devices involved in overcurrent protective device coordination studies. Use equipment designation tags that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.
2. Obtain electrical power utility impedance at the service.
3. Power sources and ties.
4. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
5. For reactors, provide manufacturer and model designation, voltage rating, and impedance.
6. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip, SCCR, current rating, and breaker settings.
7. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
8. Busway manufacturer and model designation, current rating, impedance, lengths, and conductor material.
9. Motor horsepower and NEMA MG 1 code letter designation.
10. Cable sizes, lengths, number, conductor material and conduit material (magnetic or nonmagnetic).

3.3 SHORT-CIRCUIT STUDY

A. Perform study following the general study procedures contained in IEEE 399.

B. Calculate short-circuit currents according to IEEE 551.

C. Base study on the device characteristics supplied by device manufacturer.

D. The extent of the electrical power system to be studied is indicated on Drawings.

E. Begin short-circuit current analysis at the service, extending down to the system overcurrent protective devices as follows:

1. To normal system low-voltage load buses where fault current is 10 kA or less.
2. Exclude equipment rated 240-V ac or less when supplied by a single transformer rated less than 125 kVA.
3. Photovoltaic System including inverters.
4. New electrical building service.

F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

G. The calculations shall include the ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and shall apply to low- and medium-voltage, three-phase ac systems. The calculations shall also account for the fault-current dc decrement, to address the asymmetrical requirements of the interrupting equipment.

1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.

H. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault at each of the following:

1. Electric utility's supply termination point.
2. Incoming switchboard.
3. Unit substation primary and secondary terminals.
4. Motor-control centers.
5. Control panels.
6. Distribution panelboards.
7. Branch circuit panelboards.
8. Disconnect switches.
9. Variable frequency drives.
10. Lighting and dimming control panels.
11. Photovoltaic System including inverters.
12. New electrical building service.

3.4 ADJUSTING

A. Make modifications to equipment as required to accomplish compliance with short-circuit study.

3.5 INSTRUCTION

A. Instruct City of New York's operating and maintenance personnel in the use of study results.

END OF SECTION 26 05 72

SECTION 26 05 73 - OVERCURRENT PROTECTIVE DEVICE COORDINATION STUDY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section includes computer-based, overcurrent protective device coordination studies to determine overcurrent protective devices and to determine overcurrent protective device settings for selective tripping.

1. Series-rated devices are not permitted unless specifically indicated on drawings.

B. Related Sections:

1. Section 26 05 72 “Overcurrent Protective Device Short Circuit Study.”

C. Definitions:
1. Refer to DDC General Conditions
2. Existing to Remain: Existing items of construction that are not to be removed and that are not otherwise indicated to be removed, removed and salvaged, or removed and reinstalled.
3. One-Line Diagram: A diagram which shows, by means of single lines and graphic symbols, the course of an electric circuit or system of circuits and the component devices or parts used therein.
4. Protective Device: A device that senses when an abnormal current flow exists and then removes the affected portion from the system.
5. SCCR: Short-circuit current rating.
6. Service: The conductors and equipment for delivering electric energy from the serving utility to the wiring system of the premises served.

1.3 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For computer software program to be used for studies.

C. Product Certificates: For coordination study and fault current study computer software program, certifying compliance with IEEE 399.

D. Qualification Data: For coordination study specialist.

E. Other Submittals: Submit the following prior to submittal of electrical service and distribution equipment. Submittals shall be in digital form.

1. Coordination-study input data, including completed computer program input data sheets.
2. Study and equipment evaluation reports.
3. Report indicating variances.
4. Recommendations.
5. Overcurrent protective device coordination study report; signed, dated, and sealed by a Professional Engineer licensed in the State of New York.

a. Submit study report prior to receiving final approval of the distribution equipment submittals. If formal completion of studies will cause delay in equipment manufacturing, obtain approval from commissioner for preliminary submittal of sufficient study data to ensure that the selection of devices and associated characteristics is satisfactory.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For the overcurrent protective devices to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 01 78 23 "Operation and Maintenance Data," include the following:

a. The following parts from the Protective Device Coordination Study Report:

1) One-line diagram.
2) Protective device coordination study.
3) Time-current coordination curves.

b. Power system data.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Studies shall use computer programs that are distributed nationally and are in wide use. Software algorithms shall comply with requirements of standards and guides specified in this Section. Manual calculations are unacceptable.

C. Coordination Study Specialist Qualifications: Professional Engineer Licensed in the State of New York in charge of performing the study and documenting recommendations. All elements of the study shall be performed under the direct supervision and control of this professional engineer. The Professional Engineer shall have a minimum of three years experience in

performance power system studies. All overcurrent protective device studies (short circuit, coordination and arc-flash) shall be performed by the same qualified specialist.

D. Field Adjusting Agency Qualifications: An independent agency, with the experience and capability to adjust overcurrent devices and to conduct the testing indicated, that is a member company of a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to Commissioner and City of New York.

E. De-energize equipment prior to any work to be done. If work must be performed live, obtain written approval from Commissioner and conform with OSHA Title 29.

PART 2 - PRODUCTS

2.1 COMPUTER SOFTWARE

A. Computer Software Developers: Subject to compliance with requirements, provide products by one of the following:

1. SKM Systems Analysis, Inc.
2. ESA Inc.
3. Operation Technology, Inc.
4. Power Analytics, Corporation.
5. Or approved equal

B. Comply with IEEE 242 and IEEE 399.

C. Analytical features of device coordination study computer software program shall have the capability to calculate "mandatory," "very desirable," and "desirable" features as listed in IEEE 399.

D. Computer software program shall be capable of plotting and diagramming time-current-characteristic curves as part of its output. Computer software program shall report device settings and ratings of all overcurrent protective devices and shall demonstrate selective coordination by computer-generated, time-current coordination plots.

1. Optional Features:

a. Arcing faults.
b. Simultaneous faults.
c. Explicit negative sequence.
d. Mutual coupling in zero sequence.

2.2 PROTECTIVE DEVICE COORDINATION STUDY REPORT CONTENTS

A. Executive summary.

B. Study descriptions, purpose, basis and scope. Include case descriptions, definition of terms and guide for interpretation of the computer printout.

C. One-line diagram, showing the following:

1. Protective device designations and ampere ratings.
2. Cable size and lengths.
3. Transformer kilovolt ampere (kVA) and voltage ratings.
4. Motor and generator designations and kVA ratings.
5. Switchgear, switchboard, motor-control center, and panelboard designations.
6. Photovoltaic system and inverter equipment
7. New Building electrical service

D. Study Input Data: As described in "Power System Data" Article.

E. Short-Circuit Study Output: As specified in "Short-Circuit Study Output" Paragraph in "Short-Circuit Study Report Contents" Article in Section 260572 "Overcurrent Protective Device Short-Circuit Study."

F. Protective Device Coordination Study: Prepare written report indicating the following results of coordination study.

1. Report recommended settings of protective devices, ready to be applied in the field. Use manufacturer's data sheets for recording the recommended setting of overcurrent protective devices when available.

a. Phase and Ground Relays:

1) Device tag.
2) Relay current transformer ratio and tap, time dial, and instantaneous pickup value.
3) Recommendations on improved relaying systems, if applicable.

b. Circuit Breakers:

1) Adjustable pickups and time delays (long time, short time, ground).
2) Adjustable time-current characteristic.
3) Adjustable instantaneous pickup.
4) Recommendations on improved trip systems, if applicable.

c. Fuses: Show current rating, voltage, and class.

G. Time-Current Coordination Curves: Determine settings of overcurrent protective devices to achieve selective coordination. Graphically illustrate that adequate time separation exists between devices installed in series, including power utility company's upstream devices. Prepare separate sets of curves for the switching schemes and for emergency periods where the power source is local generation. Show the following information:

1. Device tag and title, one-line diagram with legend identifying the portion of the system covered.
2. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.
3. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
4. Plot the following listed characteristic curves, as applicable:

    a. Power utility's overcurrent protective device.
    b. Low-voltage fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands.
    c. Low-voltage equipment circuit-breaker trip devices, including manufacturer's tolerance bands.
    d. Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection curves.
    e. Cables and conductors damage curves.
    f. Ground-fault protective devices.
    g. Motor-starting characteristics and motor damage points.
    h. The largest feeder circuit breaker in panelboard.

5. Series rating on equipment allows the application of two series interrupting devices for a condition where the available fault current is greater than the interrupting rating of the downstream equipment. Both devices share in the interruption of the fault and selectivity is sacrificed at high fault levels. Maintain selectivity for tripping currents caused by overloads.
6. Provide adequate time margins between device characteristics such that selective operation is achieved.
7. Comments and recommendations for system improvements.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine Project overcurrent protective device submittals for compliance with electrical distribution system coordination requirements and other conditions affecting performance. Devices to be coordinated are indicated on Drawings.

1. Proceed with coordination study only after relevant equipment submittals have been assembled. Overcurrent protective devices that have not been submitted and approved prior to coordination study may not be used in study.

3.3 PROTECTIVE DEVICE COORDINATION STUDY

A. Comply with IEEE 242 for calculating short-circuit currents and determining coordination time intervals.

B. Comply with IEEE 399 for general study procedures.

C. The study shall be based on the device characteristics supplied by device manufacturer.

D. The extent of the electrical power system to be studied is indicated on Drawings.

E. Begin analysis at the service, extending down to the system overcurrent protective devices as follows:

1. To normal system low-voltage load buses where fault current is 10 kA or less.

F. Study electrical distribution system from normal and alternate power sources throughout electrical distribution system for Project. Study all cases of system-switching configurations and alternate operations that could result in maximum fault conditions.

G. Transformer Primary Overcurrent Protective Devices:

1. Device shall not operate in response to the following:

a. Inrush current when first energized.
b. Self-cooled, full-load current or forced-air-cooled, full-load current, whichever is specified for that transformer.
c. Permissible transformer overloads according to IEEE C57.96 if required by unusual loading or emergency conditions.

2. Device settings shall protect transformers according to IEEE C57.12.00, for fault currents.

H. Motor Protection:

1. Select protection for motors served at voltages more than 600 V according to IEEE 620.

I. Conductor Protection: Protect cables against damage from fault currents according to ICEA P-32-382, ICEA P-45-482, and protection recommendations in IEEE 242. Demonstrate that equipment withstands the maximum short-circuit current for a time equivalent to the tripping time of the primary relay protection or total clearing time of the fuse. To determine temperatures that damage insulation, use curves from cable manufacturers or from listed standards indicating conductor size and short-circuit current.

J. Generator Protection: Select protection according to manufacturer's written recommendations and to IEEE 242.

K. The calculations shall include the ac fault-current decay from induction motors, synchronous motors, and asynchronous generators and shall apply to low- and medium-voltage, three-phase

ac systems. The calculations shall also account for the fault-current dc decrement, to address the asymmetrical requirements of the interrupting equipment.

1. For grounded systems, provide a bolted line-to-ground fault-current study for areas as defined for the three-phase bolted fault short-circuit study.

L. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault and single line-to-ground fault at each of the following:

1. Electric utility's supply termination point.
2. Incoming Switchboard.
3. Control panels.
4. Distribution panelboards.
5. Branch circuit panelboards.
6. Disconnect switches.
7. Variable frequency drives.
8. Photovoltaic system and inverter equipment
9. New Building electrical service

M. Protective Device Evaluation:

1. Evaluate equipment and protective devices and compare to short-circuit ratings.
2. Adequacy of switchgear, motor-control centers, and panelboard bus bars to withstand short-circuit stresses.
3. Any application of series-rated devices shall be recertified, complying with requirements in NFPA 70.

3.4 POWER SYSTEM DATA

A. Obtain all data necessary for the conduct of the overcurrent protective device study.

1. Verify completeness of data supplied in the one-line diagram on Drawings. Call discrepancies to the attention of Commissioner.
2. For new equipment, use characteristics submitted under the provisions of action submittals and information submittals for this Project.
3. For existing equipment, whether or not relocated obtain required electrical distribution system data by field investigation and surveys, conducted by qualified technicians and engineers. The qualifications of technicians and engineers shall be qualified as defined by NFPA 70E.

B. Gather and tabulate the following input data to support coordination study. The list below is a guide. Comply with recommendations in IEEE 551 for the amount of detail required to be acquired in the field. Field data gathering shall be under the direct supervision and control of the engineer in charge of performing the study.

1. Product Data for overcurrent protective devices specified in other Sections and involved in overcurrent protective device coordination studies. Use equipment designation tags

that are consistent with electrical distribution system diagrams, overcurrent protective device submittals, input and output data, and recommended device settings.

2. Electrical power utility impedance at the service.
3. Power sources and ties.
4. Short-circuit current at each system bus, three phase and line-to-ground.
5. Full-load current of all loads.
6. Voltage level at each bus.
7. For transformers, include kVA, primary and secondary voltages, connection type, impedance, X/R ratio, taps measured in percent, and phase shift.
8. For reactors, provide manufacturer and model designation, voltage rating, and impedance.
9. For circuit breakers and fuses, provide manufacturer and model designation. List type of breaker, type of trip and available range of settings, SCCR, current rating, and breaker settings.
10. Generator short-circuit current contribution data, including short-circuit reactance, rated kVA, rated voltage, and X/R ratio.
11. For relays, provide manufacturer and model designation, current transformer ratios, potential transformer ratios, and relay settings.
12. Maximum demands from service meters.
13. Busway manufacturer and model designation, current rating, impedance, lengths, and conductor material.
14. Motor horsepower and NEMA MG 1 code letter designation.
15. Low-voltage cable sizes, lengths, number, conductor material, and conduit material (magnetic or nonmagnetic).
16. Medium-voltage cable sizes, lengths, conductor material, and cable construction and metallic shield performance parameters.
17. Data sheets to supplement electrical distribution system diagram, cross-referenced with tag numbers on diagram, showing the following:

    a. Special load considerations, including starting inrush currents and frequent starting and stopping.
    b. Transformer characteristics, including primary protective device, magnetic inrush current, and overload capability.
    c. Motor full-load current, locked rotor current, service factor, starting time, type of start, and thermal-damage curve.
    d. Generator thermal-damage curve.
    e. Ratings, types, and settings of utility company's overcurrent protective devices.
    f. Special overcurrent protective device settings or types stipulated by utility company.
    g. Time-current-characteristic curves of devices indicated to be coordinated.
    h. Manufacturer, frame size, interrupting rating in amperes rms symmetrical, ampere or current sensor rating, long-time adjustment range, short-time adjustment range, and instantaneous adjustment range for circuit breakers.
    i. Manufacturer and type, ampere-tap adjustment range, time-delay adjustment range, instantaneous attachment adjustment range, and current transformer ratio for overcurrent relays.
    j. Panelboards, switchboards, motor-control center ampacity, and SCCR in amperes rms symmetrical.

k. Identify series-rated interrupting devices for a condition where the available fault current is greater than the interrupting rating of the downstream equipment. Obtain device data details to allow verification that series application of these devices complies with NFPA 70 and UL 489 requirements.

3.5 FIELD ADJUSTING

A. Adjust relay and protective device settings according to the recommended settings provided by the coordination study. Field adjustments shall be completed by the engineering service division of the equipment manufacturer under the Startup and Acceptance Testing contract portion.

B. Make modifications to equipment as required to accomplish compliance with short-circuit and protective device coordination studies.

C. Testing and adjusting shall be by a licensed electrician and a manufacturer's representative.

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Provide test report with parameters. Perform NETA tests and inspections for all adjustable overcurrent protective devices.

3.6 INSTRUCTION

A. Engage the Coordination Study Specialist to instruct the City of New York's maintenance personnel in the following:

1. Acquaint personnel in the fundamentals of operating the power system in normal and emergency modes.
2. Hand-out and explain the objectives of the coordination study, study descriptions, purpose, basis, and scope. Include case descriptions, definition of terms, and guide for interpreting the time-current coordination curves.
3. Adjust, operate, and maintain overcurrent protective device settings.

END OF SECTION 26 05 73

PAGE INTENTIONALLY LEFT BLANK

SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract]

1.2 SUMMARY

A. This section includes commissioning process requirements for Electrical systems, assemblies, and equipment.

B. Related Sections:

1. DDC General Conditions Section 019113 “General Commissioning Requirements for MEP Systems" for general commissioning process requirements.

1.3 DESCRIPTION

A. Commissioning is a systematic process of confirming that all building systems perform interactively according to the Owner’s Project Requirements and the Basis of Design and continuing through construction, acceptance and the warranty period with actual verification of performance.

B. The Commissioning process does not take away from or reduce the responsibility of the Contractor to provide a finished and fully functioning product.

C. The CxA directs and coordinates the commissioning activities and reports to the Commissioner. All members in the construction process work together to fulfill their contracted responsibilities and meet the objectives of the Owner’s Project Requirement’s as detailed in the Contract Documents.

1.4 DEFINITIONS

A. Refer to DDC General Conditions for definitions.

1.5 SUBMITTALS

A. The CxA will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment specifications. The CxA will notify the

Contractor, or Commissioner as requested, of items missing or areas that are not in conformance with Contract Documents and which require resubmission.

B. The CxA will receive a copy of the final approved submittals.

C. In addition, the Contractor is to provide the following:

1. Certificates of readiness

2. Certificates of completion of installation, prestart, and startup activities.

3. O&M manuals

4. Test reports

D. Refer to DDC General Conditions Section 013300 Submittal Procedures and Section 019113 "General Commissioning Requirements for MEP Systems" for general commissioning submittal requirements.

1.6 QUALITY ASSURANCE

A. Test Equipment Calibration Requirements: Contractors will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

A. Commissioning Kick-Off Meeting – Construction Team: The Contractor will attend a meeting of the Commissioning Team, chaired by the CxA, to review the scope of commissioning process activities and the Commissioning Plan with discussions on milestones, activities, and assignments of responsibilities. The flow and type of documents and the amount of submittal data given to the CxA will be determined. Meeting minutes will then be distributed to all parties by the CxA.

B. Commissioning Meetings: The Contractor will attend coordination meetings with the Commissioning Team, chaired by the CxA, to review progress on the Commissioning Plan, construction deficiencies, scheduling conflicts, and to discuss strategies and processes for upcoming commissioning process activities.

C. Miscellaneous Construction Meetings: The CxA attends selected planning and job-site meetings in order to remain informed on construction progress and to update parties involved in the commissioning process.

D. Pre-testing Meetings: The Contractor will attend pretest meetings with the Commissioning Team, chaired by the CxA, to review startup reports, pre-test inspection results, testing procedures, testing personnel and instrumentation requirements, and manufacturers' authorized ser-

vice representative services for each system, subsystem, equipment, and component to be tested.

E. Testing: The Contractor will coordinate with testing personnel and agencies for timing and access for CxA to witness test.

F. Manufacturers' Inspection and Startup Services: The Contractor will coordinate services of manufacturers' inspection and startup services.

G. Testing, Adjusting and Balancing: The Contractor will coordinate with plan and schedule for testing, adjusting and balancing for timing and access for CxA to witness process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the Contractor shall ultimately be responsible for all standard testing equipment for the electrical systems and controls systems in Division 26. A sufficient quantity of two-way radios shall be provided by the Contractor.

B. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York's personnel upon completion of the commissioning process.

C. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Specifications. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

A. With the assistance from the Contractor and the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems.

B. Red-lined Drawings (As-Builts): The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start

of Functional Performance Testing. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings. The Contractor will create the as-built drawings.

C. Operation and Maintenance Data: Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems. The CxA will review the O&M literature once for conformance to project requirements. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.

D. Demonstration and Orientation: Contractor will provide demonstration and orientation as required by the specifications. A complete orientation plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any orientation. An orientation agenda for each orientation session must be submitted to the CxA one (1) week prior the orientation session.

3.2 CONTRACTOR'S RESPONSIBILITIES

A. Refer to DDC General Conditions Section 019113 “General Commissioning Requirements for MEP Systems” for general Contractor’s responsibilities.

B. Attend construction phase controls coordination meetings.

C. Provide information requested by the CxA for final commissioning documentation.

D. Prepare preliminary schedule for electrical system orientations and inspections, operation and maintenance manual submissions, orientation sessions, equipment start-up and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.

E. Provide measuring instruments and logging devices to record test data, and provide data acquisition equipment to record data for the complete range of testing for the required test period.

F. Provide detailed startup procedures.

G. Provide a written list of all user adjustable set-points and reset schedules with a brief discussion of the purpose of each and the range of reasonable adjustments with energy implications.

H. Provide a written schedule frequency to review the various set-points and reset schedules to ensure they are current relevant and efficient values.

I. Respond to provided new deficiencies and/or responses within five (5) business days.

J. Gather operation and maintenance literature on all equipment, and assemble in binders as required by the Contract Documents. Submit to CxA 45 days after submittal acceptance.

K. Coordinate with the CxA to provide 48-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.

L. Notify the CxA a minimum of two weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.

M. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
1. Electrical equipment including switchgear, panel boards, motor control centers, lighting, receptacles, dimmers and all other equipment furnished under this Division.
2. Photovoltaic system including switchboard, inverter panels and solar panels.
3. Fire alarm system.

N. The equipment suppliers shall document the performance of their equipment.

O. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.

P. Contractor responsibilities to be completed by Equipment Suppliers:
1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the City of New York's personnel, to keep warranties in force.
2. Assist in equipment testing.
3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

3.3 CxA'S RESPONSIBILITIES

A. Roles and Responsibilities

1. Refer to the DDC General Conditions Section 019113 "General Commissioning Requirements for MEP Systems" for general CxA responsibilities.

3.4 TESTING PREPARATION

A. Certify in writing to the CxA that Electrical systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.

B. Certify in writing to the CxA that Electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.

C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.

D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).

E. Inspect and verify the position of each device and interlock identified on checklists.

F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.

G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 GENERAL TESTING REQUIREMENTS

A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.

B. Scope of Electrical testing shall include the entire Electrical installation, from the incoming power equipment throughout the distribution system. Testing shall include measuring, but not be limited to resistance, voltage, and amperage of system(s) and devices.

C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.

D. The CxA along with the Contractor shall prepare detailed testing plans, procedures, and checklists for Electrical systems, subsystems, and equipment.

E. Tests will be performed using design conditions whenever possible.

F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.

G. The CxA may direct that set points be altered when simulating conditions is not practical.

H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.

I. If tests cannot be completed because of a deficiency outside the scope of the Electrical system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.6 ELECTRICAL SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 26 sections. Provide submittals, test data, inspector record, infrared camera and certifications to the CA.

B. Electrical Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 26 Sections "Instrumentation and Control" and "Sequence of Operations" Assist the CxA with preparation of testing plans.

C. Fire Detection and Alarm System Testing: Provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA.

The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.

D. Electrical Distribution System Testing: Provide technicians, load banks, infrared cameras, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested

E. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.

F. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. Commissioning shall be performed on equipment and systems including but not limited to the following:

1. Distribution Panels
2. Power Panels
3. Motor Control Centers
4. Solar Panels

3.7 DEFICIENCIES/NON-CONFORMANCE, FAILURE DUE TO MANUFACTURER DEFECT

A. Deficiencies/Non-Conformance

1. The CxA will record the results of the functional test on the test form. All deficiencies or non-conformance items shall be noted and reported to the Commissioner and Contractors on a standardized form.
2. The Contractor shall respond to new deficiencies within five (5) business days. The response shall either indicate the issue will be corrected with anticipated date of completion indicated or the response should clearly indicate why the Contractor disputes the claim while referencing the Contract Document in dispute or request further information to clarify the concern.
3. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA.
4. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.
5. As tests progress and a deficiency is identified, the CxA discusses the issue with the Contractor.
6. When there is no dispute on the deficiency and the Contractor accepts responsibility to correct it, the CxA documents the deficiency and the Contractor's response and intentions or corrections. The CxA and Contractor then proceed to another test or sequence. Once the Contractor corrects the deficiency, the test is rescheduled and repeated in the anticipation of correct operation or function
7. When there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible, the CxA documents the deficiency and the Contractor's response. The deficiency is then forwarded to parties assumed to be responsible for the deficiency. Resolutions are made at the lowest management level possible. Other parties are brought into the discussion as needed. Final interpretive authority is with the Commissioner. Final acceptance authority is with the Commissioner and CxA. The CxA will then document the resolution process. Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency. The CxA then reschedules the test as stated in the section above.

B. Failure due to Manufacturer Defect

1. If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the CxA and the Commissioner. In such case, the Contractor shall provide the Commissioner with the following.

   i. Within one week of notification from the Contractor the manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the Commissioner within two weeks of the original notice.
   ii. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
   iii. The Commissioner will determine whether a replacement of all identical units or a repair is acceptable.
   iv. Two examples of the proposed solution will be installed by the Contractor and the Contractor will be allowed to test the installations for up to one week, upon which the Commissioner will decide whether to accept the solution.
   v. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

3.8 APPROVAL

A. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA. The CxA recommends acceptance of each test to the Commissioner using a standard form.

3.9 SEASONAL TESTING

A. Seasonal Testing – During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by the Contractor, with facilities staff and the CxA witnessing. Any final adjustments to the O&M manuals and record documents due to seasonal testing will be made by the Contractor.

3.10 OPERATION AND MAINTENANCE MANUALS

A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in the DDC General Conditions Section 017839 Contract Record Documents and Section 019113 General Commissioning Requirements for MEP Systems.

B. The specific content and format requirements for the standard O&M manuals are detailed in the DDC General Conditions Section 017839 Contract Record Documents and Section 019113 General Commissioning Requirements for MEP Systems. Special requirements for the controls subcontractor and TAB subcontractor are found in Division 26.

C. CxA Review and Approval – Prior to substantial completion, the CxA shall review the O&M manuals, documentation and record documents for systems that were commissioned to verify compliance with the Specifications. The CxA will communicate deficiencies in the manuals to the Contractor, or Commissioner, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the Commissioner. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated.

3.11 INSTRUCTION OF NEW YORK CITY PERSONNEL

A. The Contractor shall be responsible for instruction coordination, scheduling, and ultimately for ensuring that instruction is completed.

B. The CxA shall oversee the instruction of the City of New York's personnel for commissioned equipment and systems.

1. The CxA shall interview the City of New York's personnel to determine the special needs and areas where instruction will be most valuable. The Commissioner and CxA shall decide how rigorous the instruction should be for each piece of commissioned equipment. The CxA shall communicate the results to the Contractor who will ensure participation of the Subcontractor.

2. In addition to these general requirements, the specific instruction requirements of the City of New York's personnel by the Contractor who will ensure the subcontractors and vendors are specified in the individual sections listed in DDC's General Conditions Section 017900 Demonstration and Owners' Pre-Acceptance Orientation.

3. The Contractor shall ensure that each Subcontractor and vendor responsible for instruction will submit a written instruction plan to the Contractor for review and approval prior to instruction. The Contractor will submit one comprehensive instruction plan to the CxA and the Commissioner.

4. The plan will be reviewed by the CxA and the Commissioner. Comments pertaining to its deficiencies will be forwarded to the Contractor. The instruction plan will be rewritten until approved by the CxA and the Commissioner. The final approved instruction plan will cover the following elements:
    a. Equipment (included in instruction)
    b. Intended audience
    c. Location of instruction
    d. Objectives
    e. Subjects covered (description, duration of discussion, special methods, etc.)
    f. Duration of instruction on each subject
    g. Qualified instructor for each subject
    h. Instructor qualifications
    i. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)

5. For the primary equipment, the Contractor will ensure the controls subcontractor provides a discussion of the control of the equipment during the instruction conducted by each subcontractor or vendor.

6. Instruction documentation shall include the following items:
    a. Copy of the instruction plan, including schedule, syllabus, and agenda.
    b. Copy of the Owner's Project Requirements.
    c. Copy of the Basis of Design.
    d. Compiled operations manuals.
    e. Compiled maintenance manuals.
    f. Completed manufacturer instruction manuals.
    g. Red-lined drawings.

7. The CxA develops criteria for determining that the instruction was satisfactorily completed, including attending the instruction, etc. The CxA recommends approval of the instruction to the Commissioner using a standard form. The Commissioner signs the approval form/letter template.

8. At one of the instruction sessions, the CxA presents a presentation discussing the use of the blank functional test forms for re-commissioning equipment

9. Video recording of the instruction sessions will be verified by the CxA in electrical format, at the discretion of the Commissioner.

END OF SECTION 260800

SECTION 26 22 00 - LOW-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following types of dry-type transformers rated 600 V and less, with capacities up to 1000 kVA:

1. Distribution transformers.

1.3 SUBMITTALS

A. Product Data: Include rated nameplate data, capacities, weights, dimensions, minimum clearances, installed devices and features, and performance for each type and size of transformer indicated.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, and control wiring.

C. Qualification Data: For testing agency.

D. Source quality-control test reports.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For transformers to include in emergency, operation, and maintenance manuals.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the InterNational Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to the City of New York.

1. Testing Agency's Field Supervisor: Currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.

C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7.

D. Source Limitations: Obtain each transformer type through one source from a single manufacturer.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to the City of New York and marked for intended use.

F. Comply with IEEE C57.12.91, "Test Code for Dry-Type Distribution and Power Transformers."

1.5 DELIVERY, STORAGE, AND HANDLING

A. Temporary Heating: Apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit, throughout periods during which equipment is not energized and when transformer is not in a space that is continuously under normal control of temperature and humidity.

1.6 COORDINATION

A. Coordinate size and location of concrete bases with actual transformer provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate installation of wall-mounting and structure-hanging supports with actual transformer provided.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Eaton Electrical Inc.; Cutler-Hammer Products.
2. ABB, Electrification Product Division.
3. Square D; Schneider Electric.

4. Hammond Power Solutions.
5. Or approved equal.

2.2 GENERAL TRANSFORMER REQUIREMENTS

A. Description: Factory-assembled and -tested, air-cooled units for 60-Hz service.

B. Cores: Grain-oriented, non-aging silicon steel.

C. Coils: Continuous windings without splices except for taps.

1. Internal Coil Connections: Brazed or pressure type.
2. Coil Material: Copper.

2.3 DISTRIBUTION TRANSFORMERS

A. Comply with NEMA ST 20, and list and label as complying with UL 1561.

B. Cores: One leg per phase.

C. Enclosure: Ventilated, NEMA 250, Type 2.

1. Core and coil shall be encapsulated within resin compound, sealing out moisture and air.

D. Transformer Enclosure Finish: Comply with NEMA 250.

1. Finish Color: Gray

E. Taps for Transformers 25 kVA and Larger: Two 2.5 percent taps above and two 2.5 percent taps below normal full capacity.

F. Insulation Class: 220 deg C, UL-component-recognized insulation system with a maximum of 115 deg C rise above 40 deg C ambient temperature.

G. Energy Efficiency for Transformers Rated 15 kVA and Larger:

1. Comply with 10 CFR 431 (DOE2016) efficiency levels.
2. Marked as compliant with DOE 2016 efficiency levels by an NRTL.

H. K-Factor Rating: Transformers indicated to be K-factor rated shall comply with UL 1561 requirements for nonsinusoidal load current-handling capability to the degree defined by designated K-factor.

1. Unit shall not overheat when carrying full-load current with harmonic distortion corresponding to designated K-factor, without exceeding the indicated insulation class in a 40 deg C maximum ambient and a 24-hour average ambient of 30 deg C.
2. Indicate value of K-factor on transformer nameplate.

3. Unit shall comply with requirements of DOE 2016 efficiency levels when tested according to NEMA TP 2 with K-factor equal to one.

I. Electrostatic Shielding: Each winding shall have an independent, single, full-width copper electrostatic shield arranged to minimize interwinding capacitance.

1. Arrange coil leads and terminal strips to minimize capacitive coupling between input and output terminals.
2. Include special terminal for grounding the shield.

J. Neutral: Rated 200 percent of full load current for K-factor-rated transformers.

2.4 IDENTIFICATION DEVICES

A. Nameplates: Engraved, metal nameplate for each distribution transformer, mounted with corrosion-resistant screws. Nameplates and label products are specified in Division 26 Section 260553 "Identification for Electrical Systems."

2.5 SOURCE QUALITY CONTROL

A. Test and inspect transformers according to IEEE C57.12.91.

B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions for compliance with enclosure- and ambient-temperature requirements for each transformer.

B. Verify that field measurements are as needed to maintain working clearances required by NFPA 70 and manufacturer's written instructions.

C. Examine walls, floors, roofs, and concrete bases for suitable mounting conditions where transformers will be installed.

D. Verify that ground connections are in place and requirements in Division 26 Section 260526 "Grounding and Bonding for Electrical Systems" have been met. Maximum ground resistance shall be 5 ohms at location of transformer.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Construct concrete bases and anchor floor-mounting transformers according to manufacturer's written instructions.

3.3 CONNECTIONS

A. Ground equipment according to Division 26 Section 260526 "Grounding and Bonding for Electrical Systems."

B. Connect wiring according to Division 26 Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.

D. Remove and replace units that do not pass tests or inspections and retest as specified above.

E. Infrared Scanning: Two months after Substantial Completion, perform an infrared scan of transformer connections.

1. Use an infrared-scanning device designed to measure temperature or detect significant deviations from normal values. Provide documentation of device calibration.
2. Perform 2 follow-up infrared scans of transformers, one at 4 months and the other at 11 months after Substantial Completion.
3. Prepare a certified report identifying transformer checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and scanning observations after remedial action.

F. Test Labeling: On completion of satisfactory testing of each unit, attach a dated and signed "Satisfactory Test" label to tested component.

3.5 ADJUSTING

A. Record transformer secondary voltage at each unit for at least 48 hours of typical occupancy period. Adjust transformer taps to provide optimum voltage conditions at secondary terminals. Optimum is defined as not exceeding nameplate voltage plus 10 percent and not being lower than nameplate voltage minus 3 percent at maximum load conditions. Submit recording and tap settings as test results.

B. Connect buck-boost transformers to provide nameplate voltage of equipment being served, plus or minus 5 percent, at secondary terminals.

C. Output Settings Report: Prepare a written report recording output voltages and tap settings.

3.6 CLEANING

A. Vacuum dirt and debris; do not use compressed air to assist in cleaning.

END OF SECTION 26 22 00

SECTION 26 24 13 - SWITCHBOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Service and distribution switchboards rated 600 V and less.
2. Surge protection devices.
3. Disconnecting and overcurrent protective devices.
4. Instrumentation.
5. Control power.
6. Accessory components and features.
7. Identification.
8. Mimic bus.

B. Related Sections:
1. Division 26 05 72 “Overcurrent Protective Device Coordination Study.”
2. Division 26 05 19 “Low-Voltage Electrical Power Conductors and Cables.”
3. Division 26 05 26 “Grounding and Bonding for Electrical Systems.”
4. Division 26 05 53 “Identification for Electrical Systems.”
5. Division 26 28 16 “Enclosed Switches and Circuit Breakers.”

1.3 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Switchboards shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event"

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For each switchboard, overcurrent protective device, surge protection device, ground-fault protector, accessory, and component.

1. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

C. Shop Drawings: For each switchboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings.
2. Detail enclosure types for types other than NEMA 250, Type 1.
3. Detail bus configuration, current, and voltage ratings.
4. Detail short-circuit current rating of switchboards and overcurrent protective devices.
5. Include descriptive documentation of optional barriers specified for electrical insulation and isolation.
6. Detail utility company's metering provisions with indication of approval by utility company.
7. Include evidence of NRTL listing for series rating of installed devices.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.
10. Include diagram and details of proposed mimic bus.
11. Include schematic and wiring diagrams for power, signal, and control wiring.

D. Samples: Representative portion of mimic bus with specified material and finish, for color selection.

E. Qualification Data: For Installer.

F. Seismic Qualification Certificates: For switchboards, overcurrent protective devices, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

G. Field Quality-Control Reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

H. Operation and Maintenance Data: For switchboards and components to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in DDC General Conditions, include the following:

a. Routine maintenance requirements for switchboards and all installed components.
b. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
c. Time-current coordination curves for each type and rating of overcurrent protective device included in switchboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device.

1.5 REQUIRED MATERIALS

A. Furnish required materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Potential Transformer Fuses: Equal to 10 percent of quantity installed for each size and type but no fewer than two of each size and type.
2. Control-Power Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than two of each size and type.
3. Fuses and Fusible Devices for Fused Circuit Breakers: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
4. Fuses for Fused Switches: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
5. Fuses for Fused Power-Circuit Devices: Equal to 10 percent of quantity installed for each size and type but no fewer than three of each size and type.
6. Indicating Lights: Equal to 10 percent of quantity installed for each size and type but no less than one of each size and type.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Installer Qualifications: An employer of workers qualified as defined in NEMA PB 2.1 and instructed in electrical safety as required by NFPA 70E.

C. Testing Agency Qualifications: Member Company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing.

D. Source Limitations: Obtain switchboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

E. Product Selection for Restricted Space: Drawings indicate maximum dimensions for switchboards including clearances between switchboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Comply with NEMA PB 2.

H. Comply with NFPA 70.

I. Comply with UL 489 and UL 891.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver switchboards in sections or lengths that can be moved past obstructions in delivery path.

B. Remove loose packing and flammable materials from inside switchboards and install temporary electric heating (250 W per section) to prevent condensation.

C. Handle and prepare switchboards for installation according to NEMA PB 2.1.

1.8 PROJECT CONDITIONS

A. Installation Pathway: Remove and replace access fencing, doors, lift-out panels, and structures to provide pathway for moving switchboards into place.

B. Environmental Limitations:

1. Do not deliver or install switchboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above switchboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

    a. Ambient Temperature: Not exceeding 104 deg F.
    b. Altitude: Not exceeding 6600 feet.

C. Unusual Service Conditions: NEMA PB 2, as follows:

1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet.

D. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by the City of New York unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Notify the Commissioner no fewer than 14 days in advance of proposed interruption of electric service.
2. Indicate method of providing temporary electric service.

3. Do not proceed with interruption of electric service without commissioners written permission.
4. Comply with NFPA 70E.

1.9 COORDINATION

A. Coordinate layout and installation of switchboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

1.10 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace switchboard enclosures, buswork, overcurrent protective devices, accessories, and factory installed interconnection wiring that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Three years from date of Substantial Completion.

B. Manufacturer's Warranty: Manufacturer's agrees to repair or replace surge protection devices that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SWITCHBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Eaton.
2. Schneider Electric.
3. Siemens Power Transmission & Distribution, Inc.
4. Or approved equal.

B. Front-Connected, Front-Accessible Switchboards:

1. Main Devices: Fixed, individually mounted.
2. Branch Devices: Panel mounted.
3. Sections front and rear aligned.

C. Front- and Side-Accessible Switchboards:

1. Main Devices: Fixed, individually mounted.
2. Branch Devices: Panel mounted.
3. Section Alignment: Front and Rear aligned.

D. Front- and Rear-Accessible Switchboards:

1. Main Devices: Fixed, individually mounted.
2. Branch Devices: Panel and fixed, individually mounted.
3. Sections front and rear aligned.

E. Nominal System Voltage: 480Y/277 V & 208Y/120 V.

F. Main-Bus Continuous: 4000 & 2000A or as shown on drawings.

G. Seismic Requirements: Fabricate and test switchboards according to IEEE 344 to withstand seismic forces as per ASCE 7-10 with the following parameters:
1. Building Occupancy Category: II
2. Seismic Design Category: B
3. Site Class: D (assumed)
4. Risk Level: II.
5. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
   a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

H. Indoor Enclosures: Steel, NEMA 250, Type 1.

I. Enclosure Finish for Indoor Units: Factory-applied finish in manufacturer's standard gray finish over a rust-inhibiting primer on treated metal surface.

J. Barriers: Between adjacent switchboard sections.

K. Insulation and isolation for main bus of main section and main and vertical buses of feeder sections.

L. Space Heaters: Factory-installed electric space heaters of sufficient wattage in each vertical section to maintain enclosure temperature above expected dew point.

1. Space-Heater Control: Thermostats to maintain temperature of each section above expected dew point.
2. Space-Heater Power Source: Transformer, factory installed in switchboard.

M. Service Entrance Rating: Switchboards intended for use as service entrance equipment shall contain from one to six service disconnecting means with overcurrent protection, a neutral bus with disconnecting link, a grounding electrode conductor terminal, and a main bonding jumper.

N. Utility Metering Compartment: Barrier compartment and section complying with utility company's requirements; hinged sealable door; buses provisioned for mounting utility company's current transformers and potential transformers or potential taps as required by utility company. If separate vertical section is required for utility metering, match and align with basic switchboard. Provide service entrance label and necessary applicable service entrance features.

O. Customer Metering Compartment: A separate customer metering compartment and section with front hinged door, and section with front hinged door, for indicated metering, and current transformers for each meter. Current transformer secondary wiring shall be terminated on shorting-type terminal blocks. Include potential transformers having primary and secondary fuses with disconnecting means and secondary wiring terminated on terminal blocks.

P. Bus Transition and Incoming Pull Sections: Matched and aligned with basic switchboard.

Q. Removable, Hinged Rear Doors and Compartment Covers: Secured by standard bolts, for access to rear interior of switchboard.

R. Hinged Front Panels: Allow access to circuit breaker, metering, accessory, and blank compartments.

S. Pull Box on Top of Switchboard:

1. Adequate ventilation to maintain temperature in pull box within same limits as switchboard.
2. Set back from front to clear circuit-breaker removal mechanism.
3. Removable covers shall form top, front, and sides. Top covers at rear shall be easily removable for drilling and cutting.
4. Bottom shall be insulating, fire-resistive material with separate holes for cable drops into switchboard.
5. Cable supports shall be arranged to facilitate cabling and adequate to support cables indicated, including those for future installation.

T. Buses and Connections: Three phase, four wire unless otherwise indicated.

1. Provide phase bus arrangement A, B, C from front to back, top to bottom, and left to right when viewed from the front of the switchboard.
2. Phase- and Neutral-Bus Material: Hard-drawn copper of 98 percent conductivity, silver-plated.
3. Phase- and Neutral-Bus Material: Tin-plated, high-strength, electrical-grade aluminum alloy with tin-plated aluminum circuit-breaker line connections.
4. Copper feeder circuit-breaker line connections.
5. Tin-plated aluminum feeder circuit-breaker line connections.
6. Load Terminals: Insulated, rigidly braced, runback bus extensions, of same material as through buses, equipped with mechanical connectors for outgoing circuit conductors. Provide load terminals for future circuit-breaker positions at full-ampere rating of circuit-breaker position.
7. Ground Bus: 1/4-by-2-inch- or Minimum-size required by UL 891, hard-drawn copper of 98 percent conductivity, equipped with mechanical connectors for feeder and branch-circuit ground conductors.

8. Main-Phase Buses and Equipment-Ground Buses: Uniform capacity for entire length of switchboard's main and distribution sections. Provide for future extensions from both ends.
9. Disconnect Links:

    a. Isolate neutral bus from incoming neutral conductors.
    b. Bond neutral bus to equipment-ground bus for switchboards utilized as service equipment or separately derived systems.
10. Neutral Buses: 100 percent of the ampacity of phase buses unless otherwise indicated, equipped with mechanical connectors for outgoing circuit neutral cables. Brace bus extensions for busway feeder neutral bus.
11. Isolation Barrier Access Provisions: Permit checking of bus-bolt tightness.

U. Future Devices: Equip compartments with mounting brackets, supports, bus connections, and appurtenances at full rating of circuit-breaker compartment.

V. Bus-Bar Insulation: Factory-applied, flame-retardant, tape wrapping of individual bus bars or flame-retardant, spray-applied insulation. Minimum insulation temperature rating of 105 deg C.

W. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components including instruments and instrument transformers.

2.2 SURGE PROTECTION DEVICES

A. Manufacturers: Subject to compliance with requirements, provide products as manufactured by one of the following:

1. Advanced Protection Technologies Inc. (APT).
2. Eaton.
3. General Electric Company.
4. Siemens Power Transmission & Distribution, Inc.
5. Approved Equal

B. SPDs: Comply with UL 1449, Type 1.

C. SPDs: Listed and labeled by an NRTL acceptable to Commissioner and the City of New York as complying with UL 1449, Type 1.

1. SPDs with the following features and accessories:

    a. Integral disconnect switch.
    b. Internal thermal protection that disconnects the SPD before damaging internal suppressor components.
    c. Indicator light display for protection status.
    d. Form-C contacts rated at 5 A and 250-V ac, one normally open and one normally closed, for remote monitoring of protection status.
    e. Surge counter.

D. Peak Surge Current Rating: The minimum single-pulse surge current withstand rating per phase shall not be less than 200 kA. The peak surge current rating shall be the arithmetic sum of the ratings of the individual MOVs in a given mode.

E. Protection modes and UL 1449 VPR for grounded wye circuits with 480Y/277 V and 208Y/120 V, three-phase, four-wire circuits shall not exceed the following:

1. Line to Neutral: 1200 V for 480Y/277 V & 700 V for 208Y/120 V.
2. Line to Ground: 1200 V for 480Y/277 V & 1200 V for 208Y/120 V.
3. Line to Line: 2000 V for 480Y/277 V &1000 V for 208Y/120 V.

F. SCCR: Equal or exceed 200 kA.

G. Nominal Rating: 20 kA.

2.3 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Breaker types shown below (B1, 2, 3, 4, 5 and C) and ratings shall be as indicated on drawings.

B. Molded-Case Circuit Breaker (MCCB): Comply with UL 489, with interrupting capacity to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 400A
2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
3. Electronic trip circuit breakers 800A with rms sensing; field-replaceable rating plug or field-replicable electronic trip; and the following field-adjustable settings:

   a. 100% rated
   b. Instantaneous trip.
   c. Long- and short-time pickup levels.
   d. Long and short time adjustments.
   e. Ground-fault pickup level, time delay, and I^2t response.

4. Current-Limiting Circuit Breakers: 400A let-through ratings less than NEMA FU 1, RK-5.
5. Integrally Fused Circuit Breakers: 800A Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker; trip activation on fuse opening or on opening of fuse compartment door.
6. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6-mA trip).
7. Ground-Fault Equipment Protection (GFEP) Circuit Breakers: Class B ground-fault protection (30-mA trip).
8. MCCB Features and Accessories:

   a. Standard frame sizes, trip ratings, and number of poles.

b. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor material.
c. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge (HID) lighting circuits.
d. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
e. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
f. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 55 percent of rated voltage.
g. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
h. Auxiliary Contacts: One SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.

C. Insulated-Case Circuit Breaker (ICCB): 100 percent rated, sealed, insulated-case power circuit breaker with interrupting capacity rating to meet available fault current.

1. Fixed or Drawout circuit-breaker mounting.
2. Two-step, stored-energy closing.
3. Standard-function, microprocessor-based trip units with interchangeable rating plug, trip indicators, and the following field-adjustable settings:

a. Instantaneous trip.
b. Time adjustments for long- and short-time pickup.
c. Ground-fault pickup level, time delay, and I^2t response.

4. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function.
5. Remote trip indication and control.
6. Control Voltage: 120-V ac.

D. Bolted-Pressure Contact Switch: Operating mechanism uses rotary-mechanical-bolting action to produce and maintain high clamping pressure on the switch blade after it engages the stationary contacts.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Boltswitch, Inc.
b. Eaton.
c. Siemens Industry, Inc.
d. Or approved equal

2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.

3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.

a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.

4. Auxiliary Switches: Factory installed, SPDT, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
5. Service-Rated Switches: Labeled for use as service equipment.
6. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.

a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).

7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.

E. High-Pressure, Butt-Type Contact Switch: Operating mechanism uses butt-type contacts and a spring-charged mechanism to produce and maintain high-pressure contact when switch is closed.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Boltswitch, Inc.
b. Eaton.
c. Siemens Industry, Inc.
d. Or approved equal

2. Main-Contact Interrupting Capability: Minimum of 12 times the switch current rating.

3. Operating Mechanism: Manual handle operation to close switch; stores energy in mechanism for opening and closing.

a. Electrical Trip: Operation of lever or push-button trip switch, or trip signal from ground-fault relay or remote-control device, causes switch to open.
b. Mechanical Trip: Operation of mechanical lever, push button, or other device causes switch to open.

4. Auxiliary Switches: Factory installed, SPDT, with leads connected to terminal block, and including one set more than quantity required for functional performance indicated.
5. Service-Rated Switches: Labeled for use as service equipment.
6. Ground-Fault Relay: Comply with UL 1053; self-powered type with mechanical ground-fault indicator, test function, tripping relay with internal memory, and three-phase current transformer/sensor.

a. Configuration: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
b. Internal Memory: Integrates the cumulative value of intermittent arcing ground-fault currents and uses the effect to initiate tripping.
c. No-Trip Relay Test: Permits ground-fault simulation test without tripping switch.
d. Test Control: Simulates ground fault to test relay and switch (or relay only if "no-trip" mode is selected).

7. Open-Fuse Trip Device: Arranged to trip switch open if a phase fuse opens.

F. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

G. Fuses are specified in Section 26 28 13 "Fuses."

2.4 INSTRUMENTATION

A. Instrument Transformers: NEMA EI 21.1, and the following:

1. Potential Transformers: NEMA EI 21.1; 120 V, 60 Hz, double secondary; disconnecting type with integral fuse mountings. Burden and accuracy shall be consistent with connected metering and relay devices.
2. Current Transformers: NEMA EI 21.1; 5 A, 60 Hz, secondary; bushing type; double secondary winding and secondary shorting device. Burden and accuracy shall be consistent with connected metering and relay devices.
3. Control-Power Transformers: Dry type, mounted in separate compartments for units larger than 3 kVA.
4. Current Transformers for Neutral and Ground-Fault Current Sensing: Connect secondary wiring to ground overcurrent relays, via shorting terminals, to provide selective tripping of main and tie circuit breaker. Coordinate with feeder circuit-breaker, ground-fault protection.

B. Multifunction Digital-Metering Monitor: Microprocessor-based unit suitable for three- or four-wire systems and with the following features:

1. Switch-selectable digital display of the following values with maximum accuracy tolerances as indicated:

a. Phase Currents, Each Phase: Plus or minus 0.5 percent.
b. Phase-to-Phase Voltages, Three Phase: Plus or minus 0.5 percent.
c. Phase-to-Neutral Voltages, Three Phase: Plus or minus 0.5 percent.
d. Megawatts: Plus or minus 1 percent.
e. Megavars: Plus or minus 1 percent.
f. Power Factor: Plus or minus 1 percent.
g. Frequency: Plus or minus 0.1 percent.
h. Accumulated Energy, Megawatt Hours: Plus or minus 1 percent; accumulated values unaffected by power outages up to 72 hours.
i. Megawatt Demand: Plus or minus 1 percent; demand interval programmable from five to 60 minutes.
j. Contact devices to operate remote impulse-totalizing demand meter.

2. Mounting: Display and control unit flush or semiflush mounted in instrument compartment door.

C. Voltmeters: Cover an expanded-scale range of nominal voltage plus 10 percent.

D. Instrument Switches: Rotary type with off position.

1. Voltmeter Switches: Permit reading of all phase-to-phase voltages and, where a neutral is indicated, phase-to-neutral voltages.
2. Ammeter Switches: Permit reading of current in each phase and maintain current-transformer secondaries in a closed-circuit condition at all times.

E. Ammeters: 2-1/2-inch minimum size with 90- or 120-degree scale. Meter and transfer device with off position, located on overcurrent device door for indicated feeder circuits only.

F. Watt-Hour Meters and Wattmeters:

1. Comply with ANSI C12.1.
2. Three-phase induction type with two stators, each with current and potential coil, rated 5 A, 120 V, 60 Hz.
3. Suitable for connection to three- and four-wire circuits.
4. Potential indicating lamps.
5. Adjustments for light and full load, phase balance, and power factor.
6. Four-dial clock register.
7. Integral demand indicator.
8. Contact devices to operate remote impulse-totalizing demand meter.
9. Ratchets to prevent reverse rotation.
10. Removable meter with drawout test plug.
11. Semiflush mounted case with matching cover.
12. Appropriate multiplier tag.

G. Impulse-Totalizing Demand Meter:

1. Comply with ANSI C12.1.
2. Suitable for use with switchboard watt-hour meter, including two-circuit totalizing relay.
3. Cyclometer.
4. Four-dial, totalizing kilowatt-hour register.
5. Positive chart drive mechanism.
6. Capillary pen holding a minimum of one month's ink supply.
7. Roll chart with minimum 31-day capacity; appropriate multiplier tag.
8. Capable of indicating and recording 30-minute integrated demand of totalized system.

2.5 CONTROL POWER

A. Control Circuits: 120-V ac, supplied through secondary disconnecting devices from control-power transformer.

B. Control Circuits: 120-V ac, supplied from remote branch circuit.

C. Electrically Interlocked Main and Tie Circuit Breakers: Two control-power transformers in separate compartments, with interlocking relays, connected to the primary side of each control-power transformer at the line side of the associated main circuit breaker. 120-V secondaries connected through automatic transfer relays to ensure a fail-safe automatic transfer scheme.

D. Control-Power Fuses: Primary and secondary fuses for current-limiting and overload protection of transformer and fuses for protection of control circuits.

E. Control Wiring: Factory installed, with bundling, lacing, and protection included. Provide flexible conductors for No. 8 AWG and smaller, for conductors across hinges, and for conductors for interconnections between shipping units.

2.6 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from switchboard. Include relay and meter test plugs suitable for testing switchboard meters and switchboard class relays.

C. Portable Circuit-Breaker Lifting Device: Floor-supported, roller-based, elevating carriage arranged for movement of circuit breakers in and out of compartments for present and future circuit breakers.

D. Overhead Circuit-Breaker Lifting Device: Mounted at top front of switchboard, with hoist and lifting yokes matching each drawout circuit breaker.

E. Spare-Fuse Cabinet: Suitably identified, wall-mounted, lockable, compartmented steel box or cabinet. Arrange for wall mounting.

F. Mounting Accessories: For anchors, mounting channels, bolts, washers, and other mounting accessories, comply with seismic requirements as per manufacturer's instructions.

2.7 IDENTIFICATION

A. Mimic Bus: Entire single-line switchboard bus work, as depicted on factory record drawing, on a photoengraved nameplate.

1. Nameplate: At least 0.032-inch- thick anodized aluminum, located at eye level on front cover of the switchboard incoming service section.

B. Mimic Bus: Entire single-line switchboard bus work, as depicted on factory record drawing, on an engraved laminated-plastic (Gravoply) nameplate.

1. Nameplate: At least 0.0625-inch- thick laminated plastic (Gravoply), located at eye level on front cover of the switchboard incoming service section.

C. Mimic Bus: Continuously integrated mimic bus factory applied to front of switchboard. Arrange in single-line diagram format, using symbols and letter designations consistent with final mimic-bus diagram.

D. Coordinate mimic-bus segments with devices in switchboard sections to which they are applied. Produce a concise visual presentation of principal switchboard components and connections.

E. Presentation Media: Painted graphics in color contrasting with background color to represent bus and components, complete with lettered designations.

F. Service Equipment Label: NRTL labeled for use as service equipment for switchboards with one or more service disconnecting and overcurrent protective devices.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Receive, inspect, handle, and store switchboards according to NEMA PB 2.1.

1. Lift or move panelboards with spreader bars and manufacturer-supplied lifting straps following manufacturer's instructions.
2. Use rollers, slings, or other manufacturer-approved methods if lifting straps are not furnished.
3. Protect from moisture, dust, dirt, and debris during storage and installation.
4. Install temporary heating during storage per manufacturer's instructions.

B. Examine switchboards before installation. Reject switchboards that are moisture damaged or physically damaged.

C. Examine elements and surfaces to receive switchboards for compliance with installation tolerances and other conditions affecting performance of the Work or that affect the performance of the equipment.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Install switchboards and accessories according to NEMA PB 2.1.

B. Equipment Mounting: Install switchboards on concrete base, 4-inch nominal thickness. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-Place Concrete."

1. Install conduits entering underneath the switchboard, entering under the vertical section where the conductors will terminate. Install with couplings flush with the concrete base. Extend 2 inches above concrete base after switchboard is anchored in place.
2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
5. Install anchor bolts to elevations required for proper attachment to switchboards.
6. Anchor switchboard to building structure at the top of the switchboard if required or recommended by the manufacturer.

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, straps and brackets, and temporary blocking of moving parts from switchboard units and components.

D. Comply with mounting and anchoring seismic requirements as per manufacturer's instruction.

E. Operating Instructions: Frame and mount the printed basic operating instructions for switchboards, including control and key interlocking sequences and emergency procedures. Fabricate frame of finished wood or metal and cover instructions with clear acrylic plastic. Mount on front of switchboards.

F. Install filler plates in unused spaces of panel-mounted sections.

G. Install overcurrent protective devices, surge protection devices, and instrumentation.

1. Set field-adjustable switches and circuit-breaker trip ranges.

H. Install spare-fuse cabinet.

I. Comply with NECA 1.

3.4 CONNECTIONS

A. Bond conduits entering underneath the switchboard to the equipment ground bus with a bonding conductor sized per NFPA 70.

B. Support and secure conductors within the switchboard according to NFPA 70.

3.5 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs complying with requirements for identification specified in Division 260553 "Identification for Electrical Systems."

B. Switchboard Nameplates: Label each switchboard compartment with a nameplate complying with requirements for identification specified in Division 260553 "Identification for Electrical Systems."

C. Device Nameplates: Label each disconnecting and overcurrent protective device and each meter and control device mounted in compartment doors with a nameplate complying with requirements for identification specified in Division 260553 "Identification for Electrical Systems."

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections with the assistance of a factory-authorized service representative:

1. Acceptance Testing:

    a. Test insulation resistance for each switchboard bus, component, connecting supply, feeder, and control circuit. Open control and metering circuits within the switchboard, and remove neutral connection to surge protection and other electronic devices prior to insulation test. Reconnect after test.
    b. Test continuity of each circuit.

2. Test ground-fault protection of equipment for service equipment per NFPA 70.
3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
4. Correct malfunctioning units on-site where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
5. Perform the following infrared scan tests and inspections, and prepare reports:

    a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switchboard. Remove front and rear panels so joints and connections are accessible to portable scanner.
    b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switchboard 11 months after date of Substantial Completion.
    c. Instruments and Equipment:

        1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

6. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

C. Switchboard will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports, including a certified report that identifies switchboards included and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.7 ADJUSTING

A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Division 260573 "Overcurrent Protective Device Coordination Study."

3.8 PROTECTION

A. Temporary Heating: Apply temporary heat, to maintain temperature according to manufacturer's written instructions, until switchboard is ready to be energized and placed into service.

3.9 INSTRUCTION

A. Instruct the City of New York operating personnel to adjust, operate, and maintain switchboards, overcurrent protective devices, instrumentation, and accessories and to use and reprogram microprocessor-based trip, monitoring, and communication units.

END OF SECTION 26 24 13

SECTION 26 24 16 - PANELBOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Distribution panelboards.
2. Branch-circuit panelboards.

B. Related Sections:
1. Division 26 28 16 “Enclosed Switchboards and Circuit Breakers.”
2. Division 26 05 73 “Overcurrent Protective Device Coordination Study.”

1.3 DEFINITIONS

A. Refer to DDC General Conditions.

B. GFCI: Ground-fault circuit interrupter.

C. GFEP: Ground-fault equipment protection.

D. MCCB: Molded-case circuit breaker.

E. SPD: Surge protective device.

F. VPR: Voltage protection rating.

1.4 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Panelboards shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified."

B. Surge Suppression: Factory installed as an integral part of indicated panelboards, complying with UL 1449 SPD Type 1.

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions.

B. Product Data: For each type of panelboard.

1. Include materials, switching and overcurrent protective devices, SPDs, accessories, and components indicated.
2. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.

C. Shop Drawings: For each panelboard and related equipment.

1. Include dimensioned plans, elevations, sections, and details.
2. Show tabulations of installed devices with nameplates, conductor termination sizes, equipment features, and ratings.
3. Detail enclosure types including mounting and anchorage, environmental protection, knockouts, corner treatments, covers and doors, gaskets, hinges, and locks.
4. Detail bus configuration, current, and voltage ratings.
5. Short-circuit current rating of panelboards and overcurrent protective devices.
6. Include evidence of NRTL listing for series rating of installed devices.
7. Include evidence of NRTL listing for SPD as installed in panelboard.
8. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.
9. Include wiring diagrams for power, signal, and control wiring.
10. Key interlock scheme drawing and sequence of operations.
11. Include time-current coordination curves for each type and rating of overcurrent protective device included in panelboards. Submit on translucent log-log graft paper; include selectable ranges for each type of overcurrent protective device. Include an Internet link for electronic access to downloadable PDF of the coordination curves.

D. Qualification Data: For testing agency.

E. Seismic Qualification Certificates: Submit certification that panelboards, overcurrent protective devices, accessories, and components will withstand seismic forces defined this speicifcation. Include the following:

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

F. Field Quality-Control Reports:

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

G. Panelboard Schedules: For installation in panelboards. Submit final versions after load balancing.

H. Operation and Maintenance Data: For panelboards and components to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions, include the following:

1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
2. Time-current curves, including selectable ranges for each type of overcurrent protective device that allows adjustments.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Manufacturer Qualifications: ISO 9001 or 9002 certified.

C. Testing Agency Qualifications: Member Company of NETA or an NRTL.

1. Testing Agency’s Field Supervisor: Currently certified by NETA to supervise on-site testing.

D. Source Limitations: Obtain panelboards, overcurrent protective devices, components, and accessories from single source from single manufacturer.

E. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

F. Electrical Components, Devices, and Accessories: Listed and labeled as defined by NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Comply with NEMA PB 1 (Panelboards).

H. Comply with NFPA 70 (National Electrical Code).

1.7 DELIVERY, STORAGE, AND HANDLING

A. Remove loose packing and flammable materials from inside panelboards; install temporary electric heating (250 W per panelboard) to prevent condensation.

B. Handle and prepare panelboards for installation according to NEMA PB 1.

1.8 PROJECT CONDITIONS

A. Environmental Limitations:

1. Do not deliver or install panelboards until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above panelboards is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.
2. Rate equipment for continuous operation under the following conditions unless otherwise indicated:

a. Ambient Temperature: Not exceeding minus 22 deg F to plus 104 deg F.
b. Altitude: Not exceeding 6600 feet.

B. Service Conditions: NEMA PB 1, usual service conditions, as follows:

1. Ambient temperatures within limits specified.
2. Altitude not exceeding 6600 feet.

C. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by the City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Notify the Commissioner no fewer than 14 days in advance of proposed interruption of electric service.
2. Do not proceed with interruption of electric service without commissioner written permission.
3. Comply with NFPA 70E.

1.9 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace panelboards that fail in materials or workmanship within specified warranty period.

1. Panelboard Warranty Period: 18 months from date of Substantial Completion.

B. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace SPD that fails in materials or workmanship within specified warranty period.

1. SPD Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PANELBOARDS COMMON REQUIREMENTS

A. Fabricate and test panelboards according to IEEE 344 to withstand seismic forces as per ASCE 7-10 with the following parameters:

1. Building Occupancy Category: II
2. Seismic Design Category: B
3. Site Class: D (assumed)
4. Risk Level: II.
5. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
    a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

B. Product Selection for Restricted Space: Drawings indicate maximum dimensions for panelboards including clearances between panelboards and adjacent surfaces and other items. Comply with indicated maximum dimensions.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Comply with NEMA PB 1 (Panelboards).

E. Comply with NFPA 70 (National Electrical Code).

F. Enclosures: Flush and Surface-mounted, dead-front cabinets.

1. Rated for environmental conditions at installed location.

    a. Indoor Dry and Clean Locations: NEMA 250, Type 1.
    b. Outdoor Locations: NEMA 250, Type 3R.
    c. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.

2. Height: 84 inches maximum.
3. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box. Trims shall cover all live parts and shall have no exposed hardware.
4. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover. Trims shall cover all live parts and shall have no exposed hardware.
5. Skirt for Surface-Mounted Panelboards: Same gage and finish as panelboard front with flanges for attachment to panelboard, wall, and ceiling or floor.
6. Gutter Extension and Barrier: Same gage and finish as panelboard enclosure; integral with enclosure body. Arrange to isolate individual panel sections.
7. Finishes:

    a. Panels and Trim: galvanized steel, factory finished immediately after cleaning and pretreating with manufacturer's standard two-coat, baked-on finish consisting of prime coat and thermosetting topcoat.
    b. Back Boxes: Same finish as panels and trim.
    c. Fungus Proofing: Permanent fungicidal treatment for overcurrent protective devices and other components.

G. Incoming Mains:

1. Location: Convertible between top and bottom.
2. Main Breaker: Main lug interiors up to 400 amperes shall be field convertible to main breaker.

H. Phase, Neutral, and Ground Buses:

1. Material: Hard-drawn copper, 98 percent conductivity.

    a. Plating shall run entire length of bus.
    b. Bus shall be fully rated the entire length.

2. Interiors shall be factory assembled into a unit. Replacing switching and protective devices shall not disturb adjacent units or require removing the main bus connectors.
3. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment grounding conductors; bonded to box.
4. Isolated Ground Bus: Adequate for branch-circuit isolated ground conductors; insulated from box.
5. Full-Sized Neutral: Equipped with full-capacity bonding strap for service entrance applications. Mount electrically isolated from enclosure. Do not mount neutral bus in gutter.
6. Split Bus: Vertical buses divided into individual vertical sections.

I. Conductor Connectors: Suitable for use with conductor material and sizes.

1. Material: Hard-drawn copper, 98 percent conductivity.
2. Terminations shall allow use of 75 deg C rated conductors without derating.
3. Size: Lugs suitable for indicated conductor sizes, with additional gutter space, if required, for larger conductors.
4. Main and Neutral Lugs: Mechanical type, with a lug on the neutral bar for each pole in the panelboard.
5. Ground Lugs and Bus-Configured Terminators: Mechanical type, with a lug on the bar for each pole in the panelboard.
6. Feed-Through Lugs: Mechanical type, suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
7. Subfeed (Double) Lugs: Mechanical type suitable for use with conductor material. Locate at same end of bus as incoming lugs or main device.
8. Gutter-Tap Lugs: Mechanical type suitable for use with conductor material and with matching insulating covers. Locate at same end of bus as incoming lugs or main device.

J. NRTL Label: Panelboards or load centers shall be labeled by an NRTL acceptable to The City of New York for use as service equipment with one or more main service disconnecting and overcurrent protective devices. Panelboards or load centers shall have meter enclosures, wiring, connections, and other provisions for utility metering. Coordinate with utility company for exact requirements.

K. Future Devices: Panelboards or load centers shall have mounting brackets, bus connections, filler plates, and necessary appurtenances required for future installation of devices.

1. Percentage of Future Space Capacity: Ten percent.

L. Panelboard Short-Circuit Current Rating: Rated for series-connected system with integral or remote upstream overcurrent protective devices and labeled by an NRTL. Include label or manual with size and type of allowable upstream and branch devices listed and labeled by an NRTL for series-connected short-circuit rating.

1. Panelboards rated 240 V or less shall have short-circuit ratings as shown on Drawings, but not less than 10,000 A rms symmetrical.
2. Panelboards rated above 240 V and less than 600 V shall have short-circuit ratings as shown on Drawings, but not less than 14,000 A rms symmetrical.

M. Panelboard Short-Circuit Current Rating: Fully rated to interrupt symmetrical short-circuit current available at terminals. Assembly listed by an NRTL for 100 percent interrupting capacity.

1. Panelboards and overcurrent protective devices rated 240 V or less shall have short-circuit ratings as shown on Drawings, but not less than 10,000 A rms symmetrical.
2. Panelboards and overcurrent protective devices rated above 240 V and less than 600 V shall have short-circuit ratings as shown on Drawings, but not less than 14,000 A rms symmetrical.
3. For installation of integral TVSS to the panelboards, refer to Section “Transient Voltage Suppression for Low Voltage Electrical Power Circuits.”
4. Individual neutral conductor for each branch circuit or 2-pole/3-pole circuit breakers for multiwire branch circuits; handle ties are not allowed.

2.2 POWER PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer.
2. Siemens Energy & Automation, Inc.
3. Square D; a brand of Schneider Electric.
4. Or approved equal.

B. Panelboards: NEMA PB 1, distribution type.

C. Doors: Secured with vault-type latch with tumbler lock; keyed alike.

1. For doors more than 36 inches high, provide two latches, keyed alike.

D. Mains: Circuit breaker.

E. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes 125 A and Smaller: Bolt-on circuit breakers.

F. Branch Overcurrent Protective Devices for Circuit-Breaker Frame Sizes Larger Than 125 A: Bolt-on circuit breakers.

G. Branch Overcurrent Protective Devices: Fused switches.

H. Contactors in Main Bus: NEMA ICS 2, Class A, electrically held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
2. External Control-Power Source: 120-V branch circuit.

2.3 BRANCH CIRCUIT PANELBOARDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer.
2. Siemens Energy & Automation, Inc.
3. Square D; a brand of Schneider Electric.
4. Or approved equal.

B. Panelboards: NEMA PB 1, lighting and appliance branch-circuit type.

C. Mains: Circuit breaker.

D. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.

E. Contactors in Main Bus: NEMA ICS 2, Class A, electrically held, general-purpose controller, with same short-circuit interrupting rating as panelboard.

1. Internal Control-Power Source: Control-power transformer, with fused primary and secondary terminals, connected to main bus ahead of contactor connection.
2. External Control-Power Source: 120-V branch circuit.

F. Doors: Concealed hinges; secured with flush latch with tumbler lock; keyed alike.

G. Doors: Door-in-door construction with concealed hinges; secured with multipoint latch with tumbler lock; keyed alike. Outer door shall permit full access to the panel interior. Inner door shall permit access to breaker operating handles and labeling, but current carrying terminals and bus shall remain concealed.

2.4 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Breaker Types shown below (B1, 2, 3, 4, 5) and ratings shall be as indicated on Drawings.

B. MCCB: Comply with UL 489, with interrupting capacity to meet available fault currents.

1. Thermal-Magnetic Circuit Breakers:

a. Inverse time-current element for low-level overloads.
b. Instantaneous magnetic trip element for short circuits.

c. Adjustable magnetic trip setting for circuit-breaker frame sizes

2. Adjustable Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.
3. Electronic Trip Circuit Breakers: 400A

   a. RMS sensing.
   b. Field-replaceable rating plug or electronic trip.
   c. Digital display of settings, trip targets, and indicated metering displays.
   d. Multi-button keypad to access programmable functions and monitored data.
   e. Ten-event, trip-history log. Each trip event shall be recorded with type, phase, and magnitude of fault that caused the trip.
   f. Integral test jack for connection to portable test set or laptop computer.
   g. Field-Adjustable Settings:

      1) 100% rated
      2) Instantaneous trip.
      3) Long- and short-time pickup levels.
      4) Long and short time adjustments.
      5) Ground-fault pickup level, time delay, and I squared T response.

4. Current-Limiting Circuit Breakers: Frame sizes 800A and smaller; let-through ratings less than NEMA FU 1, RK-5.
5. Integrally Fused Circuit Breakers: Frame sizes 1200A; Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.
6. GFCI Circuit Breakers: Single- and double-pole configurations with Class A ground-fault protection (6-mA trip).
7. GFEP Circuit Breakers: Class B ground-fault protection (30-mA trip).
8. Arc-Fault Circuit Interrupter Circuit Breakers: Comply with UL 1699; 120/240-V, single-pole configuration.
9. Subfeed Circuit Breakers: Vertically mounted.
10. MCCB Features and Accessories:

    a. Standard frame sizes, trip ratings, and number of poles.
    b. Breaker handle indicates tripped status.
    c. UL listed for reverse connection without restrictive line or load ratings.
    d. Lugs: Mechanical style, suitable for number, size, trip ratings, and conductor materials.
    e. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and HID lighting circuits.
    f. Ground-Fault Protection: Integrally mounted relay and trip unit with adjustable pickup and time-delay settings, push-to-test feature, and ground-fault indicator.
    g. Shunt Trip: 120-V trip coil energized from separate circuit, set to trip at 55 percent of rated voltage.
    h. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.

i. Rating Plugs: Three-pole breakers with ampere ratings greater than 150 amperes shall have interchangeable rating plugs or electronic adjustable trip units.
j. Auxiliary Contacts: One, SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts and "b" contacts operate in reverse of circuit-breaker contacts.
k. Zone-Selective Interlocking: Integral with electronic trip unit; for interlocking ground-fault protection function with other upstream or downstream devices.
l. Multipole units enclosed in a factory assembled to operate as a single unit.
m. Handle Padlocking Device: Fixed attachment, for locking circuit-breaker handle in on or off position.
n. Handle Clamp: Loose attachment, for holding circuit-breaker handle in on position.

C. Fused Switch: NEMA KS 1, Type HD; clips to accommodate specified fuses; lockable handle.

1. Fuses and Spare-Fuse Cabinet: Comply with requirements specified in Section 26 28 13 "Fuses."
2. Fused Switch Features and Accessories:

a. Standard ampere ratings and number of poles.
b. Mechanical cover interlock with a manual interlock override, to prevent the opening of the cover when the switch is in the on position. The interlock shall prevent the switch from being turned on with the cover open. The operating handle shall have lock-off means with provisions for three padlocks.
c. Auxiliary Contacts: One normally open and normally closed contact(s) that operate with switch handle operation.

2.5 IDENTIFICATION

A. Panelboard Label: Manufacturer's name and trademark, voltage, amperage, number of phases, and number of poles shall be located on the interior of the panelboard door.

B. Breaker Labels: Faceplate shall list current rating, UL and IEC certification standards, and AIC rating.

C. Circuit Directory: Directory card inside panelboard door, mounted in metal frame with transparent protective cover.

1. Circuit directory shall identify specific purpose with detail sufficient to distinguish it from all other circuits.

D. Circuit Directory: Computer-generated circuit directory mounted inside panelboard door with transparent plastic protective cover.

1. Circuit directory shall identify specific purpose with detail sufficient to distinguish it from all other circuits.

2.6 ACCESSORY COMPONENTS AND FEATURES

A. Accessory Set: Include tools and miscellaneous items required for overcurrent protective device test, inspection, maintenance, and operation.

B. Portable Test Set: For testing functions of solid-state trip devices without removing from panelboard. Include relay and meter test plugs suitable for testing panelboard meters and switchboard class relays.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Verify actual conditions with field measurements prior to ordering panelboards to verify that equipment fits in allocated space in, and comply with, minimum required clearances specified in NFPA 70.

B. Receive, inspect, handle, and store panelboards according to NEMA PB 1.1.

C. Examine panelboards before installation. Reject panelboards that are damaged, rusted, or have been subjected to water saturation.

D. Examine elements and surfaces to receive panelboards for compliance with installation tolerances and other conditions affecting performance of the Work.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, encumbrances to workspace clearance requirements, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Comply with NECA 1.

C. Install panelboards and accessories according to NEMA PB 1.1.

D. Equipment Mounting:

1. Install panelboards on cast-in-place concrete equipment base(s). Comply with requirements for equipment bases and foundations specified in Section 033000 "Cast-in-Place Concrete."
2. Attach panelboard to the vertical finished or structural surface behind the panelboard.
3. Comply with requirements for seismic control devices Identified in this section

E. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from panelboards.

F. Comply with mounting and anchoring requirements as per manufacturers requirements to meet the seismic criteria.

G. Mount top of trim 90 inches above finished floor unless otherwise indicated.

H. Mount panelboard cabinet plumb and rigid without distortion of box.

I. Mount recessed panelboards with fronts uniformly flush with wall finish and mating with back box.

J. Mounting panelboards with space behind is recommended for damp, wet, or dirty locations. The steel slotted supports in the following paragraph provide an even mounting surface and the recommended space behind to prevent moisture or dirt collection.

K. Mount surface-mounted panelboards to steel slotted supports 5/8 inch in depth. Orient steel slotted supports vertically.

L. Install overcurrent protective devices and controllers not already factory installed.

1. Set field-adjustable, circuit-breaker trip ranges.
2. Tighten bolted connections and circuit breaker connections using calibrated torque wrench or torque screwdriver per manufacturer's written instructions.

M. Make grounding connections and bond neutral for services and separately derived systems to ground. Make connections to grounding electrodes, separate grounds for isolated ground bars, and connections to separate ground bars.

N. Install filler plates in unused spaces.

O. Stub four 1-inch empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch empty conduits into raised floor space or below slab not on grade.

P. Arrange conductors in gutters into groups and bundle and wrap with wire ties after completing load balancing.

Q. Mount spare fuse cabinet in accessible location.

3.4 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; install warning signs complying with requirements in Section 26 05 53 "Identification for Electrical Systems."

B. Create a directory to indicate installed circuit loads after balancing panelboard loads; incorporate City of New York's final room designations. Obtain approval before installing. Handwritten directories are not acceptable. Install directory inside panelboard door.

C. Panelboard Nameplates: Label each panelboard with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

D. Device Nameplates: Label each branch circuit device in power panelboards with a nameplate complying with requirements for identification specified in Section 26 05 53 "Identification for Electrical Systems."

E. Install warning signs complying with requirements in Section 26 05 53 "Identification for Electrical Systems" identifying source of remote circuit.

3.5 FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test for low-voltage air circuit breakers and low-voltage surge arrestors stated in NETA ATS (Standard for the Acceptance Testing Specifications for Electrical Power Equipment and Systems), Paragraph 7.6 Circuit Breakers and Paragraph 7.19.1 Surge Arrestors, Low-Voltage. Perform optional tests. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:

    a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each panelboard. Remove front panels so joints and connections are accessible to portable scanner.
    b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each panelboard 11 months after date of Substantial Completion.

c. Instruments and Equipment:

1) Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

D. Panelboards will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies panelboards included and that describes scanning results, with comparisons of the two scans. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Section 26 05 73 "Overcurrent Protective Device Coordination Study."

C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes. Prior to making circuit changes to achieve load balancing, inform commissioner of effect on phase color coding.

1. Measure loads during period of normal facility operations.
2. Perform circuit changes to achieve load balancing outside normal facility operation schedule or at times directed by the commissioner. Avoid disrupting services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.
3. After changing circuits to achieve load balancing, recheck loads during normal facility operations. Record load readings before and after changing circuits to achieve load balancing.
4. Tolerance: Maximum difference between phase loads, within a panelboard, shall not exceed 20 percent.

3.7 PROTECTION

A. Temporary Heating: Prior to energizing panelboards, apply temporary heat to maintain temperature according to manufacturer's written instructions.

END OF SECTION 26 24 16

SECTION 26 27 26 - WIRING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes the following:

1. Receptacles, receptacles with integral GFCI
2. Snap switches and wall-box dimmers.
3. Wall-switch and exterior occupancy sensors.
4. Communications outlets.
5. Device plates.
6. Occupancy sensors.
7. Wall box digital time switches.

B. Related Sections include the following:
1. Division 26 05 00 "Common Work Results for Electrical."
2. Division 26 05 33 "Raceways and Boxes for Electrical Systems."
3. Division 26 05 53 "Identification for Electrical Systems."

1.3 DEFINITIONS

A. Refer to DDC General Conditions.

B. EMI: Electromagnetic interference.

C. GFCI: Ground-fault circuit interrupter.

D. Pigtail: Short lead used to connect a device to a branch-circuit conductor.

E. RFI: Radio-frequency interference.

F. SPD: Surge Protective Device.

G. UTP: Unshielded twisted pair.

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For each type of product indicated.

C. Shop Drawings: List of legends and description of materials and process used for premarking wall plates.

D. Samples: One for each type of device and wall plate specified, in each color specified.

E. Field quality-control test reports.

F. Operation and Maintenance Data: To include all manufacturers' packing label warnings and instruction manuals that include labeling conditions. Include wiring diagrams and set-up instructions.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Source Limitations: Obtain each type of wiring device and associated wall plate through one source from a single manufacturer. Insofar as they are available, obtain all wiring devices and associated wall plates from a single manufacturer and one source.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to Commissioner and the City of New York, and marked for intended use.

D. Comply with NFPA 70.

1.6 COORDINATION

A. Receptacles for New York City-Furnished Equipment: Match plug configurations.

1. Cord and Plug Sets: Match equipment requirements.

1.7 REQUIRED MATERIALS

A. Furnish required materials described in subparagraphs below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Every device not listed above, one of every type installed

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers' Names: Shortened versions (shown in parentheses) of the following manufacturers' names are used in other Part 2 articles:

1. Legrand North America (Pass & Seymour).
2. Hubbell Incorporated (Hubbell).
3. Leviton Mfg. Company Inc. (Leviton).
4. Or approved equal

2.2 RECEPTACLES

A. General Description: Straight blade, feed through type. Comply with NEMA WD 1, NEMA WD 6, UL 498, and UL 943, Class A, and include indicator light that is lighted when device is tripped.

B. Duplex GFCI Convenience Receptacles, 125 V, 20 A

C. Tamper-Resistant Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD 1, NEMA WD 6 configuration 5-20R, and UL 498.

D. Flat low profile Convenience Receptacles, 125 V, 20 A: Comply with NEMA WD1, NEMA WD6 configuration 5-20R and UL 498 Supplement SD.

2.3 SNAP SWITCHES

A. Comply with NEMA WD 1 and UL 20.

B. Switches, 120/277 V, 20 A:

C. Pilot Light Switches, 20 A:

1. Description: Single pole, with neon-lighted handle, illuminated when switch is "ON."

D. Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A; for use with mechanically held lighting contactors.

E. Key-Operated, Single-Pole, Double-Throw, Momentary Contact, Center-Off Switches, 120/277 V, 20 A; for use with mechanically held lighting contactors, with factory-supplied key in lieu of switch handle.

2.4 OCCUPANCY SENSORS

A. Wall-Switch Sensors:

1. Description: Passive-infrared type, 120/277 V, adjustable time delay up to 30 minutes, 180-degree field of view, with a minimum coverage area of 900 sq. ft.

B. Wall-Switch Sensors:

1. Description: Adaptive-technology type, 120/277 V, adjustable time delay up to 20 minutes, 180-degree field of view, with a minimum coverage area of 900 sq. ft.

C. Long-Range Wall-Switch Sensors:

1. Description: Passive-infrared type, 120/277 V, adjustable time delay up to 30 minutes, 110-degree field of view, with a minimum coverage area of 1200 sq. ft.

D. Long-Range Wall-Switch Sensors:

1. Description: Dual technology, with both passive-infrared- and ultrasonic-type sensing, 120/277 V, adjustable time delay up to 30 minutes, 110-degree field of view, and a minimum coverage area of 1200 sq. ft.

E. Wide-Range Wall-Switch Sensors:

1. Description: Passive-infrared type, 120/277 V, adjustable time delay up to 30 minutes, 150-degree field of view, with a minimum coverage area of 1200 sq. ft.

2.5 COMMUNICATIONS OUTLETS

A. Telephone Outlet:

1. Description: Single RJ-45 jack for terminating 100-ohm, balanced, four-pair UTP; TIA/EIA-568-B.1; complying with Category 5e. Comply with UL 1863.

2.6 WALL PLATES

A. Single and combination types to match corresponding wiring devices.

1. Plate-Securing Screws: Metal with head color to match plate finish.
2. Material for Finished Spaces: Steel with white baked enamel, suitable for field painting.
3. Material for Unfinished Spaces: Galvanized steel.
4. Material for Damp Locations: Cast aluminum with spring-loaded lift cover, and listed and labeled for use in "wet locations."
5. For receptacles with other than 120 volt, inscribe voltage available.
6. For receptacles served by emergency circuit, inscribe “Emergency.”

B. Wet-Location, Weatherproof Cover Plates: NEMA 250, complying with type 3R weather-resistant , die-cast aluminum with lockable cover.

2.7 DIGITAL TIME SWITCHES

A. General
1. Shall automatically turn lights off after a pre-selected time. Time to be adjustable from 5 minutes to 60 minutes.
2. Shall provide a flash warning at 5 minutes before the end of timing cycle.
3. Color to match device plate color.

2.8 FINISHES

A. Color: Wiring device catalog numbers in Section Text do not designate device color.

1. Wiring Devices Connected to Normal Power System: As selected by commissioner, unless otherwise indicated or required by NFPA 70 or device listing.
2. Wiring Devices Connected to Emergency Power System: Red.
3. SPD: Blue.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Comply with NECA 1, including the mounting heights listed in that standard, unless otherwise noted.

B. Coordination with Other Trades:

1. Take steps to insure that devices and their boxes are protected. Do not place wall finish materials over device boxes and do not cut holes for boxes with routers that are guided by riding against outside of the boxes.
2. Keep outlet boxes free of plaster, drywall joint compound, mortar, cement, concrete, dust, paint, and other material that may contaminate the raceway system, conductors, and cables.
3. Install device boxes in brick or block walls so that the cover plate does not cross a joint unless the joint is troweled flush with the face of the wall.
4. Install wiring devices after all wall preparation, including painting, is complete.

C. Conductors:

1. Do not strip insulation from conductors until just before they are spliced or terminated on devices.
2. Strip insulation evenly around the conductor using tools designed for the purpose. Avoid scoring or nicking of solid wire or cutting strands from stranded wire.

3. The length of free conductors at outlets for devices shall meet provisions of NFPA 70, Article 300, without pigtails.
4. Existing Conductors:

    a. Cut back and pigtail, or replace all damaged conductors.
    b. Straighten conductors that remain and remove corrosion and foreign matter.
    c. Pigtailing existing conductors is permitted provided the outlet box is large enough.

D. Device Installation:

1. Replace all devices that have been in temporary use during construction or that show signs that they were installed before building finishing operations were complete.
2. Keep each wiring device in its package or otherwise protected until it is time to connect conductors.
3. Do not remove surface protection, such as plastic film and smudge covers, until the last possible moment.
4. Connect devices to branch circuits using pigtails that are not less than 6 inches in length.
5. When there is a choice, use side wiring with binding-head screw terminals. Wrap solid conductor tightly clockwise, 2/3 to 3/4 of the way around terminal screw.
6. Use a torque screwdriver when a torque is recommended or required by the manufacturer.
7. When conductors larger than No. 12 AWG are installed on 15- or 20-A circuits, splice No. 12 AWG pigtails for device connections.
8. Tighten unused terminal screws on the device.
9. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.

E. Receptacle Orientation:

1. Install ground pin of vertically mounted receptacles up, and on horizontally mounted receptacles to the right.

F. Device Plates: Do not use oversized or extra-deep plates. Repair wall finishes and remount outlet boxes when standard device plates do not fit flush or do not cover rough wall opening.

G. Dimmers:

1. Install dimmers within terms of their listing.
2. Verify that dimmers used for fan speed control are listed for that application.
3. Install unshared neutral conductors on line and load side of dimmers according to manufacturers' device listing conditions in the written instructions.

H. Digital Time Switches
1. Initial Settings:
    a. Set flash warning to be on.
    b. Set beep warning to be off.

I. Arrangement of Devices: Unless otherwise indicated, mount flush, with long dimension vertical and with grounding terminal of receptacles on top. Group adjacent switches under single, multigang wall plates.

J. Adjust locations of floor service outlets and service poles to suit arrangement of partitions and furnishings.

3.3 IDENTIFICATION

A. Comply with Specification 260553 "Identification for Electrical Systems."

1. Receptacles: Identify panelboard and circuit number from which served. Use hot, stamped or engraved machine printing with black-filled lettering on face of plate, and durable wire markers or tags inside outlet boxes.

3.4 FIELD QUALITY CONTROL

A. Perform tests and inspections and prepare test reports.
1. Test Instruments: Use instruments that comply with UL 1436.
2. Test Instrument for Convenience Receptacles: Digital wiring analyzer with digital readout or illuminated LED indicators of measurement.

B. Tests for Convenience Receptacles:

1. Line Voltage: Acceptable range is 105 to 132 V.
2. Percent Voltage Drop under 15-A Load: A value of 6 percent or higher is not acceptable.
3. Ground Impedance: Values of up to 2 ohms are acceptable.
4. GFCI Trip: Test for tripping values specified in UL 1436 and UL 943.
5. Using the test plug, verify that the device and its outlet box are securely mounted.
6. The tests shall be diagnostic, indicating damaged conductors, high resistance at the circuit breaker, poor connections, inadequate fault current path, defective devices, or similar problems. Correct circuit conditions, remove malfunctioning units and replace with new ones, and retest as specified above.

C. Test straight blade for the retention force of the grounding blade according to NFPA 99. Retention force shall be not less than 4 oz.

END OF SECTION 26 27 26

PAGE INTENTIONALLY LEFT BLANK

SECTION 262813 - FUSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Cartridge fuses rated 600 V ac and less for use in the following:

   a. Control circuits.
   b. Panelboards.
   c. Switchboards.
   d. Enclosed controllers.
   e. Enclosed switches.

2. Spare-fuse cabinets.

1.3 ACTION SUBMITTALS

A. Refer to DDC General Conditions

B. Product Data: For each type of product. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for spare-fuse cabinets. Include the following for each fuse type indicated:

1. Ambient Temperature Adjustment Information: If ratings of fuses have been adjusted to accommodate ambient temperatures, provide list of fuses with adjusted ratings.

   a. For each fuse having adjusted ratings, include location of fuse, original fuse rating, local ambient temperature, and adjusted fuse rating.
   b. Provide manufacturer's technical data on which ambient temperature adjustment calculations are based.

2. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
3. Current-limitation curves for fuses with current-limiting characteristics.
4. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse. Submit in electronic format suitable for use in coordination software and in PDF format.
5. Coordination charts and tables and related data.

6. Fuse sizes for elevator feeders and elevator disconnect switches.

1.4 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fuses to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions, include the following:

1. Ambient temperature adjustment information.
2. Current-limitation curves for fuses with current-limiting characteristics.
3. Time-current coordination curves (average melt) and current-limitation curves (instantaneous peak let-through current) for each type and rating of fuse used on the Project. Submit in electronic format suitable for use in coordination software and in PDF format.
4. Coordination charts and tables and related data.

1.5 FIELD CONDITIONS

A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F (5 deg C) or more than 100 deg F (38 deg C), apply manufacturer's ambient temperature adjustment factors to fuse ratings.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Bussmann, an Eaton business

B. Littlefuse, Inc.

C. Mersen USA.

D. Or approved equal

2.2 CARTRIDGE FUSES

A. Characteristics: NEMA FU 1, current-limiting, nonrenewable cartridge fuses with voltage ratings consistent with circuit voltages.

1. Type RK-1: 250-V, zero- to 600-A rating, 200 kAIC, time delay.
2. Type RK-5: 250-V, zero- to 600-A rating, 200 kAIC, time delay.
3. Type CC: 600-V, zero- to 30-A rating, 200 kAIC, fast acting, time delay.
4. Type CD: 600-V, 31- to 60-A rating, 200 kAIC, fast acting, time delay.
5. Type J: 600-V, zero- to 600-A rating, 200 kAIC, time delay.
6. Type L: 600-V, 601- to 6000-A rating, 200 kAIC, time delay.

7. Type T: 250-V, zero- to 1200-A rating, 200 kAIC, very fast acting**,** time delay.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NEMA FU 1 for cartridge fuses.

D. Comply with NFPA 70.

E. Coordinate fuse ratings with utilization equipment nameplate limitations of maximum fuse size and with system short-circuit current levels.

2.3 SPARE-FUSE CABINET

A. Characteristics: Wall-mounted steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.

1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
2. Finish: Gray, baked enamel.
3. Identification: "SPARE FUSES" in 1-1/2-inch- (38-mm-) high letters on exterior of door.
4. Fuse Pullers: For each size of fuse, where applicable and available, from fuse manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine fuses before installation. Reject fuses that are moisture damaged or physically damaged.

B. Examine holders to receive fuses for compliance with installation tolerances and other conditions affecting performance, such as rejection features.

C. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.

D. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 FUSE APPLICATIONS

A. Cartridge Fuses:

1. Service Entrance: Class L, fast acting.
2. Feeders: Class L, fast acting for over 600A; Class RK1, fast acting for 600A and under.
3. Motor Branch Circuits: Class RK1, time delay.
4. Large Motor Branch (601-4000 A): Class L, time delay.
5. Power Electronics Circuits: Class J, high speed.
6. Other Branch Circuits: Class RK1, time delay.
7. Control Transformer Circuits: Class CC, time delay, control transformer duty.
8. Provide open-fuse indicator fuses or fuse covers with open fuse indication.

3.3 INSTALLATION

A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.

B. Install spare-fuse cabinet(s) in the main electrical service room or as directed in the field by the City of New York.

3.4 IDENTIFICATION

A. Install labels complying with requirements for identification specified in Section 260553 "Identification for Electrical Systems" and indicating fuse replacement information inside of door of each fused switch and adjacent to each fuse block, socket, and holder.

END OF SECTION 262813

SECTION 26 28 16 - ENCLOSED SWITCHES AND CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Fusible switches.
2. Nonfusible switches.
3. Molded-case circuit breakers (MCCBs).
4. Molded-case switches.
5. Enclosures.

B. Related Sections

1. Division 26 05 19 “Low Voltage Electrical Cables.”
2. Division 26 05 73 “Overcurrent Protective Device Coordination Study.”
3. Division 26 05 53 “Identification for Electrical Systems.”
4. Division 26 24 13 “Switchboards.”
5. Division 26 24 16 “Panelboards.”
6. Division 26 28 13 “Fuses.”

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. NC: Normally closed.

C. NO: Normally open.

D. SPDT: Single pole, double throw.

1.4 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Enclosed switches and circuit breakers shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.

1. Enclosure types and details for types other than NEMA 250, Type 1.
2. Current and voltage ratings.
3. Short-circuit current ratings (interrupting and withstand, as appropriate).
4. Include evidence of NRTL listing for series rating of installed devices.
5. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.
6. Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. Submit on translucent log-log graph paper.

C. Shop Drawings: For enclosed switches and circuit breakers. Include plans, elevations, sections, details, and attachments to other work.

1. Wiring Diagrams: For power, signal, and control wiring.

D. Qualification Data: For qualified testing agency.

E. Seismic Qualification Certificates: For enclosed switches and circuit breakers, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

F. Field quality-control reports.

1. Test procedures used.
2. Test results that comply with requirements.
3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

G. Manufacturer's field service report.

H. Operation and Maintenance Data: For enclosed switches and circuit breakers to include in emergency, operation, and maintenance manuals. In addition to items specified in DDC General Conditions, include the following:

1. Manufacturer's written instructions for testing and adjusting enclosed switches and circuit breakers.
2. Time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device. Submit on translucent log-log graph paper.

1.6 REQUIRED MATERIALS

A. Furnish required materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fuses: Equal to 10 percent of quantity installed for each size and type, but no fewer than three of each size and type.
2. Fuse Pullers: Two for each size and type.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Testing Agency Qualifications: Member Company of NETA or an NRTL.

1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

C. Source Limitations: Obtain enclosed switches and circuit breakers, overcurrent protective devices, components, and accessories, within same product category, from single source from single manufacturer.

D. Product Selection for Restricted Space: Drawings indicate maximum dimensions for enclosed switches and circuit breakers, including clearances between enclosures, and adjacent surfaces and other items. Comply with indicated maximum dimensions.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

F. Comply with NFPA 70 (National Electrical Code).

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:

1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F.
2. Altitude: Not exceeding 6600 feet.

B. Interruption of Existing Electric Service: Do not interrupt electric service to facilities occupied by the City of New York or others unless permitted under the following conditions and then only after arranging to provide temporary electric service according to requirements indicated:

1. Notify the Commissioner no fewer than 14 days in advance of proposed interruption of electric service.
2. Indicate method of providing temporary electric service.
3. Do not proceed with interruption of electric service without Commissioner's written permission.
4. Comply with NFPA 70E.

1.9 COORDINATION

A. Coordinate layout and installation of switches, circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

1.10 WARRANTY

A. Manufacturer's Warranty: Manufacturer and Installer agree to repair or replace components that fail in materials or workmanship within specified warranty period.

1. Warranty Period: One year(s) from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 FUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer.
2. General Electric Company.
3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. Or approved equal.

B. Type GD, General Duty, Three Pole, Single Throw, 240-V ac, 800 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with cartridge fuse interiors to accommodate specified fuses, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Three Pole, Single Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Type HD, Heavy Duty, Six Pole, Single Throw, 600-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

E. Type HD, Heavy Duty, Three Pole, Double Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

F. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
4. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
5. Auxiliary Contact Kit: One NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
6. Hookstick Handle: Allows use of a hookstick to operate the handle.
7. Lugs: Mechanical type, suitable for number, size, and conductor material.
8. Service-Rated Switches: Labeled for use as service equipment.

2.2 NONFUSIBLE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer.
2. General Electric Company.
3. Siemens Energy & Automation, Inc.
4. Square D; a brand of Schneider Electric.
5. Or approved equal.

B. Type GD, General Duty, Three Pole, Single Throw, 600 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept two padlocks, and interlocked with cover in closed position.

C. Type HD, Heavy Duty, Three Pole, Single Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

D. Type HD, Heavy Duty, Six Pole, Single Throw, 600-V ac, 200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

E. Type HD, Heavy Duty, Three Pole, Double Throw, 600-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.

F. Accessories:

1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
3. Isolated Ground Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
4. Auxiliary Contact Kit: One NO/NC (Form "C") auxiliary contact(s), arranged to activate before switch blades open.
5. Hookstick Handle: Allows use of a hookstick to operate the handle.
6. Lugs: Mechanical type, suitable for number, size, and conductor material.
7. Service rated switches; labeled for use as service equipment.

2.3 MOLDED-CASE CIRCUIT BREAKERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer.
2. Siemens Energy & Automation, Inc.
3. Square D; a brand of Schneider Electric.
4. Or approved equal

B. General Requirements:

1. Comply with UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents.
2. Breaker Types shown below (C through G) and ratings shall be as indicated on Drawings.

C. Thermal-Magnetic Circuit Breakers: 400A Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits. Adjustable magnetic trip setting for circuit-breaker frame sizes 400A

D. Adjustable, Instantaneous-Trip Circuit Breakers: Magnetic trip element with front-mounted, field-adjustable trip setting.

E. Electronic Trip Circuit Breakers: 800A Field-replaceable rating plug, rms sensing, with the following 3 through 5 field-adjustable settings:

1. 100% rated.
2. Instantaneous trip.
3. Long- and short-time pickup levels.
4. Long- and short-time time adjustments.
5. Ground-fault pickup level, time delay, and I^2t response.

F. Current-Limiting Circuit Breakers: Frame sizes 400A and smaller; let-through ratings less than NEMA FU 1, RK-5.

G. Integrally Fused Circuit Breakers: Frame sizes 800A; Thermal-magnetic trip element with integral limiter-style fuse listed for use with circuit breaker and trip activation on fuse opening or on opening of fuse compartment door.

H. Ground-Fault, Circuit-Interrupter (GFCI) Circuit Breakers: Single- and two-pole configurations with Class A ground-fault protection (6-mA trip).

I. Ground-Fault, Equipment-Protection (GFEP) Circuit Breakers: With Class B ground-fault protection (30-mA trip).

J. Features and Accessories:

1. Standard frame sizes, trip ratings, and number of poles.
2. Lugs: Mechanical type, suitable for number, size, trip ratings, and conductor material.
3. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge lighting circuits.
4. Ground-Fault Protection: Comply with UL 1053; integrally mounted, self-powered type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.
5. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
6. Auxiliary Contacts: One SPDT switch with "a" and "b" contacts; "a" contacts mimic circuit-breaker contacts, "b" contacts operate in reverse of circuit-breaker contacts.
7. Key Interlock Kit: Externally mounted to prohibit circuit-breaker operation; key shall be removable only when circuit breaker is in off position.
8. Zone-Selective Interlocking: Integral with ground-fault trip unit; for interlocking ground-fault protection function.
9. Electrical Operator: Provide remote control for on, off, and reset operations.
10. Accessory Control Power Voltage: Integrally mounted, self-powered.

2.4 MOLDED-CASE SWITCHES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer.
2. Siemens Energy & Automation, Inc.

3. Square D; a brand of Schneider Electric.
4. Or approved equal.

B. General Requirements: MCCB with fixed, high-set instantaneous trip only, and short-circuit withstand rating equal to equivalent breaker frame size interrupting rating.

C. Features and Accessories:

1. Standard frame sizes and number of poles.
2. Lugs: Mechanical type, suitable for number, size, trip ratings, and conductor material.
3. Ground-Fault Protection: Comply with UL 1053; remote-mounted and powered type with mechanical ground-fault indicator; relay with adjustable pickup and time-delay settings, push-to-test feature, internal memory, and shunt trip unit; and three-phase, zero-sequence current transformer/sensor.
4. Shunt Trip: Trip coil energized from separate circuit, with coil-clearing contact.
5. Undervoltage Trip: Set to operate at 35 to 75 percent of rated voltage without intentional time delay.
6. Auxiliary Contacts: One SPDT switch with "a" and "b" contacts; "a" contacts mimic switch contacts, "b" contacts operate in reverse of switch contacts.
7. Alarm Switch: One NO & NC contact that operates only when switch has tripped.
8. Key Interlock Kit: Externally mounted to prohibit switch operation; key shall be removable only when switch is in off position.
9. Zone-Selective Interlocking: Integral with ground-fault shunt trip unit; for interlocking ground-fault protection function.
10. Electrical Operator: Provide remote control for on, off, and reset operations.
11. Accessory Control Power Voltage: Integrally mounted, self-powered.

2.5 ENCLOSURES

A. Enclosed Switches and Circuit Breakers: NEMA AB 1, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.

1. Indoor, Dry and Clean Locations: NEMA 250, Type 1.
2. Outdoor Locations: NEMA 250, Type 3R.
3. Other Wet or Damp, Indoor Locations: NEMA 250, Type 4.
4. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: NEMA 250, Type 12.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine elements and surfaces to receive enclosed switches and circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.

B. Comply with mounting and anchoring requirements specified in Section 26 05 48 "Vibration and Seismic Controls for Electrical Systems."

C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.

D. Install fuses in fusible devices.

E. Comply with NECA 1.

3.4 IDENTIFICATION

A. Comply with requirements in Section 26 05 53 "Identification for Electrical Systems."

1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.5 FIELD QUALITY CONTROL

A. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Acceptance Testing Preparation:

1. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.
2. Test continuity of each circuit.

C. Tests and Inspections:

1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
3. Perform the following infrared scan tests and inspections and prepare reports:

    a. Initial Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each enclosed switch and circuit breaker. Remove front panels so joints and connections are accessible to portable scanner.
    b. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each enclosed switch and circuit breaker 11 months after date of Substantial Completion.
    c. Instruments and Equipment: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.

4. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.

D. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports, including a certified report that identifies enclosed switches and circuit breakers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

B. Set field-adjustable circuit-breaker trip ranges as specified in Section 26 05 73 "Overcurrent Protective Device Coordination Study."

END OF SECTION 26 28 16

SECTION 26 29 23 – VARIABLE FREQUENCY MOTOR CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. This Section includes solid-state, PWM, variable frequency controllers (VFCs) for speed control of three-phase, squirrel-cage induction motors.

B. Related Sections include the following:
1. Section 262816"Enclosed Switches and Circuit Breakers."

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. BMS: Building management system.

C. IGBT: Insulated gate bipolar transistor.

D. LAN: Local area network.

E. PID: Control action, proportional plus integral plus derivative.

F. PWM: Pulse-width modulated.

G. VFC: Variable frequency controller (equals VFD-variable frequency drive or VSD-variable speed drive)..

1.4 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of VFC. Include dimensions, mounting arrangements, location for conduit entries, shipping and operating weights, and manufacturer's technical data on features, performance, electrical ratings, characteristics, and finishes.

C. Shop Drawings: For each VFC.

1. Include dimensioned plans, elevations, sections, and details, including required clearances and service space around equipment. Show tabulations of installed devices, equipment features, and ratings. Include the following:

    a. Each installed unit's type and details.
    b. Nameplate legends.
    c. Short-circuit current rating of integrated unit.
    d. Listed and labeled for series rating of overcurrent protective devices in combination controllers by an NRTL acceptable to the Commissioner and The City of New York.
    e. Features, characteristics, ratings, and factory settings of each motor-control center unit.

2. Wiring Diagrams: Power, signal, and control wiring for VFCs. Provide schematic wiring diagram for each type of VFC.

D. Coordination Drawings: Floor plans, drawn to scale, showing dimensioned layout, required working clearances, and required area above and around VFCs where pipe and ducts are prohibited. Show VFC layout and relationships between electrical components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate field measurements.

E. Qualification Data: For manufacturer.

F. Field quality-control test reports.

G. Operation and Maintenance Data: For VFCs, all installed devices, and components to include in emergency, operation, and maintenance manuals.

1. Routine maintenance requirements for VFCs and all installed components.
2. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.

H. Load-Current and Overload-Relay Heater List: Compile after motors have been installed and arrange to demonstrate that selection of heaters suits actual motor nameplate full-load currents.

I. Load-Current and List of Settings of Adjustable Overload Relays: Compile after motors have been installed and arrange to demonstrate that dip switch settings for motor running overload protection suit actual motor to be protected.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Manufacturer Qualifications: A qualified manufacturer. Maintain, within proximity of Project site, a service center capable of providing instructions, parts, and emergency maintenance and repairs.

C. Source Limitations: Obtain VFCs of a single type through one source from a single manufacturer.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to The City of New York, and marked for intended use.

E. Comply with NFPA 70.

F. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, minimum clearances between VFCs, and adjacent surfaces and other items. Comply with indicated maximum dimensions and clearances.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver VFCs in shipping splits of lengths that can be moved past obstructions in delivery path as indicated.

B. Store VFCs indoors in clean, dry space with uniform temperature to prevent condensation. Protect VFCs from exposure to dirt, fumes, water, corrosive substances, and physical damage.

C. If stored in areas subject to weather, cover VFCs to protect them from weather, dirt, dust, corrosive substances, and physical damage. Remove loose packing and flammable materials from inside controllers; install electric heating of sufficient wattage to prevent condensation.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation, capable of driving full load without derating, under the following conditions, unless otherwise indicated:

1. Ambient Temperature: 0 to 40 deg C.
2. Humidity: Less than 90 percent (noncondensing).
3. Altitude: Not exceeding 3300 feet.

B. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities occupied by The City of New York unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated:

1. Notify Commissioner no fewer than two days in advance of proposed interruption of electrical service.
2. Indicate method of providing temporary electrical service.
3. Do not proceed with interruption of electrical service without The Commissioner’s written permission.

C. Product Selection for Restricted Space: Drawings indicate maximum dimensions for VFCs, minimum clearances between VFCs, and adjacent surfaces and other items. Comply with indicated maximum dimensions and clearances.

1.8 COORDINATION

A. Coordinate layout and installation of VFCs with other construction including conduit, piping, equipment, and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Specification 033000 "Cast-in-Place Concrete. (For floor mounted VFC's)"

C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Specification 075216 "SBS Modified Bitumen Roofing System."

D. Coordinate features of VFCs, installed units, and accessory devices with pilot devices and control circuits to which they connect.

E. Coordinate features, accessories, and functions of each VFC and each installed unit with ratings and characteristics of supply circuit, motor, required control sequence, and duty cycle of motor and load. Short-circuit withstand rating shall be same as short-circuit current rating of upstream overcurrent protective device or as indicated in contract documents, whichever is higher.

F. Coordinate monitoring and control features of VFC's with communication requirements of BMS. Communication between the systems shall be seamless with specified features of the VFC fully integrated into the BMS.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. ABB Power Distribution, Inc.
2. Eaton Corporation; Cutler-Hammer Products.
3. General Electric Company.
4. Allen-Bradley Co.; Industrial Control Group.
5. Siemens Energy and Automation.
6. Square D.
7. Toshiba International Corporation.
8. Or approved equal.

2.2 VARIABLE FREQUENCY CONTROLLERS

A. Description: NEMA ICS 2, IGBT, PWM, VFC; listed and labeled as a complete unit and arranged to provide variable speed of an NEMA MG 1, Design B, 3-phase induction motor by adjusting output voltage and frequency.

1. Provide unit suitable for operation of premium-efficiency motor as defined by NEMA MG 1.

2. Both driven motor manufacturer and drive manufacturer shall have published lists showing compatibility with each other's equipment.

B. Design and Rating: Match load type such as fans, blowers, and pumps; and type of connection used between motor and load such as direct or through a power-transmission connection.

C. Output Rating: 3-phase; 6 to 60 Hz, with voltage proportional to frequency throughout voltage range.

D. Unit Operating Requirements:

1. Input ac voltage tolerance of 208 V, plus or minus 5 percent.
2. Input frequency tolerance of 50/60 Hz, plus or minus 6 percent.
3. Minimum Efficiency: 96 percent at 60 Hz, full load.
4. Minimum Displacement Primary-Side Power Factor: 96 percent.
5. Overload Capability: 1.1 times the base load current for 60 seconds; 2.0 times the base load current for 3 seconds.
6. Starting Torque: 100 percent of rated torque or as indicated.
7. Speed Regulation: Plus or minus 1 percent.

E. Isolated control interface to allow controller to follow control signal over an 11:1 speed range.

1. Electrical Signal: 4 to 20 mA at 24 V.
2. Pneumatic Signal: 3 to 15 psig (20 to 104 kPa).

F. Internal Adjustability Capabilities:

1. Minimum Speed: 5 to 25 percent of maximum rpm.
2. Maximum Speed: 80 to 100 percent of maximum rpm.
3. Acceleration: 2 to a minimum of 22 seconds.
4. Deceleration: 2 to a minimum of 22 seconds.
5. Current Limit: 50 to a minimum of 110 percent of maximum rating.

G. Self-Protection and Reliability Features:

1. Input transient protection by means of surge suppressors.
2. Under- and overvoltage trips; inverter overtemperature, overload, and overcurrent trips.
3. Motor Overload Relay: Adjustable and capable of NEMA ICS 2, Class 10 performance.
4. Notch filter to prevent operation of the controller-motor-load combination at a natural frequency of the combination.
5. Instantaneous line-to-line and line-to-ground overcurrent trips.
6. Loss-of-phase protection.
7. Reverse-phase protection.
8. Short-circuit protection.
9. Motor overtemperature fault.

H. Multiple-Motor Capability: Controller suitable for service to multiple motors and having a separate overload relay and protection for each controlled motor. Overload relay shall shut off controller and motors served by it when overload relay is tripped.

I. Automatic Reset/Restart: Attempts three restarts after controller fault or on return of power after an interruption and before shutting down for manual reset or fault correction. Bidirectional autospeed search shall be capable of starting into rotating loads spinning in either direction and returning motor to set speed in proper direction, without damage to controller, motor, or load.

J. Power-Interruption Protection: To prevent motor from re-energizing after a power interruption until motor has stopped.

K. Torque Boost: Automatically varies starting and continuous torque to at least 1.5 times the minimum torque to ensure high-starting torque and increased torque at slow speeds.

L. Motor Temperature Compensation at Slow Speeds: Adjustable current fall-back based on output frequency for temperature protection of self-cooled, fan-ventilated motors at slow speeds.

M. Status Lights: Door-mounted LED indicators shall indicate the following conditions:

1. Power on.
2. Run.
3. Overvoltage.
4. Line fault.
5. Overcurrent.
6. External fault.

N. Panel-Mounted Operator Station: Start-stop and auto-manual selector switches with manual speed control potentiometer and elapsed time meter.

O. Indicating Devices: Meters or digital readout devices and selector switch, mounted flush in controller door and connected to indicate the following controller parameters:

1. Output frequency (Hz).
2. Motor speed (rpm).
3. Motor status (running, stop, fault).
4. Motor current (amperes).
5. Motor torque (percent).
6. Fault or alarming status (code).
7. PID feedback signal (percent).
8. DC-link voltage (VDC).
9. Set-point frequency (Hz).
10. Motor output voltage (V).

P. Control Signal Interface:

1. Electric Input Signal Interface: A minimum of 2 analog inputs (0 to 10 V or 0/4-20 mA) and 6 programmable digital inputs.
2. Pneumatic Input Signal Interface: 3 to 15 psig.
3. Remote Signal Inputs: Capability to accept any of the following speed-setting input signals from the BMS or other control systems:

    a. 0 to 10-V dc.
    b. 0-20 or 4-20 mA.
    c. Potentiometer using up/down digital inputs.
    d. Fixed frequencies using digital inputs.
    e. RS485.
    f. Keypad display for local hand operation.

4. Output Signal Interface:

    a. A minimum of 1 analog output signal (0/4-20 mA), which can be programmed to any of the following:

        1) Output frequency (Hz).
        2) Output current (load).
        3) DC-link voltage (VDC).
        4) Motor torque (percent).
        5) Motor speed (rpm).
        6) Set-point frequency (Hz).

5. Remote Indication Interface: A minimum of 2 dry circuit relay outputs (120-V ac, 1 A) for remote indication of the following:

    a. Motor running.
    b. Set-point speed reached.
    c. Fault and warning indication (overtemperature or overcurrent).
    d. PID high- or low-speed limits reached.

Q. Communications: Provide an RS485 interface allowing VFC to be used with an external system within a multidrop LAN configuration. Interface shall allow all parameter settings of VFC to be programmed via BMS control. Provide capability for VFC to retain these settings within the nonvolatile memory.

R. Manual Bypass: Magnetic contactor arranged to safely transfer motor between controller output and bypass controller circuit when motor is at zero speed. Controller-off-bypass selector switch sets mode, and indicator lights give indication of mode selected. Unit shall be capable of stable operation (starting, stopping, and running), with motor completely disconnected from controller (no load).

S. Bypass Controller: NEMA ICS 2, full-voltage, nonreversing enclosed controller with across-the-line starting capability in manual-bypass mode. Provide motor overload protection under both modes of operation with control logic that allows common start-stop capability in either mode.

T. Integral Disconnecting Means: NEMA AB 1, instantaneous-trip circuit breaker with lockable handle.

U. Isolating Switch: Non-load-break switch arranged to isolate VFC and permit safe troubleshooting and testing, both energized and de-energized, while motor is operating in bypass mode.

V. Remote Indicating Circuit Terminals: Mode selection, controller status, and controller fault.

2.3 ENCLOSURES

A. Provide enclosure to for outdoor installation.

2.4 ACCESSORIES

A. Devices shall be factory installed in controller enclosure, unless otherwise indicated.

B. Push-Button Stations, Pilot Lights, and Selector Switches: NEMA ICS 2, heavy-duty type.

C. Stop and Lockout Push-Button Station: Momentary-break, push-button station with a factory-applied hasp arranged so padlock can be used to lock push button in depressed position with control circuit open.

D. Control Relays: Auxiliary and adjustable time-delay relays.

E. Standard Displays:

1. Output frequency (Hz).
2. Set-point frequency (Hz).
3. Motor current (amperes).
4. DC-link voltage (VDC).
5. Motor torque (percent).
6. Motor speed (rpm).
7. Motor output voltage (V).

F. Historical Logging Information and Displays:

1. Real-time clock with current time and date.
2. Running log of total power versus time.
3. Total run time.
4. Fault log, maintaining last four faults with time and date stamp for each.

G. Current-Sensing, Phase-Failure Relays for Bypass Controller: Solid-state sensing circuit with isolated output contacts for hard-wired connection; arranged to operate on phase failure, phase reversal, current unbalance of from 30 to 40 percent, or loss of supply voltage; with adjustable response delay.

2.5 FACTORY FINISHES

A. Finish: Manufacturer's standard paint applied to factory-assembled and -tested VFCs before shipping.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EXAMINATION

A. Examine areas, surfaces, and substrates to receive VFCs for compliance with requirements, installation tolerances, and other conditions affecting performance.

B. Examine roughing-in for conduit systems to verify actual locations of conduit connections before VFC installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 APPLICATIONS

A. Select features of each VFC to coordinate with ratings and characteristics of supply circuit and motor; required control sequence; and duty cycle of motor, controller, and load.

B. Select horsepower rating of controllers to suit motor controlled.

3.4 INSTALLATION

A. Anchor each VFC assembly to steel-channel sills arranged and sized according to manufacturer's written instructions. Attach by bolting. Level and grout sills flush with mounting surface.

B. Install VFCs on concrete bases.

C. Comply with mounting and anchoring requirements specified in Section 260529 "Hangers and Supports for Electrical Systems."

D. Controller Fuses: Install fuses in each fusible switch. Comply with requirements in Section 262813 "Fuses."

3.5 CONCRETE BASES

A. Coordinate size and location of concrete bases.

B. Concrete base is specified in Section 260500 "Common Work Results for Electrical," and concrete materials and installation requirements are specified in Division 03.

3.6 IDENTIFICATION

A. Identify VFCs, components, and control wiring according to Section 260553 "Identification for Electrical Systems."

B. Operating Instructions: Frame printed operating instructions for VFCs, including control sequences and emergency procedures. Fabricate frame of finished metal, and cover instructions with clear acrylic plastic. Mount on front of VFC units.

3.7 CONTROL WIRING INSTALLATION

A. Install wiring between VFCs and remote devices according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Bundle, train, and support wiring in enclosures.

C. Connect hand-off-automatic switch and other automatic-control devices where applicable.

1. Connect selector switches to bypass only manual- and automatic-control devices that have no safety functions when switch is in hand position.
2. Connect selector switches with control circuit in both hand and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.8 CONNECTIONS

A. Conduit installation requirements are specified in other Division 26 Sections. Drawings indicate general arrangement of conduit, fittings, and specialties.

B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

3.9 FIELD QUALITY CONTROL

A. Prepare for acceptance tests as follows:

1. Test insulation resistance for each enclosed controller element, bus, component, connecting supply, feeder, and control circuit.

2. Test continuity of each circuit.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to perform the following:

1. Inspect controllers, wiring, components, connections, and equipment installation. Test and adjust controllers, components, and equipment.
2. Assist in field testing of equipment including pretesting and adjusting of solid-state controllers.
3. Report results in writing.

C. Testing Agency: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:

D. Perform the following field tests and inspections and prepare test reports:

1. Perform each electrical test and visual and mechanical inspection, except optional tests, stated in NETA ATS. Certify compliance with test parameters.
2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.

3.10 ADJUSTING

A. Set field-adjustable switches and circuit-breaker trip ranges.

3.11 INSTRUCTION

A. Engage a factory-authorized service representative to instruct The City of New York operating personnel to adjust, operate, and maintain variable frequency controllers. Refer to Addendum to General Conditions.

END OF SECTION 262923

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 31 00 - PHOTOVOLTAIC COLLECTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. PV system description.
2. Manufactured PV units.
3. PV module framing.
4. PV array construction.
5. Inverters.
6. System overcurrent protection.
7. Mounting structures.

1.3 REFERENCE STANDARDS

A. American National Standards Institute (ANSI):
1. C12.1: Standard for Electricity Meters.
2. C12.20: Standard for Electrical Meters.

B. The Institute of Electrical and Electronics Engineers, Inc (IEEE):
1. IEEE 929: Recommended Practice for Utility Interface of Intermediate PV Systems.
2. IEEE 80: Recommended Grounding Practices.
3. IEEE 1547-2018: IEEE Standard for Interconnection and Interoperability of Distributed Energy Resource with Associated Electric Power System Interfaces.

C. Underwriters Laboratories, Inc. (UL):
1. 1741/ 1741 SA: Standard for Safety for Static Inverters, Converters, Controllers and Interconnection System Equipment for Use in Photovoltaic Power Systems.
2. 1703: Standard for Flat-Plate Photovoltaic Modules and Panels.

1.4 DEFINITIONS

A. Refer to DDC General Conditions.

B. FEP: Fluorinated ethylene propylene.

C. IP Code: Required ingress protection to comply with IEC 60529 (Degrees of Protection Provided by Enclosure).

D. MPPT: Maximum power point tracking.

E. PTC: PVUSA Test Condition. Commonly regarded as a "real-world" measure of PV output. See below for definition of "PVUSA."

F. PV: Photovoltaic.

G. PVUSA: Photovoltaics for Utility Systems Applications.

H. STC: Standard Test Conditions defined in IEC 61215(Terrestrial photovoltaic modules – Design qualification and type approval).

1.5 SUBMITTAL PROCEDURES

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for PV panels.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

C. Shop Drawings: For PV modules.

1. Include plans, elevations, sections, and mounting details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
3. Detail fabrication and assembly.
4. Include diagrams for power, signal, and control wiring.

D. Site Parameters Report: Submit report identifying environmental and bioclimatic conditions at site including, solar irradiation, solar insolation, altitude, humidity, maximum temperature, minimum temperature, rooftop ambient temperature, and seasonal ambient conditions that impact energy production of PV system

E. Structural Certification: Certification by Professional Engineer licensed in the State of New York demonstrating ability of roof to support all loads required for PV system.

F. Factory Test Reports: Solar panels and inverters.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Field quality-control reports.

C. Sample Warranty: For manufacturer's special materials and workmanship warranty and minimum power output warranty.

D. Comply with NFPA 70

E. Source Limitations: Obtain solar panels from single manufacturer. Mounting for PV system specified in this Section shall be from single manufacturer. PV system inverters shall be from single manufacturer. AC power panels shall be from single manufacturer.

F. Manufacturer: The manufacturer providing the material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such similar material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.

G. Installer: The contractor or subcontractor performing the work of this section must, within the last five (5) consecutive years prior to the bid opening, have successfully completed in a timely fashion at least three (3) projects similar in scope and type to the required work. In addition, the contractor or subcontractor performing the work must be approved by the manufacturer and by the New York State Energy Research and Development Authority (NYSERDA).

H. Listing and Labeling: Electrical components, devices, and accessories, List and label, as defined in NFPA 70, Article 100, by testing agency acceptable to The City of New York, and marked for intended use.

I. Certificate of Compliance: Provide certificate of compliance to referenced standards from manufacturer of PV Systems.

J. Qualifications:
   1. Provide qualifications of Testing Facility and individual who will be performing tests.
   2. Installation Personnel: Submit evidence prior to work that persons who are to perform work herein have appropriate training or experience in PV system installation with similar modules and associated equipment. Install shall have certification from Photovoltaic module manufacturer and inverter manufacturer.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver and receive all PV system materials required for the work.

B. Prior to and during construction, provide secure storage on site for all PV system materials stored on site.

C. Store and handle to comply with manufacturer's directions, and as required to prevent damage to glass, PV materials, and system component electronics.

D. If stored in areas subjected to weather, cover PV panels and system component electronics to provide protection from weather, dirt, dust, corrosive substances, and physical damage.

E. Replace any scratched or damaged PV system materials or system components.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Rate equipment for continuous operation under the following site-specific conditions, unless otherwise indicated:
   1. Ambient Temperature: -15 deg C to 30 deg C.
   2. Relative humidity: Up to 100% non-condensing.

1.9 CLOSEOUT SUBMITTALS

A. Refer to DDC General Conditions

B. Operation and Maintenance Data: For PV modules to include in operation and maintenance manuals.

1.10 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of PV modules that fail in materials or workmanship within specified warranty period.

   1. Manufacturer's materials and workmanship warranties include the following:

      a. Faulty operation of PV modules.

   2. Warranty Period: Two years from date of Substantial Completion.

B. Manufacturer's Special Minimum Power Output Warranty: Manufacturer agrees to repair or replace components of PV modules that fail to exhibit the minimum power output within specified warranty period. Special warranty, applying to modules only, applies to materials only, on a prorated basis, for period specified.

   1. Manufacturer's minimum power output warranties include, the following warranty periods, from date of Substantial Completion:

      a. Specified minimum power output to 80 percent or more, for a period of 25 years.

1.11 SYSTEM PERFORMANCE REQUIREMENTS

A. Product selection for mounting:

1. Support PV systems associated with new construction by structure using fixed mounted system as specified herein and in the contract documents.

1.12 COORDINATION

A. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Specification 075216 "SBS Modified Bitumen Roofing System"

B. Coordinate layout and installation of PV System and components with other construction, including conduit, piping, equipment, roof drains, roof penetrations, antennas, and adjacent obstructions and surfaces. Maintain required clearances for workspace and equipment access.

C. Coordinate size and locations of mounting bases and casting of anchor-bolt inserts into concrete slabs, beams and columns.

D. Coordinate location of ballast support rails with existing structural framing.

E. Coordinate system with structural capability of roof structure. Coordination of loading from PV mounting system with design of main building is responsibility of Structural Engineer licensed in the State of New York.

F. Coordinate Roof Slope: Project-specific application will define PV system slope; however, mounting system requires coordination with roof slope for water drainage.

G. Coordination with roof membrane: Contractor shall coordinate type, thickness, and construction of roof membrane. PV System shall be able to function with installed roof membrane and not create leaks in roof. Contractor shall ensure that PV system does not cause roof to leak.

H. Provide system technical coordination for utility interconnection agreements. Provide grid connection as required, and in location as designated by local utility company.

I. Coordinate electrical voltage, phase, and hertz characteristics of PV system’s output with electrical characteristics of local utility company. Provide isolation transformers where indicated to step-down PV system output voltage to match local utility company’s voltage.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

A. Solar Panel Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. SunPower Corp
2. LG Electronics USA, INC
3. Suntech
4. Panasonic

5. Canadian Solar
6. Kyocera
7. Or approved equal.

B. Inverter Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following:

1. SMA America
2. SolarEdge Technologies, Inc
3. Schneider Electric Solar
4. Or approved equal

C. Combiner/Collector Box Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following:

1. SMA America
2. Blue Oak PV Products
3. Solar BOS
4. Or approved equal

2.2 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Hazardous Locations: FM Global approved for NFPA 70, Class 1, Division 2, Group C and Group D.

C. Seismic Qualification Certificates: For PV system accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

D. Solar Panel Electrical Termination: Potted block with factory installed positive and negative Multi-contact connectors as indicated on the contract drawings.

E. All cell interconnections on all types of PVs shall be made with the encapsulation.

F. Diodes: All solar panels shall be supplied with factory installed by-pass diodes. All DC circuits shall be supplied with field installed blocking diodes.

G. Three Phase Central Inverters: Match inverter frequency to local utility company frequency. Match inverter output voltage to local utility company utilization voltage. Provide isolation transformers where indicated to match PV system voltage to local utility voltage.

H. Provide AC disconnect switches to building power distribution system.

I. Combiner/Collector Boxes: DC combiner boxes and AC collector boxes shall be UL 1741 listed with required number of inputs and outputs for PV system configuration.

J. Isolation Transformer: Provide isolation transformer and associated disconnect switch between AC collector boxes and building power distribution system connection.

K. Exposed Conduit: All exterior exposed conduits shall be galvanized rigid steel (RMC) with threaded fittings.

L. Disconnect Switches: Provide AC and DC disconnect switches as required.

M. Multi-Connect Connectors: Provide connectors as recommended by manufacturer. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. MC
2. Tyco
3. Huber+Suhner
4. Or approved equal.

N. PV system Output: Where grid tied PV systems are acceptable to local utility company, PV system's inverters shall match local utility company exactly in voltage, phase, and frequency to allow it to be grid-tied in accordance with local utility company's safety and power quality requirements. Provide revenue metering at utility meter to account for PV system generated power being registered on utility meter for power generation credit based upon time of day and PV power generated. Coordinate all requirements with local utility company. Refer to Specification 260500 "Common Work Results for Electrical, Communications and Electronic Safety" for additional metering requirements. Provide safety disconnect switches to disconnect PV system from local utility line in event of utility failure. Provide energy monitoring system with PV inverter. System output display shall provide information regarding voltage, amperage, frequency and total power generated (in kwh). Further display/information requirements shall be determined by the Commissioner.

2.3 PV CAPACITIES AND CHARACTERISTICS

A. Minimum Electrical Characteristics:

1. Rated Open-Circuit Voltage: 85.6 V dc.
2. Maximum System Voltage: 600 V dc.
3. Maximum Power at Voltage (Vpm): 72.9 V dc.
4. Short-Circuit Temperature Coefficient: 3.5 mA/deg C.
5. Rated Short-Circuit Current (Isc): 6.43A.
6. Maximum System: 600 V dc.
7. Rated Operation Current (Imp): 5.97A.
8. Maximum Power at STC (Pmax): 435 watts.

B. Additional Electrical Characteristics:

1. PTC Rating: 435 watts.
2. Peak Power per Unit Area: 1000 watts.
3. Tolerance of Pmax: +/-5 percent.
4. Minimum Peak Power: 435 watts.
5. Series Fuse Rating: 20A.
6. Module Efficiency: 20 percent.
7. Temperature Cycling Range: -40 deg F to +185deg F.
8. Humidity, Freeze, Damp Heat Condition: percent RH.
9. Wind Loading or Surface Pressure: 50 lbf/sq. ft..
10. Maximum Distortion Angle: .
11. Hailstone Impact Withstand: 1 inch diameter at 51 mph wind velocity.
12. Series Fuse Rating: 20A.

C. Normal Operating Temperature Characteristics (NOTC):

1. Temperature at Nominal Operating Cell Temperature: 45 deg C +/- 2 deg C.
2. Temperature Coefficient (NOTC Nominal Power): -0.36% / deg C.
3. Temperature Coefficient (NOTC Open-Circuit Voltage): -0.26% / deg C.
4. Temperature Coefficient (NOTC Short Circuit Current): -0.02% / deg C.

2.4 PV SYSTEMS DESCRIPTION

A. Interactive PV System: Collectors connected in parallel to the electrical utility; and capable of providing power for Project and supplying power to a distributed network.

1. A 1694-module array to generate a total nominal rated output of 750 kW.

2. System Components:

a. PV modules.
b. Array frame.
c. Utility-interactive inverter.
d. Overcurrent protection, disconnect, and rapid shutdown devices.
e. Mounting structure.
f. Utility meter.
g. Monitoring Software with PV generation performance tracking.

2.5 MANUFACTURED PV UNITS

A. Cell Materials: Amorphous silicon (a-Si).

B. Cell Materials: Micromorphous silicon (a-Si+uc-Si).

C. Cell Materials: Copper indium (di)selenide (CIS).

D. Cell Materials: Copper indium gallium (di)selenide (CIGS).

E. Cell Materials: Cadmium telluride (CdTe).

F. Module Construction:

1. Nominal Size: 41.16 inches wide by 81.36 inches long.
2. Weight: 56 lb.

G. Insulating Substrate Film: Flexible.

H. Conducting Substrate Film: Flexible.

I. Encapsulant: Ethyl vinyl acetate.

J. Front Panel: Fully tempered glass.

K. Backing Material: Tempered glass.

L. Bypass Diode Protection: Internal.

M. Junction Box:

1. Size: 1.56 by 3.96 by 0.52 inch.
2. Fully potted, vandal resistant.
3. IP Code: IP65 or IP66.
4. Flammability Test: UL 1703.

N. Output Cabling:

1. 0.158 inch.
2. Quick, multiconnect, polarized connectors.
3. Two-Conductor Harness: No traditional return wire is needed from the end of a row back to the source combiner.

O. Series Fuse Rating: as specified.

2.6 PV MODULE FRAMING

A. PV laminates mounted in anodized extruded-aluminum frames.

1. Entire assembly UL listed for electrical and fire safety, Class A, according to UL 1703, and complying with IEC 61215.
2. Frame strength exceeding requirements of certifying agencies in subparagraph above.
3. Finish: Anodized aluminum.

a. Alloy and temper recommended by framing manufacturer for strength, corrosion resistance, and application of required finish.
b. Color: As indicated by manufacturer's designations.

2.7 PV ARRAY CONSTRUCTION

A. Framing:

1. Material: Extruded aluminum or Galvanized steel.
2. Maximum System Weight: Less than 4 lb/sq. ft.
3. Minimum Distance to Connectors: 2” inches.
4. Raceway Cover Plates: Plastic or Galvanized steel.

B. Flat-Roof Mounting:

1. No roof penetrations.
2. Self-ballasting.
3. Wind-tunnel tested to 110-mph wind.
4. Service Life: 25 years.
5. Freestanding system.

2.8 INVERTER

A. DC-AC Inverters: Inverters shall provide output waveform to match building power distribution system when grid tied to local utility. Inverter output shall comply with all local utility company requirements. Inverters shall be compatible with its associated PV system array output and utility input as indicated on Construction Drawings. Inverters shall be capable of complete automatic unattended operation including start-up, synchronization, and disconnect, and operating in parallel with other inverters and utility. Voltage and frequency tolerances shall be plus/minus 10 percent. The inverters shall be capable of shutting down without damage when PV array output is outside tolerance parameters of inverter. Manufacturer shall connect array to ground in inverter in accordance with array requirements, as indicated on Construction Drawings. Inverters shall be at minimum listed to UL1741 and compliant with IEEE 929 and IEEE 1547-2018. Inverters shall be at minimum 95.5 percent efficient.

B. Inverter Type: String.

C. Control Type: Maximum power point tracker control.

D. Inverter Electrical Characteristics:

1. Maximum Recommended PV Input Power: 50 kilowatts.
2. Maximum Open-Circuit Voltage: 600V dc.
3. PV Start Voltage: 188V dc.
4. MPPT Voltage Range: 330-800V dc
5. Maximum Input Current: 120A.
6. Number of String Inputs: 2 per MPPT.
7. Number of Independent MPPT Circuits: 6.
8. Nominal Output Voltage:600V dc.
9. CEC Rated Power: 50 kilowatts.
10. Nominal Output Voltage: 480V ac.
11. Maximum Output Current: 50A.
12. Peak Efficiency: 97.5 percent.

13. CEC Weighted Efficiency: 97.5 percent.
14. DC/AC Terminal Range (AWG): 12AWG to 10 AWG (DC) / 4WG to 4/0 AWG CU/AL (AC).
15. Communications Interface: RS 485, RS 232 or Ethernet.
16. Utility Interface: Utility-interactive inverter.

E. Operating Conditions:

1. Operating Ambient Temperatures: Minus 13 to plus 140 deg F.
2. Storage Temperature: Minus 40 to plus 158 deg F.
3. Relative Humidity: Zero to 100 percent, noncondensing.

F. Charge controllers shall have the following:

1. Overcurrent protection.
2. Generator input breaker box.
3. Automatic transfer relay.
4. Digital display.
5. Transformer.
6. Disconnect switch.
7. Shunt controller.
8. Shunt regulator.
9. Surge overload protection.

G. Enclosure:

1. NEMA 250, Type 4X.
2. Enclosure Material: Galvanized steel.
3. Cooling Methods:

    a. Fan convection cooling.
    b. Passive cooling.

4. Protective Functions:

    a. AC over/undervoltage.
    b. AC over/underfrequency.
    c. Ground overcurrent.
    d. Overtemperature.
    e. AC and dc overcurrent.
    f. DC overvoltage.
    g. Anti-Islanding protection.

H. Disconnects: Rated for system voltage and conductor.

I. Regulatory Approvals:

1. IEEE 1547.1: Standard for Conformance Test Procedures for Equipment Interconnecting Distributed Energy Resources with Electric Power Systems and Associated Interfaces.

2. IEEE 1547.3: Guide for Monitoring, Information Exchange, and Control of Distributed Resources Interconnected with Electric Power Systems.
3. UL 1741: Standard for Inverters, Converters, Controllers and Interconnection System Equipment for Use With Distributed Energy Resources.
4. UL 1741 SA: Supplement A to UL 1741 – Specifications for Grid Support Utility Interactive Inverters.
5. UL 1699B: Standard for Photovoltaic (PV) DC Arc-Fault Circuit Protection.

J. Characteristics:

1. Inverter Dimensions: 25 inches width, 23 inches Deep, 29 inches height.
2. Inverter Weight: 185 lb.

2.9 SYSTEM OVERCURRENT PROTECTION

A. Fuses: 50A.

2.10 MOUNTING STRUCTURES

A. Roof Mount: Extruded aluminum, four rails, tilt legs, and roof standoffs.

2.11 ACCESSORIES

A. DC Combiner Box: UL listed components and suitable for the environment in which installed with provisions for 600Vdc fuses of appropriate size for each source circuit in accordance with NFPA 70 guidelines with electrical characteristics, as indicated on Construction Drawings.

B. Devices and enclosures shall be rated for application. Exterior installations of components shall have minimum steel NEMA 3R rating for exterior wet locations. Enclose interior installations in minimum steel NEMA 1 enclosures.

C. Fabrication of supports for system components (excluding PV module support) shall be heavy-duty, self supporting galvanized steel channel provided with captive clips for panels, boxed and conduits.

D. Cabling: All conductors, cabling, and associated connectors shall be UL listed for environmental conditions in which they will operate.

2.12 DATA ACQUISITION SYSTEM

A. Provide all data acquisition system (DAS) equipment required for complete and working DAS. DAS equipment shall include all of sensors and wiring required to measure and record parameters indicated herein.

B. All equipment supplied for DAS shall have capability of operating at voltage and frequency available at installation location.

C. Integrate DAS with building automation system (BAS). Instruments and measuring equipment shall report directly to BAS. BAS shall provide output to lobby display. When BAS is not available at site, provide computer for DAS of latest available technology and operating system, and with ability to share data collected by DAS system with remote computer as described in this Section, and to future BAS via RS-485/Ethernet connection.

D. The DAS shall perform the following tasks:
1. Sample listed parameters data at least 20 times per minute, and log the average values to data storage area in maximum of 15 minute intervals.
2. Retain logged data upon loss of power.
3. Start logging data and reestablish network connections automatically when power is restored.
4. Generate daily and monthly files as defined herein.
5. Store logged data for a minimum of five years.

E. The following parameters shall be monitored.
1. Ambient temperature (C) shall be measured with stainless steel sheathed temperature sensor module. House temperature sensor in steel shielded enclosure.
2. Measure wind Speed (m/s) with approved anemometer.
3. Measure plane of array (rooftop) irradiance (W/m^2) by approved pyranometer.
4. Measure module temperature with surface mounted temperature sensor (mounted on rear of module) adhered with high temperature epoxy.
5. Instantaneous voltage (V), amps (A), energy (kW), and accumulated (kWh) power output for the PV system. Provide voltage and amp meters for this task.

F. Daily file shall be generated by DAS that includes, at minimum, 15-minute averaged data over entire day for each of parameters listed above in tabular format.

G. Monthly file shall be generated by DAS that include, the following parameters in tabular format presented for each day in month.
1. Daily total irradiance (kWh/m^2)
2. Total daily AC power produced by PV system (kWh)
3. Peak AC power output for PV system (kW)
4. Average temperature for day (°C)
5. Maximum temperature for day (°C)
6. Maximum module temperature for day (°C)
7. Minimum temperature for day (°C)
8. Average wind speed for day (m/s)
9. Total calculated CO_2 abated by use of PV system.

H. DAS system shall have ability to broadcast instantaneous data onto TCP/IP network in xlm format or similar approved internet based communications protocol such that it can be read by standard web browser.

I. When there is no BAS, provide and program computer to display in a location designated by Commissioner, real time data that is broadcast by DAS equipment.

J. Display shall be updated at minimum of 12 times per minute, and it shall allow for flexibility in content, such that content and appearance may be changed at any time.

K. Real time display shall include in graphical format, at minimum, the following:
1. Instantaneous irradiance as measured by pyranometer.
2. Instantaneous ambient temperature.
3. Instantaneous wind speed.
4. Combined instantaneous AC power being produced by all PV systems.
5. Total daily electrical energy harvest produced by all PV system as running sum.
6. Total year to date electrical energy harvest produced by all PV systems as running sum.
7. Total lifetime electrical energy harvest produced by all PV systems as running sum.
8. Aggregate amount of CO_2 abated by use by all PV systems as running total.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

B. At the start of construction, the contractor or subcontractor performing the work muss apply for the photovoltaic rebate under the NY-Sun Residential/Nonresidential Incentive Program – PON 2112 for the City of New York. Submit all needed paperwork to NYSERDA on behalf of the City of New York with the incentive to be received by the City of New York.

C. Field Test Reports: Submit written test reports; include the following:
1. Test procedures used.
2. Final Test results. Include all test results and demonstrate their comparison to and compliance with requirements. Provide test results on uplift of the pedestals supporting PV systems.
3. Report shall include results of all failed tests and corrective action taken to achieve test results that comply with requirements.

D. Operation and Maintenance Manuals:
1. Each item of equipment and each system: Include description of unit or system, and component parts. Give function, normal operating characteristics, and limiting conditions. Include commercial number of replaceable parts.
2. Provide approved engineering submittals. Include equipment sizing calculations.
3. Provide manufacturer's installation wiring diagrams and schematic diagrams.
4. Include as-installed color coded wiring diagrams and schematic diagrams with wire functions labeled on the diagrams.
5. Operating procedures: Include routine normal operating instructions and sequences. Include regulation, control, stopping, shut-down, and emergency instruction. Include summer, winter, and any special operating instructions. Include the preferred mounting angle of solar panels for summer and winter optimum performance.
6. Maintenance requirements: Include required materials, routine procedures and guide for cleaning, trouble-shooting, and repairing solar panels including disassembly, repair and reassembly instructions, alignment, adjusting, balancing, and checking instructions. Include procedures for testing printed circuit boards, cells, and modules.
7. Include manufacturer's printed installation manuals, operation and maintenance instructions, and repair guides.
8. Provide manufacturer's control diagram and repair guide for each piece of equipment.

9. Provide original manufacturer's parts list, illustration, assembly drawings, repair guide, and diagrams required for maintenance.
10. Provide list of original manufacturer's spare parts, current prices, and recommended quantities to be maintained in storage.
11. Provide a screen shot of each display page of DAS output.
12. For PV systems with solar panels installed in a manner that limits maintenance access to less than two sides of each solar panel, provide preferred method for preventing undesirable vegetation around solar panels and for protecting the solar panels while removing vegetation around solar panels.

3.2 EXAMINATION

A. Examine substrate areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Do not begin installation until mounting surfaces have been properly prepared.

C. If preparation of mounting surfaces is the responsibility of another installer, notify commissioner of unsatisfactory preparation before proceeding.

D. Examine modules and array frame before installation. Reject modules and arrays that are wet, moisture damaged, or mold damaged.

E. Examine roofs, supports, and supporting structures for suitable conditions where PV system will be installed.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Comply with NECA 1.

B. Coordinate layout and installation of PV panels with roof support assembly and other construction.

C. Support PV panel assemblies independent of supports for other elements such as roof and support assemblies, enclosures, vents, pipes, and conduits. Support assembly to prevent twisting from eccentric loading.

D. Install PV inverters and system control in locations indicated on Drawings.

E. Install weather seal fittings and flanges where PV panel assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 079200 "Joint Sealants" for materials and application.

F. Seismic Restraints: Comply with requirements for seismic-restraint according to IEEE 344 to withstand seismic forces as per ASCE 7-10 with the following parameters:
   1. Building Occupancy Category: II

2. Seismic Design Category: B
3. Site Class: D (assumed)
4. Risk Level: II.
5. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
6. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

G. Wiring Method: Install cables in raceways.

H. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

3.4 CONNECTIONS

A. Coordinate PV panel cabling to equipment enclosures to ensure proper connections.

B. Coordinate installation of utility-interactive meter with utility.

C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

D. Make splices, terminations, and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.

3.5 IDENTIFICATION

A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Specification 260553 Identification for Electrical System.

B. PV system signs shall be printed in English and in local language.

C. Appropriately identify and label PV system equipment as indicated in NFPA 70 with permanent, self-adhesive, engraved red stock with white core plastic with minimum thickness 1.5mm. Lettering shall be standard engravers letter style using standard size appropriate for application in accordance with NFPA 70.

D. Label DC combiners, AC collectors, DC-AC inverters, DAS enclosures, and PV system disconnects. Use permanent, self-adhesive, printed labels identifying system component pertaining to PV system, and provided in both English. Lettering shall be standard engravers letter style using standard size appropriate for application in accordance with NFPA 70.

E. Provide warning signs for PV system startup and restart for inverters with DC disconnect switch. Refer to Article on “Start-Up Services.”

F. Provide warning signs for PV system at DC disconnect switches indicating that voltage is present on DC solar panel portion of circuit during daylight hours. Provide warning signs for PV system at AC disconnect switches indicating that voltage is present on local electrical utility portion of circuit when utility power is available.

G. Operating Instructions: Printed basic instructions for PV system components, including operation, disconnection, and emergency procedures.

H. Label DC system components with material described herein for operating DC current (Imax), system operating DC Voltages (Vmax), maximum string DC voltage (Voc), and maximum system DC current (Isc).

3.6 FIELD QUALITY CONTROL

A. Testing: After installing PV System components and after building electrical system has been energized, demonstrate product capability and compliance with requirements.

B. Contractor shall be present for complete system review and startup acceptance test with the Commissioner. Contractor shall be prepared at any time during this process to provide access to all portions of installation, and shall remedy any portion of system that is not in compliance with this specification, that does not perform to manufacturer's operating specifications, or that fails to operate due to poor workmanship.

C. In addition to the following test sequence, Contractor shall perform all tests required by manufacturer as outlined in inverter's installation and operator's manual.
   1. Ensure that inverter is switched off before proceeding.
   2. Test and record AC line voltage at the inverter to ensure that it is within proper limits as stated by the manufacturer.
   3. Test that phase sequencing is correct, if applicable.
   4. Check continuity of all fuses.
   5. Check that DC open circuit voltage is within manufacturer's recommended range at DC disconnects.
   6. If DC voltage is correct, close inverter cover, close DC and AC disconnect switches, and turn on inverter.
   7. After Manufacturer's specified start-up time, confirm that inverter is operating by recording DC operating voltage and currents, AC Phase voltages and phase currents and inverter power.
   8. Close all open equipment enclosures.
   9. Look and listen for, find the cause of, and remedy anything unusual from the PV array or PV system components.

D. Additional testing shall demonstrate proper functional operation of control and protective features under normal and abnormal conditions. In some cases devices external to inverters can handle one or more of these features:
   1. Confirm wake-up and sleep operations of PV system.
   2. Confirm inverter sleep operation during loss of building power and loss of array.

E. Provide photo record of installation and major components, including solar panels, inverters, transformers, combiners, collectors, and all display screens shall be made. Include photos

showing connections within all installed enclosures. Provide electronic copies of photo record on compact disc and hard copy of the photo record (with labels for each photo) in Operation and Maintenance Manual identified in Submittals article.

3.7 PRE-OPERATIONAL APPROVALS

A. For sites served by local electric utility company, do not connect PV system to building electrical power distribution system for testing purposes without written permission from local electric utility company. Once entire PV system is correctly installed and properly wired, and preliminary field-testing, system review and start-up test are successfully completed, Contractor shall contact utility to schedule and be present for any inspections required for PV system approval. Written notice of approval from local electric utility company must be received before system is permanently paralleled with their system. Contractor shall obtain this approval from local electric utility company, and include a copy in the Operation and Maintenance Manual.

3.8 CLEANING

A. Remove all excess sealants, fillings, grease, tape residue, dust and debris from PV system components.

B. Protect work from damage by other trades.

C. Ensure site is clean and secure, in workman like condition, during and at completion of the project.

3.9 STARTUP SERVICES

A. Perform testing as prescribed in this specification and in accordance with manufacturer's recommendations.

B. For PV system incorporating inverters with ON switch, all PV system disconnects are in CLOSED position prior to turning on inverter. For PV system incorporating inverters that do not incorporate an ON switch, PV system will be turned on when all PV system disconnects are in CLOSED position.

C. Ensure there is written permission from local utility company for interconnection of PV system with utility grid. Local utility company may require that representative of utility be on-site during initial interconnection; Contractor shall accommodate this requirement, if stated by utility.

D. Startup for the Data Acquisition System (DAS). Perform the following tests before system is deemed complete.
   1. Confirm that DAS reads zero for all measurements when respective instruments are turned off.

2. Verify and record that all measurements are reading in proper range when respective instruments are turned on. Include copy of test results in Operation and Maintenance manual described herein.
3. Verify that all files created by DAS are in proper format and have proper values.
4. Verify that real time data is being displayed properly on lobby display.
5. Confirm that all links to real time and archived data are working properly.
6. Confirm that data files are retained upon loss of power.
7. Confirm that daily, monthly, and total since system installation files are being generated properly.
8. Confirm that UPS shuts down computer upon extended power outages.
9. Confirm that data acquisition system starts automatically and re-established network connections upon restoration of power.

3.10 FIELD TESTING

A. Engage electrically qualified agent to inspect, field test, and document performance of components and equipment after installation. Prepare written test results in report. Report shall include documentation of all potential shading obstructions on solar panels.

B. All test instruments shall be identified in Report and listed by manufacturer, model number, serial number, date of calibration, and calibration authority. All test instruments shall have been calibrated within past year. Test instruments shall have attached calibration sticker that is traceable to NIST.

C. Obtain copy of local utility company's agreement to connect PV system to building power distribution system prior to all testing.

D. Contractor shall provide written procedures document. Procedure entries shall include: Date; time; person taking data; recorded value of data; indication if recorded value is out of range of system and/or equipment tolerance. Each page of the procedures shall have: test name; equipment tested; location; date; time; person performing test; model number of equipment; serial number of equipment; manufacturer; tolerance ranges of equipment tested for reference. Approach to numbering solar panels in PV array for testing shall be identified.

E. Witness startup of PV system. Commissioner shall witness startup.

F. Keep Log and include it as appendix to Report. Log shall include: issue description; log tracking number; date; time; person investing issue; action taken; person taking action; date of closure of issue. Include copy of Commissioning Issues Log in written procedures to Contractor.

G. Perform the following field tests and inspections as follows for test report:
   1. Test insulation resistance and continuity for each DC circuits, AC feeders, grounding including ground fault protection, and control circuits. Disconnect all sensitive electronic equipment prior to testing. Visually and mechanically inspect all cabling, connections, and conduits. Verify color coding of conductors per NFPA 70. Verify proper torque of termination connections with calibrated torque wrench.
   2. Test ground fault protection of PV system.

3. Test output of each solar panel. Identify which panels are shaded at any point of day between 9 AM and 4 PM.
4. Verify proper voltage and current to each input to combiner boxes, inverters, AC collector boxes, and isolation transformer.
5. Measure voltage drop on all DC circuits and AC feeders. Verify that voltage drop between solar panels and inverters does not exceed 3 percent on each DC circuit. Verify that voltage drop between inverters and connection to building power distribution system does not exceed 1 percent on each AC feeder.
6. Verify operation of all disconnect switches and proper sizing of all overcurrent protection devices in accordance with Division 26 Sections on enclosed switches and circuit breakers and on panelboards.
7. Verify that displays accurately represent output of PV system. Independently measure energy produced by PV system, and compare data to log data of DAS. Track data and compare data to log data for minimum of one month.
8. Verify solar panel output under Normal Operating Cell Temperature (NOCT). Silicon solar panels shall exhibit power output of not less than 80 percent of the rated power specified at time of delivery. Thin film solar panels shall exhibit power output of not less than 90 percent of rated power specified at time of delivery. NOCT shall be 46 to 49 deg C, air mass shall be 1.5, and wind speed shall be between 1 and 10 m/s during testing. DC voltage and current readings shall be recorded every 6 minutes over continuous 6 hour period when irradiance is 5 W/m^2 or greater. Record data for 30 days.

H. Contractor shall remove and replace malfunctioning equipment. Retest PV system as specified above.

3.11 INSTRUCTION

A. Provide 6 hours on-site instruction session for PV system components and Data Acquisition System (DAS). Provide Instructor with at least 3 years experience in installation and operation of PV systems used in project. Session shall review system, including review of wiring diagrams, equipment list.

END OF SECTION 263100

SECTION 26 41 13 - LIGHTNING PROTECTION FOR STRUCTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section includes lightning protection system for ordinary structures.

B. Section includes lightning protection system for the following:

1. Ordinary structures.
2. Rooftop modular equipment enclosures
3. Photovoltaic Panels and System Components

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. LPI: Lightning Protection Institute.

C. NRTL: National recognized testing laboratory.

1.4 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures” for all submittals.

B. Product Data: For each type of product

C. Shop Drawings:

1. Include layouts of the lightning protection system, with details of the components to be used in the installation.
2. Include raceway locations needed for the installation of conductors.
3. Details of air terminals, ground rods, ground rings, conductor supports, splices, and terminations, including concealment requirements.
4. Include roof attachment details, coordinated with roof installation.
5. Calculations required by NFPA 780 for bonding of metal bodies.

D. Coordination Drawings: Lightning protection system Shop Drawings, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Lightning protection cabling attachments to roofing systems and accessories.
2. Lightning protection strike termination device attachment to roofing systems, coordinated with the roofing system manufacturer.
3. Lightning protection system components penetrating roofing and moisture protection systems and system components, coordinated with the roofing system manufacturer.

E. Product Certificates: For each type of roof adhesive for attaching the roof-mounted air terminal assemblies, approved by the roofing-material manufacturer.

F. Written statement, signed by Contractor, that roof adhesive for air terminals is approved by manufacturers of both the terminal assembly and the single-ply membrane roofing material.

G. Field inspection reports indicating compliance with specified requirements.

H. Maintenance Data: For lightning protection system to include in maintenance manuals.

1. In addition to items specified in DDC General Conditions, include the following:

a. Dimensioned site plan showing dimensioned route of the ground loop conductor and the ground rod locations. Comply with requirements of Section 017839 "Project Record Documents."
b. A system testing and inspection record, listing the results of inspections and ground resistance tests, as recommended by NFPA 780, Annex D.

I. Completion Certificate:

1. UL Master Label Certificate.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

1.6 COORDINATION

A. Coordinate installation of lightning protection with installation of other building systems and components, including electrical wiring, supporting structures and building materials, metal bodies requiring bonding to lightning protection components, and building finishes.

B. Coordinate installation of air terminals attached to roof systems with roofing manufacturer and Installer.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Heary Bros. Lightning Protection Co. Inc.
2. Independent Protection Co.
3. Thompson Lightning Protection, Inc.
4. Or approved equal.

2.2 LIGHTNING PROTECTION SYSTEM COMPONENTS

A. Comply with UL 96.

B. Terminals: Nickel plated, solid copper.

1. Generally 18 inch high, 1/2 diameter.
2. On Flat Portion of Roof: 48 inch high, 3/4 inch diameter.
3. Single-Membrane, Roof-Mounting Air Terminals: Designed for single-membrane roof materials.

C. Stack-Mounting Air Terminals: Stainless steel or Solid copper.

D. Ground Rods, Ground Loop Conductors, and Concrete-Encased Electrodes: Comply with Division 26 05 26 "Grounding and Bonding for Electrical Systems" and with standards referenced in this Section.

E. Air Terminal Fasteners: Two bolts type for parapet mounting, stamped plate, adhesive mounting type for flat roof areas.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Install lightning protection components and systems according to UL 96A and NFPA 780 for Class II buildings.

B. Air Terminals: Install air terminals spaced 20 feet apart maximum around outside perimeter of roof and 2500 square feet apart maximum through center of flat portion of roof. Support all

terminals over 24 inches with suitable brace located at a point not less than 1/2 height of terminal.

1. Coordinate the installation of air terminal on roof to provide protection to the photovoltaic array, do not install terminals on PV panels, PV support structure or PV equipment.
2. Coordinate the installation of air terminal on roof to provide protection to the mechanical equipment.

C. Install conductors with direct paths from air terminals to ground connections. Avoid sharp bends and narrow loops.

D. Conceal the following conductors:

1. System conductors.
2. Down conductors.
3. Interior conductors.
4. Conductors within normal view from exterior locations at grade within 200 feet of building.
5. Notify Commissioner at least 48 hours in advance of inspection before concealing lightning protection components.

E. Cable Connections: Use approved exothermic-welded connections for all conductor splices and connections between conductors and other components, except those above single-ply membrane roofing.

F. Air Terminals on Single-Ply Membrane Roofing: Comply with adhesive manufacturer's written instructions.

G. Roof Penetration: Provide with pitch pocket.

H. Bond metals of conductance subject to direct lightning stroke to system using same size cable as roof conductors.

I. Bond extremities of vertical metal bodies exceeding 60 feet in length to lightning protection components.

J. A counterpoise installation based on requirements in Division 26 05 26 Section "Grounding and Bonding for Electrical Systems" may be used as a ground loop required by NFPA 780, provided counterpoise conductor meets or exceeds minimum requirements in NFPA 780.

1. Bond ground terminals to counterpoise conductor.
2. Bond grounded metal bodies on building within 12 feet of ground to counterpoise conductor.
3. Bond grounded metal bodies on building within 12 feet of roof to counterpoise conductor.

K. Provide common grounding bond between lightning protection system and electric and telephone service ground and other underground metallic piping systems that enter the building.

L. Bond lightning protection components with intermediate-level interconnection loop conductors to grounded metal bodies of building at 60-foot intervals.

3.3 CORROSION PROTECTION

A. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.

B. Use conductors with protective coatings where conditions would cause deterioration or corrosion of conductors.

3.4 FIELD QUALITY CONTROL

A. UL Inspection: Provide inspections as required to obtain a UL Master Label for system.

END OF SECTION 26 41 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 51 00 - INTERIOR LIGHTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   1. The Contract Drawings
   2. The Specifications
   3. The general conditions,
   4. The Addendum
   5. The Contract [City of New York Standard Construction Contract].

B. Section 262726 "Wiring Devices" for manual wall-box dimmers.

1.2 SUMMARY

A. Section Includes:

   1. Interior lighting fixtures, lamps, and ballasts.
   2. Emergency lighting units.
   3. Exit signs.
   4. Lighting fixture supports.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: For each type of lighting fixture, arranged in order of fixture designation. Include data on features, accessories, and finishes.

C. Shop Drawings: Show details of nonstandard or custom lighting fixtures. Indicate dimensions, weights, methods of field assembly, components, features, and accessories. Product Certificates: For each type of ballast for bi-level and dimmer-controlled fixtures, from manufacturer.

D. Coordination Drawings: Reflected ceiling plan(s) and other details, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:

   a. Air outlets and inlets.
   b. Smoke and fire detectors.
   c. Occupancy sensors.

d. Access panels.

E. Field quality-control reports.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NFPA 70.

1.5 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace lighting that fail in materials or workmanship within specified warranty period.

1. Warranty Period: 5 years from date of Substantial Completion for luminaire.

2. Warranty Period: 1 years from date of Substantial Completion for lamp.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR LIGHTING FIXTURES AND COMPONENTS

A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.

B. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA LE 5 and NEMA LE 5A as applicable.

C. Metal Parts: Free of burrs and sharp corners and edges.

D. Sheet Metal Components: Steel unless otherwise indicated. Form and support to prevent warping and sagging.

E. Doors, Frames, and Other Internal Access: Smooth operating, free of light leakage under operating conditions, and designed to permit relamping without use of tools. Designed to prevent doors, frames, lenses, diffusers, and other components from falling accidentally during relamping and when secured in operating position.

2.2 LED LIGHTING

A. General Requirements for LED lighting: Comply with UL recognize components and RoHS compliant. Indoor luminaires shall be CULus listed for 25°C ambient environments. All LED luminaires furnished complete with LEDs and power supplies shall be UL listed.

B. All LED systems (light modules, power supplies, connectors, control interfaces, etc) shall be UL listed

C. All LED Luminaire manufacturers shall provide electrical and photometric data performed in accordance with IESNA LM-79 Approved Method: Electrical Photometric Measurements of Solid-State Lighting Products.

D. Published LED life ratings shall be based on the point at which LED sources reach L70 lumen maintenance and tested in accordance with IESNA LM-80 Approved method: Testing Lumen Maintenance of LED Light Sources.

E. All LED light sources shall have a CRI of 80 or greater with R9 greater than 0.

F. LED power supplies shall operate LEDs within the current limit specifications of the manufacturer

G. LED power supply shall have a Class A sound rating.

2.3 EXIT SIGNS

A. General Requirements for Exit Signs: Comply with UL 924; for sign colors, visibility, luminance, and lettering size, comply with regulations of The City of New York and New York City Department of Buildings.

B. Internally Lighted Signs:

1. Lamps for AC Operation: Fluorescent, two for each fixture, 20,000 hours of rated lamp life.
2. Self-Powered Exit Signs (Battery Type): Integral automatic charger in a self-contained power pack.

    a. Battery: Sealed, maintenance-free, nickel-cadmium type.
    b. Charger: Fully automatic, solid-state type with sealed transfer relay.
    c. Operation: Relay automatically energizes lamp from battery when circuit voltage drops to 80 percent of nominal voltage or below. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
    d. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
    e. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.

2.4 EMERGENCY LIGHTING UNITS

A. General Requirements for Emergency Lighting Units: Self-contained units complying with UL 924.

1. Battery: Sealed, maintenance-free, lead-acid type.
2. Charger: Fully automatic, solid-state type with sealed transfer relay.
3. Operation: Relay automatically turns lamp on when power-supply circuit voltage drops to 80 percent of nominal voltage or below. Lamp automatically disconnects from battery when voltage approaches deep-discharge level. When normal voltage is restored, relay disconnects lamps from battery, and battery is automatically recharged and floated on charger.
4. Test Push Button: Push-to-test type, in unit housing, simulates loss of normal power and demonstrates unit operability.
5. LED Indicator Light: Indicates normal power on. Normal glow indicates trickle charge; bright glow indicates charging at end of discharge cycle.
6. Wire Guard: Heavy-chrome-plated wire guard protects lamp heads or fixtures.
7. Integral Time-Delay Relay: Holds unit on for fixed interval of 15 minutes when power is restored after an outage.

2.5 LIGHTING FIXTURE SUPPORT COMPONENTS

A. Comply with Section 260529 "Hangers and Supports for Electrical Systems" for channel- and angle-iron supports and nonmetallic channel and angle supports.

B. Rod Hangers: 3/8-inch minimum diameter, cadmium-plated, threaded steel rod.

2.6 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide product by one of the following or approved equal:
1. Lithonia
2. Cooper
3. GE
4. Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 INSTALLATION

A. Lighting fixtures: Set level, plumb, and square with ceilings and walls. Install lamps in each fixture.

B. Comply with NFPA 70 for minimum fixture supports.

C. Suspended Lighting Fixture Support:

1. Pendants and Rods: Where longer than 48 inches, brace to limit swinging.
2. Stem-Mounted, Single-Unit Fixtures: Suspend with twin-stem hangers.
3. Continuous Rows: Use tubing or stem for wiring at one point and tubing or rod for suspension for each unit length of fixture chassis, including one at each end.

D. Adjust aimable lighting fixtures to provide required light intensities.

E. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.3 FIELD QUALITY CONTROL

A. Test for Emergency Lighting: Interrupt power supply to demonstrate proper operation. Verify transfer from normal power to battery and retransfer to normal.

B. Prepare a written report of tests, inspections, observations, and verifications indicating and interpreting results. If adjustments are made to lighting system, retest to demonstrate compliance with standards.

END OF SECTION 26 51 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 28 31 11 - DIGITAL, ADDRESSABLE FIRE-ALARM SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the project:
   1. The Contract Drawings
   2. The Specifications
   3. The general conditions,
   4. The Addendum
   5. The Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

   1. Fire Alarm Control panel.
   2. Manual Fire-Alarm Boxes.
   3. System smoke detectors.
   4. Heat Detectors.
   5. Duct smoke detectors.
   6. Notification Devices
   7. Addressable interface device.
   8. Digital Alarm Communicator Transmitter.

1.3 DEFINITIONS

A. Refer to DDC General Conditions

B. LED: Light-emitting diode

C. NFPA 70: National Electrical Code, 2011 Edition, as modified by the 2016 New York City Electrical Code

D. NFPA 72: National Fire Alarm and Signaling Code, 2010 Edition, as modified by Appendix Q of the City of New York Building Code.

E. NICET: National Institute for Certification in Engineering Technologies.

F. NRTL: Nationally recognized testing laboratory.

G. UL: Underwriters Laboratories.

1.4 SYSTEM DESCRIPTION

A. Non-coded, UL Listed addressable manual and automatic fire alarm system with automatic sensitivity control of smoke detectors; multiplexed signal transmission, dedicated to fire-alarm service only.

1.5 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Fire-alarm control unit and raceways shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

1.6 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. General Submittal Requirements:

1. Submittals shall be approved by Commissioner.
2. Shop Drawings shall be prepared by persons with the following qualifications:
   a. NICET-certified fire-alarm technician.
   b. Licensed or certified by city or New York.

C. Product Data: For each type of product indicated.

D. Shop Drawings: For fire-alarm system. Include plans, elevations, sections, details, and attachments to other work.

1. Comply with recommendations in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72 (National Fire Alarm and Signaling Code).
2. Include voltage drop calculations for notification appliance circuits.
3. Include battery-size calculations.
4. Include performance parameters and installation details for each detector, verifying that each detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
5. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts, drawn to scale and coordinating installation of duct smoke detectors and access to them. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators. Locate detectors according to manufacturer's written recommendations.
6. Include voice/alarm signaling-service equipment rack or console layout, grounding schematic, amplifier power calculation, and single-line connection diagram.

7. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits.

E. Engineering Services: For smoke and heat detectors indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer licensed in the State of New York responsible for their preparation.

1. Drawings showing the location of each smoke and heat detector, ratings of each, and installation details as needed to comply with listing conditions of the detector.
2. Design Calculations: Calculate requirements for selecting the spacing and sensitivity of detection, complying with NFPA 72.

F. Qualification Data: For qualified Installer.

G. Seismic Qualification Certificates: For fire-alarm control unit, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

H. Field quality-control reports.

I. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals. In addition to items specified, include the following:

1. Comply with the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
2. Provide "Record of Completion Documents" according to NFPA 72 article "Permanent Records" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter.
3. Record copy of site-specific software.
4. Provide "Maintenance, Inspection and Testing Records" according to NFPA 72 article of the same name and include the following:

    a. Frequency of testing of installed components.
    b. Frequency of inspection of installed components.
    c. Requirements and recommendations related to results of maintenance.
    d. Manufacturer's user training manuals.

5. Manufacturer's required maintenance related to system warranty requirements.
6. Abbreviated operating instructions for mounting at fire command center.

J. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On magnetic media or compact disk, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.

1.7 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Installer Qualifications: Installation shall be by personnel certified by NICET as fire-alarm technician.

C. Source Limitations for Fire-Alarm System and Components: Obtain fire-alarm system from single source from single manufacturer.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

1.8 SOFTWARE SERVICE AGREEMENT

A. Comply with UL 864.

B. Technical Support: Beginning with Substantial Completion, provide software support for 1.5 years.

C. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within one year from date of Substantial Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.

1. Provide 30 days' notice to Commissioner to allow scheduling and access to system and to allow Commissioner to upgrade computer equipment if necessary.

PART 2 - PRODUCTS

2.1 SYSTEMS OPERATIONAL DESCRIPTION

A. Fire-alarm signal initiation shall be by one or more of the following devices:

1. Duct smoke detectors.
2. Manual Stations.
3. Heat Detectors.
4. Verified automatic alarm operation of smoke detectors.

B. Fire-alarm signal shall initiate the following actions:

1. Annunciate, Display and Print out alarm at Fire Alarm Control Panel (FACP).
2. Activate the "FIRE" sign at the FACP.
3. Sound alarm over horns and activate strobes throughout the occupancy.
4. Indicate what kind of device has been activated and its precise location and name at the FACP.
5. Transmit an alarm signal to the remote alarm receiving station.
6. Shutdown Air Handling Units with capacities over 2,000 cfm and associated smoke dampers.
7. Transmit signal to BMS system.
8. Record events in the system memory.

C. System trouble signal initiation shall be by one or more of the following devices and actions:

1. Open circuits, shorts, and grounds in designated circuits.
2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
3. Loss of primary power at FACP.
4. Ground or a single break in FACP internal circuits.
5. Abnormal ac voltage at FACP.
6. Break in standby battery circuitry.
7. Failure of battery charging.
8. Abnormal position of any switch at FACP.

D. System Trouble and Supervisory Signal Actions: Initiate notification appliance and annunciate at FACP.

2.2 FIRE ALARM CONTROL PANEL

A. General Requirements for Fire Alarm Control Panel:

1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864 and listed and labeled by an NRTL.

    a. System software and programs shall be held in flash electrically erasable programmable read-only memory (EEPROM), retaining the information through failure of primary and secondary power supplies.
    b. Include a real-time clock for time annotation of events on the event recorder and printer.

2. Addressable initiation devices that communicate device identity and status.

    a. Smoke sensors shall additionally communicate sensitivity setting and allow for adjustment of sensitivity at FACP.
    b. Temperature sensors shall additionally test for and communicate the sensitivity range of the device.

3. Addressable control circuits for operation of mechanical equipment.

B. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.

1. Annunciator and Display: Liquid-crystal type, 3 lines of 80 characters, minimum.
2. Keypad: Arranged to permit entry and execution of programming, display, and control commands and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameters.

C. Circuits:

1. Initiating Device, Notification Appliance, and Signaling Line Circuits:

a. Initiating Device Circuits: NFPA 72 Class B.
b. Notification Appliance Circuits: Class B.
c. Signaling Line Circuits: Class B.
d. Install addressable devices on each signaling line circuit such that it does not exceed 80 percent of the capacity of a signaling line circuit.

2. Strip Printer at FACP.

D. Smoke-Alarm Verification:

1. Initiate audible and visible indication of an "alarm-verification" signal at FACP.
2. Activate an NRTL-listed and -approved "alarm-verification" sequence at FACP and detector.
3. Sound general alarm if the alarm is verified.
4. Cancel FACP indication and system reset if the alarm is not verified.

E. Notification Appliance Circuit: Operation shall sound in a:

1. Temporal 3 pattern.

F. Remote Smoke/Heat Detector Sensitivity Adjustment: Controls shall select specific addressable smoke/heat detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-adjustment schedule changes in system memory, and print out the final adjusted values on system printer.

a. Rate-of-rise temperature characteristic shall be selectable at FACP for 15 or 20 deg F per minute.
b. Fixed-temperature sensing shall be independent of rate-of-rise sensing and shall be settable at FACP to operate at 135 or 155 deg F.
c. Provide multiple levels of detection sensitivity for each sensor.

G. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station.

H. Alarm Signaling Service: Central emergency alarm system with redundant preamplifiers, amplifiers, and tone generators provided as a special module that is part of the FACP:

1. Indicated number of alarm channels for automatic, simultaneous transmission of different alarms to different zones. Amplifiers shall comply with UL 1711 and be listed by an NRTL.

    a. Allow the application of and evacuation signal to indicated number of zones.
    b. Programmable tone sequence selection.

2. Status Annunciator: Indicate the status of various audible zones.
3. Preamplifiers, amplifiers, and tone generators shall automatically transfer to backup units, on primary equipment failure.

I. Provide operators capability at the FACP through switches to:

1. Shutdown individual HVAC units.
2. Damper Control Switches and Status Indication for all Smoke and Combination Fire-Smoke Dampers.

J. Printout of Events: On receipt of signal, print alarm, supervisory, and trouble events. Identify zone, device, and function. Include type of signal (alarm, supervisory, or trouble) and date and time of occurrence. Differentiate alarm signals from all other printed indications. Also print system reset event, including same information for device, location, date, and time. Commands initiate the printing of a list of existing alarm, supervisory, and trouble conditions in the system and a historical log of events.

K. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices and notification appliances shall be powered by 24-V dc source.

1. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.

L. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.

1. Batteries: lead calcium or nickel cadmium.
2. Instructions: Computer printout or typewritten instruction card mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

2.3 MANUAL FIRE-ALARM BOXES

A. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
   1. Double-action mechanism requiring two actions to initiate an alarm, breaking-glass pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
   2. Station Reset: Key operated test-reset lock, and manual station shall be designed so that after actual emergency operation, they cannot be restored to normal use except by the use of a key.
   3. Indoor Protective Shield: Where indicated on the drawings provide factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.
   4. Weatherproof Protective Shield: Where indicated on the drawings provide factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm.

2.4 SYSTEM SMOKE DETECTORS

A. General Requirements for System Smoke Detectors:

   1. Comply with UL 268; operating at 24-V dc, nominal.
   2. Detectors shall be two-wire type.
   3. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to FACP.
   4. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
   5. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
   6. Integral Visual-Indicating Light: LED type indicating detector showing it is operational and in alarm changes color.
   7. Remote Control: Unless otherwise indicated, detectors shall be analog-addressable type, individually monitored at FACP for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by FACP.

B. Photoelectric Smoke Detectors:

   1. Detector address shall be accessible from FACP and shall be able to identify the detector's location within the system and its sensitivity setting.
   2. An operator at FACP, having the designated access level, shall be able to manually access the following for each detector:

a. Primary status.
b. Device type.
c. Present average value.
d. Present sensitivity selected.
e. Sensor range (normal, dirty, etc.).

C. Ionization Smoke Detector:

1. Detector address shall be accessible from FACP and shall be able to identify the detector's location within the system and its sensitivity setting.
2. An operator at FACP, having the designated access level, shall be able to manually access the following for each detector:

a. Primary status.
b. Device type.
c. Present average value.
d. Present sensitivity selected.
e. Sensor range (normal, dirty, etc.)

D. Duct Smoke Detectors: Photoelectric type complying with UL 268A.

1. Detector address shall be accessible from FACP and shall be able to identify the detector's location within the system and its sensitivity setting.
2. An operator at FACP, having the designated access level, shall be able to manually access the following for each detector:

a. Primary status.
b. Device type.
c. Present average value.
d. Present sensitivity selected.
e. Sensor range (normal, dirty, etc.).

3. Number of settable levels in fire-alarm control unit varies among manufacturers and between detector types. Indicate specific number of levels on Drawings or in "Remarks" column of a detector schedule.
4. Each sensor shall have multiple levels of detection sensitivity.
5. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions were applied.
6. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit.

2.5 HEAT DETECTORS

A. General Requirements for Heat Detectors: Comply with UL 521.

B. Heat Detector, Combination Type: Actuated by either a fixed temperature of 135 deg F or a rate of rise that exceeds 15 deg F per minute unless otherwise indicated.

1. Mounting: Twist-lock base interchangeable with smoke-detector bases.

2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire command center.

C. Heat Detector, Fixed-Temperature Type: Actuated by temperature that exceeds a fixed temperature of 190 deg F or 135 deg F depending on application

1. Mounting: Twist-lock base interchangeable with smoke-detector bases.

2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

2.6 ADDRESABLE MONITOR MODULE

A. The addressable monitor module shall be provided for monitoring and interfacing normally open, latching alarm contacts or normally closed latching trouble contacts, to the addressable system, via a separate supervised class B circuit.

B. The interface element shall be identified by the control panel and contain an addressable element which is monitored by a serial polling operation.

C. The addressable monitor module shall be equipped with screw-type terminals.

D. The addressable monitor module shall include an integral visual alarm L.E.D. to indicate operation.

E. The addressable monitor module shall be capable of occupying the same initiating circuit along with other addressable devices.

F. The addressable monitor module shall be suitable for surface or flush mounting.

2.7 ADDRESSABLE CONTROL MODULE.

A. The addressable control module shall be provided with control capabilities utilizing form C dry contacts.

B. Minimum: Single pole contact, double throw output (SPDT) or as required to perform specific function.

C. The addressable control module shall be identified by the control panel and monitored by a serial polling operation.

D. The addressable control module shall be capable of occupying the same initiating circuit along with other addressable devices.

E. The addressable control module shall include an integral visual alarm L.E.D. to indicate relay activation, along with the capability of providing confirmation of actuation at the FACP.

F. Module to be supervised.

G. Relay contacts: Minimum 300 mA at 120 VAC, Form C.

H. If circuit load exceeds module rating, provide auxiliary relays as required.

2.8 NOTIFICATION APPLIANCES

A. General Requirements for Notification Appliances: Connected to notification appliance signal circuits, zoned as indicated, equipped for mounting as indicated and with screw terminals for system connections.

1. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting as indicated and with screw terminals for system connections.

B. Visible Notification Appliances: Xenon strobe lights comply with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch- (25-mm-) high letters on the lens.

1. Rated Light Output:
   a. As indicated on the design drawings.
   b. 15/30/75/110 cd, selectable in the field.
2. Mounting: Ceiling or wall mounted as indicated on the design drawings.
3. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.
4. Flashing shall be in a temporal pattern, synchronized with other units.
5. Strobe Leads: Factory connected to screw terminals.
6. Mounting Faceplate: Factory finished, color to be coordinated with the Commissioner.

C. Tone Notification Appliances:

1. Appliances shall comply with UL 1480 and shall be listed and labeled by an NRTL.
2. High-Range Units: Rated 2 to 15 W.
3. Low-Range Units: Rated 1 to 2 W.
4. Mounting: Flush.
5. Matching Transformers: Tap range matched to acoustical environment of speaker location.

2.9 DIGITAL ALARM COMMUNICATOR TRANSMITTER

A. Digital alarm communicator transmitter shall be acceptable to the remote central station and shall comply with UL 632 and be listed and labeled by an NRTL.

B. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire command center and automatically capture two telephone line(s) and dial a preset number for a remote central station. When contact is made with central station(s), signals shall be transmitted. If service on either line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the remote alarm receiving station over the remaining line. Transmitter shall automatically report telephone service restoration to the central station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.

C. Local functions and display at the digital alarm communicator transmitter shall include the following:

1. Verification that both telephone lines are available.
2. Programming device.
3. LED display.
4. Manual test report function and manual transmission clear indication.
5. Communications failure with the central station or FACP.

D. Digital data transmission shall include the following:
1. Address of the alarm-initiating device.
2. Automatic Alarm (Smoke, Duct, Heat).
3. Water Flow Alarm.
4. System supervisory signal.
5. System trouble signal.
6. Loss of AC supply or loss of power.
7. Low battery.
8. Abnormal test signal.
9. Communication bus failure.

E. Back-up Power: Rechargeable battery and automatic charger.

2.10 DEVICE GUARDS

A. Description: Plastic STI covers of size and shape for the manual station, smoke detector, gong, or other device requiring protection.

1. Factory fabricated and furnished by manufacturer of device.
2. Finish: Paint of color to match the protected device.

2.11 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include the following:

1. Case-Acme; a division of Firecom, Inc.
2. Edwards System Technology; a United Technologies Corp. company.
3. Notifier; a Honeywell company.
4. Siemens Building Technologies, Inc.; Fire Safety Division.
5. Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2 EQUIPMENT INSTALLATION

A. Comply with NFPA 72 for installation of fire-alarm equipment.

B. Equipment Mounting: Install fire command center on concrete base with tops of cabinets not more than 72 inches above the finished floor.
1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.

C. Smoke - or - Heat Detector Spacing:

1. Comply with NFPA 72, "Smoke-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for smoke-detector spacing.
2. Comply with NFPA 72, "Heat-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for heat-detector spacing.
3. Smooth ceiling spacing shall not exceed 30 feet.
4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Appendix A in NFPA 72.
5. HVAC: Locate detectors not closer than 3 feet from air-supply diffuser or return-air opening.

6. Lighting Fixtures: Locate detectors not closer than 12 inches from any part of a lighting fixture.

D. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct.

E. Remote Status and Alarm Indicators: Install near each smoke detector and each sprinkler water-flow switch and valve-tamper switch that is not readily visible from normal viewing position.

F. Audible Alarm-Indicating Devices: Provide 'A' and 'B' for each audible appliance on each floor. Provide adequate dBA setting to meet 15 dba above average ambient levels or 5 dBA above the maximum sound level having a duration of at least 60 seconds, whichever is greater. Wall-mounted appliances shall be installed such that their tops are above the finished floors at heights of not less than 90 inches and below the finished ceilings at distances of not less than 6 inches. Ceiling-mounted appliances shall not exceed 20 feet above the finished floor.

G. Visible Alarm-Indicating Devices: Provide 'A' and 'B' for each visible appliance on each floor. All strobes serving common areas shall be synchronized. Wall-mounted appliances shall be mounted such that the entire lens is not less than 80 inches and not greater than 96 inches above the finished floor.

H. Audible/Visible Alarm-Indicating Devices: Provide 'A' and 'B' for each audible/visible appliances on each floor. All strobes serving common areas shall be synchronized. Wall-mounted appliances shall be mounted such that the entire lens is not less than 80 inches and not greater than 96 inches above the finished floor. Ceiling-mounted appliances shall not exceed 20 feet above the finished floor.

I. Device Location-Indicating Lights: Locate in public space near the device they monitor.

J. FACP: Surface mounted, with tops of cabinets not more than 72 inches above the finished floor.

3.3 CONNECTIONS

A. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 3 feet from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.

1. Smoke dampers in air ducts of designated air-conditioning duct systems.
2. Alarm-initiating connection to elevator recall system and components.
3. Supervisory connections at valve supervisory switches.

3.4 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Install framed instructions in a location visible from fire-alarm control unit.

3.5 GROUNDING

A. Ground fire-alarm control unit and associated circuits; comply with New York City Electrical Code. Install a ground wire from main service ground to fire-alarm control unit.

3.6 FIELD QUALITY CONTROL

A. Field tests shall be witnessed by Contractor; Commissioner and the FDNY - Fire Department Inspector.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:

1. Visual Inspection: Conduct visual inspection prior to testing.

   a. Inspection shall be based on completed Record Drawings and system documentation that is required by NFPA 72 in its "Completion Documents, Preparation" Table in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter.
   b. Comply with "Visual Inspection Frequencies" Table in the "Inspection" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.

2. System Testing: Comply with "Test Methods" Table in the "Testing" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
3. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
4. Test visible appliances for the public operating mode according to manufacturer's written instructions.
5. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.

6. Contractor shall file all required fire department forms (A-433; B-45 and As-Built Riser Diagram) for FDNY Inspections.
7. Contractor shall provide adequate man-power for all FDNY inspections.

D. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.

E. Fire-alarm system will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

G. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.

H. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

3.7 INSTRUCTION

A. The Contractor shall provide instruction session to the City of New York's operating maintenance personnel to adjust, operate, and maintain fire-alarm system.

END OF SECTION 283111

SECTION 31 10 00 - SITE CLEARING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 REGULATORY REQUIREMENTS

A. Open Fires: Comply with the rules and regulations of the Department of Environmental Conservation Title 6, Chapter III Air Resources, Part 215. A permit is required before any burning is allowed.

B. Herbicides: Comply with the rules and regulations of the Department of Environmental Conservation Title 6, Chapter 4 Quality Services, Parts 320 through 329.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Herbicides: A chemical or a combination of chemicals which, according to the manufacturer's label, will kill stumps and roots. Deliver herbicides to the site in original manufacturers containers indicating type and percentage of chemical, and application instructions.

PART 3 - EXECUTION

A. Refer to DDC General Conditions.

3.1. PREPARATION

A. Protection

1. Prevent damage to buildings, pavement, pipes, conduits, poles and other structures above and below ground that are adjoining or included in the contract area. Restore damage that may have occurred during construction.

3.2. REMOVALS

A. Remove all living or dead tree and shrub growth where indicated or specified.

3.3. CLEAN UP

A. Dispose of all unusable materials from the site within 4 days after cutting by burning or by other methods approved by the Department of Environmental Conservation.

B. Remove and dispose of all debris from property. Leave Work area in a neat uncluttered condition.

END OF SECTION 31 10 00

SECTION 31 23 16 - EXCAVATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SECTION INCLUDES

A. Excavation for gas and utility trenches.

1.3 RELATED SECTIONS

A. Section 312323 - Backfilling

B. Section 312333 – Trenching, Backfilling and Compaction

1.4 QUALITY ASSURANCE

A. Do not excavate wet or frozen materials without written approval from the City of New York.

B. Provide safety barricades around open excavations.

1.5 FIELD MEASUREMENTS

A. Verify that survey benchmark and intended elevations for the work are as indicated.

PART 2 PRODUCTS

Not Used.

PART 3 - EXECUTION

A. Refer to DDC General Conditions.

3.1. PREPARATION

A. Identify required lines, levels, contours and datum.

B. Identify known underground, above ground and aerial utilities. Stake and flag locations.

C. Notify utility company to remove or relocate utilities, if required.

D. Protect above and below grade utilities which are to remain.

E. Protect benchmarks, existing structures, fences, sidewalks, paving and curbs from excavation equipment and vehicular traffic.

F. Notify the City of New York prior to commencement of excavation.

3.2. EXCAVATION

A. Underpin adjacent structures that may be damaged by excavation work, including utilities and pipe chases.

B. Excavate subsoil required to accommodate building foundations, slabs-on-grade, paving, drainage or sanitary structures, sidewalks, landscaping and construction operations to the limits as indicated on the plans.

C. Machine slope banks to angle of repose or less.

D. Excavation cut not to interfere with normal 45 degree bearing splay of foundations.

E. Grade top perimeter of excavation to prevent surface water from draining into excavation.

F. Hand trim excavation. Remove loose matter.

G. Remove lumped subsoil, boulders, and rock.

H. Notify City of New York of unexpected subsurface conditions and discontinue affected work in area until notified to resume work.

I. Correct unauthorized excavation at no extra cost to the City of New York in accordance with Section 312316.

J. Stockpile excavated material in area designated on site and remove excess material not being reused from site.

3.3. FIELD QUALITY CONTROL

A. Perform field inspection and testing as required under the general requirements of the Contract. The City of New York is responsible for engaging a Testing Agency for all special inspection items.

B. Provide for visual inspection of bearing surfaces.

3.4. PROTECTION

A. Protect excavations by methods required to prevent cave-in or loose soil from falling into excavation.

B. Protect bottom of excavations and soil adjacent to and beneath foundation from freezing.

END OF SECTION 31 23 16

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 31 23 23 - BACKFILLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SECTION INCLUDES

A. Pavement construction backfilling to sub-grade elevations.

B. Consolidation and compaction.

C. Fill for over-excavation.

1.3. RELATED SECTIONS

A. Section 31 23 33 – Trenching, Backfilling and Compaction

1.4. REFERENCES

A. Refer to DDC General Conditions.

B. ANSI/ASTM C136 - Method for Sieve Analysis of Fine and Coarse Aggregates.

C. ANSI/ASTM D1557 - Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures using 10 lb. Rammer and 18-inch Drop.

1.5. SUBMITTALS

A. Refer to DDC General Conditions.

B. Test Reports: Submit sieve analysis for each type fill to be used.

PART 2 - PRODUCTS

2.1. FILL MATERIALS

A. Type A - Coarse Stone: Angular, washed natural stone; free of shale, clay, friable material, sand, debris; graded in accordance with ANSI/ASTM C136 within the following limits:

Sieve Size	Percent Passing
2-inch	100%
1-inch	95%
3/4-inch	75 - 90%
5/8-inch	35 - 60%
3/8-inch	15 - 35%
No. 4	< 5%

B. Type B - Pea Gravel: Natural stone; washed, free of clay, shale, organic matter; graded in accordance with ANSI/ASTM C136, to the following:
1. Minimum Size: 1/4-inch.
2. Maximum Size: 5/8-inch.

C. Type C - Sand: Natural river or bank sand; washed, free of silt, clay, loam, friable or soluble materials, or organic matter; graded in accordance with ANSI/ASTM C136, within the following limits:

Sieve Size	Percent Passing
No. 4	100%
No. 14	10 – 100%
No. 50	5 – 90%
No. 100	4 – 30%
No. 200	0 – 1%

D. Type D - Subsoil: Reused, excavated material, graded, free of lumps, rocks and gravel larger than 3 inches in size, debris and contaminants.

E. Type E – Porous material sizes 1 and 2 to be used around drainage structures only.

PART 3 – EXECUTION

A. Refer to DDC General Conditions.

3.1. EXAMINATION

A. Verify existing conditions and substrate.

B. Verify fill materials to be reused are acceptable.

C. Verify items to be buried during backfilling process have been inspected prior to backfilling.

3.2. PREPARATION

A. Compact sub-grade to 95 percent maximum dry density in accordance with ANSI/ASTM D1557.

B. Cut out soft areas of sub-grade not capable of in situ compaction. Backfill with Type C fill and compact to density equal to or greater than requirements for subsequent backfill material.

3.3. BACKFILLING

A. Backfill areas to contours and elevations with unfrozen materials.

B. Systematically backfill to allow maximum time for natural settlement. Do not backfill over porous, wet, frozen or spongy materials.

C. Place and compact materials in continuous layers not exceeding six (6) inches compacted density.

D. All backfilled materials shall be compacted to 95 percent maximum dry density in accordance with ANSI/ASTM D1557. Maintain optimum moisture content to attain required density.

E. Employ a placement method that does not disturb or damage structures or other items against which material is backfilled.

F. Backfill against supported structures. Do not backfill against unsupported structures.

G. Backfill simultaneously on each side of structure.

H. Make grade changes gradual. Blend slope into level areas.

I. Remove surplus backfill materials from site.

J. Leave fill material stockpile areas completely free of excess fill materials

3.4. TOLERANCES

A. Maximum Variation From Top Surface of Backfilling Under Paved Areas: 1/4 inch.

B. Maximum Variation From Top Surface of General Backfilling: One (1) inch.

3.5. FIELD QUALITY CONTROL

A. Perform field tests and analysis of fill material in accordance with ANSI/ASTM D1557.

B. If tests indicate work does not meet specified requirements, remove work, replace and retest at no cost to The City of New York.

C. Unless additional testing is required by the Commissioner, compaction tests shall be taken at the following rates:

1. Concrete Structures: One test per five (5) vertical feet of structure.
2. Pavement Subgrade: One test per 500 square feet of subgrade immediately prior to placing subbase.
3. Concrete Flatwork and Pavers: One test per 400 square feet of flatwork.
4. Curbing: One test per 100 linear feet.

END OF SECTION 31

SECTION 31 23 33 - TRENCHING, BACKFILL AND COMPACTION

PART 1 - GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section Includes

1. Native Backfill Material
2. Crushed Stone Bedding
3. Select Backfill Material
4. Shoring and Bracing
5. Excavation
6. Backfill and Compaction

B. Related Sections:

1. Section 31 25 00 Erosion Sedimentation Control
2. Section 32 11 23 Aggregate Base Course

1.3 REFERENCES

A. Refer to DDC General Conditions.

B. American Society for Testing and Materials (ASTM)

1.	ASTM D1557	Testing Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures Using 10-lb (4.54 kg) Rammer and 18- In. (457 mm) Drop
2.	ASTM D2922	Testing for Density of Soil and Soil Aggregate in Place by Nuclear Methods (Shallow Depth)
3.	ASTM D448	Standard Classification for Sizes of Aggregate for Road & Bridge Construction

1.4 SUBMITTALS

A. Refer to DDC General Conditions.

B. Submit two (2) copies of the quality control testing including location where testing was done. Testing results shall include:

1. Materials source testing
2. Background testing
3. Installation testing
4. Additional density testing, if required.

1.5 QUALITY ASSURANCE

A. Contractor shall obtain an independent testing laboratory, approved by the City of New York, to provide quality control.

B. Background Testing:

1. Perform five (5) moisture density test for each native sil to determine the density of the undisturbed soils.
2. Moisture/density testing shall be in accordance with ASTM 1557 (Modified Proctor).

C. Installation Testing

1. Moisture/Density testing shall be according to ASTM D2922 (Nuclear Method)
2. Perform at least one (1) moisture/density test for each 100 linear feet of trench at a depth and location directed by the Commissioner.

D. Additional density and gradation testing shall be required when aggregate density does not meet project requirements, there is a change in compaction method, there is a change in the source or quality of aggregate, or as directed by the Commissioner.

PART 2 – PRODUCTS

2.1. NATIVE BACKFILL

A. Unless shown otherwise on drawings or ordered in writing by the Commissioner, material excavated from the trench shall be used for backfilling.

B. Excavated material shall be used as backfill provided that such material consists of loam, clay or other materials that are, in the judgment of the Commissioner, suitable for backfilling. Backfill material shall be free from frozen materials, organic matter, large stones or boulders, concrete, refuse and litter.

2.2. SELECT BACKFILL MATERIAL

A. Select backfill material shall be used as shown on drawings or ordered in writing by the Commissioner.

B. Select backfill material shall conform to the following gradation:

1. ¾-inch (19.0 mm) Crushed Rock – ASTM D448-No. 67

SIEVE SIZE	% PASSING BY WEIGHT
1-inch	100
3/4-inch	90-100
3/8-inch	20-55
No. 4	0-10
No. 8	0-5

C. Structural Fill shall be free from ice and snow, roots, sod, rubbish and other deleterious or organic matter. Structural Fill shall conform to the following gradation requirements:

1. Sieve Size — Percent Passing by Weight

*	100
No. 4	30 - 95
No. 40	10 - 70
No. 200	0 - 15

* Two thirds (2/3) of the loose lift thickness.

PART 3 – EXECUTION

A. Refer to DDC General Conditions.

3.1. SHORING AND BRACING

A. Provide shoring and bracing materials, such as sheet piling, up rights, stringers and cross braces, in good serviceable condition. Shoring shall be provided as required for safety.

B. Maintain shoring and bracing in trenches and excavations regardless of duration that the excavation will be open. Carry down shoring and bracing as excavation progresses and arrange bracing such that it does not place stress on completed work.

C. Exercise care during removal of shoring and bracing materials to prevent collapse or caving of excavation.

D. Damages to pipes or structures as a result lack of adequate shoring and bracing on the part of the Contractor, shall be restored at the Contractor's expense.

3.2. EXCAVATION

A. Removal of Obstructions

1. Remove obstructions mounds of dirt, stone, debris and refuse from within the construction limits
2. Remove and replace, in original condition, the following: signs, culverts, apron endwalls, riprap aprons, and guard posts.
3. Remove concrete and asphalt pavements, curb and gutter, and sidewalk to the maximum trench width at the ground surface or as shown on the drawings.
4. Sawcut pavement, curb and gutter, sidewalk and other surfaces vertically to a minimum depth of 3-inches prior to removal. Remove concrete surfaces to the nearest joint.

B. Trenching

1. Excavate trench to sufficient width and depth to allow for proper utility construction at the line and grades shown on drawings. Maximum trench width 2-feet above the top of the pipe shall be the outside diameter of the pipe plus 24- inches. Keep trench walls vertical when possible. The the Commissioner may prohibit benching or sloping of the trench walls if the excavation is within permanent pavement, if the excavation would not be contained within the limits of construction or if the excavation would endanger underground utilities or structures.
2. No more than 200-feet of trench shall be open at any given time.
3. Disposed of excess material.

3.3. DEWATERING

A. Contractor shall provide and maintain means and methods necessary to dewater excavations as needed. Dewater to a minimum of 3-feet below excavations.

B. Dispose of water in such a way as to prevent runoff and dewatering system discharge from entering the excavation. Convey groundwater to the point of discharge though piping. The use of open ditching or trenching, nor the use of the City of New York's utilities, shall be permitted. Sediment content of discharge shall not exceed 10 milligrams per liter.

C. Maintain dewatering system until backfilling and compaction is complete.

D. Obtain all necessary permits from NYCDEP dewatering.

E. Maintain a water supply to any private and public wells affected by the dewatering operation. Any damage caused to private wells as a result of dewatering shall be corrected.

3.4. BEDDING

A. Bedding material for sewers 18-inches in diameter and smaller shall conform to:

SIEVE SIZE	% PASSING BY WEIGHT
1-inch	100
3/4-inch	95-100
3/8-inch	30-55
No. 4	0-10
No. 8	0-5

B. Bedding material for sewers 18-inches in diameter and larger shall conform to:

1. ¾-inch (19.0 mm) Crushed Rock – ASTM D448-No. 67

SIEVE SIZE	% PASSING BY WEIGHT
1-inch	100
3/4-inch	90-100
3/8-inch	20-55
No. 4	0-10
No. 8	0-5

a. Bedding material for water mains and force mains shall consist of hard, durable particles ranging in size from fine to course in a substantially uniform combination. Material shall be free from organic matter, refuse, litter and balls or lumps of clay and shall conform to the gradation requirements detailed below:

SIEVE SIZE	% PASSING BY WEIGHT
1-inch	100
No. 16	45-80
No. 8	2-10

b. Spread bedding material over the bottom of the trench and solidly compacted such that after the pipe has been placed, imbedded to grade and aligned, there is a minimum of 4- inches of bedding material beneath the pipe barrel and a minimum of 3-inches of bedding material beneath the bell of the pipe. Fill excess depth resulting from excavation deeper than 6-inches beneath the pipe barrel with crushed stone.

c. Class "C" Bedding

1. Place bedding material up to the spring line of the pipe making sure that the lower quadrants of the pipe are firmly bedding and supported.

d. Class "B" Bedding

1. Place and compact bedding material to a level 12-inches above the top of pipe.

e. Provide an additional 3-inches of bedding material beneath the required 4-inches of bedding material where wet trench conditions exist.

3.5. BACKFILL AND COMPACTION

A. Backfill trench with excavated material in layers not more than 12-inches thick unless select backfill material is shown on drawings or ordered in writing by the Commissioner.

B. Backfill trench to last pipe joint, not to exceed 10-feet, at the end of each work day.

C. Compaction Requirements

1. The degree of compaction is expressed as a percentage of the maximum dry density at optimum moisture content as determined by ASTM D1557, Method C. The compaction requirements are as follows:

a. Area		Minimum Degree of Compaction
1)	Below footings	95%
2)	Below slabs	95%
3)	Detention basin berms	95%
4)	Pavement base course	95%
5)	Pavement subbase	95%
6)	General fill below pavement subbase	90%
7)	Trench backfill	92%
8)	Lawn areas	85%

D. Warranty

1. Settlement or damage as a result of settlement that occurs during the specified warranty period shall be restored at the Contractor's expense. The Commissioner shall determine failed areas and the extent of restore shall be agreed upon prior to the restore being made.
2. Restore of settled areas shall require removal of existing material and recompaction or flushing of the trench, as agreed upon with the Commissioner
3. Contractor shall provide a standard one (1) year warranty for failed areas.

END OF SECTION 31 23 33

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 31 25 00 -EROSION AND SEDIMENTATION CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 DESCRIPTION

A. This Section specifies requirements for temporary and permanent erosion control provisions as they relate to the construction process.

B. The work includes:

1. Providing and maintaining all temporary erosion control measures shown on the Drawings and required by the City of New York/Commissioner during the life of the Contract to control soil erosion and water pollution.
2. The installation and maintenance of additional silt fence, berms, ditches, sedimentation basins, construction exits, fiber mats, catchbasin filters, straw, netting, gravel, trenches, mulches, grasses, slope drains and other approved erosion control devices or methods, needed to protect any areas on or off site in accordance with the Stormwater Pollution Prevention Plan to be developed by the Contractor which is required by the New York City Department of Environmental Conservation.

1.3 RELATED SECTIONS

A. Sections which directly relate to the work of this Section include:

1. Section 31 10 00 – Site Clearing
2. Section 31 23 16 – Excavation
3. Section 31 23 33 – Trenching, Backfill and Compaction

1.4 DEFINITION AND COORDINATION OF EROSION CONTROL PROVISIONS

A. Permanent erosion control measures are defined as those elements that are to be incorporated into the final project product, including but not necessarily limited to such items as; finish paving and landscape, detention basin forebays, sedimentation control structures (Vortechnics, Stormceptor, catch basins, etc.), swales and ditches, berms, and other such items.

B. Temporary erosion control measures are defined as those elements that are required by permit approvals and necessary to be installed by the Contractor to meet The New York City Department of Environmental Conservation for the construction program, such items as; silt fences, berms, portable sedimentation basins, straw bales, check dams, and other such items, all of which shall be removed by the Contractor after installation of permanent erosion control measures, stabilization of the site, and prior to final completion of the project.

C. The temporary control provisions shall be coordinated with the permanent erosion control features to the extent practical to ensure economical, effective and continuous erosion control throughout the construction and post-construction period.

1.5 PRIOR TO CONSTRUCTION

A. Prior to the start of the construction, the Contractor shall submit to the City of New York/Commissioner: schedules for the construction of required stormwater detention basins, temporary and permanent erosion and sediment control work, clearing and grubbing, grading, structures at watercourses, construction, and paving. No work shall be started until control schedules and methods of operations have been submitted to the City of New York/Commissioner.

1.6 CONSTRUCTION OPERATIONS

A. When in the opinion of the City of New York/Commissioner it becomes necessary, the City of New York/Commissioner will inform the Contractor of construction procedures and operations that jeopardize erosion and sedimentation control provisions.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Erosion Control Blanket/Fabric Netting—

1. Curlex blankets, as manufactured by American Excelsior Company, Polyjute Style 465 GT, as manufactured by Synthetic Industries, Erosion Control Blankets 5758N, SC1250BN, C125BN as manufactured by North American Green or approved equal.

B. Straw bale sediment traps consisting of straw bales banded with wire or nylon tape (minimum two bands for bale) approximately two-feet, six-inches in length.

1. Stakes for straw bales shall be 1-1/2inch by 1-1/2 inch by 4 feet long.

C. Silt fence fabric shall be 100X, as manufactured by Mirafi, US Construction Fabrics, Cherokee Manufacturing, or approved equal.

D. Filter fabric at construction entrance shall be 600X, as manufactured by Mirafi, STRATA, IWT Cargo-Guard, or approved equal.

PART 3 - EXECUTION

3.1. EROSION CONTROL - STRAW BALES

A. Straw bales shall be installed at the locations, shown on the Drawings and in general as follows:

1. Toe of slope of embankment construction to filter all runoff flowing to off-site discharges.
2. Toe of temporary earthwork stockpile slopes.
3. Across construction ditches prior to entry into drainage system or waterway, and at 50 foot intervals along the remainder of the ditch.
4. Surrounding completed drainage inlets.
5. Other locations shown on the Contract Drawings and required by NYCDEC regulations and permits.

B. Tightly abut straw bales to form a continuous barrier. Secure bales in place with two stakes per bale. The bales shall be trenched 4 inches into the ground. Soil shall be constructed on the upside slope of the bales. Deteriorated, destroyed or rotted bales shall be replaced immediately. Sediment shall be removed and disposed of periodically from behind the straw bales. The accumulated sediment shall not be allowed to rise above the mid height of the bale. All sediment, straw bales and appurtenances shall be removed and disposed of at the completion of the Contract.

3.2. TEMPORARY EROSION CONTROL MATS

A. Erosion control mats shall be installed in accordance with the manufacturer's recommendations.

B. Areas to receive mats shall be smooth graded and compacted. Remove all rocks, dirt clods, vegetation and other obstructions that may cause damage to the mats.

C. Unroll mats parallel to the direction of water flow and lay flat against the ground. Overlap roll ends 1 to 2 feet with upslope mat on the top to prevent uplift of mat end by water flow. Overlay adjacent edges of mat by six inches. Extend mat 2 to 3 feet above the crest of steep slopes and anchor by excavating a 6 inch deep trench, and secure end of mat in trench, backfill and compact. Secure mat to the ground using staples or pins furnished by manufacturer of mat.

3.3. SILT FENCE

A. Silt fence shall be installed at locations as shown on the Drawings.

B. Supporting posts shall be spaced 4 feet on center, and driven at least one foot into the ground. Posts shall be 1-1/2 inch square or heavier wood posts, or standard steel posts.

C. Fabric shall be anchored in a 4-inch deep trench dug on the upslope side of the posts. The trench shall be at least 4 inches wide. The fabric shall be laid in the trench, backfilled and compacted.

D. Fabric rolls shall be spliced at posts. The fabric shall be overlapped 6 inches, folded over and securely fastened to posts.

E. Silt fences shall be inspected immediately after each storm event and at least daily during prolonged rainfall.

3.4. CONSTRUCTION REQUIREMENTS - TEMPORARY SEDIMENT CONTROL

A. The Contractor shall construct all permanent erosion and sediment control features at the earliest practical time as outlined in the accepted schedule. Temporary erosion and sediment control measures shall be used to correct conditions that develop during construction which were unforeseen, but are needed prior to installation of permanent control features, or that are needed temporarily to control erosion or sedimentation which develops during construction operations.

B. Where erosion is likely to be a problem, clearing and grubbing operations shall be scheduled and performed so that grading operations and permanent erosion and sediment control features can follow immediately thereafter, if conditions permit; otherwise, temporary control measures will be required between successive construction stages.

C. Contractor shall be responsible for controlling erosion within the project area and retaining sediment on-site away from sensitive environmental resources.

D. Failure by the Contractor to control erosion, pollution, and siltation shall be cause for the City of New York to employ outside assistance to provide the necessary corrective measures.

E. The Contractor shall remove and properly dispose of sediment from control facilities as required by the City of New York/Commissioner. The Contractor shall modify and improve erosion and sedimentation control facilities and replace deteriorated straw bales and other devices as required by the City of New York/Commissioner.

F. Minimum temporary and permanent erosion and sedimentation control measures are shown on the Drawings. The Contractor shall strictly adhere to the minimum provisions shown. Additionally, temporary measures shall be selected and constructed by the Contractor in consultation with the City of New York/Commissioner to accommodate changing field conditions that develop during construction.

G. The temporary sedimentation basins shall be maintained from the start of construction until construction of the permanent detention basins and/or stormwater system is completed and

perimeter areas are stabilized. A temporary outlet shall be constructed above the expected sediment levels. Construction of the basins shall be sequenced so that the temporary outlet is installed and basin embankment is constructed with the material available from the initial site excavations.

H. In disturbed areas where construction has permanently or temporarily ceased, the area must be stabilized within 7 days. If earth disturbing activities will resume within 7 days, temporary stabilization is not required.

I. All disturbed areas shall be re-vegetated by loaming and seeding unless otherwise noted on the approved plan.

3.5. MAINTENANCE OF EROSION CONTROL MEASURES

A. The Contractor shall check the condition of erosion and sedimentation control devices daily and maintain them in good operating condition. Straw bales shall be replaced when deteriorated.

B. The Contractor shall inspect the condition of diversion dikes and ditches, filter berms, interceptor dikes, sediment basins and other erosion and sedimentation control devices after each rainstorm and during major storm events. Restorations shall be made as necessary.

C. During construction, temporary outlets of the drainage systems shall direct the flow to temporary or permanent sedimentation basins.

D. Temporary soil erosion and sedimentation control devices shall be removed and adjacent areas outside the limits of grading restored upon completion of the work or when required by the City of New York/Commissioner.

END OF SECTION 31 25 00

PAGE INTENTIONALLY LEFT BLANK

SECTION 32 11 23 - AGGREGATE BASE COURSE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SECTION INCLUDES

A. The work to be performed includes the preparation of the aggregate base course foundation; and the production, stockpiling, hauling, placing, and compacting of aggregate base course.

1.3 RELATED SECTIONS

A. The following is a list of specifications which may be related to this section:

1. Section 31 23 16, Excavation.
2. Section 31 25 00, Erosion and Sedimentation Controls
3. Section 31 23 33, Trenching, Backfilling and Compaction.
4. Section 32 16 13, Concrete Curbs, and Gutters.

1.4 REFERENCES

A. Refer to DDC General Conditions.

B. The following is a list of standards which may be referenced in this section:

1. American Association of State Highway and Transportation Officials (AASHTO):

   a. M147, Standard Specification for Materials for Aggregate and Soil- Aggregate Subbase, Base, and Surface Courses.
   b. T11, Standard Method of Test for Materials Finer Than 75㎛ (No. 200) Sieve in Mineral Aggregates by Washing.
   c. T27, Standard Method of Test for Sieve Analysis of Fine and Coarse Aggregates.
   d. T89, Standard Specification for Determining the Liquid Limit of Soils.
   e. T90, Standard Specification for Determining the Plastic Limit and Plasticity Index of Soils.
   f. T96, Standard Specification for Resistance to Degradation of Small-Size Coarse Aggregate by Abrasion and Impact in the Los Angeles Machine.

g. T99, Standard Specification for the Moisture-Density Relations of Soils Using a 2.5 kg (5.5 pound) Rammer and a 305 mm (12 in) Drop.
h. T180, Standard Specification for Moisture-Density Relations of Soils Using a 4.54 kg (10-lb) Rammer and a 457 mm (18-in) Drop.
i. T190, Standard Specification for Resistance R-Value and Expansion Pressure of Compacted Soils.
j. T265, Standard Method of Test for Laboratory Determination of Moisture Content of Soils.
k. T310, Standard Specification for In-Place Density and Moisture Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth).

2. ASTM International (ASTM):

a. C88, Test Method for Soundness of Aggregates by Use of Sodium Sulfate or Magnesium Sulfate.
b. D698, Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12 400 ft-lbf/ft3 (600 kN-m/m3)).
c. D1557, Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/ft3(2,700 kN-m/m3)).
d. D1883, Test Method for CBR (California Bearing Ratio) of Laboratory Compacted Soils.
e. D2419, Test Method for Sand Equivalent Value of Soils and Fine Aggregate.
f. D4791, Test Method for Flat Particles, Elongated Particles, or Flat and Elongated Particles in Coarse Aggregate.

1.5 SUBMITTALS

A. Refer to DDC General Conditions.

B. Contractor shall cooperate with Commissioner in obtaining and providing samples of all specified materials.

C. Contractor shall submit certified laboratory test certificates for all items required in this section.

D. Contractor shall submit tickets for each load of aggregate.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Aggregates: Aggregates for bases shall be crushed stone, crushed slag, crushed gravel or natural gravel that conforms to the quality requirements of AASHTO M147, except that the requirements for the ratio for the minus No. 200 sieve fraction to the minus No. 40 sieve fraction shall not apply. The requirements for the Los Angeles wear test shall not apply to Class

1, 2, and 3. Aggregates for bases shall meet the grading requirements as called out in the drawings. The liquid limit shall be as shown in the table and the plasticity index shall be ≤6.

B. Gradations:

Standard US Sieve Size	Percentage by Weight Passing Square-Mesh Sieves						
	LL < 35				LL < 30		
	Class 1	Class 2	Class 3	Class 4	Class 5	Class 6	Class 7

No. 200	3 - 15	3 - 15	20 max.	3 - 12	3 - 15	3 - 12	5 - 15
Note: Class 3 materials shall consist of bank or pit run material.							

PART 3 -EXECUTION

A. Refer to DDC General Conditions.

3.1. GENERAL

A. Equipment:

1. Equipment shall be capable of performing the work as described in this specification. Equipment that is inadequate to obtain the results specified shall be replaced or supplemented as required to meet the requirements of this specification. Any equipment that is used in an improper manner may be cause for rejection of the work if in the opinion of Commissioner, the work fails to meet the requirements of this specification.
2. Equipment used for compaction shall be the rolling type, vibratory type, or combination of both types, and shall be of sufficient capacity to meet the compaction requirements herein.

3.2. PREPARATION OF FOUNDATION

A. General:

1. The foundation shall be considered to be the finished earth subgrade, subbase course, or base course, as the case may be, upon which any subbase, base, or surface course is to be constructed.
2. Preparation of foundation for construction of a subbase, base, or surface course shall consist of the work necessary to restore, correct, strengthen, or prepare the foundation to a condition suitable for applying and supporting the intended course.
3. The foundation shall be prepared and constructed such that it will have a uniform density throughout. It shall be brought to the required alignment and cross section with equipment and methods adapted for the purpose. Upon completion of the shaping and compacting operations, the foundation shall be smooth, at the required density, and at the proper elevation and contour to receive the aggregate base course.
4. Unless otherwise provided, all holes, ruts, and other depressions in the foundation shall be filled with materials similar to those existing in the foundation. High places shall be excavated and removed to the required lines, grade and section.
5. Areas of yielding or unstable material shall be excavated and backfilled with stabilization rock as determined by Commissioner. Base course material shall not be placed on a foundation that is soft, spongy, or one that is covered by ice or snow. Base course shall not be placed on a dry or dusty foundation where the existing condition would cause rapid dissipation of moisture from the base course material and hinder or preclude its proper compaction. Dry foundations shall have water applied, reworked, and compacted as necessary.
6. Commissioner may direct Contractor to make minor adjustments in the finish grade from that shown in the drawings as may be necessary or desirable to maintain the characteristics of a stabilized foundation by minimizing the amount of cutting into or filling.

B. Roads and Parking Areas: For aggregate base course roads and parking areas, the top six (6) inches of topsoil shall be stripped within the area to be aggregate surfaced. Following stripping of the topsoil, the upper twelve (12) inches of the subgrade shall be scarified and compacted to a minimum of ninety-five percent (95%) of the Maximum Standard Proctor Density (ASTM D698). Onsite material may be used as accepted by Commissioner, for compacted fill for the aggregate base course. Fill shall be placed within two percent (2%) of optimum moisture content and compacted to a minimum of ninety five percent (95%) of the Maximum Standard Proctor Density (ASTM D698).

C. Pavements: Aggregate base course used as a foundation for pavements shall be placed on the subgrade within two percent (2%) of optimum moisture and compacted to a minimum of one hundred percent (100%) of the Maximum Modified Proctor Density (ASTM D1557). The top six (6) inches of topsoil shall be stripped within the area to be aggregate surfaced. Following stripping of the topsoil, the upper twelve (12) inches of the subgrade shall be scarified and compacted to a minimum of ninety- five percent (95%) of the Maximum Standard Proctor Density (ASTM D698). Onsite material may be used, as accepted by Commissioner, for compacted fill for the aggregate base course. Fill shall be placed within two percent (2%) of

optimum moisture content and compacted to a minimum of ninety five percent (95%) of the Maximum Standard Proctor Density (ASTM D698). Deviations in aggregate base course under pavements of more than one-quarter (1/4) inch in ten (10) feet, measured with a ten-foot (10') straight edge, shall be corrected prior to pavement construction.

D. Earth Subgrade: When the foundation is an earth subgrade it shall be prepared by removing all vegetation, excavating and removing materials, filling depressions, scarifying, shaping, smoothing and compacting to meet the required grade, section and density. Stones over six (6) inches in greatest dimension shall be removed.

3.3. PLACEMENT

A. The aggregate base course shall be constructed to the width and section shown in the drawings. If the required compacted depth of base course exceeds six (6) inches, the base shall be constructed in two (2) or more layers of approximate equal thickness. The maximum compacted thickness of any one (1) layer shall not exceed six (6) inches.

B. Each layer shall be constructed as far in advance of the succeeding layer as Commissioner may direct. The work shall, in general, proceed from the point on the project nearest the point of supply of the aggregate in order that the hauling equipment may travel over the previously placed material, and the hauling equipment shall be routed as uniformly as possible over all portions of the previously constructed courses or layers of the base course.

C. The material shall be deposited on the soil foundation, or previously placed layer, in a manner to minimize segregation and to facilitate spreading to a uniform layer of the required section. In the event that blending of materials is necessary to provide required gradation and properties of the material, and is done in the roadway, the same shall be accomplished by mixing the aggregate and blending material by means of blade graders, discs, harrows, or other equipment to effect a uniform distribution and gradation throughout the finished mixture. Excessive mixing and grading that will cause segregation between the coarse and fine materials is prohibited.

3.4. COMPACTION

A. After a layer or course has been placed and spread to the required thickness, width and contour, it shall be compacted. If the material is too dry to readily attain the required density, it shall be uniformly moistened to the degree necessary during compaction operations for proper compaction.

B. Compaction of each layer shall continue until the required density specified in Article Preparation of Foundation is reached. The surface of each layer shall be maintained during compaction operations in such a manner that a uniform texture is produced and aggregates firmly keyed.

C. All areas where proper compaction is not obtainable due to segregation of materials, excess fines, or other deficiencies in the aggregate shall be reworked as necessary or the material removed and replaced with aggregates that will meet this specification.

D. The surface of each layer shall be kept true and smooth at all times.

3.5. MIXING

A. Unless otherwise specified, Contractor shall mix the aggregate by any one of the three following methods:

1. Stationary Plant Method: Aggregate base course and water shall be mixed in an approved mixer. After mixing, the aggregate shall be transported to the project site while it contains the proper moisture content and shall be placed on the roadbed by means of an approved spreader.
2. Travel Plant Method: After the material for each layer has been placed through an aggregate spreader or windrow-sizing device, it shall be uniformly mixed by a traveling mixing plant.
3. Road Mix Method: After material for each layer has been placed, the materials shall be mixed while at optimum moisture content by motor graders or other approved equipment until the mixture is uniform throughout.

3.6. SHOULDER CONSTRUCTION

A. Shoulders shall be constructed with base course material to conform to the elevation and section shown in the drawings. No equipment shall be used which by its design or through its manner of operation will damage the pavement or curbs. Insofar as practicable, the base course material shall be placed directly on the shoulder area. Materials that are deposited outside the shoulder area, if not contaminated, shall be recovered and placed within the required limits. Contractor shall not be compensated for materials not recovered as determined by Commissioner.

B. Materials shall not be deposited on the pavement or surfacing during placing unless specifically permitted by Commissioner.

C. The base course material as placed shall be spread and compacted to the required density in layers not exceeding six (6) inches in compacted thickness. Any material inadvertently placed on the pavement shall be broomed from the pavement. The result shall not effect a change in the gradation of the shoulder material.

END OF SECTION 32 11 23

SECTION 32 11 26 - ASPHALTIC BASE COURSE

PART 1 – GENERAL

1.1. RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2. SECTION INCLUDES

A. This Section includes requirements for:

1. Subgrade preparation for granular base construction.
2. Sub-base and base course construction for asphalt paving.
3. Sub-base and base course construction for gravel surfacing.
4. Restoration of existing gravel surfacing.

1.3. RELATED REQUIREMENTS

A. The following is a list of specifications which may be related to this section:

1. Backfilling: Section 31 23 23

1.4. REFERENCE DOCUMENTS

A. Refer to DDC General Conditions.

B. American Society for Testing and Materials (ASTM):

1. ASTM D698-07e1 Standard Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort (600kN-m/m3).

1.5. PROTECTION

A. Restrict traffic over completed or partially completed work after inclement weather or at any time when there is tendency for subgrade material to work into base material.

PART 2 - PRODUCTS

2.1. MATERIALS

A. Granular fill material products.

B. Base materials

PART-3 EXECUTION

1.1. SUBGRADE PREPARATION

A. Excavate soft areas of subgrade, fill with 6 inches crushed gravel and compact to minimum 95% of Standard Proctor Density.

B. In excavated areas, where fill material depth will be 4” or less, scarify subgrade to depth of 6”.

C. Compact subgrade to minimum 95% of Standard Proctor Density.

D. Ensure that required subgrade elevations are maintained upon completion of subgrade preparation.

1.2. SUB-BASE COURSE CONSTRUCTION

A. Place sub-base course on prepared subgrade to a 6” compacted depth. Compact to minimum 95% of Standard Proctor Maximum Dry Density (ASTM D698).

B. Place sub-base gravel course in continuous horizontal layers not exceeding 10 inches lift.

C. Re-mix coarse aggregate with fines and work gravel to achieve required depth, grade and section.

D. Apply water to sub-base gravel course uniformly and in sufficient quantities to obtain optimum moisture content for compaction.

E. Grade sub-base gravel course to within 2 inches of design grade by blading and compacting.

1.3. BASE COURSE CONSTRUCTION

A. Place base course of over sub-base course to compacted depth. Compact to 95 % of Standard Proctor Maximum Dry Density (ASTM D698).

B. Ensure that coarse aggregates and fine aggregates are well mixed.

C. Place base gravel course in continuous horizontal layers not exceeding 6” lift.

D. Apply water to base gravel uniformly and in sufficient quantities to obtain optimum moisture content for compaction.

E. Grade base gravel course to within 1 – 2 inchecs of design grade by blading and compacting.

F. Do not conceal manhole covers, valve covers or catch basin rims.

1.4. COMPACTION EQUIPMENT

A. Use smooth drum or pad type vibratory roller for gravel compaction.

END OF SECTION 32 11 16

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 32 12 13 - BITUMINOUS TACK AND PRIME COATS

PART 1- GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 REFERENCES

A. Refer to DDC General Conditions.

B. The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.

1. AMERICAN ASSOCIATION OF STATE HIGHWAY AND TRANSPORTATION OFFICIALS (AASHTO)
2. AASHTO T 102 (2009; R 2013) Standard Method of Test for Spot Test of Asphaltic Materials
3. ASTM INTERNATIONAL (ASTM)
4. ASTM D1250 (2008) Standard Guide for Use of the Petroleum Measurement Tables
5. ASTM D140/D140M (2016) Standard Practice for Sampling Asphalt Materials
6. ASTM D2026/D2026M (2015) Cutback Asphalt (Slow-Curing Type)
7. ASTM D2027/D2027M (2013) Cutback Asphalt (Medium-Curing Type)
8. ASTM D2028/D2028M (2015) Cutback Asphalt (Rapid-Curing Type)
9. ASTM D2397/D2397M (2017) Standard Specification for Cationic Emulsified Asphalt
10. ASTM D2995 (1999; R 2009) Determining Application Rate of Bituminous Distributors
11. ASTM D6373 (2016) Standard Specification for Performance Graded Asphalt Binder
12. ASTM D946/D946M (2015) Penetration-Graded Asphalt Cement for Use in Pavement Construction
13. ASTM D977 (2017) Standard Specification for Emulsified Asphalt
14. U.S. GREEN BUILDING COUNCIL (USGBC)
15. LEED BD+C (2009; R 2010) Leadership in Energy and Environmental Design(tm) Building Design and Construction (LEED-NC)

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Certificates of compliance for asphalt materials delivered will be obtained and checked to ensure that specification requirements are met. Quantities of applied material will be determined. Tack coat materials will not be diluted. Prime coat materials when emulsions are used can be diluted on site with potable water up to 1-part emulsion to 1-part water.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Inspect the materials delivered to the site for contamination and damage.

B. Unload and store the materials with a minimum of handling.

1.5 EQUIPMENT, TOOLS AND MACHINES

A. General Requirements

1. Equipment, tools and machines used in the work are subject to approval.
2. Maintain in a satisfactory working condition at all times.
3. Calibrate equipment such as asphalt distributors, scales, batching equipment, spreaders and similar equipment within 12 months of their use.
4. If the calibration expires during project, recalibrate the equipment before work can continue.

B. Bituminous Distributor

1. Provide a self-propelled distributor with pneumatic tires of such size and number to prevent rutting, shoving or otherwise damaging the surface being sprayed.
2. Calibrate the distributer in accordance with ASTM D2995. Engineer and equip the distributor to spray the bituminous material in a uniform coverage at the specified temperature, at readily determined and controlled total liquid rates from 0.14 to 4.5 L/square meter 0.03 to 1.0 gallons per square yard, with a pressure range of 172.4 to 517.1 kPa 25 to 75 psi and with an allowable variation from the specified rate of not more than plus or minus 5 percent, and at variable widths.
3. Include with the distributor equipment a separate power unit for the bitumen pump, full-circulation spray bars, tachometer, pressure gauges, volume-measuring devices, adequate heaters for heating of materials to the proper application temperature, a thermometer for reading the temperature of tank contents, and a hand hose attachment suitable for applying bituminous material manually to areas inaccessible to the distributor.
4. The distributor will be capable of circulating and agitating the bituminous material during the heating process.

C. Heating Equipment for Storage Tanks

1. Use steam, electric, or hot oil heaters for heating the bituminous material.
2. Provide steam heaters consisting of steam coils and equipment for producing steam, so designed that the steam cannot come in contact with the bituminous material.

3. Fix an armored thermometer to the tank with a temperature range from 4.4 to 204.4 degrees C 40 to 400 degrees F so that the temperature of the bituminous material may be determined at all times.

D. Power Brooms and Power Blowers

1. Use power brooms and power blowers suitable for cleaning the surfaces to which the bituminous coat is to be applied.

1.6 ENVIRONMENTAL REQUIREMENTS

A. Apply bituminous coat only when the surface to receive the bituminous coat is dry. A limited amount of moisture (approximately 0.14 liter/square meter 0.03 gallon/square yard) can be sprayed on the surface of unbound material when prime coat is used to improve coverage and penetration of asphalt material.

B. Apply bituminous coat only when the atmospheric temperature in the shade is 10 degrees C 50 degrees F or above and when the temperature has not been below 2 degrees C 35 degrees F for the 12 hours prior to application, unless otherwise directed.

PART 2 - PRODUCTS

2.1. PRIME COAT

A. Provide asphalt conforming to one of the following grades:

B. Cutback Asphalt

1. Provide cutback asphalt conforming to ASTM D2026/D2026M, Grade SC-70 SC-250 ASTM D2027/D2027M, Grade MC-30 MC-70 MC-250 ASTM D2028/D2028M, Grade RC-70 RC-250.

C. Emulsified Asphalt

1. Provide emulsified asphalt conforming to ASTM D977, Type SS-1 or SS1h, ASTM D2397/D2397M, Type CSS-1 or CSS-1h. Asphalt emulsion can be diluted up to 1-part water to 1-part emulsion for prime coat use. Do not dilute asphalt emulsion for tack coat use.

2.2. TACK COAT

A. Note A in TABLE 1 of ASTM D2028/D2028M should be reviewed and the material specified by viscosity or penetration. Cutback asphalt grades recommended for tack are RC-70 and RC-250. In cold-weather construction, cutback asphalt can be used with less concern than emulsions which contain water.

B. Paving grade asphalts can also be used in tack coat applications. High heat is required to achieve spraying consistency for these materials. When asphalt cement is used, the tack coat grade should be the same grade as that for the asphalt mixture or the normal unmodified asphalt grade used for the local area by the DOT.

2.3. ASPHALT CEMENT

A. Provide asphalt cement conforming to ASTM D946/D946M or ASTM D6373 Grade RS-1, SS-1, and SS-1h.

2.4. CUTBACK ASPHALT

A. Provide cutback asphalt conforming to ASTM D2028/D2028M, Grade RC-70 RC-250.

2.5. EMULSIFIED ASPHALT

A. Provide emulsified asphalt conforming to ASTM D977, Type RS-1 MS-1 HFMS-1 SS-1 SS1h ASTM D2397/D2397M, Type CRS-1 CSS-1 CSS-1h.

B. For prime coats the emulsified asphalt can be diluted with up to 1-part emulsion to 1-part water. No dilution is allowed for tack coat applications.

C. The base asphalt used to manufacture the emulsion is required to show a negative spot when tested in accordance with AASHTO T 102 using standard naphtha.

PART 3 - EXECUTION

A. Refer to DDC General Conditions.

3.1. PREPARATION OF SURFACE

A. Immediately before applying the bituminous coat, remove all loose material, dirt, clay, or other objectionable material from the surface to be treated by means of a power broom or blower supplemented with hand brooms.

B. Apply treatment only when the surface is dry and clean.

3.2. APPLICATION RATE

A. The exact quantities within the range specified, which may be varied to suit field conditions, will be determined by the Commissioner.

B. Tack Coat

1. Apply bituminous material for the tack coat in quantities of not less than 0.14 L 0.03 gallons nor more than 0.46 L/square meter 0.10 gallons per square yard of residual asphalt onto the pavement surface as approved by the Commissioner. Do not dilute asphalt emulsion when used as a tack coat.

C. Prime Coat

1. Apply bituminous material for the prime coat in quantities of not less than 0.23 L 0.05 gallons nor more than 0.54 L/square meter 0.12 gallons per square yard of residual asphalt for asphalt emulsion up to a 1 to 1 dilution rate or for residual asphalt for cutback asphalt.

3.3. APPLICATION TEMPERATURE

A. Viscosity Relationship
1. Apply asphalt at a temperature that will provide a viscosity between 10 and 60 seconds, Saybolt Furol, or between 20 and 120 square mm/sec 20 and 120 centistokes, kinematic. Furnish the temperature viscosity relation to the Commissioner.

B. Temperature Ranges

1. The viscosity requirements determine the application temperature to be used. The following is a normal range of application temperatures:

	Cutback Asphalts
MC-30	29-87 degrees C 85-190 degrees F
SC-70, MC-70, RC-70	50-107 degrees C 120-225 degrees F
SC-250, MC-250, RC-250	75-132 degrees C 165-270 degrees F
	Asphalt Emulsion
All Grades 2	0-70 degrees C 70-160 degrees F
	Asphalt Cement
All Grades	135-175 degrees C 275-350 degrees F

2. Some of these temperatures for rapid cure cutbacks are above the flash point of the material and care should be taken in their heating.

3.4. APPLICATION

A. General

1. Following preparation and subsequent inspection of the surface, apply the bituminous prime or tack coat with the bituminous distributor at the specified rate with uniform distribution over the surface to be treated.
2. Properly treat all areas and spots, not capable of being sprayed with the distributor, with the hand spray.
3. Until the succeeding layer of pavement is placed, maintain the surface by protecting the surface against damage and by restoring deficient areas at no additional cost to The City of New York.
4. If required, spread clean dry sand to effectively blot up any excess bituminous material.
5. No smoking, fires, or flames other than those from the heaters that are a part of the equipment are permitted within 8 meters 25 feet of heating, distributing, and transferring operations of cutback materials.
6. Prevent all traffic, except for paving equipment used in constructing the surfacing, from using the underlying material, whether primed or not, until the surfacing is completed.
7. The bituminous coat requirements are described herein.

B. Prime Coat

1. The prime coat is required if it will be at least 7 days before the asphalt mixture is constructed on the underlying base course, etc. The type of liquid asphalt and application rate will be as specified herein.
2. Protect the underlying layer from any damage (water, traffic, etc.) until the surfacing is placed.
3. If the Contractor places the surfacing within seven days, the choice of protection measures or actions to be taken is at the Contractor's option.
4. Restore (recompact or replace) damage to the underlying material caused by lack of, or inadequate, protection by approved methods at no additional cost to the City of New York.
5. If the Contractor opts to use the prime coat, apply as soon as possible after consolidation of the underlying material.
6. Apply the bituminous material uniformly over the surface to be treated at a pressure range of 172.4 to 517.1 kPa 25 to 75 psi; the rate will be as specified above in paragraph application rate.
7. To obtain uniform application of the prime coat on the surface treated at the junction of previous and subsequent applications, spread building paper on the surface for a sufficient distance back from the ends of each application to start and stop the prime coat on the paper and to ensure that all sprayers will operate at full force on the surface to be treated. Immediately after application remove and destroy the building paper.

C. Tack Coat

1. A tack coat should be applied to every bound surface (asphalt or concrete pavement) that is being overlaid with asphalt mixture and at transverse and longitudinal joints.
2. Apply the tack coat when the surface to be treated is clean and dry.

3. Immediately following the preparation of the surface for treatment, apply the bituminous material by means of the bituminous distributor, within the limits of temperature specified herein and at a rate as specified above in paragraph application rate.
4. Apply the bituminous material so that uniform distribution is obtained over the entire surface to be treated. Treat lightly coated areas and spots missed by the distributor by spraying with a hand wand or using other approved method.
5. Following the application of bituminous material, allow the surface to cure without being disturbed for period of time necessary to permit setting of the tack coat.
6. Apply the bituminous tack coat only as far in advance of the placing of the overlying layer as required for that day's operation.
7. Maintain and protect the treated surface from damage until the succeeding course of pavement is placed.

3.5. CURING PERIOD

A. Following application of the bituminous material and prior to application of the succeeding layer of asphalt mixture allow the bituminous coat to cure and water or volatiles to evaporate prior to overlaying.

B. Maintain the tacked surface in good condition until the succeeding layer of pavement is placed, by protecting the surface against damage and by restoring and recoating deficient areas.

C. Allow the prime coat to cure without being disturbed for a period of at least 48 hours or longer, as may be necessary to attain penetration into the treated course.

D. Furnish and spread enough sand to effectively blot up excess bituminous material.

3.6. FIELD QUALITY CONTROL

A. Obtain certificates of compliance for all asphalt material delivered to the project.

B. Obtain samples of the bituminous material under the supervision of the Commissioner.

C. The sample may be retained and tested by the Commissioner at no cost to the Contractor.

3.7. SAMPLING AND TESTING

A. Furnish certified copies of the manufacturer's test reports indicating temperature viscosity relationship for cutback asphalt or asphalt cement, compliance with applicable specified requirements, not less than 5 days before the material is required in the work.

B. Sampling

1. Sample bituminous material in accordance with ASTM D140/D140M.

C. Calibration Test

1. Furnish all equipment, materials, and labor necessary to calibrate the bituminous distributor. Calibrate using the approved job material and prior to applying the bituminous coat material to the prepared surface. Calibrate the bituminous distributor in accordance with ASTM D2995.

D. Trial Applications

1. Before applying the spray application of tack or prime coat, apply three lengths of at least 30 meters 100 feet for the full width of the distributor bar to evaluate the amount of bituminous material that can be satisfactorily applied.

E. Tack Coat Trial Application Rate

1. Apply the trial application rate of bituminous tack coat materials in the amount of 0.23 L/square meter 0.05 gallons per square yard. Make other trial applications using various amounts of material as may be deemed necessary.

F. Prime Coat Trial Application Rate

1. Apply the trial application rate of bituminous materials in the amount of 0.66 L/square meter 0.15 gallon per square yard. Make other trial applications using various amounts of material as may be deemed necessary.

G. Sampling and Testing During Construction

1. Perform quality control sampling and testing as required in paragraph field quality control.

3.8. TRAFFIC CONTROLS

A. Keep traffic off surfaces freshly treated with bituminous material. Provide sufficient warning signs and barricades so that traffic will not travel over freshly treated surfaces.

END OF SECTION 32 12 13

SECTION 32 13 13 - CONCRETE PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section Includes:

1. Concrete reinforcement and accessories.
2. Cast-in-place concrete.

B. Related Sections:

1. Section 07 92 00 "Joint Sealants" for sealant for joints.
2. Section 31 23 23 "Backfilling" for compacted fill for paving.
3. Section 32 11 23 "Aggregate Base Courses".

1.3 REFERENCES

A. Refer to DDC General Conditions.

B. General:

1. The following documents form part of the Specifications to the extent stated. Where differences exist between codes and standards, the one affording the greatest protection shall apply.
2. Unless otherwise noted, the referenced standard edition is the current one at the time of commencement of the Work.

C. ASTM International:

1. ASTM A 185 Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete
2. ASTM A 49 Standard Specification for Heat-Treated Carbon Steel Joint Bars, Micro alloyed Joint Bars, and Forged Carbon Steel Compromise Joint Bars
3. ASTM A 996 Standard Specification for Rail-Steel and Axle-Steel Deformed Bars for Concrete Reinforcement
4. ASTM C 33 Specification for Concrete Aggregates
5. ASTM C 94 Specification for Ready-Mixed Concrete

6. ASTM C 150 Specification for Portland Cement
7. ASTM C 260 Specification for Air-Entraining Admixtures for Concrete
8. ASTM C 1315 Specification for Liquid Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete
9. ASTM C 494 Specification for Chemical Admixtures for Concrete
10. ASTM D1751 Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types)
11. ASTM D1752 Specification for Preformed Sponge Rubber and Cork Expansion Joint Fillers for Concrete Paving and Structural Construction

1.4 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: Submit on the following:
1. Joint filler
2. Admixtures
3. Curing compounds.

C. Submit signed verification from the source of supply for each material used on the Work indicating that the materials meet specified requirements.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Obtain materials specified in this section from the same sources throughout the Work.

PART 2 - PRODUCTS

2.1 CONCRETE MATERIALS

A. Portland Cement: ASTM C 150, Type II .

B. Normal-Weight Aggregates: ASTM C 33.

C. Water: ASTM C 94/C 94M and potable.

2.2 REINFORCEMENT

A. Reinforcing Steel: ASTM A 615; 60-ksi yield grade; deformed steel bars, uncoated finish.

B. Welded Steel Wire Fabric: Plain type, ASTM A 185; in flat sheets; uncoated finish.

C. Tie Wire: Annealed steel, 16 AWG or heavier.

D. Dowels: ASTM A 615; 40-ksi yield grade, plain steel, uncoated finish.

2.3 ACCESSORIES

A. Pre-formed Joint for Expansion Joints.

2.4 CONCRETE MIX

A. Mix concrete in accordance with ASTM C 94.

B. Provide concrete for characteristics:

UNIT	MEASUREMENT
Compressive Strength at 7 days	2600 psi
Compressive Strength at 28 days	4000 psi

C. Use accelerating admixtures meeting ASTM C 494 in cold weather only when approved by the Commissioner. Use of admixtures shall not relax cold weather placement requirements.

D. Use set-retarding admixtures meeting ASTM C 494 during hot weather only when approved by the Commissioner.

E. Add air entraining agent meeting ASTM C 260, to concrete mix for concrete work subject to freeze/thaw cycling].

F. Use admixture like fly ash.

PART 3 - EXECUTION

A. Refer to DDC General Conditions.

3.1. EXAMINATION

A. Verify that compacted subgrade is ready to support paving and imposed loads.

B. Verify that gradients and elevations of base are correct.

C. By starting the work of this section, the Subcontractor warrants that it has examined and verified that the existing conditions comply with and conform to the provisions of the preceding paragraphs.

3.2. PREPARATION

A. Moisten base to minimize absorption of water from fresh concrete.

B. Notify the Commissioner at least 48 hours prior to commencement of concreting operations.

3.3. FORMING

A. Place and secure forms to correct location, dimension, and profile.

B. Assemble formwork to permit easy stripping and dismantling without damaging concrete.

C. Place joint fillers vertically, in straight lines. Secure to formwork during concrete placement.

3.4. REINFORCEMENT

A. Place reinforcement at top and bottom of slabs-on-grade.

B. Interrupt reinforcement at control contraction expansion joints.

C. Place reinforcement to achieve slab and curb alignment as detailed.

D. Provide dowelled joints at interruptions of concrete with one end of dowel set in capped sleeve to allow longitudinal movement.

3.5. FORMED JOINTS

A. Place expansion joints at 20 ft (6 m) intervals to correct elevation and profile. Align curb, gutter, and sidewalk joints.

B. Place joint filler between paving components and building or other appurtenances. Recess top of filler ¼ inches for sealant placement by Section 07 92 00 " Joint Sealants for Concrete Work".

C. Provide scored/ sawn joints at (3-foot (0.90 m)) intervals of sidewalk.

3.6. PLACING CONCRETE

A. Ensure that reinforcement, inserts, embedded parts, formed joints and are not disturbed during concrete placement.

B. Place concrete continuously between predetermined construction joints. Do not break or interrupt successive pours such that cold joints occur.

C. Place concrete to pattern indicated. Saw-cut contraction joints 3/16 inch (5 mm)- inch wide at an optimum time after finishing. Cut 1/3 into (8 mm) depth of slab.

D. Trowel smooth.

3.7. FINISHING

A. Paving: Light broom.

B. Sidewalk Paving: Light broom, radius and trowel joint edges.

C. Curbs and Gutters: Light broom.

D. Place curing compound on exposed concrete surfaces immediately after finishing. Apply in accordance with manufacturer's instructions.

3.8. FIELD QUALITY CONTROL

A. Maintain records of placed concrete items during construction and transmit the records to the City of New York for archiving at project completion. Record date, location of pour, quantity, air temperature, and test samples taken.

3.9. PROTECTION

A. Immediately after placement, protect concrete from premature drying, excessive hot or cold temperatures, and mechanical injury.

END OF SECTION 32 13 13

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 32 13 73 - CONCRETE PAVING JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 RELATED WORK SPECIFIED ELSEWHERE

A. Concrete Curbs and Gutters: Section 32 16 13.

1.3 SUBMITTALS

A. Refer to DDC General Conditions for all submittals.

B. Product Data: Catalog sheets, specifications, and installation instructions for each product specified except miscellaneous materials.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions.

B. Container Labels: Include manufacturer's name, trade name of product, kind of material, specification number (if applicable), expiration date (if applicable) and packaging date or batch number.

1.5 PROJECT CONDITIONS

A. Environmental Conditions

1. Temperature: Unless otherwise approved or recommended in writing by the sealant manufacturer, do not install sealants at temperatures below 40 degrees F or above 85 degrees F.
2. Humidity and Moisture: Do not install the Work under this Section under conditions that are detrimental to the application, curing and performance of the specified materials.

B. Protection:

1. Protect all surfaces adjacent to sealants with non-staining removable tape or other approved covering to prevent soiling or staining.

PART 2 - PRODUCTS

2.1. SEALANTS

A. Type 1B Sealant:

1. For Horizontal Joints: One-part, self-leveling silicone or polyurethane sealant for traffic bearing construction;

a) Bostik Chem-Calk 955-SL,
b) Tremco Vulkem 45,
c) Pecora Urexpan NR-201,
d) Pecora 300-SL,
e) Pecora 310-SL,
f) Sika Sikaflex-1CSL,
g) Dow Corning CCS.
h) Or Approved Equal

2. For Vertical Joints: One-part, non-sag silicone or polyurethane sealant;

a) Tremco Vulkem 116,
b) Pecora Dynatrol I,
c) Sika Sikaflex Textured Sealant,
d) Dow Corning CCS or CWS,
e) Pecora 301-NS, Pecora 311-NS.
f) Or Approved Equal

2.2. MISCELLANEOUS MATERIALS

A. Joint Primer/Sealer/Conditioner: As recommended by the sealant manufacturer for the particular joint surface materials and conditions.

B. Backer Rod: Compressible rod stock or expanded, extruded polyethylene.

C. Bond Breaker Tape: Polyethylene or other plastic tape as recommended by the sealant manufacturer; non-bonding to sealant.

D. Cleaning Solvents: Oil free solvents as recommended by the sealant manufacturer. Do not use re-claimed solvents.

E. Masking Tape: Removable paper or fiber tape, self-adhesive, non-staining.

2.3. COLOR OF MATERIALS

A. For exposed materials furnish color as indicated, provide the Commissioner with full range of colors offered by the manufacturer.. For concealed materials, provide the natural color which has the best overall performance characteristics.

PART 3 - EXECUTION

3.1. EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for the requirements governing execution.

3.2. PREPARATION

A. Clean joint surfaces immediately before installation of sealant and other materials specified in this Section.

1. Remove all loose materials, dirt, dust, rust, oils and other foreign matter that will impair the performance of materials installed under this Section. When necessary or when directed, wire brush, grind, or acid etch to thoroughly clean joint surfaces.

3.3. JOINT FILLER INSTALLATION

A. Set joint fillers at proper depth and position as required for installation of bond breakers, backer rods and sealants. Do not leave voids or gaps between the ends of joint filler units.

1. Smooth Edged Joints: For joints between two concrete slabs or where new concrete abuts smooth edged materials use either filler as specified.
2. Irregular Edged Joints: For joints where new concrete abuts granite curbs or other irregular edges use closed cell polyurethane joint filler.

3.4. BACKER ROD AND BOND BREAKER TAPE INSTALLATION

A. Install bond breaker tape in relaxed condition as it comes off the roll. Do not stretch the tape. Lap individual lengths.

B. Provide backer rod of sufficient size to fill the joint width at all points in a compressed state. Compress backer rod at the widest part of the joint by a minimum of 25 percent. Do not cut or puncture the surface skin of the rod.

3.5. SEALANT INSTALLATION

A. Except as shown or specified otherwise, install sealants in accordance with the manufacturer's printed instructions.

B. Prime joint surfaces which are to receive Type 1A Sealant. Do not allow the primer to spill or migrate onto adjoining surfaces.

C. Apply sealant with ratchet hand gun or other approved mechanical gun. Where gun application is impractical, apply sealant by knife or by pouring as applicable.

D. Finishing: Tool all vertical, non-sag sealants so as to compress the sealant and eliminate air voids. Provide a neat smoothly finished joint with a slightly concave surface unless otherwise indicated or recommended by the manufacturer.

1. Use tool wetting agents as recommended by the sealant manufacturer.

3.6. CLEANING

A. Immediately remove misapplied sealant and drippings from metal surfaces with solvents and wiping cloths. On other materials, remove misapplied sealant and droppings by methods and materials recommended in writing by the manufacturer of the sealant material.

B. After sealants are applied and before skin begins to form on sealant, remove all masking and other protection and clean up any remaining defacement caused by the Work.

END OF SECTION 32 13 73

SECTION 32 16 13 - CONCRETE CURBS AND GUTTERS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

B. ASTM A283, Grade A – Low and Intermediate Tensile Strength Carbon Steel Plates

1.2 SUMMARY

A. Provide all labor, materials and equipment as necessary to complete all work as indicated on the Drawings and specified herein.

B. This section includes:

1. Curb and gutters.
2. Steel Facing

C. Related sections include the following:

1. Section 31 10 00-Site Clearing
2. Section 31 23 16-Excavation
3. Section 31 23 23-Backfilling
4. Section 32 13 13-Concrete Paving

1.3 QUALITY ASSURANCE

A. Refer to DDC General Conditions

B. Concrete sampling, testing, and inspection shall conform to the requirements found in Section 32 13 13 “Concrete Paving.”

1.4 SCHEDULE

A. Concrete shall not be placed after October 15 without written permission from the Commissioner.

1.5 GUARANTY

A. Furnish and sign 1 year written Contractor's Guaranty which shall cover cracking, spalling, settling, finishing and forming.

PART 2 - PRODUCTS

A. Concrete: Refer to Section 32 13 13 "Concrete Paving" for all products, except for the following:

1. Reinforcement: Shall be No. 4 bar reinforcement of new billet stock of intermediate grade in accordance with ASTM A615.

B. Structural steel plates:

1. ASTM A283, Grade A
2. Meets requirements of "New York Steel Construction Manual"
3. Fabrication of the steel facing shall conform to the requirements of Subsection 564-3 "Construction Details" of the NYSDOT Standard Specifications.

PART 3 – EXECUTION

A. Refer to DDC General Conditions.

3.1. PLACING FORMS

A. Steel or wood forms of an approved section shall be used throughout the construction. On radii 3 feet or less, 1/4-inch plywood or masonite shall be used. All forms shall have a height equal to concrete thickness. Built-up, battered, bent, twisted, or broken forms shall be removed from the work. Expansion joint materials shall not be used.

B. Forms shall be so constructed and set as to resist, without springing or settlement, the pressure of the concrete. On curbs of sharp radius, plywood or other approved flexible material shall be used in sections short enough to form a smooth, uninterrupted curb which shall not vary from the true radius by more than 1/4-inch. Forms shall not deviate more than 1/8-inch in 10 feet from the true horizontal alignment and no more than 1/8-inch in vertical alignment.

C. Where forms are set above general surrounding area, earth shall be placed along outside edges of forms to ensure stability.

D. Forms shall be cleaned and oiled each time they are used.

E. Forms must be approved by the Commissioner prior to placing concrete.

3.2. PLACING REINFORCEMENT

A. Place 2 bars in gutter pan as specified in Drawings and in the following areas:

1. Where curb crosses a recently filled trench and extending a minimum of 5 feet beyond trench wall.
2. Where fill soil of 18 inches or more occurs.
3. In all valley gutter pans. (exception – 3 bars as shown on the detail drawing)
4. In all path ramps and extending a minimum of eighteen inches beyond the bottom of the curb taper or curb transition.
5. As directed by the Commissioner.

3.3. PLACING CONCRETE

A. Section 32 13 13 “Concrete Paving.”

3.4. JOINTING

A. Control (contraction) joints shall be perpendicular to the curb edge, 1-1/2-inch deep, open and free of all excess concrete. Control joints shall be placed at intervals of not more than 10 feet as indicated on the Drawings.

B. Expansion joints shall be placed at all points of curvature, tangency, and at intervals of not more than 100 lineal feet.

3.5. FINISHING

A. Concrete shall be struck off true to cross section, after which it shall be finished smooth and even. Face forms, if used, shall be left in place until the concrete has set sufficiently so that they can be removed without injury to the curb. The remaining forms shall be rounded with an edging tool. No tool marks are to be left on exposed edges.

B. A straight edge check is to be made while concrete is still plastic. Irregularities exceeding 1/8-inch shall be corrected. Finish surfaces shall not vary form the required cross section as indicated on Drawings by more than 1/8-inch. They shall not vary from the true horizontal alignment by more than 1/4-inch in 10 lineal feet. Sections exceeding those limitations are subject to rejection and replacing at Contractor’s expense.

C. Adding water to the surface of the concrete to assist in finishing operations is not permitted. If a finishing aid is permitted by the Commissioner, it shall only be an approved product for that intended purpose and then applied according to the product recommendations.

3.6. STEEL FACING

A. All surfaces of completed steel facing including anchors, fastenings, etc., shall be thoroughly cleaned of all rust, oil, grease or foreign matter in accordance with Item 572.01 Structural Steel Paint System, Shop Applied of the NYSDOT Standard Specifications.

B. All surfaces of steel facing to be exposed after installation shall be painted in accordance with and meet the requirements of Item 18573.10 of the NYSDOT Standard Specifications.

C. Curved steel facing shall be bent to radii designated on the plans, with tangent 36-inch lengths provided in the end sections that will incorporate the point of curvature and point of tangency of the curb radius.

3.7. CURING AND ANTI-SPALLING COMPOUND APPLICATION

A. Section 32 13 13 “Concrete Paving.”

END OF SECTION 32 16 13

SECTION 33 05 97.23 - UNDERGROUND UTILITY WARNING TAPE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 GENERAL REQUIREMENTS

A. Warning/identification tape shall be installed to identify location of underground utilities and to act as a warning against accidental excavation of buried utilities.

B. Warning/identification tape shall be used on all underground water and recycled water mains, potable and recycled water irrigation systems, sewer mains, and all related appurtenances.

C. Warning/identification tape shall also be used on cathodic protection wiring systems and tracer wire brought into and out of access ports.

PART 2 - PRODUCT

A. Warning Tape

B. Tracing Wire

PART 3 - INSTALLATION

3.1. WARNING TAPE

A. During the backfilling process, all PVC and Ductile Iron water mains, service lines and system appurtenances shall have a continuous warning tape placed immediately above them and throughout their length at a depth of eighteen (18) inches above the utility line surface.

B. The tape shall be six (6) inches wide. Tape material shall be formulated from 100 percent virgin polyolefin resins. Resins shall be pigmential for chemical stability and resistance to sulfide staining (color fastness).

C. Tape shall be constructed by the mechanical (non-adhesive) lamination of two plies of three layers blown film in such a manner as to produce a bi-axially oriented structure. The tape shall be able to provide a 700 percent elongation prior to rupture as per ASTM-D882.

D. The tape shall meet or exceed the standards provided in the Materials Specification List, included in these Standards. The warning tape shall be manufactured with a permanent APWA

line color pigment at a maximum of every thirty (30) inches along its length, be imprinted with a continuous warning message as follows:

1. "CAUTION: (State Type) WATER LINE BURIED BELOW"

2. At tees, tape ends, etc., the warning tape shall be tied together (spliced) with knot to create a continuous warning tape throughout the length of the pipeline and associated branch lines, appurtenances, etc.

3.2. TRACING WIRE

A. In addition to the installation of warning tape, copper tracing wire is to be installed with all water mains. This includes all mains, and individual hydrants. The tracing wire shall be taped, using electrical tape, on top of the pipe at ten (10) foot centers, for the total length of the pipe.

B. The tracing wire shall be 12 AWG (Average wire gauge), solid core, copper wire (solid core meaning one (1) single continuous strand of copper wire). In addition, the wire insulating coating (jacket) shall be blue in color and shall have 45 mils of polyethylene insulation thickness and high molecular weight. In addition, the tracing wire shall be HMW-PE and rated for UL 600V construction. The wire shall be suitable for wet or dry applications. The wire size (gauge) shall be continuously affixed (printed on) the entire length of all tracing wire coating and shall be easily read.

C. Where a splice is required, or when a three (3)-way splice is necessary, the wires shall be joined together with an appropriate size (blue) wire nut which shall then be placed inside a direct bury splice kit, of appropriate size. No bare wire shall be left exposed anywhere. All wires shall be spliced to all other wires for a continuous tracing wire system.

D. On all hydrants and above ground appurtenances, the tracing wire shall be run up and protected. This wire end shall not be bare, but shall have the coating jacket intact. Location and frequency of test boxes shall be as directed by the Commissioner. Test boxes, connected onto tracing wire system as per detailed drawings herein, shall be required where hydrants are not used or where hydrant spacing exceeds 500 feet.

E. No electrical connections of the tracing wire to any metal pipes or metal service lines will be allowed and care shall be taken to ensure that the tracing wire is not damaged during installation. The tracing wire will be tested for continuous signal (continuity test) and shorts to ground across all main and service lines before asphalt is installed, and prior to sub grade preparation. Tracing wire must be able to conduct a continuous signal before pipe is accepted.

July 27, 2021

ADDENDUM No. # 1

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

85021B0135 – S136-383N

DSNY BK 17/18 Garage Roof and HVAC Upgrade

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **The location of the Pre-Bid Site Walk Through has been changed to the corner of East 105th Street and Foster Avenue.**

2. **Bidders Questions and Responses to Questions:**
   See Attachment A.

3. **Revisions to PASSPort forms:**
   See Attachment B.

4. **Revisions to Documents:**
   See Attachment C.

Transferring Data Between Rounds of an RFX: A new document titled "Transferring Data Between Rounds of an RFX" has been added to the Documents section of the View RFx tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

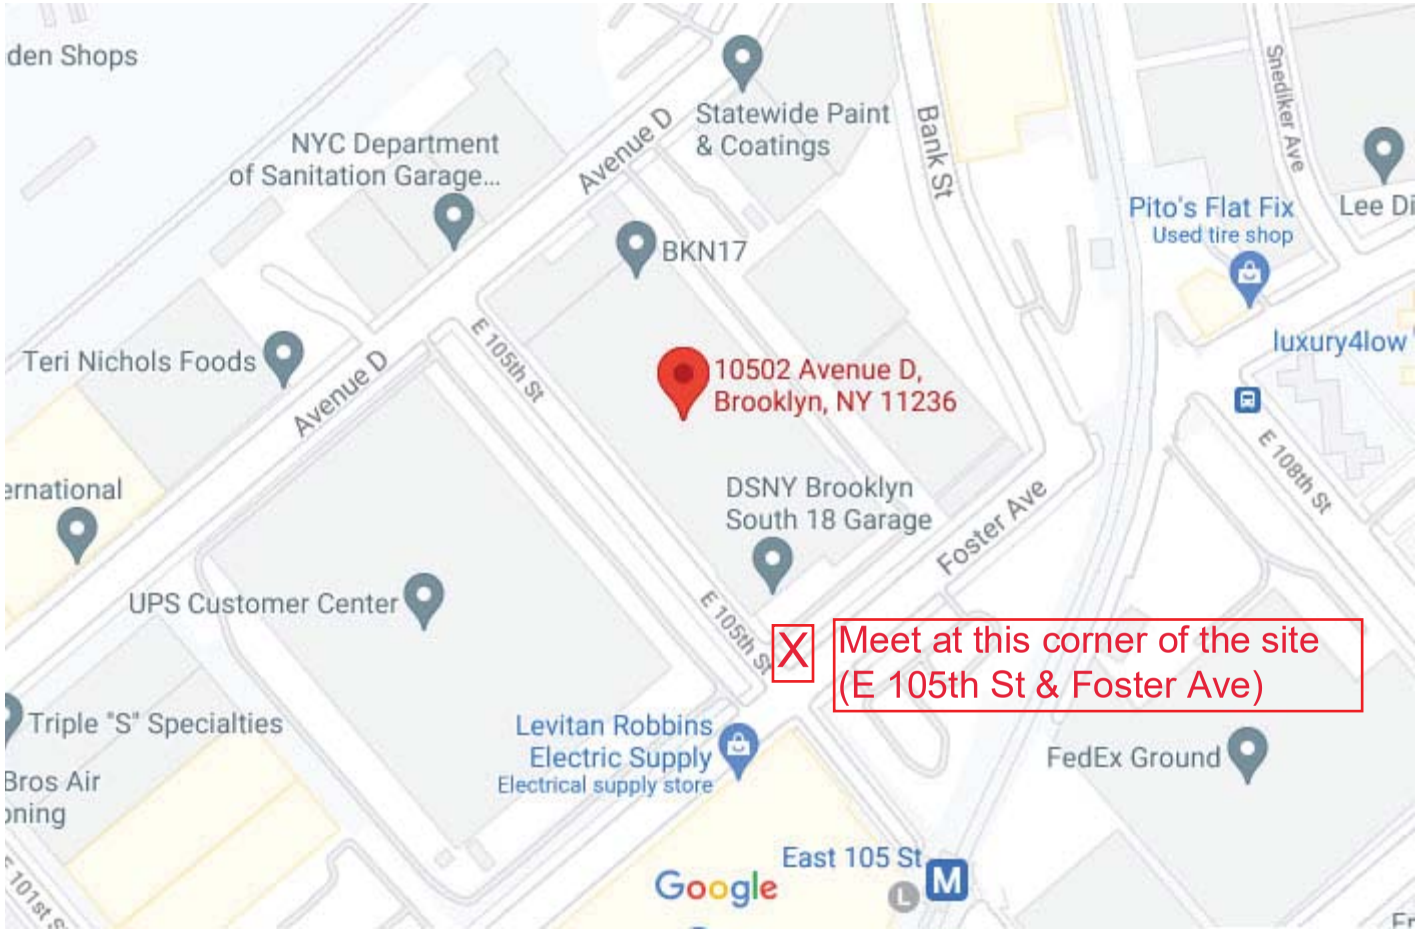
DDC PROJECT #: **S136-383N**

PROJECT NAME: **DSNY BK 17/18 Garage Roof and HVAC Upgrade**

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	We are unable to find One-page Bid Submission Form in V1 bid booklet, as called for within page#3 of said booklet "One-page signed Bid Submission Form delivered in person to DDC before the bid due date" hence please kindly advise where we can find this required Bid Submission Form, or please provide one if it is not within the bid document currently.	Bid Submission form is found in the Questionnaire, section "Paper Bid Submissions- To be Submitted to Agency."
2	We are unable to find the bid bond form within the bid document, hence please kindly advise where we can find the Bid Bond form, or please provide one if it is not within the bid document currently	Bid Bond Form is found in the Questionnaire, section "Paper Bid Submissions- To be Submitted to Agency." The bidder must select Bid Bond as the bid security type before the Bid Bond Form appears.
3	Please advise on the required M/WBE participation goal for this bid.	Please refer to the M/WBE Requirements tab in PASSPort for this information.
4	This project has an MBE requirement of 27% Black and 1% Hispanic. Please advise if we have options to go with different minorities to meet our goal.	The goal can only be met by the MBE requirement of 27% Black and 1% Hispanic.
5	We assume all work can be done during normal working hours. Please confirm.	Refer to Volume 3 - Addendum to General Conditions, "F. Construction Phasing Guidelines" on pp.5-6 for this information.



DDC PROJECT #: **S136-383N**

PROJECT NAME: **DSNY BK 17/18 Garage Roof and HVAC Upgrade**

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Please confirm if a pretest is required before we demo RTU's and Fans.	Confirmed. Refer to Specification section 230593-3.16 for testing performed on existing systems. Note that airflow values are indicated for existing equipment to remain or be tied into.
2	The Drawings call for replacing Roof Hatches, but there is no specification on this. Please provide.	Refer to the attached specifications for Roof Accessories, include within Volume 3.
3	Drawing M701 has a schedule for Modine Gas Fired Unit heater. The unit heaters indicated on drawings are existing to remain. We assume this schedule is just for reference. Please confirm or clarify.	No, the schedule is not only for reference. Refer to mechanical drawings, truck wash area, as an example where a new unit heater is shown. Also refer to truck wash area where a new electrical room is created, and a new unit heater is provided.
4	Please provide engineer's estimate for this project.	DDC does not disclose this information. Refer to the Bid Breakdown in the PASSPort Questionnaire for all line items.
5	The Phasing Plan is for the interior of the building. Are we allowed to do work on the roof throughout the year during normal working hours, without any required phasing, such as removal of existing HVAC equipment?	No. Refer to Volume 3 – Addendum to General Conditions, "F. Construction Phasing Guidelines" on pp 5-6 for this information.
6	With regards to the solicitation for 85021B0135-S136-383N - DSNY BK 17/18 Garage Roof and HVAC Upgrade, is there an estimated range for this project? If that is not available to let us know if the project cost is below $5,000,000.	DDC does not disclose this information.
7	Addendum # 1 calls for MBE goal can be met by 27% Black and 1% Hispanic Subs. Can you please provide us an updated list for Black and Hispanic subs who performs HVAC, Electrical, Masonry, Plumbing, Masonry, Scaffolding work, and so on?	Vendors are encouraged to do their own search for suitable M/WBE subcontractors; they can do so by going to the New York City's Small Business Services website - http://mtprawvwsbswtp1-1.nyc.gov/ and they can also reach out to NYC SBS directly, in order to obtain a more narrow search of qualified subcontractors.

8	Addendum #1 was issued yesterday for Project #S136-383N. One of the questions was in regards to not being able to find the bid bond form within the bid document and DDCs response was that it is found in the questionnaire section "paper bid submissions – to be submitted to agency". Please be advised, the questionnaire section is not shown for this project, so we are still unable to locate the bid bond form. Can you please advise?	Please contact MOCS at help@mocs.nyc.gov for assistance.
9	What is the Bid Budget for this project?	DDC does not disclose this information.
10	Drawings A-105 & A-106 call for roof pavers. Please clarify if we are to install concrete pavers or manufactured ceramic granule roof walkway.	The roof walkway pavers shall be precast concrete ballast pavers with bearing pads.
11	Drawing A-111 calls for Truck wash area to be installed with Epoxy Flooring. Please provide us specs on Epoxy Flooring.	See Spec section 099100- Painting, Item 2.5A regarding Epoxy Concrete Sealer.
12	Volume 3- Addendum to the General Conditions calls for the GC to provide Trailer for CM and DDC. GC must provide weekly janitor service, drinking water, cleaning of office trailer, and so on. Since there will be no activity from November to April, do we still have to include this cost? Please advise.	Yes, year-round services for CM/DDC trailers must be provided, for the duration of the project.
13	We would like to request a one (1) week extension to the bid August 12th bid date.	The Bid Opening will be on August 18th at 2:30PM.
14	Please advise if Sidewalk Bridging will be required and if so please locate.	Sidewalk bridging will be required for roof and parapet work along the perimeter of the building. Note that the building garage doors will remain active during construction and high bay bridging will be required.
15	I did not see a specification or model number for the Unit Heater Double Wall Flue please advise.	Refer to revised specification 230500 Common Work Results for HVAC section 2.5.
16	Please advise where we connect to the sanitary a Domestic Water for the Shower Trailer indicated on Drawing PH100.	Connect to the nearest bathroom within the facility. Rough location is indicated.

17	The flashing for the existing Rooftop MU units is not indicated to contain asbestos. Please confirm.	Confirmed. The MU Units Flashing/Tar (Black) does not contain asbestos materials on the BK 17/18 Sanitation Garage Roof.
18	Please confirm that we can work on Phase PH1A thru PH1L simultaneously. Is the Phasing the same for the Roof Mechanical Equipment? If each phase is considered separate for the roof, there will considerable additional crane requirements and costs.	No, these are sub-phases of phase 1 and are not to be done simultaneously. Balance of locker room is to be operational under each phase.
19	Re: Solar Panels, what is the exact size in KW AC and KW DC?	Refer to Drawing E-604 for this information.
20	Re: Solar Panels, please confirm that the inverters used in the design are the SMA Core 1 33.3 KW AC inverters and the modules are the Sunpower E-20 SPR-435NE WHT-D.	Confirmed. Refer to Specification section 263100 for additional manufacturers.
21	The phasing plan shows ductwork, but there is no detail information provided. Please clarify the scope of work.	Detail information is provided on the mechanical ductwork plans – phasing drawings indicate only how phasing is to be performed.
22	I would like to request 2 weeks of bid extension. A few sub-contractors are requesting more time to bid this project.	The Bid Opening will be on August 18th at 2:30PM.
23	The phasing plan (PH-100.00) note #8, indicates the building work is only allowed to be performed during a non-snow season (April 1st to October 31st). Does this note apply to the roofing work as well?	Yes, this note applies to roof work as well.
24	Will the 2nd floor locker rooms be vacant during the construction phase?	No, lockers will be functional and are to be phased in construction.
25	I would like to request 2 week of bid extension. My few sub-contractors are requesting more time to bid this project.	The Bid Opening will be on August 18th at 2:30PM.
26	We are having a hard time finding qualified responsive and responsible Black only MBE to meet the 27% goal set forth within referenced bid. Since this is a fairly large dollar value contract, 27% of Black only MBE goal will take good portion of the contract value. Please allow bidders to utilize other City certified minority race to meet the goal.	If a bidder wants to modify the goal, a waiver request needs to be submitted: fill out Part 3 of the Schedule B – Request for Waiver of M/WBE Participation and submit to the MWBEModification@ddc.nyc.gov email address.

27	Since NYC MBE certificate does not state the race of MBE, bidders cannot determine which MBE is qualified as Black MBE. Can a bidder reply on NYC certified MBE to self-certify him/herself as Black MBE?	The goal can only be met by the MBE requirement of 27% Black and 1% Hispanic. Yes, a firm can submit their proof of ethnicity to NYC SBS. Although the ethnicity is not on the certificate, you can check the M/WBE status of a firm on the website at http://mtprawvwsbswtp1-1.nyc.gov/
28	Please advise if the descendent of a multi-raced MBE subcontractor, who is NYC duly certified MBE, such as Black & Asian, can be qualified as Black MBE to meet the 27% Black only MBE participation goal?	M/WBE businesses used to meet the Black, Hispanic, Asian, or Native American goals must be certified in these categories as listed in the NYC SBS Online Directory of Certified Businesses.
29	Does the Contractor's Bid Form have to be submitted with the bid filled out completely, or can the Contractor submit a lump sum bid price and submit a completed Contractor's Bid Form late if we are the low bidder?	The RFx must be fully responded to by the bid submission date and time.
29	Drawing A-105 calls for Walkway Pavers we did not see a detail or a specification on this please provide.	Refer to revised Specification section 075216 – Article 2.2.J, included with Volume 3, for this information.
30	The Addendum to General Conditions page 10 indicates a project safety representative is required for this project. Please confirm that a Project manager can fulfill this requirement and that a Dedicated Safety representative is not required.	A Project Safety Representative (PSR) is always required in all DDC projects; she/he must be full time while construction operations occur. The Project Safety Representatives are designated by the contractor, so it can be the superintendent or foreman, but this person must have sufficient experience and authority to implement corrective actions, even has the authority to stop the work. She/he is a Competent Person as defined by OSHA. Finally, the PSR shall possess at least the OSHA 30 hours construction safety training.
31	Based on MBE requirements of 27% black and 1% Hispanic, can you please provide an approved list of Electrical suppliers that we can use?	Vendors are encouraged to do their own search for suitable M/WBE subcontractors; they can do so by going to the New York City's Small Business Services website-http://mtprawvwsbswtp1-1.nyc.gov/. Vendors can also reach out to NYC SBS directly, to obtain a narrower search of qualified subcontractors.
32	What are the requirements for WBE on this project?	Please refer to the M/WBE Requirements tab in PASSPort for this information.
33	What is the % that can be applied towards minority goals for supplies?	There is no % that can be applied towards minority goals for suppliers/supplies.

34	On the ground floor drawings on all the UEF Fans, it shows a plenum with 4 inlets. Are these Return Registers? They are not identified. Please clarify plenum and register size.	Plenum shall be 52Wx52Lx40H, (4) registers shall be 42X36.
35	There is no specification section for gas fired heater's flue vent. Please confirm if we are allowed to use the threaded fittings for flue vent.	Refer to revised specification 230500 'Common Work Results for HVAC,' Article 2.5. Threaded fittings are not allowed, welded only.
36	The mechanical demolition plan (DMM-101.00) shows the demo of control panels and associated wiring. There is no wiring instructions provided. Please clarify in detail.	Contractor shall remove all associated wiring with control panel and equipment/components being served. All power wiring shall be removed and cut and capped back at the source.
37	The plumbing drawings show the plumbing vents and roof drains work. There are no sizes shown on the drawings. Please, clarify.	Replace-in-kind and install new roof drain at new roof level. Match existing piping and vent sizes.
38	Print E602 notes 3 and 4 clearly state new fuses are to be provided in existing switches in DPA, DPB. Notes 6,14, and 24 sound like new switches are to be provided in the MCC, where the existing are the same size. Are these 30 amp and 60 amp MCC switches to be changed, and if so all nameplate information will be needed.	Refer to E-400 series drawings which indicate the manufacturer and model of existing MCCs and other equipment.
39	Kindly provide the information on the existing Fire Alarm Vendor on site.	Current FA Vendor: Falcon Fire & Security LLC # 718-440-8377. Note that CASE/ACME (212-889-8700) was the original installing vendor.
40	Sheet keynote calls for Fireproofing as required. We did not see the existing Deck fireproofed. Are we installing fireproofing? And if so, please provide a specification and what needs to be fireproofed.	Fireproofing details are provided on the Drawings depending on condition encountered. Also, fireproofing is indicated in Specification section 072700.
41	The DDC General Conditions section 013233 calls for GC to hire a professional Photographer to take pictures. Do we need to include this cost once a Month or once a week?	Once a month.
42	Do we need to include full time Site safety officer?	Refer to response to question 30 in this Addendum.
43	Do we need to include a full time Fire watch?	Provide fire watch as required by General Conditions.

44	Locker / Shower trailer supplied by GC as per Drawing PH-100.00. who provides the cleaning service for Locker / shower trailer and if it is by GC is this service daily or weekly?	Contractor must provide daily cleaning service for the locker/shower trailer.
45	Kindly confirm that the "Proposal Amount" under the Item Grid adds up the bid price + the Allowance.	Confirmed.
46	The Specifications call for job completion for District 17/18 in 885 CCDS. With no work permitted from Nov-1 to April 15, this will give us about 2 summers. No GC work can start until 100% ACM is complete and we get ACP 21. There will be down time between ACM and getting DOB permit. Also, we cannot start installing the solar panels until the roof is completed. We recommend CCDS be extended to cover at least three seasons from April 15 to November 1st. Further, due to supply chain issues, there is no guarantee of material. This job has very high general conditions costs and High Liquidated Damages. Please advise.	Installing the solar panel can be done in phases, just like the roof, per the Contractor's own means and methods. The 885 CCDS for seasons 1, 2, and 3 remain as is.
47	Please advise if there is an existing BMS System of this project. If so, please provide information regarding the existing system.	No, refer to mechanical drawings, in particular M-800 series drawings and Specification section 230900 for the BMS system scope of work.
48	Please advise if any control / BMS work is required for existing equipment such as unit heaters, VAV boxes, fin tube radiator, etc.	Must refer to mechanical drawings, in particular M-800 series drawings and Specification section 230900 for the BMS system scope of work.

DDC PROJECT #: **S136-383N**

PROJECT NAME: **DSNY BK 17/18 Garage Roof and HVAC Upgrade**

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Volume 3 has the following updates:

- Addendum to General Conditions, Section VII, line 3.18 (A-C) Security Guards/Fire Guards on site changed to “Applies”.
- Addendum to General Conditions, Schedule B, added 5 year warranty for 077200 Roof Accessories (Roof hatches).

- Table of Contents added 077200 Roof Accessories.

- Revised Specification section: 075216 – SBS Modified Bitumen Roofing System, Article 2.2J.
- New Specification section 077200 – Roof Accessories.
- Revised Specification section 230500 – Common Work Results for HVAC, Article 2.5.

DDC PROJECT #: **S136-383N**

PROJECT NAME: **DSNY BK 17/18 Garage Roof and HVAC Upgrade**

ATTACHMENT C – REVISIONS TO PASSPORT FORMS

This Addendum initiates Round 4 of the procurement.

Please note that numbering of addenda is independent of rounds.

Bid Opening Date Changes:

The Bid Opening scheduled for August 18, 2021 at 2:30pm has been rescheduled to August 20, 2021 at 2:30pm.

Questionnaire Changes:

Updated Bid Breakdown excel file to add 077200 Roof Accessories

Item Grid Changes:

Fixed functionality of Item Grid.

ADDENDUM No. # 4

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

85021B0135 – S136-383N

DSNY BK 17/18 Garage Roof and HVAC Upgrade

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **The Bid Opening for the contract described below scheduled for August 20, 2021, at 2:30 pm is rescheduled to September 1, 2021 at 2:30 pm.**

   Contract #1 – General Construction Work

2. **Bidders Questions and Responses to Questions:**
   See Attachment A.

3. **Revisions to PASSPort forms:**
   See Attachment B.

4. **Revisions to Documents:**
   See Attachment C.

Transferring Data Between Rounds of an RFX: A new document titled "Transferring Data Between Rounds of an RFX" has been added to the Documents section of the View RFx tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

DDC PROJECT #: **S136-383N**

PROJECT NAME: **DSNY BK 17/18 Garage Roof and HVAC Upgrade**

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Can you please get clarification what the composition of the existing roof is?	Standard built-up roofing.
2	Drawing detail 3/A401 calls for existing roof drain body to remain and replace Drain body Extension. However, plumbing drawing Detail 7/A501 calls for roof drain to be demolished and install new roof drain. Please clarify?	Roof drain replacements to be done per plumbing drawings. Architectural drawings A101 to A104, A401 and DM-101 to DM-104 were revised to match, included with this addendum.
3	Detail 45/E507 calls for Electrical Ground Test well. Is there a Grounding loop surrounding the building? If so, can we get As built drawings.	Install test wells and associated work as indicated on drawings. No as-builts of existing grounding systems are available.
4	Please confirm the bid breakdown is not required to be submitted with the bid, as this bid break down contains nearly 500 very detailed items to be broken down with pricing. Please confirm the low bidder can submit this detailed bid breakdown after the bid due date.	Bid Breakdown is required as part of the PASSPort Bid Submission.
5	Specification 237413-15 has a specification on standard roof curbs as well as vibration curbs, detail on M503 shows a standard Curb we assume a standard curb will be acceptable please confirm.	Yes, standard Curb is acceptable.
6	Drawing M107 at column 3 indicates to extend Chimney 3' above roof. I did not see a detail on this to include what material we will be using to extend please respond.	Contractor to confirm that the existing chimney, after applying new roof, will remain a minimum of 3' above the new roof. Should the chimney need to be extended to maintain min 3' above the new roof, contractor shall match existing construction of chimney to extend.
7	Kindly clarify the swing shift hours Page 5 of 26 Section 01 31 00 - Volume 3 of 3 has 3PM to 12AM and, on Drawing # PH-100.00 Note #8 has 3pm to 5am.	Swing-shift for locker room work should be 3 pm to 12 am. Refer to revised PH-100 drawing
8	We would like to get the Plan Holders List on the subject project.	The PASSPort Vendors list is included with this Addendum in PASSPort.
9	Sec. 075216 SBS cold roofing calls for 1/8" tapered insulation, ½" cover board, 2 ply base membrane and cap sheet. Drawing 1/A401 calls for underlayment board, 1 ply vapor barrier, 1/8" tapered insulation, ½" cover board, 3 ply membrane and cap sheet. Please advise which assembly is correct.	Provide roofing assembly as detailed in contract drawing A401.

10	Ref. drawing A111, 2/112, please provide structural drawings for metal deck and structural frame.	Provide 16 ga stud and joist framing at 24" o.c. with 22 ga metal deck as shown on details 1,2 and 3 in contract drawing A112.
11	E101. keynote 18, calls for us to build an underground vault with network protector at con ed connection point. This means con ed is meeting us at 13.8kv. E603 one-line states ConEd meeting us at 460 volt. Two very different conditions. Which is correct?	Refer to revised drawings E-504, E603, E604, C002 and BPP-002, BPP-004 (included with this addendum) for clarification on delineation of work between coned and contractor. Also see new 262200 low voltage transformer specification for additional transformers added.
12	Kindly advise if the Contractor can do the roofing/HVAC Equipment/solar panel work during the 7am to 4pm hours on the same days when the swing shift Phases# 1 and 2 are being performed.	Yes.
13	Please forward the contact information's of the existing fire alarm system servicing Garage 17 and 18.	Current FA Vendor: Falcon Fire & Security LLC # 718-440-8377. Note that CASE/ACM (212-889-8700) was the original installing vendor.
14	Addendum #5 states that the bid date is September 21st yet in PASSPort says September 22nd, for the above referenced project?	This has been corrected in this addendum; due date is September 21, 2021.

DDC PROJECT #: **S136-383N**

PROJECT NAME: **DSNY BK 17/18 Garage Roof and HVAC Upgrade**

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

SPECIAL INSPECTION NOTES

1. INSPECTION OF SELECTED MATERIALS, EQUIPMENT, INSTALLATION, FABRICATION, ERECTION OR PLACEMENT OF COMPONENTS AND CONNECTIONS MADE DURING THE PROGRESS OF THE WORK TO ENSURE COMPLIANCE WITH THE CONTRACT DOCUMENTS AND PROVISIONS OF THE NEW YORK CITY CONSTRUCTION CODES, SHALL BE MADE BY A SPECIAL INSPECTOR. THE CITY OF NEW YORK WILL RETAIN THE SERVICES OF THE SPECIAL INSPECTOR AND BEAR THE COSTS FOR THE PERFORMANCE OF SPECIAL INSPECTIONS IN COMPLIANCE WITH NYC CONSTRUCTION CODES REQUIREMENTS OR AS ADDITIONALLY MAY BE CALLED FOR IN THE PROJECT SPECIFICATIONS
2. THE CONTRACTOR SHALL NOTIFY THE RELEVANT SPECIAL INSPECTOR IN WRITING AT LEAST 72 HOURS BEFORE THE COMMENCEMENT OF ANY WORK REQUIRING SPECIAL INSPECTION. THE CONTRACTOR SHALL BE RESPONSIBLE FOR, AND BEAR RELATED COSTS TO ASSURE THAT ALL CONSTRUCTION OR WORK SHALL REMAIN ACCESSABLE AND EXPOSED FOR INSPECTION PURPOSES UNTIL THE REQUIRED INSPECTION IS COMPLETED.
3. INSPECTIONS AND TESTS PERFORMED UNDER "SPECIAL INSPECTION" SHALL NOT RELIEVE THE CONTRACTOR OF THE RESPONSIBILITY TO COMPLY WITH THE CONTRACT DOCUMENTS, AND THAT THERE IS NO WARRANTY GIVEN TO THE CONTRACTOR BY THE CITY OF NEW YORK IN CONNECTION WITH SUCH INSPECTION AND TESTS OR CERTIFICATIONS MADE UNDER "SPECIAL INSPECTIONS".
4. THE CONTRACTOR MUST COORDINATE WITH THE RESIDENT ENGINEER OR DDC PROJECT MANAGER TO PROVIDE ACCESS AND SCHEDULE THE WORK FOR INSPECTION BY THE SPECIAL INSPECTOR.

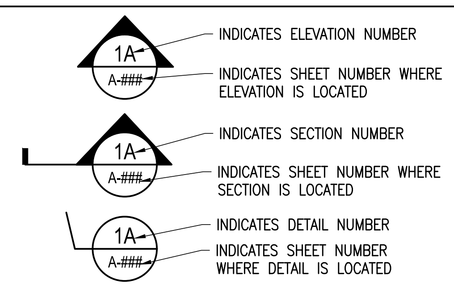
GENERAL NOTES

1. ALL WORK SHALL CONFORM TO THE REQUIREMENTS OF THE 2014 NEW YORK CITY BUILDING CODE AND NYC ENERGY CONSERVATION CODE 2016, UTILITY COMPANY REQUIREMENTS, THE BEST TRADE PRACTICES, AND ALL APPLICABLE LAWS, RULES, AND REGULATIONS.
2. BEFORE COMMENCING WORK, CONTRACTORS SHALL FILE ALL REQUIRED CERTIFICATES OF INSURANCES WITH THE CITY OF NEW YORK, OBTAIN ALL REQUIRED PERMITS AND PAY ALL FEES REQUIRED BY GOVERNING AGENCIES.
3. CONTRACTORS SHALL VERIFY ALL EXISTING CONDITIONS IN THE FIELD PRIOR TO COMMENCING WORK, AND SHALL REPORT ANY DISCREPANCIES BETWEEN DRAWINGS AND FIELD CONDITIONS TO THE COMMISSIONER.
4. THE EXISTING BUILDING WILL BE OCCUPIED DURING CONSTRUCTION & INCIDENTAL WORK WILL TAKE PLACE IN ACTIVELY OPERATING FACILITY AREAS. THE WORK WILL BE SCHEDULED BY THE OWNER'S REPRESENTATIVE SO AS NOT TO INTERFERE WITH OPERATION OF THESE AREAS. THE CONTRACTORS ARE TO FAMILIARIZE THEMSELVES WITH THESE REQUIREMENTS & REQUIREMENTS FOR OPERATING WITHIN THE PREMISES AS OUTLINED IN THE GENERAL CONDITIONS & THE SPECIFIC REQUIREMENTS OF THE SPECIFICATIONS & NOTES ON DRAWINGS.
5. THE CONTRACTOR IS NOT TO SCALE DRAWINGS. ONLY WRITTEN DIMENSIONS ARE TO BE USED.
6. THE CONTRACTORS ARE RESPONSIBLE FOR PROPER CONSTRUCTION OF ANY AND EVERY PART OF THE WORK AND THE COMPLETION REGARDLESS OF THE LEVEL OF DETAIL SHOWN IN THESE DRAWINGS.
7. THE CONTRACTOR SHALL COORDINATE ALL WORK PROCEDURES WITH REQUIREMENTS OF THE COMMISSIONER.
8. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF ALL CONDITIONS AND MATERIALS WITHIN THE CONSTRUCTION AREA. THE CONTRACTOR SHALL DESIGN AND INSTALL ADEQUATE SHORING AND BRACING FOR ALL STRUCTURAL AND REMOVAL TASKS. THE CONTRACTOR SHALL HAVE SOLE RESPONSIBILITY FOR ANY DAMAGE OR INJURIES CAUSED DURING THE EXECUTION OF THE WORK. FOR DESIGN OF SHORING AND BRACING, THE CONTRACTOR SHALL ENGAGE THE SERVICES OF A PROFESSIONAL ENGINEER LICENSED TO PRACTICE IN NEW YORK STATE.
9. EACH CONTRACTOR SHALL LAY OUT HIS/HER OWN WORK, AND SHALL PROVIDE ALL DIMENSIONS FOR HIS WORK AS REQUIRED FOR OTHER TRADES.
10. CONTRACTOR SHALL PATCH AND REPAIR ALL FLOORS, WALLS CEILINGS, ETC.. DAMAGED OR EXPOSED DUE TO HIS WORK OR REMOVALS AND FINISH TO MATCH ADJOINING SURFACES.
11. ADDITIONAL NOTES WHICH ARE APPLICABLE TO THIS PROJECT ARE FOUND THROUGHOUT THE CONTRACT DRAWINGS AND SPECIFICATIONS.
12. ALL TRADES SHALL COORDINATE WORK REQUIRING PENETRATIONS IN FIRE RATED CONSTRUCTION.

PROTECTION NOTES

1. CONTRACTOR SHALL SUBMIT A SITE SAFETY PLAN(S) TO THE COMMISSIONER' FOR REVIEW AND APPROVAL. THE PLAN(S) SHALL INCLUDE THE ENTIRE SITE, INCLUDING INTERIOR AND EXTERIOR AREAS, AND SHALL SHOW PHASED WORK PROTECTION.
2. THE SITE SAFETY PLAN(S) SHALL INCLUDE, BUT NOT BE LIMITED TO, SIDEWALK SHEDS, FENCES, EGRESS, SCAFFOLDING, FIRE PROTECTION ETC. THE PLAN(S) SHOULD ADDRESS ANY POTENTIAL INTERACTION BETWEEN THE BUILDING OCCUPANTS, THE GENERAL PUBLIC AND EXPOSURE TO THE CONSTRUCTION PROCESS.
3. THE CONTRACTOR SHALL INCLUDE IN THE SITE SAFETY PLAN THE LOCATIONS OF SIDEWALK PROTECTION SHEDS THAT WILL PROTECT THE SIDEWALKS AND OTHER PUBLIC AND PRIVATE AREAS FROM CONSTRUCTION OPERATIONS.
4. THE CONTRACTOR SHALL SHOW IN THE SITE SAFETY PLAN TEMPORARY CLOSURES AND ACCESS OF AREAS VULNERABLE TO CONSTRUCTION OPERATIONS.
5. THE CONTRACTOR SHALL ADHERE TO THE REQUIREMENTS OF CHAPTER 33, "SAFEGUARDS DURING CONSTRUCTION" OF THE NYC BUILDING CODE, 2014.



SAFETY OF PUBLIC AND PROPERTY

1. THE CONTRACTOR SHALL INSTITUTE AND MAINTAIN SAFETY MEASURES AND PROVIDE ALL EQUIPMENT OR TEMPORARY CONSTRUCTION NECESSARY TO SAFEGUARD ALL PERSONS AND PROPERTY AFFECTED.
2. STRUCTURES, DEVICES, OR CONSTRUCTION EQUIPMENT SHALL NOT BE LOADED IN EXCESS OF THEIR DESIGN CAPACITY.
3. BEFORE USING CONSTRUCTION EQUIPMENT OR DEVICES, SAME SHALL BE INSPECTED BY THE PERSON SUPERINTENDING THE WORK, AND DEFECTS OR UNSAFE CONDITIONS SHALL BE PROMPTLY CORRECTED BEFORE USE.
4. DETERMINE LOCATION, PROTECT AND SAFEGUARD ALL UTILITIES ON OR ADJACENT TO SITE. NOTIFY ALL UTILITY COMPANIES AS REQUIRED.
5. MAINTAIN FIRE PREVENTION, SANITARY AND SAFETY FACILITIES.
6. ALL MACHINERY, TOOLS, SERVICE LINES AND CONDUITS SHALL BE SHIELDED OR BARRICADED TO PROVIDE SAFETY AND PREVENT CONTACT BY THE PUBLIC.
7. AREAS USED BY THE PUBLIC SHALL BE MAINTAINED FREE FROM DEBRIS, EQUIPMENT, MATERIALS, ETC.

SUMMARY OF WORK

1. REMOVE EXISTING ROOFING ASSEMBLY TO TOP OF EXISTING ROOF DECK AND PROVIDE NEW SBS MODIFIED BITUMINOUS ROOFING ASSEMBLY WITH MIN R-30 TAPERED INSULATION, AT ALL ROOFS.
2. REMOVE EXISTING ROOF CURB AT SINGLE STORY TRUCK STORAGE AREA ROOF AND PROVIDE RAISED CURB AS SHOWN IN DRAWINGS.
3. REMOVE AND REPLACE PARAPETS AT CORNERS OF SECOND FLOOR ROOFS AS INDICATED IN DRAWINGS.
4. PROVIDE NEW PRECAST COPING WITH THRU WALL COPING FLASHING IN TOP OF ALL PARAPETS AS INDICATED.
5. PROVIDE STEEL DUNNAGE TO SUPPORT NEW ROOF TOP MECHANICAL EQUIPMENT AS INDICATED.
6. REMOVE AND REPLACE ROOF ACCESS HATCHES.
7. REMOVE EXISTING EQUIPMENT IN TRUCK WASH ROOM IN DISTRICT 17; FILL IN EXISTING TRENCHES, PATCH AND REPAIR EXISTING CONCRETE SLAB; PROVIDE 2 HOUR RATED GWB PARTITIONS FOR NEW ELECTRICAL ROOM AND STORAGE ROOM IN THIS SPACE. SEE CIVIL DRAWINGS FOR ADDITIONAL SCOPE OF WORK IN TRUCK WASH ROOM.
8. REMOVE AND REPLACE DETERIORATED METAL ROOF DECKS AS SHOWN IN STRUCTURAL DRAWINGS
9. REMOVE AND REPLACE PORTION OF EXISTING CEILING AT 2ND FLOOR OF DISTRICT 17 AND 18 FOR REMOVAL AND INSTALLATION OF MECHANICAL DUCTS AND EQUIPMENT
10. SEE MEP DRAWINGS FOR SCOPE OF MECHANICAL, ELECTRICAL AND PLUMBING WORK. COORDINATE ROOF REPLACEMENT AND STRUCTURAL SCOPE WITH MEP WORK.

PLOT PLAN

BUILDING DEPT. NOTES

ALL CONSTRUCTION WORK SHALL BE PERFORMED IN COMPLIANCE WITH THE 2014 ADMINISTRATIVE BUILDING CODE OF THE CITY OF NEW YORK AND ALL OTHER APPLICABLE ORDINANCES AND REGULATIONS OF ALL GOVERNING AGENCIES HAVING JURISDICTION OVER THE WORK.

ALL CONSTRUCTION, INCLUDING PLUMBING, MECHANICAL AND ELECTRICAL WORK, TO BE PERFORMED BY LICENSED CONTRACTORS AND ALL REQUIRED PERMITS AND CERTIFICATIONS SHALL BE OBTAINED PRIOR TO COMMENCEMENT OF WORK.

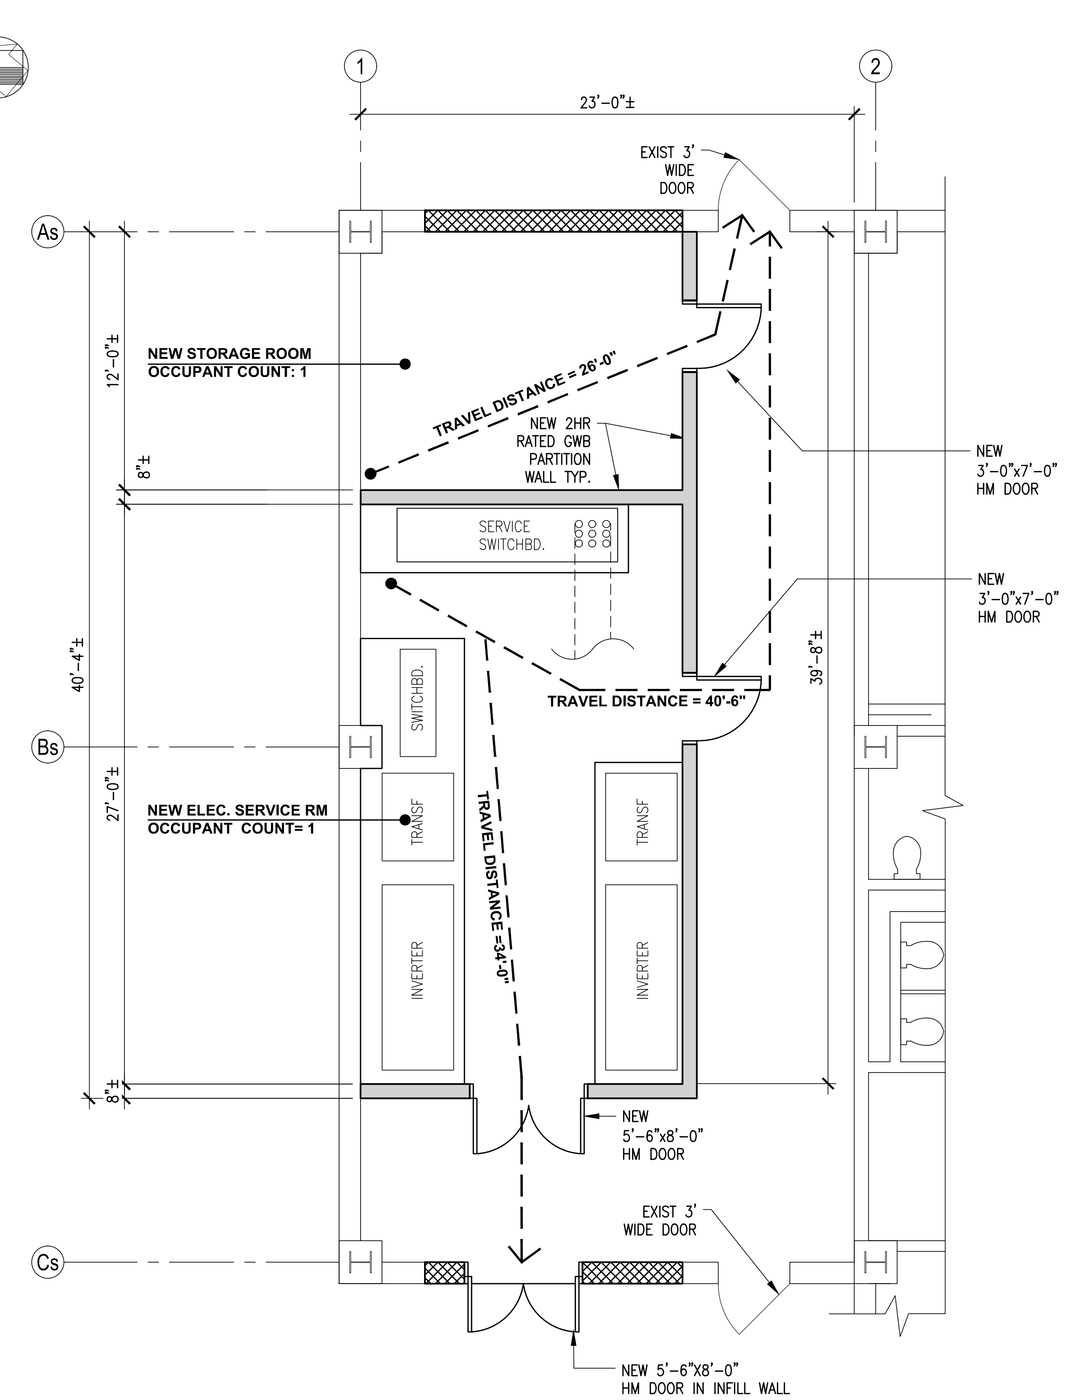
NO CHANGE IN USE, EGRESS, OCCUPANCY, FIRE RATING.

ALL FLOORS IN THE BUILDING ARE OCCUPIED BY SINGLE TENANTS.

ALL MATERIALS TO COMPLY WITH NYC DEPARTMENT OF BUILDINGS FLAME SPREAD RATINGS.

CONTROLLED INSPECTIONS REQUIRED: REFER TO G-000

RELATED DOB NOW FILINGS



THE FOLLOWING APPLICATIONS RELATED TO THIS PROJECT HAVE BEEN FILED IN 'DOB NOW:

- B00345565
- B00345568
- B00345572

DEMOLITION NOTES

1. THE CONTRACTOR SHALL VERIFY EXISTING CONDITIONS IN THE FIELD.
2. THE CONTRACTOR SHALL CONSULT ALL REFERENCE DRAWINGS AND OTHER DOCUMENTATION PROVIDED.
3. REMOVAL OF MECHANICAL, ELECTRICAL & PLUMBING EQUIPMENT AND ASSOCIATED MATERIALS SHALL BE COORDINATED WITH THE CONTRACTOR RESPONSIBLE FOR THOSE REMOVALS.
4. ALL DEMOLITION WORK SHALL BE COORDINATED WITH HAZARDOUS MATERIAL ABATEMENT. NO REMOVALS OR DEMOLITION SHALL BE DONE TO MATERIAL OR CONSTRUCTION CONTAINING HAZARDOUS MATERIAL PRIOR TO ABATING.
5. THE CONTRACTOR SHALL CONFIRM REMOVAL OR ANY ITEMS NOT INDICATED IN DRAWINGS WITH COMMISSIONER, PRIOR TO REMOVAL.
6. CONTRACTOR TO PROVIDE PHYSICAL IMPACT AND WEATHER/WATER PROTECTION FOR THE BUILDING UTILITY CONNECTIONS AND EQUIPMENT LOCATED AT THE ROOF(S) AND WITHIN THE BUILDING. UTILITY CONNECTIONS SHALL REMAIN OPERATIONAL DURING DEMOLITION AND CONSTRUCTION. CONTRACTOR SHALL SUBMIT PROPOSED PROTECTION PLAN, MATERIALS AND INSTALLATION TO THE COMMISSIONER FOR APPROVAL PRIOR TO BEGINNING THE WORK.
7. FOR ADDITIONAL DEMOLITION/REMOVAL INFORMATION SEE REMOVAL DRAWINGS DM-101 THRU DM-202

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations tables in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations tables should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was New York Long Island State Plane FIPSZONE 3104. The **horizontal datum** was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or State Plane zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3182
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was provided in digital format by the Department of Information Technology and Telecommunication, City of New York (DoITT). This information was derived from digital orthophotos produced at a scale of 1:1,200 with 2-foot pixel resolution from photography dated April 2005.

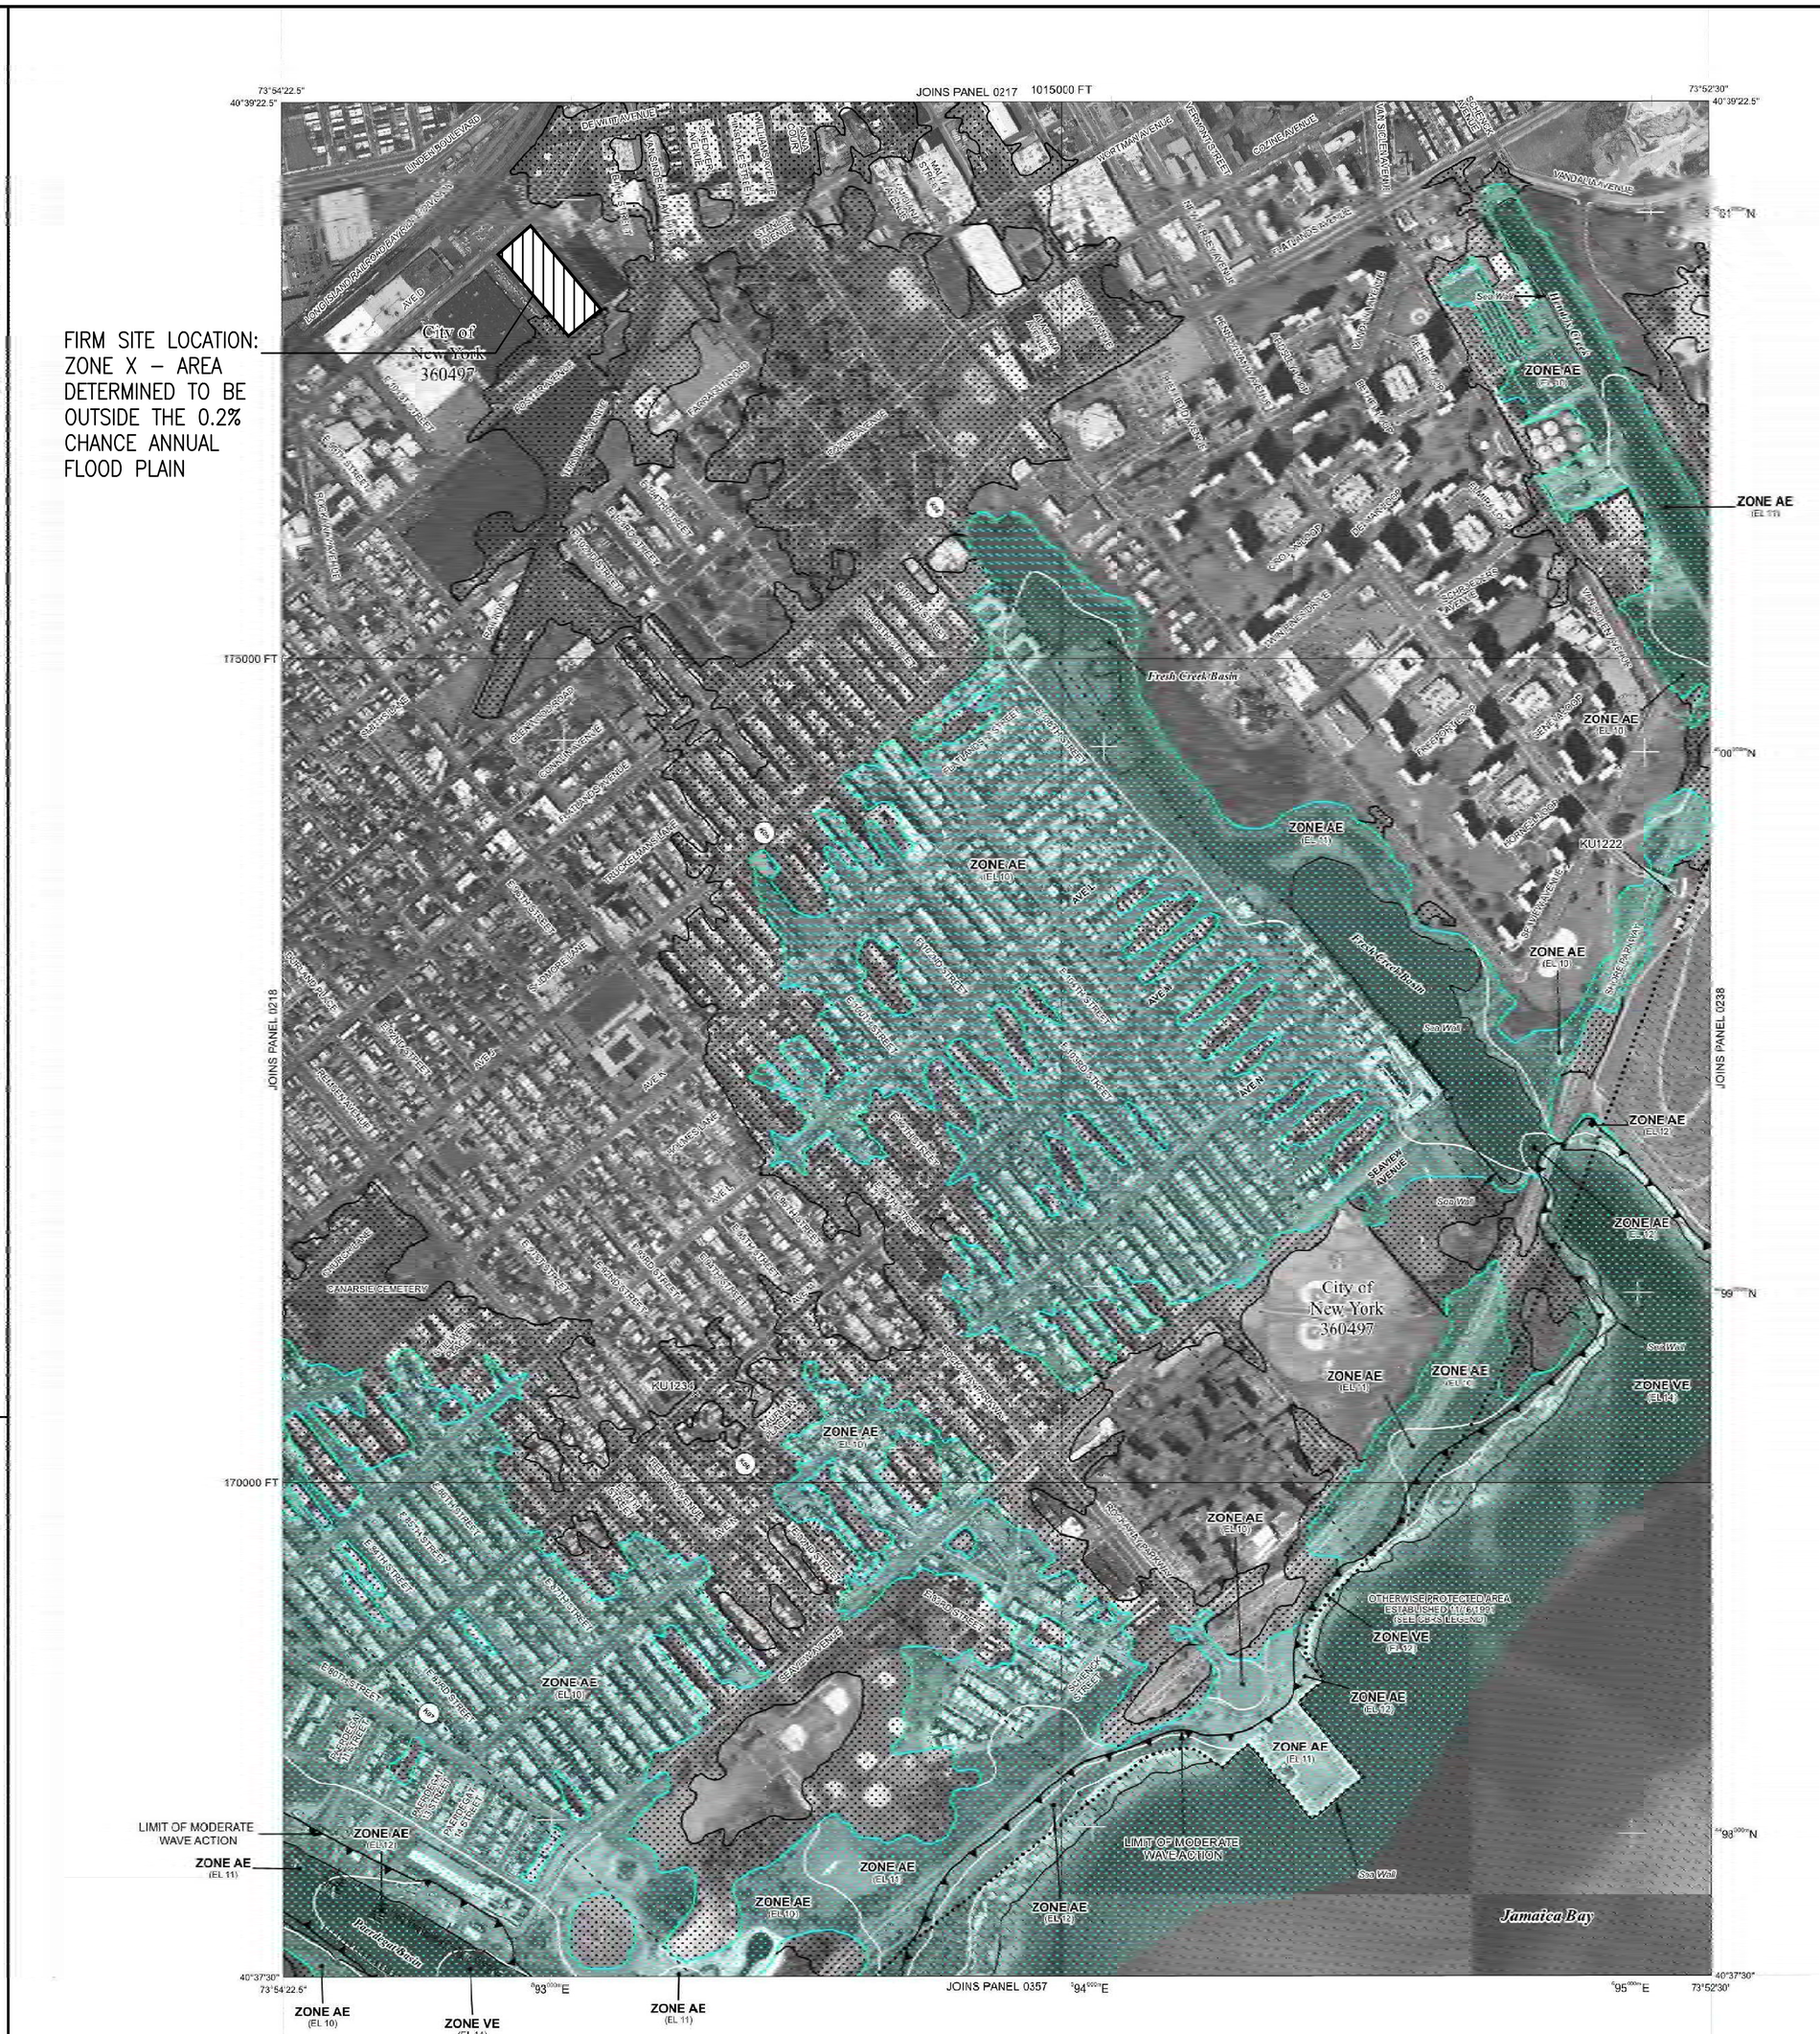
This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or deannexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

The AE Zone category has been divided by a **Limit of Moderate Wave Action (LiMWA)**. The LiMWA represents the approximate landward limit of the 1.5- foot breaking wave. The effects of wave hazards between the VE Zone and the LiMWA (or between the shoreline and the LiMWA for areas where VE Zones are not identified) will be similar to, but less severe than those in the VE Zone.

For information on available products associated with this FIRM visit the **Map Service Center (MSC)** website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.



If you have **questions about this map**, how to order products or the National Flood Insurance Program in general, please call the FEMA Map Information eXchange (FMIX) at **1-877-FEMA-MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.

FLOOD INSURANCE NOT AVAILABLE FOR STRUCTURES NEWLY BUILT OR SUBSTANTIALLY IMPROVED ON OR AFTER NOVEMBER 16, 1991, IN DESIGNATED OPAs WITHIN THE CBRS.

Boundaries of the John H. Chafee Coastal Barrier Resources System (CBRS) shown on this FIRM were transferred from the official CBRS source map(s) for this area and are depicted on this FIRM for informational purposes only. The official CBRS maps are enacted by Congress via the Coastal Barrier Resources Act, as amended, and maintained by the U.S. Fish and Wildlife Service (FWS). The official CBRS maps used to determine whether or not an area is located within the CBRS are available for download at http://www.fws.gov. For an official determination of whether or not an area is located within the CBRS, or for any questions regarding the CBRS, please contact the FWS field office for this area at (631) 776-1401.

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- **ZONE A** No Base Flood Elevations determined.
- **ZONE AE** Base Flood Elevations determined.
- **ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- **ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- **ZONE AR** Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- **ZONE A99** Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- **ZONE V** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- **ZONE VE** Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- **ZONE X** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- **ZONE X** Areas determined to be outside the 0.2% annual chance floodplain.
- **ZONE D** Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities
- Limit of Moderate Wave Action
- 513 — Base Flood Elevation line and value; elevation in feet*
- (EL 987) — Base Flood Elevation value where uniform within zone; elevation in feet*

* Referenced to the North American Vertical Datum of 1988

- Cross section line
- Transect line
- Culvert, Flume, Penstock or Aqueduct
- Road or Railroad Bridge
- Footbridge
- 87°07'45", 32°22'30" — Geographic coordinates referenced to the North American Datum of 1983 (NAD 83), Western Hemisphere
- 4378000 N — 1000-meter Universal Transverse Mercator grid values, zone 18
- 600000 FT — 5000-foot grid values: New York State Plane coordinate system, Long Island zone (FIPSZONE 3104), Lambert Conformal Conic projection
- DX5510 — Bench mark (see explanation in Notes to Users section of this FIRM panel)
- M1.5 — River Mile

2016 NYCECC TABULAR ANALYSIS - COMMERCIAL LIGHTING

NYCECC CITATION	PROVISION	ITEM DESCRIPTION	PROPOSED DESIGN VALUE	CODE PRESCRIPTIVE VALUE (ECC)	SUPPORTING DOCUMENTATION
C405.2	LIGHTING CONTROLS (MANDATORY)	INTERIOR LIGHTING CONTROLS INCLUDE OCCUPANCY SENSOR WITH MANUAL ON AND AUTOMATIC SHUTOFF.	COMBINATION SWITCH/VACANCY SENSOR IS PROVIDED WITHIN NEWLY CREATED STORAGE ROOM. MANUAL SWITCH PROVIDED WITHIN A NEWLY CREATED ELECTRICAL SERVICE ROOM(EXEMPT FROM AUTO CONTROL DUE TO SAFETY).	LIGHTING SYSTEMS SHALL BE PROVIDED WITH CONTROLS AS SPECIFIED IN SECTIONS C405.2.1, C405.2.2, C405.2.3, C405.2.4 AND C405.2.5. EXCEPTIONS: LIGHTING CONTROLS ARE NOT REQUIRED FOR THE FOLLOWING: 1. AREAS DESIGNATED AS SECURITY OR EMERGENCY AREAS THAT ARE REQUIRED TO BE CONTINUOUSLY LIGHTED. 2. INTERIOR EXIT STAIRWAYS, INTERIOR EXIT RAMPS AND EXIT PASSAGEWAYS. 3. EMERGENCY EGRESS LIGHTING THAT IS NORMALLY OFF.	SEE DRAWING A-111 (REFLECTED CEILING PLAN)
C405.2.1	OCCUPANT SENSOR CONTROLS	OCCUPANT SENSOR CONTROL IS PROVIDED IN STORAGE ROOM	VACANCY SENSORS PROVIDED WITH 20 MINUTE SHUT OFF LIMIT	OCCUPANT SENSOR CONTROLS IN SPACES OTHER THAN WAREHOUSES SPECIFIED IN SECTION C405.2.1 SHALL COMPLY WITH THE FOLLOWING: 1. AUTOMATICALLY TURN OFF LIGHTS WITHIN 20 MINUTES OF ALL OCCUPANTS LEAVING THE SPACE. 2. BE MANUAL ON OR CONTROLLED TO AUTOMATICALLY TURN THE LIGHTING ON TO NOT MORE THAN 50 PERCENT POWER. EXCEPTIONS: 1. FULL AUTOMATIC-ON CONTROLS SHALL BE PERMITTED TO CONTROL LIGHTING IN OPEN PLAN OFFICES, PUBLIC CORRIDORS, STAIRWAYS, RESTROOMS, PRIMARY BUILDING ENTRANCE AREAS AND LOBBIES, AND AREAS WHERE MANUAL-ON OPERATION WOULD ENDANGER THE SAFETY OR SECURITY OF THE ROOM OR BUILDING OCCUPANTS. 2. MANUAL-ON CONTROLS SHALL BE REQUIRED FOR CLASSROOMS (NOT INCLUDING SHOP CLASSROOMS, LABORATORY CLASSROOMS, AND PRESCHOOL CLASSROOMS), CONFERENCE/MEETING ROOMS, EMPLOYEE LUNCH AND BREAK ROOMS, AND OFFICES SMALLER THAN 200 SQUARE FEET (18.5 M^2) IN AREA. SUCH SENSORS AND CONTROLS SHALL NOT HAVE AN OVERRIDE SWITCH THAT CONVERTS FROM MANUAL-ON TO AUTOMATIC-ON FUNCTIONALITY, AND MAY HAVE A GRACE PERIOD OF UP TO 30 SECONDS TO TURN ON THE LIGHTING AUTOMATICALLY AFTER THE SENSOR HAS TURNED OFF THE LIGHTING IF OCCUPANCY IS DETECTED. 3. SHALL INCORPORATE A MANUAL CONTROL TO ALLOW OCCUPANTS TO TURN LIGHTS OFF.	SEE DRAWING A-111 (REFLECTED CEILING PLAN)
C405.2.2.3	MANUAL CONTROLS	MANUAL CONTROL AT STORAGE ROOM	MANUAL CONTROLS PROVIDED AS REQUIRED	MANUAL CONTROLS FOR LIGHTS SHALL COMPLY WITH THE FOLLOWING: 1. SHALL BE READILY ACCESSIBLE TO OCCUPANTS. 2. SHALL BE LOCATED WHERE THE CONTROLLED LIGHTS ARE VISIBLE, OR SHALL IDENTIFY THE AREA SERVED BY THE LIGHTS AND INDICATE THEIR STATUS.	SEE DRAWING A-111 FOR LOCATION OF SWITCH/VACANCY SENSOR
C405.3	EXIT SIGNS	FIVE NEW LED EXIT SIGNS TO BE PROVIDED	5W PER SIDE	1. INTERNALLY ILLUMINATED EXIT SIGNS SHALL NOT EXCEED 5 WATTS PER SIDE.	SEE DRAWING A-111 (LIGHTING FIXTURE SCHEDULE)
C405.4	INTERIOR LIGHTING POWER REQUIREMENTS	INTERIOR LIGHTING POWER REQUIREMENTS FOR STORAGE ROOM AND ELECTRICAL ROOM	STORAGE ROOM: 0.59 W/SF ELECTRICAL/MECHANICAL ROOM: 0.39 W/SF LPD VALUE FOR SPACES-BY-SPACE IS LESS THAN THE INTERIOR LIGHTING POWER CALCULATED UNDER SECTION C405.4.2. SEE DRAWING A-111.	1. STORAGE ROOM: 0.63 W/SF 2. ELECTRICAL/MECHANICAL ROOM: 0.95 W/SF 3. THE TOTAL CONNECTED INTERIOR LIGHTING POWER SHALL BE DETERMINED IN ACCORDANCE WITH EQUATION 4-9.	SEE DRAWING A-111 (LIGHTING FIXTURE SCHEDULE)

Interior Lighting Compliance Statement

Compliance Statement: The proposed interior lighting alteration project represented in this document is consistent with the building plans, specifications, and other calculations submitted with this permit application. The proposed interior lighting systems have been designed to meet the 2016 New York City Energy Conservation Code requirements in COMcheck Version 4.1.1.0 and to comply with any applicable mandatory requirements listed in the Inspection Checklist.

Mechanical Systems List

Quantity System Type & Description

1 RTU-1 (Multiple-Zone):
Heating: 1 each - Central Furnace, Gas, Capacity = 500 kBtu/h
Proposed Efficiency = 81.00% Et, Required Efficiency: 80.00 % Et
Cooling: 1 each - Single Package DX Unit, Capacity = 438 kBtu/h, Air-Cooled Condenser, Air Economizer
Proposed Efficiency = 12.10 EER, Required Efficiency: 9.80 EER + 11.4 IEER
Fan System: RTU-1 | District 17 Office -- Compliance (Motor nameplate HP method) : Passes

Fans:
FAN 1 Supply, Multi-Zone VAV, 9000 CFM, 2.0 motor nameplate hp, 70.0 fan efficiency grade

1 RTU-2 (Multiple-Zone):
Heating: 1 each - Central Furnace, Gas, Capacity = 1000 kBtu/h
Proposed Efficiency = 81.00% Et, Required Efficiency: 80.00 % Et
Cooling: 1 each - Single Package DX Unit, Capacity = 507 kBtu/h, Air-Cooled Condenser, Air Economizer
Proposed Efficiency = 10.40 EER, Required Efficiency: 9.80 EER + 11.4 IEER
Fan System: RTU-2 | District 18 Office -- Compliance (Motor nameplate HP method) : Passes

Fans:
FAN 2 Supply, Multi-Zone VAV, 12000 CFM, 2.0 motor nameplate hp, 70.0 fan efficiency grade

1 HV-1 (Single Zone):
Heating: 1 each - Central Furnace, Gas, Capacity = 120 kBtu/h
Proposed Efficiency = 82.00% Et, Required Efficiency: 80.00 % Et or 78% AFUE
Fan System: HV-1 | District 17 Office -- Compliance (Motor nameplate HP method) : Passes

Fans:
FAN 3 Supply, Constant Volume, 1400 CFM, 1.1 motor nameplate hp, 70.0 fan efficiency grade

1 HV-2 (Single Zone):
Heating: 1 each - Central Furnace, Gas, Capacity = 200 kBtu/h
Proposed Efficiency = 82.00% Et, Required Efficiency: 80.00 % Et or 78% AFUE
Fan System: HV-2 | District 18 Office -- Compliance (Motor nameplate HP method) : Passes

Fans:
FAN 4 Supply, Constant Volume, 2400 CFM, 1.5 motor nameplate hp, 70.0 fan efficiency grade

2 MU-1,2 (Single Zone):
Heating: 1 each - Central Furnace, Gas, Capacity = 800 kBtu/h
Proposed Efficiency = 80.00% Et, Required Efficiency: 80.00 % Et

Quantity System Type & Description

Fan System: MU | GARAGE -- Compliance (Motor nameplate HP method) : Passes

Fans:
FAN 5 Supply, Constant Volume, 8500 CFM, 7.5 motor nameplate hp, 70.0 fan efficiency grade

16 MU-3 THRU 18 (Single Zone):
Heating: 1 each - Central Furnace, Gas, Capacity = 800 kBtu/h
Proposed Efficiency = 80.00% Et, Required Efficiency: 80.00 % Et
Fan System: MU | GARAGE -- Compliance (Motor nameplate HP method) : Passes

Fans:
FAN 5 Supply, Constant Volume, 8500 CFM, 7.5 motor nameplate hp, 70.0 fan efficiency grade

1 ACCU-1 (Single Zone):
Split System Heat Pump
Heating Mode: Capacity = 81 kBtu/h,
Proposed Efficiency = 3.60 COP, Required Efficiency = 3.30 COP
Cooling Mode: Capacity = 72 kBtu/h,
Proposed Efficiency = 12.50 EER, Required Efficiency: 11.00 EER + 12.0 IEER
Fan System: ACCU | ELEC CLOSET -- Compliance (Motor nameplate HP method) : Passes

Fans:
FAN 7 Supply, Constant Volume, 7000 CFM, 3.0 motor nameplate hp, 72.0 fan efficiency grade

Mechanical Compliance Statement

Compliance Statement: The proposed mechanical alteration project represented in this document is consistent with the building plans, specifications, and other calculations submitted with this permit application. COMcheck Software Version 4.1.1.0

Inspection Checklist

Energy Code: 2016 New York City Energy Conservation Code

Requirements: 100.0% were addressed directly in the COMcheck software
Text in the "Comments/Assumptions" column is provided by the user in the COMcheck Requirements screen. For each requirement, the user certifies that a code requirement will be met and how that is documented, or that an exception is being claimed. Where compliance is itemized in a separate table, a reference to that table is provided.

Section # & Req.ID	Plan Review	Complies?	Comments/Assumptions
C103.2 [PR2][1]	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the mechanical systems and equipment and document where exceptions to the standard are claimed. Load calculations per acceptable engineering standards and handbooks.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C103.2 [PR4][1]	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the interior lighting and electrical systems and equipment and document where exceptions to the standard are claimed. Information provided should include interior lighting power calculations, wattage of bulbs and ballasts, transformers and control devices.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.

Additional Comments/Assumptions:

1 High Impact (Tier 1)	2 Medium Impact (Tier 2)	3 Low Impact (Tier 3)

Section # & Req.ID	Footing / Foundation Inspection	Complies?	Comments/Assumptions
C403.2.4.5, C403.2.4.6 [FO9][1]	Snow/ice melting system sensors for future connection to controls. Freeze protection systems have automatic controls installed.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.

Additional Comments/Assumptions:

Section # & Req.ID	Mechanical Rough-In Inspection	Complies?	Comments/Assumptions
C402.2.6 [ME41][1]	Thermally ineffective panel surfaces of sensible heating panels have insulation >= R-3.5.	☐Complies ☐Does Not ☐Not Applicable	Requirement will be met.
C403.2.12.1 [ME65][2]	HVAC fan systems at design conditions do not exceed allowab e fan system motor nameplate hp or fan system bhp.	☐Complies ☐Does Not ☐Not Applicable	Requirement will be met. *See the Mechanical Systems list for values.*
C403.2.12.1 [ME65][3]	HVAC fan systems at design conditions do not exceed allowab e fan system motor na neplate hp or fan system bhp.	☐Complies ☐Does Not ☐Not Applicable	Requirement will be met. *See the Mechanical Systems list for values.*
C403.2.12.3 [ME117][2]	Fans have efficiency grade (FEG) >= 67. This total efficiency of the fan at the design point of operation <= 15% of maximum total efficiency of the fan.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.12.3 [ME117][3]	Fans have efficiency grade (FEG) >= 67. This total efficiency of the fan at the design point of operation <= 15% of maximum total efficiency of the fan.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.13 [ME71][2]	Unenclosed spaces that are heated use only radiant heat.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C403.2.3 [ME55][2]	HVAC equipment efficiency verified.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	*See the Mechanical Systems list for values.*
C403.2.4.4 [ME112][2]	Zone isolation devices and controls installed where applicable.	☐Complies ☐Does Not ☐Not Observable ☐Not Appl cable	Requirement will be met.
C403.2.4.4 [ME112][3]	Zone isolation devices and controls installed where applicable.	☐Complies ☐Does Not ☐Not Observable ☐Not Appl cable	Requirement will be met.
C403.2.4.7 [ME113][2]	Fault detection and diagnostics installed with air-cooled unitary DX units having economizers.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.7 [ME113][3]	Fault detection and diagnostics installed with air-cooled unitary DX units having economizers.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.6.1 [ME59][2]	Demand control ventilatio s provided for spaces >500 ft2 and >25 people/1000 ft2 occupant density and served by systems with air side economizer, auto modulating outside air damper control, or design airflow >3,000 cfm.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.

1 High Impact (Tier 1)	2 Medium Impact (Tier 2)	3 Low Impact (Tier 3)

Section # & Req.ID	Mechanical Rough-In Inspection	Complies?	Comments/Assumptions
C403.2.6.2 [ME115][2]	Enclosed parking garage ventilation has automatic contaminant detection and capacity to stage or modulate fans to 50% or less of design capacity	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.7 [ME57][2]	Exhaust air energy recovery on systems meeting Table C403.2.7(1) and C403.2.7(2).	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Systems serving spaces that are not cooled and heated to 60°F.
C403.2.8 [ME116][2]	Kitchen exhaust systems comply with replacement air and conditioned supply air limitations, and satisfy hood rating requirements and maximum exhaust rate criteria.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C403.2.9 [ME60][2]	HVAC ducts and plenums insulated. Where ducts or plenums are installed in or under a slab, verification may need to occu during Foundation Inspection.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.9 [ME103][2]	Ducts and plenums sealed based on static pressure and location.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.9.1.3 [ME11][2]	Ductwork operating >3 in. water column requires air leakage testing.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C403.2.9.1.3 [ME11][3]	Ductwork operating >3 in. water column requires air leakage testing.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C403.2.9.1.3 [ME11][2]	Ductwork operating >3 in. water column requires air leakage testing.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C403.2.9.1.3 [ME11][3]	Ductwork operating >3 in. water column requires air leakage testing.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C403.2.9.1.3 [ME11][2]	Ductwork operating >3 in. water column requires air leakage testing.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C403.2.9.1.3 [ME11][3]	Ductwork operating >3 in. water column requires air leakage testing.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.

1 High Impact (Tier 1)	2 Medium Impact (Tier 2)	3 Low Impact (Tier 3)

Section # & Req.ID	Mechanical Rough-In Inspection	Complies?	Comments/Assumptions
C403.3 [ME62][2]	Air economizers provided where required, meet the requirements for design capacity, control signal, ventilation controls, high-limit shut-off, integrated economizer control, and provide a means to relieve excess outside air during operation.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.3 [ME62][3]	Air economizers provided where required, meet the requirements for design capacity, control signal, ventilation controls, high-limit shut-off, integrated economizer control, and provide a means to relieve excess outside air during operation.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.4.1.1 [ME75][2]	Hydronic and multizone HVAC system controls areVAV fans driven by mechanical or electrical variable s.eed drive per Table C403.4.1.1.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.4.1.1 [ME75][3]	Hydronic and multizone HVAC system controls areVAV fans driven by mechanical or electrical variable s.eed drive per Table C403.4.1.1.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.4.1.2 [ME67][2]	VAV fans have static pressure sensors located so controller setpoint <=1.2 w c..	☐Complies ☐Does Not ☐Not Observable ☐Not Appl cable	Requirement will be met.
C403.4.1.2 [ME67][3]	VAV fans have static pressure sensors located so controller setpoint <=1.2 w c..	☐Complies ☐Does Not ☐Not Observable ☐Not Appl cable	Requirement will be met.
C403.4.1.3 [ME24][2]	Reset static pressure setpoint for DDC controlled VAV boxes reporting to central controller based on the zones requiring the most pressure.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.4.1.3 [ME24][3]	Reset static pressure setpoint for DDC controlled VAV boxes reporting to central controller based on the zones requiring the most pressure.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.4.2.3.2.1 [ME121][2]	Closed-circuit cooling tower within heat pump loop have either automatic bypass valve or lower leakage positive closure dampers. Open-circuit tower within heat pump loop have automatic valve to bypass all heat pump water flow around ths tower. Open- or closed-circuit cooling towers used in conjunction with a separate heat exchanger have heat loss by shutting down the circulation pump on the cooling tower loop.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C403.4.4.6 [ME110][2]	Mult ple zone VAV systems with DDC of individual zone boxes have static pressure setpoint reset controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met. *See the Mechanical Systems list for values.*

1 High Impact (Tier 1)	2 Medium Impact (Tier 2)	3 Low Impact (Tier 3)

Section # & Req.ID	Mechanical Rough-In Inspection	Complies?	Comments/Assumptions
C403.4.4.6 [ME110][2]	Mult ple zone VAV systems with DDC of individual zone boxes have static pressure setpoint reset controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met. *See the Mechanical Systems list for values.*
C403.4.4.6 [ME110][3]	Mult ple zone VAV systems with DDC of individual zone boxes have static pressure setpoint reset controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Systems where the design exhaust airflow is more than 70% of design outdoor air intake flow. *See the Mechanical Systems list for values.*
C403.4.4.6 [ME110][3]	Mult ple zone VAV systems with DDC of individual zone boxes have static pressure setpoint reset controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Systems where the design exhaust airflow is more than 70% of design outdoor air intake flow. *See the Mechanical Systems list for values.*
C403.4.4.6 [ME110][3]	Mult ple zone VAV systems with DDC of individual zone boxes have static pressure setpoint reset controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Appl cable	**Exception:** Systems where the design exhaust airflow is more than 70% of design outdoor air intake flow. *See the Mechanical Systems list for values.*
C403.4.4.6 [ME110][3]	Mult ple zone VAV systems with DDC of individual zone boxes have static pressure setpoint reset controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Appl cable	**Exception:** Requirement does not apply. *See the Mechanical Systems list for values.*
C408.2.2.1 [ME53][2]	Air outlets a nd zone terminal devices have means for air balancing.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.

Section # & Req.ID	Rough-in Electrical Inspection	Complies?	Comments/Assumptions
C405.2.1 [EL15][1]	Lighting controls installed to uniformly reduce the lighting load by at least 50%.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C405.2.1 [EL18][1]	Occupancy sensors installed in required spaces.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C405.2.1, C405.2.2.3 [EL23][2]	Independent lighting controls installed per approved lighting plans and all manual controls readily accessible and visible to occupants.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C405.2.2.1 [EL22][2]	Automatic controls to shut off all building lighting installed in all buildings.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C405.2.3 [EL16][1]	Daylight zones provided with individual controls that control the lights independent of general area lighting.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C405.2.3, C405.2.3.1, C405.2.3.2 [EL20][1]	Primary sidelighted areas are equipped with required lighting controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C405.2.3, C405.2.3, C405.2.3.3 [EL21][1]	Enclosed spaces with daylight area under skylights and rooftop monitors are equipped with required lighting controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	**Exception:** Requirement does not apply.
C405.2.4 [EL4][1]	Separate lighting control devices for specific uses installed per approved lighting plans.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C405.2.4 [EL8][1]	Additional interior lighting power allowed for special functions per the approved lighting plans and is automatically controlled and separated from general lighting.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C405.3 [EL6][1]	Exit signs do not exceed 5 watts per face.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.

Additional Comments/Assumptions:

1 High Impact (Tier 1) 2 Medium Impact (Tier 2) 3 Low Impact (Tier 3)

Section # & Req.ID	Final Inspection	Complies?	Comments/Assumptions
C303.3, C408.2.5.2 [FI17][1]	Furnished O&M instructions for systems and equipment to the building owner or designated representative.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C303.3, C408.2.5.3 [FI8][1]	Furnished O&M manuals for HVAC systems within 90 days of system acceptance.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.2 [FI27][1]	HVAC systems and equipment capacity does not exceed calculated loads.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.1 [FI47][1]	Heating and cooling to each zone is controlled by a thermostat control. Minimum one humidity control device per installed humidification/dehumidification system.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.1 [FI47][1]	Heating and cooling to each zone is controlled by a thermostat control. Minimum one humidity control device per installed humidification/dehumidification system.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.1 [FI47][1]	Heating and cooling to each zone is controlled by a thermostat control. Minimum one humidity control device per installed humidification/dehumidification system.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.1 [FI47][1]	Heating and cooling to each zone is controlled by a thermostat control. Minimum one humidity control device per installed humidification/dehumidification system.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.1 [FI47][1]	Heating and cooling to each zone is controlled by a thermostat control. Minimum one humidity control device per installed humidification/dehumidification system.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.1 [FI47][1]	Heating and cooling to each zone is controlled by a thermostat control. Minimum one humidity control device per installed humidification/dehumidification system.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.1.1 [FI42][1]	Heat pump controls prevent supplemental electric resistance heat from coming on when not needed.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.

1 High Impact (Tier 1) 2 Medium Impact (Tier 2) 3 Low Impact (Tier 3)

Section # & Req.ID	Final Inspection	Complies?	Comments/Assumptions
C403.2.4.1.2 [FI38][1]	Thermostatic controls have a 5 °F deadband.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.1.3 [FI20][1]	Temperature controls have setpoint overlap restrictions.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.2 [FI39][1]	Each zone equipped with setback controls using automatic time clock or programmable control system.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.2.1, C403.2.4.2.2 [FI40][1]	Automatic Controls: Setback to 55°F (heat) and 85°F (cool); 7-day clock, 2-hour occupant override, 10-hour backup	☐Complies ☐Does Not ☐Not Observable ☐Not Appl cable	Requirement will be met.
C403.2.4.3 [FI41][1]	Systems include optimum start controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.3 [FI41][1]	Systems include optimum start controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.3 [FI41][1]	Systems include optimum start controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.3 [FI41][1]	Systems include optimum start controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C403.2.4.3 [FI41][1]	Systems include optimum start controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Appl cable	Requirement will be met.
C403.2.4.3 [FI41][1]	Systems include optimum start controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C405.4.1 [FI18][1]	Interior installed lamp and fixture lighting power is consistent with what is shown on the approved lighting plans, demonstrating proposed watts are less than or equal to allowed watts.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	*See the Interior Lighting fixture schedule for values.*

1 High Impact (Tier 1) 2 Medium Impact (Tier 2) 3 Low Impact (Tier 3)

Section # & Req.ID	Final Inspection	Complies?	Comments/Assumptions
C408.2.1 [FI28][1]	Commissioning plan developed by approved agency. Lighting controls shall be commissioned in accordance with C408.3.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C408.2.3.1 [FI31][1]	HVAC equipment has been tested to ensure proper operation.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C408.2.3.2 [FI10][1]	HVAC control systems have been tested to ensure proper operation, calibration and adjustment of controls.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C408.2.3.3 [FI32][1]	Economizers have been tested to ensure proper operation.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C408.2.5.1 [FI7][1]	Furnished HVAC as-built drawings submitted within 90 days of system acceptance.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C408.2.5.1 [FI16][1]	Furnished as-built drawings for electric power systems within 90 days of system acceptance.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C408.2.5.3 [FI43][1]	An air and/or hydronic system balancing report is provided for HVAC systems.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C408.2.5.4 [FI30][1]	Final commissioning report due to building owner within 30 months (for new buildings > 500,000 ft2) or 18 months (for R-2 and all other buildings) of receipt of certificate of occupancy.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.
C408.3 [FI33][1]	Lighting systems have been tested to ensure proper calibration, adjustment, programming, and operation.	☐Complies ☐Does Not ☐Not Observable ☐Not Applicable	Requirement will be met.

1A DM-101 PARTIAL ROOF PLAN (DISTRICT 17) - REMOVALS

Scale: 0 4 12 24 feet

BUILDING KEY PLAN

BUILDING SCHEMATIC SECTION

REMOVAL NOTES

1. FOR DECK REMOVAL AND REPLACEMENT LOCATIONS NOT SHOWN ON ARCHITECTURAL DRAWINGS; SEE STRUCTURAL DRAWINGS S–101 THRU S–104
   - AT AREAS OF DECK REMOVAL/REPLACEMENT, REMOVE AND REINSTALL EXISTING VENTS, ROOF DRAINS, ETC.

REMOVAL KEY NOTES

No.	SYMBOL	DESCRIPTION	DETAIL
1		REMOVE EXISTING BALLASTED ROOFING ASSEMBLY (INCLUDING RIGID INSULATION AND WOOD BLOCKING) TO TOP OF EXISTING STEEL DECK; REMOVE ALL ASSOCIATED CAP AND BASE FLASHINGS, EXPANSION JOINT COVERS, PITCH POCKETS, CRICKETS AND CANTS	N/A
2		REMOVE EXISTING MASONRY PARAPET AND 2–PIECE INTERLOCKING BRICK COPING.	2A/A–301
3		REMOVE EXISTING 2–PIECE INTERLOCKING BRICK COPING	1A/A–301
4		REMOVE EXISTING 2–PIECE INTERLOCKING BRICK MASONRY CURB AT ROOF EDGE.	1A/A–302
5	RD	REMOVE EXISTING ROOF DRAIN; REFER TO PLUMBING DWGS (1)	N/A
6		REMOVE PORTION OF EXIST. METAL DECK FOR INSTALLATION OF NEW MECHANICAL EQUIPMENT. COORDINATE WITH MECHANICAL DRAWINGS FOR OPENING SIZE	N/A
7		NOT USED	
8	OR	REMOVE EXISTING EQUIPMENT CURBS; SEE MECH DRAWINGS FOR EQUIPMENT REMOVAL	N/A
9	SK	EXISTING SKYLIGHT TO REMAIN; REMOVE FLASHINGS AROUND SKYLIGHT CURB	N/A
10		NOT USED	
11	VS	REMOVE EXISTING FLASHING AT EXISTING VENT STACKS	N/A
12	PP	REMOVE EXISTING PITCH POCKETS AT PIPE PENETRATIONS	N/A
13		REMOVE EXISTING 2 PIECE CAP FLASHING A CHIMNEY	N/A
14	EJ	REMOVE EXISTING EXPANSION JOINT COVER AND FILLER	N/A
15		REMOVE EXISTING 2–PIECE INTERLOCKING BRICK COPING AT HIGH ROOF AND 3 COURSES OF FACE BRICK AT LOW ROOF.	4A/A301
16		REMOVE EXISTING MASONRY PARAPET AND 2–PIECE INTERLOCKING BRICK COPING AT HIGH ROOF AND 3 COURSES OF FACE BRICK AT LOW ROOF.	3/A–301
17		REMOVE EXISTING 2–PIECE INTERLOCKING BRICK COPING AND 3 COURSES OF FACE BRICK AT ENTRANCE ROOF.	2/A–302

REGISTERED ARCHITECT SIDDHIL SABANAYAGAM 035580 STATE OF NEW YORK 09/30/20

DATE:	09/27/2019
PROJECT NO:	DDC30000
DRAWN BY:	N. DA ROSA
CHECKED BY:	S.SABANAYAGAM
DRAWING NUMBER:	A-501.00

THE FOLLOWING REQUIREMENTS, TOGETHER WITH THE PROJECT PLANS AND SPECIFICATIONS, APPLY TO THE STRUCTURES IN THIS CONTRACT.

BASIS OF DESIGN

1.	RISK CATEGORY:	II
2.	ROOF SNOW LOAD:	
2.1.	IMPORTANCE FACTOR, I	1.0
2.2.	EXPOSURE FACTOR, Ce	1.0
2.3.	THERMAL FACTOR, Ct	1.2
2.4.	GROUND SNOW LOAD	25 PSF
2.5.	FLAT ROOF SNOW LOAD	21 PSF*
	*PLUS ALLOWANCE FOR SNOW DRIFT	
3.	DEAD LOADS	
3.1.	ROOF DEAD	10 PSF
3.2.	SUPERIMPOSED DEAD	10 PSF
3.3.	SOLAR PANELS	8 PSF
4.	LIVE LOADS	
4.1.	ROOF LIVE	20 PSF
5.	WIND LOAD	
5.1.	IMPORTANCE FACTOR	1.0
5.2.	WIND EXPOSURE	B
5.3.	NET WIND PRESSURE	20 PSF
6.	SEISMIC LOAD	
6.1.	SOIL SITE CLASS	D (ASSUMED)
6.2.	SEISMIC DESIGN CATEGORY	B
7.	MECHANICAL UNITS	
7.1.	RTU–1	9,852 LBS
7.2.	RTU–2	10,352 LBS
7.3.	MAU UNITS	3,313 LBS

CODES & SPECIFICATIONS

THE DESIGN SHOWN ON THESE DRAWINGS IS BASED ON THE FOLLOWING CODES, SPECIFICATIONS, AND STANDARDS:

1. 2014 NEW YORK CITY BUILDING CODE
2. ACI 318 BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE BY THE ACI (AMERICAN CONCRETE INSTITUTE)
3. AISC MANUAL OF STEEL CONSTRUCTION BY THE AISC (AMERICAN INSTITUTE OF STEEL CONSTRUCTION)
4. ASCE 7 MINIMUM DESIGN LOADS FOR BUILDINGS AND OTHER STRUCTURES BY THE ASCE (AMERICAN SOCIETY OF CIVIL ENGINEERS)
5. AWS D1.1 STEEL STRUCTURAL WELDING CODE BY THE AWS (AMERICAN WELDING SOCIETY)

GENERAL NOTES

1. ALL WORK SHALL BE COORDINATED WITH ARCHITECTURAL, ELECTRICAL, MECHANICAL AND OTHER DISCIPLINE DRAWINGS. CONFLICTS IN DIMENSIONS AND INTERFERENCE SHALL BE DIRECTED TO THE ARCHITECT/ENGINEER PRIOR TO THE COMMENCEMENT OF WORK.
2. CHANGES TO THESE CONTRACT DRAWINGS MAY BE MADE ONLY BY AN AUTHORIZED REPRESENTATIVE OF THE ENGINEER OR ARCHITECT. THE ARCHITECT OR ENGINEER SHALL NOT BE HELD RESPONSIBLE OR LIABLE FOR ANY CLAIMS ARISING DIRECTLY OR INDIRECTLY FROM CHANGES MADE WITHOUT WRITTEN AUTHORIZATION BY AN AUTHORIZED REPRESENTATIVE.
3. ALL WORK SHALL BE DONE IN COMPLIANCE WITH ALL LOCAL, STATE, AND FEDERAL REGULATIONS.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MEANS, METHODS, TECHNIQUES, SEQUENCES, AND PROCEDURES IN ORDER TO COMPLY WITH THE CONTRACT DRAWINGS AND SPECIFICATIONS.
5. INSPECTION AND TESTING FOR THE ACCEPTANCE OF MATERIALS, INSTALLATION, FABRICATION, ERECTION OR PLACEMENT OF COMPONENTS AND CONNECTIONS FOR SPECIAL INSPECTION AND FOR QUALITY ASSURANCE SHALL BE IN ACCORDANCE WITH THE NEW YORK CITY BUILDING CODE AND LOCAL ENFORCEMENT AGENCY. ALL CONTRACTORS ARE REQUIRED TO COOPERATE, ACCOMMODATE AND COORDINATE WITH INSPECTING AND TESTING PERSONNEL.
6. TESTING AND INSPECTIONS ARE THE RESPONSIBILITY OF THE CONTRACTOR.
7. CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS, ELEVATIONS AND DIMENSIONS. CHANGES REQUIRED DUE TO EXISTING CONDITIONS SHALL BE SUBJECT TO A/E APPROVAL PRIOR TO ANY FABRICATION AND CONSTRUCTION.
8. SHOP DRAWINGS FOR ALL STRUCTURAL ITEMS ARE PART OF THE STRUCTURAL DESIGN. SHOP DRAWINGS SHALL BE SUBMITTED FOR REVIEW PRIOR TO FABRICATION OR DELIVERY OF MATERIALS TO THE SITE.
9. ALL WORK SHALL BE DONE IN ACCORDANCE WITH OSHA REQUIREMENTS. POTENTIAL CONFLICTS BETWEEN THESE DOCUMENTS AND OSHA REQUIREMENTS SHALL BE BROUGHT TO THE ATTENTION OF THE STRUCTURAL ENGINEER BEFORE PROCEEDING WITH THE WORK.
10. THE STEELWORK ON THIS PLAN HAS BEEN DESIGNED TO RESIST THE DESIGN LOADS ONLY AS A COMPLETED UNIT. THE CONTRACTOR SHALL FULLY BRACE AND OTHERWISE PROTECT WORK IN PROGRESS. THE CONTRACTOR SHALL ALSO ENSURE THAT ITS OPERATIONS AND PROCEDURES PROVIDE NO LOADINGS GREATER THAN THE DESIGN LOADS ON ANY MEMBER.
11. ALL ARCHITECTURAL AND MEP DETAILS SHOWN ON THE STRUCTURAL PLANS ARE FOR REFERENCE ONLY. ALL EMBEDDED ITEMS AND OPENINGS REQUIRED FOR ARCHITECTURAL, STRUCTURAL, MEP AND OTHER SERVICES SHALL BE INCORPORATED INTO THE STRUCTURE WHETHER OR NOT THEY ARE DETAILED OR INDICATED ON THE STRUCTURAL PLANS. REFER TO THE DISCIPLINE DRAWINGS FOR FURTHER DETAILS.
12. THE CONTRACT DRAWINGS MAY SHOW A TYPICAL INSTALLATION BASED ON A CERTAIN EQUIPMENT MANUFACTURER. IT SHALL NOT BE CONSTRUED AS REPRESENTING THE LAYOUT FOR ANY OTHER. ALL ALTERATIONS NECESSARY TO ADEQUATELY AND SATISFACTORILY ACCOMMODATE ALTERNATE EQUIPMENT SHALL BE MADE BY THE CONTRACTOR AT NO ADDITIONAL COST.

STRUCTURAL STEEL

1. FABRICATION AND ERECTION OF STRUCTURAL STEEL SHALL CONFORM TO THE AISC "STEEL CONSTRUCTION MANUAL" AND "CODE OF STANDARD PRACTICE FOR STEEL BUILDINGS AND BRIDGES".
2. ALL STRUCTURAL STEEL MEMBERS, PLATES. BOLTS, AND MISCELLANEOUS ITEMS SHALL BE HOT–DIP GALVANIZED, IN ACCORDANCE WITH ASTM A123 AND ASTM A153.
3. UNLESS OTHERWISE NOTED, STRUCTURAL STEEL WIDE FLANGE SHAPES SHALL CONFORM TO THE SPECIFICATIONS FOR STRUCTURAL CARBON STEEL ASTM A992.
4. ANGLES AND CHANNELS SHALL CONFORM TO ASTM A36 OR APPROVED EQUAL.
5. STRUCTURAL TUBES SHALL BE ASTM A500, GRADE B.
6. UNLESS NOTED OTHERWISE, STRUCTURAL PLATES SHALL CONFORM TO ASTM A36 OR APPROVED EQUAL.
7. ANCHOR BOLTS SHALL CONFORM TO ASTM F1554, GRADE 55.
8. ALL BOLTS SHALL BE ¾"ø A325 UNLESS NOTED OTHERWISE.
9. WELDING OF STRUCTURAL STEEL SHALL CONFORM TO THE STRUCTURAL WELDING CODE AWS D1.1. ELECTRODES SHALL BE E70XX, LOW HYDROGEN.
10. AREAS OF EXISTING STEEL WHICH ARE TO RECEIVE NEW WELDS SHALL BE SCRAPED, BRUSHED AND GROUND, OR SAND–BLASTED, DOWN TO BRIGHT METAL. THE ARCHITECT/ENGINEER SHALL CHECK THE EXPOSED STEEL AND RECOMMEND EITHER REINFORCEMENT OR MAINTENANCE TO ANY EXISTING MEMBER FOUND TO HAVE A SECTION LOSS GREATER THAN 5%.
11. FIELD–BURNING FOR CUTS AND HOLES IS NOT PERMITTED.
12. A MINIMUM OF TWO (2) BOLTS SHALL BE PROVIDED IN EACH CONNECTION.
13. NO STRUCTURAL MEMBER SHALL BE CUT, NOTCHED OR OTHERWISE ALTERED UNLESS APPROVED IN WRITING BY THE ENGINEER OF RECORD. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY AND ALL COSTS INCURRED BY ENGINEER OF RECORD FOR THE REVIEW.
14. ROOF TOP EQUIPMENT ANCHORAGE: ALL ROOF TOP EQUIPMENT CURBS, ROOF TOP MECHANICAL EQUIPMENT AND IT'S TIE DOWNS AND CONNECTION OF ALL EQUIPMENT TO BUILDING STRUCTURE ARE TO BE DESIGNED AND ENGINEERED BY A REGISTERED ENGINEER RETAINED BY THE MECHANICAL EQUIPMENT SUPPLIER. SIGNED AND SEALED DRAWINGS AND CALCULATIONS ARE TO BE SUBMITTED TO THE ENGINEER OF RECORD FOR REVIEW AND APPROVAL. THE EQUIPMENT SUPPLIER SHALL PROVIDE THE ATTACHMENT OF THE UNIT TO THE STRUCTURE AND SUBMIT TO THE ENGINEER LOADS, LOCATIONS AND METHOD OF ATTACHMENT. THE STRUCTURE ENGINEER WILL MAKE PROVISIONS IN THE DESIGN OF THE PRIMARY STRUCTURAL FRAME TO ACCOMMODATE THE LOADS AND ATTACHMENTS SUBMITTED BY THE MANUFACTURER.
15. WHERE CONCENTRATED LOAD BEARS ON TOP CHORD OR IS HUNG FROM BOTTOM CHORD OF TRUSSES, PROVIDE L2x2x¼ STRUT TO NEAREST PANEL POINT OF OPPOSITE CHORD. SEE DETAILS.

METAL DECK

1. DECK UNITS SHALL BE MANUFACTURED AND INSTALLED IN ACCORDANCE WITH THE CURRENT "DESIGN MANUAL FOR COMPOSITE DECKS, FORM DECKS AND ROOF DECKS," PUBLISHED BY THE STEEL DECK INSTITUTE.
2. PROVIDE CELLULAR FLUTED AND FORM UNITS, OPENINGS, SLEEVES, ETC, AS INDICATED ON THE ARCHITECTURAL/STRUCTURAL DRAWINGS AND SPECIFICATIONS.
3. METAL DECK UNITS SHALL BE FASTENED TO THE STEEL FRAME WITH 5/8" DIA. MIN. PUDDLE WELDS, 1 PER FLUTE AND SIDELAPS AT 12" O.C. MIN..
4. FURNISH, INSTALL AND WELD IN POSITION THE CLOSURES AND OTHER MISCELLANEOUS ITEMS AS REQUIRED TO SEAL OPENINGS. CLOSURE SHALL NOT BE LESS THAN 16 GAGE SHEET METAL.
5. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS SHOWING THE LAYOUT OF DECK PANELS, INCLUDING DETAILS OF SPECIAL CONDITIONS.
6. METAL DECK AND ACCESSORIES INSTALLED UNDER THIS CONTRACT SHALL BE HOT–DIP GALVANIZED IN ACCORDANCE WITH ASTM A653. TOUCH–UP, PER SPECIFICATIONS, ALL COATED SURFACES THAT ARE DAMAGED DURING CONSTRUCTION.

CONCRETE

1. ALL CONCRETE SHALL CONFORM TO THE "BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE," ACI 318.
2. ALL EMBEDDED STEEL SHALL BE HOT–DIP GALVANIZED ASTM A36, UNLESS OTHERWISE NOTED. ALUMINUM INSERTS ARE NOT PERMITTED.
3. SLEEVES, MECHANICAL OPENINGS, CONDUITS, PIPES, RECESSES, DEPRESSIONS, CURBS AND ALL EMBEDDED ITEMS SHALL BE PROVIDED AS SHOWN ON THE ARCHITECTURAL AND MEP DRAWINGS AND AS REQUIRED BY EQUIPMENT MANUFACTURERS. MINIMUM CLEAR CONCRETE SHALL BE 6 INCHES BETWEEN SLEEVES, AND 1½" BETWEEN EMBEDDED ITEMS AND ADJACENT REBARS.
4. REINFORCEMENT WORK OF DETAILING, FABRICATION, AND ERECTION SHALL CONFORM TO THE BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE (ACI 318), ACI DETAILING MANUAL–2004 (SP 66) AND CRSI MANUAL OF STANDARD PRACTICE (MSP 2009)
5. REINFORCEMENT SHALL CONFORM TO ASTM A615 GR. 60.
6. ALL REINFORCEMENT SHALL BE SECURELY HELD IN POSITION WHILE PLACING CONCRETE. REINFORCEMENT, SHALL BE SUPPORTED TO PREVENT DISPLACEMENT BY CONSTRUCTION LOADS OR BY CONCRETE PLACEMENT.

MASONRY

1. FURNISH AND CONSTRUCT CONCRETE MASONRY UNIT WORK ACCORDING TO REQUIREMENTS OF ACI 530.1 FOR MATERIALS, AND ACI 530 FOR DESIGN (MSJC). CONTACT OWNER'S REPRESENTATIVE BEFORE MASONRY WORK TO SCHEDULE PRE–CONSTRUCTION CONFERENCE WITH ENGINEER, GENERAL CONTRACTOR, MASONRY CONTRACTOR AND TESTING LABORATORY.
2. TEST (VERIFY) THE COMPRESSIVE STRENGTH OF THE MASONRY BY THE UNIT STRENGTH METHOD. VERIFY THE COMPRESSIVE STRENGTH OF THE MASONRY BEFORE CONSTRUCTION. ALL CONCRETE MASONRY ASSEMBLAGES SHALL HAVE A MINIMUM COMPRESSIVE STRENGTH (fm) OF 1,900 PSI. MASONRY UNITS SHALL BE ACCORDING TO REQUIREMENTS OF ASTM C90 HOLLOW CORE, GRADE N, WITH A NET AREA COMPRESSIVE STRENGTH 2,800 PSI MINIMUM. MORTAR SHALL BE TYPE S WITH WASHED SAND AGGREGATE ACCORDING TO REQUIREMENTS OF ASTM C144. MORTAR SHALL BE ACCORDING TO REQUIREMENTS OF ASTM C270 (PROPORTION SPECIFICATION TYPE S). SUBMIT FOR REVIEW PRODUCT DATA CONFIRMING THAT MASONRY PRODUCTS MEET OR EXCEED THESE STANDARDS.
3. FOR FILLING SPACES 4" OR LARGER IN BOTH DIRECTIONS, USE "COARSE GROUT" WITH A MINIMUM COMPRESSIVE STRENGTH OF 3000 PSI. THE GROUT SHALL BE TESTED IN ACCORDANCE WITH ASTM C1019. FOR FILLING SPACES LESS THAN 4" IN ONE OR BOTH DIRECTIONS USE FINE GROUT PROPORTIONED PER ASTM C476.
4. PLACE GROUT IN 4'–0" LIFTS AT 9" TO 11" SLUMP (HIGH–RANGE WATER REDUCING ADMIXTURE ASTM C494 TYPE F OR TYPE G). GROUT SHALL BE MIXED AT THE PLANT AND DELIVERED TO THE SITE BY A READY–MIX CONCRETE COMPANY. THE GROUT SHALL NOT BE MIXED ON SITE.
5. LAP ALL VERTICAL CMU REINFORCING PER ACI. ALL BARS SHALL BE TIED.
6. ALL MASONRY SHALL HAVE STANDARD HORIZONTAL JOINT REINFORCING AT 16" OC HOT–DIP GALVANIZED.
7. EXTERIOR WALL VERTICAL REINFORCING TO BE #5 @32" OC IN GROUTED CELLS, UNLESS NOTED OTHERWISE. BARS TO BE CENTERED WITHIN CELLS. PROVIDE VERTICAL #5 BARS AT WALL ENDS AND EACH SIDE OF OPENINGS (PER TYP DETAIL).
8. PROVIDE DOWELS @ BOTTOM OF CMU WALL INTO EXISTING GRADE BEAMS, MATCH VERTICAL BAR SPACING, TYP
9. PROVIDE STANDARD HOOKED HORIZONTAL BARS AT ENDS OF BOND BEAMS. ALL VERTICAL BARS SHALL HAVE STANDARD HOOK INTO BOND BEAM.
10. REFER TO THE ARCHITECTURAL DRAWINGS FOR THE ROUGH MASONRY OPENING DIMENSIONS & ELEVATIONS.
11. CONTRACTOR IS RESPONSIBLE FOR CMU WALL BRACING DURING CONSTRUCTION.
12. THROUGH PENETRATIONS FOR CMU WALLS THAT ARE CONFINED TO A SINGLE 8"x16" MASONRY UNIT SHALL NOT REQUIRE LINTELS OR OTHER REINFORCEMENT.

SPECIAL INSPECTIONS

1. SPECIAL INSPECTION WILL BE IN ACCORDANCE WITH NYC BUILDING CODE CHAPTER 17 TOGETHER WITH LOCAL AND STATE AMENDMENTS.
2. SPECIAL INSPECTIONS AND ASSOCIATED TESTING WILL BE PERFORMED BY AN APPROVED ACCREDITED INDEPENDENT AGENCY. THE CONTRACTOR WILL SECURE AND PAY FOR THE SERVICES OF THE AGENCY TO PERFORM ALL SPECIAL INSPECTION AND ASSOCIATED TESTS.
3. THE SPECIAL INSPECTOR WILL OBSERVE THE INDICATED WORK FOR COMPLIANCE WITH THE APPROVED CONTRACT DOCUMENTS AND SUBMIT RECORDS OF INSPECTION.
4. SPECIAL INSPECTIONS INCLUDE:

STRUCTURAL STEEL – WELDING	1704.3.1
STRUCTURAL STEEL – DETAILS	1704.3.2
STRUCTURAL STEEL – HIGH STRENGTH BOLTING	1704.3.3
STRUCTURAL STEEL – COLD–FORMED STEEL	1704.3.4
CONCRETE	1704.4
MASONRY	1704.5
STRUCTURAL STABILITY	1704.20
POST–INSTALLED ANCHORS	1704.32

SITE/CIVIL GENERAL NOTES

1. ALL WORK SHALL COMPLY WITH ALL APPLICABLE CODES, LAWS AND STATUTES AS REQUIRED.
2. THE CONTRACTOR SHALL CAREFULLY EXAMINE THE DRAWINGS, READ THE SPECIFICATIONS AND ALL OTHER PROPOSED CONTRACT DOCUMENTS. THE CONTRACTOR SHALL FULLY INFORM HIMSELF AS TO ALL EXISTING CONDITIONS AND LIMITATIONS UNDER WHICH THE WORK IS TO BE PERFORMED. NO ALLOWANCE WILL BE MADE TO THE CONTRACTOR BECAUSE OF LACK OF SUCH EXAMINATION OR KNOWLEDGE.
3. DO NOT SCALE MEASURE ANY DRAWING. DRAWINGS MAY BE ROUGH SCALED FOR GENERAL REFERENCE PURPOSES ONLY BUT NOT FOR LAYOUT OR FABRICATION. REPORT ANY ERRORS, INACCURACIES, DISCREPANCIES OR CONFLICTS TO THE ENGINEER IN WRITING BEFORE BEGINNING ANY WORK. WRITTEN DIMENSIONS SUPERSEDE SCALED DIMENSIONS.
4. THE CONTRACTOR SHALL PERFORM ALL WORK WITH CARE AND DISTURB ONLY THOSE AREAS OF THE SITE AFFECTED BY THE SCOPE OF WORK, UNLESS NOTED OTHERWISE OR DIRECTED BY THE ENGINEER. THE CONTRACTOR SHALL PROTECT ALL OTHER AREAS. AREAS BEYOND THE WORK LIMITS DISTURBED FOR ANY REASON BY THE CONTRACTOR AND HIS EMPLOYEES SHALL BE RESTORED, REPAIRED, OR REPLACED IN A MANNER SATISFACTORY TO THE ENGINEER AT THE EXPENSE OF THE CONTRACTOR.
5. THE CONTRACTOR'S ATTENTION IS DIRECTED TO THE FACT THAT THE EXACT EXTENT OF WORK CANNOT ALWAYS BE ACCURATELY DETERMINED PRIOR TO THE COMMENCEMENT OF CONSTRUCTION. THESE CONTRACT DOCUMENTS HAVE BEEN PREPARED BASED ON FIELD INSPECTION AND OTHER AVAILABLE INFORMATION. ACTUAL FIELD CONDITIONS MAY REQUIRE MODIFICATIONS TO CONSTRUCTION DETAILS AND WORK QUALITIES. THE CONTRACTOR SHALL PERFORM THE WORK IN ACCORDANCE WITH THE FIELD CONDITIONS.
6. THE CONTRACTOR SHALL MAINTAIN AT THE SITE ONE RECORD COPY OF ALL DRAWINGS, SPECIFICATIONS, APPROVED SHOP DRAWINGS AND APPROVED SAMPLES MARKED CURRENTLY TO RECORD ALL CHANGES DURING CONSTRUCTION.
7. THE ENGINEER ASSUMES NO RESPONSIBILITY FOR THE MEANS OF CONSTRUCTION, METHODS, TECHNIQUES, SEQUENCES OF PROCEDURES, OR THE SAFETY PRECAUTIONS AND PROGRAMS IN CONNECTION WITH THE WORK.
8. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR THE CORRECTNESS OF DIMENSIONS OR QUANTITIES; FOR ENSURING THAT VARIOUS WORK FEATURES ACHIEVE PROPER FIT; AND FOR INFORMATION PERTAINING TO THE FABRICATION PROCEDURE OR TO THE MEANS, METHODS, TECHNIQUES, SEQUENCES, AND PROCEDURES OF CONSTRUCTION. THE VERIFICATION OF THE PHYSICAL INTERRELATIONSHIPS OF ELEMENTS OF THE WORK FROM PLANS AND SPECIFICATIONS AND IN THE FIELD SHALL BE SOLELY THE CONTRACTOR'S RESPONSIBILITY. THE ENGINEER'S REVIEW OF THE CONTRACTOR'S SUBMISSIONS DOES NOT RELIEVE THE CONTRACTOR FROM THESE RESPONSIBILITIES.
9. THE CONTRACTOR SHALL VERIFY ALL EXISTING CONDITIONS IN THE FIELD BEFORE COMMENCING WORK AND SHALL REPORT ANY DISCREPANCIES BETWEEN DRAWINGS AND FIELD CONDITIONS TO THE ENGINEER. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR WORK TO BE CONFIRMED AND CORRELATED TO THE SITE; AND FOR VERIFYING EXACT LAYOUT COMPATIBILITY WITH ALL EXISTING CONDITIONS BEFORE BEGINNING WORK.
10. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROTECTION OF ALL EXISTING AND NEW CONDITIONS AND MATERIALS WITHIN THE PROPOSED CONSTRUCTION AREA INCLUDING THE REMOVAL AND INSTALLATION OF EXISTING EQUIPMENT AND MATERIALS TO PERFORM THE PROPOSED WORK. ANY DAMAGE OCCURRING DURING THE EXECUTION OF THE WORK IS THE RESPONSIBILITY OF THE CONTRACTOR AND SHALL BE REPAIRED OR REPLACED TO THE OWNER'S SATISFACTION.
11. VERIFY WITH THE ENGINEER THE EXTENT OF REMOVAL OF ALL SITE ELEMENTS.
12. THE OWNER ASSUMES THE RIGHT AT ALL TIMES TO DELIVER, PLACE AND INSTALL EQUIPMENT AS THE WORK PROGRESSES WHICH SHALL BE COORDINATED WITH THE CONTRACTOR.

STAGING NOTES

1. THE CONTRACTOR SHALL POST SIGNS REQUIRED BY THE CITY OF NEW YORK OR OTHER REGULATORY AGENCY FOR ITS WORK.
2. THE CONTRACTOR SHALL STAGE ON THE SITE IN SUCH A MANNER AS TO NOT BLOCK OR ENCROACH UPON EXISTING EXITS/ENTRANCES TO SITE FACILITIES AND VEHICLE ACCESS.
3. ALL EXITS MUST BE KEPT CLEAR OF CONSTRUCTION DEBRIS AT ALL TIMES.
4. THE CONTRACTOR SHALL SCHEDULE HIS OPERATIONS TO MINIMIZE THE INTERRUPTION OF PEDESTRIAN TRAFFIC, PEDESTRIAN SAFETY AND PROPERTY ACCESS MUST BE MAINTAINED AT ALL TIMES TO THE SATISFACTION OF THE ENGINEER. AT LOCATIONS WHERE EXISTING SIDEWALK IS CLOSED, THE CONTRACTOR SHALL PLACE A BARRICADE WITH A "SIDEWALK CLOSED" SIGN.
5. THE CONTRACTOR MAY BE ORDERED TO TEMPORARILY STOP WORK AND/OR RESCHEDULE WORK IN ORDER TO MINIMIZE INTERFERENCE WITH OTHER PLANNED FESTIVITIES OR ACTIVITIES.

SAFEGUARDING EXISTING UTILITIES NOTES

1. IT IS THE CONTRACTOR'S RESPONSIBILITY UNDER PART 753 OF THE NEW YORK STATE INDUSTRIAL CODE TO DETERMINE THE EXACT LOCATION OF THE UNDERGROUND FACILITIES PRIOR TO WORKING IN THE AREA. ANY DAMAGE CAUSED BY THE CONTRACTOR'S OPERATIONS SHALL BE REPAIRED AT THE CONTRACTOR'S EXPENSE.
2. IF ACTIVE UTILITY LINES ARE ENCOUNTERED, PROMPTLY TAKE NECESSARY STEPS TO ASSURE THAT SERVICE IS NOT INTERRUPTED.
3. IF SERVICE IS INTERRUPTED AS A RESULT OF WORK, IMMEDIATELY RESTORE SERVICE BY REPAIRING THE DAMAGED UTILITY AT NO ADDITIONAL COST TO THE OWNER.
4. IF EXISTING UTILITIES ARE FOUND TO INTERFERE WITH THE PERMANENT FACILITIES BEING CONSTRUCTED, IMMEDIATELY NOTIFY THE ENGINEER AND SECURE HIS INSTRUCTIONS.
5. VERIFY ALL EXISTING UNDERGROUND UTILITIES PRIOR TO ANY DISTURBANCE. REMOVAL OR RELOCATION OF ALL UTILITIES NOT CLEARLY SHOWN IN CONTRACT DOCUMENTS OR FOUND DURING EXCAVATION SHALL BE CONFIRMED WITH THE ENGINEER PRIOR TO WORK PROCEEDING.
6. UNLESS SHOWN TO BE REMOVED, PROTECT ACTIVE UTILITY LINES SHOWN ON DRAWINGS OR OTHERWISE MADE KNOWN TO THE CONTRACTOR PRIOR TO EXCAVATING. IF DAMAGED, REPAIR OR REPLACE AT NO ADDITIONAL COST TO THE OWNER.
7. THE CONTRACTOR IS ALERTED TO THE RULES AND REGULATIONS OF INDUSTRIAL CODE RULE 53 AND IS DIRECTED TO COMPLY WITH IT. THE CONTRACTOR, FOR THE PURPOSE OF SAFETY, SHALL NOTIFY THE ENGINEER IF ANY UTILITIES ARE EXPOSED AND/OR UNDERMINED DURING THE COURSE OF CONSTRUCTION. THE OWNER SHALL NOT BE LIABLE FOR ANY COSTS INCURRED BY THE CONTRACTOR AS A RESULT OF THE COMPLIANCE, NON-COMPLIANCE OR IMPROPER COMPLIANCE BY THE FRANCHISED OPERATOR OF UNDERGROUND FACILITIES, WITH SUBPART 53-3 OF RULE 53 OF THE INDUSTRIAL CODE.
8. PRIOR TO ANY EXCAVATION, SUBSURFACE EXPLORATION, OR INSTALLATION BELOW EXISTING GRADE, THE SITE ENGINEER IN CHARGE SHALL BE NOTIFIED OF THE DATE AND LOCATION OF THE PROPOSED WORK. THIS NOTIFICATION CALL SHALL BE MADE A MINIMUM OF TWO (2) DAYS, NOT INCLUDING THE CALL DAY, PRIOR TO WORK.

SITE SAFETY NOTES

GENERAL SAFETY AND SECURITY MEASURES

1. ALL CONSTRUCTION MATERIALS SHALL BE STORED IN A SAFE AND SECURE MANNER.
2. THE CONTRACTOR SHALL INSTITUTE AND MAINTAIN SAFETY MEASURES TO SAFEGUARD THE GENERAL PUBLIC AND PROPERTY AFFECTED BY THE CONSTRUCTION OPERATION.
3. THE CONTRACTOR SHALL KEEP THE CONSTRUCTION SITE FREE AND CLEAR OF ALL UNAUTHORIZED PERSONS.
4. WORK MUST CONFORM TO THE REQUIREMENTS OF THE NEW YORK CITY DEPARTMENT OF BUILDINGS, NEW YORK CITY DEPARTMENT OF ENVIRONMENTAL PROTECTION, NEW YORK CITY DEPARTMENT OF TRANSPORTATION, FIRE DEPARTMENT REGULATIONS, UTILITY COMPANY REQUIREMENTS AND ALL APPLICABLE LAWS AND REQUIREMENTS.
5. ALL TEMPORARY EQUIPMENT AND WIRING SHALL BE IN ACCORDANCE WITH APPLICABLE ELECTRICAL CODES.
6. THE CONTRACTOR SHALL TAKE ALL NECESSARY PRECAUTIONS INCLUDING BUT NOT LIMITED TO INSTALLING TEMPORARY SUPPORTS, SHORING AND BRACING TO ENSURE THAT CONSTRUCTION PROCEEDS IN A SAFE MANNER.
7. ALL CONSTRUCTION EQUIPMENT THAT MAY AFFECT THE PUBLIC WHILE IN OPERATION SHALL BE INSPECTED BY THE PROJECT ENGINEER OR BY A COMPETENT DESIGNATED ENGINEER. UNSAFE EQUIPMENT SHALL BE REPAIRED IMMEDIATELY OR REMOVED FROM SERVICE.
8. HOSE LINES, PIPES, CHAINS, ROPES, ETC. SHALL BE LOCATED IN A MANNER NOT TO CREATE A TRIPPING HAZARD.
9. DURING ALL LIFTING AND HOISTING OPERATIONS, FLAG PERSONS SHALL BE PROVIDED TO CONTROL ALL PEDESTRIAN AND/OR VEHICULAR TRAFFIC AT ALL TIMES.
10. ALL TRENCHES ARE TO BE COVERED WITH STEEL PLATES DURING NON-WORKING HOURS AND PROTECTED ON ALL SIDES WITH TEMPORARY FENCING OR BARRICADES.

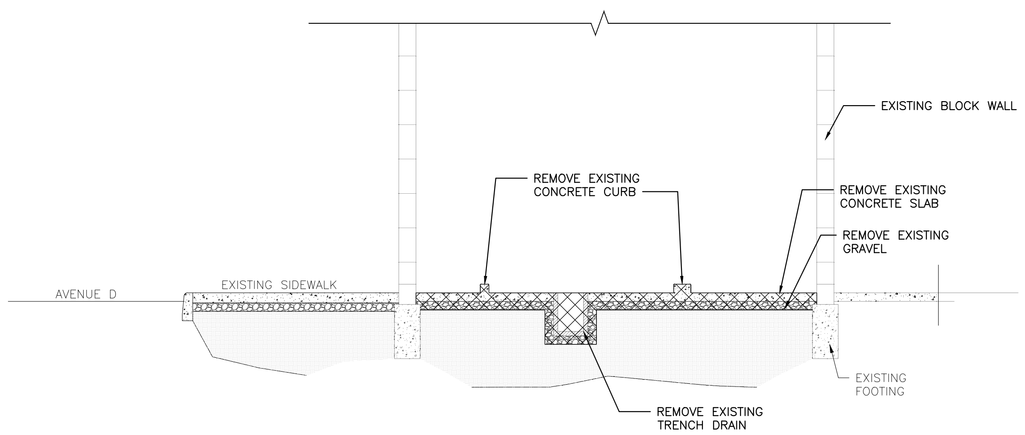
DUST AND DEBRIS CONTROL

1. SUFFICIENT CONTAINERS MADE OF METAL OR OTHER ACCEPTABLE MATERIAL SHALL BE PROVIDED BY THE CONTRACTOR FOR STORING GARBAGE AND DEBRIS.
2. DEBRIS, DIRT, DUST AND CONTAMINANTS ARE TO BE KEPT TO A MINIMUM AND ARE TO BE CONFINED TO THE IMMEDIATE CONSTRUCTION AREA. PROVISIONS SHALL BE MADE TO PREVENT THE PASSAGE OF DUST AND CONTAMINANTS INTO SITE FACILITIES BY THE CONTRACTOR.
3. DEBRIS, DIRT, DUST AND CONTAMINANTS ARE TO BE CLEANED UP AND REMOVED PERIODICALLY TO AVOID ANY EXCESSIVE ACCUMULATION. THIS SHALL BE ACCOMPLISHED IN A LEGAL MANNER.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE CONTROL OF CHEMICAL FUMES, GASES, AND OTHER CONTAMINANTS PRODUCED BY WELDING, GASOLINE OR DIESEL ENGINES, PAVING, ETC. TO ENSURE THEY DO NOT ENTER SITE FACILITIES OR BUILDINGS ADJACENT TO THE SITE.

SITE STRUCTURAL CONCRETE NOTES

1. ALL CONCRETE SHALL CONFORM TO THE LATEST EDITION OF ACI-318 BUILDING CODE REQUIREMENTS FOR REINFORCED CONCRETE.
2. CONCRETE SHALL HAVE A MINIMUM 28 DAY STRENGTH F'C=4000 PSI
3. REINFORCING STEEL SHALL BE DEFORMED BARS CONFORMING TO ASTM A615 GRADE 60. REINFORCING STEEL SHALL BE DETAILED ACCORDING TO ACI MANUAL OF STANDARD PRACTICE (ACI 315) LATEST EDITION.
4. ALL GROUT SHALL BE NON-SHRINK WITH A MINIMUM COMPRESSIVE STRENGTH OF 5000 PSI.

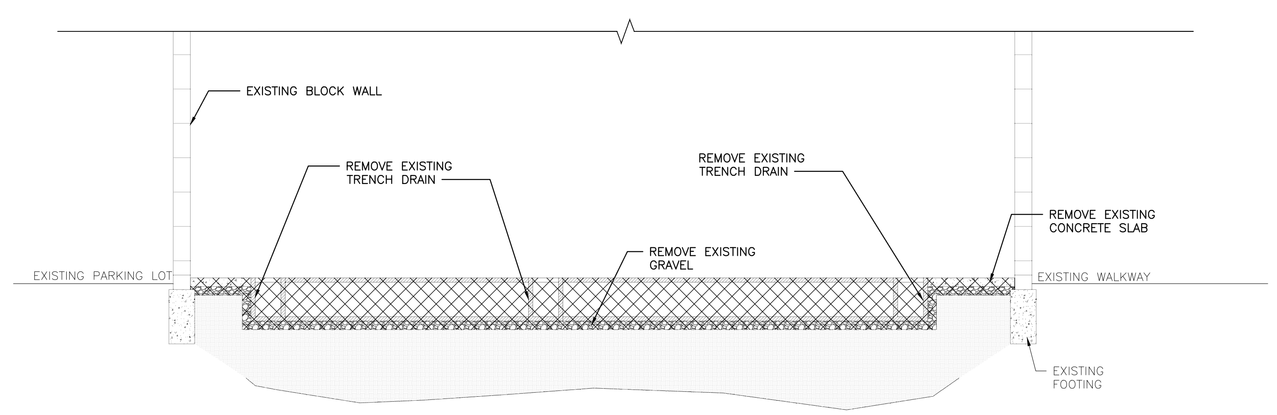
FIRE PROTECTION



1. A FIRE EXTINGUISHER MUST BE PRESENT WITHIN CLOSE PROXIMITY (NOT MORE THAN 25') OF ALL FUEL-OPERATED EQUIPMENT DURING USE.
2. COMBUSTIBLE WASTE MATERIAL MUST NOT BE ALLOWED TO ACCUMULATE AND SHALL BE REMOVED FROM THE SITE AT REASONABLE INTERVALS.

MISCELLANEOUS NOTES

1. THE ELEVATIONS PROVIDED FOR THE TOP OF NEWLY GRADED AREAS ARE TO BE CONSIDERED APPROXIMATE AND ARE TO BE USED AS A GENERAL GUIDE ONLY.
2. EXISTING STEEL GRATES, PLATES, UTILITY VALVES AND MANHOLE COVERS IN THE PAVEMENT ARE TO BE LOCATED BY THE CONTRACTOR. THESE STEEL GRATES, PLATES, UTILITY VALVES AND MANHOLE COVERS ARE TO BE ADJUSTED TO MATCH THE NEW PAVEMENT GRADES.
3. THE LOCATION AND SIZES OF ALL STEEL GRATES AND PLATES SHOWN ON THE DRAWINGS WERE DETERMINED FROM OLD RECORDS OR FIELD INSPECTIONS. THE ACTUAL SIZES, LOCATIONS AND TYPES SHALL BE VERIFIED BY THE CONTRACTOR IN THE FIELD.



RESTORATION

1. IN THOSE INSTANCES WHERE THE PROPOSED WORK PARALLELS EXISTING CURB LINES THE PIPE SHALL BE PLACED 2 FEET BEHIND THE BACK OF CURB SO AS NOT TO UNDERMINE OR DAMAGE ANY EXISTING CURBS TO REMAIN. ANY DAMAGE CAUSED BY THE CONTRACTOR SHALL BE REPLACED AT NO COST TO THE OWNER.
2. ALL TRENCHING ACROSS PAVED SURFACES REQUIRES SAWCUTS ON BOTH SIDES OF THE TRENCH. THE REMOVAL OF THE PAVEMENT SHALL BE DONE NEATLY AND CAREFULLY IN ORDER TO PRESERVE A GOOD VERTICAL FACE IN THE ASPHALT PAVEMENT TO REMAIN.
3. THE VERTICAL FACE OF EXISTING ASPHALT PAVEMENT TO REMAIN SHALL BE TACK COATED PRIOR TO NEW PAVEMENT PLACEMENT.
4. WHERE THE PROPOSED WORK INTERSECTS WITH EXISTING CONCRETE SIDEWALK AND/OR CURB, THE LIMITS OF THE SIDEWALK/CURB REMOVAL SHALL BE TO THE NEAREST EXISTING JOINT IN THE SIDEWALK/CURB OR AS ORDERED BY THE RESIDENT ENGINEER.

INSPECTION/FINAL SIGN-OFF

THE CONTRACTOR IS RESPONSIBLE TO PROCURE OR PROVIDE ALL ITEMS NECESSARY FOR FINAL NYCDOB/NYCDOT SIGN-OFF, INCLUDING BUT NOT LIMITED TO:

- NYCDOT INSPECTION AND SIGN-OFF
- FINAL AS-BUILT SURVEY
- CONCRETE CORE TEST AND FULL-TIME CONTROLLED INSPECTION SIGNED AND SEALED BY A LIST OF DRAWINGS PANIED BY BPP-11 (ENGINEER'S INSPECTION AFFIDAVIT)

DRAWING LIST

1. BPP-001.00 BUILDERS PAVEMENT PLAN TITLE SHEET
2. BPP-002.00 BUILDERS PAVEMENT PLAN – PROFILE & DETAILS
3. BPP-003.00 BUILDERS PAVEMENT PLAN – PHOTOS
4. BPP-004.00 BUILDERS PAVEMENT PLAN – MPT

GENERAL NOTES

1. EXISTING TOPOGRAPHIC, BOUNDARY AND.OR UTILITY INFORMATION AS SHOWN ON THIS DESIGN DOCUMENT IS BASED ON ARCHITECTURAL SURVEY PREPARED BY HIRANI ENGINEERING & LAND SURVEYING, LLC DATED 00-00-0000.
2. TRANSVERSE EXPANSION JOINTS WITH JOINT FILLER SHALL BE PROVIDED AT INTERVALS OF MAXIMUM 20 FEET. SCORE LINED SHALL BE EVERY 5 FEET ON CENTER.
3. EXPANSION JOINT WITH JOINT FILLER TO BE PROVIDED BETWEEN THE SIDEWALK SLABS AND CURB, STREET HARDWARE, WOOD POLES, STREET LIGHT AND TRAFFIC POLE FOUNDATIONS, HYDRANT FOUNDATION, SLABS, BUILDINGS, ETC.
4. CONTRACTOR TO OBTAIN NECESSARY DOT WORK PERMITS AND PERFORM ALL WORK IN ACCORDANCE WITH DOT REQUIREMENTS AND STANDARDS.
5. STRIP AND RESURFACE ROADWAY AS NOTED ON PLAN OR TO THE EXTENTS NECESSARY AS DIRECTED BY NYCDOT OR DOB. NYCDOT RESERVES THE RIGHT, UPON BPP INSPECTION, TO REQUIRE THE OWNER TO MILL AND RESURFACE ENTIRE STREET WIDTH.
6. ALIGN EXPANSION JOINTS FOR CURB EXPANSION JOINTS FOR SIDEWALK.
7. AS PER NYC DEPARTMENT OF PARKS, VACANT TREE PIT WILL BE REMOVED.
8. THE CONTRACTOR IS RESPONSIBLE FOR CREATING ALL REQUIRED SITE LOGISTICS PLANS, AND COORDINATING SAID PLANS AND ALL REQUIRED PERMITS WITH THE NEW YORK CITY OFFICE OF CONSTRUCTION MITIGATION AND COORDINATION (OCMC).
9. ADJUST ALL SURFACE FEATURES TO MATCH PROPOSED GRADES AS NECESSARY. CONTRACTOR SHALL COORDINATE THIS WORK WITH THE APPROPRIATE UTILITY OWNER(S), AS REQUIRED.
10. IN ORDER TO COMPLY WITH ADA REQUIREMENTS, THE CONTRACTOR IS REQUIRED TO BREAK THE TRANSVERSE GRADE OF SIDEWALKS SUCH THAT THERE SHALL BE A MINIMUM OF FIVE (5) FEET WIDTH OF SIDEWALK WITH A TRANSVERSE SLOPE NOT EXCEEDING TWO (2) PERCENT AND THE REMAINING SIDEWALK SLOPE NOT EXCEEDING FIVE (5) PERCENT.
11. "Dig Safely" Requirements in New York State for excavation on Long Island and five Boroughs of New York City, New York 811 must be called at 1-800-272-4480. For excavation elsewhere in New York State, Dig Safely New York must be called at 1-800-835-7962. Notifications for excavation work anywhere in the state can be made by dialing 811.

GENERAL REQUIREMENTS

1. ALL DESIGN, MATERIALS CONSTRUCTION METHODS AND WORKMANSHIP SHALL COMPLY WITH THE FOLLOWING PUBLICATIONS OF THE NEW YORK CITY DEPARTMENT OF TRANSPORTATION (DOT): STANDARD SPECIFICATIONS, STANDARD DETAILS OF CONSTRUCTION; RULES OF THE INFRASTRUCTURE COMPONENTS.
2. ALL NON-STANDARD MATERIALS AND CONSTRUCTION PROCEDURES SHALL BE SPECIFICALLY APPROVED IN WRITING BY DOT.
3. ANY WORK NOT COMPLYING WITH THE REQUIREMENTS OF THE DOT SHALL BE REMOVED AND REPLACED.
4. THIS PLAN SHALL BE VALID FOR THE ISSUANCE OF CONSTRUCTION PERMITS FOR A PERIOD OF ONE YEAR FROM THE DATE OF APPROVAL OR SELF-CERTIFICATION, AS APPLICABLE.
5. ALL SIDEWALK AND STREET AREAS CONSTRUCTED UNDER THIS PLAN SHALL REMAIN OPEN TO THE PUBLIC AT ALL TIMES.

ISSUANCE OF PERMITS

6. NO SIDEWALK, CURB OR ROADWAY WORK SHALL BE DONE WITHOUT A PERMIT FROM THE BOROUGH HIGHWAY SUPERINTENDENT, APPLICATION SHALL BE MADE THREE DAYS BEFORE STARTING CONSTRUCTION. THE CONTRACTOR SHALL HAVE ALL REQUIRED INSURANCE COVERAGE ON FILE.
7. NO WORK ON DRAINAGE STRUCTURE SHALL BE DONE WITHOUT A PERMIT FROM THE BOROUGH OFFICE OF THE DEPARTMENT OF ENVIRONMENTAL PROTECTION.
8. ANY VAULT WORK AT THE SITE SHALL BE DONE AS PER THE APPLICABLE RULES OF THE DOT AND THE DEPT. OF BUILDINGS.

CONSTRUCTION ACTIVITY

9. A CONSTRUCTION PLAN SHOWING MAINTENANCE AND PROTECTION OF TRAFFIC, INCLUDING PLACEMENT OF SIDEWALK BRIDGES, BARRIERS AND SIGNAGE, SHALL BE SUBMITTED TO THE BOROUGH HIGHWAY OFFICE BEFORE CONSTRUCTION BEGINS.
10. NO SIDEWALK SHALL BE CLOSED WITHOUT A PERMIT. PEDESTRIAN AND TRAFFIC SAFETY SHALL BE PROTECTED AT ALL TIMES. ROADWAY CLOSING SHALL BE AS DIRECTED.
11. THE SITE SHALL BE MAINTAINED IN A CLEAN AND SAFE CONDITION.

FINAL SIGNOFF

12. PERMITS SHALL BE PRESENTED FROM ALL PUBLIC AGENCIES AND UTILITIES HAVING OWNERSHIP OF STRUCTURES RELOCATED OR REMOVED DURING CONSTRUCTION.
13. ALL PAVEMENT MAKINGS INCLUDING THERMOPLASTIC LANE DIVIDERS, REMOVED DURING CONSTRUCTION SHALL BE REPLACED IN KIND TO THE BUREAU OF TRAFFIC STDS.
14. ALL EXISTING CATCH BASINS ON SITE SHALL BE CLEANED AND MADE OPERABLE..
15. ALL DAMAGE CAUSED BY CONSTRUCTION ON THIS PROJECT OUTSIDE THE PROJECT LIMITS SHALL BE REPAIRED AS DIRECTED.
16. THE ROADWAY SHALL BE PAVED TO THE REQUIREMENTS OF THE DOT AND AS DIRECTED.

FLAGGING OPERATION NOTES

1. AT SIGNALIZED INTERSECTIONS, SIGNALS SHALL BE TURNED OFF FOR ANY FLAGGING OPERATIONS, UNLESS OTHERWISE AUTHORIZED BY THE ENGINEER.
2. WHEN PAVED SHOULDERS HAVING A WIDTH OF 8' OR MORE ARE CLOSED, CHANNELIZING DEVICES SHALL BE USED TO CLOSE THE SHOULDER IN ADVANCE TO DELINEATE THE BEGINNING OF THE WORK AREA AND DIRECT VEHICULAR TRAFFIC TO REMAIN IN THE TRAVEL WAY.
3. CHANNELIZING DEVICE SPACING (CENTER TO CENTER) SHALL NOT EXCEED 40' IN THE ACTIVE WORK SPACE.
4. THE END ROAD WORK SIGN (G20-2) SHALL BE PLACED A MAXIMUM OF 500' PAST THE END OF THE WORK SPACE.
5. WHERE DIRECTED BY THE ENGINEER, A BUFFER SPACE SHALL BE PROVIDED IN ORDER TO LOCATE THE ONE-LANE, TWO-WAY TRAFFIC TAPER PRIOR TO ANY HORIZONTAL OR VERTICAL CURVE, IN ORDER TO PROVIDE ADEQUATE SIGHT DISTANCE FOR THE FLAGGERS AND/OR A QUEUE OF STOPPED VEHICLES.
6. THE FLAG TREE SHALL BE LOCATED ON THE SHOULDER, AT APPROXIMATELY * THE DISTANCE BETWEEN THE FLAGGER SIGN (W20-7a) AND THE FLAGGER.
7. FLAGGER SIGN (W20-7a) AND ONE LANE ROAD AHEAD SIGN (W20-4) SHALL BE REMOVED, COVERED OR TURNED AWAY FROM ROAD USERS WHEN FLAGGING OPERATIONS ARE NOT OCCURRING.
8. FLAGGER AND FLAG TREE SHALL BE ILLUMINATED TO LEVEL II ILLUMINATION DURING NIGHT TIME OPERATIONS.
9. ALL FLAGGERS SHALL USE 24" (MIN.) OCTAGON SHAPED STOP/SLOW PADDLES HAVING 6' STAFF.
10. ADDITIONAL FLAGGERS SHALL BE LOCATED AT ALL INTERSECTIONS AND COMMERCIAL DRIVEWAYS LOCATED WITHIN OR NEAR THE ACTIVE WORK AREA.
11. CENTERLINE CHANNELIZING DEVICES ARE OPTIONAL AND MAY BE ELIMINATED WHERE SPACE CONSTRAINTS EXIST.
12. NO WORK ACTIVITY, EQUIPMENT, OR STORAGE OF VEHICLES, OR MATERIAL SHALL OCCUR WITHIN THE BUFFER SPACE AT ANY TIME.
13. FOR PEDESTRIAN DETOUR ACCOMMODATIONS REFER TO THE STANDARD SHEETS TITLED "SIDEWALK DETOUR OR DIVERSION" AND "CROSSWALK CLOSURE AND PEDESTRIAN DETOUR".

GENERAL NOTES

1. WHERE THERE IS A DISCREPANCY BETWEEN THE DRAWINGS AND SPECIFICATIONS, NOTIFY THE ENGINEER PRIOR TO BID. FOR BIDDING PURPOSES THE MORE STRINGENT SHALL APPLY.
2. THE CONTRACTOR SHALL EXAMINE THE COMPLETE SET OF CONTRACT DOCUMENTS FOR ALL TRADES, AS ISSUED BY THE ARCHITECT AND REVIEW DIMENSIONS, SPACE REQUIREMENTS AND POINT OF CONNECTIONS TO ALL EQUIPMENT. MAKE ANY MINOR ADJUSTMENTS NECESSARY TO AVOID CONFLICTS WITH THE BUILDING STRUCTURE AND THE WORK OF OTHER TRADES.
3. UNLESS INSTRUCTED OTHERWISE. THE CONTRACTOR SHALL OBTAIN AND PAY FOR ALL PERMITS, LICENSES, AND FEES REQUIRED FOR INSTALLATION OF THE MECHANICAL WORK. FURNISH FINAL CERTIFICATE OF INSPECTION OR WRITTEN EVIDENCE OF ACCEPTANCE BY INSPECTION AUTHORITIES FOR ALL WORK INSTALLED.
4. REFER TO COMPLETE DRAWING PACKAGE FOR EXTENT OF CONSTRUCTION, AND EXACT LOCATION OF FIXTURES, EQUIPMENT, DEVICES , ETC.
5. CONTRACTOR SHALL COORDINATE WITH ALL TRADES TO ENSURE AN UNDERSTANDING OF THE COMPLETE SCOPE OF PROJECT PRIOR TO START OF WORK.
6. ALL EQUIPMENT & MATERIALS SHALL MATCH DESIGN SPECIFICATIONS AND MANUFACTURER'S RECOMMENDED INSTALLATION INSTRUCTIONS.
7. LOCATION OF DUCTWORK IS APPROXIMATE. ALL DRAWINGS AND LAYOUT ARE DIAGRAMMATIC TO SHOW DESIGN INTENT ONLY. CONTRACTOR TO COORDINATE ALL DUCTWORK AND PIPING WITH ALL OTHER WORK IF FIELD CONDITIONS DIFFER SIGNIFICANTLY FROM THOSE SHOWN ON THE DRAWINGS AND AFFECT WORK, INFORM ARCHITECT IMMEDIATELY BEFORE PROCEEDING WITH THAT AREA.
8. INSTALL FIRE DAMPER OR COMBINATION FIRE/SMOKE DAMPER ON ALL DUCTS PENETRATING FIRE RATED ENCLOSURES AND PARTITIONS, AND RATED CEILINGS OF HORIZONTAL EXITS. THE CONTRACTOR SHALL INTERLOCK ALL COMBINATION FIRE/SMOKE DAMPERS WITH LISTED AREA TYPE SMOKE DETECTORS IN THE BUILDING FIRE LIFE SAFETY SYSTEM. VERIFY WITH LIFE SAFETY SYSTEM CONTRACTOR. SEE FIRE ALARM SPECIFICATION AND SMOKE CONTROL NOTES FOR ADDITIONAL INFORMATION.
9. AIR HANDLING UNITS AND FAN COIL UNITS SHALL BE PROVIDED WITH DUCT SMOKE DETECTORS AT THE UNITS OUTLET WHEN THE UNITS CAPACITY EQUALS 2000 CFM OR GREATER.
10. A MINIMUM OF 36" CLEAR WORKING SPACE, NOT LESS THAN 30" WIDE, SHALL BE MAINTAINED IN FRONT OF ALL SWITCHES, OVERCURRENT DEVICES AND ELECTRIC CONTROL COMPONENTS. THE WORKING SPACE SHALL BE CLEAR AND EXTEND FROM THE GRADE, FLOOR, OR PLATFORM TO MINIMUM OF 6'-8" FT. WHERE THE ELECTRICAL EQUIPMENT EXCEEDS 6-1/2 FT IN HEIGHT, THE MINIMUM HEADROOM SHALL NOT BE LESS THAN THE HEIGHT OF THE EQUIPMENT
11. A MINIMUM OF 24" CLEAR WORKING SPACE SHALL BE PROVIDED IN FRONT OF THE ACCESS PANELS.
12. THE SMOKE DETECTORS LOCATED AT AIR MOVING EQUIPMENT SHALL SHUT DOWN ALL AIR HANDLING EQUIPMENT VIA THE LIFE SAFETY SYSTEM. WHEN SMOKE IS DETECTED AT EQUIPMENT, ALL OTHER AIR MOVING EQUIPMENT LOCATED IN OR CONNECTED TO COMMON PLENUM OR SMOKE ZONE SHALL SHUT DOWN.
13. ALL ELECTRICAL CONTROLS FOR THE SMOKE CONTROL SHALL BE RATED FOR SUCH USE.
14. PROVIDE ACCESS PANELS (MATCH WALL OR CEILING RATING) IN ALL WALLS OR CEILINGS WHERE ACCESS TO DAMPERS, CONTROLS, ETC ARE REQUIRED BY CODE. COORDINATE LOCATIONS WITH ARCHITECT.
15. CONTRACTOR SHALL NOTE THE CRITICAL SPACE AVAILABLE ABOVE CEILINGS. PROVIDE TRANSITION PIECES AT CROSSOVERS, UNDER BEAMS, OVER/UNDER PIPES, AS REQUIRED TO ACCOMMODATE DUCTS WITHIN SPACE AVAILABLE, PROVIDING EQUIVALENT DUCT SIZE TO THE DIAMETER SHOWN. COORDINATE CLOSELY WITH OTHER TRADES TO REDUCE NECESSITY OF TRANSITIONS TO A MINIMUM. NO ADDITIONAL COSTS WILL BE PAID FOR ANY REQUIRED TRANSITIONS OR OTHER SPECIAL CHANGE SHAPE PIECES. ALL DUCTWORK SHALL BE SUPPORTED AND SEISMICALLY RESTRAINED PER THE CALIFORNIA BUILDING CODES AND SMACNA STANDARD.
16. THERE SHALL BE NO PIPING AND/OR DUCTWORK RUN THROUGH ELECTRICAL ROOMS UNLESS THAT DUCTWORK AND/OR PIPING IS SERVING THAT ELECTRICAL SPACE.
17. ALL FLEXIBLE DUCT CONNECTIONS TO AIR DISTRIBUTION DEVICES TO BE MIN. 5'-0" ACOUSTICAL FLEX DUCT PER SPECIFICATIONS.
18. LOCATE EXISTING REINFORCING STEEL UTILIZING ANY SUITABLE METAL DETECTION SYSTEM. DO NOT CUT ANY EXISTING STEEL REINFORCEMENT. SHIFT ANCHOR OR CORE TO MISS THE REBAR.
19. BOLTS MUST BE INSTALLED TO AVOID DAMAGING EXISTING STEEL REINFORCEMENT. IN CASE OF CONFLICT, ADJUST BOLT LOCATION, ALLOWING FOR 1" CONCRETE COVER BETWEEN REBAR AND BOLT.
20. PROVIDE TRANSFER DUCTS AS NECESSARY ABOVE CEILING FOR RETURN AIR PATH TO AIR HANDLING EQUIPMENT SERVING THAT SPACE. REFER TO DETAILS FOR TRANSFER DUCT SIZES.
21. ALL EXISTING SUPPLY, RETURN & TOILET EXHAUST AIR DUCTWORK SHALL BE CLEANED.
22. ALL NEW WALL MOUNTED DEVICES SHALL BE PER ADA ACCESSIBILITY GUIDELINES.

ENERGY CONSERVATION NOTES

TO THE BEST OF MY KNOWLEDGE, BELIEF AND PROFESSIONAL JUDGEMENT, THESE PLANS AND SPECIFICATIONS ARE IN COMPLIANCE WITH THE 2016 NEW YORK CITY ENERGY CONSERVATION CODE.

NYC BUILDING DEPARTMENT NOTES

A. A CONTROLLED INSPECTION AND TEST WILL BE CONDUCTED BY A LICENSED ENGINEER HAVING NOT LESS THAN (5) YEARS EXPERIENCE SUPERVISING THE INSTALLATION OF VENTILATING SYSTEMS. THE TEST WILL SHOW COMPLIANCE WITH THE BUILDING ADMINISTRATIVE CODE AND REFERENCE STANDARDS. CONTRACTOR SHALL SUBMIT TO SYSKA HENNESSY GROUP FOR APPROVAL.

B. THE LICENSED PROFESSIONAL ENGINEER OR ARCHITECT OR OTHER PERSON NOT HAVING LESS THAN (5) YEARS EXPERIENCE SUPERVISING THE INSTALLATION OF VENTILAING SYSTEMS AND CONDUCTING SUCH TESTS WILL FILE A CERTIFICATE AND REPORT OF TEST THAT THE SYSTEM COMPLIES WITH THE APPLICABLE LAWS.

C. A STATEMENT WILL BE FILED BY THE OWNER IN POSSESSION THAT THE VENTILATING SYSTEM WILL BE KEPT IN CONTINUOUS OPERATION DURING NORMAL OCCUPANCY OF THE PREMISES.

D. ALL FIRE DAMPERS ARE TO BE OF TYPE APPROVED BY THE BOARD OF FIRE UNDERWRITERS. WHERE ENTERING OR LEAVING SHAFTS, FIRE DAMPERS ARE TO BE EQUIVALENT TO WALL RATING.

E. THE LATEST RULES OF BUILDING CODES ARE TO BE COMPLIED WITH.

F. SMOKE AND FIRE DETECTION SYSTEMS TO BE INSTALLED IN ACCORDANCE WITH THE BUILDING ADMINISTRATIVE CODE AND REFERENCE STANDARDS.

G. ALL EQUIPMENT SUPPLIED FOR THIS PROJECT REQUIRING NYC APPROVAL SHALL HAVE MEA OR BSA APPROVAL NUMBERS.

H. ALL MECHANICAL SYSTEM PIPING SUPPORTS SHALL BE INSTALLED IN ACCORDANCE WITH CHAPTER 3, SECTION 305 (2014 NYC MECHANICAL CODE).

I. ALL CONDENSED LIQUID BYPRODUCT DRAIN SYSTEMS PROVIDED FOR MECHANICAL SYSTEM EQUIPMENT SHALL BE INSTALLED IN ACCORDANCE WITH CHAPTER 3, SECTION 307 (2014 NYC MECHANICAL CODE).

J. ALL REFRIGERANT PIPING SHALL BE INSTALLED IN ACCORDANCE WITH CHAPTER 11, SECTION 1107 (2014 NYC MECHANICAL CODE).

K. ALL MECHANICAL EQUIPMENT, HYDRONIC / STEAM PIPING SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH CHAPTER 12 (2014 NYC MECHANICAL CODE).

L. CONTRACTOR SHALL PREPARE A CERTIFICATE OF TEST IN ACCORDANCE WITH 2014 NYC MECHANICAL CODE (REF. CHAP. 11, SECTION 1108.4) UPON THE COMPLETION OF WORK RELATING TO REFRIGERATION EQUIPMENT INSTALLATION.

M. THE DESIGN AND INSTALLATION OF MECHANICAL EQUIPMENT VIBRATION ISOLATION SHALL BE IN ACCORDANCE WITH 2014 NYC MECHANICAL CODE (REF. CHAP. 3, SECTION 301.1, CHAP. 9, SECTION 928.3)

N. ALL WORK PERFORMED BY CONTRACTOR SHALL BE IN ACCORDANCE WITH SECTION 608 OF THE 1990 US CLEAN AIR ACT (AMENDED: 58FR28660, 59 FR 42950, 59 FR 55912) AND TITLE 40 CFR, PART 82, SUBPART F FOR THE REQUIREMENTS TO SAFELY HANDLE / DISPOSE CLASS I AND CLASS II REFRIGERANTS. IN THE EVENT OF ACCIDENTAL DISCHARGE OF REFRIGERANT, CONTRACTOR SHALL FOLLOW PROCEDURES FOR REPORTING RELEASE OF HAZARDOUS MATERIALS IN ACCORDANCE WITH 2014 NYC FC (REF. SECTION 606.13) AND ALL OTHER APPLICABLE NY STATE AND FEDERAL REGULATIONS.

BUILDING DEPARTMENT APPROVAL NOTE:
THIS PLAN IS APPROVED ONLY FOR WORK INDICATED ON THE APPLICATION SPECIFICATION SHEET. ALL OTHER MATTER SHOWN ARE NOT TO BE RELIED UPON, OR TO BE CONSIDERED AS EITHER BEING APPROVED OR IN ACCORDANCE WITH APPLICABLE CODES.

1 1ST FL MECHANICAL DEMOLITION PART PLAN-DISTRICT 17
3/32"=1'-0"

KEY PLAN

SHEET NOTES

1. IN TRUCK STORAGE AND TRUCK REPAIR AREA, CONTRACTOR TO DISCONNECT AND REMOVE EXISTING GAS FIRED UNIT HEATERS FLUE AND PROVIDE NEW FLUE VENT.
2. IN TRUCK STORAGE AND TRUCK REPAIR AREA, ALL EXHAUST FANS AND ASSOCIATED RISER DUCTWORK, DUCT ACCESSORIES, HANGERS AND SUPPORTS SHALL BE DISCONNECTED AND REMOVED AS SHOWN ON PLAN.
3. IN OFFICE AREA, ALL VAV BOXES AND ASSOCIATED DUCTWORK, DUCT ACCESSORIES, AIR OUTLETS, HANGERS AND SUPPORTS SHALL REMAIN AS EXISTING AS INDICATED ON FLOOR PLANS. VAV BOXES SHALL BE RE-BALANCE.
4. IN OFFICE AREA, ALL CABINET UNIT HEATERS (CUH) AND CABINET EXHAUST FANS (CEF) AND ASSOCIATED DUCTWORK, DUCT ACCESSORIES, AIR OUTLETS, HANGERS AND SUPPORTS SHALL SHALL REMAIN AS EXISTING AS INDICATED ON FLOOR PLANS.
5. ALL SUPPLY, EXHAUST, RETURN DIFFUSERS AND GRILLES SHALL REMAIN AS EXISTING AS INDICATED ON FLOOR PLANS.
6. IN OFFICE AREA, ALL HOT WATER UNIT HEATER AND PARAMETER FIN TUBE RADIATOR SHALL REMAIN.

SHEET KEYNOTES

1. DISCONNECT AND REMOVE CARBON MONOXIDE MONITORING SYSTEM IN ENTIRETY. DEMOLITION SCOPE INCLUDES BUT NOT LIMITED TO REMOVAL OF THE CO MONITORING PANEL, ALL INTER CONNECTED CO SENSING DEVICES, ALL ELECTRICAL/CONTROL CONDUITS AND WIRING WHETHER SPECIFICALLY SHOWN OR NOT.
2. DISCONNECT AND REMOVE EXISTING CONTROL SYSTEM SERVING MAKE UP AIR UNITS/ H&V UNITS IN ENTIRETY. REMOVE CONTROL PANEL, ALL INTER CONNECTED SENSORS, THERMOSTATS ETC., ALL ELECTRICAL/CONTROL CONDUITS AND WIRING WHETHER SPECIFICALLY SHOWN OR NOT.
3. DISCONNECT AND REMOVE EXISTING CONTROL PANEL SERVING ROOFTOP AC UNITS (TRANE PANEL) ALONG WITH INTERCONNECTED WIRING AND CONDUIT. HONEYWELL CONTROLS SERVING VAVS SHALL REMAIN.
4. DISCONNECT AND REMOVE EXISTING SMOKE CONTROL SYSTEM IN ENTIRETY. REMOVE CONTROL PANEL, ALL INTER CONNECTED DEVICES, ALL ELECTRICAL/CONTROL CONDUITS AND WIRING WHETHER SPECIFICALLY SHOWN OR NOT.
5. THE CONTRACTOR SHALL PROVIDE PROTECTION OF THE PERIMETER FINNED-TUBE RADIATOR ENCLOSURES, AT THE COMPLETION OF DEMOLITION, VACUUM-CLEAN THE INTERIOR OF THE ENCLOSURE.

Plotted: 9/27/2019 8:20:14 AM P:\NYC\MEP_ENPP\DDC33000\DRAWINGS\SHEETS\DMM-103.00_DDC33000.DWG - akhan

1 1ST FLOOR MECHANICAL DEMOLITION PART PLAN-DISTRICT 18
3/32"=1'-0"

KEY PLAN

SHEET NOTES

1. IN TRUCK STORAGE AND TRUCK REPAIR AREA, CONTRACTOR TO DISCONNECT AND REMOVE EXISTING GAS FIRED UNIT HEATERS FLUE AND PROVIDE NEW FLUE VENT.
2. IN TRUCK STORAGE AND TRUCK REPAIR AREA, ALL EXHAUST FANS AND ASSOCIATED DUCTWORK, DUCT ACCESSORIES, HANGERS AND SUPPORTS SHALL BE DISCONNECTED AND REMOVED AS SHOWN ON PLAN.
3. IN OFFICE AREA, ALL VAV BOXES AND ASSOCIATED DUCTWORK, DUCT ACCESSORIES, AIR OUTLETS, HANGERS AND SUPPORTS SHALL REMAIN AS EXISTING AS INDICATED ON FLOOR PLANS.VAV BOXES SHALL BE RE-BALANCE.
4. IN OFFICE AREA, ALL CABINET UNIT HEATERS (CUH) AND CABINET EXHAUST FANS (CEF) AND ASSOCIATED DUCTWORK, DUCT ACCESSORIES, AIR OUTLETS, HANGERS AND SUPPORTS SHALL SHALL REMAIN AS EXISTING AS INDICATED ON FLOOR PLANS.
5. ALL SUPPLY, EXHAUST, RETURN DIFFUSERS AND GRILLES SHALL REMAIN AS EXISTING AS INDICATED ON FLOOR PLANS.
6. IN OFFICE AREA, ALL HOT WATER UNIT HEATER AND PARAMETER FIN TUBE RADIATOR SHALL REMAIN.

SHEET KEYNOTES

1. DISCONNECT AND REMOVE CARBON MONOXIDE MONITORING SYSTEM IN ENTIRETY. DEMOLITION SCOPE INCLUDES BUT NOT LIMITED TO REMOVAL OF THE CO MONITORING PANEL, ALL INTER CONNECTED CO SENSING DEVICES, ALL ELECTRICAL/CONTROL CONDUITS AND WIRING WHETHER SPECIFICALLY SHOWN OR NOT.
2. DISCONNECT AND REMOVE EXISTING CONTROL SYSTEM SERVING MAKE UP AIR UNITS/ H&V UNITS IN ENTIRETY, REMOVE CONTROL PANEL, ALL INTER CONNECTED SENSORS, THERMOSTATS ETC., ALL ELECTRICAL/CONTROL CONDUITS AND WIRING WHETHER SPECIFICALLY SHOWN OR NOT.
3. DISCONNECT AND REMOVE EXISTING CONTROL PANEL SERVING ROOFTOP AC UNITS (TRANE PANEL) ALONG WITH INTERCONNECTED WIRING AND CONDUIT, HONEYWELL CONTROLS SERVING VAVS SHALL REMAIN.
4. DISCONNECT AND REMOVE EXISTING SMOKE CONTROL SYSTEM IN ENTIRETY. REMOVE CONTROL PANEL, ALL INTER CONNECTED DEVICES, ALL ELECTRICAL/CONTROL CONDUITS AND WIRING WHETHER SPECIFICALLY SHOWN OR NOT.
5. THE CONTRACTOR SHALL PROVIDE PROTECTION OF THE PERIMETER FINNED-TUBE RADIATOR ENCLOSURES. AT THE COMPLETION OF DEMOLITION, VACUUM-CLEAN THE INTERIOR OF THE ENCLOSURE.
6. CONTRACTOR SHALL INSPECT AND SEAL ALL OPEN DUCTWORK AFTER DEMOLITION.
7. SEAL AND PATCH EXISTING WALL AFTER REMOVAL OF DUCTWORK. COORDINATE WITH GENERAL CONTRACTOR

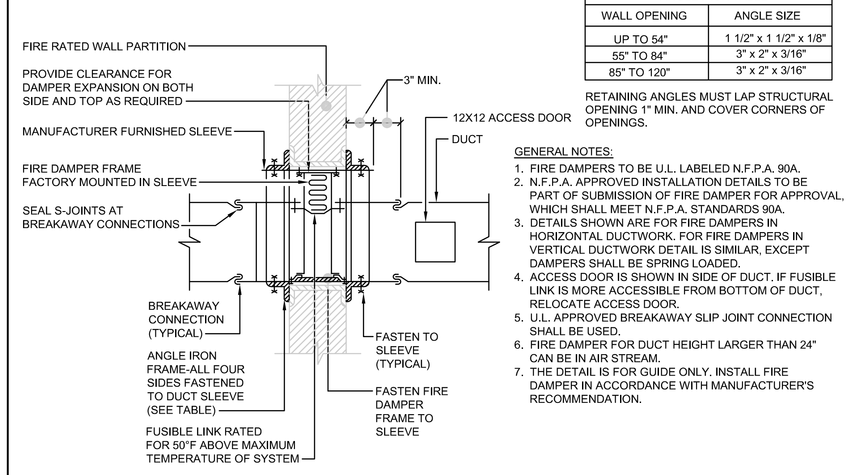
NOTE:
MINIMUM FLUE HEIGHT SHALL BE ABOVE ANY PORTION OF BUILDING STRUCTURES WITHIN 10'-0". PROVIDE GUY WIRES FOR SUPPORT IF HEIGHT EXCEEDS 3'-0".

9 GAS FIRED UNIT HEATER IN NEW STORAGE ROOM IN GARAGE 17

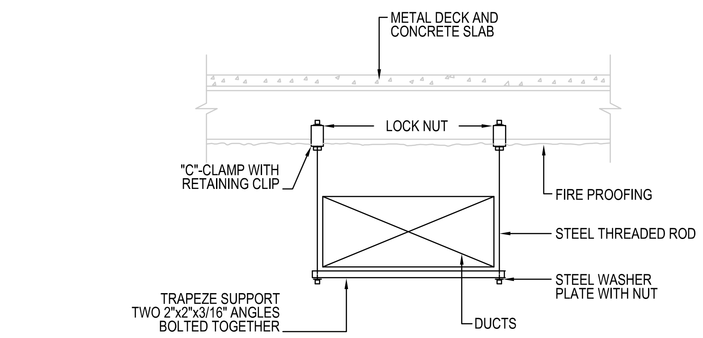


SCALE:

NOTES:
1. USE FOR SYMBOL, WHERE BRANCH DUCT AIR QUANTITY IS LESS THAN 1000 CFM.
2. NOT TO BE USED AS SUBSTITUTE FOR ELBOW.
3. BRANCH DUCT DEPTH SHALL BE A MINIMUM OF 2" LESS THAN MAIN DUCT.

6 RECTANGULAR DUCT ANGULAR TAP W/ VOLUMN DAMPER

SCALE: NONE

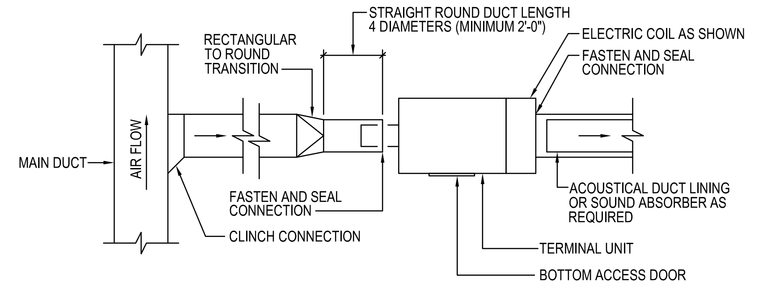


ANGLE IRON TABLE	
WALL OPENING	ANGLE SIZE
UP TO 54"	1 1/2" x 1 1/2" x 1/8"
55" TO 84"	3" x 2" x 3/16"
85" TO 120"	3" x 2" x 3/16"

RETAINING ANGLES MUST LAP STRUCTURAL OPENING 1" MIN. AND COVER CORNERS OF OPENINGS.

GENERAL NOTES:
1. FIRE DAMPERS TO BE U.L. LABELED N.F.P.A. 90A.
2. N.F.P.A. APPROVED INSTALLATION DETAILS TO BE PART OF SUBMISSION OF FIRE DAMPER FOR APPROVAL, WHICH SHALL MEET N.F.P.A. STANDARDS 90A.
3. DETAILS SHOWN ARE FOR FIRE DAMPERS IN HORIZONTAL DUCTWORK. FOR FIRE DAMPERS IN VERTICAL DUCTWORK DETAIL IS SIMILAR, EXCEPT DAMPERS SHALL BE SPRING LOADED.
4. ACCESS DOOR IS SHOWN IN SIDE OF DUCT. IF FUSIBLE LINK IS MORE ACCESSIBLE FROM BOTTOM OF DUCT, RELOCATE ACCESS DOOR.
5. U.L. APPROVED BREAKAWAY SLIP JOINT CONNECTION SHALL BE USED.
6. FIRE DAMPER FOR DUCT HEIGHT LARGER THAN 24" CAN BE IN AIR STREAM.
7. THE DETAIL IS FOR GUIDE ONLY. INSTALL FIRE DAMPER IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATION.

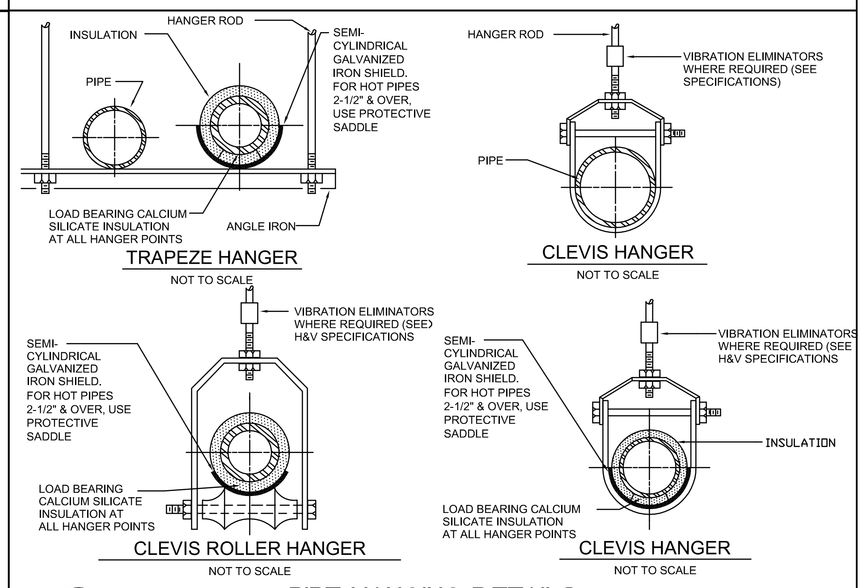
3 FIRE DAMPER



SCALE: NONE

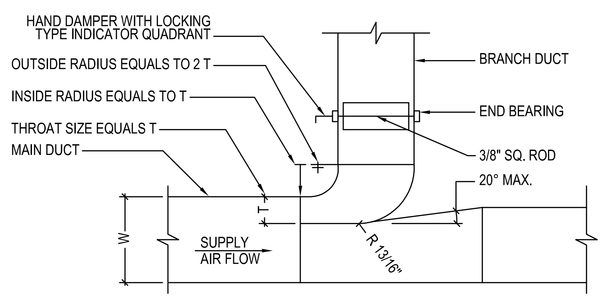
NOTES:
1. PROVIDE VIBRATION ISOLATION AS REQUIRED OR INDICATED ON DRAWINGS.
2. FOR SIZE OF STEEL THREADED RODS, REFER TO SMACNA HVAC DUCT CONSTRUCTION STANDARD. METAL AND FLEXIBLE.

8 DUCT SUPPORT FROM BEAMS



SCALE: NONE

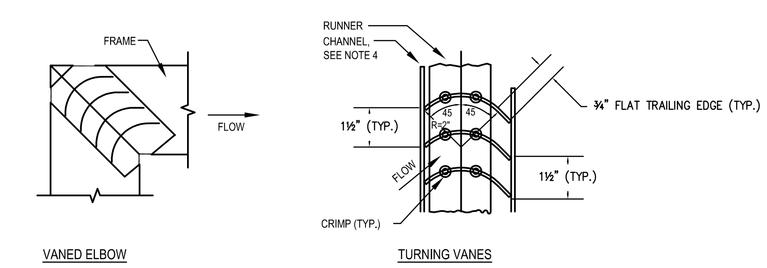
NOTES:
1. THE OPERATION OF VARIABLE VOLUME TERMINAL UNITS ARE AFFECTED BY EXCESSIVE TURBULENCE ON THE ENTERING SIDE OF EACH TERMINAL UNIT. THEREFORE, TERMINAL UNITS MUST NOT BE INSTALLED TOO CLOSE TO MAIN DUCTS, ELBOWS AND FITTINGS.
2. WHEN MINIMUM UPSTREAM STRAIGHT DUCT CONNECTION TO TERMINALS, AS INDICATED ABOVE, CANNOT BE MAINTAINED, PROVIDE ORIFICE PLATE, STRAIGHTENING VANES OR OTHER DEVICE AS RECOMMENDED BY THE MANUFACTURER AND SUBMIT TO ENGINEER FOR REVIEW PRIOR TO INSTALLATION.
3. MANUFACTURER OF TERMINAL UNIT SHALL PROVIDE CONTROLS ON LEFT OR RIGHT SIDE, AS REQUIRED BY FIELD CONDITIONS.
4. ARRANGE ACCESS TO PERMIT EASY FIELD BALANCE AND MAINTENANCE OF TERMINAL UNIT.



5 TERMINAL UNIT INSTALLATION (PLAN VIEW)

SCALE: NONE

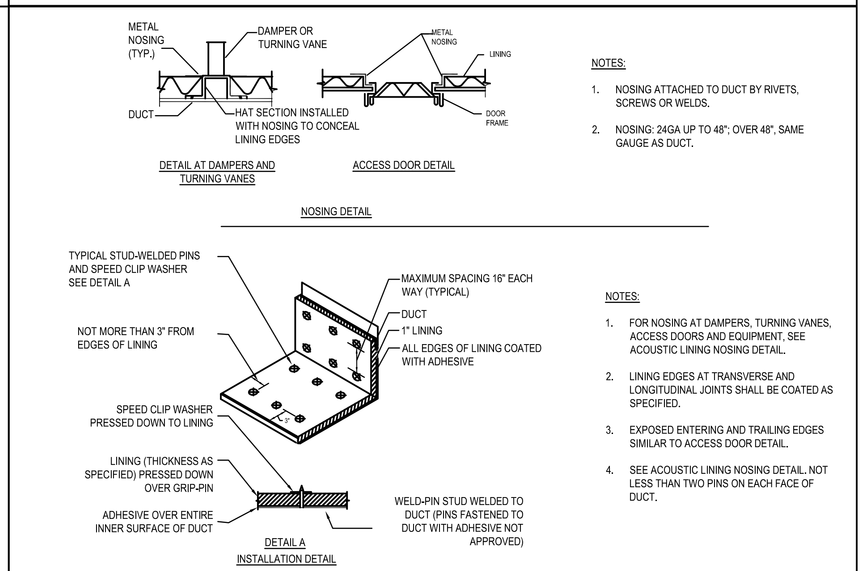
2 PIPE HANGING DETAILS



SCALE: NONE

NOTES:
1. FURNISH THIS TYPE CONNECTION WHERE NOTED AND WHEN SINGLE LINE DUCTWORK IS INDICATED AS THIS ⊥ FOR BRANCHES WITH MORE THAN 1000 CFM.
2. FURNISH THIS TYPE CONNECTION WITHOUT HAND DAMPERS FOR ALL HIGH PRESSURE DUCTWORK BRANCHES.
3. MUST BE USED WHEN W > 36".
4. MINIMUM T = 4".
5. UNLESS OTHERWISE NOTED THROAT SIZES SHALL BE PROPORTIONAL TO AIR QUANTITIES. (NOTE TO ENGINEER: SIZES SHOULD BE INDICATED ON DRAWINGS)

7 RECTANGULAR DUCT BRANCH W/ THROAT AND VOLUME DAMPER



SCALE: NONE

NOTES:
1. FOR HIGH VELOCITY APPLICATIONS PROVIDE 18 GAUGE CHANNEL AND TACK WELD VANE EDGES TO CHANNEL, TYPICAL BOTH ENDS.
2. FRAMES AND CHANNELS - BOLTED OR TACK WELDED TO ELBOW.
3. DUCT INLET AND OUTLET DIMENSIONS TO BE EQUAL.
4. MAXIMUM UNSUPPORTED VANE LENGTH 36".
5. VANES AND FRAMES - 24 GAUGE.

4 TURNING VANES

SCALE:

NOTES:
1. NOSING ATTACHED TO DUCT BY RIVETS, SCREWS OR WELDS.
2. NOSING: 24GA UP TO 48"; OVER 48", SAME GAUGE AS DUCT.

NOTES:
1. FOR NOSING AT DAMPERS, TURNING VANES, ACCESS DOORS AND EQUIPMENT, SEE ACOUSTIC LINING NOSING DETAIL.
2. LINING EDGES AT TRANSVERSE AND LONGITUDINAL JOINTS SHALL BE COATED AS SPECIFIED.
3. EXPOSED ENTERING AND TRAILING EDGES SIMILAR TO ACCESS DOOR DETAIL.
4. SEE ACOUSTIC LINING NOSING DETAIL. NOT LESS THAN TWO PINS ON EACH FACE OF DUCT.

1 ACOUSTIC LINING DETAIL

NOTES:

1. PROVIDE UNIT MOUNTED VFD FOR BOTH SUPPLY FANS AND RETURN FAN WITH INTEGRAL STARTER/ DISCONNECT SWITCH AND UNIT MOUNTED CONTROLS ENCLOSURE.
2. RTUS TO HAVE ECONOMIZER FUNCTION.
3. GAS BURNER TO HAVE 10:1 MODULAR HIGH GAS HEAT.
4. GAS TRAINS SHALL BE APPROVED TO FM, IRI, OR OTHER NYC CODE REQUIREMENTS.
5. PROVIDE HOT GAS BYPASS.
6. UL LISTED AND AUDIBLE ALARM FOR FLAME FAILURE.
7. CLOGGED FILTER INDICATOR.
8. PROVIDE MINIMUM 30" CURB. REFER TO UNIT SPECIFICATIONS FOR CURB DETAIL.

NOTES:

1. MAKE-UP AIR UNIT SHALL BE BASED ON 100% OUTDOOR AIRFLOW ARRANGEMENT.
2. PROVIDE DOUBLE WALL INSULATED METAL CABINET CONSTRUCTION WITH REMOVABLE ACCESS PANELS AND BIRDSCREEN WEATHERHOOD.
3. PROVIDE LOW-LEAKAGE MOTORIZED INLET DAMPER.
4. PROVIDE UNIT-MOUNTED DISCONNECT SWITCH.
5. PROVIDE UNIT-MOUNTED NEMA 3R CONTROL PANEL.
6. PROVIDE FACTORY FURNISHED GAS PRESSURE REGULATOR.
7. PROVIDE THE FOLLOWING ELECTRICAL ACCESSORIES: FREEZE PROTECTION, DIRTY FILTER SENSOR, INLET DAMPER END SWITCH AND EXTERNAL COOLING LOCKOUT RELAY.
8. PROVIDE 36" TALL FACTORY-FURNISHED GALVANIZED STEEL ROOF CURB WITH INSULATION. CONTRACTOR SHALL COORDINATE INSTALLATION WITH ROOFING CONTRACTOR.
9. PROVIDE UNIT MOUNTED VFD.

NOTES:

1. FANS SELECTED SPECIFICALLY BASED ON SOUND AND UPWARD MOBILITY OF 25% IN CLASS, FAN RPM, AND MOTOR HP.
2. ALL FANS SHALL BE UL/CUL-705 LISTED "POWER VENTILATORS."
3. ALL MOTORS 1 HP AND LARGER SHALL BE NEMA PREMIUM EFFICIENCY - MEETS NEMA TABLE 12-12.
4. ALL SINGLE PHASE MOTORS TO INCLUDE THERMAL OVERLOAD.
5. MOTOR VOLTAGE SHALL BE COORDINATED BY CONTRACTOR.
6. MOTORS SHALL BE PROVIDED WITH DISCONNECT SWITCHES AND APPROPRIATE ENCLOSURE BASED ON LOCATION AND APPLICATION.
7. ORIENTATION INCLUDING ARRANGEMENT, ROTATION AND/OR DISCHARGE SHALL BE COORDINATED BY CONTRACTOR.
8. ALL VFD RATED MOTORS SHALL BE PROVIDED WITH CLASS F INSULATION AND AN ORION SHAFT GROUNDING BRUSH WHICH INCLUDES A CONTINUOUS FORCE SPRING AND BRUSH MATERIAL CONSISTING OF A CARBON GRAPHITE AND INDUSTRIAL SILVER COMPOUND POSITIONED IN SUCH A MANNER THAT THE BRUSH IS ALWAYS IN CONTACT WITH THE SHAFT CONTINUOUSLY TO MAXIMIZE EFFICIENCY.
9. ALL ROOFTOP FANS SHALL BE PROVIDED WITH CLASS I LEAKAGE MOTORIZED DAMPERS & END SWITCH AS PER 2016 NYC ENERGY CONSERVATION CODE.

AIR TERMINAL UNIT SCHEDULE

DESIGNATION	TYPE	LOCATION	INLET SIZE (IN)	CFM		MINIMUM ΔSP (IN. WG.)	MANUFACTURER & MODEL NO.	REMARKS
				MIN. UNIT CAPACITY	MAXIMUM			
CAV-17-1	CAV	2ND FLOOR	10	-	800	0.1	TITUS DESV	
CAV-17-2	CAV	2ND FLOOR	16	-	1800	0.1	TITUS DESV	
CAV-17-3	CAV	2ND FLOOR	8	-	600	0.1	TITUS DESV	
CAV-18-1	CAV	2ND FLOOR	14	-	1000	0.1	TITUS DESV	
CAV-18-2	CAV	2ND FLOOR	16	-	2250	0.1	TITUS DESV	
CAV-18-3	CAV	2ND FLOOR	14	-	1650	0.1	TITUS DESV	

NOTES:

1. MINIMUM INLET DUCT SIZE INDICATED SHALL BE BROUGTH TO WITHIN THE LENGTH OF 3 DIAMETERS OF THE BOX'S INLET CONNECTION SIZE.
2. PROVIDE DDC CONTROLLER. DDC CONTROLLER SHALL BE FURNISHED BY BMS CONTRACTOR AND INSTALLED BY MANUFACTURER.
3. PROVIDE TRANSFORMER.

GAS FIRED UNIT HEATER SCHEDULE

DESIGNATION	SERVICE	LOCATION	TYPE	MOUNTING HEIGHT (FT.)	THROW (FT)	FAN DATA			MOTOR DATA		GAS DATA			AIR TEMP		OPERATING WEIGHT (LB.)	BASIS OF DESIGN MANUFACTURER	MODEL	REMARKS
						CFM	RPM	FAN TYPE	HP	V/PH/HZ	INPUT CAPACITY (MBH)	OUTPUT CAPACITY (MBH)	EFF(%)	EDB (°F)	LDB (°F)				
UH-1	DISTRICT 17 TRUCK STORAGE	STROAGE ROOM	GAS-FIRED	10	25	505	1500	PROPELLER	1/15	115/1/60	30	24	80	55	99	55	MODINE	HD-30	

NOTES: PROVIDE REMOTE THERMOSTAT.

SPLIT AIR CONDITIONING UNI - HEAT PUMP

UNIT NO.	SERVICE	LOCATION	SEER	INPUT W	DX COIL				ELECTRICAL		WEIGHT (LBS)	MANUFACTURER	MODEL	NOTE
					TOTAL COOLING / HEATING (BTU/HR)		EAT (°F)		MCA	V/PH/HZ				
							SUMMER	WINTER						
AC-1	DISTRICT 17 TRUCK WASH	DISTRICT 17 TRUCK WASH	20	104	35,500	37,000	85	70	-	208/1/60	50	LG	ARNU363SVA4	1, 2
AC-2	DISTRICT 17 TRUCK WASH	DISTRICT 17 TRUCK WASH	20	104	35,500	37,000	85	70	-	208/1/60	50	LG	ARNU363SVA4	1, 2

NOTES:

1. PROVIDE FILTER MERV 8.
2. PROVIDE LOW AMBIENT CONTROL. PROVIDE COMPLIANCE WITH ENERGY STAR REQUIREMENT.

AIR COOLED CONDENSING UNIT - HEAT PUMP

UNIT NO.	SERVING	LOCATION	COOLING CAP. BTU/HR	HEATING CAP. BTU/HR	OUTDOOR AIR (SUM/WIN ,°F)	ELECTRICAL				WEIGHT (LBS)	EER	IEER	COP	MANUFACTURER	MODEL	NOTE
						MCA	MOCP	FAN MOTOR FLA	V/PH/HZ

TG	A	SUPPLY	SIDEWALL REGISTER	335	14 X 6	14 X 6			
TG	B	SUPPLY	SIDEWALL REGISTER	665	18 X 10	18 X 10			

NOTES:

1. SEE PLAN FOR CFM.
2. ALL DIFFUSERS SHALL BE PROVIDED WITH OPPOSED BLADE DAMPERS.
3. COORDINATE BORDER AND FINISH TYPE WITH ARCHITECT.
4. PROVIDE CORD OPERATED DAMPER WHERE DIFFUSERS ARE LOCATED IN INACCESSIBLE CEILING.
5. NECK SIZE FOR NON 4-WAY DIFFUSERS SHALL BE DETERMINED BY ADJUSTING TOTAL CFM TO EQUIVALENT 4-WAY. EXAMPLE: 150 CFM 2-WAY SHALL BE SIZED BASED ON 300 CFM 4-WAY. PROVIDE DEFLECTORS AS REQUIRED.

NOTE:
FOR POINT ABBREVIATIONS, REFER TO INDIVIDUAL SYSTEM'S POINT LIST.

NOT ALL SYMBOLS SHOWN ARE APPLICABLE. SOME SYMBOLS ARE SHOWN TO FACILITATE REVISIONS AND CHANGES IN THE SCOPE OF WORK.

GENERAL NOTES

1. THE DSNY 17/18 SANITATION GARAGES, BROOKLYN, NEW YORK, SHALL REQUIRE A NEW INSTALLATION OF A BUILDING MANAGEMENT SYSTEM (BMS) FOR MONITORING AND CONTROL OF MECHANICAL EQUIPMENT. SOFTWARE AND GRAPHICS WILL BE ADDED TO THE NEW BMS SYSTEM UNDER THIS CONTRACT.
2. ADDITIONAL SOFTWARE PROGRAMMING SHALL BE PROVIDED UNDER THIS CONTRACT TO IMPLEMENT ADDITIONAL ENERGY ROUTINES. WORK SHALL INCLUDE HVAC CONTROL, ALARM MONITORING, POINT TRENDING, POINT REPORTING AND MAINTENANCE MANAGEMENT FUNCTIONS. COORDINATE WITH ALL SITE LOW VOLTAGE SYSTEMS AS SPECIFIED.
3. THE BMS CONTRACTOR NETWORK FOR THE FACILITY WORK SHALL INCLUDE HVAC CONTROL, ENERGY MANAGEMENT, ALARM MONITORING, POINT TRENDING, POINT REPORTING AND MAINTENANCE MANAGEMENT FUNCTIONS. COORDINATE WITH ALL SITE LOW VOLTAGE SYSTEMS AS SPECIFIED.
4. BMS CONTRACTOR SHALL PROVIDE A STANDALONE ETHERNET NETWORK.
5. BMS CONTRACTOR SHALL PROVIDE ALL LOW VOLTAGE WIRING ASSOCIATED WITH FUEL OIL PUMPS, FUEL OIL DAY TANKS, FUEL OIL TANKS, ETC.
6. AFTER INSTALLING EQUIPMENT, THE BMS CONTRACTOR SHALL DEMONSTRATE THAT THE SYSTEM IS 100% OPERATIONAL.
7. PROVIDE CONTROL POWER TRANSFORMERS/POWER SUPPLIES FOR ALL NEW EQUIPMENT.
8. REFER TO MECHANICAL PLANS FOR QUANTITIES AND LOCATIONS OF EQUIPMENT, DUCTWORK AND PIPING.
9. CONTROL WIRING IS TO BE ENCLOSED IN CONDUIT.
10. INTERFACE/INTEGRATE WITH THIRD-PARTY EQUIPMENT AS DEFINED AND SPECIFIED.
11. MAXIMUM ACCEPTABLE RESPONSE TIME FROM ANY ALARM OCCURRENCE (AT THE POINT OF ORIGIN) TO THE POINT OF ANNUNCIATION SHALL NOT EXCEED 5 SECONDS FOR NETWORK CONNECTED USER INTERFACES.
12. PROVIDE 120v, 15 AMP CIRCUIT TO EACH NEW BMS PANEL.
13. WHEN EQUIPMENT FAILURE COINCIDES WITH A POWER FAILURE, INDIVIDUAL EQUIPMENT FAILURE ALARMS SHALL NOT BE GENERATED.
14. THE BMS CONTRACTOR SHALL PROVIDE A COMPLETE SYSTEM CONSISTING OF DIRECT DIGITAL CONTROL PANELS (DDCPS), FIELD I/O DEVICES, POWER SUPPLIES AND SUPPORTIVE SOFTWARE, TO MEET THE WRITTEN SEQUENCES OF OPERATIONS, AS WRITTEN IN CONTRACT SPECIFICATIONS.
15. THE SYSTEM SHALL SUPPORT COMMUNICATIONS TO DDCP'S, AND PROVIDE OPERATOR INTERACTION, DATA CONSOLIDATION AND GLOBAL CONTROL FUNCTIONS VIA A LOCAL AREA NETWORK (LAN) OR WIDE AREA NETWORK (WAN) COMMUNICATION LINK BACKBONE.
16. PROVIDE ALL MISCELLANEOUS LOW VOLTAGE FIELD DEVICE MOUNTING AND INTERCONNECTING WIRING FOR ALL BUILDING MECHANICAL SYSTEMS INCLUDED IN THIS PROJECT.
17. LOW VOLTAGE CONTROLS WIRING IS NOT TO BE RUN IN ANY CONDUIT WITH 120V OR HIGHER WIRING.
18. PROVIDE AND INSTALL PROPER EARTH GROUND ON ALL BMS EQUIPMENT TO PREVENT THE BUILD-UP OF ELECTROMAGNETIC VOLTAGE POTENTIAL. ALL BMS EQUIPMENT SHALL BE EMI IMMUNE.
19. REFER TO SPECIFICATION 230900 "INSTRUMENTATION AND CONTROL FOR HVAC" FOR ADDITIONAL REQUIREMENTS FOR THIS PROJECT.
20. REFER TO MECHANICAL AND/OR ELECTRICAL PLANS FOR QUANTITIES AND LOCATION OF EQUIPMENT.

ROOF TOP UNIT (RTU) - SEQUENCE OF OPERATIONS:

A. GENERAL: REFER TO MEP DOCUMENTS FOR EQUIPMENT SCHEDULES, LOCATIONS AND ASSOCIATED FAN INTERLOCKING.

1. SYSTEM SHALL BE STARTED AND STOPPED FROM THE BMS SYSTEM.
2. SYSTEM OPERATES AS A VARIABLE AIR VOLUME UNIT
3. PRESSURE SWITCH MONITORING OF FILTER BANK.
4. OUTSIDE AIR DAMPER, MODULATING TYPE, NORMALLY CLOSED
5. RETURN AIR DAMPER, MODULATING TYPE, NORMALLY OPEN
6. EXHAUST AIR DAMPER, MODULATING TYPE, NORMALLY CLOSED
7. DIRECT EXPANSION COOLING COIL, NORMALLY OFF
8. GAS FIRED HEATING COIL, NORMALLY CLOSED
9. SUPPLY FAN VFD, NORMALLY OFF
10. EXHAUST FAN VFD, NORMALLY OFF
11. ENTHALPY WHEEL, NORMALLY OFF.
12. TIME-OF-DAY SCHEDULE: HVAC SYSTEMS SHALL OPERATE AUTOMATICALLY BY A TIME SIGNAL FROM THE BMS. OCCUPIED/UNOCCUPIED ADJUSTABLE TIME DURATIONS SHALL BE SET AT THE BMS WORKSTATION BUT BE RESIDENT IN THE LOCAL DDCP FOR OPERATION
13. FAS SHUTDOWN SIGNAL, DRY CONTACT

B. SYSTEM OFF: (UNOCCUPIED CYCLE)

1. WHEN THE SYSTEM IS OFF, ALL ASSOCIATED VALVES, DAMPERS, AND CONTROLLED DEVICES SHALL BE IN THEIR NORMAL POSITION AS STATED ABOVE.
2. UNOCCUPIED HEATING MODE: DURING THE UNOCCUPIED MODE OR PRIOR TO RTU START-UP IF THE SPACE TEMPERATURE DROPS BELOW 60 DEG F (ADJUSTABLE) THE UNOCCUPIED HEATING MODE SHALL BE ENABLED. THE SUPPLY FAN VFD SHALL START AND RAMP TO MAXIMUM SPEED WITH THE OUTSIDE AIR DAMPER CLOSED AND THE RETURN AIR DAMPER OPEN. THE GAS FIRED HEATING COIL SHALL MODULATE TO MAINTAIN SUPPLY AIR TEMPERATURE AT A SETPOINT OF 90 DEG F (ADJUSTABLE). WHEN THE SPACE TEMPERATURE RISES TO 65 DEG F (ADJUSTABLE) THE GAS FIRED HEATER SHALL SHUT DOWN AND THE SUPPLY FAN SHALL STOP. THE OUTSIDE AIR DAMPER SHALL CLOSE, AND THE RETURN AIR DAMPER SHALL OPEN.
3. UNOCCUPIED COOLING MODE: DURING THE UNOCCUPIED MODE OR PRIOR TO RTU START-UP IF THE SPACE TEMPERATURE RISES ABOVE 85 DEG F (ADJUSTABLE) THE UNOCCUPIED COOLING MODE SHALL BE ENABLED. THE SUPPLY FAN VFD SHALL START AND RAMP UP TO MAXIMUM SPEED WITH THE OUTSIDE AIR DAMPER CLOSED AND THE RETURN AIR DAMPER OPEN. THE UNIT SHALL MAINTAIN SUPPLY AIR TEMPERATURE AT A SETPOINT OF 55 DEG F (ADJUSTABLE). IF THE OUTSIDE AIR ENTHALPY IS NOT SUITABLE FOR FREE COOLING (ECONOMIZER) THE 1ST AND 2ND STAGE DX COOLING SHALL OPERATE. IF THE OUTSIDE AIR ENTHALPY IS SUITABLE FOR FREE COOLING (ECONOMIZER), THEN THE OUTSIDE AIR AND RETURN AIR DAMPERS SHALL MODULATE (IN OPPOSITE DIRECTIONS) TO MAINTAIN THE SUPPLY AIR TEMPERATURE. ON AN ADDITIONAL CALL FOR COOLING WITH THE OUTSIDE AIR DAMPER OPEN 100% AND THE RETURN AIR DAMPER CLOSED, THE 1ST AND 2ND STAGE DX COOLING SHALL OPERATE. WHEN THE SPACE TEMPERATURE DROPS TO 80 DEG F (ADJUSTABLE) THE 1ST AND 2ND STAGE DX SHALL SHUTDOWN AND THE SUPPLY FAN SHALL STOP. THE OUTSIDE AIR DAMPER SHALL CLOSE, AND THE RETURN AIR DAMPER SHALL OPEN.

C. SYSTEM START-UP:

1. RTU SHALL BE STARTED-STOPPED AUTOMATICALLY BASED ON A TIME OF DAY SCHEDULE, OPTIMAL START PROGRAM, OR VIA A MANUAL COMMAND FROM THE BUILDING AUTOMATION SYSTEM (BAS). THE OPTIMAL START PROGRAM SHALL ENABLE RTU TO START BEFORE SCHEDULED OCCUPANCY, AS LATE AS POSSIBLE WHILE ENSURING THAT THE SPACE IS AT A SATISFACTORY TEMPERATURE WHEN OCCUPANCY STARTS. THE OPTIMAL START PROGRAM SHALL USE THE SUPPLY AIR TEMPERATURE SETPOINTS FROM THE UNOCCUPIED MODE.
2. THE OUTSIDE AND EXHAUST AIR DAMPERS SHALL OPEN. THE SUPPLY AIR FAN SHALL START AND RAMP UP TO THE TEMPERATURE CONTROL SETTING AS DESCRIBED BELOW AFTER THE OUTSIDE AIR DAMPER HAS OPENED SUFFICIENTLY. THE EXHAUST AIR DAMPER SHALL OPEN TO THE 100% OPEN POSITION AND THE EXHAUST AIR FAN SHALL START AND RAMP UP TO ITS APPROPRIATE SPEED AS DESCRIBED BELOW.
3. ON START UP THE SYSTEM SHALL BE INDEXED TO THE OCCUPIED TEMPERATURE CONTROL MODE.

D. OCCUPIED TEMPERATURE AND ENTHALPY WHEEL CONTROL:

1. SUPPLY AIR TEMPERATURE RESET: THE SUPPLY AIR TEMPERATURE SETPOINT SHALL BE RESET, FROM AN INITIAL SETPOINT OF 55 DEG F (ADJUSTABLE), UP OR DOWN TO MAINTAIN THE SPACE TEMPERATURE AT DESIGN SETPOINT (70 DEG F HEATING SETPOINT, 74 DEG F COOLING SETPOINT, ADJUSTABLE), TO NO MORE THAN 75 DEG F (ADJUSTABLE), NO LESS THAN 50 DEG F (ADJUSTABLE), AND AT A RATE NOT TO EXCEED 0.1 DEG F/MINUTE (ADJUSTABLE).
2. COOLING MODE: ON A CALL FOR COOLING, IF ECONOMIZER IS NOT SUITABLE, THE FIRST STAGE OF DX COOLING SHALL CYCLE TO MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT (ADJUSTABLE) AND THE SUPPLY FAN VFD SHALL MODULATE TO MAINTAIN THE SUPPLY AIR STATIC PRESSURE SETPOINT, ENSURING MINIMUM FLOW AS DETERMINED BY THE REQUIREMENTS OF THE DX SYSTEM. IF THE FIRST STAGE OF DX COOLING CANNOT MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT, THE 1ST AND 2ND DX COOLING STAGES SHALL CYCLE IN SEQUENCE TO MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT. THE GAS FIRED HEATING COIL SHALL BE OFF DURING THE COOLING MODE. THE REVERSE SEQUENCE SHALL OCCUR WHEN THE SPACE TEMPERATURE IS WITHIN THE COMFORT BAND. SPACE TEMPERATURE IN THE ZONE SHALL BE MAINTAINED AT THE COOLING (SUMMER) SETPOINT.
3. HEATING MODE: ON A CALL FOR HEATING THE SUPPLY FAN VFD SHALL MODULATE TO MAINTAIN THE SUPPLY AIR STATIC PRESSURE SETPOINT, ENSURING MINIMUM FLOW AS DETERMINED BY THE REQUIREMENTS OF THE GAS FIRED HEATING SYSTEM, AND THE GAS FIRED HEATING COIL SHALL BE MODULATED TO MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT. THE DX COOLING SHALL BE OFF DURING THE HEATING MODE. THE REVERSE SEQUENCE SHALL OCCUR WHEN THE SPACE TEMPERATURE IS WITHIN THE COMFORT BAND. SPACE TEMPERATURE IN THE ZONE SHALL BE MAINTAINED AT THE HEATING (WINTER) SETPOINT.
4. ENTHALPY WHEEL WINTER MODE: WINTER MODE SHALL BE ENABLED WHEN THE OUTSIDE AIR ENTHALPY IS FURTHER THAN THE ENTHALPY WHEEL WINTER ENABLE MODE SETPOINT (0.5 BTU/LB., ADJUSTABLE) AND LESS THAN THE ECONOMIZER MODE ENABLE SETPOINT (2.0 BTU/LB., ADJUSTABLE) BELOW RETURN AIR ENTHALPY, AND SHALL BE DISABLED WHEN THE OUTSIDE AIR ENTHALPY IS LESS THAN THE ENTHALPY WHEEL WINTER ENABLE MODE SETPOINT OR FURTHER THAN ECONOMIZER MODE ENABLE SETPOINT BELOW RETURN AIR ENTHALPY FOR AT LEAST 5 CONTINUOUS MINUTES (ADJUSTABLE). THE ENTHALPY WHEEL SHALL BE ENABLED AND THE WHEEL SPEED SHALL BE MODULATED TO MAINTAIN THE WHEEL LEAVING AIR TEMPERATURE AT SETPOINT (ADJUSTABLE). WHEEL LEAVING AIR TEMPERATURE SETPOINT SHALL BE RESET BASED ON A DIFFERENTIAL FROM THE OUTSIDE AIR TEMPERATURE (5 DEG F INITIAL, ADJUSTABLE) TO A MAXIMUM OF THE EFFECTIVE SUPPLY AIR TEMPERATURE SETPOINT. THE OUTSIDE AIR DAMPER SHALL BE INDEXED TO THE 100% OPEN POSITION.
5. ENTHALPY WHEEL SUMMER MODE: SUMMER MODE SHALL BE ENABLED WHEN THE OUTSIDE AIR ENTHALPY IS MORE THAN THE ENTHALPY WHEEL SUMMER MODE ENABLE SETPOINT (0.5 BTU/LB, ADJUSTABLE) ABOVE THE RETURN AIR ENTHALPY, AND SHALL BE DISABLED WHEN THE OUTSIDE AIR ENTHALPY IS LESS THAN THE ENTHALPY WHEEL SUMMER MODE ENABLE SETPOINT ABOVE THE RETURN AIR ENTHALPY FOR AT LEAST 5 CONTINUOUS MINUTES (ADJUSTABLE). THE ENTHALPY WHEEL SHALL BE ENABLED AND THE WHEEL SHALL ROTATE AT MAXIMUM SPEED. THE OUTSIDE AIR DAMPER SHALL BE INDEXED TO THE 100% OPEN POSITION.
6. ENTHALPY WHEEL PURGE MODE: FOR EVERY HOUR THE ENTHALPY WHEEL IS OFF, THE WHEEL SHALL START AND OPERATE FOR ONE MINUTE TO PURGE THE WHEEL.
7. HUMIDITY/FROST CONTROL: WHEN THE OUTSIDE AIR TEMPERATURE IS ABOVE OR EQUAL TO THE FROST THRESHOLD SETPOINT (37 DEG F, ADJUSTABLE) AND THE ENTHALPY WHEEL IS ENABLED, THE EXHAUST-SIDE BYPASS DAMPER SHALL MODULATE TO MAINTAIN SUPPLY AIR HUMIDITY AT SETPOINT (55%, ADJUSTABLE). IN ALL OTHER CONDITIONS, IF THE ENTHALPY WHEEL IS ENABLED, THE EXHAUST-SIDE BYPASS DAMPER SHALL REMAIN CLOSED. WHEN THE OUTSIDE AIR TEMPERATURE IS BELOW THE FROST THRESHOLD SETPOINT AND THE ENTHALPY WHEEL IS ENABLED, THE ENTHALPY WHEEL SHALL OPERATE IN FROST CONTROL MODE. IN THIS MODE, THE ENTHALPY WHEEL SPEED SHALL BE LOCKED AT ITS LAST VALID VALUE AND THE SUPPLY-SIDE BYPASS DAMPER SHALL MODULATE TO MAINTAIN THE WHEEL LEAVING AIR TEMPERATURE AT SETPOINT. IF THE SYSTEM STARTS UP IN FROST CONTROL MODE, THE ENTHALPY WHEEL SPEED SHALL BE SET TO 60% (ADJUSTABLE). DURING THIS MODE, THE SETPOINT DIFFERENTIAL SHALL BE TEMPORARILY OVERRIDDEN TO 2 DEG F. IN ALL OTHER CONDITIONS, IF ENTHALPY WHEEL IS ENABLED, THE SUPPLY-SIDE BYPASS DAMPER SHALL REMAIN CLOSED. THE OUTSIDE AIR DAMPER SHALL BE INDEXED TO THE 100% OPEN POSITION.

E. ECONOMIZER CONTROL:

1. ECONOMIZER CONTROL MODE: (ENTHALPY WHEEL NOT OPERATIONAL, COOLING MODE ENABLED) IF THE OUTSIDE AIR ENTHALPY IS FURTHER THAN THE ECONOMIZER MODE ENABLES SETPOINT (2.0 BTU/LB., ADJUSTABLE) BELOW THE RETURN AIR ENTHALPY AND THE ENTHALPY WHEEL IS DISABLED, OR IF THE DIFFERENCE BETWEEN OUTSIDE AIR ENTHALPY AND RETURN AIR ENTHALPY IS BETWEEN THE ENTHALPY WHEEL SUMMER AND WINTER ENABLE SETPOINTS, THE ECONOMIZER MODE SHALL BE ENABLED. OUTSIDE AND RETURN AIR DAMPER SHALL MODULATE (OPPOSITE DIRECTIONS) TO MAINTAIN SUPPLY AIR TEMPERATURE AND THE SUPPLY FAN VFD SHALL MODULATE TO MAINTAIN THE SUPPLY AIR FLOW AT MINIMUM SETPOINT. IF THE OUTSIDE AIR DAMPER IS FULLY OPEN AND THE SYSTEM CANNOT MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT, THE SUPPLY FAN VFD SHALL BE MODULATED FROM THE MINIMUM FLOW SETPOINT TO THE MAXIMUM FLOW SETPOINT TO MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT. ON A FURTHER CALL FOR COOLING, IF THE SUPPLY FAN VFD IS MAINTAINING THE FLOW AT THE MAXIMUM FLOW SETPOINT AND THE SYSTEM CANNOT MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT, THE SUPPLY FAN VFD SHALL CONTINUE TO MAINTAIN FLOW AT THE MAXIMUM FLOW SETPOINT AND THE 1ST STAGE OF DX COOLING SHALL CYCLE TO MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT. IF THE OUTSIDE AIR DAMPER AND THE 1ST STAGE OF DX COOLING CANNOT MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT WHILE THE SUPPLY FAN IS MAINTAINING FLOW AT THE MAXIMUM FLOW SETPOINT, THE 2ND STAGE OF DX COOLING SHALL BE ENABLED, AND THE 1ST AND 2ND DX COOLING STAGES SHALL CYCLE IN SEQUENCE TO MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT. WHEN THE OUTSIDE AIR ENTHALPY INCREASES TO LESS THAN THE ECONOMIZER MODE ENABLE SETPOINT BELOW THE RETURN AIR ENTHALPY, OR IF THE DIFFERENCE BETWEEN OUTSIDE AIR ENTHALPY AND RETURN AIR ENTHALPY EXCEEDS EITHER OF THE ENTHALPY WHEEL SUMMER AND WINTER ENABLE SETPOINTS, FOR AT LEAST 5 CONTINUOUS MINUTES (ADJUSTABLE), THE ECONOMIZER CONTROL MODE SHALL BE DISABLED, AND AHU SHALL BE INDEXED TO ENTHALPY WHEEL OPERATION AS DESCRIBED ABOVE.

F. DEHUMIDIFICATION MODE:

1. WHEN AT LEAST THE 1ST STAGE OF DX COOLING IS ENABLED, AND THE RETURN AIR RELATIVE HUMIDITY RISES ABOVE SETPOINT (65%, ADJUSTABLE), THE DEHUMIDIFICATION MODE SHALL BE ENABLED. IN THE DEHUMIDIFICATION MODE THE 1ST AND 2ND STAGE OF DX COOLING SHALL CYCLE IN SEQUENCE TO MAINTAIN SUPPLY AIR RELATIVE HUMIDITY AT SETPOINT (55%, ADJUSTABLE) AND THE GAS FIRED HEATING COIL SHALL MODULATE TO MAINTAIN THE SUPPLY AIR TEMPERATURE AT SETPOINT. THE DEHUMIDIFICATION MODE SHALL BE DISABLED WHEN THE RETURN AIR RELATIVE HUMIDITY DROPS BACK TO DESIGN CONDITIONS AND RTU SHALL REVERT TO THE COOLING MODE AS DESCRIBED ABOVE.

G. SUPPLY AND EXHAUST AIRFLOW TRACKING CONTROL:

1. THE SUPPLY AIR FAN SHALL BE CONTROLLED AS DESCRIBED ABOVE. THE EXHAUST FAN VFD SHALL MODULATE TO MAINTAIN A FLOW DIFFERENTIAL BETWEEN SUPPLY AND EXHAUST (500 CFM, ADJUSTABLE).

H. SAFETIES

1. DUCT MOUNTED SMOKE DETECTOR (SD) SHALL BE FURNISHED AND WIRED BY ELECTRICAL CONTRACTOR. DUCT DETECTOR TO BE INSTALLED BY MECHANICAL CONTRACT, WHENEVER SMOKE IS DETECTED IN THE COMMON SUPPLY OR RETURN DUCT, THE SUPPLY AND EXHAUST FANS SHALL STOP.
2. HIGH AND LOW PRESSURE SWITCHES (PSH, PSL) SHALL BE WIRED TO THE SUPPLY FAN AND RETURN FAN MOTOR STARTERS TO STOP THE FANS WHENEVER DUCT PRESSURE DROPS BELOW OR EXCEEDS THEIR SETTINGS (ADJUSTABLE). ALARMS SHALL ANNUNCIATE AT THE BMS CONTROL CONSOLE. MANUAL RESET SHALL BE PROVIDED FOR ALL HIGH AND LOW PRESSURE SWITCHES (PSH, PSL).
3. FAN LOCK-OUT: WHENEVER THE SYSTEM FAILS TO START BY THE BMS, THE BMS SHALL LOCK-OUT THE SYSTEM AND AN ALARM SHALL ANNUNCIATE AT THE BMS.
4. FLAME FAILURE: IF THE GAS FIRED HEATING FAILS, THE BMS SHALL LOCK-OUT THE SYSTEM AND AN ALARM SHALL ANNUNCIATE AT THE BMS

I. FILTER MONITORING:

1. THE FILTERS SHALL BE MONITORED BY A DIFFERENTIAL PRESSURE TRANSMITTER. ON INDICATION OF A "CHANGE FILTER" CONDITION A MAINTENANCE ALARM SHALL BE SENT TO THE BMS. THE BMS SHALL INDICATE ACTUAL DIFFERENTIAL PRESSURE AND ADJUSTABLE SETPOINT THAT IS DEFAULTED TO THE FILTER SCHEDULE SETTING.

J. SYSTEM RESTART:

1. AFTER A SYSTEM SHUTDOWN DUE TO A POWER OUTAGE, THE UNIT CONTROLS SHALL BE PLACED IN STAND-BY MODE BY THE BMS. UNIT SHALL REMAIN IN STAND-BY MODE WHEN NORMAL POWER IS RESTORED.
2. ALL ALARMS ASSOCIATED WITH THE UNIT SHALL BE SUPPRESSED DURING A LOSS OF POWER CONDITION.

K. ALARMS:

1. THE FOLLOWING TYPICAL ALARMS BUT NOT LIMITED TO BELOW SHALL BE ANNUNCIATED AT THE BMS SYSTEM:
   a. FREEZE ALARM VIA LOW TEMPERATURE DEVICE TSL.
   b. HIGH AND LOW STATIC PRESSURE ALARMS VIA PSH, PSL.
   c. DIRTY FILTER ALARM.
   d. ALL ANALOG, OFF NORMAL, HI/LOW LIMITS.
   e. SUPPLY FAN AND EXHAUST FAN FAILURE (COMMAND / STATUS MISMATCH, AFTER A 30 SECOND DELAY, ADJ.)
   f. FAN SHUTDOWN DUE TO ACTIVATION OF SMOKE DETECTORS (VIA FIRE ALARM SYSTEM).
   g. ENERGY WHEEL FAILURE (COMMAND / STATUS MISMATCH, AFTER A 30 SECOND DELAY, ADJ.)
   h. FLAME FAILURE

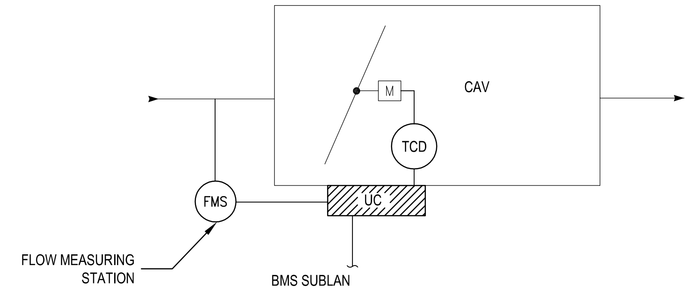
1 HEATING AND VENTILATION - CONTROL DETAIL
H&V-1 & H&V-2

HEATING AND VENTILATION WITH REHEAT COIL - SEQUENCE OF OPERATIONS:

A. GENERAL: REFER TO MEP DOCUMENTS FOR EQUIPMENT SCHEDULES, LOCATIONS AND ASSOCIATED FAN INTERLOCKING.
   1. SYSTEM SHALL BE STARTED AND STOPPED FROM THE BMS SYSTEM.
   2. SYSTEM OPERATES AS A CONSTANT VOLUME UNIT
   3. OUTSIDE AIR DAMPER, TWO POSITION, NORMALLY CLOSED
   4. PRESSURE SWITCH MONITORING OF PRE FILTER BANK.
   5. GAS FIRED HEATING COIL, NORMALLY OPEN
   6. TIME-OF-DAY SCHEDULE: HVAC SYSTEMS SHALL OPERATE AUTOMATICALLY BY A TIME SIGNAL FROM THE BMS. OCCUPIED/UNOCCUPIED ADJUSTABLE TIME DURATIONS SHALL BE SET AT THE BMS WORKSTATION BUT BE RESIDENT IN THE LOCAL DDCP FOR OPERATION
   7. FAS SHUTDOWN SIGNAL, DRY CONTACT
B. SYSTEM OFF: (UNOCCUPIED CYCLE)
   1. WHEN THE SYSTEM IS OFF ALL ASSOCIATED VALVES, DAMPERS, AND CONTROLLED DEVICES SHALL BE IN THEIR NORMAL POSITION AS STATED ABOVE.
C. SYSTEM ON: (OCCUPIED CYCLE)
   1. WHEN SYSTEM IS COMMANDED ON VIA BMS, THE OUTSIDE AIR DAMPER SHALL REMAIN OPEN AND THE SUPPLY FAN SHALL START.
   2. TEMPERATURE CONTROL:
      a) THE GAS FIRED HEAT SHALL MODULATE TO MAINTAIN THE DISCHARGE AIR TEMPERATURE AT SETPOINT.
      b) DISCHARGE AIR TEMPERATURE SETPOINT SHALL BE RESET AS REQUIRED, USING A LINEAR ALGORITHM, TO MAINTAIN A SPACE TEMPERATURE AT SETPOINT OF 59 DEG. F (ADJ.). TEMPERATURE LIMITS SHALL BE WITHIN 55 DEG. F (ADJ.) TO 74 DEG. F (ADJ.).
D. SAFETIES
   1. DUCT MOUNTED SMOKE DETECTOR (SD) SHALL BE FURNISHED AND WIRED BY ELECTRICAL CONTRACTOR. DUCT DETECTOR TO BE INSTALLED BY MECHANICAL CONTRACTOR, WHENEVER SMOKE IS DETECTED IN THE COMMON SUPPLY DUCT, THE SUPPLY FAN SHALL STOP.
   2. SUPPLY FAN SHALL BE HARDWIRE INTERLOCK TO OUTSIDE AIR DAMPER 3. FAN LOCK-OUT: WHENEVER THE SYSTEM FAILS TO START BY THE BMS, THE BMS SHALL LOCK-OUT THE SYSTEM. AN ALARM SHALL ANNUNCIATE AT THE BMS CONTROL CONSOLE.
   3. FLAME FAILURE: IF THE GAS FIRED HEATING FAILS, THE BMS SHALL LOCK-OUT THE SYSTEM AND AN ALARM SHALL ANNUNCIATE AT THE BMS
F. FILTER MONITORING:
   1. THE FILTERS SHALL BE MONITORED BY DIFFERENTIAL PRESSURE TRANSMITTERS. ON INDICATION OF A "CHANGE FILTER" CONDITION A MAINTENANCE ALARM SHALL BE SENT TO THE BMS. THE BMS SHALL INDICATE ACTUAL DIFFERENTIAL PRESSURE AND FIELD ADJUSTABLE SETPOINT THAT IS DEFAULTED TO THE FILTER SCHEDULE SETTING.
G. SYSTEM RESTART:
   1. AFTER A SYSTEM SHUTDOWN DUE TO A POWER OUTAGE, THE UNIT CONTROLS SHALL BE PLACED IN STAND-BY MODE BY THE BMS. UNIT SHALL REMAIN IN STAND-BY MODE WHEN NORMAL POWER IS RESTORED.
   2. ALL ALARMS ASSOCIATED WITH THE UNIT SHALL BE SUPPRESSED DURING A LOSS OF POWER CONDITION.
H. ALARMS:
   1. TYPICAL ALARMS, INCLUDING BUT NOT LIMITED TO THE FOLLOWING, SHALL BE ANNUNCIATED AT THE BMS SYSTEM:
      a) LOW TEMPERATURE ALARM VIA FREEZESTAT DEVICE TSL.
      b) HIGH AND LOW STATIC PRESSURE ALARMS VIA PSH, PSL.
      c) DIRTY FILTER ALARM.
      d) ALL ANALOG, OFF NORMAL, HI/LOW LIMITS.
      e) SUPPLY FAN FAILURE (COMMAND / STATUS MISMATCH, AFTER A 30 SECOND DELAY, ADJ.)
      f) FAN SHUTDOWN DUE TO ACTIVATION OF SMOKE DETECTORS (VIA FIRE ALARM SYSTEM).
      g) FLAME FAILURE



NOTES:
1. REFER TO MECHANICAL PLANS FOR QUANTITIES AND LOCATIONS OF AREAS SERVED.
2. ALL CONTROL WIRING SHALL BE PROVIDED BY BMS CONTRACTOR

EXHAUST FANS SEQUENCE OF OPERATIONS:
A. EXHAUST FANS ARE INTERLOCKED WITH THEIR RESPECTIVE ISOLATION DAMPERS, SUCH THAT WHEN A FAN IS COMMANDED ON THE DAMPER SHALL OPEN FIRST AND WHEN OPEN STATUS IS PROVEN THE FAN SHALL TURN ON.
B. EXHAUST FANS SHALL BE COMMANDED ON/OFF BY LOCAL HARDWIRED HOA SWITCH.

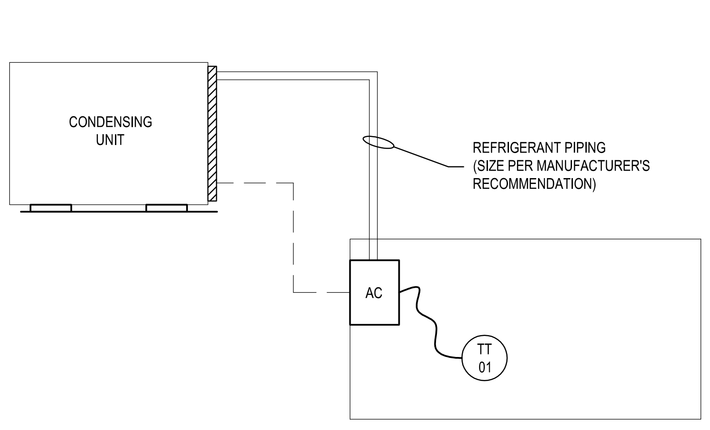
MAKE-UP AIR UNIT WITH PREHEAT COIL -
SEQUENCE OF OPERATIONS:

A. GENERAL: REFER TO MEP DOCUMENTS FOR EQUIPMENT SCHEDULES, LOCATIONS AND ASSOCIATED FAN INTERLOCKING.
   1. SYSTEM SHALL BE STARTED AND STOPPED FROM THE BMS SYSTEM.
   2. SYSTEM OPERATES AS A VARIABLE AIR VOLUME UNIT
   3. OUTSIDE AIR DAMPER, TWO POSITION, NORMALLY CLOSED
   4. EXHAUST AIR DAMPER, TWO POSITION, NORMALLY CLOSED
   5. PRESSURE SWITCH MONITORING OF PRE FILTER BANK.
   6. GAS FIRED HEATING COIL, NORMALLY OPEN
   7. DIRECT EXPANSION COOLING COIL, NORMALLY OFF
   8. SUPPLY FAN VFD, NORMALLY OFF.
   9. EXHAUST FAN VFD, NORMALLY OFF.
   10. TIME-OF-DAY SCHEDULE: HVAC SYSTEMS SHALL OPERATE AUTOMATICALLY BY A TIME SIGNAL FROM THE BMS. OCCUPIED/UNOCCUPIED ADJUSTABLE TIME DURATIONS SHALL BE SET AT THE BMS WORKSTATION BUT BE RESIDENT IN THE LOCAL DDCP FOR OPERATION.

B. SYSTEM OFF: (UNOCCUPIED CYCLE)
   1. WHEN THE SYSTEM IS OFF ALL ASSOCIATED VALVES, DAMPERS, AND CONTROLLED DEVICES SHALL BE IN THEIR NORMAL POSITION AS STATED ABOVE.



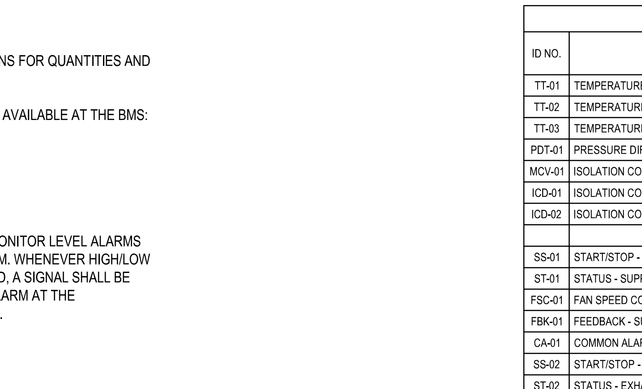
C. SYSTEM ON: (OCCUPIED CYCLE)
   1. WHEN SYSTEM IS COMMANDED ON VIA BMS, THE OUTSIDE AIR AND EXHAUST AIR DAMPERS SHALL REMAIN OPEN AND THE SUPPLY AND EXHAUST FANS SHALL START.

D. TEMPERATURE CONTROL:
   1. GAS FIRED HEAT SHALL BE MODULATED AS NECESSARY TO MAINTAIN THE DISCHARGE AIR TEMPERATURE AT DISCHARGE AIR TEMPERATURE SETPOINT.
   2. DISCHARGE AIR TEMPERATURE SETPOINT SHALL BE RESET AS REQUIRED, USING A LINEAR ALGORITHM, TO MAINTAIN A SPACE TEMPERATURE AT SETPOINT OF 59°F (ADJ.). TEMPERATURE LIMITS SHALL BE WITHIN 55°F (ADJ.) TO 74°F (ADJ.).

E. CO CONTROL VENTILATION:
   1. WHEN IN THE OCCUPIED MODE, THE FLOW MEASURING SENSOR SHALL RESET THE SUPPLY FAN SPEED BETWEEN THE MINIMUM AIRFLOW SETPOINT (0.75CFM/SQ.FT.) AND THE MAXIMUM AIRFLOW SETPOINT (6 AIR CHANGES PER HOUR) IN ORDER TO MAINTAIN THE HIGHEST MEASURED CO CONCENTRATION AT 10PPM.

F. FAN CONTROL
   1. WHEN IN THE OCCUPIED MODE, THE EXHAUST FAN SHALL MODULATE TO MAINTAIN A 3% (ADJ) SPEED DIFFERENTIAL BETWEEN SUPPLY FAN SPEED AND EXHAUST FAN SPEED

1 MAKE-UP AIR UNITS - CONTROL DETAIL
TYPICAL



NOTES:

GENERAL NOTES

1. UNLESS REQUESTED OTHERWISE, THE AMPACITY OF 600 VOLTS OR LESS CONDUCTORS SHALL BE BASED ON THE TERMINALS NOT TO EXCEED 60°C(140°F) FOR CONDUCTOR SIZE 12 THROUGH 1 AWG OR 75°C(167°F) FOR CONDUCTOR SIZE OVER 1AWG.
2. NO PIPING, DUCTS OR EQUIPMENT FOREIGN TO ELECTRICAL EQUIPMENT SHALL BE PERMITTED TO BE LOCATED WITHIN THE DEDICATED SPACE ABOVE THE ELECTRICAL EQUIPMENT.
3. FUSES SHALL BE PROVIDED WITH REJECTION TYPE FUSE HOLDERS.
4. GREEN INSULATED COPPER GROUNDING CONDUCTOR SHALL BE INSTALLED IN ALL BRANCH CIRCUITS AND FEEDERS.
5. ALL EXTERIOR ELECTRICAL EQUIPMENT SHALL BE WEATHERPROOF.
6. PROJECT SPECIFICATIONS ARE AN INTEGRAL PART OF THESE DRAWINGS.
7. A SINGLE RECEPTACLE INSTALLED ON AN INDIVIDUAL BRANCH CIRCUIT SHALL HAVE AN AMPERE RATING OF NOT LESS THAN THAT OF THE BRANCH CIRCUIT. INDICATE THE RECEPTACLES RATING.
8. MINIMUM SIZE OF CONDUIT SHALL BE 3/4". MINIMUM SIZE OF NEUTRAL CONDUCTOR SHALL BE #12 AWG, UON MINIMUM SIZE OF CONDUCTOR SHALL BE #12 AWG, UON MINIMUM CONDUCTOR SIZE AT 120 VOLTS AND OVER 100FT CIRCUIT LENGTH SHALL BE #10 AWG, UON MINIMUM CONDUCTOR SIZE AT 277 VOLTS AND OVER 200FT. CIRCUIT LENGTH SHALL BE #10AWG UON.

EXISTING TO REMAIN ———

EXISTING TO BE REMOVED - - - - - -

GENERAL CONSTRUCTION NOTES:

1. THE SCOPE OF WORK IS FOR THE RENOVATION & UPGRADE OF THE HVAC SYSTEM.
2. THE CONTRACTOR SHALL NOTE THAT BUILDING REMAINS OCCUPIED & ALL WORK SHALL BE CAREFULLY STAGE TO ENSURE THERE ARE NO DISTURBANCES TO NEITHER THE BUILDING OCCUPANTS OR THE BUILDING'S FUNCTION.
3. THE CONTRACTOR SHALL ABIDE BY THE NEW YORK CITY BUILDING RULES & ORDINANCES. CODE REQUIRED MEANS OF EGRESS MUST BE MAINTAINED.
4. THE CONTRACTOR SHALL MEET THE REQUIREMENT OF THE NYCEC 2011 WITH NYC AMENDMENTS FOR THE ELECTRICAL INSTALLATION.
5. CONTRACTOR SHALL BE FAMILIAR WITH THE PROCESS OF CONSTRUCTION & SHALL FOLLOW THE PROCEDURES DETAILED HEREIN. BEFORE UNDERGOING ANY WORK CONTRACTOR SHALL REVIEW THE CONSTRUCTION DOCUMENTS & HAVE SIGN OFF FROM THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
6. WORK SHALL NOT COMMENCE UNTIL THE CONTRACTOR FULLY UNDERSTANDS THE SCOPE OF WORK & ALL OF ITS POTENTIAL HAZARDS. CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. WORDING SUCH AS "RE-ROUTE/CAP" IMPLIES THAT THE CONTRACTOR SHALL TEMPORARILY UN-INSTALL A SYSTEM, RE-ROUTE OR CAP & RE-INSTALL THE SYSTEM TO ITS INITIAL WORKING ORDER AFTER THE WORK HAS BEEN COMPLETED.
8. THE CONSTRUCTION NOTES INDICATED WITH CODED NUMBERS PROVIDE INFORMATION TO THE CONTRACTOR AS TO SPECIAL CONDITIONS, EQUIPMENT OR SCOPE WHICH NEEDS TO BE PART OF THE CONTRACT, THE EXACT WORK PROCEDURE, STAGING & SCHEDULING OF WORK IS THE RESPONSIBILITY OF THE CONTRACTOR.
9. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL, MECHANICAL & FIRE ALARM DRAWINGS FOR ADDITIONAL INFORMATION.
10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER. ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED. CONTRACTOR SHALL NOTE 'GEF' & 'MU' MECHANICAL UNITS ARE ELECTRICALLY INTERLOCKED, CONTRACTOR SHALL COORDINATE WORK ON THESE UNITS SIMULTANEOUSLY.
11. CONTRACTOR SHALL COORDINATE THE REMOVAL OF THE MECHANICAL EQUIPMENT WITH THE FIRE ALARM CONTRACTOR.

DEMOLITION POWER PLAN NOTES:

1. ALL EXISTING POWER BRANCH CIRCUITS SERVING THE FACILITY No. 17 MECHANICAL UNITS ARE CONNECTED TO EXISTING 120/208Y DISTRIBUTION PANELS, MOTOR CONTROL CENTER, RECEPTACLE PANELS & SHOP PANELS ON THIS FACILITY. CONTRACTOR TO REFER TO CODED NOTES FOR ADDITIONAL INFORMATION.
2. EXISTING CIRCUITS ARE DESIGNATED BY THE NUMBER SHOWN ADJACENT TO EACH MOTOR, JUNCTION BOX OR ELECTRICAL DISCONNECT. CONTRACTOR SHALL NOTE SEVERAL EXISTING BRANCH CIRCUITS ARE RUN IN PARALLEL WITH IN JUNCTION BOXES, PULL BOXES & IN SOME CASES IN THE SAME RACEWAY.
3. CONTRACTOR TO SURVEY EXISTING CONDITIONS, IDENTIFY BRANCH CIRCUITING & COORDINATE REMOVAL OF POWER OF EQUIPMENT WITH OTHER TRADES. ONLY AFFECTED CIRCUITS ARE TO BE DEMO. UNDER NO CONDITION CAN THE CONTRACTOR ASSUME THE DEMOLITION OF ENTIRE RACEWAYS WHICH COULD POTENTIALLY AFFECT THE POWER & OPERATION OF OTHER EXISTING SYSTEMS ON THE SAME JUNCTION BOXES OR PULL BOXES.
4. CONTRACTOR TO PROVIDE NEW CONDUITS, WIRES, BOXES & SUPPORTS FOR EXISTING EQUIPMENT WHICH IS AFFECTED BY THE MECHANICAL DEMOLITION & WHICH IS REQUIRED BE MAINTAIN OPERATIONS. REFER TO NOTES 2 & 3, ALL NEW TEMPORARY INSTALLATION SHALL BE IN ACCORDANCE WITH CODE REQUIREMENTS, BUILDING STANDARDS & CONTRACT DOCUMENTS.
5. CONTRACTOR IS RESPONSIBLE FOR PATCHING/ REPAIR CEILING/WALL AS REQUIRED WHERE AFFECTED BY THE ELECTRICAL WORK.
6. CONTRACTOR SHALL NOTE THAT EXISTING CONDITIONS REQUIRE WORKING AT HEIGHTS IN ORDER TO ACCESS PULL BOXES, RACEWAY SYSTEM, ETC. INSTALL BELOW THE EXISTING CORRUGATED STEEL DECK. CONTRACTOR IS REQUIRE TO COORDINATE HIS WORK WITH DDC & DSNY TO ENSURE THE MOVEMENT OF LARGE EQUIPMENT IS NOT INTERRUPTED.
7. REFER TO SHEET NOTES FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES

1. EXISTING CON EDISON MANHOLES ALONG AVENUE D.
2. EXISTING CON EDISON MEDIUM VOLTAGE SERVICE TO CON EDISON TRANSFORMER VAULT LOCATED ON THE SIDE WALK.
3. EXISTING 4000A, 120/208VOLT, 3Ø, 4WIRE UNDERGROUND DUCT BANK TO DSNY GARAGE, SERVICE CONDUCTORS STUB-UP IN THE MAIN ELECTRICAL ROOM IN DSNY FACILITY 17. REFER TO ONE LINE DIAGRAM FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES - CONTINUED

4. EXISTING MAIN ELECTRICAL SERVICE ROOM LOCATED AT DSNY GARAGE 17. REFER TO ONE LINE DIAGRAM E-601 & ELECTRICAL ELEVATION DRAWING E-401 FOR ADDITIONAL INFORMATION.
5. EXISTING 4000A, 208/120V, 3Ø, 4 WIRE SERVICE SWITCH BOARD LINE UP. THE EXISTING INCOMING SERVICE CONDUCTORS STUB UP & CONNECT TO BUS, REFER TO E-502 & E-601 FOR ADDITIONAL INFORMATION.
6. EXISTING 2000AF/4000AS, 208/120V, 3Ø, 4 WIRE SERVICE SWITCH BOARD SECTION. EXISTING ELECTRICAL CONNECTION FOR GARAGE #18, SERVICE SWITCH CONNECTS TO EXISTING DPB SWITCH BOARD SECTION, 2000A MAIN LUG ONLY, 208/120V, 3Ø, 4 WIRE, EXISTING ELECTRICAL DISTRIBUTION DEDICATED TO GARAGE #18, REFER TO E-502 & E-601 FOR ADDITIONAL INFORMATION.
7. EXISTING 2000AF/4000AS, 208/120V, 3Ø, 4 WIRE SERVICE SWITCH BOARD SECTION. EXISTING ELECTRICAL CONNECTION FOR GARAGE #17, SERVICE SWITCH CONNECTS TO EXISTING DPA SWITCH BOARD SECTION, 2000A MAIN LUG ONLY, 208/120V, 3Ø, 4 WIRE, EXISTING ELECTRICAL DISTRIBUTION DEDICATED TO GARAGE #17, REFER TO E-502 & E-601 FOR ADDITIONAL INFORMATION.
8. EXISTING PANEL 'SL' 208/120V, 3Ø, 4 WIRE, 100A M.L.O., PANEL SERVES EXISTING LIGHTING.
9. EXISTING PANEL 'EP' 208/120V, 3Ø, 4 WIRE, 100A M.L.O., PANEL SERVES EXISTING LIGHTING CONTRACTOR & SPRINKLER COMPRESSOR.
10. EXISTING MOTOR CONTROL CENTER ROOM FOR FACILITY No.17. REFER TO E-402 & E-601 FOR ADDITIONAL INFORMATION.
11. EXISTING MOTOR CONTROL CENTER MMC-B 208/120V, 3Ø, 3 WIRE, 600A M.L.O.
12. EXISTING PP1 DISTRIBUTION PANEL 208/120V, 3Ø, 4 WIRE, 200A M.L.O, SERVES MECHANICAL UNITS.
13. EXISTING PP1A-S1 DISTRIBUTION PANEL 208/120V, 3Ø, 4 WIRE, 400A MCB SERVES PUMPS UNITS
14. EXISTING WALL MOUNTED STARTERS FOR FANS TO BE REMOVED.
15. EXISTING PP3 DISTRIBUTION PANELS 208/120V, 3Ø, 4 WIRE 200A M.L.O. SERVES ROLL UP DOORS.
16. EXISTING BRANCH CIRCUIT PANEL RPG1 208/120V, 3Ø, 4 WIRE 60A M.L.O. SERVES FUEL DISPENSING SYSTEM.
17. EXISTING BRANCH CIRCUIT PANEL RP1 208/120V, 3Ø, 4 WIRE 60A M.L.O. SERVES UNIT HEATERS & GENERAL BRANCH CIRCUIT RECEPTACLES.
18. EXISTING BRANCH CIRCUIT PANEL RP2 208/120V, 3Ø, 4 WIRE 100A M.L.O. SERVES UNIT HEATERS, MONITOR & GENERAL BRANCH CIRCUIT RECEPTACLES.
19. EXISTING BRANCH CIRCUIT PANEL RPP 208/120V, 3Ø, 4 WIRE 60A MCB. SERVES EQUIPMENT & GENERAL BRANCH CIRCUIT RECEPTACLES.
20. EXISTING LIGHTING PANEL LP3 208/120V, 3Ø, 4 WIRE 100A M.L.O. SERVES LIGHTING.
21. EXISTING LIGHTING PANEL LP1 208/120V, 3Ø, 4 WIRE 225A M.L.O. SERVES LIGHTING.
22. EXISTING LIGHTING PANEL LPNL2 208/120V, 3Ø, 4 WIRE 60A M.L.O. SERVES LIGHTING.
23. EXISTING FACILITY POWER FOR LIGHTING TO REMAIN.
24. EXISTING UNIT HEATER, POWER CIRCUIT & CONDUIT TO REMAIN.
25. EXISTING TRUCK WASH SPACE TO BE RE-PURPOSED. CONTRACTOR SHALL REMOVE EXISTING, COORDINATE THE REMOVAL, STORAGE OF ALL EXISTING FILING CABINETS WITH DDC & CITY OF NEW YORK BEFORE STARTING WORK. CONTRACTOR TO WALK THE SPACE WITH DDC & CITY OF NEW YORK TO IDENTIFY ANY EQUIPMENT WHICH NEEDS TO BE DISCONNECTED & TURNED OVER TO THE CITY OF NEW YORK. REFER TO CODED NOTES FOR ADDITIONAL INFORMATION.
26. EXISTING ROLL UP DOOR MOTORS, POWER & ASSOCIATED CONTROLS SHALL BE REMOVED ALL THE WAY TO THE SOURCE PANEL. COORDINATE WITH OTHER TRADES & ARCHITECTURAL DRAWINGS.
27. CONTRACTOR SHALL DEMOLISH EXISTING EQUIPMENT BRANCH CIRCUIT ALL THE WAY TO THE SOURCE PANEL.
28. CONTRACTOR SHALL DEMOLISH POWER CIRCUITS PW#5, PW#6 & PW#7 TO JUNCTION BOXES.
29. CONTRACTOR SHALL DEMOLISH POWER TO TRUCK WASH AREA WATER HEATER, COORDINATE WITH PLUMBING DRAWING FOR ADDITIONAL INFORMATION.
30. EXISTING PULL BOXES. CONTRACTOR TO COORDINATE ACCESS TO PULL BOX FEEDERS WITH DDC & DSNY. REFER TO ELECTRICAL DRAWINGS FOR ADDITIONAL INFORMATION.
31. EXISTING AIR SAMPLING MONITORING PANEL TO BE REMOVED
32. EXISTING MECHANICAL EQUIPMENT TO REMAIN

KEY PLAN

LINE LEGEND

EXISTING TO REMAIN ————

EXISTING TO BE REMOVED - - - - - - - -

GENERAL CONSTRUCTION NOTES:

1. THE SCOPE OF WORK IS FOR THE RENOVATION & UPGRADE OF THE HVAC SYSTEM.
2. THE CONTRACTOR SHALL NOTE THAT BUILDING REMAINS OCCUPIED & ALL WORK SHALL BE CAREFULLY STAGE TO ENSURE THERE ARE NO DISTURBANCES TO NEITHER THE BUILDING OCCUPANTS OR THE BUILDING'S FUNCTION.
3. THE CONTRACTOR SHALL ABIDE BY THE NEW YORK CITY BUILDING RULES & ORDINANCES, CODE REQUIRED MEANS OF EGRESS MUST BE MAINTAINED.
4. THE CONTRACTOR SHALL MEET THE REQUIREMENT OF THE NYCEC 2011 WITH NYC AMENDMENTS FOR THE ELECTRICAL INSTALLATION.
5. CONTRACTOR SHALL BE FAMILIAR WITH THE PROCESS OF CONSTRUCTION & SHALL FOLLOW THE PROCEDURES DETAILED HEREIN. BEFORE UNDERGOING ANY WORK CONTRACTOR SHALL REVIEW THE CONSTRUCTION DOCUMENTS & HAVE SIGN OFF FROM THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
6. WORK SHALL NOT COMMENCE UNTIL THE CONTRACTOR FULLY UNDERSTANDS THE SCOPE OF WORK & ALL OF ITS POTENTIAL HAZARDS, CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. WORDING SUCH AS "RE-ROUTE/CAP" IMPLIES THAT THE CONTRACTOR SHALL TEMPORARILY UN-INSTALL A SYSTEM, RE-ROUTE OR CAP & RE-INSTALL THE SYSTEM TO ITS INITIAL WORKING ORDER AFTER THE WORK HAS BEEN COMPLETED.
8. THE CONSTRUCTION NOTES INDICATED WITH CODED NUMBERS PROVIDE INFORMATION TO THE CONTRACTOR AS TO SPECIAL CONDITIONS, EQUIPMENT OR SCOPE WHICH NEEDS TO BE PART OF THE CONTRACT, THE EXACT WORK PROCEDURE, STAGING & SCHEDULING OF WORK IS THE RESPONSIBILITY OF THE CONTRACTOR.
9. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL, MECHANICAL & FIRE ALARM DRAWINGS FOR ADDITIONAL INFORMATION.
10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER, ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED. CONTRACTOR SHALL NOTE 'GEF' & 'MU' MECHANICAL UNITS ARE ELECTRICALLY INTERLOCKED. CONTRACTOR SHALL COORDINATE WORK ON THESE UNITS SIMULTANEOUSLY.
11. CONTRACTOR SHALL COORDINATE THE REMOVAL OF THE MECHANICAL EQUIPMENT WITH THE FIRE ALARM CONTRACTOR.

DEMOLITION POWER PLAN NOTES:

1. ALL EXISTING POWER BRANCH CIRCUITS SERVING THE FACILITY No. 18 MECHANICAL UNITS ARE CONNECTED TO EXISTING 120/208V DISTRIBUTION PANELS, MOTOR CONTROL CENTER, RECEPTACLE PANELS & SHOP PANELS ON THIS FACILITY. CONTRACTOR TO REFER TO CODED NOTES FOR ADDITIONAL INFORMATION.
2. EXISTING CIRCUITS ARE DESIGNATED BY THE NUMBER SHOWN ADJACENT TO EACH MOTOR, JUNCTION BOX OR ELECTRICAL DISCONNECT. CONTRACTOR SHALL NOTE SEVERAL EXISTING BRANCH CIRCUITS ARE RUN IN PARALLEL WITH IN JUNCTION BOXES, PULL BOXES & IN SOME CASES IN THE SAME RACEWAY.
3. CONTRACTOR TO SURVEY EXISTING CONDITIONS, IDENTIFY BRANCH CIRCUITING & COORDINATE REMOVAL OF POWER OF EQUIPMENT WITH OTHER TRADES. ONLY AFFECTED CIRCUITS ARE TO BE DEMO, UNDER NO CONDITION CAN THE CONTRACTOR ASSUME THE DEMOLITION OF ENTIRE RACEWAYS WHICH COULD POTENTIALLY AFFECT THE POWER & OPERATION OF OTHER EXISTING SYSTEMS ON THE SAME JUNCTION BOXES OR PULL BOXES.
4. CONTRACTOR TO PROVIDE NEW CONDUITS, WIRES, BOXES & SUPPORTS FOR EXISTING EQUIPMENT WHICH IS AFFECTED BY THE MECHANICAL DEMOLITION & WHICH IS REQUIRED BE MAINTAIN OPERATIONS, REFER TO NOTES 2 & 3. ALL NEW TEMPORARY INSTALLATION SHALL BE IN ACCORDANCE WITH CODE REQUIREMENTS, BUILDING STANDARDS & CONTRACT DOCUMENTS.
5. CONTRACTOR IS RESPONSIBLE FOR PATCHING/ REPAIR CEILING/WALL AS REQUIRED WHERE AFFECTED BY THE ELECTRICAL WORK.
6. CONTRACTOR SHALL NOTE THAT EXISTING CONDITIONS REQUIRE WORKING AT HEIGHTS IN ORDER TO ACCESS PULL BOXES, RACEWAY SYSTEM, ETC. INSTALL BELOW THE EXISTING CORRUGATED STEEL DECK. CONTRACTOR IS REQUIRE TO COORDINATE HIS WORK WITH DDC & DSNY TO ENSURE THE MOVEMENT OF LARGE EQUIPMENT IS NOT INTERRUPTED.
7. REFER TO SHEET NOTES FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES

1. EXISTING PANEL 'LP4' 208/120V, 3Ø, 4 WIRE, 225A M.L.O, PANEL SERVES EXISTING LIGHTING.
2. EXISTING PANEL 'LPNL3' 208/120V, 3Ø, 4 WIRE, 100A M.L.O, PANEL SERVES EXISTING LIGHTING.
3. EXISTING PANEL 'LP5A' 208/120V, 3Ø, 4 WIRE, 225A M.L.O, PANEL SERVES EXISTING LIGHTING

SHEET KEYNOTES - CONTINUED

4. EXISTING PANEL 'RP' 208/120V, 3Ø, 4 WIRE, 100A M.L.O, PANEL SERVES EXISTING UNIT HEATERS, GENERAL BRANCH CIRCUIT RECEPTACLES & SMOKE VENT.
5. EXISTING TWO SECTION PANEL 'MAP2' 208/120V, 3Ø, 4 WIRE, 400A MAIN FUSE, PANEL SERVES EXISTING TRUCK SHOP EQUIPMENT & TPE FANS.
6. EXISTING PANEL 'MRP2' 208/120V, 3Ø, 4 WIRE, 60A M.L.O, PANEL SERVES EXISTING TRUCK SHOP EQUIPMENT & UNIT HEATERS.
7. EXISTING FACILITY POWER FOR LIGHTING TO REMAIN.
8. EXISTING UNIT HEATER POWER CIRCUIT & CONDUIT TO REMAIN.
9. EXISTING TPE FANS AND ASSOCIATED CONTROLS TO REMAIN.
10. EXISTING PULL BOXES, CONTRACTOR TO COORDINATE ACCESS TO PULL BOX FEEDERS WITH DDC & DSNY, REFER TO ELECTRICAL DRAWINGS FOR ADDITIONAL INFORMATION

CONTRACTOR SHALL NOTE 'GEF' & 'MU' MECHANICAL UNITS ARE ELECTRICALLY INTERLOCKED, CONTRACTOR SHALL COORDINATE WORK ON THESE UNITS SIMULTANEOUSLY.
11. CONTRACTOR SHALL COORDINATE THE REMOVAL OF THE MECHANICAL EQUIPMENT WITH THE FIRE ALARM CONTRACTOR.

DEMOLITION POWER PLAN NOTES:

1. ALL EXISTING POWER BRANCH CIRCUITS SERVING THE FACILITY No. 17 MECHANICAL UNITS ARE CONNECTED TO EXISTING 120/208V DISTRIBUTION PANELS, MOTOR CONTROL CENTER, RECEPTACLE PANELS & SHOP PANELS ON THIS FACILITY. CONTRACTOR TO REFER TO CODED NOTES FOR ADDITIONAL INFORMATION.
2. EXISTING CIRCUITS ARE DESIGNATED BY THE NUMBER SHOWN ADJACENT TO EACH MOTOR, JUNCTION BOX OR ELECTRICAL DISCONNECT. CONTRACTOR SHALL NOTE SEVERAL EXISTING BRANCH CIRCUITS ARE RUN IN PARALLEL WITH IN JUNCTION BOXES, PULL BOXES & IN SOME CASES IN THE SAME RACEWAY.
3. CONTRACTOR TO SURVEY EXISTING CONDITIONS, IDENTIFY BRANCH CIRCUITING & COORDINATE REMOVAL OF POWER OF EQUIPMENT WITH OTHER TRADES. ONLY AFFECTED CIRCUITS ARE TO BE DEMO, UNDER NO CONDITION CAN THE CONTRACTOR ASSUME THE DEMOLITION OF ENTIRE RACEWAYS WHICH COULD POTENTIALLY AFFECT THE POWER & OPERATION OF OTHER EXISTING SYSTEMS ON THE SAME JUNCTION BOXES OR PULL BOXES.
4. CONTRACTOR TO PROVIDE NEW CONDUITS, WIRES, BOXES & SUPPORTS FOR EXISTING EQUIPMENT WHICH IS AFFECTED BY THE MECHANICAL DEMOLITION & WHICH IS REQUIRED BE MAINTAIN OPERATIONS, REFER TO NOTES 2 & 3. ALL NEW TEMPORARY INSTALLATION SHALL BE IN ACCORDANCE WITH CODE REQUIREMENTS, BUILDING STANDARDS & CONTRACT DOCUMENTS.
5. CONTRACTOR IS RESPONSIBLE FOR PATCHING/ REPAIR CEILING/WALL AS REQUIRED WHERE AFFECTED BY THE ELECTRICAL WORK RUNNING IN THE CEILING OF THE SECOND FL.
6. CONTRACTOR SHALL NOTE THAT EXISTING CONDITIONS REQUIRE WORKING AT HEIGHTS IN ORDER TO ACCESS PULL BOXES, RACEWAY SYSTEM, ETC, INSTALL BELOW THE EXISTING CORRUGATED STEEL DECK. CONTRACTOR IS REQUIRE TO COORDINATE HIS WORK WITH DDC & DSNY TO ENSURE THE MOVEMENT OF LARGE EQUIPMENT IS NOT INTERRUPTED.
7. REFER TO SHEET NOTES FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES

1. EXISTING MECHANICAL EQUIPMENT DISCONNECT, POWER CIRCUIT & CONDUIT TO BE REMOVED IN ITS ENTIRETY, EXISTING POWER FEED IS RAN TO PANEL LOCATED ON THE 2ND FLOOR, CONTRACTOR TO COORDINATE THE REMOVAL OF ALL CONTROLS, DISCONNECTS & WITH MECHANICAL CONTRACTOR, COORDINATE ACCESS TO CEILING IN THIS AREA WITH DDC & DSNY PROJECT MANAGER.
2. EXISTING MECHANICAL EQUIPMENT DISCONNECT, POWER CIRCUIT & CONDUIT TO BE REMOVED IN ITS ENTIRETY, EXISTING POWER FEED IS RAN TO PANEL LOCATED ON THE 1ST FLOOR, CONTRACTOR TO COORDINATE THE REMOVAL OF ALL CONTROLS, DISCONNECTS & WITH MECHANICAL CONTRACTOR, COORDINATE ACCESS TO CEILING IN THIS AREA WITH DDC & DSNY PROJECT MANAGER.
3. EXISTING MECHANICAL EQUIPMENT DISCONNECT, POWER CIRCUIT & CONDUIT TO BE REMOVED IN ITS ENTIRETY, EXISTING POWER FEED IS RAN TO DISTRIBUTION ROOM LOCATED ON THE 1ST FLOOR ELECTRICAL SERVICE ROOM. CONTRACTOR TO COORDINATE THE REMOVAL OF ALL CONTROLS, DISCONNECTS & WITH MECHANICAL CONTRACTOR. COORDINATE ACCESS TO CEILING IN THIS AREA WITH DDC & DSNY PROJECT MANAGER.
4. EXISTING MECHANICAL EQUIPMENT DISCONNECT, POWER CIRCUIT & CONDUIT TO BE REMOVED IN ITS ENTIRETY, EXISTING POWER FEED IS RAN IN CONDUIT SUPORTED FROM THE STRUCTURAL TRUSS SYSTEM TO PANEL LOCATED ON THE 1ST FLOOR. CONTRACTOR TO COORDINATE THE REMOVAL OF ALL CONTROLS, DISCONNECTS & WITH MECHANICAL CONTRACTOR. COORDINATE ACCESS TO THE GARAGE AREA WITH DDC & DSNY PROJECT MANAGER.
5. CONTRACTOR SHALL REMOVE ALL EXISTING CONDUIT ROOF STUB-UPS.

GENERAL CONSTRUCTION NOTES:

1. THE SCOPE OF WORK IS FOR THE RENOVATION & UPGRADE OF THE HVAC SYSTEM.
2. THE CONTRACTOR SHALL NOTE THAT BUILDING REMAINS OCCUPIED & ALL WORK SHALL BE CAREFULLY STAGE TO ENSURE THERE ARE NO DISTURBANCES TO NEITHER THE BUILDING OCCUPANTS OR THE BUILDING'S FUNCTION.
3. THE CONTRACTOR SHALL ABIDE BY THE NEW YORK CITY BUILDING RULES & ORDINANCES, CODE REQUIRED MEANS OF EGRESS MUST BE MAINTAINED.
4. THE CONTRACTOR SHALL MEET THE REQUIREMENT OF THE NYCEC 2011 WITH NYC AMENDMENTS FOR THE ELECTRICAL INSTALLATION.
5. CONTRACTOR SHALL BE FAMILIAR WITH THE PROCESS OF CONSTRUCTION & SHALL FOLLOW THE PROCEDURES DETAILED HEREIN. BEFORE UNDERGOING ANY WORK CONTRACTOR SHALL REVIEW THE CONSTRUCTION DOCUMENTS & HAVE SIGN OFF FROM THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
6. WORK SHALL NOT COMMENCE UNTIL THE CONTRACTOR FULLY UNDERSTANDS THE SCOPE OF WORK & ALL OF ITS POTENTIAL HAZARDS, CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. WORDING SUCH AS "RE-ROUTE/CAP" IMPLIES THAT THE CONTRACTOR SHALL TEMPORARILY UN-INSTALL A SYSTEM, RE-ROUTE OR CAP & RE-INSTALL THE SYSTEM TO ITS INITIAL WORKING ORDER AFTER THE WORK HAS BEEN COMPLETED.
8. THE CONSTRUCTION NOTES INDICATED WITH CODED NUMBERS PROVIDE INFORMATION TO THE CONTRACTOR AS TO SPECIAL CONDITIONS, EQUIPMENT OR SCOPE WHICH NEEDS TO BE PART OF THE CONTRACT. THE EXACT WORK PROCEDURE, STAGING & SCHEDULING OF WORK IS THE RESPONSIBILITY OF THE CONTRACTOR.
9. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL, MECHANICAL & FIRE ALARM DRAWINGS FOR ADDITIONAL INFORMATION.
10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER. ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED. CONTRACTOR SHALL NOTE 'GEF' & 'MU' MECHANICAL UNITS ARE ELECTRICALLY INTERLOCKED, CONTRACTOR SHALL COORDINATE WORK ON THESE UNITS SIMULTANEOUSLY.
11. CONTRACTOR SHALL COORDINATE THE REMOVAL OF THE MECHANICAL EQUIPMENT WITH THE FIRE ALARM CONTRACTOR.

DEMOLITION POWER PLAN NOTES:

9. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL, MECHANICAL & FIRE ALARM DRAWINGS FOR ADDITIONAL INFORMATION.
10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER. ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED. CONTRACTOR SHALL NOTE 'GEF' & 'MU' MECHANICAL UNITS ARE ELECTRICALLY INTERLOCKED. CONTRACTOR SHALL COORDINATE WORK ON THESE UNITS SIMULTANEOUSLY.
11. CONTRACTOR SHALL COORDINATE THE CONNECTION OF ALL HVAC EQUIPMENT WITH THE MECHANICAL & FIRE ALARM CONTRACTOR.

POWER PLAN NOTES:

1. ALL NEW POWER BRANCH CIRCUITS SERVING THE FACILITY NO. 17 MECHANICAL UNITS ARE TO BE CONNECTED TO EXISTING 120/208V DISTRIBUTION PANELS, MOTOR CONTROL CENTER, RECEPTACLE PANELS & SHOP PANELS ON THIS FACILITY. CONTRACTOR TO REFER TO CODED NOTES FOR ADDITIONAL INFORMATION.
2. NEW CIRCUITS ARE DESIGNATED BY THE NUMBER SHOWN ADJACENT TO EACH MOTOR, JUNCTION BOX OR ELECTRICAL DISCONNECT. CONTRACTOR SHALL PROVIDE DEDICATED RACEWAY & WIRING FOR ALL NEW BRANCH CIRCUITS. CONTRACTOR TO PROVIDE & INSTALL LABELS & IDENTIFY SOURCE OF POWER AS PER SPECIFICATION.
3. CONTRACTOR TO PROVIDE NEW CONDUITS, WIRES, BOXES & SUPPORTS FOR NEW BRANCH CIRCUIT FOR THE NEW MECHANICAL EQUIPMENT. ALL NEW INSTALLATION SHALL BE IN ACCORDANCE WITH CODE REQUIREMENTS, DSNY GARAGE BUILDING GUIDELINES, STANDARDS & CONTRACT DOCUMENTS.
4. CONTRACTOR IS RESPONSIBLE FOR PATCHING/ REPAIR CEILING/WALL AS REQUIRED WHERE AFFECTED BY THE ELECTRICAL WORK.
5. CONTRACTOR SHALL NOTE THAT EXISTING CONDITIONS REQUIRE WORKING AT HEIGHTS IN ORDER TO ACCESS PULL BOXES, RACEWAY SYSTEM, ETC. INSTALL BELOW THE EXISTING CORRUGATED STEEL DECK. CONTRACTOR IS REQUIRE TO COORDINATE HIS WORK WITH DDC & DSNY TO ENSURE THE MOVEMENT OF LARGE EQUIPMENT IS NOT INTERRUPTED.
6. ALL EXPOSED CONDUIT SHALL BE RGS TYPE, MINUMUM SIZE 3/4". ALL EXPOSED JUNCTION BOXES & PULL BOXES SHALL BE NEMA 3R.
7. EMT IS ONLY ALLOWED FOR BRANCH CIRCUIT WIRING IN HUNG CEILING ONLY. REFER TO DRAWING FOR LOCATIONS.
8. REFER TO SHEET NOTES FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES

1. EXISTING CON EDISON MANHOLES ALONG AVENUE D.
2. EXISTING CON EDISON MEDIUM VOLTAGE SERVICE TO CON EDISON TRANSFORMER VAULT LOCATED ON THE SIDE WALK.
3. EXISTING 4000A, 120/208VOLT, 3Ø, 4WIRE UNDERGROUND DUCT BANK TO DSNY GARAGE. SERVICE CONDUCTORS STUB-UP IN THE MAIN ELECTRICAL ROOM IN DSNY FACILITY 17. REFER TO ONE LINE DIAGRAM FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES - CONTINUED

4. EXISTING MAIN ELECTRICAL SERVICE ROOM LOCATED AT DSNY GARAGE 17. REFER TO ONE LINE DIAGRAM E-602 & ELECTRICAL EQUIPMENT ELEVATION DRAWING E-401 FOR ADDITIONAL INFORMATION.
5. EXISTING 2000AF/4000AS, 208/120V, 3Ø, 4 WIRE SERVICE SWITCH BOARD SECTION. EXISTING ELECTRICAL CONNECTION FOR GARAGE #18. SERVICE SWITCH CONNECTS TO EXISTING DPB SWITCH BOARD SECTION, 2000A MAIN LUG ONLY, 208/120V, 3Ø, 4 WIRE. EXISTING ELECTRICAL DISTRIBUTION DEDICATED TO GARAGE #18. REFER TO E-602 FOR ADDITIONAL INFORMATION.
6. EXISTING 2000AF/4000AS, 208/120V, 3Ø, 4 WIRE SERVICE SWITCH BOARD SECTION. EXISTING ELECTRICAL CONNECTION FOR GARAGE #17. SERVICE SWITCH CONNECTS TO EXISTING DPA SWITCH BOARD SECTION, 2000A MAIN LUG ONLY, 208/120V, 3Ø, 4 WIRE. EXISTING ELECTRICAL DISTRIBUTION DEDICATED TO GARAGE #17. REFER TO E-602 FOR ADDITIONAL INFORMATION.
7. EXISTING MOTOR CONTROL CENTER ROOM FOR FACILITY No.17. CONTRACTOR TO PROVIDE & INSTALL NEW POWER CONNECTION TO MECHANICAL UNITS. REFER TO E-602 FOR ADDITIONAL INFORMATION.
8. EXISTING PP1 DISTRIBUTION PANEL 208/120V, 3Ø, 4 WIRE, 200A M.L.O. CONTRACTOR TO PROVIDE & INSTALL NEW POWER CONNECTION TO MECHANICAL UNITS. REFER TO E-402 AND E-602 FOR ADDITIONAL INFORMATION.
9. EXISTING BRANCH CIRCUIT PANEL RP1 208/120V, 3Ø, 4 WIRE 60A M.L.O. CONTRACTOR TO PROVIDE & INSTALL NEW POWER CONNECTION TO MECHANICAL UNITS.
10. EXISTING BRANCH CIRCUIT PANEL RP2 208/120V, 3Ø, 4 WIRE 100A M.L.O. CONTRACTOR TO PROVIDE & INSTALL NEW POWER CONNECTION TO MECHANICAL UNITS.
11. CONTRACTOR TO PROVIDE AND INSTALL 1" RGS CONDUIT WITH PULL WIRE FOR CONTROLS AND A TWO GANG JUNCTION BOX TO EACH CARBON MONOXIDE SENSOR.
12. CONTRACTOR TO PROVIDE AND INSTALL 1" RGS CONDUIT WITH PULL WIRE FOR CONTROLS.
13. CONTRACTOR TO COORDINATE CONDUIT STUB UP TO ROOF WITH MECHANICAL AND ROOFING CONTRACTOR.
14. REFER TO E-602 FOR ADDITIONAL INFORMATION.
15. CONTRACTOR TO PROVIDE AND INSTALL NEW 20A, 1Ø CIRCUIT BREAKER WITH 2#10AWG + 1#10AWG GROUND IN 3/4" RGS CONDUIT TO EXHAUST FAN.
16. NOT USED.
17. CONTRACTOR TO PROVIDE AND INSTALL A NEW 4000A/4000AF, 208/120VOLT, 3Ø, 4W MAIN SERVICE SWITCHBOARD FOR DISTRIBUTED INTERCONNECTION WITH THE UTILITY GRID. CONTRACTOR SHALL COORDINATE WITH CON EDISON DISTRIBUTED GENERATION DIVISION.
18. NEW CON EDISON UNDER GROUND VAULT WITH TRANSFORMER AND NETWORK PROTECTOR (REFER TO CIVIL DRAWINGS FOR DETAILS).
19. CONTRACTOR TO PROVIDE 120V, 1Ø, 20A CIRCUIT WITH 2#12AWG +1#12AWG GRD. IN 3/4" TO LOW VOLTAGE TRANSFORMER SUPPLIED BY THE MECHANICAL CONTRACTOR. CONNECT VIA A TWO GANG JUNCTION BOX FOR CARBON MONOXIDE SENSOR CONTROLLER.
20. NOT USED.
21. NOT USED.
22. NOT USED.
23. REFER TO DETAIL No. 30 ON DRAWING E-504 FOR ENLARGE PLAN OF THE NEW ELECTRICAL ROOM FOR ADDITIONAL INFORMATION.
24. CONTRACTOR TO PROVIDE PULL BOX FOR DATA/CONTROLS CONDUITS. REFER TO M-800 SERIES DRAWINGS & E-502 DETAIL No. 16 FOR ADDITIONAL INFORMATION.
25. CONTRACTOR TO PROVIDE PULL BOX FOR ELECTRICAL CONDUITS. REFER TO E-501 DETAILS 2 AND 3 FOR ADDITIONAL INFORMATION.
26. CONTRACTOR TO PROVIDE 120V, 1Ø, 20A CIRCUIT WITH 2#12AWG +1#12AWG GRD. IN 3/4" TO BMS CONTROL PANEL SUPPLIED BY THE MECHANICAL CONTRACTOR. CONNECT VIA A TWO GANG JUNCTION BOX.
27. CONTRACTOR TO PROVIDE LIGHTNING PROTECTION DOWN CONDUCTOR WITH TEST WELL AND GROUND ROD. REFER TO DWG. E-506 FOR ADDITIONAL INFORMATION.

GENERAL CONSTRUCTION NOTES:

1. THE SCOPE OF WORK IS FOR THE RENOVATION & UPGRADE OF THE HVAC SYSTEM.
2. THE CONTRACTOR SHALL NOTE THAT BUILDING REMAINS OCCUPIED & ALL WORK SHALL BE CAREFULLY STAGE TO ENSURE THERE ARE NO DISTURBANCES TO NEITHER THE BUILDING OCCUPANTS OR THE BUILDING'S FUNCTION.
3. THE CONTRACTOR SHALL ABIDE BY THE NEW YORK CITY BUILDING RULES & ORDINANCES. CODE REQUIRED MEANS OF EGRESS MUST BE MAINTAINED.
4. THE CONTRACTOR SHALL MEET THE REQUIREMENT OF THE NYCEC 2011 WITH NYC AMENDMENTS FOR THE ELECTRICAL INSTALLATION.
5. CONTRACTOR SHALL BE FAMILIAR WITH THE PROCESS OF CONSTRUCTION & SHALL FOLLOW THE PROCEDURES DETAILED HEREIN. BEFORE UNDERGOING ANY WORK CONTRACTOR SHALL REVIEW THE CONSTRUCTION DOCUMENTS & HAVE SIGN OFF FROM THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
6. WORK SHALL NOT COMMENCE UNTIL THE CONTRACTOR FULLY UNDERSTANDS THE SCOPE OF WORK & ALL OF ITS POTENTIAL HAZARDS. CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. WORDING SUCH AS "RE-ROUTE/CAP" IMPLIES THAT THE CONTRACTOR SHALL TEMPORARILY UN-INSTALL A SYSTEM, RE-ROUTE OR CAP & RE-INSTALL THE SYSTEM TO ITS INITIAL WORKING ORDER AFTER THE WORK HAS BEEN COMPLETED.
8. THE CONSTRUCTION NOTES INDICATED WITH CODED NUMBERS PROVIDE INFORMATION TO THE CONTRACTOR AS TO SPECIAL CONDITIONS, EQUIPMENT OR SCOPE WHICH NEEDS TO BE PART OF THE CONTRACT, THE EXACT WORK PROCEDURE, STAGING & SCHEDULING OF WORK IS THE RESPONSIBILITY OF THE CONTRACTOR.
9. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL, MECHANICAL & FIRE ALARM DRAWINGS FOR ADDITIONAL INFORMATION.
10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER. ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED. CONTRACTOR SHALL NOTE 'GEF' & 'MU' MECHANICAL UNITS ARE ELECTRICALLY INTERLOCKED. CONTRACTOR SHALL COORDINATE WORK ON THESE UNITS SIMULTANEOUSLY.
11. CONTRACTOR SHALL COORDINATE THE CONNECTION OF ALL HVAC EQUIPMENT WITH THE MECHANICAL & FIRE ALARM CONTRACTOR.

POWER PLAN NOTES:

1. ALL NEW POWER BRANCH CIRCUITS SERVING THE FACILITY NO. 17 MECHANICAL UNITS ARE TO BE CONNECTED TO EXISTING 120/208V DISTRIBUTION PANELS, MOTOR CONTROL CENTER, RECEPTACLE PANELS & SHOP PANELS ON THIS FACILITY. CONTRACTOR TO REFER TO CODED NOTES FOR ADDITIONAL INFORMATION.
2. NEW CIRCUITS ARE DESIGNATED BY THE NUMBER SHOWN ADJACENT TO EACH MOTOR, JUNCTION BOX OR ELECTRICAL DISCONNECT. CONTRACTOR SHALL PROVIDE DEDICATED RACEWAY & WIRING FOR ALL NEW BRANCH CIRCUITS. CONTRACTOR TO PROVIDE & INSTALL LABELS & IDENTIFY SOURCE OF POWER AS PER SPECIFICATION.
3. CONTRACTOR TO PROVIDE NEW CONDUITS, WIRES, BOXES & SUPPORTS FOR NEW BRANCH CIRCUIT FOR THE NEW MECHANICAL EQUIPMENT. ALL NEW INSTALLATION SHALL BE IN ACCORDANCE WITH CODE REQUIREMENTS, DSNY GARAGE BUILDING GUIDELINES, STANDARDS & CONTRACT DOCUMENTS.
4. CONTRACTOR IS RESPONSIBLE FOR PATCHING/ REPAIR CEILING/WALL AS REQUIRED WHERE AFFECTED BY THE ELECTRICAL WORK.
5. CONTRACTOR SHALL NOTE THAT EXISTING CONDITIONS REQUIRE WORKING AT HEIGHTS IN ORDER TO ACCESS PULL BOXES, RACEWAY SYSTEM, ETC. INSTALL BELOW THE EXISTING CORRUGATED STEEL DECK. CONTRACTOR IS REQUIRE TO COORDINATE HIS WORK WITH DDC & DSNY TO ENSURE THE MOVEMENT OF LARGE EQUIPMENT IS NOT INTERRUPTED.
6. ALL EXPOSED CONDUIT SHALL BE RGS TYPE, MINIMUM SIZE 3/4". ALL EXPOSED JUNCTION BOXES & PULL BOXES SHALL BE NEMA 3R.
7. EMT IS ONLY ALLOWED FOR BRANCH CIRCUIT WIRING IN HUNG CEILING ONLY. REFER TO DRAWING FOR LOCATIONS.
8. REFER TO SHEET NOTES FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES

1. EXISTING CON EDISON MANHOLES ALONG AVENUE D.
2. EXISTING CON EDISON MEDIUM VOLTAGE SERVICE TO CON EDISON TRANSFORMER VAULT LOCATED ON THE SIDE WALK.
3. EXISTING 4000A, 120/208VOLT, 3Ø, 4WIRE UNDERGROUND DUCT BANK TO DSNY GARAGE. SERVICE CONDUCTORS STUB-UP IN THE MAIN ELECTRICAL ROOM IN DSNY FACILITY 17. REFER TO ONE LINE DIAGRAM FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES - CONTINUED

10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER. ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED. CONTRACTOR SHALL NOTE 'GEF' & 'MU' MECHANICAL UNITS ARE ELECTRICALLY INTERLOCKED, CONTRACTOR SHALL COORDINATE WORK ON THESE UNITS SIMULTANEOUSLY.
11. CONTRACTOR SHALL COORDINATE THE CONNECTION OF ALL HVAC EQUIPMENT WITH THE MECHANICAL & FIRE ALARM CONTRACTOR.

POWER PLAN NOTES:

1. ALL NEW POWER BRANCH CIRCUITS SERVING THE FACILITY NO. 17 MECHANICAL UNITS ARE TO BE CONNECTED TO EXISTING 120/208V DISTRIBUTION PANELS, MOTOR CONTROL CENTER, RECEPTACLE PANELS & SHOP PANELS ON THIS FACILITY. CONTRACTOR TO REFER TO CODED NOTES FOR ADDITIONAL INFORMATION.
2. NEW CIRCUITS ARE DESIGNATED BY THE NUMBER SHOWN ADJACENT TO EACH MOTOR, JUNCTION BOX OR ELECTRICAL DISCONNECT. CONTRACTOR SHALL PROVIDE DEDICATED RACEWAY & WIRING FOR ALL NEW BRANCH CIRCUITS. CONTRACTOR TO PROVIDE & INSTALL LABELS & IDENTIFY SOURCE OF POWER AS PER SPECIFICATION.
3. CONTRACTOR TO PROVIDE NEW CONDUITS, WIRES, BOXES & SUPPORTS FOR NEW BRANCH CIRCUIT FOR THE NEW MECHANICAL EQUIPMENT. ALL NEW INSTALLATION SHALL BE IN ACCORDANCE WITH CODE REQUIREMENTS, DSNY GARAGE BUILDING GUIDELINES, STANDARDS & CONTRACT DOCUMENTS.
4. CONTRACTOR IS RESPONSIBLE FOR PATCHING/ REPAIR CEILING/WALL AS REQUIRED WHERE AFFECTED BY THE ELECTRICAL WORK.
5. CONTRACTOR SHALL NOTE THAT EXISTING CONDITIONS REQUIRE WORKING AT HEIGHTS IN ORDER TO ACCESS PULL BOXES, RACEWAY SYSTEM, ETC. INSTALL BELOW THE EXISTING CORRUGATED STEEL DECK. CONTRACTOR IS REQUIRE TO COORDINATE HIS WORK WITH DDC & DSNY TO ENSURE THE MOVEMENT OF LARGE EQUIPMENT IS NOT INTERRUPTED.
6. ALL EXPOSED CONDUIT SHALL BE RGS TYPE, MINUMUM SIZE 3/4", ALL EXPOSED JUNCTION BOXES & PULL BOXES SHALL BE NEMA 3R.
7. EMT IS ONLY ALLOWED FOR BRANCH CIRCUIT WIRING IN HUNG CEILING ONLY. REFER TO DRAWING FOR LOCATIONS.
8. REFER TO SHEET NOTES FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES

1. EXISTING PANEL 'LP2A' 208/120V, 3Ø, 4 WIRE, 100A M.L.O. PANEL SERVES EXISTING LIGHTING.
2. EXISTING TWO SECTION PANEL 'RP2A SECT. A SECT B,' 208/120V, 3Ø, 4 WIRE, 150A MCB, PANEL SERVES EXISTING RECEPTACLES AND HVAC EQUIPMENT.
3. EXISTING TEL/DAT PULL BOX.

SHEET KEYNOTES - CONTINUED

4. CONTRACTOR TO PROVIDE AND INSTALL 3/4" RGS CONDUIT WITH PULL WIRE FOR CONTROLS.
5. CONTRACTOR TO COORDINATE CONDUIT STUB UP TO ROOF WITH MECHANICAL AND ROOFING CONTRACTOR.
6. CONTRACTOR TO PROVIDE PULL BOX FOR DATA/CONTROLS CONDUITS, REFER TO M-800 SERIES DRAWINGS FOR ADDITIONAL INFORMATION.
7. CONTRACTOR TO PROVIDE PULL BOX FOR ELECTRICAL CONDUITS, REFER TO E-501 DETAILS 2 AND 3 FOR ADDITIONAL INFORMATION.
8. CONTRACTOR TO PROVIDE AND INSTALL NEW 20A, 1Ø CIRCUIT BREAKER WITH 2#10AWG + 1#10AWG GRD IN 3/4" EMT FOR CAV, COORDINATE EXACT LOCATION WITH MECHANICAL CONTRACTOR.
9. CONTRACTOR TO PROVIDE CORE DRILL AND FIRE PROOF SEAL FOR CONDUITS TO MCC ROOM ON GROUND FLOOR, COORDINATE IN FIELD.
10. CONTRACTOR TO PROVIDE SUPPORTS FOR PHOTOVOLTAIC CONDUIT BANKS RUNNING TIGHT TO UNDERSIDE OF STRUCTURAL DECK TO PV PANEL BOARDS LOCATED IN NEW ELECTRICAL ROOM.
11. CONTRACTOR TO PROVIDE NEMA 3R PULL BOX WITHIN ROOM FOR PV CONDUIT. TRANSITION FROM RGS TO EMT CONDUIT. PROVIDE LABELING IDENTIFYING P.V. PULL BOX.
12. CONTRACTOR TO PROVIDE TIME CLOCK WITH 12 POLES ASCO MODEL 918 OR APPROVED EQUAL. TIME CLOCK TO CONTROL ALL "TEF" FANS.

GENERAL CONSTRUCTION NOTES:

1. THE SCOPE OF WORK IS FOR THE RENOVATION & UPGRADE OF THE HVAC SYSTEM.
2. THE CONTRACTOR SHALL NOTE THAT BUILDING REMAINS OCCUPIED & ALL WORK SHALL BE CAREFULLY STAGE TO ENSURE THERE ARE NO DISTURBANCES TO NEITHER THE BUILDING OCCUPANTS OR THE BUILDING'S FUNCTION.
3. THE CONTRACTOR SHALL ABIDE BY THE NEW YORK CITY BUILDING RULES & ORDINANCES, CODE REQUIRED MEANS OF EGRESS MUST BE MAINTAINED.
4. THE CONTRACTOR SHALL MEET THE REQUIREMENT OF THE NYCEC 2011 WITH NYC AMENDMENTS FOR THE ELECTRICAL INSTALLATION.
5. CONTRACTOR SHALL BE FAMILIAR WITH THE PROCESS OF CONSTRUCTION & SHALL FOLLOW THE PROCEDURES DETAILED HEREIN. BEFORE UNDERGOING ANY WORK CONTRACTOR SHALL REVIEW THE CONSTRUCTION DOCUMENTS & HAVE SIGN OFF FROM THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
6. WORK SHALL NOT COMMENCE UNTIL THE CONTRACTOR FULLY UNDERSTANDS THE SCOPE OF WORK & ALL OF ITS POTENTIAL HAZARDS. CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. WORDING SUCH AS "RE-ROUTE/CAP" IMPLIES THAT THE CONTRACTOR SHALL TEMPORARILY UN-INSTALL A SYSTEM, RE-ROUTE OR CAP & RE-INSTALL THE SYSTEM TO ITS INITIAL WORKING ORDER AFTER THE WORK HAS BEEN COMPLETED.
8. THE CONSTRUCTION NOTES INDICATED WITH CODED NUMBERS PROVIDE INFORMATION TO THE CONTRACTOR AS TO SPECIAL CONDITIONS, EQUIPMENT OR SCOPE WHICH NEEDS TO BE PART OF THE CONTRACT, THE EXACT WORK PROCEDURE, STAGING & SCHEDULING OF WORK IS THE RESPONSIBILITY OF THE CONTRACTOR.
9. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL, MECHANICAL & FIRE ALARM DRAWINGS FOR ADDITIONAL INFORMATION.
10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER, ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED, CONTRACTOR SHALL NOTE 'GEF' & 'MU' MECHANICAL UNITS ARE ELECTRICALLY INTERLOCKED, CONTRACTOR SHALL COORDINATE WORK ON THESE UNITS SIMULTANEOUSLY.

8. REFER TO SHEET NOTES FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES

1. CONTRACTOR TO PROVIDE AND INSTALL NEW 20A, 1Ø CIRCUIT BREAKER WITH 2#10AWG + 1#10AWG GROUND IN 3/4" RGS CONDUIT TO NEW MECHANICAL UNIT.
2. CONTRACTOR TO REFER TO ELECTRICAL ONE LINE DIAGRAM E-602 FOR ADDITIONAL INFORMATION.
3. CONTRACTOR TO PROVIDE & INSTALL SOLAR PHOTOVOLTAIC PANEL 435WATT SIMILAR TO SUNPOWER MODEL SRP-E20-435NE-WHT-D OR APPROVED EQUAL.
4. CONTRACTOR TO PROVIDE & INSTALL BALLASTED P.V. SUPPORT STRUCTURE ON ROOF. STRUCTURE SHALL COMPLY WITH THE FDNY FIRE CODE REQUIREMENTS FOR COLLAPSIBLE OR MOVABLE STRUCTURE.
5. CONTRACTOR TO PROVIDE & INSTALL 3/4" RGS CONDUIT FROM EACH SET OF PV STRINGS TO INVERTERS LOCATED IN THE LOWER ROOF. CONTRACTOR TO FURNISH & INSTALLED ALL CONDUIT SUPPORT ABOVE NEW ROOF.
6. CONTRACTOR TO PROVIDE AND INSTALL NEW 20A, 1Ø CIRCUIT BREAKER WITH 2#10AWG + 1#10AWG GROUND IN 3/4" RGS CONDUIT TO NEW A ROOF SERVICE GFI-TYPE RECEPTACLES IN NEMA 3R BOX AND ENCLOSURE COVER
7. CONTRACTOR TO PROVIDE AND INSTALL (7) 33KW INVERTER (BASIS OF DESIGN SMA SUNNY TRIPOWER CORE 1) COMPLETE WITH WALL MOUNTING KIT. INVERTER SHALL MEET UL1741, SUITABLE FOR GRID CONNECTIVITY AND BE CERTIFIED BY NY STATE DEPARTMENT OF PUBLIC SERVICE

1 ELECTRICAL ROOF PART PLAN-DISTRICT 18
3/32"=1'-0"

0 10'-8" 21'-4"

KEY PLAN

GENERAL CONSTRUCTION NOTES:

1. THE SCOPE OF WORK IS FOR THE RENOVATION & UPGRADE OF THE HVAC SYSTEM.
2. THE CONTRACTOR SHALL NOTE THAT BUILDING REMAINS OCCUPIED & ALL WORK SHALL BE CAREFULLY STAGE TO ENSURE THERE ARE NO DISTURBANCES TO NEITHER THE BUILDING OCCUPANTS OR THE BUILDING'S FUNCTION.
3. THE CONTRACTOR SHALL ABIDE BY THE NEW YORK CITY BUILDING RULES & ORDINANCES. CODE REQUIRED MEANS OF EGRESS MUST BE MAINTAINED.
4. THE CONTRACTOR SHALL MEET THE REQUIREMENT OF THE NYCEC 2011 WITH NYC AMENDMENTS FOR THE ELECTRICAL INSTALLATION.
5. CONTRACTOR SHALL BE FAMILIAR WITH THE PROCESS OF CONSTRUCTION & SHALL FOLLOW THE PROCEDURES DETAILED HEREIN, BEFORE UNDERGOING ANY WORK CONTRACTOR SHALL REVIEW THE CONSTRUCTION DOCUMENTS & HAVE SIGN OFF FROM THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
6. WORK SHALL NOT COMMENCE UNTIL THE CONTRACTOR FULLY UNDERSTANDS THE SCOPE OF WORK & ALL OF IT'S POTENTIAL HAZARDS. CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. WORDING SUCH AS "RE-ROUTE/CAP" IMPLIES THAT THE CONTRACTOR SHALL TEMPORARILY UN-INSTALL A SYSTEM, RE-ROUTE OR CAP & RE-INSTALL THE SYSTEM TO ITS INITIAL WORKING ORDER AFTER THE WORK HAS BEEN COMPLETED.
8. THE CONSTRUCTION NOTES INDICATED WITH CODED NUMBERS PROVIDE INFORMATION TO THE CONTRACTOR AS TO SPECIAL CONDITIONS, EQUIPMENT OR SCOPE WHICH NEEDS TO BE PART OF THE CONTRACT, THE EXACT WORK PROCEDURE, STAGING & SCHEDULING OF WORK IS THE RESPONSIBILITY OF THE CONTRACTOR.
9. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL, MECHANICAL & FIRE ALARM DRAWINGS FOR ADDITIONAL INFORMATION.
10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER. ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED. CONTRACTOR SHALL NOTE 'GEF' & 'MU' MECHANICAL UNITS ARE ELECTRICALLY INTERLOCKED. CONTRACTOR SHALL COORDINATE WORK ON THESE UNITS SIMULTANEOUSLY.
11. CONTRACTOR SHALL COORDINATE THE CONNECTION OF ALL HVAC EQUIPMENT WITH THE MECHANICAL & FIRE ALARM CONTRACTOR.
12. FOR LIGHTNING PROTECTION DETAILS, REFER TO DRAWING E-506.00.

POWER PLAN NOTES:

1. ALL NEW POWER BRANCH CIRCUITS SERVING THE FACILITY NO. 17 MECHANICAL UNITS ARE TO BE CONNECTED TO EXISTING 120/208V DISTRIBUTION PANELS, MOTOR CONTROL CENTER, RECEPTACLE PANELS & SHOP PANELS ON THIS FACILITY. CONTRACTOR TO REFER TO CODED NOTES FOR ADDITIONAL INFORMATION.
2. NEW CIRCUITS ARE DESIGNATED BY THE NUMBER SHOWN ADJACENT TO EACH MOTOR, JUNCTION BOX OR ELECTRICAL DISCONNECT. CONTRACTOR SHALL PROVIDE DEDICATED RACEWAY & WIRING FOR ALL NEW BRANCH CIRCUITS. CONTRACTOR TO PROVIDE & INSTALL LABELS & IDENTIFY SOURCE OF POWER AS PER SPECIFICATION.
3. CONTRACTOR TO PROVIDE NEW CONDUITS, WIRES, BOXES & SUPPORTS FOR NEW BRANCH CIRCUIT FOR THE NEW MECHANICAL EQUIPMENT. ALL NEW INSTALLATION SHALL BE IN ACCORDANCE WITH CODE REQUIREMENTS, DSNY GARAGE BUILDING GUIDELINES, STANDARDS & CONTRACT DOCUMENTS.
4. CONTRACTOR IS RESPONSIBLE FOR PATCHING/ REPAIR CEILING/WALL AS REQUIRED WHERE AFFECTED BY THE ELECTRICAL WORK.
5. CONTRACTOR SHALL NOTE THAT EXISTING CONDITIONS REQUIRE WORKING AT HEIGHTS IN ORDER TO ACCESS PULL BOXES, RACEWAY SYSTEM, ETC. INSTALL BELOW THE EXISTING CORRUGATED STEEL DECK, CONTRACTOR IS REQUIRE TO COORDINATE HIS WORK WITH DDC & DSNY TO ENSURE THE MOVEMENT OF LARGE EQUIPMENT IS NOT INTERRUPTED.
6. ALL EXPOSED CONDUIT SHALL BE RGS TYPE, MINUMUM SIZE 3/4". ALL EXPOSED JUNCTION BOXES & PULL BOXES SHALL BE NEMA 3R.
7. EMT IS ONLY ALLOWED FOR BRANCH CIRCUIT WIRING IN HUNG CEILING ONLY, REFER TO DRAWING FOR LOCATIONS.
8. REFER TO SHEET NOTES FOR ADDITIONAL INFORMATION.

SHEET KEYNOTES

1. CONTRACTOR TO PROVIDE AND INSTALL NEW 20A, 1Ø CIRCUIT BREAKER WITH 2#10AWG + 1#10AWG GROUND IN 3/4" RGS CONDUIT TO NEW MECHANICAL UNIT.
2. CONTRACTOR TO REFER TO ELECTRICAL ONE LINE DIAGRAM E-602 FOR ADDITIONAL INFORMATION.
3. CONTRACTOR TO PROVIDE & INSTALL SOLAR PHOTOVOLTAIC PANEL 435WATT SIMILAR TO SUNPOWER MODEL SRP-E20-435NE-WHT-D OR APPROVED EQUAL.
4. CONTRACTOR TO PROVIDE & INSTALL BALLASTED P.V. SUPPORT STRUCTURE ON ROOF. STRUCTURE SHALL COMPLY WITH THE FDNY FIRE CODE REQUIREMENTS FOR COLLAPSIBLE OR MOVABLE STRUCTURE.
5. CONTRACTOR TO PROVIDE & INSTALL 3/4" RGS CONDUIT FROM EACH SET OF PV STRINGS TO INVERTERS LOCATED IN THE LOWER ROOF. CONTRACTOR TO FURNISH & INSTALLED ALL CONDUIT SUPPORT ABOVE NEW ROOF.

5. CONTRACTOR SHALL BE FAMILIAR WITH THE PROCESS OF CONSTRUCTION & SHALL FOLLOW THE PROCEDURES DETAILED HEREIN. BEFORE UNDERGOING ANY WORK CONTRACTOR SHALL REVIEW THE CONSTRUCTION DOCUMENTS & HAVE SIGN OFF FROM THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
6. WORK SHALL NOT COMMENCE UNTIL THE CONTRACTOR FULLY UNDERSTANDS THE SCOPE OF WORK & ALL OF ITS POTENTIAL HAZARDS. CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. WORDING SUCH AS "RE-ROUTE/CAP" IMPLIES THAT THE CONTRACTOR SHALL TEMPORARILY UN-INSTALL A SYSTEM, RE-ROUTE OR CAP & RE-INSTALL THE SYSTEM TO ITS INITIAL WORKING ORDER AFTER THE WORK HAS BEEN COMPLETED.
8. THE CONSTRUCTION NOTES INDICATED WITH CODED NUMBERS PROVIDE INFORMATION TO THE CONTRACTOR AS TO SPECIAL CONDITIONS, EQUIPMENT OR SCOPE WHICH NEEDS TO BE PART OF THE CONTRACT. THE EXACT WORK PROCEDURE, STAGING & SCHEDULING OF WORK IS THE RESPONSIBILITY OF THE CONTRACTOR.
9. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL, MECHANICAL & FIRE ALARM DRAWINGS FOR ADDITIONAL INFORMATION.
10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER, ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED.

LIGHTING PLAN NOTES:

1. ALL NEW POWER BRANCH CIRCUITS SHALL BE CONNECTED TO EXISTING 120/208V PANEL U.O.N.
2. ALL NEW WORK SHALL MATCH EXISTING BUILDING STANDARD'S & SHALL BE CARRIED OUT IN STRICT COMPLIANCE OF N.E.C. & REGULATIONS OF BUILDING & AUTHORITIES HAVING JURISDICTION.
3. CIRCUITS ARE DESIGNATED BY THE NUMBER SHOWN ADJACENT TO EACH LIGHTING OR JUNCTION BOX. PROVIDE ALL CONDUITS, WIRES, BOXES & SUPPORTS. INSTALLATION SHALL BE IN ACCORDANCE WITH CODE REQUIREMENTS, BUILDING STANDARDS & CONTRACT DOCUMENTS.
4. ALL BRANCH CIRCUIT WIRING SHALL BE RUN IN CONDUIT EXPOSED IN WALLS & CEILING, U.O.N.
5. ELECTRICAL CONTRACTOR SHALL REVIEW & COORDINATE WITH OTHER TRADES DRAWINGS FOR THE EXACT LOCATION EQUIPMENT PRIOR TO COMMENCING WORK.
6. ALL NEW POWER CONDUITS PART OF PART OF THIS CONTRACT SHALL BE RAN EXPOSED AS CLOSED TO BUILDING STRUCTURE AS POSSIBLE, THE ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR LOCATION CONDUIT IN FIELD, LOCATION & QUANTITY OF PULL BOXES, CONDULETS, ETC SHALL BE DETERMINED BY THE CONTRACTOR BASED ON CONDUIT RUNS & TURNS. IT IS THE CONTRACTOR RESPONSIBILITY TO PROVIDE AS A MINIMUM THE NUMBER OF PULL BOXES IDENTIFIED ON THE CONTRACT DOCUMENT. CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. CONTRACTOR IS RESPONSIBLE FOR PATCHING/ REPAIR CEILING/WALL AS REQUIRED WHERE AFFECTED BY THE ELECTRICAL WORK.
8. ALL EXPOSED CONDUIT SHALL BE RGS TYPE, MINIMUM SIZE 3/4", ALL EXPOSED JUNCTION BOXES & PULL BOXES SHALL BE NEMA 3R.
9. EMT IS ONLY ALLOWED FOR BRANCH CIRCUIT WIRING IN HUNG CEILING ONLY, REFER TO DRAWING FOR LOCATIONS.
10. CONTRACTOR IS RESPONSIBLE FOR STORING, SECURING ALL EXISTING LIGHTING FIXTURES. ANY LIGHTING FIXTURE DAMAGED DUE TO CONTRACTORS SUPERVISION SHALL BE REPLACED AT THE CONTRACTORS EXPENSE WITH A NEW FIXTURE TO MATCH THE EXISTING.

SHEET KEYNOTES

1. EXISTING LIGHTING AFFECTED BY THE MECHANICAL REPLACEMENT OF DUCTWORK & DIFFUSERS, CONTRACTOR IS REQUIRED TO DISCONNECT, REMOVE AND STORE EXISTING LIGHTING FIXTURES AREA AFFECTED BY THE DUCTWORK.
2. CONTRACTOR SHALL CLEAN, RE-LAMP & REINSTALL ALL LIGHTING FIXTURES AS THE COMPLETION OF THE MECHANICAL INSTALLATION. EXISTING CONTROLS TO REMAIN. COORDINATE WITH OTHER TRADES AS REQUIRED.
3. CONTRACTOR TO PROVIDE AND INSTALL NEW VAPOR TIGHT LIGHTING FIXTURES IN THIS AREA WITH ASSOCIATED CONTROLS.

LIGHTING FIXTURE SCHEDULE

0 10'-8" 21'-4"

KEY PLAN

LINE LEGEND

EXISTING TO REMAIN

EXISTING TO BE REINSTALL

GENERAL CONSTRUCTION NOTES:

1. THE SCOPE OF WORK IS FOR THE RENOVATION & UPGRADE OF THE HVAC SYSTEM.
2. THE CONTRACTOR SHALL NOTE THAT BUILDING REMAINS OCCUPIED & ALL WORK SHALL BE CAREFULLY STAGE TO ENSURE THERE ARE NO DISTURBANCES TO NEITHER THE BUILDING OCCUPANTS OR THE BUILDING'S FUNCTION.
3. THE CONTRACTOR SHALL ABIDE BY THE NEW YORK CITY BUILDING RULES & ORDINANCES, CODE REQUIRED MEANS OF EGRESS MUST BE MAINTAINED.
4. THE CONTRACTOR SHALL MEET THE REQUIREMENT OF THE NYCEC 2011 WITH NYC AMENDMENTS FOR THE ELECTRICAL INSTALLATION.
5. CONTRACTOR SHALL BE FAMILIAR WITH THE PROCESS OF CONSTRUCTION & SHALL FOLLOW THE PROCEDURES DETAILED HEREIN. BEFORE UNDERGOING ANY WORK CONTRACTOR SHALL REVIEW THE CONSTRUCTION DOCUMENTS & HAVE SIGN OFF FROM THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
6. WORK SHALL NOT COMMENCE UNTIL THE CONTRACTOR FULLY UNDERSTANDS THE SCOPE OF WORK & ALL OF ITS POTENTIAL HAZARDS. CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. WORDING SUCH AS "RE-ROUTE/CAP" IMPLIES THAT THE CONTRACTOR SHALL TEMPORARILY UN-INSTALL A SYSTEM, RE-ROUTE OR CAP & RE-INSTALL THE SYSTEM TO ITS INITIAL WORKING ORDER AFTER THE WORK HAS BEEN COMPLETED.
8. THE CONSTRUCTION NOTES INDICATED WITH CODED NUMBERS PROVIDE INFORMATION TO THE CONTRACTOR AS TO SPECIAL CONDITIONS, EQUIPMENT OR SCOPE WHICH NEEDS TO BE PART OF THE CONTRACT. THE EXACT WORK PROCEDURE, STAGING & SCHEDULING OF WORK IS THE RESPONSIBILITY OF THE CONTRACTOR.
9. THE CONTRACTOR SHALL REFER TO THE ARCHITECTURAL, MECHANICAL & FIRE ALARM DRAWINGS FOR ADDITIONAL INFORMATION.
10. CONTRACTOR TO COORDINATE ALL REMOVAL OF EQUIPMENT WITH MECHANICAL CONTRACTOR, DDC & DSNY FACILITY ENGINEER, ALL LOCK OUT & TAG OUT PROCEDURES MUST BE OBSERVED.

LIGHTING PLAN NOTES:

1. ALL NEW POWER BRANCH CIRCUITS SHALL BE CONNECTED TO EXISTING 120/208V PANEL U.O.N.
2. ALL NEW WORK SHALL MATCH EXISTING BUILDING STANDARD'S & SHALL BE CARRIED OUT IN STRICT COMPLIANCE OF N.E.C. & REGULATIONS OF BUILDING & AUTHORITIES HAVING JURISDICTION.
3. CIRCUITS ARE DESIGNATED BY THE NUMBER SHOWN ADJACENT TO EACH LIGHTING OR JUNCTION BOX, PROVIDE ALL CONDUITS, WIRES, BOXES & SUPPORTS. INSTALLATION SHALL BE IN ACCORDANCE WITH CODE REQUIREMENTS, BUILDING STANDARDS & CONTRACT DOCUMENTS.
4. ALL BRANCH CIRCUIT WIRING SHALL BE RUN IN CONDUIT EXPOSED IN WALLS & CEILING, U.O.N.
5. ELECTRICAL CONTRACTOR SHALL REVIEW & COORDINATE WITH OTHER TRADES DRAWINGS FOR THE EXACT LOCATION EQUIPMENT PRIOR TO COMMENCING WORK.
6. ALL NEW POWER CONDUITS PART OF PART OF THIS CONTRACT SHALL BE RAN EXPOSED AS CLOSED TO BUILDING STRUCTURE AS POSSIBLE. THE ELECTRICAL CONTRACTOR IS RESPONSIBLE FOR LOCATION CONDUIT IN FIELD, LOCATION & QUANTITY OF PULL BOXES, CONDULETS, ETC SHALL BE DETERMINED BY THE CONTRACTOR BASED ON CONDUIT RUNS & TURNS, IT IS THE CONTRACTOR RESPONSIBILITY TO PROVIDE AS A MINIMUM THE NUMBER OF PULL BOXES IDENTIFIED ON THE CONTRACT DOCUMENT, CONTRACTOR SHALL START WORK ONLY WHEN GIVEN DIRECTION TO PROCEED BY THE DDC & THE NYC DEPARTMENT OF BUILDINGS.
7. CONTRACTOR IS RESPONSIBLE FOR PATCHING/ REPAIR CEILING/WALL AS REQUIRED WHERE AFFECTED BY THE ELECTRICAL WORK.
8. ALL EXPOSED CONDUIT SHALL BE RGS TYPE, MINIMUM SIZE 3/4", ALL EXPOSED JUNCTION BOXES & PULL BOXES SHALL BE NEMA 3R.
9. EMT IS ONLY ALLOWED FOR BRANCH CIRCUIT WIRING IN HUNG CEILING ONLY, REFER TO DRAWING FOR LOCATIONS.
10. CONTRACTOR IS RESPONSIBLE FOR STORING, SECURING ALL EXISTING LIGHTING FIXTURES. ANY LIGHTING FIXTURE DAMAGED DUE TO CONTRACTORS SUPERVISION SHALL BE REPLACED AT THE CONTRACTORS EXPENSE WITH A NEW FIXTURE TO MATCH THE EXISTING.

SHEET KEYNOTES

1. EXISTING LIGHTING AFFECTED BY THE MECHANICAL REPLACEMENT OF DUCTWORK & DIFFUSERS, CONTRACTOR IS REQUIRED TO DISCONNECT, REMOVE AND STORE EXISTING LIGHTING FIXTURES AREA AFFECTED BY THE DUCTWORK.
2. CONTRACTOR SHALL CLEAN, RE-LAMP & REINSTALL ALL LIGHTING FIXTURES AS THE COMPLETION OF THE MECHANICAL INSTALLATION. EXISTING CONTROLS TO REMAIN, COORDINATE WITH OTHER TRADES AS REQUIRED.

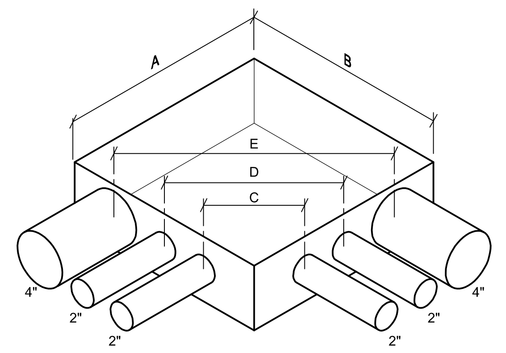
1 PULLBOX EXTENSION

SCALE: NONE

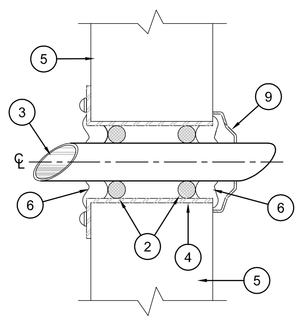


EXAMPLE:
L = 4" x 8 = 32"
W = 4"+4"+1"+6 = 15"
D = 4" x 1.5 = 6"

NOTE:
SIZES MAY NEED TO BE INCREASED TO MEET REQUIREMENTS OF NEC 370-28, COMPLY WITH STANDARD BOX SIZES OR FOR SHIELDED CABLES.

2 PULL BOX SIZING ('STRAIGHT' PULLS) LESS THAN 600V

SCALE: NONE

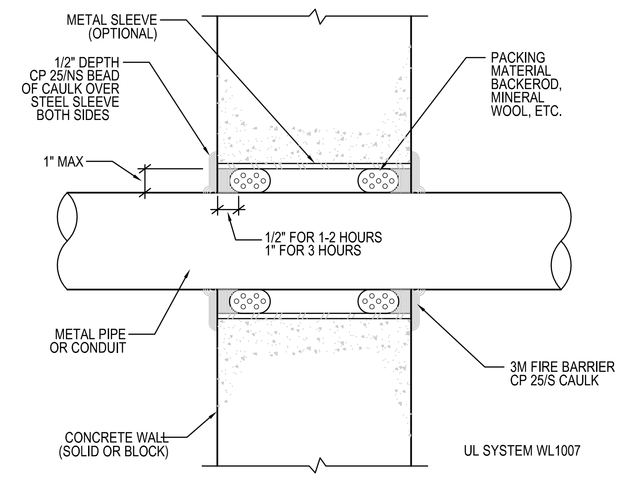


EXAMPLE:
A = (6 x 4") +2"+2" = 28"
B = (6 x 4") +2"+2" = 28"
C = (6 x 2") = 12" MINIMUM
D = (6 x 2") = 12" MINIMUM
E = (6 x 4") = 24"

NOTE:
SIZES MAY NEED TO BE INCREASED TO MEET REQUIREMENTS OF NEC 370-28, COMPLY WITH STANDARD BOX SIZES OR FOR SHIELDED CABLES.

3 PULL BOX SIZING ('L' PULLS) LESS THAN 600V

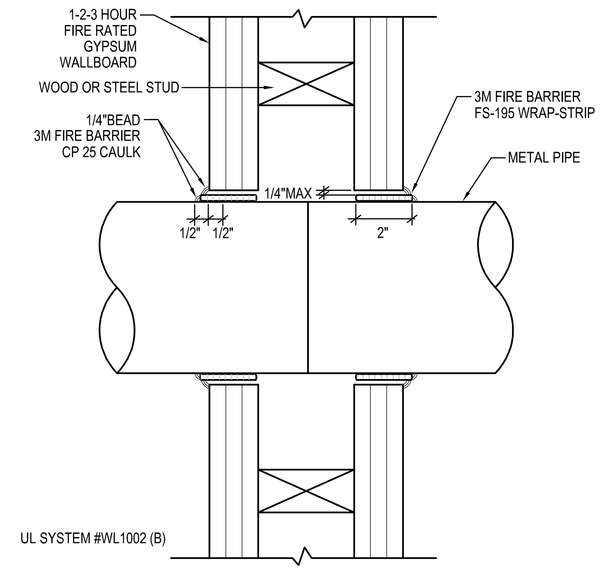
SCALE: NONE



CONDUIT & SLEEVE THRU WALL

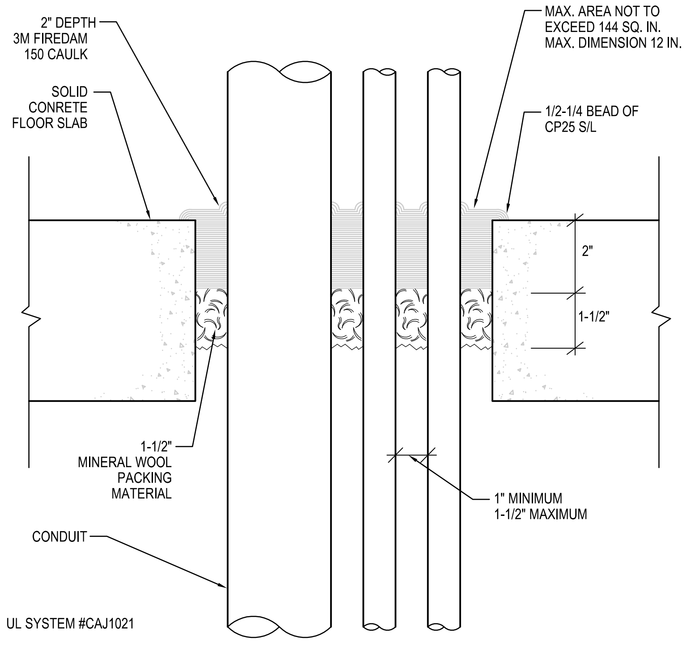
NOTES:

1. 6" MAXIMUM DIAMETER SLEEVE. SLEEVE TO BE SIZED TO ALLOW ~8" OF ANNULAR SPACE AROUND CONDUIT.
2. BACKER ROD SET SO THAT TOP OF ROD IS 1" INTO OPENING.
3. STEEL CONDUIT (4" MAXIMUM) CENTERED IN OPENING. MAXIMUM (1) ONE CONDUIT PER OPENING.
4. STEEL PIPE SLEEVE WITH ANCHOR TABS ON ONE SIDE SECURED TO WALL. PROVIDE SLEEVES FOR ALL CONDUITS AT EXTERIOR WALL ABOVE GRADE AND ALL CONDUITS 1.25" TO 4" DIAMETER THROUGH INTERIOR WALLS. FOR CONDUITS LESS THAN 1.25" PENETRATING FIRE AND/OR SMOKE PARTITIONS ON BUILDING INTERIOR, SLEEVE MAY BE OMITTED.
5. MASONRY OR CONCRETE PARTITION. REFER TO ARCHITECTURAL DRAWINGS.
6. INTUMESCENT ELASTOMERIC CAULKING COMPOUND FORCED INTO ANNULAR SPACE WITH A MINIMUM ~4" BEAD APPLIED TO PIPE AND OVER EDGE OF SLEEVE AT SLEEVE/WALL JOINT.
9. ESCUTCHEON AT WALL CONDUITS WHERE EXPOSED TO VIEW.



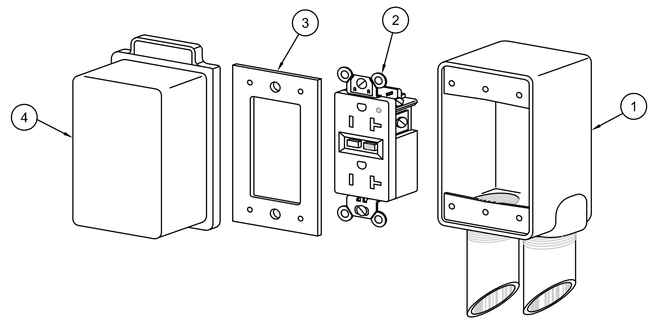
4 CABLE & CONDUIT PENETRATIONS

SCALE: NONE



5 FIREPROOFING THROUGH CONCRETE WALL

SCALE: NONE

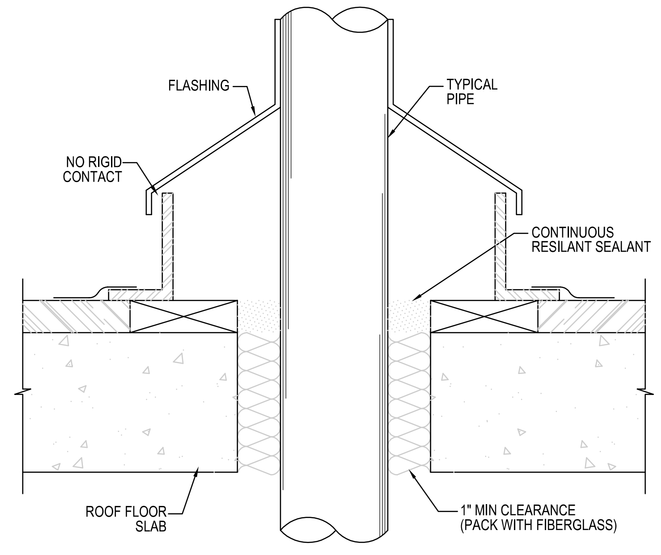


6 FIREPROOFING THROUGH GYPSUM WALL

SCALE: NONE

7 FIREPROOFING THRU CONCRETE SLAB

SCALE: NONE



NOTES:

1. CAST OUTLET BOX, FERROUS METAL CONSTRUCTION, GALVANIZED WITH HUBS FOR RIGID CONDUIT, (MINIMUM 2 HUBS, REFER TO PLANS FOR NUMBER AND LOCATIONS). PROVIDE PLUGS FOR UNUSED HUBS.
2. GROUND FAULT CIRCUIT INTERRUPTING RECEPTACLE.
3. NEOPRENE GASKET PRECUT TO FIT RECEPTACLE AND BOX.
4. CAST ALUMINUM EXTRA DEEP LIFT COVER RAINTIGHT WHILE IN USE.

8 WEATHERPROOF OUTLET INSTALLATION

SCALE: NONE

9 TYPICAL ROOF PENETRATION DETAIL

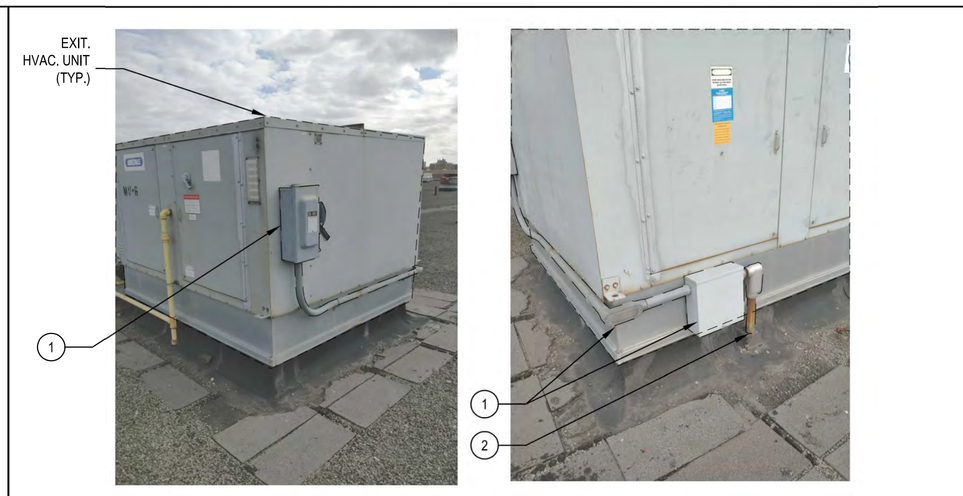
NOTES:

1. TYPEWRITTEN CIRCUIT SCHEDULE BEHIND CLEAR PLASTIC COVER ON INSIDE OF DOOR.
2. HINGED LOCKABLE DOOR WITHIN DOOR, FLUSH CATCH AND LOCK. ALL CABINETS KEYED ALIKE. KEYS TO MATCH EXISTING PANELBOARD WHERE ADDING TO EXISTING FACILITY.
3. WHERE INDICATED ON SCHEDULE PROVIDE VERTICALLY MOUNTED MAIN BREAKER AHEAD OF PANEL BUS.
4. FLUSH OR SURFACE MOUNTED PANELBOARD AS INDICATED ON DRAWINGS.
5. FACTORY INSTALLED METAL CIRCUIT NUMBERS SCREWED OR RIVETED TO TRIM.
6. LAMINATED, ENGRAVED NAME PLATE (MOUNTED UNDER DOOR IN AREAS EXPOSED TO PUBLIC VIEW) REFER TO SPECIFICATIONS "IDENTIFICATIONS AND WARNING SIGNS" FOR ADDITIONAL REQUIREMENTS.

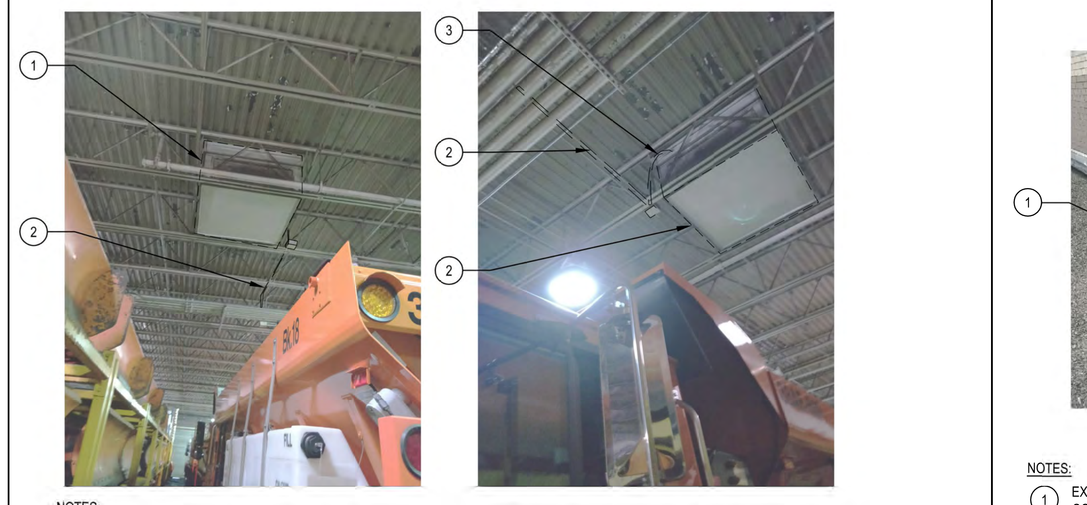


10 TYPICAL PANELBOARD

SCALE: NONE

11 FREE STANDING DISCONNECT

SCALE: NONE



NOTES:

1. EXISTING HVAC UNITS TO BE REPLACED. THE ELECTRICAL CONTRACTOR SHALL TURN-OFF, DISCONNECT POWER TO THE EXISTING UNITS & REMOVE CONDUIT AND CABLE TO SOURCE PANEL. MECHANICAL CONTRACTOR TO REMOVE UNIT.
2. CONTRACTOR TO REMOVE CONDUIT STUB-UP & ALL ASSOCIATED CONDUIT SUPPORTS.

12 EXIST. CONDITIONS CONNECTION TO 'MU' UNITS AT ROOF

SCALE: NONE

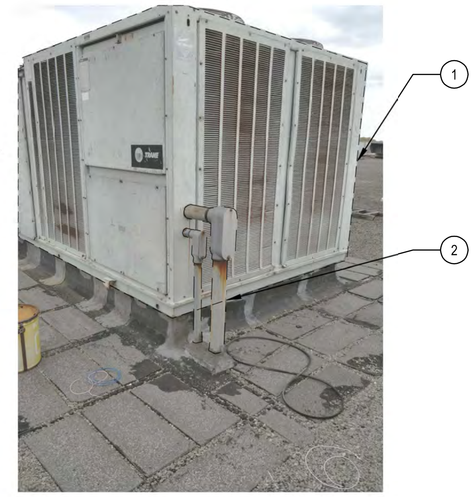
NOTES:

1. EXISTING HVAC UNITS TO BE REPLACED. THE ELECTRICAL CONTRACTOR SHALL TURN-OFF, DISCONNECT POWER TO THE EXISTING UNITS & REMOVE CONDUIT AND CABLE TO SOURCE PANEL. MECHANICAL CONTRACTOR TO REMOVE UNIT.
2. CONTRACTOR TO REMOVE ALL RACEWAY, JUNCTION BOXES & ASSOCIATED CONDUIT SUPPORTS INSTALLED ON THE STRUCTURAL TRUSS SYSTEM
3. CONTRACTOR TO REMOVE CONDUIT FLEX CONNECTION & STUB-UP ON ROOF

13 EXIST. CONDITIONS CONNECTION TO FANS UNITS AT GARAGE

SCALE: NONE

NOTES:



1. EXISTING HVAC UNITS TO BE REPLACED. THE ELECTRICAL CONTRACTOR SHALL TURN-OFF, DISCONNECT POWER TO THE EXISTING UNITS & REMOVE CONDUIT AND CABLE TO SOURCE PANEL. MECHANICAL CONTRACTOR TO REMOVE UNIT.

14 EXIST. CONDITIONS CONNECTION TO FANS UNITS AT GARAGE

SCALE: NONE

NOTES:

1. EXISTING HVAC-2 UNIT TO BE REPLACED. THE ELECTRICAL CONTRACTOR SHALL TURN-OFF, DISCONNECT POWER TO THE EXISTING UNITS & REMOVE CONDUIT AND CABLE TO SOURCE PANEL. MECHANICAL CONTRACTOR TO REMOVE UNIT.
2. CONTRACTOR TO REMOVE ALL RACEWAY, JUNCTION BOXES & ASSOCIATED CONDUIT SUPPORTS INSTALLED ON THE STRUCTURAL TRUSS SYSTEM IN THE GARAGE AREA.

15 EXIST. CONDITIONS CONNECTION TO 'HVAC-2' UNITS AT ROOF

SCALE: NONE

PULL BOX SIZING REQUIREMENT				
MAXIMUM CONDUIT SIZE (TRADE SIZE)	BOX SIZE WIDTH (IN)	BOX SIZE LENGTH (IN)	BOX SIZE DEPTH (IN)	ADD TO BOX SIZE FOR EACH ADDITIONAL CONDUIT (IN)
1	4	16	3	2
1 1/4	6	20	3	3
1 1/2	8	27	4	4
2	8	36	4	5
3	12	54	6	6
4	15	60	8	8

*1 ASSUMES INDUSTRY STANDARD AND NEC CODE IS TO DESIGN FOR A MAXIMUM OF 40% FILL. THE ACTUAL NUMBER OF CABLES WHICH CAN BE INSTALLED IN A PARTICULAR CONDUIT CAN BE SLIGHTLY MORE OR SIGNIFICANTLY LESS DEPENDING UPON FOLLOWING:

1. ALL CABLES MUST BE PULLED AT THE SAME TIME TO ACHIEVE THE GREATER FILL LEVELS
2. CONDUIT RUNS SHOULD BE LESS THAN 50 FEET IN LENGTH (REDUCE THE NUMBER OF CABLES BY 15% FOR CONDUIT RUNS BETWEEN 50 AND 100 FEET)
3. PULL BOXES SHOULD BE PLACED EVERY 100 FEET OR IF MORE THAN 180 DEGREES OF BENDS ARE INSTALLED IN THE CONDUIT
4. CONDUITS SHALL ENTER AND EXIT PULL BOXES IN A CONTINUOUS DIRECTION. PULL BOXES ARE NOT TO BE USED FOR 90 DEGREE BENDS

PULL BOX SHALL BE USED IF ANY OF THE FOLLOWING ARE MET:

1. ANY CONDUIT RUN THAT EXCEED 100 FEET.
2. ANY CONDUIT RUN THAT REQUIRE MORE THAN (2) 90 DEGREE BENDS.
3. PULLBOX MUST BE LOCATED TO PROVIDE FREE AND EASY ACCESS.
4. IN STRAIGHT SECTIONS OF CONDUIT ONLY (PULLBOXES SHOULD NEVER BE USED FOR RIGHT ANGLE BEND) AND MUST BE INSTALLED TO ALLOW CALE TO PASS THROUGH FROM ONE CONDUIT TO ANOTHER IN DIRECT LINE.
5. PULLBOXES MUST HAVE A LENGTH 8 TIMES THE TRADE-SIZE DIAMETER OF LARGEST CONDUIT PULLBOX SIZING.
6. COMPLY WITH NATIONAL ELECTRICAL CODE.

CONDUIT REQUIREMENT CABLE FILL FOR CAT 6 CABLE (OD SIZE 0.220) *1		
CONDUIT TRADE SIZE	CONDUIT ID (in)	40% FILL # OF CABLES
3/4"	0.824	5
1"	1.02	8
1-1/4"	1.275	13
1-1/2"	1.538	19
2"	2.04	34
3"	3	74
4"	4	132

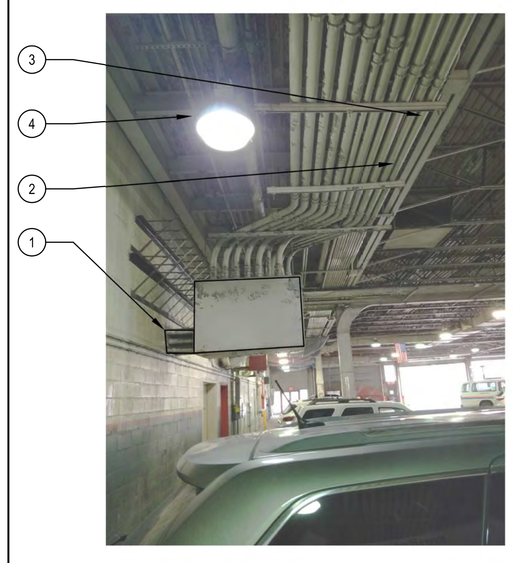
CONDUIT REQUIREMENT CABLE FILL FOR CAT 6A CABLE (OD SIZE 0.275) *1		
CONDUIT TRADE SIZE	CONDUIT ID (in)	40% FILL # OF CABLES
3/4"	0.824	3
1"	1.02	5
1-1/4"	1.275	8
1-1/2"	1.538	12
2"	2.04	22
3"	3	47
4"	4	84

NOTES:

1. PULL BOX AND CONDUIT SHALL BE FURNISHED, INSTALLED BY ELECTRICAL CONTRACTOR
2. NOTES AND CHARTS ARE FOR REFERENCE ONLY.

16 COMMUNICATION CONDUIT & PULL BOX NOTES

SCALE: NONE



NOTES:

1. EXISTING PULL BOX ON FACILITY No. 17 GARAGE AREA. PULL BOX USED TO CONNECT EXISTING DISTRIBUTION BOARD 'DPA' IN THE MAIN ELECTRICAL SERVICE ROOM TO FACILITY No.18
2. EXISTING CONDUIT BANK WHICH CONNECT TO FACILITY No.18 TO REMAIN. CONTRACTOR SHALL COORDINATE ALL ACCESS TO PULL BOXES WITH DDC & DSNY PROJECT MANAGER.
3. EXISTING CONDUITS FEEDING EXISTING UNITS HVAC-2 TO BE REPLACED WITH NEW. REFER TO FLOOR PLANS FOR ADDITIONAL INFORMATION.
4. EXISTING CONDUITS FEEDING EXISTING UNITS AND LIGHTING TO REMAIN. CONTRACTOR SHALL COORDINATE ALL ACCESS AND WORK ON GARAGE AREA WITH DDC & DSNY PROJECT MANAGERS. REFER TO DRAWINGS FOR ADDITIONAL INFORMATION.

17 EXIST. CONDITIONS (FACILITY No.17) CONDUIT RUNS & PULL BOX

SCALE: NONE

NOTES:

1. EXISTING PULL BOX ON FACILITY No. 17 GARAGE AREA. PULL BOX USED TO CONNECT EXISTING DISTRIBUTION BOARD 'DPB' IN THE MAIN ELECTRICAL SERVICE ROOM TO FACILITY No.18
2. EXISTING CONDUIT BANK WHICH CONNECT TO FACILITY No.18 TO REMAIN. CONTRACTOR SHALL COORDINATE ALL ACCESS TO PULL BOXES WITH DDC & DSNY PROJECT MANAGER.
3. EXISTING CONDUITS FEEDING EXISTING UNITS HVAC-2 TO BE REPLACED WITH NEW. REFER TO FLOOR PLANS FOR ADDITIONAL INFORMATION.
4. EXISTING CONDUITS FEEDING EXISTING UNITS AND LIGHTING TO REMAIN. CONTRACTOR SHALL COORDINATE ALL ACCESS AND WORK ON GARAGE AREA WITH DDC & DSNY PROJECT MANAGERS. REFER TO DRAWINGS FOR ADDITIONAL INFORMATION.

LIGHTNING PROTECTION NOTES

1. ALL MATERIALS SHOWN ARE MANUFACTURED BY HEARY BROS. LIGHTNING PROTECTION CO., INC. ARE SHOWN FOR INFORMATION ONLY, ALL MODEL EQUIPMENT, MATERIAL COULD BE SUBSTITUTED AS LONG AS THEY ARE OF SIMILAR QUALITY, MATERIAL AND MEET THE REQUIREMENT OF THE SPECIFICATION.

2. THE LIGHTNING PROTECTION SYSTEM AS SHOWN ON DRAWING HAS BEEN DESIGNED IN ACCORDANCE WITH UL96A & NFPA-780 LIGHTNING PROTECTION SYSTEM STANDARDS.

3. CONDUCTORS SHALL MAINTAIN A HORIZONTAL OR DOWNWARD COURSE, FREE FROM "U" OR "V" (DOWN AND UP) POCKETS.

4. NO BEND OF CONDUCTOR SHALL FORM AN ANGLE OF LESS THAN 90° NOR SHALL HAVE A RADIUS OF BEND LESS THAN 8".

5. 24" AIR TERMINALS SHALL BE SPACED 25'-0" MAXIMUM AROUND THE ROOF PERIMETER AND/OR ALONG ROOF RIDGES. AIR TERMINALS SHALL BE LOCATED WITHIN 2'-0" OF OUTSIDE CORNERS.

6. AIR TERMINALS SHALL BE SPACED EVERY 50'-0" MAXIMUM IN CENTER ROOF AREAS.

7. ACTUAL JOBSITE CONDITIONS MAY REQUIRE SLIGHT ALTERATIONS IN AIR TERMINAL, DOWN CONDUCTOR AND GROUND ROD LOCATIONS.

8. BARE COPPER MATERIALS SHALL NOT BE INSTALLED ON ALUMINUM OR GALVALUM SURFACES, AND ALUMINUM MATERIALS SHALL NOT BE INSTALLED ON COPPER SURFACES.

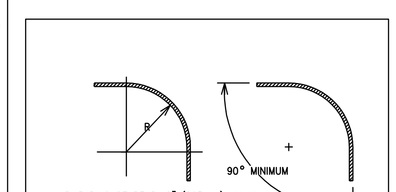
9. ALL LIGHTNING PROTECTION CONDUCTORS SHALL BE FASTENED EVERY 3'-0" MAX.

10. ALL BOLTS ON BOLT-PRESSURE CONNECTORS SHALL BE TORQUED AT 150 FT-LB.

11. ALL CONNECTIONS MUST BE USED WITH UL LISTED CABLE OF SAME METAL TYPE.

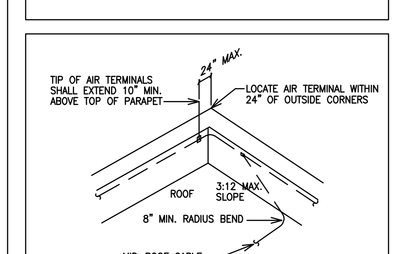
12. METALLIC BODIES OF INDUCTANCE SITUATED WITHIN 6'-0" OF A LIGHTNING CONDUCTOR OR ANOTHER BONDED METAL BODY SHALL BE INTERCONNECTED TO THE LIGHTNING CONDUCTOR SYSTEM, UNLESS INHERENTLY GROUNDED.

13. BOND ALL LARGE METAL BODIES TO THE MAIN LIGHTNING PROTECTION CONDUCTOR. (I.E.; EXHAUST FANS, ROOF VENTS, METAL COOLING TOWERS, HVAC UNITS, LADDERS, RAILINGS, ANTENNAS, SKYLIGHTS, METAL STACKS AND ANY OTHER LARGE METAL BODY WHOSE HEIGHT EXCEEDS THAT OF THE AIR TERMINAL IN USE, UNLESS PROTECTED BY HIGHER ROOF ELEVATIONS).



14. CONNECTIONS TO GROUND RODS SHALL BE MADE AT A POINT NOT LESS THAN 1'-0" BELOW FINISHED GRADE AND 2'-0" AWAY FROM FOUNDATION WALL.

15. BOND TO WATERLINES (DOMESTIC & FIRE).



16. A LIGHTNING ARRESTOR, PROTECTOR OR ANTENNA DISCHARGE UNIT SHALL BE INSTALLED ON EACH ELECTRIC AND TELEPHONE SERVICE AND RADIO AND TELEVISION ANTENNA LEAD-IN BY THE ELECTRICAL CONTRACTOR, IN ACCORDANCE WITH NFPA-70.

17. TRANSIENT VOLTAGE SURGE SUPPRESSION (TVSS) OF SERVICES SHALL BE PROVIDED BY THE ELECTRICAL CONTRACTOR. (I.E. COMPUTERS, COPIERS, TELEPHONE, ETC.).

18. PROVIDE UL MASTER LABEL CERTIFICATION UPON COMPLETION OF INSTALLATION.

8" MIN. RADIUS BEND IN CABLE

AIR TERMINALS SHALL BE LOCATED WITHIN 24" OF OUTSIDE CORNERS

12. NOT USED
13. CONTRACTOR SHALL PROVIDE AND INSTALL 3#8AWG + 1#10AWG GRD IN 3/4" RGS CONDUIT. 2.05% V.D
14. CONTRACTOR SHALL PROVIDE AND INSTALL FINAL CONNECTION TO UNIT SUPPLIED DISCONNECT. REFER TO ONE LINE DIAGRAM FOR NEW SWITCH AND FUSE TO BE FURNISH AND INSTALLED BY ELECTRICAL CONTRACTOR.
15. CONTRACTOR SHALL PROVIDE AND INSTALL NEW 2 SETS 3#3AWG + 1#8AWG GRD IN 1-1/4" RGS CONDUIT. 2.35% V.D.
16. CONTRACTOR SHALL PROVIDE AND INSTALL NEW 3#3AWG + 1#8AWG GRD IN 1-1/4" RGS CONDUIT. 2.7% V.D.
17. CONTRACTOR SHALL PROVIDE AND INSTALL NEW 3#3AWG + 1#8AWG GRD IN 1-1/4" RGS CONDUIT. 2.0% V.D.
18. CONTRACTOR SHALL PROVIDE AND INSTALL FINAL CONNECTION TO UNIT SUPPLIED DISCONNECT. REFER TO ONE LINE DIAGRAM FOR NEW SWITCH AND FUSE TO BE FURNISH AND INSTALLED BY ELECTRICAL CONTRACTOR.
19. NOT USED
20. NOT USED
21. CONTRACTOR SHALL REFER TO ELECTRICAL PLANS FOR ADDITIONAL REQUIREMENTS OF NEW CIRCUIT BREAKERS, WIRE & CONDUIT TO NEW MECHANICAL UNITS AS PART OF THIS SCOPE.
22. NOT USED
23. NOT USED
24. CONTRACTOR SHALL PROVIDE AND INSTALL NEW 30AS/20AF, 208V, 3Ø, FOR NEW MECHANICAL UNITS.

ELECTRICAL CODED NOTES (#)

1. NOT USED
2. CONTRACTOR TO COORDINATE LOCATION OF TRANSFORMER VAULT WITH CONED AS SHOWN ON CIVIL DRAWINGS. CONTRACTOR SHALL PROVIDE WIRING AND DUCKBANK INFRASTRUCTURE FROM TRANSFORMER VAULT TO SERVICE ENTRY BOX (SEB) AS SHOWN ON DETAIL 30 ON E-504.
3. CONTRACTOR TO PROVIDE SERVICE END BOX BUILD TO CONED STANDARDS WITH PROVISION FOR 12 LIMITER LUGS PER PHASE AND NEUTRAL, BOTTOM ENTRY AND TOP EXIT, BOX MOUNTED ON FLOOR WITH CONDUIT STUB-UPS FROM BELOW. PROVIDE CROWN BOX TO FACILITATE INSTALLATION OF FEEDERS FROM SEB TO SSB-2.
4. CONTRACTOR TO PROVIDE NEW SERVICE SWITCHBOARD 2 (SSB-2) AS SHOWN, COMPLETE WITH METERING AND INSTRUMENTATION SECTION AS SPECIFIED BY CONED SPEC 377. PROVIDE MAIN SERVICE DISCONNECT AND DISTRIBUTION SECTION AS SHOWN, PROVIDE INTEGRATED SURGE PROTECTIVE DEVICE PER SPECIFICATION 26 24 13. METERING EQUIPMENT AND DEVICES SHALL BE PROVIDED BY CONED AND INSTALLED BY THE CONTRACTOR.
5. CONTRACTOR TO PROVIDE AND INSTALL NEW 100A MCB, 120/208V, 3Ø, 42 POLE PANEL 'PS'.
6. CONTRACTOR TO PROVIDE AND INSTALL 4#2AWG + 1#8AWG GRD IN 1-1/2" RGS CONDUIT.
7. CONTRACTOR TO PROVIDE AND INSTALL 3#10AWG + 1#10AWG GRD IN 3/4" RGS CONDUIT. 2.06% V.D.
8. CONTRACTOR TO PROVIDE AND INSTALL NEW 2#10AWG + 1#10AWG GRD IN 3/4" RGS CONDUIT. 0.5% V.D.
9. CONTRACTOR TO PROVIDE AND INSTALL (1) 600A BUS, 500A MCB PANELBOARD.
10. CONTRACTOR TO PROVIDE 4 SETS OF 3 #500 KCMIL + 1 #2/0 AWG GROUND, 75°C (CU) IN 3-1/2" RGS CONDUIT.
11. CONTRACTOR TO PROVIDE AND INSTALL 33 KW SMA SUNNY TRI-POWER CORE1 INVERTER WITH OVERCURRENT PROTECTION AND ASSOCIATED CONTROLS (TOTAL OF 28). PROVIDE SHIELDED CATEGORY 6 CABLE IN 3/4" TO INTERCONNECT ALL INVERTERS TO CONTROL CENTER IN ELECTRICAL ROOM. PROVIDE OVERCURRENT AC AND DC CURRENT LIMITING FUSES AS SPECIFIED BY THE MANUFACTURER.
12. CONTRACTOR TO PROVIDE 3 #2 AWG + 1 #8 AWG GROUND, 75°C (CU) IN 1 -1/2" RGS CONDUIT. 1.5% V.D.
13. CONTRACTOR TO PROVIDE 3 #2/0 AWG + 1 #6 AWG GROUND, 75°C (CU) IN 2" RGS CONDUIT. 1.5% V.D.
14. CONTRACTOR TO PROVIDE AND INSTALL PHOTOVOLTAIC PANELS AS SHOWN MODEL: SPR-435NE-WHT-D OR APPROVED EQUAL.
15. CONTRACTOR TO PROVIDE 2#12AWG + 1#12AWG GRD, 75°C (CU) IN 3/4" RGS CONDUIT. PROVIDE MANUFACTURER REQUIRED CONNECTOR AS REQUIRED.
16. CONTRACTOR TO PROVIDE 2 SETS OF 4 #300 KCMIL + 1 #1 AWG GROUND, 75°C (CU) IN 3-1/2" .

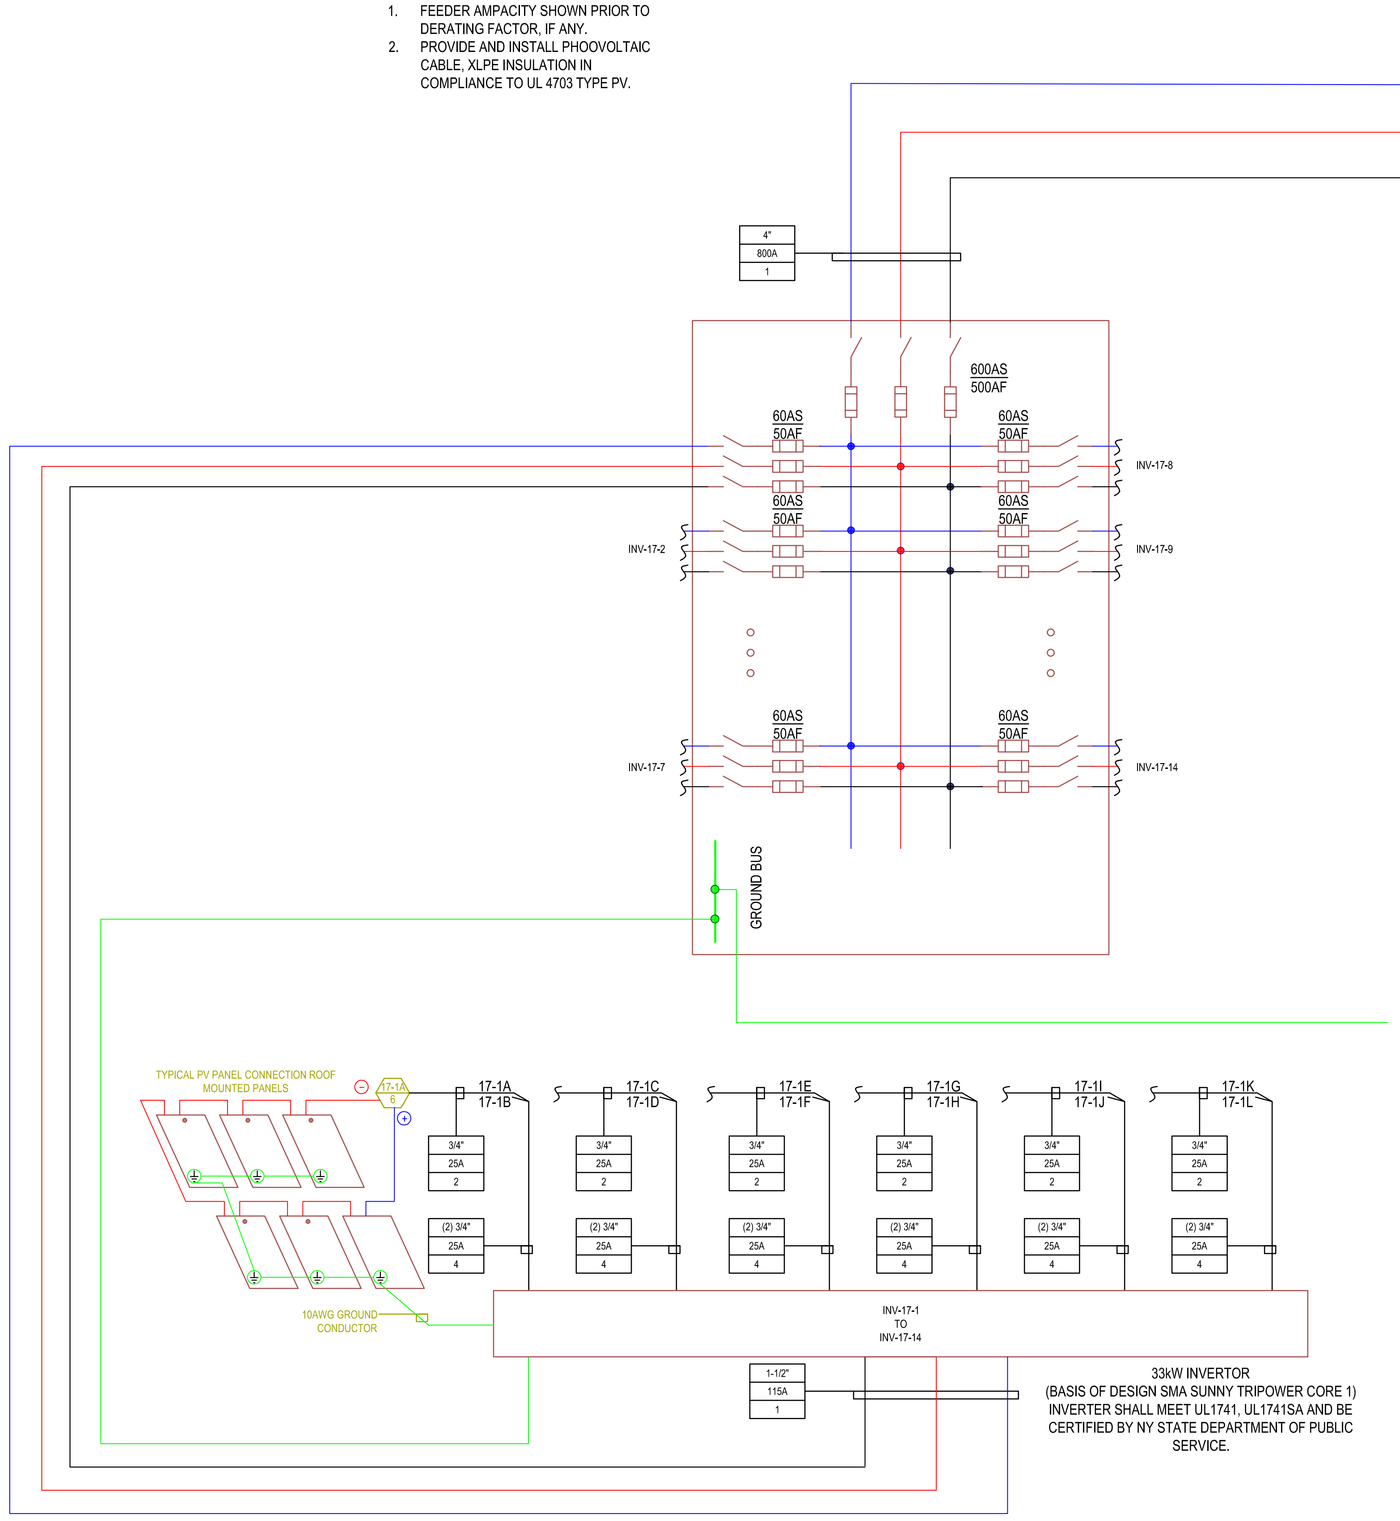
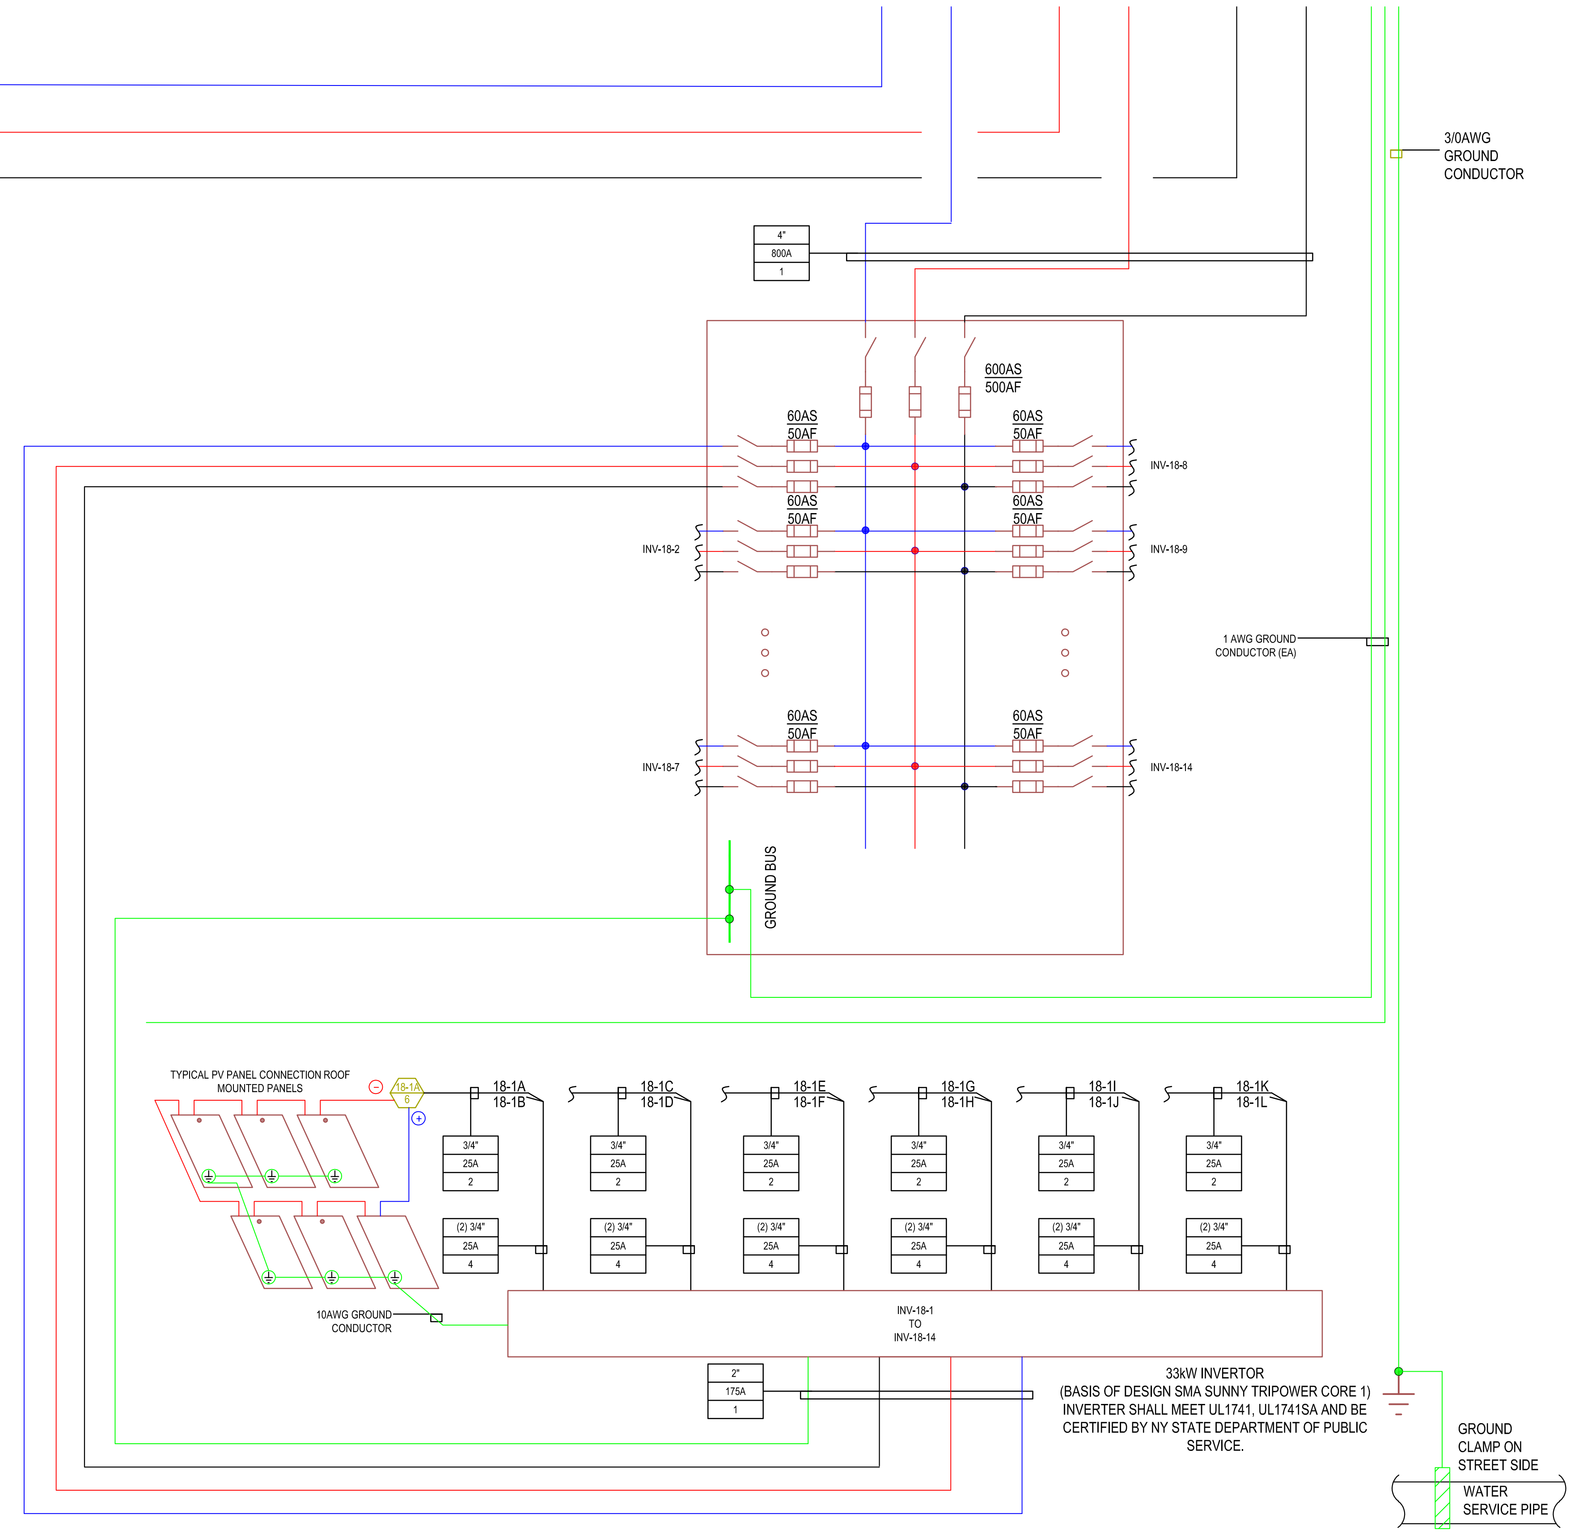
PV PANEL INFORMATION

PANEL SPECS:
P = 435 WATTS
Voc = 85.6 VOLTS
Vmp = 72.9 VOLTS
Isc = 6.43 AMPS
Imp = 5.97 AMPS



NOTE:
1. FEEDER AMPACITY SHOWN PRIOR TO DERATING FACTOR, IF ANY.
2. PROVIDE AND INSTALL PHOOVOLTAIC CABLE, XLPE INSULATION IN COMPLIANCE TO UL 4703 TYPE PV.

GENERAL SHEET NOTES:



1. FOR SYMBOLS AND ABBREVIATION, REFER TO DRAWING E-001.
2. FOR ELECTRICAL CODED NOTES AND PHOTOVOLTAIC SINGLE LINE DIAGRAM, REFER TO DRAWING E-603.

1

FROM SERVICE SWITCHBOARD SSB-2 VIA TRANSFORMER. REFER TO DRAWING E-603 FOR CONTINUATION.

33kW INVERTOR
(BASIS OF DESIGN SMA SUNNY TRIPOWER CORE 1)
INVERTER SHALL MEET UL1741, UL1741SA AND BE CERTIFIED BY NY STATE DEPARTMENT OF PUBLIC SERVICE.

33kW INVERTOR
(BASIS OF DESIGN SMA SUNNY TRIPOWER CORE 1)
INVERTER SHALL MEET UL1741, UL1741SA AND BE CERTIFIED BY NY STATE DEPARTMENT OF PUBLIC SERVICE.

COMPLIANCE NOTES - NYC

1. ALL WORK SHALL BE DONE IN ACCORDANCE WITH NYC ADMINISTRATIVE CODE AND NFPA 13-2007, AS MODIFIED BY APPENDIX Q OF THE NYC BUILDING CODE.

2. COMPLIANCE WITH TECHNICAL BUILDING BULLETIN #2012-029
   2.1. I,_____, HEREBY CERFITY THAT THE SYSTEM'S NEWLY CALCULATED HYDRAULIC DEMAND AS PER 2014 CODE DUE TO WORK FILED UNDER THIS APPLICATION IS EQUAL TO OR LESS THAN HYDRAULIC DEMAND OF THE EXISTING SYSTEM PRIOR TO CURRENT OR PROPOSED MODIFICATIONS.

3. COMPLIANCE WITH TECHNICAL BUILDING BULLETING #2012-009
   3.1. EXISTING BUILDINGS WITH AUTOMATIC SPRINKLER SYSTEMS:
   3.1.1. THE ENTIRE FLOOR SPRINKLER SYSTEM SHALL REMAIN INTACT, EXCEPT THAT SPRINLKER HEADS IN THE AREA UNDERGOING ALTERATIONS SHALL COMPLY WITH AND SHALL BE PLACED IN ACCORDANCE WITH THE APPLICABLE REQUIREMENTS OF THE CODE-REFERENCE NFPA 13.
   3.1.2. OWNER SHALL NOTIFY FDNY OF SPRINKLER SYSTEM DISCONNECTION BY SUBMITTING A LETTER OF NOTIFICATION.

SPRINKLER DESIGN CRITERIA

1. THE SPRINKLER SYSTEM IN THIS BUILDING SHALL BE IN ACCORDANCE WITH NYC BUILDING CODE 2014 AND NFPA-13 2007. THE BUILDING OCCUPANCY IS CLASS 'B'.

2. OCCUPANCY CRITERIA
   A. LIGHT HAZARD- OFFICE SPACE, SEATING AREA, AND CONFERENCE ROOMS DENSITY 0.10 GPM/SQ. FT. OVER MOST HYDRAULICALLY REMOTE 1500 SQ. FT. MAXIMUM COVERAGE PER SPRINKLER HEAD 225 SQ.FT. 52,000 SQ. FT. MAXIMUM AREA LIMITATION.
   B. ORDINARY HAZARD GROUP 1 - MECHANICAL AND ELECTRICAL EQUIPMENT ROOMS. DENSITY 0.15 GPM PER SQ. FT OVER MOST HYDRAULICALLY REMOTE 1500 SQ. FT. MAXIMUM COVERAGE PER SPRINKLER HEAD 130 SQ. FT. 52,000 SQ. FT. MAXIMUM AREA LIMITATION.

3. MINIMUM PRESSURE AND WATER DISCHARGE:
   A. LIGHT HAZARD MINIMUM PRESSURE AT SPRINKLER HEAD 7 PSI OR 14.87 GPM.

4. HYDRAULICALLY CALCULATED SYSTEMS SHALL MEET THE FOLLOWING CRITERIA:
   A. EXACT LOCATION OF SPRINKLER HEADS IN FINISHED AREAS WITH SUSPENDED CEILINGS SHALL BE AS INDICATED ON ARCHITECTURAL REFLECTED CEILING PLANS WITH HEADS IN CENTER OF TILES.
   B. WHENEVER ROLLED GROOVED CONNECTIONS ARE USED, ALLOWANCE FOR ADDITIONAL PRESSURE LOSS AT GROOVES SHALL BE MADE AS FOLLOWS:
      a. FOR EACH COUPLING ON STRAIGHT RUN INCLUDING STRAIGHT FLOW THROUGH TEE OR CROSS: ADD 1 EQUIVALENT FOOT OF PIPE.
      b. FOR EACH COUPLING AT ELBOW, TEE OR CROSS WHERE DIRECTION OF FLOW CHANGES: ADD 2 EQUIVALENT FEET OF PIPE.
   C. EQUIVALENT FITTING LENGTHS USED IN HYDRAULIC CALCULATIONS SHALL BE IN ACCORDANCE WITH NFPA 13-2007 SECTION NO. 22.4.3 AS REFERENCED BY THE NYCBC. WHEREVER FITTINGS ARE USED IN CONJUNCTION WITH SCHEDULE 40 PIPE, EQUIVALENT FITTING LENGTHS INDICATED IN NFPA 13-2007 TABLE 22.4.3.1.1 SHALL BE USED. EQUIVALENT LENGTH FOR INTERNAL PIPE DIAMETERS DIFFERENT FROM SCHEDULE 40 STEEL PIPE SHALL BE MULTIPLIED BY A FACTOR AS PER SEC. 22.4.3.1.3.
   D. EACH SPRINKLER IN THE DESIGN AREA AND THE REMAINDER OF THE HYDRAULICALLY DESIGNED SYSTEM SHALL DISCHARGE AT A FLOW RATE AT LEAST EQUAL TO THE STIPULATED MINIMUM WATER APPLICATION RATE (DENSITY) MULTIPLIED BY THE AREA OF SPRINKLER OPERATION. WHERE SPRINKLERS ARE REQUIRED TO DISCHARGE A SPECIFIC FLOW OR PRESSURE RATHER THAN A DENSITY, EACH SPRINKLER IN THE DESIGN AREA SHALL DISCHARGE AT A FLOW OR PRESSURE AT LEAST EQUAL TO THE MINIMUM REQUIRED IN ACCORDANCE WITH NFPA STANDARD NO. 13-2007, PARAGRAPH 22.4.4.6.1, AS REFERENCED BY NYCBC.
   E. HYDRAULIC CALCULATIONS SHALL BE BROUGHT BACK TO CONNECTION TO WATER SUPPLY.

5. FLOW TEST DATA:
   A. CONTRACTOR SHALL OBTAIN FLOW DATA INDICATING RESIDUAL PRESSURES ASSOCIATED WITH BUILDING SYSTEM AND SUBMIT DATA WITH HYDRAULIC CALCULATIONS.
   B. THESE HYDRAULIC CALCULATIONS ALONG WITH PUMP OR WATER FLOW TEST ARE TO BE SUBMITTED FOR APPROVAL TO THE ENGINEER AND TO THE INSURANCE UNDERWRITER. HYDRAULIC CALCULATIONS SHALL BE BROUGHT BACK TO THE LOCATION OF THE PUMP OR WATER FLOW TEST.
   C. SPRINKLER CONTRACTOR SHALL SUBMIT HYDRAULIC CALCULATIONS AND FIRE PROTECTION DRAWINGS, SIGNED AND SEALED BY HIS ENGINEER WHO IS LICENSED IN THE STATE WHERE THE PROJECT IS LOCATED.
   D. CONSTRUCTION MAY ONLY BEGIN WHEN APPROVALS ARE GRANTED.
   E. RESULT OF HYDRAULIC CALCULATIONS SHALL INDICATE MINIMUM 10% PRESSURE SAFETY MARGIN, I.E., EXCESS OF PRESSURE AVAILABLE OVER PRESSURE REQUIRED.
   F. AVAILABLE PRESSURE AT FLOOR:
      a. REFER TO RISER DIAGRAM.

SPRINKLER SCHEDULE

SYMBOL	DESCRIPTION	MANUFACTURER & MODEL	AREA	DENSITY	I.D. #

SP-601.00	SPRINKLER RISER DIAGRAM	NONE

OUT OF SERVICE FIRE PROTECTION NOTES

1. THE FOLLOWING ACTIONS ARE TO BE UNDERTAKEN PRIOR TO PLACING ANY FIRE PROTECTION SYSTEM (SPRINKLER OR FIRE STANDPIPE) AS PER FIRE CODE SEC. 901.7:
   a. NOTIFICATION SHALL BE PROVIDED TO THE FDNY.
   b. A FIRE WATCH SHALL BE ESTABLISHED AND MAINTAINED BY ONE OR MORE PERSONS HOLDING A CERTIFICATE OF FITNESS FOR FIRE GUARD.
   c. ANY OTHER ACTIONS AS DIRECTED BY THE FDNY IN ADDITION TO OR IN LIEU OF THE ACTIONS ABOVE UNTIL THE FIRE PROTECTION SYSTEM HAS BEEN RETURNED TO SERVICE.
   d. WHERE UTILIZED, FIRE GUARDS SHALL BE PROVIDED WITH AT LEAST ONE APPROVED MEANS OF NOTIFICATION TO THE FDNY AND THEIR ONLY DUTY SHALL BE TO PERFORM CONSTANT PATROLS OF THE PROTECTED PREMISES AND KEEP WATCH FOR FIRES.

2. THE BUILDING'S OWNER SHALL ASSIGN AN IMPAIRMENT COORDINATOR AS REQUIRED BY FIRE CODE SEC. 901.7.1.

3. A TAG SHALL BE USED TO INDICATE THAT A SYSTEM, OR PORTION THEREOF, IS OUT OF SERVICE AS PER FIRE CODE SEC. 901.7.2.

4. A TAG SHALL BE POSTED AT EACH FIRE DEPARTMENT CONNECTION, SYSTEM CONTROL VALVE, FIRE ALARM CONTROL UNIT, FIRE ALARM ANNUNCIATOR AND FIRE COMMAND CENTER, INDICATING WHICH SYSTEM, OR PART THEREOF, IS OUT OF SERVICE. THE FDNY SHALL SPEICIFY WHERE THE TAG IS TO BE PLACE AS PER FIRE CODE SEC. 901.7.3.

5. PLANNED REMOVAL FROM SERVICE AS PER FIRE CODE 901.7.4:
   a. THE CERTIFICATE OF FITNESS HOLDER AND THE IMPAIRMENT COORDINATOR SHALL BE MADE AWARE OF AND AUTHORIZE THE PLACING OF SYSTEMS OUT OF SERVICE. BEFORE AUTHORIZING SUCH ACTION THE IMPAIRMENT COORDINATOR SHALL:
      i. DETERMINE THE EXTENT AND EXPECTED DURATION OF THE OUT OF SERVICE CONDITION.
      ii. INSPECT THE AREAS OF THE BUILDING OR BUILDINGS INVOLVED AND ASSES THE INCREASED RISKS.
      iii. MAKE APPROPRIATE RECOMMENDATIONS TO THE OWNER.
      iv. NOTIFY THE FDNY AND THE RESPONSIBLE PERSON DESIGNATED BY THE OWNER TO ISSUE HOT WORK AUTHORIZATION IN ACCORDANCE WITH CHAPTER 26 OF THE FIRE CODE (IF ANY).
      v. NOTIFY THE CENTRAL STATION AND INSURANCE CARRIER.
      vi. NOTIFY THE OCCUPANTS IN THE AFFECTED AREA (IF ANY).
      vii. PLACE OUT OF SERVICE TAGS AT ALL REQUIRED AND APPROPRIATE LOCATIONS.
      viii. MAINTAIN SYSTEM IN SERVICE UNTIL WORK IS READY TO BEGIN.

6. RESTORATION SYSTEMS TO SERVICE AS PER FIRE CODE SEC. 901.7.6.
   a. IMPAIRMENT COORDINATOR SHALL TAKE THE FOLLOWING STEPS TO RESTORE AN IMPAIRED SYSTEM TO NORMAL WORKING ORDER:
      i. CONDUCT NECESSARY INSPECTIONS AND TEST TO VERIFY THAT THE AFFECTED SYSTEMS ARE OPERATIONAL.
      ii. GIVE NOTIFICATION TO THE FDNY.
      iii. NOTIFY THE BUILDING OWNER, CENTRAL STATION PROVIDER, INSURANCE CARRIER AND THE OCCUPANTS OF THE AFFECTED AREAS.
      iv. REMOVE THE OUT OF SERVICE TAGS.

FILING NOTES

THIS PLAN IS APPROVED ONLY FOR WORK INDICATED ON THE APPLICATION SPECIFICATION SHEET. ALL OTHER MATTERS SHOWN ARE NOT TO BE RELIED UPON, OR TO BE CONSIDERED AS EITHER BEING APPROVED OR IN ACCORDANCE WITH APPLICABLE CODES. THIS DRAWING FILED FOR FIRE PROTECTION SYSTEM ONLY.

NEW YORK CITY SPRINKLER NOTES

1. AUTOMATIC SPRINKLER SYSTEM SHALL COMPLY WITH NYC BUILDING CODE SECTION 903 & MODIFIED BY APPENDIX Q OF NYC BUILDING CODE AND NFPA 13-2007.
2. CONSTRUCTION DOCUMENTS FOR SPRINKLER SYSTEM SHALL CONTAIN PLANS THAT INCLUDE THE INFORMATION AND DATA LISTED IN SECTION 903.1.2 OF NYC BUILDING CODE.
3. APPROVED AUTOMATIC SPRINKLER SYSTEM IN NEW BUILDINGS AND STRUCTURES SHALL BE PROVIDED IN THE LOCATIONS DESCRIBED IN SEC. 903.2 OF NYC BUILDING CODE.
4. AUTOMATIC SPRINKLER SYSTEM SHALL BE DESIGNED AND INSTALLED IN ACCORDANCE WITH SEC. 903.2.1 THROUGH 903.5 OF NYC BUILDING CODE.
5. WHERE THE PROVISIONS OF NYC BUILDING CODE REQUIRE THAT A BUILDING OR PORTION THEREOF BE EQUIPPED THROUGHOUT WITH AN AUTOMATIC SPRINKLER SYSTEM IN ACCORDANCE WITH SEC. 903.3.1.1, SPRINKLERS SHALL BE INSTALLED THROUGHOUT IN ACCORDANCE WITH NFPA 13-2007 AS MODIFIED IN APPENDIX Q, AND EXCEPT AS PROVIDED IN SEC. 903.3.1.1.1. AND 903.2 OF NYC BUILDING CODE.
6. AUTOMATIC SPRINKLERS SHALL NOT BE REQUIRED IN THE ROOMS OR AREAS WHICH ARE LISTED IN 903.3.1.1.1 OF NYC BUILDING CODE AS LONG AS AN APPROVED AUTOMATIC FIRE DETECTION SYSTEM IN ACCORDANCE WITH NYC BUILDING CODE SECTION 907.2 AND AN ALTERNATIVE EXTINGUISHING SYSTEM IN ACCORDANCE WITH NYC BUILDING CODE SECTION 904.
7. SPRINKLERS SHALL NOT BE OMITTED FROM ANY ROOM MERELY BECAUSE IT IS DAMP, OF FIRE-RESISTANCE-RATED CONSTRUCTION OR CONTAINS ELECTRICAL EQUIPMENT AS PER SEC. 903.3.1.1.1 OF THE NYC BUILDING CODE.
8. WHERE ALLOWED IN BUILDINGS OF GROUP R, UP TO AND INCLUDING SIX STORIES IN HEIGHT, AUTOMATIC SPRINKLER SYSTEM SHALL BE INSTALLED THROUGHOUT IN ACCORDANCE WITH NFPA 13R AS MODIFIED IN APPENDIX Q OF NYC BUILDING CODE, AS PER SEC. 903.3.1.2.
9. WHERE AUTOMATIC SPRINKLER SYSTEM ARE REQUIRED BY NYC BUILDING CODE, QUICK-RESPONSE AUTOMATIC SPRINKLERS SHALL BE INSTALLED IN THE AREAS LISTED, AS PER SECTION 903.3.2 OF NYC BUILDING CODE.
10. AUTOMATIC SPRINKLERS SHALL BE INSTALLED WITH DUE REGARD TO OBSTRUCTIONS THAT WILL DELAY ACTIVATION OR OBSTRUCT THE WATER DISTRIBUTION PATTERN. AUTOMATIC SPRINKLERS SHALL BE INSTALLED IN OR UNDER COVERED KIOSKS, DISPLAYS, BOOTH, CONCESSION STANDS, OR EQUIPMENT THAT EXCEEDS 4 FEET IN WIDTH. NOT LESS THAN A 3 FOOT CLEARANCE SHALL BE MAINTAINED BETWEEN AUTOMATIC SPRINKLERS AND TOP OF PILES OF COMBUSTIBLE FIBERS, AS PER SEC. 903.3.3. OF NYC BUILDING CODE.
11. WATER SUPPLIES FOR AUTOMATIC SPRINKLER SYSTEM SHALL COMPLY WITH SEC. 903.3.5 OF NYC BUILDING CODE AND SEC. 903.3.1. THE POTABLE WATER SUPPLY SHALL BE PROTECTED AGAINST BACK FLOW IN ACCORDANCE WITH THE REQUIREMENTS OF SEC. 903.3.5 THE NYC PLUMBING CODE, AND RULES OF THE NYC DEPARTMENT OF ENVIRONMENTAL PROTECTION.
12. A SECONDARY ON-SITE WATER SUPPLY EQUAL TO THE HYDRAULICALLY CALCULATED SPRINKLER DEMAND, INCLUDING THE HOSE STREAM REQUIREMENT, SHALL BE PROVIDED FOR HIGH-RISE BUILDINGS IN SEISMIC DESIGN CATEGORY "C" OR "D" AS DETERMINED BY THIS CODE, AND IN ANY HIGH-RISE BUILDING WITH OCCUPIED FLOORS LOCATED MORE THAN 300 FEET ABOVE THE LOWEST LEVEL OF FIRE DEPARTMENT VEHICLE ACCESS. THE SECONDARY WATER SUPPLY SHALL HAVE A DURATION NOT LESS THAN 30 MINUTES AS DETERMINED BY THE OCCUPANCY HAZARD CLASSIFICATION IN ACCORDANCE WITH NFPA 13-2007 AS PER SEC 903.3.5.2 OF THE NYC BUILDING CODE.
13. FIRE HOSE THREADS AND FITTINGS USED IN CONNECTION WITH AUTOMATIC SPRINKLER SYSTEMS SHALL BE APPROVED AND COMPATIBLE WITH FIRE DEPARTMENT HOSE THREADS AS PER NYC BUILDING CODE SEC 903.3.6.
14. ALL VALVES CONTROLLING THE WATER SUPPLY FOR AUTOMATIC SPRINKLER SYSTEMS, PUMPS, TANKS, WATER LEVELS AND TEMPERATURES, CRITICAL AIR PRESSURES AND WATER-FLOW SWITCHES ON ALL SPRINKLER SYSTEMS SHALL BE ELECTRICALLY SUPERVISED BY THE FIRE ALARM WHERE A FIRE ALARM SYSTEM IS REQUIRED BY NYC BUILDING CODE SECTION 907, AS PER NYC BUILDING CODE SECTION 903.4.
15. APPROVED SUPERVISED INDICATING CONTROL VALVES SHALL BE PROVIDED AT THE POINT OF CONNECTION TO THE RISER ON EACH FLOOR IN HIGH-RISE BUILDINGS AS PER SEC. 903.4.3 OF THE NYC BUILDING CODE.
16. THE DOCUMENTS OR PORTIONS THERE OF LISTED IN CHAPTER 2 OF NFPA 13-2007 ARE REFERENCED WITHIN NFPA-13 AND SHALL BE CONSIDERED PART OF THE REQUIREMENTS OF THIS DOCUMENT.
17. OCCUPANCY CLASSIFICATION SHALL COMPLY WITH CHAPTER 5 OF NFPA 13-2007 AND CHAPTER 3 OF NYBC 2014.
18. PROTECTION REQUIREMENTS FOR MIXED COMMODITIES SHALL BE ACCORDANCE WITH SEC. 5.6.1.2 OF NFPA 13-2007.
19. REQUIREMENTS FOR CORRECT USE OF SPRINKLER SYSTEM COMPONENTS SHALL COMPLY WITH CHAPTER 6 OF NFPA 13-2007.
20. THE K-FACTOR, RELATIVE DISCHARGE, AND MARKING IDENTIFICATION FOR SPRINKLERS HAVING DIFFERENT ORIFICE SIZES SHALL BE IN ACCORDANCE WITH TABLE 6.2.3.1 OF NFPA 13-2007.
21. LARGE DROP AND ESFR SPRINKLERS SHALL HAVE A MINIMUM NOMINAL K-FACTOR OF 11.2 WITH SEC. 6.2.3.5 OF NFPA 13-2007.
22. AUTOMATIC SPRINKLERS SHALL HAVE THEIR FRAME ARMS, DEFLECTOR, COATING MATERIAL, OR LIQUID BULB COLORED IN ACCORDANCE WITH THE REQUIREMENTS OF TABLE 6.2.5.1, 6.2.5.2, 6.2.5.3, 6.2.5.4 OR 6.2.5.5 OF NFPA 13-2007.
23. LISTED CORROSION RESISTANT SPRINKLER SHALL BE INSTALLED IN LOCATIONS WHERE CHEMICALS, MOISTURE, OR OTHER CORROSIVE VAPORS SUFFICIENT TO CAUSE CORROSION OF SUCH DEVICES EXIST WITH SEC. 6.2.6.1. OF NFPA 13-2007.
24. ALL CONTROL, DRAIN, AND TEST CONNECTION VALVES SHALL BE PROVIDED WITH PERMANENTLY MARKED WEATHERPROOF METAL OR RIGID PLASTIC IDENTIFICATION SIGNS, AS PER SEC. 6.7.4.1 OF NFPA 13-2007.

NEW YORK CITY SPRINKLER NOTES CONTINUED

25. FIRE DEPARTMENT CONNECTIONS SHALL BE EQUIPPED WITH LISTED PLUGS OR CAPS, PROPERLY SECURED AND ARRANGED FOR EASY REMOVAL BY FIRE DEPARTMENTS, AS PER SEC. 6.8.2 OF NFPA 13-2007.
26. REQUIREMENTS OF DRY PIPE SYSTEM INSTALLATION SHALL COMPLY WITH SEC. 7.2 OF NFPA 13-2007.
27. REQUIREMENTS OF PREACTION & DELUGE SYSTEM INSTALLATION SHALL COMPLY WITH SEC. 7.3 OF NFPA 13-2007.
28. OUTSIDE SPRINKLERS FOR PROTECTION AGAINST EXPOSURE FIRE SHALL COMPLY WITH SEC. 7.8 OF NFPA 13-2007.
29. THE MAXIMUM FLOOR AREA OR ANY ONE FLOOR TO BE PROTECTED BY SPRINKLERS SUPPLIED BY ANY ONE SPRINKLER SYSTEM RISER OR COMBINED SYSTEM RISER SHALL COMPLY WITH SEC. 8.2.1 OF NFPA 13-2007.
30. WHERE THERE ARE NO LISTED QUICK-RESPONSE SPRINKLERS IN THE TEMPERATURE RANGE REQUIRED, STANDARD RESPONSE SPRINKLERS SHALL BE PERMITTED TO BE USED, PER SEC. 8.3.3.3 OF NFPA 13-2007.
31. WHEN EXISTING LIGHT HAZARD SYSTEMS ARE CONVERTED TO USE QUICK-RESPONSE OR RESIDENTIAL SPRINKLERS, ALL SPRINKLERS IN A COMPARTMENTED SPACE SHALL BE CHANGED IN ACCORDANCE WITH THE REQUIREMENTS OF SEC. 8.3.3.4 OF NFPA 13-2007.
32. SPRINKLERS OF INTERMEDIATE AND HIGH TEMPERATURE RATINGS SHALL BE INSTALLED IN SPECIFIC LOCATIONS AS REQUIRED BY SECTION 8.3.2.5 OF NFPA 13-2007 SEC. 8.3.2.4.
33. SPRINKLERS SHALL BE LOCATED, SPACED AND POSITIONED IN ACCORDANCE WITH THE REQUIREMENTS OF SEC. 8.5 OF NFPA 13-2007.
34. PROTECTION AREAS AND MAXIMUM SPACING FOR EACH HAZARD SHALL COMPLY WITH TABLE 8.6.2.2.1 (a) (b) (c) (d) OF NFPA 13-2007.
35. REQUIREMENTS OF DWELLING UNITS PROTECTION SHALL COMPLY WITH SEC. 8.15.8 OF NFPA 13-2007.
36. REQUIREMENTS OF STAGE AREA PROTECTION SHALL COMPLY WITH SEC. 8.15.16 OF NFPA 13-2007.
37. DRAIN CONNECTIONS FOR SYSTEMS SUPPLY RISERS AND MAINS SHALL BE SIZED AS SHOWN IN TABLE 8.16.2.4.2 OF APPENDIX Q OF NYC BUILDING CODE.
38. TYPES OF HANGERS SHALL BE ACCORDANCE WITH THE REQUIREMENT OF SEC. 9.1. OF NFPA 13-2007.
39. MAXIMUM DISTANCE BETWEEN HANGERS SHALL COMPLY WITH TABLE 9.2.2.1 OF NFPA 13-2007.
40. THE WATER SUPPLY FOR SPRINKLERS SHALL BE DETERMINED BY DENSITY/AREA CURVE, FIGURE 11.2.3.1.1 OF NFPA 13-2007.
41. HYDRAULIC DESIGN AREA REDUCTION FOR QUICK RESPONSE SPRINKLERS SHALL COMPLY WITH FIGURE 11.2.3.2.3.1 OF NFPA 13-2007.
42. CALCULATIONS FOR DRY SYSTEM WATER DELIVERY SHALL BE BASED ON THE HAZARD SHOWN IN TABLE 7.2.3.6.1 OF NFPA 13-2007.
43. DESIGN CRITERIA OF WATER CURTAIN SHALL COMPLY WITH SEC. 11.3.3 OF NFPA 13-2007.
44. TYPE OF SPRINKLER HEAD IN GENERAL STORAGE SHALL COMPLY WITH SEC. 12.6.2 OR 12.6.3 OF NFPA 13-2007.
45. MINIMUM OPERATING PRESSURE OF ANY SPRINKLER SHALL COMPLY WITH SEC. 22.4.4.10.1 OF NFPA 13-2007.
46. NUMBER OF WATER SUPPLIES FOR SPRINKLER SYSTEM SHALL COMPLY WITH SEC. 18.3 OF NFPA 13-2007 AND APPENDIX Q OF NYC.
47. SPRINKLER SYSTEM PIPING AND VALVE HANDLES SERVING SPRINKLER SYSTEM SHALL BE PAINTED IN ACCORDANCE WITH THE NYC LOCAL LAW 58 OF 2009 AND THE NYC BUILDINGS BULLETIN 2010-014.

GENERAL NOTES

1. CONTRACTOR SHALL VERIFY EXISTING PIPING RUNS AND CONDITIONS WITH THE NEW WORK PRIOR TO START.
2. CONTRACTOR SHALL OBTAIN ALL PERMITS AND FILE ALL WORK INCLUDING HYDRAULIC CALCULATION WITH THE AUTHORITY HAVING JURISDICTION AND OWNERS INSURANCE CARRIER.
3. COORDINATE ALL WORK WITH OTHER TRADES PRIOR TO START OF WORK.
4. SPRINKLER HEAD LOCATIONS SHALL BE COORDINATED WITH ARCHITECTURAL REFLECTED CEILING PLANS.
5. ALL SPRINKLER HEADS SHALL BE INSTALLED AT CENTER OF CEILING TILES.
6. SCHEDULE DRAINDOWN OF EXISTING SPRINKLER SYSTEM WITH OWNER PRIOR TO START OF WORK.
7. SPRINKLER HEADS AS PER B.S. & A. NO. 587-75-SA.
8. TESTING OF SPRINKLER AND STANDPIPE SYSTEM IN ACCORDANCE WITH NFPA AND LOCAL CITY BUILDING CODE.
9. CONTRACTOR SHALL FILE AN APPLICATION FOR A "LETTER OF NO OBJECTION" WITH CITY FIRE DEPARTMENT FOR THE ALTERATION WORK INDICATING DETAILED SCOPE OF WORK, DATE AND TIME AND THE DURATION OF DISCONNECTION, AND TEMPORARY FIRE PROTECTION MEASURES TO BE PROVIDED IN THE AFFECTED AREA.

CONTRACTOR NOTES:

1. CONTRACTOR SHALL BE TRAINED ON THE USE AND INSTALLATION OF THE SYSTEMS BY MANUFACTURER'S REPRESENTATIVE.
2. BEFORE STARTING ANY WORK, THE CONTRACTOR SHALL EXAMINE THE COMPLETE SET OF DRAWINGS FOR ALL TRADES, INCLUDING BUT NOT LIMITED TO ARCHITECTURAL, MECHANICAL AND ELECTRICAL. VERIFY ALL DIMENSIONS, SPACE REQUIREMENTS, AND POINTS OF CONNECTION TO ALL EQUIPMENT. MAKE ANY MINOR ADJUSTMENTS NECESSARY TO AVOID CONFLICTS WITH THE BUILDING STRUCTURE AND THE WORK OF OTHER TRADES.
3. REVIEW DOCUMENTS, VERIFY DIMENSIONS AND FIELD CONDITIONS AND CONFIRM THAT WORK IS BUILDABLE AS SHOWN. THE CONTRACTOR SHALL REPORT ANY CONFLICTS AND/OR OMISSIONS TO THE ENGINEER PRIOR TO PERFORMING ANY WORK IN QUESTION. OTHERWISE, THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL COSTS TO COMPLETE THE WORK STATED IN ON THE CONTRACT DOCUMENTS BASED UPTON THE OPTIMAL ESTABLISHED QUALITY STANDARD.
4. PROVIDE ONE COPY OF REPRODUCIBLE RECORD DRAWINGS AND AUTOCAD DISC (R204 OR HIGHER) TO PROPERTY MANAGER.

SPECIAL FLOOD HAZARD AREA NOTE:

THIS PROPERTY IS NOT IN SFHA.

FILING NOTES

THIS PLAN IS APPROVED ONLY FOR WORK INDICATED ON THE APPLICATION SPECIFICATION SHEET. ALL OTHER MATTERS SHOWN ARE NOT TO BE RELIED UPON, OR TO BE CONSIDERED AS EITHER BEING APPROVED OR IN ACCORDANCE WITH APPLICABLE CODES. THIS DRAWING FILED FOR FIRE PROTECTION SYSTEM ONLY.

SPECIAL INSPECTION NOTES

INSPECTIONS, PROGRESS INSPECTIONS, SPECIAL
INSPECTIONS AND TESTING OF FIRE PROTECTION SYSTEMS

1. THE FOLLOWING INSPECTIONS, TESTS, PROGRESS INSPECTIONS AND SPECIAL INSPECTIONS SHALL BE CONSIDERED PART OF THE CONTRACT WORK.

2. UPON COMPLETION OR PARTIAL COMPLETION OF THE PERMITTED FIRE PROTECTION WORK, INSPECTIONS, PROGRESS INSPECTIONS, SPECIAL INSPECTIONS AND TESTS SHALL BE CONDUCTED BY APPROVED AGENCIES OR SPECIAL INSPECTORS QUALIFIED TO CONDUCT SUCH INSPECTIONS AND TESTS. INSPECTIONS AND PROGRESS INSPECTIONS SHALL BE PERFORMED IN COMPLIANCE WITH SECTION BC 109 OF THE NEW YORK CITY BUILDING CODE. SPECIAL INSPECTIONS SHALL BE PERFORMED IN COMPLIANCE WITH SECTIONS BC 1704 AND BC 1707 OF THE NEW YORK CITY BUILDING CODE FOR ALL FIRE PROTECTION SYSTEMS REGULATED BY THE NEW YORK CITY FIRE CODE, SECTIONS FC 901, AND 904. REFER TO ARTICLE 116 OF CHAPTER 1 OF TITLE 28 OF THE ADMINISTRATIVE CODE FOR ADDITIONAL PROVISIONS RELATED TO INSPECTIONS.

3. SPECIAL INSPECTIONS OF FIRE PROTECTION SYSTEMS SHALL INCLUDE THE FOLLOWING AS APPLICABLE TO THE SYSTEM:

   A. VISUAL CERTIFICATION THAT REQUIRED COMPONENTS OF SUCH SYSTEMS ARE COMPLETE IN ACCORDANCE WITH THE MANUFACTURERS INSTALLATION GUIDELINES AND THE APPROVED CONSTRUCTION DOCUMENTS.

   B. SUPPORTS, HANGERS, SEISMIC BRACING, AND VIBRATION ISOLATION EQUIPMENT ARE PROPERLY SPACED AND ANCHORED TO SUPPORTING STRUCTURE.

   C. INSTALLATION OF REQUIRED SIGNAGE AND SAFETY INSTRUCTIONS.

   D. ELECTRICAL COMPONENTS ARE INSTALLED AND ELECTRICAL SIGN- OFF ISSUED.

   E. REQUIRED LABELING, OPERATIONAL INSTRUCTIONS AND SAFETY SIGNAGE PROPERLY POSTED.

   F. ALL RELATED SPECIAL INSPECTIONS FOR SUCH SYSTEMS ARE COMPLETE.

4. PROGRESS INSPECTIONS OF FIRE PROTECTION SYSTEMS SHALL INCLUDE THE FOLLOWING AS APPLICABLE TO THE SYSTEM:

   A. THROUGH-PENETRATION FIRE STOPPING.

5. TESTS OF FIRE PROTECTION SYSTEMS SHALL BE PERFORMED IN ACCORDANCE WITH THE FOLLOWING NEW YORK CITY BUILDING CODE AND NEW YORK CITY FIRE CODE SECTIONS:

GENERAL ACCEPTANCE TESTS	BC 901.5
SYSTEM ACCEPTANCE	BC Q102
WATER SUPPLY TEST	BC Q105
SYSTEM ACCEPTANCE	BC Q105
WATER SUPPLY TEST	FC 508.4
GENERAL INSTALLATION ACCEPTANCE TESTING	FC 901.5
FIRE EXTINGUISHING SYSTEMS INSTALLATION ACCEPTANCE TESTING	FC 904.1.1, 904.4

6. THE FOLLOWING IS A LIST OF ALL REQUIRED SPECIAL INSPECTIONS:

SPECIAL INSPECTION ITEM	CODE/SECTION
SPRINKLER SYSTEM SPECIAL INSPECTION	BC 1704.23
FIRE-RESISTANT PENETRATIONS AND JOINTS	BC 1704.27
SEISMIC ISOLATION SYSTEMS	BC 1707.8

7. THE FOLLOWING IS A LIST OF ALL REQUIRED PROGRESS INSPECTIONS:

PROGRESS INSPECTION ITEM	CODE/SECTION
FIRE-RESISTIVE RATED CONSTRUCTION	BC 110.3.4

FILING NOTES

THIS PLAN IS APPROVED ONLY FOR WORK INDICATED ON THE APPLICATION SPECIFICATION SHEET. ALL OTHER MATTERS SHOWN ARE NOT TO BE RELIED UPON, OR TO BE CONSIDERED AS EITHER BEING APPROVED OR IN ACCORDANCE WITH APPLICABLE CODES. THIS DRAWING FILED FOR FIRE PROTECTION SYSTEM ONLY.

GENERAL NOTES

1. PLUMBING WORK SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS OF THE 2014 CITY OF NEW YORK BUILDING CODE, THE 2014 CITY OF NEW YORK PLUMBING CODE AND SHALL CONFORM TO ALL OTHER APPLICABLE DIRECTIVES, RULES, REGULATIONS AND AUTHORITIES HAVING JURISDICTION.

2. DRAWINGS ARE DIAGRAMMATIC AND INDICATE GENERAL ARRANGEMENT OF SYSTEMS. EXACT LOCATION SHALL BE COORDINATED WITH ALL TRADES, THE STRUCTURAL DRAWINGS, ARCHITECTURAL DRAWINGS, AND/OR GENERAL CONTRACTOR AND CONSTRUCTION MANAGER.

3. LOCATION AND SIZES OF EXISTING PIPING ARE APPROXIMATE. VERIFY THE LOCATIONS AND SIZES OF EXISTING PIPING IN THE FIELD. IF ANY DISCREPANCIES OCCUR WITH THE CONTRACT DRAWINGS, NOTIFY THE ARCHITECT AND/OR THE ENGINEER PRIOR TO COMMENCEMENT OF NEW WORK.

4. ALL EXPOSED PIPING PENETRATIONS THROUGH WALLS OR CEILINGS SHALL BE PROVIDED WITH APPROPRIATE FIRE RETARDANT SEALANT AND ESCUTCHEONS.

5. SEAL OPENINGS AROUND PLUMBING WORK AND PIPING THROUGH PARTITIONS, WALLS AND FLOORS (NOT IN SHAFTS) WITH NON-COMBUSTIBLE MATERIAL AND ESCUTCHEONS.

6. SUBMISSION OF A PROPOSAL SHALL BE EVIDENCE THAT A CAREFUL EXAMINATION OF THE SITE, DRAWINGS & SPECIFICATIONS HAVE BEEN MADE AND THE CONTRACTOR IS FAMILIAR WITH THOSE ITEMS AND AREAS THAT WILL PRESENT DIFFICULTY TO THE PERFORMANCE OF THIS CONTRACT. LATER CLAIMS SHALL NOT BE MADE FOR LABOR, EQUIPMENT, ETC. NECESSARY TO COMPLETE ALL WORK AS A RESULT OF DIFFICULTIES ENCOUNTERED WHICH COULD HAVE BEEN FORESEEN.
   - A. CONTRACTOR TO VERIFY THE EXISTING CONDITIONS BEFORE CONSTRUCTION; CONFIRMING SIZES AND LOCATIONS OF ALL EXISTING PIPING PRIOR TO START OF WORK.
   - B. ALL DIMENSIONS AND EXISTING CONDITIONS SHALL BE CHECKED AND VERIFIED BY THE CONTRACTOR AT THE SITE BEFORE PROCEEDING WITH ANY WORK.
   - C. PRIOR TO STARTING DEMOLITION, DETERMINE LOCATIONS AND EXISTING CONDITIONS.

7. THIS CONTRACTOR SHALL PAY FEES, GIVE NOTICE, FILE NECESSARY DRAWINGS AND OBTAIN PERMITS AND CERTIFICATES OF APPROVAL REQUIRED IN CONNECTION WITH WORK UNDER THIS CONTRACT AND COMPLY WITH LOCAL LAWS AND ORDINANCES.

8. PROVIDE ALL REQUIRED LABOR, MATERIALS, EQUIPMENT, AND SERVICES NECESSARY FOR A COMPLETE AND SAFE INSTALLATION OF MECHANICAL IN FULL CONFORMITY WITH REQUIREMENTS OF ALL AUTHORITIES HAVING JURISDICTION; ALL AS INDICATED ON DRAWINGS AND/OR HEREIN SPECIFIED FOR THE SYSTEMS INCLUDED. WORK SHALL BE INSTALLED IN A NEAT, WORKMANLIKE MANNER. INCLUDE ALL COSTS FOR PERMITS, LICENSES, CERTIFICATES, FILING AND INSPECTIONS REQUIRED BY AUTHORITIES HAVING JURISDICTION.

9. UNDER NO CIRCUMSTANCES WILL THIS CONTRACTOR, OR HIS WORKMEN, BE PERMITTED TO USE ANY PART OF THE BUILDING AS A SHOP EXCEPT PARTS AS DESIGNATED FOR SUCH USE.

10. ALL EXISTING WATER PIPING WITHIN FIVE (5) FT. OF NEW CONNECTIONS SHALL BE PROVIDED WITH NEW INSULATION.

11. REFER TO ARCHITECTURAL DRAWINGS FOR FINAL ADDITIONAL INFORMATION.

12. ALL WORK MUST BE COORDINATED AROUND THE OPERATION OF THE FACILITY.

13. STORE MATERIALS IN DESIGNATED SPACES.

14. UNNECESSARY NOISE SHALL BE AVOIDED AT ALL TIMES AND NECESSARY NOISE SHALL BE REDUCED TO A MINIMUM.

15. ALL APPLICABLE CODES, LAWS AND REGULATIONS GOVERNING OR RELATING TO ANY PORTION OF THIS WORK ARE HEREBY INCORPORATED INTO AND MADE A PART OF THESE CONSTRUCTION DOCUMENTS AND THEIR PROVISIONS SHALL BE CARRIED OUT BY THE CONTRACTOR WHO SHALL INFORM THE OWNER, PRIOR TO SUBMITTING A PROPOSAL OF ANY WORK OR MATERIALS WHICH VIOLATE ANY OF THE ABOVE LAWS AND REGULATIONS. ANY WORK DONE BY THE CONTRACTOR CAUSING SUCH VIOLATION SHALL BE CORRECTED BY THE CONTRACTOR.

16. REMOVAL OF CERTAIN EXISTING WORK WILL BE NECESSARY FOR THE PERFORMANCE OF THE GENERAL WORK. ALL EXISTING CONDITIONS CANNOT BE COMPLETELY DETAILED ON THE DRAWINGS. THE CONTRACTOR SHALL SURVEY THE SITE AND INCLUDE ALL CHANGES IN MAKING UP WORK PROPOSAL.

17. DISCONNECT, REMOVE AND/OR RELOCATE EXISTING MATERIAL, EQUIPMENT, AND OTHER WORK AS NOTED OR REQUIRED FOR PROPER INSTALLATION OF SYSTEM.

18. THE CONTRACTOR SHALL RESTORE ALL AREAS DISTURBED DURING CONSTRUCTION TO THEIR ORIGINAL STATE.

19. THE CONTRACTOR SHALL KEEP ALL EQUIPMENT AND MATERIALS, AND ALL PARTS OF THE BUILDING, EXTERIOR SPACES AND ADJACENT STREETS, SIDEWALKS AND PAVEMENTS, FREE FROM MATERIAL AND DEBRIS RESULTING FROM THE EXECUTION OF THIS WORK. EXCESS MATERIALS WILL NOT BE PERMITTED TO ACCUMULATE EITHER ON THE INTERIOR OR THE EXTERIOR.

20. ALL EXISTING MATERIAL AND EQUIPMENT TO BE REMOVED UNDER THIS CONTRACT WILL REMAIN THE PROPERTY OF THE OWNER OR SHALL BE DISPOSED OF BY THIS CONTRACTOR AS DIRECTED BY THE OWNER.

21. THE WORK IN THE BUILDING SHALL BE DONE WHEN AND AS DIRECTED, AND IN A MANNER SATISFACTORY TO THE OWNER. THE WORK SHALL BE PHASED SO AS TO CAUSE THE LEAST POSSIBLE INCONVENIENCE AND DISTURBANCE TO THE OPERATION OF THE BUILDING.

22. THE CONTRACTOR SHALL FURNISH A WRITTEN GUARANTEE TO REPLACE OR REPAIR PROMPTLY AND ASSUME RESPONSIBILITY FOR ALL EXPENSES INCURRED FOR ANY WORKMANSHIP AND EQUIPMENT IN WHICH DEFECTS DEVELOP WITHIN ONE YEAR FROM THE DATE OF ACCEPTANCE BY OWNER. THIS WORK SHALL BE DONE AS DIRECTED BY THE DATE OF ACCEPTANCE BY OWNER. THIS WORK SHALL BE DONE AS DIRECTED BY THE OWNER. THIS GUARANTEE SHALL ALSO PROVIDE THAT WHERE DEFECTS OCCUR, CONTRACTOR WILL ASSUME RESPONSIBILITY FOR ALL EXPENSES INCURRED IN REPAIRING AND REPLACING WORK OF OTHER TRADES AFFECTED BY DEFECTS, REPAIRS OR REPLACEMENTS IN EQUIPMENT SUPPLIED BY THE CONTRACTOR.

23. ALL REQUIRED TEMPORARY SHUTDOWNS IN BUILDING SERVICES SHALL BE MINIMIZED AND SHALL BE APPROVED BY AND COORDINATED WITH THE OWNER A MINIMUM OF 2 WEEKS IN ADVANCE OF SHUTDOWN. ALL SERVICE CONNECTIONS TO EXISTING BUILDING SYSTEMS SHALL BE PERFORMED AFTER COORDINATION WITH OWNER & ENGINEER.

24. ALL STAGING AND MATERIAL STORAGE AREAS SHALL BE LIMITED TO DESIGNATED AREA.

25. THE CONTRACTOR SHALL INCLUDE ALL COSTS FOR REMOVALS IN THE CONTRACT. THESE COSTS SHALL INCLUDE WORK DESCRIBED IN THE SPECIFICATIONS AND SHOWN ON THE DRAWINGS WITH ALLOWANCES FOR UNFORSEEN DIFFICULTIES.

26. CUT AND CAP ALL WASTE PIPING AND SANITARY PIPING AT FLOOR AND AT CEILING OF FLOOR BELOW TO "LIVE" BRANCH PIPING.

27. CUT AN CAP ALL WATER PIPING BACK TO "LIVE" BRANCH PIPING.

28. PROVIDE ALL NECESSARY PIPING OFFSETS AND CHANGES IN DIRECTION TO ACCOMPLISH A COMPLETE INSTALLATION.

29. PLUMBING CONTRACTOR SHALL COORDINATE ALL TIE-INS, PLUS REMOVALS WITH GENERAL CONTRACTOR.

30. NEW WORK AND EQUIPMENT SHALL BE THOROUGHLY CLEANED AND MADE READY FOR USE.

31. REFER TO DRAWINGS FOR AREA OF CONSTRUCTION.

32. SUPPORT ALL PLUMBING WORK AND PIPING FROM BUILDING STRUCTURE AND/OR FRAMING IN AN APPROVED MANNER UTILIZING PIPE SUPPORTS ETC.. WHERE OVERHEAD CONSTRUCTION DOES NOT PERMIT FASTENING OF SUPPORTS FOR EQUIPMENT, FURNISH ADDITIONAL STEEL FRAMING.

33. INSTALL WORK SO AS TO BE READILY ACCESSIBLE FOR OPERATION, MAINTENANCE AND REPAIR. MINOR DEVIATIONS FROM DRAWINGS MAY BE MADE TO ACCOMPLISH THIS, BUT CHANGES WHICH INVOLVE EXTRA COST SHALL NOT BE MADE WITHOUT APPROVAL.

34. CONNECT NEW WORK TO EXISTING WORK IN NEAT AND APPROVED MANNER. RESTORE EXISTING WORK DISTURBED WHILE INSTALLING NEW WORK TO AN ACCEPTABLE CONDITION TO THE ENGINEER.

35. THE WORK IN THE BUILDING SHALL BE DONE WHEN AND AS DIRECTED.

36. ALL EQUIPMENT AND CONCRETE PADS SHALL BE COORDINATED WITH EQUIPMENT PURCHASED AND AS SPECIFIED OR INDICATED ON THE DRAWINGS.

37. CONTRACTOR SHALL PROVIDE ALL OTHER SUPPLEMENTARY STEEL REQUIRED FOR SUPPORTING PIPING.

38. DIMENSIONS SHOWN ON DRAWINGS ARE BASED ON PRELIMINARY DATA. CONTRACTOR TO COORDINATE ALL DIMENSIONS, ELEVATIONS AND CONNECTION REQUIREMENTS FOR FINAL CONNECTIONS UNLESS OTHERWISE NOTED.

39. ALL PIPING SHALL BE DELIVERED AND STORED AT THE SITE WITH END CAPS ON THE PIPES TO KEEP ANY MATERIAL OUT OF THE INSIDE OF THE PIPE UNTIL THE POINT OF INSTALLATION.

GENERAL PLUMBING NOTES FOR DEMOLITION

1. PLUMBING DEMOLITION WORK SHALL BE IN ACCORDANCE WITH THE 2014 NEW YORK CITY BUILDING CODE, THE 2014 CITY OF NEW YORK PLUMBING CODE AND SHALL CONFORM TO ALL OTHER APPLICABLE DIRECTIVES, RULES, REGULATIONS AND AUTHORITIES HAVING JURISDICTION.

2. EXISTING EQUIPMENT, PIPING, PLUMBING FIXTURES, ETC., IN AREA OF WORK SHALL BE REMOVED AND DISPOSED OF UNLESS OTHERWISE DIRECTED. THEY SHALL NOT BE REMOVED FROM THE PREMISES WITHOUT APPROVAL.

3. PIPING FROM FIXTURES TO BE REMOVED SHALL BE PROPERLY PLUGGED OR CAPPED AT RISERS OR MAINS SO THAT UPON COMPLETION OF NEW WORK, NO ABANDONED PIPING IS CONCEALED IN FINISHED AREAS.

4. NO DEAD ENDS SHALL BE LEFT ON ANY PIPING UPON COMPLETION OF JOB.

5. EXISTING REMOVED EXPOSED PIPING SHALL NOT BE REUSED AND WHERE NOT SPECIFICALLY NOTED OR SHOWN ON DRAWING TO BE ABANDONED, AFFECTED PIPING AND APPURTENANCES SHALL BE COMPLETELY REMOVED.

6. THE EXISTING SYSTEM TO REMAIN SHALL BE LEFT IN PERFECT WORKING ORDER AT COMPLETION OF DEMOLITION WORK.

7. LOCATIONS AND SIZES OF EXISTING PIPING ARE APPROXIMATE. EXACT SIZES AND LOCATIONS OF ALL EXISTING PIPING SHALL BE VERIFIED IN THE FIELD.

8. ALL EXISTING EXPOSED, UNNECESSARY PIPING RELATED TO WORK BEING REMOVED SHALL BE COMPLETELY REMOVED, UNLESS OTHERWISE NOTED.

9. DO NOT INTERRUPT ANY OF THE SERVICES OF THE EXISTING BUILDING, OR INTERFERE WITH THE SERVICES IN ANY WAY WITHOUT THE BUILDING ENGINEERS' PERMISSION. SUCH INTERRUPTIONS AND INTERFERENCE SHALL BE MADE AS BRIEF AS POSSIBLE AND ONLY AT APPROVED DESIGNATED TIMES.

10. WHEN DEMOLITION WORK REQUIRES THE SHUTDOWN OF EXISTING OPERATING SYSTEMS, THE DEMOLITION WORK SHALL BE PERFORMED ONLY AFTER NOTIFYING THE OWNER AT LEAST 2 WEEKS BEFORE START AND AFTER OBTAINING WRITTEN AUTHORIZATION.

11. REMOVE AND REROUTE ALL EXISTING PIPING EXPOSED TO VIEW WHERE NECESSARY TO AVOID NEW WORK AS REQUIRED BY THE PROPOSED ALTERATIONS.

12. CONTRACTOR SHALL RELOCATE ALL PIPING (THAT IS ACTIVE) FROM WALLS OR CHASES THAT ARE TO BE REMOVED TO NEW LOCATIONS. CONTRACTOR SHALL COORDINATE THESE LOCATIONS WITH THE GENERAL CONTRACTOR.

13. PIPING REMOVAL SHALL INCLUDE REMOVAL OF APPURTENANCES CONTAINED THEREIN SUCH AS VALVES, HANGERS, SUPPORTS, ETC.

14. PLUGS AND CAPS SHALL BE INSTALLED AT ALL OPEN ENDS OF PIPING TO REMAIN AND SHALL BE OF SAME MATERIAL AND PRESSURE RATING AS EXISTING.

15. REMOVE EXISTING PIPING AS INDICATED ON DRAWING OR AS MAY BY REQUIRED.

16. REMOVE RUBBISH FROM PREMISES AND SITE AT THE END OF EACH WORK DAY AS DIRECTED.

17. ROUGH PATCHING AND REPAIR ALL DISTURBED WALLS WHERE WORK IS REQUIRED.

18. DAMAGES INCURRED TO THE BUILDING OR BUILDING'S SYSTEM UNDER THIS CONTRACT SHALL BE COMPLETELY REPAIRED BY THIS PLUMBING CONTRACTOR.

19. ALL BUILDING SYSTEMS TAKEN OFF-LINE MUST BE PUT BACK ON-LINE BEFORE THIS CONTRACTOR LEAVES THE JOB SITE.

20. ALL ABANDONED PIPING SHALL BE REMOVED ALL THE WAY BACK TO THE POINT OF ORIGIN AND VALVED, CAPPED OR PLUGGED.

21. PROTECTION OF ALL FIXTURES TO REMAIN SHALL BE REQUIRED BEFORE DEMOLITION AND MUST BE INTACT UNTIL COMPLETION OF CONSTRUCTION.

22. PRIOR TO DEMOLITION, SAFE-OFF ANY SERVICE THAT COULD BE AFFECTED.

23. TORCH CUTTING: BEFORE PROCEEDING WITH WORK, SUBMIT CERTIFICATE OF COMPLIANCE AND NOTIFY THE BUILDING ENGINEER OR FIRE WARDEN.

NYC BUILDING DEPARTMENT NOTE

1. TO THE BEST OF MY KNOWLEDGE, BELIEF AND PROFESSIONAL JUDGEMENT, THESE PLANS AND SPECIFICATIONS ARE IN COMPLIANCE WITH THE ENERGY CONSERVATION CONSTRUCTION CODE OF NEW YORK STATE.

NEW YORK CITY BUILDING DEPARTMENT NOTES

1. PLUMBING SYSTEMS (SANITARY, VENT, WATER DISTRIBUTION AND GAS, ETC.) AND ALL ASSOCIATED EQUIPMENT SHALL BE INSTALLED AND MAINTAINED IN ACCORDANCE WITH THE REQUIREMENTS OF THE 2014 NEW YORK CITY BUILDING, PLUMBING CODE, FUEL GAS CODE AND CURRENT REVISIONS.

2. ALL PLUMBING WORK SHALL COMPLY WITH CHAPTERS 1 THROUGH 13 AND APPENDICES A THROUGH G OF THE NEW YORK CITY PLUMBING CODE.

3. SANITARY DRAINAGE SYSTEM SHALL BE IN ACCORDANCE WITH GENERAL PROVISIONS PC305.

4. THE MATERIALS USED IN THE PLUMBING AND GAS SYSTEMS SHALL BE IN ACCORDANCE WITH SECTION PC303.

5. THE INSTALLATION OF PLUMBING FIXTURES, FAUCETS AND FIXTURE FITTINGS SHALL BE IN ACCORDANCE WITH SECTIONS PC401 THROUGH PC427.

6. PIPING SHALL BE SUPPORTED IN ACCORDANCE WITH SECTION PC308.

7. CLEANOUTS SHALL BE IN ACCORDANCE WITH SECTION PC708.

8. TRAPS FOR FIXTURES AND DRAIN LINES SHALL BE IN ACCORDANCE WITH SECTION PC1002.

9. WATER SUPPLY SYSTEMS SHALL BE IN ACCORDANCE WITH PC601 THROUGH PC613.

10. WATER SUPPLY VALVES SHALL BE IN ACCORDANCE WITH SECTION PC606.

11. SANITARY DRAINAGE SYSTEMS SHALL BE IN ACCORDANCE WITH SECTIONS PC701 THROUGH PC715.

12. VENT PIPING SHALL BE IN ACCORDANCE WITH SECTIONS PC901 THROUGH PC919.

13. SANITARY TEES AND QUARTER BENDS SHALL BE USED IN DRAINAGE LINES ONLY WHERE THE DIRECTION OF FLOW IS FROM THE HORIZONTAL TO THE VERTICAL.

14. SHORT SWEEPS SHALL BE PERMITTED IN DRAINAGE PIPING 3 INCHES IN DIAMETER OR LARGER FOR OFFSETS EITHER HORIZONTAL OR VERTICAL.

15. SPECIAL AND STORAGE SYSTEMS PIPING SHALL BE PROVIDED IN ACCORDANCE WITH SECTIONS PC1201 THROUGH PC1204.

16. STORM DRAINAGE SYSTEMS SHALL BE IN ACCORDANCE WITH SECTIONS PC1101 THROUGH PC1114.

17. GAS PIPING AND EQUIPMENT SHALL BE INSTALLED IN ACCORDANCE WITH SECTIONS FGC401 THROUGH FGC416 AND IN ACCORDANCE WITH NFPA #54 2015.

18. TOILETS FACILITIES FOR CONSTRUCTION WORKERS SHALL BE IN ACCORDANCE WITH SECTION PC311.

19. THE POTABLE WATER SUPPLY SHALL BE PROTECTED AGAINST BACKFLOW IN ACCORDANCE WITH THE REQUIREMENTS OF SECTION PC608 AND RULES OF THE NYC DEPARTMENT OF ENVIRONMENTAL PROTECTION.

SCOPE OF WORK

1. EXISTING TRUCK WASH PLUMBING IS TO BE DEMOLISHED.
2. EXISTING GAS PIPING TO BE REUSED. GAS CONNECTION TO BE MADE TO NEW MECHANICAL EQUIPMENT.
3. A NEW 1" GAS PIPE IS TO BE CONNECTED TO THE NEW RTU-2.
4. EXISTING VENTS TO ROOF ARE TO BE EXTENDED FOR THE NEW HEIGHT OF THE ROOF.
5. EXISTING ROOF DRAINS ARE TO BE RAISED WITH THE NEW HEIGHT OF THE ROOF.
6. EXISTING GAS VENTS FOR UNIT HEATERS IN THE GARAGE ARE TO BE RAISED WITH THE NEW HEIGHT OF THE ROOF.

FILING NOTES

THIS PLAN IS APPROVED ONLY FOR WORK INDICATED ON THE APPLICATION SPECIFICATION SHEET. ALL OTHER MATTERS SHOWN ARE NOT TO BE RELIED UPON, OR TO BE CONSIDERED AS EITHER BEING APPROVED OR IN ACCORDANCE WITH APPLICABLE CODES. THIS DRAWING FILED FOR PLUMBING SYSTEM ONLY.

GENERAL NOTES

1. THESE DRAWINGS ARE THE CONSTRUCTION DOCUMENTS FOR THE BROOKLYN 17/18 SANITATION GARAGE FIRE ALARM SYSTEM WITHIN THE EXISTING BUILDING LOCATED AT AVENUE D & 105TH STREET, NEW YORK, NY. ALL INSTALLATION WORK SHALL BE COMPLETED BY A LICENSED ELECTRICAL CONTRACTOR, WHO SHALL BE REFERRED TO AS "CONTRACTOR" WHERE REFERENCED ELSEWHERE WITHIN THESE DOCUMENTS. NEW FIRE ALARM DEVICES WILL BE INSTALL AND CONNECTED TO THE EXISTING FIRE ALARM SYSTEM LOCATED AT GARAGE 17. THE NEW FIRE ALARM SYSTEM SHALL FOLLOW THE REQUIREMENTS OF THE 2014 NEW YORK CITY BUILDING CODE (907.2.2, 907.2.4, 907.2.13, AND 911) AND THE 2011 NEW YORK CITY ELECTRICAL CODE (NYCEC). IN ADDITION TO THE STANDARDS LISTED IN THE SPECIFICATION, NAMELY THE 2010 EDITION OF NFPA 72 AS MODIFIED BY APPENDIX Q OF THE 2014 NEW YORK CITY BUILDING CODE (NYCBC)

2. THE SCOPE OF WORK IS FOR THE REPLACEMENT OF THE EXISTING FIRE ALARM DEVICES. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING AND INSTALLING ALL FIRE ALARM SYSTEM COMPONENTS & DEVICES, WIRING, CONDUIT, MOUNTING HARDWARE, SYSTEM TESTING AND INSTRUCTING THE CITY OF NEW YORK TO THE OPERATION OF THE PANEL. THE CONTRACTOR SHALL ALSO BE RESPONSIBLE FOR SUBCONTRACTING WITH A CERTIFIED FIRE ALARM CONTRACTOR WHO SHALL REPRESENT THE SYSTEM MANUFACTURER TO ENSURE PROPER INSTALLATION, PROGRAMMING, OPERATION, FINAL PANEL WIRING AND MANUFACTURER SUPPORT.

3. THIS PROJECT SHALL INCLUDE THE INSTALLATION OF A NEW ADDRESSABLE FAS EQUIPPED WITH A FIRE ALARM CONTROL PANEL (FACP), REMOTE ANNUNCIATOR PANEL, ADDRESSABLE TRANSPONDERS, STROBE PANELS, ADDRESSABLE INITIATING DEVICES, AND NEW NOTIFICATION APPLIANCES AS SHOWN ON THE DRAWINGS AND INDICATED BELOW. IN ADDITION, THIS CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING WITH OTHER TRADES FOR INTERCONNECTION TO OTHER BUILDING SYSTEMS (IE: HVAC, AMCS, SECURITY, ELEVATOR, FIRE PROTECTION, ELECTRICAL, ETC.). TRANSPONDERS, DATA GATHERING PANELS, NODES, ETC. SHALL COMMUNICATE WITH THE CENTRAL PROCESSING UNIT (CPU) VIA A CLASS "X" SIGNALING LINE CIRCUIT (SLC) MEETING THE REQUIREMENTS AS DESCRIBED IN NFPA 72; ALL OTHER SIGNALING LINE CIRCUITS (SLC), INITIATING DEVICE CIRCUITS (IDC) AND NOTIFICATION APPLIANCE CIRCUITS (NAC) SHALL BE INSTALLED UTILIZING CLASS "B" PATHWAYS MEETING THE REQUIREMENTS AS DESCRIBED IN NFPA 72. PATHWAY SURVIVABILITY SHALL BE LEVEL 3 IN ACCORDANCE WITH SECTION 24.3.5.4.1 OF NFPA 72

4.THE CONDUIT RISER BACKBONE SHALL BE INSTALLED TO CONNECT ALL SYSTEM PANELS, TERMINAL BOXES AND POWER PANELS. THE RISER AND THE DEDICATED POWER RISER SHALL EMPLOY A PATHWAY SURVIVABILITY LEVEL 2, IN ACCORDANCE WITH NFPA-72.12.4.2(2010). WIRING SHALL BE PROVIDED IN THE RISER CONDUITS FOR RS-485 PRIMARY NETWORK COMMUNICATION, ADDRESSABLE, NOTIFICATION, REDUNDANT (STYLE 7) NETWORK COMMUNICATION, POWER AND SPARE CIRCUITS AS INDICATED ON DRAWINGS. ALL CONDUIT AND WIRING SHALL BE LABELED AS PER SPECIFICATIONS. ALL 120VAC POWER CONDUITS AND ALL RISER CONDUITS SHALL BE RIGID GALVANIZED STEEL OR IMC TYPE;AS PER CODE.

5. A CONDUIT RISER SYSTEM SHALL BE INSTALLED TO CONNECT ALL SYSTEM TRANSPONDERS AND TERMINAL BOXES. WIRING SHALL BE PROVIDED IN THE RISER CONDUITS FOR ADDRESSABLE CIRCUITS, AUDIBLE & VISUAL NOTIFICATION CIRCUITS AND SPARE CIRCUITS. ALL CONDUIT AND WIRING SHALL BE LABELED AS PER SPECIFICATIONS. ALL RISER CONDUITS SHALL BE RIGID GALVANIZED STEEL (RGS) TYPE. PROVIDE CONDUIT, PULL BOXES, SLEEVES AND CORE DRILLING AS REQUIRED. PROVIDE FIRE STOPPING FOR ALL FLOOR AND WALL PENETRATIONS TO MAINTAIN FIRE RATINGS.

6. TERMINAL BOXES SHALL BE NEMA 3R AND INSTALLED FOR EACH FLOOR/ZONE, AS INDICATED ON THE DRAWINGS. PROVIDE AND INSTALL TERMINAL STRIPS IN EACH TERMINAL BOX FOR TERMINATION OF ALL RISER CIRCUITS AND FOR THE HORIZONTAL DISTRIBUTION OF ALL INITIATING AND NOTIFICATION CIRCUITS SERVING EACH FLOOR, AS SHOWN ON DRAWINGS. TERMINAL STRIPS SHALL BE LABELED WITH THE APPROPRIATE CIRCUIT TYPE.

7. THE NEW ADDRESSABLE INITIATION DEVICES SHALL BE CONNECTED TO THE APPROPRIATE FAS CIRCUITS AT THE TERMINAL BOX SERVING EACH FLOOR. PROVIDE AND INSTALL END OF LINE DEVICES AS REQUIRED. INSTALL LINE ISOLATION MODULES FOR EVERY 30 DEVICES ON EACH ADDRESSABLE INITIATING CIRCUIT. EXACT LOCATIONS OF ISOLATION MODULES SHALL BE DETERMINED IN THE FIELD, DOCUMENTED AND LABELED AS SUCH.

8. ALL FIRE ALARM LOW VOLTAGE WIRING SHALL BE CERTIFIED TEFLON JACKETED FIRE ALARM CABLE WHICH MEETS THE REQUIREMENTS OF THE NEW YORK CITY ELECTRICAL CODE SECTION 760. FIRE ALARM CABLE MAY BE INSTALLED UNPROTECTED BY CONDUIT WHEN CONCEALED FROM VIEW, PROTECTED BY THE BUILDING CONSTRUCTION. PROVIDE APPROVED FIRE STOPPING MATERIAL FOR ALL FLOOR, WALL AND BARRIER PENETRATIONS TO MAINTAIN FIRE/SMOKE RATINGS. ALL FAS CONDULETS, JUNCTION BOXES AND TERMINAL BOXES SHALL BE PAINTED FIRE DEPARTMENT RED, IN ACCORDANCE WITH NYCEC.

9. THE BASE CONTRACT SHALL INCLUDE A CONCEALED CONDUIT & CABLE INSTALLATION. ALL FIRE ALARM DEVICES AND FIELD CIRCUITS IN OCCUPIED AREAS ON THE FLOORS, SHALL BE RECESSED AND CONCEALED. SURFACE MOUNTING OF DEVICES AND CONDUIT SHALL BE PERMITTED IN UN- OCCUPIED AREAS SUCH AS MACHINE ROOMS, SHAFT WAYS AND OTHER UNOCCUPIED AREAS. ALL SURFACE MOUNTED DEVICE BACK-BOXES SHALL BE THE FINISHED TYPE. REFER TO DETAIL SHEETS FOR FURTHER INFORMATION.

10. DURING INSTALLATION THE ELECTRICAL CONTRACTOR SHALL TEST ALL WIRING FOR INTEGRITY (CONDUCTOR TO CONDUCTOR/CONDUCTOR TO GROUND) AFTER EACH PHASE OF WORK AFTER ALL EQUIPMENT IS COMPLETELY INSTALLED, TESTED AND OPERATIONAL, THE FCS SHALL BE PROGRAMMED AND ALL TRANSPONDER PANELS SHALL BE TESTED AND THE WIRING RE-TESTED FOR INTEGRITY.

11. INSTALL NEW ADDRESSABLE DUCT MOUNTED SMOKE DETECTORS AT SUPPLY/RETURN FANS & RETURN DUCTS, INCLUDING ADDRESSABLE CONTROL MODULES & REMOTE RELAYS AT FAN UNITS, AS INDICATED ON THE DRAWINGS. FAN SHUTDOWN SHALL BE A FUNCTION OF THE SYSTEM, NOT THE DUCT DETECTOR. CONTRACTOR TO VERIFY FAN SHUTDOWN WIRING WITH BMS AND MECHANICAL CONTRACTORS. PROVIDE INTERPOSING RELAYS AS REQUIRED FOR INTERPOSING VOLTAGES AT THE FAN STARTER CIRCUITS OR MCC. ADDITIONAL ADDRESSABLE CONTROL MODULES SHALL BE PROVIDED AND INSTALLED (AS OUTPUTS) TO THE NEW AMCS FOR FIRE ALARM INDICATIONS AND ALSO FOR SEQUENTIAL FAN RESTART, UPON MANUAL COMMAND FROM THE FCS. DUCT MOUNTED SMOKE DETECTORS SHALL BE PROVIDED WITH REMOTE LED/TEST SWITCHES.

12. FAN UNITS THAT HAVE BEEN SHUTDOWN DURING AN ALARM CONDITION SHALL NOT AUTOMATICALLY RESTART UPON RESET OF THE FIRE ALARM SYSTEM, THEY SHALL ONLY BE RESTARTED MANUALLY. AFTER AN ALARM HAS BEEN CLEARED, THE MANUAL ACTIVATION OF A FAN RESTART ENABLE SWITCH SHALL BE REQUIRED TO ALLOW THE FANS TO RESUME NORMAL OPERATION.

13. INSTALL NEW ADDRESSABLE DUCT MOUNTED SMOKE DETECTORS WITHIN 5' OF SMOKE DAMPERS AS SHOWN ON THE CONTRACT DRAWINGS. WHERE REQUIRED TO COMPLY WITH SECTION 607.3.2 OF THE NEW YORK CITY MECHAINCAL CODE.

14. INSTALL ADDRESSABLE CONTROL MODULES AND RELAYS FOR THE CONTROL OF ALL COMBINATION FIRE / SMOKE DAMPERS AND SMOKE DAMPERS LOCATED ON THE FLOORS. SMOKE DAMPERS LOCATED WITHIN THE MECHANICAL ROOMS SERVING THE UNIT / MULTIPLE FLOORS SHALL BE DIRECTLY INTERLOCKED WITH THE FAN MOTOR CIRCUITS THEREFORE DO NOT REQUIRE DIRECT CONTROL FROM THE FIRE ALARM SYSTEM.

15. INSTALL ADDRESSABLE MONITOR MODULES FOR THE SUPERVISION OF ALL DAMPER END SWITCHES ON ALL COMBINATION FIRE / SMOKE DAMPERS AND SMOKE DAMPERS LOCATED ON THE FLOORS. END SWITCHES ON SMOKE DAMPERS LOCATED WITHIN THE MECHANICAL ROOMS SERVING THE UNIT / MULTIPLE FLOORS SHALL BE DIRECTLY INTERLOCKED WITH THE FAN MOTOR CIRCUITS THEREFORE DO NOT REQUIRE SUPERVISION BY THE FIRE ALARM SYSTEM. ALL MAIN SHAFT DAMPERS LOCATED ON THE FLOOR SHALL BE MONITORED FOR THEIR CLOSED POSITION. ALL SMOKE DAMPERS ALONG THE SMOKE WALL SHALL BE MONITORED FOR THEIR OPEN POSITION. REFER TO DIVISION 23 FOR LOCATIONS OF ALL DAMPERS. COORDINATE WITH HVAC AND BMS CONTRACTORS FOR ALL WIRING CONNECTIONS.

16. ALL DEVICES INSTALLED AS DESCRIBED ABOVE SHALL BE PROGRAMMED, TESTED AND MADE FULLY OPERATIONAL AT THE FCC TO IMPLEMENT THE FIRE MANAGEMENT SEQUENCE OF OPERATION AS DESCRIBED IN THE DRAWINGS AND SPECIFICATIONS. THE ENTIRE FIRE ALARM SYSTEM SHALL BE TESTED IN ACCORDANCE WITH NFPA-72 (CHAPTER 14) INSPECTION, TESTING AND MAINTENANCE. THE CONTRACTORS SHALL BE RESPONSIBLE FOR COMMISSIONING A PRE-TEST PRIOR TO FDNY INSPECTION. THE OWNER SHALL BE PERMITTED 3 COMPLETE SYSTEM REPROGRAMMINGS AS PART OF THIS CONTRACT.

17. THE FIRE ALARM CONTRACTOR SHALL PROVIDE ADEQUATE SIGNAGE DURING THE CONSTRUCTION OF ALL NEW FIRE ALARM EQUIPMENT, TO CLEARLY IDENTIFY WHICH FIRE ALARM DEVICES ARE IN SERVICE AN/OR OUT OF SERVICE. SIGNAGE SHALL REMAIN POSTED UNTIL THE NEW FIRE ALARM EQUIPMENT IS ACCEPTED.

18. THE FIRE ALARM CONTRACTOR SHALL FILE WITH DOB/FDNY APPROPRIATE A433 & B45 FORM FOR INSPECTION BY FDNY FIRE PREVENTION BUREAU ELECTRICAL UNIT. ALL FEES FOR THE FDNY INSPECTIONS TO BE PAID FOR BY THE ELECTRICAL TRADE MANAGER. EXPEDITING SERVICES SHALL BE PROVIDED BY THE CONSTRUCTION MANAGER.

19. THE ELECTRICAL CONTRACTOR SHALL BE RESPONSIBLE FOR ALL PATCHING OF SURFACES DAMAGED BY INSTALLATION OF NEW EQUIPMENT. ALL FLOOR AND WALL PENETRATIONS SHALL BE FILLED WITH AN APPROVED FIRE STOPPING MATERIAL. THE CONTRACTOR SHALL COORDINATE ALL PATCHING AND LOCATION OF EQUIPMENT WITH THE CM. THE CM SHALL SCHEDULE AND APPROVE ALL WORK.

20. ALL WORK, WIRING, CONDUIT AND EQUIPMENT INSTALLATIONS SHALL MEET ALL APPLICABLE CODES REFERENCED IN BID SPECIFICATIONS AND SHALL BE CONSISTENT WITH MANUFACTURER'S SPECIFICATIONS. ALL WIRING AND CONDUIT REQUIREMENTS SHALL BE VERIFIED WITH THE FIRE ALARM CONTRACTOR AND MANUFACTURER.

21. UPON COMPLETION OF THE ALL WORK, THE CONTRACTOR SHALL SUBMIT 'AS-BUILT' DRAWINGS AS PER DIVISION 1 SPECIFICATIONS OF THE NEW FIRE ALARM SYSTEM TO THE CM.

22. UPON REVIEW OF CONSTRUCTION DOCUMENTS AND PRIOR TO THE SUBMISSION OF PROPOSALS, THE CONTRACTORS SHALL INFORM THE CM OF ANY DISCREPANCIES OR REQUEST CLARIFICATIONS, IF NECESSARY, CONCERNING THE INTENT OF THE PLANS AND SPECIFICATIONS.

BUILDING DEPARTMENT APPROVAL NOTE:

THIS PLAN IS APPROVED ONLY FOR WORK INDICATED ON THE APPLICATION SPECIFICATION SHEET. ALL OTHER MATTERS SHOWN ARE NOT RELIED UPON, OR TO BE CONSIDERED AS EITHER BEING APPROVED OR IN ACCORDANCE WITH APPLICABLE CODES.

SHEET NOTES

1. THE FIRE ALARM CONTRACTOR SHALL CONNECT ALL NEW FIRE ALARM DEVICES TO THE EXISTING BUILDING FIRE ALARM CONTROL PANEL. THE FIRE ALARM CONTRACTOR SHALL REFER TO DRAWING FA-001.00 FOR ADDITIONAL INFORMATION.
2. ALL NEW WORK SHALL MATCH EXISTING BUILDING STANDARDS, & SHALL BE CARRIED OUT IN STRICT COMPLIANCE OF NFPA 72 2010 & N.E.C., FDNY FIRE CODE & NEW YORK CITY BUILDING DEPARTMENT.
3. LOCATION & DIMENSIONS OF ALL DEVICES ETC. SHALL BE COORDINATED IN FIELD.
4. THE FIRE ALARM CONTRACTOR SHALL REVIEW & COORDINATE WITH OTHER TRADES DRAWINGS FOR THE EXACT LOCATION OF EQUIPMENT PRIOR TO CONNECTING & COMMENCING WORK.
5. THE FIRE ALARM CONTRACTOR SHALL FURNISH & INSTALL FIRE PROOFING FOR ALL RATED WALL & SLABS PENETRATIONS AS REQUIRED BY CODE. THE FIRE ALARM CONTRACTOR SHALL VERIFY PARTITION CONSTRUCTION FOR EACH LOCATION & PROVIDE DETAIL / FIRE PROOF SYSTEM AS REQUIRED.
6. PROVIDE RIGID STEEL CONDUIT IN AREAS WHERE WIRING IS EXPOSED. FIRE ALARM CABLE MAY BE INSTALLED UN PROTECTED BY CONDUIT WHEN CONCEALED FROM VIEW, PROTECTED BY BUILDING CONSTRUCTION.
7. CONTRACTOR SHALL PROVIDE FIRE WATCH DURING CONSTRUCTION FOR ANY OCCUPIED AREA NOT COVERED BY THE FIRE ALARM SYSTEM.

SHEET KEYNOTES

1. FIRE ALARM CONTRACTOR SHALL DISCONNECT & REMOVE ALL EXISTING FIRE ALARM DEVICES, ASSOCIATED CONTROL MODULES, CABLES & CONDUIT BACK TO THE GROUND FLOOR EXISTING FIRE ALARM PANEL. PATCH & SEAL ALL CONDUIT OPENINGS AS REQUIRED.

SHEET NOTES

1. THE FIRE ALARM CONTRACTOR SHALL CONNECT ALL NEW FIRE ALARM DEVICES TO THE EXISTING BUILDING FIRE ALARM CONTROL PANEL. THE FIRE ALARM CONTRACTOR SHALL REFER TO DRAWING FA-001.00 FOR ADDITIONAL INFORMATION.
2. ALL NEW WORK SHALL MATCH EXISTING BUILDING STANDARDS, & SHALL BE CARRIED OUT IN STRICT COMPLIANCE OF NFPA 72 2010 & N.E.C., FDNY FIRE CODE & NEW YORK CITY BUILDING DEPARTMENT.
3. LOCATION & DIMENSIONS OF ALL DEVICES ETC. SHALL BE COORDINATED IN FIELD.
4. THE FIRE ALARM CONTRACTOR SHALL REVIEW & COORDINATE WITH OTHER TRADES DRAWINGS FOR THE EXACT LOCATION OF EQUIPMENT PRIOR TO CONNECTING & COMMENCING WORK.
5. THE FIRE ALARM CONTRACTOR SHALL FURNISH & INSTALL FIRE PROOFING FOR ALL RATED WALL & SLABS PENETRATIONS AS REQUIRED BY CODE. THE FIRE ALARM CONTRACTOR SHALL VERIFY PARTITION CONSTRUCTION FOR EACH LOCATION & PROVIDE DETAIL / FIRE PROOF SYSTEM AS REQUIRED.
6. PROVIDE RIGID STEEL CONDUIT IN AREAS WHERE WIRING IS EXPOSED. FIRE ALARM CABLE MAY BE INSTALLED UN PROTECTED BY CONDUIT WHEN CONCEALED FROM VIEW, PROTECTED BY BUILDING CONSTRUCTION.

ASBESTOS ABATEMENT
DSNY 17/18 GARAGE REPLACEMENT OF ROOF AND HVAC SYSTEMS
10502 AVENUE D
BROOKLYN, NEW YORK 11236

ASBESTOS ABATEMENT GENERAL NOTES:

1. ALL ASBESTOS REMOVAL SHALL BE PERFORMED IN ACCORDANCE WITH ALL APPLICABLE FEDERAL, STATE AND LOCAL LAW, GUIDELINES, REGULATIONS, ORDERS AND DIRECTIVES, INCLUDING WITHOUT LIMITATIONS, THE U.S. ENVIRONMENTAL PROTECTION AGENCY (EPA), AND U.S. DEPARTMENT OF LABOR, OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA), NATIONAL INSTITUTE OF OCCUPATIONAL SAFETY AND HEALTH (NIOSH), NEW YORK CITY LOCAL LAW TITLE 15, CHAPTER 1 RCNY, AND THE NEW YORK STATE DEPARTMENT OF LABOR (NYSDOL).

2. ASBESTOS ABATEMENT CONTRACTOR SHALL FURNISH ALL LABOR, MATERIAL, EQUIPMENT, SERVICES, ETC., NECESSARY TO PERFORM THE WORK REQUIRED FOR ASBESTOS ABATEMENT IN ACCORDANCE WITH CONTRACT DOCUMENTS AND ALL APPLICABLE FEDERAL, STATE AND LOCAL REGULATIONS.

3. ASBESTOS ABATEMENT CONTRACTOR SHALL DEVELOP AND IMPLEMENT A WRITTEN STANDARD PROCEDURE FOR ABATEMENT WORK TO ENSURE MAXIMUM PROTECTION AND SAFEGUARD FROM ASBESTOS EXPOSURE OF THE WORKERS, VISITORS, EMPLOYEES, GENERAL PUBLIC, AND THE ENVIRONMENT.

4. ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE SIGNS, LABELS, WARNINGS, AND POST INSTRUCTIONS THAT ARE NECESSARY TO PROTECT, INFORM AND WARN PEOPLE OF THE HAZARD FROM ASBESTOS EXPOSURE. POST IN A PROMINENT AND CONVENIENT PLACE FOR THE WORKERS A COPY OF THE LATEST APPLICABLE REGULATIONS FROM OSHA, EPA, NIOSH, NYCDEP, AND NYSDOL.

5. CITY TO NOTIFY ASBESTOS ABATEMENT CONTRACTOR OF ITEMS THAT CANNOT BE REMOVED OR REQUIRES SPECIAL ATTENTION. ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE PROPER PROTECTION AS WELL AS DECONTAMINATION OF ALL ITEMS REMAINING IN THE WORK AREA.

6. ASBESTOS ABATEMENT CONTRACTOR SHALL HEPA VACUUM AND WET WIPE ALL PORTABLE ITEMS WITHIN THE WORK AREA. CITY IS TO INDICATE ALL ITEMS THAT MAY REQUIRE SPECIAL ATTENTION (I.E., COMPUTERS, ELECTRICAL EQUIPMENT, ETC).

7. ASBESTOS ABATEMENT CONTRACTOR SHALL NOTE THAT PORTIONS OF THE BUILDING WILL BE OCCUPIED, REFER TO CONTRACT SPECIFICATIONS FOR WORK SCHEDULES AND ACCESS TO THE WORK AREA.

8. THE ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE ALL ELECTRICAL, WATER, AND WASTE CONNECTIONS, TIE-INS, EXTENSIONS, CONSTRUCTION MATERIALS, SUPPLIES, ETC. AS REQUIRED TO FACILITATE ASBESTOS REMOVAL.

9. ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE TEMPORARY ELECTRIC AND LIGHT THROUGHOUT THE WORK AREA(S) AS REQUIRED IN ACCORDANCE WITH ALL APPLICABLE REGULATIONS AND CODES.

10. ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE PORTABLE SMOKE/HEAT DETECTORS THROUGHOUT EACH WORK AREA.

11. ASBESTOS ABATEMENT CONTRACTOR SHALL PROPERLY PROTECT ALL CONTROLS, TUBING, ELECTRICAL PANELS, EQUIPMENT, ETC. WITHIN THE WORK AREA.

12. ASBESTOS ABATEMENT CONTRACTOR SHALL ISOLATE AND PROTECT ALL MECHANICAL EQUIPMENT REMAINING IN THE WORK AREA. ALL EQUIPMENT TO REMAIN SHALL BE HEPA VACUUMED AND WET WIPED PRIOR TO PLASTICIZING AND UPON THE COMPLETION OF THE PROJECT. ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE WOOD BOX ENCLOSURES AND ADEQUATE VENTILATION FOR ANY EQUIPMENT THAT WILL REMAIN IN OPERATION DURING ASBESTOS ABATEMENT. ASBESTOS ABATEMENT CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS WITH CONSULTANT AND CITY.

13. ASBESTOS ABATEMENT CONTRACTOR SHALL EXERCISE EXTREME CARE AND CAUTION DURING ANY AND ALL DEMOLITION AND ABATEMENT OPERATIONS. ASBESTOS ABATEMENT CONTRACTOR SHALL CONDUCT REMOVAL OF ALL MATERIALS FROM THE SITE WITH MINIMUM DISTURBANCE; PROVIDE PROPER PROTECTION AND REGULAR MAINTENANCE OF ALL BUILDING PREMISES DIRECTLY OR INDIRECTLY ASSOCIATED WITH ABATEMENT OPERATIONS.

14. ASBESTOS ABATEMENT CONTRACTOR SHALL COMPLETELY ISOLATE WORK AREA AS DESCRIBED IN CONTRACT DOCUMENTS. ALL ISOLATION BARRIERS, PERSONAL/WASTE DECONTAMINATION ENCLOSURE SYSTEM (P./W.D.E.S.), PLASTIC SHEETING, AIR FILTRATION DEVICES (AFD), AUXILIARY MAKE-UP AIR MANIFOLDS, ETC. SHALL BE IN PLACE AND APPROVED BY THE CITY PRIOR TO THE BEGINNING OF ASBESTOS REMOVAL.

15. ASBESTOS ABATEMENT CONTRACTOR SHALL LOCATE AND SEAL ALL PENETRATIONS THROUGH WALLS BETWEEN THE WORK AREA AND ADJACENT AREAS, INCLUDING, BUT NOT LIMITED TO PIPE, DUCT, CONDUIT, CHASES, AND OPENINGS IN FIRE WALLS OR DECKS BETWEEN FLOORS AS REQUIRED BY THE FIELD CONDITION.

16. ASBESTOS ABATEMENT CONTRACTOR SHALL CONSTRUCT ISOLATION BARRIERS IN ORDER TO PROVIDE COMPLETE AND TOTAL ISOLATION OF THE ABATEMENT SITE FROM ALL ADJACENT AREAS. ALL ISOLATION BARRIERS SHALL BE OF WOOD; 2" X 4" AT 16" O.C. WITH 1/2" PLYWOOD SHEATHING, SEALED ON BOTH SIDES WITH TWO LAYERS OF 6 MIL PLASTIC SHEETING, CAULK AND SEAL ALL JOINTS AT THE PERIMETER. ALL MATERIALS SHALL BE FIRE RETARDANT. ASBESTOS ABATEMENT CONTRACTOR SHALL FIELD VERIFY ALL LOCATIONS. CONSTRUCTION OF BARRIERS SHALL BE CONDUCTED UNDER STRICT ASBESTOS ABATEMENT CONTROLS.

17. ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE EMERGENCY EXITS (EMCB) AS REQUIRED.

18. ASBESTOS ABATEMENT CONTRACTOR SHALL COORDINATE WITH CONSTRUCTION PROJECT MANAGER AND BUILDING ENGINEER HVAC SHUTDOWN AS REQUIRED.

19. ASBESTOS ABATEMENT CONTRACTOR SHALL SEPARATE AND BLANK-OFF WITH SHEET METAL AND CAP ALL RETURN AND LOW PRESSURE DUCT SYSTEMS WHICH ENTER AND EXIT THE WORK AREA AS REQUIRED, SEAL ALL CONNECTING JOINTS AIR TIGHT WITH TAPE AND PLASTIC SHEETING. COORDINATE ALL WORK WITH THE FACILITY MANAGER AND THE CONSTRUCTION PROJECT MANAGER.

20. ASBESTOS ABATEMENT CONTRACTOR SHALL CONSTRUCT A PERSONAL/WASTE DECONTAMINATION ENCLOSURE SYSTEM (P./W.D.E.S.) AS INDICATED. IT SHALL BE OF SUFFICIENT SIZE TO ACCOMMODATE STORAGE OF MATERIALS, EQUIPMENT, ETC. WHILE ALLOWING FOR THE PASSAGE OF LABORERS AND THEIR EQUIPMENT (SCAFFOLDING) BETWEEN CLEAN AND CONTAMINATED AREAS.

21. SHOWER AND WASTEWATER MUST BE FILTERED AND DISPOSED OF IN THE BUILDING'S SANITARY SYSTEM. REFER TO CONTRACT SPECIFICATIONS.

22. ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE PORTABLE CABINET-MOUNTED AIR FILTRATION DEVICES (AFD) EQUIPPED WITH HEPA FILTERS AT 99.97% EFFICIENCY, TO .3 MICRONS. THE NUMBER OF UNITS SHALL BE SUFFICIENT TO ENSURE A MINIMUM OF FOUR (4) COMPLETE AIR CHANGES PER HOUR AND MAINTAIN A NEGATIVE PRESSURE DIFFERENTIAL OF .02 INCHES OF WATER.

23. ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE SECURITY SUCH THAT ALL BUILDING EMPLOYEES AND/OR VISITORS ARE PROHIBITED FROM ENTERING THE WORK AREA. ASBESTOS ABATEMENT CONTRACTOR SHALL ALSO BE RESPONSIBLE FOR THE FIRE WATCH DURING ALL ABATEMENT OPERATIONS.

24. ASBESTOS ABATEMENT CONTRACTOR SHALL INSTALL AFD EXHAUST MANIFOLD AS REQUIRED FOR ADEQUATE AIRFLOW. REFER TO CONTRACT SPECIFICATIONS FOR DESCRIPTION. COORDINATE ALL LOCATIONS WITH CONSTRUCTION PROJECT MANAGER.

25. ASBESTOS ABATEMENT CONTRACTOR SHALL SUPPLY ALL NECESSARY CONNECTIONS, FASTENERS, FLEXIBLE DUCTS, MANIFOLDS, SUPPORTS, ETC. ANY AND ALL INSTALLATIONS SHALL COMPLY WITH CONTRACT DOCUMENTS AND MANUFACTURER'S REQUIREMENTS.

26. ASBESTOS ABATEMENT CONTRACTOR SHALL APPLY ONE (1) COAT OF SEALANT PRIOR TO POST TESTING CLEARANCE OVER ALL SURFACES FROM WHICH ASBESTOS-ABATEMENT HAVE BEEN REMOVED. REFER TO CONTRACT SPECIFICATIONS.

27. ASBESTOS ABATEMENT CONTRACTOR SHALL HEPA VACUUM AND WET WIPE ALL SURFACES WITHIN THE WORK AREA UPON THE COMPLETION OF ASBESTOS ABATEMENT. REFER TO CONTRACT SPECIFICATIONS.

28. ASBESTOS ABATEMENT CONTRACTOR MAY ENCOUNTER EXTENSIVE CONDUIT, WIRING, DUCTS, ETC, ABOVE CEILING. ALL ITEMS SHALL BE PROPERLY PROTECTED PRIOR TO ABATEMENT AND THOROUGHLY DECONTAMINATED UPON COMPLETION OF ASBESTOS REMOVAL. REFER TO CONTRACT SPECIFICATIONS.

29. DEBRIS RESULTING FROM ANY DEMOLITION AND/OR ASBESTOS ABATEMENT ACTIVITIES SHALL BE DISPOSED OF AS INDICATED IN CONTRACT DOCUMENTS OR DIRECTED BY THE CONSTRUCTION PROJECT MANAGER.

30. ALL ROUTES THROUGH THE BUILDING, TO BE USED DURING THE ASBESTOS ABATEMENT OPERATIONS SHALL BE COORDINATED WITH FACILITY MANAGER AND CONSTRUCTION PROJECT MANAGER. ASBESTOS ABATEMENT CONTRACTOR SHALL UTILIZE ENCLOSED MOBILE CONTAINERS FOR TRANSPORTATION OF ALL WASTE MATERIALS. ALL EGRESS ROUTES SHALL BE PROPERLY PROTECTED AND SUFFICIENTLY MAINTAINED BY THE ASBESTOS ABATEMENT CONTRACTOR.

31. UNLESS OTHERWISE NOTED, ALL WORKER AND WASTE DECONTAMINATION FACILITIES, BOTH CONTIGUOUS AND REMOTE FROM THE WORK AREA, SHALL BE CONSTRUCTED WITH A SOLID OUTER SHELL. THE OUTER SHELL SHALL BE FRAMED WITH 2" x 4" STUDDING 16" O.C. WITH A SOLID SHEATHING MATERIAL OF AT LEAST 3/8" MINIMUM THICKNESS.

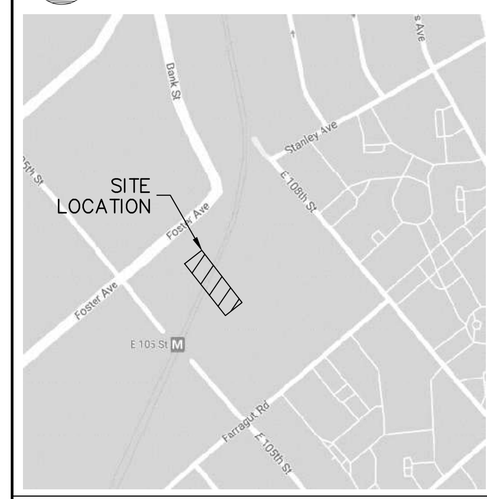
32. LOCATION OF ANY REMOTE DECONTAMINATION FACILITIES SHALL BE COORDINATED AND APPROVED BY THE CITY AND THE CONSTRUCTION PROJECT MANAGER PRIOR TO THE START OF WORK.

33. AIR FILTRATION DEVICE (AFD) EXHAUST LOCATIONS WILL BE COORDINATED WITH THE FACILITY MANAGER AND THE CONSTRUCTION PROJECT MANAGER.

34. CONTRACT DRAWINGS WERE PREPARED FROM EXISTING DRAWINGS SUPPLIED BY THE CITY AND PROVIDED FOR INFORMATION PURPOSES ONLY. THE CONSULTANT MAKES NO CLAIMS AS TO THEIR ACCURACY OR ANY INFORMATION DERIVED THROUGH THEIR USE.

35. ASBESTOS ABATEMENT CONTRACTOR IS RESPONSIBLE TO COORDINATE AND CONFIRM THE EXACT SCOPE OF WORK FOR EACH PHASE OF ABATEMENT WITH THE GENERAL CONTRACTOR AND OTHER TRADES.

36. ASBESTOS ABATEMENT CONTRACTOR SHALL BE RESPONSIBLE FOR VISITING THE JOB SITE AND DETERMINING ALL QUANTITIES, MEASUREMENTS, AND ANY OTHER CONDITIONS RELATIVE TO THE ENTIRE PROJECT. THE DRAWINGS ARE ONLY A DIAGRAMMATICAL REPRESENTATION OF THE WORK AREAS AND MAY NOT CONSTITUTE THE ACTUAL QUANTITIES OF THE MATERIAL. ASBESTOS ABATEMENT CONTRACTOR IS RESPONSIBLE FOR CONFIRMATION OF THE ACTUAL TOTAL QUANTITIES OF THE WORK PRIOR TO BIDDING. NO EXTRA COMPENSATION WILL BE ALLOWED ON ACCOUNT OF DIFFERENCES BETWEEN ACTUAL CONDITIONS AND THOSE INDICATED ON THE DRAWINGS. IT IS THE CITY'S INTENT TO REMOVE ALL ASBESTOS-CONTAINING MATERIAL SCHEDULED TO BE DISTURBED WITHIN THE WORK AREAS. THE ASBESTOS ABATEMENT CONTRACTOR SHALL PROMPTLY NOTIFY THE CITY SHOULD ADDITIONAL SUSPECT ACM BE ENCOUNTERED DURING ABATEMENT ACTIVITIES.



37. ASBESTOS ABATEMENT CONTRACTOR SHALL PROVIDE ALL SCAFFOLDING, PLATFORM INSTALLATION, EQUIPMENT, TOOLS, TRANSPORTATION AND ANY OTHER EQUIPMENT REQUIRED AND/OR NECESSARY TO COMPLETE ALL WORK DESCRIBED IN THE CONTRACT DOCUMENTS.

38. CONTRACTOR SHALL PROTECT NON-ACM INSULATION AND/OR ALL FIXED OBJECTS WITHIN THE WORK AREAS WITH TWO LAYERS OF 6 MIL POLYETHYLENE SHEETING DURING REMOVAL ACTIVITIES. COSTS ASSOCIATED WITH THESE ACTIVITIES SHALL BE INCLUDED IN THE CONTRACTORS BID.

39. CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL OF ALL ROOFING COMPONENTS, INCLUDING MULTIPLE LAYERS OF BUILT-UP MEMBRANE, TAR, VAPOR BARRIER, AND/OR FLASHING DOWN TO SUBSTRATE/DECK.

GENERAL PHASING NOTES:

1. THE PHASING PLANS INDICATED HERE ARE FOR INFORMATIONAL USE ONLY AND SHOW A GENERAL APPROACH TO PHASING. CONTRACTOR IS RESPONSIBLE FOR DEVELOPING AND SUBMITTING FOR APPROVAL PLANS FOR PHASING INCLUDING BUT NOT LIMITED TO, EXISTING CONDITIONS, SCHEDULES, TEMPORARY UTILITIES, SITE ACCESS, LEGAL MEANS OF EGRESS, SITE AND TRAILER ADA ACCESSIBILITY, SHUT-DOWN, TEMPORARY TRAILER LAYOUT AND FURNISHING.
2. CONTRACTOR SHALL SUBMIT TRAILER LAYOUT FOR EACH PHASE FOR REVIEW. COORDINATE WITH DSNY FOR SPECIFIC FUNCTIONAL/PROGRAMMING REQUIREMENTS THAT ARE TO BE MAINTAINED AT EACH PHASE AND BETWEEN EACH PHASE.
3. CONTRACTOR SHALL NOT DISPLACE MORE THAN 15 LOCKERS OF ANY ONE TYPE, TWO TOILETS AND TWO SHOWERS AT ANY ONE TIME AND SHALL CONSIDER THIS WITHIN PHASING.
4. CONTRACTOR IS RESPONSIBLE FOR MAINTAINING HVAC/PLUMBING/ELECTRICAL SERVICES TO THE SPACES OCCUPIED WHERE WORK IS NOT BEING PERFORMED.
5. NO OCCUPIED SPACE SHALL BE LEFT IN AN UNSAFE OR HAZARDOUS CONDITION.
6. CONTRACTOR IS RESPONSIBLE FOR PROTECTING ALL EXISTING FURNISHINGS DURING PERFORMANCE OF WORK AND AFTER HOURS.
7. IF, AS PART OF PHASING WORK, CONTRACTOR RELOCATES/MOVES ANY OF THE EXISTING FURNISHINGS, THE FURNISHINGS MUST BE PLACED BACK AND BE LEFT IN THE SAME CONDITION THEY WERE PRIOR TO THE WORK. IN CASE OF ANY DAMAGE, CONTRACTOR IS RESPONSIBLE TO FIX OR REPLACE THE DAMAGED FURNISHINGS.
8. ALL WORK WITHIN BK 17/18 BUILDINGS CAN ONLY BE PERFORMED DURING A NON-SNOW SEASON (APRIL 1 - OCTOBER 31) AND DURING SWING-SHIFT (3PM-12AM). COORDINATE EXACT TIMEFRAME OF SNOW SEASON WITH DSNY. (1)
9. TEMPORARY LOCKER/BATHROOM/SHOWER TRAILER IS TO BE REMOVED DURING THE SNOW SEASON AND, IF REQUIRED, REINSTALLED THEREAFTER.
10. UTILITY CONNECTION TO INTERIOR LOCKER ROOM TRAILER SHALL BE COORDINATED WITH EGRESS/ACCESS SIDEWALK. PROVIDE PEDESTRIAN PROTECTION AS REQUIRED.

(#) SHEET KEYNOTES:

1. PROVIDE A 16'X40' CODED, NON-COMBUSTIBLE TRAILER WITH INSULATED WALLS FOR DSNY LOCKER ROOM/ SHOWERS/ BATHROOM WITH TEMPORARY POWER AND PLUMBING CONNECTION TO THE EXISTING BUILDING (PROVIDE TANK AND EJECTOR PUMP IF REQUIRED) WITH THE EXCEPTION OF SANITARY/SEWER, WHICH IS TO BE DONE VIA A SEPTIC TANK (TRAILER BY WILLSCOT, NADLER, MOBILE MINI, OR APPROVED EQUAL). EACH PERSONNEL LOCKER SHALL HAVE ONE PARTITION WITH TWO DOORS (ONE FOR WET SIDE AND ONE FOR DRY SIDE). COORDINATE WITH CONSTRUCTION MANAGER FOR THE EXACT LOCATION OF TRAILER TEMPORARY CONNECTIONS.
2. CONTRACTOR SHALL NOT CLOSE MORE THAN TWO BAYS AT ANY ONE TIME. TWO BAYS ARE IDENTIFIED HERE AS AN EXAMPLE.
3. PROVIDE A DDC/CM TRAILER (WILLSCOT, NADLER, MOBILE MINI, OR APPROVED EQUAL). PROVIDE TEMPORARY UTILITIES CONNECTION TO THE BUILDING, COORDINATE LOCATION OF CONNECTION WITH CONSTRUCTION MANAGER.
4. SPACE ALLOCATION FOR CONTRACTOR TRAILERS/CONEX BOXES. ACQUIRE ALL NECESSARY PERMITS FOR LOCATING TRAILERS ON THE STREET.
5. AREA FOR STAGING/LAYDOWN FOR CONTRACTOR MATERIAL AND EQUIPMENT, MAXIMUM OF 50' BY 12'.

ADDENDUM No. # 7

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

85021B0135 – S136-383N

DSNY BK 17/18 Garage Roof and HVAC Upgrade

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **Bidders Questions and Responses to Questions:**
   See Attachment A.

2. **Revisions to PASSPort forms:**
   See Attachment B.

3. **Revisions to Documents/Drawings:**
   See Attachment C.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

Richard Jones, PE CWI
Executive Director, Specifications

DDC PROJECT #: **S136-383N**

PROJECT NAME: **DSNY BK 17/18 Garage Roof and HVAC Upgrade**

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Mechanical Drawings M101-104 show 44 CO Sensors, yet the Electrical Drawings E101-104 only show 8. Please correct the Electrical drawings to show correct quantity.	Quantities and locations of CO sensors are per Mechanical Drawings. Electrical Drawings indicate the first conduit run and the balance are to be daisy chained accordingly in conduit.
2	There is nothing in the specifications or the drawing indicating that the new control system will be controlling the existing VAV boxes. Please confirm or clarify.	CO sensors shall tie into the GEF Fans, see detail 3 on M-804.
3	Drawing M805, BMS architecture, shows monitoring for only some of the existing UHs. Please confirm that is the scope intention.	BMS to tie into all existing UHs. BMS architecture shows this as a typical condition. Refer to detail on M-805.
4	Schedule A says contract duration is 885 ccds. However, page 5 of the Addendum to General Conditions in Volume 3 shows a phasing plan with 4 areas respectively: 495, 520, 885, which add to 2,760 ccds or 7.5 years. What is the over expected duration of the contract we should use for general conditions such as trailers, MPT, etc. Please advise.	Total contract duration for the project is 885 ccds. The durations for phasing are concurrent.

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Regarding the response to Question #2 in Addendum #7: the question pertained to existing VAV boxes. Your response addressed CO Detectors, not VAV boxes. Please update your response.	As indicated on the drawings, the existing controls serving VAVs shall remain. Note that all existing VAVs are to be interlocked with individual new thermostats. All new CAVs are to be wired as per detail 3 on M-803.
